### Basic Psychology Requirements

Students must complete one graduate course of at least 3 credits in each of the following areas:

- Biological bases of behavior
- Learning and cognition
A minimum of 90 credit hours is required beyond the earned master's degree. No credit hours from the earned master’s degree can be transferred into the PhD.

**Basic Psychology Requirements**

Students must complete one graduate course of at least 3 credits in each of the following areas:

- Biological bases of behavior
- Learning and cognition
- Social psychology / Social bases of behavior in psychology
- Human development

**Cognate**

A total of 15 quarter hours must be taken in a related field outside the Morgridge College of Education. It is strongly recommended that these hours be completed in the Psychology Department or the Graduate School of Professional Psychology, although it may be possible to complete a cognate in a program different from psychology (e.g., biology, social work). It is required that students take a course in social psychology in their cognate as well as a course that fulfills the Biological Bases of Behavior. Check with your advisor before signing up for a cognate.

**Total Credits**

135
Assumes completion of a supervised field experience of 400 hours in the MA/MS program (if not, see section on coursework required for those who did not complete a practicum as part of their MA/MS program)

Advanced Practicum I and Advanced Practicum II students are required to spend 15 to 20 hours per week in practicum placement for three consecutive quarters for a total of 450-600 hours on site for each practicum. All quarters must be at the same site and must be consecutive. Some students take additional practicum hours to be more competitive for internship. For more information on practicum requirements, please see the separate practicum handbook.

PhD Clinic is generally taken for two consecutive quarters: either winter-spring, spring-summer, summer-fall, or fall-winter. Students are surveyed about their preferences and these are accommodated if possible.

Students must have successfully completed Advanced Practicum I

Cognate requirements
A total of 15 quarter hours must be taken in a related field outside the Morgridge College of Education. It is strongly recommended that these hours be completed in the Psychology Department or the Graduate School of Professional Psychology, although it may be possible to complete a cognate in a program different from psychology (e.g., biology, social work). It is required that students take a course in social psychology in their cognate as well as a course that fulfills the Biological Bases of Behavior. Check with your advisor before signing up for a cognate. Because of enrollment limitations in Psychology and Professional Psychology you (or your advisor) will probably need to contact the professor of the course you’re interested in directly to see whether you will be permitted to enroll. Please note that you may be permitted to take classes at institutions other than DU to fulfill your cognate requirement, provided they are psychology classes and you obtain pre-approval from your advisor and, on occasion, from Graduate Studies.

A minimum of 135 credit hours is required beyond the earned bachelor’s degree.

Non-coursework Requirements
- Qualifying Examination
- Comprehensive Examination
- 12-month full time internship
- Dissertation
- Oral Defense

Courses

CNP 3802 Peer Counseling (3 Credits)
Are you interested in learning about how to help others? Interested in being a counselor? This course will provide an introduction to the profession of counseling. Learn more about the variety of roles and responsibilities of mental health professionals and how you can learn how to help others.

CNP 4641 Adolescent Development (3 Credits)
Physical, cognitive, emotional, social, and moral development in adolescents with emphasis on interaction of various aspects of development within an environmental context; focus on normal development with exploration of special problems of adolescents, e.g., substance abuse, teen-age pregnancy, eating disorders and delinquency; critical study, and discussion of literature on adolescence and interviews with adolescents.

CNP 4642 Adult Development (3 Credits)
Literature on normal development of adult thinking and problem-solving processes and the self-esteem. Physiological changes and relationship between cognitive development and developmental tasks of adults included.

CNP 4700 Counseling Theory (3 Credits)
Basic counseling theories and philosophical principles as a foundation for professional training including history, concepts, techniques and trends.

CNP 4701 Advanced Seminar: Counseling Theory (3 Credits)
Focus on advanced practice issues and (doctoral students only) integration of theory and practice.

CNP 4702 Introduction to Assessment (3 Credits)
Psychological instruments used to assess social, educational, emotional, personality, language, intellectual, behavioral, and perceptual development of adolescents; required practice in administering instruments.

CNP 4704 Psychological Assessment (5 Credits)
Administration, scoring and interpretation of objective and projective personality-assessment techniques, the DSM IV, diagnostic categories, report-writing skills, ethical standards for testing. Lab fee required. Prerequisite: counseling or school of psychology Ph.D. student or instructor approval.

CNP 4705 History and Systems of Psychology (3 Credits)
Historical and philosophical basis of modern psychological theories; basic issues as related to major school of psychology.
CNP 4706 Cognitive Assessment (5 Credits)
This course provides students in Counseling Psychology with experience in individual intelligence, learning and memory, and neurocognitive screening test administration, scoring, interpretation, and report writing. Each student has an opportunity to administer various cognitive measures, with particular emphasis on the Wechsler Scales. Contemporary issues pertinent to the assessment of intelligence are covered. Emphasis is placed on synthesizing and integrating information from cognitive assessment with other sources to produce effective intervention and therapeutic recommendations. Issues regarding the use of such tests are discussed, as well as appropriate use in agencies and clinical practice. Lab fee required.

CNP 4710 Career Counseling (3 Credits)
Career development theories; career counseling and assessment techniques; applications of career counseling to special populations. Lab fee required.

CNP 4720 Group Counseling Theory (3 Credits)
Theory and research on dynamics of group process, group treatment and leadership strategies; implications for group counseling and psychotherapy. Prerequisite: master's or doctoral student in counseling or related field.

CNP 4730 Counseling Psychology Program Development and Evaluation (3 Credits)
Development, evaluation strategies and techniques for human service agencies and schools; application of research and evaluation skills in applied settings.

CNP 4740 Basic Counseling Techniques (4 Credits)
Basic counseling and interviewing skills; emphasis on building counseling relationships and facilitating client's self-exploration; skills of empathy, advanced empathy, self-disclosure, confrontation and immediacy.

CNP 4741 Int Counseling Techniques (4 Credits)
Sample of counseling techniques and effectiveness with different types of clients. Prerequisite: CNP 4740.

CNP 4743 Fieldwork in Counseling (1 Credit)
Introduction to the field of counseling with special emphasis on practicum placement. Prerequisite: admission to the MA program in counseling psychology.

CNP 4750 Counseling Psychology Beginning Practicum (1-4 Credits)
Supervised practice in counseling for master's students. Prerequisite: CNP 4740, and be a counseling psychology student.

CNP 4751 M.A. Internship (1-4 Credits)
Yearlong, 600-hour supervised field practice for second-year master's students with weekly seminar. Prerequisites: CNP 4750 and be a counseling psychology master's students.

CNP 4752 Counseling Psychology Advanced Practicum I (3 Credits)
Supervised practice in counseling for doctoral students. Prerequisites: CNP 4750 or prior practicum, and be a counseling psychology student.

CNP 4753 Counseling Psychology Advanced Practicum II (1 Credit)
Group supervised practice in counseling for second-year doctoral students with emphasis on process and countertransference issues. Prerequisite: CNP 4752.

CNP 4754 Couns Psych: PhD Internship (1 Credit)
Meets 12-month internship requirement in counseling psychology. Prerequisites: completion of comprehensive examination and dissertation proposal.

CNP 4755 MA Counseling Clinic (1-2 Credits)
On-campus, experience counseling of clients from the community with close supervision and observation. Prerequisite: MA student in counseling psychology.

CNP 4756 PhD Counseling Clinic (1 Credit)
On-campus, advanced-experience counseling of clients from the community with close supervision and observation. Prerequisite: Doctoral student in counseling psychology.

CNP 4758 PhD Field Experience (8 Credits)
Required 12-month, 40-hour-per-week internship for doctoral students in Counseling Psychology. Registration for this course indicates full-time enrollment. This course is not graded. Prerequisites: completion of comprehensive examination and dissertation proposal. Department approval is required for registration. Fall quarter enrollment must be done in conjunction with CNP 4754.

CNP 4760 School Counseling Practicum (2-4 Credits)
A minimum of 100 hours supervised practice in School Counseling for Master's students in the School Counseling Concentration. Students must be supervised by a licensed school counselor.

CNP 4761 School Counseling Internship I (2-4 Credits)
100-hour supervised field practice in a school setting for Master's students in the School Counseling Concentration, with weekly seminar. Students must be supervised by a licensed school counselor.

CNP 4762 School Counseling Internship II (1 Credit)
A minimum of 600-hour supervised field practice in a school setting for master's students in the School Counseling Concentration, with weekly seminar. Students must be supervised by a licensed school counselor.
CNP 4769 Cognitive Behavioral Strategies (3 Credits)
Historical perspective on cognitive and behavioral theories in psychology, assessment, treatment and evaluation from a cognitive-behavioral approach. Prerequisite: advanced master’s or doctoral student.

CNP 4770 Counseling Psychology Seminar: Research (3 Credits)
Review of current process and outcome research in counseling and psychotherapy; substantive issues, including client and therapist variables as well as methodological issues and experimental designs. Prerequisite: doctoral student.

CNP 4772 Diversity Seminar: Psycho-Social Issues (1 Credit)
Series of courses to analyze social and psychological impacts of oppression related to minority status, socioeconomic status, gender and family configurations; taught using an awareness and knowledge approach; implications for counseling; series includes general seminar and series of 1 credit follow-up seminars on particular topics, e.g., American Indian mental health, African- American mental health and women’s mental health. Prerequisites: CNP 4773 and students must take the 3-credit general seminar prior to the individual seminars.

CNP 4773 Diversity: Multicultural Counseling Psychosocial Issues (3 Credits)
This course uses a social justice perspective to examine the impact of oppression of Americans considered having a minority status in the United States. Minority status is defined according to an individual's current experiences and/or his or her group's history of oppression in America. Issues and concepts related to ability, age, class, socioeconomic status, ethnicity, gender, race, religion, sexual orientation, and other issues of oppression will be examined. The course is designed to present a general introduction to multicultural and social justice concepts and issues in multicultural counseling. Due to the extensive amount of material in this area only some selected issues and topics will be presented. Students interested in more specific multicultural diversity topics should take the one-credit Counseling Psychology diversity seminars or courses offered in other University of Denver colleges and departments. Students will be involved in interactive learning including the application of awareness and knowledge of course concepts and issues to themselves as participants in counseling with clients who have experienced oppression. The course is designed for graduate students who are professionals-in-training in mental health, counseling, and counseling psychology. Students should have a basic understanding of professional counseling skills and be willing to participate in counseling role-play activities. However, please note that this is not a clinical skills training course.

CNP 4776 Family Counseling (3 Credits)
Introduction to family counseling, including survey of major theories and research, and in-class demonstrations of techniques. Prerequisite: advanced master’s or doctoral student.

CNP 4778 Health Psychology (3 Credits)
Overview of rapidly expanding field of health psychology; wide variety of topics dealing with role of psychological processes in health and health care; includes impact of stress on physical health, and psychological factors that determine health-related behavior, psychological aspects of delivery of health care, and assessment issues in health psychology.

CNP 4780 Counseling Psychology Seminar: Supervision (3 Credits)
Introduces literature and research on counseling supervision, including awareness of individual differences; provides experience supervising master’s level counselors. Prerequisites: doctoral student and CNP 4752.

CNP 4784 Psychopathology (3 Credits)
Introduction to psychopathology and overview of several broad topics including schizophrenia, mood disorders and personality disorders.

CNP 4787 Motivational Interviewing (3 Credits)
Motivational interviewing is a client-centered collaborative style of therapeutic relationship designed to strengthen a person’s motivation for and commitment to change. This class facilitates skill development in managing client ambivalence, eliciting change-talk and honoring the client’s autonomy regarding taking steps toward a commonly agreed upon goal.

CNP 4789 Pharmacology of Addictive Behavior I and II (4 Credits)
This class provides a solid base of knowledge about the drugs of abuse including what occurs physiologically with drug use and other addictive behaviors. Additionally, this course explores neuroscience and genetic research on addiction to better understand the changes in the brain that underlie drug use and addictive behaviors.

CNP 4790 Counseling Psychology Seminar: Ethics (3 Credits)
Professional ethics in practice and research in counseling psychology, including informed consent, confidentiality, clients' rights, psychologists' obligations, etc.; basic APA documents. Prerequisite: doctoral student.

CNP 4791 Counseling Psychology Seminar: Counseling Couples (3 Credits)
Introduction to couples counseling, including survey of major theories and research.

CNP 4792 Pro-Seminar in Counseling Psychology (1 Credit)
Introduction to field of counseling psychology required for all first-quarter doctoral students. Prerequisite: counseling psychology doctoral students.

CNP 4794 Counseling Psychology Seminar: Special Topics (1-10 Credits)
Variety of special topics on research and practice in counseling psychology; readings, lectures and projects to provide an in-depth understanding of topics, which vary from to year and cover areas such as counseling women, counseling in business and industry, advanced group therapy, time-limit counseling, vocational counseling, etc.

CNP 4795 Master of Arts Counseling: Legal and Ethical Issues (3 Credits)
Introduction to ethical and legal issues in school and agency counseling for master's students. Prerequisite: master's student in counseling psychology.
CNP 4797 Counseling Addictive Behavior (3 Credits)
Introduction to assessment, treatment and outcome evaluation of chemical and nonchemical addictive behaviors. Requirements include abstinence from a “compulsive” behavior; journaling about one’s cognitive, emotional and behavioral reactions during the abstinence period; attending 12-step meetings; participating in a quasi-12-step in class meeting; critiquing a film depicting dynamics of an alcoholic family.

CNP 4799 Infectious Diseases in Addictive Behaviors (2 Credits)
Drug and alcohol abuse and infectious diseases go hand in hand. This class explores the high risk for contracting and spreading infectious diseases among drug abusers. This class helps prepare students to identify such diseases, determine client risk for infection, and educate students about disease prevention and treatment options.

CNP 4800 Consultation (1 Credit)
This course is designed to teach the basic theories of psychological consultation that can be used to guide practice in a variety of settings. Students learn to differentiate process, collaborative and expert consultation. The class format includes presentations from practitioners working in school, medical, forensic, and business settings. In addition, students also learn about the ethical principles that guide their practice and to also become sensitive to how their work with diverse cultural backgrounds may be perceived. Prerequisite: must be enrolled in the Counseling Psychology doctoral program.

CNP 4991 MA Independent Study (1-10 Credits)
CNP 4992 Directed Study (1-10 Credits)
CNP 4995 Research - M.A. Thesis (1-10 Credits)
CNP 5991 PhD Independent Study (1-10 Credits)
CNP 5992 Directed Study (1-10 Credits)
CNP 5995 Dissertation Research (1-20 Credits)

Curriculum Studies and Teaching

Whether you intend to become a curriculum developer, a professor or consultant, Curriculum and Instruction can help you develop into a bold leader and innovator.

We are educators dedicated to helping you become the best leader and change agent possible. We are committed to shaping a safe, sustainable, democratic, accessible and socially just learning experience for all students in all educational settings.

Master of arts - Curriculum, Instruction, and Teaching with a Concentration in Teacher Education Program-Elementary/SECONDARY/K-12

The Teacher Education Program concentrations offer an intensive, integrated, professional preparation experience. The program is structured similar to clinical preparation models where course work and field experiences are purposeful, connected, gradual, and cumulative. Program features such as small class sizes, built-in peer support, high academic standards, and a year-long residency in closely supervised field experiences in linguistically and culturally diverse settings promote student success in mastering the competencies of an effective teacher.

Apprentice Teachers are required to complete 840 hours of field experience in diverse public school classrooms. Apprentice Teachers are required to be at their fieldwork site three days a week during fall and winter quarters and four-five days a week in the spring quarter. A gradual release of responsibility leads to solo teaching throughout the year-long residency.

The mission of the University of Denver Morgridge College of Education (MCE) Teacher Education Program (TEP) concentrations is to provide an extensive, integrated, professional experience that supports Apprentice Teachers in developing the dispositions, knowledge, and skills of an effective teacher of diverse learners in underserved K-12 schools. Ultimately, effective teachers engage, plan, teach, and lead to promote the growth and development of all learners, and they take an active role in their own professional development.

Dual Undergraduate-Graduate Program in Teacher Education

The Dual Undergraduate-Graduate Degree Program in Teacher Education concentration is an approved program in which a University of Denver undergraduate student begins taking classes toward a teaching license and a graduate degree program prior to earning a baccalaureate degree. Both degrees must be earned within five years of matriculation into the undergraduate degree program. Dual degree students in the program take nine hours of graduate course work in their senior year (all nine hours double-count as undergraduate and graduate level course work). The nine hours of
MCE course work can be spread across the fall, winter, or spring quarter; or stacked into one or two quarters. Dual degree students should initiate the admissions process in the winter of their junior year.

Program Accreditation
The program is accredited by the Colorado Department of Education (CDE).

Master of Arts in Curriculum and Instruction
This degree program is designed with the individual student’s background and career goals in mind. Most students prepare for traditional and non-traditional positions in education that require planning, consulting, research, curriculum development, evaluation and policy-making. Instructional coaching is established in a profession that is increasingly gaining national attention. Many school districts across the US, including several in Colorado, are implementing instructional coaching as a component of transformative school reform.

Master of Arts in Curriculum and Instruction with a concentration in Gifted Education
Students who complete the 24 quarter-hour concentration in gifted education will participate in courses and practicum experiences aimed at developing professionals who are well-equipped to meet the needs of gifted students in a variety of educational environments. Completion of the concentration will be noted on students’ transcripts. In addition, students who successfully complete the concentration will be recommended for the Gifted Education Specialist endorsement offered through the Colorado Department of Education (CDE). Please note many of these courses are offered less frequently, so close consultation with your advisor is necessary if this concentration is of interest to you.

Master’s Students will take a minimum of 24 quarter hours in Gifted Education coursework, plus 21 quarter hours in Curriculum, Instruction, Diversity, Foundations, and Research. The minimum requirement for the degree is 45 quarter hours.

MASTER OF ARTS IN CURRICULUM AND INSTRUCTION WITH A CONCENTRATION IN Mathematics Education
Students enrolled in the master’s degree program can elect to obtain a concentration in mathematics education in place of the cognate for a total of 45 quarter hours. Students who complete the 33 quarter-hour concentration in mathematics education will participate in courses aimed at developing positive change agents in mathematics education for all students in general, and for underrepresented minority groups in mathematics in particular. Successful candidates will be prepared to work in diverse educational settings with a strong background in mathematical content, pedagogy, and assessment. Completion of the concentration will be noted on students’ transcripts. Please note many of these courses are offered less frequently, so close consultation with your advisor is necessary if this concentration is of interest to you.

Master’s Students will take a minimum of 33 quarter hours in mathematics education coursework, plus 6 quarter hours in Curriculum, and 6 quarter hours in Research. The minimum requirement for the degree is 45 credit hours.

Master of Arts in Curriculum, Instruction, and Teaching with a concentration in Urban Education
The Master of Arts in Curriculum, Instruction, and Teaching with a concentration in Urban Education, Denver Teacher Residency (DTR) is an innovative, hands-on teacher preparation program designed to cultivate and support exceptional teachers in high-needs schools within Denver Public Schools (DPS). DTR leads DPS efforts to recruit, prepare and retain high-quality urban educators to effectively meet the diverse needs of each student, improve academic achievement, and serve as leaders in Denver’s schools, district and community.

The Master of Arts in Curriculum, Instruction, and Teaching with a concentration in Urban Education, Denver Teacher Residency’s progressive approach to recruitment and training reflects the diverse ethnic, racial, socioeconomic and linguistic needs of DPS’ learning community. DTR residents are paired with mentor teachers in classrooms serving a variety of high needs, including elementary English Language Acquisition (English and Spanish), Special Education, secondary mathematics or secondary science. This hands-on approach to teacher training and certification prepares you to meet the linguistic, communication and special learning needs found in any DPS classroom.

Graduation Requirements: The 52 quarter credit hour program includes a residency requirement in Denver Public Schools in elementary or secondary contexts. Upon successful completion of coursework, you will be eligible to apply for an initial Colorado teaching license (you must meet the Colorado Department of Education – CDE requirements for a Colorado initial teacher license (http://www.cde.state.co.us/cdeprof/Licensure_tch_req.asp) and apply for the license with the CDE).

Approximate Completion Time: 12 months or 4 quarters (begins in the summer quarter with completion in the following spring quarter). At the end of the program, you will become eligible to apply for an initial Colorado teaching license (students must meet the Colorado Department of Education – CDE requirements for a Colorado initial teacher license (http://www.cde.state.co.us/cdeprof/Licensure_tch_req.asp) and apply for the license with the CDE).

Master of Arts in Early Childhood Special Education
The Master’s degree in Early Childhood Special Education (EC SPED) is a four quarter (1 to 2 year) program that focuses on expanding opportunities for specialized work with young children, youth, and families in school and community settings. It also is a pipeline to licensure and non-licensure
degrees including a doctoral degree. Students in the M.A. in EC SPED degree program develop the knowledge and practical skills needed to work successfully within the early childhood school and community agencies that serve the birth to 8-years-old age group.

Our goal is to prepare highly competent, collaborative, ethical, and self-reflective Early Childhood Special Education Specialists. This program will facilitate your training and development as a scientist-practitioner who can solve problems and share decision-making with others to optimize social-emotional, cognitive, academic, and behavioral outcomes for children from birth to age 8 with special needs, and their families.

Our goal is to prepare you to be an Early Childhood Special Education Specialist who will serve young children with special needs and their families in schools, districts, and in community organizations. You will:

- Value inclusive excellence and demonstrate a commitment to education as an essential part of every community.
- Are data-driven and reflective in their practice, and utilize evidence based practices.
- Utilize a family centered approach to intervention.
- Understand and use the latest research and technology to improve educational efforts on behalf of all learners.
- Utilize an ecological approach to intervention.

**Doctor of Education in Curriculum and Instruction**

The EdD in Curriculum and Instruction is designed to prepare educational practitioners as experts of curriculum and instruction, capable of engaging in problems and challenges in a variety of education institutions and contexts. The aim of this program is to produce graduates who are leaders and innovators in education (broadly defined), equipped with cutting-edge applied research skills, creative educational visions based on established academic disciplines, moral imagination, curricular expertise and commitments to issues of equity and social responsibility. You can specialize in two areas: Curriculum Studies or Gifted Education, or earn a concentration in Mathematics Education.

**Doctor of Philosophy in Curriculum and Instruction**

PhD students take a wide range of courses in the areas of curriculum, instruction, foundations, diversity and research. Dissertation topics cover a broad assortment of theoretical and practical topics. Additionally, our students are encouraged to consider enrolling in courses in other academic units in the Morgridge College of Education and throughout the university in order to enhance or expand their educational experience. You can earn a concentration in Mathematics Education.

A minimum of 90 credit hours is required beyond the earned master's degree. No credit hours from the earned master’s degree can be transferred into the PhD.

**Non-coursework Requirements**

- Online portfolio
- Doctoral Comprehensive Examination
- Dissertation
Curriculum and Instruction Courses

CUI 3055 Human Rights & Education (3 Credits)
Emphasis on human rights, both domestic and international, for the field of education; study of writings and research of leading educators encompassing concepts of human rights; focus on educational issues involving human rights, the Right of the Child, work of UNICEF, and implications of human rights for educational practice. Cross listed with CUI 4055.

CUI 3801 Current Issues in K-12 Education (3 Credits)
This course introduces prospective K-12 educators to the contemporary social, political, pedagogical and curricular context of schooling. Major areas of analysis and discussion will include: gender, social class, cultural competency, linguistically diverse education, funding, sexual orientation, educational policy, and diversity. The course will attempt a critical, reflective, and balanced view of schooling for the purpose of helping students develop the ability to interpret and respond to the challenges associated with teaching in modern schools. Coursework will be paired with a service-learning field experience in an urban educational setting characterized as linguistically and culturally diverse.

CUI 3802 Teacher Identity (3 Credits)
The most effective teachers combine the outer technical aspects of teaching (lesson plans, differentiated instruction, culturally responsive pedagogy, and content knowledge) with the inner non-technical elements (passion, heart, beliefs, and calling). In this course we examine the "inner-life" of the teacher with an emphasis on how understanding the themes of teacher selfhood impact the technical aspects of teaching. Key questions to examine include the following: How do the gifts, talents, and inner capacities of the teacher impact and influence communication and learning in the classroom; why do I teach; what will continue to fuel my passion for teaching; and what vision of the future do I hold for schools? Students should expect to complete 10-20 hours per week of service learning in area education settings.

CUI 3990 Service Learning in Community (1-4 Credits)
This course provides students with the opportunity to serve in the community and to reflect on their service experiences in a classroom setting through structured and meaningful reflection sessions. Students will examine a variety of topics, including the nature and significance of service-learning, motives for service, community action as a means for positive social change, and the relationship between service-learning, social justice, and civic responsibility. Cross-listed with AH 3580, SS 3580.

CUI 3991 Independent Study (1-10 Credits)

CUI 3992 Directed Study (1-10 Credits)

CUI 3995 Urban Education (5 Credits)
Historical, political and sociological influences that shape and socially construct urban schools. Characteristics, opportunities, and needs of students in urban schools and examples of current effective practice.

CUI 3996 Urban Youth Development (5 Credits)
This course examines urban youth development from several perspectives, including the social-psychological, the cognitive/creative, the physical and health-related, and the philosophical. Cross listed with CUI 3996.

CUI 4020 Introduction to Curriculum (3 Credits)
Introduces curriculum theory and curriculum as a field of study; includes study of issues such as standards, cognition, diversity, ecology, and social justice, among others.

CUI 4021 Models of Curriculum (3 Credits)
Reflects on ways various curriculum orientations may resolve modern issues or problems, with students’ independent pursuit of one or two orientations in depth; orientations examined include cognitive pluralism, developmentalism, rational humanism and reconceptualism, among others. Recommended prerequisite: CUI 4020.

CUI 4022 Curriculum Theory into Practice (3 Credits)
Helps students move from theoretical concepts and decisions involved in curriculum development to actual construction of curricula; survey of potential components encompassed in a variety of curricula followed by participation in designing a curriculum as a member of a student team; final facet requires students to develop a curriculum. Prerequisites: CUI 4020 and 4021 or instructor's permission.

CUI 4027 Implementing Curriculum: A Practicum (3 Credits)
Opportunity to experience authentic role of curriculum on site; work at the Denver Zoo, the Denver Museum of Nature and Science, other museums and school sites; to develop and implement curriculum.

CUI 4028 Literacy Instruction and Assessment (3 Credits)
Organized around a developmental continuum for literacy acquisition. Addresses best research-based practices that allow teachers to assess students’ abilities and to select appropriate instructional strategies leading to communicative competence for all children.

CUI 4029 Issues in Literacy (3 Credits)
Prepares educators to participate thoughtfully and critically in often-contentious discourse about literacy. Examines the research base that supports sound policy and practice regarding literacy instruction for all children.
CUI 4031 Teaching and Learning (3 Credits)
Takes a disciplinary approach (e.g., sociological, historical, philosophical, and anthropological) to the analysis of teaching and learning environments in response to broad questions such as: What are effective teaching and learning environments? For whom and under what circumstances? How can we create such environments?

CUI 4032 Analysis of Teaching (3 Credits)
Provides a systematic introduction to the research base that characterizes effective practice and to the array of research methods that can be employed to study teaching and teacher development.

CUI 4033 The Practice of Teaching (3 Credits)
Course explores personal, conceptual, and empirical understandings of "teaching practice." Topics addressed have included: metaphors for teaching practice, best practices for equity and social justice, professional development practices.

CUI 4034 Curriculum & Cultural Context (3 Credits)
This course will address the influence of cultural, political, sociological, and economic factors on curriculum at the instructional, situational, societal, and ideological levels. Students should be interested and willing to explore these issues through readings and discussion. We will be exploring various perspectives, including our own, which inform the discussion on this critical area of education.

CUI 4035 Urban Education: Problems and Perspectives (3,4 Credits)
Focuses on the complex problems and unique possibilities that face teachers in culturally diverse urban schools. Students will consider both theoretical perspectives and practical, applied approaches as they explore the family, community and school environments, as well as their relationships to the academic success of children and youth in urban schools.

CUI 4036 Urban Education: History, Practice, and Systems (3 Credits)
This course examines urban education from several perspectives, including the social-psychological, the cognitive/creative, the physical and health-related, and the philosophical. We will explore the emerging field of youth development in an urban context, integrate theory and practice, and analyze youth policies and their implications. Cross listed with CUI 3996.

CUI 4037 Transformational Teaching and Learning (3 Credits)
This course takes an exploratory approach to the analysis of transformation teaching and learning. It asks questions such as “What are effective teaching and learning environments?” “For whom and under what circumstances?” “How can we create such environments?” We will explore how patterns of activities in the classroom can be designed to achieve simultaneously all of the major goals of educational reform. The term classroom is not restricted to the physical classroom space but “classroom” in the sense of the organized instructional activities that can extend outside of the school building into the community.

CUI 4038 Urban Youth Development (3 Credits)
A look into school reform movements, why most fail and only a few succeed.

CUI 4039 Instructional Design & Web Development for Educators (3 Credits)
Introduces presentation software, basic HTML, and web page development software. Focuses on various Learning, Instructional Design, and Learning Style Theories and how they relate to the development of technology supported pedagogy. Students will create individualized instructional web pages for use in practice.

CUI 4040 Development of Technology Enhanced Educational Environments (3 Credits)
Utilizing emerging Learning Theories and complex Instructional Design Theories, students will move into advanced educational web page development including designing with style sheets and layers. Several customized technology mediated lessons or professional projects will be created for use in practice. Various tools, designed to enhance learning environments, will be explored.

CUI 4041 School and Curricular Reform (3 Credits)
Under the supervision of the professor, students will generate technological applications relevant to their own work settings using ideas and concepts learned in CUI 4040.

CUI 4042 Technology Leadership (3 Credits)
Explores the role of ethics, values, social, legal, and power issues associated with technology in education. Analyzes how technology is transforming learning, equitable distribution of information, and the implications for providing optimal education to diverse learning populations.

CUI 4043 Curriculum & Instr Rsch Sem (0-3 Credits)
Students write proposals and learn about current relevant research in curriculum. Students learn about the proposal and dissertation process as well as current research in curriculum.

CUI 4044 Human Rights & Education (3 Credits)
Emphasis on human rights, both domestic and international, for the field of education; study of writings and research of leading educators encompassing concepts of human rights; focus on educational issues involving human rights, the Rights of the Child, work of UNICEF, and implications of human rights for educational practice. Cross listed with CUI 3055.

CUI 4045 Teacher as Researcher (3 Credits)
Emerging philosophical and methodological issues that arise when school practitioners undertake research within their own sites; range of research traditions including quantitative, statistical research and qualitative methodologies; mastering relevant skills and accessing resources for students to be better prepared to conduct their own inquiries and understand and solve problems.

CUI 4046 Clinical Internship (1-9 Credits)
CUI 4100 Sociocultural Foundation of Education (3 Credits)
Examination of the expanded conceptions of diversity to include difference based on ethnicity, biethnicity, and multiethnic identity; social class, differently-abled, age, gender, and sexual orientation; implications of terrorism on America for ethnically diverse populations in our schools and on educational establishments around the world; attention to the interactions of ethnicity with social class and gender identifications in the school setting; implications of the learning of another language as well as the impact of language diversity in our schools; consideration of new conceptual frameworks for multicultural and diversity education for educators for the 21st century.

CUI 4130 Philosophy of Education (3 Credits)
Focuses on 3-4 philosophers and examines the contributions their philosophical ideas have on education. Philosophers studied have included John Dewey, Cornel West, Nel Noddings and Maxine Greene.

CUI 4150 Sociology of Education (3 Credits)
Sociology of education emphasizes the importance of the process of socialization on education, the interactions of ethnicity, gender, and social class in education, the formal roles and statuses within the bureaucracy of the school, the informal or "hidden" curriculum, the system of higher education and comparative views of educational systems around the world, and the impact on teaching and schools in an era of terrorism. Objectives of this course: to apply major concepts and theories in sociology to the institution of education; to interpret the applications of sociological theory to the school and the broader educational enterprise; and for personal expansion of philosophy and worldview through humanistic and social science perspectives.

CUI 4153 Practicum: Curriculum and Instruction (1-5 Credits)
Designed to fit the educational needs of the individual student who may choose from a wide variety of practicum (internship) experiences, including teaching, curriculum development, museum internships or research projects in curriculum and instruction.

CUI 4155 Special Topics (1-10 Credits)
Special topics in the field of education.

CUI 4159 Educating Multiethnic Populations (3 Credits)
Emphasizing a worldwide view in considering how education should be delivered to children and youth for life in the 21st century, especially since the World Trade Center Disaster of September, 2001. It is incumbent on those in teaching to find creative policies for working together with those in government and business, strategies that acknowledge our human diversity within and overall context of equality and peacefulness. This begins with raising social justice issues in the classroom in ways that encourage students to openly examine difficult and personally challenging materials, facilitating communication and understanding between members of diverse and unequal social groups.

CUI 4160 Race, Class and Gender in Education (3 Credits)
Ethnicity, Class & Gender in Education applies the concepts and theories of social science disciplines - sociology, social psychology, anthropology, historical perspectives and philosophical orientations - to the inclusive examination of the issues of racism, classism, sexism, and homophobia in education. This course seeks to conceptualize ethnicity, gender and social class as interactive systems, not as separate and independent variables, that impact students, teachers, school systems and the educational enterprise. We examine educational systems and practices that historically have disadvantaged women and peoples of color and discuss strategies and techniques for empowerment of the members of these groups.

CUI 4161 Ethnicity, Gender & Diversity in the Curriculum (3 Credits)
The focus of this course is to examine and explore the complexities of teaching in contemporary educational settings in which the forces of sexism, racism and classism are found. In our society where wide diversity characterizes our student population, it has become an imperative to recognize difference and relate effective teaching to these conditions. Major trends and influences that are impacting the school curriculum are explored.

CUI 4170 Engaging Learners through the Arts (3-5 Credits)
This seven day institute is designed to engage participants in a challenging exploration of the creative process through workshops with professional artists in the disciplines of dance, visual arts, creative writing, music, and theatre, and to provide a greater understanding of the theory and practical applications of school reform.

CUI 4171 The Arts in Education: Stage II (3-5 Credits)

CUI 4172 Aesthetic Foundation in Education (3 Credits)
Educational enterprise from aesthetic viewpoints; examination of a number of aesthetic theories and exploration of implications for curriculum, teaching, and evaluation.

CUI 4180 History of Education in the United States (3 Credits)
Traces historical context and development of K-12 schools in the United States from initial discovery of North and South America by Europeans to the present; understanding through examination of central issues that strongly influenced our current educational systems - evolution of schools, religion, social and political reform, women's issues, nationalism and ethnicity, industrialization of the nation and world.

CUI 4400 Nature and Needs of Gifted Learners (3 Credits)
This course is designed to provide participants with an understanding of 1) conceptual foundations and definitions of giftedness, 2) how intelligence, creativity, and non-intelligence factors are related to giftedness, 3) the nature, development, types, and needs of gifted individuals, 4) principles and issues in the identification of gifted individuals, and 5) the major issues and tensions in the education of gifted and talented individuals. Lectures, discussions, and other class activities and assigned readings and projects will include topics such as the history and nature of the giftedness construct; theories of intelligence and creativity and their relationship to conceptions of giftedness; types of giftedness; the diversity of gifted individuals and their personal and educational needs; the role of identification in the education and development of gifted children and youth; and purposes and perspectives in gifted education.
CUI 4401 Psychological Aspects of Giftedness (3 Credits)
The psychological development of gifted children is examined through a study of current theories, models, research, and case histories. Understanding of psychological development creates a foundation for applications and practices that nurture the psycho-social-emotional development of gifted individuals. Specific topics include the psychological nature and needs of the gifted; perfectionism, stress, and underachievement; special issues for gifted boys and gifted girls; highly gifted; and pertinent theories of psychological development. Emphasis is placed on synthesis of theories and application to specific situations.

CUI 4402 Curriculum for Gifted Learners (3 Credits)
This course is designed to provide participants with an understanding of the conceptual foundations in the design and development of curriculum for gifted and talented students. Includes theories, models and processes for curriculum modification and curriculum design; strategies for adapting educational content, process, product, and learning environment based on the educational characteristics and needs of gifted learners; and curriculum design and development approaches that are effective in the intellectual and personal growth of gifted and talented learners. Content in this course is aligned with appropriate instructional strategies and techniques recommended for use with gifted and talented learners. Lectures, discussions, class activities, assigned reading and projects include topics such as a general overview of curricular principles and perspectives; critical analysis of general curriculum; issues of diversity in curriculum development and modification including cultural congruence; recommended models of curriculum development for gifted and talented learners; and national trends in gifted education.

CUI 4403 Instructional Strategies for Gifted Learners (3 Credits)
This course provides a basic understanding of how to adapt curriculum for gifted learners through various instructional strategies. Strategies studied include: acceleration, enrichment, differentiation, compacting, grouping, independent study, and service learning. By selecting instructional strategies based on assessed learner needs, educators can reach many types of gifted learners in their classrooms including gifted students of poverty and gifted learners of cultural and ethnic diversity. The objectives of this class are that participants: know about and be able to define instructional strategies that meet assessed academic and affective needs of gifted learners and be able to adapt curriculum for gifted learners using learned instructional strategies.

CUI 4404 Twice-Exceptional Students (3 Credits)
The purpose of this course is to acquaint the student with the various areas of exceptionalities typically encountered with gifted students and to provide classroom related techniques to assist the teacher in identifying and working with twice-exceptional children in an effective manner. Environmental, behavioral, motivational, emotional and educational needs are addressed. Legal responsibilities, parent communication and staff development will be emphasized.

CUI 4405 Practicum in Gifted Education (1-3 Credits)
Students wishing to earn credit for the Practicum in Gifted Education must complete an experience in three of the five areas (Teaching, Assessment, Administration, Research, or Policy). Students must submit a Practicum Proposal outlining the intended practicum experiences. This Proposal must be approved by the practicum faculty supervisor when the practicum experiences are begun.

CUI 4407 Current Issues in Gifted Education: Identification (3 Credits)
This course focuses on the screening and selecting of gifted and talented students. It is designed for practicing professionals - teachers, counselors, psychologists, and administrators - who must make decisions about the identification and serving of gifted and talented students. Course uses multiple assessments, both quantitative and qualitative, to identify gifted students within an increasingly diverse population (including culturally- and ethically-diverse, high-potential, linguistically-different students with unique affective needs as well as high-potential economically-disadvantaged students). Students will use data to diagnose educational needs, prescribe appropriate educational strategies and to incorporate appropriate identification strategies for identifying gifted and talented students. Legal responsibilities and parent communication as well as staff development are emphasized. Students are required to develop an identification model based on relevant theory and current practices to be used in their particular setting.

CUI 4408 Creativity: Theory & Practice (3 Credits)
The essence of innovation is creativity, in thought, process and outcome. Classic and current theories provide a foundation for analysis of the concept of creativity. This course is designed to provide participants with an understanding of 1) the conceptual foundations and definitions of creativity; 2) how intelligence, creativity, and non-intellective factors are related to the constructs of giftedness; 3) documented brain research underlying exceptional cognition and/or creativity; 4) principles and issues in the identification and appropriate programming for creative individuals; and 5) the multiple perspectives and manifestations of creativity. Salon discussion groups, lectures, class activities and assigned readings and projects focus on the history and nature of the construct of creativity, theories of creativity, the role of innovation and transformation, assessment and measurement tools, environmental support of the creative process and creativity, and teaching and learning applications.

CUI 4410 Prog Dev/Ldrshp/Comm Gifted Ed (3 Credits)
This course emphasizes the concepts and practices involved in development and management of school- and district-based programs for the special education of gifted and talented children and youth. The course leads to in-depth understanding of program components and systems, program planning and evaluation, program leadership, advocacy in gifted education, and communications. In addition, emphasis is placed on planning and development of staff development in relation to gifted children. This course includes extensive in-class discussion and field applications.

CUI 4411 Wkshp: Gifted & Talented Educ (2-3 Credits)
This course is designed to provide participants with an overview of the education of gifted and talented students. Areas of focus within the course include definitions of gifted and talented students, characteristics, educational and psycho/social needs, common identification methods and concepts and common practices in curriculum and instructional differentiation.

CUI 4417 Independent Study: Gifted Educ (1-3 Credits)

CUI 4450 Education and Psychology of Exceptional Children (3 Credits)
Characteristics of students with moderate needs and state criteria used to determine eligibility for special education population.
CUI 4451 Teaching the Exceptional Child (3 Credits)
This course provides a broad overview of the field of exceptionality and special education. Included are discussions of current issues and controversies in the field, characteristics, classification, diagnosis, and educational interventions for early childhood and school-aged children with high-incidence and low-incidence disabilities who have exceptional education needs. This course also explores the characteristics of students with various disabilities, the history of Special Education, The Individuals with Disabilities Education Act (IDEA) and its current implications, the Response to Intervention Model (RtI) and the Individualized Education Plan (IEP). Prerequisite: CUI 4450.

CUI 4452 Low Incidence Disabilities and Behavior Intervention (3 Credits)
This course reviews a wide range of neurodevelopmental disorders and low-incidence disabilities including fragile X syndrome and Fetal Alcohol Syndrome, along with syndromes associated with chromosomal deletions. Implications for assessment and intervention are outlined including diagnostic criteria, prevalence and treatment. Research on identification and treatment including state of the art interventions and assistive technology are addressed. This class also addresses theories, research, effective practices, and background information needed to implement successful behavior intervention programs for whole classroom management and for students identified with behavioral needs. Prerequisites: TEP 4010 and CUI 4451.

CUI 4453 Curriculum Adaptations and Assessments for Children with Disabilities (3 Credits)
This course applies theories, research, effective practices, and background information for assessment for students with disabilities, monitoring student academic progress, and transition planning for students exiting K-12 schools.

CUI 4455 Assessment of Students with Special Needs (3 Credits)
Theories, research, effective practices and background information needed to develop, implement, analyze, and apply assessment data for mild/moderate-needs students.

CUI 4457 Behavior Intervention (3 Credits)
Theories, research, effective practices, and background information needed to implement successful behavior intervention programs for mild/moderate-needs students.

CUI 4459 Curriculum, Collaboration, and Transitions in K-12 Schools (3 Credits)
Knowledge, techniques to develop independent skills for K-12 moderate/mild-needs students and transitions across grade levels.

CUI 4500 Elementary Literacy: Theory and Practice I (1-3 Credits)
This course provides an introduction and overview to the many components that make up a quality balanced literacy program. During the course students will analyze current research and theory in reading and writing instruction. This course will use students' classroom placements to create a foundational understanding on which to build solid literacy philosophy as well as instructional ideas and strategies.

CUI 4501 Elementary Literacy: Theory and Practice II (1-3 Credits)
This course is an extension of Elementary Literacy I and concentrates on the continued development of theories and practical strategies for teaching literacy in diverse classrooms. This course will supply K-6 teachers with the skills to assess student abilities, select appropriate instructional strategies, and design effective instructional programs that lead to increased listening, speaking, reading and writing achievement of all children.

CUI 4502 Elementary Science and Social Studies Methods for Cultural Linguistic Diversity (3-4 Credits)
This course will enable students to develop a deeper understanding of science and social studies content and curriculum in the elementary classroom. Students will explore a range of instructional materials and develop teaching strategies with the guidance of state content standards and research on effective classroom instruction for culturally and linguistically diverse students. This course will revolve around discussion of key questions in the following eight areas: The Role of Social Studies and Science; Instruction; Standards; Content Knowledge; Curriculum Integration; Technology; Culturally Responsive Pedagogy; Sheltered Instruction.

CUI 4503 Elementary Math Methods for Cultural Linguistic Diversity (3,4 Credits)
This course will prepare pre-service elementary teachers to engage students in mathematical learning activities guided by Colorado State Mathematics Content Standards and research. Pre-service teachers will develop an understanding of how students in the elementary grades construct meaning through active engagement in purposeful activities. In addition, students will develop an understanding of infusing best practice for culturally and linguistically diverse students into the math curriculum in terms of culturally relevant pedagogy and sheltered instruction. This course will revolve around the discussion of key questions in the following seven areas: Content Standards; Instruction; Assessment; Differentiated Instruction; Technology; Culturally Responsive Pedagogy; and Sheltered Instruction.

CUI 4504 Elementary Math, Science, and Social Studies Methods Cultural Linguistic Diversity (3 Credits)
This course prepares students to develop a deeper understanding of math, science, and social studies content and curriculum in the elementary classroom as guided by Colorado Model Content Standards and research on effective sheltered content instruction for culturally and linguistically diverse students, and differentiated instruction for diverse learners.

CUI 4505 Mathematics for Secondary Teachers (2,3 Credits)
In this class, prospective secondary teachers study fundamental mathematical ideas typically taught at the secondary level. Students learn about the five fraction sub-constructs and solve problems in all five areas. In addition, students study ideas that are fundamental to understand algebra. For instance, students learn how to build rules to represent functions. Finally, students learn about inquiry-based approaches to teaching that they can use in their secondary classrooms with their students.

CUI 4506 Mathematics for Elementary School Teachers I (2,3 Credits)
In this class, prospective elementary school teachers experience an in-depth look at the representations of rational numbers, including base-ten and decimal numbers, integers, fractions, and arithmetic operations on these sets. Problem solving is emphasized throughout. Students also learn about inquiry-based approaches to teaching that they can use in their classrooms with their students.
CUI 4507 Mathematics for Elementary School Teachers II (3 Credits)
In this class, prospective elementary school teachers study fundamental mathematical ideas typically taught in grades 5-8. Students learn about visualization and its importance in geometry. Students study geometric shapes and solve a variety of problems involving geometric shapes. In addition, students learn some fundamental ideas of measurement and study length, area, volume, dimension, error and precision. Students also solve problems involving area, learn about solid shapes, and solve volume and surface area problems. Finally, students learn about inquiry-based approaches to teaching that they can use in their classrooms with their students. Prerequisite: CUI 4506.

CUI 4508 Mathematics for Elementary School Teachers III (3 Credits)
In this class, prospective elementary school teachers study fundamental mathematical ideas typically taught in grades 5-8. Students learn about visualization and its importance in geometry. Students study geometric shapes and solve a variety of problems involving geometric shapes. In addition, students learn some fundamental ideas of measurement and study length, area, volume, dimension, error and precision. Students also solve problems involving area, learn about solid shapes, and solve volume and surface area problems. Finally, students learn about inquiry-based approaches to teaching that they can use in their classrooms with their students. Prerequisites: CUI 4506 and CUI 4507 or their equivalent courses.

CUI 4510 Adolescent Literacy (3 Credits)
This course provides secondary teacher candidates an understanding of the essential elements of adolescent literacy. Students learn how literacy develops in reading, writing, and oral language and will be able to relate this information to teaching reading and writing in all content areas for both middle school and high school students.

CUI 4511 Secondary Literacy: Reading and Writing Across Content Areas (1-6 Credits)
Students learn how literacy develops in reading, writing, and oral language and will be able to relate this information to teaching reading and writing in all content areas for both middle school and high school students. This course addresses specific strategies for assessing adolescent’s literacy skills/abilities and design appropriate literacy instruction in all content areas.

CUI 4520 Urban Education I: Diversity and Social Justice (1 Credit)
This class will address questions about multicultural and social diversity in the classrooms, curricular and pedagogical theories and practices, access and equity, and the politics of education.

CUI 4521 Urban Education II: School, Student, Family and Community Influences on Student Learning (2-4 Credits)
This course will consider how teachers are able to foster meaningful connections between the educational goals of the schools and the personal and cultural experiences of young people. Students will study the child in relation to family, school, and community, as well as the relationships between teacher and pupil. We will emphasize the cultural complexity of an urban society and pay special attention to ways that curriculum, language, and literacy affect school success.

CUI 4522 Urban Education III: Sources of Pressures and Possibilities in High Poverty Schools (2,3 Credits)
This course will focus on the sources of problems in high poverty schools and examine educational reform efforts that attempt to transform high poverty schools and classrooms.

CUI 4527 Supporting English Language Learners and Students with Special Needs Across Content Areas (3 Credits)
This course evaluates similarities and differences in theory, methods, approaches, and techniques in meeting the needs of diverse learners including English Language Learners, special needs, and/or gifted. Differentiated instruction, Sheltered instruction, and Response to Intervention (RTI) are key methodologies in meeting needs of diverse learners.

CUI 4529 Foundations of Education for Linguistically Diverse Learners (3 Credits)
This course will examine the essential knowledge and orientations educators must possess to effectively meet the needs of culturally and linguistically diverse (CLD) learners through the analysis of historical, political, ethical, and legal foundations of language education in the United States. This course will explore the immigrant experience and the experience of CLD learners in schools in order to understand how the psychosocial aspects of the immigrant experience can impact second language learning.

CUI 4530 Second Language Acquisition (1-3 Credits)
CUI 4531 Supporting English Language Learners Across the Curriculum (3,4 Credits)
This course will evaluate methods, approaches, and techniques in language teaching. This course will also explore classroom strategies and practices for content-area instruction through sheltered instruction, and socio-cultural context of second language acquisition in U. S. public schools including how teachers can support bilingualism, multilingualism, biculturalism, and multiculturalism in the mainstream classroom. Furthermore, this course will explore the needs of special education and gifted culturally and linguistically diverse learners.

CUI 4532 Culturally Responsive Pedagogy (3,4 Credits)
This course examines the intricate web of variables that interact in the effort to create culturally responsive pedagogy. It examines the need and establishes a definition for culturally responsive pedagogy; and includes an examination of one's conception of self and "others;" conception of social relations; and conception of knowledge teaching and learning in a culturally diverse context. Furthermore, it cultivates the practice of culturally responsive teaching as well as explores the reality of implementing cultural responsive pedagogy in an era of standardization. In sum, this course helps practicing teachers acquire the dispositions, cultural knowledge, and competencies to adapt their curriculum and instructional skills for culturally responsive classroom practice.
CUI 4533 Research Issues in the Education of Culturally and Linguistically Diverse Learners (3,4 Credits)
In this course, students will act as teacher-researchers in order to explore issues that impact the achievement of culturally and linguistically diverse learners. This course will allow students to use functional research tools that can inform practice and lead to better teaching and learning in urban schools, and access resources to enable educators to define and address challenges in their teaching. More importantly, classrooms will become sites for educational reform in that, essentially, educators will act as advocates for change.

CUI 4534 Language Teaching Lab (1 Credit)
This course will critically examine elements of best practice for culturally and linguistically diverse learners through formal observations of three exemplary teachers and evaluate their classroom practices, instructional strategies, assessment practices, and communication strategies. This course will apply our conceptual knowledge of first and second language acquisition and our knowledge of the foundations of the English language to critically analyze each classroom context.

CUI 4535 Language in Society and Schools (3,4 Credits)
This course will introduce students to the discipline of sociolinguistics, including ways language and society impact one another, and how this interaction is reflected in schools. The focus of this course will be on current sociolinguistic theory and research on language variation and its social, political, and cultural significance. Topics include bilingualism and multilingualism in society; formal and informal types of language discourse; language and dialect; cross-cultural communication; and ways language both reflects and creates such constructs as power, culture, gender, ethnicity, and social class. In addition, this course will explore language ideology and language policy and planning.

CUI 4536 Linguistic and Cultural Issues in Linking Assessment and Instruction (3-4 Credits)
This course expands the educators’ knowledge of the connection between data-based instruction and assessment. Educators assess student learning by utilizing strategies that provide continuous feedback on the effectiveness of instruction. Educators learn informal and formal assessment practices that promote student learning and achievement. Educators develop knowledge and understanding of initial assessment of culturally and linguistically diverse learners' skills and abilities in order to provide appropriate placement and instruction. Educators utilize native language tests to promote adequate placement/transition of students. This course also helps educators develop a framework to analyze and develop culturally responsive assessment practices in order to improve student achievement. Finally, this course integrates Response to Intervention (RTI) strategies to improve student assessment.

CUI 4537 Seminar & Practicum in LDE (1-6 Credits)
This course is to provide students with the opportunity to merge theory and practice in real classroom situations. This course is organized around two main components. The seminar consists primarily of discussions on connections between theory and practice. The practicum centers on educators’ own respective teaching contexts. Students in this course are required to “log” 200 hours of direct teaching with linguistically diverse learners. Under the supervision of a practicum advisor, students will be evaluated for evidence of mastery of LDES standards.

CUI 4538 Language, Literacy & Culture (3,4 Credits)
Attaining age-appropriate English literacy skills poses many challenges to culturally and linguistically diverse (CLD) learners. Educators must therefore develop proficiency in effective literacy instruction for CLD learners. Effective literacy instruction includes a repertoire of teaching practices designed to scaffold literacy and language across the content areas, and culturally relevant curriculum as an essential component to support the achievement of CLD learners. This course will focus on helping educators gain the necessary skills, orientations, and competencies to advance the literacy of CLD learners through linguistic and cultural knowledge.

CUI 4540 Curriculum, Instruction and Assessment: Theory and Practice I (1-3 Credits)
This is the first quarter of an academic year-long weekly seminar to foster reflective, research-based classroom practice. Teacher candidates will deepen their understanding of teaching and learning in contemporary schools through a guided teaching apprenticeship with a trained mentor teacher, focused observations of a myriad of classrooms, readings, interviews, discussions, critical writing, and presentations.

CUI 4541 Curriculum, Instruction, and Assessment: Theory and Practice II (1-4 Credits)
This is the second quarter of an academic year-long weekly seminar to foster reflective, research-based classroom practice. Teacher candidates will deepen their understanding of teaching and learning in contemporary schools through a guided teaching apprenticeship with a trained mentor teacher, focused observations of a myriad of classrooms, readings, interviews, discussions, critical writing, and presentations.

CUI 4542 Curriculum, Instruction, and Assessment: Theory and Practice III (1-4 Credits)
This is the third and final quarter of an academic year-long weekly seminar to foster reflective, research-based classroom practice. Teacher candidates will deepen their understanding of teaching and learning in contemporary schools through a guided teaching apprenticeship with a trained mentor teacher, focused observations of a myriad of classrooms, readings, interviews, discussions, critical writing, and presentations.

CUI 4543 Educational Psychology: Learning and Development (1-3 Credits)
This course focuses on theories of learning and development, including behaviorism, cognition in context, and sociocultural perspectives, among others, as well as practical application of those theories. Issues of classroom management and student motivation are explored within the context of these theories.

CUI 4544 Ed Psych: Exceptional Child (1-3 Credits)
The focus of this course is on educating children and adolescents with special needs in the general education classroom. The intent is to enable future educators to better serve the needs of these children in their classrooms. Topics such as the special education process, information on specific disabilities, accommodations and modifications, behavior issues, mental health, and communicating with parents will be addressed.
CUI 4545 Perspectives on American Education I (1-3 Credits)
We expect that students will complete this 2-quarter-long class with an appreciation for and commitment to critical reflection, collegiality, ongoing professional growth, and educational reform. Through readings, reflective writing and activities, role-plays, case discussions, community-based field work, visits to a myriad of schools and classrooms, and guest presentations, we expect students to recognize and wrestle with the complexity that characterizes teaching in American society. Four central and recurring themes for this course include: democratic foundations of public schools, apprenticeship of observation, teaching as vocation, and the moral dimensions of teaching.

CUI 4546 Perspectives on American Education II (2 Credits)
We expect the students will complete this 2-quarter-long class with an appreciation for and commitment to critical reflection, collegiality, ongoing professional growth, and educational reform. Through readings, reflective writing and activities, role-plays, case discussions, community-based field work, visits to a myriad of schools and classrooms, and guest presentations, we expect students to recognize and wrestle with the complexity that characterizes teaching in American society. Four central and recurring themes for this course include: democratic foundations of public schools, apprenticeship of observation, teaching as vocation, and the moral dimensions of teaching.

CUI 4590 History and Philosophy in Mathematics Education (3 Credits)
Introduction to the effective integration of history and philosophy of mathematics into mathematics education.

CUI 4610 Learning and Teaching of Mathematics (3 Credits)
Introduction to foundational research literature on learning and teaching in mathematics education.

CUI 4620 Research on Diversity, Equity, and Social Justice in Mathematics Education (3 Credits)
Introduction to research related to issues of diversity, equity, and social justice in P-16 mathematics curriculum, instruction, and assessment.

CUI 4630 Learning Mathematics: Early Childhood (3 Credits)
Development of theories, materials, and methods used to teach mathematics in preschool to grade two and develop abilities in their use.

CUI 4640 Improving Elementary Math Instruction (3 Credits)
Teacher development of elementary mathematical content, pedagogy, curriculum, attitudes and power, and collaboration.

CUI 4640 Foundations of Education: Cognitive Theory I (3 Credits)
Introduction to cognitive research in education. Includes theories and research regarding the implementation of these theories in specific curricula.

CUI 4650 Foundations of Education: Cognitive Theory II (3 Credits)
Second course in cognitive research in education. Includes theories and research regarding the implementation of these theories in specific curricula. Prerequisite: CUI 4700.

CUI 4670 Discourse in the Mathematics Classroom (3 Credits)
The study of discourse as it relates to mathematics teaching and student learning.

CUI 4670 Mathematics and Instructional Technology (3 Credits)
Introduction to the principles of effective use of technology in mathematics instruction.

CUI 4680 Policy and Mathematics Education (3 Credits)
Introduction to educational politics and how those policies have influenced and continue to influence mathematics education.

CUI 4690 Seminar on Race in Mathematics Education (3 Credits)
Seminar course for advanced doctoral students on issues of race and mathematics education in the US.

CUI 4690 Education in International Settings (3 Credits)
Objectives of this course include: viewing education in the 21st century as cross-cultural and international; examining the role of schooling in shaping national identity and citizenship in nation-states around the globe; and identifying promising practices and exemplary curriculum material for teaching cross-cultural perspectives and world awareness.

CUI 4991 MA Independent Study (1-10 Credits)

CUI 4992 Directed Study (1-10 Credits)

CUI 4995 Research - M.A. Thesis (1-10 Credits)

CUI 5991 PhD Independent Study (1-10 Credits)

CUI 5992 Directed Study (1-10 Credits)

CUI 5994 Seminar in Dissertation Organization and Research (1-5 Credits)
Individualized assistance in developing the dissertation topic, issue, problem; guidance in preparation for proposal orals and application to the Institution Review Board (IRB), direction for dissertation chapter organization, writing and completion. This seminar is targeted for the student who needs support in completing the dissertation.

CUI 5995 Dissertation Research (1-10 Credits)

Teacher Ed Prep Courses

TEP 4004 Math Concepts for Teachers (5 Credits)
TEP 4010 Education and Psychology with Special Children (2-4 Credits)
This course serves as the foundation for understanding children with special needs and the laws and policies that support them. Each teacher needs to be responsive to the needs and experiences children bring to the classroom, including those based on culture, community, ethnicity, economics, linguistics, and innate learning abilities. This course covers the foundations for learning exceptionalities and conditions that affect the rate and extend of student learning, and will provide strategies for adapting instruction for all learners. This course introduces the classroom teacher's role in implementing an IEP and in working with families. Characteristics of students with various disabilities, the history of Special Education, The Individuals with Disabilities Education Act (IDEA) and its current implications, the Response to Intervention Model (RtI) and the Individualized Education Plan (IEP) are also addressed.

TEP 4012 Adolescent Development Overview (2-4 Credits)

TEP 4561 Elementary Curriculum I (4-6 Credits)
Focuses on teaching and learning in the K-6 classroom and prepares teachers to design and implement effective classroom instruction. Frequently covered topics include: standards-based instruction, approaches to assessment, effective teaching strategies, sound lesson/unit planning, interdisciplinary instruction, individualizing instruction, technology, multicultural curriculum. Prerequisite: enrollment in the Teacher Education Program.

TEP 4562 Elementary Curriculum II (4-6 Credits)
Continuation of TEP 4561. Both must be completed for students planning to teach in elementary schools. Prerequisite: enrollment in the Teacher Education Program.

TEP 4581 Elementary Music Methods (3-6 Credits)
Prepares K-12 music teachers to design and implement effective instruction in the elementary school music classroom. Course introduces full array of sound teaching and assessment strategies for all aspects of music. Prerequisite: enrollment in the Teacher Education Program.

TEP 4582 Secondary Music Methods (3-4 Credits)
Prepares K-12 music teachers to design and implement effective instruction in the secondary school music classroom. Course introduces full array of sound teaching and assessment strategies for all aspects of music instruction. Prerequisite: enrollment in the Teacher Education Program.

TEP 4590 Literacy Instruction (3,4 Credits)
Introduces developmental continuum for literacy. Prepares to assess students’ abilities, to select appropriate instructional strategies and to design effective instructional programs leading to increased listening, speaking, reading and writing competencies for all children. At the elementary level, focuses on balanced approach to literacy instruction. At the secondary level, emphasizes reading and writing in the content areas and assistance of the struggling reader/writer. Prerequisite: enrollment in the Teacher Education Program.

TEP 4600 Introduction to Secondary Methods (3-6 Credits)
Provides general introduction to principles of effective secondary instruction curriculum design and assessment. Frequently covered topics include: design of classroom environments, comparison of different instructional practices, purposes for and approaches to assessment, comparison of middle and high school philosophies, introduction to instructional unit plan development, and theories of instructional approach and design. Course lays a foundation for more specialized subject-matter methods courses. Prerequisite: enrollment in the Teacher Education Program.

TEP 4610 English in Secondary School (3-5 Credits)
Trends and developments in teaching English Language Arts. Frequently covered topics include: standards-based instruction, technology, subject-matter specific approaches to assessment, instruction and curriculum design. Course builds upon foundation laid in Introduction to Secondary Methods. Prerequisite: enrollment in Teacher Education Program.

TEP 4620 Social Science in Secondary School (3-5 Credits)
Trends and developments in teaching Social Science. Frequently covered topics include: standards-based instruction, technology, subject-matter specific approaches to assessment, instruction and curriculum design. Course builds upon foundation laid in Introduction to Secondary Methods. Prerequisite: enrollment in Teacher Education Program.

TEP 4630 Science in Secondary School (3-5 Credits)
Trends and developments in teaching science. Frequently covered topics include: standards-based instruction, technology, subject-matter specific approaches to assessment, instruction and curriculum design. Course builds upon foundation laid in Introduction to Secondary Methods. Prerequisite: enrollment in Teacher Education Program.

TEP 4640 Math in Secondary School (3-5 Credits)
Trends and developments in teaching math. Frequently covered topics include: standards-based instruction, technology, subject-matter specific approaches to assessment, instruction and curriculum design. Course builds upon foundation laid in Introduction to Secondary Methods. Prerequisite: enrollment in the Teacher Education Program.

TEP 4650 Foreign Language Methods in K-12 Schools (3-5 Credits)
Trends and developments in teaching foreign languages in K-12. Course content includes methods and materials of standards-based instruction, classroom and instructional management, assessment strategies, designing lessons using multiple intelligence and differentiated instruction, using technology in instruction, and integration of other content areas in teaching foreign language. Prerequisite: enrollment in Teacher Education Program.

TEP 4690 Field Experience (1-12 Credits)
Involves field experiences, including full-day teaching for 12 weeks in elementary or secondary school classroom and regularly scheduled seminar discussions with supervisor. Prerequisite: enrollment in the Teacher Education Program.
**TEP 4781 Elementary Art Methods (3-6 Credits)**
Prepares K-12 art teachers to design and implement effective instruction in elementary school classrooms. Course introduces full array of sound teaching and assessment strategies for all aspects of art. Prerequisite: enrollment in the Teacher Education Program.

**TEP 4782 Secondary Art Methods (3-4 Credits)**
Prepares K-12 art teachers to design and implement effective instruction in secondary school classrooms. Course introduces full array of sound teaching and assessment strategies for all aspects of art. Prerequisite: enrollment in the Teacher Education Program.

**TEP 4991 Independent Study (1-10 Credits)**

**TEP 4992 Directed Study (1-10 Credits)**

**TEP 4995 Independent Research (1-10 Credits)**

---

**Educational Leadership and Policy Studies**

The Educational Leadership and Policy Studies program prepares courageous, visionary and transformative leaders in educational settings at all levels of the education system. To achieve this, we offer intensive and integrated academic and field-based experiences and competency-based learning that develop and support students as they obtain effective leadership competencies. Our national networks and partnerships with the Alliance to Reform Educational Leadership (AREL), University Council of Educational Administration (UCEA), Wallace Foundation, New York City Leadership Academy, Teach for America, Colorado Association of School Executives (CASE) help us to continuously improve our work to prepare transformative educational leaders. Our students focus on leadership, policy studies and research that are relevant and appropriate for meeting tomorrow’s educational challenges. All of our programs engage students in rigorous content, collaborative inquiry, and reflective practice within a tightly connected cohort structure that intentionally builds learning communities and professional networks. We partner with individuals, schools and districts to build leadership capacity and improve educational contexts.

- Lead change in K-12 education as a principal, administrator, researcher or policymaker
- Learn through integrated academic and school-based experiences and projects
- Create learning communities that foster academic achievement and optimal growth and development for all learners
- Focus on leadership, policy studies and research that are relevant and appropriate for meeting tomorrow’s educational challenges

**Certificate in Educational Leadership & Policy Studies with a concentration in Principal Licensure**

The certificate Educational Leadership and Policy Studies with a concentration in Principal Licensure offers two cohort models that lead to recommendation for Colorado Principal Certification: the Ritchie Program for School Leaders (Ritchie) and Executive Leadership for Successful Schools (ELSS). Both models offer competency-based learning that can be individualized to the leadership needs of the aspiring leader and the needs of the school. Both models focus not only on developing the skills and abilities necessary for success as a school leader, but also on developing a strong commitment to core values essential for ethical and responsible leadership.

The certificate consists of four quarters of coursework (begins and ends in June) and requires a minimum of 300 internship hours that are integrated with coursework. The program can be completed as a certificate and/or combined with additional coursework for a master’s degree.

The cohort structure promotes the development of a rich learning community for collaboration and challenge with many different opportunities for interaction and analysis. Each quarter incorporates face-to-face sessions, inquiry projects, self-assessments, various online learning activities including discussion boards and reflection journals, as well as readings to guide instruction and learning.

**Program Accreditation**

Colorado Department of Education (CDE) Approved Educator Preparation Program. Graduates may apply for Colorado Initial Principal License (http://www.cde.state.co.us/cdeprof/Licensure_Prin_req.asp) through the Colorado Department of Education (CDE).

**Master of Arts in Educational Leadership & Policy Studies with a concentration in Principal Licensure**

The MA in Educational Leadership and Policy Studies with a concentration in Principal Licensure is designed to be completed the year following the principal preparation certificate program and offers extended study of educational measurement, social justice, and fiscal leadership. The MA is a total of
45 credit hours - the Educational Leadership and Policy Studies with a concentration in Principal Licensure program (30 or 32 credits) and four additional courses (15 credits). The completion of the MA culminates with the design and execution of an action research project.

Program Accreditation
Colorado Department of Education (CDE) Approved Educator Preparation Program. Graduates may apply for Colorado Initial Principal License (http://www.cde.state.co.us/cdeprof/Licensure_Prin_req.asp) through the Colorado Department of Education (CDE).

Doctor of Education in Educational Leadership & Policy Studies
This 65-credit-hour degree program builds on prior leadership preparation and/or a Master’s degree in a leadership related program and is designed for individuals interested in pursuing advanced leadership and inquiry skills to impact practice. The program consists of two years of coursework beyond the master’s (two courses/quarter; one research and one content course) and the completion of a Doctoral Research Project (DRP). The Doctoral Research Project is independent research regarding a persistent, complex Problem of Practice with a supportive structure of quarterly research seminars. Students have the option of completing a 300 hour Superintendency Internship.

Applicants must hold a Master’s degree in an education-related field, and have completed principal, teacher-leadership, or other leadership preparation.

Program Accreditation
Colorado Department of Education (CDE) Approved Educator Preparation Program. Graduates who have completed the Superintendency Internship may apply for Colorado Initial Administrator (Superintendent) License (http://www.cde.state.co.us/cdeprof/Licensure_Prin_req.asp) through the Colorado Department of Education (CDE).

Doctor of Philosophy in Educational Leadership & Policy Studies
The 90-quarter-credit hour-program beyond a master's degree is designed for individuals interested in acquiring advanced research skills and content expertise. The program consists of the foundational doctoral coursework of the EdD (two courses/quarter; one research and one content course), and a third year of coursework specializing in a research methodology and a specialized focus of study. PhD students complete a traditional dissertation with the option of completing a 300 hour Superintendency Internship.

Program Accreditation
Colorado Department of Education (CDE) Approved Educator Preparation Program. Graduates who have completed the Superintendency Internship may apply for Colorado Initial Administrator (Superintendent) License (http://www.cde.state.co.us/cdeprof/Licensure_Prin_req.asp) through the Colorado Department of Education (CDE).

Certificate in Educational Leadership & Policy Studies with a concentration in Principal Licensure
Certificate Cohort Options for 2014-2015
Denver Public Schools Partner Cohorts – DPS Ritchie Program for School Leaders (Ritchie) & Executive Leadership for Successful Schools (ELSS)
Executive Leadership for Successful Schools (ELSS) – Main Campus Cohort
Executive Leadership for Successful Schools (ELSS) – Aurora Public Schools Cohort
Ritchie Program for School Leaders – Adams County Schools Cohort

CERT Cohort Application requirements
• University of Denver Online Application for Graduate Admission
• One (1) Official Transcript from all colleges and universities attended
• Current Professional Resume
• Essay
• 2 Letters of Recommendation
• $65 Application Fee: The application fee may be paid with a credit card only at the time of submission. The application fee may also be paid on a bank draft or personal check drawn from a U.S. bank.

CERT Cohort Application Deadlines for 2014-2015
• Ritchie and ELSS – DPS Partnership Cohorts – December 6
• ELSS – Campus - April 1
• ELSS – Aurora Public Schools – April 1
• Ritchie – Adams County Schools – April 1
• ELSS - Mountain - ongoing

**Total Credits**

90
interaction between leader, followers and situation and where power and influence affect leader-follower relationships.

ADMN 4822 Leadership in Complex Systems (3 Credits)

Roles, responsibilities and behaviors of successful leaders in complex systems; development of understanding and skills that can be used in dealing with many complex issues that face school administrators of the 21st century; functioning effectively in a complex environment where leadership is an interaction between leader, followers and situation and where power and influence affect leader-follower relationships.

ADMN 4820 School Administration: Case Studies (3 Credits)

Focus on current critical aspects of work of effective superintendents and other administrators in key decision-making roles; includes reading, discussions and guest presenters who are practicing administrators; problem scenarios presented for resolution.

ADMN 4819 Organization Theory & Behavior (3 Credits)

Educational institutions are complex, political organizations with a wide variety of constituents and many layers of sometimes competing cultures, systems, and explicit and implicit goals. Leaders who work with these systems must find ways to make meaning of the organization and the context in which work occurs. This course will look at organizational behavior from several points of view, with the goal of understanding major theories that have been developed and learning to apply these theories in the management and study of organizations. The roles and responsibilities of various members of the organizations will be examined as well as the governance and control issues surrounding education. Organizational analysis will be viewed through the lens of structural, political, human resource and symbolic frames.

ADMN 4820 School Administration: Program and Evaluation (3 Credits)

The purpose of this course is to review theories of program evaluation, evaluation designs and analysis, and current trends in evaluation. Program evaluation aims to determine whether a program, regulation, or policy is achieving its objectives by ascertaining whether it had the desired effect on intended outcomes. The evaluation process may include evaluation of programs, products, personnel, policy, performance, proposals, technology, research, theory, and even of evaluation itself. The course equips students with basic evaluation tools and understandings necessary to be thoughtful consumers and effective users of program evaluations in improving policy outcomes and designing more effective programs and policies. It is designed to provide students with the meaning and methods of program and policy instrument evaluation in education with the intent to contribute to informed decision making and enlightened change. Students analyze evaluations of the effectiveness of a variety of programs through discussion, field work, and case studies.

ADMN 4821 School Reform and Current Educational Issues (3 Credits)

An introduction to contemporary issues and theories of educational administration. Overview of major educational administrative and organization trends currently unfolding. These trends are analyzed for validity, education soundness, and leadership implications. Students will also take a closer look at the concept of school reform and the various efforts towards this endeavor.

ADMN 4822 Leadership in Complex Systems (3 Credits)

Roles, responsibilities and behaviors of successful leaders in complex systems; development of understanding and skills that can be used in dealing with many complex issues that face school administrators of the 21st century; functioning effectively in a complex environment where leadership is an interaction between leader, followers and situation and where power and influence affect leader-follower relationships.
ADMN 4823 Educational Policy Making in the United States (3 Credits)
Designed to give educational leaders a foundation in understanding how policy is created. The course examines decision making and the growth of state and federal powers and policy making; the role of state board, the governor’s and legislature’s significance; the role and power of associations and their impact on decision-making; the changing nature of local boards of education; law making and setting of educational policies using Colorado and legislative process as examples.

ADMN 4827 Foundations of Educational History and Philosophy (3 Credits)
This foundational course examines the various theoretical, ethical, historical and philosophical perspectives that will inform educational leaders as policy and change strategies are formulated.

ADMN 4828 Leadership for the 21st Century: Using Creativity to Build Effective Schools (3 Credits)
Designed to assist leaders, at the district or building level, in the implementation of standards-based education to improve student learning and achievement. Primary emphasis is given to applying strategies for addressing critical issues in sustaining the equitable access to learning in a standards-based educational organization.

ADMN 4829 Instructional Leadership (2 Credits)
Serves prospective principals in the development and application of skills and knowledge associated with curriculum planning, development, assessment and program evaluation. Curriculum issues are examined from various contexts to enable students to understand how external demands influence curriculum decisions. Participants are assisted in developing an understanding of issues of diversity and multiculturalism and their influence on the development and supervision of the curriculum. Although the major focus is on local aspects of standards-based education, some attention is given to the national role in this area.

ADMN 4830 Student Supports and Services (3 Credits)
Considerable attention will be given to the examination of the needs of the individual student in the learning environment as well as research on child development, learning styles, brain-based learning theories and models of teaching. Primary focus areas are supports for special education students, English language learners, gifted students, and students in poverty.

ADMN 4831 Instructional Supervision and Evaluation (3 Credits)
Study and application of a variety of approaches for supervising and evaluating instruction, including approaches to classroom observation; adapting, adopting, and designing various evaluation systems; advantages and problems of various student achievement and engagement indicators; induction, mentoring, and peer support systems; and leading professional development for self and staff.

ADMN 4833 Strategic Resource Management for Schools (3 Credits)
School-site budgeting and accounting practices; resourcing the new school; how schools are funded; relationship of other resource decisions (such as scheduling) to the school operation; grant writing and fundraising.

ADMN 4834 Seminar in Multicultural Issues (4 Credits)
Extends understanding of complex systems’ operations and responses by examining multicultural issues in the historical and social context and complexity of schools and school districts. Opportunities will be provided for students to develop an understanding of issues of diversity and the relationship of these issues to the roles and work of school/district administrators. The exploration of multicultural issues will occur through the examination of various themes relative to school/district administration such as curriculum, administration, human resources, policy and reform. Particular emphasis will be given to the exploration of the historical and future purposes of schooling in a democratic/pluralistic society in an effort to help students to develop critical knowledge and skills essential for providing leadership in 21st century schools.

ADMN 4835 Curriculum Instruction and Student Achievement (3 Credits)
This course will examine educational practices that are meeting success as schools and districts attempt to learn, grow, and reinvent themselves using the principles of organizational learning. Participants will understand basic systems theory and gain practical and theoretical tools to improve curriculum development, instruction, and student achievement.

ADMN 4836 Improving School Culture (3 Credits)
School culture is a complex and challenging issue for most school leaders to shape and manage. The culture of school means many things that will be addressed in this class including school climate, parent engagement, teacher engagement, student connectedness, culturally competent practices, positive youth development, and the quality of human relationships in the school environment. This course will enable school leaders to look in depth at their schools in order to assess its culture, develop specific plans to create a climate of authentic relationships among students, parents, staff, and community.

ADMN 4838 Educational Leadership in a Digital Age (3 Credits)
This course is based upon the National Technology Standards for administrators. Students will develop their own personal technology skills and be exposed to the latest technological resources for school administrators. Participants will explore the latest efforts related to data-driven decision making for enhancing student performance and the integration of technology into the curriculum.
ADMN 4840 Strategic and Transformative School Leadership (7 Credits)
Effective school administration is guided by research and best practices which inform governance, vision, leadership, and implementation processes. Effective principals base their work on commitment to moral principles, core values, and the many dimensions of effective theory and practice. Understanding personal values, developing leadership skills and building a strong knowledge base regarding research and best practice are a key focus of the course. In addition, this course also examines strategies for visioning, mission building and branding; defining and assessing value and quality; developing competitive strategy; building networks and partnerships; assessing risk and gauging opportunity; building systems and sustainability; recruiting and developing staff, boards and stakeholders; engaging communities; and acquiring sources of funding. Students must be accepted into an ELPS certificate or MA program.

ADMN 4841 Instructional Leadership for Equitable Schools (7 Credits)
This course serves aspiring principals in the development and application of skills and knowledge associated with standards-based instructional practices, curriculum planning and development, assessment, and program evaluation. Students are assisted in developing and understanding issues of diversity and multiculturalism and their influence on the development and supervision of the instructional program. Although the major focus is on local aspects of standards-based education, some attention is given to the national role in this area. School leaders need to apply quantitative and qualitative research skills in a variety of ways to understand and improve the work of schools. This course reviews methods, applications, and data sources, including assessments and large-scale datasets, for continuous school improvement and program evaluation. In addition to the issues of instructional leadership, considerable attention is given to the examination of the needs of the individual student in the learning environment as well as research on learning styles, learning theories and models of teaching. Primary focus areas are supports for special education students, English Language learners, gifted students, and students in poverty. Students must be accepted into an ELPS certificate or MA program.

ADMN 4844 Cost Benefit Analysis for Educational Systems (4 Credits)
This course introduces students to theories and methods of analyzing resources used and benefits gained from educational programs, policies, and organizations. Prerequisites: Introductory Statistics; acceptable Program Evaluation course.

ADMN 4845 Network and Systems Analysis for Educational Settings (4 Credits)
This course works with a variety of applied research methods for analysis of networks, systems, and program and policy impacts, with a focus on education and community/social services settings. Prerequisites: Introductory Statistics; acceptable Program Evaluation course; acceptable Policy course.

ADMN 4846 Business Administration for School Leaders (3 Credits)
Schools are a large and complex business. This course will equip students with the knowledge and skills needed to lead a school or school district. Key topics will include school management, human resources, organizational change, entrepreneurship, and bargaining.

ADMN 4849 Action Research for School Leaders (4 Credits)
This course emphasizes the use of research methods which are linked to research needed in schools. Students will learn to identify, analyze and solve problems. Some of the action research methods include focus groups, interviews, observations, school records and surveys. Capstone project will relate directly to the improvement of school policy and practice.

ADMN 4859 Action Research Capstone (1 Credit)
Provides support for students as they develop their action research project into the Capstone for the Masters in Educational Administration.

ADMN 4860 Principal Internship (2 Credits)
The purpose of a formal internship with a principal is to participate in supervised practical training in many of the aspects of school building administration. It is imperative that an applicant have as many first hand experiences as possible in all phases of building administration which focus upon the standards set for principals in Colorado. Must be accepted into an ELPS certificate or MA program.

ADMN 4991 MA Independent Study (1-10 Credits)
ADMN 4992 Directed Study (1-10 Credits)
ADMN 4995 Research - M.A. Thesis (1-10 Credits)

ADMN 5100 Data Use for School Improvement (2 Credits)
School leaders need to apply quantitative and qualitative research skills in a variety of ways to understand and improve the work of schools. This course reviews methods, applications, and data sources, including assessments and large-scale datasets, for continuous school improvement and program evaluation.

ADMN 5991 PhD Independent Study (1-10 Credits)
Special projects in the field of education, taken by arrangement of Educational Administration faculty.

ADMN 5992 Directed Study (2-10 Credits)

ADMN 5993 Doctoral Research Seminar (1-4 Credits)
The Doctoral Research Seminar is designed to prepare students to undertake the completion of doctoral research or a dissertation. The research process can often be confusing and overwhelming, especially for students coming from a cohort-based program. This course assists students in turning a research idea into the EDD doctoral research project or a polished dissertation proposal and provides students strategies for making the process manageable and enjoyable.

ADMN 5995 Dissertation Research (1-10 Credits)
Higher Education

Office: Morgridge Office of Admissions
Mail Code: 1999 E. Evans Avenue, Denver, CO 80208
Phone: 303-871-2509
Email: edinfo@du.edu
Web Site: http://morgridge.du.edu/programs/higher-education/

The Higher Education program's mission is three-fold:

1. Prepare social justice professionals for careers in postsecondary education related to administration, policy, teaching and research, as well as careers in public and private agencies of higher education, for-profit and not-for-profit settings, and in a multicultural and changing world
2. Conduct equity-based research about persistent and/or timely problems facing postsecondary education
3. Provide meaningful service to the University of Denver and broader Colorado community in matters pertaining to postsecondary education, especially related to equity, diversity and social justice

The Higher Education Program (HED) is an “Inclusive Excellence Unit” (www.aacu.org) and supports the concept that inclusiveness and excellence are one and the same. That is, students and instructors from diverse social and cultural backgrounds who become part of the program all bring unique gifts, talents and experiences that make tremendous contributions to the teaching, learning and climate of the Higher Education Program.

Master of Arts in Higher Education

The HED Master’s program is designed to prepare professionals for administrative, leadership, student-centered, and/or policy-focused careers in postsecondary institutions, private and public agencies of higher education, and other educational settings. This “generalist” program enables students to explore the academic and practitioner-oriented issues related to postsecondary settings and to expand their experiential awareness through practical activities in administration, teaching, policy, and research.

Cohort

Students enter and move through the program as part of a cohort.

Program Accreditation

The University of Denver is accredited as a doctoral degree-granting institution by the Higher Learning Commission (HLC) of the North Central Association (NCA), which is one of six regional educational accrediting bodies recognized by the federal government. The HLC covers a nineteen state (mostly western and Midwestern) area, and over 1,000 institutions of higher learning hold membership in the Association. DU received its first accreditation in 1914 and has maintained accreditation since that time.

Last HLC accreditation visit: 2010
Next HLC accreditation visit: 2021

Doctor of Education in Higher Education

At the doctoral level, students gain knowledge and demonstrate competence through coursework, a doctoral comprehensive exam (also known as the preliminary oral examination), and the completion of a doctoral research project, defended in a final oral examination. The successful final orals and graduation are statements of academic and professional competence in higher education.

Socialization and orientation to the program is carried out during a required year-long seminar. The Doctoral Pro-seminar (HED 4291, 3 cr.) is designed to address socialization and orientation needs of all Higher Education doctoral programs. The seminar combines a variety of pedagogical tools to orient and socialize students into the advanced study of higher education.

The 65 quarter credit hour program requires students complete a comprehensive exam paper and dissertation. A master's degree is required.

Program Accreditation

The University of Denver is accredited as a doctoral degree-granting institution by the Higher Learning Commission (HLC) of the North Central Association (NCA), which is one of six regional educational accrediting bodies recognized by the federal government. The HLC covers a nineteen state (mostly western and Midwestern) area, and over 1,000 institutions of higher learning hold membership in the Association. Last HLC accreditation visit: 2010
Next HLC accreditation visit: 2021

Master of Arts in Higher Education

- Online Application for Graduate Admission
- One (1) official transcript from each college/university where at least 1 credit has been earned, mailed directly to DU
- 2 Letters of Recommendation (uploaded online by recommender)
- Statement of Professional Goals
- Current Vita/Resume
- $65 Application Fee: The application fee may be paid with a credit card at the time of submission. The application fee may also be paid on a bank draft or personal check drawn from a U.S. bank.

Doctor of Philosophy in Higher Education

- Online Application for Graduate Admission
- One (1) official transcript from each college/university where at least 1 credit has been earned, mailed directly to DU
- Graduate Record Exam (GRE) official score report (taken within the last 5 years). PhD only - GRE is not required for EdD applicants.
- 3 Letters of Recommendation (uploaded online by recommender)
- Statement of Professional Goals
- Current Vita/Resume
- $65 Application Fee: The application fee may be paid with a credit card at time of submission. The application fee may also be paid on a bank draft or personal check drawn from a U.S. bank.

**Non-coursework requirements**

- practicum experience
- internship experience
- successful completion of a capstone project

**Emphasis requirements**

Elective coursework allows students to complete an optional emphasis in one of three areas:

1. College Student Affairs
2. Diversity and Higher Learning
3. Leadership and Organizational Change.

In order to complete an emphasis, nine of the 15 elective credit hours need to be taken from a menu of courses affiliated within the emphasis area, as denoted in the course work plan.
The College Student Affairs emphasis enables students to gain knowledge about higher education and student development. Students will develop skills for supporting diverse student populations and experience practica and internships in student-related areas. The College Student Affairs concentration is intended for individuals interested in positions in college/university student services and other organizations focused on college student success.

The Diversity and Higher Learning emphasis is designed for students with a special interest in diversity, social justice, access, and equity. Structured around courses that provide both theoretical and practical skills, this emphasis is intended for future scholars and practitioners interested in enhancing diversity, access, and equity in organizations; faculty and staff development in P-20 educational institutions; trainers in for-profit companies and not-for-profit agencies; and administrators and faculty in two-year and four-year higher education institutions. This emphasis places a great deal of emphasis on developing critical understanding of the impact that social identities (e.g., race, class, and gender) have on collective and individual learning in organizations. Students who currently work in or intend to pursue careers in multicultural affairs, curriculum development, university instruction, university administration, consulting, or training will find this emphasis a good fit.

The Leadership and Organizational Change emphasis prepares experienced professionals to assume greater responsibility, pursue longer-term career goals, or change their emphasis in higher education administration. This concentration has been especially designed for individuals working in or seeking to understand postsecondary education in a changing multicultural and global society. Experienced professionals who are interested in enhancing their careers will discover that this program challenges them to discover and strengthen an array of skills essential for success: analytical, communication, multicultural competence, and leadership. The Leadership and Organizational Change emphasis enables participants to link professional knowledge and research with the world of practice in postsecondary education, nonprofit or non-governmental organizations, foundations, think tanks, research institutes and the private sector.

**Capstone**

Students complete the capstone project under the direction of a faculty advisor. A field site supervisor is brought on to help adjudicate the final product. The capstone project proposal must be completed at least two quarters prior to the quarter in which the student plans to graduate. Any deviation from this requires written approval from the Program Coordinator.

Students enrolled in the HED MA program will complete a capstone project as the final degree requirement. The purpose of the capstone project is to synthesize the information gained through HED coursework. After approximately 18-24 quarter hours of course work has been completed (i.e., after the first year), the student should contact their faculty advisor to discuss ideas for their capstone project and obtain approval of the Capstone Proposal. The project will take one of three forms:

1. A well-designed, research-based practical intervention addressing a significant educational problem in postsecondary education, or
2. A well-designed, research-based evaluation/assessment of an existing program focused on student success, or
3. A policy brief of publishable quality focused on a significant educational problem in postsecondary education.

**Internship and Practicum Requirements**

**Practicum**

The practicum experience is a supervised learning opportunity in a postsecondary environment that provides both academic credit and experiential learning to strengthen professional expertise. The practicum experience coincides with a year-long course (3 credit hours), HED 4290 Inclusive Excellence in Higher Education I. Practicum experiences can take one of three forms:

1. A paid assistantship/fellowship at the University of Denver or another postsecondary institution/organization
2. A paid full or part-time professional position in a postsecondary institution/organization
3. An unpaid practicum assignment related to postsecondary education (as approved).

This applied experience is for educating students to begin entry- and mid-level positions within postsecondary institutions of higher learning. The practicum experience is an integral aspect of the total learning experience. Successful practicum experiences are critical in every quarter of the first year. However, if a student is not performing as expected (that is, by achieving a “B” average or better in each of the quarters) within the practicum year, it may be necessary for the student to complete an additional practicum experience. These incidents are rare and will be discussed with the student as necessary. It is expected that those in University of Denver assistantships/fellowships will continue in their assignments for two years.

Minimum time commitment expected:

- 10 hours/week during the regular academic year for unpaid practicum assignments
- 15 hours/week during the regular academic year for paid practicum assignments

"Postsecondary institution/organization" is understood to be any accredited institution of higher education (e.g., Arapahoe Community College, Metropolitan State University), as well as community organizations (e.g., Denver Scholarship Foundation, Education Commission of the States) and/or government agencies (e.g., Colorado Department of Higher Education).

**Internship**

The internship experience provides students a second experiential learning opportunity in the field of higher education. Students usually do their internship during the summer between their first and second years, or during the second year of coursework. The internship experience is intended to
broaden students’ experience of higher education administration and service to further their professional skills. This is a two credit learning experience designed to expand the parameters of a student’s practicum experience. Academic credit is earned as part of the HED 4270 Student Affairs Internship course taken at student’s convenience during or after completion of the internship itself.

Minimum time commitment expected:

- 300 hours total for paid internships
- 150 hours total for unpaid internships

**Higher Education Electives**

7

**Total Credits Required**

65

A minimum of 65 credit hours is required beyond the earned master’s degree. No credit hours from the earned master’s degree can be transferred into the EdD.

**Non-coursework Requirements**

- The Doctoral Comprehensive Examination: The doctoral comprehensive exam consists of the completion of both a written and oral portion, and requires the approval of a review committee selected by the faculty advisor and student. The doctoral comprehensive exam is used to determine the student’s comprehension of the field, capacity to undertake independent research, and ability to think and express ideas clearly.

- The Doctoral Comprehensive Examination Paper (comps paper): As the written portion of the doctoral comprehensive exam, the comps paper is intended to assess the student’s capacity to integrate knowledge and proficiency in conducting a thorough and succinct critical review of relevant research literature. It is a scholarly analysis of a higher education problem, issue, or idea, and it is typically 40-50 pages in length, including references. It must contain a clear statement of a higher education problem, a critical analysis of pertinent research literature, and implications for
further research, policy, and practice. The student will work closely with the faculty advisor during draft development of the comps paper. The final version of the comps paper will be considered ready to submit to the comprehensive examination committee only after submission approval has been given by the faculty advisor. It is the student’s responsibility to deliver final draft copies to all committee members. Committee members must be provided at least two weeks to read and prepare comments on the comps paper. Upon advisor approval that the comps paper is satisfactory for an oral examination, the student will schedule the doctoral comprehensive oral exam.

- The Doctoral Comprehensive Oral Examination: The oral portion of the examination will last approximately 90 minutes and consists of the student’s overview of the comps paper and the comprehensive examination committee’s thorough questioning of the student’s work. The faculty advisor may ask a third faculty member to read the comps paper and participate in the oral examination, if he or she determines that it would be helpful to evaluate the quality of the examination. All comprehensive examination committee members are expected to participate fully in the oral portion of the exam, as well as in the discussion and decision regarding the result of the examination. Attendance at the oral portion of the comprehensive examination is limited to the student and the two or three faculty members that make up the committee.

- The Doctoral Research Project: The doctoral research project serves as the culmination of students’ learning and development in the EdD program. The doctoral research project is intended to be an opportunity to learn and demonstrate expertise in a particular area of postsecondary education. The basic requirement is that the doctoral research project be original work that examines a practical or policy concern in a postsecondary education setting. It must be useful to the practice of higher education leadership and administration. Students should consult the Department of Education Research, Policy, and Practice (ERPP) doctoral research project process agreement for detailed information.

Non-coursework Requirements
Courses

HED 3263 Sports and Higher Education (4 Credits)
This course provides an overview of the general history of college and university sports, athletics, intramurals, intramurals, and wellness programs as a broad introduction to this area; additional emphases center on issues related to intercollegiate sports e.g., athletic department positions, student-athlete support systems, ethical considerations, legal issues, politics and policies pertaining to institutional and NCAA norms/regulations, and current and future issues in collegiate athletics. Prerequisite: must be junior- or senior-level student.

HED 3264 Psychosocial Dimensions of Sports and Wellness (4 Credits)
Cross listed with HED 4264.

HED 3991 Independent Study (1-10 Credits)

HED 3992 Directed Study (1-10 Credits)

HED 4210 Social/Political Context High Ed (3 Credits)
This course examines the social and political context of U.S. education and provides an analysis of schooling, cultural politics, and global influences that inform current practices and structures of the higher education system. Central to this course is the development of a critical understanding of topics related to meritocracy, stratification, diversity, and decentralization in higher education. Prerequisite: Ph.D. student in higher education or permission of instructor.

HED 4211 Current Issues in Higher Ed (3 Credits)
A study of contemporary higher education as a specialized field of inquiry and as a professional area in which to work. Explores institutional missions as well as entities such as administration, faculty, curriculum, and student, in relationship to current issues.

HED 4212 Public Policy in Higher Educ (3 Credits)
Overview of federal and state public policy, current issues, research methods. Introductory seminar to public policy sequence. Recommended prerequisite: HED 4210, HED 4211.

HED 4213 Leadership and Supervision (3 Credits)
General leadership theory and its implications for higher education; specific focus on leadership skills, such as conflict resolution, problem solving, use of teams and change advocacy.

HED 4214 History American Higher Ed (3 Credits)
Development of North American higher education from colonial times to the present, focusing on important educators and institutions. Primarily for doctoral students.
HED 4215 Curriculum Dev in Higher Ed (3 Credits)
The purpose of this course is to provide students with the knowledge and understanding of curriculum design, development, and change in higher education.

HED 4216 HED Research Processes (1-5 Credits)
Enables students to explore current research and theories associated with their scholarly interests and resources for doing research, and to address problems in conducting original inquiry and investigations in postsecondary education. Attention is directed to the investigation of a research problem of each student's interest. Prerequisite: Successful completion of 10 credit hours of research courses or permission of instructor.

HED 4217 Student Affairs Administration (3 Credits)
A review of student services, emphasis on programmatic content and relationship to student development; organization of student service programs and national trends. To further describe the historical development of student affairs work including significant persons and activities and to begin the development of students' own professional identities as a reflective practitioner and to understand the responsibilities for integrating assistantships/ internships/work experiences to theory and new knowledge.

HED 4220 Org & Governance of Higher Ed (3 Credits)
Study of theoretical perspectives and empirical research drawn from the social sciences related to higher education organizations and governance with an emphasis on application of theory and practice.

HED 4221 Financing Higher Education (3 Credits)
Financing public and private institutions of higher learning; sources of income, budgeting procedures, funding and control, use of simulated exercises to illustrate principles. Recommended prerequisites: HED 4210, HED 4211 and HED 4214.

HED 4222 Higher Education and Law (3 Credits)
Review of a broad range of administrative problems with legal dimensions; process for analyzing case law on issues of access, student rights, employment, collective bargaining, church-state relations, private sector and liability.

HED 4223 Inst Research & Enroll Mgmt (3 Credits)
Explores the important area of institutional research (IR) in a postsecondary setting. Issues relating to how an IR office functions and typical responsibilities of the professionals who staff these offices will be explored. Enrollment management concepts and themes will be highlighted along with data collection and reporting aspects of the college admissions and retention processes. Recommended prerequisites: HED 4213, HED 4217 and HED 4260 for master's students; HED 4213, HED 4220 for doctoral students.

HED 4226 The Community College (3 Credits)
General issues related to community college, such as history, mission, characteristics, students, curricula, teaching and student services.

HED 4229 Student Personnl Helpng Skills (3 Credits)
This class will introduce students to basic interpersonal helping skills required in Higher Education settings, including relationship building, listening, giving feedback, problem-solving, and resolving conflicts. Students will become familiar with crisis intervention models and techniques; signs and symptoms of distress and mental illness; strategies for making appropriate referrals to mental health providers; and considerations about self and other when engaged in helping relationships, particularly those with cultural differences. Central to the course will be discussion of the appropriate role Higher Education professionals have in helping students while recognizing their limitations.

HED 4230 Inclusive Excellence in Higher Education II (1-3 Credits)
The purpose of this course is to promote the integration of the core curriculum with practitioner related experiences in the masters program. Advanced students have an opportunity to use concepts and theories learned in previously complete coursework to understand and analyze current issues facing student affairs. The course is also designed to assist students by facilitating the transition in to professional positions in higher education.

HED 4232 Research Methods in Higher Education I (1-3 Credits)
Introductory research methods course for higher education professionals.

HED 4233 Research Methods in Higher Education II (1-4 Credits)
Introductory research methods course for higher education professionals, part II.

HED 4242 Educational Policy Analysis (3 Credits)
Educational Policy Analysis offers various methods to research public policy enactments by analysis of specific federal and state policies or judiciary decisions. This course explores the nature of policy analysis within American Higher Education while simultaneously learning about educational policy analysis and conducting an analysis on key postsecondary issues. We review the history and the approaches, methods, and tools required to conduct educational policy analysis. The central focus of the course includes: the important of an initial policy statement; what roles environmental analysis as well as boundaries and constraints considerations play; and how one analyzes policy options, reflections on their implementation strategies, and make recommendations.

HED 4246 Issues of Access & Opportunity (3 Credits)
Overview of issues related to race, gender and socioeconomic status, as they affect access to and success in higher education.

HED 4247 Retention, Persistence, and Student Success in Postsecondary Settings (3 Credits)
This course introduces students to relevant research, theory, and practice related to college student retention and persistence. Students explore cultural, institutional, and individual factors that may impact college student persistence and critically examine theories attempting to explain why students leave college. In addition, students also closely explore the dynamics of oppression at the individual, institutional, and socio-cultural levels and the resulting impact on student retention. Effective retention practices, programs, and assessment procedures are also identified and examined.
HED 4260 Students and College Environments (3 Credits)
Historical overview of student life, research and literature relating to contemporary college students and student services. The purpose of this course is to provide an introduction to a variety of human development theories relevant to college students, both of traditional and non-traditional ages. The areas of psycho-social and cognitive-structural development are emphasized through multiple perspectives.

HED 4261 College Student Development Theory (3 Credits)
An overview of human development theories relevant to college students, of traditional and non-traditional ages. This application will enhance the ability of student affairs professionals as they work to maximize the affective and cognitive development of students within the college setting.

HED 4264 Psychosocial Dimens of Sport (3 Credits)
Psychology and sociology of sports as related to college and university athletics and wellness. Cross listed with HED 3264.

HED 4270 Student Affairs Internship (1-6 Credits)

HED 4281 Inclusive Excellence Programming and Development (3 Credits)
Processes for identifying market needs, developing curricula, using delivery strategies and measuring learning outcomes and satisfactions for adult education activities, including community college, university outreach and customized training programs.

HED 4282 Characteristics of College Students (3 Credits)
Characteristics to consider in working with adult learners, including aptitude, motivation, cognitive development, psycho-social development, intelligence, learning styles, gender, ethnicity and social class; practice in analyzing learning characteristics of a specific individual.

HED 4284 Inclusive Excellence in Organizations (3 Credits)
In recent years, major demographic and economic changes in this country and worldwide have contributed to the diversification of the workplace. As a result, the need for understanding how to enhance cultural diversity in organizations has taken a greater importance. Accordingly, this course focuses on the changing demographics of our society, especially related to race and culture, gender, age, physical ability, sexual orientation, and socio-economic status, emphasizing the implications these factors have for leadership and management in a variety of organizational settings.

HED 4287 Critical Race Theory and Education (3 Credits)
The purpose of this course is to provide students with an in-depth exposure to Critical Race Theory (CRT) as it pertains to education. Critical Race Theory is an analytical framework that provides race-based epistemological, methodological, and pedagogical approaches to the study of everyday inequalities in P-20 education.

HED 4288 Gender & Sexual Orientation in Education (3 Credits)
The purpose of this class is to explore the implications of sexual orientation or gender inequality for P-20 education. Feminist theory and queer serve as the foundational theoretical frameworks for this class. Through these theoretical lenses, the course examines the complex ways gender and sexual orientation are related to identity development, curriculum, academic policies, and school climate.

HED 4290 Inclusive Excellence in Higher Education I (1-3 Credits)
This course assesses and helps students develop critical self-reflection, leadership, and communication skills. Career plans are developed based on personal, academic, and professional goals. An emphasis is placed on applying theories discussed within the classroom to their respective professional roles on campus. Introductory course for all first-year master's students. This course combines the professional development seminar and practicum.

HED 4291 Doctoral Professional Development Seminar (1-3 Credits)
This course is designed to introduce the first year doctoral students to the field and discipline of Higher Education and to prepare doctoral students for their academic study.

HED 4294 Seminar in Higher Education (1-4 Credits)
Advanced seminar to examine timely topics, issues, and problems. The course description is developed each time the course is offered to describe the topics to be investigated.

HED 4295 Internship in College and University Administration (1-6 Credits)
Supervised experience in administration at college or university level. Prerequisites: EDUC 4210, EDUC 4211, EDUC 4220.

HED 4296 Internship in Public Policy (1-6 Credits)
Supervised experience in postsecondary public policy analysis or research, usually at a state or national compact or agency in the Denver-Boulder area. Recommended prerequisites: HED 4210, HED 4211, HED 4212, HED 4221, HED 4242, HED 4243.

HED 4297 Internship in College Teaching (1-6 Credits)
Supervised experience in teaching at college level. Prerequisites: HED 4210, HED 4211, HED 4280 at the doctoral level; HED 4217, HED 4261, HED 4280 at the master's level.

HED 4991 MA Independent Study (1-10 Credits)

HED 4992 Directed Study (1-10 Credits)

HED 4995 Research - M.A. Thesis (1-10 Credits)

HED 5991 PhD Independent Study (1-10 Credits)

HED 5992 Directed Study (1-10 Credits)

HED 5995 Dissertation Research (1-20 Credits)
Library and Information Science

Certificate in Library and Information Science with a concentration in Law Librarianship

The Certificate of Law Librarianship concentration prepares students who already hold a Masters of Library and Information Science to meet the unique challenges faced by professional law librarians. Students will gain a professional understanding of the complexity of the law, its marriage with interdisciplinary subject areas, and its dependence on both print and electronic mediums. The certificate will allow students to take courses designed to promote the competencies required of professional law librarians. The 18 quarter hour certificate will emphasize education and experience in the legal field as well as librarianship.

Master of Library Science in Library and Information Science and Master of Library Science in Library and Information Science with a concentration in School Library

Library and Information Science (LIS) has developed a distinctive program to serve the rapidly changing needs of future librarians, archivists and information professionals in the Rocky Mountain region.

As a small, face-to-face program, we get to know our students very well and connect them to the highly regarded professional network in the region (and beyond). Practitioners speak highly of our students and are eager to have DU MLIS students as interns and employees.

Program Accreditation

American Library Association
Colorado Department of Education and Colorado Commission of Higher Education —For the Teacher-Librarian/School-Librarian concentration

Certificate in Library and Information Science with a concentration in Law Librarianship

- Masters of Library and Information Science

Application Materials

- Online Application for Graduate Admission
- One (1) official transcript from each college/university where at least 1 credit has been earned, mailed directly to DU
- 2 Letters of Recommendation (uploaded online by recommender)
- Statement of Professional Goals
- Current Vita/Resume
- $65 Application Fee: The application fee may be paid with a credit card at the time of submission. The application fee may also be paid on a bank draft or personal check drawn from a U.S. bank.

Master of Library Science in Library and Information Science

- An earned bachelor’s degree

Application Materials

Courses

LIS 4000 Foundations of Library, Archival, and Information Science (4 Credits)
An overview of the theoretical and conceptual foundations of library, archival, and information sciences and an introduction to the information professions, including principles, values, professional organizations, publications, current and future challenges.

LIS 4010 Organization of Information (4 Credits)
This course introduces basic concepts in the theoretical, practical, and technological aspects of information organization. It provides an overview of the methodologies for organizing and representing information resources in the library, archives, and museum settings.

LIS 4011 Information Access & Retrieval (3 Credits)
Using systems for information discovery, access, and retrieval requires an understanding of characteristics of information storage media (books, videos, floppy disks, hard disks, CD-ROM, etc.), information transmission (digital and analog), and query logic. It also requires understanding the various systems for organizing types of information, including textual information, numeric, geographic, and image files. The current and existing technologies and software aiding information access and retrieval will be explored in this course. Students will experience and discuss searching systems for all types of information files stored in various media and accessed by the use of both analog and digital telecommunications systems. Prerequisite: LIS 4010.

LIS 4015 User and Access Services (4 Credits)
Overview of human information processing and user services in the changing information environment and different communities of practice. This course introduces the concepts of user information needs, seeking, and processing as a foundation for understanding users and designing user-centered information services. The course examines both traditional reference and current/emerging information services in different settings and populations. Course also introduces the concepts of information literacy, user education, and assessment of information services. Recommend prerequisite: LIS 4015.

LIS 4040 Management of Information Organizations (4 Credits)
An introduction to current theory and practice of management in information organizations through the study of organizations, communications, decision making, planning, leadership, human resources and budgeting. Prerequisite: LIS 4000 or instructor approval.

LIS 4050 Library and Information Technologies (4 Credits)
A foundation course on the applications of information and communications technology in libraries and information agencies. Integrated library systems and the acquisition, evaluation, and implementation of library automation solutions, including electronic resource management systems are explored. The course further introduces database design, Internet technology, web services, cloud computing, computer networks, telecommunications, and computer security. Hardware, software, and other productivity tools and utilities from organizations such as OCLC, Amazon, and Google are discussed.

LIS 4060 Reference (3 Credits)
Information resources include a number of different kinds of reference materials in a wide variety of formats. These include guidebooks, encyclopedias and dictionaries, indexes and abstracts, handbooks, bibliographies, biographical finding tools and biographies, data sets and much more. Many of these resources are available on-line, as well as in print and other digital formats. This course will help students identify and evaluate the most likely resources for information queries in particular settings. It will also provide the opportunity to find answers to real research questions. The course will cover the primary resources for the broad disciplines of business, humanities, sciences, social sciences and government publications in print and electronic formats. Class exercises will reflect the multidisciplinary and multicultural interests and characteristics of library users. Prerequisite: LIS 4015. Recommended prerequisites: LIS 4000 and LIS 4011.
LIS 4070 Cataloging & Classification (3 Credits)

LIS 4101 Information Science (3 Credits)
Survey of historical and contemporary concepts and issues in information retrieval, including text, images and audio/video content. Theory and practice of how knowledge is represented, structured and retrieved in information systems past, present and future.

LIS 4102 User-Centered Design (3 Credits)
Principles and strategies of the design of information systems that address the needs and preferences of users in a fundamental way. Engaging users in the process of iterative design, from needs assessment to testing and evaluation.

LIS 4110 Teaching and Learning with Technology (3 Credits)
A foundation course about the science of effective teaching and the role of technology and media to enhance learning outcomes. This course engages students with skills and knowledge required to incorporate effective media and technology to support the teaching and learning activity. The course primarily explores a wide-range of appropriate educational media and technology that facilitate preparation, presentation, and delivery of content. Most importantly, tools and educational technologies that promote best practices in both classroom interaction and expanding the learningscape outside the classroom are explored. Theories, principles, and strategies supported by the science of learning to improve the learning outcome are discussed.

LIS 4203 Competitive Intelligence (3 Credits)
In today's corporate environment, knowledge about competitors is critical for organizational survival. This course explores the need for competitive strategies and systems. The processes and systems are discussed in the various contexts: product-oriented, customer-oriented, financial, and behavioral. The trends, research, role of the information professional, and methodologies are related to the global environment of business and the change in focus from internal to external information orientation. The use of Internet and web-based strategies and the negative side of competitive intelligence are discussed.

LIS 4204 Legal Issues in Knowledge Management (3 Credits)
This course introduces students to the law as it affects libraries and information organizations. Topics covered include personnel/employment matters, copyright, creative commons licenses, contracts and licensing agreements, digital rights management, privacy concerns, and malpractice issues.

LIS 4206 Web Content Management (3 Credits)
This course will include instruction in web page creation, selection, and evaluation of web content as well as web site management. Selection of web page content will be discussed in the context of organizational knowledge management and competitive intelligence needs. Differences in information needs for provision of public information and competitive intelligence on Internet pages versus the organizational information needs of Intranets in knowledge management will be explored. This course also will address human-computer interface design to allow web page designers to create effective web pages according to established principles of design.

LIS 4301 Information Seeking Behaviors (3 Credits)
This course explores various models of information-seeking behavior, and how information delivery systems can be designed to meet the needs of users in a variety of information agencies and settings. It examines assessment and evaluation tools used to judge information system effectiveness. Prerequisite: LIS 4000 or instructor approval.

LIS 4321 Collection Management (3 Credits)
Topics addressed in this course include collection development and access policies, selection methods and practices, collection assessment, preservation and conservation, de-selection, treatment of rare material, manuscripts and archives, U.S. government publications, non-book and digital formats management, juvenile, and other special materials.

LIS 4330 Library Instruction (3 Credits)
This course provides an introduction to the principles of library instruction and information literacy including a historical overview of their place within the profession. Emphasis is on instruction within an academic setting, but students will learn important educational theories that can be applied to a variety of settings. ACRL and AASL standards will be examined as well as types of instruction, instructional design, collaboration with faculty, various competencies, assessment, and lifelong learning. The class has a strong emphasis on public speaking, communication skills, and the practical application of educational theory.

LIS 4350 Adult Materials & Services (3 Credits)
This course provides the student with an opportunity to explore readers advisory service from a customers perspective. Students study the readers advisory literature and examine all types of genre fiction. Lecture, readings and class discussion will focus on specific genres and authors within them. Students will also be required to read in all the genres.

LIS 4362 Government Publications Resources (2 Credits)
The U.S. government is the world's most prolific publisher, both for tangible and electronic formats. This class will cover the origin, nature, and scope of federal publications and issues related to management, organization, access, and reference services in a federal depository library. Technical/managerial aspects will cover acquisitions, organization, maintenance, bibliographic control, and technical processing. The reference component will cover congressional, presidential, executive branch, and judicial publications in all formats, together with their finding aids.
LIS 4372 Medical Librarianship (3 Credits)
Overview of information sources and services in health sciences libraries. Principles and practices of medical librarianship as well as sources and services in consumer health information, evidence-based resources, drug and chemical information, systematic reviews and guidelines are covered. In addition, concepts related to health informatics, including search tools and technologies for gene and protein information are discussed.

LIS 4373 Business Resources (2 Credits)
This course provides the student with an opportunity to explore information resources in business and economics. It is a companion course to LIS 4060, Reference. Lecture, readings, class discussion, and exercises will address all formats of materials including print, non-print, electronic, and web resources.

LIS 4374 Legal Reference & Resources (3 Credits)
This course provides students with an opportunity to explore the unique challenges that reference services pose in a legal environment. Lecture, readings, and class discussions as well as practical experience allow students to synthesize course content. Prerequisite: LIS 4060.

LIS 4375 Science & Technology Resources (2 Credits)
This course provides the student with an opportunity to explore information resources in science and technology materials. It is a companion course to LIS 4060, Reference. Lecture, readings, class discussions, and exercises will address all formats of materials including print, non-print, electronic, and web resources.

LIS 4377 Arts & Humanities Resources (2 Credits)
This course provides the student with an opportunity to explore information resources in arts and humanities materials. It is a companion course to Reference (LIS 4060). Lecture, readings, class discussions, and exercises will address all formats of materials including print, non-print, electronic, and web resources.

LIS 4379 Social Sciences Resources (2 Credits)
This course provides the student with an opportunity to explore information resources in social sciences. It is a companion course to LIS 4060, Reference. Lecture, readings, class discussions, and exercises will address all formats of materials including print, non-print, electronic, and web resources.

LIS 4404 Metadata Architectures (3 Credits)
Provides an overview of the principles and theories of metadata development in the digital environment. Focuses on the design and application of metadata schemas for distinct domains and information communities, issues in metadata interoperability, vocabulary control, quality control and evaluation. Examines international standards, activities and projects. Prerequisites: LIS 4000, LIS 4010, LIS 4070 or LIS 4800 or LIS 4801.

LIS 4508 Early Childhood Materials and Services (3 Credits)
This course prepares librarians to work with infants, toddlers and preschoolers, from birth to age five, and their parents and caregivers, in libraries and pre-school settings. Topics include child development, picture books, materials selection, collection development (print and non-print), programming, story time techniques and promotion. Skills for incorporating early literacy information into early childhood programs and services using “Every Child Ready to Read” methods are introduced and appropriate materials to teach and model the skills are emphasized. Students practice story time techniques and methods for engaging children and adults in pre-literacy skills.

LIS 4510 Children's Materials and Services (3 Credits)
This course is designed to prepare librarians to work with children (ages birth to 12 years) in school and public libraries. Topics covered include children's development, reading interests and needs, materials selection, collection development (including print and non-print materials), discussions of specific genres, reading motivation skills, designing a children's area, and developing various programming ideas. Students read/view/listen to and evaluate a wide variety of materials for and about this age group, prepare and present booktalks and stories, become familiar with review sources, and design a one-year plan for youth services in a school or public library.

LIS 4511 Storytelling (2 Credits)
The course teaches librarians the skills, techniques, and procedures for developing and implementing a storytelling Program for children, young adults, or adults. The history of storytelling, its place in the school or public library, and in our culture as a whole, will be included. Students will read a wide variety of stories, learn techniques to adapt them for various settings and groups, demonstrate their ability to tell stories and to develop storytelling programs for two different age groups.

LIS 4520 Young Adult Materials & Services (3 Credits)
This course prepares librarians to work with young adults (ages 12-18) in school and public libraries. Topics covered include young adult development, reading interests and needs, materials selection, collection development (including print and non-print materials), and discussions of specific genres, reading motivation skills, designing a YA area, programming, and intellectual freedom issues. Participants will read/view/listen to and evaluate a wide variety of materials for and about this age group, prepare and present booktalks, become familiar with review sources, and design a one-year plan for a YA department in a small school or public library.

LIS 4610 Alternative Careers-Librarians (3 Credits)
This course will explore the many different types of jobs and careers open to individuals with library-type skills. It will cover both traditional library jobs, for example, law librarianship, archivist work, corporate librarianship, school librarianship, and records management, as well as non-traditional career choices such as information brokerage, publishing, and information advising.
LIS 4700 Topics in LIS (1-5 Credits)
This flexible library and information science course will provide students with the opportunity to explore issues of current importance in the field. Topics and credit hours will vary and will address subjects such as emerging technologies, new methodologies, specific reader services, standards and practices, and social and economic trends in the profession. Prerequisite courses may be recommended or required as determined by the content of the specified course.

LIS 4750 Legal Research I (3 Credits)
Law librarians require a special set of research skills to be effective. This course introduces students to legal materials generated by the Executive/Administrative, Legislative, and Judicial branches of the U.S. government. Students develop research strategies for answering legal questions using primary and secondary resources and learn to relate the various sources of authority to the structure of the U.S. government. Emphasis is placed on print materials and learning foundational research strategies.

LIS 4751 Legal Research II (3 Credits)
Building upon the foundations developed in Legal Research I, this course introduces students to advanced research strategies and specialized materials. Students are given complex legal issues to research using a variety of online and print resources. Focus is placed upon developing efficient and cost-effective research techniques and strategies. Prerequisite: LIS 4750.

LIS 4756 Legal Database Research (3 Credits)
This course introduces students to legal databases. Students examine various databases in detail to uncover the strengths and weaknesses of search functions, evaluate content, accuracy, and completeness, and determine which databases meet different needs. Both fee-based and free databases are explored in depth. Prerequisite: LIS 4011.

LIS 4800 Intro Archives & Records Mgmt (3 Credits)
This course provides an introduction to the objectives and methods of the archival and records management professions including an overview of terminology, issues, and common practices. The systematic control of records throughout their life cycle from creation through processing, distribution, organization, retrieval, and archival disposition will be covered. Prerequisites: LIS 4000 and LIS 4010; or instructor permission.

LIS 4801 Archival Appraisal (3 Credits)
Archival appraisal is the most critical function of an archivist's work. Determining continuing value affects all other archival functions, and impacts individual, organizational, and societal memory. The purposes of this course are to introduce students to the basic theories, principles, techniques, and methods that archivists use for identifying and selecting information or evidence with continuing or enduring value and to enable students to compare and contrast archival appraisal to related activities in other fields. Prerequisite: LIS 4800.

LIS 4802 Archival Arrangement & Description (3 Credits)
This course looks at the theory and practice of archival arrangement and description and the methods and means for providing intellectual access to the content of archival materials. Prerequisites: LIS 4010 and LIS 4800 or permission of instructor.

LIS 4803 Preservation and Conservation (3 Credits)
An overview that includes the historical foundations of library and archival preservation, contemporary challenges and issues, and current preventative and response practices. The course covers: the origin and development of professional preservation and conservation practice - including ethics and principles, aspects of the history of books and printing that are relevant to material deterioration and treatment or reformatting options, environmental monitoring and control, disaster preparedness and response, collection management strategies, reformatting practices of non-book formats, and repair and conservation treatment of collection materials. Prerequisite: LIS 4800 or approval of instructor.

LIS 4804 Digital Objects & Collections (3 Credits)
This course is designed to be an exploration of the intersection of library and archival traditions and the world of interoperable digital libraries. It will examine the existing and developing methodologies for creating, managing, preserving, and creating access to electronic records and digital objects. Topics covered include content creation standards and best practices, metadata, interoperability, sustainability, scalability of management systems, and concepts related to designing access tools and delivery systems. While not a technical course, discussion of technology and its application to digital library practices will be a major theme. Prerequisite: LIS 4010.

LIS 4805 Advanced Records Management (3 Credits)
This course covers the establishment of information maintenance plans, evaluations and audits of records and information management Programs, the records and information survey, retention policies and legal requirements, and techniques for integrating automation to records and information management. Prerequisite: LIS 4800 or instructor permission.

LIS 4810 Digital Libraries (3 Credits)
This course provides a theoretical foundation for the study of digital libraries and discusses the technological, organizational, social, and legal issues associated with the development and use of digital libraries. Through this course students develop an understanding of digital library components and explore theoretical and practical approaches to constructing, maintaining, and evaluating digital libraries. Topics examined include digital library definitions, design and architecture of digital libraries. Topics examined include digital library definitions, design and architecture of digital libraries, information access in the digital library environment, digital library users and user services, data repositories, digital curation, digital preservation, digital library evaluation, and digital librarianship.
LIS 4820 Digitization (3 Credits)
The course offers an introduction to issues and trends in planning, developing and managing digitization projects at libraries, archives, and museums. The focus of the course is on the conversion process of analog materials into the digital format, online delivery, and preservation of master files. The course discusses collection development policy for digital projects, copyright, digital imaging technology, digitization standards and best practices for text, images, audio, and video, metadata for cultural heritage collections, delivery platforms, preservation, project management, sustainability, documentation, promotion, and evaluation of digital projects.

LIS 4901 Capstone Course (4 Credits)
Students in this course will design and complete a project to demonstrate the ability to integrate and synthesize their masters course work and apply their knowledge to a topic. The class meets with an instructor regularly over the nine-week summer quarter. The instructor monitors and guides the students to ensure that they complete the phases of the project in accordance with the proposed timeline and goals. Evaluation will be based on individual performance, with respect to the quality and professionalism of the research, the management of the project, and analytical and writing skills. Prerequisite: Minimum of 45 quarter hours of graduate LIS course work completed, including all core courses, a proposal approved by the academic advisor and faculty permission.

LIS 4910 Practicum Experience (4 Credits)
This course is designed to supplement the classroom experience by giving students practical experience working in a library or information agency. Various options are available to students depending on their areas of interest and specialization. Opportunities for experience include fields of medicine, law, art, public, and academic libraries. It is the students responsibility to select a practicum site and a field supervisor, who must be approved by LIS faculty. One hundred hours of service over a 10-week quarter are required. The student, faculty, and field supervisor will determine specific requirements for the final paper or report. Students must notify the LIS academic advisor one quarter before enrolling in the Practicum Experience. Prerequisite: Completion of a minimum of 38 quarter hours of graduate LIS coursework, including all core courses.

LIS 4911 Elementary School Practicum (2 Credits)
This course is designed to provide elementary school practical experience for teacher-librarians by working a minimum of 80 hours in an elementary school library. Prerequisite: Students must have completed most of the required coursework for the degree before enrolling in the Practicum.

LIS 4912 Secondary School Practicum (2 Credits)
This course is designed to provide secondary school practical experience for teacher-librarians by working a minimum of 80 hours in middle or high school library. Prerequisite: Students must have completed most of the required coursework for the degree before enrolling in the Practicum.

LIS 4920 Service Learning in LIS (1-4 Credits)
This course is designed to supplement the classroom experience by giving students an opportunity to participate in a service learning project. Students will propose an independent study component highlighting the learning aspects of the project. The experience should provide practical work in a library or information agency. Various options are available to students depending on their areas of interest and specialization. Opportunities for experience include many areas related to the information needs of an underserved population. It is the students responsibility to select a site and a field supervisor. The student, faculty coordinator, and field supervisor will work together to establish the goals and objectives of the experience. A minimum of 40 hours of service is required for two quarter hours of credit.

LIS 4991 MA Independent Study (1-10 Credits)
Independent study projects allow students more in-depth investigation of the many facets of library and information science. Students must work with an approved faculty advisor and submit a proposal outlining the objectives, scope, outcomes, and evaluation criteria. The faculty advisor and the department director must approve proposals. Prerequisites: Completion of a minimum of 30 quarter hours of graduate LIS coursework, including all core courses and a minimum GPA of 3.0.

LIS 4992 Directed Study (1-10 Credits)

Research Methods and Statistics

Office: Katherine A. Ruffatto Hall, 110
Mail Code: 1999 E. Evans Avenue, Denver, CO 80208
Phone: 303-871-2509
Email: edinfo@du.edu
Web Site: http://morgridge.du.edu/programs/research-methods-and-statistics/

Master of Arts in Research Methods and Statistics

The goal of the Research Methods and Statistics (RMS) MA Program is to enhance the development and use of research in education and the social and health sciences with a specific focus on program evaluation. Our faculty will equip students with cutting-edge research skills, creative educational vision, social responsibility, and sufficient experience in application of your skills and knowledge to achieve mastery. We are committed to shaping a safe, sustainable, democratic and just world and believe that high-quality research is one approach to doing this.

The education and social and health sciences fields have a growing need for professionals with strong skills in research design, statistics, qualitative and mixed methods, and data analysis. The RMS MA Program provides the courses and experiences necessary to conduct effective social science research.
Graduates with RMS MA degrees hold professional positions at program evaluation and testing companies, universities, school districts and state agencies, among others.

**Doctor of Philosophy in Research Methods and Statistics**

The goal of the Research Methods and Statistics (RMS) PhD Program is to produce students with state-of-the-art skills needed to conduct research in education and the social and health sciences. Our faculty equip students with cutting-edge research skills, creative educational vision, social responsibility, and sufficient experience in the application of these skills and knowledge to achieve mastery. We are committed to shaping a safe, sustainable, democratic, and just world and believe that high-quality research is one approach in achieving this goal.

The education and social and health sciences fields have a growing need for professionals with strong skills in research design, statistics, qualitative and mixed methods, and data analysis. The RMS PhD Program provides the courses and experiences necessary to conduct and supervise effective social science research.

Graduates with RMS PhD degrees hold leadership positions in testing and program evaluation companies, universities, school districts, and state agencies, among others.

**Master of Arts in Research Methods and Statistics**

- Admission to the master’s program requires a BA or BS degree.

**Application Requirements**

- Online Application for Graduate Admission
- One (1) official transcript from each college/university where at least 1 credit has been earned, mailed directly to DU
- Graduate Record Exam (GRE) official score report (taken within the last five years)
- 2 Letters of Recommendation (uploaded online by recommender)
- Statement of Professional Goals
- Current Vita/Resume
- $65 Application Fee: The application fee may be paid with a credit card only at the time of submission. The application fee may also be paid on a bank draft or personal check drawn from a U.S. bank.

**Doctor of Philosophy in Research Methods and Statistics**

- Admission to the doctoral program requires a MA degree.

**Application Requirements**

- Online Application for Graduate Admission
- One (1) official transcript from each college/university where at least 1 credit has been earned, mailed directly to DU
- Graduate Record Exam (GRE) official score report (taken within the last five years)
- 3 Letters of Recommendation (uploaded online by recommender)
- Statement of Professional Goals
- Current Vita/Resume
- $65 Application Fee: The application fee may be paid with a credit card only at the time of submission. The application fee may also be paid on a bank draft or personal check drawn from a U.S. bank.

**Master of Arts in Research Methods and Statistics**

F. Cognate credits 20

Total Credits 90

¹ Optional

A minimum of 90 credit hours is required beyond the earned master’s degree. No credit hours from the earned master’s degree can be transferred into the PhD.

Non-coursework requirements

• Doctoral comprehensive exam
• Dissertation

Courses

RMS 4900 Education Research and Measurement (4 Credits)
This course is intended for Master’s degree students in the College of Education. Quantitative research designs, empirical methods of data collection and interpretation, and measurement issues in research are examined.

RMS 4910 Introductory Statistics (5 Credits)
This beginning statistics course examines use and interpretation of statistics in educational and human services research, including descriptive and inferential techniques. Cross listed with SOWK 5930.

RMS 4911 Correlation and Regression (4 Credits)
This course focuses on the study of correlation and multiple regression research designs and their application to educational and social science programs. Cross listed with SOWK 5202. Prerequisite: RMS 4910.

RMS 4912 Analysis of Variance (5 Credits)
Conceptual and applied analyses of one-way through factorial nested analysis of variance designs and multivariate analysis of variance are presented. Prerequisite: RMS 4910.
RMS 4913 Multivariate Analysis (5 Credits)
Conceptual and applied analyses of common multivariate statistical techniques used in research in social sciences are presented as are assumptions and limitations of techniques and interpretation of results. Cross listed with SOWK 5950. Prerequisite: RMS 4911.

RMS 4914 Structural Equation Modeling (5 Credits)
This course covers major applications of and issues related to covariance structure modeling, specifically confirmatory factor analysis and latent variable path modeling; types of research applications for which covariance structure modeling analyses are appropriate. Prerequisite: RMS 4911.

RMS 4915 Hierarchical Linear Modeling (4 Credits)
This course introduces models that extend multiple regression to analysis of nested data structures common in education and other social sciences. Application of those methods to various forms of multilevel data, including repeated measure (growth trajectory) data is emphasized. Prerequisite: RMS 4911.

RMS 4916 Latent Growth Curve Modeling (4 Credits)
This course covers advanced issues in longitudinal data analysis using structural equation modeling and hierarchical linear modeling with latent variables. It involves both conceptual development and practical implementation of longitudinal data analysis. This course is intended to be a hands-on approach to working with data and addressing research questions that can be best answered by longitudinal data. Prerequisite: RMS 4914.

RMS 4917 Computer Applications in Social Science Research (3 Credits)
This course focuses on use of statistical software and other appropriate software programs in the analysis of quantitative data. Prerequisite: RMS 4910.

RMS 4919 Topics in Statistics (1-5 Credits)
Topics vary by quarter but may include log-linear analysis, factor analysis, or missing data analysis.

RMS 4920 Educational Measurement (3 Credits)
This course examines the meaning, characteristics, and processes of educational measurement and evaluation. Development and interpretation of both standardized and informal tests are considered.

RMS 4921 Psychometric Theory (3 Credits)
This course examines major psychometric theories (e.g., classical, item response) as related to reliability, generalizability, validity, and item analysis methods. Prerequisite: RMS 4910.

RMS 4922 Item Response Theory (3 Credits)
Theory and methods for the educational and psychological measurement of latent variables using item response theory are covered in this course. Prerequisite: RMS 4921.

RMS 4929 Topics in Psychometrics (1-3 Credits)
Topics vary, but include: large scale testing, computer applications of item response theory, affective measure construction, generalizability theory, additive conjoint measurement, and standing testing. Prerequisite: RMS 4921 or instructor permission.

RMS 4930 Empirical Research Methods (3 Credits)
This course provides in depth study of empirical research methods involved in experimental, quasi-experimental, correlational, and single-subject designs.

RMS 4931 Survey and Design Analysis (3 Credits)
Survey techniques, needs assessment, item construction, sampling, maximizing response rates and data analysis; survey construction and data analysis are required. Prerequisite: RMS 4910.

RMS 4932 Meta-Analysis Social Science Research (3 Credits)
This course examines meta analytic techniques in the social sciences. Included are discussions of review of critical data bases, coverage of all major methods of data collection and analysis, and coverage of how best to present meta analytic findings for publication. Prerequisite: RMS 4910.

RMS 4939 Topics in Quantitative Research Methods (1-5 Credits)
Topics vary, but include minimization as an alternative to randomization, propensity score modeling as an alternative to experimental control, and analysis of data from single-subject designs. Prerequisite: RMS 4930.

RMS 4940 Structural Foundations of Research in Social Sciences (3 Credits)
This introductory course on epistemology and research includes discussion of identification and development of problems for research; introduction to basic quantitative and qualitative methods of conducting research in social science settings, ethnographic, and criticism methods.

RMS 4941 Introduction to Qualitative Research (4 Credits)
This course is designed to provide students with more in-depth understanding of naturalistic, qualitative research methods. It is assumed that students enrolling in this course have already completed an introductory research methods course in either education or another discipline. Purposes and questions posed in their course include: Why should a researcher choose to conduct a qualitative study? How are data collection strategies carried out in a qualitative research design? What are some of the ethical concerns that impact qualitative research?

RMS 4942 Qualitative Data Collection and Analysis (4 Credits)
In this intermediate level qualitative research course students learn about design, purposeful sampling, field work, observational approaches, and interviews, with special attention directed to the skills and competencies needed to gather and analyze high quality data. Prerequisite: RMS 4941 or instructor permission.
RMS 4943 Computer Applications in Qualitative Research (3 Credits)
Review of assumptions of qualitative designs, types of qualitative approaches and current data-analysis techniques; computer software to analyze qualitative data.

RMS 4944 Action Research (3 Credits)
Definition of action research, whether it improves classroom practice, methods of conducting, strengths and weaknesses; use to improve specific aspects of educational practice, to become more reflective practitioners.

RMS 4945 Community-Based Research (4 Credits)
This class introduces the emerging philosophical and methodological issues that arise when university faculty students collaborate on research with community-based organizations. Prerequisites: RMS 4942 and RMS 4946.

RMS 4946 Advanced Qualitative Research (4 Credits)
This course introduces exemplary qualitative studies and consideration of implications for education and the social sciences, and considers the types of questions asked by qualitative researchers and methods they use, particularly observation and interviewing. Students undertake their own qualitative study to consider application of theory, techniques, and practice to their dissertation research. Prerequisite: RMS 4941 and RMS 4942 or permission of instructor.

RMS 4947 Arts-Based Research (3 Credits)
In this course students explore the ground upon which arts-based research is built and become acquainted with salient issues regarding this kind of research. We practice interviewing, observations and a few arts-based practices. Prerequisites: RMS 4942 and RMS 4946 or permission of instructor.

RMS 4949 Topics in Qualitative Research (1-5 Credits)
This seminar builds on the content of other qualitative research courses offered in the RMS program and meets the students where they are on their dissertation journey; thus learning opportunities are tailored to individual needs as far as possible. Assignments focus on the issues pertinent to the design of dissertation proposals and writing, including ethical issues and IRB preparation, theoretical/conceptual framework, literature review, methodology, data collection and analysis strategies, and various forms of representation.

RMS 4951 Mixed Method Research Design (4 Credits)
This course is designed as a fundamental exploration of mixed model and mixed method approaches. Students design mixed model and mixed method research studies with a particular emphasis on multi-site and longitudinal designs that are especially suited to educational issues. Students learn analysis approaches that incorporate previously learned quantitative and qualitative skills, and apply these in practice problem examples. Prerequisites: RMS 4911, RMS 4930 and RMS 4942.

RMS 4952 Research Ethics (1 Credit)
This course introduces ethical theory and a selection of current issues in research ethics.

RMS 4953 Topics in Data Management (1-3 Credits)
This is a preparatory course emphasizing the manipulation and analysis of data in electronic form.

RMS 4954 Grant Writing (3 Credits)
This course provides a focused overview of grant writing for educators. It examines the development of reference tools (paper, electronic, and online), websites, structuring, and writing funding requests, community collaboration and partnerships, project budgeting, management, evaluation, sustainability, and reporting activities.

RMS 4959 Topics in Research Design (1-5 Credits)
Topics vary, but include single subject design issues, minimization as an alternative to randomization, advances in quasi-experimental design. Prerequisite: RMS 4930.

RMS 4960 Program Evaluation Theory (3,4 Credits)
This course reviews theories of program evaluation and current trends in evaluation.

RMS 4961 Program Development & Evaluation (3 Credits)
This course focuses on the practice of program development and evaluation in school, business, or community agency settings. Both qualitative and quantitative methods of program evaluation are discussed. Students have the opportunity to focus on evaluation of a specific program.

RMS 4962 Program Development and Assessment (3 Credits)
This course focuses on how student affairs administrators conduct student outcomes assessment, evaluate program development, and monitor program and division budgets.

RMS 4969 Topics in Program Evaluation (1-5 Credits)
Topics vary, but include advocacy and policy change, assessment in higher education, multi-level evaluation, cost effectiveness analysis, data visualization and reporting, assessment in distance education, and evaluation in the arts and culture. Prerequisite: RMS 4960.

RMS 4980 Practicum in Research (1-5 Credits)
This course provides a supervised experience in design and implementation of an empirical research or evaluation study. Organization of research proposals, completion of human subjects applications, collection, and analysis of data are emphasized. Students are expected to prepare a written report of their project which is suitable for professional presentation or publication.
RMS 4981 Community-Based Research Practicum (1-5 Credits)
Students provide community-based research assistance to a community partner (non-profit, school, community based organization, etc). Student researchers are supervised by DU faculty. This course is an excellent opportunity to match the student's research expertise with the real needs of community partners. Prerequisite: RMS 4945.

RMS 4991 Independent Study (1-10 Credits)
This course allows Masters students in RMS to study a topic area independently in conjunction with a cooperating faculty member.

RMS 4992 Directed Study (1-10 Credits)

RMS 4995 Independent Research (1-10 Credits)
This course is for Masters students in RMS whose program requires completion of a Master's thesis.

RMS 5991 Independent Study (1-10 Credits)
This course allows Ph.D. students in RMS to study a topic area independently in conjunction with a cooperating faculty member.

RMS 5992 Directed Study (1-10 Credits)

RMS 5995 Independent Research (1-18 Credits)
This course is for Ph.D. students in RMS who are engaged in completing their doctoral dissertation.

Division of Natural Science and Mathematics

The Division of Natural Sciences & Mathematics offers graduate students the chance to collaborate with our faculty scholars to apply new knowledge and research which will change lives as well as challenge long-held ideas. Although not an inclusive list of opportunities, we offer access to resources such as the Meyer-Womble Observatory atop Mt. Evans, innovative geospatial software, a collection of high resolution fluorescence imaging systems as well as an ability to perform electron paramagnetic resonance. From the mystery of the blinking binary star system Epsilon Aurigae to the movement of an individual molecule inside a cell, the Division of Natural Sciences & Mathematics offers the expertise and resources to support your investigative journey.

Why study biology at the University of Denver?

The department of biological sciences provides opportunities for graduate training at the doctoral (PhD) or master’s (MS) level. Students earn a degree in biological studies with a concentration in either cell and molecular biology or biology, ecology and evolution. Both program tracks involve a combination of course work, lab or field research and a defended thesis. Students begin their thesis research under the direction of a faculty member during the first year. All students are expected to present their work at scientific meetings and publish their work in peer-reviewed scientific journals. Doctoral students also have the opportunity to participate in teaching undergraduate courses.

Research Areas

The PhD and MS programs are centered on primary research that coincides with faculty experience and expertise. Students will conduct their research in a university environment using state-of-the-art techniques and facilities. The current research emphases of the department are

- Cell and molecular biology (biophysics, neuroscience, cell signaling and physiology, developmental biology, aging, molecular forensics and molecular evolution) is supported by major research facilities that include real-time PCR instruments, a DNA WAVE HPLC, a Hitachi transmission electron microscope and an Olympus Fluoview 1000 confocal microscope and other advanced imaging systems.
- Biology, ecology and evolution (conservation biology, restoration ecology, molecular evolution, animal behavior) takes advantage of unique field study sites that include an alpine research station on Mt. Evans in the Arapaho National Forest and collaborative research opportunities with the Denver Botanic Gardens and the Rocky Mountain Center for Conservation Genetics and Systematics.

Following are the simple steps to apply for graduate study in Biological Sciences at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies at gradinfo@du.edu.

Apply Online / Application Deadlines

- Applications (https://du-grad.edu.185r.net/application) for graduate study in Biological Sciences at the University of Denver must be submitted online.
• All online materials must be submitted, and all supplemental materials must be postmarked, by the program's stated deadline: January 1 for fall quarter admission. The biology department accepts applications after this date on a rolling basis until all positions are filled.

• A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.

Course and Degree Prerequisites and Requirements

• The Biological Sciences graduate programs require a bachelor's degree from a regionally accredited college or university in biology or related field. Students with an undergraduate major in chemistry, physics or mathematics and minimal preparation in biological sciences also will be considered but may be required to take undergraduate courses when the prerequisites are lacking. Course prerequisites include: one year of general chemistry, one year of calculus (recommended), one year of physics, two years of biology and one year of organic chemistry.

Transcripts

• Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school.

• The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.

• Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program's stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early.

• The University of Denver will consider electronic transcripts official from a domestic institution provided by the following approved agencies: Army/ American Council on Education Registry Transcript System (AARTS); Docufide/Parchment; National Student Clearinghouse; Naviance; Royall and Company; and, Scrip-Safe.

Test Scores

• Application to the MS and PhD programs require the Graduate Record Examination (GRE) general test. The subject test is not required. Scores must be received directly from the appropriate testing agency by the program's stated deadline. The institution code for the University of Denver is 4842.

Language Proficiency

• Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the University is 80 (iBT) or 550 (paper-based). The institution code for the University of Denver is 4842. The minimum IELTS score accepted by the University is 6.0. Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please see the Graduate Policy Manual for complete English language proficiency requirements.

• Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English. Such applicants may be exempt from the TOEFL/IELTS requirement but not from other standardized graduate entrance examinations.

Personal Statement

• A personal statement of at least 300 words is required. The statement should include information concerning your life, education, practical experience, special interests and specific purpose for applying to the University of Denver. The statement should be submitted via upload through the online application process.

Recommendation Letters

• Three letters of recommendation are required from different faculty members or other professional contacts that are familiar with your potential to complete a research-based graduate degree. These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program's stated deadline.

Financial Support

• To be considered for federal financial aid, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline: February 15.

• Information about financial aid can be found on the Office of Financial Aid (http://www.du.edu/apply/gradfinaid) website. International students are not eligible for federal financial aid.

• Students may apply for graduate teaching assistantships through the department or for graduate research assistantships by contacting individual faculty in the department. Please visit the Department of Biology (http://www.biology.du.edu) website for further information on our faculty research interests.
Application Status

- We encourage you to be actively engaged in the admission process. You can check your application status online at https://webcentral.du.edu.

Mailing Address

- Mail official transcripts and any supplemental admission materials not submitted with the online application to:
  University of Denver
  Office of Graduate Studies
  Mary Reed Building, Room 5
  2199 S. University Blvd.
  Denver, CO 80208-4802

International Applicants

- For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information.
  International applicants are strongly encouraged to have their applications complete at least eight weeks prior to the program’s application deadline.

The Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) provides complete details regarding admission requirements.

Graduate studies in the department of biological sciences provide graduate students with a set of structured core classes that establish a strong foundation of basic knowledge in cell and molecular biology or ecology and evolution and that allow the knowledge to be built upon in subsequent specialized courses and independent research. Research areas are usually linked to the interest of the supervising faculty member. The department’s current research strengths center around the two areas: cell and molecular biology (biophysics, neuroscience, neuroendocrinology, cell signaling and physiology, developmental biology, aging, molecular forensics and molecular evolution) and ecology and evolution (biogeochemistry, conservation biology, restoration ecology, molecular evolution). To complete research commitments, MS students generally work with a major professor of choice in the laboratory and/or field for about two years, while PhD students generally work for five years.

Master of Science (MS)
The MS degree in Biological Sciences involves a combination of course work and original research. A major strength of the program is the emphasis on research beginning in the first year. Nearly all students publish their work in a scientific journal. A student who completes the degree is in a strong position to pursue a range of postgraduate opportunities, including a career in biotech, academic or government lab or agency, or continued studies in a professional or PhD program.

The program requires two years of research and course work. In consultation with the adviser and Thesis Committee, the student develops a plan for independent research that culminates with a written thesis, public seminar and oral thesis defense.

The MS degree requires 45 quarter hours of graduate coursework and research credit with successful completion and defense of the MS thesis. Students select curriculum and research in either Cell & Molecular Biology or Ecology & Evolution.

Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by the major adviser and Thesis Committee. All graduate students are required to attend departmental seminars. In addition, students who are supported by a GTA position are expected to fulfill all obligations required of the GTA appointment.

The PhD degree is typically a 4- to 5-year program that combines coursework and extensive original thesis research. Students begin their thesis research under the direction of a faculty member during the first year. The doctoral degree carries the credential for a professional career in research or academics.

Doctoral Program (PhD)
The PhD requires 90 quarter hours of graduate coursework and research credit in either Cell & Molecular Biology or Ecology & Evolution, completion of all candidacy exams, and successful completion and defense of the PhD thesis. Up to 10 quarter hours of graduate credit (or a blanket transfer of 45 quarter hours from a previous master’s program) may be accepted as transfer credit with approval of the Departmental Graduate Committee and the Office of Graduate Studies.

PhD students are required to pass both a qualifying exam and research proposal exam to advance to candidacy.

Master of Science in Biological Sciences with a Concentration in Ecology and Evolution

Degree Requirements

Coursework Requirements

The major requirements for completion of the MS degree are 45 quarter hours of course work and research credit, and successful defense of the MS thesis. The course work includes the following graduate core curriculum:
Non-coursework Requirements

Additional requirements are attendance at all departmental seminars, a thesis based on a research project approved by the thesis committee, and a successful oral defense of the thesis.

Doctor of Philosophy in Biological Sciences with a Concentration in Ecology and Evolution

Degree Requirements

Coursework Requirements

The major requirements for completion of the PhD degree are 90 quarter hours of graduate course work and research credit, completion of all candidacy exams, and successful defense of the PhD dissertation. The course work includes the following graduate core curriculum:

<table>

* Courses that the dissertation committee judges to complement the student’s major field also may be used.

Total Credits 90

Non-coursework requirements

Additional requirements are attendance at departmental seminars, passing performance in the qualifying examination and the research proposal examination, presentation of one departmental seminar per year, completion of a research dissertation of publishable quality, and successful oral defense of the dissertation.

Master of Science in Biological Sciences with a Concentration in Cell and Molecular Biology

Degree Requirements

Coursework Requirements

The major requirements for completion of the MS degree are 45 quarter hours of course work and research credit, and successful defense of the MS thesis. The course work includes the 16-credit graduate core curriculum:

<table>

Total Credits 45
**Non-coursework requirements**
Additional requirements are attendance at all departmental seminars, a thesis based on a research project approved by the thesis committee and a successful oral defense of the thesis.

**Doctor of Philosophy in Biological Sciences with a Concentration in Cell and Molecular Biology**

**Degree Requirements**

**Coursework Requirements**
The major requirements for completion of the PhD degree are 90 quarter hours of graduate course work and research credit, completion of all candidacy exams, and successful defense of the PhD dissertation. The course work includes the 20-credit graduate core curriculum:

* Courses the dissertation committee judges to complement the student's major field also may be used.

Total Credits 90

**Non-coursework requirements**
Additional requirements are attendance at departmental seminars, passing performance in the qualifying examination and the research proposal examination, presentation of one departmental seminar per year, completion of a research dissertation of publishable quality, and successful oral defense of the dissertation.

**Courses**

**BIOL 3010 Evolution and Speciation (4 Credits)**
Theories and supporting evidence explaining evolution from origin of universe to complex interrelationships of species. Prerequisites: BIOL 1010, BIOL 1011 and BIOL 2510.

**BIOL 3020 Aquatic Ecology (4 Credits)**
An introduction to the ecology of fresh-water and marine organisms including aquatic adaptations, community organization, food chains, nutrient cycling and man's impact on aquatic ecosystems. Prerequisite: BIOL 2010 or instructor's permission.

**BIOL 3030 Alpine Ecology (4 Credits)**
Ecology of alpine and subalpine regions of Colorado; organization and distribution of communities and populations, succession, energy flow, nutrient cycling, population adaptations in life-history physiology, behavior and morphology. Prerequisite: BIOL 2010.

**BIOL 3035 Invasive Species Ecology (4 Credits)**
This course investigates those plants and animal species that have dramatically expanded their ranges and cause ecological harm. Topics covered include the mechanisms of ecological impacts across the globe, how invasive species are used to test basic ecological theory, the application of this research for managing real species, and related issues such as the debate within the scientific community about the term "invasive." We use a case-study approach, and students have the opportunity to go into the field as a class to observe the real invasions and learn sampling methods.

**BIOL 3044 Coral Reef Ecology (3 Credits)**
Ecology of coral reefs; organization and distribution of reefs; review of reef organisms and their interactions with each other and their physical environment; threats to coral reef conservation. Prerequisite: BIOL 2010 or BIOL 2050.

**BIOL 3045 Coral Reef Ecology Lab (1 Credit)**
Ecology of coral reefs laboratory to supplement lecture material; travel to the Caribbean over spring break to observe coral reefs firsthand; introduction to research methods. Prerequisite: SCUBA certification and permission of instructor.
BIOL 3055 Ecology of the Rockies (4 Credits)
A week in residence at the Mt. Evans Field Station prior to the start of fall quarter includes field projects dealing with ecology and environmental issues. On campus classes involve data analysis and interpretation and formal scientific communication. Themes include terrestrial and aquatic ecosystems, taxonomic groups ranging from conifer stands to aquatic insects and mountain goats. Lab fee associated with this course. Prerequisite: BIOL 2010 or permission of instructor.

BIOL 3060 Tropical Ecology (3 Credits)
Biological composition of tropical ecosystems; biodiversity, biogeochemistry; causes and biological consequences of tropical deforestation; ecologically based approaches toward sustainable tropical forest use. Includes laboratory. Prerequisite: BIOL 2010.

BIOL 3070 Ecological Field Methods (4 Credits)
Series of field exercises for students to learn principles and procedures of field methodology, data analysis and technical writing in ecology; problems drawn from population, community and ecosystem ecology. Lab fee associated with this course. Prerequisite: BIOL 2010.

BIOL 3090 Microbial Ecology (4 Credits)
Interactions among microorganisms and their environment. Impact of ecological principles on microbial diseases, pollutant degradation, nutrient cycles and global change. Prerequisites: BIOL 1010, BIOL 1011.

BIOL 3100 Histology: Medical Microanatomy (4 Credits)
Microscopic organization of tissues and organs; correlation of organization of organs with functions and pathologies; emphasis on mammalian systems. Includes laboratory. Lab fee associated with this course. Prerequisite: BIOL 2120.

BIOL 3110 Special Topics: Biology (1-5 Credits)
Topics of special interest to teaching/research faculty of department presented as needed to complement and expand existing curriculum. May be repeated for credit.

BIOL 3120 General Microbiology (4 Credits)
Fundamental principles of microorganisms in the world and in disease; role of bacteria in biological phenomena. Includes laboratory. Lab fee associated with this course. Prerequisite: BIOL 2120.

BIOL 3130 Molecular Evolution (4 Credits)
Evolution of macromolecules and reconstruction of evolutionary history of genes and organisms. Prerequisite: BIOL 2510.

BIOL 3135 Topics in Cell Motility (4 Credits)
Fibrous elements of the cytoskeleton and associated proteins and their role in cellular motility is examined in detail. The physical forces involved in cellular motile function is applied in understanding cellular motile behavior. Prerequisite: BIOL 2120.

BIOL 3150 Intracellular Dynamics (4 Credits)
Focuses on spatial and temporal control of intracellular processes with an emphasis on neuronal and endocrine cells. Topics include vesicular traffic, protein targeting, dynamics and spatial organization of signaling complexes. Emphasis on modern techniques of cell and molecular biology with examples from primary literature. Prerequisite: BIOL 2120.

BIOL 3160 Biophysics: Ion Channels & Disease (4 Credits)
Examines ion channel structure and function and the ways in which this information provides insight into human disease. The focus is on the use of biophysical techniques in combination with molecular and genetic analysis of channel genes. General Physics recommended. Prerequisite: BIOL 2120.

BIOL 3200 Invertebrate Evolution (4 Credits)
Introduction to remarkable diversity of invertebrate life, both in terms of numbers of species, novel body plan and physiological adaptations. Includes laboratory. Prerequisites: BIOL 1010, BIOL 1011.

BIOL 3230 Nutrition (3 Credits)
Investigation of metabolism, all nutrients and various applications of nutrition to sports and healthy living. Prerequisite: BIOL 3250.

BIOL 3250 Human Physiology (5 Credits)
Functional relationships of human organ systems with coordinated laboratory activities and experiments that demonstrate and test physiological principles. Lab fee associated with this course. Prerequisites: BIOL 1010, BIOL 1011.

BIOL 3260 Nutrition (3 Credits)
From physiological and biochemical perspectives, this course explores the relationships of energy metabolism, nutrients, vitamins and minerals to human health. Prerequisite: BIOL 3250.

BIOL 3300 Biodiversity-Flowering Plants (4 Credits)
Basic techniques and principles of systematics with application to the origin, evolution, radiation, classification and biodiversity of flowering plants (angiosperms). Lab fee associated with this course. Prerequisites: BIOL 1010, BIOL 1011 or GEOG 1201, GEOG 1202, GEOG 1203 or instructor’s permission.

BIOL 3400 Ornithology (4 Credits)
Biology of birds with emphasis on ecology and behavior; field and laboratory work to stress bird identification and ecological relationships of birds. Lab fee associated with this course. Prerequisites: BIOL 1010, BIOL 1011.
BIOL 3410 Animal Behavior (4 Credits)
This class examines animal behavior from an evolutionary and ecological perspective. The course provides the background needed to understand behavioral evolution, including a focus on the inheritance of behavior, natural selection, sexual selection, and kin selection. This class studies the evolution of a variety of behaviors, including communication and displays, mate choice, parental care, cooperation, mating systems, social behavior, habitat selection, foraging, and anti-predator behavior. The emphasis is on theoretical principles, design of experiments, and interpretation of data. Prerequisites: BIOL 1010 and BIOL 1011.

BIOL 3560 Molecular Biology Laboratory (4 Credits)
Laboratory based course that covers techniques in gene excision, cloning and reinserterion and gene sequencing. Lab fee associated with this course. Prerequisite: BIOL 2510.

BIOL 3570 Proteins in Biological Systems (3 Credits)
Proteins considered in their biological setting; protein synthesis and degradation; survey of protein functions in vivo; evolution of proteins; introduction to protein biotechnology. Prerequisites: BIOL 2120, CHEM 2451, CHEM 2452 and CHEM 2453.

BIOL 3610 Developmental Biology (4 Credits)
Processes and mechanisms of development, exemplified by higher animal embryogenesis, with consideration of microbial model systems. Prerequisite: BIOL 2510.

BIOL 3620 Vertebrate Embryology (4 Credits)
Development processes in placental mammals; analysis of vertebrate cyto-differentiation and morphogenesis. Laboratory on embryonic anatomy of amphibians, birds and mammals. Prerequisites: BIOL 1010, BIOL 1011 and BIOL 2120.

BIOL 3630 Cell Biology of Development (4 Credits)
Every organism has a stereotypical shape, but how does this shape arise? This course examines the cellular and molecular mechanisms that direct the forming of body and tissue shape. Prerequisite: BIOL 2120.

BIOL 3640 Introductory Neurobiology (4 Credits)
Organization and function of vertebrate central nervous system; nature of action potential, biochemistry of neurotransmitters, neuropeptides, functional anatomy of nervous system, phylogeny of nervous system. Prerequisite: BIOL 2120.

BIOL 3641 Systems Neuroscience (4 Credits)
Structure and function of the brain and spinal cord, emphasis on functional systems including sensory perception, motor control and consciousness. Prerequisite: BIOL 3640.

BIOL 3642 Neuropharmacology (4 Credits)
How psychoactive drugs exert their effects on the nervous system; drugs of abuse and drugs used in the treatment of psychotic and neurodegenerative disorders. Prerequisite: BIOL 2120.

BIOL 3643 Developmental Neurobiology (4 Credits)
This course investigates the mechanisms involved in the maturation of neurons, and signals that direct neurons to their proper position in the central nervous system. Prerequisite: BIOL 3640.

BIOL 3644 Neuromuscular Pathophysiology (4 Credits)
Cellular and molecular basis for normal nerve and muscle functions and the alteration of these functions by toxins, trauma and diseases of the brain, nerves and muscles; how specific insults produce clinical symptoms and pathology. Prerequisite: BIOL 2120. Recommended Prerequisite: BIOL 3640 or BIOL 3250.

BIOL 3646 Seminar: Cognitive Neuroscience (2 Credits)
This seminar is the capstone course for the neuroscience portion of the cognitive neuroscience program. Seminar topics include but are not limited to neurological disorders, model systems in neuroscience and sensory systems.

BIOL 3650 Endocrinology (4 Credits)
Mechanisms of hormone action, evolution of vertebrate endocrine systems, analysis of function integration of hormonal responses in maintenance of homeostasis. Prerequisite: BIOL 2120.

BIOL 3655 Molecular Neuroendocrinology (4 Credits)
Advanced laboratory course that uses anatomical/immunological, biochemical and molecular approaches to analyze neuroendocrine pathways in the hypothalamus/pituitary system. Lab fee associated with this course. Prerequisites: BIOL 3650 and instructor's permission.

BIOL 3670 Molecular Immunology (4 Credits)
Organs, cells and molecules that underlie mammalian immune response; relationship of immune system to disease. Prerequisite: BIOL 2510.

BIOL 3680 Advanced Techniques in Cell Biology (4 Credits)
Advanced laboratory course that covers current techniques used in cell biology research. Lab fee associated with this course. Prerequisite: BIOL 2120.

BIOL 3700 Topics in Ecology (1-4 Credits)
Topics vary; may include plant, animal, biochemical, alpine or aquatic; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: one quarter of undergraduate ecology and/or instructor's permission.
BIOL 3701 Topics in Genetics (1-4 Credits)
Topics vary; may include genetic methods, molecular genetics, human genetics, chromosomes or population genetics; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: BIOL 2510 and/or instructor's permission.

BIOL 3702 Advanced Topics in Regulatory Biology (1-4 Credits)
Topics vary; may include endocrinology, physiology or immunology; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: varies with topic and instructor; instructor's permission usually required.

BIOL 3703 Advanced Topics in Developmental Biology (1-4 Credits)
Topics vary; may include gene expression in development, developmental immunogenetics, developmental biochemistry or aging; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: varies with topic and instructor; instructor's permission usually required.

BIOL 3704 Advanced Topics in Cell Biology (1-4 Credits)
Topics vary; may include supramolecular structure, microscopy, membranes and techniques. May be repeated for credit. Taught from original literature. Prerequisites: varies with course and instructor; instructor's permission usually required.

BIOL 3705 Advanced Topics in Molecular Biology (1-4 Credits)
Topics vary, but may include biochemistry, supramolecular structure and function, molecular genetics, membrane biology. May be taken more than once for credit. Taught from original literature. Prerequisite: varies with course and instructor; instructor's permission usually required.

BIOL 3706 Topics in Evolution (1-4 Credits)
Topics vary, but may include molecular evolution, plant evolution and animal evolution. Prerequisite: instructor's permission.

BIOL 3707 Advanced Topics in Conservation Biology (1-4 Credits)
BIOL 3800 Human Molecular Biology (4 Credits)
Molecular basis of heredity and genetic control, using in-vitro systems and microbial and eukaryotic models; molecular basis of heredity and genetic regulation considering in-vitro systems as well as prokaryotic and eukaryotic models. Prerequisite: BIOL 2510.

BIOL 3910 Viruses & Infectious Human Diseases (3 Credits)
Organization of viruses at the molecular level with consideration of diseases that these agents cause in humans. The mechanism of action of viruses is a major theme of the course. Prerequisite: BIOL 2510. Recommended prerequisite: BIOL 3800.

BIOL 3950 Undergraduate Research (1-10 Credits)
Participation in faculty research programs by agreement between student and faculty member. Maximum of 5 quarter hours of BIOL 3950 and/or BIOL 3991 may be applied to the 45-quarter-hour requirement for a major in biological sciences.

BIOL 3991 Independent Study (1-10 Credits)
Topic in biology studied under faculty supervision. Student's responsibility to identify faculty supervisor before registering for class. Maximum of 5 quarter hours of BIOL 3991 and/or BIOL 3950 may be applied toward the 45-quarter-hour requirement for a major in biological sciences.

BIOL 3992 Directed Study (1-10 Credits)
BIOL 3995 Independent Research (1-10 Credits)
BIOL 4010 Cellular Motile Function (2 Credits)
Current literature in area of cell motility; role of cytoskeletal elements as motile agents.

BIOL 4020 Microbial Genetic Model Syst (2 Credits)
BIOL 4030 Current Concepts in Evolution (2 Credits)
New ideas and theories in field of evolutionary biology.

BIOL 4040 Current Concepts-Animal Phys (2 Credits)
Selected topics in animal physiology.

BIOL 4050 Topics in Plant Biology (2 Credits)
Varying topics; areas of plant-animal interactions, co-evolution, plant ecology, plant biochemistry/physiology.

BIOL 4060 Gene Expression-Development (2 Credits)
Varying aspects of gene control in developing systems, a different aspect each time course is offered.

BIOL 4070 Hormone-Receptor Interaction (2 Credits)
Series of lectures; understanding molecular, cellular basis of hormone action; experimental analysis of binding of hormones with their receptors; structure-function relationships of hormone-receptor interactions; nature and action of mediators generated by hormone-receptor interaction.

BIOL 4080 Biological Membranes (2 Credits)

BIOL 4085 Accelerated Biostatistics (2 Credits)
This is an accelerated online statistics course for graduate students in Biology. Basic probability and hypothesis testing is the foundation of teaching applied statistics, including simple statistics (t-tests, F-tests, and chi square) and more advanced procedures (regression, correlation, analysis of variance). In addition, students learn more complex tools (multiple regression, multi-classification ANOVA, Student-Newman-Keuls tests), including non-parametric Tests (Mann-Whitney U, Sign test, Wilcoxon Rank Sum).
BIOL 4090 Biostatistics (4 Credits)
Statistic on biological research; emphasis on procedures, applications of regression, correlation, analysis of variance, and nonparametric tests. Include instruction on computer aided (Mac and PC) statistical analysis and presentation of results. Cross listed with BIOL 2090.

BIOL 4091 Ecology and Evolution Research Methods (1 Credit)
This course builds upon the concepts in BIOL 4090, Biostatistics, by covering in more detail and specificity issues involved in designing one's experiment to adequately test the hypotheses or describe the data of interest. Students bring and discuss their specific research projects as case studies to maximize the utility of the course.

BIOL 4100 Microbial Structure & Function (2 Credits)
BIOL 4110 Essentials of Immunology (2 Credits)
BIOL 4120 Human Chromosomes and Mutagenesis (2 Credits)
BIOL 4130 Microevolution (2 Credits)
Microevolution, the change of gene frequencies within populations; examination of forces that cause it, evaluation of its contribution to process of speciation.

BIOL 4140 Protein Biosynthesis (2 Credits)
Processes of protein synthesis in cells; emphasis on posttranslational modifications that occur to secretory proteins prior to secretion.

BIOL 4150 Special Topics in Adv Biology (1-4 Credits)
Topics of special interests to teaching and research faculty presented as needed to complement and expand existing curriculum. May be taken more than once for credit.

BIOL 4190 Biometry (3 Credits)

BIOL 4210 Grad Sem: Cell Biology (2 Credits)
A series of student presentations focusing on varied topics involving cell biology. May be taken more than once for credit.

BIOL 4211 Advanced Cell Biology (3 Credits)
Students study the subcellular structure and organization of the cell. Organelle structure and function are examined in detail as well as biogenesis and degradation (turnover) of these subcellular structures. Cytoskeletal dynamics are also a major focus. Specific topics covered include cell division, macromolecular synthesis, membrane transport, cell-matrix and cell-cell communication, cell migration, cell differentiation, and mechanisms of cell death. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students. Cross listed with BIOP 4150.

BIOL 4212 Advanced Molecular Biology (3 Credits)
This course focuses on a detailed analysis of regulated gene expression. The topics include lectures and readings of relevant literature in areas covering gene regulation at multiple steps, including transcription, RNA processing, and translation. In particular, the logic of experimental design and data analysis are emphasized.

BIOL 4213 Advanced Cell Signaling (3 Credits)
Students in this course investigate a large array of cellular signal transduction cascades. Specific signaling pathways to be covered include growth factor receptors, cytokine receptors, steroid receptors, integrin-extracellular matrix, heterotrimeric G-protein coupled receptors, monomeric G-proteins, transcription factors, lipids, cytoskeleton, cell cycle, and apoptosis. Each of these topics is examined in the context of normal cell physiology as well as their roles in specific disease processes. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students.

BIOL 4220 Grad Sem: Ecology & Evolution (2 Credits)
A series of student presentations focusing on varied topics involving ecology and evolution. May be taken more than once for credit.

BIOL 4230 Grad Sem: Molecular Biology (2 Credits)
A series of student presentations focusing on varied topics involving ecology and evolution. May be taken more than once for credit.

BIOL 4231 Responsible Conduct in Rsrch (1 Credit)
This course covers several topics regarding guidelines for ethical practices in research. Topics include: data ownership, conflict of interest and commitments, human subjects, animal welfare, research misconduct, authorship, mentoring, peer review, and collaboration. The course includes an online training component and meets one hour each week to discuss these topics.

BIOL 4300 Fall Graduate Reviews in Biol (1 Credit)
Students participate in a required review session that precedes selected departmental seminar presentations by faculty and outside speakers, and participate in a discussion session with the seminar speaker.

BIOL 4301 Wntr Graduate Reviews in Biol (1 Credit)
Students participate in a required review session that precedes selected departmental seminar presentations by faculty and outside speakers, and participate in a discussion session with the seminar speaker.

BIOL 4302 Sprg Graduate Reviews in Biol (1 Credit)
Students participate in a required review session that precedes selected departmental seminar presentations by faculty and outside speakers, and participate in a discussion session with the seminar speaker.
BIOL 4303 Reviews in Biology (1 Credit)
The experience is built around the departmental seminar series offered every quarter.

BIOL 4310 Foundations in Literature: Cell and Molecular Biology (2 Credits)
Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Cell and Molecular Biology.

BIOL 4311 Wntr Selected Top: Reg Bio (2 Credits)
Students participate in a weekly discussion group that focus on recent papers from the primary literature in regulatory biology.

BIOL 4312 Sprg Selected Top: Reg Bio (2 Credits)
Students participate in a weekly discussion group that focus on recent papers from the primary literature in regulatory biology.

BIOL 4322 Selected Tpcs: Molecular Biol (2 Credits)
The syllabus for the Selected Topics series varies each quarter. Each quarter a faculty member sets the theme for the quarter and identify a set of review articles to introduce the topic. The instructor leads the first session and provide important background material on the topic. Students select a paper from the primary literature to present to the class on the topic designated for the quarter.

BIOL 4330 Foundations in Literature: Ecology (2 Credits)
Students participate in a weekly discuss group that focuses on recent papers from the primary literature in Ecology.

BIOL 4331 Foundations in Literature: Evolution (2 Credits)
Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Evolution.

BIOL 4332 Foundations in Literature: Conservation Biology (2 Credits)
Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Conservation Biology.

BIOL 4440 Current Concepts-Animal Phys (2 Credits)

BIOL 4610 Developmental Biology (4 Credits)
The processes and mechanisms of development, exemplified by higher animal embryogenesis, with consideration of simpler model systems. Laboratory sessions use live materials; course finishes with individual projects. Prerequisite: BIOL 2510 or equivalent.

BIOL 4700 Human Molecular Biology (4 Credits)
Molecular basis of heredity and genetic control, using in-vitro systems and microbial and eukaryotic models; molecular basis of heredity and genetic regulation considering in-vitro systems as well as prokaryotic and eukaryotic models. Restricted to MBA Bioenterprize students.

BIOL 4710 Endocrinology: Chemical Communication Systems (4 Credits)
Mechanisms of hormone action, evolution of vertebrate endocrine systems, analysis of function integration of hormonal responses in maintenance of homeostasis. Restricted to MBA Bioenterprize students.

BIOL 4720 Neuropharmacology (4 Credits)
How psychoactive drugs exert their effects on the nervous system; drugs of abuse and drugs used in the treatment of psychotic and neurodegenerative disorders. Restricted to MBA Bioenterprize students.

BIOL 4730 Molecular Lab Techniques (4 Credits)
Techniques in gene excision, cloning and reinserterion; gene sequencing. Restricted to MBA Bioenterprize students.

BIOL 4731 Cell and Molecular Techniques (4 Credits)
Analysis of neuroendocrine systems using a multidisciplinary approach. Anatomical/immunological, biochemical and molecular approaches used to analyze neuroendocrine pathways in the hypothalamus/pituitary system. Restricted to MBA Bioenterprize students.

BIOL 4740 Microbiology (4 Credits)
Fundamental principles; role of bacteriology in biological phenomena. Includes laboratory. Restricted to MBA Bioenterprize students.

BIOL 4745 Immunology (4 Credits)
Organs, cells and molecules that underlie mammalian immune response; relationship of immune system to disease. Restricted to MBA Bioenterprize students.

BIOL 4760 Advanced Cell Biology (4 Credits)
Focuses on spatial and temporal control of intracellular processes with an emphasis on neuronal and endocrine cells. Topics include vesicular traffic, protein targeting, dynamics and spatial organization of signaling complexes. Emphasis on modern techniques of cell and molecular biology with examples from primary literature. Restricted to MBA Bioenterprize students.

BIOL 4850 Laboratory Skills for Forensic Serological Analysis (5 Credits)
This course is designed to provide students with two major educational skills. First, is a thorough understanding of the fundamental science behind the identification and serological analysis of biological evidence in a forensic context. Second, is a rigorously developed set of practical hands-on proficiencies with the major commercial assay systems used by forensic laboratories for the identification of blood, saliva, semen, and other biological material with potential probative value to a criminal investigation.

BIOL 4860 Laboratory Skills for Forensic Genetic Analysis (4 Credits)
This course is designed to provide students with two major educational skills. First, is a thorough understanding of the fundamental science behind the molecular genetic analysis of biological evidence in a forensic context. Second, is a rigorously developed set of practical hands-on proficiencies with the major commercial assay systems and software used by forensic laboratories for the determination and analysis of DNA profiles.
BIOL 4870 Medical Ethics (4 Credits)
This course presents knowledge and discussion of ethical issues that arise from advances in the biomedical sciences and medicine. Several specific ethical issues and policies related to methodologies and procedures, emerging medical technologies, treatment decisions, doctor-patient relationship, informed consent, medical experimentation/clinical research, and health care reform.

BIOL 4880 Capstone in Biomedical Sciences (4 Credits)
This is the capstone course for students enrolled in the Professional Science Master’s program. In this course, students integrate advanced knowledge in science and math along with courses taken outside traditional science and math courses as their electives. This course incorporates lectures, guest speakers, and class discussions focusing on current issues or concerns in the chosen concentration. PSM students only. Requires instructor approval.

BIOL 4991 Independent Study (1-17 Credits)
BIOL 4992 Directed Study (1-10 Credits)
BIOL 4995 Independent Research (1-17 Credits)
BIOL 5991 Independent Study (1-17 Credits)
BIOL 5995 Independent Research PhD (1-18 Credits)

Chemistry and Biochemistry
Office: F.W. Olin Hall, Room 202

Why study chemistry at the University of Denver?
Consider the advantages:

- Excellent, research-active faculty
- Small classes, personal attention
- First-rate teaching facilities
- Modern, state-of-the-art equipment

At the University of Denver, we offer the training and amenities to energize your graduate experience and help you develop into a professional scientist.

The Department of Chemistry and Biochemistry at the University of Denver offers programs leading to MA, MS or PhD degree in chemistry.

Our faculty members actively involve students in research programs supported with more than $1.5 million in annual funding from federal agencies, state governments and private industries. In our programs, you will enjoy the benefits of a friendly, personalized learning environment that offers nationally competitive and extremely productive research opportunities.

The Department of Chemistry and Biochemistry has much to offer a graduate student: close and frequent student-faculty interaction; an integrated program of courses; and excellent equipment and facilities including 500 MHz NMR, single-crystal X-ray diffraction, multiple EPR spectrometers, ICP-mass spectrometer, photon counting lifetime fluorescence, nanosecond laser flash photolysis, aerosol particle monitoring spectrometer, and fluorescence microscopy.

Faculty research interests encompass biophysical, organic, analytical and environmental chemistry and biochemistry. The department’s relatively small size allows a broader, more interdisciplinary approach than in large departments. Our instructional format merges traditional disciplines into interdisciplinary courses that more closely reflect current trends in chemistry.

Following are the simple steps to apply for graduate study in Chemistry and Biochemistry at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

Apply Online / Application Deadlines
- Applications (https://du-grad.edu.185r.net/application) for graduate study in Chemistry and Biochemistry at the University of Denver must be submitted online.
- All online materials must be submitted, and all supplemental materials must be postmarked, by the program’s stated deadline: March 1, for fall quarter. After the March 1 deadline, applications may be considered on a rolling basis for fall admission until positions are filled.
- A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.
Course and Degree Prerequisites and Requirements

- Proof of a bachelor’s degree in chemistry, biochemistry or a related field is required from a regionally accredited college or university.

Transcripts

- Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school.
- The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.
- Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early.
- The University of Denver will consider electronic transcripts official from a domestic institution provided by the following approved agencies: Army/ American Council on Education Registry Transcript System (AARTS); Docufide/Parchment; National Student Clearinghouse; Naviance; Royall and Company; and, Scrip-Safe.

Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the program’s stated deadline. The institution code for the University of Denver is 4842.

Language Proficiency

- Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the University is 80 (iBT) or 550 (paper-based). The institution code for the University of Denver is 4842. The minimum IELTS score accepted by the University is 6.0. Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please see the Graduate Policy Manual for complete English language proficiency requirements.
- Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English. Such applicants may be exempt from the TOEFL/IELTS requirement but not from other standardized graduate entrance examinations.

Personal Statement

- A personal statement of at least 300 words is required. The statement should include information concerning your life, education, practical experience, special interests and specific purpose for applying to the University of Denver. Describe your goals for attending graduate school. What areas of chemistry or biochemistry are you most interested in? What do you hope to do after you complete your graduate studies? Why do you enjoy chemistry or biochemistry? Describe any research or teaching experience you have had. Have you been involved in an undergraduate research project during the academic year or in the summer? Have you had a summer job or internship in a commercial lab? Have you had experience in teaching as a grader, a lab teaching assistant or a lab preparatory assistant? Share anything in your personal statement that you believe will help evaluate your application. The statement should be submitted via upload through the online application process.

Resume / C.V.

- A resume or C.V. is required. This should include work experience, research, and/or volunteer work. This should be submitted via upload through the online application process.

Recommendation Letters

- Three letters of recommendation are required. These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program’s stated deadline.

Financial Support

- Chemistry and biochemistry students are provided financial support as teaching assistants or research assistants. Assistantship positions provide a full tuition waiver and a 12-month stipend of $23,333 for new master’s students and $26,600 for doctoral students for the 2013-2014 academic year. Non-native English speakers must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section to be eligible for a graduate teaching assistantship.

Application Status

- We encourage you to be actively engaged in the admission process. You can check your application status online at https://webcentral.du.edu.

Mailing Address

- Mail official transcripts and any supplemental admission materials not submitted with the online application to:
  University of Denver
International Applicants

- For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information.

International applicants are strongly encouraged to have their applications complete at least eight weeks prior to the program’s application deadline.

The Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) provides complete details regarding admission requirements.

Master of Arts in Chemistry

The MA degree is intended primarily to meet the needs of students, such as those working full time in local industry or secondary education, who are seeking an advance degree with only a small research component. The primary difference between the MA degree and the MS degree is that a research thesis is required for the MS degree. The research required for the MS degree is often not feasible for students who work full time or is not of interest to those preparing for a career, for example, in secondary education. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student’s progress.

Additional Coursework

- One advanced topic course or additional research credits
- CHEM 4XXX or others if pre-approved by the graduate committee

Total Credits

Minimum credits required for degree: 45 (of which a minimum of 35 credit hours must be earned at the University of Denver)

The graduate core curriculum must be completed with a GPA of 3.0 or better. If it is appropriate, and approved by the graduate committee, other graduate courses may be substituted for part of the graduate core curriculum.

Independent Study and/or Research

A minimum of six credit hours of independent study and/or independent research approved by the student’s advisory committee must be completed.
Courses in Other Departments
A minimum of 35 credit hours must be taken in courses offered by the Department of Chemistry and Biochemistry. As many as 10 credit hours may be taken in science-related 3000- to 4000- graduate level courses approved by the student's advisory committee.

Seminars
All students in the MA degree program must present a technical seminar (CHEM 4900 Chemistry Seminar).

Master of Science in Chemistry
The MS degree is intended for students who wish an advanced degree in chemistry primarily for the purpose of better preparation to conduct research work in chemistry or biochemistry. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student's progress. In general, students serve as teaching assistants during their first year. For subsequent years, they are supported as either teaching assistants or research assistants, depending on the circumstances. Tuition charges are waived for all graduate teaching and research assistants.

Minimum credits required for degree: 45 (of which a minimum of 35 credit hours must be earned at the University of Denver)
The graduate core curriculum must be completed with a GPA of 3.0 or better.

Seminars
All students in the MS program must present one departmental "non-thesis" seminar (CHEM 4900 Chemistry Seminar), in addition to the thesis seminar.

Non-coursework Requirements
Thesis- A thesis of publishable quality must be completed. A summary of the thesis is presented in an oral defense. The thesis defense committee will consist of a minimum of two faculty members from the Department of Chemistry and Biochemistry and an outside chair.

Doctor of Philosophy in Chemistry
The PhD is the highest degree awarded and is intended for students seeking a career in scientific research. The ultimate aim of this degree is to train a scientist who can independently pursue a research project. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student's progress.

Total Credits 90

Minimum credits required for degree: 90

A total of 90 quarter hours (of which a minimum of 75 hours must be earned at the University of Denver). Because a PhD in chemistry is primarily a degree in which competence in research is learned and demonstrated, a large percentage of these hours are earned as credit for research (CHEM 4995 Independent Research). A minimum of 70 graduate level quarter hours must be in CHEM courses; a maximum of 20 quarter hours may be outside of CHEM courses, but must remain within natural sciences (e.g., courses with BIOL, MATH, GEOG and/or PHYS prefixes). The formal or classroom course requirements are the same as those for the MS degree.

The graduate core curriculum must be completed with a GPA of 3.0 or better.

Non-coursework Requirements

- Qualifying Examinations
  All students in the PhD program are required to take a qualifying examination at the end of the spring quarter in their first academic year. This examination covers the material presented in the core curriculum, with each course contributing 100 points. To qualify for continuance in the program, the student must score at least 500 (out of 800 points). The faculty will meet to discuss exam results and decide whether the candidate will continue in the PhD program.

- Cumulative Examinations
  The PhD candidate must complete the cumulative examination requirement by the seventh quarter in residence. These examinations are prepared from topics appearing in the current literature and fundamental materials found in review articles.

- Proposition Oral Examination
  By the end of the eighth quarter in residence, the student should give an oral presentation of an original research proposal in an area of his/her choice. This proposal will usually focus on the student’s chosen sub-discipline and should not be too closely related to any ongoing research in the department. After the public presentation, the student will defend the proposal before a committee of five faculty members (the advisory committee and two additional members).

- Dissertation
  A dissertation of publishable quality based on the student’s original research must be completed. A summary of the dissertation is presented in a public seminar and later defended in a private oral examination. The dissertation examination committee will consist of the three members of the student’s advisory committee, one additional member of the chemistry faculty to be selected by the advisory committee and an outside chair.
• Seminars

All students in the PhD program are expected to present a departmental “non-thesis” seminar (CHEM 4900 Chemistry Seminar). This seminar should be presented fairly early in the degree program. In addition, the student must present public seminars as part of the proposition oral exam and final thesis defense.

Doctor of Philosophy in Molecular and Cellular Biophysics

Molecular and Cellular Biophysics is an interdepartmental PhD degree program at the University of Denver.

See the molecular and cellular biophysics bulletin (p. 528) for more specific details.

Courses

CHEM 3110 Chemical Systems I (3 Credits)
Advanced discussion of modern concepts of organic chemistry; bonding, stereochemistry, reaction mechanisms. Prerequisites: CHEM 2453 and equivalent of one year of physical chemistry.

CHEM 3120 Chemical Systems II (3 Credits)
Interpretation of trends in the chemistry of the elements in terms of orbital interactions. Most examples will be taken from the third row transition metals and the boron and carbon groups. Prerequisites: CHEM 2131, CHEM 3310 and CHEM 3110.

CHEM 3130 Chemical Systems III (3 Credits)
Advanced-level physical biochemistry course intended for advanced-level undergraduates and graduate students. Focuses on kinetic, thermodynamic and dynamic aspects of biopolymers; delineates the relationship of these properties to the mechanism and function of biological macromolecules. Prerequisites: CHEM 3811, CHEM 3812, CHEM 3813, CHEM 3610 or the equivalent.

CHEM 3220 Advanced Analytical Chemistry (3 Credits)
Principles of chemical instrumentation applied to analytical measurements; principles, instrumentation and applications of spectrometric and chromatographic measurements. Prerequisites: CHEM 2011 and CHEM 3621, or the equivalent.

CHEM 3310 Structure and Energetics I (3 Credits)
Fundamentals of quantum chemistry, and introduction to symmetry and molecular structure of small and large systems. Prerequisite: one year of physical chemistry.

CHEM 3320 Structure and Energetics II (3 Credits)
Computational methods in chemistry. Prerequisites: CHEM 3310, one year of physical chemistry.

CHEM 3410 Atmospheric Chemistry (3 Credits)
The concepts of equilibrium thermodynamics, kinetics, and photochemistry will be applied to understanding atmospheric processes. Covers urban air pollution in detail with focus on primary pollutants. Also covers stratospheric chemistry with focus on ozone chemistry and the chemistry of climate change. Prerequisites: CHEM 2011, CHEM 2041, CHEM 2131, CHEM 2453, and CHEM 2463.

CHEM 3411 Aquatic Chemistry (3 Credits)
The circulation of the oceans and their chemical make-up. 'Classical water pollution problems' like biological oxygen demand and turbidity are discussed. Also presented: aquifer structure and flow, ground water chemistry, pollutant partitioning between stationary and mobile phases, heterogeneous surface chemistry, and the detection of trace contaminants. Prerequisites: CHEM 2011, CHEM 2041, CHEM 2131, CHEM 2453, CHEM 2463 or instructor’s permission.

CHEM 3412 Environmental Chemistry & Toxicology (3 Credits)
A survey of environmental toxicology concepts: animal testing, dose-response data, epidemiology, risk assessment. The course includes ecotoxicology, focusing on the alteration of biological and chemical systems beyond the simple response of an individual to an environmental chemical. Prerequisites: CHEM 2011, CHEM 2041, CHEM 2131, CHEM 2453, CHEM 2463 or instructor’s permission.

CHEM 3610 Physical Chemistry I (3 Credits)
Fundamentals of thermodynamics, including phase and reaction equilibria, properties of solutions, and electrochemistry needed for advanced study in life sciences and for Physical Chemistry II and III. May be taken for graduate credit by nonchemistry majors. Prerequisites: CHEM 2011, calculus and physics.

CHEM 3620 Physical Chemistry II (3 Credits)
Fundamentals of quantum chemistry, including theories of atomic and molecular structure and spectroscopy. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3610.

CHEM 3621 Physical Chemistry III (3 Credits)
Fundamentals of kinetic theory and statistical mechanics. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3620.

CHEM 3703 Topics in Organic Chemistry (3 Credits)
May include organic photochemistry, organic synthesis, organic electrochemistry or natural products. May be repeated for credit. Prerequisites: CHEM 2453 or equivalent and others depending on topic.
CHEM 3705 Topics in Biochemistry (3,4 Credits)
May include physical techniques for exploring biological structure, biological catalysis, and selected fields within biochemistry taught from original literature. May be repeated for credit. Prerequisites: CHEM 3811, CHEM 3812, CHEM 3813.

CHEM 3811 Biochemistry-Proteins (3 Credits)
Protein structure and function, starting with the building blocks and forces that drive the formation of protein structure and the basic concepts of protein structure, and continuing with enzyme catalysis, kinetics, and regulation. Prerequisites: CHEM 2453 and CHEM 2011, or instructor permission.

CHEM 3812 Biochemistry-Membranes/Metabolism (3 Credits)
Membranes and membrane mediated cellular processes, energy and signal transduction, and metabolic/biosynthetic pathways. Prerequisite: CHEM 3811.

CHEM 3813 Biochemistry-Nucleic Acids (3 Credits)
Molecular processes underlying heredity, gene expression and gene regulation in prokaryotes and eukaryotes. Prerequisite: CHEM 2453.

CHEM 3831 Advanced Protein Biochemistry (3 Credits)
This course provides fundamental insights into the chemistry and physics of proteins. It investigates how amino acids form proteins with highly complex three-dimensional structures and how these structures mediate function. We examine key research articles and their contribution to our current understanding of proteins. Topics range from protein folding to enzyme kinetics and emphasize basic principles.

CHEM 3991 Independent Study (1-10 Credits)
May be repeated for credit.

CHEM 3992 Directed Study (1-10 Credits)

CHEM 3995 Research in Chemistry (1-10 Credits)
Research project conducted under guidance of a faculty member. Credit hours and projects arranged on an individual basis. May be repeated for credit.

CHEM 4400 Adv. Topics: Organic Chemistry (3 Credits)
Physical organic chemistry; reaction mechanisms, structure reactivity relationships, kinetics, photochemistry, molecular orbital theory, etc.; current literature. May be taken for credit more than once.

CHEM 4900 Chemistry Seminar (1 Credit)
A weekly presentations of research in progress and of current literature by outside speakers, faculty and graduate students.

CHEM 4991 Independent Study (1-10 Credits)
CHEM 4992 Directed Study (1-10 Credits)
CHEM 4995 Independent Research (1-10 Credits)
CHEM 5991 Independent Study (1-10 Credits)
CHEM 5995 Independent Research (1-10 Credits)

Geography and the Environment

Office: Boettcher Center West, Room 120
Mail: 2050 E. Iliff Avenue, Denver, CO 80208
Phone: 303-871-2513
Website: http://www.du.edu/geography

Why study geography at the University of Denver?
Consider these advantages:

- Engaged and research-active faculty
- Small classes and personal attention
- State-of-the-art geospatial technology laboratories
- Strong and exciting field orientation
- Excellent location for applied research in physical and human geography

Situated at the foot of the Rocky Mountains in the dynamic city of Denver, the University of Denver is an ideal laboratory for physical and human geographers, as well as those studying human-environment interaction and geographic information science.

Since it was founded in 1945, the University of Denver’s department of geography has offered excellent opportunities for graduate students in teaching, research, academia, government and the private sector.

Quite simply, we are state-of-the-art. Among our distinctive assets
• Fully networked labs with frequent upgrades in hardware, specialized equipment and software
• Four Geographic Information Systems (GIS) labs which include most industry standard GIS software (All ESRI products, ERDAS Imagine, E-cognition, ENVI, Web Mapping and Geo-visualization products)
• USDA-approved soil and sediment lab, a weather and climate lab and the Hoyt Mineral Collection
• Multimedia teaching classrooms
• National and international field trips
• The Mount Evans field station (elevation 10,600 feet), is just 45 minutes from campus. Come visit our facilities, meet our faculty and students and see the advantages for yourself.

The Department of Geography and the Environment at the University of Denver offers programs leading to the MA in Geography, MS in Geographic Information Science (GISc) (on-campus and online programs) and PhD in Geography. Areas of teaching and research include biogeography, climatology, computer-assisted cartography, cultural ecology, cultural geography, development, ecological economics, economic geography, environmental geology, geographic information science, geovisualization, geomorphology, global change, hydrology, land use/land cover analysis, Latin America, natural resources, paleoenvironmental change, political ecology, population geography, Quaternary studies, remote sensing, soils, spatial analysis, sustainability, transportation, and urban geography and planning. With ten tenure-line faculty and four full-time lecturers, our faculty is very active in research, publishing numerous journal articles and presenting many conference papers every year. Our faculty members also are known for their excellence as instructors, with several faculty having earned major teaching awards.

Following are the simple steps to apply for graduate study in Geography at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

Apply Online / Application Deadlines

• Applications (https://du-grad.edu.185r.net/application) for graduate study in Geography at the University of Denver must be submitted online.
• All online materials must be submitted, and all supplemental materials must be postmarked, by the program’s stated deadline: For the PhD, MA and MS GISc programs, applications are accepted once a year. The deadline is January 15, for the fall quarter. All online materials must be submitted, and all supplemental materials must be postmarked, by the program’s stated deadline for financial aid consideration. For the MS in GISc online program, applications are accepted on a year-round basis. The Department will review applicants whose files are complete by May 20, for summer and fall quarter admission; September 20, for winter quarter admission; and, December 20, for spring quarter admission.
• A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.

Course and Degree Prerequisites and Requirements

• Proof of a bachelor’s, and, if applicable, a master’s degree is required from a regionally accredited college or university.
• An appropriate undergraduate degree in geography or related discipline is normally required with a minimum GPA of 3.0. A master’s degree in geography or cognate discipline with a minimum GPA of 3.5 in graduate courses is normally required for admission to the doctoral program. If bachelor’s and master’s degrees are not in geography, the following prerequisites are required: introductory physical geography, introductory human geography, computer cartography, and geographic statistics.

Transcripts

• Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school.
• The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.
• Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early.
• The University of Denver will consider electronic transcripts official from a domestic institution provided by the following approved agencies: Army/ American Council on Education Registry Transcript System (AARTS); Docufide/Parchment; National Student Clearinghouse; Naviance; Royall and Company; and, Scrip-Safe.
Test Scores

- The Graduate Record Examination (GRE) is required of all applicants, with a combined score of at least 300 on the verbal and quantitative sections of the exam. Scores must be received directly from the appropriate testing agency by the program’s stated deadline. The institution code for the University of Denver is 4842.
- For the MS GISC online program only: applicants who have completed at least 12 hours in the University’s GIS certificate program, with a GPA of 3.5 or better, could waive the GRE requirement or the undergraduate GPA requirement, but not both. Students who have completed the certificate program can automatically waive the GRE requirement.

Language Proficiency

- Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the Geography graduate programs is 88 (iBT) or 570 (paper-based). The institution code for the University of Denver is 4842. The minimum IELTS score accepted by Geography is 6.5. Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please see the Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) for complete English language proficiency requirements.
- Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English. Such applicants may be exempt from the TOEFL/IELTS requirement but not from other standardized graduate entrance examinations.

Personal Statement

- A personal statement of at least 300 words is required. The statement should be submitted via upload through the online application process. The personal statement should include information concerning your life, education, practical experience, special interests and specific purpose for applying to the University of Denver.

Recommendation Letters

- Three letters of recommendation are required. These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program’s stated deadline.

Financial Support

- To be considered for financial support, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline, February 15.
- Information about financial aid can be found on the Office of Financial Aid (http://www.du.edu/apply/gradfinaid) website. International students are not eligible for federal financial aid.
- The department provides limited funding including merit-based aid, such as graduate scholarships and teaching assistantships, and need-based grant aid. Applicants who submit a FAFSA will be automatically considered for department funding opportunities.

Application Status

- We encourage you to be actively engaged in the admission process. You can check your application status online at https://webcentral.du.edu.

Mailing Address

- Mail official transcripts and any supplemental admission materials not submitted with the online application to:
  University of Denver
  Office of Graduate Studies
  Mary Reed Building, Room 5
  2199 S. University Blvd.
  Denver, CO 80208-4802

International Applicants

- For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information. International applicants are strongly encouraged to have their applications complete at least eight weeks prior to the program’s application deadline.
Master of Science in Geographic Information Science

Students are assumed to possess a basic knowledge of cartography, geographic information systems and statistics. These prerequisites can be completed by taking the equivalent of GEOG 2000, GEOG 2020 and GEOG 2100.

Degree requirements

Electives 8-20

A minimum of 8 quarter hours of electives must be taken in geography from any of the GEOG courses at 3000 level or above.

Total Credits 48

Note: At least 12 credits of GEOG or geology coursework are required and no more than 24 credits will be accepted in transfer from the GIS certificate program.

Minimum number if credits required for degree: 48 credits

Non-coursework requirements:

- Capstone project
- Capstone project presentation

Capstone Project

Students will be required to produce a final project of professional quality demonstrating their ability to apply geographic information science to the chosen area of specialization. The project is done for, and with, a company, agency, nongovernmental organization or faculty member who is referred to as the client. The project must be used by the client and may be predominantly technical in nature or may include a research component. The project must demonstrate a mastery of one or more of the several geospatial technologies. It must require the student to engage in all facets of a project, from design to implementation. At the completion of the project, students will present their work to their peers. The identification of a project is the purpose of the Research Topic Identification course, typically taken during the spring quarter of the first year of attendance.

Master of Science in Geographic Information Science Online Degree Option

This option is designed for people wishing to complete the degree via an online format.

Prerequisites

Introduction to GIS — students entering the online MS in GISc degree program should have already completed an introductory GIS course at another academic institution, in the department of geography, or in the University College GIS certificate program. The introductory course GIS 3100 in the GIS certificate program fulfills this requirement. Work experience may be used to waive this prerequisite. Students must provide ample evidence on professional resume and be prepared to complete a basic GISc competency exam.

MS in GISc students are expected to be well versed in introductory statistics and cartography. Students are advised to take a statistics and cartography course prior to enrolling in graduate level classes.

Total Credits  
48

Note: At least 24 credits counted towards the degree must be taken within the Department of Geography & the Environment at the University of Denver

Minimum number of credits required for degree: 48 credits

Non-coursework requirements:  
- Capstone project (committee approved)  
- Capstone project presentation at a professional forum

Capstone Presentation
Students preparing to graduate are expected to present the results of their capstone projects at a professional gathering. This can be a dedicated GISc meeting or conference. It can also be a topical meeting or conference, for example, a water industry or environment-focused gathering. Students may present a paper or participate in a conference poster session. There are numerous opportunities to present one’s work throughout the world and it is important for students to become involved in the GISc community.

Master of Arts in Geography
Requirements for students with prior degrees in geography:  
Students are presumed to possess a geographic background equivalent to what is required for an undergraduate major in geography.

For the MA degree, 45 quarter hours of course work and an acceptable thesis are required. Students can specialize in subfields within physical geography, human geography or human-environment interaction.

Additional transfer, departmental, and other university courses

Total Credits 45

Note: Students must take a minimum of 33 credits in GEOG courses

Minimum number of credits required for degree: 45 credits

Non-coursework requirements:

- Research proposal presentation
- Thesis
- Final Oral Defense

Research Proposal Presentation

Each student is required to prepare and present a thesis proposal and have it formally approved by the student’s faculty committee.

Thesis Requirement

Original research of a geographic topic is required, the scope of which is determined by the thesis committee. The thesis should be of publishable quality.

Final Oral Defense

Upon completion of required course work, proposal approval and the thesis, each student will undergo a final oral defense. This exam is usually about two hours in length. The exam will address both course work and the thesis research. The final oral examination is to be conducted at least three weeks before the end of the quarter in which the degree is to be awarded. The examining committee consists of no fewer than three members chosen from the faculty of the department, although one member can be from a related cognate discipline outside the department. There is also an outside chairperson who must be a tenured or tenure-track faculty member from another department at the University of Denver serving as the university representative.

Additional Requirements for students without prior degrees in geography:

Any student desiring to pursue the MA in Geography who does not have a bachelor’s degree in Geography is required to either complete the Geography core courses listed below or show evidence of their completion of equivalent courses before continuing in the master’s program. While it may not be necessary to formally enroll in these core courses, the student is expected to attend all lectures, complete all assignments and exams, and earn the equivalent of at least a grade of B or better in each core course. Alternatively, the student can fulfill the requirement by serving as a teaching assistant for the course. Similarly, for courses taken in other departments or at other universities that are to be substituted for the core courses listed below, a grade of B or better is required. The student will be informed at the start of his/her graduate program of any required core course work, and deficiencies are to be completed as soon as possible after entering the graduate program. A student may not be advanced to candidacy until all deficiencies have been satisfied.

### Degree requirements

#### Coursework requirements

A minimum of 117 quarter hours of credit is required for the doctoral degree, 45 hours of which may be awarded from the student's MA or MS program, and must include the equivalent of GEOG 3000, GEOG 4000, GEOG 4020, and GEOG 4900.

**Total Credits**: 117

### Non-coursework requirements:

- Two Research Tools Requirement
- PhD Research Proposal Presentation
- Comprehensive Examination
- Dissertation
- Oral Defense

### Two Research Tools Requirement

The options to meet the tool requirement include languages, geographic infromation systems, computer cartography, remote sensing and geographic statistics.

### PhD Research Proposal Presentation

Each student is required to prepare and present a dissertation proposal and have it formally approved by the student's faculty committee. This should be completed by the end of the second year for a full-time PhD student.

### Comprehensive Exam

This exam, which includes both written and oral parts, is designed to evaluate the student's work at the University of Denver.

This exam is usually scheduled after all substantive course work has been completed and the dissertation proposal has been approved. It must be taken at least three quarters prior to expected graduation. Students should consult with their adviser and committee members to achieve a greater understanding of what will be on the exam. The written portion of the exam can be taken in one of two formats: a written examination conducted in the department usually taken over two days, lasting four hours each day, or a take-home examination in which the student has five days to complete the exam. An oral examination is held two weeks after the written exam has been completed. A candidate who fails one or all parts of the comprehensive
exam may petition the department for re-examination. Re-examination, if granted by the department, may not be scheduled until the succeeding quarter and cannot be retaken more than once.

Dissertation and Oral Defense

Upon completion of course work, approved proposal, comprehensive exam and the dissertation, each student will undergo a final oral defense. An oral defense may not be scheduled until at least the second quarter following the quarter in which the comprehensive exam was successfully completed (the summer may count as a quarter, though no examinations should be scheduled during the summer). The final oral defense is to be conducted at least two weeks before the end of the quarter in which the degree is to be awarded. This defense is usually about two hours in length, and is composed of a 20–25 minute presentation by the student followed by questions from the committee. The examining committee consists of no fewer than four members chosen from the faculty of the department, related cognate disciplines, or outside the university. There is also a nonvoting outside member of the examining committee who serves as the chair for the final examination and must be a tenured faculty member at the University of Denver serving as the university’s representative.

For doctoral programs, research areas are limited to the fields of biogeography, climatology, cultural geography, economic geography, geographic information science, geomorphology, global change, human environment interaction, Latin America, paleoenvironmental change, population, Quaternary studies, transportation geography and urban geography in accordance with current faculty expertise.

Geography Courses

GEOG 3000 Advanced Geographic Statistics (4 Credits)
The second in a sequence of two courses that address general statistical applications particular to geography, environmental science and other disciplines dealing with a spatial dimension in the data they work with. The focus of this second course is on the more advanced multivariate statistical techniques. The course has a strong applied orientation as particular attention is given to which technique is the most appropriate to use for a given type of problem and how to interpret and apply the resulting statistics. Extensive use is made of computer statistics packages. Homework exercises involving such statistical techniques as multiple correlation and regression analysis, principle components analysis, discriminate analysis and canonical correlation. Prerequisite: GEOG 2000.

GEOG 3010 Geographic Information Analysis (4 Credits)
Reviews many basic statistical methods and applies them to various spatial datasets. In addition, several spatial statistical methods are applied to spatial datasets. This course is an in-depth study of the interface between GIS, spatial data, and statistical analysis. Preferred prerequisite: GEOG 2000. Prerequisite: GEOG 2100.

GEOG 3030 Advanced Field Methods (4 Credits)
Various field methods used by researchers in physical geography; techniques include field mapping, laboratory analyses, geologic field methods. Prerequisite: GEOG 1201 or equivalent.

GEOG 3040 GPS for Resource Mapping (4 Credits)
This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Control and Quality Assurance issues for data collection programs. Hands-on lab exercises include navigation, mission planning for a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, differential correction, and data integration into a GIS and map production.

GEOG 3100 Geospatial Data (4 Credits)
This graduate-level course is designed to provide graduate students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems are also discussed. Cross listed with GEOG 2100.

GEOG 3110 GIS Modeling (4 Credits)
This course focuses on the concepts and procedures used in discovering and applying relationships within and among maps. It extends the mapping and geo-query capabilities of GIS to map analysis and construction of spatial models. The course establishes a comprehensive framework that addresses a wide range of applications from natural resources to retail marketing. Topics include the nature of spatial data introduction to spatial statistics and surface modeling in the first five weeks followed by spatial analysis operations and modeling techniques in the second five weeks. The lectures, discussions and independent exercises provide a foundation for creative application of GIS technology in spatial reasoning and decision making.

GEOG 3130 Advanced Geographic Information Systems (4 Credits)
This advanced course explores the more technical aspects of GIS functions and data structures. Students have hands-on access to both raster (grid-cell) and vector-based software packages in the form of lab exercises that culminate in a small student-designed GIS project. Prerequisite: GEOG 2100.

GEOG 3140 GIS Database Design (4 Credits)
Designing databases to provide a foundation for GIS functions and applications, including investigating techniques used for designing databases in non-spatial environments and learning the applicability to GIS problems. Building on concepts and techniques introduced in the first half to extend traditional techniques and methodologies to model the requirements of spatial problems. Students learn to translate the conceptual spatial model into a physical implementation specific to GIS products. Prerequisite: GEOG 2100 or GEOG 3100.
GEOG 3150 GIS Project Management (4 Credits)
This course provides graduate students seeking a career in GIS, or anyone managing a GIS project, with the knowledge, skill and abilities to take a GIS project or program past the design and implementation phase and into day-to-day operation. Students evaluate and analyze the role of GIS in an organization's overall information system strategy and communicate the importance of geography in an information system. Data sharing in the organization is examined to determine the benefits and costs of distributing data creation and maintenance activities throughout an organization. Finally, the role of GIS professionals and the skill sets required to manage GIS effectively are examined. Students review case studies of successful and not-so-successful GIS projects in North America. GIS management issues are addressed by a series of case studies focusing on various management aspects. Students are also expected to visit operational GIS programs in the metropolitan area and interview GIS managers. Students prepare case study evaluations for review in the classroom. Required for all MSGIS students because of the critical importance of GIS project management.

GEOG 3200 Remote Sensing (4 Credits)
This course acquaints students with the basic techniques of the collection, processing and interpretation of information about the character of the earth's surface from remote locations. Students become familiar with the use of the visible, infrared, thermal and microwave portions of the electromagnetic spectrum as a means of determining land cover and/or land use. Both manual and computer-assisted techniques are discussed and include hands-on applications.

GEOG 3230 Advanced Remote Sensing (4 Credits)
This course will build on the basic remote sensing concepts presented in GEOG 3200. Students will explore more in-depth concepts relevant to satellite and airborne remote sensing, including radiative transfer and information extraction. In addition, students will be introduced to two cutting-edge sources of data about the Earth’s surface: hyperspectral and lidar (Light Detection and Ranging) sensors. Students will study specific applications of advanced digital image processing techniques for environmental monitoring, natural resource management, and land-use planning. Finally, students will integrate remote sensing and other spatial datasets in the context of Geographic Information System (GIS) analysis. Prerequisite: GEOG 3200.

GEOG 3300 Cultural Geography (4 Credits)
Themes and methods of cultural geography including cultural area, landscape, history and ecology.

GEOG 3310 Culture/Nature/Economics-Human Ecology (4 Credits)
Cultural adaptation, livelihood strategies and environmental modification among subsistence and peasant societies: responses of such groups to technological change and economic integration.

GEOG 3330 Political Geography (4 Credits)
This course explores contemporary movement of people across international borders and the social, cultural, political, economic, and environmental repercussions of such movements. The class looks at the global flow of people across national boundaries and the ways in which these dispersed peoples build and maintain social networks across national borders. While doing so, we address the role of globalization in international migration processes. What motivates people to move long distances, often across several international borders and at considerable financial and psychological cost? How do migrants change--and how in turn do they bring change, social as well as economic, to new destinations as well as places left behind? This course examines politics and patterns of migration, transnational migration, and immigration to the United States.

GEOG 3350 Qualitative Methods in Geography (4 Credits)
This course focuses upon qualitative methods in the production of geographic knowledge. Qualitative methods are widely employed by geographers to understand patterns and underlying processes of human and human-environment issues in society. The course is designed to expose participants to the theories, purpose, scope, and procedures of qualitative research. Specific topics include: epistemological theories (ways of knowing); ethics and power in research; research design; data collection techniques in interviewing, participant observation and landscape interpretation, discourse and archive analysis, and case studies; data analysis; and writing and disseminating qualitative findings.

GEOG 3400 Urban Landscapes (4 Credits)
Urbanization as a process; national urban systems; internal spatial structure of cities; role of transportation in urban development; location of residential, commercial and industrial activities; agglomeration economies; residential congregation and segregation; environmental justice; urban growth and growth coalitions; decentralization and urban sprawl; edge cities; impacts on the urban environment; world cities; globalization.

GEOG 3410 Urban Applications in GIS (4 Credits)
This course uses the tools of geographic information systems (GIS) to explore concepts of traditional urban geography, including defining cities/metropolis, internal urban structures, urban systems, industrial location, social and residential patterns, urban form, environmental problems, and urban planning. The course allows students to practice fundamental skills in GIS (e.g., working with attribute tables, spatial analysis, spatial queries) and cartography (map design, color theory, display of information). Depending on the quarter, students pursue individual projects of interest or client-based projects. Prerequisite: GEOG 2100 or GEOG 3100 or equivalent.

GEOG 3420 Urban and Regional Planning (4 Credits)
Historical evolution of planning theory and practices; comprehensive planning process; legal, political, economic, social, environmental aspects of urban planning; urban design; urban renewal and community development; transportation planning; economic development planning; growth management; environmental and energy planning; planning for metropolitan regions; national planning.
GEOG 3425 Urban Sustainability (4 Credits)
The 21st century is being called the 'century of the city.' Now more than ever, humans across the globe call the city their home. Many of the world's most pressing crises are manifest in cities, including: greenhouse gas emissions, land degradation, high mass production and consumption, widespread poverty and hunger, and expanding socio-economic disparities. As 'sustainability' becomes part of mainstream discourse, this course explores what sustainability means for urban contexts around the globe. Arguably, the city has the potential to be the most efficient, equitable, and environmental form of modern human settlement. Covering all dimensions of sustainability from a social science perspective, this course focuses on theoretical groundings, practices of urban sustainability, and new research agendas. Major topics include cities and nature; planning and land use; urban form; community and neighborhoods; transportation systems and accessibility; livelihood and urban economies; and social justice and the city.

GEOG 3440 Urban Transportation Planning (4 Credits)
A specialized course in the urban planning sequence focusing on issues, practices and policies of urban transportation planning. Recommended for anyone interested in timely transportation topics, such as the feasibility and impacts of light rail transit, the planning and implementation of highway projects, and the role of freight and passenger transportation companies in transportation planning.

GEOG 3445 Sustainability and Transportation (4 Credits)
Sustainable transportation aims at promoting better and healthier ways of meeting individual and community needs while reducing the social and environmental impacts of current mobility practices. Given the importance of transport for economic growth, the uncertainties surrounding the availability and price of future sources of energy for transport use, as well as the social and environmental externalities of currently-utilized transport modes, it is imperative that more sustainable ways of providing transportation be developed and utilized.

GEOG 3500 Reconstructing Quaternary Environments (4 Credits)
Nature, magnitude, sequence and causes of Pleistocene and Holocene climatic changes; effects of climatic change on plant/animal distributions and human populations; paleoclimatic research methods. Laboratory and field trips. Prerequisites: GEOG core, ENVI 3000.

GEOG 3510 Biogeography (4 Credits)
Biogeography focuses on present and past distributions of plants and animals. In this course we consider a number of themes central to biogeography, including plate tectonics and biogeography, the effects of climate change of plant and animal distributions, biogeographic realms, island biogeography, biodiversity, human impacts on plants and animals, and the origins of agriculture.

GEOG 3520 Geography of Soils (4 Credits)
Spatial variation in soil characteristics; soil processes, soil morphology, their application in soil studies. Prerequisite: GEOG 1203 or equivalent or instructor's permission. Recommended prerequisite: general chemistry.

GEOG 3550 Topics in Physical Geography (1-5 Credits)
Investigations into various aspects of physical environment.

GEOG 3560 Fluvial Geomorphology (4 Credits)
Examines how water and sediment interact at Earth's surface to create a variety of landforms ranging from small rills to continental-scale river systems. Introduces fundamental fluvial processes or channel hydraulics and sediment transport. Examines common fluvial landforms including alluvial streams, bedrock streams, floodplains and alluvial fans. Combines traditional lectures and in-class discussions with numerous field excursions to rivers in the Rocky Mountains and Great Plains. Prerequisite: GEOG 1203, GEOG 1218, or GEOG 1266.

GEOG 3600 Meteorology (4 Credits)
The basic theory and skills of weather forecasting. Topics include thorough coverage of atmosphere dynamics and thermodynamics, the evolution of various weather types, the mechanics of storm systems (cyclones, severe storms, hurricanes), creation and interpretation of weather maps, and forecasting techniques.

GEOG 3610 Climatology (4 Credits)
Climatology is the study of the processes that result in spatial and temporal variation of weather. This course introduces the student to the processes responsible for the transfer of matter and energy between the Earth's surface and the atmosphere and the average weather conditions that result. In addition, topics of global concern, such as greenhouse effect, El Nino, urban heat islands and acid rain, are discussed. Laboratory exercises provide an opportunity to investigate climate variation and climatic change through the use of a variety of computer simulations.
GEOG 3620 Applied Climatology (4 Credits)
Climatic impact on environmental systems and human behavior; techniques to investigate climatic characteristics of environmental extremes (floods, blizzards), urban climatology and socioeconomic impacts of climate. Prerequisite: GEOG 1201. Recommended Prerequisite: GEOG 3600 or GEOG 3610.

GEOG 3630 Dendroclimatology (2-4 Credits)
Systematic variations in tree ring width and/or density can be used to reconstruct changes in precipitation or temperature well before humans were around to record the variability. This class utilizes hands on methods to introduce the fundamental principles of dendroclimatology. Through readings and lectures, students will learn how tree ring growth can be correlated to climate change. Students will then undertake several research projects to reconstruct past climate variability in the Denver metro area using tree rings. Prerequisite: permission of instructor.

GEOG 3700 Environment & Development (4 Credits)
Course examines interrelated nature of environmental and development issues in the Third World; addresses the place of environment in development theory and practice and the political ecology of Third World environmental problems and sustainable development approaches.

GEOG 3701 Topics in Geographic Information Science (1-4 Credits)
Topics vary by instructor.

GEOG 3710 Environmental Change in the Eastern Mediterranean (2 Credits)
We tend to associate environmental problems with modern societies and high technology. However, humans have had impacts on the environment, and have had to cope with challenges brought by the environment, throughout their history. Western cultures are intimately linked to the eastern Mediterranean, where some of the earliest centralized governments arose, agriculture developed, and humans first began living in permanent settlements, so the region has a long history of human-environment interaction. This class focuses on historical, archaeological, and paleoenvironmental records from the region to investigate the impacts of human activities, including deforestation, intensive agriculture, and urban development, on the environment, and the ways in which societies in the region responded to natural environmental perturbations, including drought, earthquakes, and volcanic eruptions.

GEOG 3720 Mountain Environments and Sustainability (4 Credits)
Mountain Environments and Sustainability explores the unique physical and cultural aspects of high relief and/or high altitude environments. Covering one quarter of the Earth's land surface, mountains directly or indirectly impact the lives of millions of people. We examine the significance of mountains to climate, water resources, and human activities, and discuss the sustainability of these environments and communities in light of rapid changes in many mountain regions resulting from anthropogenic factors and global change. GEOG 1201, 1202, and 1203 or instructor approval.

GEOG 3730 International Environmental Policy (4 Credits)
This course acquaints students with the global perspective on current problems of environmental protection and resource use. Population growth, food production, industrialization, technology and cultural change are considered, with heavy emphasis on the social dynamics of environmental problems. A variety of political views are studied, and an attempt is made to develop a perspective useful to students in personal and political decisions.

GEOG 3740 Environmental Justice in the City (4 Credits)
This course is designed to acquaint students with environmental justice in the urban environment. This class focuses on the City of Denver as a laboratory to explore the disproportionate impacts of social justice issues, particularly urban pollution, healthy food sources, gentrification, light rail, and employment opportunities, on neighborhoods and communities. A variety of views are studied, and an attempt is made to develop a perspective useful to students to explain urban social justice conditions.

GEOG 3750 Topics in Human-Environment Interactions (1-4 Credits)
This course investigates various aspects of the relationships between human societies and the natural environment.

GEOG 3800 Geography of Colorado (4 Credits)
This course focuses on the physical and human geography of Colorado, a state that includes the western Great Plains, the southern Rocky Mountains, and the eastern Colorado Plateau. Colorado's varied natural landscapes provide equally varied settings for human settlement and resource use. Recommended Prerequisites: GEOG 1201, GEOG 1202, and GEOG 1203.

GEOG 3830 Natural Resource Analysis & Planning (4 Credits)
Natural resources provide the basis for all human agricultural and industrial activities. This course discusses our resource distribution, conservation, management and sustainable use.

GEOG 3840 Water Resource Analysis (4 Credits)
The focus of this course is on complex policy, economic and local, national and international, and political issues surrounding resource use in the western U.S. Issues include exploitation of nonrenewable and renewable energy and mineral resources; and flexible responses to changing public policy.

GEOG 3860 GIS Applications and Natural Resources (4 Credits)
In this course we will use a case study approach to examine domestic and international natural resources such as oil, coal, timber, minerals, and recycled materials. We will use a case study approach to look at resource distribution, and the environmental impacts of extraction, production, and disposal, as well as the legal and economic context. We will use GIS data and analysis to enhance our understanding of these case studies, and students will do a project and paper using GIS data and image analysis at a local, regional or global scale. Prerequisite: Introduction to GIS or Introduction to GIS Modeling.
GEOG 3870 Water Resources & Sustainability (4 Credits)
In this course, we look at water as both a local and global resource and examine what sustainability means for human and ecological realms. After an overview of the physical processes that drive the hydrologic cycle, surface and groundwater hydrology, we examine how humans have harnessed water for our use and how we both alter and treat its quality. We examine the legal aspects of water allocation in the U.S. and the groups and agencies that are most involved in managing and overseeing water issues. Finally, we examine the most pressing water “issues” related to wildlife, development, scarcity and conflict. We look forward to imagining the power of both the individual and the collective in meeting our future, global water needs.

GEOG 3880 Clean Tech and Sustainability (4 Credits)
Clean tech has only recently become part of our vernacular and it refers to the technology that enables us to produce energy in a manner that has little or no environmental impact (solar, geothermal, wind, responsible biofuels). Clean technology will not only offer us a chance to rehabilitate the climate, but should make us more aware of how fundamental our approach to everyday life needs a more sustainable consciousness. As part of the debate, we will examine some of the problems facing civilization, why we are not sustainable, who the major players are, and how a more sustainable existence is not just our moral obligation, but it is also good economics and sound foreign policy that will accelerate poverty alleviation.

GEOG 3910 Process Geomorphology (4 Credits)
The land surface of Earth is continuously altered by geomorphic processes. This class focuses upon the nature of these processes, the work that they perform and the resulting landforms. In addition, students become familiar with various methods of geomorphic analysis through the laboratory component of the class. Cross listed with GEOL 3010. Prerequisite: GEOG 1202 or GEOG 1217 or instructor’s permission.

GEOG 3920 Remote Sensing Seminar (4 Credits)
Special topics in advanced remote sensing.

GEOG 3930 Cultural Geography Seminar (4 Credits)
Topics, methods and current research in cultural geography.

GEOG 3940 Urban Geography Seminar (4 Credits)
International comparison of economic and social, positive and negative aspects of urban systems. Prerequisite: GEOG 3400 or GEOG 3420.

GEOG 3950 Physical Geography Seminar (2-4 Credits)

GEOG 3955 Pollen Analysis Seminar (3 Credits)
Pollen grains preserved in sediment provide long-term records of vegetation conditions. Changing proportions of pollen types may reflect climatic fluctuation or human impacts. We review important recent research in pollen analysis (palynology), pollen sampling, laboratory techniques and pollen identification. Students are responsible for counting a number of samples and contributing data for a pollen diagram.

GEOG 3990 Undergraduate Research Seminar (1 Credit)
This course is designed to prepare students who will participate in faculty-supervised summer research projects. Students are introduced to research design, use of the scientific method, research expectations and reporting of results. Preparation of formal research proposal with adviser.

GEOG 3991 Independent Study (1-5 Credits)

GEOG 3992 Directed Study (1-10 Credits)

GEOG 3995 Independent Research (1-5 Credits)

GEOG 4000 Fundamental Geographic Perspectives (4 Credits)
A foundation course for persons in the community, without a degree in geography, who want to pursue an education in or make use of computer-based geographic technology but who need a foundation in geographic concepts and perspectives.

GEOG 4020 Geographic Research Methodology (4 Credits)
This class prepares students to undertake creative geographic research leading to the generation of new knowledge. Students produce a NSF proposal by the end of the class. In class, students focus on methods rather than philosophy. This does not mean students go through a laundry list of the many methods employed by geographers (they can do this on their own). Students, however, focus on the methods that are appropriate for their research questions and, at the same time, maintain a healthy awareness and respect for methods employed by geographers in other fields. The class does not focus on the philosophy of the discipline or a particular field. However, these concerns should be apparent in your proposals. Indeed, various philosophical frameworks guide research questions and how students choose to answer those questions.

GEOG 4030 Advanced Field Research (1-5 Credits)

GEOG 4040 Research Topic Identification (0-5 Credits)
GEOG 4100 Application Design/Production I (4 Credits)
First of a two quarter sequence designed to be a culminating educational experience. Primarily lab-based with some lecture material, the various application requirements and guidance on how to go about accomplishing Application Design and Production tasks is provided. Prerequisites: GEOG 2000, GEOG 2100, GEOG 3100 or equivalent.

GEOG 4105 Application Design/Production II (4 Credits)
This course places emphasis on programming and producing technical reports and/or papers that will be published in the Geography Department's online applications library. Prerequisite: GEOG 4100.

GEOG 4410 Economic Geography (4 Credits)
The study of the location and spatial organization of economic activities at the local, national, and global scales. Concerned with the spatial configuration of firms, networks, industries, and regions within the emerging global economy. Cross listed with INTS 4410.

GEOG 4460 Air Transportation & Tourism (4 Credits)
This course will be cross listed with GEOG 3460 Air Transportation & Tourism.

GEOG 4584 Geographic Information Systems for Humanitarian Assistance (4 Credits)
This class prepares students for future employment and enables them to bring more wisdom and expertise to the practice of their professions. Geographic Information Systems (GIS) technology is critical to support decision making throughout the process of response, assistance, and development — key stages in any humanitarian action. Much of the information practitioner’s encounter is spatial in nature and GIS provides a toolbox from which to better understand and utilize this type of information. This class introduces students to GIS technology functionality and information management, and examines GIS’ usefulness in humanitarian response. Today, GIS is an essential technology for emergent managers which support decision making on various levels during preparedness, mitigation, response and recovery. One of the main reasons for that is that much of the information is spatial by nature. Additionally, geospatial and geospatial-temporal analysis of data allows us to quickly access and display relevant information through the creation of maps and reports. This course introduces students to the theoretical principles of geographic information systems and examines its potential for humanitarian assistance through case studies and hands-on training with GIS software. Prerequisite: INTS 4056.

GEOG 4701 Topics in Geography (4 Credits)
Topics vary by instructor.

GEOG 4810 Geography of Latin America (4 Credits)
In this course, we examine how past and present cultural preferences and political economies effect changes in Latin American landscapes. Cross listed with GEOG 2810.

GEOG 4900 Graduate Colloquium in Geog (0 Credits)
Solid foundation in history and philosophy of the discipline of geography; basis for further exploration of major research specialization.

GEOG 4930 Nicaragua: Development Dilemmas (4 Credits)
This class takes students to post-revolutionary Nicaragua to examine the consequences of recent land grabs by foreigners and transnational companies. Students learn to operate in a country with minimal "western" infrastructure. They learn to examine developing landscapes (that is, resorts and tourism infrastructure) with new eyes and from the perspective of locals who have been left out of the development loop. By the end of the class, students begin to understand the development game, begin to question the role of tourism in developing economies, begin to know how to interact with other cultures, and finally learn to question the landscapes we "see" and begin to peel back the layers to understand the social and physical evolution of the landscape before their eyes. This class takes an experiential approach and requires students to participate in a service learning experience. Service learning is defined as a course-based, credit bearing educational experience in which faculty, students, and community members participate in an organized service activity that addresses a self-identified community need. We work with several community-based and non-governmental organizations to ensure a good fit between community needs and student expertise.

GEOG 4950 Advanced Field Research (1-17 Credits)

GEOG 4991 Independent Study (1-5 Credits)

GEOG 4992 Directed Study (1-10 Credits)

GEOG 4993 Capstone or Project (1-4 Credits)
Includes technical design and development for MA geotechnical track project and MS-GIS capstone project.

GEOG 4994 Report (1-5 Credits)

GEOG 4995 Independent Research (1-5 Credits)
Includes field research for doctoral dissertation.

GEOG 4999 Geographic Internship (0-5 Credits)
Supervised internship in a government office at local, state or federal level or within private sector. Prerequisite: Permission of instructor.

GEOG 5991 Independent Study (1-5 Credits)

GEOG 5992 Directed Study (1-5 Credits)

GEOG 5995 Independent Research (1-10 Credits)
Geology Courses

GEOL 3010 Process Geomorphology (4 Credits)
The land surface of Earth is continuously altered by geomorphic processes. This class focuses upon the nature of these processes, the work that they perform and the resulting landforms. In addition, the student becomes familiar with various methods of geomorphic analysis through the laboratory component of the class. Cross listed with GEOG 3910. Prerequisite: GEOL 1010, GEOG 1202 or permission of instructor.

GEOL 3100 Environmental Geology (4 Credits)
Environmental geology examines geologic hazards, both natural and those attributable to human impacts on the environment from urban and regional development. Specific topics may include disposal of municipal solid waste and radioactive waste; flood, earthquake, volcanic hazards; groundwater pollution and withdrawal; mass-wasting phenomena; and energy-related issues. Prerequisite: GEOL 1010, GEOG 1203 or instructor's permission.

GEOL 3200 Sedimentology/Stratigraphy (4 Credits)
This course reviews the origin, geologic history, and depositional environments of sediments and sedimentary rocks. Course work concentrates on the identification of sedimentary rocks and depositional environments by first-hand observations of rocks in the Denver area. Prerequisite: GEOL 1010, GEOG 1203 or instructor's permission.

GEOL 3300 Petroleum Geology (4 Credits)
This class examines the geological occurrences of petroleum including the origin, migration, and accumulation of oil and natural gas. This class differs from traditional petroleum geology classes by offering an examination of the economics and politics underlying the oil and gas industry, and by considering alternatives to traditional hydrocarbon resources. Prerequisite: GEOL 1010, GEOG 1203 or instructor's permission.

GEOL 3520 Erosion Process & Measurement (4 Credits)
Soil erosion is arguably the most serious environmental problem worldwide. This course focuses upon the significance of this problem, the factors affecting erosion rates, the nature of the processes themselves, methods of measurement, estimation of erosion rates and erosion control practices. Prerequisites: GEOG 1203, GEOG 1218, or GEOG 1266.

GEOL 3540 Hydrology (4 Credits)
This course provides an overview of the hydrologic cycle with emphasis placed on the study of applied hydrology. Discussions include the fundamental characteristics of precipitation, runoff processes, calculation of flood hazards, aquifers (porosity and permeability), the geologic settings of groundwater, the basic physics of groundwater flow, and water supply and use. Prerequisite: GEOL 1010, GEOG 1203 or instructor's permission. Recommended prerequisite: one introductory statistics course.

GEOL 3900 Geomorphology Seminar (1-5 Credits)
Hill slopes comprise the vast majority of the Earth's land surface. It is upon these surfaces that nearly all of the human population must exist and, hopefully, flourish. Hill slopes assume various forms, and their shape influences their utility for various human endeavors. Numerous geomorphic processes operate upon hill slopes to determine their form, and human activities strongly influence the frequency and magnitude of these geomorphic processes. Consequently, hill slopes are an interface between the Earth and the human population. Prerequisite: GEOL 3010 or permission of instructor.

GEOL 3991 Independent Study (1-5 Credits)

Mathematics

Office: Aspen Hall 717
Mailing Address: University of Denver, Department of Mathematics, 2280 South Vine Street, Denver, Colorado 80208
Phone: 303-871-2911
Fax: 303-871-3173
Email: mailto:math-info@math.du.edu (math-info@math.du.edu)
Web Site: http://www.math.du.edu

The Department of Mathematics at the University of Denver offers MA, MS and PhD degrees in mathematics. Our graduate programs enroll about 25 students and provide a personalized, congenial and rewarding educational atmosphere where you will interact with faculty from the start. We have an extraordinarily active faculty of accomplished teachers and researchers with expertise in algebraic logic, computational geometry, dynamical systems, functional analysis, nonassociative mathematics, ordered structures, probabilistic combinatorics, quantum structures, and set theory.

The MS and MA degrees prepare students for careers in which mathematics plays a central role. The PhD is a research degree that prepares students to advance the frontiers of knowledge within a specific area of mathematics.

Our graduates are highly sought, not only for their knowledge of mathematics, but also for their ability to solve problems, to think abstractly, to see the big picture, and to articulate their ideas with clarity and precision. Our graduates have been successful in a remarkably diverse collection of careers, including industry, business, education and academia.

Following are the simple steps to apply for graduate study in Mathematics at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu) or the graduate coordinator at the Department of Mathematics.
Apply Online / Application Deadlines

- Applications (https://du-grad.edu.185r.net/application) for graduate study in Mathematics at the University of Denver must be submitted online.
- Students interested in competing for graduate teaching assistantships (GTAs) or financial awards for the fall quarter must submit all online materials and have all supplemental materials postmarked by the priority deadline, February 15. After the February 15 priority deadline, applications to Mathematics will be considered on a rolling basis and funding opportunities may be limited. Applications are considered for fall, winter or spring quarters.
- A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.

Course and Degree Prerequisites and Requirements

- Proof of a bachelor’s degree is required from a regionally accredited college or university. Degree candidates must have a BS or BA in mathematics or a related field. Specific course requirements and prerequisites for individual degree programs are subject to change.

Transcripts

- Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed, including study abroad and college coursework completed in high school.
- The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.
- Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early.
- Applicants educated outside the U.S. are encouraged to contact the Office of Graduate Studies for assistance regarding transcript-related materials.
- The University of Denver will consider electronic transcripts official from a domestic institution provided by the following approved agencies: Army/American Council on Education Registry Transcript System (AARTS); Docufide/Parchment; National Student Clearinghouse; Naviance; Royall and Company; and, Scrip-Safe.

Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency. Students interested in graduate teaching assistantships (GTAs) or financial awards for the fall quarter must make sure that scores are received by the priority deadline, February 15. The institution code for the University of Denver is 4842.

Language Proficiency

- Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the University is 80 (iBT) or 550 (paper-based). The institution code for the University of Denver is 4842. The minimum IELTS score accepted by the University is 6.0. Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please see the Graduate Policy Manual for complete English language proficiency requirements.
- Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English.

Personal Statement

- A personal statement of at least 300 words is required. The statement should include information concerning your life, education, practical experience, special interests and specific purpose in applying to the University of Denver’s Department of Mathematics. The statement should be submitted via upload through the online application process.

Recommendation Letters

- Three letters of recommendation are required. These letters should be solicited and uploaded by recommenders through the online application system. Students interested in competing for graduate teaching assistantships (GTAs) or financial awards for the fall quarter must make sure that all letters of recommendation are received by the priority deadline, February 15.
Financial Support

- To be considered for federal financial support, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline, February 15. Information about financial aid can be found on the Office of Financial Aid website (http://www.du.edu/apply/gradfinaid). International students are not eligible for federal financial aid.
- Graduate teaching assistantships provide a full tuition waiver, health benefits, and a stipend of $20,000 (PhD students, 2013-14), $17,300 (MS students, 2013-14) for the nine-month year. The assistantships are renewable. These positions are merit-based and are awarded on a competitive basis.
- Dean's graduate student scholarships provide half-time tuition waiver to graduate students who are not funded by graduate teaching assistantships. The scholarship is renewable for an additional year (masters students) or two additional years (doctoral students). These positions are merit-based and are awarded on a competitive basis.

Application Status

- We encourage you to be actively engaged in the admission process. You can check your application status online at https://webcentral.du.edu.

Mailing Address

- Mail official transcripts and any supplemental admission materials not submitted with the online application to:
  University of Denver
  Office of Graduate Studies
  Mary Reed Building, Room 5
  2199 S. University Blvd.
  Denver, CO 80208-4802

International Applicants

- For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information. International applicants are strongly encouraged to have their applications complete at least eight weeks prior to the program’s application deadline.

The Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) provides complete details regarding admission requirements.

Master of Arts in Mathematics

Degree Requirements

Coursework Requirements

Every student's course of study must be approved in consultation with a designated departmental advisor.

<table>
<thead>
<tr>
<th>Approved MATH 4XXX courses (minimum 12 credits)</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Additional graduate-level MATH courses</td>
<td></td>
</tr>
<tr>
<td><strong>Total Credits</strong></td>
<td>45</td>
</tr>
</tbody>
</table>

**Minimum credits required for degree: 45**

This degree requires completion of 45 credits of graduate-level MATH courses, including at least 12 credits of approved MATH courses at the 4000 level.

At most 10 credits from another university may count toward the degree, and such credits must be approved in writing by an advisor from the Mathematics faculty.

No thesis is required.

Master of Science in Mathematics

Degree Requirements

Coursework Requirements

Every student’s course of study must be approved in consultation with a designated departmental advisor.

<table>
<thead>
<tr>
<th>Approved MATH 4XXX courses (minimum 12 credits)</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Approved cognate area (up to 15 credits)</td>
<td></td>
</tr>
</tbody>
</table>
Minimum credits required for degree: 45
This degree requires completion of 45 credits of graduate-level MATH courses, including at least 12 credits of approved MATH courses at the 4000 level.

Up to 15 credits may be in an approved cognate area. At most 10 credits from another university may count toward the degree, and such credits must be approved in writing by an advisor from the Mathematics faculty.

Non-coursework Requirements
- Tool requirement: Demonstrated competency in a tool is required and may be chosen from among the following: proficiency in the use of a modern computing typesetting system; approved outside courses; laboratory experience; or reading competency in French, German or Russian.

No thesis is required.

Doctor of Philosophy in Mathematics
This degree requires completion of at least 135 graduate-level credits beyond the BA or BS degree; passing of preliminary examinations; completion of a tool requirement; and completion of a written dissertation.

Although a master’s degree is not a prerequisite for acceptance into the PhD program, each student is required to obtain a master’s degree in mathematics before completing 80 credits in the PhD program.

Degree Requirements
Course Requirements
Every student’s course of study must be approved in consultation with a designated departmental advisor.

MATH 4XXX courses (minimum of 36 credits)

Additional Coursework (Chosen in consultation with the student’s academic advisor.)
- Up to 35 credits may be taken in other relevant disciplines, as approved by the mathematics department graduate committee.

Minimum credits required for degree: 135
Non-coursework Requirements
- Preliminary Examinations
  Every student admitted to the PhD program is expected to pass a written preliminary examination in analysis and a written preliminary examination in algebra. Both preliminary examinations are designed to test whether students in the PhD program have the adequate undergraduate preparation to continue in the program with a reasonable chance of success.

  Both examinations are offered twice per year: during the week immediately preceding the first week of the fall quarter, and during the first week of the winter quarter. A student must pass both exams by no later than the end of the winter quarter of his/her second year in the program unless the graduate committee grants an extension of this deadline for exceptional and documented reasons.

- Tool Requirement
  It is strongly recommended that students satisfy their tool requirement by demonstrating the ability to use a modern computer typesetting system. Other options include: reading competency in two languages selected from French, German and Russian; a series of outside courses in another discipline; a significant laboratory experience involving mathematics.

- Dissertation
  The dissertation must make a significant contribution to the research literature in mathematics.

  After the dissertation has been completed, the student must defend it in a final examination, as specified by the Office of Graduate Studies.

Courses
MATH 3000 The Real World Seminar (1 Credit)
Lectures by alumni and others on surviving culture shock when leaving the University and entering the job world. Open to all students regardless of major. Cross listed with COMP 3000.
MATH 3010 History of Mathematics (4 Credits)
This course surveys major mathematical developments beginning with ancient Egyptians and Greeks and tracing the development through Hindu-Indian mathematics, Arabic mathematics, and European mathematics up to the 18th century. Prerequisite: MATH 1953 or MATH 1963.

MATH 3040 Lattices and Order (4 Credits)
Ordered sets, lattices as relational and as algebraic structures, ideals and filters, complete lattices, distributive and modular lattices, Boolean algebras, duality for finite distributive lattices. Prerequisite: MATH 2200.

MATH 3050 Set Theory (4 Credits)
Zermelo-Fraenkel axioms, axiom of choice, Zorn's Lemma, ordinals, cardinals, cardinal arithmetic. Prerequisite: MATH 2200.

MATH 3090 Mathematical Probability (4 Credits)
Limit theorems for independent random variables, multivariate distributions, generating functions. Prerequisites: MATH 2080 and MATH 3080.

MATH 3161 Introduction to Real Analysis (4 Credits)
A theoretical introduction to the foundations of calculus including sequences, limits, continuity, derivatives and Riemann integration. Prerequisites: MATH 2080 and MATH 2200.

MATH 3166 Group Theory (4 Credits)
Groups and homomorphisms, isomorphism theorems, symmetric groups and G-sets, the Sylow theorems, normal series, fundamental theorem of finitely generated abelian groups. Cross listed with MATH 4166. Prerequisite: MATH 3170.

MATH 3170 Introduction to Abstract Algebra (4 Credits)
Examples of groups, permutations, subgroups, cosets, Lagrange theorem, normal subgroups, factor groups, homomorphisms, isomorphisms, rings, integral domains, quaternions, rings of polynomials, Euclid algorithm, ideals, factor rings, maximal ideals, principal ideals, fields, construction of finite fields. Prerequisite: MATH 2060 and MATH 2200.

MATH 3260 Metric Spaces (4 Credits)
Metric spaces and continuous functions; completeness and compactness; examples including norm spaces; pointwise and uniform convergence; Baire Category Theorem. Cross listed with MATH 4260. Prerequisite: MATH 3161 or equivalent.

MATH 3311 Linear Programming (4 Credits)
Linear optimization models, simplex algorithm, sensitivity analysis and duality, network models, dynamic programming, applications to physical, social and management sciences. Prerequisite: MATH 2060.

MATH 3312 Markov Chains (4 Credits)
Discrete-time and continuous Markov Chains, ergodic theorems, random processes, elementary queueing theory, applications. Prerequisite: MATH 2060 and MATH 3080.

MATH 3350 Introduction to Theory of Numbers (4 Credits)
Concepts of nonanalytic number theory and its history; prime numbers, divisibility, continued fractions, modular arithmetic, Diophantine equations and unsolved conjectures. Prerequisites: MATH 2200.

MATH 3451 Chaos, Dynamics & Fractals (4 Credits)
Introduction to one-dimensional dynamical systems, fractals; fixed and periodic points; sources and sinks; period doubling and tangent node bifurcations; chaotic dynamical systems; Sarkovskii's Theorem. Prerequisite: MATH 3161.

MATH 3550 Introduction to Theory of Numbers (4 Credits)
Specific geometrical systems including finite, Euclidean, non-Euclidean and projective geometries. Prerequisite: MATH 2200.

MATH 3600 Mathematical Logic (4 Credits)
Classical propositional calculus (deductive systems and truth-table semantics), first-order logic (axiomatization and completeness), elements of recursion theory, introduction to nonclassical logics. Prerequisite: MATH 2200.

MATH 3651 Ordinary Differential Equations (4 Credits)
Modeling of phenomena by ordinary differential equations; techniques of analysis and solution of such equations; oscillation theory and boundary value problems, power series methods, special functions, Laplace transforms and difference equations. Prerequisites: MATH 2060 and MATH 2070.

MATH 3661 Partial Differential Equations (4 Credits)
First and second order linear equations, Fourier series, the wave equation, the Cauchy problem, the heat equation, maximum principles, Laplace's equation, Green's functions. Prerequisites: MATH 2070 and MATH 2080.

MATH 3701 Combinatorics (4 Credits)
The principles of inclusion and exclusion, elementary counting techniques, systems of distinct representatives, partitions, recursion and generating functions, Latin squares, designs and projective planes. Prerequisite: MATH 2200.

MATH 3705 Topics in Mathematics (4 Credits)
Varying selected advanced topics in mathematics, depending on student demand and instructor interest.
MATH 3710 Graph Theory (4 Credits)
Paths, cycles, trees, Euler tours and Hamilton cycles, bipartite graphs, matchings, basic connectivity theorems, planar graphs, Kuratowski’s theorem, chromatic number, n-color theorems, introduction to Ramsey theory. Prerequisite: MATH 2200.

MATH 3720 Coding Theory (4 Credits)
Goals of coding theory and information theory, instantaneous and Huffman codes, Shannon theorems, block and linear codes, generating and parity-check matrices, Hamming codes, perfect codes, binary Golay code, Reed-Muller codes, cyclic codes, BCH codes, Reed-Solomon codes, ideas of convolutional and turbo codes. Prerequisite: MATH 3170.

MATH 3851 Functions Complex Variable (4 Credits)
Complex numbers, analytic functions, complex integration, series expansions, residue theory, conformal maps, advanced topics and applications.

MATH 3911 Independent Study (1-10 Credits)
Cannot be arranged for any course that appears in regular course schedule for that particular year.

MATH 3992 Directed Study (1-10 Credits)

MATH 4050 Combinatorial Set Theory (4 Credits)
Beginning with a quick review of ZFC, the standard axioms of set theory, the course covers advanced ordinal and cardinal arithmetic and infinitary combinatorics, including Ramsey theory. Additional axioms such as the Continuum Hypothesis, Martin’s Axiom, and combinatorial principles such as Diamond and their consequences for mathematics are studied. Prerequisite: MATH 3050.

MATH 4060 Descriptive Set Theory (4 Credits)
Descriptive Set Theory is one of the main branches of modern set theory. Set theory provides techniques for the precise study of real analysis. This course covers trees as tools for analyzing sets of real numbers, Polish spaces, the Borel hierarchy, Baire-measurability, extensions of continuous functions, separation theorems, and more. Prerequisite: MATH 3050.

MATH 4070 Proof Theory (4 Credits)
Hilbert-style systems, Natural deduction, (simply typed) lambda calculus, combinatory logic, the Curry-Howard correspondence, normalization, cartesian closed categories, Sequent calculi, cut elimination and applications, structural rules; logical systems: classical, intuitionistic, relevance, linear; algebraic semantics. Recommended prerequisite: MATH 2200.

MATH 4080 Algebraic Logic (4 Credits)
Elements of universal algebra, lattice theory and first-order logic; elements of abstract algebraic logic (deductive systems, algebraization, deduction filters, deduction theorems, matrix semantics); sequent calculi for substructural logics, residuated lattices, structure theory for congruences and deductive filters; subvariety lattices (atomic varieties, axiomatizations of joins, translations); algebraic cut elimination; (un)decidability and finite model property. Prerequisites: MATH 3170 and either MATH 3040 or MATH 3060.

MATH 4110 Topology (4 Credits)
Point set topology including topological spaces, connectedness, compactness and separate axioms; preparation for advanced courses in analysis. Cross listed with MATH 3110.

MATH 4120 Algebraic Topology (4 Credits)
Fundamental groups, simplicial homology, Euler characteristic classification of surfaces, manifolds. Prerequisites: MATH 3170 and MATH 3110/4110.

MATH 4162 Rings and Modules (4 Credits)
Ideals, left and right R-modules, simple modules, totally decomposable modules, Wedderburn-Artin theorems, Artinian and Noetherian rings and modules, Hopkins theorem, Hilbert basis theorem, free modules, projective and injective modules, Kaplanski theorem. Prerequisites: MATH 3176 or MATH 4176.

MATH 4163 Universal Algebra (4 Credits)
Universal algebras, congruences, lattices, distributive lattices, modular lattices, Boolean algebras, subdirectly irreducible algebras, Mal’cev theorems, varieties, Birkhoff theorem. Prerequisites: MATH 3170 and either MATH 3040 or MATH 3060.

MATH 4164 Galois Theory (4 Credits)
The fundamental theorem of algebra, field extensions, ruler and compass constructions, normal and separable extensions, field automorphisms, Galois correspondence, solvability and simplicity, calculating Galois groups. Prerequisite: MATH 3176/MATH 4176 and MATH 3166/MATH 4166.

MATH 4166 Group Theory (4 Credits)
Groups and homomorphisms, isomorphism theorems, symmetric groups and G-sets, the Sylow theorems, normal series, fundamental theorem of finitely generated abelian groups. Cross listed with MATH 3166. Prerequisite: MATH 3170.

MATH 4168 Lie Groups and Lie Algebras (4 Credits)
Lie groups and Lie algebras, fundamental theorems of Lie, general structure theory; compact, nilpotent, solvable, semisimple Lie groups; classification of semisimple Lie algebras; representation theory of compact and semisimple Lie algebras and Lie groups. Additional topics as time permits: universal enveloping algebras, symmetric spaces. Prerequisites: MATH 3161 and MATH 3170.

MATH 4176 Rings and Fields (4 Credits)
Rings, domains, fields; ideals, quotient rings, polynomials; PID’s, UFD’s, Euclidean domains; maximal and prime ideals, chain conditions; extensions of fields, splitting fields, algebraic and transcendental extensions; brief introduction to Galois theory. Cross listed with MATH 3176. Prerequisite: MATH 3170 or equivalent.
MATH 4181 Loop Theory (4 Credits)
Quasigroups, loops, latin squares, 3-nets, isotopy, multiplication groups, inner mapping groups, nuclei, commutant, center, associator subloop, inverse properties, power-associative loops, Bruck loops, Bol loops, Moufang loops, octonions. Prerequisites: MATH 3166 or MATH 4166.

MATH 4260 Metric Spaces (4 Credits)
Metric spaces and continuous functions; completeness and compactness; examples including norm spaces; pointwise and uniform convergence; Baire Category Theorem. Cross listed with MATH 3260. Prerequisite: MATH 3161 or equivalent.

MATH 4270 Hilbert Spaces (4 Credits)
Schwarz and triangle inequalities, Reisz lemma, subspaces and orthogonal projections, orthonormal bases, spectrum of bounded linear operators, compact, self-adjoint, normal and unitary operators, spectral theorem and, if time permits, unbounded operators. Also, if time permits, applications to partial differential equations, physics and engineering. Prerequisites: MATH 3260 or MATH 4260 or MATH 3110 or MATH 4110.

MATH 4280 Measure Theory and Applications (4 Credits)
Definition of Measure spaces; Lebesgue measure; limit theorems; Raydon-Nikodym Theorem; introduction to L_p spaces. Prerequisite: MATH 3260/4260 or MATH 3110/4110.

MATH 4290 Dynamical Systems (4 Credits)
Topological and measure theoretical dynamical systems; properties and invariants of systems; symbolic dynamics; Ergodic Theorems; applications. Prerequisites: MATH 3110/4110 or MATH 3260/4260.

MATH 4300 Graduate Seminar (1-4 Credits)
Students research a topic of their choosing with the aid of a faculty member, and then prepare and present a formal lecture on the subject. Prerequisite: graduate standing or consent of the instructor.

MATH 4400 Differential Geometry (4 Credits)
Planar and spatial curves, global properties of curves, surfaces in three dimensions, the first fundamental form, curvature of surfaces, Gaussian curvatures, geodesics, Theorema Egregium, hyperbolic geometry. Prerequisites: MATH 3170 and either MATH 3110/4110 or MATH 3260/4260.

MATH 4501 Functional Analysis (4 Credits)
Advanced topics in structure of linear spaces; Banach spaces; Hahn-Banach Theorem and Duality; Uniform Boundedness Theorem; Open Mapping and Closed Graph Theorems; Stone-Weierstrass Theorem; Topics in Hilbert Spaces. Prerequisite: MATH 4280.

MATH 4700 Special Topics in Mathematics (1-4 Credits)

MATH 4701 Combinatorial Algorithms (4 Credits)
Basic enumeration techniques; representations of combinatorial objects; algorithms for searching, sorting, generating combinatorial objects, graph algorithms. Prerequisites: MATH 3701 or MATH 3710.

MATH 4705 Special Topics Applied Math (1-5 Credits)
Varying selected advanced topics in mathematics, depending on student demand. Possible alternatives include of variations, partial differential equations, algebraic topology, differential manifolds, special functions.

MATH 4991 Independent Study (1-10 Credits)
Cannot be arranged for any course that appears in course schedule for that particular year.

MATH 4992 Directed Study (1-10 Credits)

MATH 4995 Independent Research (1-10 Credits)
Research projects undertaken in conjunction with a faculty member.

MATH 5000 Doctoral Seminar (3 Credits)
Techniques, methods used in mathematical, computing research. Includes proofs, bibliographic searching, writing styles, what constitutes an acceptable dissertation.

MATH 5991 Independent Study (1-10 Credits)
Cannot be arranged for any course that appears in the regular course schedule for that particular year.

MATH 5995 Independent Research (1-10 Credits)
Research leading to a dissertation.

Natural Sciences General

Office: Natural Sciences and Mathematics (http://www.du.edu/nsm)

Professional science Master in biological sciences

The Professional Science Master's (PSM) with a concentration in Biomedical Sciences offers rigorous academic training and professional practical skills to prepare students for challenging careers in the biomedical sciences and allied health sciences. The program strives to provide strong scientific knowledge and promote global-awareness, ethics, communication and other important professional skills through acquiring knowledge within and
across disciplines at DU. Students will gain an awareness and knowledge of the many current issues and concerns facing the fields of allied health and biomedical sciences industries.

**Molecular and Cellular Biophysics**

The Molecular and Cellular Biophysics PhD (MCB) program provides opportunities for doctoral studies in the interdisciplinary field of biophysics. Participation of faculty from the Departments of Biological Sciences, Chemistry & Biochemistry, and Physics & Astronomy enhances the strength and breadth of our program by incorporating cross-disciplinary and collaborative approaches to research. The MCB PhD program is centered on research activities that coincide with faculty experience and expertise. Areas of research in the MCB program include cellular physiology, developmental dynamics, protein folding and aggregation, protein network analysis, signal transduction cascades, synthetic biology, systems biology and the development of novel imaging techniques. Projects at the interface of traditional disciplines of physics, biology and chemistry as well as methods of mathematical analysis and computer modeling are particularly encouraged.

The MCB PhD program offers both a core foundation in biophysical theory and practice yet provides flexibility and individualized attention such that students with diverse scientific backgrounds will have the opportunity to be trained in molecular and cellular biophysics. During their first year in the program, students conduct lab rotations, take a year-long course sequence that covers foundations of molecular and cellular biophysics and take additional graduate courses to supplement their undergraduate training. At the end of their first year, students will join the lab in which they will conduct their thesis research.

Students with strong quantitative undergraduate backgrounds (e.g., undergraduate degrees in physics, chemistry, mathematics, computer science/engineering) who desire to apply these skills to various biological problems, as well as students with a background in cell or molecular biology with a solid foundation in mathematics and physics are particularly encouraged to apply. Financial aid is usually offered in the form of Graduate Teaching or Graduate Research Assistantships, which cover tuition costs and provide a stipend for living expenses.

Following are the simple steps to apply for graduate study in Molecular and Cellular Biophysics at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

**Apply Online / Application Deadlines**

- Applications for graduate study in Molecular and Cellular Biophysics at the University of Denver must be submitted online. All online materials must be submitted, and all supplemental materials must be postmarked, by the program's stated deadline: January 31 for the fall term. The program accepts applications after this date on a rolling basis until all positions are filled.
- A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.

**Transcripts / Course and Degree Prerequisites and Requirements**

- Students with strong quantitative undergraduate backgrounds (e.g., undergraduate degrees in physics, chemistry, mathematics, computer science/engineering) who desire to apply these skills to various biological problems, as well as students with a background in cell or molecular biology with a solid foundation in mathematics and physics are encouraged to apply. A minimum of one year of calculus and one year college physics (preferably calculus-based) regardless of undergraduate major are required.
- Applicants are required to submit an official transcript from each post-secondary institution attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed. Proof of a bachelor's, and if applicable, a master's degree from a regionally accredited college or university is required. Applicants must also account for any study undertaken outside the United States. If study abroad course work with grades and course titles do not appear on a transcript, those records must be obtained as well. All transcripts must be official and received in the Office of Graduate Studies in a sealed envelope. University of Denver students and alumni do not need to provide DU transcripts as these will be requested by the Office of Graduate Studies.
- Transcripts issued in a language other than English must be accompanied by a certified English translation. Students who have earned a degree outside the U.S. must also submit proof of graduation, typically through a degree certificate or diploma. If you have been educated outside the U.S., we encourage you to contact the Office of Graduate Studies for assistance regarding transcript-related materials. DU's in-house foreign credential evaluation may take up to four weeks. This evaluation must be complete by the program's stated deadline. Applicants with education credentials from outside of the U.S. are encouraged to apply early.

**Test Scores**

- The Graduate Record Examination (GRE) general is required and a subject test is recommended. Competitive subject GRE scores will strengthen a candidate's application. Applicants can report subject GRE scores in any of the following disciplines: Physics, Chemistry, Biology, Biochemistry, Cell and Molecular Biology. Scores must be received directly from the appropriate testing agency by the program's stated deadline. The institution code for the University of Denver is 4842. Non-native English speakers are required to provide scores from either the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS). Please note: this requirement is independent of citizenship status.
- The minimum TOEFL score accepted by DU is 80 (iBT) or 550 (paper-based). The minimum IELTS score accepted by DU is 6.0. Non-native English speakers who hold a post-secondary degree from an institution where English is the only language of instruction and examination or who hold a regionally accredited baccalaureate degree from a U.S. institution are exempt from the TOEFL/IELTS requirement. There are no exemptions for graduate teaching assistants.
• Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please visit the International Applicant (http://www.du.edu/learn/graduates/internationalapplicants.html) website for a list of TOEFL/IELTS requirements.

**Personal Statement**

• A personal statement of at least 300 words is required. The statement should include information concerning your education, practical (research) experience, special interests and specific purpose for applying to the interdisciplinary program in molecular and cellular biophysics at the University of Denver. The statement should be submitted via upload through the online application process.

**Resume / C.V.**

• A resume or C.V. is required. This should include work experience, research, and/or volunteer work. The resume or C.V. should be submitted via upload through the online application process.

**Recommendation Letters**

• Three letters of recommendation are required. These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program’s stated deadline.

**Financial Support**

• Students are supported by graduate teaching assistantships through the program for the first year, and on graduate research or teaching assistantships, arranged by their faculty thesis advisor, in their subsequent years. Either mechanism typically includes tuition waiver, stipend and health insurance.

• To be considered for federal financial aid, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline: February 15. Information about financial aid can be found on the Office of Financial Aid (http://www.du.edu/financialaid/graduate) website. International students are not eligible for federal financial aid.

**Application Status**

• We encourage you to be actively engaged in the admission process. You can check your application status online at PioneerWeb (https://PioneerWeb.du.edu).

**Total Credits**: 45

¹ Students may take ENBI 4800 Advanced Topics: Bio-Fluid Mechanics or ENBI 4800 Advanced Topics: Computational Biomechanics.

**Minimum credits required for degree**: 45

**Non-coursework Requirements**

- Capstone project: The capstone project includes a written and public oral presentation of the project. The program requires a capstone project which involves interactions with allied health and biomedical professions from outside of the DU community. The capstone experience will be culminated in a formal scholarly work (both written and orally presented) that reflects a student's individual interest and the integration of science with strong professional skills.

**Doctor of Philosophy in Molecular and Cellular Biophysics**

Graduate studies in the program are highly individualized; programs should fit each student's unique needs and interests. Students are required to perform original, publishable research and to present a thesis based on research to the faculty of the molecular and cellular biophysics program.

A student qualifies for the PhD degree after demonstrating growth as an independent investigator—identifying a significant research question; proposing a hypothesis or model to answer the question; testing the hypothesis with appropriate experiments; and writing a dissertation acceptable to the department.
The structure of the PhD program in Molecular and Cellular Biophysics is as follows:

- required core courses and elective courses during the first year
- required lab rotations during the first year
- required seminar/special topics courses during the second year
- qualifying exams first year and second year
- thesis research second year to completion

Electives

During the first two years electives can be chosen from existing 3000- or 4000-level courses in the Division and must be chosen with consultation and the approval of the Steering committee. This use of electives is critical given the interdisciplinary nature of this PhD program and scientific discipline and the fact that incoming students will come from a range of disciplines in the physical sciences and life sciences.

The remainder of the credit hours required for the degree may include:

<table>

</tbody>
</table>

Total Credits

90

Minimum credits required for the degree: 90 (must be approved by the program Steering committee)

Non-coursework Requirements

- passing performance in the qualifying examinations
- completion of a research dissertation of publishable quality
- successful oral defense of the dissertation

Additional requirements:

- successful completion of research rotations during the first year
- maintaining a minimum GPA of 3.0
- passing performance in the qualifying examinations
- attendance at departmental seminars and the presentation of one seminar per year
- completion of a research dissertation of publishable quality
- successful oral defense of the dissertation

A complete description of the program’s official requirements and details of qualifying examinations are available on the Natural Sciences & Mathematics (http://www.du.edu/nsm/departments/molecularandcellular) website.

Courses

BIOP 4100 Foundations in Biophysics (3 Credits)

Focus of the course is on application of basic physics principles to the study of cells and macromolecules. Topics include diffusion, random processes, thermodynamics, reaction equilibria and kinetics, computer modeling. Must be admitted to the MCB PhD program or related graduate program with instructor approval. Cross listed with PHYS 4100.
**BIOP 4150 Cellular Biophysics (3 Credits)**
Biophysical approaches to understanding cell function. We emphasize the various experimental approaches that biophysicists use to study basic cellular processes, including a variety of fluorescence images, optical and electrophysiological techniques. Cross listed with BIOL 4211.

**BIOP 4210 Current Topics in Biophysics (2 Credits)**
This is a seminar course that focuses on current primary literature in the fields of molecular and cellular biophysics. This is the first of a three course, year-long sequence.

**BIOP 4992 Directed Study (1-10 Credits)**

**BIOP 4993 Lab Rotation (2-9 Credits)**
Lab rotation in Molecular and Cellular Biophysics before students pass the first phase of their qualifying exam.

**BIOP 4995 Independent Research (1-9 Credits)**
Independent research in Molecular and Cellular Biophysics before students pass the first phase of their qualifying exam.

**BIOP 5991 Independent Study (1-10 Credits)**

**BIOP 5995 Independent Research (2-9 Credits)**

**BIOP 6991 Independent Study (1-10 Credits)**

**BIOP 6992 Directed Study (1-5 Credits)**

**BIOP 6995 Independent Research (1-10 Credits)**

**Physics and Astronomy**

Office: 2112 East Wesley Avenue, Room 211  
Phone: 303-871-2238  
Website: Physics and Astronomy (http://www.du.edu/nsm/departments/physicsandastronomy)

The Department of Physics and Astronomy at the University of Denver combines a tradition of individualized instruction with a contemporary research focus. We have a dynamic faculty with innovative, interdisciplinary research programs. We provide an attentive, hands-on research and learning environment up to the PhD level. The department also offers a low student-to-faculty ratio in all advanced and graduate physics and astronomy courses and stresses individualized attention to each student.

The department has major research thrusts in stellar astronomy/astrophysics, biophysics, and condensed matter physics. Our faculty members are internationally recognized and accomplished researchers. The department is a part of two major interdisciplinary centers that were recently founded at the University of Denver: the Molecular and Cellular Biophysics program and the Center for Nanoscale Science and Engineering. Major state-of-the-art instrumentation is available both in the department and through collaborations with nearby national institutes in the region (NIST, NREL, and NCAR), where several of our faculty hold associate appointments. Also, the Division of Natural Sciences and Mathematics maintains our own Linux cluster for in-house high-performance computational needs.

Following are the simple steps to apply for graduate study in Physics and Astronomy at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

**Apply Online / Application Deadlines**
- Applications (https://du-grad.edu.185r.net/application) for graduate study in Physics and Astronomy at the University of Denver must be submitted online.
- All materials submitted by the program’s priority deadline, **February 1**, will receive full consideration for the fall-quarter admission, although the applications can be submitted at any time;  
- A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.

**Course and Degree Prerequisites and Requirements**
- Proof of a bachelor’s degree is required from a regionally accredited college or university.  
- An undergraduate physics and mathematics background equivalent to a bachelor's degree in physics is required.

**Transcripts**
- Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school.
• The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.

• Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early. Applicants educated outside the U.S. are encouraged to contact the Office of Graduate Studies for assistance regarding transcript-related materials.

• The University of Denver will consider electronic transcripts official from a domestic institution provided by the following approved agencies: Army/American Council on Education Registry Transcript System (AARTS); Docufide/Parchment; National Student Clearinghouse; Naviance; Royall and Company; and, Scrip-Safe.

Test Scores
• The Graduate Record Examination (GRE) with a minimum of 146 on the quantitative section is required. Admission preference will be given to those submitting strong advanced physics scores on the Graduate Record Exam (GRE) subject test. Scores must be received directly from the appropriate testing agency by the program’s stated deadline. The institution code for the University of Denver is 4842.

Language Proficiency
• Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the University is 80 (iBT) or 550 (paper-based). The institution code for the University of Denver is 4842. The minimum IELTS score accepted by the University is 6.0. Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please see the Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) for complete English language proficiency requirements.

• Applicants may be exempt from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English. Such applicants may be exempt from the TOEFL/IELTS requirement but not from other standardized graduate entrance examinations.

Personal Statement
• Your application should include a short statement in your own words, describing why you are interested in attending graduate school and why you chose our department. In your essay, specify your particular physics area of interest and discuss your future career plans.

Recommendation Letters
• Three academic letters of recommendation are required. These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program’s stated deadline.

Financial Support
• The Department of Physics and Astronomy offers graduate teaching assistantships, graduate research assistantships, and graduate studies doctoral fellowships, none of which requires the Free Application for Federal Student Aid (FAFSA).

• To be considered for other financial support, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline, February 15.

• Information about financial aid can be found on the Office of Financial Aid website (http://www.du.edu/apply/gradfinaid). International students are not eligible for federal financial aid.

Application Status
• We encourage you to be actively engaged in the admission process. You can check your application status online at https://webcentral.du.edu

Mailing Address
• Mail official transcripts and any supplemental admission materials not submitted with the online application to:
  University of Denver
  Office of Graduate Studies
  Mary Reed Building, Room 5
  2199 S. University Blvd.
International Applicants

- For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information.

International applicants are strongly encouraged to have their applications complete at least eight weeks prior to the program’s application deadline.

Examinations

- Before registering, new graduate students must take a diagnostic examination covering undergraduate physics. This examination serves to identify undergraduate deficiencies and helps to determine the student’s initial program.
- A comprehensive examination is given to assess whether students have attained the standards set by the department to continue their pursuit of the degrees sought. All students are required to pass the comprehensive examination at an appropriate level (MS or PhD), in order to advance their candidacy status. All students pursuing a PhD are required to pass an oral dissertation research proposal in order to be promoted to PhD candidacy.

The Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) provides complete details regarding admission requirements.

Master of Science in Physics

The Department of Physics and Astronomy offers a Master of Science (MS) in Physics that prepares the student for a wide variety of jobs in industry, government and educational institutions. Our graduates have obtained industrial or governmental laboratory research positions, entered pre-college or community college teaching, joined planetarium or museum staffs, and become technical representatives of various organizations. With complementary courses in education, MS graduates are well qualified to teach at the secondary level. The MS in Physics is also a popular course of study and professional improvement for people already working in industry. For those currently employed, research projects can usually be matched to the employer’s programs, and often someone from the industry can serve as co-advisor so that the continuing education benefits both the student and the employer.

Degree Requirements

Coursework Requirements

Both 4000- and 3000-graduate level courses may be applied toward the degree, with the approval of the Graduate Committee or the Master’s/Dissertation Committee.

Graduate Core Courses

Physics & Astronomy Graduate Core Courses are the following 9 courses (23-27 qtr hrs) that all students are expected to take during the first two years in the program:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>

</tr>
</tbody>
</table>

Minimum credits required for degree: 45 including the Graduate Core Courses, which constitute 23-27 quarter hours

Non-coursework Requirements

Option I (Research Thesis)

- comprehensive examinations;
- an acceptable thesis; oral thesis defense. Two departmental faculty members and an outside chair are required for the oral defense.

Option II (No thesis)
• comprehensive examinations
• oral final examination covering course work. Two departmental faculty members are required for the oral examination.

Other Degree Requirements
• Good academic standing: a GPA of 3.0 or higher
• No grades lower than C- are accepted toward the degree
• No more than one-fourth of the hours accepted toward the degree may be of C+, C, or C- grade
• Regular attendance at the Physics and Astronomy Colloquia

Doctor of Philosophy in Physics
A minimum of three years of full-time study beyond the baccalaureate degree, with at least 90 quarter hours of approved graduate credit; comprehensive examination; oral defense and acceptable dissertation. There is no departmental foreign language requirement. Enrollment as a graduate student at the University of Denver for at least six quarters, including at least two consecutive quarters of full-time attendance, is required to meet residency standards.

Degree Requirements
Coursework Requirements
Both 4000- and 3000-graduate level courses may be applied toward the degree, with the approval of the Graduate Committee or the Master's/Dissertation Committee.

Additional Coursework 67-63

Total Credits 90

Minimum credits required for degree: 90 of which a minimum of 60 must be in Physics and Astronomy including the Graduate Core Courses, which constitute 23-27 quarter hours.

Non-Course Requirements
• Regular attendance at the Physics and Astronomy Colloquia
• Annual presentation at the Physics and Astronomy Colloquia
• Comprehensive Examination
• Advancement to Preliminary Candidacy at the Ph.D. level
• Formation of the Dissertation Committee
• Passing Oral Dissertation Research Proposal
• Advancement to Candidacy at the Ph.D. level
• Dissertation
• Dissertation Defense

Other Degree Requirements
• Good academic standing: a GPA of 3.0 or higher
• No grades lower than C- are accepted toward the degree
• No more than one-fourth of the hours accepted toward the degree may be of C+, C, or C- grade
Courses

PHYS 3111 Quantum Physics I (4 Credits)
First of a two-quarter sequence. The Schrödinger equation: interpretation of wave functions; the uncertainty principle; stationary states; the free particle and wave packets; the harmonic oscillator; square well potentials. Hilbert space: observables, commutator algebra, eigenfunctions of a Hermitian operator; the hydrogen atom and hydrogenic atoms. Prerequisites: PHYS 2252, PHYS 2260, PHYS 2556, PHYS 3612 and MATH 2070.

PHYS 3112 Quantum Physics II (4 Credits)
Second of a two-quarter sequence. Angular momentum and spin; identical particles; the Pauli exclusion principle; atoms and solids: band theory; perturbation theory; the fine structure of hydrogen; the Zeeman effect; hyperfine splitting; the variational principle; the WKB approximation; tunneling; time dependent perturbation theory; emission and absorption of radiation. Scattering: partial wave analysis; the Born approximation. Prerequisite: PHYS 3111.

PHYS 3251 Astrophysics: Radiative Processes (4 Credits)
Because light is the primary means by which astronomers learn about the Universe, understanding the production and subsequent behavior of light is key to interpreting astronomical observations. This course introduces students to the physics of astrophysical radiation and its interaction with matter as it travels from its source to our detectors. Topics may include radiative transfer, emission and absorption processes, Compton processes, synchrotron radiation, thermodynamic equilibrium, radiative and collisional excitation, and spectroscopy of atoms and molecules. The course is aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. Prerequisites: PHYS 2252 and consent of instructor.

PHYS 3252 Astrophysics: Observations (4 Credits)
Astronomy is fundamentally an observational science and as such it is important for practitioners to understand how their data are collected and analyzed. This course is therefore a comprehensive review of current observational techniques and instruments, aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. This class introduces students to the capabilities and limitations of different types of instruments while exploring the sources and types of noise and providing statistical tools necessary for interpreting observational data. Prerequisites: PHYS 2252 and consent of instructor.

PHYS 3270 Workshop: Practical Astronomy (1-5 Credits)
Capstone coursework featuring studies in experimental, computational, and/or theoretical work in astronomy and astrophysics.

PHYS 3311 Advanced Laboratory I (1 Credit)
First of a three-quarter sequence. Advanced experimental techniques in physics. Meets with PHYS 2311. Prerequisite: instructor's permission.

PHYS 3312 Advanced Laboratory II (1 Credit)
Second of a three-quarter sequence. Advanced experimental techniques in physics. Meets with PHYS 2312. Prerequisite: instructor's permission.

PHYS 3313 Advanced Laboratory III (1 Credit)
Third of a three-quarter sequence. Advanced experimental techniques in physics. Meets with PHYS 2313. Prerequisite: instructor's permission.

PHYS 3350 Analytical Mechanics I (4 Credits)
Lagrangian and Hamiltonian mechanics. Prerequisites: PHYS 1113, PHYS 1213, or PHYS 1214 and MATH 2070 and consent of instructor.

PHYS 3361 Electromagnetism I (4 Credits)
First of a two-quarter sequence. Vector algebra; differential vector calculus (gradient, divergence and curl); integral vector calculus (gradient, divergence and Stokes' Theorems); line, surface and volume integrals; Electrostatics: the electric field, electric potential, work and energy in electrostatics; method of images, boundary value problems and solutions to Laplace's equation in Cartesian, spherical and cylindrical coordinates; multipole expansion of the electric potential; electric fields in matter: polarization; the electric displacement vector; boundary conditions, linear dielectrics. Magnetostatics: magnetic fields and forces. Prerequisites: PHYS 1113, PHYS 1213, or PHYS 1214 and MATH 2070.

PHYS 3362 Electromagnetism II (4 Credits)
Second of a two-quarter sequence. Magnetic vector potential; magnetic fields in matter: magnetization; fields of magnetized objects; linear and nonlinear magnetic materials; electromotive force, Ohm's law; electromagnetic induction; Faraday's law; Maxwell's equations; the displacement current; boundary conditions; the Poynting theorem; momentum and energy density of the fields; the Maxwell stress tensor; the wave equation and electromagnetic waves in vacuum and matter; absorption and dispersion; wave guides; the potential formulation and gauge transformations; retarded potentials; dipole radiation. Prerequisite: PHYS 3361.

PHYS 3370 Advanced Topics: General (3 Credits)
Offered irregularly, depending on demand. May be taken more than once for credit. Prerequisite: instructor's permission.

PHYS 3371 Optics I (4 Credits)
First of a two-quarter sequence. Gaussian optics and ray tracing; matrix methods and application to optical design; elementary theory of aberrations; light as electromagnetic wave, diffraction and interference; interferometers and their applications. Elementary theory of coherence; selected topics. May include laboratory work as appropriate. Prerequisites: PHYS 1113, PHYS 1213 or PHYS 1214, and MATH 2070.

PHYS 3384 Thermal Physics I (4 Credits)
First of a two-quarter sequence. Laws of thermodynamics; thermal properties of gases and condensed matter; kinetic theory of gases, classical and quantum statistics. Prerequisites: PHYS 1113, PHYS 1213 or PHYS 1214 and MATH 2070.

PHYS 3391 Independent Study (1-8 Credits)
PHYS 3392 Directed Study (1-10 Credits)
PHYS 3995 Independent Research (1-10 Credits)

PHYS 4001 Introduction to Research I (1.2 Credit)
This course is the first of the 3-course sequence designed to provide the opportunity of learning fundamental skills to conduct independent research in any physical science discipline. In this course, students review essential material in mathematical physics, learn basic programming techniques and improve upon their skills in literature search and scientific writing, especially proposal writing. Special in-class seminars in collaboration with the Penrose Library and Writing and Research Center are scheduled. Student are introduced to research conducted by Physics and Astronomy faculty so that they can choose a faculty member with whom to take on a Winter Research Project during the winter interterm and winter quarter as part of Introduction to Research II. Students must prepare and submit a research proposal before the end of the fall quarter.

PHYS 4002 Introduction to Research II (1-3 Credits)
This is the second of the 3-course sequence to provide the opportunity of learning fundamental skills to conduct independent research in any physical science discipline. In this course, students conduct an independent research or study project that they have outlined in the research proposal they submitted as part of Introduction to Research I under supervision of a faculty advisor of their choosing. At the same time, students have time to review issues that we face as researchers. Prerequisites: PHYS 4001 and consent of a faculty research advisor.

PHYS 4003 Introduction to Research III (1,2 Credit)
This is the third of the 3-course sequence to provide students with the opportunity of learning fundamental skills to conduct independent research in any physical science disciplines. In this course, students complete their Winter research project conducted as part of Introduction to Research II and present the results in writing as a term paper and in oral presentation as part of the Departmental Colloquia. Special in-class sessions in collaboration with the Writing and Research Center are included. Prerequisite: PHYS 4002.

PHYS 4100 Foundations of Biophysics (3 Credits)
Focus of the course is on application of basic physics principles to the study of cells and macromolecules. Topics include diffusion, random processes, thermodynamics, reaction equilibriums and kinetics, computer modeling. Must be admitted to the MCB PhD program or related graduate program with instructor approval. Cross listed with BIOP 4100.

PHYS 4111 Quantum Mechanics I (3 Credits)
PHYS 4112 Quantum Mechanics II (3 Credits)
PHYS 4251 Intro to Astrophysics I (3 Credits)
PHYS 4252 Intro to Astrophysics II (3 Credits)
PHYS 4253 Intro to Astrophysics III (3 Credits)
PHYS 4411 Advanced Condensed Matter I (3 Credits)
Materials structure; structure analysis; elastic properties; defects; plastic mechanical properties; thermal properties and phonons; free electron gas; energy bands and Fermi surfaces; crystalline and amorphous semiconductors; quasiparticles and excitations; electrical properties and ferroelectrics; magnetic properties and ferromagnetics; classical and high-Tc superconductors; other advanced materials. Co-requisite: PHYS 4111.

PHYS 4412 Advanced Condensed Matter II (3 Credits)
Materials structure; structure analysis; elastic properties; defects; plastic mechanical properties; thermal properties and phonons; free electron gas; energy bands and Fermi surfaces; crystalline and amorphous semiconductors; quasiparticles and excitations; electrical properties and ferroelectrics; magnetic properties and ferromagnetics; classical and high-Tc superconductors; other advanced materials. Co-requisite: PHYS 4112.

PHYS 4413 Advanced Condensed Matter III (3 Credits)
Materials structure; structure analysis; elastic properties; defects; plastic mechanical properties; thermal properties and phonons; free electron gas; energy bands and Fermi surfaces; crystalline and amorphous semiconductors; quasiparticles and excitations; electrical properties and ferroelectrics; magnetic properties and ferromagnetics; classical and high-Tc superconductors; other advanced materials. Co-requisite: PHYS 4113.

PHYS 4511 Advanced Dynamics I (4 Credits)
PHYS 4611 Adv Electricity & Magnetism I (3 Credits)
PHYS 4612 Adv Electricity & Magnetism II (3 Credits)
PHYS 4750 Seminar in Physics (1 Credit)
PHYS 4811 Statistical Mechanics I (4 Credits)
Fundamentals of thermodynamics, microcanonical and canonical ensemble, quantum formulation noninteracting particle systems.

PHYS 4910 Special Topics Physics (1-5 Credits)
PHYS 4991 Independent Study (M.S.) (1-10 Credits)
PHYS 4992 Directed Study (M.S.) (1-10 Credits)
PHYS 4995 Independent Research (M.S.) (1-10 Credits)
PHYS 6991 Independent Study (PhD) (1-10 Credits)
PHYS 6995 Independent Research (PhD) (1-10 Credits)
Division of Social Sciences

Arts, Humanities, and Social Sciences (AHSS) is the liberal arts hub of the University of Denver and represents 26 schools, departments and programs. We offer 26 different graduate degrees ranging from a PhD in English to a Master’s in Public Policy to a Master’s in Music. All of these graduate programs are well regarded for academic rigor and post-graduation job placement. With about 340 AHSS graduate students enrolled, our intimate graduate programs feature small class sizes taught by enthusiastic faculty, many of whom are internationally recognized for their research and creative endeavors. In our interdisciplinary, highly collaborative environment, we strive to foster meaningful partnerships amongst students and faculty, support student research opportunities and provide both theoretical and applied learning opportunities for our graduate community.

Anthropology

Office: Sturm Hall, Room 146
Mail Code: 2000 E. Asbury Ave., Denver, CO 80208
Phone: 303-871-2406
Email: anthropology@du.edu
Web Site: http://www.du.edu/anthro

The department of anthropology has a research-active faculty who work closely with students on a one-on-one basis. Classes are small, so graduate students have their own work-spaces. The department has a wealth of archaeological and ethnographic collections in its museum.

Anthropology explains the relationships among biology, culture and the environments in which people live. Anthropology addresses problems such as the integration of cultural and ethnic diversity, the conduct of international relations, human rights and the management of environmental and cultural resources. There are three basic options for construction of a master’s degree in anthropology: archaeology, cultural anthropology or museum studies. Each concentration has its own formal course work, independent study and requirements for graduation.

Master of Arts in Anthropology with a Concentration in Archaeology

Following are the simple steps to apply for graduate study in Anthropology at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

Apply Online / Application Deadlines

- Applications for graduate study in anthropology at the University of Denver must be submitted online (https://du-grad.edu.185r.net/application).
- All online materials must be submitted, and all supplemental materials must be postmarked, by the program’s stated deadline: February 4, for fall quarter admission.
- A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.

Course and Degree Prerequisites and Requirements

- Proof of a bachelor’s degree is required from a regionally accredited college or university.

Transcripts

- Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school.
- The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.
- Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early.
- The University of Denver will consider electronic transcripts official from a domestic institution provided by the following approved agencies: Army/American Council on Education Registry Transcript System (AARTS); Docufide/Parchment; National Student Clearinghouse; Naviance; Royall and Company; and Scrip-Safe.

Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the program’s stated deadline. The institution code for the University of Denver is 4842.

Language Proficiency

- Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the University is 80 (iBT) or 550 (paper-based). The
institution code for the University of Denver is 4842. The minimum IELTS score accepted by the University is 6.0. Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please see the Graduate Policy Manual for complete English language proficiency requirements.

- Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English. Such applicants may be exempt from the TOEFL/IELTS requirement but not from other standardized graduate entrance examinations.

Candidate Statement
- A personal statement of academic and professional goals and objective is required. Include your future goals and purpose for applying to the Anthropology program. The statement should be submitted via upload through the online application process.

Recommendation Letters
- Two letters of recommendation are required. These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program’s stated deadline.

Financial Support
- To be considered for financial support, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline, February 15.
- Information about financial aid can be found on the Office of Financial Aid website (http://www.du.edu/financialaid/graduate). International students are not eligible for federal financial aid.
- Some programs provide competitive awards in the form of fellowships and/or assistantships. Contact your academic program for more information.

Application Status
- We encourage you to be actively engaged in the admission process. You can check your application status online (https://webcentral.du.edu).

Mailing Address
- Mail official transcripts and any supplemental admission materials not submitted with the online application to:
  University of Denver
  Office of Graduate Studies
  Mary Reed Building, Room 5
  2199 S. University Blvd.
  Denver, CO 80208-4802

International Applicants
- For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information (http://www.du.edu/learn/graduates/internationalapplicants.html). International applicants are strongly encouraged to have their applications complete at least eight weeks prior to the program’s application deadline.

The Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) provides complete details regarding admission requirements.

Master of Arts in Anthropology with a Concentration in Archaeology

Track: Thesis

Degree Requirements

- 48 graduate-level quarter hours
- Maximum of 10 hours of transfer work
- Minimum GPA: 3.0
- Minimum grade for individual courses counted toward degree: B

Non-Course Requirements

- Advancement to Candidacy
- Oral Defense
- Thesis
- Qualifying Examination
- Tool (ANTH 3680 Quantitative Methods-Anthropology or Foreign Language literacy or course work)
- Three Quarters Residency as a graduate student at DU

Course Requirements

- Maximum 15 quarter hours outside of ANTH prefix
- Maximum 10 quarter hours of ANTH 4991 Independent Study
- No limit for ANTH 4995 Independent Research

ANTH 3660 Anthropological Theory, Method and Context 4
ANTH 4000 Advanced Anthropology 4
ANTH 3990 Summer Field School-Archaeology (*) 4-6
or ANTH 3790 Field Methods in Archaeology

Select at least one of the following: 4

ANTH 3170 Applied Heritage Management
ANTH 3390 Geoarchaeology
ANTH 3701/3702 Topics in Anthropology

Select one Cultural Anthropology course: 4

ANTH 3000 Anthropology of Tourism
ANTH 3020 Native Religions
ANTH 3360/4380 Cross-Cultural Perspective: Women
ANTH 3430 Visions, Utopias and Messiahs
ANTH 3470 Applied Anthropology
ANTH 3500 Culture and The City
ANTH 3540 The Nature of Language
ANTH 3650 Dynamics of Culture Change
ANTH 4200 Native North America
ANTH 4250 North American Archaeology
ANTH 4370 Sex & Class in Latin America

Select one Museum course: 4

ANTH 3290 Art and Anthropology
ANTH 3661  Museums and their Visitors
ANTH 3741  Introduction to Conservation
ANTH 3742  Museum Exhibit Development
ANTH 3743  Managing Collections
ANTH 4744  Museum Anthropology

Total Credits 48

Track: Master’s Paper

Degree Requirements
- 60 graduate-level quarter hours
- Maximum of 15 hours of transfer work
- Minimum GPA: 3.0
- Minimum grade for individual courses counted toward degree: B

Non-Course Requirements
- Advancement to Candidacy
- Master’s Paper
- Qualifying Examination
- Tool
- Three-Quarters Residency as a graduate student at DU

Course Requirements
- Maximum 15 quarter hours outside of ANTH prefix

Class is applied/practice oriented course. Students are limited to taking no more than three of these classes (12 credits) to count toward their requirements.

### Courses

**ANTH 3000 Anthropology of Tourism (4 Credits)**

Considers the interaction of host and visitor cultures in foreign tourism. Explores the effects of tourism on the host culture and the expectations of the visitors. Discusses tourism's relationship to development and the various levels of needs of the tourists.

**ANTH 3020 Native Religions (4 Credits)**

A cross-cultural survey of concepts used to understand and talk about "religion," "the supernatural," and associated behavior among Native peoples of Turtle Island. Topics include healing and techniques of controlling and channeling supernatural power; sacred places and their significance; myths and symbols in their cultural contexts; initiation rites; conceptualizations of male and female deities; and responses of indigenous people to attempted missionization.

**ANTH 3030 Digital Anthropology (4 Credits)**

Digital Anthropology introduces students to computer technology used in anthropological research. Students study and then produce a number of digital products useful in the analysis and interpretation of museum collections, for archaeological mapping and research, and for the dissemination of anthropological knowledge online. This process covers the use of Geographic Information Systems (GIS) for spatial analysis, three-dimensional imaging programs ranging in scale from broad landscape mapping to detailed digital artifact analysis. In addition, the use of geophysical methods for imaging what is below the surface allows students to produce images of what lies below the ground in archaeological contexts.

**ANTH 3040 Anthropologies of Place (4 Credits)**

This class is an exploration of the relationship between people and places from an anthropological viewpoint. We concern ourselves with a variety of ideas about place, emphasizing not just how places are used, but how they infuse themselves into the lives, histories and ethics of those who interact with them. The course readings include book-length anthropological case studies interspersed with interdisciplinary readings about place and landscape. The course includes seminar-style discussions of readings, workshops and observations in the field. On several occasions, we take our class on the road, working together to think about how people and place interact. By the end of the class, each student creates his or her own anthropology of a place. Must be junior standing or above.

**ANTH 3060 Cultural Narratives (4 Credits)**

Human beings are natural storytellers. Whether reciting oral traditions or recounting personal experience, people everywhere use narratives as a way to express and to understand themselves. This course approaches cultural narratives from two angles. First, it explores the ways that anthropologists, usually trained in the social sciences, make use of and study narratives, whether through ethnographic observation, conducting an interview, gathering folklore or archaeological interpretation. Second, the class investigates narratives that, although produced by non-anthropologists, engage with anthropological issues such as kinship, gender, work, tradition and identity. The narratives range broadly from fiction, to poetry, to film. These two approaches are framed by theoretically informed readings about narrativity, both from the social sciences and the humanities. The class involves intensive reading and writing, as it makes use of both discussion and workshop formats. Each student in the course completes a research and writing project culminating in his or her own cultural narrative. Must be junior standing or above.

**ANTH 3070 Folklore and Cultural Heritage (4 Credits)**

Folklore and Cultural Heritage is the study of the expressive behaviors and practices that constitute the ordinary, everyday life of communities. Folklore includes the intangible cultural heritages of all peoples, for example, the artistic expression reflected in stories and storytelling, music, dance, legends, oral history, proverbs, jokes, popular beliefs, customs, dialects and ways of speaking. Everyone has folklore and participates in the "folklore process."

Prerequisite: introductory social science course. Cross-listed with ANTH 4070.
ANTH 3080 Memory and Memorialization (4 Credits)
The course focuses on how social groups represent, experience and commemorate the remembered past; it explores issues of construction of memory, particularly how representations of the past- and its materialization through monuments, ruins, and landscapes- are connected with issues of institutionalized perceptions of national, ethnic, racial and religious identity. Furthermore, it discusses concepts such as "authenticity," "tradition," and "modernity" in the interpretation of cultural heritage and how the interpretation of the past and of culture depend on context (political and historical), experience and point of view. The course aims to develop an interdisciplinary approach to memory and to methodologies and empirical research.

ANTH 3130 The Archaeology of Gender (4 Credits)
This course examines the ways archaeology can contribute to the study of gender through investigations of the deep through recent past. The class will include readings on gender theory, the uses of archaeological data and specific case studies of engendered lives in the past. Cross listed with GWST 3130.

ANTH 3135 Feasting, Fasting and Food: The Anthropology of Food (4 Credits)
Feasting, Fasting and Food focuses on foodways and food culture. Food and its acquisition and preparation are tied to the historical, social and cultural lives of all peoples. By drawing on historical sources, ethnography and a number of anthropological perspectives, we look at foodways as symbols of identify, culinary tourism, food work as trade or profession, the study of food as art and theater, and food and memory. Prerequisite: ANTH 310.

ANTH 3170 Applied Heritage Management (4 Credits)
Considers the role of archaeology in preservation and the management of cultural resources in terms of legislation, ethics and practical application, with emphasis of the utility, necessity and reality of doing archaeology today in the public sector. Site report writing, governmental regulations and the business side of archaeology are stressed. Archaeological information from site reports and artifact analysis are compiled and presented in a digital format. Prerequisite: ANTH 3110.

ANTH 3200 Human Origins and Evolution (4 Credits)
Examines the fossil record for human evolution from 6 million years ago to the origin of modern Homo sapiens, including current theories, evidence and controversies. Considers the historical and sociological contexts of human evolutionary studies, popular myths and misconceptions, and alternative scenarios for the future evolution of the human species.

ANTH 3250 Guatemalan Field School: Women & Development in a Guatemalan Town (4 Credits)
This class provides students with the chance to interact with highland Guatemalan women involved in an on-going development project. Students are participant observers who will be gathering socio-demographic data from locals. Students apply their Spanish language skills.

ANTH 3290 Art and Anthropology (4 Credits)
Study of the concept of art and its multiple roles in society from a cross-cultural and historical perspective. Commodification of culture through tourism and the global art market; arts of resistance and survival; and cultural expression and community development.

ANTH 3310 Indigenous Environment (4 Credits)
The purpose of this course is to introduce students to particular environmental issues that affect indigenous peoples, including subsistence and economic issues; sacred lands; cultural property dilemmas; and the impact that use of traditional cultural properties by others--including nation-state governments, corporations and tourists--have on indigenous peoples' cultural and social integrity. Particular focus is on one of these issues--travel and particularly "ecotravel" and "ecotourism.

ANTH 3330 Human Rights of Indg Peoples (4 Credits)
This course introduces students to the concept and definition of "indigenous peoples." It covers the history of resistance, revitalization, and assertion of sovereignty by Indigenous peoples, and why the United Nations felt it necessary to adopt a "Declaration on the Rights of Indigenous Peoples" in 2007. It covers how indigenous identities and indigenous rights issues do or do not "fit" with internationally accepted definitions of human rights. The course will concentrate on the intersection of indigenous autonomy with globalization, neo-liberal ideologies, and nation-state policies. Case studies focus on Iroquois, Cree, Mayans, Mapuche, Zapatistas, Maoris, and Sami.

ANTH 3350 Latin American Archaeology (4 Credits)
Covers the prehistory of the Western Hemisphere south of the Mexico-U.S. border, from initial colonization of the hemisphere by Paleo-Indian people, to the origins of agriculture and the rise of civilization. Olmec, Mayan, Aztec, Chavin, Moche and Inca cultures are covered in detail.

ANTH 3360 Cross-Cultural Perspective: Women (4 Credits)
Confronts question about women's lives and women's status in a global perspective. It addresses issues such as why women have been subordinate to men in so many cultures, how one actually measures dominance and subordination, and whether there is some biological basis for gender inequality. Broad theoretical questions on the status of women are discussed and form the basis for the analytical inquiry which follows. Cross-listed with ANTH 4360.

ANTH 3380 Women and Development (4 Credits)
A case study approach to understanding women's status and the problems of combining productive and reproductive responsibilities in developing countries. Cross-listed with ANTH 4380, INTS 3390.

ANTH 3390 Geoarchaeology (4 Credits)
Use of geological methods to interpret archaeological sites, ancient landscape reconstruction, study of environmental change and habitation.

ANTH 3430 Visions, Utopias and Messiahs (4 Credits)
Ghost dance, peyote religion, cargo cults, peasant revolution, charismatic leaders, messianic movements in cross-cultural perspectives; roles played by cultural systems, historical circumstances and social conditions in generating social movements.
ANTH 3470 Applied Anthropology (4 Credits)
The practical application of cross-cultural knowledge and awareness to the solution of social and cultural problems. Ethnographic methodologies, a review of the history of applied anthropology and a consideration of the ideological and ethical components of applied anthropology are covered.

ANTH 3485 Anthropology and Underdevelopment (4 Credits)
Anthropological approach to some of the developing world's most pressing social problems and how anthropologists can make a relevant contribution in confronting, studying and changing the nature of underdevelopment.

ANTH 3500 Culture and The City (4 Credits)
Examines the past and future of the city as a human built environment that reflects and reproduces social, political, economic, and cultural forces and ideals. Begins with the origin of cities in antiquity and ends with contemporary urban landscapes. Analysis is sensitive to both the technologies and aesthetics of urban form. Emphasis is on the possibilities for urban redesign to meet the problems of 21st century city life.

ANTH 3540 The Nature of Language (4 Credits)
Language as social, psychological, cultural phenomenon; relationship between cultures, semantics; language as medium of cultural unification; relationship between dialects, social structure.

ANTH 3550 Africa: Peoples and Cultures (4 Credits)
Survey course in the anthropology of Africa designed to explore the diversity of African people and cultures. The course examines issues of contemporary life in the continent as well as the way it has been portrayed by the media, anthropologists, historians, and writers. Topics such as geography, history, society, politics, religion, ethnicities, and material culture of different regions are central to the discussion.

ANTH 3560 Anthropological Theory, Method and Context (4 Credits)
History and development of particular schools of thought, paradigms, methods and methodologies that characterize contemporary anthropology. Intellectual, artistic developments, world-wide sociopolitical and economic processes that shaped much of anthropological thinking of the times. Research methods in reconstruction of human history and qualitative ethnographical research.

ANTH 3580 Quantitative Methods-Anthropology (4 Credits)
The use of statistics in all branches of anthropology; data screening; parametric and nonparametric statistics. Prerequisite: any course in basic statistics.

ANTH 3630 Archaeological Method and Theory (4 Credits)
This class presents methods for gathering archaeological data in the laboratory and then using a variety of theoretical approaches in its interpretation. Students gather archaeological data using museum collections from a variety of sites. Those artifacts include stone tools and ceramics as well as other environmental data and architectural information in a variety of environmental and landscape contexts. For each site studied students are presented with a body of theoretical literature from which to interpret these data. A variety of interpretative methods can potentially be chosen for each site, and in most cases there is no right answer, only answers that can be supported by the data collected and interpreted using the theoretical constructs read. All students are required to write up complete site reports for each project including all raw data collected in the analysis and theoretical approaches used in interpretation.

ANTH 3640 The Nature of Language (4 Credits)
Language as social, psychological, cultural phenomenon; relationship between cultures, semantics; language as medium of cultural unification; relationship between dialects, social structure.

ANTH 3650 Dynamics of Culture Change (4 Credits)
Considers culture change and the agents of change. Focuses on changes in indigenous cultures around the world resulting from colonialism 1850-1950, forced acculturation, the tension between worldwide economic development and human rights, and the changing nature of the post-colonial world.

ANTH 3660 Anthropological Theory, Method and Context (4 Credits)
History and development of particular schools of thought, paradigms, methods and methodologies that characterize contemporary anthropology. Intellectual, artistic developments, world-wide sociopolitical and economic processes that shaped much of anthropological thinking of the times. Research methods in reconstruction of human history and qualitative ethnographical research.

ANTH 3661 Museums and their Visitors (4 Credits)
This course is designed to be a comprehensive introduction to museums and their approaches to serving visitors, primarily through exhibitions and education. It examines current research and museum practice as it relates to the museum as an environment for meaningful visitor experiences and learning. The course is organized around the following core issues: (1) What do visitor experiences look like in a museum context? (2) How do museums design for different audience types? (3) What do we learn from assessing visitors' experiences? (4) How do objects, ideas and spaces affect visitor learning and experiences? Cross listed with ARTH 3661.

ANTH 3680 Quantitative Methods-Anthropology (4 Credits)
The use of statistics in all branches of anthropology; data screening; parametric and nonparametric statistics. Prerequisite: any course in basic statistics.

ANTH 3701 Topics in Anthropology (4 Credits)
Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit.

ANTH 3702 Topics in Anthropology (4 Credits)
Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit. Prerequisite: ANTH 1010.

ANTH 3703 Topics in Anthropology (4 Credits)
Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit. Prerequisite: ANTH 1010.

ANTH 3741 Introduction to Conservation (4 Credits)
Introduction to physical properties of materials found in museum artifacts and specimens. Discusses preventative conservation principles and methods.

ANTH 3742 Museum Exhibit Development (4 Credits)
Introduces general principles of planning, development, production and evaluation of museum exhibits. Explores design elements and methods of evaluation. Students have the opportunity to do exhibit mockups and exhibit evaluation.
ANTH 3743 Managing Collections (4 Credits)
Principles and methods regarding acquisition, documentation, conservation and accessibility of collections. Law, registration methods, computerization, policy, development, ethics and preventive conservation are also discussed.

ANTH 3750 Ethnographic Methods (4 Credits)
In this course, students study the art and science of ethnographic research methods, conduct quarter-long field research projects, and write practice ethnographies. The course requires students to apply the American Anthropological Association's Code of Ethics in their research and to write Institutional Review Board applications for their projects. Course readings include texts on ethnographic methods as well as controversial and exemplary ethnographic publications for student dissection and debate.

ANTH 3790 Field Methods in Archaeology (4 Credits)
Introduces basic methods of archaeological survey, excavation, artifact collection strategies and field interpretation. Students learn to create field maps and cross-sectional drawings of archaeological phenomena. Cross-listed with ANTH 1790. Prerequisite: ANTH 2310.

ANTH 3791 Critical Perspectives in Museum Studies (4 Credits)
This course critically explores museums and heritage complexes as sites of cultural production and consumption at different historical moments and in diverse cultural and national settings. Special attention is given to contemporary issues, debates, and approaches in the context of museum anthropology and heritage studies. The term museum is used to include a wide range of heritage projects that do not rely only on the traditional institution established to collect, conserve and exhibit material culture, but includes intangible heritage, historic built environment and event natural environment that was used and marked by human action.

ANTH 3800 Capstone Seminar Anthropology (4 Credits)
This seminar brings anthropology to bear on a topic of special significance. It assesses grasp of the key concepts, theories and insights of anthropology, and critically reflects on the nature and history of the discipline. Prerequisite: Senior standing.

ANTH 3890 Context of Material Culture (4 Credits)
Examines how material culture both reflects and actively structures political, economic and cultural life. Considers the relationship between people and their material culture (portable objects, non-portable objects, buildings, socially-created landscapes) in Western, non-Western, ancient, and contemporary cultural contexts. Reading materials draw from the fields of ethnology, archaeology, folklore, geography, history, art and architecture.

ANTH 3891 Critical Perspectives in Museum Studies (4 Credits)
This course critically explores museums and heritage complexes as sites of cultural production and consumption at different historical moments and in diverse cultural and national settings. Special attention is given to contemporary issues, debates, and approaches in the context of museum anthropology and heritage studies. The term museum is used to include a wide range of heritage projects that do not rely only on the traditional institution established to collect, conserve and exhibit material culture, but includes intangible heritage, historic built environment and event natural environment that was used and marked by human action.

ANTH 3980 Context of Material Culture (4 Credits)
Examines how material culture both reflects and actively structures political, economic and cultural life. Considers the relationship between people and their material culture (portable objects, non-portable objects, buildings, socially-created landscapes) in Western, non-Western, ancient, and contemporary cultural contexts. Reading materials draw from the fields of ethnology, archaeology, folklore, geography, history, art and architecture.

ANTH 3990 Summer Field School-Archaeology (4-6 Credits)
Archaeological excavation, survey and recordings; analysis and conservation of artifacts in the field.

ANTH 3991 Independent Study (1-15 Credits)

ANTH 3992 Directed Study (1-10 Credits)

ANTH 3995 Independent Research (1-10 Credits)

ANTH 4000 Advanced Anthropology (4 Credits)

ANTH 4040 Historical Archaeology: Theory and Method (4 Credits)
Because it is the archaeology of periods for which there is also written history, historical archaeology is a dynamic and interdisciplinary field. It also has a distinct set of concerns and methods that builds upon, but does not replicate, those of prehistoric archaeology. This course is designed to engage students in the practice of historical archaeology through readings, discussions, and the hands-on analysis of archaeological materials. The first class of each week is a discussion of readings in historical archaeology. The readings introduce students to theoretical and methodological issues in the discipline, as well as important case studies. Many of the readings have a North American focus, but address international practice. The second class of each week has a hands-on focus. Backed by readings on historic materials analysis, we discuss and practice the types of research historical archaeologists perform on actual materials, focusing on different material types each week. Students in the course each process and analyze a set of materials excavated from a historic site. Cross-listed with ANTH 2040.

ANTH 4070 Folklore and Cultural Heritage (4 Credits)
Folklore and Cultural Heritage is the study of the expressive behaviors and practices that constitute the ordinary, everyday life of communities. Folklore includes the intangible cultural heritages of all peoples, for example, the artistic expression reflected in stories and storytelling, music, dance, legends, oral history, proverbs, jokes, popular beliefs, customs, dialects and ways of speaking. Everyone has folklore and participates in the "folklore process."
Cross-listed with ANTH 3070.

ANTH 4200 Native North America (4 Credits)
Native American cultures north of Mexico. Cross-listed with ANTH 2200.

ANTH 4220 Human Rights in Latin America (4 Credits)
This course aims to provide students with an overview of human rights issues and how they have evolved in recent Latin American history, from the military dictatorships of the authoritarian period to contemporary challenges faced in the region's democracies. It also aims to place human rights concerns in a broader sociopolitical context. Many of today's human rights issues are rooted in the past, but others respond to new and emerging challenges. In this class, we explore the roots and contemporary realities of human rights movements in Latin America. The examination of these topics should allow us to pose broader questions about the meaning of human rights in a globalized world, the efficacy of international instruments for rights enforcement, and the complex challenges that linger in the aftermath of authoritarianism and state-sponsored terror.
ANTH 4250 North American Archeology (4 Credits)
Prehistoric archeology in North America from earliest traces of human occupation to European contact; emphasis on cultures north of Mexico, east of Rockies. Cross-listed with ANTH 2250.

ANTH 4290 Art and Anthropology (4 Credits)
This class introduces students to anthropological approaches to the study of art and visual culture. The first part of the course covers foundational work in the field, introducing key concepts as well as methods for viewing and understanding art from a cross-cultural/comparative and interdisciplinary perspective. We examine the relationships among art, technology and the environment, as well as the importance of form, function, style, meaning, and aesthetics in the study of art. The second part addresses issues of contemporary concern in art and anthropology, such as the influence of market forces and tourism on artistic traditions and cultural expressions; the intersection of art and identity; the politics of cultural representation. The course also explores the ethnographic turn in some forms of contemporary art as well as doing ethnography as art.

ANTH 4360 Cross-Cultural Perspectives of Women (4 Credits)
Cross-listed with ANTH 3360.

ANTH 4370 Sex & Class in Latin America (4 Credits)
Evolving role of women in Central and South America from precollonial states to modern cities, rural areas.

ANTH 4380 Women and Development (4 Credits)
Case study approach to understanding women's status; problems of combining productive/reproductive responsibilities in developing countries. Cross-listed with ANTH 3380, INTS 3390.

ANTH 4700 Readings in Anthropology (1-5 Credits)
Directed readings in anthropology under faculty supervision. May be repeated for credit.

ANTH 4701 Special Topics in Anthropology (1-5 Credits)
ANTH 4702 Special Topics in Anthropology (1-5 Credits)
ANTH 4703 Special Topics in Anthropology (1-5 Credits)
ANTH 4704 Special Topics in Anthropology (1-5 Credits)

ANTH 4744 Museum Anthropology (4 Credits)
This course introduces students to museum anthropology and the ethnography of museums as well as the theoretical and practical sides of museum studies. The course is based on the following premises: Museum anthropology is a form of applied anthropology in which museums are a venue for making anthropological insights and knowledge accessible and relevant to the public; Museums, as institutions of public culture, are a forum for exploring contemporary social issues and concerns; The role of museums in society and civic engagement is at the core of contemporary museum anthropology and Museology.

ANTH 4745 Museum Practicum (2 Credits)
Individually designed practicum in student's area of interest.

ANTH 4750 Masters Museum Exhibit (4 Credits)
Required for MA with museum studies concentration. Type of exhibit and placement planned with student's committee.

ANTH 4981 Museum Internship (1-6 Credits)
ANTH 4991 Independent Study (1-17 Credits)
ANTH 4992 Directed Study (1-10 Credits)
ANTH 4995 Independent Research (1-17 Credits)

Communication Studies

Office: Sturm Hall, Room 200

Web Site: http://www.du.edu/comn

The Department of Communication Studies has been a pioneer in speech and communication studies since 1912, offering MA and PhD programs, as well as a dual degree with the Graduate School of Social Work.

Our program takes full advantage of being situated in the state's capital and business center, offering students excellent opportunities to study culture and communication, interpersonal and family communication and public discourse and communication ethics.

The graduate program in Communication Studies seeks to identify the ways in which we can better understand who we are as members of cultures, groups and families; examine and critique ideologies and structures that constrain our contact with each other; identify ways to deliberate and reach just decisions in public, organizational and personal contexts; and create the means for dialogue and collaboration in instances of conflict and struggle. This
mission is realized through three distinct but overlapping areas of emphasis in which students can specialize: culture and communication, interpersonal and family communication and rhetoric and communication ethics.

Areas of Emphasis

Students must select a primary Area of Emphasis in which to study. In certain cases, a student may combine two areas with the assistance of a faculty advisor. The student’s chosen area must be communicated to a faculty member in that area.

Culture and Communication

The area of Culture and Communication investigates the communicative constitution and intersection of difference in its various codifications as culture, race, class, religion, ethnicity, nationality, gender and sexual orientation. Its vision is to promote an ethic of inclusivity, racial and social justice, reciprocity and mutual transformation in the encounter of difference. Courses reflect this emphasis, focusing on the social and performative construction of identity, the politics of representation, performances of affect, identity and community and vernacular and embodied rhetorics, all informed by critical, feminist and queer perspectives on cultural communication.

This area investigates the communicative constitution and negotiation of difference in its various codifications as culture, race, religion, ethnicity, nationality, gender and sexual orientation. Its vision is to promote an ethic of inclusivity, racial and social justice, reciprocity and mutual transformation in the encounter of difference. As such, it endeavors to equip students with perspectives, knowledge and skills needed to function in an ethical manner within a global cultural context. Besides introducing students to the history of theorizing and practice in the field, the program seeks to update disciplinary competence to include more fluid and dynamic conceptions of cultural negotiation of difference within the context of trans-border crossings, intensified global interactions and the displacement and movements of populations.

Interpersonal and Family Communication

The area of interpersonal communication explores how human communication works in our everyday lives, specifically, how people interact, and the impact their actions have on relationships between members of dyads, families, groups, social networks and communities. A basic premise of work in this area is that human interaction is fundamental to the construction, development and maintenance of personal and social relationships, and to the organization of social life as we know it today. The curriculum in this area draws from and is grounded in several significant traditions in social science and communication research, namely social-psychological, dialectical and interpretive approaches. Courses focus on current trends and significant contributions to research in interpersonal communication, family communication and research on close relationships.

The objective of study in this area is to facilitate an increased understanding of the communication processes and practices that occur within various contexts of interpersonal and social relationships, such as close, intimate relationships, including friendships, marriages and family relationships. Our primary value commitment is to high-quality relationships. That is, our research and teaching is directed toward discovering and disseminating information about the ways that relationships can be mutually satisfying and constructive—or dissatisfying and destructive.

We emphasize the construction of relationships through communication and recognize that quality relationships can take many forms.

Rhetoric and Communication Ethics

The Rhetoric and Communication Ethics area of emphasis is dedicated to the investigation of public communication and is particularly concerned with questions of how ethics and justice are constituted throughout the spectrum of public communication activity. The study of rhetoric and communication ethics at DU is best defined through three intellectual commitments. First, we are committed to developing philosophical accounts of the nature of communicative activity. Second, we are committed to understanding how communicative action works to form and transform our public and civic identities. And third, we are committed to producing reflective criticism of communicative activity in all of its textual and performative modalities.

It is our mission to foster intellectual relationships between faculty and students that will result in research programs capable of describing the normative presuppositions of communicative activity, using that knowledge to expose and critique illegitimate and unjust communication behavior and constructing normative models of ethical communicative practice. It is our mission to cultivate teachers dedicated to addressing important public issues in a reasoned, passionate and ethical manner. It is our mission to model a deep commitment to using knowledge of rhetoric and communication ethics to further the public good.

Master of Arts in Communication Studies

Following are the simple steps to apply for graduate study in Communication Studies at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

Apply Online / Application Deadlines

- Applications for graduate study in Communication Studies at the University of Denver must be submitted online (https://du-grad.edu.185r.net/application).
- All online materials must be submitted, and all supplemental materials must be postmarked, by the program’s stated deadline: December 15, for admission and financial aid consideration for fall quarter; March 15, for the following winter quarter; June 15, for the following spring quarter. After the priority deadlines, applications may be considered on a rolling basis.
- A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.
Course and Degree Prerequisites and Requirements

- For the M.A. program, applicants must have a bachelor’s degree in communication or a related field. Proof of a bachelor’s degree is required from a regionally accredited college or university. A minimum GPA of 3.0 in the highest earned degree at the time of matriculation is required.

Transcripts

- Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school.
- The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.
- Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early.
- The University of Denver will consider electronic transcripts official from a domestic institution provided by the following approved agencies: Army/American Council on Education Registry Transcript System (AARTS); Docufide/Parchment; National Student Clearinghouse; Naviance; Royall and Company; and, Scrip-Safe.

Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the program’s stated deadline. The minimum combined score required by the Communication Studies program is 286/800 on the verbal and quantitative sections. The institution code for the University of Denver is 4842.

Language Proficiency

- Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the Communications Studies programs is 88 (iBT) or 570 (paper-based). The institution code for the University of Denver is 4842. The minimum IELTS score accepted is 7.0. Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please see the Graduate Policy Manual for complete English language proficiency requirements.
- Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English. Such applicants may be exempt from the TOEFL/IELTS requirement but not from other standardized graduate entrance examinations.

Essay

- Applicants must submit a two- to four-page essay indicating area of emphasis(s), motivation for applying, professional and personal goals, and any additional information that will inform the faculty of your capability to pursue graduate-level work. The essay should be submitted via upload through the online application process.

Resume/C.V.

- A resume or C.V. is required. This should include work experience, research, and/or volunteer work. The resume or C.V. should be submitted via upload through the online application process.

Recommendation Letters

- Three letters of recommendation are required. These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program’s stated deadline.

Financial Support

- To be considered for financial support, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline, February 15.
- Information about financial aid can be found on the Office of Financial Aid website (http://www.du.edu/financialaid/graduate). International students are not eligible for federal financial aid.
- Some programs provide competitive awards in the form of fellowships and/or assistantships. Contact your academic program for more information.

Application Status

- We encourage you to be actively engaged in the admission process. You can check your application status online.

Mailing Address

- Mail official transcripts and any supplemental admission materials not submitted with the online application to:
  University of Denver
  Office of Graduate Studies
  Mary Reed Building, Room 5
International Applicants

- For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information (http://www.du.edu/learn/graduates/international/applicants.html). International applicants are strongly encouraged to have their applications complete at least eight weeks prior to the program’s application deadline.

*The Graduate Policy Manual provides complete details regarding admission requirements.*

Doctor of Philosophy in Communication Studies

Following are the simple steps to apply for graduate study in Communication Studies at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

Non-coursework Requirements

- Tool Requirement: The tool is a methodological rather than a content requirement. This requirement should be met through course work in a methodology that results in advanced knowledge about a method that is related to the dissertation. In addition to recognizing tool requirement
options in the traditional sense, (i.e., statistics) the student, in consultation with the dissertation advisor, may petition the faculty for an option deemed appropriate to the research/investigative requirements of the dissertation. The tool consists of 8–10 credits of course work taken during the PhD program at the University of Denver; transfer hours from the student’s prior MA program cannot be counted toward the tool.

- **Periodic Review:** After completion of 30 quarter credits, the PhD student may be advanced to preliminary candidacy. Basis for advancement is the periodic faculty review of the progress of each student.

- **Comprehensive Examination:** At the end of required graduate course work and preliminary to advancement to final candidacy, the PhD student is required to pass a comprehensive examination. The examination is designed to test the student’s competencies as a scholar. The examination assesses both depth and breadth of knowledge within the discipline by focusing upon both the student’s curriculum emphasis and supporting work in other fields of study. The comprehensive examination offers the doctoral student an opportunity to demonstrate that he/she has become an independent, original and mature thinker in the discipline, as a consequence of the research and study engaged in during formal graduate course work.

  - **Examination Procedures:** Exam preparation and administration will be under the supervision of an examination committee chosen by the student in conjunction with his/her advisor. The committee will consist of a minimum of three tenure-track faculty members in the department of communication studies. The examining committee chair will, in consultation with the student, convene the committee to prepare the examination and will offer the student guidance in preparation for meeting. (See the department for a more detailed description of comprehensive examination policies and procedures.)

- **Dissertation:** The PhD student is expected to submit a formal dissertation proposal, write a dissertation and defend the dissertation in an oral defense. No oral defense can be taken in the summer quarters.

### Courses

**COMN 3130 Organizational Communication (4 Credits)**

This is an applied course, service learning course, based on a consulting model. While the course will extend and enrich the topical and theoretical knowledge developed in COMN 1550 and COMN 2130, the primary purpose of this course will be to help students explore how they can put such knowledge into practice by collectively working with a local non-profit organization to first diagnose and then propose (and, in some cases implement) solutions to an organizational communication problem faced by that organization.

**COMN 3230 Principles of Leadership (4 Credits)**

Roles, functions, behaviors that influence and direct; emphasis on interpersonal effectiveness; theories and methods.

**COMN 3245 Building Group/Team Effectiveness (4 Credits)**

The objectives of this course are to help students acquire a deeper understanding of groups and teams, how they function, and what contributes to their success or failure. It also aims to help students develop the skills and capacities that will allow them to contribute in concrete and significant ways to successful outcomes and satisfying experiences for themselves and others in groups and teams. Cross listed with LDRS 2540.

**COMN 3270 Health Communication (4 Credits)**

This course examines the role of health communication in our everyday lives. We will focus on communication strategies that inform and influence individuals, families and communities in decisions that enhance health. We will also explore the dynamics and impact of health communication between individuals and the health care system such as doctor-patient communication, dissemination of health related information, and the role of mediated communication in examining health communication.

**COMN 3280 Family Communication (4 Credits)**

The purpose of this course is to enhance understanding about communication patterns within families. In this course, we will examine theory/research on the role of communication in creating and maintaining healthy marriages and families. Specifically, we will study communication and the family life cycle, different family forms, family race/ethnicity, power in families, conflict in families, communication and stress in families, and communication in the aging family. The course format includes lectures, discussions, analysis of case studies, and in class applications.

**COMN 3285 Advanced Relational Communication (4 Credits)**

Advanced Relational Communication is intended to increase understanding of relationships from diverse perspectives. The three main perspectives we will investigate show how relationships affect and are affected by their context, the individuals involved, and the relational system. The goals of this course are for students to increase their skill in (1) explaining how knowledge about context, individuals, and relational systems increases understanding of communication processes in a variety of relationships; (2) evaluating critically the information about relationships that we encounter in our everyday lives; (3) asking and investigating questions about real-life relationships.

**COMN 3290 Communication and Aging (4 Credits)**

In this course, we will focus on the communication processes associated with aging. We will explore the implications of aging and how aging affects the process and outcomes social and relational interactions. We will examine communication and aging through interactional processes (intrapersonal, interpersonal and relational) and through context (organization, family, health, and culture). Emphasis will be placed on the theoretical and applied research in communication and aging.
COMN 3300 Principles of Persuasion (4 Credits)
This course involves a social scientific approach to persuasion and social influence. Some of the topics included in this approach are the relationship between attitude and behavior; characteristics of the source, message, and receiver of a persuasive appeal; and models and theories that explain the effects of persuasive communication. By the end of the course, students should be able to think more critically about the persuasive messages they encounter in everyday life, to apply theoretical models of persuasion, and to construct persuasive messages.

COMN 3315 Public Deliberation (4 Credits)
During the last two decades public deliberation has emerged as the centerpiece of theoretical and practical accounts of liberal democracy. This course begins by setting out the nature and functions of public deliberation. We will then track how deliberative democrats respect the traditional accounts of inclusion, equality and reason in an attempt to meet the demands of the deep cultural diversity that marks social life in advanced industrial societies. Specifically we will ask if public deliberation as portrayed in these accounts is sufficient to meet these demands or do we need to expand our understanding of political argument to include a diversity of rhetorical practices? And, once we do expand our account of deliberation how does this transform the traditional problematic of both democratic and rhetorical theory?.

COMN 3425 Rhetoric and Governance (4 Credits)
An introduction to the works of Michel Foucault and his influence on contemporary rhetorical theory. Permission of instructor is required.

COMN 3435 Rhetoric and Public Life (4 Credits)
An introduction to the conceptual and political history of the public sphere. The course pays particular attention to how the normative assumptions of public communication are affected by the demands of cultural pluralism. Permission from instructor is required.

COMN 3470 Seminar in Free Speech (4 Credits)
This course will survey some of the major conceptual innovations in the justifications of freedom of speech. We will begin with an exploration of the traditional defenses of free speech and then move to a reexamination of those defenses in light of modern communication theory and the challenges of pluralism. In particular we will ask if the justifications of free speech need to be rethought given our understanding of speech as a social force that constitutes identities and values rather than merely expressing private opinions. Moreover, given our understanding of the social force of speech, should we regulate speech that is racist, sexist and seems to erode the foundations of a public culture based on mutual respect and public deliberation over social goods? Can we devise a robust defense of free speech based on its social force that both protects those that may be harmed by antidemocratic discourses and still provides the resources for democratic dissent?.

COMN 3500 Advanced Public Speaking (4 Credits)
Theory, preparation, delivery and evaluation of public speeches.

COMN 3680 Gender and Communication (4 Credits)
This course focuses on the interactive relationships between gender and communication in contemporary U.S. society. This implies three priorities for the class. First, the course explores the multiple ways communication creates and perpetuates gender roles in families, media, and society in general. Second, the course considers how we enact socially created gender differences in public and private settings and how this affects success, satisfaction, and self-esteem. Third, the course connects theory and research to our personal lives. Throughout the quarter, the course considers not only what IS in terms of gender roles, but also what might be and how we, as change agents, may act to improve our individual and collective lives. Cross listed with GWST 3680, HCOM 3680.

COMN 3700 Topics in Communication (1-4 Credits)
COMN 3701 Topics in Communication (1-4 Credits)
COMN 3702 Topics in Communication (1-4 Credits)
COMN 3703 Topics in Communication (1-4 Credits)
COMN 3704 Topics in Communication (1-4 Credits)
COMN 3705 Topics in Communication (1-4 Credits)

COMN 3770 Mediated Communication and Relationships (4 Credits)
This course examines how people develop, define, maintain, and manage interpersonal relationships through their use of mediated communication. We will examine communication in relationships that occur through the internet, text-messaging, cell phones, chat rooms, gaming, and virtual communities. This is a seminar type course where students guide and are guided through their own study of mediated relationships.

COMN 3800 Philosophies of Dialogue (4 Credits)
This course explores the philosophies of dialogue of Martin Buber, Mikhail Bakhtin and others in the context of contemporary communication scholarship on ethics, culture, and relationship. Prerequisite: permission of instructor.

COMN 3850 Communication Ethics (4 Credits)
This class is not just about how to be ethical communicators but it is also about how to discover ethics--the good life and care for others, answerability and responsibility--deep within the structures of human communication itself. The course is committed to a mixture of theory and practice but practice is at the heart of the matter. Half of our sessions will be devoted to dialogue or conversation about ethics in life. There we will try to work as close as we can with ethics in our own lived experience. In the other half, we will explore theory: the ethical/philosophical/communicative ground of ethics.

COMN 3991 Independent Study (1-5 Credits)
COMN 3992 Directed Study (1-10 Credits)
COMN 3995 Independent Research (1-10 Credits)
Topics and quarter hours vary. Prerequisite: instructor’s permission.

COMN 4010 Introduction to Graduate Studies (5 Credits)
History of the discipline; noteworthy scholars and publications, current issues in the discipline.

COMN 4020 Communication Studies: Relational (5 Credits)
Recent social science literature in interpersonal communication; emphasis on pragmatics, meta-level perspectives, relational concerns affecting intimacies, friendships, families.

COMN 4030 Communication Studies: Organizational (3-5 Credits)
Ways in which communicative actions create, maintain, transform terms that define and regulate our practical and passionate attachments to each other; specifically how identity, knowledge, value, social organizations are constructed in and through communicative practices.

COMN 4100 Seminar: Speech Communication Theory (5 Credits)
Theoretical foundations of communication and language behavior; syntactics, semantics, pragmatics.

COMN 4110 Theories In Interpersonal Communication (5 Credits)
Selected themes in interpersonal communication, based primarily on theoretical sources, including interaction, relationships, goal achievement, hierarchies, interpersonal change.

COMN 4120 Comparative Theories in Human Communication (5 Credits)
Selected efforts to construct theories of human communication; lectures, discussions, student presentations of analysis of readings.

COMN 4130 Seminar in Communication in Human Organizations (5 Credits)
Current problems and issues in organizational communication.

COMN 4140 Graduate Colloquium (5 Credits)

COMN 4150 Culture, Ethnicity and Communication (5 Credits)
A cross-cultural approach to investigate communication codes, norms, value dimensions, power, privilege, and relationship issues within national, ethnic, and gender groups.

COMN 4200 Physical Basis of Spoken Language (5 Credits)
The purpose of this course is to provide the student with a comprehensive understanding of the past, current, and evolving legal, policy, and regulatory issues effecting telecommunications, telecommunications-related industries, and the Internet. Laws and policies effecting multichannel television, wireline and wireless telephone companies, and the Internet will be examined in depth. Focus is placed on the role public policy plays in light of a rapidly changing information environment, critical evaluation and understanding of the rationale behind policy and regulatory activity, and the exploration of the various complex problems arising from the evolving information environment and its products.

COMN 4210 Seminar: Interpersonal Communication (5 Credits)
Selected theories applicable to interpersonal communication and their implications.

COMN 4220 Critical Intercultural Communication (5 Credits)
This seminar explores the key figures and foundational essays in the development of Critical Intercultural Communication. This seminar offers a critical perspective on current theory and research in intercultural communication. We emphasize questions and practices of “diversity” (especially involving race, class, gender, and sexuality) as they manifest in local and global contexts in the United States. The principle objective is to develop a politically informed and self-reflexive praxis in the service of reframing the study of intercultural communication.

COMN 4221 Culture, Power and Representation (5 Credits)
Central to the production of cultural knowledge about the ‘other’ is the labor of power implicated in all practices of discursive representation. In this course, we will examine the various theories of representation, the racial and gendered production of difference, the relation between discourse and subjectivity, and more generally, the poetics and politics of representation. These topics will be explored within a rich variety of contexts and institutional sites, e.g., in colonial and anthropological discourse, in popular media narratives and consumer culture, in the global deployment of Western theoretical/knowledge productions, among others.

COMN 4222 Theories of Identity and Subjectivity (5 Credits)
The seminar explores the communicative constitution of cultural, political, and institutional identities. Discussion will range from the historical development of the theoretical discourse on identity and subjectivity to more contemporary theories covering the emergence and transformation of identities in public discursive spaces. Particular attention will be given to theoretical frameworks and methods of inquiry animating research having to do with what is known as the “new cultural politics of difference.” The course ends with a look at the contexts and arenas in which “identity” and “subjectivity” have emerged as critical sites of contestation in the 21st century.

COMN 4223 Culture and Communication: Contexts and Issues (5 Credits)
This is a capstone course in the foundations sequence for the Culture and Communication Area of Concentration in Human Communication Studies. This course will integrate content from the other three area foundations courses and specifically address implications for the study and practice of intercultural communication in such contexts of study as globalization, transnationalism, diaspora, colonization, immigration, adaptation, localization, corporate, institutional, and situated discourse. In addition current theoretical, research, and application issues and problematic such as multivocality, voice and representation, intersections and contradictions of contradictory identifications, representations, micro and macro forces, and paradigmatic separation and integration will be discussed. Prerequisites: COMN 4220, COMN 4221 and COMN 4222.
COMN 4230 Intercultural Training (5 Credits)
Research and theoretical approaches that examine international/intercultural training and instructional practices about topics such as adaptation, adjustment, competence, conflict and cultural diversity.

COMN 4231 Discourse and Race (5 Credits)
This course looks at race as a discursive formation using the literature in Critical Race Theory that has emerged over the past decade. In analyzing this body of work covering a wide range of themes and diverse theoretical perspectives, we hope to uncover the historic, material, as well as symbolic determinations of the discourse on race that have conspired to sustain a highly racialized system in place.

COMN 4240 Seminar: Group Communication (5 Credits)
Small group literature; interpersonal and group communication.

COMN 4250 Seminar: Family Communication (5 Credits)
This course is designed to investigate and explore the communication processes associated with families. Areas of exploration include definitions of family communication and interactional patterns, the impact of life stage on family communication processes, marriage and divorce, parent-child communication, sibling interactions, the child-free family, and the later-life family.

COMN 4251 Advanced Seminar in Family Communication (5 Credits)
This advanced seminar is designed to build on the first seminar in family communication. The course will examine how historic research in the study of families have influenced the field of family communication. Emphasis will be placed on how understanding these classics can influence theory and research in the human communication area of family communication.

COMN 4280 Theories-Group Communication (5 Credits)
Examination, from different theoretical perspectives, of group communication as an area of study; research and application in speech communication discipline.

COMN 4300 Seminar in Persuasion (5 Credits)
Theory, research, special problems in persuasion and attitude change.

COMN 4310 Communication and Collaboration (5 Credits)
A survey of contemporary theories and applications.

COMN 4315 Public Deliberation (5 Credits)
An introduction to the theories and problematics of public deliberation. The course pays particular attention to the demands of inclusion, equality, and public reason as requirements of public deliberation.

COMN 4400 Seminar: Rhetoric Conversation Analysis (5 Credits)
Contemporary contributions to development of rhetorical theory ranging from perspectives on rhetoric offered by various rhetorical theorists to methods of rhetorical criticism.

COMN 4420 Rhetorical Theory (5 Credits)
Contemporary rhetorical theories.

COMN 4425 Rhetoric and Governance (5 Credits)
An introduction to the works of Michel Foucault and his influence on contemporary rhetorical theory.

COMN 4435 Rhetoric and Public Life (5 Credits)
An introduction to the conceptual and political history of the public sphere. The course pays particular attention to how the normative assumptions of public communication are affected by the demands of cultural pluralism.

COMN 4510 Seminar: Speech Communication Theory (5 Credits)
Integration of conceptual theory with behavioral practice in formal public speaking situations through lectures, discussions, performances.

COMN 4530 Critical Theories of Communication II: Nietzsche's Influence on Contemporary Rhetoric (5 Credits)
In conversation with Classical Rhetorical Theory and Critical Theories I, this course is designed to explore a major philosopher's influence on rhetoric and communication studies. Friedrich Nietzsche offers and inspires a second trajectory of thinking that allies with, but ultimately diverges from, the Marxist critical project. Broadly, Nietzschean thought echoes the Marxist concern for structural oppression, alienation, and limited consciousness; but it attempts to undermine structural power as much as possible without the tools of structural power (namely, language, values/truth/knowledge, and the subject). We explore this line of critique much more closely, considering how it has materialized in communication scholarship. This course offers a point of departure for explorations of particular theorists.

COMN 4700 Topics in Communication (1-5 Credits)

COMN 4701 Topics in Communication (1-5 Credits)

COMN 4702 Topics in Communication (1-5 Credits)

COMN 4703 Topics in Communication (1-5 Credits)

COMN 4704 Topics in Communication (1-5 Credits)

COMN 4705 Topics in Communication (1-5 Credits)

COMN 4710 Seminar: Nonverbal Communication (5 Credits)
Theoretical and practical exploration of interpersonal role relationships; emphasis on time, space, kinetic, vocal, tactile cues; methodological concerns.
COMN 4760 Linguistic Aspects of Communication Theory (5 Credits)

COMN 4800 Philosophies of Dialogue (5 Credits)
This course explores the philosophies of dialogue of Martin Buber, Mikhail Bakhtin and others in the context of contemporary communication scholarship on ethics, culture, and relationship.

COMN 4850 Communication Ethics (5 Credits)
This course explores the work of Todorov, Bakhtin, Levinas, and Hyde as foundational to communication ethics.

COMN 4890 Philosophy of Communication (5 Credits)
How speech communication is presupposed and/or demonstrated to be related to social reality, language, intersubjectivity by various methodologies used in conducting communication research; special emphasis on exploring presuppositions of recent methodological developments in contrast to more traditional approaches.

COMN 4900 Quantitative Methods I (5 Credits)
Lectures, readings, written assignments that facilitate growth and development of the research scholar.

COMN 4901 Quantitative Methods II (5 Credits)
This course is a continuation of the HCOM 4900 which explored the process of human inquiry, social science paradigms, the development of sound research questions, and strategies and techniques surrounding sampling, measurement and design. This course will expand on the exploration of research design and statistical methods that can be utilized in answering research questions and hypotheses. In addition, we will be collecting data that will be used to help us understand and analyze various statistical strategies.

COMN 4910 Theory Building in Communication (5 Credits)
Steps involved in constructing theory; application of theory building process to communication phenomena.

COMN 4915 Discourse Analysis (5 Credits)
An introduction to common theoretical assumptions and methods shared by scholars who study discourse as social interaction, with emphasis on analyzing key features of discourse that are central to their work.

COMN 4920 Communication Research Practicum (5 Credits)

COMN 4930 Speech and Communication Research - Qualitative Methods (5 Credits)
Grounded theory, phenomenology and other non-numerical approaches to research in human interaction.

COMN 4931 Qualitative Methods II (5 Credits)
This course teaches students qualitative data management skills, introduces them to an array of qualitative methods for analyzing naturalistic data, and guides them through the application of these skills to qualitative research projects. Prerequisite: COMN 4930.

COMN 4932 Critical Methods for Studying Culture (5 Credits)
This seminar provides an overview of a variety of critical methodologies (inclusive of the theory of method) for the study of culture. Potential course foci include textual analysis, critical ethnography, personal narrative, oral history, performance writing, and autoethnography.

COMN 4933 Writing Culture (5 Credits)
This seminar serves as a capstone course in the Culture and Communication seminar sequence. Students explore diverse genres used to write about culture. The course aims to help every student find a writing voice by reading excellent writing in diverse genres. By writing and rewriting all term, this course guides students through the process of writing an article centered around culture and communication, following the practices of the field.

COMN 4991 Independent Study (1-10 Credits)

COMN 4992 Directed Study (1-10 Credits)

COMN 4995 Independent Research (1-10 Credits)

COMN 5921 Seminar: Communication Research I (5 Credits)
Design, method, procedure strategies in research. Prerequisite: approved proposal.

COMN 5922 Seminar: Communication Research II (5 Credits)
Design, method, procedure strategies in research. Prerequisite: approved proposal.

COMN 5923 Seminar: Communication Research III (5 Credits)
Design, method, procedure strategies in research. Prerequisite: approved proposal.

COMN 5991 Independent Study (1-10 Credits)

COMN 5992 Directed Study (1-10 Credits)

COMN 5995 Independent Research (1-15 Credits)

Economics

Office: Sturm Hall, Room 246, 2000 E. Asbury Ave., Denver, CO 80208
Phone: 303-871-2685
Email: econ04@du.edu
Master of Arts in Economics

If you’re looking for a career as a business or government economist, the University of Denver’s master of arts in economics program offers excellent preparation.

Our MA program helps you build the solid skills and respected credentials that employers want. The degree also prepares students for doctoral studies, particularly if they want to explore alternative approaches and develop further insights about economics before entering doctoral programs.

Our department’s strengths include

• Macroeconomics
• Economics of money, banking and finance
• Environmental economics
• Health economics
• International and development economics
• Alternative approaches to economics
• History of economic thought
• Econometrics
• Gender economics

Our MA program is also geared toward your schedule — all of our required courses, and many of our electives, are conducted between 6:00 p.m. and 7:50 p.m. to accommodate students who work during the day. Other elective courses are typically offered between 4:00 p.m. and 5:50 p.m.

Master of Arts in Economics

Following are the simple steps to apply for graduate study in Economics at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

Apply Online / Application Deadlines

• Applications for graduate study in Economics at the University of Denver must be submitted online (https://du-grad.edu.185r.net/application).
• All online materials must be submitted, and all supplemental materials must be postmarked, by the program’s stated deadline: March 1, for the fall quarter. Applications can be submitted for admission in any quarter of the year. However, because of the sequencing of the three required courses, it is most advisable for students to apply for admission to the fall quarter of an academic year.
• A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.

Course and Degree Prerequisites and Requirements

• Proof of a bachelor’s degree is required from a regionally accredited college or university.
• Applicants must have an undergraduate major or minor in economics, or 20 quarter hours of economics coursework, or permission from the DU economics department.

Transcripts

• Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school.
• The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.
• Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early. Applicants educated outside the U.S. are encouraged to contact the Office of Graduate Studies for assistance regarding transcript-related materials.
• The University of Denver will consider electronic transcripts official from a domestic institution provided by the following approved agencies: Army/ American Council on Education Registry Transcript System (AARTS); Docufide/Parchment; National Student Clearinghouse; Naviance; Royall and Company; and, Scrip-Safe.

Test Scores

• The Graduate Record Examination (GRE) is required. The Economics program does not accept GMAT or LSAT scores as a substitute for the GRE. Scores must be received directly from the appropriate testing agency by the program’s stated deadline. The institution code for the University of Denver is 4842.
Language Proficiency

• Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the University is 80 (iBT) or 550 (paper-based). The institution code for the University of Denver is 4842. The minimum IELTS score accepted by the University is 6.0. Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please see the Graduate Policy Manual for complete English language proficiency requirements.

• Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English. Such applicants may be exempt from the TOEFL/IELTS requirement but not from other standardized graduate entrance examinations.

Candidate Statement

• A personal statement of academic and professional goals of at least 300 words is required. The statement should be submitted via upload through the online application process.

Recommendation Letters

• Three letters of recommendation are required. These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program’s stated deadline.

Financial Support

• To be considered for financial support, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline, February 15.

• Information about financial aid can be found on the Office of Financial Aid website (http://www.du.edu/financialaid/graduate). International students are not eligible for federal financial aid.

• The Department of Economics has limited financial support available for graduate students each year. Graduate teaching assistantships (GTA) and tuition credits as well as merit scholarships are available for both international and domestic students. The department awards financial support mainly on the basis of scholastic ability, though with some concern for need and the ability and willingness of students to assist with undergraduate courses. To qualify for scholarship support, recipients must be full-time students.

Application Status

• We encourage you to be actively engaged in the admission process. You can check your application status online (https://webcentral.du.edu).

Mailing Address

• Mail official transcripts and any supplemental admission materials not submitted with the online application to:

  University of Denver
  Office of Graduate Studies
  Mary Reed Building, Room 5
  2199 S. University Blvd.
  Denver, CO 80208-4802

International Applicants

• For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information (http://www.du.edu/learn/graduates/internationalapplicants.html). International applicants are strongly encouraged to have their applications complete at least eight weeks prior to the program’s application deadline.

The Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) provides complete details regarding admission requirements.

Master of Arts in Economics

The program requires 45 credit hours of graduate work in economics. A student must earn a grade of B- or better in each of the four required courses. The minimum grade for an individual elective course is C- but the minimum GPA is 3.0. The student must also defend her/his thesis in an oral defense and pass it, and then she/he must complete whatever revisions the thesis committee suggests. It is possible to complete all requirements in one academic year, though it is normally best to plan on finishing in the second year of study.

Electives

Students choose a minimum of 4 courses (ECON 3XXX). 16

Total Credits 45

Courses

ECON 3040 Marxian Political Economy (4 Credits)
An exposition of Marx’s theory of value through a detailed reading of Capital, vol. I. Excerpts from other readings by Marx, and some of the relevant secondary literature used. Restriction: junior standing. Prerequisite: ECON 2020 or ECON 2030.

ECON 3110 European Economic History (4 Credits)
The emergence of capitalism from feudal society; the Industrial Revolution, English capitalism; European industrialization; state and economy in capitalism; 20th-century Europe and the global economy. Restriction: junior standing. Prerequisite: ECON 2020 or ECON 2030.

ECON 3120 Economic History of the U.S. (4 Credits)
Industrial progress from colonial period to the present time; influence of economic forces in social and political development. Restriction: junior standing. Prerequisite: ECON 2020 or ECON 2030.

ECON 3460 Monetary Theory and Policy (4 Credits)
Studies the interaction between money and the economy. Examines the workings of the financial institutions and how they affect the economy. Looks at the questions of what serves as money, what determines interest rates, and how the central bank conducts monetary policy and its effect on the performance of the economy. Restriction: junior standing. Prerequisite: ECON 2030.

ECON 3480 Money & Financial Markets (4 Credits)
Examines workings of the money and financial markets and their relation to the monetary system and to the macroeconomy. Restriction: junior standing. Prerequisite: ECON 2020 or ECON 2030.

ECON 3500 Economic Development (4 Credits)
Careful re-examination of the works of the prominent development economists of the immediate postwar decades to critically shed light on the treatment of topical development problems by modern economists. Restriction: junior standing. Prerequisite: ECON 2020 or 2030.

ECON 3590 Urban Economics (4 Credits)
Covers topics and issues of economic growth and decline in metropolitan areas, emphasizing urban economic issues. A broad range of policy areas is discussed, including labor market policy, welfare reform, housing policy, racial segregation, transportation, and environmental policy, among others. Restriction: junior standing. Prerequisite: ECON 2020 or 2030.

ECON 3600 International Monetary Relations (4 Credits)
Theory, policy, and history of international organization of money and finance; open-economy macroeconomics: balance of payments, exchange rate dynamics, monetary policy effectiveness. Cross-listed with INTS 3600. Restriction: junior standing. Prerequisite: ECON 2030.

ECON 3610 International Trade Theory & Policy (4 Credits)
Examines topical trade issues confronting the United States, policies proposed to tackle them, and the theoretical underpinnings of these policies. Studies how those policies could affect the less developed countries as determined by the environment established under the World Trade Organization. Prerequisite: ECON 2020 or 2030. Recommended: ECON 2610.

ECON 3620 Philosophical Perspectives on Economics and Social Sciences (4 Credits)
This course provides an advanced survey of conceptual and methodological issues that lie at the intersection of philosophy, economics, and the social sciences. More specifically, the main goal is to engage in a critical discussion of how sciences such as psychology, sociology, and neuroscience can challenge and modify the foundations and methodology of economic theories. The course is structured around three broad modules. After a brief introduction, we begin by discussing the emergence of rational choice theory which constitutes the foundation of classical and neoclassical economics and present some paradoxical implications of expected utility theory. The second module focuses on the relationship between economics and psychology. More specifically, we examine the emergence of behavioral economics, the study of the social, cognitive, and emotional factors on the economic decisions of individuals and institutions and their consequences for market prices, returns, and resource allocation. Finally, the third module focuses on the implications of neuroscience on decision making. We discuss some recent developments in neuroeconomics, a field of study emerged over the last few decades which seeks to ground economic theory in the study of neural mechanisms which are expressed mathematically and make behavioral predictions.

ECON 3670 Econometrics: Multivariate Regression Analysis for Economists (4 Credits)
This course develops the foundations of ordinary least squares (OLS) regression analysis and teaches students how to specify, estimate, and interpret multivariate regression models. Students have to apply what they have learned using a popular software package used for econometrics and real data. Special topics also covered include regression models that include dummy variables, log-linear models, fixed effects models, a brief discussion of instrumental variables, and an introduction to time-series analysis and forecasting. Prerequisites: ECON 2670 and either ECON 2020 or ECON 2030. Restriction: Junior standing.
ECON 3740 Health Economics (4 Credits)
This course is designed to study the nature of the organization of health care production, delivery and utilization according to economic theory. It introduces the up-to-date problems and issues in the U.S. health care system by studying demand for and supply of health care services, health care production and costs, and market analysis of health care industry. Important parties playing roles in health care industry such as private health insurance firms, physicians, pharmaceutical industry, and hospital services will be studied in detail. In addition, the course deals with the role of government in health care industry and various health care reforms proposed in the U.S. Restriction: junior standing. Prerequisite: ECON 2020 or 2030.

ECON 3830 Topics in Macroeconomics (4 Credits)
Coverage varies but may include advanced topics in monetary theory, the study of business cycles, or the works of important monetary and macroeconomic theorists. Restriction: junior standing. Prerequisite: ECON 2030.

ECON 3850 Mathematics for Economists (4 Credits)
Restriction: junior standing. Prerequisite: ECON 2020 and 2670.

ECON 3970 Environmental Economics (4 Credits)
This course examines economic perspectives of environmental and resource problems, ranging from peak oil, food crisis, and climate change. Topics include the property-rights basis of polluting problems, environmental ethics, benefit-cost analysis, regulatory policy, incentive-based regulation, clean technology, population growth and consumption, and sustainable development. Restriction: junior standing. Prerequisite: ECON 2020.

ECON 3991 Independent Study (1-8 Credits)
Prerequisites: ECON 1030.

ECON 3992 Directed Study (1-10 Credits)

ECON 3995 Independent Research (1-4 Credits)
This research project is based on a topic that the student picks in consultation with the chair of the economics department. During the consultation process a faculty supervisor is assigned to work with the student throughout the research process. The topic is preferably one that requires the student to demonstrate her/his ability to apply what she/he has learned in the intermediate-level required courses for the economics major. Restriction: senior standing.

ECON 3996 Senior Paper Research (2-4 Credits)
This research project is based on a topic that the student picks in consultation with the chair of the economics department. During the consultation process a faculty supervisor will be assigned to work with the student throughout the research process. The topic is preferably one that requires the student to demonstrate her/his ability to apply what she/he has learned in the intermediate-level required courses for the economics major. Restriction: senior standing.

ECON 4020 Adv Macroeconomic Theory (5 Credits)
Determinants of national income and its components and of the level of employment and the general price level; also examines business cycles and alternative macroeconomic theories.

ECON 4030 Adv Microeconomic Theory (5 Credits)
The orthodox microeconomic approach to determining prices and income distribution in competitive general equilibrium based on utility and profit maximization of consumers and firms; alternative theories of value and distribution.

ECON 4050 Origins of Modern Economics (5 Credits)
This course covers the development of economic theory from the decline of the classical school through the emergence of the Keynesian theory and investigates in detail the structure of the neoclassical theory and the degree to which Keynesian economics provides an alternative. We examine why economists thought that certain theoretical frameworks were better than others and what problems still remain.

ECON 4991 Independent Study (0-10 Credits)

ECON 4992 Directed Study (1-10 Credits)

ECON 4995 Thesis Research (1-10 Credits)

Institute for Public Policy

Office: Institute for Public Policy Studies, Mary Reed Building, Room 107
Mail Code: 2199 S. University Blvd. Denver, CO 80208
Phone: 303-871-2468
Email: ipps@du.edu
Web Site: http://www.du.edu/ipps

Public policy is a highly disciplined, evidence-based approach to the analysis and solution of contemporary issues, such as fiscal policy, entitlement reform, health care, national security, regulation, education and immigration.

The graduate program in public policy, which offers the master of public policy (MPP) degree, gives you the opportunity to analyze, create and articulate innovative policies responsive to the most challenging issues facing this nation, while respecting and supporting your passion to serve responsibly.
Career Advancement
MPP graduates enjoy exciting careers as public policy professionals — running government agencies, leading nonprofit organizations, serving as consultants to corporations or political campaigns, or developing a perspective for a client with a legislative or regulatory agenda. The MPP program will provide you with the analytical and critical thinking skills you need, as well as the professional contacts that will open the door to professional success.

Faculty Expertise
Faculty members in the MPP program are academics, policy experts, legal scholars, and former and current elected officials. Our instructors represent a wide range of policy expertise, including political history, economics, health policy, regulatory policy, lobbying, education policy, constitutional law and quantitative analysis.

Flexibility
Most MPP classes are offered in the evenings, allowing you to gain real-life public policy experience during the day through full-time employment or policy internships. In addition, our flexible dual-degree program gives you the opportunity to enhance your future career by combining your MPP with several other relevant graduate degrees.

Opportunity
The University of Denver’s campus is located just minutes from downtown Denver, a regional hub for major corporations, financial institutions, law firms, nonprofit organizations, think tanks, and more government offices than any other U.S. city outside of Washington, D.C.

Master of Public Policy
Following are the simple steps to apply for graduate study in Public Policy at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

Apply Online / Application Deadlines
• Applications for graduate study in Public Policy at the University of Denver must be submitted online (https://du-grad.edu.185r.net/application).
• All online materials must be submitted, and all supplemental materials must be postmarked, by the program’s stated deadline: June 15, for the fall quarter; and, November 15, for the winter quarter.
• A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.

Course and Degree Prerequisites and Requirements
• Proof of a bachelor’s degree is required from a regionally accredited college or university.

Transcripts
• Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school.
• The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.
• Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early.

Test Scores
• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the program’s stated deadline. The institution code for the University of Denver is 4842.

Language Proficiency
• Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the Public Policy program is 95 (iBT) or 587 (paper-based). The institution code for the University of Denver is 4842. The minimum IELTS score accepted is 7.0. Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please see the Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) for complete English language proficiency requirements.
• Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English. Such applicants may be exempt from the TOEFL/IELTS requirement but not from other standardized graduate entrance examinations.

Candidate Statement
• A personal statement of professional objectives is required. The personal statement should be two to three pages, preferably double-spaced, and should address these three areas:
  • What led you to your interest in pursuing this degree? Do you have a particular policy topic that interests you?
  • What are your professional and career goals? Ten years from now, what type of work do you hope to be doing in the field of public policy?
  • How would a degree from the Institute for Public Policy Studies at the University of Denver help you achieve your professional goals?
• The statement should be submitted via upload through the online application process.

Recommendation Letters
• Three letters of recommendation are required. Letters of recommendation should be written by professors if you are a recent college graduate. If you have been out of school for some time, you may have the letters written by supervisors or others who can speak to your academic potential. These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program’s stated deadline.

Interview
• An interview may be required. Academic program staff will contact eligible applicants to schedule. Interviews are not scheduled through the Office of Graduate Studies.

Financial Support
• To be considered for financial support, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline, February 15.
• Information about financial aid can be found on the Office of Financial Aid website (http://www.du.edu/financialaid/graduate). International students are not eligible for federal financial aid.
• After application files are complete and after applicants have been interviewed, each prospective student will be carefully considered for need-based and merit-based funds. The Institute for Public Policy Studies awards the scholarships listed below.
  • Gov. Richard D. Lamm Scholarships. Gov. Richard D. Lamm Scholarships are awarded on a merit-basis to applicants who demonstrate a passionate interest in current public policy problems and offer unique solutions. Students may be awarded Lamm Scholarships of up to $10,000. The Lamm Scholarship Fund was created by Institute for Public Policy Studies co-director and former three-term Colorado Governor, Richard D. Lamm. No additional application is required.
  • Dean’s Scholarships. Former Arts, Humanities, and Social Sciences Dean Anne McCall made the Dean’s Scholarships possible. Dean’s Scholarships are merit-based and generally awarded for $2,500–$7,500. All applicants who meet the February 15 deadline are considered.
  • Graduate Research Assistantship Tuition Waivers and Stipends. The Institute for Public Policy Studies awards two to four MPP students to assist faculty on research projects. Assistantship awards include tuition waivers credited directly to a student’s tuition bill and stipends in the form of a salary. Assistantship awards range from $7,500 to $15,000. All applicants who meet the February 15 admission application deadline and make note in their application packet (e.g., cover letter and resume) that they wish to be interviewed for this type of award will be considered.

Application Status
• We encourage you to be actively engaged in the admission process. You can check your application status online (https://webcentral.du.edu).

Mailing Address
• Mail official transcripts and any supplemental admission materials not submitted with the online application to:

  University of Denver
  Office of Graduate Studies
  Mary Reed Building, Room 5
  2199 S. University Blvd.
  Denver, CO 80208-4802

International Applicants
• For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information (http://www.du.edu/learn/graduates/internationalapplicants.html). International applicants are strongly encouraged to have their applications complete at least eight weeks prior to the program’s application deadline.

The Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) provides complete details regarding admission requirements.
Master of Public Policy

In conjunction with other graduate programs at the University of Denver, MPP students can take specialized and approved courses in various policy specific areas. Policy emphases are available in the following areas:

- Education Policy
- Business and Government
- Energy and Environmental Policy
- Social Policy and Nonprofit Management
- Communications and Public Affairs
- Global Health
- International Policy and National Defense
- Political and Global Economics
- Customized

Each emphasis has a distinct list of requirements that will fulfill the MPP elective credits. Additionally, students are encouraged to explore experiential learning opportunities such as internships in the specific area as well as complete the required Policy Memorandum on a topic that is relevant to the emphasis.

Great Issues Forums

The Great Issues Forums are a series of policy seminars focused on the nation’s most important current issues. The graduate program in public policy offers five of these two-day, full-day courses every year for two quarter hours of credit each. Students must complete six forums (12 hours) to earn the MPP. The topics of these seminars rotate frequently, as expertise and events warrant, and are an integral part of the MPP program.

Non-coursework requirements

- Policy Memorandum

Policy Memorandum
As the capstone project of the MPP experience, the Policy Memorandum integrates the knowledge and skills learned in and outside the classroom. The Policy Memorandum provides an opportunity to experience firsthand the type of practical and professional work often required of a policy analyst. Students identify and define a real-world policy issue; analyze the issue by conducting research, gathering data and interviewing professionals with opposing views; analyze the costs and benefits of the issue; and recommend courses of action.

Courses

**PPOL 4100 American Public Policy System (4 Credits)**
The American Policy Agenda, which is required for MPP students, will provide an intensive overview of the development of American public policy in the 20th century, with special emphasis on the interconnection between the values of the public and private sectors. Through the lens of a useful descriptive model, graduate students will learn concepts of the role of government have evolved from: the (1) constitutional period, wherein political society was thought to be a rational device for the protection of property and liberty and prosperity was equivalent to the free management of affairs; to the (2) administrative period, wherein powerful regulatory agencies were created to control concentrations of corporate power and the idea developed that the market does not always reflect the social good; to the (3) bureaucratic period, wherein the stock market collapse of 1929 and the Great Depression reversed key ideas of limited government inherent in the constitution and, beginning with the New Deal, social engineering in the "public interest" defined virtually every problem as "national;" to the (4) social welfare period, wherein government became the source of vast entitlements and benefits and interest groups came to dominate the policy debate; to the (5) current period of stalemate, gridlock, and reconsideration, wherein big government is a given, along with a utilitarian social contract defined as that which provides the most efficiency, the most productivity, and the most consumption for the most people.

**PPOL 4200 Microeconomics for Public Pol. (4 Credits)**
Microeconomics for Public Policy Analysis will provide a comprehensive, case-based overview for the MPP student of the consequences of contemporary public policies for individuals, households, and firms. Public policy is often said to consist of the distribution of scarce or valuable resources or benefits through the mechanisms of the public sector. This course will provide the opportunity to gain fluency and expertise in the application of economic analysis to such problems as transfer payments, entitlements, government subsidies, taxation, housing, education, labor, welfare and crime. Issues concerned with exploring the government's role in encouraging innovation, maintaining a growing economy, and budgeting under conditions of "surplus," will be explored using contemporary policy initiatives. Two competing visions of public policy will be examined: the role of economic policy in securing the benefits of "ordered liberty," which accrues to the individual; and (2) the vision of public policy as fundamental to the correction of anomalies in the market and in the distribution of scarce resources, often based on interest group claims of "disparity" and "inequality".

**PPOL 4300 Quantitative Analysis-Pub Pol (4 Credits)**
This course will provide the MPP student with the tools of mathematical analysis needed for the advanced study of public policy issues and evaluation of alternatives. Topics will include descriptive statistics, probability, sampling, estimation, inference and hypothesis testing, variable analysis and correlation, regression theory, reliability and validity, and prediction and simulation. Students needing review of college-level algebra will be referred to appropriate tutorials.

**PPOL 4400 Analytical & Critical Skills (4 Credits)**
This course will provide the student with the analytical tools necessary to evaluate competing points of view, using empirical techniques, logic, and statistical inference. Case studies will be drawn from the current legislative and regulatory environment and will provide the MPP student with opportunities to construct a course of action, based on the use of logically consistent arguments and on the persuasive use of facts and empirical data. Students in this course will also learn the history and development of the scientific method, how to distinguish speculation, theory, fact, and opinion, how to identify the validity, ideological content or irrationality of data, how to identify the intentional obfuscation of issues, and how to evaluate one's own prejudices and vulnerability to argument not based on evidence.

**PPOL 4500 Cost-Benefit Analysis/Pub Pol (4 Credits)**
How do we determine if programs have met their objectives? Increasingly, this is a matter for empirical evaluation. This course will focus on quantitative approaches to program evaluation and on the primary tool available to the policy analyst in the modern organizational framework, cost-benefit analysis. Various issues will be considered, including the "costs" associated with taxes (and tax expenditures), governmental mandates, health and safety regulation, environmental regulation, government "investments," such as those in education, defense, law enforcement, and the regulation of financial industries.

**PPOL 4501 Great Issues Forum (2 Credits)**
The Great Issues Forums are unique short courses devoted to a single policy issue and taught by a nationally-recognized authority in the area. These courses will occur on a periodic basis, with at least two forums to be offered each academic quarter. Participation in these courses is required for graduate students in the MPP program. Each course will be taught on an intensive workshop basis, over the course of two or more days, for example, all-day sessions on Friday and Saturday. Specific topics will be determined by the immediacy of the policy issue and its relevancy to the curriculum of the MPP.

**PPOL 4502 Issues Forum II (2 Credits)**
The Great Issues Forums are unique short courses devoted to a single policy issue and taught by a nationally-recognized authority in the area. These courses will occur on a periodic basis, with at least two forums to be offered each academic quarter. Participation in these courses is required for graduate students in the MPP program. Each course will be taught on an intensive workshop basis, over the course of two or more days, for example, all-day sessions on Friday and Saturday. Specific topics will be determined by the immediacy of the policy issue and its relevancy to the curriculum of the MPP.
PPOL 4504 The Policymaking Environment (2 Credits)
This forum aims to provide MPP students with a robust understanding of the essentials of the policymaking process in the United States. We will be examining in sequence three basic topics: 1) The political values and principles that establish the parameters for the policymaking environment; 2) The set of governmental and non-governmental actors who participate in policymaking and how they relate to each other; and 3) What policymaking models can help to explain the way policy is made by those actors.

PPOL 4506 The American Fiscal Future: Solvency, Security, and Sovereignty in the 21st Century (4 Credits)
This course provides the opportunity for students to gain a comprehensive understanding of American fiscal policy, the derivation of the social welfare state, the consequences of debt and deficits for American public policy and social stability, and the policy alternatives to current dysfunctional policies.

PPOL 4600 Regulatory Policy (4 Credits)
This course will provide the MPP student with a solid understanding of the legal basis for policy action, through a case-based examination of executive and legislative authority, judicial policy-making, the expansion of the due process and equal protection clauses of the 14th Amendment, and the expansion of administrative authority under the Administrative Procedure Act. Such issues as affirmative action, government contracting, school finance, antitrust, and substantive due process will be presented utilizing a combination of traditional legal analysis and the cost-benefit approach of the policy specialist.

PPOL 4700 Public Management & Budgeting (4 Credits)
This course introduces students to the topic of public management, which includes concepts such as organizational structure, performance management, and strategy development. In addition, the instructor will teach the techniques and concepts of government and non-profit budgeting/financial management. The budgeting process includes program development/implementation, cost and revenue estimation and projection, and budget evaluation. The relationship between public management and budgeting will be explored.

PPOL 4701 Topics in Public Policy (4 Credits)
Various topics in public policy are covered. Topic subjects to change each term as deemed appropriate with local, regional and federal policy issues and regulation changes. Prerequisite: PPOL 4100.

PPOL 4806 Decision Making in Public Policy (4 Credits)
Provides a new perspective on the process of decision-making in the public and private sectors. Viewed from the perspective of a significant paradigm shift, the "rational model" of policy-making is contrasted with emerging theories based on a view of human nature that is unpredictable, idiosyncratic, and context-based. Case studies are drawn from the current financial crisis and from the ongoing debate over economic stimulus and recovery. Additional examples are provided from the New Deal era, the Vietnam war, Watergate, and from the wars in Afghanistan and Iraq.

PPOL 4807 The Public Policy Implications of Retiring the Baby Boomers (4 Credits)
The first baby boomers start drawing Social Security in 2008, and they they start turning 65 in 2011. American Retirement Policy has long undertaken three major obligations with regard to the elderly: Social Security, Health Care and Long Term Care. The shock of 76 million baby boomers impacting these three systems (and related programs like Veteran’s programs, Military retirement, Federal Civil Service Retirement, etc.) will be profound. Your generation will soon be running a nation of 50 Florida’s. This class will look at the public policy options of these three programs. We will also look at the politics of retirement policy, the demography of the next 50 years, tax policy in an aging society, how other developed countries are handling similar problems, and we will develop a comprehensive plan for meeting these multiple challenges.

PPOL 4808 Health Care Policy (4 Credits)
No prerequisites. The purpose of this course will be to explore the assumptions, the history, the development and the current practices of the U.S. health care systems. What are its strengths and what are its weaknesses? How do we explain its paradox of excess and deprivation? We will spend some limited time examining other nation's health care systems for comparative purposes. The course will cover a broad range of topics and will explore a systems approach to health, obtaining an understanding of the integration of the public and private sector, free-market and government regulation; the effects on the doctor/patient relationship, the new health care demands, the search for quality, the role of new technologies and the changing ethical standards. Such a course cannot be designed to describe a functional world of health care delivery for even as the description is being formulated, the practical and functional aspects of that world are changing.

PPOL 4810 Building a Sustainable America (4 Credits)
This course has a viewpoint: endless economic and population growth are sustainable. Opposing viewpoints are welcomed, even encouraged, but the purpose of this class is to start developing a new, more sustainable agenda for America. No trees grow to the sky and no geometric growth curves are sustainable. The first census in 1790 found four million Europeans living in North America. (Estimate of Native Americans vary widely.) That means that between 1790 and 1990, America had six doublings of its population (4, 8, 32, 64, 128, 256). Note that two more doublings would give us one billion Americans. Sustainable? Desired Public Policy? Similarly, U.S. and world economic growth has been growing exponentially. America’s GDP is now 13 trillion dollars and there are serious questions whether the world’s eco-systems can provide 6.5 billion people (the current world population) anything close to an American standard of living. Nor can the eco-system tolerate economic growth at historic rates. Many thoughtful observers think that a whole new phase of human development has been reached, call it the Sustainability Revolution, which will have as profound impact on human history as did the Industrial Revolution. Our globe is warming, our glaciers are melting, our oceans are expanding, our coral dying, our rainforests dying, our deserts creeping, our water-tables falling; we seem to be headed to a time of convergence. For the first time in history, humankind has itself become a geological force. New public policy solutions need to be brought forth and debated. We will attempt to do exactly that.
PPOL 4811 The Strategy of Public Policy (4 Credits)
Public Policy is formed in many ways: legislation, court rulings, initiative campaigns, executive orders, and regulations, not to mention many other subtle instruments that are often invisible to the public. All of these tools make analyzing policy a difficult task, and they make choosing the right strategy for getting a policy implemented even more complicated. How is it that policy makers choose to implement their policies? Are any options more effective than others? To understand the policy process in the U.S., policy analysts must understand the institutions that exist in government.

PPOL 4812 Supreme Court & Public Policy (4 Credits)
This course, which is specifically designed for graduate students in public policy, provides the necessary professional background for students to understand the role of the Supreme Court of the United States in the formulation of public policy. Central to the course are the due process and equal protection clauses of the 14th Amendment to the U.S. Constitution, which are the key to understanding the vast expansion of Supreme Court power since the New Deal. The course also provides a basis for the student to understand the constitutional basis for administrative regulation, as well as freedom of expression issues inherent in the 1st Amendment.

PPOL 4820 What Works in Public Policy - and What Doesn’t (4 Credits)
The goal of this course is to analyze the implications for public policy of significant public policy failures and successes. Selected major public policy initiatives are examined with a view toward judging their ultimate success or failure and the reasons for these outcomes. There is an emphasis on discussing unintended consequences and the role of modern economic theory. The role of ideology and politics in policy outcomes is also a focus. Policy areas that are evaluated include: Social Security and Medicare; the decline of the cities; federal fiscal and tax policy; and deregulation of financial markets.

PPOL 4900 Public Sector Internship (1-10 Credits)
Students will gain hands-on experience with policy issues in a variety of settings.

PPOL 4910 Private Sector Internship (1-10 Credits)
Students will gain hands-on experience with policy issues in a variety of settings.

PPOL 4920 Non-Profit Sector Internship (1-10 Credits)
Students will gain hands-on experience with policy issues in a variety of settings.

PPOL 4991 Independent Study (1-10 Credits)
Students will work in collaboration with faculty from the Institute for Public Policy Studies to complete an independent study project.

PPOL 4992 Directed Study (1-5 Credits)

PPOL 4995 Independent Research (1-10 Credits)
The Policy Memorandum research project is designed to provide the MPP student with a capstone experience that will synthesize the knowledge and skills that were acquired during the 60 quarter hours of formal coursework. Included among the skills that students will apply are research, quantitative methods, economic analysis, cost-benefit analysis, budgeting and project management.

Media, Film & Journalism Studies

Master of Arts in International and Intercultural Communication
The Master of Arts program in International and Intercultural Communication is offered through an interdisciplinary partnership between two large and active entities, the Department of Media, Film & Journalism Studies and the Josef Korbel School of International Studies. Students are able to choose from the breadth of coursework available in these two schools, while developing their own specific areas of concentration. Additionally, students are able to take advantage of electives and internships to develop expertise in their field of interest.

Graduates of this program are prepared to pursue careers in international and intercultural public relations and marketing, TV, print and Internet journalism, government diplomacy, cross-cultural and diversity training, college teaching and international education, conflict resolution and cross-cultural human resources/organizational communication.

Effective global communication requires that people understand both international and intercultural differences. Success is based on communicating goals and bridging differences. Students pursuing the MA-IIC establish a strong theoretical and applied foundation, while learning the nuances of the global environment. They then have an opportunity to extend this interdisciplinary base through courses in anthropology, foreign languages and literatures, business and other areas.
Master of Arts in Media, Film and Journalism Studies and Master of Science in Strategic Communication

The department of media, film and journalism studies’ graduate programs offer a broad-based understanding of the role and operation of the mass media in contemporary society as well as the creation of stories and messages for distribution through various channels.

Students may choose from three specialized programs:

- MA in media, film and journalism studies, student-designed emphasis
- MA in media, film and journalism studies, video production emphasis
- MS in strategic communication

Students may also choose various dual-degree program combinations including:

- MS in strategic communication/MA video production emphasis
- MA in media, film and journalism studies/JD (with the Sturm College of Law)

Our programs provide a unique curriculum focusing on the social, economic, cultural, legal and public policy implications of the mass media and allow students to specialize in particular areas to prepare them for careers in media research, public relations, video and television production, filmmaking, media criticism, media management and media regulation and policy. Some MA and MS graduates also seek more advanced degrees as they enter MFA or PhD programs.

All master’s programs require 48 credits for completion of the degree. While some full-time students take a heavier load and part-time students take a lighter load, most media, film and journalism studies graduate students take eight credit hours/two courses per quarter. This is particularly true of those who complete a thesis. Because of the sequencing of classes, it generally takes six quarters to complete the MA, video emphasis and student-design degrees, while some in the MS in strategic communication degree have completed the degree in five quarters. We schedule most graduate-level courses during afternoon and evening hours as a convenience to those who wish to pursue their degree on a part-time basis or for full-time students who maintain employment during their pursuit of an advanced degree.

Our alumni develop careers in a variety of areas including corporate, nonprofit and government public relations, advertising, video, television and film production, journalism, media research analysis, telecommunications and education.

Master of Arts in International and Intercultural Communication

Following are the simple steps to apply for graduate study in International and Intercultural Communication at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

Apply Online / Application Deadlines

- Applications for graduate study in International and Intercultural Communication at the University of Denver must be submitted online (https://du-grad.edu.185r.net/application).
- All online materials must be submitted, and all supplemental materials must be postmarked, by the program’s priority deadline: January 1, for international students seeking fall quarter admission; and, February 15 for domestic students seeking fall quarter admission. Applications are accepted after the priority deadlines if space is available. Applicants for winter and spring quarters should have their applications complete at least two months prior to the start of the quarter.
- A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.

Course and Degree Prerequisites and Requirements

- Proof of a bachelor’s, and, if applicable, a master’s degree is required from a regionally accredited college or university.

Transcripts

- Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school.
- The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.
- Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early. Applicants educated outside the U.S. are encouraged to contact the Office of Graduate Studies for assistance regarding transcript-related materials.
• The University of Denver will consider electronic transcripts official from a domestic institution provided by the following approved agencies: Army/American Council on Education Registry Transcript System (AARTS); Docufide/Parchment; National Student Clearinghouse; Naviance; Royall and Company; and, Scrip-Safe.

Test Scores
• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the program’s stated deadline. The institution code for the University of Denver is 4842.

Language Proficiency
• Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the International and Intercultural Communication program at DU is 105 (iBT) or 620 (paper-based). The institution code for the University of Denver is 4842. The minimum IELTS score accepted is 7.5. Applicants must also achieve a minimum 4.5 TWE or 27 writing (iBT) or 8.0 IELTS writing. Please see the Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) for complete English language proficiency requirements.
• Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English.
• Such applicants may be exempt from the TOEFL/IELTS requirement but not from other standardized graduate entrance examinations.
• Applicants whose native language is not English and who may be exempted from the English proficiency test requirements based on their academic degree credentials are strongly encouraged to submit TOEFL and TWE scores. Submission of these scores will strengthen the application.

Candidate Statement
• A personal statement of academic and professional goals and objectives is required. Include how those goals and objectives relate to international and intercultural communication. The statement should be submitted via upload through the online application process.

Recommendation Letters
• Three letters of recommendation are required. Academic references are preferred, although professional references may also be submitted. These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program’s stated deadline.

Financial Support
• To be considered for financial support, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline, February 15.
• Information about financial aid can be found on the Office of Financial Aid website (http://www.du.edu/financialaid/graduate). International students are not eligible for federal financial aid.
• Departmental financial support is primarily merit-based aid, such as graduate scholarships, as well as a limited amount of need-based grant aid. For consideration, all online materials must be submitted, and all supplemental materials must be postmarked, by the program’s stated deadlines.
• Peace Corps Paul D. Coverdell Fellows Program: Returning Peace Corps volunteers (RPCV) may earn their MA in international and intercultural communication and apply for specific financial aid awards. RPCVs also receive 10 hours of academic credit for their Peace Corps service, which means they can take 50 hours of course work rather than the 60 hours required for the general IIC degree. IIC/RPCVs have the same requirements as general IIC degree students, but the language requirement is waived and RPCVs complete a 5-credit internship in the United States within a “high-need” community.

Application Status
• We encourage you to be actively engaged in the admission process. You can check your application status online (https://webcentral.du.edu).

Mailing Address
• Mail official transcripts and any supplemental admission materials not submitted with the online application to:
  University of Denver
  Office of Graduate Studies
  Mary Reed Building, Room 5
  2199 S. University Blvd.
International Applicants

- For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information (http://www.du.edu/learn/graduates/internationalapplicants.html). International applicants must apply by January 1.

Master of Arts in Media, Film and Journalism Studies

Following are the simple steps to apply for graduate study in Media, Film and Journalism Studies at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

Apply Online / Application Deadlines

- Applications for graduate study in Media, Film and Journalism Studies at the University of Denver must be submitted online (https://du-grad.edu.185r.net/application).
- All online materials must be submitted, and all supplemental materials must be postmarked, by the program’s priority deadline: January 1, for international students seeking fall quarter admission; and, February 15 for domestic students seeking fall quarter admission. Applications are accepted after the priority deadlines if space is available. Occasionally, students may be considered for admission to the winter or spring quarters.
- A $65 non-refundable application fee is required for an application to be processed.

Course and Degree Prerequisites and Requirements

- Proof of a bachelor’s degree is required from a regionally accredited college or university.
- An undergraduate degree in communications is not required for admission to graduate programs in Media, Film and Journalism Studies.

Transcripts

- Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school.
- The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.
- Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early. Applicants educated outside the U.S. are encouraged to contact the Office of Graduate Studies for assistance regarding transcript-related materials.
- The University of Denver will consider electronic transcripts official from a domestic institution provided by the following approved agencies: Army/American Council on Education Registry Transcript System (AARTS); Docufide/Parchment; National Student Clearinghouse; Naviance; Royall and Company; and, Scrip-Safe.

Test Scores

- The Graduate Record Examination (GRE) is required and scores generally must be at or above the 50th percentile to be competitive for admission to the program. Scores must be received directly from the appropriate testing agency by the program’s stated deadline. The institution code for the University of Denver is 4842.

Language Proficiency

- Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the Media, Film and Journalism Studies program is 105 (iBT) or 620 (paper-based). The institution code for the University of Denver is 4842. The minimum IELTS score accepted is 7.5. Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please see the Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) for complete English language proficiency requirements.
- Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English. Such applicants may be exempt from the TOEFL/IELTS requirement but not from other standardized graduate entrance examinations.
• Applicants to Media, Film and Journalism Studies whose native language is not English and who may be exempted from the English proficiency test requirements based on their academic degree credentials are strongly encouraged to submit TOEFL scores. Submission of these scores will strengthen the application.

Personal Statement
• A personal statement is required.
• Applicants are encouraged to address these three areas in their statement:
  • Their future career goals.
  • How these goals intersect with the degree they are seeking from the Media, Film and Journalism Studies Department at the University of Denver.
  • Other information relevant to their pursuit of an advanced degree.
• The statement should be submitted via upload through the online application process.

Recommendation Letters
• Three letters of recommendation are required and at least two should be academic in nature (e.g., a former professor). These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program’s stated deadline.

Financial Support
• To be considered for financial support, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline, February 15.
• Information about financial aid can be found on the Office of Financial Aid website (http://www.du.edu/financialaid/graduate). International students are not eligible for federal financial aid.
• Departmental financial support is primarily merit-based aid, such as graduate teaching assistantships and scholarships. For consideration, all online materials must be submitted, and all supplemental materials must be postmarked, by the program’s stated deadlines.

Application Status
• We encourage you to be actively engaged in the admission process. You can check your application status online at https://webcentral.du.edu.

Mailing Address
• Mail official transcripts and any supplemental admission materials not submitted with the online application to:
  University of Denver  
  Office of Graduate Studies  
  Mary Reed Building, Room 5  
  2199 S. University Blvd.  
  Denver, CO 80208-4802

International Applicants
• For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information (http://www.du.edu/learn/graduates/internationalapplicants.html). International applicants must apply by January 1.

The Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) provides complete details regarding admission requirements.

Master of Science in Strategic Communication
Following are the simple steps to apply for graduate study in Media, Film and Journalism Studies at the University of Denver. If you have any questions about the process, please contact the Office of Graduate Studies (gradinfo@du.edu).

International Applicants

- For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information (http://www.du.edu/learn/graduates/internationalapplicants.html). International applicants must apply by January 1.

The Graduate Policy Manual (http://www.du.edu/media/documents/graduates/gradpolmanual.pdf) provides complete details regarding admission requirements.

Master of Arts in International and Intercultural Communication

The MA in IIC requires 60 quarter hours of credit, including four courses in communication (10-20 credits from MFJS (or Communication Studies--COMN) and four in International Studies INTS (20 credits). Required courses include MFJS 4650 and MFJS 4912 Seminar in Mass Communication Foundations in International & Intercultural Communication. One course in research methods is also required (4-5 credits), as well as completing a thesis and/or an internship (5-10 credits). Students must demonstrate a two-year proficiency in at least one language other than English by early in the quarter before they plan to graduate. Please see below for suggested courses for Areas of Concentrations.

Degree requirements

Coursework requirements

Core coursework requirements

I. Department of Media, Film and Journalism Studies and the Department of Communication requirements (4 courses) 16-18

Complete both of the following courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>MFJS 4650</td>
<td>International Communication</td>
</tr>
<tr>
<td>MFJS 4912</td>
<td>Seminar in Mass Communication (Foundations in International and Intercultural Communication)</td>
</tr>
</tbody>
</table>

Complete an additional 2 courses in MFJS (or COMN)

II. Joseph Korbel School of International Studies requirements (4 courses) 20

Depending on substantive interests, a student selects one of the following options (Traditional MA or Professional):

A. Traditional MA option

Complete 2 courses in one concentration plus 2 classes in a second concentration OR students complete 1 core curriculum course plus 3 courses in one concentration.

Core curriculum includes but is not limited to:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>INTS 4900</td>
<td>International Politics</td>
</tr>
<tr>
<td>or INTS 4501</td>
<td>Comparative Politics: States and Societies in the 21st Century</td>
</tr>
<tr>
<td>or INTS 4304</td>
<td>Econometrics for Decision Making II</td>
</tr>
<tr>
<td>or INTS 4820/4821/4822</td>
<td>Democracy and War: Socrates, Thucydides, and Today's America</td>
</tr>
</tbody>
</table>

Concentration areas include:
Human Rights; Development; Global Political Economy; Policy Analysis, International Technology Analysis and Management; Conflict Resolution; Global Environment; International Security; Global Finance, Trade, and Economic Integration; Global Health; and Humanitarian Aid

B. Professional MA option

Students may take four courses in one of the designated Program Training Core curricula in one of the professional MA programs in INTS: International Administration; International Public Policy; Development; Global Finance, Trade & Economic Integration; International Health; and Humanitarian Aid. Students choosing this option to fulfill their INTS requirements should work with Tom Rowe, the IIC advisor for INTS coursework; Susan Rivera; or David Levine, the associate dean to develop a written plan, and submit a signed copy of the plan to the IIC director. We recognize that there will be cases where students have special needs and interests, and may prefer to create a custom-designed combination of courses; modifications may be made in these requirements after consultation with Tom Rowe, David Levine or Susan Rivera. A signed copy of the modified agreement should be given to the IIC Director for the student’s file.

Note: Details on the Traditional or Professional MA options are available from the INTS department and are included in the INTS Student Handbook.

III. Research Methods

Research Methods course may be from MFJS or INTS. Must receive approval from the ICC Director to use research requirements from other departments to fill this requirement.

IV. Thesis and Internship courses

Internship must be completed in a U.S. high-needs community.

V. Electives

Elective courses must be at the 4000 or 5000 level. Electives may serve as additional coursework needed to reach the minimum number of credits required for the degree.

Minimum number of credits required for degree: 60 credits

Non-coursework Requirements:

- Foreign Language Proficiency

Foreign Language Proficiency

No University of Denver language courses may be counted toward the course requirements of the joint MA program. Students may take language courses to reach or surpass the two-year proficiency level, but these will not count toward the credits required for the degree.

International students whose native language is not English may use that language to meet the requirement, provided they have done academic or professional work in that original language.

IIC/Peace Corps’ Paul D. Coverdell Fellows Program

In cooperation with the Peace Corps, the Paul D. Coverdell Fellows Program permits students who have completed their service in the Peace Corps to study the MA in International & Intercultural Communication degree following their service. They receive 10 credits for their Peace Corps service toward the 60 credits required for the degree, leaving 50 credits for the program. Please see below for a list of suggested courses for Areas of Concentrations.

Coursework requirements

I. Department of Media, Film and Journalism Studies (also from Communication Studies) 16-18

II. Joseph Korbel School of International Studies (4 courses) 20

III. Research Methods 4-5

IV. Internship (must be completed with a high-need community in the U.S.) 5

V. Electives (remaining credits)

Total Credits 50

Total number of credits required for degree: 50 credits

Non-coursework Requirements

- Internship
- Thesis (including proposal presentation and oral defense)
- Foreign Language Proficiency
Internship

A minimum of five credit hours of internship (40 hours per credit X 5 = 200 hours) is required for students who choose the internship option. An internship is registered as a course (MFJS 4980: Internship), and may be taken for 1 to 5 credits during any one term. (Note: Internships must be secured or in the process of being secured in the quarter before graduation.) Students may register for additional internship credits (up to a total of 10) as part of their course electives. Students may elect to do one or more internships with media/communications agencies, non-profit organizations, corporations, or government, in the Denver area, or elsewhere in the U.S. or abroad. Students are encouraged to do the internship near the end of their program, after they have completed at least half of the 60 credits required for the MA degree. All internships will be administered and supervised by Prof. Erika Polson, the Director of Internships for the IIC Program in the Dept. of Media, Film and Journalism Studies. Students must meet with the internship director in order to obtain approval for an internship.

Thesis

Students may opt to do a thesis and/or an internship, for a total of 10 credits maximum (five credits minimum). To begin work on the thesis, the student must first choose an area of research interest and develop a research question that will guide the thesis research. At that time, the student should also choose a thesis advisor with expertise in the student’s interest area. The advisor will help the student to focus the research question and may suggest additional readings or coursework that will help the student develop the thesis project. Students should review the process and policies for the master’s thesis in the Graduate Policy Manual. Students can find “Thesis and Dissertation Formatting Guidelines,” “Thesis Oral Defense Information,” and “Thesis/Dissertation Submission Instructions via ETD” under the “Graduation and Oral Defense Information on this website. The student should meet at least twice with the thesis advisor to finalize a research question and outline the entire project. The student should then begin work on a preliminary proposal which may need to be reviewed by the IIC Graduate Committee (as determined by the thesis advisor and IIC Director), and should include a brief summary of the following:

- research problem or question
- theoretical framework,
- preliminary literature review
- methods.

The committee will review the proposal and the student’s course record (including grades), consult with the student’s advisor and instructors of courses related to the thesis, and make a recommendation to the student on doing a thesis. If the committee recommends against the student doing a thesis, the student may opt to do an internship or other course work. A student has the option to revise and resubmit the preliminary thesis proposal one time. Once the preliminary proposal has been approved by the IIC Graduate Committee, the student and advisor will need to select a thesis committee, which includes the advisor and a minimum of two other committee members (at least one Media, Film & Journalism Studies, and one from International Studies; the third may be from either area) who will read the formal research proposal and the final report. These additional members should be contacted and asked if they would be willing to serve on the thesis committee. Having formed the thesis committee, the student should begin work on a formal thesis proposal. The exact form of this proposal will be outlined by the thesis advisor and will vary according to the thesis topic, the specific problem being studied and the methodology proposed to explore that problem. All proposals should include the following (the order may vary):

1. a general introduction to the thesis topic
2. an explication of the problem(s) the research will address (i.e., the purpose of the study)
3. a review of the literature related to the stated problem
4. a clear and succinct statement of the research questions or hypotheses the thesis will address
5. a discussion of the research methods that will be used to explore the questions or hypotheses
6. a description of the material or data that will be examined in order to suggest answers to the research questions or to test the hypotheses
7. if appropriate, a discussion of the contributions the study will make to the existing discourse on the thesis topic.

The student will need to convene the thesis committee for a proposal meeting following completion of the proposal. The committee members should be presented with a draft of the research proposal two weeks prior to this meeting. At the meeting the committee members will question the student on the project’s theory, design, and research methods to ensure that the project is rigorous and of appropriate scope. Revisions to the proposal may be required following this meeting, but once the committee has approved the proposal, the student may regard it as a contract. An approved proposal outlines specifically what procedures the student must follow to complete the thesis requirement; no committee member may fault the student for the study’s design when the thesis is complete (providing the student follows the approved plan, such concerns must be addressed at the proposal meeting. Following approval of the research proposal, the student may then proceed to conduct the research described in the proposal, then report and discuss the results in the final written thesis report, which must be approved in an oral defense by the thesis committee. The format of the thesis should follow the guidelines developed by the Office of Graduate Studies exactly.

Foreign language Proficiency

By the time they graduate with the MA degree, students must prove proficiency equivalent to approximately two years of college-level course work in a language other than English, or their native language. Ways to prove proficiency include:

1. Course work beyond the two-year level (earned ‘B’ or better) within the past three years of initial enrollment in the IIC program. Note: **The school must offer the course according to formal levels or years: for example, when the student finishes a course, the student will be at or beyond the two-year level. If the course work was performed at a non-accredited institution (so the courses are not offered by levels), the student must take the
proficiency test. Students enrolling in Berlitz Language Learning courses must complete level 4. Most university courses are offered according to year or level, whereas many short-term intensive “submersion” programs or classes are not.

2. Worked or lived in another culture requiring proficiency at or beyond the two-year level for six months or more within the past three years (including international students whose first language is not English); primary language used by the student in the other culture was not English.

3. Taking a foreign language course (see (1) above on type of course) for which completion (and earning a ‘B’ or better) brings the student up to the two-year proficiency level within three years to enrolling in the IIC program or during the program. The classes will not count toward the degree.

4. Taking a foreign language course beyond the two-year level and earning a ‘B’ or better. Students may take 3000-level courses to bring them beyond the two-year proficiency requirement; however the classes will not count as credits toward their degree.

5. Taking and passing the graduate foreign language proficiency exam through the Center for World Languages and Cultures (CWLC).
   a. Taking and passing the graduate foreign language proficiency exam through the Center for World Languages and Cultures (CWLC). Students must take the language proficiency exam AT LEAST two quarters prior to their anticipated graduation date. Please take the exam as early in your program as possible! Students should contact the Center at cwlc@du.edu or 303.871.4601, to register for the exam, for a fee of $50 (cash or a check only). Early registration is appreciated! Contact the CWLC to determine exact dates the Language Proficiency Test is offered each quarter. Students may take the test only one time per quarter, so if the student does not pass the test, s/he will need to wait until the next quarter before taking it again.

   Students should submit a memo with written evidence of proficiency to the IIC Director no later than the beginning of the quarter before graduation. International students who are proficient in English, as well as their primary language are exempt from this requirement.

Areas of concentration

One of the advantages of the IIC program is the flexibility of the curriculum. While many students have expressed their appreciation for such a broad selection of classes, they have also asked for a guide to which classes might be best suited to their interests. The following is a list of areas of concentration compiled by IIC professors from which students may choose their own concentration. The courses listed under each area are suggestions only, and are not complete listings; students are not required to enroll in them (unless otherwise noted). They are simply intended to help students choose classes that will best serve their interests and goals. It is also possible to construct individualized areas of concentration; however, these must be approved by an IIC advisor. Please be aware that many classes are offered only once during the academic year and that schedules are subject to change. Students are advised to check the dynamic online course catalog (see the Registrar’s website at: http://www.du.edu/registrar/) frequently and contact relevant professors and faculty if unsure about a class. Entrance into certain courses may be especially competitive; for these reasons it is wise to plan ahead and select two or three backup courses.

Sample Areas of Communication

- Development Communication
- Emergent Digital Practices
- Global Health Communication
- Globalization and Culture
- Global Environment
- Human Rights
- International & Intercultural Strategic Communication (nonprofit or corporate)
- International Administration
- International Politics
- Media Production
- Conflict Management/Resolution

Please note: 3000-level Courses. A student is allowed to take only one 3000-level course to count for credit towards the 60 hours needed to complete the master’s program in International and Intercultural Communication, and it must be cross-listed as a graduate/undergraduate course (see Course Catalog). Graduate students are expected to complete an additional paper or project beyond the basic course requirements when taking a 3000-level course that is cross-listed with undergraduates. Consult with the instructor before enrolling in any 3000-level course.

University of Denver | Graduate Bulletin 2014-2015 | 591
Master of Arts in Media, Film and Journalism Studies

Students pursuing an MA in media, film and journalism studies can choose from two program options: the student-designed emphasis or the video emphasis.

Student-Designed Emphasis

This degree is a traditional research-oriented, 48 credits, two-year that offers a great deal of flexibility. Students develop a research topic for their thesis based on their particular interests in media and using the appropriate methodological tools studied during their first year of course work. After completing 24 credits in the program, students develop a thesis proposal for their research project. Once a student has defended her or his proposal in front of their thesis committee, the student then concentrates on researching and writing the thesis during the second year of graduate study in addition to taking classes. To complete this program successfully, a student must defend the thesis before his or her graduate thesis committee.

Electives

Complete additional coursework to reach minimum number of credits required for the degree. Maximum of 12 credit hours outside the department. Only one course can be 3000 level. Electives may not be taken at either the Women's College or University College.

Thesis

Student may take at least 1 but up to 8 credits depending on program plan worked out between student and thesis advisor.

Total Credits

48

Minimum number of credits required for degree: 48 credits

Non-Coursework Requirements:

- Thesis (including oral defense)

Video Production Emphasis

This program is designed for students who want to explore the world of video production and filmmaking. It is a two-year, 48-credit-hour degree program. Individuals do not need a background in video production to apply successfully for this program. The program focuses on building historical, theoretical and critical understanding to compliment technical and aesthetic abilities. Novice production students begin their first year learning foundational skills in pre-production, writing, cinematography, sound design and editing while more experienced students begin their graduate degree with more advanced production work through our Experimental Film and Video course in the fall. During the second and third quarters of the first year, both advanced and novice students begin the first of two genre specific advanced production capstone sequences, either in narrative or documentary filmmaking, in addition to other required and elective courses. These two-quarter capstone sequences are offered on alternative years. During the second year, all students work toward increased proficiency in advanced production courses as well as gain experience in an internship environment. The combined coursework allows students to gain proficiencies in researching, producing and distributing a documentary as well as writing, producing and distributing a short narrative project.

**Dual or Joint Degree Programs** Students may also choose various dual-degree program combinations including: MA in strategic communication/in video production, MA in media, film and journalism studies/JD (with the Sturm College of Law) Please contact the media, film and journalism studies department for information on these programs.

**Courses**

**MFJS 3120 Media Ethics (4 Credits)**

Analysis of problems affecting mass communications profession that result from interaction among governmental, legal, institutional and socioeconomic forces in mass communications systems. Senior standing required.
MFJS 3150 Activist Media: A Historical Overview 1960-Present (4 Credits)
Today’s alternative cultures use internet and mobile technologies to access and circulate mainstream information, but also to rapidly exchange information that exists outside mainstream media channels. Activist movements today with access to digital tools and networks are no longer dependent on newspapers and broadcast networks to represent them and to disseminate their messages. We are, however, just beginning to see how the proliferation of alternative networks of communication, and the content, practices, and identities they facilitate, interact with traditional political and business organizations, as well as with traditional media products and practices. This course focuses on media activism over the past half-century tied to various social movements with an emphasis on contemporary protest movements and their use of new and old media tools and strategies. Cross listed with EDPX 3725. MFJS 4725. Prerequisite: junior standing or permission of instructor. MFJS, SCOM, MDST, COMN, JOUR, MCOM, IIC, or DMST majors only.

MFJS 3160 Networked Journalism (4 Credits)
This course traces the shift that has taken place over the past 15 years from mass-mediated journalism to networked journalism, with emphasis on experiments in citizen and participatory news and on the changing relationship between journalists and their publics. It explores emergent communication technologies and practices and how they are changing the news media landscape. Prerequisite: junior standing or permission of instructor. MFJS, SCOM, MDST, COMN, JOUR, MCOM, IIC, or DMST majors only.

MFJS 3201 Digital Design and Editing (4 Credits)
Students explore publication design, learn techniques for creating effective layouts, and use page payout software to incorporate and manipulate text, photographs and illustrations. Prerequisite: MFJS 2140.

MFJS 3203 Women and Film (4 Credits)
This course explores the major intersections of the terms "women" and "film." It is concerned, for example, with the representation of women in film, both in the dominant Hollywood cinema and in alternative filmmaking practices (independent, experimental, documentary, and other national cinemas), with films by women and with women as cinema viewers or spectators. This course examines a variety of feminist approaches (historical, critical, theoretical) relevant to the subject matter. Lab fee. Cross listed with GWST 3203. Prerequisites: MFJS 200 or GWST 1112 or permission of instructor.

MFJS 3204 Film & Broadcast Documentary (4 Credits)
An historical study of documentary film and video, from the films of the Lumiere brothers to contemporary examples. Issues explored include: the nature of documentary and what distinguishes it from fiction, the development of documentary modes or styles, propaganda and ideology in documentary film, ethics, borderline forms that combine documentary and fiction, and documentary’s role in supporting established institutions and regimes and/or promoting social change. Lab fee required. Prerequisite: Permission of instructor.

MFJS 3205 International & Development Communication (4 Credits)
The course uses a variety of methods and approaches to inspire critical reflection about the complex relationship between communication, culture, media and globalization, (trans)national identity(ies) and development.

MFJS 3206 Film History I: Silent Cinema (4 Credits)
This course explores the international history of film, from the origins of cinema through the late silent period. We examine the ways in which important events such as massive immigration, the Progressive movement, colonialism, World War I, modernism, and the Bolshevik Revolution have altered the face of film history, and look at some of the most important cinematic movements of the period. We discuss film historiography and the special challenges posed by film historical research and writing. Lab fee required. Note: This course is writing-intensive. Prerequisite: Permission of the instructor.

MFJS 3208 Feature, Editorial, and Blog Writing (4 Credits)
Nature and functions of newspaper and magazine article writing and editing, with concentrated practice in these areas. Laboratory fee required. Prerequisite: MFJS 2140.

MFJS 3212 Film History II: Sound Cinema (4 Credits)
This course explores the international history of film, from the development of sound cinema through the post-World War II period, 1926-1960. We examine the ways in which important events such as the Great Depression, the rise of fascism, the Second World War, and the Cold War have altered the face of film history, and look at some of the most important cinematic movements of the period. We discuss film historiography and the special challenges posed by film historical research and writing. Lab fee required. Prerequisite: Permission of the instructor.

MFJS 3216 Film History III: Contemporary Cinema (4 Credits)
This course explores the history of film from 1960 to the present. We examine the ways in which important events such as the Cold War, struggles against colonialism, the Vietnam War, globalization, and the rise of religious fundamentalisms have altered the face of film history and look at some of the most important cinematic movements of the period. We discuss film historiography and the special challenges posed by film historical research and writing. Note: Lab fee required. This course is writing-intensive. Lab fee required. Prerequisite: Permission of the instructor.

MFJS 3224 Introduction to 16mm Film and HD Digital Cinematography (4 Credits)
This course focuses on the visual aspects of telling a cinematic Story. Students learn the basics of black and white cinematography using 16mm film cameras and/or the basics of color cinematography using high definition digital cameras. The class emphasizes silent storytelling, using lighting, art design and camera movement to develop character and theme. Students read from seminal film theorists about varying approaches to cinematography and write analyses of their own work. Lab fee required.
MFJS 3229 Video Editing is for Everybody (4 Credits)
The goal for this course is for students to have a basic working knowledge of editing using various media elements (video, audio, photos, music, graphics), developing proficiencies using different editing software, and applying a mixture of editing theories and techniques. This is a summer course only.

MFJS 3301 Culture Jamming (4 Credits)
Culture Jamming® describes a set of tactics that certain artists, activists, filmmakers, musicians and journalists use to subvert power structures through appropriation, re-use or re-contextualization of dominant media influences. Students study the cultural context of (to name just a few topics) graffiti art, musical mashups, the re-editing of film and video, flash mobs, media interventions, drop-lifting, and the critical graphic design and journalism of publications like Adbusters.

MFJS 3310 Advanced Newswriting & Reporting (4 Credits)
Application of investigative techniques to interpretive reporting in areas of contemporary social concern. Laboratory fee required. Prerequisite: MFJS 2140.

MFJS 3320 Screenwriting for TV & Film (4 Credits)
This course leads students through advanced scriptwriting formats based on instructor expertise. Lab fee required. Prerequisite: MFJS 2150.

MFJS 3330 Broadcast & Video Journalism (4 Credits)
Students in this course learn and practice the techniques used by broadcast journalists as they write, shoot and edit news packages for television. Laboratory fee required. Prerequisite: MFJS 2140.

MFJS 3501 Web 2.0 Design and Content Management (4 Credits)
This course covers the building and management of web pages. The course also covers creating sites using open source content management systems, preferably for applications related to the not-for-profit sector. Applicants must be comfortable integrating Web 2.0 content into sites. Laboratory fee required. MFJS, SCOM, MDST, COMN, MCOM, JOUR, or IIC majors only.

MFJS 3504 Advanced Multimedia Storytelling and Publishing (4 Credits)
In this course, students tap the reporting, writing, editing and multimedia production and editing skills and knowledge learned and practice in previous journalism studies classes and apply them to building from scratch, a own content management based multimedia web site. Laboratory fee required. Prerequisites: MFJS 2140, MFJS 2240 or MFJS 3215, and MFJS 3501.

MFJS 3600 Introduction to 3D Modeling (4 Credits)
This course will serve as an introduction to 3D modeling, texturing, and lighting on the computer. Students will complete a series of projects in which the processes of preparing and producing a 3D piece will be explored. Various strategies and techniques for creating detailed models to be used in animation and games will be examined. Additional attention will be spent on virtual camera techniques as well as the use of compositing in creating final pieces. Current trends in the field will be addressed through the analysis and discussion of current and historical examples. Prerequisites: MFJS 2110, DMST 2100, DMST 4100 or permission of instructor. Cross-listed with DMST 3600, DMST 3630, EDPX 3600, EDPX 4600, MCOM 3600, MFJS 3630. MFJS, SCOM, MDST, MCOM, IIC, JOUR, COMN and DMST majors only.

MFJS 3852 Advanced Design, Layout, and Editing (4 Credits)
This course teaches students advanced layout and design for media publications using contemporary software applications for journalists and public relations professionals.

MFJS 3900 Topics in Mass Communications (1-4 Credits)

MFJS 4050 Strategic Management-Communication Campaigns (4 Credits)
Focuses on understanding and implementing public communication campaigns. Central to the course is the exploration of the theoretical social science framework underlying communicmation campaigns and examination of the ways theories are used to define and explain communmication problems and to plan and evaluate campaigns.

MFJS 4060 Strategic Messaging (4 Credits)
Continues the focus on learning and applying public relations techniques, emphasizing media relations and media writing. Students develop the ability to formulate and evaluate appropriate communication objectives, strategies, and tactics in response to real-world public relations problems, paying attention to ethical considerations. Students produce a portfolio of written public relations materials. Prerequisite MFJS 4050 ir instructor permission.

MFJS 4070 Seminar in Public Relations (4 Credits)
Through a combination of course readings, case study analyses and guest speakers, students will observe and learn about the practice of public relations in the health and nonprofit sectors. Students will also learn about the goals, challenges and opportunities specific to these sectors. Prerequisite: MCOM/MFJS 4060 or permission of instructor.

MFJS 4080 International and Intercultural Public Relations (4 Credits)
Explores aspects of international and intercultural public relations, including intercultural communications issues, international media issues, international corporate PR, cross-cultural and diversity training, international media relations, and international public relations of governments. The class focuses on relevant theories and issues, rather than on techniques. Prerequisite MFJS 4050 or permission of instructor.

MFJS 4140 Issues in Mass Communication History (4 Credits)
This course examines historically the interplay of economic, social, political and cultural aspects of communications technologies, media production and media institutions. The course deals primarily with American media history; some attention will be paid to media history in other countries.
MFJS 4160 Mass Communication Theory (4 Credits)
Surveys a number of theoretical approaches to the study of media and mass communication, paying attention to the historical context in which they arise. Students explore the relationships among media technologies, institutions, content, and audiences as well as their impacts on culture and society. The class prepares students to formulate theoretically grounded research questions within the field of media and mass communication.

MFJS 4200 Topics in Mass Communications (4 Credits)

MFJS 4218 Narrative Film/Video Production I (4 Credits)
This is the first of a two-course capstone sequence focused on the filmmaking process and the completion of a short narrative film. Using an intensive workshop method, the class examines the scriptwriting and pre-production processes, and students finish the quarter with a completed pre-production notebook that includes a shooting script, a producer analysis, a script breakdown, production boards, casting decisions, location scouting reports and a shooting schedule. Likewise, through readings, discussions and screenings, the course is designed to expose students to the larger world of narrative filmmaking. Lab fee required. Cross-listed with MFJS 3218. Prerequisites: MFJS 4450 and MFJS 4470 or permission of the instructor.

MFJS 4219 Documentary Film/Video Production I (4 Credits)
This is the first of a two-course capstone sequence focused on the filmmaking process and the completion of a short documentary film. This course focuses on historical modes and styles of documentary, ethics, and documentary pre-production. Students pitch films, form filmmaking teams and research and write a proposal for their films. Reflective writing about process and outcome anchors student learning. Lab fee required. Cross-listed with MFJS 3219. Prerequisites: MFJS 4470 or permission of instructor.

MFJS 4220 Narrative Film/Video Production II (4 Credits)
This is the second of a two-course capstone sequence focused on the filmmaking process and the completion of a short narrative film. The class uses an intensive workshop method to hone work on films pre-produced in Narrative Film/Video I. Specifically, students focus on shooting, directing, editing and sound development for their short narrative film. Lab fee required. Prerequisites: MFJS 4450, MFJS 4470, and MFJS 4218.

MFJS 4221 Documentary Film/Video Production II (4 Credits)
This is the second of a two-course capstone sequence focused on the filmmaking process and the completion of a short documentary film. The course focuses on documentary structure, production and post-production. Additionally, using an intensive workshop style, students critique their own and each other's work. Reflective writing about process and outcome anchors student learning. Lab fee required. Prerequisites: MFJS 4470 and MFJS 4219.

MFJS 4222 Experimental Theory and Production (4 Credits)
This course is an historical, critical overview of experimental film/video movements; training in experimental projection techniques; production of own experimental projects. Lab fee required. Cross listed with MFJS 3222. Prerequisite: MFJS 4470 or permission of instructor.

MFJS 4223 Advanced Editing (4 Credits)
Building on the basic non-linear editing skills gained in Introduction to Field Production and Editing, this course focuses on advanced editing techniques including image and sound manipulation that utilize rhythmic, graphic, metaphorical, temporal and spatial approaches. In addition, the class addresses advanced sound sweetening and image color correction. Students read from seminal film theorists about varying approaches to editing and write analyses of their own work. Lab fee required. Cross listed with MFJS 3223. Prerequisite: MFJS 4470 or permission of instructor.

MFJS 4229 Video Editing is for Everybody (4 Credits)
Video has become ubiquitous. Whether on YouTube, Hulu, television or a friend's Facebook page, people are exposed to thousands of edited videos every year. From business to anthropology, chemistry to journalism, students in every discipline want to create videos to enhance class projects, aide business plans, promote good works, accompany science processes and create lasting memories. This course is designed to provide students with a basic understanding of television and film editing. When completing this course, the goal is for students to have a basic working knowledge of editing using various media elements (video, audio, photos, music, graphics), editing software and applying a mixture of editing theories and techniques (continuity and montage style editing). There are no prerequisites for this course.

MFJS 4250 Critical Studies of Film, TV, and Popular Culture (4 Credits)
This graduate seminar introduces students to the major theories of culture and to various critical approaches to film, television and popular literature including semiotics, genre theory and ideological analysis. Prerequisite: MFJS 4160.

MFJS 4260 Qualitative Research Methods (4 Credits)
Surveys interpretive critical theories and methods, which may include participant observation, ethnography, textual analysis, reception or audience studies, historiography, semiotics, and feminist studies. The class also prepares students to write a thesis proposal. Prerequisite MFJS 4250 or permission of instructor.

MFJS 4300 Freedom of Expression Issues (4 Credits)
Historical development of First Amendment freedoms, various theories/philosophies that underlie constitutional free expression guarantees; Judicial interpretations of scope of First Amendment as related to political, corporate, commercial expressions.

MFJS 4310 New Media Law & Regulation (4 Credits)
Examination of current conflicts in mass communications law. Particular emphasis is given the legal problems of communications technologies. Topics may include libel, privacy, obscenity, news gathering, copyright, media ownership and comparative approaches to media law. The course provides insight into how the legal process works and an understanding of the principles and philosophies that underlie the restraints on new communication technologies.
MFJS 4320 Brands and Identities (4 Credits)
Reviews theories and cases of the role and meaning of brands in a consumer society, with a particular emphasis on understanding how brands are implicated in the construction and presentation of personal and group identities. The course combines insights from marketing, social psychology, and cultural studies to explore the importance of brands for both consumers and practitioners. Students master core branding concepts and use them to critically analyze salient social and cultural issues.

MFJS 4450 Scriptwriting (4 Credits)
Utilizing film and written texts, this course examines the fundamentals of narrative scriptwriting. Students produce a short narrative script (10-15 pages) while learning about the various processes involved in this art form. Cross listed with MFJS 2150. Lab fee required.

MFJS 4470 Introduction to Field Production and Editing (4 Credits)
This course focuses on the complete production process: pre-production (planning), production (lighting, shooting and sound gathering) and post-production (editing). The goal of the course is for students to gain a basic understanding of the process involved in producing a field-based production, the skills necessary to complete it and the critical understanding behind all decision. Lab fee required. Cross listed with MFJS 3215.

MFJS 4501 Web Building & Site Management (4 Credits)
An introduction to the fundamental concepts of Web site development and management, including HTML, DHTML, graphical Web-building tools (Macromedia DreamWeaver and others), multilevel site planning and construction, navigation schemes, basic interactivity (via Javascript and CGI), information organization, Web site management and delivery of basic multimedia content.

MFJS 4540 Attitude Change & Persuasion (4 Credits)
A review of the major theories of persuasion, and analysis of their application in public communication campaigns.

MFJS 4550 Media Effects & Consequences (4 Credits)
Examines the psychological effects and sociological consequences of mass communications. The course combines theoretical perspectives from social science inquiry that seek to explain how audiences use the mass media and the effects which media have on audiences. Emphasis is placed upon areas of inquiry which have a bearing on mass communications policy. Prerequisite MFJS 4160.

MFJS 4560 Quantitative Research Methods (4 Credits)
Development/application of specific social sciences research techniques to study mass communication, emphasis on survey research strategies. Prerequisite: MFJS 4550 or permission of instructor.

MFJS 4650 International Communication (4 Credits)
Major theories concerning international communication flows, the impact of globalization and global media, issues of new communication technologies, the rhetoric and media framing of global politics and culture; international marketing and public relations; and national and cultural sovereignty issues related to communication. Prerequisite: instructor's permission.

MFJS 4651 Development Communication (4 Credits)
An overview of major theories in development communication concerning past, present, and future roles of media in economic/cultural development around world. Prerequisite: MFJS 4160 or permission by instructor.

MFJS 4652 Culture, Gender, and Global Communication (4 Credits)
Explore the ways in which culture, gender, and communication intersect and shape a variety of issues from an international and intercultural perspective, including sexuality and gender identity, indigenous and immigration rights, women's rights, and human rights. Using a global feminist perspective, the class examines paradigm shifts in creating social change through social and political movements. Cross listed with MFJS 3652.

MFJS 4653 Language, Power, and Globalization (4 Credits)
This course focuses on scholarly and political debates surrounding the social nature of language, language and (inter)national and individual identity, language policy, multilingualism and linguistic diversity, language and globalization, language and media and communication technologies, and, finally, the future of the global language landscape.

MFJS 4912 Seminar in Mass Communication (1-5 Credits)

MFJS 4980 Internship (1-10 Credits)
Arrange with internship director to complete internship with Denver-area media organization. Prerequisite: varies; consult internship director.

MFJS 4991 Independent Study (1-10 Credits)

MFJS 4992 Directed Study (1-10 Credits)

MFJS 4995 Independent Research (1-10 Credits)

Psychology

Office: Frontier Hall
Mail Code: 2155 S. Race St., Denver, CO 80208

Web Site: http://www.du.edu/psychology
The Psychology PhD program in the department of psychology is oriented toward training qualified students to pursue careers in research, teaching and professional practice. Concentrations include: Affective/Social Psychology, Clinical Psychology, Cognitive Psychology, and Developmental Psychology. We also offer a specialization in Developmental Cognitive Neuroscience (DCN).

Doctor of Philosophy in Psychology with a concentration in Affective/Social Psychology

The graduate program in Affective/Social Psychology focuses on the intricacies of human emotional and social processes from neuroscience and social perspectives.

Doctor of Philosophy in Psychology with a concentration in Clinical Psychology

The graduate program in Clinical Psychology focuses on conducting scientific research on child psychopathology and its many contributing environmental and social factors.

Doctor of Philosophy in Psychology with a concentration in Cognitive Psychology

The graduate program in Cognitive Psychology focuses on how the mind works in areas such as memory, executive functions, reading and language processes, and unconscious cognition.

Doctor of Philosophy in Psychology with a concentration in Developmental Psychology

The graduate program in Developmental Psychology focuses on human developmental processes—including biological, cultural, social and psychophysiological factors.

Developmental Cognitive Neuroscience

The specialization in Developmental Cognitive Neuroscience is open to students in any of the graduate programs and offers a developmental approach to the neuroscience underlying specific content areas with study of genetics, imaging, network models and behavior of both typical and abnormal populations.

Admission requirements for all Doctor of Philosophy in Psychology Concentrations

Apply Online / Application Deadlines

- Applications for graduate study in Psychology at the University of Denver must be submitted online (https://du-grad.edu.185r.net/application).
- All online materials must be submitted, and all supplemental materials must be postmarked, by the program’s stated deadline: December 1, for the fall quarter.
- A $65 non-refundable application fee is required for an application to be processed. Application fee waivers are available for McNair Scholars.

Course and Degree Prerequisites and Requirements

- Proof of a bachelor’s, and, if applicable, a master’s degree is required from a regionally accredited college or university.

Transcripts

- Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school.
- The applicant is responsible for obtaining all transcripts. DU students and alumni do not need to provide DU transcripts. Applicants who have earned a degree outside the U.S. must submit transcripts accompanied by certified English translations, if not normally issued in English.
- Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission. This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early. Applicants educated outside the U.S. are encouraged to contact the Office of Graduate Studies for assistance regarding transcript-related materials.
- The University of Denver will consider electronic transcripts official from a domestic institution provided by the following approved agencies: Army/American Council on Education Registry Transcript System (AARTS); Docufide/Parchment; National Student Clearinghouse; Naviance; Royall and Company; and, Scrip-Safe.

Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the program’s stated deadline. The institution code for the University of Denver is 4842.
Language Proficiency

- Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date. The minimum TOEFL score accepted by the University is 80 (iBT) or 550 (paper-based). The institution code for the University of Denver is 4842. The minimum IELTS score accepted by the University is 6.0. Graduate Teaching Assistants (GTAs) must demonstrate fluency in spoken English by scoring a 26 on the TOEFL speaking section or 8.0 on the IELTS speaking section. Please see the Graduate Policy Manual for complete English language proficiency requirements.

- Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the language of instruction and examination is English. Such applicants may be exempt from the TOEFL/IELTS requirement but not from other standardized graduate entrance examinations.

Biographical Statement

- Applicants are required to submit a 2–3 page biographical statement specifying research interests, research background, and proposed faculty mentor(s). The statement should be submitted via upload through the online application process.

Recommendation Letters

- Three letters of recommendation are required and should emphasize research potential or promise. These letters should be solicited and uploaded by recommenders through the online application system. Letters must be received by the program’s stated deadline.

Financial Support

- To be considered for financial support, domestic applicants should apply early and submit the Free Application for Federal Student Aid (FAFSA) by the priority deadline, February 15.

- Information about financial aid can be found on the Office of Financial Aid website. International students are not eligible for federal financial aid.

- The department provides full tuition waivers for the 120 hours required for the Ph.D. and stipend support for at least four years. Additional support may be available during the summer months for teaching or research assistantships. In addition to tuition and stipend support, the department makes available, on a competitive basis, funds for both research and travel to professional meetings.

Application Status

- We encourage you to be actively engaged in the admission process. You can check your application status online.

Mailing Address

- Mail official transcripts and any supplemental admission materials not submitted with the online application to:
  
  University of Denver
  Office of Graduate Studies
  Mary Reed Building, Room 5
  2199 S. University Blvd.
  Denver, CO 80208-4802

International Applicants

- For complete international applicant information, please visit the Office of Graduate Studies International Student Application Information. International applicants must apply by December 1.

Doctor of Philosophy in Psychology with a Concentration in Affective/ Social Psychology

Students earn a master’s degree on their way toward obtaining the PhD; however, students are not required to obtain an official master’s degree. All students are required to fulfill the requirements for the master’s degree, regardless of whether or not they apply for graduation for an official master’s degree. Completion of master’s degree requirements is required in order to be advanced to preliminary doctoral candidacy.

**II. PhD requirements**

**Core coursework requirements**

Complete one course from four of the five categories (Cognitive Psychology, Neuroscience, Social/Personality/Emotions, Developmental Psychology, and Psychopathology)

**A. Cognitive Psychology**

- PSYC 4002 Prosem in Memory and Cognition 5
- PSYC 4249 Prosem in Reading and Language 5

Note: Cognitive students must complete both of the courses

**B. Neuroscience**

- PSYC 4526 Prosem in Cog Neuroscience 5
- PSYC 4525 Prosem in Develop Neuropsych 5
- PSYC 4262 Affective Neuroscience 5

Note: DCN students are required to take Cognitive Neuroscience and at least 1 other Neuroscience Prosem

**C. Social/Personality/Emotions**

- PSYC 4011 Proseminar in Emotion 5
- PSYC 4021 Prosem in Social Psychology 5
- PSYC 4020 Proseminar in Personality 5

Note: Affective/ Social students must take both the Social and the Emotion Proseminars

Note: Clinical Child students must take the PSYC 4021 Proseminar in Social Psychology

**D. Developmental Psychology**

- PSYC 4031 Developmental Proseminar: Cognition & Perception 5
- PSYC 4032 Developmental Proseminar: Social-Emotional 5
- PSYC 4033 Devel Proseminar: Biological 5

Note: Developmental Students are required to complete all 3

**E. Psychopathology**

- PSYC 4512 Prosem in Psychopathology 5
- PSYC 4565 Systems of Psychotherapy 5

Note: Clinical Students are required to complete both courses.

**Ethics**

Complete the following course:

- PSYC 4920 Ethics-Psych & Rsrch Practice

**Tool requirement**

### Tool requirement

10

### Total Credits

120

**Minimum number of credits required for degree: 120**

**Additional Course Requirements:**

**Research Tool Requirement (10 hours required)**

**Non-coursework Requirements**

- Master's research paper or Master's thesis
- Dissertation Prospectus and Prospectus Meeting
- Dissertation and Oral Defense
- Research Training
- Clinical Competencies
- Clinical Training
  - Clinical Practicum
  - Successful Completion of an Externship
  - Successful Completion of an APA approved internship

**Doctor of Philosophy in Psychology with a Concentration in Developmental Psychology**

**Core Coursework Requirements**

Students earn a master’s degree on their way toward obtaining the PhD; however, students are not required to obtain an official master’s degree. All students are required to fulfill the requirements for the master’s degree, regardless of whether or not they apply for graduation for an official master’s degree. Completion of master’s degree requirements is required in order to be advanced to preliminary doctoral candidacy.

**I. Master's degree requirements**

Specialization: Development Cognitive Neuroscience Requirements

Requirements

The following requirements for the DCN program are in addition to the student's area requirements. The DCN minor mainly affects how students meet Core and Tool requirements. DCN students in each of the four Areas of the Department have additional Core requirements to meet (see DCN Status Sheet). It also affects Advanced Clinical requirements for Clinical DCN students and elective requirements for non-clinical DCN Students (see below). The Neuroscience methods courses listed fulfill the student's Tool Requirement; students are not required to fulfill their area's tool requirements.
Any entering student in DCN must demonstrate competency in basic neurobiology (i.e. have taken an undergraduate class in physiological psychology, basic neurobiology, etc.). Otherwise, they need to take Introduction to Neurobiology in the Biology Department.

1. Four required Core Courses (these also count toward Area Core requirements).
   a. One Cognitive Area Proseminar
   b. Two Neuroscience Core classes: Proseminar in Cognitive Neuroscience is required for everyone and the second can be either Developmental Neuropsychology or Affective Neuroscience.
   c. Developmental Proseminar or Biological Processes in Development or Cognition/Perception (if Biological Processes is not offered).

2. Required Neuroscience methods classes (counts for department Tool Requirement). Two of the following courses (each of which focuses on different neuroscience methods):
   a. Imaging Cognition
   b. Stress and Health
   c. Neural Network Models
   d. Genetics (available at IBG at CU Boulder; check with Developmental Cognitive Neuroscience Area Head about how to enroll.)

3. Other Required Courses/Experiences
   - For Developmental DCN students, either a Cognitive or Affective/Social elective.
   - For Cognitive DCN students, either a Developmental or Affective/Social elective.
   - For Affective/Social DCN students, either a Developmental or Cognitive elective.
   - For Clinical DCN students, one year of Developmental Neuropsychology Clinic.

Courses

PSYC 3020 Adolescence (4 Credits)
Development, behavior, special problems, and characteristics of early and late adolescence. Prerequisite: PSYC 2050.

PSYC 3029 Imaging the Mind (4 Credits)
Imaging Cognition is an introductory course to the basic theory and data analysis techniques used in functional magnetic resonance imaging (fMRI). It will cover basic brain anatomy, the basic physics of MRI, experimental design, data processing and the issues associated with data processing, and interpretation of fMRI data. Students in this course will receive hands-on experience in processing a data set from start to finish. They will apply different image preprocessing techniques, statistical design parameters, and statistical models to determine how these factors influence the outcome of the data and how these factors influence the interpretation of that data. In this manner, each student will be exposed individually to the decision issues and interpretation pitfalls involved in fMRI data analysis. In class, students will use the smart-to- the-seat classroom. Cross listed with PSYC 4255. Prerequisites: by permission of instructor only; must have PSYC 2130 or PSYC 2031.

PSYC 3032 Introduction to Neural Networks (4 Credits)
Introduction to basic principles and computational methods in artificial neural network modeling; neural models of cognitive and psychological processes examined and evaluated. Cross listed with PSYC 4254. Prerequisite: instructor's permission.

PSYC 3033 Seminar: Cognitive Neuroscience (2 Credits)
This seminar is for students in the cognitive neuroscience program. The goal of the seminar is to provide an opportunity for junior- and senior-level cognitive neuroscience majors to apply the knowledge and skills they have acquired in other courses to current cutting-edge topics in the field. Prerequisite: cognitive neuroscience concentration.

PSYC 3050 Research Methods (4 Credits)
Survey of research methods and research designs in psychology used to study behavior. Required for all students, especially those planning graduate work in psychology. Prerequisites: PSYC 1001 and PSYC 2300.

PSYC 3090 Infancy and Early Childhood (4 Credits)
The objective of this course is to introduce the study of early development focusing on the prenatal and infant periods. This course considers the exciting changes that take place during pregnancy for both mom and fetus. This course considers biological, cognitive, social, and physical development. This course is part of the field of Developmental Science. The prominent theories and research in the field are considered. Questions developmental psychologists currently and historically study and the research they conduct to help answer these questions are explored. Prerequisite: PSYC 1001 or equivalent and PSYC 2070 or PSYC 2050 or PSYC 2051.

PSYC 3150 Senior Honors Research Seminar (1-5 Credits)
In conjunction with senior research thesis. Prerequisites: PSYC 2750, PSYC 2751 and PSYC 2752.

PSYC 3151 Senior Honors Research Seminar (1-5 Credits)
In conjunction with senior research thesis. Prerequisites: PSYC 2750, PSYC 2751 and PSYC 2752.

PSYC 3152 Senior Honors Research Seminar (1-5 Credits)
In conjunction with senior research thesis. Prerequisites: PSYC 2750, PSYC 2751 and PSYC 2752.
PSYC 3350 Cultural Psychology (4 Credits)
This seminar examines how people’s sociocultural context shapes their thoughts, feelings, and behaviors. To approach this question, we read and discuss classic as well as recent theoretical and empirical articles from the field of cultural psychology. Topics include defining culture; dimensions of cultural variation; culture-biology interactions; methodological considerations; cultural influences on cognition, emotion, the self, moral judgment, and health; cultural neuroscience; cultural approaches to race and ethnicity; and mechanisms of cultural influence. Throughout, this course emphasizes sociocultural diversity in psychological processes. Students are encouraged to develop empirically tractable ways of asking and answering questions relating to cultural psychology and to apply concepts of cultural psychology to their own research.

PSYC 3440 Gender and Society (4 Credits)

PSYC 3666 Brain Development & Cognition (4 Credits)
Examines what the brain tells us about development and what development tells us about the brain. Topics include subcortical and cortical developments to the acquisition of language and drawing. Prerequisites: PSYC 2050 or PSYC 3031 or BIOL 3640 and 15 quarter hours in psychology, junior or senior standing.

PSYC 3701 Topics in Psychology (1-4 Credits)

PSYC 3702 Psychology of Sexual Minorities (4 Credits)
This class is a thorough review of the state of the development, psychological and other social science knowledge of gay, lesbian, bisexual, transgendered, and other sexual minority individuals. The course will employ a developmental approach in examining the lives of GLBT persons, their special needs, concerns, and vulnerabilities. Topics explored will include the psychology of sexual orientation identity, homophobia, heterosexism, and hate crimes, GLBT adolescents, romantic relationships, couples, parenting, and families. Prerequisite: PSYC 1001.

PSYC 3760 Field Experiences in Psychology (1-2 Credits)
Students meet weekly with professor and complete an unpaid internship at a community organization. Prerequisites: PSYC 1001 or equivalent, PSYC 2500 or equivalent, 21 years old by October 1, psychology major, and permission of instructor. Corequisite: PSYC 3759.

PSYC 3761 Field Experiences in Psychology (3-5 Credits)
Students meet weekly with professor and complete an unpaid internship at a community organization. This class has a service learning component. Prerequisites: PSYC 1001 or equivalent, PSYC 2500 or equivalent, PSYC 3760, PSYC 3759, 21 years old by October 1, psychology major, and permission of instructor.

PSYC 3762 Field Experiences in Psychology (1-5 Credits)
Students meet weekly with professor and complete an unpaid internship at a community organization. This class has a service learning component. Prerequisites: PSYC 1001 or equivalent, PSYC 2500 or equivalent, PSYC 3760, PSYC 3759, PSYC 3761, 21 years old by October 1, psychology major, and permission of instructor.

PSYC 3991 Independent Study (1-10 Credits)
Maximum of 5 hours per quarter not to exceed a total of 10 quarter hours.

PSYC 3992 Directed Study (1-10 Credits)

PSYC 3999 Psychology Senior Assessment (0 Credits)
This course involves a required assessment of graduating psychology majors’ knowledge of the discipline based on coursework taken one quarter prior to graduation. Prerequisites: at least any five of the following courses required for the major: PSYC 1001 or equivalent, PSYC 2300, 3050 or 2751-2752, PSYC 2500 or 2510 or 2520 or 2530, PSYC 2600 or 2040 or 3030, PSYC 2050 or PSYC 2055; PSYC 2031 or 2130, PSYC 2031 or 2150 or at least 163 total credit hours or at least 30 credits of psychology hours.

PSYC 4002 Prosem in Memory and Cognition (5 Credits)
Theory/research on thinking, problem solving, language, creative thought, other aspects of knowing process.

PSYC 4011 Proseminar in Emotion (5 Credits)
Social/physiological aspects of emotions, including motivation, physiological processes, basic emotions, cognitive appraisal, cross-cultural issues, empathy, effects of emotions.

PSYC 4020 Proseminar in Personality (5 Credits)
Personality structure/dynamics, theory and findings, interrelationships between personality and socio-cultural determinants of behavior.

PSYC 4021 Prosem in Social Psychology (5 Credits)
Major theoretical issues and empirical research in social psychology; topics include cultural, social structure, cognitive consistency, social neuroscience, social cognition, person perception, the self, social influence, attitudes, relationships, emotion, coping.

PSYC 4031 Developmental Proseminar: Cognition & Perception (5 Credits)
Problems/theories in developmental psychology including Piagetian theory, language, emotional, perceptual, personality development, learning, biological bases of behavior, genetic influences.

PSYC 4032 Developmental Proseminar: Social-Emotional (5 Credits)
Problems/theories in developmental psychology including Piagetian theory, language, emotional, perceptual, personality development, learning, biological bases of behavior, genetic influences.
PSYC 4033 Devel Proseminar: Biological (5 Credits)
This course provides an overview of major biological processes during development and their effects on physical, cognitive, and social development. Specific topics will include: history, concepts, and central themes of developmental psychology; theoretical and biological models of human development (e.g., developmental psychobiological systems view); brain development and plasticity; behavioral genetics; sleep and circadian rhythms; sexual differentiation and hormonal influences on behavior; stress and the HPA axis; effects of nutrition and toxic substances.

PSYC 4043 Clinical Approaches: Community (5 Credits)
Community psychology; major theoretical/conceptual issues, assessment/intervention techniques.

PSYC 4050 Cultural Psychology (5 Credits)
This seminar examines how people’s sociocultural context shapes their thoughts, feelings and behaviors. To approach this question, we read and discuss classic as well as recent, theoretical as well as empirical articles form the field of cultural psychology. Topics include: (1) defining culture; (2) dimensions of cultural variation; (3) culture-biology interactions; (4) methodological considerations; (5) cultural influences on cognition, emotion, the self, moral judgment, and health; (6) cultural neuroscience; (7) cultural approaches to race and ethnicity; and (8) mechanisms of cultural influence. Throughout, this course emphasizes sociocultural diversity in psychological processes. Students are encouraged to develop empirically tractable ways of asking and answering questions relating to cultural psychology and to apply concepts of cultural psychology to their own research.

PSYC 4060 History and Systems of Psych (5 Credits)
General nature of scientific progress throughout history as relates to evolution of psychology as scientific/academic discipline; history explored by asking whether prevailing Zeitgeist, the appearance of the “Great Mind,” or some combination of both factors was responsible for pivotal changes seen throughout psychology’s history.

PSYC 4085 Stress & Health (5 Credits)
This course will serve as an introduction to the field of psychoneuroimmunology, with a focus on stress and development. The first section of the course will review basic immunology including immune system components and functions, and relations between the immune system and other systems. The later portion of the course will focus on effects of stress for different disease mechanisms (infection, allergy, cancer etc).

PSYC 4235 Teaching Psychology (1-5 Credits)
Experiential approach to learning techniques for teaching psychology.

PSYC 4241 Seminar-Discourse Processes (5 Credits)

PSYC 4249 Prosem in Reading and Language (5 Credits)

PSYC 4254 Intro to Neural Network Models (5 Credits)
Cross listed with PSYC 3032.

PSYC 4255 Imaging the Mind (5 Credits)
Imaging Cognition is an introductory course to the basic theory and data analysis techniques used in functional magnetic resonance imaging (fMRI). It will cover basic brain anatomy, the basic physics of MRI, experimental design, data processing and the issues associated with data processing, and interpretation of fMRI data. Students in this course will receive hands-on experience in processing a data set from start to finish. They will apply different image preprocessing techniques, statistical design parameters, and statistical models to determine how these factors influence the outcome of the data and how these factors influence the interpretation of that data. In this manner, each student will be exposed individually to the decision issues and interpretation pitfalls involved in fMRI data analysis. In class, students will use the smart-to-the-seat classroom. Cross listed with PSYC 3029.

PSYC 4256 Seminar:Cognitive Neuroscience (5 Credits)
Neural systems underlying human perception, memory, language, pathological syndromes that result from damage to these systems.

PSYC 4257 Psychophys & Neuroscience Lab (5 Credits)

PSYC 4258 Social Neuroscience (5 Credits)

PSYC 4260 Psychophysiology (5 Credits)
This course will serve as an introduction to the field of psychophysiology, with a focus on autonomic psychophysiology (e.g., measures of the electrodermal and the cardiovascular system). Such measures uniquely allow researchers to answer questions about mind-body interactions, emotions, cognition, and health, among others. The first section of the course will review theory of psychophysiology and relevant physiological systems as well as introduce students to the basics of psychophysiological measurement. The second section of the course will be hands-on, allowing students either to write a study proposal involving psychophysiological measurement or to use the psychophysiology lab to design and execute their own study using physiological measures.

PSYC 4262 Affective Neuroscience (5 Credits)
Affective neuroscience is the study of emotions in the brain. In this course, we explore how new frontiers in emotion research, from brain scans to psychoactive drugs to monkey colonies, have changed the way we think about emotions and moods. We aim to learn how scientists ask these new questions: how and what can we learn about emotion from动物 models, patient studies, genetic studies, brain scans, and drugs? We learn and debate different theories about what emotions are: when are emotions helpful and harmful? Why do we have them? How many are there? Can we control how we feel? Finally, we learn how to think about emotions scientifically: What kind of evidence matters? How do emotion scholars talk about their work? What kind of questions can we ask, and what kind can we hope to answer?

PSYC 4265 Social Perception and Communication (5 Credits)
The way that people look and communicate evoke immediate and sometimes automatic responses from other people. Accordingly, this course includes topics such as facial structure and function, nonverbal communication, social categorization, behavioral mimicry, and thin-slices.
PSYC 4270 Seminar-Social Cognition (5 Credits)
Theory research in cognitive social psychology, including social knowledge structures, categorization of social information, social memory, judgment and inference, cognition-emotion links, effects on social behavior.

PSYC 4295 Research Design & Inference (5 Credits)
Logic and methods of fundamental principles of graduate psychology research design and statistical inference. Permission of instructor required.

PSYC 4300 Correlation and Regression (5 Credits)
Theory/computational methods of major parametric/ nonparametric correlation techniques. Prerequisite: PSYC 4295.

PSYC 4330 Analysis of Variance (5 Credits)
Complex analysis of variance, other quantitative methodologies. Prerequisite: PSYC 4300 or instructor's permission.

PSYC 4350 Structural Equation Modeling for the Social Sciences (5 Credits)
This advanced course covers the basics of structural equation modeling and how this flexible approach to statistical analysis can be applied in the social sciences. Specific techniques that will covered will include testing for mediation, path analysis, confirmatory factor analysis, and the analysis of longitudinal data, as well as other related topics. There will be an emphasis on applying these techniques to students' own research through hands-on demonstrations and homework assignments and an emphasis on interpreting and critiquing structural equation models in published research. A course on correlational methods and regression is a prerequisite.

PSYC 4355 Multilevel Modeling for the Psychological Sciences: Theory and Applications (5 Credits)
This advanced course covers the basics of multilevel (hierarchical) linear modeling and how this flexible approach to statistical analysis can be applied to theory and data in the psychological sciences. Specific techniques that will be covered include the analysis of nested data, family and dyadic data, and longitudinal data as well as mediation and moderation. There will be an emphasis on applying these techniques to students' own research through hands-on demonstrations and homework assignments. There will also be an emphasis on interpreting and critiquing multilevel modeling analyses in published research. Courses on analysis of variance as well as correlational methods and regression are pre/corequisites.

PSYC 4411 Child Assessment-Cognition (2-5 Credits)

PSYC 4413 Child Assessment-Personality (5 Credits)
Overview of evidence-based psychological assessment (emotional, behavioral, and social) of children and adolescents with a focus on integrating theory, research, and clinical practice.

PSYC 4511 Prosem in Psychopathology (5 Credits)
Theories of behavioral/personality disorders on children; survey of clinical/experimental literature.

PSYC 4512 Prosem in Psychopathology (5 Credits)

PSYC 4518 Readings in Family Therapy (5 Credits)
This course will survey major historical and contemporary theories from the field of family therapy. Basic family therapy techniques will be covered, and integrated with other modes of therapy (e.g. individual, marital). In the second half of the course, students will work with families and receive group supervision.

PSYC 4525 Prosem in Develop Neuropsych (5 Credits)
Normal brain development, functional neuroanatomy, clinical conditions that can affect brain functioning in children, adults.

PSYC 4526 Prosem in Cog Neuroscience (5 Credits)
This is a graduate-level introduction to cognitive neuroscience. It covers basic theories of cognition and their neurological support.

PSYC 4540 Adv Topics in Cognitive Devel (5 Credits)
Varying topics; theory/research in cognitive development including Piagetian work. Prerequisite: graduate status or instructor's permission.

PSYC 4545 Memory Dvlpmnt:Nature & Nurture (5 Credits)
Theory & research in the field of memory development, with particular emphasis on neurobiological perspectives of memory development. Considers the role of biology (nature), as well as the socio-cultural context (nurture) in which memory develops. Specific topics in memory development will include: early memory development & infantile amnesia, infant visual recognition memory, procedural memory, episodic memory, autobiographical memory, and trauma & memory development. Since the course covers topics in systems level neuroscience (i.e., a class in behavioral or cognitive neuroscience). Classes that fulfill this prerequisite include PSYC 4255, PSYC 4256, PSYC 4257, PSYC 4525 or PSYC 4526 or instructor approval.

PSYC 4565 Systems of Psychotherapy (5 Credits)
The course provides an introduction to evidence-based treatment for children and adolescents. Conceptual and empirical underpinnings of youth therapies are examined. Treatments for three prominent child and adolescent disorders - disruptive behavior problems, depression, and anxiety disorders - are highlighted. Demonstration and practice of specific treatment components is included.

PSYC 4566 Systems of Psychotherapy II (5 Credits)
Conceptual/empirical foundations of interventions for clinical problems, including (but not limited to) parasuicidality, Borderline Personality Disorder, and substance abuse.

PSYC 4571 Multicult Issues & Ment Health (5 Credits)
Theory, research, and practice issues related to the mental health of racial/ethnic minority and other diverse groups.

PSYC 4579 Research Design (5 Credits)
Sturm College of Law

PSYC 4587 Workshop in Marital Therapy (4 Credits)
PSYC 4612 Marital Conflict (1-10 Credits)
PSYC 4620 Advan in Couples Intervention (5 Credits)
PSYC 4625 Marital/Couples Thrpy-Div Popl (5 Credits)
This course will cover the complexities in couples research and intervention that are the focus of current investigations in labs around the world. The major issues revolve around the role that marital problems play in the development, maintenance and treatment of a variety of child and adult problems and vice versa. These will include, adult sexual problems, alcohol and drug use and abuse, anxiety disorders, depression, medical problems, and that marital discord and destructive conflict are generic risk factors for a wide range of child and adult mental health problems and that marital health is a protective factor.
PSYC 4920 Ethics-Psych & Rsrch Practice (2 Credits)
Ethical issues on psychological research. Teaching, practice.
PSYC 4930 Psychology Practicum-Clinical (1-5 Credits)
On-the-job training in clinical psychology. May be repeated for a maximum of 24 quarter hours. Prerequisite: Admission to doctoral program.
PSYC 4931 Psychology Practicum-Teaching (1-5 Credits)
On-the-job training in teaching psychology. May be repeated for a maximum of 24 quarter hours. Prerequisite: Admission to doctoral program.
PSYC 4932 Psychology Practicum-Research (1-5 Credits)
On-the-job training in research psychology. May be repeated for a maximum of 24 quarter hours. Prerequisite: Admission to doctoral program.
PSYC 4934 Practicum: DCN Neuropsychology (1-10 Credits)
PSYC 4952 Directed Study (1-10 Credits)
PSYC 5991 Masters Independent Study (1-10 Credits)
PSYC 5995 Masters Independent Research (1-10 Credits)
PSYC 6981 APA Internship (8 Credits)
1 Year APA approved Internship in clinical psychology - the course is not graded.
PSYC 6991 Ph.D Independent Study (1-10 Credits)
PSYC 6995 Ph.D Independent Research (1-10 Credits)

Sturm College of Law

At the University of Denver Sturm College of Law, we balance rigorous academics with the demands of the outside world and help you focus on things that matter to you: your career, your future, your life in law. Our nationally ranked specialty programs provide opportunities to pursue your interest in areas such as Corporate and Commercial Law, International Legal Studies, Environmental and Natural Resources Law, Workplace Law and Constitutional Rights and Remedies. Because we recognize that a legal education grounded in practical skills training is the key to a successful legal career, we created the Experiential Advantage Curriculum which allows you to spend an entire year in real or simulated practice settings. By the time you graduate, you will have a year's worth of legal practice experience — via clinics, externships, and in-depth course simulations, including our new Semester in Practice Externship — and be poised to distinguish yourself in a competitive job market. Your time at Denver Law will be well spent — reaching within yourself while reaching out to the world.

College of Law

Your time at Denver Law will be well spent — reaching within yourself while reaching out to the world.
Juris Doctor

To be admitted to the University of Denver Sturm College of Law, you must hold a bachelor of arts or a bachelor of science degree from an accredited college or university. No undergraduate field of study is favored, based on evidence that a strong student in any major can develop the skills of writing, analysis, and persuasion necessary for success in law school.

First-Year JD Application Requirements

- Completed online application (https://os.lsac.org/release/startup.aspx?appl=4842A1). The application will include your:
  - Resume – should list employment experience, educational background and extracurricular and community activities. It should also include any honors and awards you have received. Please include dates for all items on your resume.
  - Personal statement – Keeping in mind the fact that your LSAT score and undergraduate GPA are only a part of what the Admissions Committee will consider, you should take this opportunity to explain to the committee why you should be selected for admission to Denver Law. Topics that the committee may consider helpful in evaluating your qualifications may include:
    - Significant personal experiences beyond what may be reflected in your transcripts and on your resume.
    - Characteristics and experiences that you will bring the Sturm College of Law and the legal profession that distinguish you from other applicants.
    - Long-range career plans and goals that you intend to pursue with your law degree.
    - The intellectual contribution you will make to the classroom.
  - a non-refundable application fee.
- Completed Credential Assembly Service Report from LSAC. This requires the following items:
  - Valid Law School Admissions Test ( http://www.lsac.org/jd/lsat/about-the-lsat.asp ) score
  - All transcripts from any post-secondary schooling completed.
  - Two letters of recommendation from professors or employers evaluating your analytical skills, writing ability, and/or personal integrity.

Additional Requirements for International Students

- LSAC Credential Assembly Service (CAS)
  - If you have completed any post-secondary work outside the US (including its territories) or Canada, these transcripts must be submitted to the LSAC to be translated and evaluated. A foreign credential evaluation will be completed by the American Association of Collegiate Registrars and Admissions Officers and included with your CAS report.
  - We will not accept any other translation or evaluation services for the admissions process.
  - If you have questions, contact LSAC at LSACINFO@LSAC.org or
- TOEFL/IELTS
  - A TOEFL or IELTS score is required, unless you have completed a post-secondary degree at an institution whose language of instruction and testing is English. The whole program of study must have been completed in English.
  - Request that your test scores be sent from the testing organization to LSAC
    - LSAC TOEFL Code: 0058
  - The University of Denver requires the following minimum scores:
    - TOEFL Paper-based test: 587
    - TOEFL Internet-based test: 95
    - IELTS: 7.0

Master of Science in Legal Administration with a Concentration in Court Administration, International Court Administration, or Law Firm Administration

Applications for the MSLA degree are accepted and reviewed on a rolling basis for a start date in January, May, or August. Completed applications are notified within 4-6 weeks.

Complete the Application Here (https://du-grad.edu.185r.net/application/login) NOTE: It can take up to 10 seconds to move from page to page within the application. Please do not refresh your screen.

To complete the application, please submit the following:

- Essay: Please upload an essay within the application explaining “Why You Wish to Pursue a Career in Legal Administration”
- Resume: Please upload a copy of your resume in the space provided within the application
- Two Letters of Recommendation: Two letters of recommendation are required. After logging in to the application, there is a “create invitation” link under the “for others to complete” heading. Please click this link. It will bring you to a page to send out requests to recommenders. Recommenders will receive this invitation and upload their recommendations electronically.
- **Official transcripts**: Please send all transcripts to the MSLA office (address listed) from any undergraduate or graduate institutions attended.
- **Test Scores**: Please have official LSAT, GMAT, or GRE scores mailed to the MSLA office (address listed). **IF you have five years professional work experience, the testing requirement may be waived (if you have questions, please email the MSLA office or call 303.871.6308).**
- **Processing Fee**: There is a $65 nonrefundable processing fee associated with an application. In the application, please indicate whether you will be paying with a credit card or will be mailing in a payment to the address listed below.

**Please send all application materials to:**

University of Denver Sturm College of Law  
Master of Science in Legal Administration program  
2255 East Evans Ave, 330H  
Denver, CO 80208-0640

Master of Laws in International Business Transactions

The Director of the IBT LLM program, in collaboration with the Program Manager, shall have primary responsibility for setting, modifying, and applying admission criteria, in compliance with the SCOL’s Strategic Plan, mission and policies, as well as all relevant University policies and procedures (including English language competency requirements for students whose native language is not English).
A candidate for the LLM must have earned a Juris Doctorate (JD) or equivalent degree from a law school that is a member of the Association of American Law Schools or is approved by the American Bar Association, or in the case of a foreign candidate, must have completed a law degree with high academic standards from a recognized foreign university.

The IBT LLM will conduct a holistic review of applicants, and will consider, among other things: JD or JD equivalent GPA, TOEFL or other English language test (if applicable), work experience, academic records, letters of recommendation and personal statement of interest.

In order to be considered for admission, applicant must submit:

- a completed application (LSAC LLM or DU/Slate template);
- final and official transcripts with Proof of Diploma or GPA (as applicable) for JD or JD equivalent degree;
- a personal statement of interest and purpose (which, among other others, should address future goals and use of the degree);
- resume or CV
- two to three letters of recommendation;
- International applicants must submit an official TOEFL or IELTS score report. Currently proposed English language standards for International candidates are: 85 internet-based/567 paper-based TOEFL, or 6.5 IELTS; ECA option.

**Master of Laws in Natural Resources Law, MASTER OF RESOURCES IN LAW STUDIES, CERTIFICATE IN NATURAL RESOURCES LAW**

Application Deadlines:

Fall semester
- June 5th for International Applicants
- August 1st for US Citizens/Residents

Spring semester
- November 5th for International Applicants
- December 15th for US Citizens/Residents

Application requirements:

**US Citizens/Residents**
- A Completed Online Application
- Two Letters of Recommendation
- Official Transcripts
- Payment of Application Fee ($50)

**International Applicants**
- A Completed Online Application
- Two Letters of Recommendation
- Completed Financial Verification Forms/Official Bank Letter
- Official Transcripts and Proof of Graduation
  (If transcripts are not in English, they should be accompanied by an official translation.)
- Official TOEFL or IELTS Score – University TOEFL code: 4842
  (Minimum Requirements: TOEFL- 80 IELTS- 6.0)
- Payment of Application Fee ($50)

Minimum Number of Credits Required for Degree

27

Master of Laws in International Business Transactions

Degree Requirements

Coursework Requirements

All students must complete a minimum of 24 and maximum of 28 semester credits in the program curriculum.

All students must complete LAWS 4315 (International Business Transactions: Survey) for 3 semester credits. All international students must complete LAWS 4315 and LAWS 4064 (Introduction to American Legal System) for a total of 6 semester credits (certain exceptions apply). In addition, all domestic students must complete at least additional 21 semester credit hours and all international students must complete 18 semester credits of
approved electives. All students must have at least one course focused on drafting and/or negotiation as an elective approved by the program prior to registration.

A full-time student is expected to earn the degree in one academic year (or over two consecutive semesters); a part-time student can earn the degree in 2 years. Program time limit is 3 years from the time of matriculation. Fall or Spring semester matriculation is permitted.

Master of Laws in Natural Resources Law
Degree Requirements
Coursework Requirements
You may customize your course of study, depending upon your goal to work internationally, within the United States, or both. The College of Law offers over forty courses in these advanced degree programs, divided equally between international and domestic issues. There are no required courses, you may customize your degree by selecting any approved courses.

Juris Doctor
Degree Requirements
Coursework Requirements
The Sturm College of Law awards the degree of Juris Doctor to those students who successfully fulfill the following requirements:

- Completion of ninety [90] semester credit hours with passing grades. Only a grade of F constitutes a failing grade for purposes of this requirement. Students receive no credit hours toward graduation for courses in which they earn a grade of F.

- Maintenance of the required cumulative grade point average: For students who enter the Sturm College of Law in the 2007 Fall, or any subsequent, semester: a cumulative GPA of 2.3 or higher

- Successful completion of all required courses (as defined in the chart that follows this section). A student who receives a grade of F in a required course must retake the course and earn a passing grade. Both grades remain on the student’s transcript and affect the student’s cumulative GPA.

- Completion of the Upper Level Legal Writing requirement

- Completion of the Public Service requirement

- Completion of the Professional Skills Requirement. [All students entering the College of Law in Fall 2013 or thereafter must successfully complete a curricular offering of two or more semester credit hours. A list of qualifying courses will be made available.]

- Resolution of all financial obligations to the University of Denver

- Completion of all credit hours within a specified time period following initial matriculation at law school. The American Bar Association requires law students to complete their legal educations within seven years. Full-time day-division students at the Sturm College of Law normally meet all JD
requirements by the end of their third year. Part-time evening-division students at the Sturm College of Law normally complete all JD requirements by the end of their fourth year.

**Good Standing**

All students who enter the Sturm College of Law in the 2007 Fall, or any subsequent, semester must maintain a cumulative grade point average of at least a 2.3 to remain in good standing.

Students may check their Academic Progress Report on MyWeb. Students have the responsibility to check MyWeb carefully and to contact the Registrar’s Office if students note any discrepancy between their understanding and their Academic Progress Report. Students have the sole responsibility to ensure that they have completed all graduation requirements.

| Total Credits | 90 |

**Public Service Requirement**

All law students must satisfy the Public Service Requirement in order to graduate. To satisfy the requirement, each student must perform a minimum of 50 hours of supervised, uncompensated, legal public service work. **Students are strongly encouraged to complete this requirement before their last semester of law school.**

After a student has completed a minimum of thirty (30) academic credit hours, the student may satisfy the Public Service Requirement by participation in one of the following:

- An Externship for credit at a government agency; a judicial agency; a nonprofit (501©(3)) organization; or in a private law firm doing 50 hours of pro bono work under the auspices of the Legal Externship Office (http://www.law.du.edu/index.php/legal-externship-program).
- The Rocky Mountain Children’s Law Center Child Advocacy Practicum (http://www.law.du.edu/forms/legal-externship-program/prezi.php?type=child-advocacy) associated with the Legal Externship Office
- An approved Public Interest Practicum (http://www.law.du.edu/index.php/public-interest-practicum) for either zero or one credit under the auspices of the Public Interest Office.
- A pre-approved Sturm College of Law course (http://www.law.du.edu/index.php/public-service-requirement/how-to-satisfy-the-psr/pre-approved-law-courses) which has a practical public service component (current pre-approved courses are Street Law, the Graduate Tax Program’s Low-Income Taxpayer Clinic, Trial Practice III: Mentor’s Practicum, the International Criminal Law Practicum, Wills Lab, and the Probate Practicum). You must receive a “C” in order for the class to count for the PSR.

The Public Service Requirement has the following goals:

- Educate students about their professional responsibilities, particularly their obligation to perform public service work as practicing attorneys;
- Help students develop practical lawyering skills by supervising them in real work situations and teaching them to integrate the theory and practice of law;
- Raise awareness among students of meaningful career and public service opportunities.

Students can find further details about the requirement here » (http://www.law.du.edu/index.php/public-service-requirement)
Upper Level Legal Writing Requirement

All law students must satisfy the Upper Level Legal Writing requirement prior to graduation. The requirement provides students additional instruction and practice in research, organization and expression.

To satisfy the requirement, each student must:

- Complete a written product of at least ten (10) pages on an appropriate legal subject determined by a professor and the student.
- Secure the professor’s written comments as to the substance and style of the student’s written project.
- Prepare a second draft of the written project in response to the professor’s comments to the professor’s satisfaction.

Students may satisfy the Upper Level Legal Writing requirement in the following ways:

1. **Advanced Legal Writing Course**
   A student can enroll in and successfully complete the upper level legal writing course entitled “Advanced Legal Writing.”

2. **Designated Seminar Classes or Clinics**
   A student can enroll in and successfully complete a seminar that satisfies the Upper Level Legal Writing requirement. The student also can enroll in and successfully complete a clinical course that satisfies the Upper Level Legal Writing requirement. Clinics and seminars do not necessarily satisfy the Upper Level Legal Writing requirement. Students must clarify with individual professors whether the seminar or clinic will satisfy the Upper Level Legal Writing requirement. A student who elects to fulfill the Upper Level Legal Writing requirement under this option must make certain that the Registrar’s Office receives certification from the professor that the student successfully fulfilled the Upper Level Legal Writing requirement. Only after the Registrar’s Office has received official certification has the student completed this graduation requirement.

3. **Directed Research Projects**
   The student may enroll in and successfully complete a 2-3 credit hour Directed Research Project with a full-time faculty member. If the student successfully completes a Directed Research project that fulfills the Upper Level Legal Writing requirement, the professor must certify to the Registrar that the student has completed the Upper Level Legal Writing requirement. A student who elects to fulfill the Upper Level Legal Writing requirement under this option must make certain that the Registrar’s Office receives certification from the professor that the student successfully fulfilled the Upper Level Legal Writing requirement. Only after the Registrar’s Office has received official certification has the student completed this graduation requirement.

4. **Certification by Professor**
   Any full-time or adjunct professor can offer a student the opportunity to complete the Upper Level Legal Writing requirement within the course taught by the professor or independently of the course taught by the professor. Upon successful completion of the Upper Level Legal Writing requirement, the professor must certify to the Registrar that the student has completed the requirement. A student who elects to fulfill the Upper Level Legal Writing requirement under this option must make certain that the Registrar’s Office receives certification from the professor that the student successfully fulfilled the Upper Level Legal Writing requirement. Only after the Registrar’s Office has received official certification has the student completed this graduation requirement.

Professional Skills Requirement

1. All law students entering the College of Law in the Fall 2013 Term or thereafter must successfully complete a curricular offering of two or more semester credits hours that provides substantial instruction in professional skills generally regarded as necessary for effective and responsible participation in the legal profession beyond legal research, writing, and analysis.

2. Professional skills include pre-trial practice, trial advocacy, appellate advocacy, alternate dispute resolution processes, client communication, counseling, negotiation, legal document drafting, fact investigation, interaction with regulators (such as drafting of regulatory ruling requests), interviewing, law practice management, legal problem solving, recognizing and resolving ethical dilemmas, and similar skills.

3. To fulfill this requirement, a curricular offering must provide at least one credit (700 classroom minutes) of instruction in the performance of professional skills beyond legal research, writing, and analysis, and must engage each student in multiple (more than one) hands-on skills performances that are evaluated by the instructor.

4. The College of Law Registrar shall maintain a list of courses that satisfy the professional skills requirement on the College of Law webpage. The College of Law Modern Learning Committee and Curriculum Committee shall be responsible for approving courses that satisfy the professional skills requirement, and for periodically updating that list. Each course description for each class that satisfies the professional skills requirement shall indicate that it does so.

5. A student may not use the same curricular offering to satisfy both the upper level writing requirement and the professional skills requirement, unless the course has been designated as a special Carnegie Integrated Course offering by the Modern Learning Committee. Each Carnegie Integrated Course shall include a full credit hour of skills instruction in addition to assigned upper level writing.
Law Courses

LAWS 4002 Accounting for the Small Legal Practice (3 Credits)
This course will provide an introduction to basic accounting fundamentals, provide key concepts that apply to attorneys and solo practitioners, and explore situations where accounting plays a role in the practice of law. Topics include: understanding the balance sheet, income statement, statement accounting; partnership vs. LLC; income tax accounting; money management and cash flow in a law practice; retainers; trust accounts; income measurement; auditing; and billing/fees/timekeeping.

LAWS 4003 Appellate Advocacy (3 Credits)
This course focuses on developing skills necessary for effective appellate advocacy. It includes discussion of the critical differences between trial and appellate practice and techniques for presenting a persuasive case on appeal. Students will write appellate briefs and present oral argument to a panel of judges. Students will also observe oral arguments presented in Colorado appellate courts.

LAWS 4006 Accounting for Lawyers (3 Credits)
This class introduces students to accounting principles and practices to prepare them for the manner in which transactional and other lawyers will be presented with accounting, auditing, and financial matters that must be understood to enable them to provide effective legal representation to clients. The course includes an introduction to basic concepts of bookkeeping and financial accounting, reading and understanding traditional financial statements, financial statement analysis and the use of financial ratios, and legal issues involving accountancy. The class will also examine the role and responsibilities of the independent auditor and the concept of full and fair disclosure of financial information as required by generally accepted accounting principles.

LAWS 4007 Business Development: Marketing and Client Service (3 Credits)
This course provides students with the tools to effectively market a solo practice and connect with the client. Topics include: client relationship management; social media; building a brand; networking fundamentals; website development; managing client expectations; effective communications; and, referrals.

LAWS 4008 Privacy Law (3 Credits)
This Privacy Law seminar examines the development of privacy rights as a key consideration in the business and governmental policy debates within the U.S. and E.U. These debates range from the appropriate role of government collection retention and usage of personal identifiable information (PII) as well as regulating the private sectors' usage of PII. The E.U. has taken the lead in establishing an all-encompassing privacy policy for both the public and private sectors, whereas the U.S. has established a sectorial approach to establishing privacy law and regulations. Lawyers will continue to play a significant role in shaping governmental privacy policy, drafting statues and regulations, as well as business drafting and negotiating technology contracts.

LAWS 4015 Intermediate Legal Analysis (3 Credits)
Intermediate Legal Analysis provides second year students with instruction in analytical skills in a particular substantive area taught in the first year curriculum, utilizing multiple short-writing assignments with no more than 30 students per section. The course is a skills-based course, designed to develop analytical strategies necessary for success in law school, including rule synthesis and application, statutory interpretation, case analysis and briefing, fact evaluation, discernment of legal principles and theories, and effectiveness in written communication. The course will provide multiple opportunities for practice and feedback with exercises designed to help students learn, understand, and recall course materials with a particular emphasis in developing writing approaches and strengths for solving hypothetical legal problems. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4018 Criminal Law (Advanced) (3 Credits)
This course examines actual criminal cases from around the world and the application of the law at the time and place of the crime. The students will then compare this to the law today in the same jurisdiction and the Model Penal Code as applied to the same facts. This course also reviews current Colorado Law as it relates to liability and punishment based on the same fact pattern. The course will encourage analysis of what the law is and should be, and teh aftermath of each case will lead to discussion about what actually happened to the defendant and why.

LAWS 4019 Animal Rights (3 Credits)
Students who have participated in the Civil Litigation Clinic for one semester are eligible to enroll in the Advanced Civil Litigation Clinic. The purpose of the advanced clinic is to provide students who have developed fundamental trial skills in the areas of landlord-tenant, domestic violence, and workplace law to further develop those skills and to work on cases and matters with greater independence for an additional semester without repeating the seminar component of the clinic.

LAWS 4022 Criminal Clinic (Advanced) (3 Credits)
LAWS 4023 Civil Litigation Clinic (Adv.) (1-10 Credits)
LAWS 4025 Administrative Law (3 Credits)
This class provides an introduction to the administrative process of government. Topics include: Constitutional issues of separation of powers; delegation of legislative and judicial power; legislative and judicial authority in government agencies; agency exercise of policy-making functions; and controls imposed on agencies by administrative procedure legislation, Constitutional principles, and judicial review of agency action.

LAWS 4026 Criminal Procedure (Adv.) (3 Credits)
From the commencement of formal proceedings to collateral attacks on convictions, this course guides students through the laws regulating criminal prosecutions. The course topics typically include pleas; trial rights; discovery; bail procedures; sentencing; double jeopardy; the death penalty; and habeas corpus. The focus of the course is on the federal constitutional rights and the federal rules of procedure that are applicable to each stage of a criminal proceeding. Prerequisite: LAWS 4200.
LAWS 4027 Trial Practice II: Voir Dire (3 Credits)
This course covers the practical process of jury selection including the court rules and statutes that apply as well as Constitutional issues including fair cross-section and discriminatory challenges. An exploration of the demographic, legal, and case-specific issues that can be addressed in jury selection. The course couples traditional lectures with emphasis on student exercises. The course culminates in a final voir dire where the student is given a case problem and required to incorporate persuasive introductions, law questions, case-specific questions, and conclusions. Student participation throughout the class is required as both the inquiring attorney and as a juror.

LAWS 4028 Civil Procedure (Advanced) (3 Credits)
Topics for this course include post-trial procedure, injunctions, and other advanced civil procedure matters.

LAWS 4030 Family Law (Adv.) (3 Credits)
Advanced Family Law is a practicum oriented class. This class has some lecture components, but there will be significant practicum aspects for students interested in learning about the practice of family law. Students will gain a general knowledge of family law, and more specifically the substantive and procedural aspects of dispute resolution oriented domestic relations practice. The subjects covered are divorce, custody and child support jurisdiction (intrastate and interstate); domestic case procedure, meeting with and managing your client; working with opposing counsel; temporary status conferences and agreements, Domestic Violence, discovery and use of experts, unbundled legal services, access to justice issues, and the permanent orders (final orders in the divorce); and attorney’s fees. Prerequisite: LAWS 4240.

LAWS 4031 Mediation (3 Credits)
Students who have completed the basic Alternative Dispute Resolution course may enroll in this program that focuses on clients with more complex cases in both the civil and criminal arenas. Clients will be selected based on both public interest aspect and the propriety of the case as a learning vehicle for planning, pleading, negotiation, discovery, research and trial work. Prerequisite: LAWS 4060.

LAWS 4032 Legal Analysis Strategies (3 Credits)
This course provides last semester graduating students with instruction, guidance and feedback to develop foundational skills necessary to achieve success on both the bar exam and in the legal profession as skilled legal analysts. Substantively, the course will focus on core bar exam subjects (constitutional law, contracts, property, evidence, torts and criminal law/procedure) using practical problems in all three examination formats of the bar exam - essays, performance tests, and multiple-choice questions. Initially, the course provides a diagnostic evaluation of analytical and communicative strengths using a performance test and multiple-choice questions. Subsequent classes require submission of written practice exams with follow-up class presentations by students of analytical strategies used to solve hypothetical problems posed in essay questions, performance tests and multiple-choice questions. The course includes a final exam given during the final exam period designed to simulate bar exam protocols.

LAWS 4035 Advanced Legal Research (3 Credits)
Students select an area of practice in which to explore all major legal research resources, formats, and costs, and refine their ability to formulate cost-effective research strategies. They will identify an issue of interest and formulate a Legal Research Plan for analysis on the issue; draft a Library Purchasing Plan for the practice area; write and revise a legal analysis on the issue; draft a client letter on the legal analysis; consider potential ethical issues for the practice area and write a short paper on these concerns; give an oral presentation; and write a final reflection. This course does satisfy the Upper Level Writing requirement (ULW).

LAWS 4037 European Union Environmental Law and Policy (3 Credits)
The European Union (EU) has become a leading player in the context of European environmental legislation and policy making. Of particular interest has been the underpinning of the EU's single market, and environmental protection, the importance of which is clearly set out in the European Community Treaty. Matters dealing with climate change, genetically modified organisms, and recycling are now dealt with on a regular basis at EU level.

LAWS 4042 Trial Practice (Advanced) (3 Credits)
This class is an advanced study of trial practice issues and skills. Prerequisite: LAWS 4635.

LAWS 4048 Agency Partnership & LLC (3 Credits)
This is a survey of legal doctrines and legislation that governs the Limited Liability Corporation (LLC). The course material also explores employment and agency relationships and partnerships.

LAWS 4050 Topics in Constitutional Law (3 Credits)
This course provides upper level exposure to constitutional issues not covered in the basic required Constitutional Law course. Topics vary from semester to semester and may include the following: Sexuality, Individual Rights, Causation, Poverty and First Amendment.

LAWS 4060 Alternative Dispute Resolution (3 Credits)
The course examines the full range of contemporize dispute resolution processes: negotiation, mediation, arbitration and formal litigation. Conceptual and functional similarities and distinctions between these processes are explored. Additionally the processes; impacts upon disputants, role of the lawyer, the legal system and social order are reviewed.

LAWS 4064 American Legal System: Research, Writing and Analysis (3 Credits)
This course addresses the principles governing the American legal system and provides a brief comparison of the U.S. system to a sampling of other legal systems. In addition, the course addresses the organization of the course system, the anatomy of a lawsuit, and some of the ethical rules governing lawyers. Legal reasoning, standard legal analysis method, and reasoning by analogy are covered. A broad view of American civil procedure and constitutional law are included. Also, because this is a critical election year, legal issues impacted by the upcoming elections are explored. Finally, more practical skills such as legal research, legal writing and exam-taking skills are addressed.
LAWS 4065 American Legal History (3 Credits)
This course concerns itself with the interaction between the legal system and social change in what is now the United States. Chronologically, the course materials run from the colonial period to the New Deal, although the nineteenth century will receive particular emphasis. A principal focus is the interrelationship of law, social life, economy, and ideology.

LAWS 4070 Antitrust and Unfair Competition (3 Credits)
The expansion of our economy over time has required the federal government and the courts to rethink their respective roles in regulating business conduct in the United States. The laws regulating business conduct are as dynamic as the notion of competition itself. This course teaches the history and fundamentals of antitrust and unfair competition laws in the United States. This course discusses the competitive problems which arise from monopolization, price and supply agreements, tying arrangements, exclusive dealings, cartel activity and mergers. The course also examines the interplay between federal, state and private enforcement of these laws.

LAWS 4089 Business Development: Marketing & Client Services (3 Credits)
This course provides students with the tools to effectively market a solo practice and connect with the client. Topics include: client relationship management; social media; building a brand; networking fundamentals; website development; managing client expectations; effective communications; and referrals.

LAWS 4090 Bankruptcy (4 Credits)
This course introduces the federal bankruptcy system and Bankruptcy Code, including both the law of consumer bankruptcy and the law of corporate reorganizations. Topics include the rights of creditors in bankruptcy law and state law, the scope of the automatic stay, the treatment of executory contracts, the sale of assets in bankruptcy, the avoiding powers, bankruptcy planning, the restructuring of corporations in Chapter 11, and the procedure for confirming plans of reorganization.

LAWS 4095 Real Estate (3 Credits)
This course serves as an introduction to contractual, priority of right, and title assurance issues involved in transferring real estate. This is a highly recommended survey course for all law students regardless of specialization because much of the course material is heavily examined on the Multi-state, Colorado and other state Bar Exams. This class also serves as a gateway course for real estate specialists.

LAWS 4096 Patent Law (3 Credits)
This course review the major patent law doctrines. Topics include patentability requirements under 35 U.S.C. 101, 102, 103, and 112, claim construction, various infringement doctrines, affirmative defenses and remedies.

LAWS 4100 Basic Tax (4 Credits)
This course provides students with a general understanding of tax law. Materials cover topics from personal and business deductions, to property basis and depreciation.

LAWS 4105 Business & Commercial Law Sem (1-3 Credits)
Topical seminars scheduled periodically to afford students the opportunity for focused study of business and commercial law matters such as: consumer credit; mergers and acquisitions; corporate practice; bankruptcy; antitrust; quantitative evidence; representation of minority--and women-- owned business firms. Prerequisite: LAWS 4190.

LAWS 4110 Business Planning (3 Credits)
The course introduces students to the transactional lawyering considerations involved in forming and representing an emerging growth business. The course examines the life cycle of a start-up company, including selecting the appropriate entity form, structuring the economic interests and managerial control among various owners, considering the lawyer's duties to the entity in dealing with its founders and management, and documenting various approaches to raising capital. Using a simulated deal format, students will draft, review and analyze documents typically used in organizing and financing a start-up business.

LAWS 4112 Trademark Law (Advanced) (2 Credits)
This seminar focuses on complex practical and legal issues confronted by today's trademark practitioners, ranging from brand protection strategies to litigating equitable relief claims for trademark infringement. The course also covers how trademark principles are being applied to the internet and e-Commerce. The course focuses on U.S. trademark law, but includes exposure to the aspects of international trademark law that are most frequently encountered by U.S. trademark practitioners. The course calls for students to participate in hands-on exercises, such as developing a new brand and arguing a preliminary injunction motion. The course requires a basic familiarity with trademark law, but the specific Trademark Law class is not a prerequisite. Prerequisite: LAWS 4310 or equivalent.

LAWS 4115 Trademark Law (3 Credits)
This course covers common law doctrines. Topics include the acquisition and preservation of trademark rights, false advertising claims, infringement doctrines, defenses, and remedies, with attention to internet issues and recent developments in the law. Recommended prerequisite: LAWS 4310.

LAWS 4117 Taxation of Property Transactions (3 Credits)
This course includes basis of property; capital expenditures and current expense comparison; depreciable status; amortization of intangible property; depreciation methods; property casualties and losses; profit or loss computation and characterization for taxable property dispositions; limitations on passive losses; lessor and lessee reporting; tax-deferred dispositions. Cross listed with TAX 4110.

LAWS 4120 Civil Procedure (4 Credits)
This required introductory course examines how Constitutional statutory and judicial rules frame the determination of court controversies. They also explore the doctrines, remedies, and other principles pertinent to judicial dispute resolution.
LAWS 4129 Comparative Corporate Law Seminar (2 Credits)
Comparative Corporate Law examines the system for forming and managing businesses in the United States and overseas. We examine the impact of culture and other factors on legal regimes and examine whether a uniform international system is developing. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4131 Commercial Law Survey (4 Credits)
This course provides an introduction to the concepts and methods of commercial law. As a survey course, it explores the major Articles of the Uniform Commercial Code, namely, Article 2 (Sales), Article 9 (Secured Transactions), Article 3 (Payment Systems), as well as Article 5 (Letters of Credit) and Article 7 (Documents of Title). In addition, the intersection of Article 9 and Bankruptcy Law will be discussed in some depth. The completion of this course gives students a firm footing for any advanced course in commercial law. Students taking only one course in commercial law receive broad exposure to the basics of commercial law.

LAWS 4132 Colorado Legal Research (2 Credits)
This course introduces students to legal materials generated by executive/administrative, legislative, and judicial branches of Colorado government. Students develop research strategies for answering legal questions using primary and secondary resources and learn to relate the various sources of authority to the structure of Colorado government. Students are required to bring laptop computers to class.

LAWS 4133 Corporate Social Responsibility (3 Credits)
Corporate Social Responsibility represents the integration of a variety of environmental, social, ethical, and even political considerations into basic business strategies to produce a positive impact on society while still earning profits. With increasing frequency, consumers and investors reward companies that embrace CSR by purchasing their products and stock. This seminar in Corporate Social Responsibility explores a variety of pressing legal issues involving corporate governance, sustainable development, shareholder activism, executive compensation, the role of religion in the boardroom, international regulation, and CSR certification, among other topics. Through the readings and discussions, students examine the American approach to CSR in light of international regulatory efforts and models of socially responsible business practices in various countries around the world. Students gain a greater sense of the special role lawyers play in burgeoning CSR movement by examining some sophisticated examples of corporate strategy, planning, and litigation on CSR matters. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4135 Comparative Law (3 Credits)
Comparative Law is the study of the foundation of legal traditions and systems which exist in the world today. The major topics covered in this course are legal history and culture; legal structures; legal actors; and procedure and sources of law. The interactive course begins with an overview followed with coverage of each of the topics in relation to the United States legal system. We then cover the same topics in relationship to the common law tradition and the civil law tradition.

LAWS 4137 Comparative Environmental Law (3 Credits)
Comparative Environmental Law is an introduction to the growing network of international law (multilateral and bilateral treaties, customary law, adjudications, etc.) that govern environmental law. The course focuses on international legal issues including global climate change; trans boundary pollution; resource depletion; toxic waste export; biodiversity and wildlife/plant extinction; deforestation; desertification; ocean pollution; sustainable development; etc. (The internal domestic environmental laws of individual countries receive some attention as does trade law, but these are covered with more detail in Comparative Law and International Business Transactions, respectively.).

LAWS 4139 Commercial Law for Foreign Investors in Guatemala (2 Credits)
This class uses the Dominican republic-Central America-United States Free Trade Agreement (CAFTA-DR) and the North American Free Trade Agreement (NAFTA) to examine the legal framework regulating foreign investment in Central America and Mexico. With Guatemala’s ratification of CAFTA-DR, Guatemala opened its doors not only to trade but also to foreign investment, including from U.S. companies looking to do business in Guatemala. While the CAFTA-DR includes norms that govern the relationship between foreign investors and Member States, the domestic laws of each Member State continue to provide the central regulatory structure that governs relations among the parties, including in the areas of commerce, intellectual property, labor and the environment. This is an introductory course that examines the principle commercial norms that would apply to foreign investors in Guatemala, with a special emphasis on the law of contracts. The course examines the comparable norms applicable under NAFTA and introduces the topic of how CAFTA’s ratification has promoted rule of law reforms in Guatemala in the areas of commerce, intellectual property, labor and the environment. This course is taught in Spanish.

LAWS 4143 Commercial Paper (2,3 Credits)
This course introduces students to Article 3 of the Uniform Commercial Code, Negotiable Instruments. After studying this part of the UCC at the beginning of the semester, students will engage in a simulated, complex business transaction for the remainder of the course. The simulation involves problem solving, extensive document drafting, client counseling and professionalism, among other topics. The simulation involves transactions in a business/banking context, but is not an overview of banking law.

LAWS 4144 Comparative Free Speech and Access to Information in the Americas (2 Credits)
This course looks at the history and text of the guarantees of free speech in the constitutions of the United States and Latin American countries, including Guatemala; at judicial decisions interpreting them; and at the actual scope of those guarantees of free speech in practice, with emphasis on the function of free speech in facilitating democracy. The course also looks at the impact of globalization on free speech guarantees, including the impact of international treaties, the activities of NGOs, and speech on the Internet. The course compares the systems for providing citizens access to government information in the U.S. and Latin America, particularly Guatemala, and looks closely at areas where interest in disclosure and secrecy conflict.
LAWS 4145 Computer and Internet Law (3 Credits)
Computers and Internet Law is designed to consider the areas in which computer technology and the legal environment intersect. This includes legal protection of computer software; contracting for computer services; computer data banks and privacy; the check-less society; and the relationships between Federal Communications Commission policies and computers.

LAWS 4160 Conflict of Laws (3 Credits)
Conflict of Laws is an analysis of legal problems arising in cases when at least one of the operative facts cuts across state or national boundaries. Topics covered include problems of interstate jurisdiction over parties and subject matter the application of principles of full faith and credit and comity on the recognition and enforcement of interstate and multinational judgments; the comparison of various theories of law choice in the context of the Constitutional threshold constraints of the due process and full faith and credit clauses.

LAWS 4164 Constitutional Law (4 Credits)
This required introductory course examines the role of the United States Supreme Court and, in particular, the Court’s power in exercising judicial review in cases interpreting the U.S. Constitution. The course focuses primarily on two topics. First is the doctrine of Separation of Powers: examining the structure and interrelationship of the three branches of the federal government, Congress, the Executive Branch, and the federal judiciary. Second is the doctrine of Federalism: the relationship and power distribution between the federal government and state governments. In addition, all sections devote part of the course to an introduction to at least one aspect of the large field of individual constitutional rights. The specific rights covered vary by instructor. Among the possible topics are: the Equal Protection Clause and Due Process Clause of the Fourteenth Amendment, the First Amendment, and/or the Fifth Amendment’s Takings Clause. Students who wish to gain a deeper understanding of these topics are strongly encouraged to take Constitutional Law II.

LAWS 4166 Constitutional Law II: Individual Rights (3 Credits)
Topics vary from semester to semester and may include the following: Sexuality, Individual Rights, Causation, Poverty and First Amendment. This course provides upper level students exposure to constitutional issues not covered in the basic required Constitutional Law course.

LAWS 4168 Constitutional Litigation Seminar (3 Credits)
This course examines individual and class action litigation brought against government officials for the violation of constitutional rights under 42 U.S.C. section 1983, the primary federal civil rights statute, and other civil rights statutes. The historic interplay between substantive Constitutional law and traditional doctrines of tort liability has developed into an entire body of law under section 1983 that any civil rights or government lawyer must regularly confront. The seminar focuses on the most critical substantive issues in pursuing Constitutional litigation. This includes the history and purposes of section 1983; the elements of constitutional torts; rules governing liability of government officials and municipal liability; immunity doctrines; remedies; jurisdictional and procedural barriers to section 1983 litigation; and recovery of attorney’s fees. The class also discusses the availability and viability of alternative remedial mechanisms to section 1983. Prerequisites: LAWS 4165 and LAWS 4166.

LAWS 4169 Constitutional Law Writing Seminar (3 Credits)
This course satisfies the Upper Level Writing requirement (ULM). Permission by instructor only.

LAWS 4175 Contracts (4 Credits)
Consideration of the restatement of contracts and the relevant provisions of the Uniform Commercial Code. Legal protection accorded contracts: remedies and measure of recovery; damages; specific performance; restitution. Elements of agreement: preliminary negotiations; agreements unenforceable for indefiniteness; mutual assent. Consideration and the seal; bases of contractual liability; consideration; reliance and estoppel; mutuality. Problems of offer and acceptance; termination of offeree’s power of acceptance; contracts concluded by correspondence; unilateral contacts—notice, knowledge, revocation of offer; contracts implied from conduct. Special problems of consideration. Third-party beneficiaries. Assignment. Effects of changes or unforeseen circumstances. Conditions in contracts--problems of draftsmanship: express and implied conditions; conditions precedent, subsequent and concurrent; severability of contract provisions. Procedures after default. The Statue of Frauds.

LAWS 4178 Contracts Drafting (3 Credits)
This course addresses the perspectives and skills that a lawyer must develop in order to assist clients with transactional work and aligning business objectives and contracts. In addition to delving deeper into selected areas of substantive contract law, students read materials that focus on writing and interpreting contractual provisions. Because a core focus of the class is writing for contracts, students regularly engage in drafting exercises to hone their drafting skills. The course also focuses on negotiation in a transactional setting, and how discussions with both clients and other parties can distill the key business terms that are to be reflected in a contract. Although substantive law and theory is utilized throughout the course, the primary objective of the course is exposing students to some of the practical, real-world skills essential to a transactional law practice.

LAWS 4179 Construction Law Seminar (3 Credits)
This course examines the legal relationships, obligations, rights, and remedies that govern the diverse parties to a construction project, including owners, lenders, contractors, material men, sureties, insurers, subcontractors, laborers, and others. A substantial portion of construction law (and accordingly, the primary focus of this class) is advanced contract law. Experience in the construction industry is not required, but those students who are unfamiliar with construction will benefit from spending a little extra time learning basic construction concepts and processes.

LAWS 4181 Corporate Drafting Seminar (3 Credits)
Corporate drafting focuses on writing responsive, lucid, unambiguous corporate documents. Students assume the role of the in-house counsel and other members of the corporate negotiating team as the team structures, negotiates, drafts, and implements corporate transactions. This course requires extensive writing. This course satisfies the Upper Level Writing requirement (ULW).
LAWS 4185 Business Entities (4 Credits)
The course provides an overview of the differences in the operation of a trade or a business as an LLC/LLP, an S-Corporation and a C-Corporation. The class offers an overview of the state law requirements for the operation of each type of business (Model Business act and LLC/LLP state statutes) and the difference in the tax treatment for each type of business. The objective is to give students a basic understanding of some of the do's and don'ts for each business and how they might advise a client as to the preferred business form in typical factual situations. The class explores both the legal and tax effects during the life cycle of any business, including formation, operation, distribution, redemption, sale of an interest, liquidation, mergers and divisions, and the death of the owner. Prerequisite: LAWS 4100.

LAWS 4186 Corporate Taxation I (3 Credits)
The federal income taxation of corporations and their shareholders with emphasis on the creation of the corporation, establishment of its capital structure, operational alternatives, distribution to shareholders, stock dividends and redemptions, personal holding company, and accumulated earnings tax. Cross listed with TAX 4200.

LAWS 4187 Corporate Taxation II (3 Credits)
A continuation of Corporate Taxation I with emphasis on corporate reorganizations, operation, liquidation of subsidiary corporations and corporate division, and carryover of tax attributes. Cross listed with TAX 4300. Prerequisite: LAWS 4186.

LAWS 4188 Corporate Taxation III (3 Credits)
Advanced corporate taxation problems with emphasis on collapsible corporations; liquidations; detailed study of sections 305, 36, 307; loss carryovers and Subchapter S corporations. Cross listed with TAX 4330. Prerequisite: LAWS 4186.

LAWS 4190 Corporations (4 Credits)
Corporations provides students with a basic introduction to corporations, including the roles of shareholders and creditors. The instructor also covers the various duties and liabilities of offices and directors, and supplies a brief overview of the applicability of the federal securities laws.

LAWS 4195 Criminal Law (4 Credits)
The course explores the definition of crime and criminal liability.

LAWS 4197 Victim's Rights (3 Credits)
Victim's rights has emerged as an important arena for the criminal justice field in the 21st Century. Anyone planning a career in criminal justice will want to engage in this seminar class to learn about the law and its application to victim's rights. This class is designed to explore beyond advanced criminal procedure the role of the criminal justice system and its response to victim's. In-depth discussions will be held about victim's rights and criminal procedure.

LAWS 4200 Criminal Procedure (3 Credits)
Criminal Procedure outlines Constitutional and other rules regulating pretrial evidence acquisition by government officials in criminal matters. The course commonly includes the following topics: an overview of criminal justice administration; arrest; search and seizure; the exclusionary rule and its administration; wiretapping electronic eavesdropping; entrapment; interrogation; and confessions and lineup practices.

LAWS 4201 Death Penalty Jurisprudence (3 Credits)
The course is designed to make students aware of the substantive body of law surrounding the modern death penalty and the policy issues raised by the law. The course begins with the class constructung a fair death penalty. Students decide whether they, as the omnipotent legislature, want a death penalty. Then, students construct one that is fair, just and humane, and that achieves the goals that they have established for their death penalty.

LAWS 4202 Disability Law (3 Credits)
This course examines the growing area of disability law. Topics to be covered include discrimination based on disability in employment and public accommodations, as well as the requirement for educational institutions to provide special education services to disabled students. Relevant federal statutes are examined, including the Americans with Disabilities Act (with special emphasis on the ADA Amendments Act of 2009), Section 504 of the Rehabilitation Act, and the Individuals with Disabilities in Education Act.

LAWS 4203 Elder Law (3 Credits)
The course explores a range of issues relevant to legal counseling of elderly clients, such as mental and physical impairments, public assistance, Medicaid, social security, 'nursing homes, guardianships, trusts, and right to die issues.

LAWS 4205 Survey of Employment Law (3 Credits)
This course provides a broad overview of the field of employment law. It begins with an exploration of the employer/employee relationship and the "at will" rule. It then addresses various constitutional, statutory, and common law doctrines that tend to be applied to the employer/employee relationship, often as exceptions to the "at will" rule. Contract, tort, and anti-discrimination doctrines are covered, as well as constitutional doctrines addressing free speech and privacy in the workplace, and regulatory regimes addressing wages and hours. Finally, this course explores the post-employment relationship, including trade-secrets and non-competition agreements. These topics are addressed at both a theoretical and practical level.

LAWS 4206 Environmental Law Clinic (3 Credits)
The goal of the Environmental Law Clinic of the Student Law Office (SLO) is to protect the environment and public health, while teaching students practical legal skills that will translate into any practice area. Students applying for the Environmental Law Clinic are asked to select between two tracks: the Federal Wildlife Project or the Colorado Urban Project. Students who select the Federal Wildlife Project (FWP) track in the Environmental Law Clinic will work on the preservation of endangered species and their habitats throughout Colorado and the western United States. Students who select the Colorado Urban Project (CUP) track in the Environmental Law Clinic will work to address the emerging environmental issues along Colorado’s urban Front Range. This is a yearlong course with 3 out of class credits for this course and 3 in class credits through the corequisite course. This course may satisfy the Upper Level Writing Requirement (ULW). Corequisite: LAWS 4802. Prerequisite: LAWS 4235 and LAWS 4425.
LAWS 4210 Energy Law (3 Credits)
Energy Law presents the regulation of production, conversion, transportation, distribution and pricing of fossil, hydro, nuclear, and other conventional sources of primary energy. It also offers insight into the regulation of renewable energy resources, including energy from the sun, wind, biomass, oceans, earth (geothermal), and rivers (including low-head hydro). There is an emphasis on new legislative and judicial development relating to these various energy sources. The course is taught in a seminar format, and students present and critique classmate papers as part of the class. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4214 Copyright Law (3 Credits)
This course covers the major copyright law doctrines. Topics include the subject matter of copyright, the scope of protection, rights conferred, infringement doctrines, defenses, remedies, and attention to particular industries and recent development in the law. Recommended prerequisite: LAWS 4310.

LAWS 4215 Entertainment Law (3 Credits)
Entertainment Law focuses on issues that have an impact on the entertainment industry. Topics include copyright; service and trademark; licensing; publishing; unfair competition; antitrust; agency; and labor law. The class also explores publishing agreements.

LAWS 4218 Discovery Practicum (3 Credits)
Most civil litigations never get to trial. Instead, these cases are settled after the discovery period has revealed the strengths and weaknesses in the case. This course focuses on the instruments, rules, and case law governing discovery of information in litigation: interrogatories, document requests, requests for admissions, and depositions. It is taught in the form of a “whole-course simulation,” which means students will represent a party and have an opposing counsel in a simulated litigation throughout the course. Students prepare and serve discovery documents (just as in practice), take, defend, and act as a witness in a deposition, and reach a settlement of the case at the end of the course. Because of the nature of the course and the many practice documents prepared during the semester, there is no final examination. This course will satisfy the Upper Level Writing requirement (ULW). This course is a “Carnegie Integrated Course.”

LAWS 4219 Environmental Ethics & Justice (3 Credits)
This course provides a broad analytical consideration of ethical environmental policy-making. Students consider the historical aspect of environmental ethics as the various ethical approaches to making a decision concerning the environment. The class also explores the roles that the law, economics, and society’s values play in environmental ethics.

LAWS 4220 Environmental Law (3 Credits)
Environmental Law covers the major federal laws and programs for environmental protection. These laws and programs include the National Environmental Policy Act; Clean Water Act; Clean Air Act; Resource Conservation and Recovery Act; and Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Although the course focuses primarily on federal statutory law, it also incorporates some discussion of common law remedies. Recommended prerequisite: LAWS 4025.

LAWS 4224 Employment Law Benefits (3 Credits)
This course is a statute and case law course that introduces students to Employment Retirement Income Security Act (ERISA), the important federal law that controls the design and operation of virtually all employee benefit plans. The course offers students an understanding of the application of ERISA and how ERISA issues arise in business and private law practice. The classroom scenarios include lecture, problem solving and role playing to identify the kinds of experiences students are likely to experience in private practice.

LAWS 4225 Estate and Gift Taxation (3 Credits)
This course is a study of the federal estate tax; federal gift tax; and federal generation skipping transfer tax.

LAWS 4227 Employment Discrimination Law (3 Credits)
This course concerns federal constitutional and statutory law that prohibits discrimination in the workplace, including regulation of both private employers and the federal government. The course covers theoretical issues, such as the definition of equality, and practical problems that involve the complex procedural requirements of the applicable statutes.

LAWS 4228 Employment Law Seminar (3 Credits)
Students select topics relating to current issues in labor and employment law and will write publishable articles based on independent research. Students present their papers to the class toward the end of the semester. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4230 Estate Planning (2 Credits)
Estate analysis, including fact gathering and the analysis of data; the psychological aspects of “role playing” in estate planning; the members of the team (the attorney, the CPA, the life underwriter, the trust officer); life insurance in an estate and business planning context; planning with trusts, including revocable, short-term, and irrevocable; the transfer of a closely held business interest from one generation to the next, including full and partial stock redemptions, cross purchase agreements, private annuity, installment sale, retirement, recapitalization, qualified and nonqualified plans of deferred compensation; special estate planning considerations for the professional corporation, the highly paid executive, and the farmer and rancher; specific cases analyzed.

LAWS 4232 European Union Law (3 Credits)
The European Union (EU) has been described as the 21st century’s newest superpower. Bearing in mind the rapidly growing importance of the EU, this course introduces EU law, and emphasizes its historical underpinnings, institutional framework, legal procedures, and internal market. Moreover, emerging policies (e.g. enlargement, environment) are considered. The course examines these topics in the context of European political integration and where appropriate, the ongoing tension in the trans-Atlantic relationship between the EU and United States.
LAWS 4235 Evidence (4 Credits)
This required course is an introduction to procedural rules that regulate the use of evidence at trial, including coverage of the mode of examination, relevance, impeachment, character evidence, hearsay, expert evidence, and privileges. Particular attention is paid to the Federal Rules of Evidence.

LAWS 4236 Election Law (3 Credits)
This course examines Federal Election Law, specifically the Voting Rights Act; federal legislative districting; federal regulation of political parties; and the evolution of federal campaign finance law. The course does not address state campaign finance issues, ballot initiatives, or term limits. However, it may touch on those topics if time permits.

LAWS 4237 Evidence Practicum (3 Credits)
This practicum is designed to help students build trial skills and make the transition from evidence law learned in the classroom to evidence used in the courtroom. It provides simulation-type experiences requiring students to understand the foundations required to admit different kinds of evidence, to anticipate evidentiary issues, to make and to respond to objections, and to prepare examinations designed to avoid objections. The course supplements Trial Practice by focusing heavily on the rules of evidence. Prerequisites: LAWS 4365 and LAWS 4235.

LAWS 4238 Exempt Organizations (2 Credits)
The statutory exemption for “charities,” social welfare and social clubs, homeowners’ associations, fraternal orders, employee benefit organizations, mutual or cooperative companies, business and professional leagues, labor unions, exempt organizations, property title companies, federally organized or chartered organizations, and political organizations’ activities, funds, and lobbying activities; prohibited transaction rules; the private foundation; the unrelated business and debt-financed income tax exposures; excise tax exemptions; administrative appeal and declamatory judgment procedures; anti-discrimination considerations; charitable contributions. Crosslisted with TAX 4430.

LAWS 4240 Family Law (3 Credits)
This course is an examination of laws that involve and/or regulate families. Students learn the legal rights of families in cases incidental to marriage or without marriage. This includes child-parent relationships and the dissolution of marriage. This class also provides students with an understanding of new familial relationships.

LAWS 4250 Federal Courts (3 Credits)
This is an advanced public law course that examines the role of the federal courts in our constitutional system. It focuses on the federal courts’ role and power in relation to the other branches of the national government (separation of powers) and in relation to state and local governments (federalism). Specific topics include: the organic judicial powers of the federal judiciary, including Article III’s Case or Controversy requirement; congressional power to restrict or expand federal jurisdiction, the Supreme Court’s power to review state court rulings on federal law by direct appeal and on collateral review (habeas corpus), federal question jurisdiction, federal civil rights law under 42 U.S.C. § 1983, and many of the doctrines that limit federal judicial power to provide remedies to parties whose federal constitutional and civil rights have been violated, including official immunity, state sovereign immunity, and the abstention doctrines. It is highly recommended for students interested in pursuing federal judicial clerkships and/or careers in federal civil rights litigation, government representation, or other federal litigation.

LAWS 4251 Federal Wildlife Law (3 Credits)
This course covers federal wildlife law beginning with the Constitutional underpinnings of federal wildlife law. It focuses on the Endangered Species Act with some coverage of the Migratory Bird Treaty Act. The course takes new approaches to species and habitat preservation, paying particular attention to Colorado species.

LAWS 4259 Global Climate Change Law and Policy (3 Credits)
As concern over the threat of global climate change spreads, action on greenhouse gas emissions (GHGs) is increasingly commanding attention. This seminar consists of supervised research and writing on the issue of climate change and the legal and policy responses. The course focuses on the effects of climate change on development and the environment in industrialized and developing countries and the laws in the international, regional and domestic arenas that address the problem.

LAWS 4260 Gender and the Law (3 Credits)
This course examines the role of gender in many areas of the law, including employment discrimination and reproductive rights. Provides perspectives on the effects of gender-based hierarchy on the structure of the law and legal processes. Explore contemporary feminist jurisprudence and the impact of women in the legal profession.

LAWS 4262 Sexual Orientation Law Seminar (3 Credits)
This seminar offers an opportunity for students of any or no sexual orientation to study the relationship between law and sexual orientation to study the relationship between law and sexual orientation. Historically, law in the United States consistently and pervasively regulated the realm of human identity and behavior we call sexuality. Questions and claims challenging traditional assumptions about sexual orientation surfaced in the last twenty-five years. Our study of sexual orientation and law allows us to view the relationship between law and society through a new lens, that of sexual orientation. Specifically, we examine issues of sexual orientation arising in areas ranging from constitutional law criminal law, employment law, family law, health law, immigration law, to tax law. We discuss some or all of the currently controversial issues relating to sexual orientation and law, including such topics as the proliferation of both nondiscrimination laws and anti-gay initiatives like amendment 2 in Colorado, the constitutionality of laws prohibiting specified sexual behavior between different-sex and same-sex adults, the constitutionality of laws limiting the right to speak about sexual identity, public and private employment discrimination against gays and lesbians including the military ban on persons who are openly gay or lesbian, and discrimination against same-sex couples with respect to marriage, parenting, health benefits, and taxes.
LAWS 4265 Government Contracts Seminar (3 Credits)
This seminar provides an in depth examination of the unique statutory, regulatory and administrative process used by the U.S. Government when it annually spends more than $1 trillion taxpayer dollars to contract for goods and services used by Federal departments and agencies. Topics include the contract award and contract administration processes, with an emphasis on practical solutions to issues which routinely confront attorneys who advise businesses that do business with the Government.

LAWS 4276 Health Law (3 Credits)
This survey course introduces students to how the legal environment of health care shapes both its quality and its distribution. The course begins with a foundation in how health care is both provided and financed in the U.S., including managed care, Medicare, and Medicaid. This foundation sets the stage for studying the laws and policies that impact health law, including ERISA, antitrust, fraud and abuse, the False Claims Act, Stark, and HIPAA. This course does not focus on bioethics or medical malpractice. Students must submit a publishable quality paper on a health law topic approved by the professor. This course will satisfy the Upper Level Writing requirement (ULW).

LAWS 4277 Holocaust Seminar (3 Credits)
This class focuses on conceptions of individual and state accountability. By understanding how the Holocaust occurred, and how individual and collective acquiescence combined with affirmative conduct, we can begin to grasp the complex web that created a moment in time where morality and civilization were abdicated and almost eradicated. We examine how law, culture, power, ignorance and fear combined to create the Final Solution, and how conceptions of moral agency and accountability were forged in flames that marked the death camps. Students read narratives of resistance and collaboration and historical accounts of how the U.S., Europe and religious institutions interacted with the Third Reich. Through the readings and discourse that follow, students have the unique opportunity to question what constitutes moral agency and how individuals and cultural systems should be held accountable for circumstances that created the Third Reich and its ideology. This class is interdisciplinary thereby integrating law with literature, political theory and philosophy. Prerequisite: instructor’s permission.

LAWS 4280 Hughes Research Seminar (1-5 Credits)
Topic of Seminar to be determined by Hughes Research professor teaching the course.

LAWS 4288 International and Human Rights: Indigenous Peoples (3 Credits)
This course explores some of the major contemporary legal issues facing indigenous peoples across the globe. The course covers issues as far ranging as: how indigenous groups are defined under the law; ethical and legal issues pertaining to indigenous self-governance including the tension between minority rights, individual rights, and democratic precepts; the uneasy application of self-determination law to indigenous self-governance; the implications of human rights, environmental, intellectual property, and international trade regimes for indigenous peoples; and international legal texts affecting indigenous peoples, such as the United Nations Declaration of the Rights of Indigenous Peoples. At the option of the individual student, this course can be used to satisfy the Upper Level Writing requirement (ULW).

LAWS 4290 Human Rights Law (2 Credits)
The course provides an introduction to international civil and political rights and economic, social, and cultural rights in the international arena. It also covers the means available to protect such rights of the individual and groups. The focus is on the implementation part at the United Nations and other international, regional and national settings. Prerequisite: LAWS 4320.

LAWS 4292 Individual Tax Problems (3 Credits)
Using the Internal Revenue Code and the Federal Income Tax Regulations as a basis, substantive issues relating to individual taxation are covered. Areas included are general concepts of gross income, individual employee benefits and deductions, charitable deductions, alternative minimum tax, deductibility and classes of interest, office in home and vacation homes, and a general overview of the interrelationships of various statutory and non-statutory principles. Cross listed with TAX 4020.

LAWS 4295 Immigration Law (3 Credits)
This is a study of the historical development and current jurisprudence in American immigration law. The course examines such concepts as sovereign authority, exclusion, expulsion and asylum, and current developments in the area.

LAWS 4298 Immigration Law Advanced (3 Credits)
This course provides theoretical and practical approaches to the representation of non-citizens in removal proceedings. This course is designed for students who have an interest in practicing immigration law with a focus on deportation and removal practice before the Department of Homeland Security, the Executive Office for Immigration Review, and the federal courts. The goal of this course is to give students a theoretical framework for identifying and assessing immigration issues, including immigration consequences of criminal convictions, and for formulating strategies for effective prosecution and representation of non-citizens in removal proceedings. The instructor also teaches the practical tools and procedures, which students may apply to actual case representation. Prerequisite: LAWS 4295 or an immigration related externship.

LAWS 4300 Federal Indian Law (3 Credits)
This introductory course surveys the body of “Federal Indian Law,” focusing on the legal relationship between Indian nations and the United States, including implications of this relationship for states and individual citizens. The course covers the historical origins of federal Indian common law, the development of federal Indian policy, and tribal sovereignty in the modern era (tribal property, jurisdiction, criminal and civil governance, and economic development including gaming). It may provide a brief introduction to the Indian Child Welfare Act, religious and cultural freedoms, tribal law, and indigenous peoples in international law, if time allows.
LAWS 4303 International Criminal Law Practicum (3 Credits)
In this course, the class collectively analyzes the genocide, war crimes and crimes against humanity charges against an accused in a major international tribunal prosecution. Each student is assigned witnesses in the case and is expected to analyze that testimony and record their work in the case database using Casemap software meticulously following previously established protocols. The work involves the students learning the nature of the conflict generally, thoroughly learning the indictment against Taylor, getting up to speed on the law of war crimes and crimes against humanity, and finally assessing the witness testimony for relevant facts and attributing those facts to the legal outline in the case.

LAWS 4304 Insurance Law (3 Credits)
A comprehensive overview of laws, standards, concepts and remedies related to Insurance, including: interests protected by Insurance; selection and control of risks; insurable interest; the principle of indemnity; types and classifications of Insurance; making, dealing with and termination of insurance contracts; underwriting and claims handling; regulation of Insurance and insurers; subrogation; and extra-contractual liability. This course will satisfy the Upper Level Writing requirement (ULW).

LAWS 4309 International Law and the Use of Force (3 Credits)
This course deals with the two aspects of the use of force by countries: the initial decision to resort to force and then the regulation of that force once the conflict begins. In 1945, the United Nations Charter set out to prohibit the resort to force by its member states except in two limited situations: self-defense or where authorized by the Security Council. The Geneva Conventions and its protocols, as well as customary international law, regulate how that force is applied. The subject of this course is how these provisions have been interpreted since 1945 and trends in the law that will guide us in the future.

LAWS 4310 Introduction to Intellectual Property (3 Credits)
This survey course covers the basics of United States intellectual property law, including patents, copyrights, trademarks, and trade secrets. The course addresses the policies underlying the protection of intellectual property and compares the different ways organizations and individuals can use intellectual property to protect their interests. This course is intended both for students who want an introduction to intellectual property and for those who intend to pursue a career in intellectual property law.

LAWS 4315 International Business Transactions: Survey Course (3 Credits)
This course provides students with a general overview of international business transactions. The course examines the legal framework of international sales transactions including the commercial terms of the sales agreements, shipping contracts, insurance, financing arrangements and customs documentation. The course also examines the foreign direct investment transaction, international franchise and distribution agreements. The regulation of international business is reviewed, with special attention to the World Trade Organization agreements and regional trade areas.

LAWS 4317 International Environmental Law (3 Credits)
This is an introduction to International Environmental Law -- the expanding field of multi-nation treaties, laws, judicial decisions, policies, practices, and politics governing the global environment. IEL backgrounds students on the 21st century’s hottest international law topics -- sustainable development, climate change, transboundary air and water pollution, natural resources development, international trade, toxic waste and recycling, and protection of wildlife, ecosystems, human life, and human rights.

LAWS 4318 International Business Transactions: Federal Regulation (3 Credits)
IBT: Federal regulation examines the ability of the federal government to control international trade. The focus of the course is US export controls, embargoes, anti-terrorism regulations that apply to international commerce, and the Foreign Corrupt Practices Act. Students prepare a compliance program integrating these regulations into a workable framework for a company.

LAWS 4319 International Human Rights (3 Credits)
The seminar begins with a general overview of international human rights as put forth in the International Bill of Rights. The second part of the course focuses on the emerging area of corporate social responsibility and human rights. The last part of the seminar consists of student presentations on the topics of the research papers required for the course. This course will satisfy the Upper Level Writing requirement (ULW).

LAWS 4320 International Law (3 Credits)
International Law is the foundational course in public law, treaties, systems, and policies that bind nations into a world community of law. The class places special emphasis on the origins of international law; statehood; international responsibility and claims; use of force; and human rights.

LAWS 4341 International Commercial Arbitration (3 Credits)
This course uses the Willem C. Vis International Commercial Arbitration Moot Competition to give students practical skills-based training in the most important aspects of international commercial arbitration and international sales law. The Vis Moot is based on a problem governed by the U.N. Convention on Contracts for the International Sale of Goods (the “CISG”).

LAWS 4342 International and Comparative Mining Law (3 Credits)
The course deals with basic concepts of mineral law, as practiced in various jurisdictions. This includes exploration, mining and environmental protection and reclamation issues. It then focuses on the current evolution and legal and policy status of mining legislation, mineral investment agreements, and major actors. Students completing this course develop a basic understanding of the general approaches, legal frameworks, policies and agreements used to regulate the mining industry in key jurisdictions outside the United States. This course is taught in Spanish.
LAWS 4343 International and Comparative Petroleum Law (3 Credits)
The course deals with basic concepts of international law relating to petroleum investment, current elements of petroleum legislation, and petroleum investment agreements (production-sharing, concession, joint venture, service, management contracts). Also, students explore such aspects of petroleum law as dispute settlement and legal status. The instructor will discuss the major actors (international petroleum companies, state petroleum enterprises, Ministries of Energy) and their legal and policy status. Students completing the course leave with a basic understanding of the general approaches, policies, and agreements used to regulate the petroleum industry in key selected jurisdictions outside the United States.

LAWS 4344 International Tax (3 Credits)
Introduction to U.S. international taxation with an equal emphasis on inbound and outbound transactions. Resident and nonresident alien taxation, withholding taxes, effectively connected (business) income, foreign investment in U.S. real estate, tax treaties, branch taxes, earnings stripping, conduit financing rules, foreign earned income exclusion, classification of foreign entities, foreign tax credit, foreign personal holding companies, controlled foreign corporations, passive foreign investment companies, export transactions, Subpart F manufacturing rules, outbound property transfers, and transfer pricing. Cross listed with TAX 4420.

LAWS 4345 Jurisprudence (3 Credits)
The course is designed to introduce several contemporary modes of legal thought. The course is an exploration and critical evaluation of these differing perspectives on law are pursued to foster an understanding of the interdependency between legal philosophy and legal decision process, the role law plays in our culture, and the social and philosophical impediments to law's effectiveness.

LAWS 4347 International Environmental Law in Latin America (2 Credits)
This course examines the role of international law in promoting cooperative solutions to some of the most pressing environmental problems confronting the planet. The course begins with an introduction to the international law framework within which international environmental law has developed, and emphasizes the relationship between international environmental law and international human rights law. The course then uses several case studies to analyze the legal regimes that have developed to address environmental problems of particular relevance to Latin America, including protection of biodiversity, climate change adaptation and mitigation, and protection of water resources. This course is taught in Spanish.

LAWS 4348 International Criminal Procedure and Practice (3 Credits)
The International Criminal Court and the various international and internationalized tribunals such as the International Criminal Tribunal for Rwanda and for the former Yugoslavia prosecute a unique and evolving set of international criminal laws designed to end the impunity of military and political leaders engaged in mass violence. The post-World War II Nuremberg trials were the first attempt to use tribunals to hold individuals criminally responsible. Later, the Nuremberg present was the basis of the creation of ad hoc war crimes tribunals for the former Yugoslavia and Rwanda in the early 1990s, which then opened the door to other tribunals such as the Special Court for Sierra Leone, the Extraordinary Chambers for Cambodia and the International Criminal Court. The practitioners of the tribunals represent the range of cultures, mores and legal traditions of the world. These varied experiences create different expectations as to the conduct of proceedings and what amounts to procedural fairness. This course studies the rules of procedure and practice that have developed at the international tribunals in the multi-cultural context.

LAWS 4350 Juvenile Law (3 Credits)
This course examines the legal parameters surrounding juveniles. Students gain a basic understanding of juvenile law, such as the legal definition of who is considered a child and the allocation of power between the state, parent(s), and the children. The class examines what protection the Constitution provides children and the historical development and philosophy of juvenile justice to understand the foundation of juvenile law. The focus of the class also includes an examination of rights of abused children and children who are delinquents and status offenders.

LAWS 4351 International Mergers and Acquisitions (3 Credits)

LAWS 4355 Labor Law (3 Credits)
Labor Law provides a background of modern labor relations law and union pressures with an historical review of the laws that shape this field. Laws covered include the National Labor Relations Act; National Labor Management Relations Act; Labor-Management Reporting and Disclosure Act of 1959; Civil Rights Act of 1964; employer unfair labor practices; union unfair labor practices; internal affairs of labor organizations; collective bargaining and settlement of labor disputes; and state labor legislation. Also, it explores employer and union labor practices and manners in which disputes concerning these practices may be resolved.

LAWS 4358 Land Conservation Transactions (3 Credits)
This course covers the fundamental law and principles related to land conservation. It is a research based class, and students are responsible for researching, presenting information and drafting regarding a specific conservation project. This course provides all the background necessary to allow students to conduct a meaningful research foray in and to create conservation easements for land conservation.

LAWS 4360 Land Use Planning (3 Credits)
This course examines government controls used in the regulation of land use and development and the urbanization of the built environment in cities and metropolitan areas in the United States. The course includes an analysis of state and local laws and federal constitutional issues related to the use of master plans, zoning and land development codes, growth management and smart growth development techniques, as well as the topics of subdivision regulation, eminent domain and urban renewal. Special problems in land use planning studied include exclusionary zoning, regulation of aesthetics, design controls and visual beauty, signs and billboard, religious land use, protection of natural lands and wildlife habitat, regulation of natural resources development, fair housing laws, and the protection of private property rights in the urban regulatory process.
LAWS 4362 Latin American Law (3 Credits)
This course seeks to provide students with a basic understanding of Latin American legal traditions. Intended for students who will come into contact with Latin American law in their work as lawyers, international civil servants, business executives and diplomats. The course examines the civil law tradition and constitutional law issues and current developments, such as Latin American economic integration, reform of the public sector, and the emergence of the Inter-American system for the protection of human rights.

LAWS 4365 Law and Economics (3 Credits)
This course is an examination of selected common law, regulatory law, and Constitutional law issues from the perspective of economic efficiency analysis.

LAWS 4375 Law and Society (3 Credits)
The primary focus of this seminar is on law as a product of the structure of society. The subject matter can be divided into four distinct sections: 1) What factors affect the development of substantive law? This section examines the influence of values, beliefs and norms. 2) Given the existence of substantive law, what organizations develop to carry out the administration of law? Here concentration is on the phenomena classified as legal roles, organizations, institutions, and inter-institutional relations -e.g., juries, the legal profession, courts, legislature, etc. 3) How does law affect social behavior? and 4) What is the role of law in social change?

LAWS 4376 Race, Class & Reproductive Rights (3 Credits)
This course examines how race and class status affect women's reproductive rights and how both legal rules and medical practices in this area rely on stereotypes and enforce norms of "good motherhood" on women. Topics covered include some or all of the following: abortion, contract parenthood ("surrogacy"), cloning, sterilization, embryo freezing, pregnancy-based employment discrimination, criminal prosecutions of women for prenatal substance abuse, and court-ordered Cesarean sections.

LAWS 4379 International Trade Law (3 Credits)
This course examines the law of international trade in goods and services, focusing principally on the law of the World Trade Organization and the General Agreement on Tariffs and Trade. We examine the trading system's rules restraining national restrictions on trade that address, among other things, tariff and non-tariff barriers, discrimination, regionalism, anti-dumping, countervailing duties, and safeguards. The course also spends time considering the relationship between trade and other regulatory areas or social values, such as environmental protection, health and safety standards, human rights, intellectual property protection, and other facets of globalization. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4380 Hazardous Waste and Toxic Substances (3 Credits)
This practical, hands-on course reviews the major federal environmental protection programs, with an emphasis on the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or "Superfund") and the Resource Conservation and Recovery Act (RCRA). It also covers Toxic Torts, Underground Storage Tanks, the Clean Water Act, Safe Water Drinking Act, and the Clean Air Act. Other materials may be distributed by the instructor on OSHA, NEPA, TSCA, OPA, the Colorado state voluntary cleanup program (VCUP), toxicology, and immunity issues. The course emphasizes practical application of major environmental laws. Students become familiar with statutory and regulatory schemes, and are expected to be able to identify environmental legal issues and apply environmental laws and regulations to hypothetical problems. JD student prerequisites: LAWS 4220, LAWS 4495, or LAWS 4495. LLM and MRLS student prerequisites: LAWS 4220, LAWS 4450, or LAWS 4495, or be registered to take any of these.

LAWS 4382 Legislative Process: Institutions & Interpretations (3 Credits)
This course is designed to be a three credit introductory course on the legislative process. This course focuses on theories of the process through an examination of theories of representation, theories of deliberation, direct democracy, and due process of lawmaking. Finally, this course will also explore legislprudence. Legisprudence explores theories of statutory interpretation and constitutional/statutory provisions which govern the political process and its participants. This course is intended to serve very practical goals. Students considering careers as legislative drafters, legislative staffers, elected officials, lobbyists or activists should emerge from this course with an understanding of the legislative process and a sense of how courts, agencies, and the executive branch are likely to interpret statutes. This course provides litigators with the tools to convince the courts that their interpretation of a statute is the correct one. For those students whose careers will require advising others about the meaning of statutes, this course helps provide the skills needed to perform that task.

LAWS 4383 Doing Business-Latin America (3 Credits)
Taught in Spanish, this course acquaints students with the legal framework of business transactions in Latin America. The course exposes students to the civil law system used in most Latin American countries and covers selected topics of importance to lawyers advising clients doing business, or seeking to do business in Latin America. Topics may include the development of Latin American law, types of corporate and partnership organization, trade law, foreign investment, intellectual property, taxation of foreign income, environmental and labor standards, and dispute resolution.

LAWS 4385 Lawyering Process I (3 Credits)
The Lawyering Process Course provides first-year law students with a foundation in the essential lawyering skills that are necessary to be an effective, ethical, and professional member of the legal community in a rigorous, supportive learning environment that uses a client-centered approach. The first semester focuses on introducing students to the legal system, legal research, and providing client advice through written analysis.

LAWS 4386 Lawyering Process II (3 Credits)
The Lawyering Process Course provides first-year law students with a foundation in the essential lawyering skills that are necessary to be an effective, ethical, and professional member of the legal community in a rigorous, supportive learning environment that uses a client-centered approach. The first semester focuses on introducing students to the legal system, legal research, and providing client advice through written analysis. The second semester builds on students' research, writing, analytical, and oral presentation skills in the context of advocating for a client.
LAWS 4420 Legal Practice Seminar – Law as a Business (3 Credits)
This course provides an overview of the business functions of a law practice. Students learn how effective law practice administrators and managers base policy and management decisions on a comprehensive understanding of the law firm as a complex and interdependent equation. JD course, open to MSLA students.

LAWS 4421 Introduction to Small Practice Management (3 Credits)
This course provides an introduction to the administrative needs necessary to open and operate a solo or small legal practice. Topics include: administrative needs specific to various types of legal practice; space and facilities; technology; document management systems; malpractice insurance; outsourcing; health insurance; conflicts; and human resources issues.

LAWS 4422 Legal Databases Research (3 Credits)
This course introduces students to a variety of legal databases, both fee-based and free, that can be utilized for conducting effective legal research as a student and practicing lawyer. Students learn to analyze and critically evaluate whether or not a database provides accurate information and resources. Students learn to determine which legal databases are most useful for specific types of information and resource needs. Students learn to construct successful search strategies that can be employed to search a database and find the information required. This course equips students to become expert researchers in the online environment.

LAWS 4424 Legal Spanish for Lawyers (2 Credits)
This course prepares students with basic Spanish proficiency to represent Spanish-speaking clients in the U.S. legal system or to work in Spanish on multinational matters involving Latin America. It combines one-on-one Spanish immersion instruction with a structured classroom component. The Spanish immersion component introduces and builds on each student's legal Spanish vocabulary in areas of law likely to require lawyering in Spanish or in areas identified as priorities by the student. The structured classroom component allows students to practice skills in Spanish, such as client interviewing, intake, and client counseling, through simulations and group exercises. This course is taught in Spanish.

LAWS 4425 Legal Profession (3 Credits)
This required course is the study of the legal profession in American society. Topics include the history, structure, and function of the legal profession; the role of lawyers in the delivery of legal services; standards of professional ethics (including the Code of Professional Responsibility and the Rules of Professional Conduct); professional responsibility problems that confront the legal profession; developments in the delivery of legal services; disciplinary procedures; and admission to the practice of law.

LAWS 4430 Mediation and Arbitration Clinic (3 Credits)
This is a course offering clinical experience in both mediation and arbitration. The student learns mediation skills, performs mediation simulations, and mediates actual cases. Students are oriented to the role of arbitrator, perform arbitration simulations, and attend actual arbitrations. By gaining experience in both roles, students learn which process to choose for resolving a particular dispute. In addition, students learn lawyering skills such as communication, negotiation, problem solving, and drafting agreements. Application must be sent to the Student Law Office for admission to this course. Students will earn 3 out of class credits for this course and 2 in class credits through the corequisite course L4803, Mediation and Arbitration Clinic Seminar. Corerequisite: LAWS 4803. Prerequisite: permission of faculty supervisor.

LAWS 4433 Media Law (3 Credits)
This course addresses the First Amendment, statutory, and common law regimes under which the news media operate in the United States, ranging from the seminal New York Times v. Sullivan to the recent decisions on anonymity for online bloggers. This course is designed to provide opportunities for serious study/discussion of legal issues affecting the news media, as well as opportunities for practical experience in the tasks faced by today's media lawyers. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4436 Litigation Technology (3 Credits)
Litigation Technology gives students up-close, hands-on learning to prepare and effectively use electronic illustrative aids and demonstrative exhibits in trial and alternative dispute settings. Each student prepares opening statements, closing arguments, and direct and cross-examinations, utilizing litigation software. Students learn to create their own presentations, and how to advocate most effectively using technology.

LAWS 4441 Business Mergers & Acquisition (3 Credits)
This is a transactions based course that focuses on teaching future junior associates practical deal skills in the context of M&A law. The course covers how M&A deals (e.g. asset sales and triangular mergers) are structured, how lawyers interact with various parties to engineer a transaction, the basics of a negotiated document, allocation of value and risk, drafting techniques, advising boards, and due diligence concerns. We work with statutes relevant to M&A transactions (with a focus on Delaware law and the MBCA), federal securities laws (the Act, proxy rules and the Williams Act), and survey tax and antitrust laws. Finally, the course also covers anti-takeover defenses, deal protection devices, and board fiduciary obligations. While the course includes theory and policy discussions, it also incorporates practical assignments, a drafting exercise, and a team presentation. Prerequisite: LAWS 4190.

LAWS 4442 Trial Practice III: Mentors Practicum (3 Credits)
Advanced Trial Practice: Mentors Practicum is a year-long, skills-based course for law school students seeking to refine their trial skills, and improve their understanding and application of evidence and criminal procedure, through teaching these skills to local area high school mock trial students. The course consists of two classes a week. The first takes place at the law school. This weekly class involves case analysis and evidentiary discussion, resulting in the law students preparing their lesson plans to be taught to the high school students. Lesson plans include trial topics such as case analysis and evidentiary discussions, direct and cross-examination, objections and the rules of evidence, opening statements, closing arguments, and development of theme and theory. The second weekly class takes place at a local area high school, where the law students act as mentor-coaches to high school mock trial teams.
LAWS 4444 Medical Malpractice (3 Credits)
This course is a study of the various types of medical malpractice claims, and special issues encountered in medical malpractice litigation. Students learn how to select and prepare medical negligence cases for trial, with focus on the use of discovery tools in medical cases, hiring and working with medical experts, and explore settlement, subrogation, and probate approval for the settled claims of a minor. Medicine is central to medical malpractice litigation, so students are also exposed to concepts in anatomy, physiology, pathology, medical terminology, and medical records in this course.

LAWS 4445 Mining Law (3 Credits)
This course provides the basic framework of mining law. It begins with the acquisition of title to and development of deposits of hard minerals and energy resources under the mining and mineral leasing laws of the federal and state governments in the western United States. Next, it emphasizes the practices and procedures of the various proprietary and regulatory agencies responsible for the management and administration of public lands. Finally, students learn how to resolve competitive demands for exclusive and multiple use of public lands for mineral production and conservation.

LAWS 4446 Multiculturalism, Race and the Law Seminar (3 Credits)
This course is designed to examine the interstices of cultures, race, identity and the law as manifested in legislation and jurisprudence. Through case law and articles, we uncover and examine the ways in which legal systems define and promote certain racial and cultural activities, identities, and classifications and discourage others. Some are advanced as legitimate, and deserving of protection, and others not so. These endorsements have a significant impact on the makeup of American society. We see ourselves as a melting pot of cultures and peoples from all over the world, but do our laws really promote this vision? Have our laws evolved to promote racial and cultural harmony, or to discourage it? While most discussion focuses on these issues as they appear in the United States, we also discuss cases and materials from other nations, including Australia, Canada, India, Israel, Europe and Africa. Race and culture have played a pivotal role in historical and current political events and these will also be examined from a global perspective. There is no final exam, but written work is assigned throughout the term, and a final research paper is required.

LAWS 4450 Natural Resource Law (3 Credits)
The course is designed primarily for students who wish to have an introduction to and an overview of the entire natural resources law area in one course. Students survey the primary natural resources subject matter areas: water law; mining law; oil and gas law; public land law; environmental law; and energy law.

LAWS 4452 Economics of Natural Resource and the Environment: Policy, Markets, and Economic Measurement (3 Credits)
This course deals with the basic concepts of financial evaluation of a natural resources project. The emphasis is on financial evaluation topics and issues relevant to a lawyer’s participation in a project. Students are introduced to the time-value of money; spreadsheet analysis; discounted cash flow; and spreadsheets, with relevancy to negotiations. Students are encouraged to consult with the director of this program before enrollment.

LAWS 4454 Psychiatry and the Law (3 Credits)
This course explores the relationships between psychiatry, psychology, medicine and the law. Subjects to be covered include: DSM-IV diagnoses and psychopharmacology; sanity and competency determinations; role of mental health experts in the court; special issues involving the mentally ill and death penalty; issues particular to juvenile offenders; third party protections and reporting requirements in child abuse and danger to third parties; civil commitment and involuntary treatment of the mentally ill; malpractice including professional misconduct and sexual boundary violations, and standards of mental health care; professional ethics in medicine and the law; law of informed consent and proxy decision making for medical treatment; confidentiality; clinical and legal aspects of end of life care; and prisoners’ rights in correctional settings including sex offender treatment. Readings include landmark state and federal decisions shaping each of these areas, along with readings from legal and mental health literature.

LAWS 4455 Negotiation and Mediation (3 Credits)
The course examines principles of negotiation, bargaining and dispute problem solving. Builds the development of skills in negotiation and later mediation. Principles of problem solving introduced in negotiation are further developed in an exploration of mediation, it’s legal, economic, skills context and its propriety as a process to resolve disputes in varying circumstances.

LAWS 4462 Negotiating Natural Resources Agreements (3 Credits)
Students completing this course leave with an understanding of the general approaches, and primary issues and motivations pertaining to the negotiation of large, internationally funded petroleum and mining projects. They particularly gain a perspective on the negotiation of first-tier agreements between trans-national companies and governments, and joint venture agreements between private parties.

LAWS 4463 Qualified Pension and Profit Sharing Plans (3 Credits)
An in-depth study of ERISA, labor department rules, and Internal Revenue Code provisions relating to qualified deferred compensation. The course is geared toward an understanding of all the pension and profit sharing rules required for plan qualification, with emphasis on qualified plan planning for both incorporated and unincorporated forms of business. Cross listed with TAX 4120.

LAWS 4464 Natural Resources Distinguished Practitioner Seminar (3 Credits)
The Distinguished Natural Resources Practitioner in Residence Seminar is a “capstone seminar” taught each year in the Spring Semester by a different but prominent natural resource or environmental law lawyer who has extensive experience in energy, resources, or environmental law work. The focus of the Seminar is on skills training, where the skills taught are those that all lawyers need in order to have a successful career in the practice of law. Among the “how-to” skills typically addressed are: (1) how to obtain a job, either as a lawyer or as a law-trained worker; (2) how to obtain and retain clients; (3) how to work in the private sector, government sector, business sector, and in-house sector; (4) how to write; (5) how to work with associates and colleagues; (6) how to deal with technical or scientific matters in a legal context; (7) how to work in the litigation arena, before trial and appellate courts; (8) how to practice or appear before administrative agencies; (9) how to organize and refine a mass of complicated information so that a decision-maker can make sense of it. There is no final exam or paper expected; the grade is usually by class participation and small writing exercises. Prerequisite: permission of instructor.
LAWS 4465 Oil and Gas Law (3 Credits)
This course surveys the various characteristics of oil and gas interests. Topics include mineral rights, and how ownership leases and transfers of these rights should be handled. The instructor also distinguishes the field of oil and gas law on private lands from those in the public domain.

LAWS 4468 Pre-Trial and Discovery Practicum (3 Credits)
This “hands-on” course provides students with a practical understanding of the pretrial process and how discovery procedures shape and impact civil litigation today. The progression of class topics mirror the pretrial process within the context of a hypothetical case. Starting with initial client interviews, class topics include interrogatories, requests for production, electronic discovery, depositions, and expert discovery. Students also consider ethical issues relating to discovery and the pretrial process, and what remedies or sanctions are available for discovery abuses. This course will satisfy the Upper Level Writing requirement (ULW).

LAWS 4474 Patent Law (Advanced) (3 Credits)
This course explores more than a dozen advanced topics in patent law. These issues include claim drafting; international patent applications; opinion letters; remedies in patent cases; security interests; patent ability of software; and patent ability of genetic sequences. While Patent Law is not a formal prerequisite for this course, students who have not taken Patent Law should be prepared to do extra reading in the first few weeks of the semester to familiarize themselves with the basic concepts of patent law.

LAWS 4480 Professional Ethics Seminar (3 Credits)
This seminar begins with brief introductions to ethics in general and professional ethics specifically, and then turns to in depth consideration of theoretical perspectives on lawyer's ethics. For the remainder of the semester the seminar focuses on: (1) Comparative professional ethics: comparing the ethics of other professions—medicine, journalism and business, for example—with the ethics of lawyering. (2) Narrative ethics: stories (from literature, biography, or tradition) and how they inform ethical perception and choice. (3) Topics chosen by students for research and presentation.

LAWS 4481 Partnership Taxation (3 Credits)
Tax treatment of partnership income in the hands of the partner; the conduit rule; problems associated with the formation, operation, and dissolution of the partnership; sale of the partnership interest; withdrawal and retirement of partners; basis adjustments, unrealized receivables, and substantially appreciated inventory. Cross listed with TAX 4320.

LAWS 4483 Patent Litigation (3 Credits)
This is an in-depth study of laws, strategies and tactics of patent litigation. Topics include legal principles, procedures and strategies associated with patent claim construction, infringement, invalidity and unenforceability. Also, students cover patent trial practice with a focus on both the knowledge and practical skills necessary to litigate patent cases.

LAWS 4487 Prosecutor as Protagonist (3 Credits)
This seminar is an in depth examination of the role of the prosecutor in our justice system. Attorney General Suthers leads wide ranging discussions about crime and punishment. Topics discussed and debated include the purpose of criminal sentencing, minimum mandatory sentences, the death penalty, the juvenile justice system, plea bargaining, prosecutor ethics, special prosecutors, criminal justice interest groups, prosecution oversight of police, forensic science, federalization of crime, attorney general activism, jury reform, reform of drug laws, and mental illness in the criminal justice system. Some of the top experts in Colorado on these subjects speak to the seminar participants.

LAWS 4489 Civil and Criminal Tax Procedure (2-4 Credits)
Statute of limitations on assessment/collection of deficiencies, definition of deficiency, restrictions on assessment and collection; statute of limitations on overpayments, claims and suits for refund, and limitations for criminal prosecutions; regulations and rulings—retroactive revocation; administrative settlements, closing agreements and compromises; civil penalties; tax return preparer penalties; civil litigation—injunctions, jurisdiction of Tax Court, District Court, and Court of Claims, small claims procedure, authority to increase deficiencies, choice of forum; jeopardy assessments and termination of taxable years; criminal tax investigations—administrative summons, document production (taxpayer and third party), constitutional protections, common law privileges, strategies; professional responsibilities and ethics for the tax practitioner. Cross listed with TAX 4310.

LAWS 4490 Property (4 Credits)
This course introduces selected topics relating to rights and interests in land and personal property. These topics include estates in land and future interests; private and/or public restriction of land use; conveyancing; interests and estates in land; and landlord/tenant relations.

LAWS 4495 Public Land & Resources Law (3 Credits)
This course provides an overview of law, policy, and procedures governing the third of United States land managed by the federal government for the benefit of all the people. The course traces the interwoven law, history, and economics controlling acquisition and allocation of public lands and resources and examines a selection of significant commercial uses and resource categories of land use practices. Recommended prerequisite: LAWS 4025.

LAWS 4497 Law & Popular Culture (3 Credits)
Why are there so many jokes about lawyers? Why is John Grisham so popular? What explains the success of the “Law and Order” franchise? Does popular culture affect the outcomes of trials? This seminar explores the role law plays in popular culture (for example, how law and lawyers are portrayed and perceived; how law shapes and defines pop culture) and the role popular culture plays in law and in the lives of lawyers (for example, the impact of cameras in the courtroom); should lawyers be allowed to write books and sell their clients’ stories? The reading list includes traditional materials (case law and legal scholarship) as well as movies, novels and other popular culture materials. Recommended prerequisite: LAWS 4425.
LAWS 4988 Public Interest Practicum (1 Credit)
The Public Interest Practicum is one option for students to satisfy the Public Service Requirement. The only satisfying course offered for only zero or one credit, it requires participation of the JD student in a 50-hour, non-compensated, law-related, public interest placement under the supervision of an attorney or judge who has been in practice or on the bench for a minimum of three years. A practicum student must complete the minimum of 50 hours in one of the following settings: judicial internship; government agency; private law firm doing pro bono or low bono work; non-profit (501(c)(3)) organization; or pre-approved uncompensated research project for a faculty member. A student may decide to take the Public Interest Practicum for 1 credit or 0 credit. The Public Interest Practicum for 1 Academic Credit requires a Public Interest Practicum Online Seminar component to supplement the practical experience. The Public Interest Practicum is beneficial for students who are not planning on satisfying the Public Service Requirement through other opportunities.

LAWS 4500 Public Utility Regulation (3 Credits)
This intensive, 1-week course presents law practitioners with recent innovations in the economics and policy of utility regulation. Course features guest lectures with individuals from industry and government sectors that are involved with utility regulation. Students learn the social science of utility regulation and gain insight into how utility regulation is conducted.

LAWS 4506 Energy & Project Finance Law (3 Credits)
This course explores the legal, economic, technological, and policy underpinnings of the Renewable Energy Industry, global warming, and associated implications to the electric utility and transportation sectors. The course addresses both domestic and international perspectives on renewable energy development.

LAWS 4508 Renewable Energy for the 21st Century: Law, Policy & Markets (3 Credits)
Renewable Energy for the 21st Century helps prepare students for future involvement in this dynamic sector. Students are introduced to the policy and legal framework involving renewables and energy efficiency as well as important technological and market-based issues.

LAWS 4509 Renewable Energy: Project Development and Regulation (3 Credits)
This course examines the broad range of legal topics that a renewable energy lawyer must understand in order to practice effectively. We examine the structure, regulation, and functioning of the electric energy industry in the United States. We explore in detail the law applicable to the development, ownership and operation of renewable projects across the spectrum of technologies. Significant emphasis is placed on the practical “real world” issues encountered in developing, financing and operating these projects.

LAWS 4511 Renewable Energy Law (3 Credits)
The development of renewable energy sources has grown exponentially both nationally and worldwide. The increased appetite for renewable energy sources has driven a need for more information about those sources and the significant legal implications arising from the development of those sources. This course is organized by resource—solar, wind, hydropower, biomass, and geothermal. It focuses primarily on critical legal issues in tort, property, and contract areas raised by the expansion of these key renewable energy sources. The course also addresses the role of energy efficiency and some of the broader legal hurdles facing renewable energy use from a nationwide perspective.

LAWS 4520 Remedies (3 Credits)
Remedies provides students with the basic principles and problems of damages, restitution, and equity. Students enter into an investigation of fundamental concepts, such as remedial goals, problems of proof, and the relationship between remedies and substantive rights. The course also explores equitable remedies and alternative remedial devices available in any given situation.

LAWS 4524 Russian for Lawyers I (3 Credits)
This is a unique chance to break stereotypes about Russia! This sequence of courses introduces students to the fundamentals of the Russian language, with emphasis on legal and economic vocabulary. More specifically, this includes vocabulary and reading assignments that involve finance, international trade, stock exchange, and with a special focus on Natural Resources and Environmental Law in Russia. No prior knowledge of Russian is required.

LAWS 4525 Russian for Lawyers II (3 Credits)
This course picks up where Russian for Lawyers I leaves off by continuing to introduce students to the fundamentals of the Russian language, but with an emphasis on legal and economic vocabulary. More specifically, this includes vocabulary and reading assignments that involve finance and banking, insurance, international trade, and stock exchange/securities matters. Prerequisite: LAWS 4524.

LAWS 4526 Sales and Leases (3 Credits)
This course examines the formation and terms, as well as remedies for breach, of contracts for the sale of goods under Article 2 of the Uniform Commercial Code (UCC). The course completes the coverage of Article 2 of the UCC that was introduced in the first-year Contracts course. In addition, the course also examines the provisions on leases in Article 2A, sales transactions involving the use of documents of title (Article 7) and letters of credit (Article 5).

LAWS 4527 School of Mines Exchange (3 Credits)
LAWS 4528 Securities Law (3 Credits)
Students in this course study the statues and regulations regulating the offer and sale of securities by private and public corporations. Course material information pertaining to the Securities Exchange Act of 1934; federal regulation of the public securities markets; insider trading; broker-dealer regulation; tender offers; and public corporations. Recommended prerequisites: LAWS 4190 or LAWS 4048.
LAWS 4529 Securities Litigation (3 Credits)
The main focus of this course is the granting of a security interest in collateral in exchange for a loan and the priority among creditors to the collateral in case the debtor defaults on its obligation to repay. Secured transactions can be involved in a wide variety of legal representations, including transactional matters and litigation. The Secured Transactions Class is designed to provide students with a working understanding of Article 9 of the Uniform Commercial Code and how it comes into play in these transactions. Students who have taken the Commercial Law Survey course should not take this unless they wish to study this subject in greater depth.

LAWS 4530 Secured Transactions (3 Credits)
This course covers the law of secured transactions in personal property. It is not a securities course. Students who have taken the Commercial Law Survey course should not take this unless they wish to study this subject in greater depth. The main focus of this course is the granting of a security interest in collateral in exchange for a loan and the priority among creditors to the collateral in case the debtor defaults on its obligation to repay. Secured transactions can be involved in a wide variety of legal representations, including transactional matters and litigation. The Secured Transactions Class is designed to provide students with a working understanding of Article 9 of the Uniform Commercial Code and how it comes into play in these transactions.

LAWS 4539 Social Change Lawyering (2 Credits)
This seminar explores the role of law and the legal profession in pursuing broader social causes across the political spectrum, such as the pursuit of civil rights for racial minorities or the effort to overturn the constitutional right to abortion. Distinguished from the practice of law solely advocating the interests of individual clients, social change lawyering is a major component of the legal profession of the 21st century. Known variously as “public interest law,” cause lawyering, and by numerous other labels, this area of practice implicates many important issues worthy of serious scholarly consideration. Some of the topics that may be examined include: the competing definitions of social change lawyering and the relevance of such definitions; the history of American law and social change; the role of progressive/conservative ideologies in social change lawyering; the role of government and private firms in effectuating social change; strategies and organizational models for social change lawyering groups; the relationship between social change lawyers and their clients; the economics and financing of social change lawyering; ethics and social change lawyering; legal education and social change. Throughout the course, students are asked to critically examine the role of lawyers in social change, and question whether and how lawyers have been effective agents of social change in American society. The course does not use a traditional casebook. Rather, students study a set of materials comprised of excerpts from law review articles and books, historical and sociological materials, and problems. Students are required to write short, reflective discussion board posts on each week’s readings, as well as a more comprehensive final paper. Students may elect to use this seminar to fulfill the upper level writing requirement if they submit a draft of the final paper and do a substantial rewrite after receiving the instructor’s feedback. Prerequisite: permission of instructor.

LAWS 4543 Sexual Orientation and the Law (3 Credits)
This seminar offers an opportunity for students to study the relationship between law and sexual orientation. Historically, law in this country consistently and pervasively regulated the realm of human identity and behavior we call sexuality. However, questions and claims challenging traditional assumptions about sexual orientation have surfaced in the last twenty-five years. Our study of sexual orientation and law allows students to view the relationship between law and society through a new lens, that of sexual orientation.

LAWS 4545 Sports Law (3 Credits)
The course studies the legal problems of professional athletics. It applies the application of contract law, antitrust, labor law and income tax to the functioning of a professional league. The question of governmental regulation of professional sports is a constant focus of students’ work. Special attention is given to the impact of these questions on negotiating players’ contracts.

LAWS 4550 State & Local Government (2,3 Credits)
The institutional framework within which the decision-making process affecting urban areas operate; the rules by which the formal power to govern in urban areas is organized, limited and divided among decision-making units. Although dealing largely with the subject matter of traditional courses in municipal corporations, this course broadens that perspective to include newer institutional and organizational arrangements.

LAWS 4552 Securities Law Seminar (3 Credits)

LAWS 4553 Spanish for Lawyers (3 Credits)
This course is in beginning Spanish with an emphasis on the development of listening, speaking, reading and writing skills. The focus is on creating conversational exchanges about selected topics and situations in the present and future tenses. Students practice oral communication skills needed to converse with Spanish-speaking clients, using basic legal terminology. The customs and culture of Spanish-speaking people are also examined with the aid of video programs, CDs and readings. Topics: Greetings, spelling names and addresses, personal descriptions, numbers, coordinating meetings (times, driving directions), family members, housing arrangements and meals, grammatical structures, present and future tenses of verbs, ser and estar, possessive adjectives, commands, por and para and direct object pronouns. Legal Topics: intake, phone etiquette, interview, fees, and confidentiality.

LAWS 4554 Spanish for Lawyers II (3 Credits)
This course is the second of a two part series in beginning Spanish with an emphasis on the development of listening, speaking, reading and writing skills. The focus is on creating conversational exchanges about selected topics and situations in the present and past tenses. Students practice oral communication skills needed to converse with Spanish-speaking clients using basic legal terminology. The customs and culture of Spanish-speaking people are also examined with the aid of video programs, CDs and readings. Topics: Daily routine, the concept of time, shopping, sports and pastimes, holidays and traditions, transportation and travel. Grammatical structures: past tenses, uses of ser and estar, reflexive verbs, double object pronouns, verbs like gustar. Legal topics: interviewing client (divorce, robbery, domestic violence, and traffic accident), explaining civil and criminal court proceedings.
LAWS 4555 Street Law (3 Credits)
Under faculty supervision, students in two-person teams will teach law in urban high schools. An underlying principle of the course is that one of the best ways to learn is to teach. There will be weekly seminars and field performances supervised by the instructor. Students will develop skills in: practical application of legal concepts; substantive topics in federal and Colorado Law; teaching techniques; classroom management; and the multi-faceted roles of lawyers in the community. Each student will participate in researching, drafting, and presenting a course in a particular field of substantive law.

LAWS 4556 Subsustain & Trade (3 Credits)
This seminar is designed to give an introduction to the convergence of trade, environment, and development issues and law, addressing areas of conflict and synergies among them. It focuses on rules, procedures, and institutions aimed at making globalization compatible with sustainable development by integrating trade policy and law with policies that address other aspects of “human development”, such as, environmental concerns, social concerns, human rights, gender issues, and governance. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4605 Taxation of Natural Resource (2 Credits)
This course outlines the financial, business, and legal tax problems that may be encountered during the acquisition, operation, and disposition of natural resources properties. It is a strong course for students to develop skills in general tax planning for natural resources ventures.

LAWS 4610 Torts (4 Credits)
This introductory course considers compensation for private wrongs, covering harm to persons and property, with attention to legal theories of intentional torts, negligence and strict liability.

LAWS 4615 Torts (Advanced) (3 Credits)
Advanced Torts combines practical and theoretical discussion of issues that personal injury lawyers face in practice. The topics in the seminar vary but generally include fee agreements, damages, use of experts, medical malpractice, hospital and other liens, subrogation, and governmental immunity. The seminar emphasizes the empirical reality of injuries, claims, and litigation. Prerequisite: LAWS 4610.

LAWS 4618 Representing Clients Before the SEC (3 Credits)
SEC insiders explain the processes and practices of the Division, intertwined with discussion and analysis of SEC enforcement actions past and present. This course gives students critical information to effectively represent a wide variety of clients before the Division, among them public companies, regulated entities, defrauded investors, and perpetrators of crime.

LAWS 4631 Space and Technology Law (3 Credits)
Space and Technology Law is not one particular area of law. Rather it is best thought of as a combination of numerous areas of policy and law (including the Communications Act, the COMSAT Act, the Defense Production Act, the Land Remote Sensing Act, the Commercial Space Act, the Arms Export Control Act, the Export Administration Act, and several other bodies of law) that come together to govern the Space and High Technology Industries. There is extensive overlap between what is considered high tech and what is considered space and how they are treated from a legal and policy standpoint. The course explores many of these interrelated issues.

LAWS 4634 Motions Practice (3 Credits)
In this class, students learn how to present and argue pre-trial motions. These motions include motions from civil practice (motion for preliminary injunction, motion to dismiss, motion for summary judgment, etc.) criminal practice (motion to suppress, Rule 35(c), etc.) and evidentiary motions (Rules 403, 404, and 405.) In addition, the course covers both legal and evidentiary motions in limine. Each student is asked to prepare, present, and argue a motion, as well as decide motions presented by others after making appropriate findings of fact and conclusions of law. Because a number of the motions involve the presentation of witnesses and appropriate case and statutory law, students learn trial skills, as well as refresh their knowledge of criminal and civil procedure, and the rules of evidence. Students are not asked to draft motions or prepare written briefs.

LAWS 4635 Trial Practice I: Basic Courtroom Skills (3 Credits)
The course is designed to teach the concepts and organizing principles of the formal trial process. It emphasizes the understanding necessary to develop, evaluate, prepare, and present a case for trial before a judge, jury, or other fact-finder. Exercises and simulations are used to demonstrate the importance of theory building and teach the functions of each stage of a trial. Students develop the advocacy skills appropriate to adversary adjudication. Prerequisite or corequisite: LAWS 4235.

LAWS 4637 Civil Litigation Practicum (3 Credits)
This course provides students a practical, hands-on approach to civil pretrial litigation. Students draft pleadings, motions and discovery requests essential in the litigation process prior to the actual trial stage.

LAWS 4638 Trial Practice III: Mentor's Practicum (3 Credits)
The Mentor's Practicum employs and relies upon integrated teaching, feedback, student collaboration, and multiple assessment. The practicum is designed for law school students who have exhibited advanced skills in trial advocacy, client advocacy, case analysis and communication.

LAWS 4640 Trusts and Estates (4 Credits)
Students enrolled in this course learn the ins-and-outs of trusts and estates planning. The course surveys everything involving succession wills, trusts, the role of third parties to a trust or estate, and property disposition.

LAWS 4651 Legal Writing (Advanced) (3 Credits)
Course involves a series of writing assignments, normally related. Typically, students research an initial legal issue, and then draft a first office memo. After receiving detailed feedback, students do at least one revision of that first office memo. Students then undertake research for a second legal issue, and then draft a second office memo. After receiving detailed feedback, students then do a revision of that second office memo. Finally, students use the final versions of those two office memos to create a court document, which they then revise as their final assignment. This course satisfies the Upper Level Writing requirement (ULW).
LAWS 4660 Scientific Evidence (3 Credits)
The course begins with the U.S. Supreme Court decision in Daubert v. Merrell Dow Pharmaceuticals, Inc. (113 S.Ct. 2786 (1993)). This decision threw out the Frye Rule that had governed the admission of scientific evidence in federal courts since 1923. While the Daubert rule now applies in all federal courts, states are free to either stay with the Frye Rule, adopt the new Daubert Standard or adopt some combination of the two. Students discuss the implications of these evidentiary changes in a number of areas of legal controversy. The course concentrates primarily on the use of social science evidence; however, topics include tort litigation involving Bendectin, and the controversy over the use of DNA testing in criminal cases. Other topics include the use of scientific evidence in consumer confusion cases; obscenity cases and the question of community standards; and the number of syndrome evidence cases, including post-traumatic stress disorder, battered woman syndrome, and rape trauma syndrome. Constitutional law cases include coverage of death penalty issues, jury size cases, and school segregation by race and gender (including the controversy over single-sex education, and the ending of school busing mandates by the federal courts). The goal of this course is to increase the proficiency of lawyers to use scientific evidence on behalf of clients and be able to defend against such evidence when presented by the opposing counsel.

LAWS 4670 Water Law (3 Credits)
Water Law is an introductory course for students interested in pursuing water law. It covers private property rights in water, and the legal and environmental controls surrounding it. Recommended prerequisite: LAWS 4025.

LAWS 4672 International Water Law (3 Credits)
This course presents a global overview of water law, systems, and practice in the modern world. It includes coverage of hydrology, history, national legal systems, and modern international treaties and cases. It has a special emphasis on sustainable development, equitable utilization, pollution control, and ecosystem protection utilized for multi-nation water basins. LAWS 4670 Water Law and LAWS 4320 International Law courses are not a prerequisite, as basics will be covered.

LAWS 4674 White Collar Crime (3 Credits)
This course is designed for students with an interest in advanced criminal law practice, particularly the growing legal field of white collar crime. This seminar course will introduce students to the major substantive legal areas that make up the white collar field, including mail and securities fraud, bribery, health care fraud, conspiracy, and money laundering. In addition, students will learn the basics of conducting a corporate internal investigation, dealing with search warrants and subpoenas, criminal pre-trial matters, special considerations for criminal discovery, and common ethical issues. By the end of the course, students will have learned the basic substantive and procedural issues involved in white collar practice. Students will learn from and interact with a variety of practitioners drawn from the private and government sector. Instructor permission is required for enrollment.

LAWS 4686 Wills Lab (1 Credit)
This lab is designed to provide students with practical experience with interviewing and drafting for a real client while under the close supervision of a practicing attorney. Clients come primarily from Legal Aid. Each student is individually supervised by a volunteer attorney or by Prof. Marsh. The attorney goes with the student to the first interview with the client to assist the student if any difficulties come up in the interview. Then the student drafts the appropriate documents from scratch, and the attorney helps the student determine what revisions are necessary. When documents are in final form the attorney assists the student in having the documents properly signed. Documents include will, living will, and medical or financial powers of attorney, as appropriate. Letter grades are given by Prof. Marsh. Note that no student is allowed to drop the Wills Lab after the first interview with the client unless there is a severe medical emergency. There will be one introductory meeting scheduled during lunch time. All the rest of the work is scheduled individually by the student, supervising attorney, and client. NOTE: Students will NOT be allowed to drop the course after the first interview with the client. Prerequisite: LAWS 4640.

LAWS 4700 Special Topics (1-5 Credits)
LAWS 4701 Special Topics (1-5 Credits)
LAWS 4702 Special Topics (1-5 Credits)
LAWS 4703 Special Topics (1-5 Credits)
LAWS 4704 Special Topics (1-5 Credits)
LAWS 4705 Special Topics (1-5 Credits)
LAWS 4706 Special Topics (1-5 Credits)
LAWS 4707 Special Topics (1-5 Credits)
LAWS 4708 Special Topics (1-5 Credits)
LAWS 4709 Special Topics (1-5 Credits)

LAWS 4800 Criminal Defense Clinic (3 Credits)
This clinic offers students the opportunity to defend low-income clients charged with various criminal offenses. These offenses include DUI/DDWAI; domestic violence; assault; theft; disturbance; child abuse and neglect; menacing; etc. Students represent their clients in various municipal and county courts in the area. This course requires numerous court appearances for arraignments, pre-trial motions, and sentencing. Students should be prepared for an intense litigation experience in misdemeanor criminal defense. Students earn 3 out of class for this course and 3 in class credits through the corequisite course. Corequisite: LAWS 4801. Prerequisite: permission of faculty supervisor.
LAWS 4801 Criminal Defense Clinic Seminar (3 Credits)
The Criminal Law Clinic Seminar must be taken in conjunction with the Criminal Law Clinic. Class sessions will be devoted to a variety of topics, including classes on lawyering skills, substantive law, issues of lawyering and society, and case review sessions, in which student attorneys will present information about their cases/projects to each other and give and solicit feedback about issues they are confronting in the representation of their clients. The classes include simulation exercises that are critiqued by faculty, and field exercises that involve trips to the Denver jail. Classes are taught by clinical faculty and by guest speakers who include area judges, practitioners, interpreters and other court personnel. Clinic class will be held twice a week for 75 minutes each session. Students earn 3 in class credits for this course and 3 out of class credits through the corequisite course. Corequisite: LAWS 4800.

LAWS 4802 Environmental Law Clinic Seminar (3 Credits)
The Environmental Law Clinic Seminar must be taken in conjunction with the ELCP Clinic. During class, students will review federal civil procedure through a lecture series entitled “anatomy of a lawsuit,” have specific lectures on effective legal writing, and commonly used statutes such as the Freedom of Information Act, and Endangered Species Act. Each student must also prepare a class presentation on their assigned major case, and participate in random, less formal docket meetings. Students must also attend four guest lectures from lawyers and other professionals on environmental law advocacy issues. Students earn 3 in class credits for this course and 3 out of class credits through the corequisite course. Corequisite: LAWS 4206.

LAWS 4803 Mediation & Arbitration Clinic Seminar (2 Credits)
The Mediation and Arbitration Clinic Seminar must be taken in conjunction with the Mediation and Arbitration Clinic. The seminar meets once a week for 90 minutes. Students read articles on mediation issues and receive intensive training in the classroom that is reinforced with classroom simulations. Students are also required to critique each other in the simulations. The seminar focuses upon identifying and resolving issues that arise during actual mediations. Students will earn 2 in class credits for this course and 3 out of class credits through the corequisite course. Corequisite: LAWS 4430.

LAWS 4805 Civil Litigation Clinic (3 Credits)
The Civil Litigation Clinic students represent low-income clients in a variety of civil disputes. The clinic permits students to participate in the selection of cases and problems they work on. Students have represented clients in areas involving wage and hour claims, housing discrimination, eviction defense and domestic violence protection orders. Additionally, the Civil Litigation Clinic requires some form of community outreach project enabling the student to learn about the client populations they serve. Students will earn 3 out of class for this course and 3 in class credits through the corequisite course. Corequisite: LAWS 4806.

LAWS 4806 Civil Litigation Clinic Semnr (3 Credits)
The Civil Litigation Clinic students represent low-income clients in a variety of civil disputes. The clinic permits students to participate in the selection of cases and problems they work on. Students have represented clients in areas involving wage and hour claims, housing discrimination, eviction defense and domestic violence protection orders. Additionally, the Civil Litigation Clinic requires some form of community outreach project enabling the student to learn about the client populations they serve. Students will earn 3 out of class for this course and 3 in class credits through the corequisite course. Corequisite: LAWS 4805.

LAWS 4807 Child Advocacy Practicum (2 Credits)
The Child Advocacy Externship Program is a classroom course and externship taught by the Rocky Mountain Children’s Law Center. The classroom component focuses of juvenile law from the perspective of the child and includes a mock trial judged by Colorado District Court judges and magistrates, with a settlement conference hosted by the Colorado Supreme Court. In the externship, students work on dependency and neglect, delinquency, and protection order cases under the supervision of Law Center Attorneys. NOTE: because this is a year-long course starting in the fall semester, students may only apply during course enrollment in the spring. The Child Advocacy Externship Program is a year-long and 8 total credit hours (2 in-class credits per semester, and 2 externship credits per semester). Applicants should be prepared to develop the skills and knowledge to be an effective child advocate. There are no prerequisites, but applicants need to be prepared to have a work understanding of trial advocacy, professional responsibility and evidence. Applicants should be comfortable with public speaking. Preference is given to incoming third year law students. To apply, send a cover letter and resume to Jason Carrithers at jcarrithers@childlawcenter.org This is a year-long experience. Other Child Advocacy externship opportunities can be found by searching for a supervising attorney under Non Profit organizations and Private Firms. Prerequisite: Participation in Fall and Spring semesters is required, for a total of 8 credits, 2 credits in class and 2 externship per semester.

LAWS 4809 Civil Rights Clinic (3 Credits)
The Civil Rights Clinic (CRC) represents individuals and groups in civil and human rights matters. The CRC’s current cases address a range of complex constitutional issues litigated before the Federal District Court for the District of Colorado. Some of the claims currently being litigated in the CRC will impact constitutional jurisprudence nationwide. The current CRC docket is focused on the constitutional rights of prisoners. These cases challenge prison conditions and policies pursuant to the First, Fifth, Eighth and Fourteenth Amendments on issues such as: indefinite solitary confinement, failure to provide prisoners with adequate medical or mental health care, long-term denial of outdoor exercise, and the prison’s refusal to provide meaningful process to individuals placed in long-term segregation. Students will earn 3 out of class for this course and 3 in class credits through the corequisite course L4812, Civil Rights Clinic Seminar. This course meets the Upper Level Writing requirement (ULW).

LAWS 4812 Civil Rights and Disability Law Clinic Seminar (3 Credits)
The Civil Rights Clinic (CRC) represents individuals and groups in civil and human rights matters. The CRC’s current cases address a range of complex constitutional issues litigated before the Federal District Court for the District of Colorado. Some of the claims currently being litigated in the CRC will impact constitutional jurisprudence nationwide. The current CRC docket is focused on the constitutional rights of prisoners. These cases challenge prison conditions and policies pursuant to the First, Fifth, Eighth and Fourteenth Amendments on issues such as: indefinite solitary confinement, failure to provide prisoners with adequate medical or mental health care, long-term denial of outdoor exercise, and prison’s refusal to provide meaningful process to individuals placed in long-term segregation. Students will earn 3 in class credits for this course and 3 out of class through the corequisite course L4805, Civil Rights Clinic. This course meets the Upper Level Writing requirement (ULW).
LAWS 4880 DU Law Journal (0-3 Credits)
Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4884 Int’l Law Journal (0-3 Credits)
Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4888 Transportation Law Journal (0-3 Credits)
Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4889 Water Law Review (0-3 Credits)
Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4901 Corporate Apprenticeship Program (4 Credits)
The Corporate Apprenticeship Program’s purpose is to provide the opportunity for law students to learn about the distinct challenges facing corporate counsel. This program is offered solely in the spring term and consists of four mandatory seminars and 15 hours of work per week (preferably on consecutive days) in the legal department of sponsoring corporations. The interactive seminars are designed to introduce students to the practice environment and operations of an in-house corporate legal department.

LAWS 4996 Thesis (1-10 Credits)
The program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and the community. Example placements include public defenders’ offices; prosecutors’ offices; the Attorney General’s office; Legal Service offices; judicial clerkships; and selected private firms. Need special enrollment permission from Internship/Externship Office. A maximum of 10 credit hours may be awarded for this program.

LAWS 4999 Directed Research (2-3 Credits)
Direct Research is an opportunity for students to research and write on any area of law approved by a full-time faculty member who agrees to direct the project. The research project must be completed within the semester for which the student is registered. The research is compiled into a paper of publishable quality. A copy is delivered to the supervising faculty member for grading and a second copy is delivered to the associate dean for academic affairs by the last day of exams for that semester. Students may petition for either two or three semester hours. A maximum of five semester hours credit for Directed Research is permitted in satisfaction of the 90-credit degree requirement. A Directed Research application form (available in the registrar’s office) signed by both the faculty supervisor and student is required for enrollment. The registrar’s office will register the student for his or her directed research once the student’s application form has been approved. All directed research projects must conform with the upper level writing requirement, which involves a mandatory rewrite, in addition to any other requirements. This course satisfies the Upper Level Writing requirement (ULW). Permission is required from the faculty supervisor and the Assistant Dean for Student Affairs to increase credit hours to 4 or 5.

LAWS 5025 Externship (1-10 Credits)
The program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and the community. Example placements include public defenders’ offices; prosecutors’ offices; the attorney general’s office; legal service offices; judicial clerkships; and selected private firms. Externship Seminar: In conjunction with the above field placement each student shall meet in a seminar under the supervision of a member of the law faculty to explore common and contrasting areas of professional responsibility, professional tasks and skills, decision making and dispute resolution presented in the various extern settings.

LAWS 5026 Trial Practice III: National Trial Team (3 Credits)
The Trial Teams Course is for the new and veteran students who are selected to represent the school on one of the national trial teams. The course meets one night a week during the summer session for five hours each night. The course is split into two sections, one for returning team members, and one for the newly-selected team members. The course is an advanced courtroom-simulation course in which students work intensely with other students and the instructor, delving into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. The veteran section begins the first class with students presenting both sides of a criminal case. The new member section begins with refreshers on case analysis, evidence, and courtroom strategies, and culminates with final trials. There is weekly out-of-class case analysis, drafting, and preparation required. Grading is based on classroom participation, written homework, simulated courtroom presentations, and a final trial.

LAWS 5027 American Association for Justice Trial Team (3 Credits)
Sturm’s American Association for Justice Trial Team (AAJ) is one of four of the school’s advanced courtroom-simulation based “team-courses” in which students find themselves working intensely with five other students and an instructor, delving deeply into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. Students must invite to be on one of Sturm’s National Trial Teams, after tryouts that are held every spring (April). The team-courses meet all three semesters (fall, spring and summer). Being invited onto one of the teams is a two-year commitment. Starting the first week of each semester, and continuing throughout the entire semester, the AAJ team-course meets once a week in a classroom environment, for a total of 2.5 classroom hours per week. The AAJ team-course also meets a second time each week for courtroom simulation performances and video review, for an additional four (4) hours. There is also substantial out-of-class case analysis and examination drafting required. The team competes on the national level in the fall at an “invitational” tournament, and in the spring in the AAJ tournament against other ranked law schools from around the country. Grading is based on classroom participation, written homework, and simulated courtroom presentations. Prerequisite: LAWS 4635.
LAWS 5029 ABA Trial Team (3 Credits)
Sturm's ABA/NTC team is one of four of the school's advanced courtroom-simulation based "team-courses" in which students find themselves working intensively with five other students and an instructor, delving deeply into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. Students must be invited to be on one of Sturm's National Trial Teams, after tryouts that are held every spring (April). The team-courses meet all three semesters (fall, spring, and summer). Being invited onto one of the teams is a two-year commitment. Starting the first week of each semester and continuing throughout the entire semester, the ABA/NTC team-course meets twice a week in a classroom environment, for a total of five (5) classroom hours per week. The ABA/NTC team-course also meets a third time each week for courtroom simulation performances and video review, for an additional four (4) hours. There is also substantial out-of-class case analysis and drafting required. The team competes on the national level in the fall at an "invitational" tournament, and in the spring in the ABA/NTC tournament against other ranked law schools from around the country. Grading is based on classroom participation, written homework, and simulated courtroom presentations.

LAWS 5029 Semester in Practice (12 Credits)
The Semester in Practice (SIP) gives students the opportunity to develop practice skills by fulfilling 15 credits (12 field work credits plus a three credit graded seminar). Students work full time during the externship (40 hours per week). In this capstone experience, offered to students in their last year of law school, students have significant exposure to the substantive law in their externship, and focus on skills and professional identity in their seminar. One of a handful of such programs in the country, the Semester in Practice is a bridge from law school to practice.

LAWS 5030 Semester in Practice Seminar (3 Credits)
This seminar is the classroom component of the Semester in Practice (SIP) course. Through class discussion, we explore a variety of issues that provide students with the opportunity to reflect on the legal profession and how they perceive their role in the profession - currently and prospectively. We focus primarily on professional identity and ethical issues of key importance to the practice of law.

LAWS 5031 Legal Externship Seminar (1 Credit)
The Legal Externship Program is divided into practice-specific programs. Students enrolled in each of these programs are required to also enroll in an accompanying for-credit seminar that addresses topics specific to each practice area.

Legal Administration Courses

MSLA 4050 The Impact of Court Governance (1 Credit)
This course informs students on the policy making process of local court governance and the impact of the process on court operations and public services. Various governance structures are explored to include the benefits of principle based governance. Students gain in-depth insight into the roles and relationships of judges and court administrators as leaders and governing authorities within the judicial system. Course knowledge is applicable to all levels of national and international court jurisdiction.

MSLA 4080 Law Firm Information Technology (2 Credits)
This course is designed to inform the student on the complexities of information technology in a law firm setting. Topics include time and billing, assessing the IT needs of the office, networking abilities, creating a paperless office, security, case management, outsourcing, and knowledge management.

MSLA 4090 Court Information Technology (2 Credits)
This course is designed to introduce students to the intricacies of information technology in a court setting and the importance of an efficient and effective system. Topics include communications technology (internal and external), virtual courthouses, electronic case filing, legal research systems, information and systems security, networking abilities and needs, court reporting/recording and accessibility to the public (website).

MSLA 4100 Court Fiscal Management (3 Credits)
This course focuses on the key aspects of financial management in a court setting. Students learn models of public budgeting, internal controls, procurement, outsourcing, RFPs, internal and external auditing, and government funding models. Prerequisite: MSLA 4410.

MSLA 4121 Human Resources (2 Credits)
This course provides students with an introduction to the management of human resources and its impact on organizations, both public and private. Topics addressed include: strategic HR management, staffing the organization, Equal Employment Opportunity, job analysis, recruitment, training, employee compensation and benefits, employee rights, union/management relations, and global human resource strategies.

MSLA 4151 Applied Leadership and Management Theory (3 Credits)
This course is designed to provide the student with an understanding of the importance of effective leadership and management in the workplace. Students will learn the tools necessary to manage conflict, build strong teams, function as a team, manage performance, create and maintain a positive work environment, and motivate others.

MSLA 4180 Court Case Flow and Load Management (2 Credits)
This course is designed to provide the student with the fundamental principles of managing an effective case management system. Students will learn the importance of an efficient case flow management system, the history of case management, electronic case filing, civil and criminal rules of procedure, case assignment, quality assurance and time standards and major case, records management and reporting systems, strategies necessary to gain judicial support, leadership and cooperation to effectuate effective case flow management practices, and improve judicial performance as it relates to the disposition of actions.
MSLA 4181 Inclusiveness in the Legal Profession - The Next Generation of Diversity Efforts (1 Credit)
Diversity and inclusiveness are hot topics in the legal profession. This highly interactive course will educate students about the state of diversity and inclusiveness within the legal profession, the systemic underpinnings of the lack of diversity, how to create inclusive environments for successful retention and advancement of female and diverse attorneys and staff, as well as the importance of diversity and inclusiveness to the viability of the legal profession. Students will be challenged to draw upon their own life experiences, to consider different perspectives, and provide thoughtful analysis on how they can incorporate diversity and inclusiveness practices with their career path and future legal organizations.

MSLA 4200 The Business of Courts (3 Credits)
This course is designed to provide the student with the fundamental principles and elements of the key functions performed by the courts. These functions include jury management, court based mediation and arbitration programs, court reporting, client expectations, contingency planning, continuity of operations planning, needs and expectations of litigants without lawyers, interpreter services, court and staff performance measurement and management, and the role of the court administrator.

MSLA 4201 Law Firm Administration (3 Credits)
This course informs the student of the fundamental principles, elements and day-to-day operational processes of law office management. Topics covered in this course include law office culture, law firm organization, succession planning, practice areas, client communication flow, collection challenges, and understanding and working with law office timekeeping, accounting, and billing systems.

MSLA 4205 Lawyer Recruitment, Development, and Advancement in Law Firms (2 Credits)
This course will focus on the key aspects of lawyer recruitment, development and advancement in law firms. Students will learn the primary methods for recruiting and hiring lawyers at all experience levels, and the most important elements of lawyer development, including orientation, integration, legal and core skills training, experiential learning, mentoring, performance management, and evaluations. Traditional compensation and advancement models, as well as emerging trends in all of these areas, will also be covered during the course.

MSLA 4215 Court Space, Facilities and Security (2 Credits)
This course is designed to inform the students of the fundamentals of managing the court's space, facilities and security. Aspects of this course include: facilities management, operational standards and management, safety and security, assessing courthouse building needs, developing space planning reports, the management of all types of space projects, building and personnel security issues, contingency planning, and disaster recovery.

MSLA 4300 Introduction to the United States Judicial System (3 Credits)
This course provides the student with an overview of the United States judicial system. Students learn the fundamentals of our legal system, historical basis of the U.S. judicial system, the foundation, structure, purpose, what it stands for, and the varying levels of the U.S. court system.

MSLA 4301 Judicial Performance and Evaluation (1 Credit)
This course informs students on the complexities of judicial performance and evaluation. Students learn the fundamentals of developing a judicial performance program, measuring the effectiveness of performance recommendations, commissions on judicial performance, and the components of the evaluation process.

MSLA 4310 World Judicial Systems (3 Credits)
The goal of this course is to compare and contrast the role of the judiciary in various legal systems. Topics include types of courts and court systems (including domestic, supranational, i.e., the European Union, and international courts), judicial independence, separation of powers, and challenges facing the judiciary such as miscarriages of justice. Students also compare court procedures (civil, criminal, appellate review) in different types of legal systems.

MSLA 4320 Fundamentals of Comparative Law (3 Credits)
This course introduces the classifications of the world’s legal systems: (civil law, common law, Islamic law, customary law, and mixed law systems). Students will learn the general elements of a legal system then compare and contrast these features in different types of legal systems as they are used in various countries or other jurisdictions including the European Union. Students will also explore internet and electronic resources to research and analyze foreign legal systems.

MSLA 4330 Specialty Courts (2 Credits)
This course will provide the students with an understanding of the purpose, functionality and effectiveness of specialty courts. Topics will include the types of specialty courts and how to create them, maintaining sustainability, treatment options, demographics, budgeting and measuring specialty court performance.

MSLA 4380 Research and Writing for the Legal Administrator (2 Credits)
This course is designed to provide the students with the necessary writing skills to be effective legal administrators. Topics will include writing executive summaries, press releases, legal citations, proposals, policy drafting, responses to RFP’s and legal research.

MSLA 4384 Court Comm & Media Relations (2 Credits)
This course will inform the students how to address communications and manage media relations for the courts. Topics will include views of the court from multiple perspectives, communicating to different constituencies, public relations and customer satisfaction, and educational outreach programs.

MSLA 4385 Law Firm Communications and Technology (3 Credits)
This course is designed to inform the students on the complexities of communication and the transfer of knowledge in the law firm setting. Topics will include proper and effective communication techniques and tools, use of social media and electronic communities, knowledge management tools, knowledge sharing environments, and the use of technology.
MSLA 4386 Law Firm Client Services and Satisfaction (2 Credits)
This course is designed to inform the student of the importance of client service and satisfaction and its value to the law firm. Topics covered in this course include external communication, client feedback, partnering with clients, client relationship management, and evaluation and survey design.

MSLA 4410 Accounting for the Legal Administrator (2 Credits)
This course will explore the principals and practices governing the preparation of financial statements, from the perspective of the legal administrator. Students will gain a comprehensive overview of the preparation and content of the income statement.

MSLA 4415 Statistics for the Legal Administrator (2 Credits)
This course will introduce the fundamentals of statistics for the legal administrator. Students will learn how to measure efficiencies and work performance, perform and analyze needs assessment, track productivity; measure cases flows, and assess client needs.

MSLA 4901 Law Firm Financial Management (3 Credits)
This course focuses on the key aspects of financial management in a law firm setting. Students analyze financial reports/data, work flow analysis and assessment, understand trust accounts, client billing and internal controls, to ultimately recognize and understand the financial health of the law firm. Prerequisite: MSLA 4410.

MSLA 4950 Strategic Planning in Courts (2 Credits)
This course is designed to prepare the student in creating a strategic plan for the courts. Students learn to think strategically, design surveys, perform an environmental analysis, set goals, develop action plans, and measurement tools.

MSLA 4954 Project Management (2 Credits)
This course is designed to provide students with the tools to effectively manage a project regardless of its size. Topics include clarifying the project goals, using objectives to define responsibilities, understanding GANTT and PERT charts, goal setting, prioritization, time management, consensus building, developing creative teams, empower the project team, motivating the team, communications tools, how to handle conflicts, and how to celebrate your success.

MSLA 4999 Directed Research MSLA (1-17 Credits)
MSLA Directed Research is an opportunity for students to research and write on any area of legal administration approved by an MSLA faculty member who agrees to direct the project. The research project must be completed within the semester for which the student is registered. The research is compiled into a paper of publishable quality that is delivered to the MSLA program director by the last day of exams for that semester. A Directed Research application form (available in the Registrar’s Office) signed by both the faculty supervisor and student is required for enrollment. The Registrar’s Office will register the student for his or her directed research once the student’s application form has been approved.

MSLA 5010 Capstone: Externship/Project (4 Credits)
The externship or creative project is designed to complement the student’s area of study. The externship enables the student to work in a practical setting and acquire the experience in a legal environment. The creative project option provides students, already working in the legal environment, an opportunity to complete a project or research paper on a topic determined by student and MSLA office. A grade of “pass” is given after the work is completed, and a letter from the supervisor summarizing the student’s experience is submitted to the MSLA Office.

University College

University College is the college of professional and continuing studies at the University of Denver. Fully accredited, we provide educational opportunities for busy adults through challenging, career-relevant, and practice-based courses. Our students pursue degrees in Organizational and Professional Communication, Environmental Policy and Management, Healthcare Leadership, Information and Communications Technology, and much more. We believe in the personal and public benefits of education that engage, challenge, and energize. Come to advance your career, whether it’s in the beginning, middle or final stages.

Certificate in Arts and Culture with a concentration in Art, Literature, and Culture

The graduate certificate in the Art, Literature, and Culture concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The graduate certificate in Art, Literature and Culture concentration allows students to add a new skill set to their portfolio as they enhance their ability to be critical, active participants in the arts, as well as connect with artistic material and the act of creative expression. Expert instructors from the field of arts and culture provide a broad cultural literacy that will give students the critical thinking skills needed to excel within the arts and culture industry. From performing arts to literature, film to art, a cultural degree from the University of Denver's University College provides graduates with an outstanding education that effectively prepares them for a professional position within an art, literature, or culture field. Credits earned through this graduate certificate may apply toward a master’s degree in Arts and Culture.
This certificate prepares students to:

- Contextualize rich and varied artistic expressions with the role arts and culture play in today's society

**Arts and Culture Outcomes**

This program prepares students to:

- Describe and discuss arts and culture within the context of today's society, economy, and not-for-profit trends
- Address and strategize issues of organizational development, inclusiveness, and leadership
- Plan for programs and events utilizing theoretical guiding principles based on case studies
- Develop plans for audience development in changing cultural and economic context

**Certificate in Arts and Culture with a concentration in Arts Development and Program Management**

The graduate certificate in Arts Development and Program Management concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Designed specifically for professionals in the arts management and cultural fields, the graduate certificate in Arts Development and Program Management concentration focuses on the entrepreneurial skills needed to excel within an arts organization, such as funding and leadership techniques. With a graduate certificate in Arts Development and Program Management concentration, students will be prepared for vibrant careers as managers or facilitators in an arts organization. Applied, hands-on courses delivered online or on campus in the evenings, or in a combination of both, will prepare students for a fast-paced arts and culture career. Learn best practices for the arts and culture industry and utilize them in arts organization innovation and event planning, as well as marketing and fundraising. Credits earned through this graduate certificate may apply toward a master's degree in Arts and Culture.

This certificate prepares students to:

- Apply entrepreneurial strategies to lead and develop arts and culture programs in nonprofit, governmental, and for profit sectors

**Arts and Culture Outcomes**

This program prepares students to:

- Describe and discuss arts and culture within the context of today's society, economy, and not-for-profit trends
- Address and strategize issues of organizational development, inclusiveness, and leadership
- Plan for programs and events utilizing theoretical guiding principles based on case studies
- Develop plans for audience development in changing cultural and economic context

**Certificate in Arts and Culture with a concentration in Creative Writing**

The graduate certificate in the Creative Writing concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The University of Denver's graduate certificate in Creative Writing concentration helps students define, develop, and explore their writing abilities in a professional or personal capacity, whether their interests are in memoir, poetry, nonfiction, or fiction writing. Intensive writing and revision workshops, along with lessons in the overall publishing process, will be provided to students in the certificate program.

Through the graduate certificate in the Creative Writing concentration, students move beyond mechanics and refine their writing skills to use the written language to communicate more clearly, artfully, and powerfully at a professional and personal level. Dedicated faculty members provide expert instruction, as they guide students to extend their potential as writers. Students in the Creative Writing concentration love to learn creative writing and literature, and our graduates live the writing life. University College allows students to foster creativity in a positive atmosphere, helping them to sustain and strengthen their creative writing prowess. Credits earned through this graduate certificate may apply toward an Arts and Culture master's degree.

This certificate prepares students to:

- Use written language to communicate more clearly and powerfully in their professional and personal lives
- Move beyond mastering mechanical skills and conveying information to writing artfully, evoking emotions, and expressing points of view
- Participate in intensive workshops designed to give their writing personalized attention
- Read and critique literature with the eye of a writer and editor
- Work with dedicated faculty who will help them extend their potential as writers and address their writing strengths and weaknesses
- Share with other students their experience with the craft of writing
- Foster their creativity in a positive atmosphere in which they receive constructive feedback on their writing
Arts and Culture Outcomes

This program prepares students to:

- Describe and discuss arts and culture within the context of today's society, economy, and not-for-profit trends
- Address and strategize issues of organizational development, inclusiveness, and leadership
- Plan for programs and events utilizing theoretical guiding principles based on case studies
- Develop plans for audience development in changing cultural and economic context

Master of Liberal Studies in Arts and Culture with a concentration in Art, Literature, and Culture

The Art, Literature, and Culture master's degree is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. University College offers graduate students the opportunity to experience and study rich and varied literary, musical, visual, and performance artistic expressions across a variety of cultures. The master's degree concentration is an interdisciplinary program that is presented within a context of the political and social environment. Students will enhance their ability to be critical, active participants in the arts, as well as connect with artistic material and the act of creative expression.

Students will discover how the arts operate within culture from expert instructors and they will develop a broad cultural literacy that will provide critical thinking skills needed to excel within the arts and culture industry. From performing arts to literature, film to art, a cultural degree from the University of Denver's University College provides graduates with an outstanding education that effectively prepares them for a professional position within an art, literature, or culture field. Customize your Arts and Culture master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

- Contextualize rich and varied artistic expressions with the role arts and culture play in today's society

Arts and Culture Outcomes

This program prepares students to:

- Describe and discuss arts and culture within the context of today's society, economy, and not-for-profit trends

Master's Degree Admission

Admission Criteria

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process

Master's degree applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/masters.cfm).

- **Application:** Applicants must complete the application online (http://myweb.du.edu).
- **Application Fee:** A $75 non-refundable application fee is required for an application to be processed.
- **One Official Transcript from each Post-Secondary Institution:** Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
- **Two Letters of Recommendation:** Two confidential letters of recommendation are required.
- **Statement of Purpose:** A personal statement (two pages double spaced) is required. The statement should include information on how the degree will enhance career plans and meet educational goals. Sharing personal experiences, abilities, achievements, and goals is encouraged. This document has considerable influence in the decision to admit applicants with attention given to written communication skills.
- **Résumé/Curriculum Vitae (CV).**
• **Degree Plan:** The degree plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.

• **Language Proficiency:** Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.

• **Proof of Permanent Residency:** Permanent Residents must provide a copy of their Registration Alien Card (green card).

• **Admission Interview:** An interview may be required at the program director’s request.

• **Creative Writing Applicants:** Applicants must submit a writing sample (2-3 pages) in any genre.

• **International Applicants:** Additional requirements are listed below for international applicants.

**Certificate ADMISSION**

**Admission Criteria**

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are **NOT** required.

**Admission Process**

Certificate applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/certificate.cfm).

- **Application:** Applicants must complete the application online (http://myweb.du.edu).

- **Application Fee:** A $50 non-refundable application fee is required for an application to be processed.

- **One Official Transcript from each Post-Secondary Institution:** Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.

- **Certificate Plan:** The certificate plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.

- **Language Proficiency:** Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.

- **Proof of Permanent Residency:** Permanent Residents must provide a copy of their Registration Alien Card (green card).

- **Admission Interview:** An interview may be required at the program director’s request.

- **Creative Writing Applicants:** Applicants must submit a writing sample (2-3 pages) in any genre.

- **International Applicants:** Additional requirements are listed below for international applicants.

**International aDMISSION**

International applicants must comply with all requirements set forth for domestic applicants and supplement their application with additional documentation. International applicant information, including admission deadlines and the International Applicant Checklist, is available on the University College website (http://universitycollege.du.edu/answers/admission/international.cfm).

Admitted international applicants whose native language is not English are required to attend University College’s International Preparation Week (http://universitycollege.du.edu/answers/admission/international.cfm) prior to attending courses at University College.

University College will consider graduate applicants who have earned three-year baccalaureate degrees from 15-year education systems. The school from which the applicant has earned the degree must be a formally recognized or regionally accredited institution of higher learning, as determined by the University Of Denver Office Of International Student Admission. Admission policy and procedures for applicants holding three-year baccalaureate degrees is the same as for other international applicants with one exception: applicants with a three-year degree are not eligible for English Conditional Admission. Priority consideration will be given to those with a minimum of three year’s work experience.
Additional Admission Requirements for International Applicants

- **English Proficiency**: All internationally educated applicants whose native language is not English are required to submit proof of English Language Proficiency regardless of citizenship and/or U.S. residency.

1. **TOEFL**: A minimum score of 550 (paper based), 213 (computer based), or 80 (Internet based) is required for admission consideration. Generally, applicants should achieve at least 20 in all TOEFL subscores on the internet-based exam. TOEFL score reports older than two years from the date of application are not acceptable for admission consideration.

2. **Academic IELTS**: A score of 6.5 or higher is required to be considered for admission. Each individual band score must be 6.0 or higher. IELTS score reports older than two years from the date of application are not acceptable for admission consideration.

3. **Possible Exemptions**: International applicants may be exempt from the TOEFL/Academic IELTS requirement if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the entire language of instruction and examination is in English.

4. **English Conditional Acceptance (ECA)**: Master's degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, ECA requires an evaluation by the University of Denver's English Language Center (ELC) and successful completion of intensive ELC English courses including the Graduate Preparation Program. Academic classes may not be taken while students are enrolled at the English Language Center. Graduate certificate students may not be admitted through ECA. As an alternative to the English Language Center, an applicant may become fully admitted by submitting sufficient TOEFL/Academic IELTS scores.

- **Official Transcripts and Translations**: International applicants should submit official transcripts printed in the official language of instruction of their institution. Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English.

- **Photocopy of Diploma/Degree Certification and Appropriate Translations**: Applicants who have earned a degree outside the U.S. must submit proof of graduation through a degree certificate or diploma along with all appropriate official translations.

- **A Photocopy of Current Passport**: Applicants must provide a copy of the photograph and legal name page of their passport. This is required before an I-20 can be issued by the University of Denver.

- **The Supplemental Information Form (SEVIS Supplement)**: Applicants who are not U.S. Citizens or permanent residents must complete the SEVIS form.

- **Financial Verification Form**: Applicants seeking an I-20 student visa must submit financial verification documents.

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

Capstone Project (or successful completion of Capstone Seminar)
Courses

MALS 4020 Graduate Research and Writing (4 Credits)
Critical thinking, accomplished through solid research and clear writing, is paramount to success in one’s academic and professional pursuits. This course enables students to develop clear analytic and rhetorical writing skills at the graduate level; these skills are utilized throughout the curriculum in all degree areas. Each student organizes and produces a focused paper on a topic related to the student’s degree field that contains a continuing argument centered around a clear thesis statement supported by the work of experts. Sources are evaluated for validity and incorporated in the paper with regard to the absence of plagiarism and proper Turabian author-date documentation. Focusing on the thesis statement, students research and analyze current data and trends in the field, build a rhetorical argument, and draw conclusions. The course stresses editing and revision for mechanics, style, and language. It is designed to improve writing and communication skills for use in academic and professional settings. This course is required of all degree seeking students and should be taken in the first two quarter of enrollment. A final grade of B or better must be earned in this course to meet degree requirements.

MALS 4030 Philosophy and Spirituality (4 Credits)
Throughout time human beings have used systems of thinking and belief to grasp at the big questions of life, including the search for meaning, the existence of God, and whether we are truly free or living according to a predestined path. This core course examines various wisdom traditions, sets of spiritual belief, and schools of thought from throughout the world. In it, students will draw upon diverse wisdom and spiritual traditions and apply good critical thinking to contemporary ethical situations. Students will demonstrate an ability to comprehend and use key terms in philosophy and spirituality and learn to develop a discerning attitude toward systems of thought and spirituality. They will also recognize methodology used in philosophical and spiritual discourse, and contemplate how to apply philosophy and faith to problems and situations in today's world.

MALS 4045 The Human Condition (4 Credits)
Within the rich tradition of the liberal arts and humanities lies the study of the social sciences, the academic undertaking of viewing and understanding the human condition. It is important for the humanist scholar to think about who we are, and how we are doing as people. This core class focuses on the disciplines that gauge how individuals and groups live, learn and grow - sociology, psychology, gender and sex studies, marriage and family, anthropology, and related subjects. The class uses case studies to examine how people live and react to their circumstances.

MALS 4050 World Visual & Performance Art (4 Credits)
This course draws upon global artistic traditions of visual art and performance in conveying how human beings express ideas, themes, and emotions. Students view and experience artistic forms and movements throughout history and from a variety of traditions across the world, critically analyzing art movements and forms across time. They synthesize ideas across cultures, traditions, and types of creative expression and make connections and distinctions between genres and art forms. A different, rich, artistic theme is the focus each time the course is taught.

MALS 4120 Writing Non-Fiction (4 Credits)
This course concentrates on the craft of writing nonfiction, which includes genres and approaches such as memoir, the personal essay, narrative nonfiction, travel writing, humor, criticism, and experimental forms. Class discussions involve some lecture but are structured more as a workshop. Students learn about writing and write about learning. Members of the class are expected to express their ideas about the craft and to workshop their writing. The class is a safe place for writers to share their work with others and to learn from one another.

MALS 4130 Fiction Fundamentals (4 Credits)
Effective, powerful writing requires skills that can be acquired. This course is a combination of workshops and lectures focusing on the interplay of plot, characterization, and pacing. Students learn to turn personal experience into story structure and tap the psychological well-spring which enables writers to sustain momentum. The instructor utilizes literary examples to illustrate successful uses of these concepts. Students are invited to bring material at any stage of development to the first class. During the course, development and critique of each student’s material is encouraged.

MALS 4150 Poetry: The Voice Within (4 Credits)
This course is a combination of readings in poetry and poetics, brief lectures, and open discussions focused on the interplay of image, metaphor, rhythm, emotions and ideas in the expressive form of writing called poetry. Students learn to tap the imaginative sources that all creative writing springs from and flow those energies into poetic form. Examples illustrate successful uses of key poetic concepts and help students explore various approaches to expressing themselves fully and clearly through a range of open-ended exercises. Students develop practical critiquing skills with the aim of helping themselves and their classmates write with greater subtlety and power.

MALS 4163 Writing the Screenplay (4 Credits)
Screenwriting is the art of telling a story in images. This class focuses on elements of form and structure, with particular emphasis on format, character development, plot and dialogue. Movies are studied to illustrate genre, fixed and fluid characters, tragic flaw, the dynamic of relationships, development of protagonist and antagonist, and other screen elements. Numerous in-class exercises, discussions, workshops and screenings enable students to find the dramatic essence of stories, write a detailed film synopsis, treatment, and the first act of a feature-length screenplay.

MALS 4190 The Writer's Workshop (4 Credits)
A writer writes* is the universal mantra of the writing life, but one of the critical steps in developing a work in progress is getting constructive feedback. Unfortunately, all too often, a writer ends up disappointed because the feedback received is superficial, too polite, or little more than proofreading. This course teaches students to workshop in a meaningful way, responding to content, focus, coherence, and organizational issues. Students learn to elicit more feedback from their workshop colleagues, demonstrating the relationship between reader and writer. The class explores a variety of genres, and each student produces short exercises and longer projects that demonstrate a grasp of various aspects of the writing craft. Periodically, guest authors with different writing specialties join the class to discuss the writing experience and shed light on the workshop process.
MALS 4240 Memoir & Personal Essay (4 Credits)
Personal essays and memoirs are forms of writing that attempt to arrive at universal truths through self-exploration. Students examine the work of several modern essayists and analyze a literary memoir. Through course readings, writing, workshopping, and discussions, students analyze and apply what makes this writing work. By incorporating literary elements such as conflict, characterization, dramatic structure, and transformation, students turn their personal experiences into meaningful nonfiction narratives. As V.S. Pritchett said of the memoir, “It’s all in the art. You get no credit for living.” Personal essays need not deal with the author’s biography at all, only with his or her experience in a limited way. This course combines reading, writing, analysis, and discussion facilitation.

MALS 4260 Writing the Short Story (4 Credits)
The dramatic elements of the short story are distinct from any other form of fiction. This workshop is for writers who plan to seriously study the form of the contemporary short story, and to apply their learning to their own projects. Students focus equally on reading published works and writing/revising an original short story, as well as discussing aspects of publishing. Weekly writing exercises, readings, and workshops of student stories are combined to provide the most direct, effective training in this dynamic form. Prerequisite: MALS 4130 (Fiction Fundamentals).

MALS 4270 Writing & Healing (4 Credits)
Many writers attest to the emotional, spiritual, and even physical benefits of writing. In this course, we explore a variety of ways written expression can help us navigate the human journey. Students learn leading theoretical models of journal and poetry therapy (interactive bibliotherapy), assess poems for use in personal growth contexts, and participate in experiential discussions and writing exercises. Students focus on the writing and healing process rather than their own self-explorations of healing through writing. Students submit a portfolio of reflection writings, as well as complete a final paper on a writing topic that intersects with a personal growth experience or interest.

MALS 4280 Funding the Arts and Program Development (4 Credits)
Arts organizations must always consider funding when developing programming. Organizational strategic planning is analyzed, and fundraising is examined as a major component of planning. Various tools and techniques for fundraising, including communication and planning skills, are analyzed and applied to case studies. Students explore different forms of fundraising and their implications for programming, which may include private or public grants, governmental funding, fundraising events, and private donations.

MALS 4281 Event Planning (4 Credits)
Events and festivals play a large role in promoting the arts and developing links between the arts community and wider audiences and patrons. Students address various topics associated with event and festival planning and management, such as program development, marketing and audience development, venue considerations, and building partnerships. Students create an event program and plan.

MALS 4283 Marketing the Arts: Audience Development and Retention (4 Credits)
This course provides a strategic approach to audience and markets. Students study basic principles of marketing and audience identification. They build strategic marketing plans that are cohesive with the mission and programming of the organization, utilizing various forms of media. Audience characteristics are examined from various perspectives, and theories of creating commitment to the arts are studied. Students create an arts marketing plan for an organization or event.

MALS 4284 Arts and Culture Entrepreneurship (4 Credits)
In any sector of the Arts and Culture field, whether government, non-profit, or for profit, it is essential to be able to develop programs and/or organizations from conception through implementation and assessment. This development requires the clear communication of what is needed to develop, implement, and sustain this plan over time. In this course, students take an entrepreneurial approach to develop a program or organization in the arts and culture field. Students develop and present a comprehensive business plan to define, map, structure, and assess the program / organization in either the non-profit or for profit sector.

MALS 4440 Artists on Art (4 Credits)
This course explores the professional life of the artist, including how artists conceive of a vision for their work, organize their time and space, and communicate about their art. Students read significant works (diaries, correspondence, and essays) by and about artists, and have opportunities to interact with working artists. Students keep and produce a journal to explore ideas, plan projects, and describe methods and media to be used in their current or proposed work.

MALS 4442 History of Methods and Media (4 Credits)
This course provides a review of selected periods and movements in the history of art with special attention to the methods, materials, media and design techniques used by artists of different eras. Students explore the relationships of available technologies and media to the purpose and social influences that created particular stylistic periods and movements. Through careful study of images and by completing several brief assigned projects, students explore typical artistic problems and generate creative responses.

MALS 4444 Emerging Trends in Art (4 Credits)
This course focuses on what is “going on” in the arts: contemporary trends, what’s hot, what’s not, and why. Selected themes in modern and contemporary art are reviewed to help students discover how their art will fit into or counter emerging trends in art. The latest cutting edge developments in art are explored, and students are challenged to describe the place and purpose for their work.

MALS 4448 Studio Art: Drawing (4 Credits)
This studio course explores essential components of drawing including composition, line, value, proportion, shape, positioning, and perspective. Materials to be covered include pencil, charcoal, pastel, and pen and ink. Light source, shading, and value are also addressed. Drawing styles and techniques explored in this course vary each session.
MALS 4450 Studio Art: Painting (4 Credits)
This studio course is designed for students working beyond the beginning level in painting and will involve extensive experimentation with materials and techniques to address individual painting problems identified by faculty and students. The organization of ideas and development of personal imagery are addressed. Painting styles and techniques explored in this course vary each session.

MALS 4452 Studio Art: Ceramics (4 Credits)
This studio course focuses on the use of the potter's wheel as a ceramic tool. Work will include simple to complex thrown and altered forms. Hand-building techniques and non-traditional approaches to use of materials, glazing and firing are also studied. Styles and techniques explored in this course vary each session.

MALS 4454 Studio Art: Sculpture (4 Credits)
This studio course addresses core issues of three-dimensional form. Students learn about the processes of modeling, casting, carving, and construction of armatures. Emphasis is placed on discovering where images and ideas come from, how they develop, and how they interface with various materials and techniques for sculptural representation.

MALS 4455 Into the Future: Global Trends and Forecasting (4 Credits)
Why is learning about the future important today? How do we look into the future and analyze the dynamic global environment that is changing on a daily basis? This course will challenge students to look into the future and examine the following seven important trends: Globalism, Human Genome/Cloning, Migration/Generational Change, New Energy Processes, Religion/Ethics, Security/Terrorism, and Technological Change. Each student will write a research paper analyzing a future trend or issue and give a class presentation about their findings. In so doing, they will demonstrate an awareness of the pitfalls and opportunities for humanity in this interlinked, globalized, 21st century world.

MALS 4456 Studio Art: Photography (4 Credits)
This course explores the techniques and aesthetics of artistic photography, including a thorough overview of old and new methods. Instruction includes camera use, picture processing, and presentation. Assignments provide a context for developing technical skills and exploring personal interpretation.

MALS 4458 Studio Art: Printmaking (4 Credits)
This course introduces intaglio and relief printmaking methods in addition to paper lithography. Intaglio techniques include copper plate etching and engraving. Relief printing includes linoleum cut and woodcut methodology. Single plate black and white and multiple plate color methods are reviewed. Students focus on work in one of these media for a class project.

MALS 4460 Studio Art: Digital Art (4 Credits)
This course lays the groundwork for design literacy and digital art making. Class objectives include understanding how meaning is formed and learning digital applications in art reflecting cultural, social, political and psychological contexts. Students are expected to complete pre-course work to gain software literacy and attend a post-course critique; class time is spent on creating digital art works.

MALS 4462 Studio Art: Mixed Media (4 Credits)
This course explores the techniques and aesthetics of mixed media in visual art, including an exploration of innovative media use. Instruction includes method and media processing and presentation. Assignments provide a context for developing technical skills and exploring personal interpretation.

MALS 4470 Arts and Culture: History, Context, and Trends (4 Credits)
This course examines the significant and growing economic, social, and educational impact of the arts in today's rapidly changing environment. Discussion of current and historical trends in the visual, performing, literary, and media arts provide a context for practical applications in the field.

MALS 4480 Arts and Culture: Best Practices and Practical Skills (4 Credits)
This course provides a comprehensive overview of nonprofit best practices with specific applications to arts and culture organizations. Governance, budget planning and management, organizational development, advocacy, marketing and fundraising, community and rural development, event planning and facilities management are discussed using exemplary and diverse arts organizations as case studies.

MALS 4490 Cultural Participation and Program Planning (4 Credits)
In this course, students explore changing attitudes and participation in the arts and the need for innovative approaches to engage audiences. Audience development and involvement is explored, especially in terms of arts education. The connection between cultural participation and program planning is closely examined. Various models are discussed on a theoretical level, and diverse arts organizations serve as case studies for practical applications.

MALS 4530 China and The Pacific Rim (4 Credits)
This course is an introduction to the rich cultural traditions of Asia, past, present and future--its religious and philosophical systems, artistic and literary contributions, and patterns of political, social, and economic development. It will also investigate the shared experiences of Asian Americans in the U.S. with an emphasis on people of Chinese, Japanese, Korean, Southeast Asian, Pacific Islander and South Asian ancestry. Contemporary issues such as ethnic association, discrimination, interracial conflict, generational differences, and gender roles and relationships also will be covered. Students are expected to gain from this course and appreciation of the cultural complexity of Asia and Asian-American communities.

MALS 4544 The Middle East (4 Credits)
The Middle East has been referred to as the "World Trouble Spot," but it is also a region of vibrant cultural traditions and a rich past, present and future. Students in the course examine the impact of the Middle East's history - and its unique artistic, literary, and cultural contributions - on the present day. They also study the current Middle East peace process, the oil economy, and radical Islam as it relates to jihadism and terrorism.
MALS 4701 Topics in Literature (4 Credits)
The content of this course varies each term. The topics may include time-sensitive issues in the area of literature, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

MALS 4702 Topics in Writing (1-4 Credits)
The content of this course varies each time it is offered. The topics may include time-sensitive issues in the areas of writing and literature, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

MALS 4703 Topics in Film (1-5 Credits)
The content of this course varies each time it is offered. The topics may include time-sensitive issues from the film industry, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

MALS 4704 Topics in Art (1-5 Credits)
The content of this course varies each time it is offered. The topics may include time-sensitive issues from the film industry, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

MALS 4705 Topics in Liberal Studies (1-5 Credits)
The content of this course varies each time it is offered. The topics may include time-sensitive issues from the film industry, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

MALS 4740 Natural Science and Literature (4 Credits)
The natural sciences have inspired some of the most entertaining, creative and provocative works in international literature. Writers like Thoreau, Gould, McPhee, Kingsolver and others have explored some of the most complex theories that explain the majesty of the physical world. Students read and analyze many works in this popular genre. Specifically, the class looks at how these writers use story to shape their work, how they introduce and explain multifaceted theories for the layperson, and how recent scientific theory has shaped our culture. Students also have an opportunity to write about scientific subjects in their own voice.

MALS 4745 Children’s Literature (4 Credits)
This course is an introductory study of all levels of children's literature for the student who is interested in literature, the student who is planning to teach, and for those who are or will be parents. This course introduces students to types, genres, and varieties of literature for reading to children as well as reading by children. The main focus is to remember the joys and wonders of reading as a child and young adult, and to approach the literature selected not as "just a kid's book," but as literature with real quality standards and room for critical and analytical discussions.

MALS 4750 Literature to Film (4 Credits)
In this course, we examine the adaptation of literary works into films. We closely study selected modern literary works and the film interpretations of each work. Focusing on the transition from one narrative form to another, the course aims at enhancing the critical skill of students as well as their creative ability. Therefore, we also have mini scripting workshops as a way of imaginatively highlighting the sort of considerations that go into the making of the film script.
MALS 4755 World Literature (4 Credits)
In this course, students take a literary tour of the world in 70 days. Stops along the way include classic works of the 20th-Century from Africa, Asia, Europe, and Latin America - fiction, nonfiction, and poetry. As with any whirlwind tour, students learn a little about "the other" and a lot about themselves. An emphasis can help us see our own literary and cultural assumptions with new eyes. Students are also asked to reflect on thematic relationships and differences among texts from different times and places.

MALS 4880 From Romance to Realism (4 Credits)
Nineteenth-century Britain witnessed wide-scale social, political, and cultural upheaval: the French Revolution, the expansion of empire, naval dominance, massive political reforms, and ongoing debate about women. This course explores the great writings of the period, examining the transition from the Romanticism of the early part of the century, characterized by the writing of William Wordsworth, S. T. Coleridge, Jane Austen, and Sir Walter Scott, to the realism of the later century employed by such writers as Charles Dickens, George Eliot, Robert Browning, and Alfred, Lord Tennyson. We explore the tensions, gaps, and overlaps between these two categories - Romanticism and realism - and their place in the writing of the authors whose works are frequently labeled as Romantic or Realist. The course emphasizes both the literature itself and the cultural forces from which the literature developed.

MALS 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project synthesizes and applies core concepts acquired from the program. The student selects an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. View the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements.

MALS 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. The seminar is dependent upon collegial discussion of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. The course structure, facilitated by the faculty member, guides the students through the process of independent research and writing of a capstone paper; the instructor provides intensive feedback on the capstone process and papers. Students are responsible for generating the course content through ongoing discussion of and peer feedback on the capstone process and individual papers, as well as the analysis and contextualization of focused students papers within the wider degree field of study. Students professionally and academically communicate their findings through written work and oral presentations. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

MALS 4903 Creative Capstone Seminar (4 Credits)
The Creative Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating creative work and paper that critically addresses its context in the degree field of study. In the critical paper, the student presents writing and content motivations of the creative work, supports those motivations with professional and academic work in the field, analyzes the creative work in the context of the writing and literature fields, and reflects upon the creative process. The seminar is dependent upon collegial discussion of student writing process and drafts under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. The course structure, facilitated by the faculty member, guides the students through the creative process and writing of an analytical capstone paper; the instructor provides intensive feedback on the capstone process and papers. Students are responsible for generating the course content through ongoing discussion of and peer feedback on the capstone process and individual work, as well as the analysis and contextualization of focused student creative work and papers within the wider degree field of study. Students professionally and academically communicate their creation and findings through written work and oral presentation. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

MALS 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.
MALS 4905 Graduate Social Research Methods (4 Credits)
Graduate Social Research Methods is an exploration of the methods and purposes of social science research from the perspective of the researcher as well as that of the informed professional and consumer of information. Students learn about the process of research, including the development of research questions, the purpose of various social science research methods, the role of professional ethics, and general approaches to the analysis and interpretation of data. Students develop the ability to read and critique basic social science research articles and to implement simple research designs. Students develop and write a research proposal around a specific research question informed by a review of the literature. Technical requirements include the ability to read and modify Microsoft Excel documents.

MALS 4915 Humanities Research (4 Credits)
In this course, students engage in critical inquiry of the intersections between art, culture, and society with an interdisciplinary approach. Students develop informed research questions and thesis statements to provide insight to artistic and cultural issues within historical, theoretical, and ethical frameworks. A cohesive framework of analysis is developed through critical reading of scholarly literature. Connections are made between humanistic study of arts and culture and applications in the professional, creative economy. The course addresses and develops skills needed for graduate and professional study at the University of Denver.

MALS 4991 Independent Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

MALS 4992 Directed Study (1-8 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Directed Study is offered only on a for-credit basis.

Certificate in Environmental Policy and Management with a concentration in Energy and Sustainability
The graduate certificate in Energy and Sustainability concentration may be earned online or in a combination of online and on campus at the University of Denver in the evenings to meet the needs of busy adults. Busy adults who already hold master's degrees, or professionals who work within the field of energy development, will benefit from a graduate certificate in Energy and Sustainability, a dynamic field that is emerging in importance and popularity. Ideal for students seeking further study related to sustainable systems, energy development and use, energy finance, and alternative and renewable energy processes, the graduate certificate in Energy and Sustainability may be earned online or on campus in the evenings. Students will develop integration strategies, build finance and marketing plans, articulate a strong working knowledge of sustainability concepts, and learn about energy and sustainability systems.

Sustainable systems must be considered and developed in the areas of growth, transportation, energy, policy, and business models in order to head off looming environmental, political, and humanitarian problems. This will be accomplished through a comprehensive study of sustainability in the areas of economic development, green building, land use, transportation, and water resources. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

This certificate prepares students to:

- Demonstrate a solid understanding of how nonrenewable and renewable energy sources are developed, used, regulated, and financed
- Articulate a strong working knowledge of sustainability concepts
- Show an understanding of trends and issues in areas of traffic management, climate science, water supplies, and green buildings
- Develop plans for the integration of sustainable practices into products, business and marketing plans, environmental policies, and organizational processes
- Build finance schemes and marketing strategies for their plans so they can be presented to an organization leader as an executable idea
Certificate in Environmental Policy and Management with a concentration in Environmental Assessment of Nuclear Power

The graduate certificate in Environmental Assessment of Nuclear Power concentration may be earned online or in a combination of online and on campus at the University of Denver in the evenings to meet the needs of busy adults. The graduate certificate addresses the requirements and topics needed for any Environmental Impact Statement (EIS), as well as the human health and environmental risks associated with the use of radioactive materials. Graduate certificate students will be prepared with essential knowledge to complete, analyze, and enhance Environmental Impact Statements—documents that provide valuable information about proposed development processes of nuclear energy. The graduate certificate program will also support the educational infrastructure that allows the nation to move forward with its nuclear energy initiatives by promoting and strengthening the teaching/learning needs in environmental protection around nuclear sites and installations, including uranium mines and milling facilities.

Earned online or on campus in the evenings, the graduate certificate in Environmental Assessment of Nuclear Power goes beyond environmental basics; certificate students will understand the role of scientific quantification of nuclear project action and the interaction with the environment, while pursuing alternative power solutions that contribute to the sustainable development of nuclear energy. Learn the laws and policy associated with nuclear energy and become an expert in the interaction between nuclear power and the environment. Credits earned through this graduate certificate may apply toward a master’s degree in Environmental Policy and Management.

This certificate prepares students to:

- Develop the skills necessary to prepare an EIS, and their interdisciplinary nature
- Develop the ability to critically analyze the EIS document and the implementation policy process
- Understand the role of scientific quantification of nuclear project action and the interaction with the environment
- Enhance the individual and team skills necessary in the preparation of an EIS
- Advance knowledge in nuclear energy policy and laws
- Develop a foundation for improving engineering design of nuclear systems and nuclear waste treatment facilities that would be friendlier to the environment
- Develop the capability to identify alternative design features that would be friendlier to the environment and contribute to sustainable development of nuclear energy

Certificate in Environmental Policy and Management with a concentration in Environmental Health and Safety

The graduate certificate in Environmental, Health and Safety concentration may be earned online or in a combination of online and on campus at the University of Denver in the evenings to meet the needs of busy adults. Designed and delivered for professionals who already holds a master’s degree, or for professionals looking to further their environmental career with a new skillset, the graduate certificate in Environmental, Health and Safety concentration may be earned online or on campus in the evenings. Certificate students will explore the foundational statutory and regulatory origins of environmental health and safety compliance management and learn how to effectively and efficiently streamline resources to integrate safety and health regulations across sectors and industries.

Students pursuing this graduate certificate, either online or on campus, will acquire environmental management skills and technical knowledge that prepare them to work with health and safety statutes and regulations, management of worker health and safety issues, environmental management and reporting systems, and business and finance. Credits earned through this graduate certificate may apply toward a master’s degree in Environmental Policy and Management.

Certificate in Environmental Policy and Management with a concentration in Environmental Management

The graduate certificate in Environmental Management concentration may be earned online or in a combination of online and on campus at the University of Denver in the evenings to meet the needs of busy adults. Designed and delivered for professionals who already holds a master’s degree, or for professionals looking to further their environmental career with a new skillset in leadership, policy, and environmental issues, the graduate certificate in Environmental Management concentration provides detailed instruction on statutes and regulations, management and reporting systems, business and finance strategy, and communication and negotiation skills as they each relate to environmental management. Environmental Management graduate certificate students take master’s level classes, but do not complete a capstone project. Credits earned through this graduate certificate may apply toward a master’s degree in Environmental Policy and Management.
Certificate in Environmental Policy and Management with a concentration in Environmental Policy

The graduate certificate in Environmental Policy concentration may be earned online or in a combination of online and on campus at the University of Denver in the evenings to meet the needs of busy adults. Designed and delivered for professionals who already hold master's degrees or for those looking to further their environmental career with a new skillset, the graduate certificate in Environmental Policy concentration is ideal for adult students seeking an innovative, career-relevant graduate certificate. Environmental policy analysis at the public level will be discussed, including contemporary methods for analytical model development, implementation, and evaluation.

Environmental Management and Policy students who are currently in the field of environmental policy, or for those aspiring to join the field, will develop skills through the online graduate certificate program that will serve them well in a policy-making organization, such as values and ethics, communication and negotiation, policy analysis, and environmental laws and regulations. Environmental Policy graduate certificate students take master's level classes, but do not complete a capstone project. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

Certificate in Environmental Policy and Management with a concentration in Natural Resource Management

The Natural Resource Management graduate certificate may be earned online or in a combination of online and on campus at the University of Denver in the evenings to meet the needs of busy adults. Designed for professionals who already hold master's degrees, or for busy adults looking to further their environmental career with a new skillset, the graduate certificate in Natural Resource Management earned online or on campus in the evenings will prepare students to work in natural resource management roles for commercial or government organizations. Certificate students will learn historic and contemporary management systems and principles, in addition to essential policies and procedures needed to thrive in natural resource management in the public or private sectors.

The graduate certificate is designed for professionals whose primary interest is the management of natural resources for organizations which plan or regulate the use of natural resources, or commercial operations which extract and use natural resources. Graduate certificate students will develop organizational leadership skills and learn environmental statutes and regulations pertaining to natural resource management. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

Master of Applied Science in Environmental Policy and Management with a concentration in Energy and Sustainability

The Energy and Sustainability master's degree concentration may be earned online or in a combination of online and on campus at the University of Denver in the evenings to meet the needs of busy adults. Students are prepared to enter the dynamic industry of energy and sustainability, which is emerging in importance and popularity around the world. Students will establish a solid foundation in energy and sustainability concepts, and then learn to integrate environmental systems, put policy into practice, and develop effective sustainability plans. Regulatory and policy issues related to energy development, implementation, and use, energy finance, and alternative and renewable energy processes will be examined, along with renewable energy sources, plans for integration, and trends within the field of energy.

Sustainable systems must be considered and developed in the areas of growth, transportation, energy, policy, and business models in order to head off looming environmental, political, and humanitarian problems. This will be accomplished through a comprehensive study of sustainability in the areas of economic development, green building, land use, transportation, and water resources. Customize your Environmental Policy and Management master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

• Demonstrate a solid understanding of how non-renewable and renewable energy sources are developed, used, regulated, and financed
• Articulate a strong working knowledge of sustainability concepts
• Show an understanding of trends and issues in areas of traffic management, climate science, water supplies, and green buildings
• Develop plans for the integration of sustainable practices into products, business and marketing plans, environmental policies, and organizational processes
• Build finance schemes and marketing strategies for their plans so they can be presented to an organization leader as an executable idea

Master of Applied Science in Environmental Policy and Management with a concentration in Environmental Assessment of Nuclear Power

The Environmental Assessment of Nuclear Power master's degree concentration may be earned online or in a combination of online and on campus at the University of Denver in the evenings to meet the needs of busy adults. This degree addresses the requirements and topics needed for any Environmental Impact Statement (EIS), as well as the human health and environmental risks associated with the use of radioactive materials. Students will be prepared with essential knowledge to complete, analyze, and enhance Environmental Impact Statements—documents that provide valuable
information about proposed development processes of nuclear energy. The program will also support the educational infrastructure that allows the nation to move forward with its nuclear energy initiatives by promoting and strengthening the teaching/learning needs in environmental protection around nuclear sites and installations, including uranium mines and milling facilities.

The master's degree concentration in Environmental Assessment of Nuclear Power goes beyond environmental basics; students will understand the role of scientific quantification of nuclear project action and the interaction with the environment, while pursuing alternative power solutions that contribute to the sustainable development of nuclear energy. Learn the laws and policy associated with nuclear energy and become an expert in the interaction between nuclear power and the environment. Customize your Environmental Policy and Management master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

- Develop the skills necessary to prepare an EIS, and their interdisciplinary nature
- Develop the ability to critically analyze the EIS document and the implementation policy process
- Understand the role of scientific quantification of nuclear project action and the interaction with the environment
- Enhance the individual and team skills necessary in the preparation of an EIS
- Advance knowledge in nuclear energy policy and laws
- Develop a foundation for improving engineering design of nuclear systems and nuclear waste treatment facilities that would be friendlier to the environment
- Develop the capability to identify alternative design features that would be friendlier to the environment and contribute to sustainable development of nuclear energy

Master of Applied Science in Environmental Policy and Management with a concentration in Environmental Health and Safety

The Environmental, Health and Safety master's degree concentration may be earned online or in a combination of online and on campus at the University of Denver in the evenings to meet the needs of busy adults. Whether students currently work in environmental health and safety positions for commercial or government operations, or aspire to, the Environmental, Health and Safety master's degree prepares them with the management skills and technical knowledge required to become a health and safety manager or officer. Students will begin with the foundational statutory and regulatory origins of environmental health and safety compliance management and learn how to effectively and efficiently streamline resources to integrate safety and health regulations across sectors and industries.

Critical instruction is given on relevant training, emergency planning, procedural operations, and the management of worker health and safety, in addition to environmental management and reporting systems and business and finance strategy. Customize your Environmental Policy and Management master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

Master of Applied Science in Environmental Policy and Management with a concentration in Environmental Management

The Environmental Management master's degree concentration may be earned online or in a combination of online and on campus at the University of Denver in the evenings to meet the needs of busy adults. Master's degree students will learn environmental management and leadership essentials, providing them with critical knowledge related to technology, law, and economics as they each relate to the environment. Facilitating environmental innovation, development plans, and integration will be discussed, along with essential permitting and regulatory issues that environmental managers need.

Students in the Environmental Management master's concentration will receive engaging instruction from professional practitioners who work in the fields they teach in topics ranging from economics to law, leadership to regulations, as each topic relates to the environment. Designed for students seeking a combination of leadership, policy, and environmental issue education, the concentration prepares graduates to address and manage complex environmental systems. Customize your Environmental Management master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

Master of Applied Science in Environmental Policy and Management with a concentration in Environmental Policy

The Environmental Policy master's degree concentration may be earned online or in a combination of online and on campus at the University of Denver in the evenings to meet the needs of busy adults. Designed for professionals working in organizations focused on environmental policy development or advocacy such as legislatures, regulatory agencies, consultants, and advocacy groups, the Environmental Policy master's concentration provides students with policy analysis and development skills needed to serve as a senior analyst or manager within a policy-making organization.

Students will receive valuable instruction—from professional practitioners who work in the fields they teach—in topics ranging from economics to law, ethics to finance, as each topic relates to environmental policy. A master's degree concentration in Environmental Policy will prepare students for
Admission Criteria

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process

Master's degree applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/masters.cfm).

- **Application:** Applicants must complete the application online (http://myweb.du.edu).
- **Application Fee:** A $75 non-refundable application fee is required for an application to be processed.
- **One Official Transcript from each Post-Secondary Institution:** Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
- **Two Letters of Recommendation:** Two confidential letters of recommendation are required.
- **Statement of Purpose:** A personal statement (two pages double spaced) is required. The statement should include information on how the degree will enhance career plans and meet educational goals. Sharing personal experiences, abilities, achievements, and goals is encouraged. This document has considerable influence in the decision to admit applicants with attention given to written communication skills.
- **Résumé/Curriculum Vitae (CV).**
- **Degree Plan:** The degree plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
- **Language Proficiency:** Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.
- **Proof of Permanent Residency:** Permanent Residents must provide a copy of their Registration Alien Card (green card).
- **Admission Interview:** An interview may be required at the program director’s request.
- **International Applicants:** Additional requirements are listed below for international applicants.
CERTIFICATE ADMISSION

Admission Criteria

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process

Certificate applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received within the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/certificate.cfm).

- **Application:** Applicants must complete the application online (http://myweb.du.edu).
- **Application Fee:** A $50 non-refundable application fee is required for an application to be processed.
- **One Official Transcript from each Post-Secondary Institution:** Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
- **Certificate Plan:** The certificate plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
- **Language Proficiency:** Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.
- **Proof of Permanent Residency:** Permanent Residents must provide a copy of their Registration Alien Card (green card).
- **Admission Interview:** An interview may be required at the program director’s request.
- **International Applicants:** Additional requirements are listed below for international applicants.

INTERNATIONAL ADMISSION

International applicants must comply with all requirements set forth for domestic applicants and supplement their application with additional documentation. International applicant information, including admission deadlines and the International Applicant Checklist, is available on the University College website (http://universitycollege.du.edu/answers/admission/international.cfm).

Admitted international applicants whose native language is not English are required to attend University College’s International Preparation Week (http://universitycollege.du.edu/answers/admission/international.cfm) prior to attending courses at University College.

University College will consider graduate applicants who have earned three-year baccalaureate degrees from 15-year education systems. The school from which the applicant has earned the degree must be a formally recognized or regionally accredited institution of higher learning, as determined by the University Of Denver Office Of International Student Admission. Admission policy and procedures for applicants holding three-year baccalaureate degrees is the same as for other international applicants with one exception: applicants with a three-year degree are not eligible for English Conditional Admission. Priority consideration will be given to those with a minimum of three year’s work experience.

Additional Admission Requirements for International Applicants

- **English Proficiency:** All internationally educated applicants whose native language is not English are required to submit proof of English Language Proficiency regardless of citizenship and/or U.S. residency.
  1. **TOEFL:** A minimum score of 550 (paper based), 213 (computer based), or 80 (Internet based) is required for admission consideration. Generally, applicants should achieve at least 20 in all TOEFL subscores on the internet-based exam. TOEFL score reports older than two years from the date of application are not accepted for admission consideration.
  2. **Academic IELTS:** A score of 6.5 or higher is required to be considered for admission. Each individual band score must be 6.0 or higher. IELTS score reports older than two years from the date of application are not acceptable for admission consideration.
  3. **Possible Exemptions:** International applicants may be exempt from the TOEFL/Academic IELTS requirement if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the entire language of instruction and examination is in English.
  4. **English Conditional Acceptance (ECA):** Master’s degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, ECA requires an evaluation by the University of Denver’s English Language Center (ELC) and successful completion of intensive ELC English courses including the Graduate Preparation Program. Academic classes may not be taken while students are enrolled at the English Language Center. Graduate certificate
students may not be admitted through ECA. As an alternative to the English Language Center, an applicant may become fully admitted by submitting sufficient TOEFL/Academic IELTS scores.

- **Official Transcripts and Translations**: International applicants should submit official transcripts printed in the official language of instruction of their institution. Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English.

- **Photocopy of Diploma/Degree Certification and Appropriate Translations**: Applicants who have earned a degree outside the U.S. must submit proof of graduation through a degree certificate or diploma along with all appropriate official translations.

- **A Photocopy of Current Passport**: Applicants must provide a copy of the photograph and legal name page of their passport. This is required before an I-20 can be issued by the University of Denver.

- **The Supplemental Information Form (SEVIS Supplement)**: Applicants who are not U.S. Citizens or permanent residents must complete the SEVIS form.

- **Financial Verification Form**: Applicants seeking an I-20 student visa must submit financial verification documents.

**Certificate in Environmental Policy and Management with a Concentration in Energy and Sustainability**

Total Credits: 48

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

### Non-coursework Requirement

Total Credits 48

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

### Non-coursework Requirement

Capstone Project (or successful completion of Capstone Seminar)

### Master of Applied Science in Environmental Policy and Management with a Concentration in Environmental Health and Safety

Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

**Non-coursework Requirement**

Capstone Project (or successful completion of Capstone Seminar)

**Courses**

**EPM 4001 Environmental Foundations and Principles (4 Credits)**
This course is an introduction to the field's history, current issues and problems, ethics, systems, and economics; and an overview of key necessary knowledge and skills to work and learn within the field. Students will: gain a strong historical understanding of how environmental and natural resource issues have influenced economic development and societal growth throughout the ages; learn about the complexity of environmental issues and the value of interdisciplinary and systems thinking when applied to making decisions about natural resource usage; understand the important role that empirical science, policy analysis and advocacy play in how governments and private companies address complex environmental issues; become aware of the stressors that ecosystems around the globe are experiencing and the value of multidisciplinary approaches to addressing these challenges; and understand the diverse employment opportunities available in the environmental field.

**EPM 4002 Integrated Environmental Systems (4 Credits)**
The earth as a whole is comprised of many systems that affect the environment. Some have large wide ranging reach, while others are restricted to a relatively small area. Included is everything in between. Actions in one area or system may have unintended secondary and tertiary consequences in that system or others. This course uses various tools and materials to study a few environmental systems and determine connections, consequences, impacts, barriers, decision making, life cycle costs, etc.

**EPM 4003 Environmental Finance and Economics (4 Credits)**
This class provides an overview of economics and finance in an environmental context. Topics include an overview of the economic system, efficiency, equity, market failure, environmental regulation, benefit-cost analysis, valuing the environment, pollution control, energy, conservation of natural resources, performance metrics, risk and return, time value of money, cost of capital, returns on investments, and standard financial reports. The class makes use of reading assignments, written assignments, case studies, and class participation. The course emphasizes relationship between business management and environmental quality, and provides students with a financial and economic decision-making framework for understanding and analyzing environmental issues.

**EPM 4040 Wetland Ecology and Management (4 Credits)**
This course provides a detailed examination of aquatic communities and habitats with an emphasis on freshwater systems. The recognition, identification, classification, and maintenance requirements of various wetland communities are stressed. Students analyze Section 404 of the Clean Water Act and the permitting process. Guidelines for placing dredge and fill materials in wetlands and other construction projects that directly or indirectly affect these areas are reviewed. Students explore concepts related to regulatory enforcement, mitigation, and the need for additional policies and actions to sustain as well as protect these critical communities.

**EPM 4108 Impacts of Recreational Use (4 Credits)**
The practical and theoretical basis of recreational use of public and private lands is examined in the context of ecosystem management. The statutory and regulatory policies and current issues regarding the management and use of lands in wilderness systems, wild and scenic river corridors, parks, and open spaces are discussed in detail. The impacts of recreational uses on the environment and conflicts with other uses of land and resources are discussed. Land use planning policies and decisions which respond to recreation, wilderness and open space issues are examined. Field trips to Rocky Mountain National Park, Chatfield State Park, or other outdoor recreation sites will be scheduled to supplement classroom meetings.

**EPM 4115 Introduction to Ecology (4 Credits)**
This course examines the concepts of the ecosystem, populations, communities, the flows of energy, material cycles, and the necessity of diversity. Concepts including the unity of organisms and inseparable interactions with the physical environment are analyzed. Class discussions include topics such as the formation, distribution, and organization of ecological communities; plant succession and nutrient cycling; evolutionary trends of plant and animal populations; and species interactions in subalpine and alpine forests, prairies, and plains.

**EPM 4120 Introduction to Natural Resource Management (4 Credits)**
This course provides an introduction to natural resource management with an overview of historic and contemporary management systems and principles. Students examine key policies, guidelines, and planning procedures of governmental agencies, resource-based industry and the public. Topics include the simultaneous consideration of biological, physical, social, and economic aspects of lands, waters, and natural resources to achieve sustainable conditions. Other topics are multiple use/sustained yield management; soil and water conservation and protection; use, restoration, and preservation of renewable and non-renewable resources; and the preservation and management of natural resources for recreation, spiritual renewal, and other amenity values.
EPM 4140 NEPA (4 Credits)
Students examine the requirements and implementation strategies of the National Environmental Policy Act. The Council on Environmental Quality, National Environmental Policy Act Regulations and the rules and requirements of various federal agencies which are responsible for National Environmental Policy Act implementation are examined in detail. Specific applications of National Environmental Policy Act to private and public activities which constitute major federal actions significantly affecting the quality of the human environment are discussed. Representative Environmental Impact Statements and Environmental Assessments are presented and critiqued for regulatory compliance and thoroughness in disclosing environmental effects of proposed actions. Prerequisite: EPM 4200 (Environmental Protection Law).

EPM 4150 Global Environmental Law and Policy (4 Credits)
This course explores the legal and philosophical underpinnings of the environmental movement, both in the United States and internationally. Students will analyze global environmental issues including endangered species, overpopulation, resource depletion, biodiversity, ocean dumping, deforestation, desertification, global warming, and ozone depletion. Emphasis is placed on management options and the use of international laws and treaties to mitigate, lessen, or eliminate damage to various aspects of the environment.

EPM 4200 Environmental Protection Law (4 Credits)
This course reviews a wide spectrum of laws which protect our environment and health. Students will discuss the purpose, context and implications of the most important laws, regulations and court cases that affect the quality of our lives. Coverage includes: National Environmental Policy Act (NEPA), Clean Air Act (CAA), Clean Water Act (CWA), Resource Conservation and Recovery Act (RCRA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Emergency Planning and Community Right-to-Know Act (EPCRA), Occupational Safety and Health Act (OSHA), and related toxics laws. It provides an overview of the legal system and the roles of Congress, the President, executive agencies, states, and courts in shaping environmental laws.

EPM 4220 Endangered Species and Wildlife (4 Credits)
This course provides an overview of the basic principles, trends, challenges, and controversies of the administration of maintaining certain wildlife species. Threats from water and air pollution, poaching and other illegal actions, interrelationships of wildlife and their habitats, and biodiversity will be discussed. Students gain an understanding of the roles and responsibilities of various federal, state and local agencies, environmental and wildlife interest groups, and other organizations involved in wildlife management issues.

EPM 4230 Energy Fundamentals (4 Credits)
This course provides a well-rounded primer on energy as a resource and its importance in the economy and the world today. Renewable energy and alternative fuels as well as nuclear and hydrogen-based technologies will be explored. This course also provides an in-depth view of issues surrounding the development, enforcement and application of energy regulatory policy.

EPM 4232 Sustainability: Policy and Practice (4 Credits)
In 1987 the Brundtland Commission, formerly the World Commission on Environment and Development, defined sustainability as "development that meets the needs of the present without compromising the ability of future generations to meet their own needs." The wording suggests the concept of sustainability is difficult to define. Certainly it relates to some of the most challenging questions of our times: How do we encourage consumption patterns to ensure a continuing resource supply for future generations? How can an individual enterprise, whether it is a major corporation or a mom-and-pop business, practice sustainability? How do well-meaning executives, scientists, engineers and policymakers achieve a balance between environmental protection and economic development?.

EPM 4233 Sustainable Transportation (4 Credits)
21st Century transportation planning on the local and global scale involves consideration of environmental policies and sustainable practices. Development of an efficient system for moving goods and people along highways, airways and public transit networks must coordinate with legal requirements governing automobile source emissions, water pollution, mitigation of congestion, and crisis management. Conflicts occur along political fault lines between public interest groups, environmental justice advocates, the business community, government regulators, and the ordinary commuter. Consideration is given to different fuel sources, including carbon-based, hydrogen, electricity, and biofuels. The course also examines fuel efficiency (CAFE) and trends in emission science and regulation.

EPM 4234 Climate Change and Science (4 Credits)
Global Warming" is a cause celebre, but how much do we really know about the science involved in studying the earth's climate? Moving beyond the social and political opinions espoused in the current debate on climate change, this course delves into the chemical and physical forces at play in the arena. This course covers scientific processes used in measuring climate dynamics, among them ozone chemistry, carbon and oxygen cycles, and heat and water budgets. It explores scales and methods for detecting climate change, including analyzing ice cores, instrumental records, and time series. Some attention will be dedicated to "climate forcing" caused by such things as orbital variations, volcanism, plate tectonics, and solar variability.

EPM 4235 Green Building (4 Credits)
Builders, developers and designers increasingly are promoting the use of green construction practices in the pursuit of healthier, smarter buildings. Students in this course examine sustainable building strategies and tools, including LEED (Leadership in Energy and Environmental Design), the nationally-accepted benchmark for the design, construction and operation of high-performance green buildings. LEED promotes a whole-building approach by recognizing performance in five areas: sustainable site development water savings, energy efficiency, materials selection and indoor air quality. What materials are best in the design and operation of green building? How can a designer or building owner make better use of power and water efficiency programs? What are the recent developments, trends and case studies of green buildings and materials?.
EPM 4236 Nuclear and Hydrogen Energy (4 Credits)
Two future- and high-tech oriented energy sources are explored in this course, nuclear power and hydrogen fuel. The course covers principles used in fission energy and in nuclear power engineering, including controlled chain reactions and reactor design criteria. It also attends to issues of radioactive waste treatment and storage and the mitigation of other radiation hazards. Currently, some 20% of the United States electric power comes from nuclear plants that use low-enriched uranium as fuel, burn nothing, and emit virtually no CO2. What is the future for this form of energy? In addition to nuclear power technology, the course focuses on fuel cells and the hydrogen economy, which brings its own questions concerning cost-benefit analysis and risks. Do these new economy, relatively “clean” energies present a way to avoid the downward trend of depleting natural resources, or do they send a siren song with the waste and safety problems they present?.

EPM 4237 Renewable Energy (4 Credits)
Renewable energy sources now generate an estimated 13 percent of power worldwide. A political hot button, renewable energy sources range in their effectiveness, with some technologies already mature and economically viable, while still others need additional development or government subsidies to survive. The course begins with an overview of the major alternative sources, examining each one in-depth to consider its benefits, as well as its environmental and economic risks. We cover thermal systems and photovoltaics in the generation of solar power; atmospheric science and weather in the study of wind power; the organic chemistry that is involved in biomass, biofuels and agricultural residues; direct use of hot water in geothermal systems; and other alternative sources such as tidal and wave energy. Problems vexing grid placement and dissemination throughout a source network is also studied.

EPM 4238 Water and Food Sustainability (4 Credits)
For such basic human needs, water and food present their own highly-technical challenges inside legal, political and environmental spheres. This course delves into environmental, economic, and social implications in water usage and water resources regulation. This course also takes a broad look at food and farming systems at community, society, and ecosystem levels.

EPM 4280 RCRA Permitting and Compliance (4 Credits)
This course presents Resource Conservation and Recovery Act's cradle-to-grave regulations governing solid and hazardous waste generation and disposal, the various permitting requirements, and the process by which permits are obtained. Design and performance requirements for treatment, storage, and disposal facilities are examined. Developing trends in waste minimization, solid waste management, and special waste controls are also examined.

EPM 4355 ISO 14001 Standards (4 Credits)
This advanced course introduces the new ISO 14001 standard for environmental management systems. It includes a history and developmental context review of the ISO 14001 standard. This class reviews the specific elements and processes that form certifiable 14001 environmental management systems. Using an example, students develop a complete program that integrates the 14001 requirements with the existing strategic management methods of an organization. This program demonstrates how to use the 14001 framework as a proactive and systematic approach to environmental management. Class discussions include developing an environmental policy, specifying objectives and targets, implementing an environmental management program, monitoring and measuring program results, and reviewing the program to ensure continual improvement.

EPM 4390 Environmental Policy Analysis (4 Credits)
This course provides a basic introduction to the field of public environmental policy analysis. Specifically, it serves as a foundation course that introduces contemporary methods of policy analysis, agenda-setting, models of policy formulation and implementation, and policy evaluation. The focus is principally on concepts, analytical approaches, and research methods.

EPM 4400 Environmental Values and Ethics (4 Credits)
Students examine ethical considerations in environmental management and decision making. Discussions cover personal versus organizational attitudes; cultural, economic, and historic values; science versus politics; and international and intergenerational policies. The course also explores various philosophies of humankind's relationship with the environment. Students are encouraged to develop and express a personal philosophy relative to their role in the regulatory, technical, scientific, and financial management of the environment.

EPM 4460 Land And Visual Resources (4 Credits)
This course is designed to provide students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems is also be discussed.

EPM 4461 Assessment of Social Impacts (4 Credits)
Students examine how the introduction of nuclear power systems or a nuclear waste treatment facilities affect the demographic and economic characteristics of a specific region. Basic analysis of archaeological resources, historic buildings and structures, and traditional cultural properties are also considered. Pertinent areas of environmental law provides guidelines and regulations with relation to the nuclear industry and current policy issues including the importance of the Energy Policy Act of 2005.

EPM 4462 Ecology, Soil, and Water (4 Credits)
A general overview of the potential effects of nuclear power facilities on ecosystems and ecological resources. These include terrestrial resources, wetlands, floodplains, aquatic resources, protected and sensitive species, geology, soil mechanics and seepage. In site-specific scales, the following items need to be considered, such as physical alteration of the landscape, disruption of natural processes, such as flooding and fires, and pollution.
EPM 4463 Air Quality, Noise and Transportation (4 Credits)
Air quality, noise and transportation issues can potentially be affected in the area surrounding a nuclear power plant in a variety of ways. Students become acquainted with the methodology of the dose rate estimations to the public and workers; the methods that are in place to monitor and reduce the risk to the public and workers from all hazards; and various pathways of exposure from possible nuclear contaminants and related pollution. Perceptions of citizens as stakeholders are considered. Identifying and profiling atmospheric toxic sources, developing and assessing emerging measurement methods, characterizing the degree and extent of local air toxicity problems, and tracking progress of air toxin reduction efforts. The impact of transportation on human and environmental risk assessment, including the primary methods and routes used to transport to a specific site, affected employees, commercial shipments, hazardous and radioactive material shipments, transportation packaging, transportation accidents, and onsite and offsite traffic volumes.

EPM 4464 Nuclear Power Plant Systems (4 Credits)
This course presents the basic components of nuclear power plant systems, their functional purpose, and operating conditions, including an overview of the equipments design and components from the safety point of view. An overview of nuclear power plants is presented in context of their impact on the environment and human health, including active and passive safety aspects.

EPM 4465 Environmental Restoration and Waste Management (4 Credits)
Environmental Restoration is the identification and elimination of hazardous materials from a designated site such that the risks to human health and the environment are reduced to an acceptable level for an intended future land use. This course examines successful environmental restoration activities that were used to reduce and mitigate risk associated with past operations of nuclear and nuclear-related facilities and the significant potential to release harmful contaminants. Environmental restoration effects on the ecological and human health risk assessments and analyses related to the transport, treatment, storage, and disposal of waste from the contaminated site are presented. Remediation processes for radioactive materials and other hazardous wastes and the eventual storage, processing, and disposal and the potential effect on humans and the environment is studied. An overview is given on the development of a radiological protection program for an EIS report. External and internal hazards: control measures and monitoring, and other important limits and measurements are explored.

EPM 4500 Leadership for Environmental Managers (4 Credits)
This course is an overview of basic leadership and management skills with an emphasis on topics germane to practicing environmental professionals. It addresses three main subject areas: performance metrics and standard financial reports (i.e., how organizations and businesses keep score); leadership (i.e., changes in behavior and work habits necessary for advancement from staff to management; and achieving clarity in organizational values and mission); and basic elements of internal and external communications. The class will make use of reading assignments, written assignments and class participation.

EPM 4510 Environmental, Health & Safety (4 Credits)
Students are given an overview of the statutory and regulatory origins of environmental health and safety compliance management. The exponential growth in regulations and the increased demand to streamline resources present a unique opportunity for the environmental professional to integrate safety and health regulations both horizontally and vertically within the organization. Students learn to evaluate the benefits and barriers to integration of environmental health and safety. Topics to be discussed include fundamentals of safety management, training requirements, emergency planning, setting goals, objectives, and operating procedures, and how management views environmental health and safety.

EPM 4520 OSHA Law (4 Credits)
This course provides an in-depth review of the laws and regulations that govern the safety and health of workers. The course is of value to students seeking to expand knowledge of the Occupational Safety and Health Act. Emphasis is on the areas of overlap between safety and environmental laws, OSHA’s inspection and enforcement authority, employee and employer rights, record keeping requirements and an outline of labor’s interest in OSHA cases. Current topics such as OSHA reform legislation and regulatory agenda are discussed.

EPM 4525 Workplace Safety Management (4 Credits)
This course examines Occupational Safety and Health Administration rules governing work place safety and other applicable industry standards, like those of the American National Standards Institute and National Fire Protection Association. Students learn how to develop and apply compliance programs, how to reduce losses of direct and indirect costs due to accidents, and how to convince management and employees that safety programs are beneficial. Important programs and topics include development of costs of accidents, investigation programs, practical application of worker’s compensation, confined space entry programs, injury/illness records and reporting, programs for new fall protective rules, personal protective equipment programs, and actions to develop financial and management support.

EPM 4701 Topics in EPM (2-5 Credits)
The content of this course will vary each time it is offered. The topics may include time-sensitive issues in the field of environmental policy and management, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content will be announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

EPM 4705 Land Use Planning (4 Credits)
This course includes a comprehensive examination of the land use planning efforts of federal, state, and local governments. The legal authorities, responsibilities, and conflicts of these governmental entities are examined in detail. Class discussions include: setting goals and objectives for specific components of ecosystems; design of projects to achieve desired ecologic conditions; the interrelationship between home rule authority, local zoning and planning requirements, and federal/state natural resource plans; use of new technologies in planning; and public participation in land use plans.
EPM 4710 Environmental Project Management (4 Credits)
Students discuss environmental project management from the government, industry, and contractor perspectives. The course looks at successful project management organization, planning, and communication strategies. Using examples, students will also examine complex projects needing management. The types of contractual assistance needed will be reviewed.

EPM 4780 Air, Water and Soil Pollution (4 Credits)
This course addresses sources, reactions, and remediation of pollutants occurring in the atmosphere, waters, and soil. The deposition of pollutants from the atmosphere to soil and surface waters (acid rain) is covered. The migration of pollutants from surface waters through the soil to ground waters are also discussed.

EPM 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topics, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project synthesizes and applies core concepts acquired from the program. The student selects an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. View the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements.

EPM 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. The seminar is dependent upon collegial discussion of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. The course structure, facilitated by the faculty member, guides the students through the process of independent research and writing of a capstone paper; the instructor provides intensive feedback on the capstone process and papers. Students are responsible for generating the course content through ongoing discussion of and peer feedback on the capstone process and individual papers, as well as the analysis and contextualization of focused student papers within the wider degree field of study. Students professionally and academically communicate their findings through written work and oral presentations. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPS of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

EPM 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

EPM 4910 Research Practices and Applications (4 Credits)
This course develops competency in principles of research and measurement for use in the professional setting. As an initial course in the program of study, students learn research methods to apply to program and systems design and evaluation to achieve successful measurement of outcomes and goals. Students become critical consumers of pertinent literature to provide background and support for the choice and application of proper qualitative and quantitative research methods and data analysis for professional application. Critical thinking through comparing and contrasting cause and effect is used to build logic models. Research, design, and evaluation processes that address issues of implementation, feasibility, and sustainability are emphasized. At the conclusion of this course, students are prepared to apply and clearly communicate the practice of scientific research principles in the professional environment to ensure that the question being asked can be answered through rigorous research and the design and formative assessment of the program or system. Completion of Institutional Review Board (IRB) training via CITI Program is required as a basis for discussion of research ethics and IRB procedures. Competencies gained in this course, including practices of inquiry, self-analysis, and evaluation, are integrated throughout the course of study and demonstrated in the culminating capstone work of the master's degree.

EPM 4980 Internship (1-4 Credits)
The EPM Internship is designed to offer students a purposeful experience in the field of environmental policy and management. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.
EPM 4991 Independent Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed it with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

EPM 4992 Directed Study (1-10 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Directed Study is offered only on a for-credit basis.

Geographic Information Systems

Certificate in Geographic Information Systems with a Concentration in Geographic Information Systems

The certificate in Geographic Information Systems with a concentration in Geographic Information Systems is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. University College offers the region's first complete graduate certificate program in Geographic Information Systems. Designed and delivered for busy adults, the Geographic Information Systems graduate certificate helps professionals add to their skill set with technology skills that help solve real-world problems related to GIS.

Certificate students receive applied instruction from professional practitioners who work in the fields they teach as they learn to plan, implement, and execute a GIS project through remote sensing, internet mapping, or digital image processing. The GIS certificate allows students to explore training fundamentals at a very hands-on, applied level necessary to succeed in the field.

Gain a contextual background in GIS, from the management of natural resources to public utility management, public works engineering, environmental impact assessment, and even market research. In a burgeoning integrative world, it is vital to grasp the diverse fundamentals of each topic within the Geographic Information Systems industry and gain an insider’s perspective to specific fields as they each relate to GIS training. Credits earned through this graduate certificate may apply toward a master’s degree in Geographic Information Science or Information and Communications Technology.

Geographic Information Systems Outcomes
This program prepares students to:

• Demonstrate an understanding of the nature of geographic data
• Demonstrate the ability to critically evaluate the appropriate use of geographic data
• Recognize appropriate applications of GIS technology to solve spatial problems
• Be able to plan, implement, and execute a GIS project

Certificate admission

Admission Criteria
A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process
Certificate applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/certificate.cfm).

• Application: Applicants must complete the application online (http://myweb.du.edu).
• Application Fee: A $50 non-refundable application fee is required for an application to be processed.
**International Admission Requirements**

Admission. Priority consideration will be given to those with a minimum of three year's work experience.

- **Certificate Plan:** The certificate plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.

- **Language Proficiency:** Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.

- **Proof of Permanent Residency:** Permanent Residents must provide a copy of their Registration Alien Card (green card).

- **Admission Interview:** An interview may be required at the program director’s request.

- **International Applicants:** Additional requirements are listed below for international applicants.

---

**INTERNATIONAL ADMISSION**

International applicants must comply with all requirements set forth for domestic applicants and supplement their application with additional documentation. International applicant information, including admission deadlines and the International Applicant Checklist, is available on the University College website (http://universitycollege.du.edu/answers/admission/international.cfm).

Admitted international applicants whose native language is not English are required to attend University College’s International Preparation Week (http://universitycollege.du.edu/answers/admission/international.cfm) prior to attending courses at University College.

University College will consider graduate applicants who have earned three-year baccalaureate degrees from 15-year education systems. The school from which the applicant has earned the degree must be a formally recognized or regionally accredited institution of higher learning, as determined by the University Of Denver Office Of International Student Admission. Admission policy and procedures for applicants holding three-year baccalaureate degrees is the same as for other international applicants with one exception: applicants with a three-year degree are not eligible for English Conditional Admission. Priority consideration will be given to those with a minimum of three year’s work experience.

**Additional Admission Requirements for International Applicants**

- **English Proficiency:** All internationally educated applicants whose native language is not English are required to submit proof of English Language Proficiency regardless of citizenship and/or U.S. residency.
  1. **TOEFL:** A minimum score of 550 (paper based), 213 (computer based), or 80 (Internet based) is required for admission consideration. Generally, applicants should achieve at least 20 in all TOEFL subscores on the internet-based exam. TOEFL score reports older than two years from the date of application are not acceptable for admission consideration.
  2. **Academic IELTS:** A score of 6.5 or higher is required to be considered for admission. Each individual band score must be 6.0 or higher. IELTS score reports older than two years from the date of application are not acceptable for admission consideration.
  3. **Possible Exemptions:** International applicants may be exempt from the TOEFL/Academic IELTS requirement if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the entire language of instruction and examination is in English.
  4. **English Conditional Acceptance (ECA):** Master’s degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, ECA requires an evaluation by the University of Denver's English Language Center (ELC) and successful completion of intensive ELC English courses including the Graduate Preparation Program.. Academic classes may not be taken while students are enrolled at the English Language Center. Graduate certificate students may not be admitted through ECA. As an alternative to the English Language Center, an applicant may become fully admitted by submitting sufficient TOEFL/Academic IELTS scores.

- **Official Transcripts and Translations:** International applicants should submit official transcripts printed in the official language of instruction of their institution. Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English.

- **Photocopy of Diploma/Degree Certification and Appropriate Translations:** Applicants who have earned a degree outside the U.S. must submit proof of graduation through a degree certificate or diploma along with all appropriate official translations.

- **A Photocopy of Current Passport:** Applicants must provide a copy of the photograph and legal name page of their passport. This is required before an I-20 can be issued by the University of Denver.

- **The Supplemental Information Form (SEVIS Supplement):** Applicants who are not U.S. Citizens or permanent residents must complete the SEVIS form.

- **Financial Verification Form:** Applicants seeking an I-20 student visa must submit financial verification documents.

Total Credits: 24

Minimum number of credits required for certificate: 24 credits

Courses

GIS 4060 Intro Visual Basic Application (4 Credits)
This course is an introduction to the development of Windows-based applications using a three-step approach of creating the interface, setting the properties, and writing code. Course topics include understanding Microsoft's Visual Basic program, Writing Drag-Drop Routines, Creating Menu Bars, Debugging Your Programs, adding standard controls; writing syntax for objects, methods, and properties; declaring procedures and variables; setting objects and variables; and writing decision constructs and loops. Students are introduced to Visual Basic to provide a programming foundation for.

GIS 4070 ArcObjects (4 Credits)
This class is an introduction to the development of custom applications and tools in GIS. It combines ESRI's ArcObjects with C# .NET programming language to introduce students to desktop GIS development. Students learn about the C# language, Object Oriented Programming, ESRI's Object Model Diagrams, conversion of VBA code to C# code, the creation of custom GIS based forms, buttons, and tools, and the automation of the GIS workflow. Students leave this class with the ability to create embedded tools as well as distributable C# .NET GIS applications based on ArcGIS 10.
GIS 4080 Python Programming (4 Credits)
This course introduces Python concepts and the Python scripting environment in a GIS environment. Python is a free, open-source scripting language that has been integrated with ArcGIS. Python is a dynamic, interpreted language that can be used to automate redundant tasks and workflows in GIS. Students learn tools and techniques and proper Python syntax, script flow, and error handling. Students learn to write scripts that allow them to automate redundant tasks and workflows in GIS. Students learn to write scripts that allow them to automate geoprocessing processes and GIS work more efficiently. This course teaching fundamental concepts needed to create Python scripts in ArcGIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4100 Geospatial Technologies (4 Credits)
Introduction to the fundamentals of Geospatial Technologies, including Geographic Information systems (GIS), Global Positions Systems (GPS), cartography, remote sensing, and spatial analysis through a series of hands-on computer-based exercises. Participants learn how to utilize geospatial technology to address social and environmental issues. This course is designed to be used as a stand-alone course to complement other disciplines or an entry level course into a geospatial program. Course content is based upon the United States Department of Labor’s Geospatial Technology Competency Model for entry level geospatial occupations including Geospatial or GIS Technicians and Technologists.

GIS 4101 Introduction to Geographic Information Systems (4 Credits)
This is the initial course in Geographic Information Systems (GIS). General introduction including background, development, trends, prospects in this rapidly evolving technology; basic components, functions of GIS, fundamental spatial, geographic concepts explored through use of GIS software.

GIS 4110 Geographic Statistics (4 Credits)
This course introduces the basic concepts of probability and statistics with an emphasis on applications and an ongoing focus regarding the nature and problems associated with spatial or geographic data.

GIS 4150 Project Design (4 Credits)
This course addresses the process of implementing GIS projects. It examines the methodologies available to plan a GIS project as well as the tasks involved in system implementation. Topics include user needs assessments, project implementation planning, hardware and software design, acquisition processes for hardware and software, data acquisition, performing the pilot project, and full implementation planning. The course uses case studies to illustrate variations in implementation approaches and to identify why some projects succeed and others fail. Students are expected to identify a client in the community and prepare an implementation plan for their class project. This course addresses the process of implementing GIS projects in multipurpose environments. It examines the methodologies available to plan and manage a GIS project as well as the tasks involved in system implementation. The topics include: Project implementation planning; User needs definition and functional requirements; Application definition; Database development and design; System planning and design.

GIS 4200 Geospatial Intelligence (4 Credits)
The term geospatial intelligence (GEOINT) means the exploitation and analysis of imagery and geospatial information to describe, assess, and visually depict physical features and geographically referenced activities on the earth. GEOINT consists of imagery, imagery intelligence and geospatial information. This course serves as an introduction to the fundamentals of the geospatial intelligence community, core GEOINT technologies and operations, and the role of GEOINT in national, regional and local security affairs supporting decision makers and operations. The course is built on a framework of data, technology and analysis in support of the GEOINT community which may include natural disasters, first responders, military problems, homeland defense, and law enforcement.

GIS 4504 Cartographic Design (4 Credits)
The theory and art of map making developed over several thousand years and has recently been revolutionized by computer technology. This course is designed to expose students to the use of computer techniques in assessing technical design issues in the compilation of accurate and meaningful automated geographic mapping products. ArcView is used in a series of hands-on lab exercises to produce typical GIS mapping products. Each class includes lecture and discussion of cartographic design concepts. Emphasis is placed on reader perception of map design elements, and also includes an introduction to appropriate software tools and application of concepts through lab exercises. In-class time is provided for work on lab exercises. It is likely that additional lab time outside of class will be necessary and/or valuable for students, particularly in completion of the final project. Prerequisite: GIS 4101.

GIS 4510 GIS in Business (4 Credits)
Businesses continue to embrace GIS as an effective alternative to traditional manual mapping analysis methods. GIS has emerged as an affordable solution for performing essential revenue producing and expense reducing functions. Many years ago, successful GIS implementation required huge capital investment and a large staff of GIS experts; however, with the introduction of more powerful inexpensive computers and easier to use software, companies of all sizes are unleashing the business potential of GIS on the marketplace. This course exposes students to various business applications and uses of GIS as well as the underlying theories and technology behind the applications. This course emphasizes various business disciplines including Marketing, Real Estate, Transportation, and Oil & Gas using ArcView GIS in practical, hands-on exercises that demonstrate the theories and concepts discussed in the lectures.
GIS 4520 GIS in Telecommunications (4 Credits)
Telecommunications is a thriving technology and business, accounting for a significant percentage of technical advances and revenue around the globe. GIS has emerged as a crucial tool in the telecommunications field for maintaining existing entities, planning for additional ones, and for gaining an advantage in this very competitive marketplace. The use of GIS in the telecom industry continues to grow because GIS technology accommodates the many CAD programs and drawings representing plant and transmission towers/coverage as well as the geographic representations of those items. Only a few years ago, introducing GIS into a telecom business required significant cash outlay, but through less expensive hardware and more user-friendly software, now even a modest CLEC can implement an effective GIS. This course exposes students to the various applications and uses for GIS in the telecom arena by breaking down the miscellaneous telecom requirements into GIS components and technological solutions. This course emphasizes specific telecom technology application requirements and allows students, through hands-on-lab work, to discover the power of GIS in delivering superior telecom solutions. This course also focuses on OSP/ISP applications and solutions, network connectivity issues as well as the exploding future of wireless technology.

GIS 4530 Crime Mapping and Analysis (4 Credits)
Municipal police departments, county sheriff departments, and other state and federal law enforcement agencies use GIS technology as a tool to analyze crime statistics and patterns. This course explores how GIS technology is used in law enforcement to provide strategic, tactical, and administrative crime analysis.

GIS 4540 Conservation GIS (4 Credits)
This course is designed to provide students with an introduction to the use of geographic information systems (GIS) in conservation. Students receive an introduction to the use of GIS in various types of conservation studies and preservation. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support planning and management of land, species, and habitats.

GIS 4550 GIS Technology Integration (4 Credits)
Computer technology is becoming more sophisticated at an ever-increasing rate. In addition, a number of issues related to data suppliers also exist. This course introduces many of the technologies that feed data into a GIS. Emphasis is focused on the technological viability, accuracy, precision, implications or combinations of data, and economics which help students assess which technologies are appropriate for a particular application.

GIS 4570 Geographic Information Systems in Public Health (4 Credits)
GIS offers many applications and functionality that are tremendously beneficial to the Public Health industry. The ability to visualize cases in space (geographically) and time is invaluable in analyzing spatial clusters of health related events. Further the ability to model the spread of a potential epidemic can literally be a life saver. GIS is a natural choice for solving many Public Health issues including: analyzing the location of diseases; the spread of contagious diseases (both vector borne as well as the spread through human contact); the cause and effect of environmental factors; as well as the availability of Health facilities.

GIS 4620 Geodatabase Application (4 Credits)
This course in Geodatabase Application is logically broken into two separate component parts; the first section deals with Geodatabase concepts and provides a general overview of the Geodatabase structure and implementation including: background, object classes, feature classes, relationship classes, domains, validation rules, and Geodatabase topology. The second portion of the course focuses on Geodatabase Application introducing advanced features of Geodatabase, providing a solid foundation for the application of the Geodatabase to model and address complex real world issues. Geodatabase Linear Referencing, Geodatabase Surface Modeling, and Geocoding Services in the Geodatabase, are explored. This course incorporates a hands-on lab component. Computer lab exercises are designed to introduce the student to concepts and Geodatabase application. Strong emphasis is placed on Geodatabase design. Design objectives, design guidelines and functional requirements of the resulting Geodatabase model are addressed.

GIS 4630 Public Domain Data for GIS (4 Credits)
Geospatial data are the foundation upon which GIS and spatial analysis rests. As GIS has matured, the challenge has evolved from generating data to managing the enormous volume of data from government agencies, nonprofit organizations, and industry, and increasingly, from ordinary citizens through citizen science and volunteered geographic information efforts. Key to working with this volume of data are essential issues such as privacy, copyright, public domain, cost recovery, metadata standards, and data quality that GIS professionals must grapple with to be effective in the 21st Century. This class discusses and applies these issues and works with a rich array of data sources to enable effective decision-making in a Geographic Information System.

GIS 4650 Demographic Analysis Using GIS (4 Credits)
This course offers an overview of US Decennial Census data, covering a brief historical overview of why census information is collected, collection procedures, geographic coverage, and subject matter contained in census reports. Using a popular PC-based desktop mapping software program, students learn how to navigate through census files and create a variety of thematic maps. Several application areas, such as marketing, demographic analysis and facility planning, are used in sample exercises.

GIS 4660 GIS in Municipal Government (4 Credits)
There are many areas of government where desktop mapping can be extremely helpful in solving problems that are spatial in nature. This course explores the many types of data collected by city and county government agencies from crime and election data to building, assessment, and zoning data and how it can be displayed in map form. Prerequisite: GIS 4101.

GIS 4670 GIS and the Law (4 Credits)
This course provides an overview, from a legal perspective of the role of government in handling and disseminating GIS data; an explanation and analysis of state and federal legislation and court decisions regarding open-records laws; and, an explanation and analysis of other laws or legal doctrines that affect GIS such as copyright, contract, right of privacy, anti-trust, tort liability and ethics.
GIS 4680 Environmental Applications (4 Credits)
This class provides students with an introduction to practical applications of computerized Geographic Information Systems (GIS) in environmental assessment and natural resource management. Emphasis is placed on automated analytical techniques and data presentation methods that support facility site selection, environmental impact analyses, resource management, and characterization of environmental hazards. This course is designed to provide students who participate in environmental assessment projects with introductory preparation for practice as GIS professionals in public agencies or in the private sector.

GIS 4685 GIS and Natural Hazards (4 Credits)
This course is designed to provide students with an introduction to the use of GIS in natural hazard assessment. Students receive an introduction to the use of geographical information systems (GIS) in various types of natural disasters and response management. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support hazard risk and assessment, mitigation, and emergency response planning.

GIS 4690 GPS for GIS (4 Credits)
This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Control and Quality Assurance issues for data collection programs. Lab exercises include planning a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, and data integration into a GIS.

GIS 4700 Remote Sensing (4 Credits)
This course provides a survey of remote sensing technologies, applications, and the industry. This course is designed for GIS, Geography and Geoscience students who seek to broaden their understanding of remote sensing in support of Geographic Information Systems. Introductions to the electromagnetic spectrum, energy sources, radiation principles, aerial cameras, and electronic imaging provide the student with the initial building blocks to a thorough understanding of remote sensing. This course provides an overview of the various high altitude and space-based collection systems and their characteristics, with a view toward future systems and capabilities. In addition, this course exposes students to the techniques of extracting relevant information from both hard copy and digital imagery.

GIS 4701 Topics in Geographic Information Systems (2-5 Credits)
The content of this course varies each time it is offered, depending on the interests and needs of the students. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

GIS 4740 Digital Image Processing (4 Credits)
This course is the second in the two-course Remote Sensing emphasis of University College’s GIS Certificate Program. The curriculum is a rigorous presentation of digital imaging processing theory with emphasis on its application to airborne and space borne imagery. The course includes computer laboratory exercises and workshops, where the students apply theory to satellite and air photo data. Interpretation of the digitally processed data is also included in the class exercises. Examples of vector and raster data integration are be shown as well.

GIS 4780 Internship (4 Credits)
GIS students may fulfill up to three quarter hours of electives by enrolling in a GIS internship with a GIS company or an agency actively engaged in GIS activities. Students incorporating professional work experience must work with an approved mentor, who evaluates the student’s performance and learning. The internship is designed to provide practical experience to students without prior professional experience in the field. Students who are employed on a full-time basis in the GIS industry may not use paid work experience as part of the academic program.

GIS 4911 Independent Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

GIS 4992 Directed Study (1-8 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the directed study. Directed Study is offered only on a for-credit basis.

Certificate in Global Affairs with a concentration in Global Issues

The Graduate Certificate in Global Issues concentration offered at University College focuses on current events and socio-political international affairs. Certificate students who seek to expand their skillset will learn to analyze contemporary issues and trends in a global context, viewing the influence of events and ideas on the world stage.

Certificate classes are offered online or on campus in the evenings, or in a combination of both, and are taught by professional practitioners who work in the fields they teach and contend with global issues in their fields. In a growing, integrated world, international relations have surged in importance. Students become immersed in the analytical and solution-oriented mindset of an international relations expert and apply the transferrable skills learned to their profession immediately. Credits earned through this graduate certificate may apply toward a master’s degree in Global Affairs.

This graduate certificate prepares students to:

- Analyze contemporary issues and trends in a global context, viewing the influence of events and ideas

Global Affairs Outcomes

This program prepares students to:

- Define and discuss globalization in terms of business, culture, government, and major issues
- Define culture and assess cultural differences
- Navigate international legalities of working globally
- Research cultural traditions and regional histories to holistically describe and work within another culture in a context of global affairs
- Compare the diverse interpersonal relationship styles of various cultures and their impact on communication, trade, politics, and human discourse
- Gain sensitivity to and be able to discuss different perspectives as they are influenced by national origin, cultural identification, varying levels of economic success, and divergent methods of political interaction; and
- Be attentive to the global nature of 21st century human interaction in future international friendships and business dealings

Certificate in Global Affairs with a concentration in Translation Studies

The graduate certificate Translation Studies concentration is offered entirely online to meet the needs of busy adults and help students expand their translator skills and stay ahead of the curve in this competitive industry. Translation Studies concentration students will gain the knowledge and transferrable skills needed to become effective translators in a professional capacity, either from English to Spanish or Spanish to English. Certificate students with proficiency in Spanish and English will gain a broad theoretical and practical background through translation studies, as well as practice in different types of translation (legal, commercial, financial, localization, political, and medical translation).

Classes are led by translation experts who work in the field, are taught online, and are geared toward busy adults. Learn what it takes to become a professional translator and gain valuable translator training and experience by apprenticing as a translator in a professional setting. The online graduate translation certificate will cover essential terminology, computer applications for translators, and issues related to working internationally in an individual and team-based environment. Credits earned through this graduate certificate may apply toward a master’s degree in Global Affairs.

This graduate certificate prepares students to:

- Utilize and apply translation theories and methods to practical translations in a variety of fields, which may include legal, commercial, financial, localization, political, or medical specialties
- Translate from English to Spanish and Spanish to English using essential terminology and appropriate computer applications
- Analyze the cultural, organizational, and structural contexts of source and target languages, to provide effective and accurate translations that meet client needs and requirements
- Demonstrate project management and translation skills in a professional setting

Global Affairs Outcomes

This program prepares students to:

- Define and discuss globalization in terms of business, culture, government, and major issues
- Define culture and assess cultural differences
- Navigate international legalities of working globally
- Research cultural traditions and regional histories to holistically describe and work within another culture in a context of global affairs
- Compare the diverse interpersonal relationship styles of various cultures and their impact on communication, trade, politics, and human discourse
- Gain sensitivity to and be able to discuss different perspectives as they are influenced by national origin, cultural identification, varying levels of economic success, and divergent methods of political interaction; and
- Be attentive to the global nature of 21st century human interaction in future international friendships and business dealings
Certificate in Global Affairs with a concentration in World History and Culture

The graduate certificate in World History and Culture concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Critically examine the history and culture of the world from a broad range of perspectives, preparing you for an equally wide range of careers related to global issues. Graduate certificate students will gain a firm grasp of international studies and the world at large.

Students will study the historical, political, sociological, and economic factors that contribute to nations’ cultures, identities, and history while broadening their global affairs knowledge, from competition and conflict to building community and cooperation. The World History and Culture concentration explores international studies in an applied, practical manner for professionals and executives working across cultures and across industries. Credits earned through this graduate certificate may apply toward a master's degree in Global Affairs.

This graduate certificate prepares students to:

• Study the historical, political, sociological, and economic factors that contribute to other nations’ cultures and identities

Global Affairs Outcomes

This program prepares students to:

• Define and discuss globalization in terms of business, culture, government, and major issues
• Define culture and assess cultural differences
• Navigate international legalities of working globally
• Research cultural traditions and regional histories to holistically describe and work within another culture in a context of global affairs
• Compare the diverse interpersonal relationship styles of various cultures and their impact on communication, trade, politics, and human discourse
• Gain sensitivity to and be able to discuss different perspectives as they are influenced by national origin, cultural identification, varying levels of economic success, and divergent methods of political interaction; and
• Be attentive to the global nature of 21st century human interaction in future international friendships and business dealings

Master of Liberal Studies in Global Affairs with a concentration in Global Issues

The Global Issues master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Offering an in-depth look at contemporary global issues that impact politics, the economy, and society, the Global Issues concentration explores how each issue, its history, and its potential resolution affect society. From human rights to sustainable development, areas of focus in the Global Issues concentration explore contemporary issues and trends in a global context.

Professional practitioners who work in the fields they teach and contend with international relations in their daily work lead each course as students are introduced to the global processes that impact societies around the world while they apply practical theory to ethical, political, and conflict situations on the global stage. In a growing, integrated world, there has been a surge in the importance of international relations. Degree seekers should take advantage of this resurgence and master the fundamentals of global affairs by becoming immersed in the analytical and solution-oriented mindset of an international relations expert. Customize your Global Affairs master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

• Analyze contemporary issues and trends in a global context, viewing the influence of events and ideas

Global Affairs Outcomes

This program prepares students to:

• Define and discuss globalization in terms of business, culture, government, and major issues
• Define culture and assess cultural differences
• Navigate international legalities of working globally
• Research cultural traditions and regional histories to holistically describe and work within another culture in a context of global affairs
• Compare the diverse interpersonal relationship styles of various cultures and their impact on communication, trade, politics, and human discourse
• Gain sensitivity to and be able to discuss different perspectives as they are influenced by national origin, cultural identification, varying levels of economic success, and divergent methods of political interaction; and
• Be attentive to the global nature of 21st century human interaction in future international friendships and business dealings

Master of Liberal Studies in Global Affairs with a concentration in Translation Studies

The Translation Studies master's degree concentration is offered entirely online to meet the needs of busy adults. Earning a master's degree with a concentration in Translation Studies provides students the knowledge and transferable skills to become effective translators in a professional capacity, either from English to Spanish or Spanish to English. Translation students (must be admitted into the degree program with proficiency in Spanish and
English) will gain a broad theoretical and practical background through translation studies, as well as practice in different types of translation—such as legal, commercial, financial, localization, political, and medical translation.

Classes are taught online and are led by professional practitioners of translation who work in the fields they teach. Students will learn what it takes to become a professional translator as they gain valuable communication training and experience by apprenticing as a translator in a professional setting. Translation Studies will cover essential terminology, computer applications for translators, and issues related to managing projects internationally in individual and team-based environments. Customize your Global Affairs master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select the translation courses that cater to your specific career needs.

This degree prepares students to:

• Utilize and apply translation theories and methods to practical translations in a variety of fields, which may include legal, commercial, financial, localization, political, or medical specialties
• Translate from English to Spanish and Spanish to English using essential terminology and appropriate computer applications
• Analyze the cultural, organizational, and structural contexts of source and target languages, to provide effective and accurate translations that meet client needs and requirements
• Demonstrate project management and translation skills in a professional setting

Global Affairs Outcomes
This program prepares students to:

• Define and discuss globalization in terms of business, culture, government, and major issues
• Define culture and assess cultural differences
• Navigate international legalities of working globally
• Research cultural traditions and regional histories to holistically describe and work within another culture in a context of global affairs
• Compare the diverse interpersonal relationship styles of various cultures and their impact on communication, trade, politics, and human discourse
• Gain sensitivity to and be able to discuss different perspectives as they are influenced by national origin, cultural identification, varying levels of economic success, and divergent methods of political interaction; and
• Be attentive to the global nature of 21st century human interaction in future international friendships and business dealings

Master of Liberal Studies in Global Affairs with a concentration in World History and Culture
The World History and Culture master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will critically examine the history and culture of the world from a broad range of perspectives, preparing them for an equally wide range of careers related to international relations. Degree seekers will earn more than a history degree, as they obtain a masterful grasp of international studies and the world at large.

Students will study the historical, political, sociological, and economic factors that contribute to nations’ cultures, identities, and history while broadening their global affairs knowledge, from competition and conflict, to building community and cooperation. The World History and Culture concentration explores international studies in an applied, practical manner for professionals and executives working across cultures and across industries. Customize your Global Affairs master’s degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

• Study the historical, political, sociological, and economic factors that contribute to other nations’ cultures and identities

Global Affairs Outcomes
This program prepares students to:

• Define and discuss globalization in terms of business, culture, government, and major issues
• Define culture and assess cultural differences
• Navigate international legalities of working globally
• Research cultural traditions and regional histories to holistically describe and work within another culture in a context of global affairs
• Compare the diverse interpersonal relationship styles of various cultures and their impact on communication, trade, politics, and human discourse
• Gain sensitivity to and be able to discuss different perspectives as they are influenced by national origin, cultural identification, varying levels of economic success, and divergent methods of political interaction; and
• Be attentive to the global nature of 21st century human interaction in future international friendships and business dealings
Master’s Degree Admission

Admission Criteria

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process

Master's degree applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/masters.cfm).

- **Application:** Applicants must complete the application online (http://myweb.du.edu).
- **Application Fee:** A $75 non-refundable application fee is required for an application to be processed.
- **One Official Transcript from each Post-Secondary Institution:** Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
- **Two Letters of Recommendation:** Two confidential letters of recommendation are required.
- **Statement of Purpose:** A personal statement (two pages double spaced) is required. The statement should include information on how the degree will enhance career plans and meet educational goals. Sharing personal experiences, abilities, achievements, and goals is encouraged. This document has considerable influence in the decision to admit applicants with attention given to written communication skills.
- **Résumé/Curriculum Vitae (CV):**
- **Degree Plan:** The degree plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online degree builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
- **Language Proficiency:** Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.
- **Proof of Permanent Residency:** Permanent Residents must provide a copy of their Registration Alien Card (green card).
- **Admission Interview:** An interview may be required at the program director’s request.
- **Translation Studies Applicants:** Applicants must complete the required Language Pair Information and Assessment (http://universitycollege.du.edu/assets/pdf/admissions/grad/langapp.pdf) form.
- **International Applicants:** Additional requirements are listed below for international applicants.

Certificate Admission

Admission Criteria

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process

Certificate applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/certificate.cfm).

- **Application:** Applicants must complete the application online (http://myweb.du.edu).
- **Application Fee:** A $50 non-refundable application fee is required for an application to be processed.
- **One Official Transcript from each Post-Secondary Institution:** Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
- **Certificate Plan:** The certificate plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online degree builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
• **Language Proficiency:** Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.

• **Proof of Permanent Residency:** Permanent Residents must provide a copy of their Registration Alien Card (green card).

• **Admission Interview:** An interview may be required at the program director’s request.

• **Translation Studies Applicants:** Applicants must complete the required Language Pair Information and Assessment (http://universitycollege.du.edu/assets/pdf/admissions/grad/langapp.pdf) form.

• **International Applicants:** Additional requirements are listed below for international applicants.

### International Admission

International applicants must comply with all requirements set forth for domestic applicants and supplement their application with additional documentation. International applicant information, including admission deadlines and the International Applicant Checklist, is available on the University College website (http://universitycollege.du.edu/answers/admission/international.cfm).

Admitted international applicants whose native language is not English are required to attend University College’s International Preparation Week (http://universitycollege.du.edu/answers/admission/international.cfm) prior to attending courses at University College.

University College will consider graduate applicants who have earned three-year baccalaureate degrees from 15-year education systems. The school from which the applicant has earned the degree must be a formally recognized or regionally accredited institution of higher learning, as determined by the University Of Denver Office Of International Student Admission. Admission policy and procedures for applicants holding three-year baccalaureate degrees is the same as for other international applicants with one exception: applicants with a three-year degree are not eligible for English Conditional Admission. Priority consideration will be given to those with a minimum of three year’s work experience.

### Additional Admission Requirements for International Applicants

• **English Proficiency:** All internationally educated applicants whose native language is not English are required to submit proof of English Language Proficiency regardless of citizenship and/or U.S. residency.

  1. **TOEFL:** A minimum score of 550 (paper based), 213 (computer based), or 80 (Internet based) is required for admission consideration. Generally, applicants should achieve at least 20 in all TOEFL subscores on the internet-based exam. TOEFL score reports older than two years from the date of application are not acceptable for admission consideration.

  2. **Academic IELTS:** A score of 6.5 or higher is required to be considered for admission. Each individual band score must be 6.0 or higher. IELTS score reports older than two years from the date of application are not acceptable for admission consideration.

  3. **Possible Exemptions:** International applicants may be exempt from the TOEFL/Academic IELTS requirement if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the entire language of instruction and examination is in English.

  4. **English Conditional Acceptance (should this be Admission not Acceptance?) (ECA):** Master's degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, ECA requires an evaluation by the University of Denver’s English Language Center (ELC) and successful completion of intensive ELC English courses including the Graduate Preparation Program. Academic classes may not be taken while students are enrolled at the English Language Center. Graduate certificate students may not be admitted through ECA. As an alternative to the English Language Center, an applicant may become fully admitted by submitting sufficient TOEFL/Academic IELTS scores.

• **Official Transcripts and Translations:** International applicants should submit official transcripts printed in the official language of instruction of their institution. Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English.

• **Photocopy of Diploma/Degree Certification and Appropriate Translations:** Applicants who have earned a degree outside the U.S. must submit proof of graduation through a degree certificate or diploma along with all appropriate official translations.

• **A Photocopy of Current Passport:** Applicants must provide a copy of the photograph and legal name page of their passport. This is required before an I-20 can be issued by the University of Denver.

• **The Supplemental Information Form (SEVIS Supplement):** Applicants who are not U.S. Citizens or permanent residents must complete the SEVIS form.

• **Financial Verification Form:** Applicants seeking an I-20 student visa must submit financial verification documents.

- GS 4130 Human Rights and the Role of Women 4

Elective requirements

Select three of the following: 12

- GS 4200 Globalization and Human Geography
- GS 4210 World Religious Traditions
- GS 4220 Competition and Conflict
- GS 4230 Community and Cooperation

Total Credits 48

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

**Non-coursework Requirement**

Capstone Project (or successful completion of Capstone Seminar)

**Courses**

**GS 4010 Global Players, Structures, and Trends (4 Credits)**

In this course, globalization is studied from historical and contemporary perspectives. Structures of community and organizations, governmental and nongovernmental, are examined and compared. Students study cases of global conflict and cooperation. Global issues are introduced, and students examine the role of the United States in the world across issues, borders, and cultures.

**GS 4020 Cultural Positioning and Assessment (4 Credits)**

In building a global perspective, it is essential to be able to position oneself culturally and interact with people from other cultural backgrounds. This course addresses the question of how to learn about different regions and cultures and how to assess the similarities and differences with one’s own. Students learn about how to define culture. They develop skills to research countries, regions, and cultures through history, human geography, religion, and artistic traditions. They use the knowledge gleaned through research to build cross-cultural communication skills.

**GS 4030 Issues in Working Internationally (4 Credits)**

In a global marketplace, working internationally is very common. There are many legal, corporate, and cultural issues that individuals and corporations in the international workplace encounter on a regular basis. This course addresses legal issues – such as contracts and agreements, import/export regulations, intellectual property, and human resources – that affect how business is done across national and cultural lines. In addition, workers need to be able to assess the business and social cultures in another country in order to navigate the business climate and networking protocols.

**GS 4100 Hunger, Food, and Health (4 Credits)**

A growing world population, climate change, and scarce resources have many implications on hunger, food, and health. Floods and droughts, conflict and migration affect food supplies, which create hunger. Cultural norms and practices, famine, forced migration, and conflict contribute to health concerns. New strains of disease threaten global pandemics. Students in this course examine current issues of hunger, food, and health in a global context. Social, political, cultural, and economic aspects of these issues are analyzed. The role of governmental and non-governmental organizations and agencies in issues of hunger, food, and health are discussed. Students debate the causes and solutions of global hunger, food, and health issues, using case examples to support their arguments.

**GS 4110 Sustainable Development (4 Credits)**

Economic development, ecology and democracy are three dynamic, powerful and volatile forces in the world today. Players in the tension between them include nations, large corporations, and a groundswell of farmers, workers, and ordinary people. This course looks at the model of sustainable development as a way for countries to make long-term and ethical decisions about how to use resources: earth, water, air, energy, as well as the most important resource, people. Contrasts are drawn between Western economies and the emerging world attempting the leap from an agricultural paradigm to industrialization, while trying to avoid falling into the Malthus trap of overpopulation. Students develop an understanding of the complex, intertwined relationship between economic growth, environment and humanity.

**GS 4120 Terrorism and War in the 21st Century (4 Credits)**

In the 21st century, the word “terrorism” is a part of the common vernacular used with multiple, and at times vague, meanings. This course prepares students to understand and explain the contexts and impacts of terrorism through interdisciplinary exploration of terrorism theories. Students investigate how these theories apply to both real world situations and responses to terrorism and how these theories contribute to our understanding of 21st century concepts of war and terror.

**GS 4130 Human Rights and the Role of Women (4 Credits)**

The Universal Declaration of Human Rights was adopted by the UN General Assembly in 1948. With this international recognition of human rights is a responsibility to promote and protect those human rights. In this course, those rights and the organizations that promote and protect them are studied. The philosophical and theoretical bases for the concept of human rights is examined. In addition, students delve into women’s human's rights and perspectives, including feminist perspectives on international human rights and issues such as trafficking, refugees, economic and social rights. The role of women in promoting and defending universal human rights is highlighted.

**GS 4200 Globalization and Human Geography (4 Credits)**

This course examines human-environment relations under globalization from the lens of human geography. Core concepts of human geography such as scale, place, and identity are used to examine current globalization trends, debates, and implications on human settlements and activities. Students examine the interconnection of economics, politics, migration, culture, trade, settlement patterns and development at different scales through the lens of geography. The course ends with an analysis of current resistance responses and alternatives for the future.

**GS 4210 World Religious Traditions (4 Credits)**

This course examines the religions of the world and their roles in defining cultures and societies. Major world religions are examined and discussed in this course, including their varied beliefs, rituals, and institutions. Comparisons and distinctions are drawn between the various Western and non-Western traditions. In addition to major religions, smaller religious movements and distinct religions from around the world are also discussed.
GS 4220 Competition and Conflict (4 Credits)
In this course, students study philosophies, cultures, and events of competition and conflict across the globe and throughout history. Theories of the dialectic, competition, and struggle for advancement are analyzed. Social and belief systems of nationalism, capitalism, and survival of the fittest are among those that create boundaries and encourage competition and, at times, conflict. Students delve into and analyze various conflicts and cultures throughout history marked by ideals of competition, individualism, and power.

GS 4230 Community and Cooperation (4 Credits)
In this course, students examine world cultures, ideas, and events across history through a lens of community and cooperation. Philosophies of community, social cooperation, and unity for societal progress are analyzed. The philosophies of socialism and communism, their various modes of implementation, and their success are assessed. International organizations that foster cooperation and community, such as the United Nations and the European Union are investigated. Social movements for change that create communities across borders are analyzed and discussed.

GS 4300 Theory and Practice of Translation and Interpretation (4 Credits)
This course provides a review of translation and interpretation theories, the link between linguistic and cultural factors, and their relevance to the translation and interpretation task. The course covers the different aspects of translation and interpretation as different yet often complimentary professions; survey translation tools and reference materials; discuss professional roles and modes and public perception of the professions. Standard business practices and professional code of ethics are examined. General practice in translation and interpretation is provided. Fundamental translation and interpreting theories are emphasized at the beginning of the course and are conveyed in the form of assigned readings, lectures, class discussions, and independent research. Language Generic. Prerequisite: Admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty or the Certificate of Advanced Study in Translation Studies.

GS 4301 Basic Translation: Written and Sight (4 Credits)
This is an introductory course in translation covering a variety of registers: commercial, journalistic, legal, literary, medical, and technical. Students learn to apply text analysis, text typology, and contrastive analysis of their working languages to identify, analyze, and resolve translation problems while independently developing an efficient and rational approach to the process of translation. In addition, course assignments include practice and graded exercises in translation and sight translation, utilizing authentic texts drawn from an extensive variety of text categories that include, but are not limited to, current events, general political economy, general legal documents, and scientific and technical topics for general audiences. Language Specific. Prerequisites: GS 4300 Theory & Practice of Translation and Interpretation and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty or the Certificate of Advanced Study in Translation Studies.

GS 4302 Terminology and Computer Applications for Translators (4 Credits)
This course provides an introduction to translation memory software and terminology management software. Translation theory or field-specific terminology are not covered. Students become familiar with the concept of translation memory, learn to use the main features (create, import, export, analyze, clean up) of some of the applications available, and use translation memory in the translation process as necessary to create a translation project workflow from start to finish. Students also learn to use terminology tools to create and edit a term base that can be used during translation as a main reference. Language Generic. This course may be taken concurrently with GS 4300. Prerequisite: Master of Liberal Studies in Global Affairs with a Translation Studies specialty or the Certificate in Translation Studies.

GS 4303 Translation Practicum (4 Credits)
Application of the knowledge, skills, and attitudes attained in the classroom by apprenticing under qualified translators, translation agencies, law firms, government agencies (e.g. school districts, the IRS, police departments, social services agencies), and/or healthcare and community-based organizations in a variety of general work situations. Interns shadow their mentors and the move into actual translation assignments in monitored situations. The nature of the professions easily accommodates the completion of the Translation Practicum online for distance students. The Practicum helps students develop and establish an identity as professional translators, as it builds a practical knowledge of translation as a profession. Its goal is to empower students to identify and pursue professional development opportunities and specializations. Initiation into the translation industry through interaction with members of the profession, professional organizations, and institutions in the language industry are encouraged. Students are expected to prepare a final project based on their practical experience following the University College Internship Handbook. The practicum should be taken as one of the last two translation classes. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty or the Certificate of Advanced Study in Translation Studies.

GS 4304 Introduction to Legal Translation (4 Credits)
Because a legal document bears legal liabilities, the translation of a legal document has the same legal effect as the original. As a result, the requirements for accuracy in legal translation (meaning, tone, and style) are quite high. This course provides an overview of the nature of legal translation and an introduction to the principles of comparative law, such as how to research legal issues in the countries of the language pair. The concepts of equivalence and zero equivalence are analyzed. Participants translate different types of agreements; certificates; and affidavits, as well as a wide array of documents focusing on probate, family, poverty, and criminal law. Students are given assignments on the research approach, steps, and skills needed to tackle a legal translation project from start to finish. Fundamental legal translation theory is emphasized at the beginning of the course and conveyed in the form of assigned readings, lectures, class discussions, and independent research. Language specific. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty or the Certificate of Advanced Study in Translation Studies.
GS 4305 Localization and Translation of Software and Web Pages (4 Credits)
This course provides students with a general overview of the field of web page translation and an introduction to software localization. Class topics range from technical discussions on computer architecture to tips for managing localization projects. Students gain a thorough understanding of the basic components of a localization project (web, software, online help, and documentation) and insight into the larger context of software/web localization and internationalization processes. Using real-life examples and hands-on exercises, students explore the cultural, technical, and organizational challenges in the adaptation of culturally sensitive elements. Language generic. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4306 Translation of Medical and Scientific Texts (4 Credits)
This course covers medical terminology involving patient education, medical research, drug development, the human body and systems, major diseases, as well as the most common injuries. Students translate documents used in general medical practice and are introduced to the common roots, prefixes and suffixes in medical terminology. Translation skills are reinforced by analyzing different levels of difficulty in medical texts, by translating, and by addressing requests for editing and rewriting translated materials for patient populations and audiences of different education levels. Students practice translating medical office correspondence, informational brochures, patient letters, discharge information, hospital intake questionnaires, living wills, patient outreach/educational materials, instructions for taking medications, laboratory tests, and medical disability reports, among others. Language specific. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4307 Translation Project Management (4 Credits)
This course gives students the opportunity to address both translation and non-translation related issues associated with planning, executing, controlling, and delivering a final translation for a client (either direct or as an agency). Particular focus is given to hands-on practice of the various communications between the parties. The course outlines an effective project management methodology that can be applied to large or small translation/localization projects. Language generic. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4701 Topics in Global Affairs (4 Credits)
The content of this course varies each time it is offered. Specific course content is detailed on quarterly schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

GS 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project synthesizes and applies core concepts acquired from the program. The student selects an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. View the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements.

GS 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. The seminar is dependent upon collegial discussion of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. The course structure, facilitated by the faculty member, guides the students through the process of independent research and writing of a capstone paper; the instructor provides intensive feedback on the capstone process and papers. Students are responsible for generating the course content through ongoing discussion of and peer feedback on the capstone process and individual papers, as well as the analysis and contextualization of focused students papers within the wider degree field of study. Students professionally and academically communicate their findings through written work and oral presentations. Students must have: unconditional acceptance as a degree candidate; completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

GS 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: unconditional acceptance as a degree candidate; completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.
GS 4905 Graduate Social Research Methods (4 Credits)
Graduate Social Research Methods is an exploration of the methods and purposes of social science research from the perspective of the researcher as well as that of the informed professional and consumer of information. Students learn about the process of research, including the development of research questions, the purpose of various social science research methods, the role of professional ethics, and general approaches to the analysis and interpretation of data. Students develop the ability to read and critique basic social science research articles and to implement simple research designs. Students develop and write a research proposal around a specific research question informed by a review of the literature. Technical requirements include the ability to read and modify Microsoft Excel documents.

GS 4991 Independent Study (1-5 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

GS 4992 Directed Study (1-5 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Directed Study is offered only on a for-credit basis.

Healthcare Leadership

Certificate in Healthcare Leadership with a Concentration in Healthcare Policy and Regulatory Leadership
The graduate certificate in Healthcare Policy and Regulatory Leadership concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will add new skills to their portfolio, including knowledge on how to help shape, interpret, and implement policies and regulations that impact a value-driven healthcare system. The Healthcare Policy and Regulatory Leadership concentration will provide an improved understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare related public policy and healthcare law.

Certificate students will explore the role of professional standards and accreditation as they relate to quality assurance and reimbursement strategies for healthcare. The complexities of a changing relationship between policy, providers, and patients within various cultural settings, domestically and internationally, will be discussed in relationship to healthcare. Credits earned through this certificate may apply toward a master's degree in Healthcare Leadership.

This certificate prepares students to:

• Compare variations in healthcare delivery domestically and internationally
• Understand the legislative process involved in the creation of healthcare public policy
• Explain how change leads to resistance and what measures must be adopted to incorporate change
• Discuss how professional standards and accreditation relate to quality assurance in various areas of healthcare
• Analyze the processes involved in the implementation of healthcare public policy and healthcare reform

Certificate in Healthcare Leadership with a Concentration in Managing Legal Issues in Healthcare
The graduate certificate in Managing Legal Issues in Healthcare concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students explore the intersection of law and health systems as they navigate business and practice management in healthcare. Law as it relates to healthcare is the focus of the graduate certificate, which allows for the expansion of relevant and necessary skills for legal professionals, health providers, practice managers, and healthcare administrators.

Certificate students learn the economic and legal structures associated with healthcare systems and delivery mechanisms in order to assess and respond to common legal and policy issues facing individuals and organizations within healthcare. Certificate students will be exposed to transactional law, professional liability, professional review, patient privacy, and anti-discrimination, discussed in relation to both inpatient and outpatient facilities and providers. Principles of change management will be applied throughout certificate coursework to provide leadership skills necessary to develop, facilitate, and maintain change across health systems. Credits earned through this graduate certificate may apply toward a master’s degree in Healthcare Leadership.
This certificate prepares students to:

- Analyze the intersection of law and healthcare in health administration
- Assess legal and regulatory systems that impact healthcare payment and delivery
- Explore legal issues which influence academic medical research and health entrepreneurship
- Examine ethical considerations which affect healthcare
- Identify business principles necessary to manage the legal components of healthcare systems

**Certificate in Healthcare Leadership with a Concentration in Medical and Healthcare Information Technologies**

The graduate certificate in Medical and Healthcare Information Technologies concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will gain the cutting-edge skills needed to thrive in the emerging medical information technology field as they learn to improve patient care. Students will learn how technology impacts and improves diagnosis, treatment, training, patient records, and financial transactions through the certificate program, which offers a high-level knowledge of the interoperability of healthcare information systems.

The certificate program will prepare students with a new skillset for their portfolio, including how to reduce costs and improve access to quality healthcare through technologies that comprise the framework of modern connected healthcare. Certificate courses emphasize provider and patient interaction and how to improve overall efficiency through relevant health informatics. Credits earned through this graduate certificate may apply toward a master's degree in Medical and Healthcare Information Technologies.

This certificate prepares students to:

- Discuss how technology affects diagnosis, treatment, training, recordkeeping, financial transactions and data outcome analysis
- Compare and contrast emerging trends in medical and healthcare information technology including electronic health records and telehealth
- Discuss how technology can help improve quality of patient care and reduce costs as healthcare moves from a volume-based to value-based system
- Identify different ways to facilitate discussion and communication between clinical providers and technical staff

**Certificate in Healthcare Leadership with a Concentration in Strategic Leadership in Healthcare Organizations**

The graduate certificate Strategic Leadership in Healthcare Organizations concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will learn to successfully and strategically lead within healthcare organizations, in addition to developing, implementing, and administering strategic plans for various types of healthcare systems. Using case-based study techniques, healthcare certificate students will explore practice and system management, strategic planning, and change leadership. The graduate certificate program directs students in gaining in-depth healthcare leadership skills that ensure systems and organizations continue to be dynamic, relevant, and competent.

Through analysis of the interrelationships of value, quality, and price, certificate students examine the macro-level of healthcare financial systems in order to better understand budgets and organizational goals and vision. From upholding patient values to maintaining a congenial work environment, strategic healthcare leaders forge the way for dynamic, innovative healthcare organizations. Credits earned through this graduate certificate may apply toward a master's degree in Healthcare Leadership.

This certificate prepares students to:

- Compare and contrast leadership and administration characteristics that contribute to success in the provision of healthcare
- Identify basic components of a strategic plan and change management, relating them to financial planning and patient value within the healthcare system
- Discuss issues that support and detract from a harmonious workplace environment, how these issues affect patient services, and provide solutions in effectively dealing with these issues
- Compare and contrast the strategic management functions required to lead and administer various types of healthcare systems
- Demonstrate expertise in the complex history and process of healthcare economics

**Master of Professional Studies in Healthcare Leadership with a Concentration in Healthcare Policy and Regulatory Leadership**

The Healthcare Policy and Regulatory Leadership master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will acquire the essential tools necessary to become leaders who help shape, interpret, and implement policies and regulations that impact a value-driven healthcare system. Designed and delivered for busy adults seeking...
professional development and advancement within the healthcare industry, the healthcare degree will provide an improved understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare related public policy and healthcare law.

Degree-seeking students will discuss the implications of policies across geographic areas. The role of professional standards and accreditation is discussed in relationship to quality assurance and reimbursement strategies for healthcare. The master's degree concentration in Healthcare Policy and Regulatory Leadership from University College examines the complex and changing relationship between policy, providers, and patients within various cultural settings, domestically and internationally, in healthcare. Master's degree students will receive a career-relevant education that shapes them into healthcare leaders with a pulse on the dynamism in healthcare and continuing emergence of reform leading to changes in healthcare policy. Customize your Healthcare Leadership master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

- Compare variations in healthcare delivery domestically and internationally
- Understand the legislative process involved in the creation of healthcare public policy
- Explain how change leads to resistance and what measures must be adopted to incorporate change
- Discuss how professional standards and accreditation relate to quality assurance in various areas of healthcare
- Analyze the processes involved in the implementation of healthcare public policy and healthcare reform

**Master of Professional Studies in Healthcare Leadership with a Concentration in Managing Legal Issues in Healthcare**

The Managing Legal Issues in Healthcare master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will explore the intersection of law and health systems as they navigate business and practice management in healthcare. Law as it relates to healthcare is the focus of this master’s degree concentration, which provides legal professionals, health providers, practice managers, and healthcare administrators the concentrated knowledge of how law and medicine must work in cooperation to assure better health, improved care, and lower costs while ensuring patient safety in healthcare.

Master’s degree students will acquire specialized skills related to the economic and legal structures associated with healthcare systems and delivery mechanisms in order to assess and respond to common legal and policy issues facing individuals and organizations within healthcare. The master’s degree curriculum focuses on healthcare law and policy issues including transactional law, professional liability, professional review, patient privacy, and anti-discrimination, discussed in relation to both inpatient and outpatient facilities and providers. Unique legal concerns related to academic and entrepreneurial medicine are addressed including research regulations, intellectual property and product development. Customize your Healthcare Leadership master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

- Analyze the intersection of law and healthcare in health administration
- Assess legal and regulatory systems that impact healthcare payment and delivery
- Explore legal issues which influence academic medical research and health entrepreneurship
- Examine ethical considerations which affect healthcare
- Identify business principles necessary to manage the legal components of healthcare systems

**Master of Professional Studies in Healthcare Leadership with a Concentration in Medical and Healthcare Information Technologies**

The Medical and Healthcare Information Technologies master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Stay at the cutting-edge of emerging medical information technology and improve patient care with a master's degree concentration in Medical and Healthcare Information Technologies from University College, where courses are geared for the busy adult who seeks professional development in the healthcare field. Learn how technology affects and improves diagnosis, treatment, training, patient records, and financial transactions. Students will gain a high-level knowledge of the interoperability of healthcare information systems, the benefits and barriers associated with electronic health records systems, and the emerging use of distance medicine and telehealth.

Degree-seeking students will be prepared to enter the healthcare field with innovative, solution-oriented tactics to improve the efficiency and effectiveness of systems and patient care. Classes cover how to reduce costs and improve access to quality healthcare through technologies that comprise the framework of modern connected healthcare. With the explosion of technology drastically affecting the healthcare industry both nationally and globally, it is more important than ever to stay current on the medical information technologies available to healthcare professionals today. Courses emphasize provider and patient interaction and how to improve overall efficiency through relevant health informatics. Customize your Healthcare Leadership master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.
This degree prepares students to:

- Discuss how technology affects diagnosis, treatment, training, recordkeeping, financial transactions and data outcome analysis
- Compare and contrast emerging trends in medical and healthcare information technology including electronic health records and telehealth
- Discuss how technology can help improve quality of patient care and reduce costs as healthcare moves from a volume-based to value-based system
- Identify different ways to facilitate discussion and communication between clinical providers and technical staff

Master of Professional Studies in Healthcare Leadership with a Concentration in Strategic Leadership in Healthcare Organizations

The Strategic Leadership in Healthcare Organizations master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. At University College, students will acquire the skills needed to successfully and strategically lead within healthcare organizations through the integrative process of a changing healthcare industry. Using case based study techniques, students will explore practice and system management, strategic planning, and change leadership. The program directs students in gaining in-depth healthcare leadership skills that ensure systems and organizations continue to be dynamic, relevant, and competent.

The relationship between patients and providers is the fundamental element of a strategic healthcare system. Successful management of this relationship requires healthcare leaders who can accommodate challenges constructively and provide high quality care to patients. Through analysis of the interrelationships of value, quality, and price, students will examine the financial state of healthcare at the macrolevel, allowing them to better understand the budgetary restraints while striving to realize an organization's vision and goals. From upholding patient values to maintaining a congenial work environment, strategic healthcare leaders forge the way for dynamic, innovative healthcare organizations. Customize your Healthcare Leadership master’s degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

- Compare and contrast leadership and administration characteristics that contribute to success in the provision of healthcare
- Identify basic components of a strategic plan and change management, relating them to financial planning and patient value within the healthcare system
- Discuss issues that support and detract from a harmonious workplace environment, how these issues affect patient services, and provide solutions in effectively dealing with these issues
- Compare and contrast the strategic management functions required to lead and administer various types of healthcare systems
- Demonstrate expertise in the complex history and process of healthcare economics

MASTER’S DEGREE ADMISSION

Admission Criteria

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process

Master’s degree applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/masters.cfm).

- Application: Applicants must complete the application online (http://myweb.du.edu).
- Application Fee: A $75 non-refundable application fee is required for an application to be processed.
- One Official Transcript from each Post-Secondary Institution: Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
- Two Letters of Recommendation: Two confidential letters of recommendation are required.
- Statement of Purpose: A personal statement (two pages double spaced) is required. The statement should include information on how the degree will enhance career plans and meet educational goals. Sharing personal experiences, abilities, achievements, and goals is encouraged. This document has considerable influence in the decision to admit applicants with attention given to written communication skills.
- Résumé/Curriculum Vitae (CV).
- Degree Plan: The degree plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
• Language Proficiency: Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.
• Proof of Permanent Residency: Permanent Residents must provide a copy of their Registration Alien Card (green card).
• Admission Interview: An interview may be required at the program director’s request.
• International Applicants: Additional requirements are listed below for international applicants.

CERTIFICATE ADMISSION

Admission Criteria
A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process
Certificate applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/certificate.cfm).

• Application: Applicants must complete the application online (http://myweb.du.edu).
• Application Fee: A $50 non-refundable application fee is required for an application to be processed.
• One Official Transcript from each Post-Secondary Institution: Applicants are required to submit an official transcript from each post-secondary institution they have attended, or a copy of official transcripts for credit earned as transfer work and study abroad.
• Certificate Plan: The certificate plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
• Language Proficiency: Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.
• Proof of Permanent Residency: Permanent Residents must provide a copy of their Registration Alien Card (green card).
• Admission Interview: An interview may be required at the program director’s request.
• International Applicants: Additional requirements are listed below for international applicants.

INTERNATIONAL ADMISSION

International applicants must comply with all requirements set forth for domestic applicants and supplement their application with additional documentation. International applicant information, including admission deadlines and the International Applicant Checklist, is available on the University College website (http://universitycollege.du.edu/answers/admission/international.cfm).

Admitted international applicants whose native language is not English are required to attend University College’s International Preparation Week (http://universitycollege.du.edu/answers/admission/international.cfm) prior to attending courses at University College.

University College will consider graduate applicants who have earned three-year baccalaureate degrees from 15-year education systems. The school from which the applicant has earned the degree must be a formally recognized or regionally accredited institution of higher learning, as determined by the University Of Denver Office Of International Student Admission. Admission policy and procedures for applicants holding three-year baccalaureate degrees is the same as for other international applicants with one exception: applicants with a three-year degree are not eligible for English Conditional Admission. Priority consideration will be given to those with a minimum of three year’s work experience.

Additional Admission Requirements for International Applicants
• English Proficiency: All internationally educated applicants whose native language is not English are required to submit proof of English Language Proficiency regardless of citizenship and/or U.S. residency.
1. TOEFL: A minimum score of 550 (paper based), 213 (computer based), or 80 (Internet based) is required for admission consideration. Generally, applicants should achieve at least 20 in all TOEFL subscores on the internet-based exam. TOEFL score reports older than two years from the date of application are not acceptable for admission consideration.
2. **Academic IELTS**: A score of 6.5 or higher is required to be considered for admission. Each individual band score must be 6.0 or higher. IELTS score reports older than two years from the date of application are not acceptable for admission consideration.

3. **Possible Exemptions**: International applicants may be exempt from the TOEFL/Academic IELTS requirement if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the entire language of instruction and examination is in English.

4. **English Conditional (Admission?) (ECA)**: Master's degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, ECA requires an evaluation by the University of Denver's English Language Center (ELC) and successful completion of intensive ELC English courses including the Graduate Preparation Program. Academic classes may not be taken while students are enrolled at the English Language Center. Graduate certificate students may not be admitted through ECA. As an alternative to the English Language Center, an applicant may become fully admitted by submitting sufficient TOEFL/Academic IELTS scores.

- **Official Transcripts and Translations**: International applicants should submit official transcripts printed in the official language of instruction of their institution. Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English.
- **Photocopy of Diploma/Degree Certification and Appropriate Translations**: Applicants who have earned a degree outside the U.S. must submit proof of graduation through a degree certificate or diploma along with all appropriate official translations.
- **A Photocopy of Current Passport**: Applicants must provide a copy of the photograph and legal name page of their passport. This is required before an I-20 can be issued by the University of Denver.
- **The Supplemental Information Form (SEVIS Supplement)**: Applicants who are not U.S. Citizens or permanent residents must complete the SEVIS form.
- **Financial Verification Form**: Applicants seeking an I-20 student visa must submit financial verification documents.

Total Credits  48

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

Non-coursework Requirement
Capstone Project (or successful completion of Capstone Seminar)

**Total Credits** 48

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

**Non-coursework Requirement**
Capstone Project (or successful completion of Capstone Seminar)
Courses

HC 4000 Healthcare Systems and Regulatory Environments (4 Credits)
This course opens with a comprehensive overview of the functions of various types of healthcare organizations: providers, insurance companies, government agencies, and professional associations. Alternative payment and provider models are reviewed, regulatory bodies and issues are explored, and healthcare reform efforts and proposals are discussed. Supply and demand projections for personnel are examined. The work of key federal agencies (NIH, National Center for Disease Control, and Food and Drug Administration) is reviewed as well as the activity of national and international non-governmental organizations. Major national and global public health challenges are introduced.

HC 4005 Healthcare Macroeconomics (4 Credits)
This course focuses on macro analysis of the current financial state of healthcare in the United States. The interrelationships of value, quality, and price are analyzed. The importance of transparency of quality and its effect on value is articulated. Compensation and payer models are compared including the role of employer benefits, private health insurance plans, Medicare and Medicaid, and various mechanisms used to cover the costs of prescription drugs. Current issues, such as pay for performance, cost saving through prevention, cost shifting, and healthcare for the aging, are discussed.

HC 4010 Healthcare Leadership and Communication (4 Credits)
This course focuses on methods of communication within medical teams and units, across an organization, and among healthcare organizations. Techniques for communicating highly technical medical information to patients, families, and differently trained providers are examined. Foundational technical language of medicine and the basic terminology associated with common disorders and treatments, new technologies, and regulations are reviewed. Basic principles involved in leadership skills and change management are introduced.

HC 4100 Management Principles in Healthcare Systems (4 Credits)
Healthcare systems are dynamic and require constant attention to maintain relevance and competency. In this course students encounter and explore the strategic management functions required to lead and administer various types of healthcare systems. Techniques are explored for analyzing a system and moving it forward from where it is to where it needs to be.

HC 4110 Healthcare Innovative Strategies and Change Management (4 Credits)
Strategic planning for maximum use of financial resources is critical to success within a healthcare system. The starting point includes understanding all of the basic components of a strategic plan: mission, vision, strategy and tactics. A strategic plan answers the questions: Why are we here? Where are we going? How will we get there? What resources do we need? Creative and innovative thinking when considering allocation and management of resources is explored. Students learn the conceptual language and systems of strategic planning and decision making. They learn the application of these principles to provide successful change management within an organization.

HC 4130 Organizational Behavior in Healthcare (4 Credits)
Patient satisfaction, an element of healthcare management, is often a result of how well the entire healthcare system functions. Students examine successful examples of cooperation, compatibility, and dedication within the workplace and explore what contributes to a harmonious and effective healthcare environment. Interpersonal skills are discussed, as well as ethical guidelines and laws that define acceptable workplace behavior.

HC 4200 Comparative Healthcare Systems (4 Credits)
This course describes variations in healthcare delivery systems locally, nationally, and globally as they relate to policy, structure, and finance. Comparisons of systems are made relative to expenditure of resources and outcomes. Students learn about healthcare coverage, access to care, healthcare rationing, provider manpower distribution, and seeking healthcare in foreign countries (medical tourism). The discrepancy between the desirable and the practical is explored, and students are asked to outline and defend a system that they believe is both desirable and practical.

HC 4210 Healthcare Professional Standards and Quality Improvement (4 Credits)
This course examines and is structured around key recommendations in the Institute of Medicine’s Crossing the Quality Chasm. It covers the movement to health care quality in the U.S., starting with definitions of quality and a historical perspective on quality initiatives. The class reviews quality initiatives in the past 10 years, including efforts by the Institute of Medicine, Agency for Healthcare Quality and Research, Center for Medicare and Medicaid Services, various accrediting organizations (e.g. NCQA), and employer-based initiative such as HEDIS and Leapfrog. Patient safety requirements, programs and culture are examined. The class explores the challenges of and techniques for establishing and measuring the quality of health care in various organizational settings. It examines the impacts of delivery system model and health information technology on quality and service, and explores recent efforts to link quality with payment. Throughout the course, there is an emphasis on how students, as healthcare leaders, introduce and sustain an emphasis on quality in organizational settings.

HC 4220 Ethical Considerations in Healthcare (4 Credits)
Students begin to learn how to apply ethical theories and principles to draw conclusions about a variety of medical situations, and the healthcare industry. Students develop this skill by analyzing ethical dilemmas. Through the readings and papers assigned in the course as well as class discussions, it becomes apparent how ethical considerations vary depending on the perspective of the stakeholder or assessor, which is critical in making decisions with no one right answer.

HC 4225 Healthcare Public Policy and the Legislative Process (4 Credits)
This class provides students with an understanding of the political and legislative procedures that lead to healthcare policy change and reform. Students examine the influences and functions of government agencies, legislative processes and procedures and executive branch rule-making. Students objectively evaluate how policy changes occur at the federal and state levels and subsequently affect the functioning as a citizen and a professional. Class lecture focuses on the legislative path of federal law and then follows it through to the outcomes at the state level. Students explore the importance of developing relationships, communication and advocacy strategies with elected officials and various stakeholder groups that interact with the federal and state legislative processes.
HC 4230 Public Policy Implications for Healthcare (4 Credits)
Students explore the dynamism in healthcare and the continuing emergence of new trends and policy issues. The relationship between emerging issues, the ability to adapt to the issues, and the challenges inherent in change are explored. Adaptation to change as a leadership skill is an underlying theme throughout the course. Students develop expertise in analyzing issues, considering and weighing proposed policies, and in defending strategies for bringing about change.

HC 4301 Fundamentals of Healthcare Information Systems (4 Credits)
Healthcare information technology (HIT) systems can improve cost and efficiency when systems are properly evaluated and implemented. Good IT systems are also increasingly being associated with better patient outcomes. However, healthcare has lagged behind other industries in adoption of IT systems. A major challenge to healthcare professionals is understanding the major underlying technical concepts involved in the jargon-filled world of healthcare information systems. This foundational course provides a working knowledge of key HIT definitions and concepts. It is not designed to turn students into network administrators or software developers; rather, it is to equip the student to become an active and valuable participant—or even a team leader—in the evaluation, selection, implementation and ongoing operation of health information systems. Note: This course is a pre-requisite for HC 4325 except with approval by the academic director.

HC 4310 Electronic Health Records Systems (4 Credits)
Electronic health records systems - electronic medical records (EMRs), electronic health records (EHRs), and personal health records (PHRs) are all the buzz these days, yet for the past 30 years the healthcare sector has clung to paper records, manila file folders and clipboards. Technology vendors have been claiming for years that their systems are mature enough to be successfully used, yet many providers say they will retire or sell their practice before they will adopt EMR/EHR technology. Other providers, who have made the leap of faith and have implemented EMR/EHR technology, say they would never go back to paper records. Against this backdrop, this course explores in great detail the technical and controversial aspects of healthcare information technology in general and the specific factors involving evaluation and adoption of EMR systems. We explore the fundamental components of modern electronic records systems, and review their impact on both business and clinical functions, discussing barriers to adoption and how to overcome them. A class exercise is utilized to evaluate one or two EMR systems, and role-play actual evaluation in a clinic environment. Key areas of interoperability, interfaces and standards are introduced. The course is practical and thought-provoking as it emphasizes critical thinking and the synthesis of ideas from multiple sources and perspectives. Participants are challenged to develop their own viewpoints and opinions, substantiated by the published work of those who are thought leaders in the field of HIT, as well as the participants’ own experiences.

HC 4315 InterConnected Healthcare: Telehealth Processes, Issues, Exchanges, Robotics (4 Credits)
Healthcare information systems are generally viewed as disparate pieces rather than integrated systems. Limitations inside/outside of organizations inhibit the flow of patient data across care boundaries. A decrease in providers in rural settings is creating a widening gap in access to quality healthcare, particularly for certain populations and specialties. The advantages and challenges of various technologies that can impact these issues are discussed. Special focus is placed on how communication, safety and efficiency are increased while distance becomes less of a barrier. Health information exchanges are also covered, which allow patient data to be shared between and among healthcare organizations, and also support such concepts as quality reporting, disease registry and evidence based medicine.

HC 4325 Healthcare Information Technology Applications (4 Credits)
This course covers the major healthcare information technologies and topics other the electronic health records systems. There is a large focus in healthcare technology on electronic records systems. However, there are many other important systems that form the complete framework of modern connected healthcare. This course includes electronic practice management (EPM/PMS) systems, scheduling, billing, diagnostics/labs, reporting, payment interfaces and business intelligence in healthcare. Prerequisite: HC 4301, or approval by the academic director.

HC 4400 Legal Issues: Healthcare Providers and Facilities (4 Credits)
This course is a primer on the legal and compliance considerations associated with operation and administration of healthcare provider groups and facilities. Topics include the Stark and anti-kickback laws, contract law, licensure and credentialing, professional liability, staff management and professional review, HIPAA and patient privacy, safety, highlights of the Patient Protection and Affordable Care Act of 2010 (PPACA), and civil rights and non-discrimination in the private and public sector.

HC 4410 Legal Issues: Healthcare Research, Development and Entrepreneurship (4 Credits)
This course describes legal issues which impact medical research, development of pharmaceutical agents and medical devices, food safety regulation and principles of healthcare entrepreneurism and biotechnology. Topics include institutional review board, data management and security, grants, loans and capital investment as funding sources, and intellectual property.

HC 4420 Legal Issues: Healthcare Delivery and Payment Systems (4 Credits)
This course provides an understanding of the legal complexities of creating and managing delivery and payment models for healthcare services. Course content revolves around the current challenges of evolving from volume based to value based reimbursement principles. Topics include fraud and abuse and compliance systems, legal foundations of private vs. public payment systems, disparities in access and reimbursement, health information exchanges and health insurance exchanges, and review or current healthcare reform efforts in reimbursement procedures.

HC 4701 Topics in Healthcare Leadership (1-10 Credits)
This is an advanced special topics seminar course. The focus is on specialized areas of interest. Topics courses may be used as electives within the Healthcare Leadership degree and certificates, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate programs.
HC 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project synthesizes and applies core concepts acquired from the program. The student selects an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. View the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements.

HC 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. The seminar is dependent upon collegial discussion of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. The course structure, facilitated by the faculty member, guides the students through the process of independent research and writing of a capstone paper; the instructor provides intensive feedback on the capstone process and papers. Students are responsible for generating the course content through ongoing discussion of and peer feedback on the capstone process and individual papers, as well as the analysis and contextualization of focused students papers within the wider degree field of study. Students professionally and academically communicate their findings through written work and oral presentations. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HC 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HC 4910 Research Practices and Applications (4 Credits)
This course develops competency in principles of research and measurement for use in the professional setting. As an initial course in the program of study, students learn research methods to apply to program and systems design and evaluation to achieve successful measurement of outcomes and goals. Students become critical consumers of pertinent literature to provide background and support for the choice and application of proper qualitative and quantitative research methods and data analysis for professional application. Critical thinking through comparing and contrasting cause and effect is used to build logic models. Research, design, and evaluation processes that address issues of implementation, feasibility, and sustainability are emphasized. At the conclusion of this course, students are prepared to apply and clearly communicate the practice of scientific research principles in the professional environment to ensure that the question being asked can be answered through rigorous research and the design and formative assessment of the program or system. Completion of Institutional Review Board (IRB) training via CITI Program is required as a basis for discussion of research ethics and IRB procedures. Competencies gained in this course, including practices of inquiry, self-analysis, and evaluation, are applied and integrated throughout the course of study and demonstrated in the culminating capstone work of the master’s degree.

HC 4980 Internship (1-10 Credits)
The Healthcare Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master’s programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all Healthcare students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences.

HC 4991 Independent Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

HC 4992 Directed Study (1-8 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Directed Study form and filed the form with all appropriate offices before registering for the directed study. Directed Study is offered only on a for-credit basis.
Certificate in Information and Communications Technology with a concentration in Database Design and Administration

The graduate certificate in Database Design and Administration concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults who are current or aspiring database designers and administrators. Expand your skillset to include designing, administering, fine-tuning, and maintaining databases with a graduate certificate in database design and administration concentration. Expert instructors who work in the field they teach provide excellent insight to what is needed to work efficiently and effectively in this sector of IT.

Become a leader in database design, development, and administration while you expand your skillset to include data modeling, data warehousing, performance tuning, programming, and building and maintaining client/server databases. The combination of required and elective courses in the graduate certificate program covers key DBS technologies such as SQL Server, Oracle PL/SQL, Transact-SQL programming, and NoSQL databases. This extensive content delivered in a hands-on manner provides both the knowledge and the specific skills needed to put the student on the path to earn key industry certifications for vendor database platforms. Credits earned through this graduate certificate may apply toward a master's degree in Information and Communications Technology.

Information and Communications Technology Outcomes

This program prepares students to:

- Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
- Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
- Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
- Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
- Apply best project management practices
- Apply good design processes and methods to develop production-quality systems
- Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
- Lead and coach others in the development of systems and software components
- Communicate effectively with technical peers, management, customers, and end-users
- Identify best practices in information assurance

Certificate in Information and Communications Technology with a concentration in Information Systems Security

The graduate certificate Information Systems Security concentration offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A graduate certificate in Information Systems Security from University College—a designated Center of Academic Excellence in Information Assurance Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in IT security.

Certificate classes at University College use innovative lab experiences to provide hands-on expertise with industry-current security tools. Students also garner career-relevant knowledge on related IT subjects to better relate the challenges of the rapidly evolving world of cyber security and cyber threats to other key trends in the ICT industry. To ensure up-to-the-minute knowledge and skills, the curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)². In addition, the program was developed in collaboration with the Colorado Springs and Denver chapters of the Information Security Systems Association (ISSA), and the courses have been mapped to the Committee on National Security Systems (CNSS) standards. The University of Denver has been designated by NSA/DHS as a Center of Academic Excellence in Information Assurance Education. Credits earned through this graduate certificate may apply toward a master's degree in Information and Communications Technology.

This certificate prepares students to:

- Develop and implement security policies and procedures
- Design secure applications
Information and Communications Technology Outcomes

This program prepares students to:

- Implement access controls
- Establish secure operations
- Control physical security
- Use encryption
- Secure networks
- Plan for business continuity
- Investigate incidents and handle legal issues
- Determine Return on Security Investment (ROSI)

Certificate in Information and Communications Technology with a concentration in Mobile Application Development

The graduate certificate in Mobile Application Development concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Current software and web developers need to update their mobile app design skills to meet the growing demand in the marketplace, and a graduate certificate will help expand skills and provide credentials needed to be competitive in the field. Students in the mobile application concentration will learn best practices in browser-based and packaged apps, 3rd party native extensions, distribution to app stores, and cross-platform application development. Certificate students will also acquire specialized developer knowledge and the technical skillset needed to succeed as professional mobile app designers and developers.

Certificate students will be able to expand their technical skills in JavaScript, learn about next gen wireless networks, learn PHP, or brush up on knowledge of Flash. Students at University College gain a strategic business perspective and problem-solving skills that will help them thrive in any organization. In the rapidly evolving, converged world of ICT, it is vital to grasp the diverse industry fundamentals, while also gaining an insider's perspective regarding specific areas of ICT such as mobile application design and application development. Credits earned through this graduate certificate may apply toward a master's degree in Information and Communications Technology.

Information and Communications Technology Outcomes

This program prepares students to:

- Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
- Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
- Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
- Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
- Apply best project management practices
- Apply good design processes and methods to develop production-quality systems
- Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
- Lead and coach others in the development of systems and software components
- Communicate effectively with technical peers, management, customers, and end-users
- Identify best practices in information assurance
Certificate in Information and Communications Technology with a concentration in Project Management

The graduate certificate in Project Management concentration through the Information and Communications Technology program is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Combine information and communication technology skills with a project management and business background and become a proficient leader within the IT field. Receive hands-on, practical instruction from professional practitioners who work in the fields they teach on the tools and techniques of effective IT project management. Learn how to develop a clear plan that places a project in the context of an organization’s strategic plan, while considering the implications information and communication technologies present in any given project.

The Project Management concentration students will gain a firm grasp on converging information and communication technologies and learn to understand the fundamentals of each sector. Recognizing how each IT subject connects to one another, from information security systems to geographic information systems, will give students the competitive edge needed in this dynamic industry. The content for this graduate certificate has been developed to parallel the Project Management Institute’s (PMI®) “Project Management Body of Knowledge” (PMBOK® Guide) and the unique curriculum prepares students to succeed on the PMI® Project Management Professional (PMP®) Certification Exam. Credits earned through this graduate certificate may apply toward a master’s degree in the Information and Communications Technology program.

This certificate prepares students to:

• Understand the basic principles of IT project management and become proficient in the use of project management software
• Be prepared to deal with the legal ramifications of running a complex project
• Develop a comprehensive risk management plan for a project
• Manage the complexity inherent in IT large-scale projects
• Develop an IT project management plan that clearly places a project in the context of an organization’s strategic plan
• Prepare to pass the PMI® Project Management Professional (PMP®) Certification Exam

Information and Communications Technology Outcomes

This program prepares students to:

• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

Certificate in Information and Communications Technology with a concentration in Software Design and Programming

The graduate certificate Software Design and Programming concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Expand your skillset to include software design and programming principles, while developing the in-depth knowledge needed to succeed in the field with a Software Design and Programming certificate. Current or aspiring programmers will practice OO methods and programming, with a focus on modern web-based, client-server applications and systems.

Certificate students learn how to develop quality software programs and applications, apply Software Quality Assurance practices, use software management processes such as the Unified Software Development Process, and code in languages such as C#, Java, Python, and PHP. Expert instructors guide software certificate students to identify and overcome the challenges presented by designing and programming software with various languages and development tools. A comprehensive perspective is also provided at University College, conveying how other technology domains such as application security and database design, affect software programming. Credits earned through this graduate certificate may apply toward a master’s degree in the Information and Communications Technology program.

Information and Communications Technology Outcomes

This program prepares students to:
• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

Certificate in Information and Communications Technology with a concentration in Technology Management

The graduate certificate in Technology Management concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Learn how the convergence of business and technology impacts the strategic and operational objectives. Certificate students will gain the right technical skills, combined with a strategic perspective regarding critical business needs, as they are prepared to meet current industry demands, and positioned to meet the demands of tomorrow.

The Technology Management concentration allows students to become proficient in creating, managing, and using technology to accomplish strategic organizational goals as they expand and strengthen their knowledge and skills in creative thinking, strategic and tactical decision making, and global awareness. This applied Technology Management certificate offers professionals an opportunity to receive applied instruction from professional practitioners who bring deep expertise in business management strategies and their technological implications. Credits earned through this graduate certificate may apply toward a master's degree in the Information and Communications Technology program.

This certificate prepares students to:
• Understand the breadth and scope of the ICT industry and ICT technologies
• Analyze the trends that are transforming the industry
• Recognize how convergence is shaping future opportunities
• Develop the business skills needed to manage technical organizations
• Expand your knowledge of the global competition for markets and technical resources
• Convert the strategic application of technology into competitive advantage
• Foster innovation in your company, in your products, and in your career
• Apply the decision making and leadership skills you learn today to your job tomorrow

Information and Communications Technology Outcomes

This program prepares students to:
• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

Certificate in Information and Communications Technology with a concentration in Telecommunications Technology

The graduate certificate Telecommunications Technology concentration is offered online to meet the needs of busy adults. The Telecommunications Technology concentration provides practical telecommunications instruction, including evaluating emerging telecommunications technologies, wireless networks and services, and the convergence of voice, data, and multimedia services on the global IP network. Certificate students will learn how to
assess and analyze telecommunications technologies, plus gain vital skills necessary to design, develop, and implement telecommunications systems such as wireless networks. The dominant wireless telecom technologies and protocols are presented, including OFDM, MIMO, mobile IP, WIMAX, LTE, and WPANs.

In addition to IT fundamentals, students will also develop essential strategic business and problem-solving skills that will help them thrive in any organization by creating effective alliances throughout the technology sector. Credits earned through this graduate certificate may apply toward a master’s degree in the Information and Communications Technology program.

This graduate certificate prepares students to:

- Become proficient in the technical specifications of multiple telecommunications technologies
- Evaluate alternative technologies for the fulfillment of communications needs
- Assess current and emerging telecommunications technologies
- Prepare for a future in which telecommunications, data transfer, and digital entertainment converge
- Plan and evaluate the effectiveness of an enterprise network

Information and Communications Technology Outcomes

This program prepares students to:

- Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
- Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
- Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
- Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
- Apply best project management practices
- Apply good design processes and methods to develop production-quality systems
- Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
- Lead and coach others in the development of systems and software components
- Communicate effectively with technical peers, management, customers, and end-users
- Identify best practices in information assurance

Certificate in Information and Communications Technology with a concentration in Web Design and Development

The Web Design and Development graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Move beyond first generation HTML-based Web pages and learn to create interactive, state-of-the-art, Web-based applications that support the demands of contemporary business processes by pursuing a web design certificate. The certificate program provides an in-depth knowledge of web design and web development through hands-on instruction. Students will gain the competitive advantage needed to meet current industry demands, as well as the foundations to meet the demands of tomorrow by expanding their IT skillset with a certificate.

Students will use a variety of essential software tools employed in professional web development projects, such as Flash, AJAX, and Ruby on Rails. The real-world development scenarios, coupled with the hands-on learning experience provided by professional practitioners who work in the fields they teach, result in a highly career-relevant, innovative degree in web design and development. Web design and development will be put in the context of subjects such as information systems security, software and database design, and telecommunications and students will learn how their work is impacted by these different sectors. Credits earned through this graduate certificate may apply toward a master’s degree in the Information and Communications Technology program.

Information and Communications Technology Outcomes

This program prepares students to:

- Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
- Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
- Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
- Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
- Apply best project management practices
- Apply good design processes and methods to develop production-quality systems
- Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
- Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

Master of Applied Science in Information and Communications Technology with a concentration in Database Design and Administration

The Database Design and Administration master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults who are current or aspiring database designers and administrators. Learn how to design, administer, fine-tune, and maintain databases with a database administration degree, plus develop business acumen that will help you excel in IT. Master's degree students learn from expert instructors who work in the field they teach, providing cutting-edge insight to what is needed to work efficiently and effectively in this sector of IT.

The combination of required and elective courses in the master's degree program covers key DBS technologies such as SQL Server, Oracle PL/SQL, Transact-SQL programming, and NoSQL databases. This extensive content delivered in a hands-on manner provides both the knowledge and the specific skills needed to put the student on the path to earn key industry certifications for vendor database platforms. Customize your Information and Communications Technology master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

Information and Communications Technology Outcomes

This program prepares students to:
• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

Master of Applied Science in Information and Communications Technology with a concentration in Geographic Information Systems

The Geographic Information Systems (GIS) master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. GIS training prepares students to apply geographic information systems technology to solve real-world problems, whether determining the best location for a new store, analyzing environmental damage, or detecting crime patterns in a city. GIS solutions provide the capability to store, retrieve, and analyze spatial information by combining layers of data to yield valuable understanding of a locale.

As a current or aspiring GIS professional, you will receive applied instruction from professional practitioners who work in the fields they teach as you learn to plan, implement, and execute a GIS project through remote sensing, internet mapping, or digital image processing. Also, you will develop a valuable business background with creative, solution-oriented techniques through this versatile program, which emphasizes applied education that will propel your GIS career forward. Students will explore GIS fundamentals at a very hands-on, practical level necessary to succeed in the field of GIS. Customize your Information and Communications Technology master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:
• Understand the nature of geographic data
• Recognize appropriate applications of GIS technology to solve spatial problems
• Be able to apply GIS technology to solve real-world problems
• Be able to plan, implement, and execute a GIS project

Information and Communications Technology Outcomes

This program prepares students to:
• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

Master of Applied Science in Information and Communications Technology with a concentration in Information Systems Security

The Information Systems Security master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A master's degree concentration in Information Systems Security from University College—a designated Center of Academic Excellence in Information Assurance Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in IT security.

Master's degree students receive applied instruction as they learn to navigate real-world security challenges, such as setting up a secure network, securing servers, and problem solving hypothetical security situations. Students also garner career-relevant knowledge on related IT subjects to better relate the challenges of the rapidly evolving world of cyber security and cyber threats to other key trends in the ICT industry. To ensure up-to-the-minute knowledge and skills, the curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)². In addition, the program was developed in collaboration with the Colorado Springs and Denver chapters of the Information Security Systems Association (ISSA), and the courses have been mapped to the Committee on National Security Systems (CNSS) standards. The University of Denver has been designated by NSA/DHS as a Center of Academic Excellence in Information Assurance Education.

Customize your Information and Communications Technology master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:
• Develop and implement security policies and procedures
• Design secure applications
• Implement access controls
• Establish secure operations
• Control physical security
• Use encryption
• Secure networks
• Plan for business continuity

Information and Communications Technology Outcomes

This program prepares students to:
• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance
Master of Applied Science in Information and Communications Technology with a concentration in Mobile Application Development

The Mobile Application Development master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. With mobile application development on the rise, current software and web developers need to update their mobile app design skills to meet the growing demand in the marketplace. In this master's degree program, students will learn best practices in browser-based and packaged apps, 3rd party native extensions, distribution to app stores, and cross-platform application development. Degree seekers will acquire specialized developer knowledge and the technical skillset needed to succeed as professional mobile app designers and developers.

In addition to the native and web standards-based application development techniques, you'll also have the option to customize your program based on your career needs. For example, students can expand their technical skills in JavaScript, learn about next gen wireless networks, learn PHP, or brush up on your knowledge of Flash. The master's degree in Mobile Application Development provides a high level of applied knowledge pertaining to mobile app design and development that will help launch a career as a mobile app developer, or elevate your current position. Customize your Information and Communications Technology master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

Information and Communications Technology Outcomes

This program prepares students to:

• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

Master of Applied Science in Information and Communications Technology with a concentration in Project Management

The Project Management master's degree specialty through the Information and Communications Technology program is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Combine information and communication technology skills with a project management and business background and become a proficient leader within the IT field. Receive hands-on, practical instruction from professional practitioners who work in the fields they teach on the tools and techniques of effective project management. Learn how to develop a clear plan that places a project in the context of an organization's strategic plan, while considering the implications information and communication technologies present in any given project.

Graduates of the Project Management program will gain a firm grasp on converging information and communication technologies and learn to understand the fundamentals of each sector. Recognizing how each IT subject connects to one another, from information security systems to geographic information systems, will give students the competitive edge needed in this dynamic industry. The content for this concentration has been developed to parallel the Project Management Institute's (PMI®) "Project Management Body of Knowledge" (PMBOK® Guide) and the unique curriculum prepares students to succeed on the PMI® Project Management Professional (PMP) Certification Exam. Customize your Information and Communications Technology master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

• Understand the basic principles of project management and become proficient in the use of project management software
• Be prepared to deal with the legal ramifications of running a complex project
• Develop a comprehensive risk management plan for a project
• Manage the complexity inherent in large-scale projects

Information and Communications Technology Outcomes

This program prepares students to:
• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

Master of Applied Science in Information and Communications Technology with a concentration in Software Design and Programming

The Software Design and Programming master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Expand your knowledge of software design and programming principles, while developing the in-depth skills needed to succeed in the field with a Software Design and Programming master's degree. Current or aspiring programmers will practice OO methods and programming, with a focus on modern web-based, client-server applications and systems. You will also select from a variety of elective courses that best meet your specific career needs.

Degree seekers learn how to develop quality software programs and applications, apply Software Quality Assurance practices, use software management processes such as the Unified Software Development Process, and code in languages such as C#, Java, Python, and PHP. Skills are applied in hands-on assignments, with expert instructors guiding software degree students to identify and overcome the challenges presented by designing and programming software with various languages and development tools. Customize your Information and Communications Technology master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

Information and Communications Technology Outcomes

This program prepares students to:

• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

Master of Applied Science in Information and Communications Technology with a concentration in Technology Management

The Technology Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The Technology Management degree concentration represents the convergence of business and technology and emphasizes the impact technology can have on strategic and operational objectives when applied through sound business management practices. With the right technical skills, combined with a strategic perspective regarding critical business needs, you’ll be prepared to meet current industry demands, and positioned to meet the demands of tomorrow.

Graduates with a Technology Management master's degree concentration or graduate certificate become proficient in creating, managing, and using technology to accomplish strategic organizational goals as they expand and strengthen their knowledge and skills in creative thinking, strategic and tactical decision making, and global awareness. In addition to the practical education received online or on campus, Technology Management master's degree students will also receive a broader understanding of how related IT sectors impact their technology management roles. Customize your Information and Communications Technology master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.
This degree prepares students to:

• Understand the breadth and scope of the ICT industry and ICT technologies
• Analyze the trends that are transforming the industry
• Recognize how convergence is shaping future opportunities
• Develop the business skills needed to manage technical organizations
• Expand your knowledge of the global competition for markets and technical resources
• Convert the strategic application of technology into competitive advantage
• Foster innovation in your company, in your products, and in your career
• Apply the decision making and leadership skills you learn today to your job tomorrow

Information and Communications Technology Outcomes

This program prepares students to:

• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

Master of Applied Science in Information and Communications Technology with a concentration in Telecommunications Technology

The Telecommunications Technology master's degree concentration is offered online to meet the needs of busy adults. Become a proficient, technical leader within the information and communications technology field through a Telecommunications Technology master's degree concentration. Learn how to evaluate emerging telecommunications technologies, wireless networks and services, and the convergence of voice, data, and multimedia services on the global IP network.

Students will learn how to assess and analyze telecommunications technologies, plus gain vital skills necessary to design, develop, and implement telecommunications systems such as wireless networks. The program emphasizes the challenges and approaches to deal with the immense wireless data traffic explosion from devices such as the iPhone, iPad, Android smartphones and connected laptops, as well as broadband services like VOIP and mobile video. Customize your Information and Communications Technology master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

• Become proficient in the technical specifications of multiple telecommunications technologies
• Evaluate alternative technologies for the fulfillment of communications needs
• Assess current and emerging telecommunications technologies
• Prepare for a future in which telecommunications, data transfer, and digital entertainment converge
• Plan and evaluate the effectiveness of an enterprise network

Information and Communications Technology Outcomes

This program prepares students to:

• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

Master of Applied Science in Information and Communications Technology with a concentration in Web Design and Development

The Web Design and Development master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The program provides an in-depth knowledge of web design and web development through hands-on instruction. Move beyond first generation HTML-based Web pages and learn to create interactive, state-of-the-art, Web-based applications that support the demands of contemporary e-business processes by pursuing a web design degree. Students will use a variety of essential software tools employed in professional web development projects, such as Flash, AJAX, and Ruby on Rails. The real-world development scenarios, coupled with the hands-on learning experience provided by professional practitioners who work in the fields they teach, result in a highly career-relevant, innovative degree in web design and development.

In addition to IT fundamentals, students will also develop essential business and problem-solving skills that will help them thrive in any organization. In an increasingly technological world, it is vital to understand the fundamentals of other fields of IT study, and how each converges with your web design and web development degree. Customize your Information and Communications Technology master’s degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

Information and Communications Technology Outcomes

This program prepares students to:

• Assess current and emerging technologies in such areas as mobile applications, wireless networks, and cloud computing
• Define an enterprise architecture including hardware, software, databases, and communications networks and protocols
• Evaluate, select, and apply software design and development methodologies that incorporate software development, acquisition, and/or re-use
• Identify the operational and economic impact of system architecture and software applications in areas such as computer processing, data communications, network design, and software maintenance and support
• Apply best project management practices
• Apply good design processes and methods to develop production-quality systems
• Plan and evaluate, select, and apply appropriate systems and software quality assurance methods and tools
• Lead and coach others in the development of systems and software components
• Communicate effectively with technical peers, management, customers, and end-users
• Identify best practices in information assurance

MASTER’S DEGREE ADMISSION

Admission Criteria

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process

Master’s degree applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/masters.cfm).

• Application: Applicants must complete the application online (http://myweb.du.edu).
• Application Fee: A $75 non-refundable application fee is required for an application to be processed.
• One Official Transcript from each Post-Secondary Institution: Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
• Two Letters of Recommendation: Two confidential letters of recommendation are required.
INTERNATIONAL ADMISSION

International applicants must comply with all requirements set forth for domestic applicants and supplement their application with additional documentation. International applicant information, including admission deadlines and the International Applicant Checklist, is available on the University College website (http://universitycollege.du.edu/answers/admission/international.cfm).

Admitted international applicants whose native language is not English are required to attend University College’s International Preparation Week (http://universitycollege.du.edu/answers/admission/international.cfm) prior to attending courses at University College.

University College will consider graduate applicants who have earned three-year baccalaureate degrees from 15-year education systems. The school from which the applicant has earned the degree must be a formally recognized or regionally accredited institution of higher learning, as determined by the University Of Denver Office Of International Student Admission. Admission policy and procedures for applicants holding three-year baccalaureate degrees is the same as for other international applicants with one exception: applicants with a three-year degree are not eligible for English Conditional Admission. Priority consideration will be given to those with a minimum of three year’s work experience.
Additional Admission Requirements for International Applicants

- **English Proficiency:** All internationally educated applicants whose native language is not English are required to submit proof of English Language Proficiency regardless of citizenship and/or U.S. residency.

1. **TOEFL:** A minimum score of 550 (paper based), 213 (computer based), or 80 (Internet based) is required for admission consideration. Generally, applicants should achieve at least 20 in all TOEFL subscores on the internet-based exam. TOEFL score reports older than two years from the date of application are not acceptable for admission consideration.

2. **Academic IELTS:** A score of 6.5 or higher is required to be considered for admission. Each individual band score must be 6.0 or higher. IELTS score reports older than two years from the date of application are not acceptable for admission consideration.

3. **Possible Exemptions:** International applicants may be exempt from the TOEFL/Academic IELTS requirement if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the entire language of instruction and examination is in English.

4. **English Conditional (Admission?) (ECA):** Master's degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, ECA requires an evaluation by the University of Denver's English Language Center (ELC) and successful completion of intensive ELC English courses including the Graduate Preparation Program. Academic classes may not be taken while students are enrolled at the English Language Center. Graduate certificate students may not be admitted through ECA. As an alternative to the English Language Center, an applicant may become fully admitted by submitting sufficient TOEFL/Academic IELTS scores.

- **Official Transcripts and Translations:** International applicants should submit official transcripts printed in the official language of instruction of their institution. Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English.

- **Photocopy of Diploma/Degree Certification and Appropriate Translations:** Applicants who have earned a degree outside the U.S. must submit proof of graduation through a degree certificate or diploma along with all appropriate official translations.

- **A Photocopy of Current Passport:** Applicants must provide a copy of the photograph and legal name page of their passport. This is required before an I-20 can be issued by the University of Denver.

- **The Supplemental Information Form (SEVIS Supplement):** Applicants who are not U.S. Citizens or permanent residents must complete the SEVIS form.

- **Financial Verification Form:** Applicants seeking an I-20 student visa must submit financial verification documents.

Total Credits 48

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

Non-coursework Requirement

Capstone Project (or successful completion of Capstone Seminar)

Courses

**ICT 4000 ICT Business Foundations (4 Credits)**
This course provides an overview of the relationships between business needs and Information & Communications Technology solutions. The course focuses on fundamental attributes of business research and analysis in the ICT field. Applying appropriate research methods is a critical course requirement. Students demonstrate the critical skills required to define a problem, establish a business and technical context, perform appropriate research, propose and analyze alternative solutions, identify decision criteria, and make recommendations based on such considerations as benefits, technical feasibility, costs, risks, and resources. Students assess the relevance of research findings, considering the credibility of the source, relevance to the research question, and validity of the underlying data. Taking into account current industry trends and customer/user needs, students apply the product development process to create a product or service proposal, including business requirements and a detailed business case. The course establishes the professional and academic framework for the ICT master’s degree program, setting a relevant industry context for all ICT concentrations.

**ICT 4005 ICT Technical Foundations (4 Credits)**
This course provides a substantive review of the technology at the core of the ICT industry. Coverage includes hardware, networking technology, databases, information services, applications, and content in enterprise context. The application development process is briefly reviewed. A framework is developed around data at rest, data in transit, and data being processed. This framework is used to detail the roles of a variety of hardware and software artifacts, and their use in the production, processing, protection, and use of organizational information. The role of the ICT user interface and web systems in providing user access to content anytime anywhere is reviewed. The security requirements associated with a variety of information types are introduced, along with the current best practices used in information security.

**ICT 4010 Enterprise Architecture (4 Credits)**
In this course, students learn how to effectively and efficiently integrate information and communications technologies to support business goals. The course provides an overview of the global, enterprise-wide architectural framework that drives business decisions regarding selection and implementation of ICT systems and solutions. Topics include supporting and transforming Global Value Chains, e-business designs; creating enterprise architecture; and the various methodologies, tools and techniques used in the design and implementation of the enterprise architecture. The course encompasses all aspects of information and communications technology, including data networks, applications, operating systems, database systems, telecommunications systems, and hardware components in the context of a total enterprise-wide framework.

**ICT 4015 Managing Technology for Strategic Value (4 Credits)**
In this course, students acquire an in-depth understanding of the key management skills necessary to manage technology for strategic value. It concentrates on providing in-depth knowledge of strategic planning, the role of technology in business, and business process automation. It also provides students with the management skills and tools to prioritize technology investments, and manage technology products and projects. Topics include strategic planning and business alignment, managing business applications, business process automation, the role of web 2.0 in business processes, technology management, budgeting and capital investment prioritization, and build/buy decision-making in regards to custom-built and off-the-shelf solutions.
ICT 4020 Business Forecasting and Planning (4 Credits)
Business forecasting and planning brings together a wide diversity of skills: economic, financial, marketing, and technical analysis. This course brings together these concepts and extends prior coursework with coverage of budgeting, finance, costing, business planning, revenue forecasting, profit and loss statements, and balance sheet analysis as applied to information systems and services. Coverage includes the economics of software and other intellectual property, network effects, usage and sharing effects, sunk costs and monopoly effects, capacity and resource planning issues, and an introduction to the related regulatory issues. Students develop budgets or business plans for several increasingly difficult scenarios addressing a range of technology applications and services.

ICT 4025 Technology and Innovation Management (4 Credits)
Leaders of innovative firms build commitment to new directions, re-design structures to support new missions, and transform cultures. This course concentrates on the implementation of the business strategy through effective structures and systems. Students analyze key aspects of strategic deployment, including organizational structure, cross-functional teams, performance planning and enhancement, reward systems, recruiting, and the development of knowledge workers. In this course students integrate all the areas of knowledge covered in the ICT Foundations and Technology Management specialty courses. This should be the last of the four required courses taken in the Technology Management specialty.

ICT 4045 Information Technology Service Assurance (4 Credits)
In today’s technology-centric work environment, simply delivering IT services is no longer sufficient. Organizations must provide "assurance" that IT services and the underlying data assets are reliable, highly available and secure. IT Service Assurance or IT Quality Assurance includes many functions including IT service delivery, service level management, quality assurance testing and monitoring, change and release management, project management, security, and compliance, all within a risk management framework. This course evaluates these functions as integrated components of a service assurance program and their impact on the organization. It also investigates how service assurance is intertwined with the strategic and tactical initiatives of the organization. The use of case studies and actual IT related challenges and opportunities are utilized to anchor the course concepts. The combined in-class meetings and online course structure lend itself to ongoing interaction, collaboration, and sharing of ideas.

ICT 4100 Principles of Project Management (4 Credits)
This course is designed to provide students with practical skills in project management and the students who are continuing in the Project Management course sequence with a framework for the concepts and tools covered in the remainder of the program. The various elements of the project management processes, tools and techniques are explored, applying the software used in managing projects. Topics include a review of processes to initiate, plan, execute, monitor and control, and close a project. Project integration, scope (including requirements), time, cost management, and planning human resources are emphasized. Students learn project management skills through hands-on exercises using project management tools and techniques and project management software to emphasize the real world of managing a project.

ICT 4105 Project Contracts and Procurement (4 Credits)
This course is designed to provide students with practical skills in project contracts and procurement. This course introduces the various elements of the contract and procurement process, including exposure to procurement plans, Request for Information (RFI), Request for Quote (RFQ) and Request for Proposal (RFP), as well as the various types of contracts and change order procedures. The course builds upon the framework from the remainder of the program. Topics include how to develop a procurement plan, what type of RFs to use and why, selection criteria for vendors, and contract selection. Students learn project management skills through hands-on exercises developing procurement plans, RFX’s and contracts. No prerequisites.

ICT 4110 Project Management Tools and Techniques (4 Credits)
This course introduces students to project risk and quality management and develops advanced skills in applying the project management tools and techniques learned in ICT 4100 (prerequisite course). A focused examination of scheduling, cost, quality, and risk management processes using advanced tools and techniques is included. Emphasis is placed on the project planning, execution, and monitoring and controlling processes. This course is on the Project Management Institute’s (PMI) certification track. Prerequisite: ICT 4100 or equivalent knowledge.

ICT 4115 Project Management Dynamics (4 Credits)
This is an advanced course that applies the knowledge and skills learned in the prerequisite courses to a complex program. The planning, monitoring and controlling, and project close process groups are explored using case analyses of program and project plans. Learning is based on reading case material and the practical application of project management tools and techniques. Students receive hands on simulation experiences in planning and running subprojects, and work in Project Management Office (PMO) roles. Students develop a workable change management system, exercise project integration and communication skills, and demonstrate the ability to keep an overall program on track. They also demonstrate decision making skills, with emphasis on making tradeoffs based on solid business rationale. This course is on the Project Management Institute’s (PMI) certification track. Prerequisites: ICT 4100 and ICT 4110.

ICT 4120 Lean Six Sigma-Getting Started (4 Credits)
Students use Lean tools and techniques to define and scope a problem, determine project objectives and benefits, and create a project charter. The students also learn to define the ‘as is’ process, validate the measurement system and measure outputs, and quantify process performance.

ICT 4125 Lean Six Sigma-Analyze (4 Credits)
Students apply Lean tools and techniques to identify potential causes (x’s), investigate the significance of x’s, identify significant causes, and provide a preliminary definition of process outcomes as a function of causes [y=f(x)].

ICT 4130 Lean Six Sigma: Improve and Control (4 Credits)
Students apply Lean tools and techniques to generate potential solutions, select and test a solution, develop an implementation plan, and create a control and monitoring plan. The students also learn the methods and techniques for implementing a full scale solution and finalizing transition.
ICT 4155 Strategic Alliances (4 Credits)
Strategic alliances are key drivers of business success in today's global economy and have gradually replaced vertical integration as the chief method of expansion. Business-to-business alliances provide organizations with a variety of benefits, including enhancing the capability of organizations and help to extract maximum value from available resources. While applicable to any industry, strategic alliances are particularly important in the technology sector. This course defines and discusses the roles of various types of strategic alliances in the technology sector, including informal alliances, partnerships, joint ventures, and outsourcing arrangements. It also explores strategies for managing profitably and exploring these external business relationships. Case studies are an integral part of the learning experience. Successful alliances such as the Apple-AA&T, Microsoft-Infosys, and Cisco-Intel are analyzed from the perspective of each party, 3rd party vendors, customers, and a variety of other stakeholders. Examples of unsuccessful alliances and the costs and benefits of foregoing alliance participation are also explored. No prerequisites.

ICT 4160 Contemporary Views and Advanced Methods for Complex Projects (4 Credits)
This course explores the planning and execution challenges that often cause complex projects to fail. The course provides a historical perspective regarding project management practices, and reviews evidence regarding trends in project outcomes. For example, despite the use of commonly accepted methods for project management and systems engineering, the success rate of NASA and DOD programs, as measured by schedule, budget, and requirements performance, is trending downward. The evidence shows similar trends in commercial industries (e.g., the Airbus A380 and Boeing 787 aircraft programs). The course addresses why the methods embodied in the Project Management Body of Knowledge (PMBOK) are sometimes insufficient to assure project success. The course then explores remedies drawn from recent research and cases in complex systems development and global learning case studies. The instructors host a weekly online review of readings and discussion. Participation is voluntary, but recommended. Guest speakers from Europe, the Americas, and Asia share their views of project trends in their regions. During the final five weeks of the course, students learn and leverage visual modeling and simulation tools for the design of complex projects. Methods to handle complex, concurrent, and mutual dependencies across organizations and cultures are applied. Based on industrial case studies, the instructors introduce Project Design methods, including student access to TeamPort project modeling and simulation software. The course culminates in the ninth week with teams in an online role play exercise to demonstrate collaborative planning and decision-making using these advanced methods. This course requires several hours of dedicated, synchronous interaction with the whole class in the eighth and ninth weeks. Prerequisite: ICT 4100 or equivalent experience.

ICT 4165 Project Collaboration with SharePoint (4 Credits)
This course focuses on the role of collaboration as a critical success factor in project planning and execution. Complex projects typically entail cross-functional teams that are often geographically distributed, culturally diverse, and require collaboration across both organizational and corporate boundaries. This course covers best collaboration practices and the use of collaborative websites to facilitate communication, create shared understanding of processes and deliverable, and apply tools to achieve successful project completion. Hands-on assignments are used to illustrate how collaborative sites allow a project team to post, edit and jointly work on documents of all types, such as project charters, project plans, WBS, requirements, budgets, schedules, procurement activities and closeout activities. Students collaborate within the course to learn how collaborative sites can be used to control project documentation and enforce the security levels associated with those documents. Students also learn how these sites can be used for such activities as assigning tasks, building a project calendar, setting up logs for gathering information, and performing other typical project management duties. The lab portion of the courses uses SharePoint as a template and shows how to set up a site to create folders, lists, tasks lists, calendars, and set the associated security levels. A SharePoint site is created for each student and students have access to both the class site and their individual sites.

ICT 4170 Agile Techniques and Practices in Project Management (4 Credits)
Is the Agile vs. traditional project management debate over? At least in the world of software development, the debate is largely over, as evidenced by the widespread adoption of Agile methods. For example, according to Gartner, in 2012 Agile development methodologies will be used in 80 percent of all software development projects. As the term implies, however, the techniques and best practices for the successful application of Agile project management processes are not static, they will continue to evolve. And, Agile principles and practices are used across many project domains, each with their own unique characteristics and challenges. So, best Agile project management practices will continue to be dynamic. The Agile debate is now turning from the tactical to the strategic. Realizing the full benefits of Agile (e.g., faster time to market, improved responsiveness to customers, higher quality, and greater efficiency), means more than improving project execution. It requires transforming the business into an Agile enterprise. This course examines both the Agile processes and practices for delivering projects, and the cultural and programmatic challenges encountered in transforming the business into an Agile enterprise. The course content, in addition to reading assignments, uses practical assignments such as case studies, projects, and simulations to provide applied experience with Agile practices.

ICT 4300 Web Enabled Information Systems (4 Credits)
This course is an introduction to the design of web enabled information systems. The course reviews modern design and programming principles, introduces database design and object-oriented principles, and introduces security issues and best practices related to web application development. The course introduces object-oriented modeling methods, including use cases, class, and activity diagrams, that describe the informational and behavioral content of a system's objects. Basic OOM design tools are introduced along with an introduction to database programming and query development. Additionally, web design programming is introduced using hands-on exercises. The class addresses organizational concerns around web applications, exploration of technology in today's market, and retention of data integrity. This should be the first course taken in each of the following specialties: Software Design and Programming, Database Design and Administration, We Design and Development, and Information Systems Security.

ICT 4305 Object-Oriented Methods (4 Credits)
This course introduces the object-oriented view of software analysis, modeling, and design. It defines all of the relevant concepts needed to understand the paradigm. A complete graphical notational scheme is taught for the purpose of diagramming objects and object interactions. The course covers the design, evolution, modification, and test/verification phases of object-oriented development in some depth. Since project management plays a key role in the success of object-oriented development, its relation to the development process is discussed. The course also surveys the various object-oriented languages and tools available.
ICT 4310 Client-Server Applications (4 Credits)
This course provides a practical introduction to client-server applications and programming. The course examines key aspects of client-server computing such as systems requirements for operating systems, middleware, networks, servers and clients. The course develops the student's understanding of alternative client-server architectures to meet business requirements, the selection of application development tools, and the use of object-oriented analysis and design practices to implement client-server applications. Students also develop client applications using a variety of techniques. Prerequisite: ICT 4300.

ICT 4315 Object-Oriented Programming (4 Credits)
This course covers modern programming techniques using object-oriented methods. The course familiarizes the student with development tools and the syntax of a programming language by developing simple programs that use control flow techniques and basic input/output techniques. Basic methods to harden code against malicious attack are introduced, and basic verification techniques presented. Prerequisites: ICT 4300 and ICT 4305.

ICT 4351 .NET Programming with C# (4 Credits)
Students identify and describe the fundamentals of the .NET architecture, explain various .NET components, their respective responsibilities and functions, identify and explain .NET design issues and development solutions; identify and describe the fundamental .NET components; explain CLR execution, and have some familiarity with predominant .NET languages.

ICT 4361 Java Programming (4 Credits)
This course enhances the student's experience in object-oriented design and software development by performing and discussing object-oriented design for re-use of general purpose applications and small Java applications, including using the Java Collection API and Swing user interface classes. Topics include the use of Java as an object-oriented programming language, including encapsulation, simple inheritance, and polymorphism; design of Java classes using Java interfaces and packages; implementation of design patterns in working Java code; and use of Java Base Classes. The course also addresses the use of JAVA IDEs such as Eclipse and NetBeans. Note: This course does not address JavaScript. Prerequisites: ICT 4300, ICT 4305, ICT 4315.

ICT 4405 Database Design & Programming (4 Credits)
This course concentrates on the relational DB model and the conceptual, logical, and physical phases of database design and development. Entity-relationship modeling, data normalization to third normal form, and Structured Query Language programming are core components of the class. It includes additional data modeling techniques and upper Normal Forms (Boyce/Codd, Fourth, and Fifth). It delves into the concepts of database integrity and transaction management, concurrency protocols (locking and time stamping), and security schemes.

ICT 4410 Data Warehousing Design (4 Credits)
Organizations with vision and courage are gaining competitive advantage by implementing data warehouses. Under the guidance of an executive sponsor, a team of data administrators, database specialists, and organizational analysts creates these contemporary decision support environments. Building a data warehouse is fundamentally different than building a subject area database for an operational system. In this course students use such data warehouse (DW) concepts as partitioning, granularity, record of source, and metadata as they learn how to build a viable decision support environment. Students further their understanding of such topics as architect development, data migration and integration, use of operational data stores, and transactional systems.

ICT 4415 Database Backup and Recovery with Lab (4 Credits)
This course explores basic database recovery and backup strategies and tactics using a working database system. Topics include preparing backup, recovery and disaster plans, and performing complete and incomplete database recoveries using the Export/Import utility. Using ICT E-labs, students also gain experience with troubleshooting utilities, RAM architecture, and setting up a standby database.

ICT 4451 Database Programming: Oracle PL/SQL (4 Credits)
This course builds on ICT 4405 Database Design and Programming, allowing students to transform a database schema design into a database application prototype using Oracle's PL/SQL. Topics include advanced SQL DDL, DML, and scripting, PL/SQL constructs, stored procedures, modular design and development, software development processes, views, sequences, cursors, dynamic SQL, error handling, locking, as well as performance and tuning, and database security. Using virtual E-Labs, students design and develop a database and related PL/SQL applications.

ICT 4461 SQL Server with Lab (4 Credits)
This course is an introduction to Microsoft SQL Server for both the DBA and Developer. The key new features of SQL Server are introduced and explored, and the various editions of SQL Server are contrasted. In-depth coverage is provided on how to use the new Microsoft SQL Server Management Studio for both administrative and development tasks. Special emphasis is given to query optimization techniques. An introduction to SQL Integration Services, SQL Analysis Services and SQL Reporting Services is also presented. Prerequisites: ICT 4300 and ICT 4405.

ICT 4462 Transact - SQL Programming (4 Credits)
Transact-SQL is the primary programming interface between applications and the Microsoft SQL Server database. Transact-SQL can be sent from programs or applications to the SQL Server database or can be built into reusable database stored procedures. This course focuses on Transact-SQL in a stored procedure context. Topics include: basic and advanced SQL, SQL functions, stored procedure declaration and execution, cursors, temp tables, error handling, transaction management, security, and performance issues. The course uses a combination of lecture, textbook reading assignments, and hands-on lab assignments to meet its objectives.
ICT 4485 NoSQL Databases (4 Credits)
Relational database systems have been dominant in the market for over forty years, and remain so today. However, the emergence of distributed and cloud computing, as well as the increasing need for storage of large databases (i.e., big data, such as human genome, Google search engine, social media data, Large Hadron Collider), have created the need for alternate data storage solutions. A number of different models/database management systems have been developed, that as a group are being referred to as NoSQL databases. A number of large, well-known companies use such databases, including Google, Amazon, Facebook, Twitter, Adobe, MTV, LexisNexis, the New York Times, Forbes and Netflix. Some companies use more than one variety of NoSQL databases. This course examines different non-relational (NoSQL) data models, such as Key-Value, Document, Column, Graph and the Object-Oriented database models. Students learn about advantages and disadvantages of the different approaches. This class includes hands-on experience with a representative sample of NoSQL databases. Computing developments that spurred the existence of NoSQL databases, such as big data, distributed, and cloud computing are also discussed. Prerequisites: ICT 4300 and ICT 4405.

ICT 4505 Website Design and Management (4 Credits)
This course extends student web design and development skills, and includes advanced HTML techniques and enhanced page design capabilities using CSS. The key to great web design is rooted in a solid foundation, which requires a plan or a "blueprint". We explore best-practices in information architecture (IA) and how to incorporate user-centered design (UCD) techniques as a standard practice in web design. Students also develop an understanding and working knowledge of Cascading Style Sheets (CSS). Through the use of readings, examples, hands-on projects, and discussions the class builds an understanding of the foundations and applications of user-centered design to plan, build and manage a website. Through participation in a project and regular discussions, class members experience working as active and contributing members of the class and knowledge-building community. Prerequisite: ICT 3500, ICT 4300 or equivalent experience.

ICT 4510 Advanced Website Design and Management (4 Credits)
This course explores advanced techniques for web programming using current client-side web technologies. Use of JavaScript, jQuery and Ajax are covered. HTML5 technologies such as Forms, Local Storage and Web workers are introduced. Students create an interactive website. This is a hands-on course where students apply what they learn as they learn it. Students demonstrate mastery of the materials by applying the principles introduced in class to laboratory exercise, class discussions, and projects. Prerequisite: ICT 4505.

ICT 4515 Usability Design for Websites (4 Credits)
This course expands the student's basic knowledge of Web page and website development (ICT 4505) by providing in-depth understanding of how to design Web applications with the user in mind. Students gain knowledge about how the fields of human factors engineering and psychology (e.g., visual perception, cognition, learning, and memory) relate to usability design as well as how usability assessments are conducted. Usability guidelines, design problems and design strengths, and best practices for common functions such as Web navigation, menus, scrolling, graphics and icons are explored. The class is a combination of lectures and lab experiences, culminating in the student's developing a website, conducting a usability evaluation, and reporting on the results and recommendations from the evaluation.

ICT 4540 XML and Data in Application Development (4 Credits)
XML is an open, text-based markup language that provides structural and semantic information to data. This "data about data," or metadata, provides meaning and context to the application using it, and supports manipulation and display. The course focuses on techniques to make this data useful for business applications, as well as for browser display. Hands-on experience with the XML formats and manipulation, which includes programming techniques, forms the weekly assignments, culminating in a summary project. Other standards, such as JSON, are discussed, as well as use of CSS for display of XML data. Some JavaScript is introduced to illustrate the document model and techniques for integration of data. Prerequisites: Students should have familiarity with constructing HTML web pages and data concepts. Familiarity with a data manipulation or programming language will be helpful.

ICT 4550 Motion and Interactivity with Adobe Edge Animate (4 Credits)
This course enable even those with little knowledge of HTML or experience programming web content to freely create a variety of rich compositions involving motion and interactivity through the Adobe Edge application. Students learn how to use this professional authoring software to create highly engaging content which targets HTML5, CSS, and JavaScript. The course also covers Edge Runtime APIs and how to integrate compositions into existing web-based systems.

ICT 4555 Introduction to the Flash Platform (4 Credits)
This course introduces students to rich media design and development using the Flash Platform. Students learn the fundamentals of working in the Flash authoring environment to produce web modules, small applications, and basic audio-video delivery mechanisms. Students also receive an introduction to the latest version of ActionScript. Students learn basic syntax and become familiar with many of the classes and methods available to them when writing applications with the Flash Platform. Prerequisite: ICT 3500 or equivalent experience.

ICT 4560 Web Graphics Production (4 Credits)
This course introduces the fundamental concepts and techniques of digital graphics creation and image processing for both online publication and website interface design. Students learn the basics of correcting and modifying images, bitmap painting tools, vector drawing tools, typography, masking, web production techniques, and advanced image compositing. Integration of images and generated code into a website layout employing CSS is also covered.

ICT 4561 Web Development with PHP (4 Credits)
This course introduces students to programming Web applications using PHP and MySQL. Topics include processing form data, file uploads, object-oriented programming and database access. Students leverage a PHP framework and learn to install and configure a local development environment to test and develop their Web applications. Prerequisite: ICT 4510 or previous programming experience.
ICT 4570 Web Scripting with JavaScript (4 Credits)
This course presents students with the principles necessary to design and develop client-side scripts used to build dynamic websites and applications. JavaScript concepts such as data types, control structures, functions and objects are discussed. Students learn how to write beginner and intermediate scripts. In addition, students are introduced to advanced JavaScript topics, including module development, distributed computing and security. Students are presented with real world examples of JavaScript and build an interactive and dynamic client-side application. Technologies covered in the course include JavaScript/ECMAScript, JQuery (a JavaScript library), JSON (a JavaScript-friendly data format), JavaScript as the J in AJAX, and JavaScript in HTML5 form interaction and validation. Prerequisite: Knowledge of HTLM, ICT 4505, or previous programming experience.

ICT 4576 Native Application Development with Adobe AIR on Mobile Devices (4 Credits)
During this course students learn how to use a set of languages and tools to build business and media-centric applications that run on mobile devices such as laptops, tablets, smartphones, and eReaders running on Windows, MAC OS, IOS, and Android. This course illustrates best practices for reusing code, structuring projects, and submitting applications to app stores. Throughout the course students utilize an IDE such as FDT or IntelliJ, MXML, and ActionScript to build cross-device native applications. Students also learn how to add functionality to their Adobe AIR native applications by leveraging third party Native Extensions to access native features. Prerequisite: ICT 4300 or previous programming experience.

ICT 4580 Mobile Application Development with Web Standards (4 Credits)
This course enables students to take advantage of web standards (HTML5, CSS3, JavaScript) along with various popular frameworks and tools in the generation of both mobile web applications for the browser and packaged mobile applications for devices. We examine the fundamentals behind good user and interaction design when targeting mobile devices and see what is appropriate for implementation on these platforms. We also employ a popular cross-compilation tool to perform distribution onto multiple platforms. Prerequisite: previous programming experience.

ICT 4585 Web Development with Ruby on Rails (4 Credits)
Ruby is a dynamic, general-purpose, object-oriented programming language that has an associated web application framework, Rails. The Ruby on Rails (RoR) web application paradigm is powerful and flexible, and has been widely adopted by other frameworks. It allows for the rapid and agile creation of dynamic web applications with little of the overhead associated with other approaches. The student learns how to quickly develop, test, and deploy dynamic web applications using RoR. The student also learns how to manage both the user experience and a backend database from within the RoR framework. Prerequisite: ICT 4510 or previous programming experience.

ICT 4605 IS Security Principles (4 Credits)
This is a comprehensive Information Systems Security management course covering the ten basic principles of Information Assurance and Information System Security. The course follows the Common Body of Knowledge (CBK) convention established by the International Information System Security Certification Consortium, Inc. (ISC)2. This course serves as an introduction to the ten domains of information systems security with the emphasis on management issues. It provides the foundation of information systems security and the methodologies that organizations apply to analyze and achieve their security goals. Students learn about significant computer security laws and regulations, the development of effective security policies, system access controls, network security, encryption and security models. The course also covers specific security measures to include, but not limited to, physical security controls, network security, telecommunications, and cryptography. Information covered includes contemporary issues of computer crime and contingency planning. A systems approach to security issues to analyze and develop solutions is emphasized. All topics are discussed in the context of a total enterprise-wide framework. Prerequisite: ICT 4300.

ICT 4610 TCP/IP Networks (4 Credits)
This course explores the basic operation of the TCP/IP protocol stack including its history, development, current applications, and future implications. The full range of TCP/IP protocols from IP and TCP to basic RPC issues and application protocols such as SMTP, FTP, and HTTP are studied. Students also study TCP/IP capabilities, alternatives, and performance issues. Security-specific protocols including SSL and IPSec are examined along with the security aspects of all other protocols. Mechanisms for Internet connectivity for homes and businesses are also covered. Prerequisite: ICT 4005.

ICT 4615 Computer and Physical Security (4 Credits)
Controlling access to computers and controlling access to a building can no longer be viewed as two separate worlds. Today, IT access control and physical security need to be integrated if organizations are to be fully protected from threats. This course concentrates on seeing IT access control as integrated with physical security within an organization. Students investigate how various technologies and methodologies can work together to manage access to computer systems; how to manage elements of physical security; and the issues involved in creating a unified and complete enterprise security system. Security technologies to physically protect an organization’s people, facility and resources, access control techniques and administration, identification and authentication techniques and methods of attack are emphasized. Prerequisites: ICT 4300 and ICT 4605.

ICT 4670 Disaster Recovery and Operations Security (4 Credits)
This course focuses on the planning and operations security required to effectively recover from natural disasters and security attacks and to ensure the operations and integrity of computer systems and staff. Topics include defining continuity requirements, choosing appropriate recovery strategies and understanding the key elements of a continuity plan. Students create a Business Continuity Plan including business impact analysis, recovery strategies, and recovery plan implementation. The course also provides an understanding of controls over resources, facilities, hardware, systems, and the people who create, modify, and use them. Control mechanisms and operations security “best practices” are identified.
ICT 4680 Principles of Cryptography (4 Credits)
E-commerce has made cryptography a cornerstone of modern information systems security. Cryptology is one of the 10 domains required for the CISSP, and is a core component of all other recognized information security certifications. Surprisingly, it is the least understood of the information security disciplines. This course focuses on the terminology and concepts needed to understand how cryptographic techniques are used to protect sensitive information. Topics include: Advanced Encryption Standard (AES), the Secure Hash Algorithm (SHA), Digital Signatures and Message Authentication Codes, Diffie-Hellman Key Exchange, public key infrastructure (PKI), secure sockets layer (SSL), and IPsec among others. Lecture and reading materials are reinforced by hands-on experimentation with cryptographic software tools. Internet resources are used to tie the course material to current technology trends. No programming experience or advanced mathematical skills are required for this course. Prerequisite: ICT 4605.

ICT 4685 Cloud and Internet Law (4 Credits)
The legal ramifications of Cloud Computing, Cyber and Internet Law are effecting dynamic change in our country and all throughout the world. This course explores the laws of the new paradigm of Cloud Computing, Cyber and Internet Law and describes the types of issues and concerns that exist. Such issues include the civil and criminal laws, rules and regulation, privacy issues, contractual agreements between parties (on many levels from providers in numerous different states and countries), the impact of differing cultural standards and mores from all over the world, and legal methods of protecting companies from these issues and worries in the world of Cloud Computing, the Internet and Cyber Law.

ICT 4690 Computer Forensics with Lab (4 Credits)
This course is concerned with providing an overview of the methods and tools utilized for collecting and preserving electronic digital evidence for the computer forensic process; the forensic examination, analysis, and report writing; and preparing for courtroom testimony about the forensic results. The course is supplemented by hands-on-exercises, case studies, and a moot court exercise in which each student will testify.

ICT 4695 Application Security (4 Credits)
In this course, students explore the security principles and practices that apply to application software development throughout the entire software development lifecycle (SDLC). Topics include characteristics of secure and resilient applications, proven best practices for secure software, and designing for security and resilience. The course also provides an overview of programming best practices. Other topics include testing custom application, testing off-the-shelf commercial applications, implementing development security methodologies, and evaluating the models used to measure the maturity of software development organizations. Prerequisites: ICT 4300 and ICT 4605.

ICT 4701 Topics in Information and Communication Technology (4 Credits)
From time to time a special topics course may be offered that addresses a new issue, a developing concept, industry trends, or new technology.

ICT 4800 Network Communications and the Internet (4 Credits)
This course focuses on the fundamental concepts and technologies of communications networks and the Internet, including the information theory that is the foundation of modern communication systems. It emphasizes application of these concepts to the analysis and design of network solutions to meet various service provider and IT business requirements. Topics include network media, communications protocols and standards, LAN and WAN network architectures, the Public Switched Telephone Network, and current trends in networking via the Internet. Network components, such as modems, routers, switches, and voice communications systems are analyzed. The various transport media of copper, fiber, and wireless infrastructures are compared. Critical thinking is emphasized via discussions of current and future trends in network technology, global regulatory and political issues in voice/data/video communications, and Internet governance. Prerequisite: ICT 3800 or equivalent experience.

ICT 4815 Managing Global Telecommunications Projects (4 Credits)
Set in the context of today’s convergence from the traditional telco/telephony world to next generation all-IP networks brought about by the Internet revolution, the course addresses managing across borders, cultures, time zones, and continents. In addition, the course explores managing conflicts of interest between carriers and over-the-top (OTT) players such as Apple, Google/Android and Skype. Related topics include the challenges and opportunities in vendor management between the old telco vendors of the West and their new competitors from the East. Finally, the course analyzes stakeholder management at the C- and EVP-level of the organization. A variety of assignments create opportunities for students to work in teams, and at other times to work individually on a set of real-world case studies derived from typical projects at leading global network operators and telecom vendors. This course applies project management best practices to the typical challenges faced by project managers in today’s fast-paced, complex and highly competitive global telecom industry. Case studies are used to exemplify core project management challenges at an advanced level. Prerequisites: two courses in any of the following areas: Project Management, Technology Management, Telecommunications Technology.

ICT 4830 Broadband Wireless Networks (4 Credits)
This course examines wireless telecommunication networks with an emphasis on key challenges and approaches to deal with the immense wireless data traffic explosion from devices such as the iPhone, iPad, Android smartphones and connected laptops, as well as services like VOIP and mobile video. The wireless telecom industry is studied from standards, carriers, and technology perspectives. The dominant wireless telecom technologies and protocols are presented, including OFDM, MIMO, mobile IP, WIMAX, LTE, and WPANs. The “triple play” convergence of voice, data, and video over wireless networks is analyzed. Voice over IP is also studied in reference to Quality of Service.

ICT 4835 Enterprise Networks (4 Credits)
This course provides the advanced understanding of computer networks needed to design and develop complex network systems. Topics covered are network analysis and design issues, switching, routing, techniques for network traffic analysis, logical and physical network design, and integration, testing and implementation issues.
ICT 4840 Next Generation Wireless Networks and Services (4 Credits)
The rapid innovation in wireless networks that is at the center of today’s Information and Communication Technologies industry takes place in the three areas of broadband radio, core networks, and wireless services. This course focuses on the key next generation technologies at the core networks and service layers. First, the Internet Protocol Multimedia Subsystem (IMS) is examined, which is at the heart of many next generation deployments. Basic IMS architecture and important sample case studies are used to highlight core facets of modern network designs. At the service layer, this course explores wireless service architecture, including popular applications such as text (SMS), picture (MMS) and mobile instant messaging, consumer and enterprise mobile email, TV/video and mobile web services. Apple and Android mobile over-the-top (OTT) ecosystems are examined and a SWOT approach taken to analyze strengths, weaknesses, opportunities and threats of controlled vs. open application ecosystems. Finally, the conflict between OTT and network operator based deployment of wireless services is discussed, using pioneering applications such as Skype, FaceTime, and others as case studies. Prerequisite: ICT 4800 or departmental permission.

ICT 4845 Network Security with Lab (4 Credits)
This course examines the key broadband radio technologies at the center of today’s rapid innovation in wireless networks. Wireless telecommunications networks are studied with an emphasis on the challenges and the approaches to deal with the immense wireless data traffic explosion from devices such as the iPhone, iPad, Android smartphones and connected laptops, as well as broadband services like VOIP and mobile video. The dominant wireless telecom technologies and protocols are presented, including OFDM, MIMO, mobile IP, WiMAX, LTE, and WPANs. The "triple play" convergence of voice, video, and data over wireless networks is analyzed. The wireless telecom industry is studied from standards, carrier, and technology perspectives. Important radio network concepts are addressed, including network design, cell selections and traffic concepts, mobility handoff signaling, radio resources management, location updates, roaming, as well as authentication and encryption. Prerequisite: ICT 4800 or departmental permission.

ICT 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topics, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project synthesizes and applies core concepts acquired from the program. The student selects an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. View the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MAL 4020. A final grade of B or better must be earned in this course to meet degree requirements.

ICT 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. The seminar is dependent upon collegial discussion of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. The course structure, facilitated by the faculty member, guides the students through the process of independent research and writing of a capstone paper; the instructor provides intensive feedback on the capstone process and papers. Students are responsible for generating the course content through ongoing discussion of and peer feedback on the capstone process and individual papers, as well as the analysis and contextualization of focused students papers within the wider degree field of study. Students professionally and academically communicate their findings through written work and oral presentations. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPS of 3.0 or better, and a B or better in MAL 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

ICT 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MAL 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

ICT 4980 Internship (4 Credits)
The ICT internship is designed to offer students a practical educational experience in an industry related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the ICT master’s degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all ICT students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the ICT degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.
ICT 4991 Independent Study (1-4 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

ICT 4992 Directed Study (1-4 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Directed Study form and filed the form with all appropriate offices before registering for the directed study. Directed Study is offered only on a for-credit basis.

Intermodal Transportation Institute
Office: Intermodal Transportation Institute
Mail Code: 2400 S. Gaylord Street, Denver, CO 80208
Phone: 303-871-7449
Email: du-iti@du.edu

Master of Science in Intermodal Transportation Management
The University of Denver offers an MS in Intermodal Transportation Management designed to prepare transportation professionals for leadership roles in the transportation, supply chain, and logistics industries, which are becoming increasingly intermodal, international, and interdependent. This professionally-oriented degree combines a rigorous academic program delivered by highly-qualified industry practitioners and faculty with insight from a board of directors composed of transportation industry leaders, thereby ensuring that course content remains relevant and current. Throughout the program, students learn to effectively address the wide-ranging management and business challenges facing today's global transportation industry while gaining an understanding of the broad range of transportation modes and options available to meet these challenges.

The program's unique format - a week-long, on-campus residency held each quarter for five consecutive quarters - allows students to continue working full-time while earning their graduate degree. It also affords students professional networking opportunities that offer significant professional advantages for the future. Upon earning a Master of Science in Intermodal Transportation Management from the Intermodal Transportation Institute at the University of Denver, program participants join a group of distinguished alumni who have gone on to play pivotal roles in the transportation industry.

Master of Science in Intermodal Transportation Management
• Bachelor’s degree from an accredited institution
• Five years mid-to-senior-level management

Master of Science in Intermodal Transportation Management
Degree Requirements
Coursework Requirements
Students must complete 60 quarter hours of coursework credit.

Courses

TRAN 4010 Introduction to Transportation Systems (2 Credits)
This course discusses the history and present condition of the transportation sector, its significance in the modern world, and contemporary ethical, economic, socio-political, and sustainable development issues. All modes (rail, motor carrier, air, water, pipeline, private automobiles, and urban transit) will be presented. Engineering aspects, such as design and technologies, including intelligent transportation systems, as well as managerial, strategic, and policy issues will be introduced. The emerging patterns of intermodalism for both passengers and freight will be discussed.

TRAN 4020 Transportation Economics (4 Credits)
The fundamental concepts, theories, and methodologies of transportation economics are addressed with particular reference to intermodalism. These include transport demand and forecasting, transport costs and cost analysis, pricing of transport services, infrastructure pricing and investment, market structure in regulated and deregulated industries, and project evaluation. The costs and benefits of intermodalism and sustainability will be analyzed in depth.

TRAN 4030 Quantitative Tools for Transportation Management (4 Credits)
This course will introduce regression and forecasting demand; dedicated software; industrialized data set with variables. Also addressed in the course will be linear programming models including transportation related cost minimization programs, warehousing and building models for analyzing a distribution system as well as decision making skills. Simulation/optimization as a methodology with pertinent software will be used. Additionally, the impact of technology upon the transportation industry will be presented.

TRAN 4050 Intermodal Transportation Systems (4 Credits)
Students will be introduced to all aspects of intermodal transportation and to the current issues affecting decision making in this area. The course will cover the history of intermodal transport, the barriers and facilitators to its development, its present condition in the US and throughout the world, and its future prospects. Specific topics to be discussed include system infrastructure of the future, connectivity and intermodal connections, terminals/ports and equipment, containerization, standardization, communication and other technologies, competitive issues, intelligent transportation systems, the civilian/military interface, and the issue of sustainability. The practical impact of information technology and emerging technologies will be addressed using models with coordination between models.

TRAN 4060 Transportation Marketing and Sales Tools (4 Credits)
The marketing mix is presented as it relates to both freight and passenger transportation services. Demand forecasting and market analysis for transportation markets. Understanding capacity, marginal costs of capacity market segmentation, pricing capacity and revenue maximization within available capacity constraints will be addressed. Customer service is discussed fully in terms of understanding both the freight- and passenger-customer perspectives and relating this information to marketing and management decision making, especially with regard to the intermodal industry.

TRAN 4070 US and International Law (4 Credits)
This course will survey the main issues facing transportation professionals in managing and operating a safe and secure intermodal transportation system. Particular attention will be given to labor and management practices that have proven effective in addressing these issues and to their potential for intermodal transportation. Topical content will include the history of labor relations, fatigue in transportation, personnel safety, ergonomics, negotiation strategies, ethical issues, security issues, and others.

TRAN 4080 Transportation Law and Regulation: Domestic and International (4 Credits)
This course addresses the history of transportation and its regulation, constitutional law, regulatory agencies and administrative procedures, railroad regulation, motor carrier regulation, taxicab regulation, air carrier regulation, pipeline regulation, carrier liability (passengers and cargo), labor law, safety regulation, environmental law, antitrust law, and disabilities law as well as issues of intermodalism.

TRAN 4310 Freight Transportation (4 Credits)
This course will teach students the organization of the freight transportation sector of the American economy with particular reference to contemporary managerial problems and strategy issues. The students will study each of the five modes of freight transportation in depth-rail, motor carrier, air, water, and pipelines. The historical development, economic characteristics, technologies, sustainability, and future prospects of each of the modes in terms of the development of a system will be addressed.

TRAN 4320 Transportation Management, Leadership and Values (4 Credits)
This course will address personal behavior; understanding yourself as a leader and organizational behavior issues such as organizational structures, motivation, power and politics, culture and change management. The course will focus on ways of dealing more effectively with the organizational upheaval that comes with change, including planning and information-sharing techniques to help keep your team focused on solutions. Developing leaders- creating a vision, gathering resources, motivating others, handling conflict- together with advice about how to create a climate that encourages others to take initiative and develop their own potential will be a vital part of the course. Strategies in human resource with a system level macro focus will be discussed.
TRAN 4330 Principles of Supply Chain: Management and Technologies (4 Credits)
This course will assist students in gaining awareness, knowledge, and understanding of the distribution patterns and relationships that play a key role in determining company success. We will view perspectives within the context of the global marketplace and across both freight and passenger transportation. We will address external value chains and internal value chains; stakeholder relationship management; the supply chain and the demand chain complexities; strategies of E-business; the strategic use of IT; strategic planning to gain a competitive advantage; end-to-end supply chain visibility and the strategic use of technologies in the enterprise-wide system.

TRAN 4340 Supply Chain Strategy (4 Credits)
Expanding on the Principles of Supply Chain: Management and Technologies course, Supply Chain Strategy gives participants an understanding of more specific tactics to improve supply chain efficiencies with coverage of global as well as domestic issues. Participants learn the key financial aspects of supply chain management that impact the company. Additionally, current trends in supply chain management, including applicable global trends, are covered.

TRAN 4610 Passenger Transportation Systems (4 Credits)
This course is designed to provide a thorough immersion in the major modes of passenger transportation and the ways in which they are being linked to form an intermodal system. Intercity and intracity transportation modes will be examined. The historical development, economic characteristics, technologies, sustainability, and future prospects of each of the modes in terms of development of an intermodal system will be addressed.

TRAN 4700 Topics in Global Trade (4 Credits)
Specialized topics in Intermodal Transportation.

TRAN 4710 Transportation Finance (4 Credits)
This finance course focuses on the transportation managers ability to understand and analyze financial statements. Topics covered will be the basics of major accounting statements, income and balance sheets, use of operating leverage, ratio analysis to determine relative performance of companies and the industry individual modes and across modes. An emphasis will be placed on time value of money and capital expenditure analysis and decision models for capital budgeting. Exploring markets and the sources of financial capital, securities, public and private financing will be discussed.

TRAN 4910 Intermodal Travel Seminar (2 Credits)
This course will provide exposure to real-world issues and problems in the intermodal transportation industry through an intensive four-to-seven-day onsite visit to a major transportation facility in North America. The course will include research and data gathering prior to the actual visit and will result in team projects with the final presentations being made during the final Quarter.

TRAN 4920 Leadership Development Planning Project (4 Credits)
The purpose of this course is to provide students with the opportunity to develop from the program a personal leadership development plan. Capitalizing on the knowledge gained through-out the program and how it relates to them personally, the student will develop a leadership plan which benefit them as intermodal transportation leaders of the future.

TRAN 4950 Intermodal Business Planning Project (1-8 Credits)
This course will provide exposure, identification of, and the problem solving of real-world issues and problems in the intermodal transportation industry. Students, in cooperation with their organization, will identify a challenge or situation within their own sponsoring organization and then develop a problem solving business plan with a defined outcome for the identified situation.

TRAN 4991 Independent Study (1-10 Credits)

Certificate in Leadership and Organizations with a concentration in Human Capital Organizations

The graduate certificate in Human Capital in Organizations concentration is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials to include leadership knowledge on managing human capital. Certificate students will learn to lead, determine, cultivate, and maintain the symbiotic relationship between individuals and the organizations they work for. The graduate certificate in Human Capital in Organizations concentration prepares students to ethically develop and maintain human capital while learning the best practices to do so. Strategic human capital can be the winning element of a successful organization; master the process of developing and retaining employees to engage and achieve objectives, innovate, and maximize organizational and individual success.

Explore knowledge and information management, communication tactics, vertical and horizontal partnerships, and organizational learning to promote the successful development of capital. Led by instructors who work in the field they teach in, certificate classes introduce students to innovative and creative approaches to structuring and sustaining the development of human capital. Students will define the attributes, challenges, and advantages of human
capital and strategies for leveraging each while integrating personal and organizational achievement. Credits earned through this graduate certificate may apply toward a master’s degree in Leadership and Organizations.

This certificate prepares students to:

- Describe partnerships both vertically and horizontally
- Define the attributes, challenges, and advantages of human capital and strategies for leveraging each
- Describe the integration of knowledge management and organizational learning as a concept for integrating personal and organizational success
- Define the opportunities, challenges and options to have employees participate in decision making through the use of various techniques
- Discuss best practices in ethically developing and maintaining human capital

Leadership and Organizations Outcomes

This program prepares students to:

- Identify a clear mission and lead the dynamic process of translating a mission to a series of goals and outcomes
- Utilize the knowledge of an organization’s most important resource, people, in the creation and transmission of knowledge and economic, cultural, and technological change
- Align mission, vision, people, resources, and goals to maximize success and value over time for an organization
- Design and implement processes and content in organizations to meet the description of organizational excellence, which includes strong leadership and relationships

CERTIFICATE IN LEADERSHIP AND ORGANIZATIONS With a Concentration in Philanthropic LEADERSHIP

The graduate certificate in Philanthropic Leadership concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will learn to develop fundraising and philanthropic strategy and implementation techniques as you learn to manage a non-profit or charitable organization development function. The certificate in Philanthropic Leadership concentration prepares students to lead dynamic organizations and strengthen an organization’s reputation, build vital support through strong and lasting leadership, and sustain donor relationships resulting in a robust development function.

Certificate students learn from faculty who work in the field they teach as they provide students with industry insight to help them thrive in the tight-knit field of development and fundraising. From budget planning to legal issues, useful technology to ethics, the practical guidance provided in the certificate program will prepare non-profit leaders with the knowledge and skills needed to succeed as professional development leaders in the philanthropic sector. Credits earned through this graduate certificate may apply toward a master’s degree in Leadership and Organizations.

This certificate prepares students to:

- Describe the processes and content of organizations that meet the description of philanthropic organizational excellence
- Explain or develop the organization’s policy as it relates to donor relationships and local, state, and federal requirements
- Develop a greater level of personal and professional cultural competence
- Identify donor support that aligns with the ethics, mission, vision, and values of the organization
- Compare and contrast different fundraising strategies, including grants, major gifts, planned giving, and annual campaigns
- Evaluate and select the most effective structure for an organization for fundraising
- Develop and critique the current roles of staff, board, and volunteers and contrast it to ‘best practice’ analysis

Leadership and Organizations Outcomes

This program prepares students to:

- Identify a clear mission and lead the dynamic process of translating a mission to a series of goals and outcomes
- Utilize the knowledge of an organization’s most important resource, people, in the creation and transmission of knowledge and economic, cultural, and technological change
- Align mission, vision, people, resources, and goals to maximize success and value over time for an organization
- Design and implement processes and content in organizations to meet the description of organizational excellence, which includes strong leadership and relationships

Certificate in Leadership and Organizations with a concentration in Strategic Innovation & Change

The graduate certificate in Strategic Innovation and Change concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will learn tactical innovation and change management using vision, values, and
mission as an overall guide. Led by professional practitioners who work in the fields they teach, leadership classes provide professionals the skills to manage change, encourage innovation, and develop effective strategic initiatives while fulfilling an organization's mission.

Students will explore the change theories and concepts required for effective and ethical change leadership while understanding how the relationships within an organization are affected. Certificate students can expect to develop environmental scanning skills to identify and evaluate external factors that affect an organization on a micro or macro level and prepare them to be solution-oriented leaders. Organizations are analyzed from the viewpoint of strategic alignment of their critical frameworks of operation including financial management, budget, and planning. The concept of innovation not being a one-time event, but instead an organizational view and structure as part of an organizational strategy, will be explored. Credits earned through this graduate certificate may apply toward a master's degree in Leadership and Organizations.

This certificate prepares students to:

• Define the role of mission, vision, values, and goals as a start of strategic planning
• Articulate and discuss the advantages and limitations of the strategic planning process
• Identify the areas to be addressed in implementing innovation and change; customers, competitors, suppliers, technology
• Explore the change theories and concepts and skills required for effective and ethical change leadership and how the relationships within an organization are affected
• Discuss how financial management and budget and planning need to align with the vision, values, and goals of an organization

Leadership and Organizations Outcomes

This program prepares students to:

• Identify a clear mission and lead the dynamic process of translating a mission into a series of goals and outcomes
• Utilize the knowledge of an organization's most important resource, people, in the creation and transmission of knowledge and economic, cultural, and technological change
• Align mission, vision, people, resources, and goals to maximize success and value over time for an organization
• Design and implement processes and content in organizations to meet the description of organizational excellence, which includes strong leadership and relationships

Master of Professional Studies in Leadership and Organizations with a concentration in Human Capital Organizations

The Human Capital in Organizations master's degree concentration is offered entirely online to meet the needs of busy adults. Students will learn to determine, cultivate, and maintain the symbiotic relationship between individuals and the organizations they work for. Strategic human capital can be the winning element of a successful organization; master the process of developing and retaining employees to engage and achieve objectives, innovate, and maximize organizational and individual success. The master's degree concentration in Human Capital in Organizations prepares students to ethically develop and maintain human capital while learning the best practices to do so.

Led by instructors who work in the field they teach in, classes introduce students to innovative and creative approaches to structuring and sustaining the development of human capital. Students explore knowledge and information management, communication tactics, vertical and horizontal partnerships, and organizational learning to promote the successful development of capital. Students will define the attributes, challenges, and advantages of human capital and strategies for leveraging each while integrating personal and organizational achievement. Customize your Leadership and Organizations master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

• Describe partnerships both vertically and horizontally
• Define the attributes, challenges, and advantages of human capital and strategies for leveraging each
• Describe the integration of knowledge management and organizational learning as a concept for integrating personal and organizational success
• Define the opportunities, challenges and options to have employees participate in decision making through the use of various techniques
• Discuss best practices in ethically developing and maintaining human capital

Leadership and Organizations Outcomes

This program prepares students to:

• Identify a clear mission and lead the dynamic process of translating a mission into a series of goals and outcomes
• Utilize the knowledge of an organization's most important resource, people, in the creation and transmission of knowledge and economic, cultural, and technological change
• Align mission, vision, people, resources, and goals to maximize success and value over time for an organization
• Design and implement processes and content in organizations to meet the description of organizational excellence, which includes strong leadership and relationships

**Master of Professional Studies in Leadership and Organizations with a concentration in Philanthropic Leadership**

The Philanthropic Leadership master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults seeking fundraising and philanthropic strategy and implantation techniques. Designed specifically for professionals who currently or aspire to manage a non-profit or charitable organization development function, the master's in Leadership and Organizations with a concentration in Philanthropic Leadership prepares students to lead dynamic organizations. Students will learn to strengthen and enhance their organization's reputation, build vital support through strong and lasting leadership, and sustain donor relationships resulting in a robust development function with a master's degree.

Leadership classes are led by faculty who work in the field they teach and provide students industry insight to help them thrive in the tight-knit field of development and fundraising. Students will learn strategies of fiscal responsibility and transparency that lead to community support, and identify the goals and plans necessary to uphold a successful organization. From budget planning to legal issues, useful technology to ethics, the practical guidance provided in the master's concentration in Philanthropic Leadership at University College will prepare non-profit leaders with the knowledge and skills needed to succeed as professional development leaders in the philanthropic sector. Customize your Leadership and Organizations master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

• Describe the processes and content of organizations that meet the description of philanthropic organizational excellence
• Explain or develop the organization's policy as it relates to donor relationships and local, state, and federal requirements
• Develop a greater level of personal and professional cultural competence
• Identify donor support that aligns with the ethics, mission, vision, and values of the organization
• Compare and contrast different fundraising strategies, including grants, major gifts, planned giving, and annual campaigns
• Evaluate and select the most effective structure for an organization for fundraising
• Develop and critique the current roles of staff, board, and volunteers and contrast it to 'best practice’ analysis

**Leadership and Organizations Outcomes**

This program prepares students to:

• Identify a clear mission and lead the dynamic process of translating a mission in to a series of goals and outcomes
• Utilize the knowledge of an organization's most important resource, people, in the creation and transmission of knowledge and economic, cultural, and technological change
• Align mission, vision, people, resources, and goals to maximize success and value over time for an organization
• Design and implement processes and content in organizations to meet the description of organizational excellence, which includes strong leadership and relationships

**Master of Professional Studies in Leadership and Organizations with a concentration in Project Management**

The Project Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students receive hands-on, practical instruction from professional practitioners who work in the fields they teach on the tools and techniques of effective project management. Students will learn how to develop a clear plan that places a project in the context of an organization's strategic plan, while considering budgetary, scheduling, and human capital implications.

The content for the Project Management concentration has been developed to parallel the Project Management Institute's (PMI® Project Management Body of Knowledge (PMBOK®) Guide. It covers all of the relevant areas and prepares the student to do well on the PMI® Project Management Professional (PMP) Certification Exam. In addition, the master's degree concentration provides practical experience in using the tools and techniques of effective project management. You'll learn the basic principles of project management and become proficient in the use of project management software and understand how to develop a plan that clearly places a project in the context of an organization's strategic plan.

This degree prepares students to:

• Understand the basic principles of project management and become proficient in the use of project management software
• Be prepared to deal with the legal ramifications of running a complex project
• Develop a comprehensive risk management plan for a project
• Manage the complexity inherent in large-scale projects
• Develop a plan that clearly places a project in the context of an organization’s strategic plan
• Prepare to pass the PMI® Project Management Professional (PMP®) Certification Exam

Leadership and Organizations Outcomes
This program prepares students to:
• Identify a clear mission and lead the dynamic process of translating a mission into a series of goals and outcomes
• Utilize the knowledge of an organization’s most important resource, people, in the creation and transmission of knowledge and economic, cultural, and technological change
• Align mission, vision, people, resources, and goals to maximize success and value over time for an organization
• Design and implement processes and content in organizations to meet the description of organizational excellence, which includes strong leadership and relationships

Master of Professional Studies in Leadership and Organizations with a concentration in Strategic Innovation & Change
The Strategic Innovation and Change master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will learn tactical innovation and change management using vision, values, and mission as an overall guide. Led by professional practitioners who work in the fields they teach, leadership classes provide professionals the skills to manage change, encourage innovation, and develop effective strategic initiatives while fulfilling an organization’s mission.

Students can expect to develop environmental scanning skills to identify and evaluate external factors that affect an organization on a micro or macro level and prepare them to be solution-oriented leaders. While learning to take advantage of current realities and seize opportunities for an organization through strategy, degree seekers will explore the change theories and concepts required for effective and ethical change leadership while understanding how the relationships within an organization are affected.

The importance of mission and vision is discussed throughout the Strategic Innovation and Change master’s degree concentration. Customize your Leadership and Organizations master’s degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:
• Define the role of mission, vision, values, and goals as a start of strategic planning
• Articulate and discuss the advantages and limitations of the strategic planning process
• Identify the areas to be addressed in implementing innovation and change; customers, competitors, suppliers, technology
• Explore the change theories and concepts and skills required for effective and ethical change leadership and how the relationships within an organization are affected
• Discuss how financial management and budget and planning need to align with the vision, values, and goals of an organization

Leadership and Organizations Outcomes
This program prepares students to:
• Identify a clear mission and lead the dynamic process of translating a mission into a series of goals and outcomes
• Utilize the knowledge of an organization’s most important resource, people, in the creation and transmission of knowledge and economic, cultural, and technological change
• Align mission, vision, people, resources, and goals to maximize success and value over time for an organization
• Design and implement processes and content in organizations to meet the description of organizational excellence, which includes strong leadership and relationships

MASTER’S DEGREE ADMISSION
Admission Criteria
A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process
Master’s degree applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will
be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/certificate.cfm).

- **Application**: Applicants must complete the application online (http://myweb.du.edu).
- **Application Fee**: A $75 non-refundable application fee is required for an application to be processed.
- **One Official Transcript from each Post-Secondary Institution**: Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
- **Two Letters of Recommendation**: Two confidential letters of recommendation are required.
- **Statement of Purpose**: A personal statement (two pages double spaced) is required. The statement should include information on how the degree will enhance career plans and meet educational goals. Sharing personal experiences, abilities, achievements, and goals is encouraged. This document has considerable influence in the decision to admit applicants with attention given to written communication skills.
- **Résumé/Curriculum Vitae (CV)**.
- **Degree Plan**: The degree plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
- **Language Proficiency**: Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.
- **Proof of Permanent Residency**: Permanent Residents must provide a copy of their Registration Alien Card (green card).
- **Admission Interview**: An interview may be required at the program director’s request.
- **International Applicants**: Additional requirements are listed below for international applicants.

## CERTIFICATE ADMISSION

### Admission Criteria

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are **NOT** required.

### Admission Process

Certificate applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/certificate.cfm).

- **Application**: Applicants must complete the application online (http://myweb.du.edu).
- **Application Fee**: A $50 non-refundable application fee is required for an application to be processed.
- **One Official Transcript from each Post-Secondary Institution**: Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
- **Certificate Plan**: The certificate plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
- **Language Proficiency**: Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.
- **Proof of Permanent Residency**: Permanent Residents must provide a copy of their Registration Alien Card (green card).
- **Admission Interview**: An interview may be required at the program director’s request.
- **International Applicants**: Additional requirements are listed below for international applicants.
INTERNATIONAL ADMISSION

International applicants must comply with all requirements set forth for domestic applicants and supplement their application with additional documentation. International applicant information, including admission deadlines and the International Applicant Checklist, is available on the University College website (http://universitycollege.du.edu/answers/admission/international.cfm).

Admitted international applicants whose native language is not English are required to attend University College’s International Preparation Week (http://universitycollege.du.edu/answers/admission/international.cfm) prior to attending courses at University College.

University College will consider graduate applicants who have earned three-year baccalaureate degrees from 15-year education systems. The school from which the applicant has earned the degree must be a formally recognized or regionally accredited institution of higher learning, as determined by the University Of Denver Office Of International Student Admission. Admission policy and procedures for applicants holding three-year baccalaureate degrees is the same as for other international applicants with one exception: applicants with a three-year degree are not eligible for English Conditional Admission. Priority consideration will be given to those with a minimum of three year’s work experience.

Additional Admission Requirements for International Applicants

- **English Proficiency:** All internationally educated applicants whose native language is not English are required to submit proof of English Language Proficiency regardless of citizenship and/or U.S. residency.

  1. **TOEFL:** A minimum score of 550 (paper based), 213 (computer based), or 80 (Internet based) is required for admission consideration. Generally, applicants should achieve at least 20 in all TOEFL subscores on the internet-based exam. TOEFL score reports older than two years from the date of application are not acceptable for admission consideration.

  2. **Academic IELTS:** A score of 6.5 or higher is required to be considered for admission. Each individual band score must be 6.0 or higher. IELTS score reports older than two years from the date of application are not acceptable for admission consideration.

- **Possible Exemptions:** International applicants may be exempt from the TOEFL/Academic IELTS requirement if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the entire language of instruction and examination is in English.

- **English Conditional Admission (ECA):** Master's degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, ECA requires an evaluation by the University of Denver's English Language Center (ELC) and successful completion of intensive ELC English courses including the Graduate Preparation Program. Academic classes may not be taken while students are enrolled at the English Language Center. Graduate certificate students may not be admitted through ECA. As an alternative to the English Language Center, an applicant may become fully admitted by submitting sufficient TOEFL/Academic IELTS scores.

- **Official Transcripts and Translations:** International applicants should submit official transcripts printed in the official language of instruction of their institution. Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English.

- **Photocopy of Diploma/Degree Certification and Appropriate Translations:** Applicants who have earned a degree outside the U.S. must submit proof of graduation through a degree certificate or diploma along with all appropriate official translations.

- **A Photocopy of Current Passport:** Applicants must provide a copy of the photograph and legal name page of their passport. This is required before an I-20 can be issued by the University of Denver.

- **The Supplemental Information Form (SEVIS Supplement):** Applicants who are not U.S. Citizens or permanent residents must complete the SEVIS form.

- **Financial Verification Form:** Applicants seeking an I-20 student visa must submit financial verification documents.

Total Credits: 48

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.
Leadership and Organizations

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

Total Credits: 48

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

Non-coursework Requirement

Capstone Project (or successful completion of Topics in Organizational Leadership)

Leadership Org Studies Courses

Organizational Leadership Courses

ORL 4160 Integrating Personal and Organizational Success (4 Credits)

This class explores the dynamics where the organization and the individual are successful and what is the role of the teacher. It analyzes options and opportunities, including the use of a systems thinking model, organizational learning, knowledge management, appreciative inquiry and building an ethical model for success at all levels of an organization; public, private or non-profit.
ORL 4170 Developing Human Capital in Organizations (4 Credits)
This course explores why, with the changes in the workforce, organizations; public, private, and nonprofit; are looking internally for innovation, creativity and strategic change. Based on the premise that organizations continue to evolve or they will become extinct, this course examines the reasons behind developing human capital and discusses concrete strategies for this development, in a sustaining and ethical manner. This course evaluates the advantage of a connected workforce; a shared mission, vision and information, knowledge, reward and communication structures. Stressing that people are an organization's most important resource, this course identifies the role of the leader in developing and retaining human capital.

ORL 4185 Enterprise Management (4 Credits)
The enterprise management course provides a contextual basis for the application of effective cross-functional management methods within the enterprise. The topics taught in this course come from the traditional academic areas of business, industrial engineering, applied statistics, and project management. This course is designed to present and integrate these fundamental knowledge areas into a multi-dimensional enterprise management knowledge base and skill set.

ORL 4190 Value Driven Decision Making (4 Credits)
This course explores both objective and subjective decision making models. Emphasis is placed on decision making and risk assessment for organizational effectiveness in public, private and nonprofit organizations. The rational approach is taught via maximization of expected outcomes and decision tree analysis. The irrational side of decision-making is covered through demonstrations and discussion of decision bias and judgment heuristics. The role of the leader is discussed.

ORL 4320 Understanding Cities: Services (4 Credits)
The delivery of municipal services involves multifaceted operations. This course examines the models and frameworks used in the administration of various city and county services, such as law enforcement; fire and emergency services; schools; social services; medical and hospital services; public health; and cultural, sports, entertainment and recreation services. This course draws on experts from local governments to describe current issues, unresolved problems, and promising solutions.

ORL 4330 Political Environments (4 Credits)
This course provides an in-depth examination of the components of political environments, including grassroots activism, political campaigns, the election process, boards, public forums, etc. Current events and case studies providing key examples will be explored to develop an understanding of political exchange and social change. The effects of public decision-making on collaboration will also be examined, and negotiation skills for engaging in political interactions will be identified and cultivated.

ORL 4340 Business and Community Entrepreneurship (4 Credits)
This course explores how businesses, not-for-profit organizations, and municipal government work together to create an atmosphere that supports entrepreneurship. Topics include regulations, taxation, economic development, business incentives, manpower development, and encouragement of trade, tourism, and convention business. Coordinating bodies such as trade associations and chambers of commerce are also explored. Strategic planning, entrepreneurial, and project management skills are developed through a collaborative course project.

ORL 4360 Community Change Processes (4 Credits)
Community change is omnipresent and can impact organizations and municipalities at every level, as well as individual citizens. Changes can involve technological advances, demographic changes, community issues, special interests, and workplace pressures. This course explores organizational change theories including change process and then various models employed to effectively implement change. It examines the impact of change on municipalities and its citizenry and explores practical change management methodologies. Students will explore creative and innovative techniques to conceptualize and plan community development initiatives as well as enhance leadership skills for communication and implementation.

ORL 4370 Comparative Financial Systems (4 Credits)
The financial systems of business, government, and not-for-profit organizations are described, compared, and contrasted. The revenue sources, limitations, and legal structures regulating financial operations are described, and the methods of controlling and reporting expenditures are examined. Processes for strategic planning, budget building, and auditing are explored as are the interactions of the three sectors on such matters as taxation, fundraising, and economic development. Methods used for public and private collaborations, such as tax increment financing and Certificates of Participation, along with other emerging financial tools, will be explored.

ORL 4380 Social Marketing Communication (4 Credits)
Social marketing applies commercial marketing concepts and tools to influence the behavior of target audiences to improve the quality of their lives and/ or the society of which they are a part. Although built on many of the same principles as commercial marketing, social marketing is distinctly different. This course explores the specialized practice of social marketing as an effective approach to promoting behavioral and social change. Using case studies and problem-based learning strategies, it examines relevant theories, concepts and practices considered by nonprofit organizations, government and corporations when seeking to effect behavioral changes that lead to measurable outcomes including community development, improved health, injury prevention and environmental protection.

ORL 4400 Leading Strategic Planning in Organizations (4 Credits)
Beginning with a clear mission, strategic planning is an iterative, dynamic process of translating the mission into a series of goals and outcomes in public, private, and nonprofit organizations. The organization's vision, values, mission and goals are the core of the process; strategic planning involves a series of options, understanding opportunities, evaluating risk, developing the plan and building in ethics, communication, implementation and evaluation. The strengths and limitations of rational planning processes are explored and strategies for coping with unintended consequences are developed. The role of the leader in this process is also discussed.
OHR 4410 Principles of Environmental Scanning (4 Credits)
Environmental scanning is the process of identifying and evaluating external factors that may affect an organization; public, private, or nonprofit; on either a micro or a macro level. The micro level includes the immediate and global competitive environment and the macro level encompasses external trends dealing with the economy, politics, social changes or technology. This course provides students the opportunity to develop a process for environmental scanning and learn to use tools to evaluate trends and the significance of a trend. Casual loop diagrams, systems archetypes and scenario planning are discussed. These tools are useful in all sectors.

OHR 4420 Leading Change for Transformation (4 Credits)
The only thing that is constant is change. Beginning with this premise, this class explores the exciting and opportunity filled world of change and transition. This course explores the basic change theories, concepts and skills required for effective and ethical change management in public, private and nonprofit organizations. Students examine the notion of breakpoint change, the various stages of individual and organizational change, essential relationships between leadership and management, and assorted organizational and management models for managing change. The concept of chaos or a chaotic organization for producing extraordinary results is discussed. The role of the leader in this process is analyzed.

OHR 4510 Building the 21st-Century Organization (4 Credits)
This course examines the purpose and roles of organizations in today’s global economy. The main focus is on the design and structure of organizations based on their industry; the internal and external environment; type of culture; degree of complexity and use of technology; routine and non-routine processes; size; and whether they are global, national or local. Differences between public, private and governmental organizations are illustrated. Organizational culture and its effect on ethics, change management, and innovation are examined. The sources of conflict in organizations are explained and students learn how power, political tactics, and collaboration can be used to resolve conflict. Contemporary challenges facing organizations are identified along with the design and structure options that help mitigate these challenges. Students develop an Organization Design Plan that enables a selected organization to effectively operate within its environment at optimal performance. Designing for performance, sustainability and innovation are key aspects of this course.

OHR 4520 Financial Applications in Organizations (4 Credits)
This course is designed to enable students to discover how basic financial concepts are similar and different across public, private and non-profit organizations. Students compare and contrast the use of these concepts and processes in different organizational types and structures.

OHR 4530 Leading a Culture of Organizational Innovation (4 Credits)
This course examines a proven process of innovation and how it applies to private, public and non-profit organizations; leading to entrepreneurship. The course identifies how organizational culture can have a positive or negative effect on innovation. The role of the leader is also discussed. Determining the right strategy for effective innovation and how to structure organizations to innovate best is explored. Students describe how to implement management systems to assess ongoing innovation, using metrics throughout the process, and determine how to incentivize innovation in work teams. Using the seven rules of innovation, students assess a selected organization on its degree of innovation and propose a plan for integrating innovation.

OHR 4550 Strategic Organizational Partnerships (4 Credits)
Partnerships extend the capability of the organization; public, private or nonprofit; and help to leverage available resources. Strategic partnerships also provide an alternative to vertical integration and a way to complement the organization's core competencies. This course defines and discusses the roles of various types of organizational partnerships, including internal and external, strategic partnerships, and joint ventures, and explores strategies for ethically managing these external and internal organizational relationships.

OHR 4580 Innovation and Entrepreneurial Development (4 Credits)
This course examines a proven process of innovation and how it applies to private, public and non-profit organizations, leading to entrepreneurship. The course identifies how organizational culture can have a positive or negative effect on innovation. Determining the right strategy for effective innovation and how to structure organizations to innovate best is explored. Students describe how to implement management systems to assess ongoing innovation, using metrics throughout the process, and determine how to incentivize innovation in work teams. Using the 7 rules of innovation, students assess a selected organization on its degree of innovation and propose a plan for integrating innovation.

OHR 4600 Philanthropy Roles and Practices (4 Credits)
This course discusses what defines excellence in organizations, especially in the non-profit and public organizations. This course explores and analyzes organizations from the standpoint of clarity of message, value to supporters, funders, users and staff; organizational structure, transparency to the supporters and funders, culture, and ethics. An evaluation of the organizational skills, systems, infrastructure and human resources complete the analysis. The organization that achieves excellence strengthens its fiscal position and reputation. The role of the leader in achieving excellence is discussed. Topics covered: history of philanthropy in the U.S.; Global philanthropy; Legal and tax considerations; Mission driven organizations; Nonprofit boards; Differences of nonprofit driven services for a community versus government/public providing those services.
ORL 4610 Cultivating and Sustaining Donor Relations (4 Credits)
This course answers the questions of why donors are needed and how to establish and sustain donors for the organization. This class explores the practice of identifying donors and establishing the relationship in an ethical and sustainable manner. Donors may be business, other organizations, individuals or foundations. Based on the premise that first there is involvement, and then transparency and finally donations, how effectively an organization established and sustains donors supports the long term existence of the organization.

ORL 4615 Principles of Finance for Fundraising (4 Credits)
This course provides fundraising professionals an understanding of financial statements, budgets and IRS issues. Topics include: accounting principles, managing the accounting process, cash flow, cost accounting and analyzing financial statements.

ORL 4620 Principles of Strategic Fundraising (4 Credits)
Beginning with a clear mission, strategic fundraising is an iterative, dynamic process of translating the mission into a series of outcomes and support for the organization. With the organization's vision, values, mission and goals as the core of the process, the fundraising is done with high ethical standards, ensuring accountability to the donors and compliance with all applicable Federal, State and local Laws. Various fundraising strategies and vehicles are discussed, along with the role of the staff and the board in fundraising. Last, there is some discussion of the current larger issues in fundraising.

ORL 4630 Organizing for Successful Fundraising (4 Credits)
Most organizations are unsuccessful with their fundraising efforts, not because their cause isn't worthy of support, but because they simply are not organized to raise funds. This course covers the basic elements of a mission statement, preparing the case for support by donors, the roles of staff, board, volunteers, and the legal and ethical issues involved. Organizational structures are discussed, with the balance between bureaucracy and innovation/creativity. The role of technology is illustrated. The local, state and federal laws that govern fundraising are discussed.

ORL 4640 Research and Writing for Fundraising (4 Credits)
This course is an in depth exploration of researching and writing effective proposals and grants. Principles of the Institutional Review Board (IRB) are studied and basic training completed. Funding sources are analyzed and the process of competing for a grant is discussed. At the conclusion, students have the knowledge to research, prepare, and present a grant proposal. Prerequisite: ORL 4620.

ORL 4650 Advanced Board Development (4 Credits)
This course explores the opportunities and challenges with a board of directors from a staff perspective. This course evaluates the value of a knowledgeable and effective board of directors in the success of the organization. The role of the board of directors and the role of a staff member, especially in fundraising, is often unclear and the need for clarity and differences in the roles are discussed. How to develop and maintain a working relationship with the board of directors member to move the organization forward is analyzed. Lastly, this course evaluates how to choose members for the board and how to design and implement a development plan for board of directors members are explored. Prerequisite: ORL 4600.

ORL 4660 Database Management and Technology for Fundraising (4 Credits)
This course explains why having reliable information with regular updates is essential in the development and sustaining of a donor base for nonprofits. All aspects of effective technology uses, including: research, email, electronic contributions, volunteer contact lists and mail generation are discussed. Legal, ethical and costs considerations are investigated. Prerequisites: ORL 4600, ORL 4615 and ORL 4620.

ORL 4670 Advanced Fundraising (4 Credits)
This course provides the opportunity for students to build on the knowledge gained in Principles of Strategic Fundraising. Topics include: current trends, legal concerns, professional development for fundraisers and alternative revenue sources. There is an emphasis on understanding and explaining the financial structure of the organization. Prerequisites: ORL 4600, ORL 4615 and ORL 4620.

ORL 4680 Advanced Volunteer Management (4 Credits)
This course focuses on the recruitment, training and retention of the organization's volunteers, whether public, private or nonprofit. Including a cost benefit analysis, this course is an in-depth analysis of a volunteer program. There is a discussion of the legal and ethical considerations, advantages and disadvantages, of using volunteers in an organization. Prerequisite: ORL 4600.

ORL 4701 Topics in Organizational Ldrsp (1-6 Credits)
The content of this course varies each time it is offered. The topics may include time-sensitive issues from the film industry, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

ORL 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project synthesizes and applies core concepts acquired from the program. The student selects an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. View the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements.
ORL 4902 Topics in Organizational Leadership (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. The seminar is dependent upon collegial discussion of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. The course structure, facilitated by the faculty member, guides the students through the process of independent research and writing of a capstone paper; the instructor provides intensive feedback on the capstone process and papers. Students are responsible for generating the course content through ongoing discussion of and peer feedback on the capstone process and individual papers, as well as the analysis and contextualization of focused students papers within the wider degree field of study. Students professionally and academically communicate their findings through written work and oral presentations. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

ORL 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

ORL 4905 Graduate Social Research Methods (4 Credits)
Graduate Social Research Methods is an exploration of the methods and purposes of social science research from the perspective of the researcher as well as that of the informed professional and consumer of information. Students learn about the process of research, including the development of research questions, the purpose of various social science research methods, the role of professional ethics, and general approaches to the analysis and interpretation of data. Students develop the ability to read and critique basic social science research articles and to implement simple research designs. Students develop and write a research proposal around a specific research question informed by a review of the literature. Technical requirements include the ability to read and modify Microsoft Excel documents.

ORL 4910 Research Practices and Applications (4 Credits)
This course develops competency in principles of research and measurement for use in the professional setting. As an initial course in the program of study, students learn research methods to apply to program and systems design and evaluation to achieve successful measurement of outcomes and goals. Students become critical consumers of pertinent literature to provide background and support for the choice and application of proper qualitative and quantitative research methods and data analysis for professional application. Critical thinking through comparing and contrasting cause and effect is used to build logic models. Research, design, and evaluation processes that address issues of implementation, feasibility, and sustainability are emphasized. At the conclusion of this course, students are prepared to apply and clearly communicate the practice of scientific research principles in the professional environment to ensure that the question being asked can be answered through rigorous research and the design and formative assessment of the program or system. Completion of Institutional Review Board (IRB) training via CITI Program is required as a basis for discussion of research ethics and IRB procedures. Competencies gained in this course, including practices of inquiry, self-analysis, and evaluation, are applied and integrated throughout the course of study and demonstrated in the culminating capstone work of the master's degree.

ORL 4980 Internship (1-4 Credits)
The ORL internship is designed to offer students a practical educational experience in an industry related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the ORL master's degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College sends notification to all ORL students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the ORL degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.

ORL 4991 Independent Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted into a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent study is offered only on a for-credit basis.

ORL 4992 Directed Study (1-10 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted into a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Directed Study is offered only on a for-credit basis.

Certificate in Organizational and Professional Communication with a concentration in Alternative Dispute Resolution

The graduate certificate Alternative Dispute Resolution concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults who seek to enhance their current skills. A comprehensive approach to the study of conflict analysis and resolution, the Alternative Dispute Resolution concentration recognizes the potentially destructive nature of conflict and how to resolve it. Alternative Dispute Resolution (ADR) uses mediation, negotiation, facilitation, and arbitration methods to resolve conflicts between individuals, organizations, small groups, and nations. ADR certificate students will learn how to apply conflict theories in order to understand and analyze conflict situations, as well as develop contextually appropriate conflict management systems. Credits earned through this graduate certificate may apply toward a master's degree in Organizational and Professional Communication.

This certificate prepares students to

• Apply conflict theories to understand and analyze conflict situations
• Recognize the potential role of culture in conflict situations
• Utilize a variety of alternative processes to resolve conflict, including mediation, negotiation, and facilitation
• Develop contextually appropriate conflict management systems
• Perform alternative dispute resolution practices in accordance with various applicable codes of ethics

Organizational and Professional Communication Outcomes

This program prepares students to

• Demonstrate effective written and verbal communication skills across organizational, professional, and social settings
• Utilize knowledge of theoretical foundations and applied techniques to expand one’s comfort level with communication choices across settings
• Display critical thinking processes: analyze, understand, and evaluate communication within organizations and as part of external professional situations
• Utilize creativity in constructing, assessing, and/or managing problem solving, decision making or conflict processes and interactions; demonstrate the ability to revise such processes for more effective outcomes as needed
• Understand the nature and needs of group/team processes as they relate to and operate within organizations
• Demonstrate social awareness, responsibility, and sensitivity for the communication required in culturally diverse groups
• Develop knowledge and skills within one or two communication specialties which enhance and clarify professional direction, career objectives, or personal development

Certificate in Organizational and Professional Communication with a concentration in New Media and Internet Marketing

The graduate certificate in New Media and Internet Marketing concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Designed for marketing managers, strategists, public relations professionals, business owners, and executives who are familiar with foundational PR and marketing concepts and practices, the New Media and Internet Marketing concentration is a career-relevant, applied program that will help you improve reputation management and increase engagement. While ROI and branding are still the cornerstones of marketing, new strategies have emerged that are critical to prolonged success: search engine optimization, pay per click advertising, social media integration, mobile marketing, web metrics and analytics, digital campaign management, email marketing, and more.

Students will expand their skills in traditional marketing and communication as well as develop the core fundamentals of new media and internet marketing with a certificate in New Media and Internet Marketing concentration. As a marketer, it's essential to be at the forefront of the convergence of technology and communication#s graduate certificate will provide the latest thought-processes in new media and internet marketing, as well as help you develop the communication and organizational skills needed to ensure a long-term, sustainable career. Credits earned through this graduate certificate may apply toward a master's degree in Organizational and Professional Communication.

This graduate certificate prepares students to:

• Design, manage, and measure persuasive multi-channel, integrated marketing, and optimization strategies
• Understand the current scope and anticipate trends of social media, digital, and internet marketing
• Develop measurable SEO, PPC, mobile marketing, and email strategies that carry out organization’s business objectives
• Measure new media and digital marketing and adjust future campaigns based on results
• Elevate organization’s digital branding efforts and improve reputation management

Organizational and Professional Communication Outcomes
This program prepares students to:
• Demonstrate effective written and verbal communication skills across organizational, professional, and social settings
• Utilize knowledge of theoretical foundations and applied techniques to expand one’s comfort level with communication choices across settings
• Display critical thinking processes: analyze, understand, and evaluate communication within organizations and as part of external professional situations
• Utilize creativity in constructing, assessing, and/or managing problem solving, decision making or conflict processes and interactions; demonstrate the ability to revise such processes for more effective outcomes as needed
• Understand the nature and needs of group/team processes as they relate to and operate within organizations
• Demonstrate social awareness, responsibility, and sensitivity for the communication required in culturally diverse groups
• Develop knowledge and skills within one or two communication specialties which enhance and clarify professional direction, career objectives, or personal development

Certificate in Organizational and Professional Communication with a concentration in Organizational Communication
The graduate certificate in Organizational Communication concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults seeking improved business communications skills within any industry. A communication certificate prepares professionals to effectively communicate verbally or written in an organizational, business, or interpersonal realm. Students will learn to troubleshoot, resolve conflict, and diplomatically deal with strategic workforce issues through the certificate program. Professional practitioners who work in the fields they teach lead comprehensive classes that teach graduate certificate students techniques in persuasion, presentation, negotiation, culture, and processes in the context of tactical communication.

Certificate students will develop an understanding of various persuasion techniques and the theories and practice of group dynamics as they broaden their awareness of and practice with business communications tools, concepts, and presentation tactics. Professionals seeking enhanced communication skills will learn the organizational communication tactics needed to succeed in any industry. Credits earned through this graduate certificate may apply toward a master's degree in Organizational and Professional Communication.

This degree prepares students to
• Understand various persuasion techniques and a format for choosing which is most effective for given circumstances
• Develop awareness of and practice with business communication concepts, tools, and presentation techniques
• Understand theories and practice of group and team dynamics
• Identify barriers to effective communication and develop new skills to ensure productive outcomes
• Be change leaders through applying principles of change, critical change dynamics, and processes for knowledge transfer within organizations

Organizational and Professional Communication Outcomes
This program prepares students to
• Demonstrate effective written and verbal communication skills across organizational, professional, and social settings
• Utilize knowledge of theoretical foundations and applied techniques to expand one’s comfort level with communication choices across settings
• Display critical thinking processes: analyze, understand, and evaluate communication within organizations and as part of external professional situations
• Utilize creativity in constructing, assessing, and/or managing problem solving, decision making or conflict processes and interactions; demonstrate the ability to revise such processes for more effective outcomes as needed
• Understand the nature and needs of group/team processes as they relate to and operate within organizations
• Demonstrate social awareness, responsibility, and sensitivity for the communication required in culturally diverse groups
• Develop knowledge and skills within one or two communication specialties which enhance and clarify professional direction, career objectives, or personal development

Certificate in Organizational and Professional Communication with a concentration in Organizational Development, Training and Learning
The graduate certificate in Organizational Development, Training, and Learning concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults seeking professional development in adult learning theories, organizational development, and training/learning design. Students will learn the organizational development, training, and learning tactics needed to succeed in any industry. Credits earned through this graduate certificate may apply toward a master's degree in Organizational and Professional Communication.

This degree prepares students to
• Understand various persuasion techniques and a format for choosing which is most effective for given circumstances
• Develop awareness of and practice with business communication concepts, tools, and presentation techniques
• Understand theories and practice of group and team dynamics
• Identify barriers to effective communication and develop new skills to ensure productive outcomes
• Be change leaders through applying principles of change, critical change dynamics, and processes for knowledge transfer within organizations

Organizational and Professional Communication Outcomes
This program prepares students to
• Demonstrate effective written and verbal communication skills across organizational, professional, and social settings
• Utilize knowledge of theoretical foundations and applied techniques to expand one’s comfort level with communication choices across settings
• Display critical thinking processes: analyze, understand, and evaluate communication within organizations and as part of external professional situations
• Utilize creativity in constructing, assessing, and/or managing problem solving, decision making or conflict processes and interactions; demonstrate the ability to revise such processes for more effective outcomes as needed
• Understand the nature and needs of group/team processes as they relate to and operate within organizations
• Demonstrate social awareness, responsibility, and sensitivity for the communication required in culturally diverse groups
• Develop knowledge and skills within one or two communication specialties which enhance and clarify professional direction, career objectives, or personal development

Certificate in Organizational and Professional Communication with a concentration in Organizational Development, Training and Learning
The graduate certificate in Organizational Development, Training, and Learning concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults seeking professional development in adult learning theories, organizational development, and training/learning design. Students will learn the organizational development, training, and learning tactics needed to succeed in any industry. Credits earned through this graduate certificate may apply toward a master's degree in Organizational and Professional Communication.

This degree prepares students to
• Understand various persuasion techniques and a format for choosing which is most effective for given circumstances
• Develop awareness of and practice with business communication concepts, tools, and presentation techniques
• Understand theories and practice of group and team dynamics
• Identify barriers to effective communication and develop new skills to ensure productive outcomes
• Be change leaders through applying principles of change, critical change dynamics, and processes for knowledge transfer within organizations

Organizational and Professional Communication Outcomes
This program prepares students to
• Demonstrate effective written and verbal communication skills across organizational, professional, and social settings
• Utilize knowledge of theoretical foundations and applied techniques to expand one’s comfort level with communication choices across settings
• Display critical thinking processes: analyze, understand, and evaluate communication within organizations and as part of external professional situations
• Utilize creativity in constructing, assessing, and/or managing problem solving, decision making or conflict processes and interactions; demonstrate the ability to revise such processes for more effective outcomes as needed
• Understand the nature and needs of group/team processes as they relate to and operate within organizations
• Demonstrate social awareness, responsibility, and sensitivity for the communication required in culturally diverse groups
• Develop knowledge and skills within one or two communication specialties which enhance and clarify professional direction, career objectives, or personal development

Certificate in Organizational and Professional Communication with a concentration in Public Relations and Marketing

The graduate certificate in Public Relations and Marketing concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students are prepared to effectively coordinate and manage public relations, marketing, and advertising strategies via communication plans and operations. Current or aspiring marketing professionals will expand their skillset and learn how to manage corporate identity, products, and services, and key relationships with internal and external constituents through a public relations and marketing certificate. Taught by professional practitioners who work in PR and marketing, classes are geared toward the busy adult who currently or aspires to work within the field of public relations and marketing.

Certificate students will learn research-based decision making, as well as the process of communicating persuasively to target audiences, the principles of branding and market positioning, the proficiency needed to measure the effects of PR and marketing efforts, and the practice of successful media relations and internet marketing communication. Advances in technology, increased public scrutiny, and demand for accountability have increased the frequency, speed, and nature of organizational and professional communication in business, government, and not-for-profit organizations—thereby increasing the need for PR professionals or employees with public relations knowledge. Credits earned through this graduate certificate may apply toward a master's degree in Organizational and Professional Communication.

This program prepares students to

• Implement the process of communicating/writing persuasively for specific outcomes with targeted audiences
• Understand branding and market positioning as they relate to consumer behavior, what drives it, and how to influence it
• Employ marketing, PR, and advertising techniques to create communication plans with measurable results
• Develop, manage, and analyze effective media relations practices and venues
• Gain a perspective on primary principles and practices of marketing and public relations at work in a 21st century global economy

Organizational and Professional Communication Outcomes

This program prepares students to

• Demonstrate effective written and verbal communication skills across organizational, professional, and social settings
• Utilize knowledge of theoretical foundations and applied techniques to expand one's comfort level with communication choices across settings
• Display critical thinking processes: analyze, understand, and evaluate communication within organizations and as part of external professional situations
• Utilize creativity in constructing, assessing, and/or managing problem solving, decision making or conflict processes and interactions; demonstrate the ability to revise such processes for more effective outcomes as needed
• Understand the nature and needs of group/team processes as they relate to and operate within organizations
• Demonstrate social awareness, responsibility, and sensitivity for the communication required in culturally diverse groups
• Develop knowledge and skills within one or two communication specialties which enhance and clarify professional direction, career objectives, or personal development

**Master of Professional Studies in Organizational and Professional Communication with a concentration in Alternative Dispute Resolution**

The Alternative Dispute Resolution master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Offering a rigorous and comprehensive approach to the study of conflict analysis and resolution, the Alternative Dispute Resolution concentration recognizes the potential destructive nature of conflict and how to resolve it. Alternative Dispute Resolution (ADR) strives to resolve conflicts between individuals, organizations, small groups, and nations using arbitration, negotiation, facilitation, and mediation.

The master's concentration in Alternative Dispute Resolution addresses communication theory as it relates to conflict management, mediation models, and the negotiation process. Master's degree students learn to apply conflict theories in order to understand and analyze conflict situations, as well as develop contextually appropriate conflict management systems. Customize your Organizational and Professional Communication master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to

• Apply conflict theories to understand and analyze conflict situations
• Recognize the potential role of culture in conflict situations
• Utilize a variety of alternative processes to resolve conflict, including mediation, negotiation, and facilitation
• Develop contextually appropriate conflict management systems
• Perform alternative dispute resolution practices in accordance with various applicable codes of ethics

**Organizational and Professional Communication Outcomes**

This program prepares students to

• Demonstrate effective written and verbal communication skills across organizational, professional, and social settings
• Utilize knowledge of theoretical foundations and applied techniques to expand one's comfort level with communication choices across settings
• Display critical thinking processes: analyze, understand, and evaluate communication within organizations and as part of external professional situations
• Utilize creativity in constructing, assessing, and/or managing problem solving, decision making or conflict processes and interactions; demonstrate the ability to revise such processes for more effective outcomes as needed
• Understand the nature and needs of group/team processes as they relate to and operate within organizations
• Demonstrate social awareness, responsibility, and sensitivity for the communication required in culturally diverse groups
• Develop knowledge and skills within one or two communication specialties which enhance and clarify professional direction, career objectives, or personal development

**Master of Professional Studies in Organizational and Professional Communication with a concentration in New Media and Internet Marketing**

The New Media and Internet Marketing master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Designed for marketing managers, strategists, public relations professionals, business owners, and executives who are familiar with foundational PR and marketing concepts and practices, the New Media and Internet Marketing degree concentration is a career-relevant, applied program that will help you improve reputation management and increase engagement. While ROI and branding are still the cornerstones of marketing, new strategies have emerged that are critical to prolonged success: search engine optimization, pay per click advertising, social media integration, mobile marketing, web metrics and analytics, digital campaign management, email marketing, and more.

The comprehensive New Media and Internet Marketing master's degree concentration offers the tools, tactics, and strategies needed to synthesize new media and internet marketing methods along with traditional marketing best practices to help you create focused, strategic marketing plans. Degree seekers will find that the interdisciplinary approach not only provides the latest thought processes in new media and internet marketing, but also helps them to develop the communication and organizational skills needed to ensure a long-term, sustainable career. Customize your Organizational and Professional Communication master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to

• Design, manage, and measure persuasive multi-channel, integrated marketing, and optimization strategies
• Understand the current scope and anticipate trends of social media, digital, and internet marketing
• Develop measurable SEO, PPC, mobile marketing, and email strategies that carry out organization’s business objectives
• Measure new media and digital marketing and adjust future campaigns based on results
• Elevate organization’s digital branding efforts and improve reputation management

Organizational and Professional Communication Outcomes

This program prepares students to

• Demonstrate effective written and verbal communication skills across organizational, professional, and social settings
• Utilize knowledge of theoretical foundations and applied techniques to expand one’s comfort level with communication choices across settings
• Display critical thinking processes: analyze, understand, and evaluate communication within organizations and as part of external professional situations
• Utilize creativity in constructing, assessing, and/or managing problem solving, decision making or conflict processes and interactions; demonstrate the ability to revise such processes for more effective outcomes as needed
• Understand the nature and needs of group/team processes as they relate to and operate within organizations
• Demonstrate social awareness, responsibility, and sensitivity for the communication required in culturally diverse groups
• Develop knowledge and skills within one or two communication specialties which enhance and clarify professional direction, career objectives, or personal development

Master of Professional Studies in Organizational and Professional Communication with a concentration in Organizational Communication

The Organizational Communication master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Improve your business communication skills within any industry and learn to effectively communicate verbally or written in an organizational, business, or interpersonal realm with a master's in Organizational Communication. Graduates will troubleshoot, resolve conflict, and diplomatically deal with strategic workforce issues such as operations, management, sales, marketing, business development, or technology. Professional practitioners who work in the fields they teach lead comprehensive classes offering master's degree students techniques in persuasion, presentation, negotiation, culture, and processes in the context of tactical communication.

Degree-seeking students in the Organizational Communication degree concentration will develop an understanding of various persuasion techniques and the theories and practice of group dynamics. Graduates broaden their awareness of and practice with business communication tools, concepts, and presentation tactics. A communication degree can be effectively utilized in any industry, as the goal of enhancing excellence with productive outcomes is the same across the board. Customize your Organizational and Professional Communication master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to

• Understand various persuasion techniques and a format for choosing which is most effective for given circumstances
• Develop awareness of and practice with business communication concepts, tools, and presentation techniques
• Understand theories and practice of group and team dynamics
• Identify barriers to effective communication and develop new skills to ensure productive outcomes
• Be change leaders through applying principles of change, critical change dynamics, and processes for knowledge transfer within organizations

Organizational and Professional Communication Outcomes

This program prepares students to

• Demonstrate effective written and verbal communication skills across organizational, professional, and social settings
• Utilize knowledge of theoretical foundations and applied techniques to expand one's comfort level with communication choices across settings
• Display critical thinking processes: analyze, understand, and evaluate communication within organizations and as part of external professional situations
• Utilize creativity in constructing, assessing, and/or managing problem solving, decision making or conflict processes and interactions; demonstrate the ability to revise such processes for more effective outcomes as needed
• Understand the nature and needs of group/team processes as they relate to and operate within organizations
• Demonstrate social awareness, responsibility, and sensitivity for the communication required in culturally diverse groups
• Develop knowledge and skills within one or two communication specialties which enhance and clarify professional direction, career objectives, or personal development
Master of Professional Studies in Organizational and Professional Communication with a concentration in Organizational Development, Training and Learning

The Organizational Development, Training, and Learning master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults and prepares graduates to understand adult learning theories, instructional design, and organizational culture. Students gain an understanding of the needs of training, the organizational culture in which training occurs, and the importance of organizational design and effective evaluations. Classes are led by professional practitioners who work in the fields they teach and impart communication and instructional planning skills necessary for developing effective training and organizational development programs.

The Organizational Development, Training, and Learning degree program emphasizes the synergistic nature of human resources, organizational development, and training operations within organizations. Students will develop an authentic assessment plan, design and administer training evaluations, and utilize technology in planning, designing, and implementing effective practices. American businesses spent more than $156 billion on employee learning last year, proving it is more important than ever that such efforts be rewarding, provide a return on investment, and produce desired change within an organization. Customize your Organizational and Professional Communication master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

MASTER'S DEGREE ADMISSION

Admission Criteria
A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process
Master’s degree applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/masters.cfm).

• Application: Applicants must complete the application online (http://myweb.du.edu).
• Application Fee: A $75 non-refundable application fee is required for an application to be processed.
• One Official Transcript from each Post-Secondary Institution: Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
• Two Letters of Recommendation: Two confidential letters of recommendation are required.
• Statement of Purpose: A personal statement (two pages double spaced) is required. The statement should include information on how the degree will enhance career plans and meet educational goals. Sharing personal experiences, abilities, achievements, and goals is encouraged. This document has considerable influence in the decision to admit applicants with attention given to written communication skills.
• Résumé/Curriculum Vitae (CV).
• Degree Plan: The degree plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
• Language Proficiency: Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.
• Proof of Permanent Residency: Permanent Residents must provide a copy of their Registration Alien Card (green card).
• Admission Interview: An interview may be required at the program director’s request.
• International Applicants: Additional requirements are listed below for international applicants.

CERTIFICATE ADMISSION

Admission Criteria
A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process
Certificate applications are reviewed for admission on a quarterly basis. Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/certificate.cfm).
 Additional Admission Requirements for International Applicants

- **Application:** Applicants must complete the application online (http://myweb.du.edu).
- **Application Fee:** A $50 non-refundable application fee is required for an application to be processed.
- **One Official Transcript from each Post-Secondary Institution:** Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
- **Certificate Plan:** The certificate plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
- **Language Proficiency:** Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.
- **Proof of Permanent Residency:** Permanent Residents must provide a copy of their Registration Alien Card (green card).
- **Admission Interview:** An interview may be required at the program director’s request.
- **International Applicants:** Additional requirements are listed below for international applicants.

INTERNATIONAL ADMISSION

International applicants must comply with all requirements set forth for domestic applicants and supplement their application with additional documentation. International applicant information, including admission deadlines and the International Applicant Checklist, is available on the University College website (http://universitycollege.du.edu/answers/admission/international.cfm).

Admitted international applicants whose native language is not English are required to attend University College’s International Preparation Week (http://universitycollege.du.edu/answers/admission/international.cfm) prior to attending courses at University College.

University College will consider graduate applicants who have earned three-year baccalaureate degrees from 15-year education systems. The school from which the applicant has earned the degree must be a formally recognized or regionally accredited institution of higher learning, as determined by the University Of Denver Office Of International Student Admission. Admission policy and procedures for applicants holding three-year baccalaureate degrees is the same as for other international applicants with one exception: applicants with a three-year degree are not eligible for English Conditional Admission. Priority consideration will be given to those with a minimum of three year’s work experience.

Additional Admission Requirements for International Applicants

- **English Proficiency:** All internationally educated applicants whose native language is not English are required to submit proof of English Language Proficiency regardless of citizenship and/or U.S. residency.
  1. **TOEFL:** A minimum score of 550 (paper based), 213 (computer based), or 80 (Internet based) is required for admission consideration. Generally, applicants should achieve at least 20 in all TOEFL subscores on the internet-based exam. TOEFL score reports older than two years from the date of application are not acceptable for admission consideration.
  2. **Academic IELTS:** A score of 6.5 or higher is required to be considered for admission. Each individual band score must be 6.0 or higher. IELTS score reports older than two years from the date of application are not acceptable for admission consideration.
  3. **Possible Exemptions:** International applicants may be exempt from the TOEFL/Academic IELTS requirement if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the entire language of instruction and examination is in English.
  4. **English Conditional Acceptance (ECA):** Master's degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, ECA requires an evaluation by the University of Denver's English Language Center (ELC) and successful completion of intensive ELC English courses including the Graduate Preparation Program. Academic classes may not be taken while students are enrolled at the English Language Center. Graduate certificate students may not be admitted through ECA. As an alternative to the English Language Center, an applicant may become fully admitted by submitting sufficient TOEFL/Academic IELTS scores.

- **Official Transcripts and Translations:** International applicants should submit official transcripts printed in the official language of instruction of their institution. Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English.
- **Photocopy of Diploma/Degree Certification and Appropriate Translations:** Applicants who have earned a degree outside the U.S. must submit proof of graduation through a degree certificate or diploma along with all appropriate official translations.
- **A Photocopy of Current Passport:** Applicants must provide a copy of the photograph and legal name page of their passport. This is required before an I-20 can be issued by the University of Denver.
- **The Supplemental Information Form (SEVIS Supplement):** Applicants who are not U.S. Citizens or permanent residents must complete the SEVIS form.
- **Financial Verification Form:** Applicants seeking an I-20 student visa must submit financial verification documents.

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

**Non-coursework Requirements**

Capstone Project (or successful completion of Capstone Seminar)

**Courses**

**COMM 4006 Group/Team Dynamics (4 Credits)**

Effective group/team processes are invaluable to every organization. Even so, we know that ensuring productive and satisfying interactional outcomes in organizational, professional and personal settings can be difficult. Focusing upon theory, application and practice of small group processes—including development of group dynamics, leadership and teams—allows students to incorporate new skills, enhance productivity, and reduce barriers to effective communication.

**COMM 4015 Business Communication and Presentations (4 Credits)**

This course provides students with an opportunity to view current trends and practices in business communication, and examine presentational speaking concepts and skills that are necessary in business, organizational or professional settings. Students gain experience through classroom presentations that allow them to apply the theoretical concepts. Topics such as organizing the contents of the speech, developing effective delivery skills, and using visual aids, are covered in class sessions and applied to students' current experiences. Assignments include formal and impromptu presentations, readings and discussions, written papers and outlines. This course is highly interactive, and attendance is mandatory.

**COMM 4016 Persuasion Methods and Techniques (4 Credits)**

The ability to write and speak in a persuasive manner is often the difference between success and failure. This course looks at a variety of concepts, techniques, and tools designed to improve the persuasiveness of written and spoken interactions. Differences between persuasion, negotiation and mediation are discussed and applied to case presentations. This course requires participation and presentations, readings, discussions and projects. This course is highly interactive, and attendance is mandatory.

**COMM 4020 Communication in Professions and Organizations (4 Credits)**

In this course, students study the field of communication past and present. Career options, communication-related industries, and communication specialties, serve as the core content for this course. Students are exposed to current issues, developments, and trends in the communication field. Students study various communication topics and the scope of activities related to training and development, PR and marketing, consulting, leadership functions, coaching and mentoring, alternative dispute resolution, global perspectives, and the role of e-communication in the 21st century. Ethics related to the field of communication are also explored. Potential areas of interest and growth become more conceivable to students, and serve as the foundation for special projects used to contrast communication functions of the past and future.

**COMM 4030 Learning Organizations (4 Credits)**

This course prepares students to be change leaders in their organizations. The course begins with a focus on understanding critical change dynamics, including organizational structure, phases and roles. The students study and practice competencies which allow organizational members to direct change dynamics in effective ways. The development of competencies are accomplished through discussion, lecture, video, case studies, and change assessment inventories. Concepts and practices of coaching, mentoring and facilitation are explored as methods of supporting change leaders with intergenerational knowledge transfer, or employee development.

**COMM 4045 Applied Critical Thinking in Communication (4 Credits)**

This course provides an examination of the critical thinking processes and models of decision making and problem solving. The suitability, usage, and effectiveness of critical thinking models in achieving positive organizational outcomes are emphasized. Faculty and student perspectives and experiences, along with case studies, demonstrate applications of the critical thinking and problem solving processes within various communication settings and specialties.

**COMM 4047 Organizational Development (4 Credits)**

Today's organizations face constant pressures to change - the need for groups to change is one of the hallmarks of contemporary organizations, whether it's a government entity, a private business, a not-for-profit, or an educational institution. For organizational members and managers, the ability to effectively facilitate organizational change often distinguishes the implementation of a mediocre solution from an extraordinary one that makes a difference. In this class we examine how to facilitate change effectively. We explore the issues and practices of organizational development to understand what kinds of interventions are useful in what situations. This course examines the major components of organization development and design; the evolution of organization development, the nature of change, and how to effectively manage and implement change in organizational environments. We discuss the OD process in depth to familiarize students with the process of contracting, data gathering diagnosis, giving feedback, conducting interventions, and evaluating results. This course is recommended for students interested in consulting, management, or other roles that involve change and development in the workplace.

**COMM 4070 Understanding Human Communication (4 Credits)**

This course emphasizes the many communication theories, their origin, and applied use in personal, organizational and smaller professional settings. The course utilizes case studies, surveys, projects, and self-assessment to encourage students to reflect on personal experiences with issues like interpersonal communication and group and team dynamics to facilitate understanding of the importance of applying theory to practice. Key skills and strengths are identified as they relate to students' professional goals and objectives.
COMM 4117 International Technical Comm (3 Credits)
This course focuses on communication and technical writing skills needed to address today's international business environment. Students will develop the foundational skills necessary to write for translation, as well as develop an understanding of, and sensitivity to, the challenges inherent in intercultural technical communication. Additionally, international standards organizations and the role they play in international communication will be discussed.

COMM 4140 Marketing Foundations and Planning (4 Credits)
This course introduces students to primary principles and practices of marketing and the decision-making processes necessary to effectively manage a marketing environment. Areas of concentration include market oriented strategic planning, competitive analysis, target market segmentation, branding, positioning and differentiation, global marketing issues, paradigms and tools, pricing strategies and channel management. Major factors and decisions essential to marketing professionals are emphasized. Students develop skills and enhance understanding of implementation strategies for effective marketing of products and services in a 21st century global economy.

COMM 4144 Public Relations Principles and Process (4 Credits)
Public relations professionals are being asked to uphold the goal of effective communication in a complex global environment. Business, government, nonprofit, and other organizations depend upon PR professionals who communicate effectively to constituencies, and represent constituency concerns back to the organization. This course explores the essential components of public relations through an examination of the profession, its principles and processes. Areas of emphasis include the characteristics of effective communication and relationships, the nature and history of public relations, media relations, public relations and organizational decision making, and an overview of professional communications options available to the public relations professional. Students learn how to work with reporters representing major media venues to gain editorial coverage for their organizations, as well as learn what works best for messaging to their target audience. Students also learn how to recognize a news angle and set up contracts.

COMM 4145 Writing for Public Relations (4 Credits)
Students examine the purposes, style, format, content, and distribution of written materials used to support public relations programs. Special emphasis is placed on materials prepared for the mass media, such as news releases, fact sheets, media advisories, feature articles, news stories, effective letters and appeals, and internet venues. Discussions, research and writing assignments support the development of improved public relations writing skills.

COMM 4150 Reputation Management (4 Credits)
Online reputation management is the process of tracking, maintaining and defending a consistent message, style, and image across all digital media. It requires constant monitoring and participation in the conversations. The practice of online reputation management has become popular with the advent of widespread digital communications. Reputation management systems use various predefined criteria for processing complex data to report behavior and activity surrounding a reputation - thereby automating the process of determining trustworthiness. This course focuses on how to monitor, manage and measure a brand's presence online and how to effectively position a brand to build credibility.

COMM 4155 Public Relations and Marketing Research and Measurement (4 Credits)
An increased focus on accountability and the "bottom line" make the tracking, measurement and effectiveness of public relations and marketing communication more crucial than ever before. If such effectiveness is not demonstrated fiscally, downsizing, mergers or outsourcing of public relations and marketing professionals may result. This course examines research methods for evaluating advertising, packaging, names, image, and customer satisfaction as related to public relations tactics and strategies. A software package and tool incorporated into this course streamline the measurement process while facilitating the development of measurement tools.

COMM 4200 Instructional Design and Technology (4 Credits)
Designing training that maximizes results is a central concern in organizations. This course identifies the elements of effective training, how learning occurs both formally and informally, how trainers must plan for learning in order to meet organizational objectives, and potential learning strategies for maximizing learning effectiveness. Students are presented with many examples and case studies illustrating how organizations have approached learning objectives. They are given an opportunity to create a strategy that might be applied in their work settings. This course provides participants involved in corporate training with a fundamental understanding of technology uses for skill and professional development.

COMM 4203 Adult Learning Theory and Instructional Strategies (4 Credits)
Adult learning is very different from the learning processes in children. Adults bring a great deal of experience to the learning situation and are intent on the application of their newfound knowledge and skills. The factors that determine how adults learn, as well as appropriate instructional strategies to best reach these learners, are discussed. The course focuses on using adult learning principles to strategically design training materials and facilitate adult learning.

COMM 4206 Effective Evaluation Design (4 Credits)
Assessment and evaluation enables training professionals to determine if the costs of training were worth the benefits, whether the training met organizational goals, and if further training is necessary. Through case studies, practice exercises, and the development of an authentic assessment plan, students learn how to design and administer different types of training evaluations. In addition, students explore how to report results to management and build ongoing support for training programs.

COMM 4209 Strategic Organizational Design (4 Credits)
In many companies it seems that moving the "boxes" on the organizational chart is an annual event. Sadly, most of these changes fail to achieve the desired results. One of the reasons that many restructuring efforts fail is that they do not take an organization design perspective into consideration - they may create new titles and reporting relationships, but fail to address supporting processes and systems that have a significant impact on the structure's success. In this course, we examine how to design an organization to match its strategy, ensuring the alignment of work processes, structure, rewards, people and capabilities, and management processes. We look at different options for structuring organizations, consider the advantages and disadvantages of each, and learn how to implement an organizational design change. By the end of the course, students have a greater appreciation for the complexities and processes of organization design.
COMM 4216 Performance Consulting (4 Credits)
This course develops the competencies necessary to become a skilled internal consultant. Human Resources professionals, training professionals, and any student interested in organizational consultation should enroll. Topics include the role of the performance consultant, the performance consulting process, forming a data collection strategy for needs assessment, contracting and client intervention. Students also learn how to plan for an initial project meeting and differentiate between business, performance, learning, and work environment needs. This course also helps students establish a framework for leadership coaching to help leaders develop clarity and effectively communicate a vision for moving into a desired future. The principles of coaching are explored from the vantage point of leadership and communication theories including transformational leadership, conflict management, and the use of effective dialogue to coordinate management of meaning (how individuals organize and manage meanings and how they coordinate their meanings with one another).

COMM 4218 Intercultural Training (4 Credits)
Intercultural understanding and cultural competence skill development is increasingly important across industries in our global communities. Global workforces are rich with multicultural, multi-ethnic, and multilingual diversity. Inherent in this diversity is a network of cultural traditions, values, and communication styles. Thus, there is a need for intercultural and diversity training in the corporate world, the nonprofit world, and in education and communication. Management experts need to gain a deeper understanding of these diverse values and communication styles in order to work effectively with and train colleagues and clients. This course illustrates intercultural concepts and processes that require training, including culture shock and adaptation, cultural dialectics, expatriate/repatriation, self-reflexivity, etc. Students practice the tools and skills needed to train on these concepts, including conducting needs assessments, defining learning outcomes, and designing and facilitating intercultural training.

COMM 4220 Conflict Theory (4 Credits)
The focus of this course is an overview of communication theory as it relates to conflict management. Students study various theories in order to explain and predict the course of conflict interactions. The theories are used to analyze case studies and select the most appropriate method of conflict management from the methods of negotiation, facilitation, mediation, arbitration, and litigation.

COMM 4221 Mediation Principles and Practices (4 Credits)
This course presents students with an overview of a variety of mediation models, basic principles, procedural steps, and benefits of mediation. Students examine various stages of mediation, including preparation, the mediation session(s), caucusing and settlement. Teaching methods include mini-lectures, discussions, and hands-on experience through role-playing and case studies. Recommended Prerequisite: COMM 4222 Negotiation Principles & Practice is strongly encouraged prior to this course.

COMM 4222 Negotiation Principles and Practice (4 Credits)
Negotiation is at the core of alternative dispute resolution. This course presents the theoretical groundwork for interest-based dispute resolution upon which principled negotiation and other alternative dispute resolution methods are founded. Topics include the definition of the negotiation process, different types of negotiation, and negotiation strategies. Students have an opportunity to practice and compare different negotiation techniques. Teaching methods are experiential in nature and include mini-lectures, discussions, and role-plays. Students also develop strategies for managing challenging negotiations and breakdowns.

COMM 4223 Facilitation Principles and Practice (4 Credits)
Facilitation skills are fundamental to constructive dialogue and collaboration, including successful negotiation and mediation. Specifically, the process-oriented practice of facilitation provides procedural guidance to promote productive and transformative dialogue essential to alternative dispute resolution practices. Topics include exploration of individual conflict styles and strategies; facilitative management techniques; small-group consultant problem solving; facilitation of strategic planning; and practice in listening, framing and reframing skills.

COMM 4224 Conflict and Culture (4 Credits)
Diversity and multiculturalism are ever present in our global community. Inherent in this diversity is a network of cultural traditions, values and communication styles. This course addresses dispute resolution in multicultural settings and broadens students’ understanding of how to assess and resolve conflicts in which ethnicity and other dimensions of cultural diversity are integral components. Only after understanding one’s own biases and cultural perspectives can people work to understand others’ cultural differences.

COMM 4225 Restorative Practices (4 Credits)
Students in this course explore theories and practice of Restorative Practices within alternative dispute resolution models. Restorative practice is a philosophical approach to be used in conjunction with traditional justice and conflict resolution systems. This concept is increasingly used when an offense has occurred, as a method of healing individuals and communities who have been harmed/impacted by that action. With beginnings in indigenous societies, the basic principle is to bring those harmed together with the community in a dialogue aimed at reestablishing personal and relational balance for all involved. Restorative practice’s initial practitioners were often within the traditional justice system, yet this method of conflict resolution has expanded to a wide range of applications including education, non-profit, government, human resources, classroom management, and healthcare.

COMM 4226 Managing Organizational Conflict (4 Credits)
Conflict is a reoccurring part of life in business, government, and nonprofit organizations. It is a product of the human existence and our diversity as an interrelated society. The costs associated with these conflicts are well documented. However, organizations are increasingly recognizing that conflict does not have to carry costly financial and interpersonal burdens and can, in fact, serve as a productive change agent. This course explores the nature and sources of organizational conflict and facilitates development of practical skills to recognize and manage workplace conflict using case studies, interactive lectures, simulations, and field research. Students are introduced to the concept of conflict coaching. This course is well-suited for managers and leaders in any profession who want to increase their capability and enhance their value in organizations.
COMM 4227 Managing the Training Function (4 Credits)
This course is specifically designed to provide professionals in Training and Development with the knowledge necessary to successfully manage the training function in an organization. A variety of processes and software tools are discussed to create a competency-based organization and to prepare students for managing a training department. Capitalizing on the use of strategies to support organizational objectives is also discussed. The focus of this course is on preparing students to be able to identify major business challenges and the competencies needed to support them from the training perspective. The content of this course stresses that the key to developing and realizing relevant, effective training is to set structured and evaluative objectives that tie programs directly to organizational goals.

COMM 4228 E-Communication in the 21st Century (4 Credits)
The boom in online communication options such as e-newsletters, blogs, wikis, podcasts, virtual communities, discussion forums, social networking, and listervs not only cuts publishing and distribution costs but allows businesses to reach a larger consumer base than ever before. This course uses case studies, teamwork, and personal experience to engage students in the effective use, design, and development of e-communication in business and professional situations. This course also covers topics in ethical writing, evaluating and citing sources, plagiarism, fair use, audience analysis, and usability testing.

COMM 4230 Integrating Social Media (4 Credits)
Social media techniques, including blogs, social networking sites, online video, bookmarking, and mobile marketing are accelerating the velocity of communications: content is now created, published, accessed, consumed and shared in real time. Organizations must evaluate social media techniques and determine how best to incorporate them to achieve their marketing communication objectives. This course focuses on integrating social media elements into the enterprise-wide marketing strategy. Students gain first-hand knowledge of various social media techniques through hands-on, practical exercises. Students also develop their own Social Media Plan emphasizing goal setting, tactics, measurements and implementation. Through online research, case studies, and interaction with industry experts, students experience the strategic application of social media marketing communication.

COMM 4231 Internet Marketing Communication (4 Credits)
Internet Marketing enables business to reach a vast audience at a fraction of the cost of traditional marketing media and enables organizations to connect and engage with specific user groups to promote their objectives. The focus of this course is to provide a fundamental understanding of digital marketing communications techniques and how to integrate them into the traditional marketing mix. Internet strategies, tactics, measurement, and implementation are explored. Through discussion, research, Internet searches, and evaluation of case studies and projects, students learn about the essential elements of Internet Marketing and strategic integrated marketing communication.

COMM 4232 Multichannel Marketing Strategy (4 Credits)
One of the key challenges for today's marketers is how to assess, integrate, and measure new digital channels in the traditional marketing mix. Developing an integrated multichannel marketing strategy includes identifying and prioritizing marketing resources across all digital channels, such as sites, blogs, search, display, email and inbound channels like Facebook, Twitter, Linkedin and YouTube to engage current and prospective customers. Students explore various strategic planning models, segment target markets, define customer needs, examine buyer behavior and define the marketing tactics, technology and tools to measure multichannel marketing ROI and success.

COMM 4233 Email Marketing (4 Credits)
Today's consumer expectations for relevant, engaging, and timely messages have made email marketing an essential component of the multichannel marketing mix. The creation and delivery of personalized, targeted messages to subscribers can drive both engagement and ROI. This class examines the development and integration of email marketing (including tools, copy, design, service providers, tracking and measurement) to enhance business relationships, encourage customer loyalty and acquire new customers.
COMM 4324 Web Analytics (4 Credits)
Web analytics is the collection, analysis, and reporting of digital traffic in order to measure and optimize internet marketing programs. The practice of web analytics includes tools for measuring website traffic, conducting business/market research, estimating usage patterns for digital campaigns, and providing insights into visitor behavior. The focus of this class is on developing a performance measurement system for the digital channel, incorporating both on-site and off-site analytics. Key performance indicators are tied to internet marketing goals and tactical campaigns. Students conduct a review of online metrics, compare analytics vendors, and develop a performance tracking system and a management dashboard report.

COMM 4325 Advanced Search Marketing (4 Credits)
Search engines are one of the primary ways that Internet users find the information they are seeking. Search Engine Marketing (SEM) seeks to promote websites by increasing their visibility in search engine results pages (SERPs) through the use of paid placement, contextual advertising and paid inclusion. This class focuses on promoting an organization through search engines, delivering relevant content in the search listings, and encouraging users to click through to a designation site. Both of the two key techniques of SEM are explored: search engine optimization (SEO) to improve results from the natural or organic listings, and paid search marketing or pay-per-click (PPC) to deliver results from the sponsored listings within search engines. Navigational search and universal search practices are also explored.

COMM 4326 Digital Campaign Management (4 Credits)
Development of successful digital marketing campaign depends on clear articulation of objectives tied to overall organizational goals and existing marketing strategies. Success of a digital campaign is also rooted within the human, technical and business processes through which it comes to life. Students explore a variety of digital techniques including web marketing, search engine marketing, interactive advertising, affiliate marketing, social media, email marketing, mobile marketing and more. Focus is on planning steps, management and measurement against key performance indicators.

COMM 4327 Writing for the Web and Content Management (4 Credits)
This course presents content creation, curation, and overall content strategy as the foundation of effective digital communication and marketing. This course explores the principle of writing effective copy for mobile, websites, hypertexting, blogs, tweets, email, SEO keywords/tags, image captions and more.

COMM 4701 Topics in Applied Comm (4 Credits)
The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of communication, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects, such as ethics, human communication theory, or interpersonal communication. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

COMM 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topics, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project synthesizes and applies core concepts acquired from the program. The student selects an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. View the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements.

COMM 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. The seminar is dependent upon collegial discussion of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. The course structure, facilitated by the faculty member, guides the students through the process of independent research and writing of a capstone paper; the instructor provides intensive feedback on the capstone process and papers. Students are responsible for generating the course content through ongoing discussion of and peer feedback on the capstone process and individual papers, as well as the analysis and contextualization of focused students papers within the wider degree field of study. Students professionally and academically communicate their findings through written work and oral presentations. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPS of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.
Certificate in Security Management with a concentration in Emergency Planning and Response

The certificate in Emergency Planning and Response concentration is offered online at the University of Denver to meet the needs of busy adults and prepares current or aspiring emergency response professionals to effectively strategize and implement emergency plans. With an emergency preparedness certificate, graduates will learn to compare and contrast plans and responses to various events and disasters, as well as analyze leadership competence as plans are executed. As communication is key to effective emergency preparedness, graduate certificate students will take away strategies for effective communication, as well as mitigation, preparedness, recovery, and emergency response.

Certificate students will learn about the strategized plan, the response, and the recovery process of emergency management. Led by professional practitioners who work in the emergency planning and response field, emergency certificate classes focus on the integrated system at every stage of a disaster, examining the roles of emergency response teams, government agencies, businesses, and private citizens. Credits earned through this graduate certificate may apply toward a master's degree in Security Management.

This certificate prepares students to

- Compare and contrast plans and responses to various types of events and disasters
- Analyze leadership competence and necessary leadership skills
• Develop and analyze strategies to implement team solutions
• Present a model of effective communication within an emergency response and planning structure
• Plan and report on strategies for mitigation, preparedness, response, and recovery
• Measure and evaluate the effectiveness of an emergency response and planning strategy

Security Management Outcomes
This program prepares students to:

• Lead the strategic, planning, and management efforts of private and public sector organizations
• Evaluate and analyze emerging security issues, regulations, and threats
• Analyze financial implications of security programs and options
• Protect vital assets such as people, physical structures and equipment, intellectual property, information and maintain post-incident continuity of operations

Certificate in Security Management with a concentration in Information Security

The certificate in Information Security concentration is offered entirely online to meet the needs of busy adults seeking to expand their current skillset in information security. An Information Security certificate prepares students to analyze security needs, provide effective solutions, and fill a critical niche in organizations. The certificate in Security Management with a concentration in Information Security is offered online or on campus in the evenings, or in a combination of both to meet the needs of busy adults seeking to expand their current skillset in information security. Certificate students will examine practical issues such as setting up a secure network, securing servers, and handling information security incidents. The practical labs give Information Security graduate certificate students the hands-on experience they need using industry-current tools geared for security.

Certificate students will be prepared for real-world security challenges with a rigorous education from professional practitioners who work in information security. Certificate students will learn to design secure applications, implement access controls, establish secure operations, and control physical security, all while they use encryption, secure networks, and maintain business continuity. Become an indispensable expert in determining Return on Security Investment (ROSI) and develop security policies and procedures that protect your organization from internal and external threats. Credits earned through this graduate certificate may apply toward a master's degree in Security Management.

Security Management Outcomes
This program prepares students to

• Lead the strategic, planning, and management efforts of private and public sector organizations
• Evaluate and analyze emerging security issues, regulations, and threats
• Analyze financial implications of security programs and options
• Protect vital assets such as people, physical structures and equipment, intellectual property, information and maintain post-incident continuity of operations

Certificate in Security Management with a concentration in Organizational Security

The certificate in Organizational Security concentration is offered online at the University of Denver to meet the needs of busy adults. Current and aspiring security management professionals will benefit from the certificate in Security Management with a concentration in Organizational Security offered by University College, as students learn the key strategic, planning, and management skills needed to succeed in security management. The certificate program is designed for busy adults seeking to advance their skills in organizational-level security.

The certificate program is ideal for security professionals who currently work in the field, or aspire to, as they will examine emerging security issues, regulations, and threats in classes led by instructors who work in the field they teach, offering security management students valuable insight to the security. Certificate graduates will learn to implement strategies to protect vital assets such as people, physical structures and equipment, intellectual property, and information, as well as analyze financial implications of security programs and options. Credits earned through this graduate certificate may apply toward a master's degree in Security Management.

This certificate prepares students to

• Lead the strategic, planning, and management efforts of private and public sector organizations
• Evaluate and analyze emerging security issues, regulations, and threats
• Analyze financial implications of security programs and options
• Protect vital assets such as people, physical structures and equipment, intellectual property, information and maintain post-incident continuity of operations
Security Management Outcomes
This program prepares students to

- Evaluate and analyze emerging security issues, regulations, and threats
- Analyze financial implications of security programs and options
- Protect vital assets such as people, physical structures and equipment, intellectual property, information and maintain post-incident continuity of operations

Master of Applied Science in Security Management with a concentration in Emergency Planning and Response
The Emergency Planning and Response master's degree concentration is offered online at the University of Denver to meet the needs of busy adults and prepares current or aspiring emergency response professionals to effectively strategize and implement emergency plans. Graduates will learn to compare and contrast plans and responses to various events and disasters, as well as analyze leadership competence while plans are executed. As communication is key to effective emergency preparedness, degree seekers will take away strategies for effective communication, as well as mitigation, preparedness, response, and recovery.

Whether an emergency is natural or man-made, emergency preparedness is vital to ensure the least possible impact on the welfare of those affected. The Emergency Planning and Response master's degree concentration covers the strategic plan, the response, and the recovery process. Led by professional practitioners who work in the emergency planning and response field, classes focus on the integrated system at every stage of a disaster, examining the roles of emergency response teams, government agencies, businesses, and private citizens. Customize your Security Management master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to

- Compare and contrast plans and responses to various types of events and disasters
- Analyze leadership competence and necessary leadership skills
- Develop and analyze strategies to implement team solutions
- Present a model of effective communication within an emergency response and planning structure
- Plan and report on strategies for mitigation, preparedness, response, and recovery
- Measure and evaluate the effectiveness of an emergency response and planning strategy

MASTER’S DEGREE ADMISSION

Admission Criteria

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process

Master's degree applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/masters.cfm).

- Application: Applicants must complete the application online (http://myweb.du.edu).
- Application Fee: A $75 non-refundable application fee is required for an application to be processed.
• One Official Transcript from each Post-Secondary Institution: Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.

• Two Letters of Recommendation: Two confidential letters of recommendation are required.

• Statement of Purpose: A personal statement (two pages double spaced) is required. The statement should include information on how the degree will enhance career plans and meet educational goals. Sharing personal experiences, abilities, achievements, and goals is encouraged. This document has considerable influence in the decision to admit applicants with attention given to written communication skills.

• Résumé/Curriculum Vitae (CV).

• Degree Plan: The degree plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.

• Language Proficiency: Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.

• Proof of Permanent Residency: Permanent Residents must provide a copy of their Registration Alien Card (green card).

• Admission Interview: An interview may be required at the program director’s request.

• International Applicants: Additional requirements are listed below for international applicants.

CERTIFICATE ADMISSION

• Proof of Permanent Residency: Permanent Residents must provide a copy of their Registration Alien Card (green card).

• Admission Interview: An interview may be required at the program director’s request.

• International Applicants: Additional requirements are listed below for international applicants.

INTERNATIONAL ADMISSION

International applicants must comply with all requirements set forth for domestic applicants and supplement their application with additional documentation. International applicant information, including admission deadlines and the International Applicant Checklist, is available on the University College website (http://universitycollege.du.edu/answers/admission/international.cfm).

Admitted international applicants whose native language is not English are required to attend University College’s International Preparation Week (http://universitycollege.du.edu/answers/admission/international.cfm) prior to attending courses at University College.

University College will consider graduate applicants who have earned three-year baccalaureate degrees from 15-year education systems. The school from which the applicant has earned the degree must be a formally recognized or regionally accredited institution of higher learning, as determined by
the University Of Denver Office Of International Student Admission. Admission policy and procedures for applicants holding three-year baccalaureate 
degrees is the same as for other international applicants with one exception: applicants with a three-year degree are not eligible for English Conditional 
Admission. Priority consideration will be given to those with a minimum of three year’s work experience.

Additional Admission Requirements for International Applicants

- **English Proficiency:** All internationally educated applicants whose native language is not English are required to submit proof of English Language 
Proficiency regardless of citizenship and/or U.S. residency.

1. **TOEFL:** A minimum score of 550 (paper based), 213 (computer based), or 80 (Internet based) is required for admission consideration. Generally, 
applicants should achieve at least 20 in all TOEFL subscores on the internet-based exam. TOEFL score reports older than two years from the date 
of application are not acceptable for admission consideration.

2. **Academic IELTS:** A score of 6.5 or higher is required to be considered for admission. Each individual band score must be 6.0 or higher. IELTS 
Score reports older than two years from the date of application are not acceptable for admission consideration.

3. **Possible Exemptions:** International applicants may be exempt from the TOEFL/Academic IELTS requirement if by the time of matriculation they 
have earned a post-secondary degree from a formally-recognized/accredited university where the entire language of instruction and examination is 
in English.

4. **English Conditional Acceptance (ECA):** Master's degree applicants who do not meet the required level of English proficiency may be considered 
for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, ECA requires an evaluation 
by the University of Denver’s English Language Center (ELC) and successful completion of intensive ELC English courses including the Graduate 
Preparation Program. Academic classes may not be taken while students are enrolled at the English Language Center. Graduate certificate 
students may not be admitted through ECA. As an alternative to the English Language Center, an applicant may become fully admitted by 
submitting sufficient TOEFL/Academic IELTS scores.

- **Official Transcripts and Translations:** International applicants should submit official transcripts printed in the official language of instruction of their 
institution. Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English.

- **Photocopy of Diploma/Degree Certification and Appropriate Translations:** Applicants who have earned a degree outside the U.S. must submit 
proof of graduation through a degree certificate or diploma along with all appropriate official translations.

- **A Photocopy of Current Passport:** Applicants must provide a copy of the photograph and legal name page of their passport. This is required 
before an I-20 can be issued by the University of Denver.

- **The Supplemental Information Form (SEVIS Supplement):** Applicants who are not U.S. Citizens or permanent residents must complete the 
SEVIS form.

- **Financial Verification Form:** Applicants seeking an I-20 student visa must submit financial verification documents.

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

Capstone Project (or successful completion of Capstone Seminar)

Courses

SMGT 4050 Security Concepts Overview (4 Credits)
This course provides an introduction to the main principles and issues in business and organizational security management. Topics include protection of, and assessing the loss potential of, personnel, facilities, and information, and continuity of operations. The course makes extensive use of case studies and analyses, field exercises and research.

SMGT 4100 Business Function of Security (4 Credits)
This course covers the role of security in an organization or business context. Topics include budgets, contracts, financial analyses, how the security functions support the overall mission of the organization, and the relationship of security to other essential business functions. Students will also learn how to defend the costs of the security systems and security operations to high-level executives.

SMGT 4150 Risk Management (4 Credits)
Students will learn to identify and manage risks, crises and disasters, and to prepare emergency and contingency plans. Students will learn how to prevent losses, mitigate losses and accelerate recovery from security events or natural disasters. This will be accomplished through case studies and practical exercises.

SMGT 4200 Integrated Security Systems (4 Credits)
This course covers the integration of physical, personnel, and information security, including the use of information technology to enhance physical and personnel security. Students will learn the essential elements of system design, development of procedures, testing and maintenance of integrated security systems. This will be accomplished through case studies and practical exercises.

SMGT 4210 Critical Incident Management (4 Credits)
All communities are vulnerable to a variety of hazards. Emergency management provides a structure for anticipating and dealing with emergency incidents. Emergency management involves participants at all governmental levels and in the private sector. Activities are geared according to phases before, during, and after emergency events. The effectiveness of emergency management rests on a network of relationships among partners in the system. The goal of this course is to introduce students to the fundamentals of emergency management as an integrated system, surveying how the resources and capabilities of all functions at all levels can be networked together in all phases for all hazards. Included is an in-depth look at the four phases of comprehensive emergency management: mitigation, preparedness, response, and recovery.

SMGT 4220 Hazardous and Radiological Material Preparedness (4 Credits)
Hazardous materials plan development is a difficult and challenging job that requires a high level of skill and knowledge from planners charged with these responsibilities. Due to local funding shortages and frequent staff turnover at the state and local levels in the planning arena, and because of the complexity of hazardous materials planning requirements, there continues to exist a significant performance problem and training requirement for hazardous materials planning. This course provides students the assistance and confidence needed to effectively plan for and respond to hazardous materials incidents, through sound emergency planning and with the highest level of safety for response personnel within the student’s jurisdiction. This course also addresses the fundamental principles of radiation as well as the nuclear threat.

SMGT 4230 Mitigation for Emergency Managers (4 Credits)
As the costs of disasters continue to rise, governments and ordinary citizens must find ways to reduce hazard risks to our communities and ourselves. Efforts made to reduce hazard risks are easily made compatible with other community goals; safer communities are more attractive to employers as well as residents. As communities plan for new development and improvements to existing infrastructure, mitigation can and should be an important component of the planning effort.

SMGT 4250 IS: Threats in Security (4 Credits)
This course explores emerging protection concepts for the information age. Students will identify threats to security systems, discover vulnerabilities, and suggest and design protection systems. Topics include management of information security and data processing facilities, data theft, misuses of information technologies, computer viruses and hacking, and network protection. The course also covers information technology laws, privacy issues, and information security planning.
SMGT 4300 Security Administration (4 Credits)
Students apply principles of management to security administration. Topics include personnel management, security planning, organizational leadership and communication, and recruitment and training.

SMGT 4350 Business Assets Protection (4 Credits)
Students examine the application of security knowledge and techniques to the protection of business assets. The security planning process is examined by the study of risk analysis, security surveys, and financial planning and decision making for development of security programs and countermeasures.

SMGT 4400 Emergency Planning (4 Credits)
Students discuss the role of the security manager in the identification, analysis, and response to a variety of human and natural crises. They examine threats resulting from riots, demonstrations, product tampering, work stoppage activities, terrorism, and natural disasters.

SMGT 4450 Legal & Ethical Issues in Security Management (4 Credits)
This course is an overview of important legal and ethical issues with which the business and organizational security management professional must deal. Students examine such issues as personnel law and obligations; negotiations; contract management; constitutional rights of individuals; legal liability of security professionals and organizations; legal compliance; and ethical standards.

SMGT 4500 Human Factors in Security (4 Credits)
This course focuses on historical and contemporary perspectives of human behavior. Theories of behavior in the context of threat-producing activities are discussed. Contemporary issues such as substance abuse, violence, ideologies, and similar themes are examined.

SMGT 4701 Topics in Security Management (1-6 Credits)
The content of this course varies each time it is offered. The topics may include time-sensitive issues from the film industry, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

SMGT 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topics, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project synthesizes and applies core concepts acquired from the program. The student selects an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. View the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. 

SMGT 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. The seminar is dependent upon collegial discussion of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. The course structure, facilitated by the faculty member, guides the students through the process of independent research and writing of a capstone paper; the instructor provides intensive feedback on the capstone process and papers. Students are responsible for generating the course content through ongoing discussion of and peer feedback on the capstone process and individual papers, as well as the analysis and contextualization of focused students papers within the wider degree field of study. Students professionally and academically communicate their findings through written work and oral presentations. Prerequisites: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

SMGT 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better, and a B or better in MALS 4020. A final grade of B or better must be earned in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.
SMGT 4910 Research Practices and Applications (4 Credits)
This course develops competency in principles of research and measurement for use in the professional setting. As an initial course in the program of study, students learn research methods to apply to program and systems design and evaluation to achieve successful measurement of outcomes and goals. Students become critical consumers of pertinent literature to provide background and support for the choice and application of proper qualitative and quantitative research methods and data analysis for professional application. Critical thinking through comparing and contrasting cause and effect is used to build logic models. Research, design, and evaluation processes that address issues of implementation, feasibility, and sustainability are emphasized. At the conclusion of this course, students are prepared to apply and clearly communicate the practice of scientific research principles in the professional environment to ensure that the question being asked can be answered through rigorous research and the design and formative assessment of the program or system. Completion of Institutional Review Board (IRB) training via CITI Program is required as a basis for discussion of research ethics and IRB procedures. Competencies gained in this course, including practices of inquiry, self-analysis, and evaluation, are applied and integrated throughout the course of study and demonstrated in the culminating capstone work of the master's degree.

SMGT 4991 Independent Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent study is offered only on a for-credit basis.

SMGT 4992 Directed Study (1-5 Credits)
This is an advanced course for students wishing to pursue a directed course of study, which is based on an existing course. However, the existing course is not offered in a reasonable time frame to accommodate the student. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the directed study. Directed study is offered only on a for-credit basis.

Certificate in Strategic Human Resources Management with a concentration in Global Human Resources

The graduate certificate in Global Human Resources concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults and prepares graduates to understand the current domestic and international economies as they relate to professions in global human resources. Certificate students will delve into discussions that go beyond the local, regional, and national level and instead explore the impact of world issues, laws, trends, and international business topics as they relate to effective HR strategy.

Certificate students are effectively prepared to face the advanced challenges of marketing, technology, management, and finance at the global level from a strategic, competent perspective with each election, world event, software implementation, and restructuring. HR professionals with several years of experience who are looking to challenge themselves and become more marketable by learning about the international marketplace will benefit from this graduate certificate. HR at the global level is emerging in importance, and certificate students will learn about vital world issues, laws and trends, and HR strategy. As the world becomes smaller via 21st century practices, corporate objectives and communication avenues, understanding all aspects of the "globalization" of functions becomes essential. Credits earned through this graduate certificate may apply toward a master's degree in Strategic Human Resource Management.

This certificate prepares students to:

• Contrast leadership models, skills, and needs
• Demonstrate knowledge of the current global economy as it relates to the HR profession and its functions
• Develop a greater level of personal and professional cultural competence
• Plan and develop processes for global human resource functioning
• Understand, contrast, and utilize best practices within domestic and global HR markets
• Apply HR solutions to a global market
• Explore the impact of world issues, laws, trends, and international business topics as they relate to effective HR strategy

Strategic Human Resource Management

This program prepares students to:

• Exposure to the most up-to-date research, practices, and key strategic developments in the field of human resources
• Expanded understanding of the global workplace and its worldwide challenges and implications
• Enhanced capacity to integrate information and technology with HR operations and management
• Understand and model principals of ethical and legal behavior as HR professionals operating across organizational, professional, and social settings
• Development of critical strategic management interests and skills
• Development of requisite knowledge for managing and developing Human Resource functions/programs within national and global paradigms
• Enhanced capacity to understand and utilize business and financial knowledge within the HR environment and the advantages of doing so
• Develop knowledge and skills within an HR concentration which stimulates interest and enhances professional direction and future career objectives

Certificate in Strategic Human Resources Management with a concentration in Human Resource Management and Development

The graduate certificate in Human Resource Management and Development concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults and will help HR professionals expand their skill set and provide transferrable knowledge they can apply today. Certificate students learn to execute business strategy through the development of talent management programs, in addition to how to evaluate, diagnose, and solve organizational change and issues in HR.

Certificate students are led by professional practitioners who work in human resource management and classes impart the knowledge, strategies, theories, tools, and techniques necessary to effectively manage a workforce. HR professionals must be aware of key 21st century and world issues affecting human resource management and learning organizations. They must understand current research and applications affecting choices in consulting and they must incorporate the powerful technological tools and methods, which are utilized to track and measure goals, outcomes, and performance.

The Strategic Human Resource Management program offers innovative, career-relevant graduate certificate courses from compensation to information systems, decision-making to ethics as they each relate to HR. Certificate students can expect a challenging program of study, as they learn to implement systems theory as a model for business success, and measure the impact of learning and performance strategies. Credits earned through this graduate certificate may apply toward a master's degree in Strategic Human Resource Management.

This graduate certificate prepares students to:

• Incorporate the process of executing business strategy through the development of talent management programs, which incorporate metrics for performance and up-to-date tools tied to achievement
• Understand systems theory as a model for business success, and measure the impact of learning and performance strategies
• Understand and choose current communication and consulting tools designed to meet organizational objectives
• Evaluate, diagnose, and treat organizational change and organizational issues
• Incorporate technology utilization into various HR functions including integration of systems, deployment of HR information, or programs and management activities

Strategic Human Resource Management

This program prepares students to:

• Exposure to the most up-to-date research, practices, and key strategic developments in the field of human resources
• Expanded understanding of the global workplace and its worldwide challenges and implications
• Enhanced capacity to integrate information and technology with HR operations and management
• Understand and model principals of ethical and legal behavior as HR professionals operating across organizational, professional, and social settings
• Development of critical strategic management interests and skills
• Development of requisite knowledge for managing and developing Human Resource functions/programs within national and global paradigms
• Enhanced capacity to understand and utilize business and financial knowledge within the HR environment and the advantages of doing so
• Develop knowledge and skills within an HR concentration which stimulates interest and enhances professional direction and future career objectives

Master of Professional Studies in Strategic Human Resources Management with a concentration in Global Human Resources

The Global Human Resources master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults and prepares graduates to understand the current domestic and international economies as they relate to the global human resources profession. The Global Human Resources master's degree concentration goes beyond the local, regional, and national level and instead explores the impact of world issues, laws, trends, and international business topics as they relate to effective HR strategy.

The master's degree effectively prepares graduates to face the advanced challenges of marketing, technology, management, and finance at the global level from a strategic, competent perspective with each election, world event, software implementation, and restructuring. Practical instruction is led by professional practitioners who work in the fields they teach and work in organizations that deal with HR on a global level. This concentration is ideal for HR professionals with several years of experience who are looking to challenge themselves and become more marketable by learning about the
international marketplace. For anyone interested in applying to a global corporation, or is currently playing a key role in an organization’s transition into going global or being merged or acquired by a global organization, this concentration will benefit those interested in learning world issues, laws and trends, and HR strategy at the global level.

As the world becomes smaller via 21st century practices, corporate objectives and communication avenues, understanding all aspects of the "globalization" of functions becomes essential. Customize your Strategic Human Resource Management master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

- Contrast leadership models, skills, and needs
- Demonstrate knowledge of the current global economy as it relates to the HR profession and its functions
- Develop a greater level of personal and professional cultural competence
- Plan and develop processes for global human resource functioning
- Understand, contrast, and utilize best practices within domestic and global HR markets
- Apply HR solutions to a global market
- Explore the impact of world issues, laws, trends, and international business topics as they relate to effective HR strategy

Strategic Human Resource Management

This program prepares students to:

- Exposure to the most up-to-date research, practices, and key strategic developments in the field of human resources
- Expanded understanding of the global workplace and its worldwide challenges and implications
- Enhanced capacity to integrate information and technology with HR operations and management
- Understand and model principals of ethical and legal behavior as HR professionals operating across organizational, professional, and social settings
- Development of critical strategic management interests and skills
- Development of requisite knowledge for managing and developing Human Resource functions/programs within national and global paradigms
- Enhanced capacity to understand and utilize business and financial knowledge within the HR environment and the advantages of doing so
- Develop knowledge and skills within an HR concentration which stimulates interest and enhances professional direction and future career objectives

Master of Professional Studies in Strategic Human Resources Management with a concentration in Human Resource Management and Development

The Human Resource Management and Development master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults and prepares students to integrate the HR function with strategic organizational goals by executing business strategy through the development of talent management programs. Students learn how to evaluate, diagnose, and solve organizational change and issues, as well as meet organizational objectives through use of current communication and consulting tools.

Led by professional practitioners who work in human resource management, classes are geared toward HR professionals seeking the knowledge, strategies, theories, tools, and techniques necessary to effectively manage a workforce. HR professionals must be aware of key 21st century and world issues affecting organizations and human resource management. Degree#seekers will come to understand current research and applications making an impact on choices in consulting as they discover how to incorporate powerful technological tools and methods, which are utilized to track and measure goals, outcomes, and performance.

The Strategic Human Resource Management master's degree program offers innovative, career#relevant courses from ethics to information systems, compensation to decision making, in which students can expect a challenging program of study. Learn to implement systems theory as a model for business success, and measure the impact of learning and performance strategies by becoming a master of human resource management and development. Customize your Strategic Human Resource Management master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to:

- Incorporate the process of executing business strategy through the development of talent management programs, which incorporate metrics for performance and up#to#date tools tied to achievement
- Understand systems theory as a model for business success, and measure the impact of learning and performance strategies
- Understand and choose current communication and consulting tools designed to meet organizational objectives
- Evaluate, diagnose, and treat organizational change and organizational issues
- Incorporate technology utilization into various HR functions including integration of systems, deployment of HR information, or programs and management activities
Strategic Human Resource Management

This program prepares students to:

- Exposure to the most up-to-date research, practices, and key strategic developments in the field of human resources
- Expanded understanding of the global workplace and its worldwide challenges and implications
- Enhanced capacity to integrate information and technology with HR operations and management
- Understand and model principals of ethical and legal behavior as HR professionals operating across organizational, professional, and social settings
- Development of critical strategic management interests and skills
- Development of requisite knowledge for managing and developing Human Resource functions/programs within national and global paradigms
- Enhanced capacity to understand and utilize business and financial knowledge within the HR environment and the advantages of doing so
- Develop knowledge and skills within an HR concentration which stimulates interest and enhances professional direction and future career objectives

MASTER'S DEGREE ADMISSION

Admission Criteria

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.

Admission Process

Master's degree applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/masters.cfm).

- Application: Applicants must complete the application online (http://myweb.du.edu).
- Application Fee: A $75 non-refundable application fee is required for an application to be processed.
- One Official Transcript from each Post-Secondary Institution: Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
- Two Letters of Recommendation: Two confidential letters of recommendation are required.
- Statement of Purpose: A personal statement (two pages double spaced) is required. The statement should include information on how the degree will enhance career plans and meet educational goals. Sharing personal experiences, abilities, achievements, and goals is encouraged. This document has considerable influence in the decision to admit applicants with attention given to written communication skills.
- Résumé/Curriculum Vitae (CV).
- Degree Plan: The degree plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
- Language Proficiency: Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.
- Proof of Permanent Residency: Permanent Residents must provide a copy of their Registration Alien Card (green card).
- Admission Interview: An interview may be required at the program director’s request.
- International Applicants: Additional requirements are listed below for international applicants.

CERTIFICATE ADMISSION

Admission Criteria

A regionally accredited baccalaureate degree is required for admission. Applicants must have a minimum grade point average (GPA) of 3.0 on a 4.0 scale (or equivalent) in their undergraduate work from a regionally accredited degree-granting institution for full admission. Applicants whom University College believes may successfully engage in graduate work, but who have not met the previously stated GPA requirement, may be admitted to a degree program on a provisional basis. The GMAT and GRE are NOT required.
Admission Process
Certificate applications are reviewed for admission on a quarterly basis. Applications and all supplemental materials must be submitted online; with the exception of transcripts, which must be received by the stated application deadline (requests for accommodation may be granted). Applicants will be notified of a decision via email and standard mail approximately two weeks following the application deadline. Detailed application information and application deadlines are located on the University College website (http://universitycollege.du.edu/answers/admission/certificate.cfm).

- **Application**: Applicants must complete the application online (http://myweb.du.edu).
- **Application Fee**: A $50 non-refundable application fee is required for an application to be processed.
- **One Official Transcript from each Post-Secondary Institution**: Applicants are required to submit an official transcript from each post-secondary institution they have attended, or are presently attending, where 2 quarter hours (or one semester hour) or more were completed. This includes transcripts for credit earned as transfer work and study abroad.
- **Certificate Plan**: The certificate plan, detailing courses for the academic program, is required to complete the admission process and can be completed through the University College online Degree Builder (http://universitycollege.du.edu/DegreeBuilder/Student/ChooseDegree.aspx) tool.
- **Language Proficiency**: Applicants whose native language is not English or who have been educated in countries where English is not the native language, regardless of citizenship, must provide official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS). The TOEFL and IELTS scores are valid for two years from the test date. Applicants may be exempt from English proficiency test requirements if they have earned a post-secondary degree from a recognized/accredited university where the language of instruction and examination is English.
- **Proof of Permanent Residency**: Permanent Residents must provide a copy of their Registration Alien Card (green card).
- **Admission Interview**: An interview may be required at the program director’s request.
- **International Applicants**: Additional requirements are listed below for international applicants.

INTERNATIONAL ADMISSION
International applicants must comply with all requirements set forth for domestic applicants and supplement their application with additional documentation. International applicant information, including admission deadlines and the International Applicant Checklist, is available on the University College website (http://universitycollege.du.edu/answers/admission/international.cfm).

Admitted international applicants whose native language is not English are required to attend University College’s International Preparation Week (http://universitycollege.du.edu/answers/admission/international.cfm) prior to attending courses at University College.

University College will consider graduate applicants who have earned three-year baccalaureate degrees from 15-year education systems. The school from which the applicant has earned the degree must be a formally recognized or regionally accredited institution of higher learning, as determined by the University Of Denver Office Of International Student Admission. Admission policy and procedures for applicants holding three-year baccalaureate degrees is the same as for other international applicants with one exception: applicants with a three-year degree are not eligible for English Conditional Admission. Priority consideration will be given to those with a minimum of three year’s work experience.

**Additional Admission Requirements for International Applicants**

- **English Proficiency**: All internationally educated applicants whose native language is not English are required to submit proof of English Language Proficiency regardless of citizenship and/or U.S. residency.
  1. **TOEFL**: A minimum score of 550 (paper based), 213 (computer based), or 80 (Internet based) is required for admission consideration. Generally, applicants should achieve at least 20 in all TOEFL subscores on the internet-based exam. TOEFL score reports older than two years from the date of application are not acceptable for admission consideration.
  2. **Academic IELTS**: A score of 6.5 or higher is required to be considered for admission. Each individual band score must be 6.0 or higher. IELTS score reports older than two years from the date of application are not acceptable for admission consideration.
  3. **Possible Exemptions**: International applicants may be exempt from the TOEFL/Academic IELTS requirement if by the time of matriculation they have earned a post-secondary degree from a formally-recognized/accredited university where the entire language of instruction and examination is in English.
  4. **English Conditional (Admission?) (ECA)**: Master's degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, ECA requires an evaluation by the University of Denver's English Language Center (ELC) and successful completion of intensive ELC English courses including the Graduate Preparation Program. Academic classes may not be taken while students are enrolled at the English Language Center. Graduate certificate students may not be admitted through ECA. As an alternative to the English Language Center, an applicant may become fully admitted by submitting sufficient TOEFL/Academic IELTS scores.
- **Official Transcripts and Translations**: International applicants should submit official transcripts printed in the official language of instruction of their institution. Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English.
- **Photocopy of Diploma/Degree Certification and Appropriate Translations**: Applicants who have earned a degree outside the U.S. must submit proof of graduation through a degree certificate or diploma along with all appropriate official translations.
• A Photocopy of Current Passport: Applicants must provide a copy of the photograph and legal name page of their passport. This is required before an I-20 can be issued by the University of Denver.

• The Supplemental Information Form (SEVIS Supplement): Applicants who are not U.S. Citizens or permanent residents must complete the SEVIS form.

• Financial Verification Form: Applicants seeking an I-20 student visa must submit financial verification documents.

Students may choose from the elective options above, or they may work with their advisor to choose electives from the Related or Flexible options for their elective courses.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Related Option. The Related Option allows students to choose from a predetermined group of subject areas from other concentrations that have been identified as most likely relating to their concentration area.

Students will work with their personal academic advisor to determine the best set of courses to choose from the Flexible Option. The Flexible Option allows students to choose from a pool of courses that have been designated for this option. Courses may be from different concentration areas and students will need to obtain approval from the academic director to pursue this option.

Capstone Project (or successful completion of Capstone Seminar)
Maintaing Contact Information

E-Mail

Students are provided a firstname.lastname@du.edu email address that automatically forwards to the designated personal off-campus email address. This address shall be an official means of communication with all students, faculty and staff. Students are responsible for all information sent to them at this address. It is important to maintain your preferred off-campus address and email account. Students may change the preferred off-campus email address at any time by logging into PioneerWeb (https://PioneerWeb.du.edu) and selecting the myWeb link on the Student tab. Select Personal Information and then Update Email Addresses. Update your personal email address to the off-campus address and be sure to check the box designating the off-campus address as the preferred address.

The UTS Computer HelpDesk can assist with logging into PioneerWeb (https://PioneerWeb.du.edu) and answer questions on a variety of other technical topics. To contact the HelpDesk call 303-871-4700, send email to support@du.edu or access support through the UTS website.

The University sends much of its correspondence solely through email. This includes policy announcements, emergency notices, meeting and event notifications, course syllabi and requirements, and correspondence between faculty, staff, and students. Such correspondence is mailed only to the official university email address. Faculty, staff, and students are expected to check their email on a frequent and consistent basis in order to stay current with University-related communications. Faculty, staff, and students have the responsibility to recognize that certain communications may be time-critical. This policy applies to all members of the University of Denver community; faculty, staff, and students.

The @du.edu Computer Account

The official email address will appear in the University's Banner administrative system within 24 hours after a person is officially entered into the Banner administrative system and will also appear in the University's online directory. Students may request confidentiality.

Procedures for Approval for Access to Electronic Communications of Others

Individuals needing to access the electronic communications of others, to use information gained from such access, or to disclose information from such access must obtain approval in advance from the Vice Chancellor of University Technology Services. Requests must be in writing and minimally include the following:

- name and title of the person whose communications will be accessed
- name and title of the person who will access the communications
- purpose of access
- what forms of communication will be accessed (e.g., voice mail, email, fax)
- required duration of access
- what will be done with accessed messages, including to whom they will be disclosed

Address Information

Enrolled students must provide the University with a valid mailing address and are responsible for communications sent to that address. If correct address information is not maintained, students may not receive grades, bills or graduation mailings. The University is not responsible if payment of tuition and fees is not made because a student did not receive a billing notice. Students may be assessed a late fee if payment is not received by the due date printed on the bill. Additionally, the University must know how to contact students in case of an emergency.

Students unable to make address changes online can pursue the following options:

- Visit the registrar’s office on the garden level of University Hall or download the Address/Phone/ Email Change Request form from http://www.du.edu/registrar.
- Send an email to registrar@du.edu; include student number and indicate which address or addresses are to be changed. (See following address types.)
- Call 303-871--4095. (For security reasons, students are asked to give identifying information.)
- Send a fax to 303-871--4300. (Include student number, month and date of birth, and indicate which address types are to be changed.)

Types of Addresses

- Mailing: This is the default address used by DU. All constituents should have a correct mailing address.
- Billing: Used to send the tuition bill to a different address from the mailing address.
- Business: Your place of work. For DU employees, this will be your office address.
- Grades: Used to send grades to to a different address than the mailing address.
• **Home**: Used to distinguish a permanent (family) address for students from out of the area, or a home address for alumni. International students and employees (visa classes F, M and J) must maintain a valid foreign address in this field.

• **On--Campus**: Used only for University housing addresses. It is populated automatically each term.

• **Parents**: DU can maintain up to two addresses for parents.

• **Seasonal**: Used to override your permanent mailing address for certain times each year—e.g., a summer house.

• **Temporary**: Used to override your permanent mailing address for a single specified period.

**Telephone Numbers**

Students can enter several different types of telephone numbers in their student account: permanent home, business, cell, fax and local (if different from permanent home). Indicate the type and whether the number should be added or deleted on the front of the form. If checked as “unlisted,” the telephone number will only be released to University officials.
Critical Notification System

Registration Instructions

The University can send voice or text messages to students in the event of an urgent situation. The system will call every contact number provided and leave a voicemail if the call is unanswered. Text messages are optional and sent to only one number. The owner assumes any costs associated with receiving text messages.

You may designate one number to receive text messages. If you have elected to receive a text message, you will receive a text message from the CINS vendor to confirm that you wish to opt in to receive future emergency text messages. You will be responsible for any costs associated with your text messages. Remember this is how we reach you in an emergency.

Students must provide valid contact information in order to receive a text message or voice mail alert. To update contact information, click the Notification Preferences link under Personal Information, which is found under the myWeb tab of PioneerWeb (https://PioneerWeb.du.edu).

Emergency Contacts

You may provide the University with contact information for individuals you wish us to contact in the event of an emergency. You may update emergency contact information in Personal Information, which is found under the myWeb tab of PioneerWeb (https://PioneerWeb.du.edu).

Academic Year

Summer Session

Summer session is an avenue for graduate students to accelerate their programs or complete necessary coursework. Elective and required courses are offered in a variety of time frames. Travel and other unique courses, including short, intensive workshops, are part of the summer program.

Visiting students, professionals and individuals from the community are admitted under an open enrollment policy.

Note: University College considers summer to be part of the academic year. The Summer Quarter is ten weeks long.

Interterm

Interterm is the time period prior to each academic quarter, during which short, on-campus and travel courses are offered. Hours completed in interterm are applied as credit toward graduation requirements. Students register for interterm classes through the Special Community Programs office.

Note: Some units may have specific requirements about the maximum number of interterm hours which may be applied toward the degree. Contact the unit for details.

Attendance

Students must officially enroll for the courses they attend. A student cannot receive credit or a grade for a course without being enrolled in it.

Instructors have the right and responsibility to establish attendance policies for their courses.

Students are responsible for informing instructors about their absence from class and for completing assignments given during their absence.

Religious Accommodations and Class Attendance

Faculty, staff, student organizations and other programming groups are strongly urged to be mindful of major holy days in their scheduling. A list of the most-frequently observed religious holidays can be found at: http://portfolio.du.edu/religiouslife. Please note this list is meant to be inclusive of most major religious traditions (although certainly not comprehensive) and religious holidays have no official status at DU.

University policy grants students excused absences from class or other organized activities for observance of religious holy days, unless the accommodation would create an undue hardship. Faculty are asked to be responsive to requests when students contact them in advance to request such an excused absence. Students are responsible for completing assignments given during their absence, but should be given an opportunity to make up work missed because of religious observance.

Once a student has registered for a class, the student is expected to examine the course syllabus for potential conflicts with holy days and to notify the instructor by the end of the first week of classes of any conflicts that may require an absence (including any required additional preparation/travel time). The student is also expected to remind the faculty member in advance of the missed class, and to make arrangements in advance (with the faculty member) to make up any missed work or in-class material within a reasonable amount of time.
Examples of reasonable accommodations for student absences might include: rescheduling of an exam or giving a make-up exam for the student in question; altering the time of a student’s presentation; allowing extra-credit assignments to substitute for missed class work or arranging for an increased flexibility in assignment due dates; releasing a graduate assistant from teaching or research responsibilities, etc. The student must be given the opportunity to do appropriate make-up work that is equivalent and intrinsically no more difficult than the original exam or assignment. Faculty should keep in mind that religion is a deeply personal and private matter and should make every attempt to respect the privacy of the student when making accommodations (for example, it is not appropriate to announce to the class that a student is doing a presentation or making up an exam at a later date because of their religious observance).

If a student and course instructor cannot agree on an accommodation, the student may bring the matter to the Department Chair for a decision. Additional resources in resolving disagreements over accommodations include the University Chaplain, the Center for Multicultural Excellence, and the Office of Diversity and Equal Opportunity. If there is still no agreement, the student may bring the matter to the school or college dean’s office, where a final decision will be made. Students who believe they have been discriminated against on the basis of religion by the denial of a requested religious accommodation may contact the Office of Diversity and Equal Opportunity to learn about filing a discrimination complaint.

Final Exams

Any final exam for a course must be scheduled during the final exam period. Each quarter, the Office of the Registrar posts the final exam schedule on its website at www.du.edu/registrar. Students must attend all final exams as scheduled by faculty. Students are expected to let their instructors know when they have more than one exam being held at the same time. The Office of the Registrar will attempt to resolve conflicts whenever possible. Final exams are not changed to accommodate student travel plans, and students should only plan travel after the official end date of the term.

Campus Weather Closures

Sometimes severe storms may create such a hazard that the University makes a decision to close and cancel operations for a period of time. Students can receive information about campus weather closures by registering for the Critical Incident Notification System (p. 812). The University of Denver homepage will also be updated to reflect a closure due to severe weather.

Disclosure of Student Information

The Family Educational Rights and Privacy Act (FERPA) affords eligible students certain rights with respect to their education records. (An “eligible student” under FERPA is a student who is 18 years of age or older or who attends a postsecondary institution.) These rights include the following:

1. The right to inspect and review the student's education records within 45 days after the day the University receives a request for access. A student should submit to the registrar a written request that identifies the record(s) the student wishes to inspect. Request forms are available from the registrar. The registrar will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the registrar, the registrar shall advise the student of the correct official to whom the request should be addressed.

2. The right to request the amendment of the student’s education records that the student believes is inaccurate, misleading or otherwise in violation of the student’s privacy rights under FERPA. A student who wishes to ask the University to amend a record should write the University official responsible for the record, clearly identify the part of the record the student wants changed and specify why it should be changed. If the University decides not to amend the record as requested, the University will notify the student in writing of the decision and the student’s right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

3. The right to provide written consent before the University discloses personally identifiable information (PII) from the student's education records, except to the extent that FERPA authorizes disclosure without consent. The University discloses education records without a student’s prior written consent under the FERPA exception for disclosure to University officials with legitimate educational interests. A University official is a person employed by the University in an administrative, supervisory, academic, research or staff position (including law enforcement unit personnel and health staff); a person serving on the board of trustees; or a student, volunteer or employee of a partner organization serving on an official committee, such as an admission, disciplinary or grievance committee, or assisting another University official in performing his or her tasks. A University official also may include a contractor outside of the University who performs an institutional service or function for which the University would otherwise use its own employees and who is under the direct control of the University with respect to the use and maintenance of PII from education records, such as an attorney, auditor or collection agent or a student volunteering to assist another University official in performing his or her tasks. A University official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her institutional duties.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by the University to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, DC 20202-4605
Directory Information

The law provides that “directory information” may be released without the consent of the student. The University of Denver designates the following student information as “directory information:"

- The student’s name, addresses, telephone numbers, electronic mail and webpage addresses, employer, job title, photographic images, date and place of birth, field of study, full-time or part-time status, class (e.g., graduate, sophomore, junior), participation in officially recognized activities and sports, weight and height of members of athletic teams, dates of attendance, anticipated date of graduation, degrees and awards received, thesis and dissertation titles and the most recent previous educational agency or institution attended by the student.

Students may prevent the University from disclosing directory information by submitting a “Request to Prevent Disclosure of Directory Information" form (available from the Office of the Registrar) to the Office of the Registrar, University Hall, G33.

Disclosure

Students may authorize the University to share information from education records with third parties such as parents. Authorizations may be completed online or by completing an authorization form available in the Office of the Registrar.

FERPA permits the disclosure of PII from students’ education records, without consent of the student, if the disclosure meets certain conditions found in §99.31 of the FERPA regulations. Except for disclosures to University officials, disclosures related to some judicial orders or lawfully issued subpoenas, disclosures of directory information and disclosures to the student, §99.32 of FERPA regulations requires the institution to record the disclosure. Eligible students have a right to inspect and review the record of disclosures. A postsecondary institution may disclose PII from the education records without obtaining prior written consent of the student to the following entities or for the following purposes:

- University officials, including faculty, within the University whom the University has determined to have legitimate educational interests. This includes contractors, consultants, volunteers or other parties to whom the University has outsourced institutional services or functions, provided that the conditions listed in §99.31(a)(1)(i)(B)(f)-(a)(1)(i)(B)(2) are met. (§99.31(a)(1))
- Authorized representatives of the U. S. Comptroller General, the U. S. Attorney General, the U.S. Secretary of Education or State and local educational authorities, such as a State postsecondary authority that is responsible for supervising the University’s State-supported education programs. Disclosures under this provision may be made, subject to the requirements of §99.35, in connection with an audit or evaluation of Federal- or State-supported education programs or for the enforcement of or compliance with Federal legal requirements that relate to those programs. These entities may make further disclosures of PII to outside entities that are designated by them as their authorized representatives to conduct any audit, evaluation or enforcement or compliance activity on their behalf. (§§99.31(a)(3) and 99.35)
- In connection with financial aid for which the student has applied or which the student has received, if the information is necessary to determine eligibility for the aid, determine the amount of the aid, determine the conditions of the aid or enforce the terms and conditions of the aid. (§99.31(a)(4))
- Organizations conducting studies for, or on behalf of, the University, in order to (a) develop, validate or administer predictive tests; (b) administer student aid programs; or (c) improve instruction. (§99.31(a)(6))
- Accreditating organizations to carry out their accrediting functions. (§99.31(a)(7))
- Parents of an eligible student if the student is a dependent for IRS tax purposes. (§99.31(a)(8))
- To comply with a judicial order or lawfully issued subpoena. (§99.31(a)(9))
- To appropriate officials in connection with a health or safety emergency, subject to §99.36. (§99.31(a)(10))
- With information the University has designated as “directory information” under §99.37. (§99.31(a)(11))
- A victim of an alleged perpetrator of a crime of violence or a non-forcible sex offense, subject to the requirements of §99.39. The disclosure may only include the final results of the disciplinary proceeding with respect to that alleged crime or offense, regardless of the finding. (§99.31(a)(13))
- The general public, the final results of a disciplinary proceeding, subject to the requirements of §99.39, if the University determines the student is an alleged perpetrator of a crime of violence or non-forcible sex offense and the student has committed a violation of the University’s rules or policies with respect to the allegation made against him or her. (§99.31(a)(14))
- Parents of a student regarding the student’s violation of any Federal, State or local law, or of any rule or policy of the University, governing the use or possession of alcohol or a controlled substance if the University determines the student committed a disciplinary violation and the student is under the age of 21. (§99.31(a)(15))

As of January 3, 2012, the U.S. Department of Education’s FERPA regulations expand the circumstances under which a student’s education records and PII contained in such records—including Social Security Number, grades, or other private information—may be accessed without the student’s consent. First, the U.S. Comptroller General, the U.S. Attorney General, the U.S. Secretary of Education or state and local education authorities (“Federal and State authorities”) may allow access to student records and PII without consent to any third party designated by a Federal or State authority to evaluate a federal- or state-supported education program. The evaluation may relate to any program that is “principally engaged in the provision of education,” such as early childhood education and job training, as well as any program that is administered by an education agency or institution. Second, Federal and State Authorities may allow access to a student’s education records and PII without the student’s consent to researchers performing certain types of studies, in certain cases even when the University objects to or does not request such research. Federal and State Authorities must obtain certain use-restriction and data security promises from the entities that they authorize to receive PII, but the Authorities need not maintain direct control over such entities. In addition, in connection with Statewide Longitudinal Data Systems, State authorities may collect,
compile, permanently retain and share without the student’s consent PII from education records, and they may track participation in education and other programs by linking such PII to other personal information about the student that they obtain from other Federal or State data sources, including workforce development, unemployment insurance, child welfare, juvenile justice, military service and migrant student records systems.

**Additional Information**

Questions about these policies and procedures may be directed to the Office of the Registrar at 303.871.3897. Request forms and additional information are available on the web at www.du.edu/registrar or in the Office of the Registrar at 2197 South University Blvd., room G33, Denver, Colorado 80208.

Admissions

Unit-specific admission requirements are set by individual academic programs and reviewed and published annually. Upon publication, the admission requirements are established for the annual admission cycle and may not be altered until the next admission cycle. Applicants must meet all published admission requirements.

Admission Status (p. 818)
Admission Process and Standards for All Applicants (p. 819)
Additional Standards for International Applicants (p. 822)
Additional Information for Non-Native English Speakers (p. 824)

Admission Status

A student may be admitted to graduate study in one of the following classifications:

- regular degree student
- provisional admission
- certificate student
- special status student
- English Conditional Admission (ECA)
- lifelong learner
- visiting scholar

Regular Degree Student

Students unconditionally approved for graduate study in a master’s, doctoral, or academic certificate program have regular status.

Regular status is required for advancement to degree candidacy and graduation. Qualified students may be recommended for admission to regular degree status provided they meet the minimum admission standards and the requirements set forth by the individual graduate degree program.

Provisional Admission

Students admitted with some deficiency in undergraduate training, incomplete credentials, or low GPA are admitted with provisions.

Students may be accepted with provisions on a case-by-case basis. Students admitted with provisions must be changed to regular status as soon as the conditions governing this type of admission have been met, and provisions must be satisfied in the time frame set by the admitting unit. The incomplete admission credentials provision must be satisfied no later than the sixth week of the first quarter of enrollment or a hold will be placed prohibiting registration.

The deficiency in academic training provision must be satisfied no later than the first 15 credit hours of enrollment or one calendar year, whichever comes first. Any provision for a specific course(s) must be earned with a grade of B or better in each course. Students must be informed of the provisional admittance policies and the provisions to be satisfied in the acceptance letter.

Graduate and professional programs may require that students with three-year baccalaureate degrees be admitted provisionally and complete specific graduate-level courses in their first 15 credit hours of enrollment, earning a grade of B or better in each course.

Note: Some academic units may have more restrictive timelines for satisfying provisions. Contact the unit for details.

Certificate Student

A certificate student is one who is engaged in a program of study leading to a certificate. Only academic certificates will appear on the student’s transcript. Students must be admitted to a certificate program to be awarded the certificate.

Special Status Student

Students who do not intend to pursue a degree program may be admitted under special status. Proof of bachelor’s degree is required to enroll in graduate courses under special status. International applicants must demonstrate proof of English language proficiency and submit the International Special Status Supplement form. Special status students must secure the appropriate departmental administrator’s signature on the special status form prior to submitting it for registration. Admission as a special status student does not guarantee admission to any University of Denver graduate degree program. In the event that the student subsequently wishes to undertake a degree program at the University of Denver, the regular application procedures must be followed, including the submission of the required application fee. No more than 15-credit hours earned in special status may be applied to the degree.
Special status students must apply each term in the appropriate graduate unit. Special status students may not register during priority registration, but may register immediately prior to the beginning of each term. Some academic units do not allow special status enrollment.

**Note:** Special status students interested in taking Iliff School of Theology courses must register at Iliff. The classes will be counted as special status hours, not transfer courses, towards the DU-Iliff Joint PhD program with advisor approval upon acceptance into the Joint PhD program.

**English Conditional Admission (ECA)**

In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, graduate units, at their discretion, may offer English Conditional Admission (ECA) to academically qualified non-native English speakers. Such applicants must take training through the University of Denver's English Language Center to meet the English language requirement. English language training at centers outside of the University of Denver will not be counted toward meeting English language proficiency requirements.

**Lifelong Learners**

University College offers courses to non-degree seeking students and non-certificate seeking students. These students are designated as Lifelong Learners.

Neither entrance examinations nor a baccalaureate degree are required in order to register for courses as a Lifelong Learner. Students must declare their status as Lifelong Learners during their first quarter they are enrolled.

Lifelong Learners may take University College courses for academic credit and a permanent record is maintained by the University of Denver. Lifelong Learners may also take University College courses for non-credit (unless the course is offered for credit only). The courses cannot be counted toward a degree.

Lifelong Learners must maintain a GPA of 3.0 to be eligible to continue taking classes. If the cumulative GPA is below 3.0, University College will send a letter notifying the student that no further University College courses may be taken.

**Visiting Scholar**

Faculty members of other institutions may pursue postdoctoral study for no credit as guests of the University, without paying tuition. Visiting faculty members should apply to the department in which they plan to study. If graduate credit is desired, they must register as special status students and pay the regular tuition rates.

**Admission Process and Standards for All Applicants**

The University of Denver requires the submission of specific items and documentation from students applying for admission to graduate study. All materials must be received in the Office of Graduate Studies, or appropriate admission unit, by the program’s stated deadline. All credentials submitted become property of the University of Denver and cannot be copied or returned to the applicant/student or any person(s). The information given on the application must be true and complete without evasion or misrepresentation. Applicants who willfully omit, falsify, or provide incomplete statements may be denied admission or dismissed.

**University Admission Criteria**

The University of Denver offers admission to applicants who demonstrate the highest potential for successful graduate study. Applicants are evaluated by the individual programs to which they apply on the basis of their prior performance and professional promise as evidenced by academic records, letters of reference, standardized test scores, and other pertinent data. Academic program admission requirements may be in addition to or more rigorous than University minimal standards. To be admitted as a regular graduate student, an applicant must meet the following requirements:

- **Baccalaureate Degree:** Applicants must hold an earned baccalaureate degree from a regionally accredited college or university.
- **GPA:** The average undergraduate GPA of students accepted into graduate and professional programs for fall 2014 was 3.39. Some departments and programs set their admission standards higher than the average GPA of students typically admitted to the University. Applicants with lower than average undergraduate GPA may be offered admission, provided that other aspects of their application show evidence of special promise. For example, a high GRE/GMAT score, extensive research experience, or strong letters of recommendation may compensate for a lower than average GPA. However, programs that wish to admit applicants with an undergraduate GPA of 2.5 or lower must admit them provisionally with an approved petition.
- **Standardized Test Scores:** The University of Denver does not require graduate entrance examinations for admission. However, many graduate programs do require standardized exams such as the Law School Admission Test (LSAT), the Graduate Record Examination (GRE), the Graduate Management Admissions Test (GMAT), or the Miller Analogies Test (MAT) for admission. Some departments may require applicants to take the GRE Subject Test in a specific discipline as well. Please see the published admission requirements for specific academic program admission requirements.

**Note:** The minimum GPA requirement for the Sturm College of Law is set according to the standards of the American Bar Association.
**Application**

Applications for graduate study at the University of Denver must be submitted online (requests for accommodation may be granted).

**Application Fee**

A non-refundable application fee is required for each application.

The non-refundable application fee (bank draft, cash, money order, wire transfer, or personal check) drawn on U.S. funds, covers the cost of processing application materials. A credit card payment is accepted during online application submission only. Applications will not be processed until the application fee is paid. No waivers or deferrals are allowed with the exception of McNair Scholars and other national scholar programs with the approval of the Associate Provost for Graduate Studies. Certification of participation must be included with the application materials.

**Transcripts and Proof of Degree**

Applicants are required to submit one official transcript from each post-secondary institution they have attended, or are presently attending, where two quarter hours (or one semester hour) or more were completed including study abroad and college coursework completed in high school. Proof of a bachelor’s, and, if applicable, a master’s degree is required from a regionally accredited college or university.

Official transcripts must be received in the time-frame set by the admitting unit but no later than the sixth week of the first quarter of enrollment, or a hold will be placed on the student’s account prohibiting future registration.

The applicant is responsible for obtaining all transcripts. University of Denver students and alumni do not need to provide University of Denver transcripts.

Students with three-year baccalaureate degrees from 15-year educational systems from accredited institutions of higher learning are qualified to be considered for graduate admission to the University of Denver. Applicants with a three-year baccalaureate degree cannot be granted English Conditional Admission. For more information, see Section 2.3.b. English Conditional Admission (ECA).

Applicants who have earned a degree outside the U.S. also must submit proof of graduation, typically through a degree certificate or diploma. Official study abroad transcripts are required unless the course titles, grades and credit earned abroad appear on another transcript. Applicants educated outside the United States are encouraged to contact the Office of Graduate Studies or the appropriate admission office for assistance regarding transcript-related materials.

Transcripts from outside of the U.S. are evaluated by the Office of International Student Admission (http://www.du.edu/apply/admission/apply/international). This process can take three to four weeks and must be complete by the program’s stated deadline. Therefore, applicants with a degree from outside of the U.S. are encouraged to apply early.

All official transcripts must include a statement of receipt of degrees earned (or separate degree/diploma certificate).

The University of Denver will consider paper transcripts official when delivered to the University of Denver in a sealed envelope from the issuing institution or a third-party agency acting on behalf of the institution provided the following criteria are met:

- The transcripts must have the original signature of the registrar and/or the seal of the issuing institution
- The transcripts must be enclosed in an envelope with the stamp or signature of the registrar across the sealed flap

The University of Denver will consider electronic transcripts official from a domestic institution provided the following criteria are met:

- The transcript is certified as official from the college or university using a third-party agency for the certification process. Approved agencies include Army/American Council on Education Registry Transcript System (AARTS), National Student Clearinghouse, Naviance, Royall and Company, and Scrip-Safe. The University of Denver reserves the right to rescind approval of the above-mentioned agencies based on changes in technology utilized by the agency. Upon request, the Office of the Registrar will take into consideration a third-party vendor other than the aforementioned agencies.
- The transcript must be received from the third-party agency by a University official.
- The transcript must be a certified PDF document with no evidence of tampering. The transcript must be retrieved from a secure server. Emailed transcripts will not be accepted.

Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English. Errors or omissions in English translations may be grounds for refusal or dismissal. Please consult the Office of Graduate Studies for specific details.

The University of Denver reserves the right to reject transcripts or request additional information if there is any question about the authenticity of the document. Transcripts with course work in progress will not be considered final and admission will be granted provisionally.

**Notes**: Some units may have more restrictive admissions requirements or guidelines. Consult the unit for more information.

The Office of International Student Admission evaluates international post-secondary transcripts.
Supplemental Documents: Letters of recommendation, Essay, and Statement of Purpose

Letters of recommendation from professors, preferably in the student’s field of concentration or from employers, may be required. Some graduate units require an admissions essay, statement of purpose, or other supplemental application documents. Applicants should consult with the published admission requirements for specific guidelines for the letters of recommendation, essay, statement of purpose, or other supplemental documents.

Reuse of Supplemental Documents

Supplemental documents, including letters of recommendation, remain on file for 12 months from the date of application and may be reused within that time frame upon request by applicants who have not matriculated. Otherwise, new documents will be required. Supplemental documents are purged upon matriculation into a graduate program and will not be available for reuse.

Admissions Examinations (GRE, GMAT, LSAT, ETC.)

Some programs require standardized test scores such as the General Record Examination (GRE). Scores must be received directly from the appropriate testing agency by the program’s stated deadline date. The University of Denver’s ETS Institution Code is: 4842. Individual graduate programs reserve the right to set test score requirements.

If an exam is required for admission, it must be taken prior to matriculation unless the applicant is admitted with a provision to complete the entrance examination. The provision must be satisfied in the time-frame set by the admitting unit, but no later than the sixth week of the first quarter of enrollment or a hold will be placed on the student’s account prohibiting future registration.

Pearson Vue and the Educational Testing Service policy are to report scores until September 30th following the fifth anniversary of the test date. Therefore, test scores are only valid for five years.

Note: Contact the graduate unit for details on required admission examinations.

Verification of Legal Permanent Residency (Permanent Resident or Green Card)

A copy of the Permanent Resident or Green Card is required for permanent residents. Applicants should provide a copy of Permanent Resident or Green Card the at the time of application.

Admission Offer

The admission offer must be officially accepted or declined by the stated deposit deadline in the admission letter. If the offer is declined, the applicant will not be eligible to enroll in a future term without reapplying to the program.

The University of Denver is a signatory on the Council of Graduate Schools (CGS) Resolution Regarding Graduate Scholars, Fellows, Trainees, and Assistants that binds all departments to an agreement that students are under no obligation to respond to offers of financial support (admission) prior to April 15th; earlier deadlines for acceptance of such offers violate the intent of the Resolution.

Admission Deposit

A non-refundable deposit is required of all applicants newly admitted to each graduate program. The admission deposit must be submitted by the stated deposit deadline in the admission letter.

The deposit confirms the applicant’s intent to attend the University. Only those who have confirmed their attendance in the program by sending the proper deposit receive registration information. Applicants must deposit directly to the Office of Graduate Studies or the appropriate admission office. Deposit fees vary by program. Consult the individual graduate unit for information on the required deposit and deadline. The deposit is applied to the first term of tuition. However, fully funded graduate assistants and employees using a tuition waiver may request a refund of the deposit from the Bursar’s Office upon matriculation.

Reapplication

Applicants who wish to enter the same program within one year of a previously submitted application must reapply for admission by submitting a new online application and supporting documents and will be charged a reapplication fee. Official transcripts and supplemental documents remain on file for up to 12 months and may not need to be resubmitted. The student will be admitted under the degree requirements in effect at the time of reapplication.

Admission Term Changes

Deferral

Deposited students who would like to postpone enrollment for a term or up to a year can request to defer their admission. Requests for deferrals must be put in writing. Deferrals must be approved and processed prior to the first day of the accepted term. Only one deferral will be approved per admitted student.
In rare instances, a deferral may be granted up to the third week of the accepted term. If the deposited student does not request a deferral by the stated deadline, the student must apply and pay the application fee for admission into future terms. The deposit is non-refundable.

Note: Some units do not allow deferrals or may have more stringent deferral requirements. Contact the unit for details

Early Enrollment

Some graduate programs allow deposited students to request a one-time change of admit term to indicate an earlier start term. Requests for term changes must be put in writing. Term changes must be approved and processed prior to the first day of the intended matriculation term.

If the deposited student does not enroll in the term to which the admit term change was granted, the student must apply and pay the application fee for admission into future terms. The deposit is non-refundable.

Note: Some units do not allow term changes or may have more stringent term change requirements. Contact the unit for details

Change of Graduate Program

Post application submission and prior to an admission decision, applicants may request a one-time change to the academic program to which they applied. After an admission decision has been rendered, a new application and application fee are required to be considered for admission to a different program. Expected to matriculate (deposited) students should follow the University change of degree or program student policy which allows for a change of major or concentration, or to change to a lesser degree (doctoral to master’s level), within the same college/school.

Additional Standards for International Applicants

In order to issue an I-20 or DS-2019 forms to accepted international applicants, the Office of International Student and Scholar Services must verify that the applicant “meets all standards for admission” [per U.S. Federal Register: 8 CFR § 214.3(k)(3)] or is academically eligible for admission and is admitted [per 22 C.F.R. § 62.23(d)-(e)]. Units or departments must petition the Associate Provost for Graduate Studies to admit graduate international applicants whose academic background does not meet the University of Denver's graduate admission standards.

Copy of Passport

Applicants who are not U.S. citizens or permanent residents may provide a copy of the passport at the time of application. This document may be uploaded through the online application system. Applicants who do not have a passport should make arrangements to obtain a passport before an I-20 can be issued.

Financial Verification

When an international applicant has been admitted to the University of Denver, in order for an I-20 or DS-2019 to be issued, the student must submit the following:

- passport copy
- DU International Supplemental form
- DU Financial Verification form
- bank letter from the student or supporter (if not an agency)
- letter from supporter/agency/government

Photocopies of financial verification documents are accepted. The financial verification form is only required if the student does not have a bank letter or letter from the supporting agency/government. This requirement does not apply to U.S. permanent residents or students not in F-1 or J-1 immigration status.

Orientation Program

All new F-1 and J-1 international students to include those matriculating after attending the University of Denver’s English Language Center are required to attend an orientation offered by the Office of International Student and Scholar Services. Other non-immigrant students are welcome to attend.

SEVIS

Students who are not U.S. citizens or permanent residents must hold an immigration status granted by the U.S. federal government which allows study in the United States in order to maintain legal immigration status. Most students enroll at the University of Denver in F-1 or J-1 immigration status although other statuses may also permit students to study in the United States.

The Student and Exchange Visitor Information System (SEVIS) is used by government agencies and school officials to collect and maintain information on F and J students and their dependents. School officials use SEVIS to issue original certificates of eligibility to students (I-20 for F-1 students, DS-2019 for J-1 exchange visitors) to apply for a visa at a U.S. embassy, apply for a change of status in the U.S. or transfer status from another school.
Federal immigration regulations also require school officials to maintain students’ records in SEVIS from matriculation through the end of their program, which includes any post-completion practical training (Optional Practical Training for F-1 students and Academic Training for J-1 students) authorized by U.S. Citizenship and Immigration Services or the University.

Only a Designated School Official (F-1 program) or Responsible Officer (J-1 program) may access student records in SEVIS. DSOs and ROs may also issue a limited number of immigration benefits to students, including permission to drop below full-time status and authorization or recommendation for employment.

SEVIS requires school officials to enter certain biographical, financial and program details to generate an initial I-20 or DS-2019 for students and dependents. Federal immigration regulations specify the types of changes and reportable events that school officials must report in SEVIS after a student has matriculated. The primary reporting requirement is the enrollment status of students, which must be reported each academic term.

**Note:** The J-1 program is comprised of several different categories, including non-degree exchange, degree-seeking student, research/scholar, and intern. Enrollment requirements only apply to student categories.

**Mandated Event Related Reporting**
- change in U.S. (physical) address--reported as mailing address in myWeb or PioneerWeb
- change in foreign address--reported as home address in myWeb or PioneerWeb
- change in legal name
- change in country of citizenship
- change in major field of study, secondary major and/or minor
- change in education level
- completion of program
- extension of program duration
- authorization to drop below full-time status
- authorization to withdraw from program
- absence from the country for more than five months
- transfer to another school or program
- authorization for on-campus employment (J-1 students only)
- authorization for pre- or post-completion Academic Training (J-1 students only)
- authorization for Curricular Practical Training (F-1 students only)
- recommendation for pre- or post-completion Optional Practical Training (F-1 students only) and extensions permitted under STEM or “cap gap” regulations
- change in employment status or employment details during authorized periods of practical training

In addition to reporting the above changes or events, school officials must also respond to any formal request for information about a student made by the Department of Homeland Security or Immigration and Customs Enforcement.

**Session Related Reporting**
- Enrollment status (including failure to enroll or unauthorized drop below full-time)
- Current U.S. (physical) address--reported as mailing address in myWeb
- Current session end date
- Next session start date (or start of next period of required enrollment)

**Violations of Status**
A violation of status occurs when a F-1 or J-1 student fails to abide by the responsibilities and restrictions of immigration status. A violation of status may result in the student’s loss of lawful presence in the United States and may jeopardize the student’s eligibility to be in the U.S. legally to study at the University.

Violations of status for F-1 and J-1 students include:
- failure to report arrival in the United States to the school or program
- failure to report reportable information by required deadline
- failure to enroll during a period of required enrollment
- failure to maintain health insurance coverage (J-1 students only)
- unauthorized drop below full-time
- unauthorized employment (including unauthorized off-campus employment or exceeding the maximum number of hours per week permitted for on-campus employment)
Additional Standards for Non-Native English Speakers

English Language Proficiency (TOEFL/IELTS)

TOEFL/IELTS

Official scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS) are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL or IELTS score is received. The TOEFL and IELTS scores are valid for two years from the test date and are considered official only when received directly from the testing agency.

TOEFL

The minimum TOEFL score accepted by the University is 80 (iBT) or 550 (paper-based). The institution code for the University of Denver is 4842.

IELTS

The minimum IELTS score accepted by the University is 6.0.

English Language Proficiency Assessment

Students whose native language is not English and who are required to submit TOEFL/IELTS scores will be assessed by the University of Denver English Language Center (ELC).

• Students whose University of Denver assessment demonstrates they are proficient enough in English to be academically successful, regardless of TOEFL/IELTS scores, may enroll in graduate academic classes full-time.

• Students whose University of Denver assessment demonstrates minor deficiencies and indicates their opportunity for academic success would be enhanced by ELC support may enroll in academic classes full-time and will be placed in an ELC bridge course(s).

• Students whose University of Denver assessment indicates significant levels of deficiency will be placed in an ELC bridge course(s) but may elect to take an appropriate level of English language instruction at the ELC and may be required to reduce their academic course load accordingly.

Students who do not attend the English Language Assessment must contact the ELC to arrange for an assessment in order to be cleared for registration and will incur a $200.00 assessment charge.

English Language Exemption

Applicants may be exempted from English proficiency test requirements if by the time of matriculation they have earned a baccalaureate degree or higher from a formally-recognized/accredited university where the institution’s language of instruction and examination is English. Such applicants may be exempt from the TOEFL/IELTS and the English Language Proficiency Assessment requirement but not from other standardized graduate entrance examinations.

Note: Individual graduate programs reserve the right to set higher TOEFL or IELTS test score requirements. Graduate Teaching Assistants have a higher speaking test requirement.

English Conditional Admission (ECA)

In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, graduate units, at their discretion, may offer English Conditional Admission (ECA) to academically qualified non-native English speakers. Such applicants must take training through the University of Denver’s English Language Center to meet the English language requirement. English language training at centers outside of the University of Denver will not be counted toward meeting English language proficiency requirements.

International applicants with a three-year baccalaureate degree cannot be granted English Conditional Admission.

Students who are admitted under the ECA option are not eligible for Graduate Teaching Assistantships until they have met the requirements of the ECA program, met the minimum requirement for GTAs on the speaking section of the TOEFL or IELTS exam, and have been changed to regular status students.

ECA students cannot enroll in any regular degree courses prior to meeting the University’s English requirement. In order to be granted regular status in their graduate degree programs and become eligible to take academic classes, ECA students must meet one of the following requirements:

• academic suspension
• conviction of a crime

Note: The J-1 program is comprised of several different categories, including non-degree exchange, degree-seeking student, research/scholar, and intern. Enrollment requirements only apply to student categories.
• Present a departmental qualifying minimum TOEFL or IELTS score and take the English Language Proficiency Assessment or
• Successfully complete intensive English courses through level five at the University’s English Language Center (http://www.du.edu/intl/elc) (ELC) and take the English Language Proficiency Assessment.

Applicants must determine if the department they wish to apply to allows English Conditional Admission. If it does, applicants need to apply for admission to the degree program and indicate that they wish to be considered for ECA.

Students seeking ECA under F-1 or J-1 immigration status must prove their ability to pay for their first year of major/degree studies prior to matriculation even though they will attend the English Language Center (ELC) initially. It is expected that these financial resources will remain available for the duration of the degree program.

Financial aid awards for the degree program cannot be applied to the costs for English language training and additional proof of funding may be requested before the appropriate immigration document can be issued.

If admitted conditionally, the student’s English language proficiency will be tested by the ELC and the student will be placed in the appropriate class level (one through five). Testing for ELC class levels will take place after a student arrives on the University of Denver’s campus and prior to the beginning of ELC classes.

Notes: Some units may not accept students under English Conditional Admission and therefore, would not accept ELC completion to meet English language proficiency requirements. Graduate departments may require ELC graduates to submit a TOEFL/IELTS score for admission consideration. Additionally, graduate departments may, at their discretion, require any admitted non-native English speakers to take courses at the English Language Center regardless of his/her TOEFL/IELTS score.

Note: In general, ELC students may not take graduate classes concurrently with their enrollment in ELC. The exception to this is students who are fully admitted to the graduate program and are encouraged to take ELC classes.

Required Tests for GTA Eligibility

TOEFL/IELTS

Any graduate applicant whose native language is not English (including US citizens and permanent residents) and who is from a country where English is not the native language, regardless of his or her educational background or citizenship, who wishes to be considered for any Graduate Teaching Assistantship during any year of study in any graduate department at the University of Denver, must demonstrate fluency in spoken English by scoring a minimum of 26 on the Internet Based TOEFL (iBT) exam speaking section or an IELTS score of 8 on the speaking section.

English Language Proficiency Assessment

Students offered a Graduate Teaching Assistant (GTA) position whose native language is not English and who are required to submit TOEFL/IELTS scores will be assessed by the University of Denver English Language Center (ELC) and will need to complete a proficiency assessment designed specifically for GTAs.

Prospective GTAs who are awarded a GTA based on demonstrated fluency in spoken English by scoring a 26 on the TOEFL speaking section or an eight (8) on the IELTS speaking section whose University of Denver assessment demonstrates they are not sufficiently proficient may be permitted to hold a GTA position, but must be restricted to non-teaching GTA responsibilities and will be required to enroll in an ELC speaking bridge course for enrichment.

Students may contact the unit and/or the Office of Graduate Studies for additional details.
Tuition and Fees and Financial Aid

Tuition and Fees

Tuition Charges

Tuition for most programs during the regular academic year (fall, winter, and spring quarters) is charged at a flat rate for students carrying 12 through 18 credit hours. Students in a flat rate program will be charged the hourly rate on each hour taken beyond 18 hours per quarter.

Other academic programs, such as Sturm College of Law, Daniels College of Business, University College and some distance education programs, may have a different tuition rate and students in those programs may not be eligible for the flat rate. Tuition charges for residents or non-residents of Colorado are the same. The University reserves the right to make changes in tuition charges or refund policies without advance notice.

Student Fees

In order to enhance opportunities for students’ use of technology in and out of the classroom and to provide multiple modalities of student learning, a student technology fee is charged each quarter to all students. This fee is charged per credit hour taken. The student activity fee is assessed of all registered graduate and professional students (both part- and full-time). Exclusions include students enrolled in degree programs in the Sturm College of Law or University College non-credit courses and non-degree programs.

Late Charges

Registration beginning on the first day of the quarter is considered late registration. All students (continuing, new, returning leaves of absences, and readmitted) who do not register before the first day of the quarter are assessed a late registration service charge that cannot be waived. Once registered, students may drop and add courses freely through the seventh day of the quarter without financial penalty.

Late Registration Service Charge

A service charge of $25 is assessed the first day of the quarter for all students who have not enrolled in at least one course prior to the first day of the quarter. A $50 service charge is assessed from the second through the fifth days of the quarter (business days, Monday–Friday). If registration is available over the weekend during or immediately following the first five business days, the $50 service charge is applied to first-time weekend enrollees (Saturday or Sunday). A $100 service charge is assessed beginning the sixth business day and continuing through the remainder of the quarter. Days are calculated based on the term’s academic calendar and not on the class meeting days of specific courses. Tuition, fees and any other charges are due as specified on the billing statement. The service charge is not assessed for adding classes to an existing schedule. The maximum fee assessed for late registration in a given term is $100.

Late Payment Fee

Registered students for a given term who have not paid, or made arrangements to pay, their tuition by the appropriate University deadlines may be assessed a late payment fee. Late fees are assessed ever month until a balance is paid in full or payment arrangements are set up.

Student Financial Liability

It is the student’s responsibility to abide by the University’s payment and refund policies.

If, after completing the registration process, the student does not withdraw from registration by the last day for 100% refund for dropped classes” date published on the Academic Calendar (http://www.du.edu/registrar/calendar) on the Office of the Registrar’s website, the student agrees to pay the total amount of tuition and other charges set forth. The student understands that if any payment is not made when due, or if the student withdraws, or is required to withdraw, from the University for any reason, then all remaining tuition and other charges are immediately due and payable. All amounts not paid when due may begin to accrue monthly late fees. In addition, the student agrees to pay all collection costs and amounts. If the student has any overdue charges outstanding, the University may recover those overdue amounts by reducing any payments owed by the University to the student.

Students are not removed from classes based only upon non-payment. Students who do not officially withdraw from classes and do not attend have “F” grades assigned and may owe tuition and charges as specified above.

Students with a past due balance for a given term are not allowed to enroll in classes for any subsequent term. Grades, transcripts, and other attendance certifications are withheld and a financial hold placed on the account until payment is received.

Refund Information

The date of withdrawal from a class at the University is the date that the Registrar’s Office receives a written notification of withdrawal or the date the student drops the class online.
In order for tuition charges to be reversed at 100% for complete withdrawals, programs on the quarter system (except University College) should refer to the Academic Calendar (http://www.du.edu/registrar/calendar) on the Office of the Registrar’s website, for specific refund dates. Refunds are first applied to any obligations owed to the University, including charges with future dates.

**Note:** Some units may have different policies regarding tuition, fees and payments. Contact the unit for details.

### Tuition Refund Appeals

A student may appeal for an exception to the University refund policy if unusual circumstances exist that are beyond the student’s control. A student must officially withdraw from the course prior to beginning the appeals process. The statute of limitations for an appeal is 90 days from the end of the term in which the course for which the tuition being appealed was offered.

### Informal Appeal/Automatic Refund

If a student drops all classes for a given term, an informal appeal for a full refund may be made to the Office of the Registrar. An informal appeal requires that the withdrawal is completed and the request for the tuition refund is made prior to the end of the sixth week of the term (defined by the deadline for automatic W). To be eligible for an automatic refund, the condition for withdrawal must meet one or more of the following criteria and must be accompanied by appropriate documentation as specified below:

**Criteria and Documentation**

- **Physical and/or mental illness that prevents the student from completing the course(s)**
  
  Documentation: A signed, dated, letter on letterhead from the physician for physical illness or psychiatrist or other licensed mental health professional for mental illness. The letter must specifically state that the student was advised to withdraw due to illness.

- **Death of a student (sixth week deadline for informal appeal waived)**
  
  If a student dies after enrolling and paying tuition but before the sixth week of the quarter, the tuition will be refunded without a formal tuition appeal.

  After the sixth week of the quarter, a formal appeal must be submitted to the Bursar’s Office.

  Documentation: Memorial Service folder, notice published in the newspaper, or copy of the death certificate.

- **Serious illness or death of immediate family member, which prevents the student from completing the course(s)**
  
  Documentation for illness:
  A signed, dated, letter on letterhead from the physician for physical illness or psychiatrist or other licensed mental health professional for mental illness.

  Documentation for death:
  Memorial Service folder, notice published in the newspaper, or copy of the death certificate.

- **Job relocation or loss of employer reimbursement eligibility due to involuntary job loss**
  
  Documentation: A signed, dated, letter on letterhead from immediate supervisor or human resource administrator.

- **Unexpected increase in job responsibilities, required change in work schedule, or required travel that prevents completion of all courses**
  
  Documentation: A signed, dated, letter on letterhead from immediate supervisor or human resources administrator that specifies dates of increased workload or travel.

The documentation, as listed above, must be submitted to the Office of the Registrar prior to the end of the sixth week of the term. If the documentation is adequate and establishes a condition that prevents the student from completing the course(s), appropriate adjustments are made to the student’s account. If conditions do not merit an automatic refund, the student may make a formal appeal. The Office of the Registrar and the Bursar’s Office staff reserve the right to request that a formal appeal be made if in their judgment conditions or documentation are inappropriate or dubious.

### Formal Appeal

In cases where circumstances do not fit the criteria for an informal appeal, the end of sixth week (automatic “W”) deadline has passed, or an informal appeal is not accepted, a formal appeal for full or partial refund may be filed. Petitions are filed through PioneerWeb. Select the Student tab, locate Documents/Requests in the upper right hand section of the page and select Request for Tuition Appeal. Completed forms and supporting documentation must be submitted by noon on the first Thursday of the month. Petitions are reviewed and decided by the Tuition Appeals Committee, which meets once per month. The decision of the Committee is final and is communicated to the student by letter.

**Notes:** In accordance with federal, state and institutional regulations, approval of an appeal may require forfeiture of any financial aid proceeds received, which may result in an outstanding balance being owed to the University.
Financial Aid

Financial aid for graduate students is in large part provided by individual departments based on the mission and goals of the unit. The Office of Financial Aid does not award scholarships, grants, fellowships, or GTA/GRA waivers for graduate students. The student should contact the academic unit in which s/he is enrolled or plans to enroll. The Office of Financial Aid offers Federal Work-Study, Federal Perkins loans, Federal Direct loans and provides information on additional financing options, including Federal Direct Graduate PLUS loans and alternative (private) loans.

DU graduate students are eligible for two types of aid:

- Federal and state aid (available to U.S. citizens and permanent residents), which includes the Colorado Graduate Grant, Federal TEACH Grant, Federal Work Study, Federal Perkins Loans, Federal Direct loans, Federal Graduate PLUS loans, and
- Merit-based aid, which includes the Graduate Studies Doctoral Fellowship, Graduate Studies Doctoral Fellowship for Inclusive Engagement, divisional/departmental scholarships and awards and graduate teaching assistantships (GTA)/graduate research assistantships (GRA) awards.
   - Withdrawal and Financial Aid
   - Federal Regulations Regarding Withdrawals
   - Earned Title IV Aid
   - Repayment of Unearned Aid
   - Student and Institutional Regulations Regarding Withdrawals
   - Financial Aid Application

To apply for federal aid and certain types of institutional need-based aid, a student must complete the Free Application for Federal Student Aid (https://fafsa.ed.gov) (FAFSA). Only U.S. citizens, permanent residents and eligible noncitizens can submit a FAFSA. International students are not eligible.

The FAFSA (https://fafsa.ed.gov) is available on January 1st each year and is submitted online. The University of Denver’s school code is 001371. Applicants and students are encouraged to meet the University of Denver’s priority deadline for FAFSA submission. The U.S. Department of Education Central Processing system receives and processes the FAFSA. Once the FAFSA is processed, the student receives an email that allows access to an electronic Student Aid Report (SAR). The SAR summarizes the FAFSA information and provides a dollar amount for the Expected Family Contribution (EFC). Students should review the SAR comments and make any necessary corrections. The University of Denver Office of Financial Aid will receive the SAR information electronically from the U.S. Department of Education. Students do not need to send the University of Denver a copy.

Each academic year approximately 30% of financial aid applications are selected by the U.S. Department of Education for review. This process of review is known as verification. If a student is selected for verification, a comment will appear on the SAR. In addition, the Office of Financial Aid will send an email to a new student’s FAFSA email address or a continuing student’s University of Denver account requesting verification documentation.

Federal Direct Loans

To qualify for Federal Direct Loans, graduate students must be enrolled at least half-time in an eligible degree or certificate program (four credit hours or more per quarter/semester). To receive loans, a student must also make Satisfactory Academic Progress (SAP) in the program of study, not be in default on an educational loan and submit all required financial aid forms. Federal Direct Loans are the most common type of aid for graduate students. Eligibility is determined by information provided on the FAFSA. The Office of Financial Aid offers awards.

For students needing additional funding, other financing options are available including payment plans, Federal Direct Graduate/Professional PLUS Loans and private education loans. For information on these options, please visit the Office of Financial Aid (http://www.du.edu/financialaid/graduate) website.

Federal Perkins Loans

The Federal Perkins loan is a federally guaranteed, fixed-rate, low-interest loan for graduate students enrolled at least half-time (four credits per term). Federal Perkins loans are awarded by the Office of Financial Aid on a first-come, first-served basis to students who meet the financial aid priority date. To qualify, a graduate student must typically have an EFC of $0. Not all students who meet the eligibility requirements will receive the award. Funds are limited and awarded until exhausted. The typical annual award amount is $3,000 for the traditional academic year (fall, winter and spring quarters or fall and spring semesters). Students awarded a Perkins loan can find additional information about entrance counseling and the Master Promissory Note (MPN) on the Bursar’s (http://www.du.edu/bursar) website.

Students on Continuous Enrollment are not eligible for Federal Perkins Loans.
Federal Work-Study/Student Employment Program

This work program, funded by the federal government, provides part-time employment at an hourly wage, which is determined by the demands of the job and the skill and experience of the student employee. The program encourages community service and work related to each student’s career goals.

To qualify for a graduate work-study award, students must be enrolled in an eligible degree program. Priority will be given to students enrolled full-time who meet the priority application deadline. Students enrolled half-time, in continuous enrollment, or are in a reduced rate academic program* will be offered work-study in the amount of $1500, without the option to increase their award. Work-study will be prorated for students that: do not attend full year; switch his/her academic program to a reduced tuition program; or change his/her enrollment from full-time to half-time or continuous enrollment.

* For the 2014-15 aid year, quarter students that have a tuition rate less than $1142 per credit, semester students that have a tuition rate less than $1404 per credit. Examples include but are not limited to the Women’s College, University College, and Certificate and Licensure programs.

Students in dual undergraduate-graduate degree programs who have received the bachelor’s degree and are officially enrolled as graduate students may be eligible for graduate work-study. Students must meet the need-based fund requirements listed above and demonstrate a calculated need.

Recipients of the graduate work-study award must be enrolled half-time (at least four credit hours per term). Awards are made through the financial aid awarding process through the Office of Financial Aid on a first-come, first-served basis.

Work-study handbooks are available from the Office of Student Employment for students and supervisors and provide further details regarding work-study policies and procedures.

Background Checks

All employees, including work-study students, must fill out background check paperwork and be cleared by Human Resources as eligible to hire prior to officially being offered a position. Background checks must be run if the student has never been an employee at the University of Denver or if they have not worked at the University of Denver for more than 120 days. Overseas addresses may require additional time for processing in order for the background check to be completed.

Off-Campus Employment Website

Financial Aid maintains an off-campus job website for currently enrolled students who want jobs regardless of their financial need. This enables them to earn money to help pay education expenses. Part-time jobs are available off campus with local businesses, non-profit organizations, government agencies, University of Denver alumni and families in the Denver community. Students will earn at least the current federal minimum wage, but the amount may be higher depending on the type of work and the skills required. Additional information about part-time employment can be found on the Office of Student Employment (http://www.du.edu/studentemployment) website.

Merit-Based Funds

Merit-based awards are competitive and limited in number. Early application is always advisable. Application dates vary. Check with the college, school, or department for specific requirements and deadlines.

Graduate Studies Doctoral Fellowship

The purpose of the Graduate Studies Doctoral Fellowship (GSDF) is to assist in the recruitment of new highly qualified domestic or international students to doctoral programs at the University of Denver. Awards will be made to excellent nominees as soon as they are received and approved. A small portion of the total GSDF funds will be reserved for rolling admissions. This is a one-time award for new students and must be used in the first year of attendance.

For each student recommended, the department submits a nomination form and detailed supporting letter for each student they are recommending to the Office of Graduate Studies. Please refer to the nomination guidelines available at: www.du.edu/grad/faculty

Graduate Studies Doctoral Fellowship for Inclusive Engagement

The purpose of the Graduate Studies Doctoral Fellowship for Inclusive Engagement (DFIE) is to assist in the recruitment and retention of highly qualified students to doctoral programs at the University of Denver for the purpose of furthering the University’s mission of inclusive excellence specifically in regard to attributes such as race, ethnicity, class, gender, age, culture, religion, sexual orientation, or (dis)ability. Awards will be made to excellent nominees as soon as they are received and approved. A small portion of the total DFIE funds will be reserved for rolling admissions.

For each student recommended, the department submits a detailed nomination form and a letter from the student explaining current engagement in activities that contribute to an inclusive environment that benefits all students. Please refer to the Inclusive Engagement Fellowship Policies and Procedures (http://www.du.edu/media/documents/graduates/inclusiveengagementfp.pdf) for additional information.
GSDF and DFIE Awards and Eligibility

The maximum award that can be requested per student is $4,500 per year and $1,500 per quarter, spread evenly across the quarters of attendance. The award can be combined with other types of aid including GTA or GRA appointments in order to create a financial aid package that will assist the highest qualified students. Both fellowships are merit-based.

- Only doctoral students are eligible for these awards. Doctoral students may be domestic or international.
- The awarding of the GSDF is based on merit. While graduate units may set their own specific guidelines regarding the definition of merit, each nominee must possess high GPAs for all previous work, have attained exceptional scores on graduate entrance exams (GRE, etc.), an acceptable TOEFL/IELTS score or equivalent if an international student and have a strong letter of support from the admitting unit. Only the very best applicants should be nominated.
- Students must be enrolled for at least eight quarter hour credits of coursework (i.e., not Continuous Enrollment) during each quarter in which they receive the GSDF. If the student drops below the minimum enrollment for the quarter, the award will be withdrawn for that quarter.
- The Associate Provost approves or denies the request and the department is notified of the decision.
- The department notifies the student of the status of the award. Students with approved awards must log in to PioneerWeb (https://PioneerWeb.du.edu) and go to Financial Aid Awards to accept the award.
- The GSDF award will then be dispersed through the Office of Financial Aid.

Deans Scholarship Hours

Contact the academic unit for information on availability and requirements.

Financial Aid: Satisfactory Academic Progress (SAP)

Federal regulations require the Office of Financial Aid at the University of Denver to monitor the academic progress of all students receiving financial aid toward the completion of their degree. To retain eligibility for student aid, students must meet the terms of the Satisfactory Academic Progress (SAP) policy described here. The SAP policy is enforced in conjunction with all other University policies and procedures, including the academic suspension policy. For masters, JD, and doctoral students, SAP is checked on a yearly basis, usually in mid to late summer, and any probation or suspension is effective the following fall term. Graduate certificate program students are an exception; SAP is monitored after each term, including summer.

SAP is monitored using the three following factors:

- cumulative grade point average
- cumulative completion rate
- maximum time frame limit

Cumulative Grade Point Average (CGPA)

Graduate students must maintain a cumulative GPA of 3.0 or better (2.30 for Law students). According to the policy of the Registrar, the grade point average is determined by multiplying the credit points (e.g., B+ = 3.3) by the number of credit hours for each course. Total the credit hours attempted, total the credit points and divide the latter by the former. Grades of I, NR and W are not included in the grade point average. Incompletes that are not resolved within one year are calculated as “F” in the GPA. All grades for repeated courses are included in determining the GPA. Undergraduates have separate GPA requirements and will be calculated separately. Graduate and Law have separate GPA requirements and will be calculated separately. Official GPAs at the University of Denver are truncated at two decimal places (e.g., a mathematical result of 3.8766666 is reported as 3.87).

Cumulative Completion Rate (CCR)

In order to graduate within the maximum time frame (MTF) limit, students must complete and pass a minimum of 66.67% of all courses attempted. The courses used to calculate the CCR will be the courses the student was enrolled in at the end of week one of the academic term. Successful completion of a course of study requires a grade of Pass or D or above or a C for graduate students. Grades of W, NC, NP, WF, F, Audit, or Incomplete do not constitute successful completion of a course. All accepted transfer credits are counted as attempted, with the exception of transfer credits completed while a student is not meeting DU SAP requirements. Remedial coursework is accepted if the credit hours earned apply toward the degree or certificate program.

Maximum Time Frame Limit (MTF)

Students are required to complete all degree requirements within a percentage of the minimum credits required to graduate. The MTF for Graduate and Law students is 150%, thus a student may attempt a maximum of 135 credits in order to complete a degree that requires 90 credits. In the case of a class taken more than once, both grades will be counted toward MTF. The courses used to calculate the CCR as well as when the student has reached the MTF limit will be the courses the student was enrolled in at the end of week one. Once a student has reached the MTF limit, or at the point we determine they will go over it once they complete their required courses, the student is no longer eligible for federal or state financial aid.
Graduate students will be notified by the Office of Financial Aid by email and by mail at the current mailing address after SAP is determined if they do not meet the following criteria:

1. maintain a 3.00 CGPA (2.30 for Law students)
2. maintain an 66.67% CCR
3. complete all degree requirements within a 150% MTF limit

**Financial Aid Suspension and Probation**

Students failing to meet either the CGPA or CCR are placed on financial aid suspension and will not receive a disbursement of any financial aid until a SAP Probation Contract is completed. The SAP Probation Contract is not available online. Students are required to make an appointment with a financial aid staff person to complete the contract. Students have one term to complete the SAP Probation Contract. This will always be the fall term or the term immediately following the failure to meet SAP for certificate students. If a SAP Probation Contract is not signed, the student is no longer eligible for financial aid (unless an appeal is submitted and approved as stated below).

Once a student completes the SAP Probation Contract, the student will be able to receive financial aid for a probationary period of three quarters (two semesters) to make up the deficit. Certificate students have a probationary period of one quarter to make of the deficit. Students must meet both the CGPA and CCR by the end of the probationary period for financial aid eligibility to continue. If a student fails to meet either the CGPA or CCR by the end of the probationary period, the student is no longer eligible for financial aid.

Students will be suspended from financial aid once they reach the MTF limit (student has attempted 150% of the minimum credits required to graduate), unless an appeal is submitted and approved (please see below).

**Appeal Process**

Students who are not meeting Satisfactory Academic Progress and have extenuating circumstances surrounding their failure to abide by the above criteria may appeal their status to the Office of Financial Aid.

Examples of possible appeals include:

- a student who exceeds the maximum time frame (MTF) limit due to a change in degree program
- a student who had extenuating personal/medical circumstances that have been resolved
- a student who was studying abroad and could not reasonably be expected to complete the SAP Probation Contract in the fall term

To appeal financial aid suspension, students are required to submit the following documentation to the Office of Financial Aid: a written statement from the student explaining the reason for appeal, including his/ her program of study, anticipated completion date, a list of required courses left to complete the program, if appropriate; third party documentation surrounding the reason for the appeal. Appeal decisions will be emailed to students within three to five weeks of submission. If the Special Circumstances Committee needs more information regarding the SAP appeal to make a decision, a financial aid staff person will coordinate this effort and the time frame to make a decision will be delayed. Appeal decisions are final.

**Graduate Assistantships**

Departments assign Graduate Teaching Assistantships (GTA) and Graduate Research Assistantships (GRA) to eligible students according to the guidelines below. These policies apply to both GTAs and GRAs except where specified.

Graduate assistantships may be awarded to eligible students in the same or closely related field as their degree program.

GTA and GRA appointments are made on a full-, half-, one-third, or quarter-time basis. Assistantship awards can be made for any one quarter or all four academic quarters.

In general, full-time graduate assistants are expected to devote 20 hours per week to their assignments, half-time graduate assistants devote 10 hours and quarter-time graduate assistants devote 5 hours. However, some academic areas may require different hours.

Students must be in good academic standing in order to maintain eligibility for a GTA/GRA position. Students on academic probation or suspension are not eligible for a GTA/GRA position until that status is resolved. After two consecutive terms below 3.0 GPA a student is not eligible for a GTA/GRA position until the GPA is raised to a 3.0 or better.

**Note:** Regardless of terminology a unit or department may use to describe these positions (GXA, GSA, GA, RSA, etc.) there are only two official assistantship types of positions: a GTA or a GRA. Units, departments and recipients of these positions must follow these guidelines accordingly.
Graduate Teaching Assistant (GTA)

The GTA may assist faculty members in classroom and laboratory instruction, prepare apparatus or material for demonstration, and/or conduct tutorials and grades assignments. GTAs may also be assigned to teach courses under the supervision of faculty members. In some departments/offices, GTAs may be assigned to carry out research or administrative duties. GTAs are funded by the University budget.

GTAs who are assigned to research or administrative duties (including GAs, GSAs, etc.) are still considered GTAs and must demonstrate fluency in spoken English to be eligible to receive the GTA award. For more information, see English Language Proficiency (TOEFL/IELTS) (http://www.du.edu/media/documents/graduates/toefl_ielts_table.pdf).

Graduate Research Assistant (GRA)

The GRA works under supervision in a program of departmental or interdepartmental research. The appointment is made with the understanding that required services will contribute to the student’s professional training. GRA work is often used as part of thesis/dissertation research, with approval by the appointing department head or dean of the college or school and the thesis/dissertation supervisor.

The label “GRA” only applies to graduate assistants who receive stipend and waiver from external awards (e.g. grants or contracts).

GTA and GRA Eligibility and Required Exams

An assistantship recipient must be enrolled in an academic program during the terms in which they receive the award, stipend and tuition waiver hours. Departments may stipulate that recipients must be enrolled full-time.

Required Exams for GTA Eligibility

Any graduate applicant whose native language is not English (including US citizens and permanent residents), regardless of his/her educational background, who wishes to be considered for any graduate assistantship (except GRA) during any year of study in any graduate department at DU, must demonstrate fluency in spoken English by scoring a minimum of 26 on the Internet Based TOEFL (IBT) speaking section, an IELTS score of 8 on the speaking section and be assessed by the University of Denver English Language Center (ELC).

GTA/GRA Employment Restrictions

Students who are admitted with provisions who are appointed to GTA or GRA positions must satisfy the provisions in the time frame specified in the admission letter in order to remain eligible for a graduate assistantship.

Should a graduate assistantship recipient wish to change his/her major field of study to another college, school or department, the award is not transferable to the new department.

Students cannot hold a GTA/GRA position and a work-study position simultaneously. However, within the same academic year a student may hold a GTA/GRA and a work-study position, just not during the same term.

A graduate student cannot hold more than the equivalent of one full-time assistantship and/or student employee position, or combination thereof at any time (GTA and/or GRA). Full-time is normally defined as 20 hours per week (1.0 FTE).

Students cannot be a GTA/GRA and enrolled in the same class they would be the graduate assistant for at the same time.

Stipend and Waiver Awards

GTA and GRA positions receive both a tuition waiver and monthly stipend unless the student has completed all coursework and is registered for Continuous Enrollment. In that case, the GTA or GRA is only eligible to receive a stipend, but not a tuition waiver. Awards are made through the graduate college, school, or department. Assistantship awards can be made for any one quarter or all four academic quarters. The combination of all tuition waivers cannot exceed tuition charges (prior to any assessed fees) and waivers cannot be awarded in cash.

Assistantship awards will be full-, half-, one-third, or quarter-time. Graduate Assistants who are less than full-time receive stipend and waivers proportional to their appointment.

Normally, full-time graduate assistants receive 8-10 hours of waiver for each academic term. Awards in specific colleges, schools, or departments may vary.

There is no tuition-waiver benefit for spouses, dependents, or non-dependents of graduate assistants.

Award Duration and Use for Assistantships

When assistantship recipients have both scholarship and waiver hours available in any given term, scholarship hours will be drawn upon first to pay tuition bills. When assistantship recipients are also employees and have a combination of employee waiver, scholarship and/or assistantship waiver hours available in any given term, the employee waiver will be drawn upon first, then the scholarship hours and finally the assistantship waiver hours will be drawn upon to pay tuition bills.
Because the fiscal year ends before the summer term closes, waivers cannot be carried forward from the spring to the summer term.

Waiver hours cannot be used for interterm courses, noncredit courses, or any other fees or fines, including continuous enrollment fees.

If the student drops courses after or during the refund period for which waiver hours have been used, the waiver will not be re-awarded for future use.

**GTA Award Duration and Use**

When awards are made for multiple terms during an aid year (for instance, fall through spring) GTA waiver hours will be divided equally among the terms, except in the case of term-by-term appointments which should be entered into the specific term for which the award is to be used. Students must inform their program of their plan for waiver hour use. Appointments cannot be effective prior to the term in which the student will actually begin working; i.e., a GTA appointment cannot begin in the summer if the student will not be working until fall term. **Appointed** means that the student is working and earning a stipend.

When awards are made for a single term, waiver hours will be available for use during the term of appointment only. GTAs appointed term-by-term cannot borrow waiver hours from the future or carry over waiver hours to the next term. GTAs will not receive waiver hours during any term they are not receiving a stipend.

**GRA Award Duration and Use**

GRA awards are for one-quarter duration and GRA waivers cannot carry forward. There is no borrowing from the future and no carry-over from one term to the next, and GRA waivers cannot be made available until the term they are earned. GRA awards are subject to these policies for the life of the research grant.

Neither the stipend nor the waiver portion of a GRA award can cover any period outside of the grant or contract period. For example, if a grant or contract begins or ends at the halfway point of a term, no more than one-half of a full award (stipend and waiver) can be paid during that term.

**Late Awards**

Graduate assistant positions awarded late or after the fall term may affect other financial aid that a student is receiving.

**Taxability**

Because waiver hours are considered to be merit-based scholarships, they are not taxable income. All stipend money received by a graduate assistant is taxable income. Recipients must have a W-4 form on file in the Controller's Office (http://www.du.edu/controller/payroll).

**Hiring Graduate Assistants**

Graduate units must submit an I-9 form for graduate assistants to Human Resources within three business days of hire. When domestic students and US Citizens are hired as GTAs, the graduate unit should re-verify (but not necessarily resubmit) the I-9 when the graduate assistant has been absent for more than one term.

International students: If the visa status changes after the student has been hired, a new I-9 must be submitted.

**Background Checks**

All student employees, including GTAs and GRAs, must complete the background check process and be cleared as eligible to hire by Human Resources prior to officially being offered the assistantship.

Background checks must be run if the student has never been employed at DU before or if they have not worked at DU for more than 120 days.

**Terminating Graduate Assistants**

If a graduate assistant is proven incapable of performing the responsibilities of the position, the unit has the right to terminate the award prior to the end of the award period.

If the appointment of a graduate assistant is terminated by means other than death or disablement before the end of an academic term, the award recipient is responsible for repayment of the “unearned” share of the award, including waiver hours “borrowed” from the future (GTAs only). Repayment may occur through deductions from the final paycheck or by other means.

With permission from the appropriate budget officer, the program may hire a replacement graduate assistant and reallocate the unused portion of any remaining stipend or waiver award to the new assistant.

**Health Insurance Scholarship for Graduate Teaching and Research Assistants**

The GTA/GRA Health Insurance Scholarship covers the cost of the DU Student Health Insurance Plan (SHIP) and the Health & Counseling Fee (HCF). Eligibility is determined one time per year in the fall.
Eligibility

To be eligible for the GTA/GRA Health Insurance Scholarship, graduate assistants must meet the following criteria:

- have a full-time appointment as a GTA or GRA for fall, winter, and spring quarters
- successfully complete the requirements of their full-time appointment as a GTA or GRA for fall, winter, and spring quarters
- have a tuition waiver offer from the department averaging at least eight credit hours for the fall, winter, and spring quarters (for a total of at least 24 credits)
- register for and complete an average of eight credit hours during the fall, winter, and spring quarters (for a total of at least 24 credits of actual coursework, not including Continuous Enrollment)
- must not be registering for Continuous Enrollment (CENR) alone in any one of the three quarters
- must complete the acceptance process by the annual fall quarter deadline.

After receiving the Health Insurance Scholarship, failure to comply with any of the above listed rules may result in a hold being placed on the student’s account. The hold will not be removed until the student has re-paid the Health Insurance charges.

Students who wish to receive the GTA/GRA Health Insurance Scholarship must accept the terms and conditions of the scholarship and the award in myWeb. The award (payment) will automatically be applied to the student’s account if they have registered for classes, have been assessed the DU Health Insurance Plan (SHIP) and/or the health and counseling Fee (HCF) and have not waived the SHIP and/or HCF online.

Students who are on Continuous Enrollment or are not registered for six credits are not automatically accessed the SHIP or HCF each quarter. In order to be accessed the SHIP and HCF and receive the scholarship, students must complete the SHIP and HCF enrollment forms for Continuous Enrollment (available through the Health Center) for all applicable terms.

On-Campus Employment Authorization for International Students

Federal immigration regulations permit F-1 and J-1 students in lawful immigration status to work on campus at the school or program that holds their SEVIS record. On-campus employment may include graduate teaching assistantships, graduate research assistantships and student worker positions; international students are not eligible for work-study positions due to U.S. citizenship or permanent residency requirements.

F-1 students may work on campus without special authorization as a benefit of their immigration status. J-1 students must receive written authorization from an international student advisor or their non-DU program sponsor prior to beginning on-campus employment. J-1 employment authorizations may be approved for on-campus employment for up to 12 months. Unauthorized on-campus employment, or employment in excess of the maximum numbers of hours permitted per week, constitutes a violation of the student’s immigration status.

International students in other immigration statuses may generally not work on campus without an Employment Authorization Document issued by U.S. Citizenship and Immigration Services (USCIS).

Questions regarding the interpretation and application of immigration regulations governing the on-campus employment benefit of F-1 and J-1 students should be directed to an international student advisor in International Student and Scholar Services (http://www.du.edu/intl/isss).

Maximum Number of Hours per Week

F-1 and J-1 students may work up to 20 hours per week (part-time) during quarters of required enrollment and more than 20 hours per week (full-time) during their annual vacation quarter and during University breaks and interterm periods. These limits apply to the total number of hours worked in a single calendar week among all on-campus positions.

Definition of Employment

For immigration purposes, employment—whether on or off campus—is defined as the exchange of services for compensation, monetary or otherwise. International students must have the appropriate authorization from an international student advisor, the program sponsor, or USCIS prior to beginning any form of employment in the United States.

Definition of On-Campus Employment

Federal immigration regulations define on-campus employment for F-1 and J-1 students as follows:

- Employment for the host school or program on the institution’s premises; or
- Employment for a commercial firm that operates on the premises of the host school or program and that provides direct services to the student population, such as a campus bookstore or cafeteria; or
- Employment at an off-site location that has an established educationally affiliated relationship with the host school or program, generally evidenced by a Memorandum of Understanding.
Start of Employment Authorization

F-1 and J-1 students may begin on-campus employment immediately upon acquiring F-1 or J-1 immigration status. Students beginning a new period of F-1 or J-1 status may begin on-campus employment upon entering the United States, up to 30 days before their program start date.

Students transferring from another school or program may begin on-campus employment after the release of their SEVIS record to the University and reporting to International Student & Scholar Services. Students beginning a new program at DU after completing another program may continue working on campus in the interim provided a change of level or program has been authorized by an international student advisor and there is no break in the student's F-1 or J-1 status.

Curricular Practical Training

F-1 students may request a Curricular Practical Training (CPT) authorization from an international student advisor to participate in a paid internship, practicum experience, or other form of practical training that is an integral or required part of the student's program of study.

More information regarding CPT can be found on the ISSS (http://www.du.edu/intl/issss) website.

Academic Training

J-1 students may request an academic training authorization from an international student advisor or their program sponsor to participate in a paid internship, practicum experience, or other form of practical training that is an integral or required part of the student's J-1 program. J-1 students should consult with ISSS regarding academic training requirements.

Required Documentation to Hire International Students

Departments should refer to the University's I-9 process for verifying employment eligibility when hiring international students. Please refer to New Hire Checklist: F-1/J-1 Students on the ISSS (http://www.du.edu/intl/issss) website.

English Proficiency Requirements

F-1 and J-1 immigration regulations do not require students to have a defined level of English proficiency prior to beginning on-campus employment. However, University policy requires a specific level of achievement in English proficiency for graduate teaching assistantships.
Registration

Students must register by the appropriate deadlines for all courses they wish to attend.

Students may register for courses through PioneerWeb (https://PioneerWeb.du.edu), in the registration office located in the Office of the Registrar (http://www.du.edu/registrar), or as designated by the college or school the student is attending. Courses requiring special permissions or forms, such as independent study, restricted enrollment, those with unmet prerequisites, or those resulting in a credit-hour overload may require students to register in the Office of the Registrar. Students are expected to check with academic advisors and/or the program requirements in the academic bulletin to identify prerequisites and course restrictions prior to attempting to register for courses.

After priority registration, students may drop or add courses without approval or penalty (except for the late registration fee) through the first seven days of a quarter (summer session excluded) through PioneerWeb (https://PioneerWeb.du.edu) or during regular office hours in the registration office. All students in the following categories who do not register before the first day of the quarter are assessed a late registration service charge: continuing students, new students, students returning from leave of absence and readmitted students. The late registration service charge cannot be waived. Registrations are not processed after the designated registration period of the quarter.

Students may drop or add courses without approval or penalty (except for the late registration fee) through the first seven days of a quarter (summer session excluded) through PioneerWeb (https://PioneerWeb.du.edu) or during regular office hours in the registration office.

Please refer to the Important Dates Calendar for more information regarding registration deadlines.

Registration Offices

Registration is overseen by different offices depending upon the student’s program. Questions about registration dates, deadlines or procedures should be directed toward the appropriate registration office.

Graduate students may contact the University’s Office of the Registrar (http://www.du.edu/registrar) at 303-871-4095.

The University College Registrar (http://www.universitycollege.du.edu) can be reached at 303-871-2291.

The Sturm College of Law Registrar (http://www.law.du.edu) can be reached at 303-871-6132.

The Graduate Tax Program Registrar (http://www.du.edu/tax) can be reached at 303-871-6239.

The Graduate School of Social Work Registrar (http://www.du.edu/socialwork) can be reached at 303-871-3463.

Course Registration

Section Changes

Students may change from one section of a course to another with the instructor’s approval for the section being added. The section being dropped is deleted from the student’s record.

Adding Courses

Generally, courses may be added from the second to eighth week of a ten-week quarter with an instructor’s signature. Courses may not be added after the eighth week of the quarter. Deadlines for adding courses may differ for semester and interterm periods.

Waitlists

Contact the individual academic units for their policies on waitlisted courses.

Credit Load

A full-time graduate student may enroll for 8 to 18 credit hours each quarter.

A credit-hour load of more than 18 hours requires instructor and advisor approval and the signature of the dean of the unit. Each credit hour taken in excess of 18 hours is charged at the current hourly tuition rate.

Note: The total study load includes all courses taken at the University of Denver and at other institutions concurrently. Courses taken for no-credit (NC) are also applied toward the total study load. The maximum enrollment for any quarter is 20 credit hours.
Dropping Courses

Notification by Student of Intent to Withdraw

Students may notify the Registrar of their intent to withdraw by completing the Withdrawal Form (http://www.du.edu/registrar/forms/WithdrawalForm.pdf) or, if registered for classes, by making notification via the web, in person, by fax or by phone. The completed Withdrawal Form (http://www.du.edu/registrar/forms/WithdrawalForm.pdf) should be submitted to the Office of the Registrar (http://www.du.edu/registrar) (fax: 303-871-4300). The withdrawal date is the date that the student notifies the Office of the Registrar. It will be noted on the form. If the request to withdraw is received by another unit with registration authority, the effective date is the date that office is notified. Students who request a withdrawal via the phone are expected to read the information on the Withdrawal Form as well as that on the Withdrawal Information Sheet and Checklist (http://www.du.edu/learn/graduates/studentresources.html). During the automatic withdrawal period classes will be dropped on the date of notification.

A student must officially drop a course or a failing (F) grade is assigned. The only exception is in the case of an administrative withdrawal.

When a student ceases to attend a course, the student remains enrolled in the course unless the course is officially dropped through the appropriate registration office. A course may be dropped without instructor’s approval through the published date for automatic withdrawal (generally the end of the sixth week of a quarter). A student cannot drop a course after the automatic withdrawal (W) deadline without the instructor’s signature and advisor’s signature. All required signatures submitted to the appropriate registration office. If the drop is not requested and approved, the student remains enrolled in the course and will receive a failing (F) grade for the course. The student is liable for payment of all tuition and charges related to the course.

Students may not withdraw from courses after the eighth week of the quarter (or after the fourth week of a five- or six-week course).

In cases where the grade report indicates the student never attended, the Registrar may process the withdrawal request without referral to the Associate Provost’s office or the Graduate Academic Concerns Committee. Section and level corrections are also delegated to the Registrar’s Office.

In some cases, the student may need to submit a formal petition for an exception to academic policy to withdraw from a course.

Notes: Some programs may have more stringent policies regarding withdrawal from courses. Contact the unit for details.

Contact the Sturm College of Law for semester system withdrawal procedures.

International students who are considering withdrawing from the University should also contact the Office of International Student and Scholar Services (ISSS) in addition to following the Office of Graduate Studies procedures.

Official Drop Periods

Courses dropped through the first seven days of a quarter (Monday–Sunday, summer session excluded) are deleted from the student’s record. Tuition will be reversed through this time period (first 10 percent of the term), if applicable.

A notation designating a withdrawal (“W”) is assigned for courses officially dropped after the first week of the quarter. The course appears on the student’s record with a withdrawal (“W”) grade notation. Credit hours for the withdrawn course are not earned and the “W” grade notation is not calculated in the GPA. A course may be dropped without instructor approval through the published date for automatic withdrawal (generally the end of the sixth week of a quarter, 60 percent of the term). Withdrawal deadlines and tuition refund schedules are available at www.du.edu/registrar.

Academic Dishonesty

A student can be prevented from dropping a course in cases of suspected academic dishonesty, even during the automatic withdrawal (W) period.

In cases of suspected academic dishonesty, the Office of the Registrar (http://www.du.edu/registrar) can reinstate a course that has been dropped without notification to the student. Once the case is heard by the Office of Student Conduct (http://www.du.edu/studentlife/studentconduct) or reviewed by the unit in which the case originated, and if academic dishonesty is determined, an instructor may assign a student a failing (F) grade for the course. A withdrawal (W) for the course is not honored. If the accused student is found innocent of academic dishonesty and there has been an attempt to drop during the automatic withdrawal period, the drop is processed and a notation of withdrawn (W) assigned.

Requesting Drop When Student is Failing

An instructor may refuse to give permission to drop a course to a student who is failing the course.

Drops with Approval

After the sixth week of a ten-week quarter the instructor’s signature and advisor’s signature are required to drop a course.

Drop Deadlines

Withdrawals during the two weeks (ten class days, Monday through Friday) prior to the scheduled final examination period are not allowed.

The Office of the Registrar (http://www.du.edu/registrar) will maintain these and other important registration activity deadlines.
Notes: Some units may have different policies regarding registration processes, deadlines and procedures for adding/dropping of courses and academic dishonesty. Contact the Office of the Registrar for more details.

Registration deadlines may differ for interterm periods.

University College, Graduate Tax and the Sturm College of Law may have different policies regarding registration processes, deadlines and procedures for adding/dropping of courses. Contact their registration offices for more details.

Repeating Courses

Repeatable courses include independent research, independent study, topics courses and music performance courses. Unless it is specifically designated as repeatable, a course in which the student has received a qualifying grade may not be repeated for credit.

If a non-repeatable course is taken again, the regular tuition rate is paid and the course is counted as part of the total credit load. All grades are counted in GPA calculations. The highest grade received in the repeated course fulfills the degree requirements, but hours earned toward degree requirements are counted only once.

All repeated courses appear on student transcripts. Automated advising tools (e.g. the Academic Progress Report) may show only first grade for the course.

Course Information

Enrollment in any course implies the permission of the instructor and the department. Courses are subject to the prerequisites identified in the course description unless the instructor approves appropriate equivalent experience or study.

Graduate courses to be applied in a cognate area are subject to the approval of the major department or program.

In general, an appropriate undergraduate major as determined by the graduate program must precede a graduate major or program.

Course Number Designation

Graduate credit cannot be earned in courses numbered below 3000.

Not all 3000-level courses may be offered for graduate credit. Students should consult the course description in their unit, program, and course schedule prior to enrolling in any 3000-level course to verify it is listed at the graduate level and may count as credit for the graduate degree. 3000-level courses that are not designated as graduate level are not approved to count toward graduate degrees.

The course number consists of a three or four letter subject code that identifies the academic unit offering the course, followed by four numbers that indicate the level of the course.

Schedule Type

Independent Study

Independent study provides opportunities for the capable student to do special work under individual supervision in areas not covered by class offerings.

Projects must be undertaken within the academic term in which they are registered. Independent study may not be taken instead of, or to modify, a regular course offered by a department. In addition, independent study cannot be used to account for study taken at another university or at the undergraduate level. The study must be conducted with DU faculty at the graduate level.

The department may limit the maximum number of Independent Study credit hours a student may apply towards their degree.

The students should demonstrate qualities necessary for interested and intensive inquiry. The student, with the approval of the instructor and department concerned, must agree upon the topic and outline.

Graduate students must obtain applications for independent study projects from the Office of the Registrar (http://www.du.edu/registrar). Partial applications will not be processed and registration after published registration dates is not permitted. To be eligible for independent study, the student must be in academic good standing (i.e., 3.0 GPA for graduate students). Independent studies must be at least one credit hour and generally not to
exceed five hours. Independent study projects appear on the student’s transcript with the specific topic as the course title and academic grades (A-F) are assigned.

The responsibilities of the instructor of record are to establish specific requirements for the course of study, see that the grades are submitted, approve the credentials of other faculty involved and agree to assume responsibility if problems arise.

**Independent Research**

Independent research opportunities are available to students primarily for thesis and dissertation research or other independent research. The department may limit the maximum number of Independent Research credit hours a student may apply towards the degree.

Projects must be undertaken within the academic term in which they are registered and registration after published registration dates is not permitted.

Students obtain applications from their academic department. Incomplete or partial applications will not be processed. Upon successful completion of the project or on its termination by request of the department, the research advisor will record a final grade. The department may use the A-F grading system in evaluating the research or record “P” (pass) or “F” (fail) for the course.

The responsibilities of the instructor of record are to establish specific requirements for the course of study, see that the grades are submitted, approve the credentials of other faculty involved and agree to assume responsibility if problems arise.

**Directed Study**

A directed study course is a permanent catalog course delivered on an individual basis when the course is not offered that term. Directed studies are approved under extenuating circumstances to provide an opportunity to complete a required course.

Directed studies use the same forms and processes as independent studies. Partial applications will not be processed. Directed study courses appear on the student’s transcript with the specific course title and must be approved by the instructor and department concerned. There can be no change in the basic content of the course. In particular, this means the level, subject code, description, title, grading policy (A-F, P/NP), credits and course content cannot differ from the permanent course. Projects must be undertaken within the academic term in which they are registered. Registration after published registration dates is not permitted.

The responsibilities of the instructor of record are to establish specific requirements for the course of study, see that the grades are submitted, approve the credentials of other faculty involved, and agree to assume responsibility if problems arise.

**Experiential Learning/Internship Credit**

**Courses for No Credit**

A student may register for no credit (NC) in any course with approval of the course instructor and only where space is available. A no credit registration cannot be changed to a credit registration after the deadline for registration has passed. Furthermore, a student enrolled for credit cannot change to no credit after the end of the sixth week of the quarter. Such courses count as full credit value in determining the total study load allowed. Courses taken on a no credit basis do not apply as part of the minimum credit-hour requirements for any graduate degree. The tuition charge for no credit courses is the same as for credit courses.

If adding the no-credit course creates a course overload, it requires approval from the instructor, advisor and dean of the unit.

No credit courses are listed on the student’s permanent record with a grade of No Credit (NC). Students receiving any type of financial aid, scholarship, grants or tuition waiver should check with the Office of Financial Aid (http://www.du.edu/registrar) before registering for NC as financial aid or waiver may not cover courses taken for no credit.

**Note:** Some units may have more stringent policies regarding no credit courses. Students should consult their registration office for information.

**Auditing Classes**

Auditing privileges are extended only to full-time students who have approval of the course instructor and only where space is available. Students do not officially register for courses that are being audited; therefore, no tuition is charged and no record of the course is made. Students enrolled in a course may change to audit only if the course is dropped within the first seven days of the term.

**Note:** Auditing privileges are not available for Daniels College of Business, Graduate School of Professional Psychology or University College courses.

**Graduate Courses for Undergraduate Credit (Credit Counted Toward Bachelor’s Degree)**

With the approval of the chair of the department or the dean of the college or school, undergraduate students may request to take a graduate course for undergraduate credit.

Graduate courses taken for undergraduate credit may not be used again for credit upon enrollment in University of Denver graduate programs. Students should consult the college, school, or department before enrolling.
Forms (http://www.du.edu/studentlife/advising/documents/GraduateCreditUndergradStudent.pdf) are available in the Center for Academic and Career Development (http://www.du.edu/studentlife/advising/forms.html). The request must be approved and filed in the Office of the Registrar (http://www.du.edu/registrar) before the student registers for the graduate course and registration must be completed before the deadline of the last day for registration with credit.

**Graduate Credit for Undergraduate Students (Credit Counted Toward Graduate Degree)**

With the approval of the chair of the department or the dean of the college or school, undergraduate students who are within ten credit hours of the number required for graduation and who have fulfilled all specific degree requirements may receive graduate credit for a maximum of ten credit hours of 3000- and 4000-level courses taken in excess of graduation requirements.

Forms (http://www.du.edu/studentlife/advising/documents/GraduateCreditUndergradStudent.pdf) are available in the Center for Academic and Career Development (http://www.du.edu/studentlife/advising/forms.html). The request must be approved and filed in the Registrar’s office before the student registers for the graduate course. Registration must be completed before the deadline of the last day for registration with credit.
Transcripts

A transcript is a copy of a student’s academic record showing the academic status of the student at the time it is issued. The official transcript includes the complete academic record of courses taken at the University of Denver.

Transcripts are available from the Office of the Registrar (http://www.du.edu/registrar). However, transcripts and diplomas are not issued until all outstanding accounts with the University are paid. Students may check for current holds in PioneerWeb (https://PioneerWeb.du.edu). The Office of the Registrar (http://www.du.edu/registrar) does not hold transcripts pending a change of grade. Issued to Student is stamped on official transcripts sent to or picked up by students.

Unofficial transcripts can be obtained in PioneerWeb (https://PioneerWeb.du.edu).

Transcripts from Colorado Women’s College/Temple Buell are also available through the Office of the Registrar (http://www.du.edu/registrar).
Graduate Program Administration

Students may have questions on a range of topics from academic standards to graduation requirements. To successfully navigate the policies and practices of the institution, we invite you to take some time to read the Graduate Policy Manual.

Individual schools and departments may have additional policies particular to their graduate programs. Please make sure you understand both; however, it is important to know that unit-specific policies do not override university-wide policies. Please consider contacting the Office of Graduate Studies for questions about the university’s policies and procedures.

Grades and Reporting

University Grading System

Reporting Grades

Grades must be reported for all registered students by the grade submission deadline. For federal financial aid purposes, non-reported grades may be considered as failing. This can result in financial obligations for the student.

Never Attended

A Never Attended (NA) grade should be assigned to students who registered for a class (and appear on the roster) but never attended the class.

Failing Grades

If a student ceases attending class or submitting assignments (and has not earned a passing grade) and has not made arrangements for an incomplete (I), a failing (F) grade must be assigned.

Withdrawal (W)

For colleges, schools, and departments on the quarter system, official withdrawal during the second to sixth weeks of the term will automatically result in the recording of grades of Withdrawal (W) for all courses. In weeks six through eight W’s will be given with the instructor’s permission. If a student fails to complete a course and does not withdraw, a grade of (F) will be recorded on the transcript.

IP, NR and Incomplete Marks

Markers of IP (In Progress) or NR (Non-Reported) for courses on the transcript will turn to marks of Failing upon graduation if no grade has been assigned for the course.

Last Date of Attendance

Federal financial aid rules require institutions to record a student’s last date of attendance if the student ceases attending a class.

Last date of attendance appears on web and paper grade rosters. It is very important the university know that a student received a failing (F) grade because s/he ceased attending class. In cases where faculty do not have an exact date, an estimate should be provided (e.g., last assignment date).

Non-Passing Grades

Students who receive non-passing grades often have all non-passing grades for a term. By federal financial aid rules, the University must consider those students to have withdrawn from the University. If DU does not have accurate records, the University and the student may face financial obligations for federal financial aid.

Grade Reports

Students may view grades for courses on the web. Grades are available on the web as soon as they are validated in the Office of the Registrar. Privacy regulations do not permit the University to release grades over the telephone. It is the student’s responsibility to check his/her transcript to ensure that grades are recorded appropriately for completed courses.

For most programs at the University of Denver, grade reports are mailed upon request only. Requests to have grade reports mailed are valid through the summer term and must be renewed each academic year. Requests for mailed grade reports must be received by the last day of classes for the academic term. Grade Report Mailer forms are available in the Office of the Registrar.

Duplicate grade reports or reports requested after the end of the term may be obtained in the Transcript office for a fee.

Notes: Some units may have more specific grading guidelines and grade reporting procedures. Contact the unit for details.

Graduate Tax Program: uses a numerical grading system.
Graduate School of Social Work and Graduate School of Professional Psychology: do not award grades of D+, D, or D-.

Sturm College of Law: Faculty have 30 days after the date an exam is given to turn their grades in to the Sturm College of Law Registrar’s office. Once grades are turned in, they must be processed. Required courses must fit into the mandated mean and median, which may require several adjustments by the faculty member. After the faculty member finalizes the grades, it takes 24 to 48 hours to post the grades to the web.

**Incompletes**

An Incomplete (I) is a temporary grade which may be given at the instructor’s discretion to a student when illness, necessary absence, or other reasons beyond the control of the student prevent completion of course requirements by the end of the academic term.

Incomplete (I) grades should be assigned only when all requirements for the course have not been completed because of circumstances beyond the student’s control. Incomplete (I) grades should be assigned only when the student has made specific arrangements with the instructor prior to the end of the term. An incomplete (I) grade should not be assigned in any other circumstances.

Incomplete grades may be given only in the following circumstances:

- The student's work to date is passing; and
- attendance has been satisfactory through 60% of the term; and
- an illness or other extenuating circumstance legitimately prevents completion of required work by the due date; and
- required work may reasonably be completed in an agreed-upon time frame; and
- the Incomplete is not given as a substitute for a failing grade; and
- the Incomplete is not based solely on a student’s failure to complete work or as a means of raising his/her grade by doing additional work after the grade report time; and
- the student initiates the request for an Incomplete grade before the end of the academic term; and
- the instructor and student complete the Application for Incomplete Grade form before the end of the academic term.

Appropriate grades must be assigned in other circumstances. A failing grade and last date of attendance should be recorded for students who cease attending class without authorization. Students who are unable to complete a course and who do not meet these circumstances should consider dropping the course.

Once the coursework is completed and graded, the instructor must submit the grade using the University’s grade change process. It is in the student’s best interest that incomplete grades are made up by the end of the following academic term. Incomplete grades must be made up and final grades submitted within one calendar year. Only under the most extenuating circumstances may an Incomplete be made up more than one calendar year from the date it is recorded and only with approval of the dean of the unit in which the course was taken. The coursework may be completed while the student is not enrolled.

Incomplete grades will expire on the date selected by the professor when the grade of incomplete is entered. This date will be no more than one calendar year from the last day of classes of the quarter in which the incomplete was incurred. Faculty may enter a default grade that will appear on the transcripts should the expiration deadline lapse without further action on the part of the student. Incomplete grades may be replaced with letter grades prior to the expiration deadline with faculty approval through PioneerWeb.

Incomplete grades appear on the transcript for up to one year and they do not affect the grade point average at this stage. After one year, or at the time of graduation, incomplete grades will change to (F) and affect the GPA. (This policy affects incomplete grades given in fall 1995 and thereafter. Prior to 1995, unchanged incompletes remain on the permanent record as part of hours attempted and are calculated as a failing (F) grade in the GPA.) Notation of the original incomplete status of the grade remains on the student’s transcript along with the final grade.

An Incomplete grade may not be considered passing for purposes of determining academic standing, federal financial aid eligibility, athletic eligibility, or other purposes.

An Incomplete should not be assigned when it is necessary for the student to attend additional class meetings to complete the course requirements. Students who receive an incomplete grade in a course must not re-register for the course in order to remove the (I). An Incomplete should not be assigned where the normal practice requires extension of course requirements beyond the close of a term, e.g., thesis or project type courses.

**Note:** Some graduate units may have more restrictive policies.

Markers of Withdrawal, Incomplete or Failing grades on a student’s transcript may impact their satisfactory academic progress for determining federal aid eligibility. Contact the Financial Aid office for further information.
Academic Standards

Grade Point Average

The grade point average (GPA) is determined by multiplying the credit points (for example, B+ = 3.3) by the number of credit hours for each course. Add up the total credit hours attempted, total the credit points and divide the number of points by the number of hours.

Grades of I, IP, NC, NR, W, NP or P are not included in the grade point average. Incomplete grades that are not completed within one calendar year from the quarter the original course was taken are converted to grades of ‘F’ in the GPA. All grades for repeated courses are included in determining the GPA.

Good Academic Standing

Graduate students must maintain a cumulative GPA of 3.0 or higher to be in good academic standing.

Note: GPA Requirements for Sturm College of Law students may be different.

Below 3.0 Grade Point Average

Any student whose overall grade point average falls below a 3.0 are no longer in good academic standing and may be warned, put on probation, suspended or terminated, depending upon the grade point deficiency. It is the program’s responsibility to inform the student of the deficiency and the student must contact his/her advisor to develop a plan to remedy the student’s academic deficits.

After three consecutive quarters (two semesters) of deficit or, in the opinion of the student’s advisor, department chair and/or dean, the student is incapable of raising his/her GPA to 3.0, or finishing requirements for the degree, the student may be terminated from the program.

Students whose GPA falls below a 3.0 may not be eligible for some types of financial aid. For more information, see Section 8.4 Financial Aid: Satisfactory Academic Progress (SAP) or contact the Office of Financial Aid for details.

Graded Work Accepted for the Degree

In no case may more than one-fourth of the hours accepted toward the degree be of “C” grade. A grade lower than “C-” renders the credit unacceptable for meeting University degree requirements. Grades of “C-” or better qualify for graduate credit but may not count towards the degree requirement. Students should consult with the unit to understand the minimum grade requirement.

Students cannot take more than eight-quarter hours beyond the degree requirements in order to make up grade deficiencies. These additional credit hours should be relevant for the degree and approved by the student’s advisor. Students whose grades are still deficient after taking the additional eight hours are terminated from the degree program.

Note: Satisfactory grades for the Sturm College of Law may be different. Consult the unit for details.

Repeating Courses

Repeatable courses include independent research, independent study, topics courses and music performance courses. Unless it is specifically designated as repeatable, a course in which the student has received a qualifying grade may not be repeated for credit.

If a non-repeatable course is taken again, the regular tuition rate is paid and the course is counted as part of the total credit load. All grades are counted in GPA calculations. The highest grade received in the repeated course fulfills the degree requirements, but hours earned toward degree requirements are counted only once.

All repeated courses appear on student transcripts. Automated advising tools (e.g. the Academic Progress Report) may show only first grade for the course.

Candidate Status and Completion of Coursework

Advanced degrees are not awarded automatically on completion of the required number of courses or hours of credit and the candidate’s status is subject to review at any time.

Grade Changes

Grades submitted by instructors at the end of the term are final and are not subject to change by reason of revision of judgment on the part of the instructor. Grades cannot be changed on the basis of a second trial, such as a new examination or additional work undertaken or completed after the grade report has been recorded, or by retaking the course.

In the event of a grade error, the faculty member should change the grade using the University’s grade change process. Any correction or appeal of a grade must take place in the term following the one in which the grade was assigned.
The initial reporting of a grade does not require the grade change process; if the grade was not recorded or if the course is listed as IP (In Progress), a memo on departmental letterhead will suffice to report the grade.

Note: Some graduate units may have more restrictive policies. Contact the academic unit for details.

Probation

Any student whose overall grade point average falls below a 3.0 will be placed on probation.

It is each program’s responsibility to inform the student of their probationary status. The student must contact his/her advisor to develop a plan to remedy the student’s academic deficits. After three consecutive quarters (two semesters) of deficit, the student will be recommended for termination from the program.

Note: Requirements for probationary status for Sturm College of Law students may be different. Students should consult the unit for appropriate procedures.

Suspension

Students may be suspended from the University for academic or behavioral misconduct and may not be permitted to enroll for a period specified as part of the terms of their suspension.

The University will not accept courses completed at another institution while the student is under suspension.

A suspended student who wishes to re-enroll must reapply through his/her program’s admission office.

Termination

A student will be recommended for termination from his/her graduate program for the following reasons:

- the student maintains a GPA lower than 3.0 for three consecutive quarters (two semesters)
- in the opinion of the student’s advisor, department chair and/or dean, the student is incapable of raising his/her GPA to 3.0 or finishing requirements for the degree
- a department can document that a student will not be returning
- the time limit for completing provisions has expired
- the time limit for completion for the degree has expired
- the request for an extension of time has been denied
- the student wishes to change to another degree program outside of the college, school, or department in which s/he is currently enrolled
- severe academic or behavioral misconduct
- violation of the Honor Code

If the student chooses to reapply to a program after being terminated, the time limit to complete the degree may not automatically be reset and there is no guarantee a student will be readmitted, even if s/he reapplies.

Notes: Some programs may have more stringent policies. Contact the unit for details.

Requirements and procedures for termination for Sturm College of Law students may be different. Students should consult the unit for appropriate procedures.

Mandatory Withdrawal Policy

A student will be subject to mandatory withdrawal if the Associate Provost for Graduate Studies or his/her designees, in consultation with appropriate university administrators, has probable cause to conclude that the student has engaged or threatens to engage in the following:

- poses a significant danger of causing imminent physical harm to others
- impedes the lawful activities of other members of the campus community
- reasonably demonstrates an inability to maintain academic progress at the University
- fails to comply with a request for mental health evaluation after exhibiting behavior that poses imminent self-harm.

Except in emergencies (see Mandatory Interim Emergency Withdrawal Policy) at least seven days advance notice will be given to the student if s/he may be subject to mandatory withdrawal. The time and place of the informal hearing will be included in the notice.

The student may be asked to undergo a physical or psychological evaluation to assist the Associate Provost in his/her determination. A student who does not complete a requested evaluation may be withdrawn pursuant to the emergency policy.
After at least seven days, an informal hearing will be held, wherein

- The Associate Provost or his/her designee and the Director of Health and Counseling Services will review any physical or psychological evaluation that they may have and give the student the opportunity to review and discuss that evaluation.
- The student may be accompanied by medical or mental health professional, faculty member, or another person of his/her choice who may serve as an advocate.
- A decision regarding continuance or withdrawal from the University will be made by the Associate Provost or his/her designee.
- A statement of reasons will be made and filed with the student’s record for any decision requiring a student’s mandatory withdrawal from the University. This statement will include the requirements for re-admission to the University. These requirements may include a mandatory period of separation from the University to allow for treatment and recovery. Record of the withdrawal will be released only under circumstances described by the Federal Educational Rights and Privacy Act (FERPA)

Mandatory Interim Emergency Withdrawal

An interim emergency withdrawal may be implemented immediately by the Associate Provost for Graduate Studies or his/her designee if any of the following conditions are felt to be present:

- the student’s behavior poses a significant danger of causing imminent physical harm to others, or
- the student suffers an accident or illness that gravely disables him/her, or
- the student is impeding the lawful activities of other members of the campus community

A student withdrawn on an interim basis shall be given an opportunity to appear personally before the Associate Provost or his/her designee within 48 hours from the effective date of the interim withdrawal in order to discuss the following issues only:

- the reliability of the information concerning the student’s behavior, and
- whether or not the student’s behavior poses a significant danger of causing imminent physical harm to others, or of impeding the lawful activities of other members of the campus community

A student subject to such an interim withdrawal may be asked by the Associate Provost or his/her designee to release and submit the following information prior to continuing his/her educational program and/or returning to campus:

- Written statement by an appropriate licensed health care provider, including:
  - A description of the problem(s) that led to the student’s interim withdrawal, including diagnoses, and indicating that the student, at the time of evaluation by the health care provider, is medically able to resume study at the University.
  - In addition, the health care provider must list any medications prescribed for the student, any side effects that may affect the student’s ability to attend and complete classes, whether any prescribed medications require monitoring, and the name of the treatment provider designated to monitor the medication.
- The student must sign a HIPAA-compliant consent form for release of the information by the provider.
- Submit a completed Treating Health Care Provider Questionnaire form provided by the University.
- The name of a health care provider who is providing continuing treatment and/or may be contacted in an emergency.
- Releases of information signed for DU’s Health and Counseling Center and the Associate Provost’s office to consult with each other and with the treatment provider.

After reviewing the information, the Associate Provost or his/her designee may decide:

- to readmit the student
- to readmit the student pending the informal hearing, or
- to continue the withdrawal pending the informal hearing.

Administrative Withdrawal

Students are administratively withdrawn from courses that are canceled by the University.

Canceled courses are deleted from the student’s record and tuition charges reversed, if appropriate. Students are notified of the cancellation by the college, school or department responsible for offering, and subsequently canceling, the course.
Student Withdrawal from the University

Withdrawing (Temporary or Permanent)

Students considering time away from graduate study must communicate with the University prior to taking time off from the graduate program and fill out the appropriate paperwork. There are two types of withdrawals, temporary and permanent. Regardless of withdrawal type, the first step for students enrolled in courses is to officially drop courses.

Temporary Withdrawal

This is for students planning to resume studies at the University of Denver. This type of withdrawal includes personal and medical leaves. The approved Leave of Absence form must be submitted to the Office of Graduate Studies (students in Law, Business, Social Work, UCOL and International Studies return the form to the college's student service office instead of the Office of Graduate Studies) prior to any leave.

Permanent Withdrawal

Students wishing to discontinue graduate study must communicate the decision to permanently withdraw from the graduate program in writing to the University.

Things to Consider Prior to Withdrawing

Students who wish to drop all courses in a term and take a leave of absence or withdraw permanently from their programs are advised to consider the impact on the following items:

Timeline for Degree Completion, Cohort Placement and Degree Requirements

While on an approved leave of absence, students are guaranteed a place in their current program when they return to the University, provided all deadlines and rules are observed. Some units may have more restrictive guidelines for a leave of absence. Students should consult with their unit and program for more information before deciding to take leave. Students returning from leave have the same registration priority as continuing students. It is important to note that students are still held to the original timeline for completion of the degree, unless a student is on an approved medical leave of absence. Special Status, or non-degree seeking, students or students who are beyond the time limit to complete their degrees are not eligible for a leaves of absence.

Students who permanently withdraw may not re-enter the program without applying for and being re-admitted to the academic program. They are accepted under the newest bulletin requirements.

Tuition and Fee Payment and Refund Schedule

Outstanding debts must be cleared with the Bursar’s Office. A student’s leave application will be accepted even if they owe money to the University. However, students will not be allowed to register for future terms if they have any outstanding debts to the University. In the case of extenuating circumstances that are beyond the student’s control, a student may appeal for an exception to the University's refund policy.

Withdrawal Deadlines

Enrolled students should review the academic calendar (http://www.du.edu/registrar/calendar) and be aware of the important dates and term specific withdrawal deadlines.

Health Insurance Coverage

University of Denver Health Insurance coverage may be interrupted or discontinued. To learn more about the coverage, students should consult with the staff in the Health and Counseling Center (http://www.du.edu/health-and-counseling-center) at 303-871-2205.

Financial Aid, Scholarships, Work-Study, GTA/GRA and Loan Repayment Terms

Students should be clear about the impact of withdrawal on loan repayment requirements as well as scholarships, teaching assistantships and other forms of University aid. While on a leave of absence, students are not eligible to receive financial aid, including work-study. Some forms of University aid (i.e. GRA and GTA positions and other scholarships or fellowships) are not guaranteed to be reinstated if a student takes a leave of absence. In addition, student loan repayment terms may be impacted and in some cases repayment may begin when a student goes on Leave. It is the students’ responsibility to notify their lender they are taking a leave of absence and will not be enrolled in school.

Students should apply for financial aid well in advance of the term they expect to return to school so their disbursement is available at the beginning of the term. Contact the Office of Financial Aid (http://www.du.edu/financialaid) for additional information.

F-1 or J-1 Visa Immigration Status for International students

International students who are interested in withdrawing should be aware of certain restrictions in the immigration laws. Nonimmigrant students may not remain in the United States in F-1 or J-1 immigration status if they are not enrolled full-time in school unless they meet certain criteria and have approval from International Student and Scholar Services (ISSS). In order to take a Leave, international students may need to either leave the United States while
out of school or change to another non-immigrant status. Before withdrawing and applying for a Leave, international students should consult with an adviser in the ISSS office.

**University Housing Contract**

Housing contracts are for the entire academic year; please see housing policy to understand approved reasons for checking out during the academic year. Students must check out of the apartment within 24 to 48 hours of withdrawing.

**Benefits for Veterans**

For students receiving veterans’ benefits, Veteran Services in the Office of the Registrar should be notified of withdrawal plans.

**Parking Permits and Unpaid Citations**

Unpaid citations must be cleared with Parking Services and parking permits should be returned to avoid additional costs.

**University Libraries Books and Overdue Book Fines**

All library books should be returned and overdue book fines should be paid prior to withdrawing.

**Contact Information**

It is university policy that students maintain a preferred off-campus address and email account. It is each student’s responsibility to keep both a current mailing address and email address updated while on leave. If a student’s address changes while on Leave, the address should be updated through PioneerWeb (https://PioneerWeb.du.edu).

**Personal Leave of Absence**

A graduate student may withdraw from the University temporarily or permanently for non-medical reasons. For medical circumstances, see Section medical leave of absence. Students who wish to withdraw permanently from their programs should notify the University in writing. A graduate student who wants to take time off from the University must fill out the Application for Leave of Absence for Graduate Students. The form must be signed by the student’s advisor and turned into the Office of Graduate Studies by the Registrar’s published deadline to drop classes. Students who are currently enrolled for the quarter during which they wish to begin a leave of absence must first withdraw from courses for the quarter during which they apply for Leave. Students who fail to withdraw will be liable for full tuition and fee charges, and a failing grade may be recorded for every course for which the student is registered.

In general, Leaves of Absence are for students who want to take a period of time away from the University (excluding summer) with the intent to return. The maximum period of time for a single leave of absence is three consecutive quarters, excluding summers. Students who need an additional leave of absence should file a new application for a leave of absence. While on an approved leave of absence, students are guaranteed a place in their current program when they return to the University, provided all deadlines and rules are observed. Some units may have more restrictive guidelines for a leave of absence. Students should consult with their unit and program for more information before making a decision about whether to take a leave. Returning students have the same registration priority as continuing students. It is important to note that students are still held to the original timeline for completion of the degree.

Students who are called to active military duty while enrolled should apply for a leave of absence. Active Peace Corps volunteers may apply for a leave of absence for the term of their Peace Corps service.

Students on a formal internship, cooperative education, or clinical placement program as part of an academic program at DU should not apply for a leave of absence as they may need to be enrolled for internship or practicum credits. Instead, students should work with their graduate unit to be sure they are in compliance with program requirements.

Students who have outstanding judicial sanctions or actions due to violations of the Honor Code will not be considered in good standing with the University of Denver and must first be cleared by Student Conduct before they may be readmitted to DU. Please contact Student Conduct (http://www.du.edu/studentlife/studentconduct) with any questions before applying for a leave of absence.

Prior to returning to the University, students should contact their advisers for information on choosing courses appropriate for each academic program. Please contact the appropriate student services office with questions about returning to the university and registering for courses. International students must contact ISSS (http://www.du.edu/intl/isss/about.html) to obtain proper immigration documents before returning.

**Medical Leave of Absence**

A medical leave of absence may be requested for serious mental and/or physical conditions that prevent a student from functioning successfully or safely as a member of the University community. A medical leave of absence provides students up to one year of relief from coursework and time-to-degree requirements (except for the Sturm College of Law students). Generally, a student may request a medical leave of absence a total of two times while enrolled in an educational program at DU. Students may apply up to the last published day of classes. In addition, if the medical leave is approved, tuition for the quarter in which the student begins the leave may be refunded. Medical withdrawal is not intended as a strategy to shield a student from
unsatisfactory progress or any other academic irregularity. Any student on a medical leave of absence may not enroll for any courses at any institution unless required as a part of the health care plan.

Transfer of credit toward a DU degree for courses taken while on leave is not guaranteed. A medical leave of absence is only allowed for students who are dealing with their own personal health circumstances. Students seeking a leave of absence for other reasons may apply for a personal leave of absence and refer to the forms and polices for a leave of absence.

**Processing a Medical Leave of Absence**

- The complete Application for Leave of Absence for Graduate Students (http://www.du.edu/media/documents/graduates/personalleave.pdf) and all relevant medical documentation must be submitted within two weeks of the last date the student attended classes and no later than the published last day of classes.
- If the documents (Application for Leave of Absence for Graduate Students (http://www.du.edu/media/documents/graduates/personalleave.pdf) and official medical documentation) are completed and submitted before the end of the sixth week of the term, all courses will be dropped, the relevant departments will be notified on the student’s behalf, and tuition refunded.
- If the completed application and supporting medical documentation are submitted after the sixth week of the regular academic term and before the published last day of classes, the student may be required to petition separately for a late withdrawal from courses and file a formal appeal for a tuition refund. For summer, interterm or intensive short courses, please refer to the Academic Calendar (http://www.du.edu/registrar/calendar) on the Office of the Registrar’s (http://www.du.edu/registrar) website for current add/drop dates.
- Students may not apply for a Medical Leave of Absence for a term which has ended. Please contact the Office of the Graduate Studies (http://www.du.edu/learn/graduates/studentresources.html) to discuss what options might be available for future terms.

**Medical Documentation**

Appropriate medical documentation must be submitted with the Application for Leave of Absence for Graduate Students (http://www.du.edu/media/documents/graduates/personalleave.pdf) and must include the following:

- a signed and dated letter, on clinic letterhead, from a medical care provider appropriate for the medical condition indicated
- diagnosis of the condition, indicating confirmation that the condition prohibits the student from attending classes and/or completing coursework

**Returning from a Medical Leave of Absence**

As a condition of accepting a medical leave of absence, students agree to obtain appropriate medical treatment before returning to the University. To be eligible to return, students must submit documentation from an appropriate health care provider. At least two weeks before the start of the term a student plans to return to classes, the following items must be submitted:

- a signed and dated letter, on clinic letterhead, from a medical care provider appropriate for the medical condition indicating the student, at the time of the evaluation by the health care provider, is medically able to resume study at the University
- the health care provider must also submit a completed Health Care Provider Questionnaire, available from the Office of Graduate Studies (http://www.du.edu/learn/graduates/studentresources.html).

The Associate Provost for Graduate Studies, or the Associate Provost’s designee, has final determination as to whether the documentation the student has submitted is sufficient.

It is the student’s responsibility to submit medical documentation and necessary letters/forms with sufficient time to allow for processing and priority registration if approved to return. All other provisions for returning to the University apply (e.g., registration holds, etc.).

If a graduate student has not been approved to return to study within one calendar year of taking the Leave, the degree time limit is reinstated, and the student will be placed on inactive status until the time to degree expires and/or the appropriate documentation is submitted to the Office of Graduate Studies required to return from a medical leave of absence. Students may be eligible to reapply.

All other provisions and procedures for non-medical Leaves of Absence apply. Please review the general (personal) leave of absence policies for more information.

Students may also seek grades of “Incomplete” in their course(s), if eligible.

**Enrollment Status**

**Regular Enrollment**

The University’s definition of full-time graduate study is eight credit hours or more of coursework or research credit per quarter. Half-time students are enrolled in four to seven credit hours. Less than half-time students are enrolled in one to three credit hours.
Some graduate programs and fellowship awards may require more than eight credit hours of enrollment per quarter to be considered full-time. Contact the individual graduate unit regarding specific enrollment requirements.

**Concurrent Enrollment**

Students may enroll concurrently at another college, school, or university only if they are pursuing a requirement not currently offered at DU and if the concurrent enrollment does not result in an unacceptable credit overload.

The total study load includes all courses taken at the University of Denver and at other institutions concurrently. Courses taken for no-credit (NC) are also applied toward the total study load. The maximum enrollment for any quarter is 20 credit hours.

**Consecutive Term Enrollment**

All graduate degree-seeking students must be in active status and enrolled for consecutive terms fall through spring.

Enrollment may consist of registration for courses, thesis or dissertation credits, or Continuous Enrollment registration. The minimum thesis or dissertation credit requirements are determined by the individual graduate programs which may require students to register for additional thesis or dissertation credits to maintain degree candidacy. A graduate student who is not in active status and not consecutively enrolled must apply for readmission and pay any continuous enrollment fees owed for previous quarters, if applicable.

Unless a student is on an official leave of absence, a student’s status is rendered inactive after one quarter of non-enrollment. The student will not be able to register for courses and will need to submit a Readmission form to the program.

Students not planning to be consecutively enrolled must apply for a leave of absence from the university.

*Note: Academic units and programs may have additional registration and/or enrollment requirements. Contact the unit for more information.*

**Student Status Definitions**

**Active Status**

Active status (AS) means a student who:

- is eligible to register or registered for the current term
- is on an approved leave of absence (medical or personal)

**Inactive Status**

Inactive status (IS) means a student who:

- is neither active nor terminated
- has been awarded a degree

**Inactive Withdraw (IW)**

Inactive withdraw is when a student initiated termination and means a student who:

- has officially withdrawn from the University with no plans to complete degree
- has withdrawn from one degree program to change to another degree program outside of the college, school, or department.

**Dismissed Academic (DA)**

Dismissed academic is when a graduate unit initiated termination for academic reasons and means a student who has been institutionally withdrawn from the University in accordance with University policy.

**Dismissed Conduct (DC)**

Dismissed conduct is when a graduate unit initiated termination for conduct reasons and means a student who has been institutionally withdrawn from the University in accordance with University policy.

**Suspended Academic (SA)**

Suspended academic is when the institution initiated suspension for academic reasons and means a student who has been institutionally suspended from the University in accordance with University policy.
Suspended Conduct (SC)
Suspended conduct is when the institution initiated suspension for conduct reasons and means a student who has been institutionally suspended from the University in accordance with University policy.

Continuous Enrollment
Registration for Continuous Enrollment (CE) is limited to students who have completed all required coursework (with the exception of independent research hours 4995/5995) and are pursuing academic work/research necessary to complete a degree. CE is designed primarily for students who are working on a thesis, dissertation, or research paper/capstone.

Students who have completed all their coursework and are working on non-thesis research papers, capstones, performance, or other creative work enroll for four credit hours. Students who have completed all their coursework and are working full time on a thesis or dissertation enroll for eight credit hours. Doctoral students who have completed all coursework are eligible for continuous enrollment during the preparation of the doctoral comprehensive examinations. CE hours will not appear on student transcripts.

Students enrolled in the dual undergraduate-graduate program who have earned the baccalaureate degree and have completed all required graduate coursework and are working on a thesis are eligible for graduate CE.

CE is not to be used for students who are only engaged in required internships and practicums. Students should register for internship and practicum courses through their department.

Students should be enrolled in CE by the end of the 100% reimbursement/drop-add period to be eligible for the university health insurance and health fee, plus loan deferment. Students who do not enroll prior to the first day of classes of a given quarter will be charged late registration fees as determined by the Registrar.

CE enables students to maintain active status with the University and access to university resources including library, email, lab access, participation in the DU Student Health Insurance Plan and Health & Counseling fee services, and part-time student rates at the Coors Fitness Center. Students who are appointed DU employees must pay the Coors Fitness Center faculty/staff rate.

CE is not to be used for enrollment purposes while making up an incomplete grade. An exception is if all other coursework is completed and the student is working on the thesis, dissertation or research paper/capstone while completing the work required for the incomplete grade. It is the responsibility of the student and graduate college, school, or department to make this determination prior to approving eligibility for CE credit.

Registration in Continuous Enrollment
CE requires annual approval by the student’s faculty advisor, the Dean and/or the Associate Provost. Students are responsible for registering themselves in CE each quarter by the appropriate registration deadlines.

Continuous Enrollment Approval forms must be returned to the appropriate student services office.

Approval by the Dean is required for the Graduate School of Social Work, the Josef Korbel School of International Studies, and the Morgridge College of Education.

Approval by the Associate Provost’s office is required for all divisions, schools, and colleges.

Permission to enroll in CE is granted for up to one academic year beginning in the fall quarter. Students requiring CE after fall quarter registration must complete and submit the form prior to the beginning of the subsequent quarter (winter, spring and summer) in order to be enrolled in CE. To avoid late fees, the student must submit a new form for fall quarter of the following academic year.

After permission to enroll is granted, students are responsible for registering themselves online for CE each quarter. Registration for CE must follow the Registrar’s deadlines. To avoid late registration charges, students must register for CE prior to the first day of classes. To be eligible for health insurance and loan deferment, students must be registered by the end of the 100% refund period. Hours added after that time will not count towards financial aid eligibility.

There are five course codes for CE. Students register for the appropriate type of CE depending on their thesis/dissertation requirements and financial eligibility status.

- **CENR 4500 Non-Thesis (4 credits)**
  Master’s level students working on non-thesis research papers, capstones, performance, or other creative work.

- **CENR 4600 Thesis (8 credits)**
  Master’s level students working on a thesis

- **CENR 5600 Doctoral (8 credits)**
  Doctoral level students working on a dissertation
• CENR 4500, CENR 4600, and CENR 5600 registrations will confer loan eligibility or loan deferment if the student is eligible to receive financial aid. Students with an approved time extension for completion of their degree program, but who are no longer eligible for financial aid because they are past the aid eligibility time limit (seven years master’s level, six years for MSW, or ten years doctoral) register for

• CENR 4700 Master’s Level, Non-Financial Aid Eligible (0 credits).1

• CENR 5700 Doctoral Level, Non-Financial Aid Eligible (0 credits).1

1 These courses do not confer loan eligibility or loan deferment.

Notes: Students in University College, the Sturm College of Law, Graduate Tax and the Daniels College of Business are not eligible for continuous enrollment.

Peace Corps students are NOT to be put on continuous enrollment for the duration of their Peace Corps assignments. These students must follow the Peace Corps’ procedures for maintaining appropriate loan deferment status.

Morgridge College of Education doctoral students and students in the DU-Illiff Joint PhD program are required to register for dissertation hours in addition to continuous enrollment. Contact the unit for details.

Some units may have more stringent policies. Contact the unit for details.

Fees and Readmission

Students must register and pay for CE on a quarter-by-quarter basis. In addition to the standard CE fee, technology fees will be assessed based on part/full-time status (four/eight quarter hours).

Students who have finished their coursework but who have become inactive because they were not registered for CE or on an approved leave of absence from the program must complete the Continuous Enrollment Application for Re-Admission. The student must submit transcripts from any institution(s) s/he may have attended during his/her absence from DU.

The student will owe CE and technology fees for the quarters s/he was not enrolled from winter quarter 2005 forward. In addition, a late fee may be assessed at the time of readmission. Paying fees for previous quarters will not make the student eligible for retroactive enrollment, financial aid, or retroactive loan deferment.

International Students

Federal immigration regulations require F-1 and J-1 students to enroll full-time for at least three quarters (or fall and spring semesters for law students) each academic year in order to maintain their immigration status. Exceptions to this requirement may only be authorized by an international student advisor or the program sponsor under very limited criteria.

Federal immigration regulations permit the host institution to define full-time enrollment for F-1 and J-1 students studying at the graduate level. The University defines full-time enrollment for graduate students as eight or more credit hours. To comply with the full-time enrollment requirement, F-1 and J-1 students must enroll in continuous enrollment after all coursework is completed or during the final quarter of coursework, if registered for less than eight credits, while working on the thesis or dissertation.

International students must also maintain acceptable levels of health insurance coverage during their academic program, as required of all students by the University. In addition, the U.S. Department of State requires J-1 students to maintain health insurance coverage throughout their exchange program in order to maintain their J-1 immigration status.

F-1 and J-1 students must receive authorization from an international student advisor or their program sponsor prior to dropping below full-time status in an academic quarter when enrollment is required. Failure to receive prior authorization to drop below full-time status is a violation of the student’s immigration status and will result in the loss of the student’s authorization to lawfully study in the United States.

F-1 and J-1 students should enroll in continuous enrollment (CENR 4600 or CENR 5600) in order to comply with the full-time enrollment requirement while working on the thesis or dissertation, even if they have reached the maximum limits for their degree programs. Registration in continuous enrollment courses does not confer loan eligibility or loan deferment benefits on a student.

Financial Aid Loan Eligibility and Loan Deferment

United States citizens and permanent residents participating in CE may be eligible for student loans and loan deferment as long as they are within the maximum time frame allotted for their program.

Students enrolled in CE are eligible for Federal Direct Loans and Federal Work-Study only. The maximum work-study award may be awarded in the amount of $1500, without the option to increase the award.
Students registered in CE are not eligible for waivers, scholarships, or some forms of financial aid that requires the student to be enrolled on a full-time basis (eight credit hours or more). These include the Graduate Studies Doctoral Fellowship and the Graduate Studies Doctoral Fellowship for Inclusive Engagement. Students are also not eligible for Perkins Loans, which require the student to be enrolled on a half-time basis (four credit hours or more).

However, students on CE may receive a GTA or GRA, as long as they are not required to be enrolled on a full-time basis (eight credit hours or more) according to departmental guidelines.

Registration in CE does not guarantee eligibility for financial aid.

Students must follow the loan procedures established by the Office of Financial Aid (http://www.du.edu/financialaid), and must contact the Office of Financial Aid for details on eligibility for loans and loan deferment. Satisfactory progress towards the degree must be verified.

Eligibility for loans and in school loan deferment ends after seven years in a master’s program (six years for the MSW), and after ten years in a doctoral program. Time away from the program (e.g., Leave of Absence, Medical Leave of Absence, or other non-enrollment periods) will count against the loan and loan deferment eligibility time limit. There are alternatives to the in school loan repayment deferment that may be applicable. To find out more information about a forbearance or economic hardship deferment, please contact the Office of Financial Aid, or your lender. Students are responsible for submitting lender-required loan deferment forms to the Office of the Registrar (http://www.du.edu/registrar).

Health Insurance and Continuous Enrollment

Students who are on CE are not automatically assessed the Student Health Insurance Plan (SHIP) or health and counseling fee each quarter. SHIP enrollment is available twice a year, in the fall and spring. The Health & Counseling Fee enrollment is available every quarter. Please contact the Health and Counseling Center to discuss enrollment deadlines and payment options, 303-871-2205.

Change of Degree or Program

A student wishing to change major or concentration, or wishing to change to a lesser degree (doctoral to master’s level), within the same college/school must request that the graduate unit submit a completed change of major form to the appropriate student services office. Graduate units reserve the right to request that the student submit a full application for admission (which includes the application fee) to the appropriate admissions office, instead of a change of major form.

A student wishing to change to a major or degree outside of the current college/school, or wishing to change to a higher degree (master’s level to doctoral), must submit a full application for admission, including an application fee and supplemental admissions documents, to the appropriate admissions office.

A graduate student who wishes to change to another degree program must be terminated/withdrawn from the program of original admittance and accepted into the new degree program.

Note: Some units may have alternative procedures for changing degree programs. Contact the unit for details.

Readmission

Readmission for Inactive Students

Students who are within their time limits for completion of their degrees, but have interrupted their graduate programs by not registering for one or more consecutive terms (excluding summer) without properly withdrawing by requesting a leave of absence, must submit a readmission form to the program.

Students who still have coursework to complete must submit an application for readmission and indicate the last term attended and the expected term of re-entry. The department must approve the request for readmission and the student must submit transcripts from any institution(s) attended during absence from DU. Once readmission is complete, students may register during the regular registration period, including priority registration, according to the Registrar’s deadlines.

Readmission for Terminated Students

Students who have been terminated from a program or have an expired time limit for degree that wish to be readmitted need to complete the following:

1. Submit a new application to the program and meet the current admissions criteria.
2. If admission is granted, the most current program bulletin must be followed, including all curriculum and program requirements.
3. All previous coursework older than five years must be reviewed by the department to determine if it is still relevant for current term of admittance.

Final approval for admission and consideration of coursework from a program in which a student was previously terminated must be approved by the Associate Provost for Graduate Studies.

Note: Per “Section 484C of the Higher Education Act (HEA) provides that an institution of higher education may not deny readmission to a service member of the uniformed services for reasons relating to that service.”
Class Attendance

Attendance

Students must officially enroll for the courses they attend. A student cannot receive credit or a grade for a course without being enrolled in it.

Instructors have the right and responsibility to establish attendance policies for their courses.

Students are responsible for informing instructors about their absence from class and for completing assignments given during their absence.

Religious Accommodations and Class Attendance

Faculty, staff, student organizations and other programming groups are strongly urged to be mindful of major holy days in their scheduling. A list of the most-frequently observed religious holidays can be found at: http://portfolio.du.edu/religiouslife. Please note this list is meant to be inclusive of most major religious traditions (although certainly not comprehensive) and religious holidays have no official status at DU.

University policy grants students excused absences from class or other organized activities for observance of religious holy days, unless the accommodation would create an undue hardship. Faculty are asked to be responsive to requests when students contact them in advance to request such an excused absence. Students are responsible for completing assignments given during their absence, but should be given an opportunity to make up work missed because of religious observance.

Once a student has registered for a class, the student is expected to examine the course syllabus for potential conflicts with holy days and to notify the instructor by the end of the first week of classes of any conflicts that may require an absence (including any required additional preparation/travel time). The student is also expected to remind the faculty member in advance of the missed class, and to make arrangements in advance (with the faculty member) to make up any missed work or in-class material within a reasonable amount of time.

Examples of reasonable accommodations for student absences might include: rescheduling of an exam or giving a make-up exam for the student in question; altering the time of a student’s presentation; allowing extra-credit assignments to substitute for missed class work or arranging for an increased flexibility in assignment due dates; releasing a graduate assistant from teaching or research responsibilities, etc. The student must be given the opportunity to do appropriate make-up work that is equivalent and intrinsically no more difficult than the original exam or assignment. Faculty should keep in mind that religion is a deeply personal and private matter and should make every attempt to respect the privacy of the student when making accommodations (for example, it is not appropriate to announce to the class that a student is doing a presentation or making up an exam at a later date because of their religious observance).

If a student and course instructor cannot agree on an accommodation, the student may bring the matter to the Department Chair for a decision. Additional resources in resolving disagreements over accommodations include the University Chaplain, the Center for Multicultural Excellence, and the Office of Diversity and Equal Opportunity. If there is still no agreement, the student may bring the matter to the school or college dean’s office, where a final decision will be made. Students who believe they have been discriminated against on the basis of religion by the denial of a requested religious accommodation may contact the Office of Diversity and Equal Opportunity to learn about filing a discrimination complaint.

Final Exams

Any final exam for a course must be scheduled during the final exam period. Each quarter, the Office of the Registrar posts the final exam schedule on its website at www.du.edu/registrar. Students must attend all final exams as scheduled by faculty. Students are expected to let their instructors know when they have more than one exam being held at the same time. The Office of the Registrar will attempt to resolve conflicts whenever possible. Final exams are not changed to accommodate student travel plans, and students should only plan travel after the official end date of the term.

Campus Weather Closures

Sometimes severe storms may create such a hazard that the University makes a decision to close and cancel operations for a period of time. Students can receive information about campus weather closures by registering for the Critical Incident Notification System (p. 812). The University of Denver homepage will also be updated to reflect a closure due to severe weather.

Internships After Completion of Coursework

Some students are required to do an internship as part of the degree requirements, but do not receive course credit while on internship status. These students, who have completed all other coursework, must register for internship credits.

Students should consult the Office of Financial Aid (http://www.du.edu/financialaid/graduate) to see if they are eligible for loans and loan deferment. Students who are not required to participate in an internship are not eligible.
Note: There are internship programs available to DU students for credit. General regulations governing loans and loan deferments apply. Contact the Office of Financial Aid (http://www.du.edu/financialaid/graduate) for further information.

Calendar and Term Definitions

Quarter Calendar

The academic calendar is divided into fall, winter and spring quarters and a summer session. Each quarter is approximately ten weeks long and summer session is nine weeks. There are four interterm sessions. Students may complete degree requirements through continuous enrollment, including summers, or may arrange the normal work of a three-quarter academic year in any desirable sequence of quarters and summer session.

Semester Calendar

The Sturm College of Law academic calendar is divided into autumn, spring and summer session. Each semester is approximately 15 weeks long. Students may complete requirements through continuous enrollment, including summers, or may arrange the normal work of a two-semester academic year in any desirable sequence of semesters.

University College Calendar

University College considers summer to be part of the academic year. The Summer Quarter is ten weeks long.

Summer Session

Summer session is an avenue for graduate students to accelerate their programs or complete necessary coursework. Elective and required courses are offered in a variety of time frames. Travel and other unique courses, including short, intensive workshops, are part of the summer program.

Visiting students, professionals and individuals from the community are admitted under an open enrollment policy.

Note: University College considers summer to be part of the academic year. The Summer Quarter is ten weeks long.

Interterm

Interterm is the time period prior to each academic quarter, during which short, on-campus and travel courses are offered. Hours completed in interterm are applied as credit toward graduation requirements. Students register for interterm classes through the Special Community Programs office.

Note: Some units may have specific requirements about the maximum number of interterm hours which may be applied toward the degree. Contact the unit for details.
Introduction
The University of Denver supports students called to active duty in the armed services by providing academic support, tuition relief and refunds, and for reinstatement of students whose documented service in the uniformed services has required their sudden withdrawal or prolonged absence from their enrollment at the institution. Included is service in the uniformed services whether voluntary or involuntary on active duty in the Armed Forces, including such service by a member of the National Guard or Reserve. When a University of Denver student is under call or ordered to active duty, the following provisions will apply.

Purpose
This guideline offers suggestions for ways in which academic and administrative units and faculty may assist students who are called to active military duty.

Student Responsibility
A University of Denver student who receives orders calling him/her to report for active military duty should provide a copy of those orders (including the date in which the orders were made and the “reporting date”) to the Coordinator of Military Programs in the Office of the Registrar. The Coordinator of Military Programs will provide a copy of the orders and written official leave of absence request (if applicable) to the Office of Graduate Studies or Office of Undergraduate Academic Resources and the Office of Financial Aid, if the student has a scholarship or other financial aid. The Coordinator of Military Programs will notify the faculty members in all courses in which the student is enrolled and will assist with arrangement of course completion options and a written official leave of absence (if needed). It is generally the student’s responsibility to work directly with faculty members to determine appropriate course completion options.

Note: Should the student not be capable of providing a copy of such orders to the Coordinator of Military Programs due to the immediacy of the military assignment, s/he must submit official orders, 1) upon return to school, or 2) while on duty. The University can only consider request for changes to grades or tuition charges with official military orders. The University will make appropriate changes to the student’s records once the official orders are submitted.

Course Completion Options
• Faculty are urged to work with a student who has received military orders to enable the student to complete the course work whenever it is reasonably feasible for the student to do so.
• If a student receives military orders for an extended period of time and it is highly likely that the student will miss most of the class sessions in the course, the student would be well advised to drop the course.
• If the student receives military orders late in the term, faculty members may offer the student the option of an incomplete if such an option is academically appropriate.

Other Academic Matters
• Service members and reservists who are temporarily unable to attend class or have to suspend their studies due to service requirements are allowed to re-enter a program provided that satisfactory academic progress is being made by the service members prior to suspending their studies. Students’ re-entry or re-admission to the University shall be governed by existing policies for re-entry or readmission.
• While graduate students are on a leave of absence due to military deployment, their time away from the University will not count as part of the time limit set for degree completion.

Administrative Matters
• A student who is forced by virtue of military orders to drop selected courses or withdraw from a term should receive a 100% refund of any tuition the student has paid for the courses dropped or withdrawn. Refunds of tuition and fees paid by financial aid or other third parties will be handled by the Bursar and the Office of Financial Aid so as not to disadvantage the student, but in accordance with applicable regulations.
• A student on financial aid who is forced by virtue of military orders to drop selected courses or withdraw from a term should not be penalized in terms of financial aid eligibility, making academic progress, or other financial aid criteria.
• If a student has arranged to attempt to complete a course and finds that the nature of the military service prevents the student from completing the course work, the student should notify the faculty member and the Coordinator of Military Programs and request their assistance in determining and implementing an appropriate course of action (e.g., requesting an incomplete, dropping the course, and written official leave of absence if needed).
• Room and board charges will be pro-rated based on the student’s official check-out date.
• For new students, an enrollment deposit is required to confirm their acceptance of the offer of admission. If a student is deployed to active duty military service before the beginning of the planned term of enrollment, the deposit will be refunded.
• A student can appeal any administrative decisions that result in his/her required participation in military orders by requesting the procedures for doing so from the Coordinator of Military Programs.
Immunizations and Health Insurance Requirements

Immunization Requirements

Colorado law (see Colorado Revised Statutes 25-4-901 to 909) and Colorado Department of Public Health & Environment regulations require all college and university students physically present on campus and enrolled for one or more classes to submit proof of immunization, as described below.

All new incoming students who were born on or after January 1, 1957 must have had two measles, two mumps, and one rubella doses, the first administered no earlier than four days before the first birthday and the second at least 28 calendar days after the first dose. Measles, mumps, and rubella (MMR) vaccine is not required for students born before January 1, 1957. In lieu of immunization, written evidence of laboratory tests showing immunity to measles, mumps, and rubella is acceptable.

Prior to the start of classes, students must submit the completed Certificate of Immunization form to the Health & Counseling Center. Students must submit proof of immunization before coming to campus. Students that fail to submit proof will not be allowed to register for classes.

In the event of a disease outbreak, those students who requested a medical, religious, or personal exemption from the immunization requirement will be withdrawn from classes until the outbreak is contained and will not be entitled to a refund of tuition for any missed time.

A downloadable form and instructions can be found on the Health & Counseling Center (http://www.du.edu/duhealth) website. Alternative records, such as a childhood records, may be acceptable upon review of the Health and Counseling Center staff. Please call 303-871-2205 for more information.

While meningitis vaccination is not required, studies have shown that college students are at increased risk of contracting this potentially life-threatening disease. For this reason, the Centers for Disease Control and Prevention and the American College Health Association strongly recommend that college students consider vaccination to reduce this risk. The State of Colorado requires all incoming students to complete a Meningococcal Information notice acknowledging that students or their parents/guardians are aware of the risks of meningitis.

Note: University College students are exempt from this requirement.

Health Insurance Requirements

DU requires that all traditional students carry adequate health insurance. The University defines adequate health insurance as having a $500,000 minimum coverage per condition or illness, an affordable deductible, co-pay and co-insurance, a prescription benefit and coverage as required by Federal and Colorado State laws including Affordable Care Act mandates.

In light of recent healthcare law changes, the Health and Counseling Center verifies health insurance policy information from students who waive the Student Health Insurance Plan. This verification process will begin during early summer. Students selected for waiver verification will be contacted and must submit a copy of their health insurance card in order to verify participation in adequate coverage.

Participation in DU’s health care program (which consists of paying the Health/Counseling Fee and purchasing Student Health Insurance Plan) allows students to receive medical and mental health care at our Health & Counseling Center for little or no out-of-pocket costs.

There are two procedures for enrolling in the student health insurance plan and the health and counseling fee:

1. For students registered for six or more quarter hours (eight or more if you are a Law student), the Student Health Insurance Plan and Health/Counseling fees are added to the tuition bill. An informational hold is automatically placed on the student’s account. To remove the hold students should visit myWeb (https://myweb.du.edu/mbw/tabwbvis.P_GenMenu?name=homepage) and accept or decline coverage. Students who will be receiving the GTA/GRA Health Insurance Scholarship should not decline coverage.

2. Degree seeking students carrying less than six credit hours (less than eight credit hours for Law students), enrolled in University College, or on Continuous Enrollment, will need to enroll for the Student Health Insurance Plan (SHIP) at the Health and Counseling Center. SHIP enrollment is available twice a year, once in the Fall and once in the Spring. The Health & Counseling Fee enrollment is available every quarter.

For more information regarding eligibility or enrollment in the Student Health Insurance Plan, please call 303-871-2205 or go to the Health and Counseling Center (http://www.du.edu/health-and-counseling-center) website.

Graduate Program Definitions

The University of Denver offers a range of graduate degree and certificate programs:

Graduate Degree Program

A graduate degree program is a combination of courses and related activities organized under the authority of a dean, the Associate Provost for Graduate Studies, Graduate Council, the Provost and the Board of Trustees for the attainment of broad educational objectives leading toward a post-baccalaureate degree.
In general, with the exception of students in the dual undergraduate-graduate program, graduate students must have earned a bachelor’s degree from a regionally accredited college or university before matriculation in a graduate program. However, with approval from the Associate Provost for Graduate Studies, students who have already earned a master’s degree, but not a bachelor’s degree, may in rare cases, matriculate without a bachelor’s degree.

**Formal Dual Degree**

A formal dual degree program links two master’s degrees or a master’s program with a JD program and leads to two degrees. The Graduate Council and the Associate Provost for Graduate Studies must approve all proposals for formal dual degree programs.

There are two types of formal dual degree programs. Type one incorporates two distinct disciplines where students complete two separate sets of core courses and cross-count electives. Type two incorporates two areas of study within one discipline where students can cross-count a common set of core courses and take separate sets of electives.

Dual degrees must be pursued concurrently, not consecutively. In order to meet this requirement, students interested in pursuing a dual degree must matriculate into the second program no later than the first term available following fifty percent (50%) course work completion of the first program.

Students should complete both degrees at the same time. However, students can receive the first degree as long as all original requirements and credits for the first degree have been met. They then have up to 18 months to complete the second degree. Students pursuing a dual degree with Sturm College of Law must complete all requirements for both degrees before the law degree can be awarded. Students will not be graduated and certified to take the bar examination unless both programs have been completed. Students must apply for graduation for both programs.

**Flexible Dual Degree**

Students may propose a flexible dual degree program that links two master’s degrees or a master’s degree and a JD degree.

Students must submit the proposal for the Flexible Dual Degree no later than one term prior to matriculation into the second degree.

Dual degrees must be pursued concurrently, not consecutively. In order to meet this requirement, students interested in pursuing a dual degree must matriculate into the second program no later than the first available term following fifty percent (50%) course work completion of the first program.

Students should complete both degrees at the same time. However, students can receive the first degree as long as all original requirements and credits for the first degree have been met. They then have up to 18 months to complete the second degree. Students pursuing a dual degree with Sturm College of Law must complete all requirements for both degrees before the law degree can be awarded. Students will not be graduated and certified to take the bar examination unless both programs have been completed. Students must apply for graduation for both programs.

Any significant changes to the approved program require the student to resubmit a revised proposal packet to the deans/chairs/directors and advisors of both programs and the Office of Graduate Studies.

**Proposing a Flexible Dual Degree**

To propose a flexible dual degree, the student must first apply to and be admitted by both programs, pay application fees and admissions deposits for both programs, and seek the counsel of an advisor in each program. Admission into each program does not take the place of filing a Flexible Dual Degree proposal nor guarantee approval of the proposal.

The dean, chair, or director of each degree program and both program advisors, must carefully compare the requirements for each program and approve the proposed curriculum. The student must then submit a copy of the original requirements for each degree (printout from the unit website or copy from the student handbook is acceptable), a detailed course plan showing all proposed courses, and the credit hours; a one to two page statement of the educational/career objectives stating the reasons for the specific course selection and which courses most clearly serve the educational and career goals of the student; and current official/unofficial transcript(s) showing any work already completed towards the proposed program and degrees.

The student then submits the documents listed above to the Office of Graduate Studies, which reviews and decides on the proposals. Proposals with errors or course/program inconsistencies will be returned for revision.

Once the proposal is approved, the student will be entered into the university computer system as a flexible dual degree student.

**Curriculum Structure**

Students may propose any flexible dual degree program that seems reasonable to them and their advisors for academic and career objectives. Only elective courses may be counted among the hours used for reduction or cross-counting.

All the core requirements of each program must be preserved and cannot be overlapped or waived. Credit reduction due to cross counting of elective courses will be limited to the following for each program as determined by the original number of credit hours required for each degree:

Required credit hours for degrees and flexible dual degree reduction allowed:
• 45-60 quarter hour degree program: Reduce or cross-count a maximum of 15 quarter hours for the one degree without outside transfer credit. The traditional maximum outside transfer credit allowed in this case would be 15 quarter hours. A reduction of 15 quarter hours from the original degree will be the maximum allowed when combining outside transfer hours and the cross counting of degree hours.
• 61-75 quarter hour degree program: Reduce or cross-count a maximum of 12 quarter hours for the one degree without outside transfer credit. The traditional maximum outside transfer credit allowed in this case would be 24 quarter hours. A reduction of 24 quarter hours from the original degree will be the maximum allowed when combining outside transfer hours and the cross counting of degree hours.
• 76-90 quarter hour degree program: Reduce or cross-count a maximum of 15 quarter hours for the one degree without outside transfer credit. The traditional maximum outside transfer credit allowed in this case would be 45 quarter hours. A reduction of 45 quarter hours will be the maximum allowed from the original degree when combining outside transfer hours and the cross counting of degree hours.

Note: Credits at the Sturm College of Law for a JD degree are calculated using semester hours: 1 semester hour equals 1.5 quarter hours. A 90 semester hour JD degree may only be reduced by a maximum of 10 semester hours for a total of 80 semester hours completed for the JD. (10 semester hours equals 15 quarter hours).

Non-Course Requirements

All non-course requirements must be fulfilled for both programs. If one of the non-course requirements of both intended programs is the writing and defense of a thesis, then (with prior approval from both departments) a combined thesis may be written as long as both departments are equally represented (from original proposal to completion) and so long as the most rigorous requirements are adhered to for completion and oral defense.

If a student decides to only complete one degree, s/he must inform the units, program advisors and the Office of Graduate Studies in writing of his/her intention to nullify the flexible dual degree proposal. The student must complete all the original requirements for the remaining degree in order to graduate.

Dual Undergraduate-Graduate Degree Programs

A Dual Undergraduate-Graduate Degree Program is an institutionally approved program (formerly known as a Three-Two or Four-One program) in which a DU undergraduate student begins taking classes toward a graduate degree program prior to earning a baccalaureate degree. Both degrees must be earned within five years of matriculation into the undergraduate degree program.

The programs may reduce a limited number of both undergraduate and graduate credit hours toward both degrees.

The amount of the credit hour reduction is variable across programs. To be admitted, a student’s academic progress must demonstrate that the requirements of the program can be completed in five years.

Undergraduates still need to meet all normal core, major, minor and total credit hour requirements of their respective majors and minors before receiving the undergraduate degree. Graduate coursework is usually taken during the undergraduate “senior” year. Students should be admitted to the dual undergraduate-graduate program before taking graduate courses since undergraduate students generally may not take graduate courses. Usually, no more than 30 hours of electives may be used in the senior year to begin the graduate/professional program. Only graduate credit may be counted for the graduate degree. The total number of credit hours required varies by department. All requirements of the graduate or professional program need to be completed before receiving the advanced degree.

• For students enrolled in a dual degree program, the University will award the undergraduate degree at the time it is earned.
• The University may continue to provide the same level of institutional financial aid for newly graduated dual degree students but now in the form of a graduate scholarship. The undergraduate level of aid will be provided for an additional year beyond the initial commitment of four years or until the bachelor’s degree is earned, whichever comes first. Once a dual degree student receives the undergraduate degree, funds formerly provided to them in the form of Pell grants, Federal Supplemental Opportunity Grants and Colorado State Grants will take the form of graduate scholarships. Not all dual degree students may be eligible for the graduate scholarship. Please contact the graduate academic program or the Office of Financial Aid for information.
• Upon completion of the undergraduate degree federal loan eligibility will actually increase for most students because of the higher graduate student borrowing maximum.
• A student who chooses not to continue on for the graduate degree may count the graduate courses, if approved as relevant by the advisor, toward the undergraduate degree. (Students should visit the appropriate college or school for opt-out options and requirements.)
• Students enrolled in the dual undergraduate-graduate program who have been awarded the BA/BS degree, completed all required coursework and are working on a thesis may be eligible to enroll in graduate continuous enrollment.

Dual Undergraduate-Graduate Admission and Records Procedures

The following must be followed consistently and accurately:

• Students are admitted to dual undergraduate-graduate degree programs by the graduate admission unit. The graduate unit follows all normal admission procedures and the student must meet all admission criteria for the graduate program other than receipt of the baccalaureate degree. Students should be admitted to the dual undergraduate-graduate program as early as practical for financial aid and other reasons. They must be
admitted to the dual undergraduate-graduate program no later than the end of their tenth full-time quarter of the undergraduate degree (i.e., by the first quarter of the senior year).

- The effective term for admission should be the term in which the student is permitted to take graduate courses. For example, if the student’s senior year begins in the fall and the student meets admission criteria and may begin taking graduate courses in the subsequent spring term, the admission term should be that spring.
- Graduate units are responsible for assuring that the student information is accurate.

**Note:** A student who receives a bachelor’s degree and was not previously enrolled in a dual undergraduate-graduate program is not eligible to return and enroll in a graduate program and reduce the number of credit hours for the graduate degree.

**DU-Illiff Joint PhD Program**

The University of Denver (Colorado Seminary) and the Iliff School of Theology jointly administer a program leading to the doctor of philosophy in religious and theological studies.

Joint PhD students maintain student status and have access to resources in both co-sponsoring institutions. Students in the Joint PhD program should be referred to as “DU/Illiff Joint PhD Students” and not primarily as either Iliff or DU students.

Students in the Joint PhD program are expected to know the specific policies, procedures, and requirements for both the University of Denver and the Iliff School of Theology.

**Certificate Programs**

A certificate program provides a set of learning experiences concentrated in a specific set of educational goals.

Certificate programs may grant Continuing Education Units (CEUs), or they may include non-credit offerings. Most certificates require a minimum of 18 quarter credit hours. Credit hours that have already been counted for a previous degree that has been awarded cannot count towards granting a certificate. Contact the unit for details.

**Concurrent Candidacies**

Concurrent candidacies occur when students are enrolled in two programs concurrently.

Admission and program requirements must be fulfilled for each program. There will be no reduction in the number of credit hours required for either degree.

At the time of admission, the student submits written approval from each unit allowing enrollment in two programs simultaneously.

**Transfer of Credit for Graduate Degrees**

**Transfer of Credit Criteria**

- The student must initiate in writing the request for transfer of credit through the program of study and is responsible for seeing that the transfer of credit is requested prior to the beginning of the first term but not later than the end of the first term. Transfer credit requests for course work taken from another institution during DU’s program of study needs to be submitted in the returning quarter and no later than the preceding term in which the student wishes to graduate.
- The student is responsible for seeing that the transfer of credit is posted on his/her DU transcript and the department, appropriate student services office of the college, school, or department and the Office of Graduate Studies have approved the request.
- Graduate coursework and credit hours already applied toward a degree received from DU or another institution cannot be accepted as transfer credit towards another graduate degree of the same level or less. Graduate credit earned and not applied towards a degree may be eligible for transfer of credit to a DU degree.
- An official transcript must be on file in the Registrar’s office.
- The transfer credit must have been earned as graduate credit at a regionally accredited institution offering a graduate degree program in a similar field for which the student is currently seeking a degree. Transfer credit is approved on a course-by-course basis (unless it is a blanket transfer of credit hours for a doctoral program from a previously earned master’s degree).
- The credit must have been earned within a five-year period preceding the request for transfer of individual courses. Exceptions to this regulation may be made only by petition with specific justification by the college, school or department to the Associate Provost for Graduate Studies.
- Coursework with a “B-” grade may be requested to be transferred, providing the average of all graduate transfer coursework is “B” or better. If only one course is to be transferred, the grade must be “B” or better (a grade of “B-” or lower is unacceptable).
- Courses taken on a pass/fail basis are not acceptable for transfer, unless the instructor provides a class syllabus and the student provides proof from the institution that a “Pass” is equivalent to a “B” or better.
- Transfer credit is not included in the computation of the grade point average for the current degree.
Coursework Taken Prior to Enrollment at DU

Credits earned prior to enrollment in a degree program at DU may be transferred to meet degree requirements at DU in accordance with the transfer of credit policy and for students entering DU without a previous graduate degree OR students entering a DU doctoral program with a master’s degree, the request for the transfer must be made prior to or during the first quarter of attendance as a DU degree-seeking student.

Coursework Taken After Enrollment at DU

If the credit to be transferred is earned while the student is already enrolled in a degree program at DU, students may transfer graduate credit earned from a regionally accredited institution to meet degree requirements at DU in accordance with the transfer of credit policy and:

- The student must initiate in writing a request for approval of outside coursework, prior to enrolling in the course. The written request, submitted to the college, school or department, should include the name of the institution where the course will be taken, the course title, number of credit hours, course description, and the student’s reasons for requesting outside credit.

Transfer of Credit for a Master’s Programs

Transfer credit toward a 45-credit hour master’s degree is generally limited to 10 quarter hours, but some programs may have more restrictive limits. Some master’s degree programs that require more than 45 credits may allow more than 10 credits to be transferred toward the degree. Contact the unit for details.

Transfer of Credit for a Doctoral Programs

With approval from the student’s advisor and the chairperson of the department, doctoral students may reduce the required hours for a doctoral degree by up to 45 hours with an earned master’s degree from a regionally accredited university.

The student must initiate in writing the request for posting the master’s degree through the program of study and is responsible for seeing that the department, appropriate student services office of the college, school, or department and the Office of Graduate Studies have approved the request.

An official transcript must be on file in the Registrar’s office and must demonstrate that the student earned a “B” average or better in his/her master’s degree program.

The student’s DU academic department must fill out the Transfer of Credit form and provide a statement that the student’s master’s degree is appropriate and adequate background for the doctoral degree being sought.

15 additional quarter hours may be allowed to be transferred provided the credits have been earned after the master’s degree was awarded and it does not conflict with the doctoral residency requirement that requires enrollment at DU in at least six quarters (four semesters), including at least two consecutive quarters (one semester) of full-time attendance.

Note: Some graduate programs may have more stringent policies regarding transfer credit. Contact the unit for details.

Exceptions:

- Morgridge College of Education: Students must complete 90 quarter hours in addition to a master’s degree for the doctoral program.
- English: Students must complete 90 quarter hours in addition to a master’s degree for the doctoral program.
- GSSW: An MSW (or equivalent) plus 75 credits are required for completion of the PhD program in Social Work. The MSSW and MSSA are equivalent to the MSW.
Graduate Program Definitions

The University of Denver offers a range of graduate degree and certificate programs:

Graduate Degree Program

A graduate degree program is a combination of courses and related activities organized under the authority of a dean, the Associate Provost for Graduate Studies, Graduate Council, the Provost and the Board of Trustees for the attainment of broad educational objectives leading toward a post-baccalaureate degree.

In general, with the exception of students in the dual undergraduate-graduate program, graduate students must have earned a bachelor’s degree from a regionally accredited college or university before matriculation in a graduate program. However, with approval from the Associate Provost for Graduate Studies, students who have already earned a master’s degree, but not a bachelor’s degree, may in rare cases, matriculate without a bachelor’s degree.

Formal Dual Degree Programs

A formal dual degree program links two master’s degrees or a master’s program with a JD program and leads to two degrees. The Graduate Council and the Associate Provost for Graduate Studies must approve all proposals for formal dual degree programs.

There are two types of formal dual degree programs. Type one incorporates two distinct disciplines where students complete two separate sets of core courses and cross-count electives. Type two incorporates two areas of study within one discipline where students can cross-count a common set of core courses and take separate sets of electives.

Dual degrees must be pursued concurrently, not consecutively. In order to meet this requirement, students interested in pursuing a dual degree must matriculate into the second program no later than the first term available following fifty percent (50%) course work completion of the first program.

Students should complete both degrees at the same time. However, students can receive the first degree as long as all original requirements and credits for the first degree have been met. They then have up to 18 months to complete the second degree. Students pursuing a dual degree with Sturm College of Law must complete all requirements for both degrees before the law degree can be awarded. Students will not be graduated and certified to take the bar examination unless both programs have been completed. Students must apply for graduation for both programs.

With fully developed and approved curricula, these programs are available to graduate students who are admitted to both schools and submit the Dual Degree Approval Form (http://www.du.edu/media/documents/graduates/dual_degree_form.pdf) during the program’s first term. For program details, please contact the school, college or department.

Flexible Dual Degree Programs

Students may propose a flexible dual degree program that links two master’s degrees or a master’s degree and a JD degree.

Students must submit the proposal for the flexible dual degree no later than one term prior to matriculation into the second degree.

Dual degrees must be pursued concurrently, not consecutively. In order to meet this requirement, students interested in pursuing a dual degree must matriculate into the second program no later than the first term available following fifty percent (50%) course work completion of the first program.

Students should complete both degrees at the same time. However, students can receive the first degree as long as all original requirements and credits for the first degree have been met. They then have up to 18 months to complete the second degree. Students pursuing a dual degree with Sturm College of Law must complete all requirements for both degrees before the law degree can be awarded. Students will not be graduated and certified to take the bar examination unless both programs have been completed. Students must apply for graduation for both programs.

Any significant changes to the approved program require the student to resubmit a revised proposal packet to the deans/chairs/directors and advisors of both programs and the Office of Graduate Studies.

Proposing a Flexible Dual Degree

To propose a flexible dual degree, the student must first apply to and be admitted by both programs, pay application fees and admissions deposits for both programs, and seek the counsel of an advisor in each program. Admission into each program does not take the place of filing a Flexible Dual Degree proposal (http://www.du.edu/media/documents/graduates/flexdual.pdf) nor guarantee approval of the proposal.

The dean, chair, or director of each degree program and both program advisors, must carefully compare the requirements for each program and approve the proposed curriculum. The student must then submit a copy of the original requirements for each degree (printout from the unit website or copy from the student handbook is acceptable), a detailed course plan showing all proposed courses, and the credit hours; a one to two-page statement of the educational/career objectives stating the reasons for the specific course selection and which courses most clearly serve the educational and career goals of the student; and current official/unofficial transcript(s) showing any work already completed towards the proposed program and degrees.
The student then submits the documents listed above to the Office of Graduate Studies, which reviews and decides on the proposals. Proposals with errors or course/program inconsistencies will be returned for revision.

Once the proposal is approved, the student will be entered into the University computer system as a flexible dual degree student.

**Curriculum Structure**

Students may propose any flexible dual degree program that seems reasonable to them and their advisors for academic and career objectives. Only elective courses may be counted among the hours used for reduction or cross-counting.

All the core requirements of each program must be preserved and cannot be overlapped or waived. Credit reduction due to cross counting of elective courses will be limited to the following for each program as determined by the original number of credit hours required for each degree.

**Required credit hours for degrees and flexible dual degree reduction allowed:**

- 45-60 quarter hour degree program: Reduce or cross-count a maximum of 10 quarter hours for the one degree without outside transfer credit. The traditional maximum outside transfer credit allowed in this case would be 10 quarter hours. A reduction of 15 quarter hours from the original 42 degree will be the maximum allowed when combining outside transfer hours and the cross counting of degree hours.

- 61-75 quarter hour degree program: Reduce or cross-count a maximum of 12 quarter hours for the one degree without outside transfer credit. The traditional maximum outside transfer credit allowed in this case would be 22 quarter hours. A reduction of 25 quarter hours from the original degree will be the maximum allowed when combining outside transfer hours and the cross counting of degree hours.

- 76-90 quarter hour degree program: Reduce or cross-count a maximum of 15 quarter hours for the one degree without outside transfer credit. The traditional maximum outside transfer credit allowed in this case would be 45 quarter hours. A reduction of 45 quarter hours will be the maximum allowed from the original degree when combining outside transfer hours and the cross counting of degree hours.

Note: Credits at the Sturm College of Law for a JD degree are calculated using semester hours: 1 semester hour equals 1.5 quarter hours. A 90 semester hour JD degree may only be reduced by a maximum of 10 semester hours for a total of 80 semester hours completed for the JD (10 semester hours equals 15 quarter hours).

**Non-Course Requirements**

All non-course requirements must be fulfilled for both programs. If one of the non-course requirements of both intended programs is the writing and defense of a thesis, then (with prior approval from both departments) a combined thesis may be written as long as both departments are equally represented (from original proposal to completion) and so long as the most rigorous requirements are adhered to for completion and oral defense.

Students who decide to only complete one degree must inform the units, program advisors and the Office of Graduate Studies in writing of their intention to nullify the flexible dual degree proposal. Students must complete all the original requirements for the remaining degree in order to graduate.

**Dual Undergraduate-Graduate Degree Programs**

A Dual Undergraduate-Graduate Degree Program is an institutionally approved program in which a DU undergraduate student begins taking classes toward a graduate degree program prior to earning a baccalaureate degree. Both degrees must be earned within five years of matriculation into the undergraduate degree program. Students pursuing a dual degree with a Juris Doctorate must earn both degrees within six years.

The programs may reduce a limited number of both undergraduate and graduate credit hours toward both degrees.

The amount of the credit hour reduction is variable across programs. To be admitted, a student’s academic progress must demonstrate that the requirements of the program can be completed within the set time-frame.

Undergraduates still need to meet all normal core, major, minor and total credit hour requirements of their respective majors and minors before receiving the undergraduate degree. Graduate coursework is usually taken during the undergraduate “senior” year. Students should be admitted to the dual undergraduate-graduate program before taking graduate courses since undergraduate students generally may not take graduate courses. Usually, no more than 30 hours of electives may be used in the senior year to begin the graduate/professional program. Only graduate credit may be counted for the graduate degree. The total number of credit hours required varies by department. All requirements of the graduate or professional program need to be completed before receiving the advanced degree.

- For students enrolled in a dual degree program, the University will award the undergraduate degree at the time it is earned.

- As a dual-degree student, you are considered an undergraduate until you have fulfilled your undergraduate degree requirements, and should file your FAFSA (http://www.fafsa.ed.gov) and CSS PROFILE (https://profileonline.collegeboard.com/prf) as an undergrad. Once you complete your undergraduate degree requirements, you are considered a graduate student. Federal loan eligibility will increase for most students because of the higher graduate student borrowing maximum and scholarship merit based aid will be decided and awarded by their graduate unit. If you have specific questions about how your financial aid may be affected, please contact the graduate academic program or the Office of Financial Aid for information. Dual undergraduate-graduate students who matriculated into the undergraduate degree 2012 and earlier will continue to receive the
undergraduate financial aid award level in the 5th year. In addition, Boettcher and Daniels Fund scholars in a dual undergraduate-graduate degree will continue to receive the undergraduate financial aid award level in the 5th year.

- Upon completion of the undergraduate degree federal loan eligibility will actually increase for most students because of the higher graduate student borrowing maximum.

- A student who chooses not to continue on for the graduate degree may count the graduate courses, if approved as relevant by the advisor, toward the undergraduate degree. (Students should visit the appropriate college or school for opt-out options and requirements).

- Students enrolled in the dual undergraduate-graduate program who have been awarded the BA/BS degree, completed all required coursework and are working on a thesis may be eligible to enroll in graduate continuous enrollment.

**Dual Undergraduate-Graduate Admission and Records Procedures**

The following must be followed consistently and accurately:

- Students are admitted to dual undergraduate-graduate degree programs by the graduate admission unit. The graduate unit follows all normal admission procedures and the student must meet all admission criteria for the graduate program other than receipt of the baccalaureate degree. Students should be admitted to the dual undergraduate-graduate program as early as practical for financial aid and other reasons. They must be admitted to the dual undergraduate-graduate program no later than the end of their tenth full-time quarter of the undergraduate degree (i.e., by the first quarter of the senior year).

- The effective term for admission should be the term in which the student is permitted to take graduate courses. For example, if the student’s senior year begins in the fall and the student meets admission criteria and may begin taking graduate courses in the subsequent spring term, the admission term should be that spring.

- Graduate units are responsible for assuring that the student information is accurate.

*Note:* A student who receives a bachelor’s degree and was not previously enrolled in a dual undergraduate-graduate program is not eligible to return and enroll in a graduate program and reduce the number of credit hours for the graduate degree.

**DU-Illiff Joint PhD Program**

The University of Denver (Colorado Seminary) and the Iliff School of Theology jointly administer a program leading to the doctor of philosophy in religious and theological studies.

Joint PhD students maintain student status and have access to resources in both co-sponsoring institutions. Students in the Joint PhD program should be referred to as “DU/Illiff Joint PhD Students” and not primarily as either Illiff or DU students.

Students in the Joint PhD program are expected to know the specific policies, procedures, and requirements for both the University of Denver and the Iliff School of Theology.

**Certificate Programs**

A certificate program provides a set of learning experiences concentrated in a specific set of educational goals.

Certificate programs may grant Continuing Education Units (CEUs), or they may include non-credit offerings. Most certificates require a minimum of 18 quarter credit hours. Credit hours that have already been counted for a previous degree that has been awarded cannot count towards granting a certificate. Contact the unit for details.

**Concurrent Candidacies**

Concurrent candidacies occur when students are enrolled in two programs concurrently.

Admission and program requirements must be fulfilled for each program. There will be no reduction in the number of credit hours required for either degree.

At the time of admission, the student submits written approval from each unit allowing enrollment in two programs simultaneously.
Master's Degree Requirements

Delve deeper into your chosen field of study through DU’s 14 nationally acclaimed graduate schools and colleges. Each offers a wide range of innovative degree programs that are structured to equip you with precisely the skills and expertise you need. You’ll complete your degree ready to confront challenges and pursue opportunities that will promote progress—and create positive change.

Requirements

Credit Requirements

The range of approved graduate credits required for a master’s degree is 45-92 quarter hours. A minimum of 35 hours of graduate credit must be earned at the University of Denver.

Advanced degrees are not awarded automatically on completion of the required number of courses or hours of credit.

Students enrolled in a graduate program should not take courses towards another degree program unless they have been accepted into the second program, and no more than 15 quarter hours of credit may be earned at the University of Denver and applied towards a degree program before acceptance into that degree program. Advanced degrees are not awarded automatically on completion of the required number of courses or hours of credit.

Residency Requirements

Enrollment as a graduate student in the University of Denver for at least three quarters (two semesters) is required for graduation.

Tool Requirements

Candidates may be required to demonstrate proficiency in the required tools for research and advanced study.

Where required, tool requirements are determined by the candidate’s advisor and program and may include one or more languages, statistical methods, laboratory or other research skills. Consult the college, school or department for requirement details.

Advancement to Candidacy

A review of a candidate’s plan of study and progress must be conducted as soon as all the minimum requirements have been met and no later than the first day of the term in which the student expects to complete his/her degree.

Minimum requirements for the review include completion of any provisional admission requirements, an approved plan of study that will lead to meeting the degree requirements, posting of any transfer work to the student’s record, completion of tool (if required) and a grade point average of “B” or better in all work completed to that point. Successful completion of the review and approval by the appropriate student services office constitutes Advancement to Candidacy.

Notes: Some units may require satisfactory completion of a qualifying examination for Advancement to Candidacy. Consult the academic unit for information regarding requirements.

Final Examination

The requirement of a final examination for the master’s degree is in accordance with the requirements of the candidate’s college, school or department. Where required, the examination may be oral or written or both. The examination may focus on overall course content or it may be the final step in the defense of a thesis.

Additional Master’s Degree Requirements

In addition to coursework, most master’s degree programs require a creative project, internship or practicum, oral comprehensive examination and/or major paper or thesis. Typically such projects are managed within the unit or program. In units requiring a thesis, a master’s thesis oral defense committee must be established and a Thesis/Dissertation Oral Defense Committee Recommendation form must be submitted to the Office of Graduate Studies after the proposal has been approved and no later than the first day of the term in which the student expects to complete his/her degree.

Master’s Thesis

The master’s thesis represents the culminating research of the master’s degree program. It is a scholarly presentation of original research that is defended as partial fulfillment of requirements for the master’s degree. Students should consult the Office of Graduate Studies for instruction regarding how to prepare and format the thesis.
Program-level Thesis Proposal Committee

All candidates for the master’s degree must have a thesis director who is a tenured or tenure-track faculty member in the student’s graduate program. The program may require that thesis proposals be approved by or defended before a committee within the department or program, which may reserve the right to determine the composition of the thesis proposal committee. However, only those faculty who meet the following University requirements may serve as voting members of the oral defense committee.

Master’s Thesis Oral Defense Committee

The master’s candidate’s thesis oral defense committee is recommended by the school or program and approved by the Associate Provost for Graduate Studies. The Thesis/Dissertation Oral Defense Committee Recommendation form should be submitted to the Office of Graduate Studies as soon as the thesis proposal has been approved or defended but no later than the first day of the quarter in which the student expects to complete his/her degree.

Composition

The committee is composed of a minimum of three and a maximum of five members. Minimally two are voting members, including the thesis director. The chair of the committee is a non-voting member and must be from a department, school or college other than that of the candidate. All voting members of the committee must be full-time appointed faculty at DU and have research records appropriate to the student’s area of specialization.

Faculty from appropriately related programs who hold the terminal degree in their field may serve on the committee as long as the candidate’s graduate program has the majority representation and a majority of the members hold the earned doctorate. When a master’s degree is interdisciplinary, faculty representation from all disciplines must be reflected on the committee.

Oral Defense Committee Chair

The committee member from outside of the student’s graduate department represents the Associate Provost for Graduate Studies and serves as chair of the oral defense committee. The oral defense committee chair must be a tenured or tenure-track member of the DU faculty.

It is the responsibility of the student to find an appropriate oral defense committee chair to serve who meets these requirements.

Thesis Director

The thesis director must be a tenured or tenure-track member of the candidate’s graduate program. It is the thesis director’s responsibility to ensure that the student’s research meets appropriate academic standards for the discipline in which the degree is being conferred.

Special Members

In rare occasions, students may request to add an adjunct faculty member, post-doctoral appointee, a professor from another institution, or another qualified person—including someone without a doctorate but with other appropriate qualifications—as a special committee member. A special member may not be considered a substitute for one who meets the University requirements; rather, the special member should be considered as an addition to the core committee.

Students also may request that a non-tenure track, full-time appointed DU faculty member serve as committee chair.

These requests must be supported by a strong rationale, have the support of the student’s program and be approved by the Associate Provost for Graduate Studies. The request must include a statement of rationale, the proposed special member’s CV, and the Thesis/Dissertation Oral Defense Committee Recommendation form.

Program-specific Requirements

Schools and departments reserve the right to establish requirements that are more restrictive than the minimal University standards. It is the student’s responsibility to determine whether or not the unit has requirements in addition to University policy and the program’s responsibility to ensure that those requirements have been met before submitting the committee recommendation form to the Office of Graduate Studies.

Master’s Thesis Oral Defense

The candidate’s oral defense committee conducts the oral defense of the master’s thesis. The defense must be held at least three weeks before the end of the quarter in which the degree is to be granted.

All members of the defense committee must receive a copy of the candidate’s thesis at least two weeks prior to the scheduled defense.

The defense is expected to be held with the student present in person at DU, unless emergency circumstances make it impossible for the student to be physically present. Permission to hold a defense with the student participating by conference call, webcast or other medium should be obtained by petitioning the Associate Provost for Graduate Studies. Petitions for faculty members to participate by conference call or other medium are not required.
Scheduling and Verification of the Oral Defense

The student must make arrangements for appointing the defense committee and for the date and time of the oral defense with the thesis director. Students must submit a completed Schedule of Oral Defense form to the appropriate student services office and their academic program no later than four weeks prior to the date of the defense.

On the form, the candidate will designate the oral defense committee chair, the thesis director and all other members of the oral defense committee. After the form has been submitted, the Office of Graduate Studies will verify that all members meet the minimum University requirements.

Responsibilities of Oral Defense Committee Chair

As a representative of the Associate Provost for Graduate Studies, the chair of the oral defense committee must be a tenured or tenure-track faculty member of the University of Denver from a different department or discipline than that of the candidate.

The role of the chair is to provide a non-specialist’s perspective on the quality of the thesis. The chair must be familiar with the standards for doctoral research and should have some general knowledge of the topic of the student’s thesis. The chair is expected to have read the thesis prior to the examination and to participate in the examination as the individual’s academic expertise permits, but the chair does not vote on the committee.

 Conducting the Defense

The oral defense committee chair will preside over and manage the defense process. The chair is responsible for making certain that the defense is conducted in a professional manner and that the student has a fair opportunity to defend the thesis. The chair is expected to provide opportunities for each voting member of the oral defense committee to participate in the defense and to ensure that the examination is of high quality while remaining within proper limits of inquiry. Interested faculty members, and in accordance with departmental policy, currently enrolled graduate students also may attend the oral defense. After the oral defense committee has conducted the essential examination of the candidate, questions may be asked by others present if pertinent and appropriate as determined by the defense committee.

When the defense is completed, the chair will request that the candidate and all other persons not on the defense committee leave the room and will call for a motion to pass or fail the candidate. A recommendation to pass can have no more than one negative vote from members of the committee. If the motion is a recommendation to pass, the committee must then agree on the conditions of the recommendation as follows:

- **Pass with no revisions** means that only grammatical, labeling or numbering changes are required. Only a limited number of sentence additions or deletions should be necessary.
- **Pass with minor revisions** indicates that the candidate will be required to reorganize portions of the manuscript and change some of the content.
- **Pass with major revisions** means that a complete chapter or chapters must be rewritten, additional tables are required and interpreted, or the general format must be changed. Responsibility for seeing that needed revisions are made rests with the thesis director, but committee members also may require their approval before final submission.
- **Fail** indicates that the thesis content is not of acceptable quality or that the candidate cannot defend the research. In most cases, failing the defense results in the rejection of the student’s thesis and a new or related study usually will need to be undertaken.

A candidate who fails the oral defense may petition to the oral defense committee for a maximum of one re-defense. If granted, the re-defense must be scheduled through the Office of Graduate Studies and must occur within normal timelines.

The Result of Oral Defense form must be signed by all committee members and returned immediately to the Office of Graduate Studies. All signatures must be original. In rare occasions, when a committee member participates remotely, a faxed or scanned signature will be accepted.

**Note:** Other units may have more specific requirements regarding the committee. Contact the unit for details.

Completing the Degree

Time Limit for Completion of the Degree

Master’s degree candidates are expected to complete degree requirements within five years of beginning their programs, as measured by the matriculation into the degree program.

Failure to complete the degree within the established time limits will result in termination unless the student successfully petitions for an extension to the Associate Provost for Graduate Studies. The college, school, or department and the student’s advisor must recommend this extension. If it is not approved, the student will be terminated from the program. Students may petition for an extension of time for a minimum of one quarter and up to a maximum of one year per request. For more information, see Exceptions regarding extensions of time.

**Note:** GSSW: The MSW must be completed in four years. The Ed.S must be completed in six years.
Final Procedures for Earning the Master’s Degree

The student must assume full responsibility for meeting all basic requirements for the degree as well as the specific requirements outlined by the college, school or department. The student must complete the following:

• Apply for graduation by the deadline. Failure to complete the degree during the expected graduation term may require a new application and payment of a fee for additional evaluation and services.

• If the graduate program requires one, arrange for an oral defense of the thesis. The Office of Graduate Studies should approve the oral defense committee as soon as the thesis proposal has been approved or defended but no later than the first day of the quarter in which the student expects to complete the degree. Formal notification of the oral defense should be filed in the Office of Graduate Studies no later than four weeks before the defense date and in accordance with the University schedule of deadlines when graduation candidacy is in the same quarter as the defense.

• Complete any required final defense, oral or written or both, at least three weeks before the end of the quarter in which the degree is awarded.

• All Incomplete grades must be removed at least three weeks before the end of the term in which the degree is to be awarded.

• Submit electronic copy of thesis to ProQuest and have faculty approval page turned in to the Office of Graduate Studies two weeks prior to the end of the quarter. The student should contact the Office of Graduate Studies for the schedule of deadlines and obtain specific instructions for the preparation of the thesis format.

• If revisions are such that the thesis in its final form cannot be filed at least two weeks before the end of the quarter, the awarding of degrees will be postponed.

Notes: Students in Dual or Flexible Dual Degree programs must file an application for graduation for both degree programs.

Individual academic units may have more stringent policies. Contact the unit for details.
Doctoral Degree

The doctorate is the highest degree offered by the University. It is conferred on students who successfully complete those requirements that the faculty of the college, school or department have prescribed as the criteria for determining the general proficiency and specialized competence of the candidate in his/her chosen field. Total achievement, within the framework of certain accepted standards and uniform course requirements, constitutes the major consideration in awarding the doctorate. Each candidate's program is planned and carried out under the supervision of the program advisor and committee in accordance with requirements approved by departments, and with regard for the individual nature of the student's objectives.

Requirements

Credit Requirements

The approved range of graduate credit for the doctoral degree is 90-142 quarter credit hours beyond the bachelor's degree. However, some colleges, schools and departments may have different requirements; consult the specific graduate program for details.

Students enrolled in a graduate program should not take courses towards another degree program unless s/he has been accepted into the second program, and no more than 15 quarter hours of credit may be earned at the University of Denver and applied towards a degree program before acceptance into that degree program. Advanced degrees are not awarded automatically on completion of the required number of courses or hours of credit.

Residency Requirements

Enrollment in at least six quarters (four semesters), including at least two consecutive quarters (one semester) of full-time attendance is required for graduation.

Advising

Responsibility for securing approval of a proposed program of study rests with the student. Consultation with the advisor at regular intervals is essential to satisfactory planning and progress toward a degree. The requirements outlined in the college, school, or departmental summaries serve as a guide to program planning and are subject to specific determination in consultation with program advisors, and the student must assume full responsibility for meeting basic requirements and deadlines, as well as the specific requirements outlined by the program advisor.

Research Tool Requirements

Candidates may be required to demonstrate proficiency in the required tools for research and advanced study.

Where required, tool requirements are determined by the candidate's advisor and committee, and may include one or more languages, statistical methods, laboratory or other research skills. Consult the college, school or department for requirement details.

Advancement to Preliminary Candidacy

The minimum requirements for advancement to preliminary candidacy include: formulation and approval of candidate's general plan of study, achievement of regular status, a minimum grade point average of 3.0 in all work completed to that point, posting of any transfer credit to the candidate's record and planning of tool requirements.

During or immediately after the first full quarter of doctoral study (normally the first post-Master's quarter), students should arrange with their college, school, or department for an evaluation of status so they may be recommended for advancement to preliminary candidacy.

Note: Advancement to preliminary candidacy may also require satisfactory completion of entrance qualifying examination, if required by the program. Consult the college, school or department for more details.

Comprehensive/Competency Examination

This examination is either a written or an oral test designed to evaluate the student's work in the major and related fields. The examination is scheduled at least three quarters (two semesters) prior to graduation. A candidate who fails one or all parts of the examination may petition the college, school or department for re-examination. If granted, a re-examination may not be scheduled until the following quarter.

It is generally expected that students will complete the comprehensive exam prior to defending the dissertation proposal. Students should consult with their unit regarding the timing of the comprehensive exams and the proposal defense.
The Doctoral Dissertation

The dissertation represents the culminating research experience for doctorate of philosophy students through which degree candidates are expected to complete quality original scholarship that contributes to the theoretical/research knowledge base of the candidate’s field of study. The college, school or department determines the amount of credit allowed for research and work on the dissertation.

The Graduate School of Professional Psychology requires their doctorate of psychology candidates to complete a doctoral paper instead of a dissertation.

The Morgridge College of Education requires their doctorate of education candidates to complete a doctoral paper instead of a dissertation.

Program-Level Dissertation Proposal Committee

All candidates for the doctorate of philosophy degree must have a dissertation director who is a tenured or tenure-track faculty member in the student’s graduate program. Programs may require that dissertation proposals be approved by or defended before a committee within the department. Programs reserve the right to determine the composition of the dissertation proposal committee. However, only those who meet the following University requirements may serve as voting members of the oral defense committee.

Doctoral Dissertation Oral Defense Committee

The doctoral candidate’s dissertation oral defense committee is recommended by the school or department and approved by the Associate Provost for Graduate Studies. The Thesis/Dissertation Oral Defense Committee Recommendation form should be submitted to the Office of Graduate Studies as soon as the dissertation proposal has been approved or defended but no later than the first day of the quarter in which the student expects to complete the degree.

Composition

The committee is composed of a minimum of four and a maximum of seven members. Minimally three are voting members, including the dissertation director. The chair of the oral defense committee is a non-voting member and must be from a department, school, or college other than that of the candidate. All voting members of the committee must be full-time appointed faculty at DU and have research records appropriate to the student’s area of specialization.

Faculty from appropriately related programs who hold the terminal degree in their field may serve on the committee as long as the candidate’s graduate program has the majority representation and a two-thirds majority of the members, excluding the director, hold the earned doctorate.

When a doctoral degree is interdisciplinary, faculty representation from all disciplines must be reflected on the committee.

Oral Defense Committee Chair

The committee member from outside the student’s graduate department represents the Associate Provost for Graduate Studies and serves as chair of the oral defense committee. The oral defense committee chair must be a tenured member of the DU faculty and must hold an earned doctorate from an accredited institution.

It is the responsibility of the student to find an appropriate oral defense committee chair to serve who meets these requirements.

Note: Students in the DU-Iliff Joint PhD Program may have an Outside Chair from the Iliff School of Theology, but that faculty member must be outside of the Iliff concentration field in which the student is enrolled.

Dissertation Director

The dissertation director must be a tenured or tenure-track member of the candidate’s graduate program. It is the dissertation director’s responsibility to ensure that the student’s research meets appropriate academic standards for the discipline in which the degree is being conferred.

Special Members

In rare occasions, students may request to add an adjunct faculty member, post-doctoral appointee, a professor from another institution, or another qualified person—including someone without a doctorate but with other appropriate qualifications—as a special committee member. A special member may not be considered a substitute for one who meets the University requirements; rather, the special member should be considered as an addition to the core committee.

Students also may request that a non-tenure track, full-time appointed DU faculty member serve as committee chair.

These requests must be supported by a strong rationale, have the support of the student’s program and be approved by the Associate Provost for Graduate Studies. The request must include: a statement of rationale, the proposed special member’s CV and Thesis/Dissertation Oral Defense Committee Recommendation form.
Unit-Specific Requirements

Schools and departments reserve the right to establish requirements that are stricter than the minimal University standards. It is the student’s responsibility to determine whether or not the unit has requirements in addition to University policy and the unit’s responsibility to ensure that those requirements have been met before submitting the committee proposal form to the Office of Graduate Studies.

Doctoral Dissertation Oral Defense

An oral defense of the dissertation is required and is conducted by the candidate’s oral defense committee. The defense is concerned primarily with the dissertation or research project but also may include such other information in the major field, as the committee deems pertinent. The defense must be held at least three weeks before the end of the quarter in which the degree is to be granted. All members of the defense committee must receive a copy of the candidate’s dissertation at least two weeks prior to the scheduled defense.

The defense is expected to be held with the student present in person at DU unless emergency circumstances make it impossible for the student to be physically present. Permission to hold a defense with the student participating by conference call, webcast or other medium should be obtained by petitioning the Associate Provost for Graduate Studies. Petitions for faculty members to participate by conference call or other medium are not required.

Scheduling and Verification of the Oral Defense

The student must make arrangements for appointing the defense committee and for the date and time of the oral defense with the college, school or departmental director. Students must submit a completed Schedule of Oral Defense form to the appropriate student services office and their academic unit no later than three weeks prior to the date of the defense.

On the form, the candidate will designate the oral defense committee chair, the dissertation director and all other members of the oral defense committee. After the form has been submitted, the Office of Graduate Studies will verify that all members meet the minimum University requirements.

Responsibilities of Oral Defense Committee Chair

As a representative of the Associate Provost for Graduate Studies, the chair of the oral defense committee must hold an earned doctorate from an accredited institution and must be a tenured faculty member of the University of Denver from a different department, or discipline than that of the candidate.

The role of the chair is to provide a non-specialist’s perspective on the quality of the dissertation. The chair must be familiar with the standards for doctoral research and should have some general knowledge of the topic of the student’s dissertation. The chair is expected to have read the dissertation prior to the defense and to participate in the defense as his/her academic expertise permits, but the chair does not vote on the committee.

Conducting the Defense

The oral defense committee chair will preside over and manage the defense process. The chair is responsible for making certain that the defense is conducted in a professional manner and that the student has a fair opportunity to defend the dissertation. The chair is expected to provide opportunities for each voting member of the oral defense committee to participate in the defense and to ensure that the defense is of high quality while remaining within proper limits of inquiry. Interested faculty members, and in accordance with departmental policy, currently enrolled graduate students also may attend the oral defense. After the oral defense committee has conducted the essential examination of the candidate, questions may be asked by others present if pertinent, appropriate as determined by the defense committee.

When the defense is completed, the chair will request that the candidate and all other persons not on the defense committee leave the room and will call for a motion to pass or fail the candidate. A recommendation to pass can have no more than one negative vote from members of the committee. If the motion is a recommendation to pass, the committee must then agree on the conditions of the recommendation as follows:

- **Pass with no revisions** means that only grammatical, labeling or numbering changes are required. Only a limited number of sentence additions or deletions should be necessary.
- **Pass with minor revisions** indicates that the candidate will be required to reorganize portions of the manuscript and change some of the content.
- **Pass with major revisions** means that a complete chapter or chapters must be rewritten, additional tables are required and interpreted, or the general format must be changed. Responsibility for seeing that needed revisions are made rests with the dissertation director, but committee members also may require their approval before final submission.
- **Fail** indicates that the dissertation content is not of acceptable quality or that the candidate cannot defend the research. In most cases, failing the defense results in rejection of the student’s dissertation and a new or related study usually will need to be undertaken.

However, a candidate who fails the oral defense may petition to the oral defense committee for a maximum of one re-examination. If granted, the re-defense must be scheduled through the Office of Graduate Studies and must occur within normal timelines.

The Result of Oral Defense form must be signed by all committee members and returned immediately to the Office of Graduate Studies. All signatures must be original. In rare occasions, when a committee member participates remotely, a faxed or scanned signature will be accepted.
Completing the Degree

Advancement to Final Candidacy

The student must apply for or be recommended for advancement to final candidacy as soon as all requirements are fulfilled, and no later than the first day of the quarter in which the student expects to complete the degree. In no case can a student graduate the same quarter as advancement to final candidacy. The minimum requirements for advancement to final candidacy include: satisfactory progress in coursework, certification of the completion of tool requirements, progress in research for the dissertation and proposal approved, and satisfactory completion of the comprehensive examination.

Completing the Degree

Time Limit for Completion of Degree

The candidate for the doctorate who holds a master’s degree on entering the doctoral program is expected to complete all requirements for the degree no later than seven years after beginning the program, as measured by matriculation into the degree program. Candidates who hold only a bachelor’s degree on entering the doctoral program are expected to meet all degree requirements no later than eight years after doctoral studies begin. Failure to complete the degree within the established time limits will result in termination unless the student successfully petitions for an extension to the Associate Provost for Graduate Studies. The college, school, or department chair and advisor must recommend this extension in writing. If it is not approved, the student will be terminated from the program. Students may petition for an extension of time for a minimum of one quarter up to a maximum of one year per request. For more information, see Exceptions regarding extensions of time.

Final Procedures for Earning the Doctorate of Philosophy

The student must assume full responsibility for meeting all requirements for the degree. Before becoming a candidate for graduation, the student must complete the following:

- The candidate must apply for graduation in the by the deadline. Failure to do so will automatically delay graduation to a subsequent quarter. Failure to complete the degree during the expected quarter will require a new application and payment of a fee for additional evaluation and services.
- Arrange for an oral defense. The Office of Graduate Studies should approve the oral defense committee as soon as the dissertation proposal has been approved or defended but no later than the first day of the quarter in which the student expects to complete his/her degree. Formal notification of the oral defense should be filed in the Office of Graduate Studies no later than four weeks before the defense date and in accordance with the University schedule of deadlines when graduation candidacy is in the same quarter as the defense.
- Submit the dissertation to the oral defense committee at least two weeks before the date of the defense.
- Satisfactorily complete the oral defense at least three weeks before the end of the quarter in which the degree is to be awarded.
- All Incomplete grades must be removed at least three weeks before the end of the quarter in which the degree is to be awarded.
- Submit electronic copy of dissertation to ProQuest and have faculty approval page submitted to the Office of Graduate Studies two weeks prior to the end of the quarter. The student should contact the Office of Graduate Studies for the schedule of deadlines and obtain specific instructions for the preparation of the dissertation format.
- If revisions are such that the dissertation in its final form cannot be filed at least two weeks before the end of the quarter, the awarding of degrees will be postponed.
- Students who are working on a doctoral paper must submit their paper no later than two weeks before the end of the quarter.
Electronic Thesis and Dissertation

As of spring quarter 2008, all theses and dissertations must be submitted electronically to ProQuest (UMI) unless an exemption is granted using the “opt out” procedure. ProQuest/UMI is widely known and respected as the main searchable database for scholarly work; the University of Denver strongly encourages students to submit their dissertations and theses to ProQuest.

If the student and the dissertation/thesis chair believe submitting the work to ProQuest will create serious ethical, publishing or other issues, please request an exception to this process by submitting a memo to the Associate Provost for Graduate Studies that explains the concerns.

The electronic submission instructions can be found on the Graduate Oral Defense Information (http://www.du.edu/currentstudents/graduates/graduationinformation.html) web page.

Faculty should review the instructions before advising a student about submitting the thesis or dissertation.

Criteria for a Master's Thesis or Doctoral Dissertation

- Requires an oral defense committee chair and oral defense.
- The scheduling of the oral defense and formatting of the thesis/dissertation must be coordinated through the Office of Graduate Studies (http://www.du.edu/learn/graduates/studentresources.html) in accordance with the University schedule of deadlines and graduate policy.
- All copyright issues must be cleared before the thesis or dissertation is submitted. The student is responsible for obtaining proper permissions for all material used within the work. Evidence of copyright permission may be required with the student's submission to ProQuest (UMI) (http://www.proquest.com/products-services/dissertations). For additional information about copyright permission and the copyright process, visit ProQuest (http://www.proquest.com/products-services/dissertations).
- Electronic submission of “publishable” quality scholarly work.

Embargos and Restrictions on Accessing Theses and Dissertations

Students should be advised that a thesis or dissertation may be considered to be “previously published” by some publishers if it is put into a searchable digital/electronic repository (e.g. ProQuest). However, it should be noted that then student, not ProQuest (UMI), retains the copyright.

Students should discuss their future thesis/dissertation publication goals with their advisor. Students planning to publish from their thesis or dissertation should consider requesting an embargo of their work.

The student and the thesis or dissertation chair director submit a memo to the Associate Provost for Graduate Studies explaining the issue and stating that access to the work needs to be restricted. The Associate Provost must approve the final decision for permission to embargo the work.

During an embargo, ProQuest will completely restrict access to the document for a specified time period. The thesis or dissertation will be held in the ProQuest repository with no access until the embargo expires.

Reasons for Embargo

- The student is interested in pursuing the option of an academic or commercial press acquiring the rights to publish the dissertation or thesis as a book.
- The student is interested in submitting work from the thesis/dissertation to a peer-reviewed journal.
- There are patentable rights in the work for which disclosure may be detrimental to the rights or interests of the author.
- There is an ethical need to prevent disclosure of sensitive or classified information about persons, institutions, technologies, etc. for a time-limited period.

If a student believes that they will need to restrict access for a limited time period they can request a six month, one year, or two year embargo.

When an embargo expires, the thesis or dissertation will be automatically made available electronically by ProQuest.

Renewing an Embargo

If a student wishes to continue to restrict access for a limited time period, the student can request a six month, one year, or two year renewal on the embargo. The student and the thesis or dissertation chair director will submit a memo to the Associate Provost for Graduate Studies explaining the issue and stating that access to the work stills needs to be temporarily restricted. The Associate Provost must approve the final decision for permission to renewal embargo. A student may only request two embargo renewals for a maximum of six year embargo period. Students with extenuating circumstances should consult the Associate Provost for Graduate Studies.

If the embargo extension is approved, the student should contact ProQuest directly at 1-800-521-0600 x7020 or via email at disspub@proquest.com.
University Libraries

ProQuest makes the thesis/dissertation available electronically to the University Libraries. The level of access to the student’s work through the University Libraries depends upon embargo choices as described below.

- If the student does not embargo the work, the library will make the work available through the library’s online catalog, with links to both ProQuest and the library’s digital repository.

If the student embargoes the work for one of the following two reasons, University Libraries will make the work available only to the DU Community and through Inter-Library Loan in a PDF format. The work will not be made available outside the DU Community or over the internet:

- The student is interested in pursuing the option of an academic or commercial press acquiring the rights to publish the dissertation or thesis as a book.
- The student is interested in submitting work from the thesis/dissertation to a peer-reviewed journal.

If the student embargoes the work for one of the following two reasons, University Libraries will restrict access to the work until such time that they are notified by ProQuest that the embargo has been released, or when the author provides written permission directly to University Libraries:

- There are patentable rights in the work or other issues in which disclosure may be detrimental to the rights or interests of the author.
- There is an ethical need to prevent disclosure of sensitive or classified information about persons, institutions, technologies, etc. for a time-limited period.

After the embargo period, the work will be made available through University Libraries online catalog with links to ProQuest and the library’s digital repository.

Opt Out Procedure

In some instances a student may wish to use only University Libraries as the repository of their work. In such cases the student will submit their work digitally to Penrose and it will be made available only to the DU Community and through Inter-Library Loan in a PDF format.

The student and the thesis or dissertation chair director will submit a memo to the Associate Provost for Graduate Studies explaining the issue and stating that access to the work needs to be restricted. The Associate Provost must approve the final decision for permission to restrict access to the work.

Permanently Suppress

In rare cases, where the work includes proprietary information such as company data and records or confidential information that should never be made public, such as client records or interviews or some other serious condition that justifies such an action it may be appropriate for a student to permanently suppress work. In such cases the student will submit their work electronically to University Libraries. The work will be retained by the library and listed in catalog system, but will not be accessible without permission from the author.

The student and the thesis or dissertation chair director submit a memo to the Associate Provost for Graduate Studies explaining the issue and stating that access to the work needs to be restricted. The Associate Provost must approve the final decision for permission to restrict access to the work.
Graduation Requirements

Students may not receive a University of Denver degree without completing all degree requirements. Students may not receive a degree with fewer than the published number of credits or with a cumulative GPA below the minimum required for their degree program (2.30 Sturm College of Law, 3.0 for all other graduate programs).

Students must apply no later than the first day of the term at least two quarters prior to the intended quarter of graduation. Law students planning on graduating spring or summer semester may apply as of November 1st of that academic year. For those planning on graduating fall semester, the application will be available the first day of that semester.

Prior to applying to graduate, students need to verify that their curriculum records are accurate and up-to-date. Students who did not apply for graduation by the deadline should review the Graduate Request to Participate in Commencement Ceremony for Students Not Graduating (http://www.du.edu/media/documents/graduates/walking.pdf) policy. All requests for walking in commencement and late petitions for graduation must be approved by the Associate Provost or a designee appointed by the Associate Provost.

Application for Graduation

Requirements for Graduation

Students may not receive a University of Denver degree without completing all degree requirements. Students may not receive a degree with fewer than the published number of credits or with a cumulative GPA below the minimum required for their degree program (2.30 Sturm College of Law, 3.0 for all other graduate programs).

Students should submit the graduation application two quarters in advance of the intended graduation date. Applications are accepted up to the seventh calendar day of that term. For example, to graduate in the spring quarter (June), the graduation application is due by the seventh calendar day of winter quarter (January).

Prior to applying to graduate, students need to verify that their curriculum record is accurate and up-to-date. Students who did not apply for graduation by the deadline should review the Graduate Request to Participate in Commencement Ceremony for Students Not Graduating policy. All requests for walking in commencement or late petitions for graduation must be approved by the Associate Provost or his/her designee.

Commencement Ceremonies

Formal Commencement ceremonies are held at the University of Denver at the end of the spring and summer terms.

Participating in commencement does not constitute official graduation. It is a celebration that signifies the completion of the appropriate degree requirements and has no academic or legal implications.

Commencement Program

The Commencement program lists the names of all graduation candidates who applied at the appropriate time to receive degrees at that specific commencement ceremony. The appearance of a name in the program does not guarantee a student’s graduation at that time unless all degree requirements have been completed.

Spring Commencement

Spring Semester

The Sturm College of Law’s Spring Commencement occurs at the end of the spring semester, normally in mid-May. Students who have completed all graduation requirements during autumn or spring semester of the current academic year are invited to participate in the ceremony.

Spring Quarter

Commencement occurs at the end of the spring quarter, normally in early June. Students who have completed all graduation requirements during autumn, winter, or spring quarters of the current academic year are invited to participate in the ceremony.

Summer Commencement

Summer Commencement occurs at the end of summer session, normally in mid-August. Students who have completed all graduation requirements during summer session are invited to participate in the ceremony.
Request to Participate in Commencement Ceremony for Students Not Graduating

Students who have not completed their degrees may request to participate in the Graduate Commencement Ceremony only if the following parameters have been met for each eligible term:

Requirements for Walking in Spring Ceremony

- Submit the Graduate Request to Participate in Commencement Ceremony for Students Not Graduating (http://www.du.edu/media/documents/graduates/walking.pdf) form to the Associate Provost or the Associate Provost's designee two weeks prior to the graduation date.
- File for graduation within the required time frame.
- Eligibility as a candidate for graduation for the subsequent summer quarter.
- Candidate is within five-credit hours of degree completion, including resolving any incomplete grades.
- Registration for final program requirements in the summer inteterm or in summer quarter.
- Complete all non-course degree requirements (e.g., internships, practicum, major research paper) two weeks prior to the end of spring quarter.
- If a thesis or dissertation is required for the degree, complete the defense within the first six weeks of the subsequent summer quarter. The defense date must be on file with the Office of Graduate Studies.

Requirements for Walking in Summer Ceremony

- Submit the Graduate Request to Participate in Commencement Ceremony for Students Not Graduating (http://www.du.edu/media/documents/graduates/walking.pdf) form to the Associate Provost or the Associate Provost's designee two weeks prior to the graduation date.
- File for graduation within the required time frame.
- Eligibility as a candidate for graduation for the subsequent fall quarter.
- Candidate is within five-credit hours of completing the degree, including resolving any incomplete grades.
- Registration for final requirements in or before the subsequent fall quarter.
- Complete all non-course degree requirements (e.g., internships, practicum, major research paper) two weeks prior to the end of summer quarter.
- If a thesis or dissertation is required for the degree, the defense must be complete within the first six weeks of the subsequent fall quarter. The defense date must be on file with the Office of Graduate Studies.

Forms requesting to walk in either the Spring or Summer commencement ceremonies should be returned to the appropriate student services office for approval from the unit and the Associate Provost for Graduate Studies. Students may be approved to walk in commencement up until two weeks before of the end of the term, but a student’s name may not appear in the commencement program if requests are received only one month prior to the commencement ceremony.

Diplomas

A diploma is a ceremonial University document which verifies the University has granted a degree to the student.

Diplomas are not issued until all degree requirements are complete, grades are posted, outstanding accounts with the University are paid and any holds are cleared. Students may check for any holds and posting of grades on their student record online.

Diploma Name Policy

The student name listed on a diploma or certificate must match the official name on file at the University (first name, middle name, last name) with the following exceptions:

- Option of first name or initial
- Option of diminutive or alternate form for the first name
- Omission of the first name when the middle name is used as a salutary name
- Option of middle name or initial
- Omission of the middle name
- Inclusion of former or maiden name
- Inclusion of proper capitalization and accentuation of name
- Inclusion of Hispanic maternal surnames

Neither titles nor degrees previously earned will be included as part of a graduate’s name on a diploma.
Academic Resources

Anderson Academic Commons
Center for World Languages and Cultures
Disability Services Program

Academic Accommodations for Students with Disabilities

Disability Accommodations

Graduate students who need accommodations for a disability in order to fully participate in University classes and programs should call the Disability Services Program (http://www.du.edu/studentlife/learningeffectiveness/disabilityservices) (DSP). This contact should be made as far in advance as possible. DSP will work collaboratively with students, graduate department faculty and other University personnel to facilitate appropriate, individualized accommodations. Documentation of disability is required.

Examples of documentation may include, but are not limited to, medical reports, psycho-educational reports (for students with learning disabilities) and/or verification of psychological disabilities. Documentation is used to assist with the determination of appropriate accommodations and is kept confidential.

The Handbook for Students with Disabilities (policies and procedures) is available on the Disability Services Program (http://www.du.edu/studentlife/disability/dsp) website. Select “publications” or call the office 303-871-2278. The website also has links to DSP and other information including documentation guidelines. DSP is located on the 4th floor of Ruffatto Hall (Morgridge College of Education; corner of Evans and High streets).

Learning Effectiveness Program

Office of Teaching and Learning

Diplomas

A diploma is a ceremonial University document, which verifies the University has granted a degree to the student.

Diplomas are not issued until all degree requirements are complete, grades are posted, outstanding accounts with the University are paid, and any holds are cleared. Students may check for any holds and posting of grades on their student record online.

Diploma Name Policy

The student name listed on a diploma or certificate must match the official name on file at the University (first name, middle name, last name) with the following exceptions:

- option of first name or initial
- option of diminutive or alternate form for the first name
- omission of the first name when the middle name is used as a salutary name
- option of middle name or initial
- omission of the middle name
- inclusion of former or maiden name(s)
- inclusion of proper capitalization and accentuation of name
- inclusion of Hispanic maternal surnames

Neither titles nor degrees previously earned will be included as part of a graduate’s name on a diploma.
Each student understands, upon admission to the University, that they are required to uphold the professional standards required by the academic unit.

Student Conduct

Honor Code

All members of the University of Denver are expected to uphold the values of integrity, respect and responsibility. These values embody the Honor Code for students, faculty, staff and administrators as members of the University community. Our values are defined in the following ways:

- **Integrity**: acting in an honest and ethical manner;
- **Respect**: honoring differences in people, ideas and opinions;
- **Responsibility**: accepting ownership for one’s own conduct.

The complete text of the Honor Code and honor code violation procedures relating to students is maintained by Student Conduct (http://www.du.edu/studentlife/studentconduct) (SC).

*Note:* Some units may have additional or more stringent ethical guidelines. Students should contact the department for details.

Academic Misconduct

Faculty have the authority to set standards of academic integrity and define academic misconduct. The faculty member in conjunction with the academic unit determines the appropriate academic sanctions for academic misconduct. Academic sanctions are assessed by an individual faculty member and/or an academic unit and relate to the student’s standing within that course and/or unit. These may include, but are not limited to failure of an assignment, failure of a course and/or termination from a graduate program. When academic misconduct is suspected, the faculty member and/or representative of the academic unit should discuss these suspicions with the student and then come to a determination regarding appropriate academic sanctions. The exact process by which this is done is left to the faculty member in conjunction with the academic unit. Academic dishonesty is both an academic and behavioral issue. Students who violate the Honor Code are subject to dual consequences, academic sanctions and disciplinary actions.

Appeals

Academic sanctions are not subject to the appellate process outlined in the Honor Code but are instead governed by the Procedure for Academic Grievances and Appeals for Graduate Students (http://www.du.edu/media/documents/graduates/grievance.pdf). Decisions made by faculty members or academic units regarding academic sanctions may be appealed according to the Procedure for Academic Grievances and Appeals for Graduate Students (http://www.du.edu/media/documents/graduates/grievance.pdf). Appeals will only be reviewed in the following circumstances:

- The existence of procedural errors is so substantial that the accused was denied a fair hearing
- A finding of fact made in the original hearing clearly not supported by the facts presented
- New and significant evidence is presented that was not reasonably available at the time of the initial hearing
- The imposition of a sanction that is arbitrary and capricious

Disruptive Classroom Behavior

Harassment includes unauthorized conduct of any kind which interferes with the ability of other students to pursue their education in designated environments (e.g., residences, study areas, classrooms, or libraries), the functioning of faculty or staff, or any other aspects of the University’s educational mission.

Individual instructors have the right to determine whether specific student behavior is disruptive. Instructors may require a student to leave an individual class meeting for disruptive behavior. However, instructors are not authorized to summarily remove a student from the course. Should such removal be deemed necessary, instructors must follow the procedure outlined below. In exceptional cases where a student’s presence is deemed to be an immediate threat to the instructor or other members of the class, instructors should immediately call Campus Safety at 303-871-3000.

If a student has repeatedly disrupted the class, or if a student’s presence represents a significant impediment to the educational process, that student may be removed via an involuntary drop.

The instructor should first meet with the student in an attempt to resolve the issue. Another faculty or staff member (including Student Conduct, Office of Graduate Studies, or Campus Safety staff) may be asked to attend this meeting. If this meeting fails to resolve the situation, the instructor shall inform the student of the intention to seek an involuntary drop and provide the student an opportunity to drop the course voluntarily.
The instructor shall bring the matter to the office of the division or college dean prior to the class meeting following the instructor’s meeting with the student. In consultation with the instructor, the dean or designee shall determine whether to grant the request for an involuntary drop. The decision should be communicated to the student before the next scheduled class meeting and shall be communicated no later than one week from the instructor’s initial meeting with the student.

The student may appeal the decision to the Office of the Provost. This appeal must be submitted in writing no later than one week from the decision. Appeals shall only be considered in the following circumstances:

- The existence of procedural errors so substantial that the student was denied due process
- A decision clearly not supported by the facts presented
- Presentation of new and significant evidence that was not reasonably available at the time of the decision
- The decision is demonstrably arbitrary and capricious

While an appeal is being considered, the student is restricted from attending the dropped class.

The appeal shall be considered and a decision rendered to the student no later than one week from its receipt by the Office of the Provost. This decision shall be final.

Copies of all involuntary drop requests shall be provided to OSC who shall determine whether disciplinary charges should also be filed. OSC shall generally defer to the recommendation of the course instructor. However, if the student has a previous disciplinary record, OSC reserves the right to take appropriate action regardless of the instructor’s recommendation.

The course drop shall be effective from the date of the original decision and for all administrative purposes (e.g., transcripts, tuition refunds, etc.) shall be considered the same as if the drop had been voluntary.

Any questions about this process should be directed to Student Conduct (http://www.du.edu/studentlife/studentconduct).

Sexual Relationships and the Classroom Environment

The University strongly discourages sexual relationships between a teacher and student or between a supervisor and staff member because such relationships tend to create compromising conflicts of interest or the appearance of such conflicts.

As used in this section, the term teacher includes a faculty member, graduate student, administrator, coach, advisor, residence staff or program director having supervisory responsibilities for students.

Sexual exploitation or sexual harassment of any kind as described in University policy is a violation and will be subject to severe sanctions up to and including termination or dismissal. Please read the complete University of Denver Equal Opportunity/Sexual Harassment Policy (http://www.du.edu/bfa/media/documents/policy/Equal_Opp.pdf) for more information on consensual sexual relationships and sexual harassment.

Smoke-Free Policy

On January 1, 2010, the University became a smoke-free campus to encourage healthy lifestyles and wellness among our community members. We ask that all University community members help with a renewed support of the smoke-free policy on campus.

All indoor and outdoor (all areas with red brick sidewalk, parking lots, etc.) University spaces are smoke-free. All forms of smoke producing products are prohibited on campus including, but not limited to the following items:

- Cigarettes
- Bidis
- Kreteks
- Cigars
- Pipes
- Hookahs

The only exceptions are designated areas around the Newman Performing Arts Center and the Ritchie Center. These areas are only to be used by the public during public events.

If you choose to smoke, you can do so anywhere off campus. This includes the City of Denver owned sidewalks that surround campus.
Disability Services Program

Academic Accommodations for Students with Disabilities

Disability Accommodations

Graduate students who need accommodations for a disability in order to fully participate in University classes and programs should call the Disability Services Program (http://www.du.edu/disability/dsp) (DSP). This contact should be made as far in advance as possible. DSP will work collaboratively with students, graduate department faculty and other University personnel to facilitate appropriate, individualized accommodations. Documentation of disability is required.

Examples of documentation may include, but are not limited to, medical reports, psycho-educational reports (for students with learning disabilities) and/or verification of psychological disabilities. Documentation is used to assist with the determination of appropriate accommodations and is kept confidential.

The Handbook for Students with Disabilities (policies and procedures) is available on the Disability Services Program (http://www.du.edu/studentlife/disability/dsp) website. Select “publications” or call the office 303-871-2278. The website also has links to DSP and other information including documentation guidelines. DSP is located on the 4th floor of Ruffatto Hall (Morgridge College of Education; corner of Evans and High streets).

Student Death Response and Notification Guidelines

Critical Injury or Death of a University Community Member Student and Employee Guidelines for Non-Emergency Situations

The critical injury or death of a student or employee is a tragedy not only for family members and friends but also for the University community. The University of Denver strives to ensure that our responses are thoughtful, caring, professional, coordinated, and consistent. If you become aware of the critical injury or death of a DU community member, and any immediate or continuing threat has been addressed, please report the incident so that the University can respond appropriately. The notification of a tragic event sets in motion a range of protocols by Campus Safety, administrators, medical and mental health professionals, Student Life personnel, faculty, students, and others, depending on the circumstances. While such tragedies may profoundly impact the home department of the student or employee, it is imperative that academic and business units resist attempting to handle tragic events autonomously but rather involve the University officials responsible for crisis management. These guidelines are intended to assist University community members in contacting the appropriate officials to initiate the most immediate and effective response to a non-emergency tragic event. In case of an immediate or continuing threat, call 911 and Campus Safety at 13000.

NOTIFICATION—Campus Safety - 12334 Any member of the university community may receive information from a variety of sources regarding the serious injury or death of a student or employee. If you become aware of such a tragedy involving a DU community member, call Campus Safety at x12334 or (303-871-2334). Please don't assume that someone else has called. After notifying Campus Safety, please take a moment to follow up with one of the offices listed as second contact. Then take no further action unless officially authorized to do so. The director of campus safety will initiate standard institutional protocol to address the situation.

OUTREACH AND SUPPORT— Pioneers CARE and Human Resources

The director of student outreach and support (undergraduate) and the director of graduate student services (graduate) lead the University’s outreach efforts and serve as support resources for those students most directly affected by a tragedy. Please file a Pioneers CARE Report (https://publicdocs.maxient.com/reportingform.php?UnivofDenver&layout_id=99). The Human Resources office works with affected individuals in the case of faculty or staff injuries or deaths. The University’s official notification of the tragedy will invite community members to contact DU’s resources and
individuals as necessary. While many members of the University community may be trained in health and counseling, all official outreach must be provided by authorized staff. If employees undertake actions outside of their job responsibilities, they put the University at legal risk.

COMMUNICATION—Office of Marketing and Communications

In order to protect the privacy of those involved and to ensure accuracy of information, please do not distribute notices about the tragic event to anyone on or off campus. Emails or other forms of communication sent regarding this type of situation without authorization is prohibited. All formal communication must be managed through institutional protocol and approved by the University Marketing and Communications office. Please direct all media inquiries to the Office of Marketing and Communications (http://www.du.edu/marcomm).

UNIT-LEVEL RESPONSES

Affected units may wish to organize a response by the colleagues or peers most closely associated with the student or employee. However, all responses must be coordinated through the university chaplain, associate provost, dean, director or their designees to ensure that efforts are managed consistently, appropriately and sensitively.

Support Services and Resources

Pioneers Care

Faculty, staff, or students who have a concern about a graduate student at DU can find useful information and/or report their concerns via the Pioneers CARE (http://www.du.edu/studentlife/studentsupport/pioneers_care/team.html) website.

If you have concerns about a student, submit a Pioneers CARE (https://publicdocs.maxient.com/reportingform.php?UnivofDenver&layout_id=99) report.

The Office of Graduate Studies works with University representatives and the academic unit to address concerns reported.

Academic Exceptions, Complaints Procedures, Academic Grievances and Appeals

Exceptions

Graduate Academic Concerns Committee

Academic policies define institutional standards and ensure equitable treatment of all students. All students are expected to observe the academic policies and practices of the University. However, in instances of documented extraordinary circumstances, a student may request an exception to a policy or practice.

The Graduate Academic Concerns Committee is a standing subcommittee of the Graduate Council which represents the Graduate Council’s interests as advisory to the Associate Provost. As chair of the Committee, the Associate Provost appoints its members and ensures that the committee is representative of appropriate academic and administrative units. This committee also may serve as the review body for graduate academic appeals and grievances as referred to them by the Provost and Associate Provost for Graduate Studies.

Decisions of the Committee are final. The Committee re-considers its decisions only on the basis of new information not previously available for the initial review.

Purview

The Graduate Academic Concerns Committee considers requests for exceptions to University-wide policy affecting graduate students. Permission to deviate from University policies is not granted automatically or perfunctorily. Each request is considered on its merits. Decisions are made on the academic basis of the petition and requests granted when approval does not weaken the integrity of the academic program. While the committee is cognizant of the hardships that students may face, petitions based primarily on cost or convenience considerations will not be approved.

Prohibited Exceptions

Exceptions to University policies will be considered only if there is no University prohibition against deviating from regulations. The University prohibits exceptions regarding the following:

- Late registration for courses students have sat in on, but were not enrolled. Students may not be permitted to attend courses for which they have not registered.
- Removal of markers of Withdrawal “W” from the student’s record. Notations of Withdrawal “W” do not impact the student’s GPA and are official markers of University registration transactions.
- Waivers of graduation requirements. Students may not receive a University of Denver degree without completing all degree and credit hour requirements or with a cumulative GPA below the minimum required for their degree program.
- To count undergraduate courses, courses numbered below 3000 level or 3000 level courses that are offered for undergraduate credit only for the graduate degree. Students should consult with their academic advisors to enroll for appropriate graduate level courses.

Items for Committee Review

The Graduate Academic Concerns Committee will review the following requests in addition to any issues referred to the Committee by the Associate Provost.

Changing Course Registration After the Close of a Term

The Committee will consider retroactive adds or drops only in the event of extenuating circumstances beyond the student’s control:

- An error on the part of the University in registration. 
  
  Documentation: Letter(s) on institutional letterhead from an appropriate University authority.

  - Registration for the wrong course or course level. (e.g. registered for 4991 Master’s level, should have been 5991 doctoral level)
  
  Documentation: Letter(s) on institutional letterhead from an appropriate University authority.

  - The student registered for but never attended the course.
  
  Documentation: Letter(s) on institutional letterhead from an appropriate University authority.

  - Erroneous re-registration for the same course for which a student already received an Incomplete “I” grade.
  
  Documentation: Letter(s) on institutional letterhead from an appropriate University authority.

  - Physical injury/illness and/or mental illness that prevents the student from completing course(s).
**Documentation:** Letter(s) on letterhead from the physician for physical injury/illness or psychiatrist or other licensed mental health professional for mental illness. The letter(s) must specifically state that the student was advised to withdraw due to injury/illness.

- Serious illness or death of immediate family member that prevents the student from completing the course(s).

**Documentation (for illness):** Letter on business letterhead from the attending physician for the physical illness or psychiatrist or other licensed mental health professional for mental illness.

**Documentation (for death):** Memorial service folder, obituary, or copy of death certificate

- Job relocation or loss of employer reimbursement eligibility due to involuntary job loss.

**Documentation:** Letter on business letterhead from immediate supervisor or human resources administrator.

- Unexpected increase in job responsibilities, required change in work schedule, or required travel that prevents completion of course(s).

**Documentation:** Letter on business letterhead from immediate supervisor or human resources administrator that specifies the dates of increased workload and/or travel.

**Note:** The Graduate Academic Concerns Committee does not handle registration for the wrong section of a course.

### Extensions of Time to Complete Degree

The Committee will consider petitions for extensions of time to complete the degree with the following minimum documentation required:

- letter of input from the student,
- student submission of a detailed outline plan with milestones and goal dates leading to completion of the degree, and
- letter(s) of input from the student’s faculty and/or departmental advisor.

### Petition Process

Students must initiate petitions online using PioneerWeb (see instructions below). Required documentation may be submitted to:

Office of Graduate Studies  
2199 S. University Blvd  
Mary Reed Building, Room 5  
Denver, CO 80208-4802

Email: gradstudies@du.edu (preferred)  
Fax: 303-871-4566.

### Instructions for Online Submission

Navigate to PioneerWeb (https://PioneerWeb.du.edu) Log in using the DU ID and Passcode, select the “Student” tab, go to “myWeb (Banner Self-Service),” select “Student and Financial Aid,” select “Student Records,” go to “Request Academic Exception.”

### Required Documentation

A valid petition includes, at minimum, the official online request submission, written documentation from the student, the student’s advisor and, if the request is in regards to a class, the instructor of the course being petitioned. Additional documentation may be required before the petition can be reviewed.

Petitions for students in the Morgridge College of Education, University College, Graduate School of Social Work and Josef Korbel School of International Studies must also include unit input. Once the student’s electronic petition and faculty input for that petition have been received, the information will be sent to the unit for review. The unit will then email input to graduatestudies@du.edu (gradstudies@du.edu).

It is the responsibility of the student to ensure that all documents, including faculty and unit input, are submitted in a timely fashion. Documentation must be received at least one week prior to the monthly Graduate Academic Concerns Committee meeting.

The Associate Provost for Graduate Studies, or the Associate Provost’s designee, has final determination as to whether the documentation the student has submitted is sufficient.

### Petition Review and Status

Petitions are reviewed and decided by the Associate Provost for Graduate Studies and the Graduate Academic Concerns Committee, which meets once per month during the regular academic session. The Committee does not meet during the summer or interterm periods. Petitions submitted during interterm periods are reviewed at the discretion of the Associate Provost for Graduate Studies.

It is the responsibility of the student to check the status of their petitions and respond to requests by the Committee representative.
The student will be notified (via webCentral) of the decision of the Associate Provost and/or the Graduate Academic Exceptions Committee within one week of when the request was reviewed. The decision report will be emailed to the instructor and department.

**Statute of Limitations**

The Committee will not consider petitions for policy exceptions more than one calendar year after the completion of the quarter in question or once a student’s degree has been certified and posted to the transcript.

A student has two weeks from the initial submission to complete their petition. If, at the end of two weeks there are still outstanding documents, the petition will be archived and no further actions will be taken.

**Items for Associate Provost Review**

**Transfer of Credit Policy and Credit Hours to Count for the Degree**

- Transfer hours from another institution older than five years do not count for the graduate degree.
- Students cannot take more than eight credits beyond degree requirements in order to make up grade deficiencies.

**English Language Proficiency Assessment for Students with a Low TOEFL/IELTS Speaking Test**

If the student earns minimally a score of 24 on the speaking section of the TOEFL or a 7.5 on the speaking section of the IELTS and performs high on the DU speaking assessment, the academic unit may submit a petition to the Associate Provost for Graduate Studies requesting that the student be awarded the GTA but must enroll in and successfully complete the ELC Bridge Course in his/her first academic term of enrollment. Petitions must provide a compelling case for the exception. Petitions are submitted at the discretion of and by academic units. The Office of Graduate Studies will not accept requests and petitions from students.

**Unit-specific Admission Requirements Set by Individual Academic Programs**

The Associate Provost will consider petitions for applicants that are requesting waivers from unit-specific admission requirements (i.e. letter of recommendation or essay). These petitions need to be supported by the departmental admission committee and have a strong rationale.

*Note: The dean of the graduate unit reviews requests for waivers regarding entrance exams.*

**Concurrent Enrollment and Residency Requirements**

Students may enroll elsewhere concurrently only if they are pursuing a requirement not currently offered at DU and if the concurrent enrollment doesn’t result in an unacceptable overload.

Students may be allowed an exception to the residency requirement if extenuating circumstances (e.g. medical or personal issues) require that they be away from the University of Denver campus. Any off-campus study request must be consistent with the student’s graduate program and must have appropriate departmental approvals.

The residency requirement will not be waived if a student’s time out-of-residence results in too substantial a proportion of their graduate work being taken outside the University of Denver.

Permission for concurrent enrollment or waivers of residency will never be allowed for financial reasons.

**Petition for Unit Level Exceptions**

- Graduate units that wish to be considered for an exception to University policy must provide a request to the Associate Provost for Graduate Studies that includes a rationale for the variance.
- The Associate Provost will consider the petition and will notify the unit of the decision. A unit whose petition is denied by the Associate Provost has the right to request that the matter be referred to the Graduate Council for review.
- Graduate Council may recommend that the Associate Provost reconsider the request in consultation with the Provost. The Associate Provost will make a final determination and report to the Graduate Council on all petitions and outcomes.

**Discrimination or Harassment Complaint Procedures**

The Office of Equal Opportunity/ADA Compliance establishes these procedures to assist it in carrying out its responsibilities in the administration and enforcement of the University of Denver's policies related to nondiscrimination and assuring the University's compliance with applicable laws including Executive Order 11246; Title VII of the Civil Rights Act of 1964; the Age Discrimination in Employment Act; Title IX of the Education Amendments of 1972; the Age Discrimination Act of 1975; the Americans with Disabilities Act (ADA) of 1990 and as amended by ADA Amendments Act of 2008; the Rehabilitation Act of 1973; the Vietnam Era Readjustment Assistance Act; the Genetic Information Nondiscrimination Act of 2008; Title 24, Article 34 of the Colorado Revised Statute; and Denver Municipal Ordinances. University Policy and these Procedures are intended to comply with the prohibitions of these laws as amended as well as other applicable federal, state, and local anti-discrimination laws.
The Office of Equal Opportunity/ADA Compliance accepts and investigates complaints alleging discrimination, harassment or retaliation in violation of University of Denver policy and applicable laws. Consistent with federal, state and local law and University policies related to non-discrimination, the Office conducts neutral investigations of complaints of discrimination (including harassment) on the basis of race, color, national origin, age, religion, disability, sex, sexual orientation, gender identity, gender expression, marital status, veteran status or genetic information; complaints of retaliation; and complaints alleging failure to provide reasonable accommodations for disability and religion.

Complaints for External Agencies

Several external agencies are available to students who have exhausted all other opportunities for resolution within the University.

Colorado Department of Higher Education

The Colorado Department of Higher Education regulates Colorado institutions of higher education. Their complaint policy may be found on the Colorado Department of Higher Education (http://highered.colorado.gov/Academics/Complaints) website.

U.S. State Education Regulatory Agencies

Through distance learning and other programs, the University of Denver provides instruction throughout the world. Students may direct concerns or complaints to regulatory agencies in their state. A list of U.S. state education regulatory agencies can be found on the State Contacts (http://www.du.edu/currentstudents/statecontact.html) page.

Higher Learning Commission

Complaints regarding the institution's ongoing ability to meet the criteria of institutional accreditation may be directed to the Higher Learning Commission. Individuals interested in bringing an appropriate complaint to the attention of the Commission should take some time to compile a complete submission, as outlined below. There is no complaint form.

1. Write a cover letter directed to the Commission containing a brief narrative of the facts of the complaint. In most cases, such a narrative need be no longer than a few pages.

2. Indicate in your complaint why you believe the issues raised in your complaint are accrediting issues. If possible, please review the Commission’s Criteria for Accreditation (http://policy.ncahlc.org/Policies/criteria-for-accreditation.html) on the Commission’s (http://policy.ncahlc.org) website prior to writing this section.
   You should also indicate how you believe the Commission can assist you with this matter. Remember that the Commission cannot assist you in understanding your tuition bill, arranging for a refund of tuition, obtaining a higher grade for a course, seeking reinstatement to an academic program, etc.

3. Attach documentation to support your narrative wherever possible. (For example, if you make reference in your complaint to an institutional policy, include a copy of the policy with your complaint.) Helpful documentation might include relevant portions of the catalog, letters or email exchanged between you and the institution, learning agreements, etc.

4. A few reminders:
   • Please type your complaint or print very neatly.
   • Please do not use abbreviations or nicknames (e.g., NMS or USC or U of N).
   • Sign and date the cover letter.
   • Include contact information for future correspondence. Include a street address.
   • If you are writing on behalf of someone else (son/daughter or client), be sure to provide that person’s consent in writing to allow you to communicate with the Commission on the student’s behalf.

5. Mail the letter and its attachments to the Commission’s office at 230 South LaSalle Street, Suite 7-500, Chicago, IL 60604-1413. The Commission does not have an online complaint system and does not accept complaints via email.

Please note that the Commission will not consider those complaints that are not in writing and do not contain the elements noted here. The Commission’s complaint policy precludes it from considering matters more than 5 years old.

The Commission will acknowledge your complaint within thirty days of receiving it and let you know whether your complaint is complete and whether it raises issues that are related to accrediting requirements or whether it is an individual dispute outside the jurisdiction of the Commission’s complaint policy.

Email questions to complaints@hlcommission.org
Procedures for Academic Grievances and Appeals

Active students may appeal academic and student status related decisions and/or seek resolution of complaints or grievances through the Academic Grievance and Appeal Procedure during their enrollment at the University of Denver.

Graduate units may have additional requirements specific to their accreditation or professional standards. It is the responsibility of the student to determine whether the graduate unit has specific requirements and the responsibility of the unit to ensure that those requirements are addressed prior to advancing the grievance to the Office of the Provost. In the event of conflict between any grievance process published in unit manuals or websites, the process outlined in the Graduate Policy Manual will govern.

Eligible and Ineligible Concerns

Eligible Concerns

These procedures may be used only by active students with the following concerns:

- A grievance or appeal regarding academic standing during their enrollment at DU.
- An academic decision made by a faculty or staff member, administrator or committee of the University of Denver that directly and adversely affects the student—e.g., program termination, academic suspension, removal from a course, termination of GTA or GRA appointment.
- The grievance or appeal must be based on problems of process or concerns of bias, retaliation, or other impropriety and not on differences in judgment or opinion concerning academic performance.

*Note:* Students who wish to appeal a termination from a program must do so within 45 days of the term following their last term as an active student. For concerns of bias and retaliation based upon a protected class, the grievance will be referred to the Equal Opportunity Office, which may alter the timeline and process.

Ineligible Concerns

These procedures may not be used to resolve the following concerns:

- appeals related to disciplinary actions taken by the Conduct Review Board
- grade appeals
- admission decisions
- appeals or grievances submitted beyond the published timeline

Formal Grievance and Appeal Process

First Level: Informal Resolution

Students are expected to attempt to resolve complaints informally with the faculty or staff member, administrator or committee responsible for the academic decision. This attempt must include discussion of the complaint with the involved party or parties. *If all reasonable informal efforts to resolve a complaint fail, the student may file a formal grievance or appeal.*

If the complaint involves a charge of unlawful discrimination, the student may report the situation to the Office of Equal Opportunity or an appropriate supervisor who must immediately notify the Office of Equal Opportunity.

Second Level: Submission of the Formal Grievance or Appeal to Program Director/Chair

If a student elects to file a formal grievance or appeal, it must be filed within 45 calendar days into the next quarter after the contested decision or grade was officially recorded and during which the student is enrolled at DU. All grievances and appeals must be filed in writing, signed and dated by the student and include supporting documentation at the time it is filed. The grievant/appellant must minimally provide the following:

- a clear description of the decision being grieved or appealed,
- the basis or bases for challenging the decision,
- the identity of the party or parties who made the decision,
- the specific remedy or remedies requested, and
- a description of all informal resolution attempted.

The decision of the program director or department chair must be issued in writing within 30 days of receiving the grievance and shall include all of the following:

- a copy of the student’s formal grievance,
- relevant findings of fact,
- decision and the reasons for the decision reached, and
Third Level: Submission of the Formal Grievance or Appeal to Dean

The party who finds the resolution unsatisfactory may appeal the decision in writing to the dean of the academic unit within five working days of receiving the program director or department chair’s written decision.

The dean may render a decision on the matter or may refer the grievance or appeal to a standing grievance/appeal committee or establish an ad hoc committee to hear the matter. When an ad hoc committee is established, the student who lodges the appeal may designate one of the faculty members who will serve on this committee. This member must be tenured or tenure-track faculty from the University of Denver. Members of the unit involved in the grievance may not serve on the ad hoc committee and must recuse themselves if they are members of the standing committee.

The committee may, at its discretion, receive from the student, relevant faculty or staff members or other individuals, any additional evidence or argument that it deems necessary to resolve the grievance or appeal.

The appeals committee will begin deliberations as soon as possible and provide the dean a written recommendation no later than 30 days after the date that the dean’s office received the written, dated request for appeal at this level. The dean will make a final decision and distribute it to all affected parties within five working days after receiving the committee’s recommendation.

Fourth Level: Submission of the Formal Grievance or Appeal to Provost

The party who finds the resolution unsatisfactory may appeal the decision to the Provost within five working days of receiving the dean’s decision. The Provost will hear only those grievances and appeals based on problems of process or concerns of bias, retaliation, or other improprieties unrelated to protected class status and not on differences in judgment or opinion concerning academic performance. Within five working days after receiving the appeal, the Provost may refer grievances or appeals to appropriate bodies or personnel. If the issue is referred to the Graduate Council, its chair will appoint three members of the Council as a Grievance Committee to hear the case and shall designate one of the committee members to serve as chair.

Anyone called upon by the Provost or the Provost’s designee shall submit a written recommendation within 30 days of receiving the case. The Provost is the final authority in the matter and will report the disposition of the case to all involved parties within 30 days of receiving a recommendation from the designee.

Scope of Review

Any University agent charged with reviewing a formal grievance or appeal may gather additional relevant facts if necessary and/or meet with involved parties. The reviewer will base his/her decision on documented evidence.

Deviation from Procedures

These guidelines provide basic steps for resolving appeals and grievances. The steps may vary based upon the structure of the academic unit or the particularities of the situation. The provost or his/her designee may choose to approve or may direct a deviation from these procedures, for example, postponement of a time limit or elimination or addition of a step in the process, in order to ensure an effective and timely resolution.

Grievance or Appeal Record

Documentation in support of a grievance or appeal will be held by the person responsible for considering the grievance or appeal at that stage and passed along to the person responsible for the next step, if any. A record of meetings or interviews must be made and kept as part of the grievance or appeal record as well. The complete grievance or appeal record will consist of the original grievance or appeal, all documentary evidence and all formal decisions made at each step of the process.

Failure to Meet Deadlines

If after a formal grievance or appeal is filed, the University agent charged with review of the grievance or appeal fails to meet any deadline at any stage of the process, the grievant/appellant may proceed directly to appeal to the next higher University administrator in the manner prescribed by these Procedures, subject to the relevant time limitation calculated from the date of the missed deadline. The failure of any University administrator to meet any deadline shall not entitle the grievant/appellant to any relief requested, nor shall such a failure be construed as tantamount to a decision in the grievant/appellant’s favor. Any grievant who fails to meet the deadlines imposed by these Procedures will be bound by the decisions previously made.

* The Provost may refer grievance appeals to appropriate bodies or personnel.

Procedure for Grade Appeals

Scope of Review: Grade appeals must be based on problems of process and not on differences in judgment or opinion concerning academic performance. The burden of proof rests on the student to demonstrate that one or more of the following occurred:

• The grading decision was made on some basis other than academic performance and other than as a penalty for academic misconduct.
• The grading decision was based upon standards unreasonably different from those which were applied to other students in the same course and section.
• The grading decision was based on an unreasonable departure from previously articulated standards.

The chairperson, grade appeal committee or dean may recommend grade changes but shall have the power to alter grades only in cases of clearly established procedural error or substantial capriciousness or arbitrariness in evaluation.

Timeline

The formal procedure must be started within 45 calendar days after the contested decision or grade was officially recorded. The grade appeal process officially begins on the date the Academic Appeal document is received by the faculty member.

Appeal Record

Any appeal must be in writing, dated and headed with the words “Academic Appeal.” Once a formal appeal is presented to a faculty member, it must be presented in its original form at all later levels of appeal, although new statements may be added at any time.

Any evidence and all direct and supporting statements once made, become part of the permanent record of the appeal and must be produced at each level of appeal.

At each level of appeal, a written, dated decision and written reasons for the decision must be provided to the affected party or parties—the student, the faculty member and any person who has rendered a decision at an earlier level of appeal.

Students are permitted to submit evidence in writing. At the discretion of the University, students may be invited to present their appeal in person.

Grade Appeal Process

First Level: Appeal to the Faculty Member

A student will, where possible, attempt to resolve the issue informally with the professor before filing a written grievance. Should attempts at informal resolution fail, the student may wish to file a formal grade appeal. After receiving a formal appeal, the faculty member shall assure that a written decision with express reasons is available or delivered to the student within 30 calendar days. Should the student fail to take further action within seven calendar days after receiving the faculty member’s decision, that decision shall stand. If the student is dissatisfied with the decision or does not receive a response from the faculty member within 30 calendar days, the appeal may proceed to the second level.

Second Level: Appeal to the Department Chair/Program Director

If the student elects to continue the appeal, the appeal goes to the chair of the department or program director if there is no chair. The chair or director shall assure that a written decision or recommendation about the appeal is available or delivered with express reasons within 30 calendar days after receiving the appeal.

If the student is dissatisfied with the decision or does not receive a response from the chair or director within 30 calendar days, the appeal may proceed to the third level. Should the student or faculty member fail to take action on the chair’s decision or recommendation within seven calendar days following its receipt, the accepted recommendation of the faculty member or new decision by the department chair shall be final.

Third Level: Appeal to Dean

If the student elects to continue the appeal after the chair’s decision or recommendation has been received, the appeal may be taken to the dean of the appropriate academic unit (or the dean’s designee) within seven calendar days.

The dean shall ascertain within 30 calendar days whether the appeal procedures at the first and second levels have been duly followed; if they have not, the dean will require that they be followed before taking further action.

The appeals committee shall consist of three faculty members chosen by the dean or the dean’s designee. The dean or designee shall serve on the appeals committee as chairperson without vote. All deliberations of the committee will be closed and confidential.

Faculty from the same department as the faculty member involved in the case may not serve on the appeals committee.

The appeals committee should meet as soon as possible, but no later than 30 calendar days after a written, dated request for appeal at this level has been received and the Dean has ascertained that appeal procedures at the first and second levels have been duly followed. The presence of all eligible committee members (the three faculty members and the dean or designee) shall constitute the quorum.

A written recommendation shall be furnished by the appeals committee and transmitted through the office of the dean to all affected parties within seven calendar days after the conclusion of the committee’s deliberations.

The decision of the appeals committee is final.

Note: There is a separate grade appeal procedure for courses taught in the College of Law. Students with grade appeals in College of Law courses should consult the specific guidelines for academic grade procedures for that unit.
Disclosure of Student Information

The Family Educational Rights and Privacy Act (FERPA) affords eligible students certain rights with respect to their education records. (An “eligible student” under FERPA is a student who is 18 years of age or older or who attends a postsecondary institution.) These rights include the following:

1. The right to inspect and review the student's education records within 45 days after the day the University receives a request for access. A student should submit to the registrar a written request that identifies the record(s) the student wishes to inspect. Request forms are available from the registrar. The registrar will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the registrar, the registrar shall advise the student of the correct official to whom the request should be addressed.

2. The right to request the amendment of the student's education records that the student believes is inaccurate, misleading or otherwise in violation of the student’s privacy rights under FERPA. A student who wishes to ask the University to amend a record should write the University official responsible for the record, clearly identify the part of the record the student wants changed and specify why it should be changed. If the University decides not to amend the record as requested, the University will notify the student in writing of the decision and the student’s right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

3. The right to provide written consent before the University discloses personally identifiable information (PII) from the student's education records, except to the extent that FERPA authorizes disclosure without consent. The University discloses education records without a student's prior written consent under the FERPA exception for disclosure to University officials with legitimate educational interests. A University official is a person employed by the University in an administrative, supervisory, academic, research or staff position (including law enforcement unit personnel and health staff); a person serving on the board of trustees; or a student, volunteer or employee of a partner organization serving on an official committee, such as an admission, disciplinary or grievance committee, or assisting another University official in performing his or her tasks. A University official also may include a contractor outside of the University who performs an institutional service or function for which the University would otherwise use its own employees and who is under the direct control of the University with respect to the use and maintenance of PII from education records, such as an attorney, auditor or collection agent or a student volunteering to assist another University official in performing his or her tasks. A University official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her institutional duties.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by the University to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, DC 20202-4605

Directory Information

The law provides that “directory information” may be released without the consent of the student. The University of Denver designates the following student information as “directory information:"

The student's name, addresses, telephone numbers, electronic mail and webpage addresses, employer, job title, photographic images, date and place of birth, field of study, full-time or part-time status, class (e.g., graduate, sophomore, junior), participation in officially recognized activities and sports, weight and height of members of athletic teams, dates of attendance, anticipated date of graduation, degrees and awards received, thesis and dissertation titles and the most recent previous educational agency or institution attended by the student.

Students may prevent the University from disclosing directory information by submitting a “Request to Prevent Disclosure of Directory Information” form (available from the Office of the Registrar) to the Office of the Registrar, University Hall, G33.

Disclosure

Students may authorize the University to share information from education records with third parties such as parents. Authorizations may be completed online or by completing an authorization form available in the Office of the Registrar.

FERPA permits the disclosure of PII from students' education records, without consent of the student, if the disclosure meets certain conditions found in §99.31 of the FERPA regulations. Except for disclosures to University officials, disclosures related to some judicial orders or lawfully issued subpoenas, disclosures of directory information and disclosures to the student, §99.32 of FERPA regulations requires the institution to record the disclosure. Eligible students have a right to inspect and review the record of disclosures. A postsecondary institution may disclose PII from the education records without obtaining prior written consent of the student to the following entities or for the following purposes:

- University officials, including faculty, within the University whom the University has determined to have legitimate educational interests. This includes contractors, consultants, volunteers or other parties to whom the University has outsourced institutional services or functions, provided that the conditions listed in §99.31(a)(1)(ii)(B)(2)- (a)(1)(i)(B)(2) are met. (§99.31(a)(1))
• Authorized representatives of the U. S. Comptroller General, the U. S. Attorney General, the U.S. Secretary of Education or State and local educational authorities, such as a State postsecondary authority that is responsible for supervising the University’s State-supported education programs. Disclosures under this provision may be made, subject to the requirements of §99.35, in connection with an audit or evaluation of Federal- or State-supported education programs or for the enforcement of or compliance with Federal legal requirements that relate to those programs. These entities may make further disclosures of PII to outside entities that are designated by them as their authorized representatives to conduct any audit, evaluation or enforcement or compliance activity on their behalf. (§§99.31(a)(3) and 99.35)

• In connection with financial aid for which the student has applied or which the student has received, if the information is necessary to determine eligibility for the aid, determine the amount of the aid, determine the conditions of the aid or enforce the terms and conditions of the aid. (§99.31(a)(4))

• Organizations conducting studies for, or on behalf of, the University, in order to (a) develop, validate or administer predictive tests; (b) administer student aid programs; or (c) improve instruction. (§99.31(a)(6))

• Accrediting organizations to carry out their accrediting functions. (§99.31(a)(7))

• Parents of an eligible student if the student is a dependent for IRS tax purposes. (§99.31(a)(8))

• To comply with a judicial order or lawfully issued subpoena. (§99.31(a)(9))

• To appropriate officials in connection with a health or safety emergency, subject to §99.36. (§99.31(a)(10))

• With information the University has designated as “directory information” under §99.37. (§99.31(a)(11))

• A victim of an alleged perpetrator of a crime of violence or a non-forcible sex offense, subject to the requirements of §99.39. The disclosure may only include the final results of the disciplinary proceeding with respect to that alleged crime or offense, regardless of the finding. (§99.31(a)(13))

• The general public, the final results of a disciplinary proceeding, subject to the requirements of §99.39, if the University determines the student is an alleged perpetrator of a crime of violence or non-forcible sex offense and the student has committed a violation of the University’s rules or policies with respect to the alleged crime made against him or her. (§99.31(a)(14))

• Parents of a student regarding the student’s violation of any Federal, State or local law, or of any rule or policy of the University, governing the use or possession of alcohol or a controlled substance if the University determines the student committed a disciplinary violation and the student is under the age of 21. (§99.31(a)(15))

As of January 3, 2012, the U.S. Department of Education’s FERPA regulations expand the circumstances under which a student’s education records and PII contained in such records—including Social Security Number, grades, or other private information—may be accessed without the student’s consent. First, the U.S. Comptroller General, the U.S. Attorney General, the U.S. Secretary of Education or state and local education authorities (“Federal and State authorities”) may allow access to student records and PII without consent to any third party designated by a Federal or State authority to evaluate a federal- or state-supported education program. The evaluation may relate to any program that is “principally engaged in the provision of education,” such as early childhood education and job training, as well as any program that is administered by an education agency or institution. Second, Federal and State Authorities may allow access to a student’s education records and PII without the student’s consent to researchers performing certain types of studies, in certain cases even when the University objects to or does not request such research. Federal and State Authorities must obtain certain use-restriction and data security promises from the entities that they authorize to receive PII, but the Authorities need not maintain direct control over such entities. In addition, in connection with Statewide Longitudinal Data Systems, State authorities may collect, compile, permanently retain and share without the student’s consent PII from education records, and they may track participation in education and other programs by linking such PII to other personal information about the student that they obtain from other Federal or State data sources, including workforce development, unemployment insurance, child welfare, juvenile justice, military service and migrant student records systems.

**Additional Information**

Questions about these policies and procedures may be directed to the Office of the Registrar at 303.871.3897. Request forms and additional information are available on the web at www.du.edu/registrar or in the Office of the Registrar at 2197 South University Blvd., room G33, Denver, Colorado 80208.
