This course is an advanced theory for practice course with builds upon foundation courses in HUman Behavior in the Social Environment (HBSE) and clinical theories, and covers conceptualization, dynamics of, and interventions in mental health, substance use, and trauma. The course examines the independent and intersecting theory bases of mental health, trauma and substance use approaches. It also explores recent evidence about individual and environmental risks associated with these conditions and evidence about both specific therapeutic interventions and the importance of common relational factors. Social workers make up one of the largest professional groups working with clients living with mental health concerns, and bring a unique person-in-environment and strengths perspective to that work, which fits well with a recovery philosophy. Clinical frameworks and interventions common across these fields, such as harm reduction, motivational interviewing, self-determination theory, and the transtheoretical model of changes are presented, and students are introduced to integrative approaches that show promise in responding to client conditions.

SOWK 4350 Evolving Perspectives and Trends in Aging (3 Credits)
This course provides an overview of how theories of aging inform the role of social workers with older adults and their families across a range of service settings, including emerging fields of practice. The course examines multiple perspectives on the late life adult years, spanning the period from middle adulthood and on into late life, including: historical, biological, psychological, social, cross-cultural, and spiritual theories and related empirical evidence. While addressing evolving trends, the importance of difference, and ethical implications the topical issues include: work and retirement; economic status; residence and housing location; education and learning styles; interpersonal relationships with partners, families, and peers; creativity, spirituality, and religiosity; political beliefs and ideologies (including the formation, maintenance and alteration of prejudice and racism); the experience of chronic illness, disability, and death; and wisdom attained during adulthood and aging.
SOWK 4360 Social-Ecological Resilience and One Health: Connecting Human and Environmental Wellbeing (3 Credits)
Social-Ecological Resilience and One Health: Connecting Human and Environmental Wellbeing is a required theory for practice course in the Sustainable Development and Global Practice Concentration. This course builds on an innovative social ecology perspective that emphasizes coupled social-ecological systems and the integrated model of One Health as necessary theoretical frameworks for understanding the inter-connectedness of human health, wellbeing and resilience with that of other species and the natural environment. This course reviews and analyzes theoretical concepts and models for contextualizing the important social and ecological issues impacting our global environment as well as the societal implications of global environmental change. Using an integrated social science approach that highlights sustainable development as a paradigm that acknowledges the interdependence and interconnection between humans and the more-than-human world, social workers practicing in local and global communities will be prepared to implement effective, strengths-based solutions to support sustainable development and capacity-building efforts at various scales. This course will promote critical thinking and develop a knowledge base for sustainability and resilience oriented prevention and intervention strategies, environmental awareness, sense of belonging in a social-ecological community, adaptation and advocacy.

SOWK 4370 Community and Organizational Change: Theory for Practice (3 Credits)
This course presents key theoretical frameworks for students to be informed and innovative in responding to changing community, organizational and societal contexts. Theories of social change are presented that can assist social work leaders in promoting positive social change in the lives of vulnerable populations through the development of policy, community interventions and human services organizations. Students apply theories to understanding organizational change and innovation and the promotion of social and economic justice through community and policy practice.

SOWK 4375 Economic Theory and Social Work (3 Credits)
Human rights, urbanization, poverty, housing, gender inequality, care of children, poverty, indebtedness, racial and/or ethnic discrimination, and cultural conflicts are challenging the United States and nations throughout the world. This course introduces students to economic theories to develop broader conceptualization of local, national, and global social problems and possible intervention strategies. An understanding of economic theory provides a foundation for studying the emergence and maintenance of diverse social policies to address these problems. The course explores Neoclassical, Behavioral, and Microeconomic concepts of economic efficiency and the corresponding consequences to marginalized and oppressed populations.

SOWK 4401 Integrated Health Care: Models and Practice (3 Credits)
This course provides an overview of the knowledge, skills and theory of integrated health care social work practice, where physical and behavioral health services are most often provided in a primary care medical environment. Students will learn roles/functions of the behavioral health professional and their effectiveness as a member of the collaborative care team. Incorporating knowledge of evidence-based practice models of care and behavior change theory, they will increase their practice abilities to effectively work at an advanced level of skill as an integrated care behavioral health provider. Strategies and skills in patient engagement, motivational enhancement and advocacy will be taught through case studies and group activities. Cultural competency and effective care planning in an integrated healthcare environment will be emphasized.

SOWK 4410 Prevention & Treatment of Adolescent Substance Abuse (3 Credits)
This course examines causal factors and theories that seek to explain why some adolescents develop problems with alcohol and other drugs. Effective substance abuse prevention and treatment approaches are identified at the individual, family, school and community level.

SOWK 4412 Practice Elements in Interventions with Children and Youth (3 Credits)
This course offers an integrative theoretical framework of research and theory to intervene with children and adolescents in school, family, and community-based agencies. Interventions include both direct work with children and collaborative/conjoint work with parents. Techniques include common elements across empirically-supported interventions such as cognitive-behavioral therapy, behavioral treatment, client centered treatment, social skills training, and parent management training. Intervention strategies are described across four primary problem areas common among children/adolescents: anxiety, depression, disruptive behavior, and attention deficit disorder. For each of these problem areas, intervention techniques are demonstrated, practiced in class, implemented in field placements, and monitored for client progress. The use of empirically-supported interventions is discussed from a multidimensional perspective with consideration for cultural context and adaptations necessary for particular client groups.

SOWK 4416 Foster Care and Permanency Planning (3 Credits)
This course presents strategies for culturally competent assessment and intervention with children who are in foster care, adoption, or with their families. It focuses on permanency planning, involving extended families in making case decisions and caring for children, family reunification, relinquishment of children for adoption, termination of parental rights, preparing children and parents for adoption or guardianship, working with young adults nearing emancipation, and providing post-adoption/guardianship services. Prerequisites: SOWK 4305 and SOWK 4600 or permission of the instructor.

SOWK 4418 Child Welfare Practice: Assessment & Intervention (3 Credits)
This course provides an overview of the continuum of care of child welfare practice from entry to exit. The course uses an evidence-based approach taking a comprehensive look at child welfare services through a culturally responsive and multi-systemic lens. It presents strategies for culturally competent assessment and intervention with children, youth, and families involved with the child welfare system focusing on engaging families in assessment, service, and permanency planning. The course is required for students in the child welfare track. The prerequisites are SOWK 4305 (Child Maltreatment: Causes and Developmental Consequences) and SOWK 4600 (Child Welfare Policy and Services, or permission from the instructor.)
SOWK 4420 Multisystemic Social Work Practice and Advocacy with Families (3 Credits)
This course facilitates the development of family systems practice skills with clients, individuals, couples, families, organizations, constituencies, and communities. This course focuses on the development of multisystemic strategies and techniques utilizing family systems theory as part of the ongoing process of engagement, assessment, and preliminary interventions. It emphasizes the integration of research, theory, and practice through experiential learning and skill building. Students will learn strategies and techniques through role play demonstrations practicing intake/assessment/goal setting, preliminary intervention development, and professional documentation. Students will be asked to discuss their own “use of self” development throughout the class and reflect on personal bias, cultural bias, assumptions, values and affective reactions that may influence the relationship with client systems or constituencies. Prerequisite: SOWK 4320.

SOWK 4425 Positive and Community Youth Development (3 Credits)
This course provides an overview of the "community and positive youth development" approach to providing social services to children and adolescents. Many services for young people focus on negative outcomes such as behavior problems, pregnancy, violence, drug abuse, and truancy. These services are supposed to “fix” the small minority of kids who are “broken” in some way. The community and positive youth development perspective stresses that all youth need a variety of supports and opportunities to develop into healthy, contributing adults. This course considers how such an approach to social service delivery can be applied across different organizational settings (e.g., schools, government agencies, and non-profits) to promote the well-being of American youth from diverse cultural backgrounds.

SOWK 4430 Substance Use Interventions (3 Credits)
There is widespread recognition that substance use is one of America's most pressing social problems. Social workers increasingly find themselves attempting to help individuals and families resolve substance use problems, as well as directly or indirectly related issues. This course introduces students to current and emerging substance use treatment approaches so they can conduct their practices from an informed perspective.

SOWK 4435 Grassroots Organizing for Social Justice (3 Credits)
This course examines grassroots approaches to community organizing and social change for social justice. Topics include: power and empowerment theory, insider/outside considerations, development of critical consciousness and popular education techniques for organizing, history and genealogy of community organizing and social movements related to social work, direct action tactics and strategies, arts-based organizing, campaign development, and ethics and skills for working with diverse communities.

SOWK 4445 Social Work Assessment and Intervention in Aging (3 Credits)
This course focuses on biological, neurological, psychological, social, spiritual, and environmental aspects of late life as a foundation for the delivery of assessments and interventions to older adults. This course presents information on demographic projections, population trends, and theoretical perspectives that inform gerontological social work practice. This class additionally focuses on the unique nature of social work with this diverse population including a continuum of care services for older adults, interdisciplinary nature of helping services, dynamic nature of aging for multiple vulnerable older adults such as those facing institutionalized oppression, and specific attention to elder wellness.

SOWK 4454 Child and Adolescent Trauma (3 Credits)
This course introduces students to the common concepts (general theory and foundational knowledge), components (intervention and treatment elements) and skills (practitioner skills) underlying evidence-based treatment for children and adolescents who have experienced trauma. Trauma is broadly defined, and includes children and adolescents exposed to traumatic events including, but not limited to natural disasters, war, abuse and neglect, medical trauma, witnessing interpersonal crime (e.g. intimate partner violence), and other traumatic events. The course highlights the role of development, culture, and empirical evidence in trauma-specific interventions with children, adolescents, and their families. It addresses the level of functioning of primary care giving environments and assesses the capacity of the community to facilitate restorative processes. The course focuses on assessment and intervention as a foundation for subsequent learning about treatment. This course incorporates the new National Child Traumatic Stress Network (NCTSN) core curriculum on child trauma (CCCT). The course conveys the crucial evidence-based concepts, components, and skills designed by NCTSN to strengthen competency in assessment, referral, and treatment.

SOWK 4465 Human Security: Intervention Strategies for Economic & Social Development (3 Credits)
Human security is a new paradigm for understanding complex global vulnerabilities. Human security goes way beyond traditional notions of national security and highlights the security of the individual rather than that of the nation state. Human security uses a person, entitlement and human rights centered view of security. It is essential for national, regional and global stability and sustainability. In defining human security, the United Nations stressed "the right of all people to live in freedom and dignity, free from poverty and despair," and recognized that "all individuals, in particular vulnerable people, are entitled to freedom from fear and freedom from want, with an equal opportunity to enjoy all their rights and fully develop their human potential" (A/RES/60/1). "Human security aims at ensuring the survival, livelihood and dignity of people in response to current and emerging threats - threats that are widespread and cross cutting. Such threats are not limited to those living in absolute poverty or conflict" (UN-OCHA). Today, the impacts of natural disasters, climate change and other forms of environmental change, and global economic crises, among others, are considered to threaten human security in as well as developed countries. The increasing numbers of internal violent conflicts, forced migration, natural disasters and environmental degradation have resulted in national and international security failings that reflect the challenges of the post-Cold War security environment. The failure of mainstream development models to generate growth, particularly in Least Developed Countries (LDCs), or to deal with the consequences of complex new threats (e.g., HIV/AIDS, climate change, social and economic inequality) reinforced the sense that international institutions and states are not organized to address such problems in an integrated way. Social workers focusing on human, social and economic issues in global settings will use various human development strategies and other capacity-building approaches in practice. This course develops students’ skills in human and social development strategies, sustainable livelihood and conflict management strategies, and other capacity-building community strategies, and fosters a solid understanding of the programmatic and practical requirements for human security in a global context.
SOWK 4500 Mental Health Interventions with Children (3 Credits)
This course offers an integrative framework of theory and research to understand and intervene in the major mental health problems experienced by children. Interventions include both direct work with children and collaborative/conjoint work with parents. Techniques include play therapy, cognitive-behavioral interventions, psychopharmacology, and crisis intervention for suicide. Children's development is considered from a multidimensional perspective, including cultural context, risk and protective factors, and the development of psychopathology.

SOWK 4501 Wellness Promotion and Intervention Across the Lifespan (3 Credits)
This course prepares students to critically analyze the determinants of wellness across the life span, across socio-economic boundaries and across cultures in order to promote wellness in the everyday lives we lead both personally and as social workers in a community. An emphasis will be placed on the research and application of knowledge and skills to increase social worker awareness of the distinctions between health and wellness and to promote wellness in the quality of life in a community. This course builds students' skills and strategies to enhance wellness needs within a community. Strategies include using developmental models, researching current policies, and implementing wellness assessment tools in order to create interventions for communities.

SOWK 4505 Relationship Therapy (3 Credits)
This course focuses on assessment, problem/solution path identification, intervention strategies and outcome evaluation in counseling heterosexual, gay and lesbian couples. Identifies common relationship patterns and explores intervention strategies including behavioral, strategic, structural, narrative, transpersonal and feminist. Also covered are issues such as conflict management, relationship enhancement, intimacy, power and control, domestic abuse, infidelity and divorce. Students will analyze the intersecting issues of oppression: sexism, racism, classism, heterosexism and ageism.

SOWK 4520 Advanced Clinical Social Work Practice with Families (3 Credits)
This course is an advanced skill-based course that extends students' knowledge and application of family systems therapy. The course engages the active participation of students in role-play scenarios and the discussion and deconstruction of actual cases enhancing their developing skills as family therapists-in-training. In this course, students have the opportunity to plan and implement an entire course of treatment for a family. This allows the development of a conceptual understanding of family therapy practice, treatment skills and interventions, and utilization of self-as-therapist that influences the therapeutic system. Students have multiple opportunities to practice family interventions and receive feedback from both classmates and the instructor through the use of the clinical family therapy methods of ‘live supervision’ and ‘reflecting teams’. Students will experience the connection between theory and practice and learn to integrate multiple theories. Issues related to transference, culture based countertransference, resistance, and working with involuntary clients are discussed. Advanced Clinical Social Work Skills with Families builds on the family systems theory and practice applications learned in the required family systems concentration courses and expands students' opportunity to apply theory to cases in diverse practice and client situations. An emphasis is placed on the development of personal theory, professional development, and therapeutic change/outcome as it relates to common factors in family therapy. This course also builds upon SOWK 4505: Relationship Therapy and aspects unique to couple's therapy. Required prerequisites: SOWK 4320 and SOWK 4420.

SOWK 4521 Advanced Skills for Working with Military Families (3 Credits)
The class is designed to give students an understanding of the issues military families face and how to apply that understanding to clinical interventions with military families. It also investigates individual service member concerns, spousal/partner relationships, and family dynamics surrounding deployment, active duty, and returning home permanently or between deployments.

SOWK 4523 Care Management Skills and Resources to Promote Community Living (3 Credits)
Many individuals and their families of all ages cope with physical and mental health conditions that impede their ability to live in the community. A vast array of formal and informal resources, public programs, and privately funded services can promote community living. Social workers often provide care management to enhance access, coordinate care, and ensure equality of these long-term services and supports. This course will develop students' skill at care management and knowledge of resources, including resources for persons with developmental disabilities, chronic mental health conditions, physical disabilities, and age-related functional impairments.

SOWK 4525 Administration and Management Practice and Skills (3 Credits)
This course examines the application of leadership and supervision theories to practice settings in communities, organizations and policy contexts. A focus is placed on leadership roles and an examination of leadership styles, with an emphasis on the skills of transformational leadership and supervision. Topics covered include team leadership and supervision, one to one supervision skills, managing conflict, personnel management, and cross cultural work.

SOWK 4530 Poverty and Community Economic Development (3 Credits)
This is an advanced community practice class focused on poverty, low-income neighborhoods and local economic development. The class begins with a thorough review of the scholarly literature related to poverty, sustainability, and the concentration of poverty in low-income neighborhoods. Then, public and private responses to poverty are examined. The class focuses on both governmental policies and programs supported by the private sector. Next, the class turns to local responses to the concentration of poverty in low-income neighborhoods. The class focuses on the interdisciplinary nature of programs and interventions aimed at community economic development in low-income neighborhoods.
SOWK 4535 Planning and Program Development (3 Credits)
This course prepares students to engage in strategic planning and program development roles and practice within a social work community, organizational, or policy practice setting. Students in this course gain knowledge in the principles of planning, social enterprise, the engagement of stakeholders in planning processes, community collaboration and the elements of designing and implementing programs. Students have the opportunity to put this knowledge base into practice by developing a comprehensive program proposal applying the skills of strategic thinking, planning, critically evaluating research informed practice and practice informed research. In addition, students engage in communicating professional judgment in both written and oral formats.

SOWK 4540 Advanced Skills for Working with Military Families (3 Credits)
This course is designed to give students an understanding of the issues military families face and how to apply that understanding to clinical interventions with military families. It also investigates individual service member concerns, spousal/partner relationships, and family dynamics surrounding deployment, active duty, and returning home permanently or between deployments.

SOWK 4545 Social Work Practice with LGBTQIA Communities (3 Credits)
This course examines contemporary U.S. child welfare policies in historical perspective, focusing on prevention, report and investigation of child abuse and neglect, as well as family preservation, out-of-home care, adoption and services for troubled adolescents. Also evaluated are the impact of multiculturalism, human development, and identity development while exploring how individuals view spirituality and religion as they move through the life cycle. Drawing on the work of Edward Canda, Ken Pargament and Froma Walsh, the course will explore definitions of spirituality and religion, survey methods of approaching spiritually sensitive bio-psycho-social assessments, and examine culturally and spiritually sensitive social work interventions. Class activities will emphasize dialogue, reflection, exploration and experiential learning in order to develop a balanced framework for navigating spiritually and religion in practice settings with individuals, groups, families, communities and organizations. In this course, students will gain self-awareness and learn how their own cultural and spiritual perspectives have shaped their worldview and professional sense of self. It is assumed that students enrolling in this course will bring an interest in learning about the many facets of spirituality. As such, students will be asked to explore their own ideology of spirituality as it relates to their professional identity and practice effectiveness. Prerequisite: SOWK 4132.

SOWK 4555 Spirituality and Social Work (3 Credits)
The purpose of this course is to provide students with a nondiscriminatory framework of knowledge to respond competently and ethically to populations with diverse spiritual perspectives and religious cultures in social work practice. This social justice-informed course underlines and respects the diversity of all spiritualities with special attention to spiritual populations historically marginalized and neglected by Eurocentric assumptions common to social work. This course builds on the generalist approach of our foundation curriculum and integrates theories of multiculturalism, human development, and identity concepts while exploring how individuals view spirituality and religion as they move through the life cycle. Drawing on the work of Edward Canda, Ken Pargament and Froma Walsh, the course will explore definitions of spirituality and religion, survey methods of approaching spiritually sensitive bio-psycho-social assessments, and examine culturally and spiritually sensitive social work interventions. Class activities will emphasize dialogue, reflection, exploration and experiential learning in order to develop a balanced framework for navigating spiritually and religion in practice settings with individuals, groups, families, communities and organizations. In this course, students will gain self-awareness and learn how their own cultural and spiritual perspectives have shaped their worldview and professional sense of self. It is assumed that students enrolling in this course will bring an interest in learning about the many facets of spirituality. As such, students will be asked to explore their own ideology of spirituality as it relates to their professional identity and practice effectiveness. Prerequisite: SOWK 4132.

SOWK 4565 Social and Environmental Impact Assessments (3 Credits)
Social and environmental impact assessments are important tools for analyzing and managing both the intended and unintended consequences of development projects on human and ecological systems in order to bring about a more equitable and sustainable social ecological system. This class incorporates an understanding of the history and concepts of the three levels of impact assessments (micro, mezzo, and macro) into the research process that is the core of social impact assessments. Students prepare and evaluate social ecological impact assessments through learning to identify and define problems, select theoretical frameworks appropriate to the problem, identify research questions, design a study appropriate for the identified questions, gather and analyze data, and write the final assessment. Particular attention is paid to assessing the effects of interventions on vulnerable populations. Other topics will focus on the practical aspects of project team selection and management, timelines, and the communication of findings to stakeholders.

SOWK 4600 Child Welfare Policies and Services (3 Credits)
This course examines contemporary U.S. child welfare policies in historical perspective, focusing on prevention, report and investigation of child abuse and neglect, as well as family preservation, out-of-home care, adoption and services for troubled adolescents. Also evaluated are the impact of policies and proposals for change in policies, considering empirical evidence, values and ethics. Provides a framework to analyze policy choices and encourages students to advocate for needed policy changes. Prerequisite: SOWK 4120 or SOWK 4299.

SOWK 4605 Poverty: Policies and Services (3 Credits)
The United States poverty rate declined steadily from the 1950s through the 1970s, decreasing from 22% of the population in the late 1950s to 12% in the late 1970s. Poverty rates have fluctuated since then with current rates standing at approximately 15% or 46 million people. More than 16 million children, 22% of all children, live in families with incomes below the federal poverty line. The course begins by considering the federal poverty measure and competing definitions of poverty. Key programs and policies meant to alleviate poverty, such as government transfer programs (including cash and noncash welfare, earnings supplements, and social insurance programs), education and training programs, and support services are examined. Course content is applied to practice scenarios to enhance student knowledge of poverty programs, eligibility criteria and application processes. Critical discussions of these programs will inform analysis of alternative approaches to poverty reduction and economic self-sufficiency.
SOWK 4610 Policies and Programs for Children and Youth (3 Credits)
This course examines the history and evolution of social policies and programs targeting high-risk youth. Students will seek to critically analyze the effects of current and recent policies in the context of youth offending and other adolescent problem behaviors. Prerequisite: SOWK 4120 or SOWK 4299.

SOWK 4630 Family Policies and Services (3 Credits)
Identifies challenges contemporary American families are experiencing and presents strategies for developing policies and services to meet these challenges. Examines specific policies and services that most affect families, as well as broader questions concerning power and its distribution, allocation of resources and the role of government in promoting individual and family well-being. Prerequisite: SOWK 4120 or SOWK 4299.

SOWK 4635 Immigration Policies and Services (3 Credits)
This course identifies challenges for immigrants and presents strategies for developing policies and services to meet these challenges. It not only examines specific policies and services that most affect immigrants but also considers broader questions concerning power and its distribution, allocation of resources, and the role of government in promoting individual and family well-being. This is a concentration policy course for all concentrations.

SOWK 4640 Mental Health and Substance Use Policies (3 Credits)
This course provides a comprehensive understanding of policies related to mental health and/or substance use, their historical antecedents, and the socio-political forces that influence their development. This course also introduces students to emerging controversies concerning these policies.

SOWK 4645 Health Care Policy (3 Credits)
This policy course provides an overview of health care policy as it is relevant to social work practice in multiple health and behavioral care settings. With the advent of health care reform and the implementation and operationalization of the Patient Protection and Affordable Care Act (PPACA), there are rapidly changing policy issues related to this innovative integration and delivery of health care services. Students in this course critically analyze the practice of policy in this new and quickly evolving service arena. This course explores key health policy strategies to foster integrated delivery system development and sustainability in line with health policy goals to reduce cost of care, improve population health and improve quality of integrated care services, with special emphasis on the integration of primary care, behavioral health services and wellness/health promotion initiatives. Strategies for students to influence policies and promote change in the interest of the individual/family/community, agency/organization and the communities they serve are presented. Critical thinking skills in developing and analyzing proposals to improve integrated health policy are encouraged. The course builds on policy content offered in the professional foundation year and links policy to practice and research skills.

SOWK 4650 Aging Policy (3 Credits)
This course provides an overview of social policy and service delivery issues in gerontology. It includes a critical review of rapidly developing policy issues, as well as an overview of U.S. health care and social service delivery systems serving older adults. The course encourages students to participate in critical analysis of issues and to develop and analyze innovative proposals to improve policy and programs for older adults. This course fulfills the policy requirement for the Aging Services and Policy concentration.

SOWK 4655 Mental Health and Health Care Policy (3 Credits)
This course provides an overview of social policy and service delivery issues in mental health and health care, with emphasis on achieving quality and addressing disparities. It includes a critical review of United States’ historic and developing policy issues, as well as mental health and health care financing and delivery systems and other key issues in the field. Students will participate in critical analysis of issues and will examine various proposals to improve mental health and health care policy and programs. Prerequisite: SOWK 4120 Social Policy Analysis, Advocacy and Practice, or SOWK 4299 Advanced Standing Seminar.

SOWK 4660 Social Policy Advocacy (3 Credits)
Facilitates student learning within policy-making arenas. Students are paired with health and social service agencies and coalitions to assist in agenda-setting, legislative research, and issue-advocacy development and implementation in the state legislature and bureaucracy.

SOWK 4665 Global Policies and Programs for Sustainable Development (3 Credits)
In the 21st century, more international cooperation will be required to confront transnational problems, many of which arise from globalization. From infectious diseases to civil conflicts that spill across borders, from global financial crises to protecting the world’s natural systems and resources, there are many modern issues that require enhanced global cooperation and collective solutions. Global Policies and Programs for Sustainable Development considers transnational problems that cannot be solved by national governments alone, and examines policy systems (or “regimes”) and global governance approaches that have emerged to manage global issues, such as: finance, trade, human rights, migration, health, environmental change, national and human security, and disaster reduction and response. Overall, this course focuses on understanding and connecting global policy trends, and examines their inter-relatedness with globalization and their impact on human and social development. Global Policies and Programs for Sustainable Development gives students the opportunity to study, analyze, and understand specific global policy initiatives, their development, and implementation. Devising effective strategies to address global problems is necessary because these problems can impede social and economic development, tear at the fabric of societies, and even undermine regional and international stability. The goal of this course is to train students to understand the essential components of global policies in both the public and private sectors and to prepare them to initiate policy reforms to accomplish innovative and effective outcomes. This course also will address the development of policy in the context of social work values and ethics. Global policy regimes will be analyzed from multiple viewpoints. Readings, case studies, and discussion will address policies within international organizations (e.g., United Nations, World Bank, International Monetary Fund, and specialized agencies such as the World Health Organization) with applications for developed, transitional, and developing countries. The course will emphasize an analytical approach for understanding the impact of global policies on programs, services, and development at large.
SOWK 4670 Policy Development & Analysis (3 Credits)
Focuses on the development and analysis of social welfare policy. Reviews the structure of the policy-making and implementation process, and examines perspectives on the definition of social problems and approaches to the development and analysis of social welfare policies. Students apply the perspectives and frameworks as they analyze a specific social problem and policy directed toward it, identify needed change in policy, select place and strategy for change in policy, and communicate knowledge to central actors in the policy-making and implementation process. Prerequisite: SOWK 4120 or SOWK 4299.

SOWK 4680 Native Peoples Practice: History and Policy (3 Credits)
This course is designed as the background to practice with Native Peoples. It will explore the relationship between theory and practice, socio-economic, political, and health issues, and the dynamics of changes in reservation and urban Native communities. Historical trauma, federal policies, impacting Native people, and laws and regulations that impact social service delivery will be reviewed. Social services delivery systems will be analyzed with the uniqueness of the cultural parameters of tribal communities. Guest lecturers from tribal communities may partner with faculty to teach the course. Prerequisites: SOWK 4299 and SOWK 4132.

SOWK 4700 Solution Focused Brief Therapy (3 Credits)
This course is a methods/skills course that provides students with the opportunity to gain knowledge and skills in the contextual stance and core interventions of the evidence-based approach, Solution-Focused Brief Therapy (SFBT). Students gain an understanding of how this approach works, and the ability to use this approach in a variety of settings including with clients struggling with chronic mental illness, trauma, and substance misuse, as well as with children and adolescents, couples and families, in community development, and supervision. This course addresses competencies and practice behaviors in advanced clinical settings including Families, Child Welfare, Children and Youth, Mental Health and Health.

SOWK 4705 Forensic Orientation in Social Work Practice: Assessment and Interventions with High-Risk Offenders (3 Credits)
Presents and applies a framework for assessing and intervening with offender populations. This risk and containment framework takes a community safety and victim-centered perspective and focuses on assessing and intervening with multiple systems surrounding offenders. The framework is then applied to specific interventions with domestic violence abuse offenders and with adult and adolescent sexual offenders.

SOWK 4710 Domestic Violence (3 Credits)
This is a concentration year practice elective focusing on understanding, assessing, and intervening with domestic violence, understood as violence occurring in the context of intimate relationships. The purpose of this course is to provide students with the theoretical understanding and practice skills necessary to establish a beginning competence in assessing and intervening with domestic violence and in developing community, systemic, and policy responses.

SOWK 4712 Law of Family and Child (3 Credits)
Examines legal principles and procedures relevant to social work practice with families and children: structure and operation of the American legal system, principles to follow in conducting legal research, basic principles of constitutional law and law related to juvenile delinquency, child protection, adoption, education and domestic relations. Covers legal aspects of social work practice including licensing, confidentiality and professional liability.

SOWK 4713 Preventing Behavioral Health Problems in Children and Youth (3 Credits)
Behavioral health problems in childhood and adolescence take a heavy toll on millions of lives. These problems range widely – from anxiety and depression to alcohol, tobacco, and drug abuse; delinquent and violent behavior; dropping out of school; and risky sexual activity and unwanted pregnancies. SOWK 4713 presents an overview of practices and policies aimed at preventing behavioral health problems in young people. Emphasis is placed on developing the practice and policy skills that are necessary to deliver preventive interventions and programs in schools, families, and communities. Students will select an effective program, learn the skills necessary to deliver the program, and then implement the program in a classroom setting. Class content will emphasize the importance of increasing the role of social work practitioners and social work values in the interdisciplinary field of prevention practice.

SOWK 4715 School Social Work Interventions (3 Credits)
Designed to give students the ability to identify, understand and apply the varied roles of school social worker. Examines politics of education, the educational organizational structure, special education law and process, collaborative teamwork with school and community professionals and inter-system case coordination. Emphasis placed on meeting the needs of special education populations through assessment, intervention and evaluation and on preventive programs for children and youth at risk for school failure, truancy and dropping out.

SOWK 4718 School Social Work Assessment and Realities (3 Credits)
This concentration course is the third in the School Social Work Certification. Both SOWK 4715 (School Social Work Interventions) and SOWK 4712 (Social Work and the Law) are prerequisites for this class. The class provides advanced skills in assessment pertinent to the school ecosystem. It also juxtaposes these skills with field trips to several schools to interact with School Social Workers in a variety of settings and work roles to understand how these assessments are used in the school setting. The course emphasizes the written tasks and social work skills that School Social Workers need to perform on a regular basis, as well as how these skills are used to help the student, family, and school environment. Prerequisites: SOWK 4712 and SOWK 4715.

SOWK 4720 Prevention and Treatment of Juvenile Delinquency and Youth Violence (3 Credits)
Examines causal factors and theories that seek to explain why some adolescents engage in delinquent conduct and/or violent behavior. Effective delinquency and violence prevention and treatment approaches are identified at the individual, family, school and community levels.
SOWK 4721 Existential Social Work Practice (3 Credits)
The problems facing people can be understood in the context of situations and meanings they give to them. This course seeks to identify useful ways to clarify and validate the client’s unique “world view”, bypassing the many dangers and misuses of diagnostic categorization and empowering clients in relation to themselves and problem definition.

SOWK 4723 Social Work Practice in Health Care (3 Credits)
This course is designed to explore and develop advanced social work knowledge and skills in order to practice social work in diverse health care settings. It includes examination of the social work role on interdisciplinary teams, health care terminology, setting-specific assessment and interventions and comprehensive social work services for acute and chronically ill patients. It emphasizes social work values and ethics in relation to health care practice.

SOWK 4725 Mind-Body Connections and Social Work Practice (3 Credits)
This course teaches skills for implementing mind-body techniques, models for wellness assessments, and evidence-based mind-body strategies for intervention in client and community problems. An evidence-based approach creates a foundation for: 1) understanding the mind-body connection that influences an individual’s and community’s physical, emotional, and social well-being and 2) the most efficacious methods for mind-body social work practice skills. Research evidence demonstrates that mind-body strategies are helpful for an array of concerns such as, military personnel with PTSD, adults with emotional regulation issues, academic concerns of stressed-urban youth, community mobilization, and emancipatory practice.

SOWK 4726 Experiential Therapy (3 Credits)
This course provides students with knowledge and skills to facilitate experiential-based therapy with children, youth, families and couples with a focus on environmentally sound practices. This is considered a service learning class since we are partnering with nature. Please wear comfortable clothes and comfortable closed toed shoes for all classes and bring a water bottle.

SOWK 4727 Experiential Therapy in Nature (3 Credits)
SOWK 4727 is a methods/skills course which provides students with knowledge and skills to facilitate experiential therapy with groups with a focus on environmentally sound practices in the outdoors.

SOWK 4730 Cognitive Behavioral Therapies (3 Credits)
This course examines major cognitive behavioral therapies (CBT) suggesting methods focusing on clients’ problem-solving abilities, building on client strengths, targeting specific thought patterns that impede clients from reaching goals, and assessing outcomes in terms of changes in thinking and behavior. Theory is applies to individuals, dyads, families, and groups. Additionally, this course examines relevant research suggesting both indication and counter-indications of approaches.

SOWK 4732 Disrupting Privilege through Anti-Oppressive Practice (3 Credits)
This course, building on the theoretical foundation in SOWK 4132 Multicultural Social Work Practice, examines the barriers to the professional use of self as an ally to historically disenfranchised groups, both in the context of day-to-day relationships with clients as well as in the context of community and macro-level interventions. The course is intended to assist in understanding the personal, situational, structural, and cultural influences that impede justice-oriented social work practice. The course supports students in developing strategies, skills, and approaches to anti-oppressive practice. Anti-oppressive social work practice is a range of practice approaches that adopt a critical and structural perspective on issues of social inequality, oppression, power, privilege, and domination. It encompasses approaches such as feminist, anti-racist, Afrocentric, disability practice, and critical social work frameworks to name a few (Campbell, 2003). It attends to both process and outcome (Dominelli, 1998), and links the provision of individual assistance to people from marginalized groups with involvement in social movements corresponding to the marginalization (Carniol, 2000). "The [anti-oppressive] framework enables links to be made between individual action and social structures. It informs practice by enabling the worker to evaluate differences that exist at an individual level and within society and how these impact on each other. It provides the means of making accurate assessments by taking into account the inequalities that texture the lives of those denied access to society’s resources because of their defined social status and the exclusionary practices of the dominant system. It demands that we consistently engage in the process of critical self examination, which in turn enables us to engage in the process of change." (Dalrymple and Burke, 1995, p. 18).

SOWK 4735 Interpersonal Approaches to Counseling (3 Credits)
This course is an elective course which utilizes the interpersonal models of psychotherapy and neurobiology, drawing upon psychodynamic theories and techniques. The course examines traditional and contemporary psychotherapy theories and techniques. Interpersonal interventions are grounded within the values, ethics and standards of practice for clinical social work.

SOWK 4737 Assmnt & Interven w/Adolescent (3 Credits)
Examines adolescence as a major developmental life cycle stage and the reciprocal relationships between gender, race, ethnicity, family development, peer group, neighborhood and the adolescent’s physical, intellectual, social and sexual development, as they contribute to identity formation. Presents individual, group, family and program-based intervention approaches, ranging from least to most intensive and restrictive. Prerequisite: completion of foundation year course work or permission of adviser and instructor.

SOWK 4741 Grief and Loss Across the Lifespan (3 Credits)
This course is designed to prepare students to understand social work roles and practice (engagement, assessment, intervention and evaluation) in working with those experiencing loss across the life span. Whether the loss is related to health or functioning, family system, developmental stage or an actual death, this course prepares students to be culturally responsive to diverse perspectives and bereavement needs. Students will learn theoretical models of grief and loss and how to effectively evaluate the needs of grieving individuals, families, communities and their support systems.
SOWK 4742 Disability Studies (3 Credits)
This values course will facilitate students’ exploration of their own perceptions, biases, and belief systems with regards to the broad topic of disability. A values perspective encourages students to reflect on their personal, professional, cultural and political perceptions of the epistemology of the notion of disability. This course will explore the social construction of concepts of ableism and identity, engage in historical analysis of disability (both domestically and internationally), and familiarize students with pertinent legislation/policies that impact persons with disability (PWD). Students will learn definitions of disability, come to know more about the spectrum of disability and utilize critical theoretical perspectives. The study of disability includes persons with disability (PWD), including the broad range of categorizations related to mental health, physical health, and cognitive ability. Students will engage in critical dialogue around the representation of PWD in our culture. Utilizing a person-in-environment perspective, students will look at the Social Work Code of Ethics as it relates to PWD and explore various facets of self-determination, independent living, relationships and sexuality, and the role of family, power and privilege in the lives of persons with disabilities. Prerequisite: SOWK 4132.

SOWK 4749 Culturally Responsive Practice with LatinX (3 Credits)
Addresses immigration issues, as well as intervention and theoretical approaches for Latinx populations. Covers the selection of interventions and strategies for cross-cultural use in adequately addressing the needs of Latinx. A required course for the Latinx Social Work Certificate.

SOWK 4750 Critical Perspectives on the Latinx Context (3 Credits)
This course provides a framework for culturally relevant social work services designed to meet the needs of the Latinx community. This is a social work content course taught in Spanish. Students acquire core principles grounded in an understanding of social justice, privilege, and oppression including the interconnection between human and civil rights, globalization, immigration and poverty. Students will expand their oral and written Spanish expression as they learn about cultural, social and political theory. Students learn aspects of Mexican culture, community development, historical patterns of oppression, spirituality, and the role of indigenous movements. As a result of this course, students understand how to advocate for nondiscriminatory cultural, social and economic practices within a Latinx context and experience. It is designed for students in all concentrations who have an interest in understanding issues facing the Latinx community. Prerequisite: Initial placement is based on minimum language proficiency test results at the intermediate-advanced level. Further placement determination will consist of a comprehensive evaluation to ascertain oral and written proficiency. Enrollment in this course may be limited to Latinx Certificate students.

SOWK 4751 Global Relations and Poverty in Mexico (3 Credits)
Provides a mixture of experiential and academic learning based on the community-learning model of Paulo Friere. Taught in Cuernavaca, Mexico, the course covers Mexican culture, community development, historical patterns of oppression, spirituality and liberation theology, global economics and policy, and the role of indigenous movements. Includes discussion on the relationship between poverty in Mexico and the US, and implication for social workers. A required course for the Social Work with Latinos/as Certificate.

SOWK 4752 Trauma Informed Assessment and Interventions (3 Credits)
This course provides an overview of multi-system level definitions of traumatic experience—historical, individual, interpersonal, family, organizational, and community. The emphasis is on social work practice that is culturally responsive, growth-oriented, and strengths based, in which the study of trauma is approached from a theoretical base that perceives the trauma response as a “response” rather than a “disorder.” Trauma informed assessment and interventions are examined, incorporating a social justice perspective on historical trauma, poverty, and interpersonal violence. This course promotes the unique contribution social workers offer through the lenses of strength, resilience, and coping as well as commitments to cultural responsiveness and ecological/systems factors. Students will identify how secondary trauma impacts social workers and the importance of professional accountability to self-care and ongoing growth and development.

SOWK 4753 Social Development in Latin America (3 Credits)
Covers social development in South and Central America, with special emphasis on Mexico. Practice-oriented, it is geared towards a knowledge of policy-making in Latin America and on the skills required for local social development. A required course for the Social Work with Latinos/as Certificate.

SOWK 4754 Trauma and Recovery in Social Work Practice (3 Credits)
Provides an overview of multi-system level definitions of trauma experience - historical, individual, interpersonal, family, organizational, community, and global. Also examines various approaches to trauma response theory. Promotes the unique contribution social workers have to offer through lenses of strength, resiliency, and coping as well as commitments to multicultural and systems factors.

SOWK 4755 Interventions for Responses to Trauma (3 Credits)
This course is designed from a strengths perspective in which the study of trauma is approached from a theoretical base that perceives psychological adjustments after trauma as primarily a “response” rather than a “disorder.” Includes information on the integration of cognitive, emotional, and somatic approaches to trauma treatment, as well as consideration of when to use a trauma-informed versus a trauma-focused paradigm. At the community level, the course also includes an introduction to mental health reactions and responses to disaster. Prerequisite: SOWK 4754.

SOWK 4756 Social Work from a Chinese Perspective (3 Credits)
This course provides students with a unique opportunity to learn first in the classroom the social, cultural, historical, political, and economic characteristics of China and how these characteristics shape social work in China. Then students learn by experiencing social work in China. In Beijing, students participate in lectures given by faculty at China Youth University, discussions with social work students, visits to social work organizations, visits to important cultural landmarks and nightly synthesis of new knowledge and experiences. An elective course.
SOWK 4757 Social Work and Latino/a Cultures: An Intensive Practice and Spanish Immersion Course (3 Credits)
This required course for the Social Work with Latinos/as certificate combines academic classroom instruction and experiential and conversational learning. The goal of the course is to enhance the student's Spanish communication and cultural responsibly skills through dialogue practice and service in Latin America. Country location for this study abroad course is determined based on yearly certificate objectives and travel advisories. Based on the student's individual skills and interests, and the needs of local field agencies and communities, students become involved in volunteer and service learning opportunities preparing them for their concentration field placement back in the United States where they are expected to demonstrate competency in Spanish. Students will learn to identify cultural differences and similarities in attitudes towards community organizing and mental health care, and social service delivery in order to better address these cultural differences and similarities in the United States. This experience also allows students to learn Spanish within a cultural and professional context. This course is conducted entirely in Spanish.

SOWK 4758 Social Work in Kenya: Context, Conservation, Empowerment, Sustainability (3 Credits)
This course is designed to introduce students to the social, cultural and conservation issues of Kenya and East Africa. This course is field-based with strong emphasis on service learning and direct experiences. Course readings, lectures, classroom discussions, service learning projects and field work in rural Kenya provide participants firsthand experience in the social, cultural, historical, political, environmental, ecological and economic realities that exist in Kenya. This course is open to qualified concentration and advanced standing Graduate School of Social Work students. The course meets on campus for four sessions before traveling to Nairobi, Voi, and Kasigau, Kenya. Due to the intensive nature, remote travel logistics and costs for this course, direct communication with the professors is required. Qualifications include: willingness to sign International Travel Agreement, willingness to receive required medical authorization and immunization, academic good standing, and readiness for the physical and emotional demands of traveling in rural and remote Africa.

SOWK 4759 Global Cultural Perspectives: Consensus and Conundrums (3 Credits)
Social workers increasingly practice in global communities both nationally and internationally. Changes in practice environments demand that social work practitioners are informed citizens of comparative cultures and societies. This course examines the values and ethics of social work practice in a global context of power, privilege and oppression. Course materials and educational experiences are used to challenge students to examine ethical and value-based conundrums when practicing in global settings and to develop practice skills to enhance the health, well-being and sustainability of communities. Through the use of case studies, critical thinking, cultural inventories and reflexivity the course supports and challenges students' personal growth and professional practice.

SOWK 4760 Resource Development and Fundraising (3 Credits)
This course examines strategies and tactics around skill building in fundraising, resource-development strategies, grant-proposal writing, budgeting, and fiscal processes common to not-for-profit or governmental organizations. Topics include resource development and acquisition (fundraising) and discussions on the budget process required resource management for nonprofit organizations.

SOWK 4762 Bosnia in Transition: The Social Work Response (3 Credits)
This course provides students with the unique opportunity to learn firsthand about the social work response in post-war Bosnia through a social justice lens. The social, cultural, historical, political, economic, religious, legal and ethnic characteristics of the former Yugoslavia will be explored as context for studying the genocide that occurred in the 1990s. Learning will occur in the classroom at GSSW, followed by travel to Bosnia. Students will be exposed firsthand to the local, national and international efforts toward rebuilding and healing, through lectures provided by faculty at the University of Sarajevo School of Social Work, interaction with Bosnian social work students, visits to NGOs focused on the post-war efforts, visits to sites important during the war, visits to war tribunal sites, and exposure to current legal, economic and human service processes.

SOWK 4763 Social Work and Social Justice in South Africa (3 Credits)
This three-credit course will be conducted in partnership with Educo Africa in Cape Town, South Africa. The course will provide experiential and service learning social work experiences. Course activities will encourage cross cultural learning experiences and increase knowledge pertinent to South Africa's social, cultural, environmental, political and historical reality. It will expose students to Community Development challenges as well as environmental and social justice issues in a South African context. The goal of the course is to increase personal, community and global leadership potential of social work and social development professionals. This course in partnership to Educo Africa will use a community-based context to increase the effectiveness and expertise of students and will support student's engagement in program development and building international networks and partnerships.

SOWK 4764 Historical Trauma and Healing (3 Credits)
This course is designed to provide students with a context for practice with communities experiencing historical trauma. We learn about the conceptualization of historical trauma, its impact on communities as well as community responses to it. We also discuss the importance of cultural protective factors, strengths, and culturally relevant models of healing around multigenerational, collective experiences of trauma. A number of practice approaches found useful with communities experiencing historical trauma are presented and discussed. Class format includes presentations, small group discussions, films, poetry, movement, and experiential learning in the community. This course is built upon the concepts of empowerment practice, indigenous models of social work, and narrative theory and practice. We use these perspectives as we explore work around historical trauma in communities. This class provides social work direct practice skills on individual, family, community and policy levels.

SOWK 4765 International Social Development (3 Credits)
Social development is a process of planned instructional change to bring about a better correspondence between human needs and social policies and programs. This class focuses primarily on the developing work with particular emphasis on transitional economies. Practice-oriented, the class is geared toward a knowledge of policy-making for human security and the skills required for local social development.
SOWK 4775 Social Work with Adult Groups (3 Credits)
The course teaches students advanced clinical group work methods and skills with vulnerable and resilient adult clients who are experiencing an array of bio-psycho-social-spiritual problems, and who are seen in mental health, health, and gerontology practice settings. The purpose of group work is to meet the socio-emotional needs of members through mutual aid and support, education, therapy, growth, and socialization. The impact of gender, age, race/ethnicity, sexual orientation, social class, ability/disability, and spirituality on group formation and dynamics is addressed. Evidence of practice effectiveness of group methods is examined. Ethical conflicts and dilemmas involved in group work are considered within the framework of social work values and ethics.

SOWK 4780 Conflict Resolution in Social Work Practice (3 Credits)
Covers methods of conflict resolution including negotiation, bargaining and mediation. Applies social work role of mediator to families, divorces and child custody, elder care issues, groups and organizations. Examines frameworks and helps students build skills for conflict resolution in practice. An elective course.

SOWK 4782 Feminisms in Social Work Practice (3 Credits)
This course engages students in the conversation of scholarship and social work practice issues related to social justice and the oppression of women. The course is designed to expand the knowledge of theory, research, policy and practice for working with diverse groups of women in multiple settings. Feminist social work perspectives for social work practice at micro, meso and macro practice levels will be critically examined. Topics include feminist theories, or feminisms, including eco-feminism and womanism, clinical and community feminist practice models, globalization and women, and the value of feminist research. These topics will be informed by knowledge and awareness of intersectionality, oppression and privilege. Prerequisite: SOWK 4132.

SOWK 4784 Suicide Assessments and Interventions (3 Credits)
This course builds students’ competencies in assessing suicide risk, planning for safety, and providing counseling to individuals who are thinking about suicide or have made a suicide attempt. This class examines theories of suicide causation, methods of suicide risk assessment, and models of techniques for intervention. Students will learn practices for eliciting sensitive information about troubling thoughts, assessing and documenting a client's level of suicide risk, and using cognitive-behavioral and other methods to help reduce suicide risk.

SOWK 4786 Human Trafficking: Prevention, Intervention, and Support of Its Victims (3 Credits)
This course meets the values for practice requirement and is relevant for students who are interested in trauma, human rights, international issues, prevention of child abuse, intervention with victims of violence, interventions with child abuse, interventions with high-risk youth, and PTSD. This class investigates human trafficking from a social work perspective: prevention, intervention, and support of victims. Additionally, this course investigates regional differences in both labor and sex trafficking. The class also studies how prevention, intervention, and giving support to victims change from different regional (Asian, African, European, and Latin American) perspectives. The course also investigates human trafficking in the US, both with domestic and international victims. Prerequisite: SOWK 4132.

SOWK 4790 Human Sexuality (3 Credits)
Integrates human sexuality in the thinking and practice of social workers. By viewing sexual behavior from the social work perspective, the student is prepared to assume a significant role in helping clients deal with issues of human sexuality. Focuses on clients experiencing sexual dysfunction and on sexually oppressed client groups including the elderly, the homosexually or bisexually oriented, the physically or developmentally challenged and the sexually abused. An elective course.

SOWK 4795 Integration of Animals Into Therapeutic Settings (3 Credits)
Explores the human-animal bond and potential for therapeutic intervention with the animal as teacher, therapist, facilitator and companion in a number of therapeutic settings. Focuses on core skills for social workers seeking to integrate this clinical approach into their practice. A required course for the Animal Assisted Social Work Certificate.

SOWK 4796 Animal Assisted Social Work Practice (3 Credits)
This course provides a comprehensive examination of approaches to Animal Assisted Social Work (AASW) and emphasizes clinical application skills utilized with a broad array of persons and in a number of therapeutic settings. Students will learn to design, implement and analyze the efficacy of AASW approaches within their chosen area of specialization, providing an opportunity to practice these approaches in their field internships. Students will learn to clearly articulate, assess, and intervene in "link" violence as it relates to social work practices and AASW implications. A required course for the Animal-Assisted Social Work Certificate. Prerequisite: SOWK 4795 or permission of instructor.

SOWK 4797 Issues for Evidence-Supported Animal Assisted Social Work (3 Credits)
This course is designed to take students into an evidence-supported exploration and understanding of methods for incorporating specific animals and animal assisted interventions in the context of current social work practice. The course examines the capacities of different species for work with diverse goals and populations in animal interactions and introduces components critical to animals' well-being. Emphasis is placed on case formulation and experiential learning methods that link goal-specific human-animal interactions that impact measureable client behavioral changes. The course focuses on the explicit identification of how the animal will move clients toward goals and identifying outcomes and indicators of such change. Special attention is given to the development of animal selection, handling, evaluation, and management skills necessary for development as a social worker with competency in the incorporation of animals in evidence-based practice. Prerequisite: SOWK 4795.
SOWK 4890 Contemporary Global Issues (1-3 Credits)
The complexities of sustainable development and global practice require an understanding of current developments and events at a global scale. This course is designed to support student learning by providing a dynamic review and exploration of contemporary global issues with a focus on approaches and competencies for global social work practice. This course encourages students to understand the myriad geo-cultural, political, socio-economic, and environmental dimensions involved in current global developments and events. Examining issues of governance, local and regional laws, as well as human rights and social justice issues to include those of race, religion and ethnic influence can expand understanding of the unique considerations of various countries and world regions. Particular emphasis is laid on human security, poverty alleviation and humanitarian concerns, conflict/post conflict response, human rights, human and social development, migration and refugee activity, civil society and environmental sustainability. In this course, efforts are made to incorporate historical understanding, research-driven knowledge, expert experience-based insight, and field-tested skills and resources to examine possible solutions, policy, and response. Social workers focusing on human, social, economic and ecological issues in global settings must be equipped to evaluate, analyze and respond to current global issues with a coherent understanding of major value and policy frameworks such as the new Sustainable Development Goals (SDGs). This course develops students’ global reach and readiness as global citizens and social workers by engaging students in a year-long in-depth exploration of current events shaping issues and unfolding events globally.

SOWK 4900 Methods for Evaluating Practice and Programs (1-3 Credits)
Provides students with strategies for evaluating social work practice at multiple system levels. Prerequisite: SOWK 4201 or admission to advanced standing program.

SOWK 4901 Applied Practice Evaluation Research (3 Credits)
Provides students with the opportunity to conduct a practice evaluation project in their field setting. Prerequisite: SOWK 4900.

SOWK 4950 Foundation Field Internship (1-15 Credits)
This required practicum provides foundation students with the opportunity to integrate social work theory and practice for effective professional intervention at clinical and community levels. Prerequisite or Corequisites: SOWK 4020, SOWK 4001, SOWK 4132.

SOWK 4960 Concentration Field Internship: Clinical (1-18 Credits)
Concentration students participate in planned clinical practice experience that integrates classroom theory, the learning of practice skills and the continued development of social work attitudes, ethics and values in the clinical practice setting. Prerequisite: completion of foundation year course work and field practicum.

SOWK 4961 Concentration Field Internship: Community (1-18 Credits)
Concentration students participate in planned community practice experience that integrates classroom theory, the learning of practice skills and the continued development of social work attitudes, ethics and values in the community practice setting. Prerequisite: completion of foundation year course work and field practicum.

SOWK 4965 International Field Practicum (0-18 Credits)
This international course fulfills partial requirement for a student’s concentration year practicum. In an international social work setting, the practicum provides students with the opportunity to integrate social work theory and practice for effective professional intervention at clinical and community levels.

SOWK 4970 Concentration Field Internship (0-18 Credits)
Concentration students participate in planned practice experience that integrates classroom theory, the learning of practice skills and the continued development of social work attitudes, ethics, and values. Prerequisite for 2-year students: successful completion of foundation-year course work and field internship. Prerequisite for students with advanced standing: successful completion of advanced standing prerequisite courses and BSW-year internship. Field must be taken concurrently with concentration-year course work, or after core concentration course work. Concentration-year field requires a minimum of 20 hours a week experience at the assigned field agency. Any deviation from this standard requirement must be approved by the Director of Field Education. Prerequisite: SOWK 4950.

SOWK 4971 Experimental Class (3 Credits)
Experimental courses allow GSSW to provide a wide variety of course offerings that respond to current issues and themes in the profession as they arise, as well as providing specialized courses that relate to the interests and areas of expertise of our faculty. All experimental courses are offered as electives open to all students. Prerequisite: determined by each instructor.

SOWK 4990 Topics in Social Work (1-4 Credits)
This topics course provides students with the opportunity to learn content appropriate to graduate social work education that is not currently incorporated into the standard MSW curriculum. Given the ever-changing nature of social work practice, theory, and research, topics of importance emerge each year that have particular relevance for a period of time or may be new emergent topics that will have relevance for the future of the discipline of social work. As such, this course provides a mechanism through which courses may be offered on a one-time basis. Topics may be related to social work practice, theory, or research. Topics vary from term to term and may be limited by program administrators, faculty, or by student interest.

SOWK 4992 Directed Study (1-10 Credits)
A permanent catalog course delivered on an individual basis when the course is not offered that term. Directed studies are approved under extenuating circumstances to provide an opportunity to complete a required course. Prerequisite: approval of instructor and MSW Director. Credit hours vary according to the catalog course taken.
SOWK 4999 Capstone (0-1 Credits)
This course is a 0-1 credit (Pass-Fail) required course in which students document their work through the development of an individual portfolio. Students are asked to upload artifacts (papers, presentations and field accomplishments) from both classroom and field internship that demonstrate how they have met the CSWE foundation and concentration specific EPAS competencies and practice behaviors. Students complete a reflection statement on their learning as it relates to the EPAS competencies.

SOWK 5000 Seminar in Professional Social Work Issues (2 Credits)
Examines the dilemmas and challenges confronting the social work profession and social work education. Examines the nature of professional education, the nature of the profession itself and the forces internal and external to the profession that have an impact upon practice and education. Required.

SOWK 5101 Social Welfare Policy Analysis and Development (3 Credits)
Applies analytical techniques to development of social welfare policy stressing the ability to formulate a policy hypothesis (i.e., a statement, in testable form, of a basic premise underlying a policy position) and to reach conclusions based on analysis of empirical evidence related to the policy hypothesis. Required.

SOWK 5110 Introduction to Advanced Quantitative Research Methods (3 Credits)
This required doctoral course introduces students to quantitative approaches to conducting social research. The course includes material related to measurement, sampling, research design, data collection, and data analysis. While each of these topics encompasses technical issues to be mastered by doctoral students, the logic and underlying rationale of these research methods is of prime importance in this course. A second component of the course requires students to define and begin to develop a substantive area of intended study and research during their enrollment in the doctoral program. Elements of articulating a substantive research area and steps toward defining key research questions in a topical area are reviewed. Aspects of conducting literature reviews leading to the articulation of a substantive research area are discussed in class sessions.

SOWK 5111 Quantitative Methods for Assessing Social Interventions (3 Credits)
Social work researchers are in a unique position to contribute to knowledge about the causes of individual and societal problems and to test interventions that seek to prevent or ameliorate such problems. A variety of qualitative and quantitative research methods are used to advance knowledge about etiological factors contributing to individual and social problems and to assess the outcomes of specific social policies and practice strategies. This course presents a detailed examination of quantitative methods and designs that are useful in assessing the effects of social interventions. Measurement, sampling and design issues in generating and testing research questions and hypothesis are explored. Experimental, quasi-experimental, and survey research designs are assessed and applied to practice and policy issues and problems. Special emphasis is placed on developing skills necessary to conduct intervention research. Cognate students may be permitted on a case by case basis, space permitting.

SOWK 5120 Introduction to Advanced Qualitative Research Methods (3 Credits)
This course provides a substantive doctoral-level review of content on qualitative research methods and strategies. It is developed for students from social science disciplines. The content includes the nature of the method, the epistemological implications and assumptions, and appropriate applications. Student learning and evaluation includes the experience of developing a research proposal based on qualitative methodology and conducting data collection for a mini-research project. This class a prerequisite for SOWK 5121, Qualitative Data Analysis. This course is required for social work doctoral students. Students from other departments may register with permission from the professor.

SOWK 5121 Qualitative Data Analysis (3 Credits)
The focus of this course is on data analysis and interpretation, demonstration of the science of the analysis, and presentation of findings in oral and written forms. Students are expected to conduct qualitative analyses on textual data they collected as part of SOWK 5120 or as a result of some other qualitative data collection experience. Over the course of the term students learn to code and analyze their data, interpret findings, orally present those findings, and write a final paper in which they demonstrate a rigorous engagement with qualitative data analysis and the literature relevant to their topic. This course is for SOWK PhD students only. Cognate students may be permitted on a case by case basis, space permitting.

SOWK 5130 Mixed Methods Research in Social Work (3 Credits)
This course introduces doctoral students to mixed methods research in social work and the social sciences. Students explore mixed methods as a third research paradigm that strategically combines both quantitative and qualitative methods within a single inquiry. The course encourages students to actively reflect on previous quantitative and qualitative research training. Specific topics for the course include: history and language of mixed methods research; relevant paradigms and epistemological debates; mixed methods design and research questions; and analysis and dissemination consideration. SOWK PhD students only. Cognate Students will be allowed to register on a case by case basis, space permitting.

SOWK 5201 Statistical Methods (5 Credits)
Examines the use and interpretation of statistics in educational and human services research, including descriptive and inferential statistics. Required.

SOWK 5202 Correlation and Regression (4 Credits)
Examines correlational and multiple regression research designs and their application to social work and social science problems. This course is for SOWK PhD students only. Cross-listed with RMS 4911, SOWK 5952. Prerequisite: SWOK 5201.

SOWK 5203 Multivariate Analysis (5 Credits)
Provides a conceptual understanding of common multivariate statistical techniques as applied to research in social work and the social sciences. Prerequisite: SOWK 5201.
SOWK 5300 Social Science Theory and the Philosophy of Science (3 Credits)
This foundation doctoral level course introduces traditional issues and recent developments in the philosophy of science, and provides an overview of social science theory and theoretical frameworks. It examines philosophical questions on scientific inquiry and the consequences modern science imposes on our basic understanding of knowledge and nature. The course analyzes and critiques the social-and-behavioral-science foundations that undergird the social work knowledge base and current social work theories. There are no prerequisites for this course. This course is required to social work doctoral students.

SOWK 5301 Social Work Theory in Research and Practice (3 Credits)
This course builds on SOWK 5300, Philosophy of Science and Social Work Theory, to examine how theories, conceptual frameworks, perspectives, and models are used specifically within social work research, education, and practice. This course explores how theories are used in research and in social work interventions on individual, family, group, organizational, community, and policy levels. The course analyzes and critiques the social work knowledge base and the current state of social work theories. This course is required for social work doctoral students. Prerequisite: SOWK 5300.

SOWK 5401 Quantitative Research Methods (4 Credits)
Focuses on basic elements of quantitative social research methods: measurement, sampling, research designs, data collection and data analysis. Emphasizes logic and underlying rationale, as well as technical issues. Prior understanding of computer-based statistical analysis is helpful. Required.

SOWK 5403 Advanced Social Welfare Policy Analysis (3 Credits)
Applies analytical techniques to development of social welfare policy stressing the ability to formulate a policy hypothesis (i.e., a statement, in testable form, of a basic premise undergirding a policy position) and to reach conclusions based on analysis of empirical evidence related to the policy hypothesis. This course is for SOWK PhD students only.

SOWK 5405 Qualitative Data Analysis (4 Credits)
Provides an understanding of analysis methods used to draw meaning from qualitative data, methods that must be practical, applicable and understandable to other observers. Prepares students to use a systematic, scientific process of analysis that captures the meaning of data while avoiding research self-delusion and unreliable or invalid conclusions. Topics include data collection, data reduction, data display, and conclusion drawing and verification. Methods include application of computer software. Prerequisite: SOWK 5402. Required.

SOWK 5450 Social Work Knowledge Integration and Publication (3 Credits)
This required doctoral course introduces students to integrating knowledge for social work scholarship through the use of tools that support academic argumentation and exposition. It provides students with the skills, expertise, and readiness necessary to compose a number of scholarly documents, including academic publications and the dissertation proposal. The course focuses on the preparation and writing of the comprehensive examination proposal as an example of such documents. The major product of the class is a paper designed to meet the requirements of the comprehensive examination proposal. Advisors and mentors participate in class presentations and critiques as a part of preparing the student for their ongoing scholarship.

SOWK 5452 Correlation and Regression (4 Credits)
Examines correlation and multiple regression research designs and their application to educational and social science problems. Cross listed with RMS 4911. Prerequisite: SOWK 5930. Required.

SOWK 5500 Pedagogy in Social Work Education (3 Credits)
This foundation course examines philosophies, theories, and pedagogical models that are utilized in social work education. It explores how various perspectives shape the approaches and techniques used and how these in turn impact classroom effectiveness and issues of classroom management. The course incorporates concepts and develops skills based on evidence-based teaching. This course is a required course for social work students and has no prerequisite. This course is for SOWK PhD students only.

SOWK 5501 Teaching Practicum (3 Credits)
This 3-hour required course provides classroom instruction and teaching opportunities designed to prepare doctoral students for faculty positions in undergraduate and graduate level social work education. Students work with a faculty mentor to pursue practicum placements that match their substantive interests. Students are expected to devote approximately 8 hours to the practicum per week. Restricted to Ph.D. students only.

SOWK 5505 Multivariate Analysis (5 Credits)
This course is designed to provide students with an introduction to common multivariate statistical analyses. Provides a conceptual understanding of common multivariate statistical techniques as applied to research in education and the social sciences. Cross listed with RMS 4913. Prerequisite: SOWK 5930.

SOWK 5590 Special Topics (1-3 Credits)
This special topics course provides students with the opportunity to learn content appropriate to graduate social work education that is not currently incorporated into the standard PhD curriculum. Given the ever-changing nature of social work practice, theory, and research, topics of importance emerge each year which have particular relevance for a period of time or may be new emergent topics that will have relevance for the future of the discipline of social work. As such, this course provides a mechanism through which courses may be offered on a one-time basis. Topics may be related to advanced social work theory, pedagogy, or research. Topics vary from term to term and may be initiated by program administrators, faculty, or by student interest.

SOWK 5991 Independent Study (1-10 Credits)
This is an opportunity for students to undertake special study in a defined area of interest with faculty consultation.

SOWK 5992 Independent Study (1-10 Credits)
This is an opportunity for students to undertake special study in a defined area of interest with faculty consultation.

SOWK 5993 Independent Study (1-10 Credits)
This is an opportunity for students to undertake special study in a defined area of interest with faculty consultation.

SOWK 5994 Independent Study (1-10 Credits)
This is an opportunity for students to undertake special study in a defined area of interest with faculty consultation.

SOWK 5995 Independent Study (1-10 Credits)
This is an opportunity for students to undertake special study in a defined area of interest with faculty consultation.

SOWK 5996 Independent Study (1-10 Credits)
This is an opportunity for students to undertake special study in a defined area of interest with faculty consultation.

SOWK 5997 Independent Study (1-10 Credits)
This is an opportunity for students to undertake special study in a defined area of interest with faculty consultation.

SOWK 5998 Independent Study (1-10 Credits)
This is an opportunity for students to undertake special study in a defined area of interest with faculty consultation.

SOWK 5999 Independent Study (1-10 Credits)
This is an opportunity for students to undertake special study in a defined area of interest with faculty consultation.
SOWK 5995 Independent Research-Thesis (1-10 Credits)

SOWK 6991 Independent Study (1-10 Credits)

Students undertake special study in a defined area of interest with faculty consultation. By arrangement.

SOWK 6995 Dissertation Research (1-18 Credits)

The formal mechanism for undertaking the dissertation, providing for faculty support through the appointment of a dissertation committee. By arrangement.

**Graduate Tax Program**

The Graduate Tax Program was created at the University of Denver in 1975 in response to the demand for trained tax specialists in both the legal and accounting professions. Initially an evening program catering to the needs of practicing attorneys and accountants employed in the Denver area, it has evolved into one of the few such programs to offer a curriculum designed for both the full- and part-time student. The Graduate Tax Program also offers its degrees in an online format for working professionals who live more than 50 miles from Denver. The Program, accredited by the Association to Advance Collegiate Schools of Business (AACSB) and subject to acquiescence by the American Bar Association, is offered to highly qualified students who are graduates in law, accounting, or business.

The Graduate Tax Program prepares students for entry into professional tax practice in both the public and private sectors. Through the interdisciplinary nature of the program, the law graduate learns the accounting aspects of tax practice, and the accounting graduate acquires a thorough understanding of the legal process.

**Graduate Tax Program**

The Graduate Tax Program was created at the University of Denver in 1975 in response to the demand for trained tax specialists in both the legal and accounting professions. Initially an evening program catering to the needs of practicing attorneys and accountants employed in the Denver area, it has evolved into one of the few such programs to offer a curriculum designed for both the full- and part-time student. The Graduate Tax Program also offers its degrees in an online format, accommodating busy schedules of working professionals. The Program, accredited by the Association to Advance Collegiate Schools of Business (AACSB) and subject to acquiescence by the American Bar Association, is offered to highly qualified students who are graduates in law, accounting, or business. The program emphasizes experiential learning opportunities; for example, students have the opportunity to participate in the Low Income Taxpayer Clinic or enroll in externships/internships for zero or course credit.

The Graduate Tax Program prepares students for entry into professional tax practice in both the public and private sectors. Through the interdisciplinary nature of the program, the law graduate learns the accounting aspects of tax practice, and the accounting graduate acquires a thorough understanding of the legal process. To be competitive in the marketplace, non-lawyers should plan to earn the CPA designation.

The educational standards of the Program are rigorous; students are expected to be prepared for class each day, and grading is usually based on one final examination. The environment, however, is one of cooperation rather than competition, and the teaching attitude is both helpful and challenging. The Program is dedicated to the pursuit of superior professional competence, and students with similar aspirations find their studies in the Graduate Tax Program entirely rewarding.

Graduates of accredited law schools successfully completing the Program receive a Master of Laws (LLM) in Taxation. All other candidates receive a Master of Taxation (MT) degree. Both degrees are awarded upon the joint recommendation of the faculties of the Sturm College of Law and Daniels College of Business. A dual degree program is available, where a University of Denver Sturm College of Law student may pursue the JD and LLM in taxation concurrently graduating with a JD/Tax LLM; flexible dual degree options with other DU graduate programs are available.

**Master of Laws in Taxation**

**Degree and GPA Requirements**

- **Bachelor's degree:** All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- **Grade point average:** The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- **Program GPA requirement:** The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.
Other Requirements

• The JD degree or its equivalent (such as an LLB) from a college of law approved by the American Bar Association (no GMAT or LSAT score submission) is required. Those pursuing a JD at the Sturm College of Law at the University of Denver may apply to pursue a formal dual JD/LLM in Taxation option. Please see the dual degree policy here.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

• Minimum TOEFL Score (Internet-based test): 80
• Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Graduate Tax Program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Taxation

Degree and GPA Requirements

• Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

• The GMAT or GRE is required. Scores must be received directly from the appropriate testing agency by the deadline. The GMAT code number is MZR-GT-68. The GRE code number is 4842. We will consider you waived from the GRE/GMAT if you have one or more of th

English Language Proficiency Test Score Requirements

Total Credits 45

Students must earn and maintain a cumulative GPA of at least a 2.7 to remain in good standing.

A full-time student is expected to earn the degree in one year or over four quarters; a part-time student can earn the degree in 2-3 years. Program time limit is 5 years from the time of matriculation.

**Courses**

**TAX 4010 Tax Principles, Research and Writing (2 Credits)**
Research sources, techniques, and practice; in-depth research of selected areas. Emphasis on argument and communication of conclusions; evaluation of legislative history and administrative authorities.

**TAX 4020 Individual Tax Problems (4 Credits)**
Using the Internal Revenue Code and the Federal Income Tax Regulations as a basis, substantive issues relating to individual taxation are covered. Areas are included are general concepts of gross income, individual employee benefits and deductions, charitable deductions, alternative minimum tax, deductibility and classes of interest, office in home and vacation homes, and a general overview of the interrelationships of various statutory and non-statutory principles. Cross listed with LAWS 4292.

**TAX 4100 Tax Accounting (4 Credits)**
Adoption of and change in accounting periods; income recognition and deduction allowance under the cash and accrual methods; prepaid and contested income and expenses; long-term contracts; capitalization and expensing; interest, original issue discount, and the time value of money; deferred payment transactions; income and deduction reversals; accounting method and practice changes.

**TAX 4110 Property Transactions (4 Credits)**
Basis of property; expenditures and current expense comparison; depreciable status; amortization of intangible property; depreciation methods; property casualties and losses; profit or loss computation and characterization for taxable property dispositions; limitations on passive losses; lessor and lessee reporting; tax-deferred dispositions.

**TAX 4120 Qualified Pension and Profit Sharing Plans (4 Credits)**
An in-depth study of ERISA, labor department rules, and Internal Revenue Code provisions relating to qualified deferred compensation. The course is geared toward an understanding of all the pension and profit sharing rules required for plan qualification, with emphasis on qualified plan planning for both incorporated and unincorporated forms of business.

**TAX 4200 Corporate Taxation I (4 Credits)**
The federal income taxation of corporations and their shareholders with emphasis on the creation of the corporation, establishment of its capital structure, operational alternatives, distributions to shareholders, stock dividends and redemptions, personal holding companies, and accumulated earnings tax.

**TAX 4210 Estate & Gift Taxation (4 Credits)**
Taxation of gratuitous transfers under the federal estate and gift tax codes, including taxable inter vivos gifts, annual exclusion, gift-splitting, gift tax charitable deduction, gift tax on powers of appointment, estate tax on owned interests, property transferred inter vivos with retained interests and powers, property subject to powers of appointment or transferred in contemplation of death, jointly owned property, life insurance proceeds, annuities and employee death benefits, marital deduction, charitable deduction, estate tax credits, estate tax deductions, valuation problems.

**TAX 4220 Fiduciary Income Taxation (4 Credits)**
Federal income taxation of estates and trusts. Included is a discussion of the concept of an estate or trust; trust accounting income for a simple and complex trust; calculation of taxable income, including special rules on the calculation of distributable net income, capital gains, personal exemptions, and charitable contributions; the separate share rule and trapping distributions; income in respect of a decedent; the grantor trust rules under Sections 671-678; and the calculation of the alternative minimum tax.
TAX 4230 Estate Planning (3 Credits)
Estate analysis, including fact gathering and the analysis of data; the psychological aspects of "role playing" in estate planning; the members of the
team (the attorney, the CPA, the life underwriter, the trust officer); life insurance in an estate and business planning context; planning with trusts,
including revocable, short-term, and irrevocable; the transfer of a closely held business interest from one generation to the next, including full and
partial stock redemptions, cross purchase agreements, private annuity, installment sale, retirement, recapitalization, qualified and nonqualified plans of
delayed compensation; special estate planning considerations for the professional corporation, the highly paid executive, and the farmer and rancher;
specific cases analyzed. Prerequisite: TAX 4210.

TAX 4240 Tax and Financial Planning (3 Credits)
This is an introductory, integrated course focusing on personal financial planning. Topics covered include cash flow projections and budgeting, annual
and multiple period income tax planning, an introduction to taxation of investments, an insurance and liability coverage survey, retirement planning,
and estate and succession planning.

TAX 4250 Ethics in Tax Practice (3 Credits)
An examination of the ethical rules and considerations affecting lawyers and accountants in tax practice, including transactional, compliance and
dispute resolution issues.

TAX 4300 Corporate Taxation II (4 Credits)
A continuation of Corporate Taxation I with emphasis on corporate reorganizations, operation, liquidation of subsidiary corporations and corporate
division, and carryover of tax attributes. Prerequisite: TAX 4200.

TAX 4310 Civil & Criminal Tax Procedure (4 Credits)
Statute of limitations on assessment/collection of deficiencies, definition of deficiency, restrictions on assessment and collection; statute of
limitations on overpayments, claims and suits for refund, and limitations for criminal prosecutions; regulations and rulings– retroactive revocation;
administrative settlements, closing agreements and compromises; civil penalties; tax return preparer penalties; civil litigation–injunctions, jurisdiction
of Tax Court, District Court and Court of Claims, small claims procedure, authority to increase deficiencies, choice of forum; jeopardy assessments
and termination of taxable years; criminal tax investigations– administrative summons, document production (taxpayer and third party), constitutional
protections, common law privileges, strategies; professional responsibilities and ethics for the tax practitioner.

TAX 4315 Low Income Taxpayer Clinic (2-4 Credits)

TAX 4320 Partnership Taxation (4 Credits)
Tax treatment of partnerships and partners; aggregate and entity principles; problems associated with the formation, operation, and dissolution of
partnerships; transactions between partnerships and partners; compensation of service partners; sales of partnership interests; withdrawal and
retirement of partners; basis adjustments; treatment of unrealized receivables and substantially appreciated inventory.

TAX 4330 Corporate Taxation III (4 Credits)
Advanced corporate taxation problems with emphasis on liquidations; detailed study of sections 305, 306, 307; loss carryovers and Subchapter S
corporations. Prerequisite: TAX 4300.

TAX 4386 Graduate Tax Program Externship (2-4 Credits)
The Graduate Tax Program (GTP) encourages students to gain practical experience and to develop professional skills in the field of taxation.
Externships are supervised by faculty and GLS department who interact with the eligible student and the employer or organization that provides the
externship. The externship should provide a new learning experience for the student intern and must be related to taxation. Satisfactory completion of
the externship will result in a passing grade for the externship. The GTP Director or a full time GTP faculty member may serve as Faculty Supervisor for
the externship.

TAX 4410 Taxation-Natural Resources (3 Credits)
Tax problems encountered in the acquisition, operation, and disposition of natural resource properties; pre-production expenditures, depletion,
depreciation, and ad valorem taxes; emphasis on overall tax planning for natural resource ventures.

TAX 4420 International Taxation (4 Credits)
Introduction to U.S. international taxation with an equal emphasis on inbound and outbound transactions. Resident and nonresident alien taxation,
withholding taxes, effectively connected (business) income, foreign investment in U.S. real estate, tax treaties, branch taxes, earnings stripping,
conduit financing rules, foreign earned income exclusion, foreign tax credit, controlled foreign corporations, passive foreign investment companies,
export transactions, Subpart F manufacturing rules, outbound property transfers, and transfer pricing. Cross listed with LAWS 4344.

TAX 4430 Exempt Organizations (3 Credits)
An examination of the statutory exemptions for "charities," social welfare organizations, social clubs, homeowners' associations, fraternal orders,
employee benefit organizations, mutual or cooperative companies, business and professional leagues, labor unions, property title companies, federally
organized or chartered organizations, political organizations, and other exempt organizations; rules on electioneering and lobbying activities; taxation
of private foundations; prohibited transaction rules; the tax on unrelated business income, including debt-financed income; excise tax exemptions;
administrative appeal and declaratory judgment procedures; anti-discrimination considerations; charitable contributions.

TAX 4470 Employment Tax (2 Credits)
Explore existing employment tax risks, recognize employment tax planning opportunities through appropriate compensation and entity structuring
techniques, analyze proper worker classification, and highlight preventative techniques to avoid personal liability.
TAX 4490 State & Local Taxation (3 Credits)
Taxable incidents, privilege tax, discrimination, and multiple taxation under the Commerce Clause of the United States Constitution; taxation based on class legislation and the Equal Protection Clause; nexus or jurisdictional due process; allocation and apportionment formulas; business versus nonbusiness income; multi-state tax compact; unitary concept; residence definitions; nonresident income sources; tax credits and short period returns for individual income taxpayers; sales of tangible personal property; retail and wholesale sales; taxable and nontaxable leases; contractors rule, exemptions, and resale certificates under sales and use tax statutes; valuation techniques for real personal property; and administrative and judicial appeal of property tax valuations and assessments.

TAX 4500 Consolidated Returns (3 Credits)
Methods used by related corporations to report income and losses; affiliation and consolidation; computation of consolidated taxable income; allocation of consolidated tax liability; deferred intercompany transactions; treatment of investments in affiliates; earnings and profits; impact of corporate combination and separation.

TAX 4600 Seminar: Selected Topics (2-4 Credits)
Recognition of tax problems and opportunities for a broad range of transactions encountered by individuals. Areas include family income splitting and other tax reduction and avoidance techniques; portfolio transactions, including short sales, puts and calls, and commodity futures; structuring agreements in contemplation of marriage or arising out of separation or divorce; personal insurance; charitable contributions; net operating losses; alternative minimum tax; various year-end planning techniques.

TAX 4620 Accounting for Income Taxes (ASC 740) (2 Credits)
Examines the financial accounting and reporting of income taxes under Statement of Financial Accounting Standards Codification Topic 740 (FASB ASC 740), formerly known as FAS 109, and related accounting literature. Topics include the calculation of current and deferred income taxes, an overview of book-tax differences, the calculation of interim period tax provisions and the presentation and disclosure of income taxes in financial statements. Students will learn the basics of accounting for income taxes related to advanced topics such as stock compensation expense, foreign operations, state income taxes, accounting for uncertain tax positions (formerly known as FIN 48), business combinations, inter-company transactions and valuation allowances.

TAX 4980 Internship (0 Credits)
The Graduate Tax Program (GTP) encourages students to gain practical experience and to develop professional skills in the field of taxation. Internships are supervised by faculty who interact with the eligible student and the employer or organization that provides the internship. The internship should provide a new learning experience for the student intern and must be related to taxation. Satisfactory completion of the internship results in a passing grade for the internship. The GTP Director or a full time GTP faculty member may serve as Faculty Supervisor for GTP interns. Students must obtain approval from the GTP Director or a full-time GTP faculty member.

TAX 4991 Independent Study (1-4 Credits)
Opportunity to study and write in any area agreed upon between the student and a member of the faculty. The student is required to produce a written work of publishable quality to receive a final grade for the course. The 4 quarter-hour maximum may be applied toward graduation requirements with no more than 2 quarter hours in any one quarter. Must obtain pre-approval from the Graduate Tax Program.

Josef Korbel School of International Studies

The Josef Korbel School of International Studies is one of the world's leading schools for the study of international relations. Our interdisciplinary programs prepare tomorrow's global leaders for careers in commerce, government, diplomacy, security, sustainable development, global health and humanitarian relief. Coming together from over 20 different countries, our students provide diverse perspectives that supplement the experience and research of our renowned faculty.

Conflict Resolution

Office: Sie Complex Room 4008
Mail Code: 2201 S. Gaylord St., Denver, CO 80208
Phone: 303.871.6477
Email: cri@du.edu
Web Site: http://www.du.edu/conflictresolution

Master of Arts in Conflict Resolution

The interdisciplinary program in Conflict Resolution focuses on the study and application of alternative theories, various types of bargaining and negotiation techniques, and related ethical issues. These topics are examined through selected cases of conflict to understand how to manage and improve social patterns and policy choices between individuals, within organizations, and across cultures.

The program combines a scholarly and vocational approach—theory with practice—in exploring a range of environments where conflict arises, including the personal, business and political arenas, from international diplomacy to national and local government policy discussion.
Master of Arts in Conflict Resolution

Degree and GPA Requirements

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- Applicants must take either the GRE General Test or the GMAT and submit the scores to the University of Denver. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 484.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 95
- Minimum TOEFL Score (Paper-based test): 587
- Minimum IELTS Score: 7
- Minimum CAE Score: 185

English Conditional Admission: No, this program does not offer English Conditional Admission.

Total Credits

60

CRES 4222 Theories of Conflict Practice and Third Party Roles 4

1 Students may also select courses from any of the affiliated academic units (International Studies, Management, Law, Social Work, Professional Psychology, Communication, Religious Studies, University College) by permission of the graduate director.

Minimum number of credits required for degree: 60

Non-coursework Requirements

• Internship
• Practicum
• Professional Development

Courses

CRES 3951 Mediation Fundamentals (4 Credits)
This course provides 40-hour mediation training following the model standards for Mediator Certification programs established by the Association for Conflict Resolution. It covers the mediation process and mediator skills including preparation, opening statement, information gathering, movement and solution seeking, negotiation, confidentiality, ethics, power balancing and diversity issues. Students engage in video-recorded role-play scenarios to develop mediation skills.

CRES 4111 Reflective Practice and Evaluation (4 Credits)
Course is designed for practitioners who would like to become more reflective and theory oriented in their practice, and for researchers who wish to work with actual data and questions from practice. The goals are to learn techniques for making theories of practice explicit, to examine ways practice and research may modify theory, and to explore how to introduce and expand reflective practice into conflict resolution.

CRES 4221 Negotiation Theory and Practice (4 Credits)
An overview of negotiation theories, strategy and tactics to understand the role of power perceptions, communications, and ethics affect bargaining processes and outcomes.

CRES 4222 Theories of Conflict Practice and Third Party Roles (4 Credits)
An analysis and critique of the nature and role of third parties in conflict intervention including conciliator, arbitrator, facilitator, monitor, trainer. Theoretical perspectives and case studies are used to understand the situations in which third parties operate, what values and resources they bring to their roles, and how power issues affect mediator functioning. Ethical guidelines are also considered.

CRES 4225 Conciliation and Reconciliation (4 Credits)
Societies are often divided along ethnic, racial, or religious lines. Without work at the grassroots level, international peace agreements regularly fail within five years of ratification. How do we create sustainable post-conflict relationships? How does justice factor into peace, or into the sustainability of peace agreements? This course explores these questions by building on concepts and themes introduced in Mediation Theory (CRES 4222), and analyzing topics such as multilevel interventions and their challenges, second track diplomacy, and citizen dialogue. Reconciliation is a key factor in peace building – Voice, Acknowledgement, and Repair are specifically considered within this realm. Focus is also on the challenges presented by deep-rooted, protracted conflicts, allowing for more complete understanding of the situations in which third parties must operate.

CRES 4333 Resolving Contentious Public Issues (4 Credits)
The course covers collaborative governance work, including identity politics of contentious public issues. Natural resources disputes and the range of processes used to address these conflicts, including theories and concepts useful for understanding environmental and policy disputes, case studies, and world views that premise these disputes, provide insight into constructing interventions best suited to the characteristics and context of each contentious issue.

CRES 4400 Restorative Justice (2 Credits)
This course explores four leading Restorative Justice practices - Victim-Offender Mediation, Conferencing, Talking Circles, and Truth Commissions - to understand how needs of victims are addressed, and embracing notions of forgiveness, reconciliation and social healing within a set of principles based on social justice.

CRES 4410 Intractable Conflict (2 Credits)
This course is focused on factors that lead to intractability, along with strategies for violence prevention and conflict transformation. Conflict mapping and analysis, sources of intractability, and social, psychological, economic and political dimensions of intractable conflicts are examined.
CRES 4420 Negotiate Difficult Situations (2 Credits)
What should a negotiator do when the win-win approach fails and important interests are at stake? This course addresses a variety of tactics and ploys of unethical behavior and dirty tricks used in persuasion and bargaining. Students learn how to recognize and counter such techniques and practice in simulated and real world settings. Prerequisite: CRES 4221.

CRES 4810 Conflict Resolution Topics (2,4 Credits)
Fields of interest to Conflict Resolution Students such as negotiation, international conflict resolution case studies, restorative justice, conflict transformation, methods for conflict resolution research.

CRES 4820 Topics in Conflict Resolution (2,4 Credits)
Fields of interest to Conflict Resolution Students such as negotiation, international conflict resolution case studies, restorative justice, conflict transformations, methods for conflict resolution research.

CRES 4830 Topics in Conflict Resolution (2-4 Credits)
Fields of interest to Conflict Resolution Students such as negotiation, international conflict resolution case studies, restorative justice, conflict transformation, methods for conflict resolution research.

CRES 4840 Managing Organizational Conflict in the Workplace (2,4 Credits)
A broad study of conflict in organizations that may involve gender, race, age, disability and other issues, using lecture, case studies, group dialogue, and team projects to develop systems of management and evaluation.

CRES 4850 Creating Agreement (2 Credits)
Multilateral agreements are as complex as they are difficult to create. What are the key elements in this process? The history of such negotiations is one of both successes and failures. This course examines the development of criteria necessary for creating satisfactory and acceptable agreements involving multiple parties through a series of case studies that link negotiation theory and praxis.

CRES 4860 Public Forum Facilitation (2 Credits)
Diverse democracies require high quality communication and coordination to function well. In the current era, however, polarization, cynicism and apathy have become the norm, they obstructing possibilities for collaborative problem-solving. What are the best processes for making public decisions in a democracy? This course examines the tools of advocacy, debate, dialogue and deliberation through the lens of facilitation in public forums.

CRES 4870 Conflict Vulnerability Assessment (2 Credits)
This course guides students seeking to specialize in early warning and conflict prevention approaches at the community, societal, or country level through the contemporary scholarly literature, policy-related instruments and models that seek to define and measure “conflict vulnerability.

CRES 4880 Grant Writing: The Research Proposal and Conflict Analysis (2 Credits)
This course is designed to cover key elements of social research methods that are important principles of evidence-based policy, known for its rigor and precision in careful data collection - including quantitative and qualitative methodology analysis and expert opinion to build facts and findings from context-free, context rich and colloquial environments into a coherent whole - to support informed decision-making capability.

CRES 4961 Professional Development (0 Credits)
To develop the specialized knowledge, skills, attitudes, values, norms, and interest needed to perform professional roles in the Conflict Resolution practitioner community. It involves informal socialization including lessons learned incidentally through association with mentors, networking with practitioners, and observations of conflict resolution processes in all areas of life. Students gain an awareness of how self-image and activities play an active part in professional socialization.

CRES 4971 Practicum (4 Credits)
Students design, execute, and evaluate conflict resolution interventions. Student involvement in planning, implementation, reflection, and evaluation may look different in different contexts, but all elements are present in some form. Students are supervised by faculty with relevant theoretical expertise and practice experience.

CRES 4981 Internship (0-4 Credits)
CRES 4985 Internship (4-8 Credits)
CRES 4991 Independent Study (1-4 Credits)
CRES 4995 Thesis Research (1-4 Credits)

Public Policy
Office: Sie International Relations Complex
Mail Code: 2201 South Gaylord Street, Denver, CO 80208
Phone: 303-871-2468
Email: ipps@du.edu
Web Site: http://www.du.edu/ipps
The Institute for Public Policy Studies (IPPS) at the Josef Korbel School of International Studies offers a highly disciplined, evidence-based approach to the analysis and solution of contemporary issues, such as fiscal policy, entitlement reform, health care, national security, regulation, education and immigration via a two-year Master of Public Policy (MPP) degree program.

The study of Public Policy at the University of Denver is dynamic, personalized and focused on creating the core skill set required of a 21st-Century decision leader.

Professional schools at the University of Denver, such as the Sturm College of Law, the Daniels College of Business, the Morgridge College of Education, and the Daniel Felix Ritchie School of Engineering and Computer Science are deeply interconnected with IPPS.

The Public Policy degree focuses on issue definition, analytics, data, and problem solving. MPP students graduate with a job-ready skill set, equally applicable to decision-making and leadership positions in the public, private, and non-profit sectors. The curriculum is issue-based and strategic. The MPP graduate knows how to define policy problems across disciplinary boundaries and learns methodologies to evaluate and implement alternative courses of action within corporations, regulatory agencies, and governmental organizations.

Sophisticated study of history, law, empirical techniques, and strategy makes degrees in Public Policy both valuable and versatile, in a time a momentous societal, political, and technological change. Studying Public Policy at the Institute for Public Policy Studies, at the Josef Korbel School of International Studies, will provide a significant “return on investment” that will last a lifetime and qualify the MPP graduate to compete for advanced positions in government, legislative staffing, consulting, corporate relations, strategic planning, crisis management, urban development, non-profit management, and lobbying.

Career Advancement
MPP graduates enjoy exciting careers as public policy professionals — running government agencies, leading nonprofit organizations, serving as consultants to corporations or political campaigns, or developing a perspective for a client with a legislative or regulatory agenda. The MPP program provides students with the analytical and critical thinking skills needed, as well as the experience that will open the door to professional success.

Faculty Expertise
Faculty members in the MPP program are academics, policy experts, legal scholars, and former and current elected officials. Instructors represent a wide range of policy expertise, including political history, economics, health policy, regulatory policy, lobbying, education policy, constitutional law and quantitative analysis.

Flexibility
Most MPP classes are offered in the evenings, allowing students to gain real-life public policy experience during the day through full-time employment or policy internships. In addition, our flexible dual-degree program offers students the opportunity to enhance their future careers by combining the MPP with several other relevant graduate degrees.

Opportunity
The University of Denver’s campus is located just minutes from downtown Denver, a regional hub for major corporations, financial institutions, law firms, nonprofit organizations, think tanks, and government offices.

Master of Public Policy in Public Policy
Degree and GPA Requirements
- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores
- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 95
- Minimum TOEFL Score (Paper-based test): 587
• Minimum IELTS Score: 7
• Minimum CAE Score: 185

English Conditional Admission: No, this program does not offer English Conditional Admission.

**Great Issues Forums Requirement:**

Complete 6 Great Issues Forums for a total of 12 credits

| PPOL 4501 | Great Issues Forum                        | 12      |
| or PPOL 4502 | Issues Forum II                         |         |

**Policy Memorandum research credit:**

| PPOL 4995 | Independent Research                      | 4       |

**Elective Courses:**

Any PPOL class not already used as a required course, or a pre-approved course from any graduate program.

Note: Candidates may use 0-4 of Independent Study credits and/or 0-4 Internship credits to count towards the elective requirement.

Total number of credits: 60

---

1 The Great Issues Forums are a series of policy seminars focused on the nation’s most important current issues. The graduate program in public policy offers five of these two-day, full-day courses every year for two quarter hours of credit each. Students must complete six forums (12 hours) to earn the MPP. The topics of these seminars rotate frequently, as expertise and events warrant, and are an integral part of the MPP program.

**Minimum number of credits required for the degree: 60 credits**

**Non-coursework requirements**

• Policy Memorandum

**Policy Memorandum**

As the capstone project of the MPP experience, the Policy Memorandum integrates the knowledge and skills learned in and outside the classroom. The Policy Memorandum provides an opportunity to experience firsthand the type of practical and professional work often required of a policy analyst. Students identify and define a real-world policy issue; analyze the issue by conducting research, gathering data and interviewing professionals with opposing views; analyze the costs and benefits of the issue; and recommend courses of action. Upon submission of the student’s Policy Memorandum, degree candidates are scheduled to present the results of their research, along with their recommended course of action, to a faculty committee, consisting of the student’s primary advisor, their cost-benefit advisor, and at least two additional faculty members, as appropriate to the student’s topic.
Courses

**PPOL 4100 American Public Policy System (4 Credits)**
The American Policy Agenda, which is required for MPP students, will provide an intensive overview of the development of American public policy in the 20th century, with special emphasis on the interconnection between the values of the public and private sectors. Through the lens of a useful descriptive model, graduate students will learn concepts of the role of government have evolved from: the (1) constitutional period, wherein political society was thought to be a rational device for the protection of property and liberty and prosperity was equivalent to the free management of affairs; the (2) administrative period, wherein powerful regulatory agencies were created to control concentrations of corporate power and the idea developed that the market does not always reflect the social good; to the (3) bureaucratic period, wherein the stock market collapse of 1929 and the Great Depression reversed key ideas of limited government inherent in the constitution and, beginning with the New Deal, social engineering in the "public interest" defined virtually every problem as "national," to the (4) social welfare period, wherein government became the source of vast entitlements and benefits and interest groups came to dominate the policy debate; to the (5) current period of stalemate, gridlock, and reconsideration, wherein big government is a given, along with a utilitarian social contract defined as that which provides the most efficiency, the most productivity, and the most consumption for the most people.

**PPOL 4200 Microeconomics for Public Pol. (4 Credits)**
Microeconomics for Public Policy Analysis will provide a comprehensive, case-based overview for the MPP student of the consequences of contemporary public policies for individuals, households, and firms. Public policy is often said to consist of the distribution of scarce or valuable resources or benefits through the mechanisms of the public sector. This course will provide the opportunity to gain fluency and expertise in the application of economic analysis to such problems as transfer payments, entitlements, government subsidies, taxation, housing, education, labor, welfare and crime. Issues concerned with exploring the government's role in encouraging innovation, maintaining a growing economy, and budgeting under conditions of "surplus," will be explored using contemporary policy initiatives. Two competing visions of public policy will be examined: the role of economic policy in securing the benefits of "ordered liberty," which accords to the individual; and (2) the vision of public policy as fundamental to the correction of anomalies in the market and in the distribution of scarce resources, often based on interest group claims of "disparity" and "inequality".

**PPOL 4300 Quantitative Analysis-Pub Pol (4 Credits)**
This course will provide the MPP student with the tools of mathematical analysis needed for the advanced study of public policy issues and evaluation of alternatives. Topics will include descriptive statistics, probability, sampling, estimation, inference and hypothesis testing, variable analysis and correlation, regression theory, reliability and validity, and prediction and simulation. Students needing review of college-level algebra will be referred to appropriate tutorials. The overall learning objective of this course is to help students recognize and apply basic statistical concepts to Public Policy and, more in general, Social Science analysis. Students will learn how to use statistical software to: build datasets, describe data in a visual and analytical fashion, perform statistical tests, and construct basic statistical inference models. Students will also learn how to report their analytical findings for Public Policy analysis.

**PPOL 4400 Analytical & Critical Skills (4 Credits)**
This course will provide the student with the analytical tools necessary to evaluate competing points of view, using empirical techniques, logic, and statistical inference. Case studies will be drawn from the current legislative and regulatory environment and will provide the MPP student with opportunities to construct a course of action, based on the use of logically consistent arguments and on the persuasive use of facts and empirical data. Students in this course will also learn the history and development of the scientific method, how to distinguish speculation, theory, fact, and opinion, how to identify the validity, ideological content or irrationality of data, how to identify the intentional obfuscation of issues, and how to evaluate one's own prejudices and vulnerability to argument not based on evidence. Students in this course how to identify the validity, ideological content or irrationality of information, how to identify the intentional obfuscation of issues, and how to evaluate one's own prejudices and vulnerability to arguments not based on evidence.

**PPOL 4500 Cost-Benefit Analysis/Pub Pol (4 Credits)**
How do we determine if programs have met their objectives? Increasingly, this is a matter for empirical evaluation. This course will focus on quantitative approaches to program evaluation and on the primary tool available to the policy analyst in the modern organizational framework, cost-benefit analysis. Various issues will be considered, including the "costs" associated with taxes (and tax expenditures), governmental mandates, health and safety regulation, environmental regulation, government "investments," such as those in education, defense, law enforcement, and the regulation of financial industries.

**PPOL 4501 Great Issues Forum (2 Credits)**
Intensive Great Issues Forums provide cutting edge opportunities to study emerging issues, like innovation and technology, antitrust, privacy, healthcare, education, fiscal policy, national security, economic growth, ethics, and metropolitan dynamics. We maintain close affiliations with leading think tanks, such as the Brookings Institution and the American Enterprise Institute in Washington, D.C., and with important political figures and policymakers. The Great Issues Forums are unique short courses devoted to a single policy issue and taught by a nationally-recognized authority in the area. These courses will occur on a periodic basis, with at least two forums to be offered each academic quarter. Participation in these courses is required for graduate students in the MPP program. Each course will be taught on an intensive workshop basis, over the course of two or more days, for example, all-day sessions on Friday and Saturday. Specific topics will be determined by the immediacy of the policy issue and its relevancy to the curriculum of the MPP.
PPOL 4502 Issues Forum II (2 Credits)
Intensive Great Issues Forums provide cutting edge opportunities to study emerging issues, like innovation and technology, antitrust, privacy, health care, education, fiscal policy, national security, economic growth, ethics, and metropolitan dynamics. We maintain close affiliations with leading think tanks, such as the Brookings Institution and the American Enterprise Institute in Washington, D.C., and with important political figures and policy makers. The Great Issues Forums are unique short courses devoted to a single policy issue and taught by a nationally-recognized authority in the area. These courses will occur on a periodic basis, with at least two forums to be offered each academic quarter. Participation in these courses is required for graduate students in the MPP program. Each course will be taught on an intensive workshop basis, over the course of two or more days, for example, all-day sessions on Friday and Saturday. Specific topics will be determined by the immediacy of the policy issue and its relevancy to the curriculum of the MPP.

PPOL 4504 The Policymaking Environment (2 Credits)
This forum aims to provide MPP students with a robust understanding of the essentials of the policymaking process in the United States. We will be examining in sequence three basic topics: 1) The political values and principles that establish the parameters for the policymaking environment; 2) The set of governmental and non-governmental actors who participate in policymaking and how they relate to each other; and 3) What policymaking models can help to explain the way policy is made by those actors.

PPOL 4600 Regulatory Policy (4 Credits)
This course will provide the MPP student with a solid understanding of the legal basis for policy action, through a case-based examination of executive and legislative authority, judicial policy-making, the expansion of the due process and equal protection clauses of the 14th Amendment, and the expansion of administrative authority under the Administrative Procedure Act. Such issues as affirmative action, government contracting, school finance, antitrust, and substantive due process will be presented utilizing a combination of traditional legal analysis and the cost-benefit approach of the policy specialist.

PPOL 4700 Public Management & Budgeting (4 Credits)
This course introduces students to the topic of public management, which includes concepts such as organizational structure, performance management, and strategy development. In addition, the instructor will teach the techniques and concepts of government and non-profit budgeting/financial management. The budgeting process includes program development/implementation, cost and revenue estimation and projection, and budget evaluation. The relationship between public management and budgeting will be explored.

PPOL 4701 Special Topics in Public Policy (4 Credits)
Various topics in public policy are covered. Topic subjects to change each term as deemed appropriate with local, regional and federal policy issues and regulation changes. Prerequisite: PPOL 4100. Two examples are: “Denver Dynamics” explores the policy options and responses to the challenges of big city governance. Exclusive interactions with major stakeholders in the City and County of Denver are featured, with a view to giving the student an insider’s view of power, economic development, political influence and decision-making. “Getting Results Inside the Beltway: Power and policy in Washington, D.C.” is a travel course consisting of specially-arranged one-on-one sessions with Washington-based lawmakers, decision-leaders, and policy experts, through which graduate students will gain an understanding of the dysfunctions of the current budget process, political polarization, the interest groups that shape the current policy dynamic, the increasing importance of media in shaping policy, the solutions that will be required for the United States to regain fiscal sanity and solvency—and the challenges that will need to be met to preserve American hegemony and redefine national security.

PPOL 4806 Decision Making in Public Policy (4 Credits)
Provides a new perspective on the process of decision-making in the public and private sectors. Viewed from the perspective of a significant paradigm shift, the "rational model" of policy-making is contrasted with emerging theories based on a view of human nature that is unpredictable, idiosyncratic, and context-based. Case studies are drawn from the current financial crisis and from the ongoing debate over economic stimulus and recovery. Additional examples are provided from the New Deal era, the Vietnam war, Watergate, and from the wars in Afghanistan and Iraq.

PPOL 4808 Health Care Policy (4 Credits)
No prerequisites. The purpose of this course will be to explore the assumptions, the history, the development and the current practices of the U.S. health care systems. What are its strengths and what are its weaknesses? How do we explain its paradox of excess and deprivation? We will spend some limited time examining other nation's health care systems for comparative purposes. The course will cover a broad range of topics and will explore a systems approach to health, obtaining an understanding of the integration of the public and private sector, free-market and government regulation; the effects on the doctor/patient relationship, the new health care demands, the search for quality, the role of new technologies and the changing ethical standards. Such a course cannot be designed to describe a functional world of health care delivery for even as the description is being formulated, the practical and functional aspects of that world are changing.

PPOL 4811 The Strategy of Public Policy (4 Credits)
Public Policy is formed in many ways: legislation, court rulings, initiative campaigns, executive orders, and regulations, not to mention many other subtle instruments that are often invisible to the public. All of these tools make analyzing policy a difficult task, and they make choosing the right strategy for getting a policy implemented even more complicated. How is it that policy makers choose to implement their policies? Are any options more effective than others? To understand the policy process in the U.S., policy analysts must understand the institutions that exist in government.
**PPOL 4812 Supreme Court & Public Policy (4 Credits)**
This course, which is specifically designed for graduate students in public policy, provides the necessary professional background for students to understand the role of the Supreme Court of the United States in the formulation of public policy. Central to the course are the due process and equal protection clauses of the 14th Amendment to the U.S. Constitution, which are the key to understanding the vast expansion of Supreme Court power since the New Deal. The course also provides a basis for the student to understand the constitutional basis for administrative regulation, as well as freedom of expression issues inherent in the 1st Amendment.

**PPOL 4900 Public Sector Internship (0-10 Credits)**
Students will gain hands-on experience with policy issues in a variety of settings.

**PPOL 4991 Independent Study (1-4 Credits)**
Students will work in collaboration with faculty from the Institute for Public Policy Studies to complete an independent study project.

**PPOL 4992 Directed Study (2-4 Credits)**

**PPOL 4995 Independent Research (1-4 Credits)**
The Policy Memorandum research project is designed to provide the MPP student with a capstone experience that will synthesize the knowledge and skills that were acquired during the 60 quarter hours of formal coursework. Included among the skills that students will apply are research, quantitative methods, economic analysis, cost-benefit analysis, budgeting and project management.

**International Studies**
Office: Anna & John J. Sie International Relations Complex
Mail Code: 2201 S. Gaylord St., Denver, CO 80210
Phone: 303-871-2544
Email: korbeladm@du.edu
Web Site: du.edu/korbel/

**Doctor Of Philosophy in International Studies**
The PhD degree is designed as a five to seven-year program provided the student a) enters with a closely related master’s degree and b) is able to devote full-time study during the entire period. The student working toward this degree must earn a grade average of 3.5 or higher for a minimum of 108 hours of graduate credit, of which 72 hours must be earned at the University of Denver. Students select two of the three fields available: Comparative Politics, International Relations, and Political Theory. In addition, each student must meet the core curriculum and field training, methodology and foreign language requirements, pass written and oral comprehensive field exams, file an approved prospectus, and successfully write and defend a dissertation.

**Master of Arts in Global Finance, Trade and Economic Integration**
The Global Finance, Trade, and Economic Integration (GFTEI) program provides students with a multi-disciplinary, policy-focused examination of the global economy. Courses within this degree focus on the complex changes underway in the global economy, including the emerging patterns of finance, trade, and human capital flows and their effect on national economies; the effect of globalization on state capacity, policy autonomy, and national economic conditions; the relationship between economic, political, and social outcomes; corporate governance and competition; and the interaction of interest groups, states, and multilateral agreements and organizations. All students within this degree receive training in advanced statistical methods, including econometrics. Students also select from a diverse collection of “hard” and “soft” skills courses (e.g. Art of Forecasting, Political Risk Analysis, Professional Communications, Project Management, Time Series and Panel Data, Social Entrepreneurship, International Business Transactions.)

Students pursuing the GFTEI degree are required to select one specialization that is tied to their intellectual and career aspirations. Some students have chosen to pursue two specializations. Examples of specializations that students have pursued recently include international political economy, international business, economic development policy, energy and environment, the political economy of Africa, China, the European Union, or Latin America, international security, quantitative analysis, and qualitative methods.

This degree is intended for students who intend to pursue careers in four domains:

1. International economic policy analysis for public sector agencies, such as the Department of Commerce, the International Trade Administration, and the Ministry of Finance;
2. Analyst positions in multilateral institutions and organizations, such as the World Bank, the World Trade Organization, the United Nations, the African Development Bank, and the Organization for Economic Cooperation and Development;
3. Research and analyst positions within non-governmental organizations, such as Oxfam, Action Aid, Accion, and Water for People; and
4. Private sector careers as economic policy consultants, country risk or international project analysts, or international project managers.

Students who seek a more specialized and technical training in portfolio allocation might consider creating their own customized, “flexible dual degree” with the Daniels College of Business (DCB) that allows them to earn an MS in Finance along with the GFTEI degree (for more information, see the “Flexible Dual Degree Programs (http://bulletin.du.edu/graduate/dual-degrees/flexible-dual-degree-programs)” section of the Graduate Bulletin).
Master of Arts in International Security

The International Security program provides education and training from a multi-disciplinary perspective on issues associated with the causes, consequences, and means of preventing and mitigating threats across the range of levels of analysis. The Security Program defines both security and threats broadly and interactively, ranging from and making linkages across traditional systemic/state level threats associated with the use of violence and those associated with the provision of human security at the societal/individual level. Utilizing a diverse faculty and an array of teaching approaches/practical exercises, our aim is to allow students to master, analyze, and test theories, policies, and approaches to the challenges of international security as well as develop the analytic and communications skills necessary to become leading practitioners in the security field via the public, private, non-profit, and/or international sectors.

At the completion of the Security Curriculum, students will have a clear understanding of the foundational concepts, theories, and approaches associated with the study and practice of international security and are able to relate these approaches to each other and to real world security challenges. In addition, students will have developed the analytic, professional, and communications skills necessary to provide and articulate professional level analysis as well as developed one or more sub-areas of expertise within the international security field.

Master of Arts in International Studies

The Master of Arts in International Studies combines an in-depth study of one of the principle fields of international studies with an issue-oriented specialization, skills courses, and opportunities for internships or advanced research. It is the traditional professional international studies curriculum, long favored by students pursuing career options in the government, private, and non-profit sectors, as well as those considering a PhD. It is also
our most flexible degree, as it allows you to tailor a program according to your particular needs and interests. Upon completion, MA in International Studies students will be expected to identify two of the major theoretical approaches in the chosen field and discuss their relevance to a specific issue in international affairs.

Certificate of Specialization in Homeland Security

This certificate program is offered to currently enrolled Josef Korbel School of International Studies’ Master’s or PhD students. The Homeland Security Certificate Program is a professional certification program focused on preparing participants to step directly into career opportunities in the local, state, and national homeland security profession.

Certificate of Specialization in Global Health Affairs

The Certificate in Global Health Affairs (CGHA) is the first global health program to be based in a school of International Studies. Unlike certificates offered by schools of medicine or public health, which emphasize biomedical approaches to health, CGHA places social and political solutions at the forefront of global health action. Combined with a degree, the seven-course CGHA sequence prepares students for systematic, evidence-based approaches to a broad range of global health problems relating to development, diplomacy, security, trade, and human rights.

CGHA’s core emphasis lies in building sound decision-making skills in an arena often suffused with inefficiency and blindness to political, social, and cultural context. Substantive courses address the widest conception of the causes and consequences of individual and population health, emphasizing short- and long-term effects, the increasing globalization and personalization of health; and interactions between health and other key areas of human endeavor such as politics, development, trade, and conflict. Practical courses build skills in epidemiology, research methodology, and program design and evaluation.

Students who graduate with the certificate in global health affairs distinguish themselves as leaders and innovators through the pursuit of the “science of service” on and off campus. While most GHA students take advantage of traditional internship opportunities at leading international health organizations, many also pursue action-oriented research and leadership projects through a network of partner agencies. Students are encouraged, but not required, to undertake action-oriented research projects including a thesis or Significant Research Paper, which may be completed for course credit. Throughout the GHA program, students build an evidence-based framework for evaluating project impacts on served communities, service agencies, their own career paths, and their community at DU.

Certificate of Specialization in Humanitarian Assistance

The mission of the Certificate in International Studies with a Concentration in Humanitarian Assistance is to prepare students to work in the humanitarian field. The certificate provides students with the theoretical and practical underpinnings for humanitarian work which is technically sound, engages with affected communities, responds to the diverse needs of impacted populations, and sets the stage for sustainable and inclusive recovery and development.

A limited number of students pursuing a Master’s degree at Korbel are admitted to the Certificate in International Studies with a Concentration in Humanitarian Assistance each year. Admission is extremely competitive on the basis of focus and motivation. Prior experience is not required.

Applications will be accepted from continuing Korbel students and from incoming students in Spring Quarter. Students will be informed of admission decisions in time to register for the fall quarter.

For more information about the program, please visit: http://www.du.edu/korbel/humanitarian-assistance/.

All certificate students are required to do the following:

1. Complete core humanitarian coursework comprising two courses which aim to introduce students to key aspects of humanitarian assistance (one focused on policy and the other on field operations) and two additional courses directly related to humanitarian assistance.
2. Take three elective courses in one of three tracks (personalized tracks are also possible with the HA program director’s approval):
   a. Monitoring, Evaluation and Analysis
   b. Management/Operations
   c. Policy/Advocacy
3. Complete an international humanitarian work focused internship (150 hours) with an organization whose core work includes international humanitarian assistance or humanitarian policy/advocacy. This is a critical component of the Certificate. It is unlikely that students in the Certificate Program will find appropriate internships in Denver. Certificate candidates should plan to spend some significant time interning at an appropriate location (either in the US or abroad) in order to fulfill this requirement.

Doctor of Philosophy in International Studies

Degree and GPA Requirements

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

**Standardized Test Scores**

• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

**English Language Proficiency Test Score Requirements**
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 95
- Minimum TOEFL Score (Paper-based test): 587
- Minimum IELTS Score: 7
- Minimum CAE Score: 185

English Conditional Admission: No, this program does not offer English Conditional Admission.

**Master of Arts in International Studies**

**Degree and GPA Requirements**

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. ## Total Credits

108

1. INTS 4327 Advanced Issues in International Studies is an advanced research course that combines the study of comparative and international political economy with research methods. Many PhD students write their extended research paper while taking this course. Offered only every other year; not annually.

2. Methodology training beyond these required courses is a matter of individual needs and interests, and students should consult their advisor or potential dissertation committee chair and members about available options. A limited fund is available to fund students to study at methods courses outside of DU, at for example, methods summer schools. Awards for this purpose will be made on a competitive basis and only when students and their advisors can prove that such training is vital for completion of the Ph.D. dissertation.

3. INTS 4522 Philosophy of Social Science is offered every other year.

## Minimum number of credits required for degree: 90 hrs.

### Non-coursework Requirements

- **One Extended Research Paper:** PhD students are required to write an extended research paper during their period of fulfilling course work requirements. Students demonstrate a capacity for independent research in writing the extended research paper.
• **Foreign Language Proficiency:** Required.

• **Comprehensive Written Exams:** PhD candidates must pass two comprehensive exams (in their chosen fields) in order to advance to candidacy. Within three weeks after the written exam, an approximately 1.5 hour oral exam is given. Comprehensive exam committees are comprised of three tenure-line faculty.

• Students cannot progress towards prospectus stage until they successfully pass both fields. A prospectus must have approval/signature of all JKSIS committee members.

• **Final Dissertation:** Prior to submitting the final dissertation for graduation, students must successfully pass an oral defense of the dissertation.

| 72 |

---

1. Prerequisite for INTS 4310 International Trade: grade of B- or better in undergraduate course in Introductory Microeconomics, Principles of Economics (combining Introductory Micro and Macroeconomics), or International Economics. Prerequisite for INTS 4320 Int’l Monetary Relations: grade of B- or better in undergraduate course in Introductory Macroeconomics, Principles of Economics (combining Introductory Micro and Macroeconomics), or International Economics. Students who have not completed the undergraduate prerequisites for INTS 4310 International Trade and INTS 4320 Int’l Monetary Relations should first complete INTS 4536 Economics: Fundamental Knowledge, Global Applications.

2. Students who have taken INTS 4324 to fulfill their International Studies Core requirement must take INTS 4370 to fulfill their Program Training Core requirement.

3. INTS 4310 and INTS 4320 are recommended as prerequisites for INTS 4370.
Students must complete INTS 4050 Statistical Methods I (with a grade of C- or better) before they are eligible to register for INTS 4051 Statistical Methods II. Students will receive elective credit for completing INTS 4050 Statistical Methods I.

Students may take INTS 4057 Statistics for International Affairs (which combines Stats I and Stats II) instead of INTS 4051 Statistical Methods II, if they have a strong quantitative background and a minimum quantitative GRE score of 148 coming into the program. This is a fast-paced course. Students with a lower quantitative GRE score may not take this course without permission of the instructor.

Minimum number of credits required for degree: 72 credits.

Non-coursework Requirements
- Foreign Language Proficiency: Optional, but strongly recommended
- Internship: Required (registered as INTS 4981 Internship 0-4 credits)*
- Thesis (0-8 credits) or Substantial Research Paper (0-4 credits): Optional

* Internships are required for most of the MA degrees at the Josef Korbel School of International Studies and are managed through the Office of Career and Professional Development at the Korbel School. For a few categories of students, the Korbel School may grant an exemption from the internship requirement. While students in the following categories are highly encouraged to pursue internships to enhance their professional development, they may petition to be exempted from the internship requirement.
  1. Students entering Korbel with substantial relevant professional work experience, typically at least 5 years.
  2. Students with a confirmed job offer in a sector in which they had been working prior to beginning the Josef Korbel degree.
  3. Students sponsored by foreign governments whose terms of study discourage internships.

Students who have a degree and/or certificate internship requirement seeking internship exemptions are to formally petition the Associate Dean of Student Affairs during their first quarter of coursework.

^1 Students must complete INTS 4050 Statistical Methods I (with a grade of C- or better) before they are eligible to register for INTS 4051 Statistical Methods II. Students will receive elective credit for completing INTS 4050 Statistical Methods I.
Students may take INTS 4057 Statistics for International Affairs (which combines Stats I and Stats II) instead of INTS 4051 Statistical Methods II, if they have a strong quantitative background and a minimum quantitative GRE score of 148 coming into the program. This is a fast-paced course. Students with a lower quantitative GRE score may not take this course without permission of the instructor.

**Minimum number of credits required for degree:** 72 hrs.

**Non-coursework Requirements**
- Internship: Optional, but strongly recommended (registered as INTS 4981 Internship 0-4 credits)
- Foreign Language Proficiency: Required
- Thesis (0-8 credits) or Substantial Research Paper (0-4 credits): Optional
- Students not pursuing a thesis must do one of the following:
  - Take two additional skills courses (a writing course is recommended)
  - complete one additional skills course and one SRP

One of the following courses will complete the skills requirement:

- INTS 4226 Social Entrepreneurship & Global Poverty
- INTS 4333 International Project Design and Monitoring
- INTS 4342 Project Management
- INTS 4391 Financial Management and Fundraising of Non-Profits
- INTS 4394 Non-Profit Management Issues & Techniques
- INTS 4423 Introduction to Epidemiology
- INTS 4555 Professional Communications
- INTS 4557 Cross-Cultural Communications
- INTS 4575 Systems Thinking for Social Scientists
- INTS 4579 International Futures
- INTS 4632 Qualitative Research Methods
- INTS 4633 Int'l Project Evaluation
- INTS 4966 Applied Field Methods

Elective Requirements (eight courses): 32

All other courses to total 72 credits for completion of the degree.

Total Credits 72

1. Students who have sufficient background in development economics may substitute INTS 4310 International Trade, INTS 4320 Int'l Monetary Relations, or INTS 4370 Political Economy of Globalization with explicit permission from the International Development Degree Director; see pre-requisite requirements. Students can exercise these options by presenting a transcript showing a grade of B or better in an upper-division undergraduate or accredited graduate course in economics of development. Requests for substitution must be approved by the degree director.

2. INTS 4521 Cultures of Development may be applied to either the Politics of Development requirement or the SHD/ED requirement, but not both.

3. Students must complete INTS 4050 Statistical Methods I (with a grade of C- or better) before they are eligible to register for INTS 4051 Statistical Methods II. Students will receive elective credit for completing INTS 4050 Statistical Methods I.

4. Students may take INTS 4057 Statistics for International Affairs (which combines Stats I and Stats II) instead of INTS 4051 Statistical Methods II if they have a strong quantitative background and a minimum quantitative GRE score of 148 coming into the program. This is a fast-paced course. Students with a lower quantitative GRE score may not take this course without permission of the instructor.

5. INTS 4052 Statistical Methods III requires successful completion (i.e. grade of C- or better) of either INTS 4051 Statistical Methods II or INTS 4057 Statistics for International Affairs as a pre-requisite.

Minimum number of credits required for degree: 72 hrs.

Non-coursework Requirements

- Internship: Required (registered as INTS 4981 Internship 0-4 credits)*
- Foreign Language Proficiency: Required
- Thesis (0-8 credits) or Substantial Research Paper (0-4 credits): Optional. Students who choose to complete a thesis should prepare a proposal and secure a faculty advisor for the project at least one year before they plan to defend and submit the thesis.

* Internships are required for most of the MA degrees at the Josef Korbel School of International Studies and are managed through the Office of Career and Professional Development at the Korbel School. For a few categories of students, the Korbel School may grant an exemption from the internship requirement. While students in the following categories are highly encouraged to pursue internships to enhance their professional development, they may petition to be exempted from the internship requirement.

1. Students entering Korbel with substantial relevant professional work experience, typically at least 5 years.
2. Students with a confirmed job offer in a sector in which they had been working prior to beginning the Josef Korbel degree.
3. Students sponsored by foreign governments whose terms of study discourage internships.

Students who have a degree and/or certificate internship requirement seeking internship exemptions are to formally petition the Associate Dean of Student Affairs during their first quarter of coursework.

INTS 4804  Realism and Democracy
INTS 4820  Democracy and War
INTS 4822  Contemporary Political Theory
INTS 4890  Revolutions and State Building

III. Methods and Skills Courses (take a minimum of 4 courses or 16 credits):

A. Methods

1. Interpretive (take a minimum of 1 course)
   - INTS 4010  Epistemology
   - INTS 4522  Philosophy of Social Science
   - INTS 4632  Qualitative Research Methods
   - INTS 4644  Human Rights Research Methods

2. Quantitative (take a minimum of 1 course)
   - INTS 4051  Statistical Methods II
   - INTS 4057  Statistics for International Affairs
   - INTS 4052  Statistical Methods III
   - INTS 4579  International Futures

3. Skills (take a minimum of 2 courses)
   - INTS 4333  International Project Design and Monitoring
   - INTS 4342  Project Management
   - INTS 4497  International Campaign Management
   - INTS 4711  Topics in International Studies (Campaigns and Foreign Policy)
   - INTS 4955  Human Rights Clinic I (and INTS 4956 Human Rights Clinic II)
   - INTS 4956  Applied Field Methods
   - INTS 4981  Internship (Highly recommended but this could be waived if students show previous professional experience in human rights. Alternatively, in lieu of internship, education Summer trip (such as Israel and the West Bank) – Israel and the West Bank – https://www.du.edu/korbel/middleeast/partnerships-programs/student-trip.html)

IV. Electives:

(0-6 courses) Electives can be selected from the MA in International Human Rights Program or from outside the field.

Language Proficiency (Required)

Effective September 1, 2019, a foreign language proficiency is required. See MA Handbook (foreign language requirement).

Independent Studies — Optional.

For Research Papers, Thesis, etc.

For Language acquisition and Culture.

Total Credits 56

1. Students must complete INTS 4050 Statistical Methods I (with a grade of C- or better) before they are eligible to register for INTS 4051 Statistical Methods II. Students will receive elective credit for completing INTS 4050 Statistical Methods I.

2. Students may take INTS 4057 Statistics for International Affairs (which combines Stats I and Stats II) instead of INTS 4051 Statistical Methods II, if they have a strong quantitative background and a minimum quantitative GRE score of 148 coming into the program. This is a fast-paced course. Students with a lower quantitative GRE score may not take this course without permission of the instructor.

3. INTS 4052 Statistical Methods III requires successful completion (i.e. grade of C- or better) of either INTS 4051 Statistical Methods II or INTS 4057 Statistics for International Affairs as a pre-requisite.
Minimum number of credits required for degree: 72
* Internships are required for most of the MA degrees at the Josef Korbel School of International Studies and are managed through the Office of Career and Professional Development at the Korbel School. For a few categories of students, the Korbel School may grant an exemption from the internship requirement. While students in the following categories are highly encouraged to pursue internships to enhance their professional development, they may petition to be exempted from the internship requirement.
1. Students entering Korbel with substantial relevant professional work experience, typically at least 5 years.
2. Students with a confirmed job offer in a sector in which they had been working prior to beginning the Josef Korbel degree.
3. Students sponsored by foreign governments whose terms of study discourage internships.

Students who have a degree and/or certificate internship requirement seeking internship exemptions are to formally petition the Associate Dean of Student Affairs during their first quarter of coursework.

Master of Arts in International Security

Degree Requirements

Coursework Requirements

All International Security students are strongly encouraged to complete all Core Coursework, Foundational Coursework (Program Training Requirements A), and the Skills Coursework (Program Training Requirements B), in their first three to four quarters at the Josef Korbel School.

</tbody>
</table>

Specialization Area Requirement 12

Any set of three, 4000 level courses that, taken together, represent a common topic, region, or other security related specialization area. Students are welcome to generate their own specialization by topic/region (which must be approved by the International Security Degree Director) or select from the curriculum supported Security Specializations listed below. The phrase "or relevant, for-credit coursework/research" refers to individual work done via an Advanced Topics course, INTS 4991 - Independent Study, INTS 4995 - MA Thesis, or INTS 4996 - SRP, as approved by the International Security Degree Director. Options Include:

Intelligence
INTS 4753 | Intelligence and National Security |
Plus any two of the following courses or relevant, for-credit coursework/research:
INTS 4736 | Strategic Intelligence Data Collection and Analysis |
INTS 4738 | Current Issues in Strategic Intelligence |
INTS 4579 | International Futures |
Homeland Security
INTS 4730 | Introduction to Homeland Security |
INTS 4731 | Homeland Defense: Prevention & Mitigation |
Plus one of the following courses or relevant, for-credit coursework/research:
INTS 4736 | Strategic Intelligence Data Collection and Analysis |
INTS 4786 | Planning and Assessment in Complex Environments |
INTS 4907 | International Terrorism |
INTS 4989  North American Defense and Security

Emerging Security Issues

Any three of the following courses or relevant, for-credit coursework/research:

- INTS 4539  Food Security in the United States and the World
- INTS 4630  Civilian Protection in Armed Conflicts
- INTS 4642  Environmental Security
- INTS 4670  Gender, Security and Human Rights
- INTS 4935  International Humanitarian Law of Armed Conflict

U.S. National Security

- INTS 4700  United States Foreign Policy
  or INTS 4701  US National Security Policy

Plus any two of the following courses or relevant, for-credit coursework/research:

- INTS 4635  Civil-Military Relations
- INTS 4753  Intelligence and National Security
- INTS 4786  Planning and Assessment in Complex Environments
- INTS 4907  International Terrorism
- INTS 4935  International Humanitarian Law of Armed Conflict
- INTS 4989  North American Defense and Security

Comparative Foreign Policy

Any three of the following courses or relevant, for-credit coursework/research:

- INTS 4147  American Govt & Pol. Making
- INTS 4447  Making of Chinese Foreign Policy
- INTS 4622  Global Governance
- INTS 4701  US National Security Policy
- INTS 4760  Russian Foreign and Defense Policy

Customized regional/topical specialization (with International Security Degree Director approval)

Elective requirements

Remaining coursework to total 72 hrs.

Total Credits 72

1. Students may take INTS 4057 Statistics for International Affairs (which combines Stats I and Stats II) only if they have a strong quantitative background and a minimum quantitative GRE score of 148 coming into the program. This is a fast-paced course. Students with a lower quantitative GRE score may not take this course without permission of the instructor.

2. Course may not be used for specialization if it is being counted toward the Foundational Course requirement.

3. All International Security students must enroll in INTS 4735 at their first opportunity, and complete INTS 4739 or INTS 4057 in their first year.

4. Advanced Topics Courses, cannot be taken until a student has completed the aforementioned courses, as well as any foundational coursework that is a pre-requisite for those courses.

Minimum number of credits required for degree: 72 hrs.

Non-coursework Requirements

- Internship: Required (registered as INTS 4981 Internship 0-4 credits)*
- Foreign Language Proficiency: Optional, but strongly recommended
- Thesis (0-8 credits) or Substantial Research Paper (0-4 credits): Optional

* Internships are required for most of the MA degrees at the Josef Korbel School of International Studies and are managed through the Office of Career and Professional Development at the Korbel School. For a few categories of students, the Korbel School may grant an exemption from the internship requirement. While students in the following categories are highly encouraged to pursue internships to enhance their professional development, they may petition to be exempted from the internship requirement.

1. Students entering Korbel with substantial relevant professional work experience, typically at least 5 years.
2. Students with a confirmed job offer in a sector in which they had been working prior to beginning the Josef Korbel degree.
3. Students sponsored by foreign governments whose terms of study discourage internships.

Students who have a degree and/or certificate internship requirement seeking internship exemptions are to formally petition the Associate Dean of Student Affairs during their first quarter of coursework.

</tbody>
</table>
Choose four of the following:

INTS 4301  Introduction to Political Theory
INTS 4526  Modern Islamic Political Thought
INTS 4599  Ethics and International Affairs
INTS 4710  Topics in International Studies (Gandhi, Socrates, and Mass Non-Violent Resistance)
INTS 4802  Foundational Ideas in Social Science: Marx and Weber
INTS 4804  Realism and Democracy
INTS 4820  Democracy and War
INTS 4822  Contemporary Political Theory
INTS 4890  Revolutions and State Building

Specialization Area Requirement: 12

A three-course specialization. Students may design a customized specialization area with the approval of International Studies Degree Director. Students are only required to have one specialization, but may complete two if they wish. Students can consult with faculty with expertise in a particular specialization, pending final approval by the International Studies Degree Director, to get a list of suggested courses for any of the standard specializations.

International Development (for questions see Sally Hamilton or Aaron Schneider):

INTS 4350  Economic Development
INTS 4468  Politics of Development

Plus any course listed under the M.A. in International Development requirement for SHD/ED

International Security (for questions see Lewis Griffith):

Choose three of the following courses:

INTS 4700  United States Foreign Policy
INTS 4701  US National Security Policy
INTS 4702  Major Issues in International Security Policy
INTS 4703  Security & Strategy

Human Rights (for questions see Claude d’Estree):

INTS 4940  Introduction to Human Rights (required)

Plus one course from each of two subfields:

Legal and Organizational - choose from:
INTS 4936  International Law and Human Rights
INTS 4941  Human Rights and International Organizations

Regional and Country Focus:
INTS 4875  Human Rights and Foreign Policy

Topics - choose from:
INTS 4939  Genocide and the Human Condition
INTS 4987  Forced Labor and Human Trafficking

Theoretical Issues - choose from:
INTS 4804  Realism and Democracy
INTS 4935  International Humanitarian Law of Armed Conflict

Conflict Resolution (for questions see Karen Feste):

INTS 4920  Conflict Resolution

One course in Intervention, Peacebuilding, or Peacekeeping

One course in Negotiation, Mediation, or Conciliation (or International Organization, if approved by International Studies Degree Director)

Global Health Affairs (for questions see Sandy Johnson):

INTS 4367  Global Health Affairs
INTS 4516  Major Diseases in Global Health (From Pathophysiology to Action)

Plus a third approved course from the list of GHA courses or an approved health course offered in another unit of the university (University College courses are not eligible).

Policy Analysis

INTS 4349  Comparative Public Policy and Finance
INTS 4750  The Policy Making Process

And one course on a particular policy issue.

Environmental Policy
INTS 4397  The Environment, The Economy, and Human Well-Being
INTS 4642  Environmental Security
INTS 4972  Global Environmental Governance
Also recommended to deepen the specialization are INTS 4484, INTS 4514, INTS 4539, INTS 4566, and INTS 4653.

Homeland Security
INTS 4730  Introduction to Homeland Security
INTS 4731  Homeland Defense: Prevention & Mitigation
INTS 4734  Homeland Sec & Civil Soc

Humanitarian Assistance
While there is no formal specialization available in Humanitarian Assistance, interested students may build a customized specialization by taking at least three courses/12 credits from the following list of courses. Approval for this customized specialization must come from the International Studies Degree Director. Students interested in such a specialization must understand seats are available only on a space-available basis after Humanitarian Assistance Certificate students have had the opportunity to register for their required courses.
INTS 4XXX  International Study Transfer (Gender and Humanitarian Aid)
INTS 4056  Information Management in Humanitarian Crises
INTS 4492  Health and Humanitarian Aid
INTS 4496  Field Operations for Humanitarian Assistance
INTS 4581  Introduction to Humanitarian Systems
INTS 4583  International Protection in the Humanitarian Context
INTS 4647  Critical Issues in International Humanitarian Assistance
INTS 4652  Contemporary Issues in Refugee Studies
INTS 4787  Civil-Military Practices in Humanitarian Responses
INTS 4935  International Humanitarian Law of Armed Conflict

Customized Specialization
Three, interrelated courses as approved by the International Studies Degree Director.

Skills Requirements
Methodology/Skills: A package of three courses from the various methods and skills courses offered at the Josef Korbel School and, with permission, from other units at the University of Denver (excluding University College). The list below contains examples of the types of courses that students may choose and do not exhaust the possibilities. The best choices for each student will depend on each student’s specific career goals and should be discussed with the degree director.

Quantitative Courses
INTS 4051  Statistical Methods II
INTS 4052  Statistical Methods III
INTS 4057  Statistics for International Affairs
INTS 4333  International Project Design and Monitoring
INTS 4345  The Art of Forecasting
INTS 4575  Professional Communications
INTS 4583  Systems Thinking for Social Scientists
INTS 4633  Int'l Project Evaluation

Management and Communications Courses
INTS 4342  Project Management
INTS 4391  Financial Management and Fundraising of Non-Profits
INTS 4394  Non-Profit Management Issues & Techniques
INTS 4555  Professional Communications
INTS 4557  Cross-Cultural Communications

Issue-Oriented Courses
INTS 4423  Introduction to Epidemiology
INTS 4483  Practical Applications in Global Health
INTS 4735  Defense and Security Methods
INTS 4736  Strategic Intelligence Data Collection and Analysis
INTS 4739  Defense and Security Quantitative Analysis
INTS 4954  Human Rights Research and Design

Qualitative and Field Methods
INTS 4010  Epistemology
Elective requirements (seven courses):  28
Remaining coursework to total 72 hrs.
Total Credits 72

1. Students must complete INTS 4050 Statistical Methods I (with a grade of C- or better) before they are eligible to register for INTS 4051 Statistical Methods II. Students will receive elective credit for completing INTS 4050 Statistical Methods I.

2. INTS 4052 Statistical Methods III requires successful completion (i.e. grade of C- or better) of either INTS 4051 Statistical Methods II or INTS 4057 Statistics for International Affairs as a pre-requisite.

3. Students may take INTS 4057 Statistics for International Affairs (which combines Stats I and Stats II) instead of INTS 4051 Statistical Methods II, if they have a strong quantitative background and a minimum quantitative GRE score of 148 coming into the program. This is a fast-paced course. Students with a lower quantitative GRE score may not take this course without permission of the instructor.

Minimum number of credits required for degree: 72 hrs.

Non-coursework Requirements
- Foreign Language Proficiency: Optional, but strongly recommended
- Internship: Optional, but strongly recommended (registered as INTS 4981 Internship 0-4 credits)
- Thesis (0-8 credits) or Substantial Research Paper (0-4 credits): Optional

Minimum number of credits required for certificate: 28

Non-coursework Requirements

- All GHA candidates must conduct a single, 150-hour health-related practical experience or a suitable alternative (see below). This experience must take place during the student's course of study and the work must be carried out off-campus. As an alternative to a traditional internship, this requirement could be fulfilled through current employment, an RPCV local internship, independent research (as long as it has an off-campus field component), or work on a GHA service-based research project. To qualify as health-related, a substantive component of the internship/practicum should focus on health issues. If this condition is not met within the context of the internship/practicum, the student may instead submit an additional, separate report on the health implications of their internship/practicum to the certificate director in order to fulfill the requirement. See the GHA Director for guidelines. It is possible for students to fulfill both a degree and certificate requirement with one internship/practicum.

Students are encouraged but not required to base their internship on their required proposal for INTS 4367 Global Health Affairs, and to prepare a thesis, significant research paper, or independent study based on one of their internships or other self-driven or faculty-driven research.

Minimum number of credits required for certificate: 28

Non-coursework Requirements

- An internship, focused on international humanitarian aid, (150 hours) with an organization, whose core work includes international humanitarian assistance or humanitarian policy/advocacy, is required for the Humanitarian Assistance Certificate. These are usually completed by students in the summer between the first and second years of the MA program. Students arrange their own internship placements but should consult with the HA program director for ideas, contacts, and must obtain approval from the HA Program Director prior to starting the internship. Internships must also be approved by the JKSIS Office of Career and Professional Development before the internship starts.

Total Credits 24

Courses

INTS 4010 Epistemology (4 Credits)
An introductory course covering philosophy and history of science, epistemology, causality, and the logic of inquiry as related to international studies. The relation between theory and practical politics is explored, and differences between empirical and normative theory are examined in the context of foundational principles of politics and social science.

INTS 4011 Comparative Genocide (4 Credits)
This course examines the historical origins, patterns, and legacies of contemporary genocides around the world. We begin with the UN Convention on the Prevention and Punishment of the Crime of Genocide in 1948, which legally codified the definition of genocide and compelled ratifying parties to prevent its reoccurrence. Yet as we’ll see, genocide has instead reoccurred with alarming frequency. We will discuss the definitional and analytical challenges facing this subject, as well as academic and policy debates regarding how to define and prevent genocide. We will also explore different approaches to seeking justice and reconciliation in the aftermath. To do so, this class will ground theoretical debates in empirical case studies.

INTS 4029 International Business: Strategy and Practice (4 Credits)
This course focuses on applied issues in international business. Students will learn to think strategically about international business issues, and will in turn be able to apply that thinking to best practices. The following subject areas will be covered: country selection, entry mode theory, exporting, born-global businesses, organizational structures internationally, negotiation, consumption, culture, and demand. Other potential topics include global supply chain management/sourcing, country of origin effects, etc.
INTS 4031 Conflict and Security in Cyberspace (4 Credits)
This course is for Korbel in DC program participants only. Cyber conflict is a new and complicated strategic problem that will engage the international community at many different levels. The cyber environment challenges traditional strategic thinking, and work on an adequate policy framework to assess and manage cyber conflict is at an early stage. Many traditional security concepts will need to be adjusted for the cyber environment through review and discussion. This class will look at both the national and international dimensions of cyber conflict in the larger international security context.

INTS 4033 Natural Resources and Armed Conflicts Under International Law (4 Credits)
The course will offer a description and an assessment of how international law regulates the relationship between natural resources and armed conflicts. Attention will be given to principles and rules regulating access to natural resources in the pre-conflict phase; protecting the resources pending the conflict; regulating the exploitation of the resources during and after occupations and international administrations. The role of transnational corporations in fueling conflicts will be considered with reference to recent developments such as certification schemes, the emerging legal framework on transparency in business, and the debate on corporate responsibility for international crimes. The concept of “illegal exploitation of natural resources” will be analyzed in light of the relevant resolutions of the United Nations Security Council. Finally, possible solutions to the issue of armed conflict resources (i.e. resources fueling the initiation of conflicts) will be considered from a legal perspective.

INTS 4036 Mobilities: Critical Perspectives on Forced and Voluntary Migration (4 Credits)
The mobility of people across international borders, be they labeled as refugees or economic migrants, is becoming a crucial debate both within academia and in the public sphere. Migrants are presented as potential promoters of peace and actors of development in their country of origin, but also as a threat to the national cohesion in their country of destination. This course deals with key issues related to the field of migration studies. Building on an anthropological perspective on the predicaments and strategies of people, it will offer a critical scrutiny of existing categories such as the distinctions between forced and voluntary migration, between situations of conflict and development. At the conceptual level, the course questions the narrow framework of the nation-state to relocate migration processes in all their complexity and proposes new approaches that take into account ongoing circulation and the existence of transnational ties. At the practical level, it stresses the normality and potential of human mobility throughout history to renew the policy debates of states and international organizations.

INTS 4039 Violence, History and Memory in Twentieth Century Africa Law (4 Credits)
This course offers historical, theoretical and empirical perspectives on the impact of conflict in the modern history of Africa. Opening with a guided discussion of broad debates over models of warfare and violence that apply social, cultural, materialist and instrumental theories of causation, the course then proceeds through a series of case studies in seminars. These include colonial wars of decolonization in Algeria and Kenya, the Biafran War of secession and its repercussions in Nigeria, contrasting genocides in Burundi and Rwanda, the Red Terror in revolutionary Ethiopia, liberation struggles in Southern Africa, the ‘African World War’ in Congo, interlinked conflicts in Sierra Leone and Liberia, and other cases of contemporary significance. In each case, students will be encouraged to consider the means of violence employed, the causes and motivations of conflict, issues of gender, youth, religion, politics and ethnicity, the personal and communal impacts of experiencing and witnessing various forms of violence, and the transnational dynamics of conflict. Throughout, questions of culpability, ethics and moralities will be tackled in relation to the various approaches to transitional or retributive justice, the problem of ‘living together again’ dominated by the pressures of memory, silence, memorialization and mythico-history.

INTS 4040 Technology and War (4 Credits)
This course introduces graduate students to past, present, and future trends in warfare, focusing especially on the how technological advances affect the ways in which states engage in international conflict. The course will begin by introducing students to a number of theories that help shed light on why technological developments occur and how they affect the conduct of war. Subsequent classes will then examine important technological developments and assess how each has impacted the use of force over time. Topics range from the invention of gunpowder and the use of machine guns, to the development of nuclear weapons, the use of unmanned technologies on the battlefield, and the growing importance of the cyber domain to future inter-state conflict.

INTS 4046 Global Economic Inequality and Human Rights (4 Credits)
The main purpose of this course is to understand the conceptual and empirical issues underlying the political economy of global inequality and its relation to Human Rights. What is inequality? What are the global dimensions of inequality and what are the connections between global inequalities and human rights? What are the proximate and deeper causes of global inequality? How does the analysis of deeper causes of global inequality and poverty relate to the underlying political economy of global capitalism? In order to do this, we will look at the relationship between the world economic system, economic growth, poverty and inequalities in several different dimensions. After an initial exploration of these issues we will focus on the more recently developed social capabilities approach developed by Amartya Sen and others. In particular we will explore the limits of policies under the existing institutional arrangements and examine the need for fundamental changes in the global political economy. A special feature of the course will be an analysis and assessment of the millennium development goals and the prospects for progressive policies in the post-MDG period, e.g., the SDGs. We will also examine the problems of the advanced countries in a rigorous holistic framework that will go beyond the important work of Pickett and his collaborators on inequality.
INTS 4047 Global Sustainable Development and Human Rights (4 Credits)
The main purpose of this course is to understand critically the conceptual and empirical issues underlying the linkages between sustainable development and human rights globally. For this purpose we will need to understand both the current global political economy (GPE) and Geopolitics. The key questions are: What is sustainable development? What are the global dimensions of sustainable development? What are the linkages between sustainable development and human rights globally and within particular nation states? How does the discourse of the linkages between sustainable development and human rights relate to the underlying political economy and geopolitics of global capitalism? How does the discourse of the linkages between sustainable development and human rights relate to the underlying causes of inequality and poverty in the world? In order to do this, we will look at the relationships among sustainable development, human rights, energy, technology, geopolitics, geo-economics, economic growth, poverty and inequalities in several different dimensions. After an initial exploration of these issues we will focus critically on the more recently developed social capabilities approach developed by Amartya Sen and others within the context of domestic and global political economy. In particular we will explore the limits of policies under the existing institutional arrangements and examine the need for fundamental changes in the global political economy and within the nation states. For this purpose we will try to find the approximate but deep causal structure of GPE and the place of sustainability and human rights within this GPE. A special feature of the course will be an analysis and assessment of the climate change issues and renewable energy and critiques of technological fix.

INTS 4048 International Politics of Nuclear Weapons (4 Credits)
This MA-level course analyzes subjects central to the understanding of the role of nuclear weapons in international politics. The course addresses the origins of the atomic bomb project, early efforts to control nuclear materials, deterrence theory, nuclear strategy and force posture, and considers contemporary challenges to the global nuclear order including nuclear latency and nuclear terrorism. The goal of the course is to introduce students to the evolution of scholarship on the role of nuclear weapons in international politics, and to evaluate contemporary nuclear security issues in light of this broader context. Each class will focus on a different substantive topic, interweaving theory with history to better understand each issue area. The course will start with the initial development and use of nuclear weapons, followed by an in-depth look at the early thinking on nuclear strategy and escalation during the Cold War. These classes will cover the Manhattan Project, the bombings of Hiroshima and Nagasaki, the basics of deterrence theory, the arms race between the United States and Soviet Union, and historical cases of nuclear crises and brinkmanship (the Cuban Missile Crisis being the most well-known example). During weeks 5-7 students will explore the politics of nuclear acquisition, evaluating different explanations for why states build nuclear weapons. This section of the course will also explore the variety of ways that the international community has sought to prevent the spread of nuclear weapons, including the important role of international institutions, norms, and the nuclear disarmament movement. The final three classes are devoted to contemporary topics in nuclear politics, including the threat of nuclear terrorism, nuclear energy and dual-use issues, regional instability in Northeast and South Asia, the Iran nuclear deal, and the implication of new technologies (e.g. autonomous systems, 3D printing, precision weapons) for nuclear issues. The final class will provide the students with the opportunity to take stock of what we have learnt over the course of the quarter and to reevaluate early thinking on nuclear weapons in light of what we know now.

INTS 4049 Addressing Complex Interagency Problems (4 Credits)
This class will ask students develop the skills and addresses the challenges associated with the process by which policy recommendations are developed within the United States Government, particularly as they relate to complex multi-dimensional security problems. Students will learn about the roles played by various departments and agencies that are engaged in the policy making process, as well as how external actors impact the development of national security policy. This class will also give students the opportunity to learn about the policy making process in the United States inter-agency environment through a series of presentations from practitioners as well as hands-on experience via role-playing and the development of briefing memos, presentations and other materials. Students will learn about the history, structure and function of the interagency process, including past and current reform processes such as the Clinton Administration's Presidential Decision Directive on Managing Complex Contingency Operations (PDD-56) as well as the more recent Project on National Security Reform. Students will also hear several real-life examples of interagency policy-making from former government officials and various subject-matter experts. Students will be expected to role-play members of a mock National Security Council (NSC) team or as representatives of various US Government Departments and Agencies involved in the interagency decision-making process. Students will identify an actual national security problem and be responsible for debating and agreeing to a set of policy recommendations within the format and structure of the mock NSC. Select students may have the opportunity to present their recommendation to a current member of the National Security Council via video-teleconference. At the end of the course, students should have a fundamental understanding of the strengths and weaknesses of the current system; what constitutes good NSC products and how to produce them; and how concession and compromise, trade-offs, external public pressure, intelligence issues and budget realities all can play a role in how national security decisions are made.

INTS 4050 Statistical Methods I (4 Credits)
An introductory course featuring statistical reasoning, probability, sampling, statistical inference, nominal and ordinal measures of association, and correlation. Open only to students with no prior background in statistics.

INTS 4051 Statistical Methods II (4 Credits)
This course is a continuation of Statistical Methods I, covering the fundamentals and primary methods of statistical inference. Topics include two-sample hypothesis testing, analysis of variance, chi-square goodness-of-fit tests, chi-square contingency analysis, correlation, simple regression and multiple regression. Emphasis will be on problem solving, computer applications (using Stata) and interpretation of results. This course is offered in the Winter quarter only. Prerequisites: INTS 4050.

INTS 4052 Statistical Methods III (4 Credits)
This course will serve as continuation of Statistical Methods II. This will be an applied, non-calculus based course on statistical techniques used in nonparametric and multivariate analysis. Emphasis will be on applications and data analysis using the statistical software package SAS. Prerequisite: INTS 4051 or INTS 4057.
INTS 4056 Information Management in Humanitarian Crises (4 Credits)
Accurate, reliable and timely data collection, processing, analysis and dissemination (four steps in information management) are critical for the effective implementation of both development and humanitarian programs. In humanitarian responses, there are numerous challenges to managing information in what may be a rapidly evolving situation. This course introduces students to the theory of information management and its application in the humanitarian context.

INTS 4057 Statistics for International Affairs (4 Credits)
This is a fast-paced course which serves as an introduction to basic and intermediate concepts in statistics and probability, as well as the primary methods of statistical inference. Topics include data collection, presenting data in tables and charts, summarizing and describing numerical data, basic probability, discrete probability distributions, normal distribution, sampling distributions, confidence interval estimation, single-sample and two-sample hypothesis testing, analysis of variance, chi-square goodness-of-fit tests, chi-square contingency analysis, simple regression and multiple regression. Emphasis will be on statistical reasoning, problem solving, computer applications (using Stata), and interpretation of results. This course is offered in the Fall quarter only. Prerequisite: Strong quantitative background and a minimum quantitative GRE score of 148 or permission of the instructor.

INTS 4058 Applied Time-Series Analysis (4 Credits)
This course serves as an introduction to time-series analysis and panel data analysis techniques. Topics include moving averages, exponential smoothing, time-series decomposition, model identification and estimation, Box-Jenkins method, ARMA and ARIMA models and VAR analysis. Panel data analysis includes fixed effects and random effects models. Emphasis will be on computer applications (using Stata) and interpretation of results. This course is offered in the Winter quarter only (and occasionally in the Spring quarter instead of Winter). Prerequisites: INTS 4051 or INTS 4057.

INTS 4087 Tch Conflict & Nuclear War (0 Credits)
This course is offered in the Winter quarter only. Prerequisites: INTS 4051 or INTS 4057. This course will build a political ecology of policy domains central to improving food security and nutrition outcomes in both global north and south. We will examine policy issues and constituencies, institutional approaches, theoretical perspectives, and empirical analyses. You will have opportunities to engage with institutional approaches through structured exercises, including a mid-term graded exercise. You will also have an opportunity to produce an independent project that will include your own policy recommendations.

INTS 4110 Food and Nutrition Security for Sustainable Development (4 Credits)
This policy-oriented course will examine structures and processes that result in varying food security outcomes across space and time. Food security outcomes reflect interactions among political, economic, socio-cultural, and physical environmental systems. These systems, which are both dynamic and permeable, give rise to particular forms and patterns of food production, distribution, and consumption, and to more or less environmentally-sustainable uses of the natural resources critical to food and nutrition security. Ultimately, food security is realized when all people within a population consume sufficient nutrients to live active and healthy lives. This normative focus on human health and well-being, as the metric by which food security outcomes will be measured, is critical to the framing of this course. Political, economic, and social institutions–positioned at scales encompassing global, national, “local” (micro-regional, community), and household–are simultaneously charged with producing food in particular physical environments and/or making food available and accessible to their populations, and with protecting environmental resources and public health in ways that contribute to nutritional components of human development. The term “political ecology” has been used to describe an analytical framework that explicitly focuses on the interactions among the structures of political economy and those of physical/biological ecologies (including human), together with the socio-cultural contexts that influence structural impacts and help to explain outcomes. This framework incorporates both an explicit navigation among scales (of power and of analysis) and a long-term perspective. Cumulatively, the readings and exercises of this course will build a political ecology of policy domains central to improving food security and nutrition outcomes in both global north and south. We will examine policy issues and constituencies, institutional approaches, theoretical perspectives, and empirical analyses. You will have opportunities to engage with institutional approaches through structured exercises, including a mid-term graded exercise. You will also have an opportunity to produce an independent project that will include your own policy recommendations.

INTS 4127 The Rise and Fall of Great Powers (4 Credits)
This new graduate course provides an in-depth look at often ignored areas of history. Learning about the rise and fall of the Roman Empire, British Empire, Russian Empire, Soviet Empire and Chinese Empire provides an excellent backdrop to understanding important historical lessons that are often downplayed in the early 21st century. The course provides a series of good works that can help students better understand the present and future developments of our century.

INTS 4134 Forever Emerging? The Developmental Trajectory of Modern Brazil (4 Credits)
Brazil has the largest population, economy, and industrial basis in Latin America. It is the seventh largest economy in the world, fifth largest country in land area, outranking the continental United States. Like the US, Brazilians are a mix of indigenous, European, and African peoples, along with subsequent inflows of Asian and Middle Eastern immigration, though race, ethnicity, and class have been interpreted with distinct cleavages and hierarchies. We approach our understanding of Brazil through the country’s former capital, Rio de Janeiro, a city of numerous complexities, wonders, contradictions, challenges, and potential. By looking at the historical evolution of this fascinating city, the course will offer students an opportunity to study the evolution of Brazil, from the colonial period to the present day, when the country has increasingly been seen as a regional economic and diplomatic powerhouse, as well as a globally emergent player. By focusing on the historical trajectory of Rio de Janeiro, in an in-depth reflection structured along textual, visual, and in-sight materials and experiences, students are invited to reflect about matters of change and continuity as well as how national socio-political trends are reflected in local contexts, thus also learning to reflect about the interpretive relationship between the micro-macro levels of analysis. Historical political and economic narratives, contemporary analysis of the country’s place in the world, films, music, architecture, guided visits to neighborhoods and local cultural institutions will be our explanatory prisms into the Carioca (Rio-based) spirit and cultural memories as expressions of national trends and trajectories. Through lectures, seminar discussions, and field studies, we explore Rio’s renowned and sometimes notorious informality, from informal housing (favelas) to language, social organization and economic activities. We also explore themes such as tourism, the history of housing policies, and the transformation of local culture into ‘national’ and ‘export’ cultures. Moreover, by looking at the urban transformations over the last 200 years, we explore Brazil’s drive to become an industrial power, as well as the new social conflicts produced by these efforts. Finally, we investigate Brazil’s contemporary culture, politics, sports, achievements, promises and continued challenges as it proceeds as a so-called emergent nation into the 21st century, while still struggling with its colonial past.
INTS 4141 Domestic/Int'l Conseq:Drug War (4 Credits)
Domestic and international policy and the impact of the drug war on both.

INTS 4142 After the Fall: Russia & China (4 Credits)
Provides analysis of the historical rise of Russia and China, and their complex inter-relationship and interaction with the United States and the world.

INTS 4147 American Govt & Pol. Making (4 Credits)
Examines governmental fragmentation affects and policies and examines how policy issues engage different segments of the government.

INTS 4151 History, Culture and Conflict (4 Credits)
An introductory course examining how and why historians develop diverse interpretations of events and periods. Methods of analyzing evidence, selecting research material, and supporting arguments are discussed and evaluated in assessments of selected historical cases. Methodological ties between the historiographic approach and social sciences including anthropology and psychology, as well as the study of gender are also drawn.

INTS 4200 Water and Sanitation in the Global South (4 Credits)
The current water governance systems are intertwined with politics and power and prioritize some groups and water uses over others. Worldwide, there are 750 million people who lack basic water access and 2.5 billion who lack sanitation access. Water is life. It sustains ecosystems, it fuels energy and industry, it enables livelihoods, it is essential for food security, health and nutrition, and it is central to many social and spiritual practices. Inadequate access to safe drinking water, sanitation facilities and hygiene practices deepens income poverty, weakens health, undermines education and exacerbates gender inequality. This interdisciplinary course will explore water and sanitation issues in the Global South. Political ecology and the hydro-social cycle will be introduced as concepts for moving beyond technical water and sanitation planning to consider how water is related to broader issues of power, politics, culture, and society. We will learn about practical and applied approaches for planning water, sanitation and hygiene (WASH) programs, discuss interactions between society and water, and critically examine constructions of water scarcity. In this process we will move between scales at the community, river basin, regional and global level. Several special topics will be explored including gender and water, multiple use water services, water privatization, water and culture, WASH technologies, sustainability, health and behavior change. This course will focus on the water needs of communities in the Global South from a perspective of social justice.

INTS 4210 Multinational Corporations (4 Credits)
The emergence of sweeping new legal rights for MNCs in relation to their foreign direct investment and cross-border trading activities under the avalanche of bilateral investment treaties negotiated in the last few decades and under multilateral conventions such as NAFTA represent what many have termed "revolutionary" changes in the nature of state sovereignty as it relates to state-investor relations. That expansion of investor/MNC rights in relation to state sovereignty has thus seemingly reached a point calling for re-examination of the nature and appropriate scope of MNC rights, as well as the nature of MNE accountability and responsibilities which are the flip side of such rights.

INTS 4215 Gender and Humanitarian Assistance (4 Credits)
In recent decades, the humanitarian system has grappled with the concept of gender and how to operationalize it in the context of humanitarian preparedness and response. Through readings, class discussions, guest speakers and assignments, students will have the opportunity to gain a better understanding of how the humanitarian system's approach is evolving in theory and practice.

INTS 4220 Political Economy of Energy & Sustainable Development (4 Credits)
The main purpose of this course is to understand critically the conceptual and empirical issues underlying the linkages between energy and sustainable development within the current global political economy(GPE) and Geopolitics. What is sustainable development? What are the global dimensions of sustainable development? What are the linkages between energy and sustainable development? How does the discourse of the linkages between energy and sustainable development relate to the underlying political economy and geopolitics of global capitalism? How does the discourse of the linkages between energy and sustainable development relate to the underlying causes of inequality and poverty in the world? In order to do this, we will look at the relationships among energy, geopolitics, geoeconomics, economic growth, poverty and inequalities in several different dimensions.

INTS 4221 India in the Global Economy (4 Credits)
The main purpose of this course is to understand critically the conceptual and empirical issues underlying the linkages between Indian economic development and the world economy within the current global political economy(GPE). What is sustainable development? What are the global dimensions of sustainable development? What are the linkages between Indian strategy for development and sustainable development? Is the Indian strategy for development sustainable? How does the mainstream Indian development discourse relate to the underlying political economy of global capitalism? What are the deep underlying causes of inequality and poverty in India? In order to do this, we will look at the relationship between India's development strategy, energy, economic growth, poverty and inequalities in several different dimensions.

INTS 4222 Slavery and Genocide: A Comparative Analysis (4 Credits)
This course attempts to examine the similarities and differences between slavery and genocide by using comparative techniques. Since both slavery and genocide studies have definitions problems we will work toward clarity since politics has played a major role in naming events. Beyond definitions, we need to take a close look at the political economy of both slavery and genocide.
INTS 4223 Global Dynamics and Local Threats in Agricultural Development (4 Credits)

Many low- and middle-income countries in which agriculture plays a key role for development are characterized by high levels of socio-economic inequality, a mixed human rights record and a dominance of transnational corporate power in domestic agricultural export markets. At the same time, these countries face processes of environmental degradation through anthropogenic and natural drivers of change that affect the availability of ecosystem services and thus shape agricultural development and human wellbeing. This course offers an in-depth study of the political, socio-economic and social-ecological conditions for sustainable agricultural development in low- and middle-income countries. We explore the political economy of agricultural production and trade in countries that depend to a significant extent on the export of agricultural commodities as a source of foreign revenue. We examine the design and implementation of global policy frameworks, international agreements, and national strategies for agricultural production and trade, with a particular focus for the governance of natural resource use. Our goal is to assess the relevance and effectiveness of current governance structures for agriculture to respond to local-, regional- and global-scale environmental changes and socio-economic challenges in ways that address current and future human needs. Through case studies from selected agricultural sub-sectors and diverse countries from across Asia, Africa and Latin America, we investigate local strategies for natural resource use in the context of poverty, inequality, and environmental change. The course provides a comprehensive coverage of the political economy of agricultural development and an introduction to social-ecological systems analysis as a theoretical framework for interdisciplinary research in the field of sustainable development.

INTS 4224 Trade Unions in the Global Economy (4 Credits)

Trade unions are major influences in the political economy of most nations, even as they face apathetic or hostile governments and increasingly powerful multinational corporations. As globalization has created common employers across national boundaries, trade unions have struggled to establish institutions and mechanisms to defend workers and build global power. The course will familiarize students with the underappreciated role of trade unions in the global economy. Having a grasp of the subject matter is essential to anyone working in the international arena for governments, corporations, non-governmental organizations and trade unions.

INTS 4225 Civic Strategies for Fighting Extremism (4 Credits)

This course will teach students hands-on community organizing, technology and intervention strategies for action to help combat extremism. The students will spend time working directly with community and government agencies on security strategies, identifying online risks, and learning about social media strategies for intervention. Some of the skills covered include network analysis, resource management, cognitive behavior change and political psychology, public narrative, power mapping, asset-based community development, and group facilitation.

INTS 4226 Social Entrepreneurship & Global Poverty (4 Credits)

This course provides an overview of the role of social entrepreneurs, innovative small firms, and entrepreneurial NGOs in sustainable development and poverty alleviation. Market-driven strategies are increasingly important for all organizations, in government, public, or private sectors, to encourage local solutions that are sustainable and do not require ongoing subsidy. Entrepreneurial NGOs and small firms are a great source of local innovation and adaptation, identifying potential strategies that can be scaled up through partnerships with governments, social purpose organizations, or private capital. These market-driven strategies are based on a good understanding of customers, the value provided, and how to best deliver products and services to vulnerable populations in a responsible way. Further, a strong customer and market focus ensures that all social purpose organizations (both for-profit businesses and NGOs) meet customer needs effectively and develop new products and services efficiently.

INTS 4233 Realism and International Security (4 Credits)

We focus in this course on realist understandings that relate to national security—a focus on the power wielded by states and the balance of power among them. Under anarchy (the absence of central authority), wars and “rumors” of wars are the continual expectation, whether dealing with city-states in ancient Greece, Renaissance Italy, American or European states in the 18th and 19th centuries, or interstate conflicts across the globe in the 20th and 21st centuries. It is a world aptly described by Thucydides and Sun Tzu, Machiavelli and Hobbes—not to mention, among others (and with variations in their approach), Carr, Niebuhr, Morgenthau, Waltz, Hoffmann, Gilpin, Schelling and, in our time (in no particular order), Mearsheimer, Walt, Betts, Layne, Posen, Schweller, Greco, Van Evera, Snyder, Jervis, and Nye. We also take account of critics of realism (for example, Haas, Ruggie, and Ashley)—as well as those who have made their peace with it (for example, Keohane and Wendt). The central question is what does realism offer to both theorists and policy practitioners?

INTS 4234 International Security, Diplomacy and Force (4 Credits)

The course examines the ways and means of war and peace with a focus on both multilateral and bilateral forms of diplomacy. We begin with the use of force and the modalities of peacemaking in the Greco-Roman, Indian and Chinese ancient worlds. Ending wars in the “modern” period has often resulted in new constructs to maintain peace. Thus, the Peace of Augsburg (1555) and the Peace of Westphalia (1648) that ended warfare among German states established a foundation for sovereignty as cornerstone of a new state system. When post-1789 France became a “revolutionary” power, she dramatically upset the status quo. After the defeat of Napoleon in 1815, conservative powers gathered in the Congress of Vienna to restore a balance of power. The arrangements they established (dubbed the “Concert of Europe”) successfully avoided general war for 99 years. World War I (1914-18) was followed by multilateral diplomacy at Versailles and formation of the League of Nations and agreement to maintain international security through application of international law. Failure of this design in the interwar period led to another attempt after World War II (1939-45) at Yalta, Potsdam, Dumbarton Oaks, and San Francisco to establish and maintain peace not just by international law (collective security), but also through alliances (collective defense)—both under United Nations auspices. In the seven decades since, both bilateral and multilateral diplomacy have been used to restore or maintain international peace and security, also engaging in peacekeeping and arms control efforts in relation to weapons of mass destruction, confidence- and security-building measures (CSBM), space and other security-related matters on present-day national and international security agendas.
INTS 4235 Realism and National Security (4 Credits)

We focus in this course on realist understandings that relate to national security—a focus on the power wielded by states and the balance of power among them. Under anarchy (the absence of central authority), wars and “rumors” of wars are the continual expectation, whether dealing with city-states in ancient Greece, Renaissance Italy, American or European states in the 18th and 19th centuries, or interstate conflicts across the globe in the 20th and 21st centuries. It is a world aptly described by Thucydides and Sun Tzu, Machiavelli and Hobbes—not to mention, among others (and with variations in their approach), Carr, Niebuhr, Morgenthau, Waltz, Hoffmann, Gilpin, Schelling and, in our time (in no particular order), Mearsheimer, Walt, Betts, Layne, Posen, Schewler, Greico, VanEvera, Snyder, Jervis, and Nye. We also take account of critics of realism (for example, Haas, Ruggie, and Ashley)—as well as those who have made their peace with it (for example, Keohane and Wendt). The central question is what does realism offer to both theorists and policy practitioners?

INTS 4250 Global Dynamics & Local Threats in Agricultural Development (4 Credits)

Many low- and middle-income countries in which agriculture plays a key role for development are characterized by high levels of socio-economic inequality, a mixed human rights record and a dominance of transnational corporate power in domestic agricultural export markets. At the same time, these countries face processes of environmental degradation through anthropogenic and natural drivers of change that affect the availability of ecosystem services and thus shape agricultural development and human wellbeing. This course offers an in-depth study of the political, socio-economic and social-ecological conditions for sustainable agricultural development in low- and middle-income countries. We explore the political economy of agricultural production and trade in countries that depend to a significant extent on the export of agricultural commodities as a source of foreign revenue. We examine the design and implementation of global policy frameworks, international agreements, and national strategies for agricultural production and trade, with a particular focus for the governance of natural resource use. Our goal is to assess the relevance and effectiveness of current governance structures for agriculture to respond to local-, regional- and global-scale environmental changes and socio-economic challenges in ways that address current and future human needs. Through case studies from selected agricultural sub-sectors and diverse countries from across Asia, Africa and Latin America, we investigate local strategies for natural resource use in the context of poverty, inequality, and environmental change. The course provides a comprehensive coverage of the political economy of agricultural development and an introduction to social-ecological systems analysis as a theoretical framework for interdisciplinary research in the field of sustainable development.

INTS 4270 Gender, Security, and Human Rights (4 Credits)

This course examines the gendered dimensions of security and human rights, with a particular focus on periods of violence and insecurity. Gender equality has been at the heart of human rights and development efforts over the past half-century. Governments and multinational organizations have created legal and normative instruments to address the ongoing marginalization of women and girls around the world, such as the 1979 Convention on the Elimination of Discrimination Against Women (CEDAW) and the 1995 Beijing Platform of Action. More recently, these same actors have turned their attention towards the importance of “gendering” discussions of international security. For instance, UNSCR 1325, passed in 2000, is a landmark legal framework that aims to secure women's inclusion in post-war peace processes. Despite these formal achievements, gender-based violations and insecurity continue persist around the globe. Moreover, there remain profound gaps between legal provisions aiming to promote women’s equality and the lived experience of women on the ground. Drawing from critical feminist analyses, this class will introduce you to the concepts of gendered rights and security, challenge you to think about intersectionality as a lens through which to understand “rights,” and increase your understanding of the contemporary human rights and security crises unfolding around the world today.

INTS 4280 Contemporary Peace Operations: Disarmament, Demobilization, & Reintegration (4 Credits)

Disarming, demobilizing and reintegration (DDR) of former fighters in the aftermath of conflict is as old as war itself. Tens of thousands of soldiers were voluntarily DDR-ed during the Roman-Etruscan wars in the 3rd century BC and virtually every conflict since. In fact, no fewer than 60 DDR initiatives have taken place globally since the UN and major bi-lateral engagement the late 1980s. While most were launched in the wake of international or civil wars as part of an internationally mandated peace support operation, shifting conflict dynamics and emergent caseloads over the last decade continue to alter the landscape in which DDR operations are implemented. Whether occurring in a humanitarian crisis, as an outcome of a peace accord or during active conflict, DDR represents a voluntary civilian led non-violent policy option for peacebuilding and human security for the international community. Often applied in a post conflict environment, the global caseload in 2014 was estimated at approximately 250,000 DDR candidates spread across more than 20 planned or ongoing DDR operations. Presently, DDR targets persons in combatant and non-combatant roles from statutory armies and non-state armed groups. It is not uncommon for DDR to serve as tool for security sector reform and transformation efforts aimed at downsizing and legitimizing armed forces under civilian control. In doing so DDR is a unique policy tool that enhances the resilience of local, national and regional actors, by addressing various peace consolidation issues spanning the civilian and security sectors. The course will utilize illustrative global case studies to examine 3 distinct ‘generations’ of DDR since the 1980s. Tracking the evolution of DDR in contemporary peace operations, the course will demonstrate the critical role DDR continues to play in peacebuilding and recovery in settings as diverse as the Balkans and Philippines where DDR is used to facilitate the ‘normalization of relations’, to the Sahel, the Horn of Africa, South America and the Middle East where DDR addresses mercenaries and terrorism. DDR’s current role in stabilization efforts in the Ukraine, Afghanistan and The Sudan will be juxtaposed with political stability and development issues in Central America and Southern Africa where gang violence and veteran’s concerns are related to DDR outcomes. The first generation of DDR occurred in the wake of the Cold War. Typified by verifiable caseloads under unified command and control, these occurred regionally in Latin America and Southern Africa. In the mid-2000s, 2nd Generation policy approach emerged in response to the perception by the international community that DDR, and reintegration specifically, was not achieving intended development aims. This led to a broad range of initiatives targeting communities as a means to facilitate enabling conditions for DDR. Presently, DDR is undergoing a 3rd shift. The monetization of DDR is creating a cottage industry for former fighters traveling across international borders rejoining armed groups as mercenaries. At the same time peace operations are receiving DDR mandates in areas where conflict is ongoing and insurgent groups slated for DDR are associated with ‘terrorist’ organizations complicating the legal and political environment.
INTS 4290 Gender, Environment, and Development (4 Credits)
This course is concerned with how and why gender matters in producing environmental, economic, and social outcomes of planned and unplanned development. It is also concerned with gender as a human rights issue and the equity and ethical dimensions of environmental and related economic planning. Beyond these practical implications of gendered environments, the course will engage theoretical and ideological underpinnings for the gendered structures of environmental control and management encountered in a wide range of physical environments.

INTS 4301 Introduction to Political Theory (4 Credits)
Political theory analyzes and interprets the foundations of political life and evaluates its principles, concepts and institutions. It is fundamentally concerned with the normative political relationships among human beings that revolve around the organization and basis of government. This course provides an introduction to Western political theory through key texts and thinkers that are essential reference points in the social science literature. The focus will be on the Enlightenment tradition and the approach will be geared toward understanding how the seminal texts and thinkers of this period have shape--and continue to shape--our understanding of political ideas and norms. This course will also have a pragmatic component, where the books and ideas under consideration will be applied to contemporary international debates and issues. Please note that this course is geared toward students without a strong background in political theory. No previous knowledge is required or assumed. All that is needed is an open mind and willingness to work hard.

INTS 4303 Econometrics for Decision Making I (4 Credits)
The first course in a two course sequence in Applied Econometrics. Introduces basic probabilistic techniques for the quantitative analysis of economic and social data and their application to international public policy decision making. Prepares students to: compile and analyze data sets; build and test regression models; interpret and critically evaluate applied econometric studies; and conduct their own applied econometric research using computerized statistical packages. Prerequisite: INTS 4051 or INTS 4057.

INTS 4310 International Trade (4 Credits)
An intermediate course analyzing causes and consequences of international trade. Classical, neo-classical, and product- cycle models included. Topics include international specification, terms of trade of developed and less- developed countries, distribution of gains from trade, instruments and uses of commercial policy, nominal and effective protection, and theory of customs unions and economic integration. Prerequisite: grade of B- or better in undergraduate course in Introductory Microeconomics, Principles of Economics (combining Introductory Micro and Macroeconomics), or International Economics. Students who have not completed the undergraduate prerequisites for INTS 4310 should first complete INTS 4536.

INTS 4318 Applied Research in International Economics (4 Credits)
The purpose of this course is to critically review the literature in political economy and introduce students to some recent empirical work to analyze data and test relevant theories and hypotheses in political economy, IPE and related social science disciplines. The course provides students with the tools necessary to conduct and critically evaluate empirical analysis in these fields. Two data sets are handed out during the course and students analyze them. The final paper deals with a substantive empirical issue.

INTS 4319 Governing the Global Economy: The Effectiveness of Multilateral Economic Institutions (4 Credits)
Multilateral Economic Institutions are the primary mechanisms by which the global economy is governed when it is governed at all. This course examines the institutions and theoretical foundations that are at the center of this system of global governance by studying their history, sources of authority, and ideological underpinnings. Simultaneously, each multilateral economic institution/regime is examined from an empirical perspective in order to determine the impact of these institutions and whether or not they are accomplishing their respective tasks in the governance of the global economy. The course is both theoretical and empirical and there is a bias to the course - it is that the MEIs are among the most written about and least understood institutions in the global economy. In addition, the course also examines the practical reality of multilateral economic negotiations through an examination of recent attempts to govern segments of the global economy; including international trade, finance, and climate.

INTS 4320 Intl Monetary Relations (4 Credits)
An intermediate course examining history of the monetary system, foreign exchange rates, balance of payments analysis, and adjustment processes under different exchange systems, current status problems, and prospects for reform. Prerequisite: grade of B- or better in undergraduate course in Introductory Macroeconomics, Principles of Economics (combining Introductory Micro and Macroeconomics), or International Economics. Students who have not completed the undergraduate prerequisites for 4320 should first complete INTS 4536.

INTS 4324 International Political Economy (4 Credits)
The course examines 3 contrasting visions of international political economy: economic security, trade and finance.

INTS 4327 Advanced Issues in International Studies (4 Credits)
The purpose of this course is to train students in advanced research in the fields of International Relations and Comparative Politics. The course achieves these ends through an investigation into a particular empirical theme (of the professor’s choosing in any given year). While due emphasis is placed on the major findings of the specified literature, as much or more attention is given to the research design, methods and evidence of the selected literature. Students will learn what constitutes a falsifiable hypothesis and what the alternatives to falsifiability are, examine various scholars’ methods of operationalization and measurement, consider the merits of treating rival explanations to one’s own, and judge the veracity of findings by these and other criteria. In addition, students will apply such knowledge gained by writing their own original research paper during the quarter. The course aims to assist primarily PhD candidates in their abilities to carry out research, to assess the quality of other scholars’ research, to teach in the fields of International Relations and Comparative Politics, and to excel in their comprehensive exams. Please note that this course is offered only once every other year. Thus PhD candidates must enroll in the first year it is available in their course program.
INTS 4330 International Business Transactions (4 Credits)

INTS 4332 Data Analysis and Development (4 Credits)

INTS 4333 International Project Design and Monitoring (4 Credits)

It can be beneficial for graduate students planning careers in multilateral and bilateral development agencies, non-profit organizations, private-sector companies, and professional services organizations to have an understanding of how to develop a project proposal, implement it, and evaluate its results. These are useful skills for entering or reentering employment with these organizations. The Josef Korbel School of International Studies currently offers a trilogy of courses in international project cycle management—international project design and monitoring, project management, and international project evaluation. The three courses are delivered in sequence during the academic year in conformance with the project cycle, but they can be taken out of sequence without prerequisite or need to take them all. Each course uses monitoring and evaluation methods and means to connect the design, management, and evaluation of a project. Students may have been exposed some of these methods in courses covering quantitative and qualitative techniques and field research methods. Each course also shares in common the development teams and managers of those teams to produce the key deliverables at three key stages of the international project cycle. The purpose of the International Project Design and Monitoring course (formerly International Project Analysis) is to provide students with an appreciation for the myriad of considerations in designing and monitoring an international development intervention and exposure to conventional and unconventional methods and means for doing so. The international project cycle begins with identifying an intervention to address a development impediment or opportunity faced by a target group. A development intervention typically falls into a sector or thematic area, such as education and health care, and it is generally directed towards physical, human, institutional/legal capacity building, or a combination of them. Projects can be singular in scope, such as building a new primary school, or broadly scoped to mitigate causes of poverty, such as the Millennium Development Villages project, but they all should be a unique endeavor with a beginning and an end. Much of the physical development today is supported by the private sector or state sponsored organizations, with less support through traditional foreign aid unless it is a major reconstruction effort like in Afghanistan. In this course, students will learn that a project proposal should be designed in concert with the beneficiaries to be relevant, feasible, and supported by their needs, but also recognizing their absorption capacities. Such a project proposal should ideally have gone through a systematic analysis of factors that will affect its design and management of risk, including economic, financial, environmental, technical, and social factors, as well as special safeguard areas. Students will also learn about the continued need for project proposals to define the underlying theory of change, assumptions, and logical framework for linking inputs, activities, outputs, outcomes and ultimately desired impacts. Establishing a performance management plan for the project that defines, among other things, the metrics and milestones for monitoring the process is an essential component of most project proposals. However, students will learn that adherence to plans is challenging under complex development conditions.

INTS 4339 Microfinance, Financial Inclusion and Inclusive Markets (4 Credits)

This course provides an overview of why microfinance and financial inclusion are key strategies and platforms to build sustainable development and inclusive markets and how the financial inclusion ecosystem supports development outcomes through direct impact of microfinance institutions (MFIs) and systems change. Microfinance and financial inclusion are important ways to improve economic choices and household resilience among the poor, providing access to credit, safe savings options, payment systems, and even micro-insurance to help the poor manage risk and financial uncertainty. They are also important tools to create local, inclusive markets and economic opportunity by facilitating micro and small business development and access to development assets like clean energy, clean water, agricultural inputs, education, and healthcare. We will focus on lessons and insights from microfinance’s evolution into financial inclusion, how digital finance and other technology innovations are creating new opportunities and risks in development, and the shared characteristics of highly effective microfinance institutions and NGOs that integrate microfinance into their development strategies.

INTS 4341 Illicit Markets in the Americas (4 Credits)

This course applies the understandings of International Political Economy (IPE) to the study of illicit market activity in the western hemisphere. While sociologists, criminologists, legal scholars and law enforcement agencies have all contributed substantially to this area of study, IPE has only recently been applied. So what can this approach contribute? Through IPE, we can place illicit market activity within the larger structure of trade and monetary relations, the rise of the informal sector and the existence of economic and other inequalities in particular regions. We can consider the nature and impact of North-South relations and the process of structural adjustments as advised by international financial institutions. Further, we can evaluate the overall function and effectiveness of law enforcement, governing institutions and international organizations in controlling illicit market activity. Finally, through IPE, we can consider the ideational context of participation in illicit market activity.
INTS 4342 Project Management (4 Credits)
It can be beneficial for graduate students planning careers in multilateral and bilateral development agencies, non-profit organizations, private-sector companies, and professional services organizations to have an understanding of how to develop a project proposal, implement it, and evaluate its results. These are useful skills for entering or reentering employment with these organizations. The Josef Korbel School of International Studies currently offers a trilogy of courses in international project cycle management—international project design and monitoring, project management, and international project evaluation. The three courses are delivered in sequence during the academic year in conformance with the project cycle, but they can be taken out of sequence without prerequisite or need to take them all. Each course uses monitoring and evaluation methods and means to connect the design, management, and evaluation of a project. Students may have been exposed some of these methods in courses covering quantitative and qualitative techniques and field research methods. Each course also shares in common the development teams and managers of those teams to produce the key deliverables at three key stages of the international project cycle. The purpose of the Project Management course is to expose students to right- and left-brain approaches to managing the knowledge areas of project management, such as time and cost management, as well as approaches used by project managers and their teams. This course concentrates on the implementation and completion/transition phases of the international project cycle. The implementation phase commences after stakeholders approve a project proposal—translated into a project charter—from which a detailed project management plan is developed to execute the project. Project managers rely, to a large extent, on internationally recognized management approaches to move workflow smoothly among project phases, allocate project tasks effectively, efficiency track project milestones, and make adjustment for inevitable and often uncontrollable project delays and cost overruns. The completion/transition phase ends the project and transfers control from the project team to the operational team, preferably through a defined exit strategy. The course covers the knowledge and skills needed to meet the educational requirements for certification by the Project Management Institute (PMI). PMI serves practitioners and organizations by providing standards that describe leading practices, globally recognized credentials that certify project management expertise, and resources for professional development, networking and community. PMI credentials certify your knowledge and experience in project management so you can be more confident at work and more competitive in the job market. Several other organizations will be mentioned that also provide certification, but all share in common required education hours, years of experience, and passing a professional examination. Students in the course will exhibit their new knowledge and skills by joining small teams to prepare a professional project management plan for the selected development project charter and through individual examination.

INTS 4345 The Art of Forecasting (4 Credits)
Course defines forecasting techniques and expert systems. Will cover Delphi techniques, expert systems, modeling and economic forecasting.

INTS 4349 Comparative Public Policy and Finance (4 Credits)
Course aims to provide in-depth treatment of the question "why do size, form, financing, and distributive outcomes of government differ so greatly across nations?.

INTS 4350 Economic Development (4 Credits)
This course combines an introduction to the theories and key issues in economic development with a rigorous analysis of empirical evidence from low- and middle-income countries in Asia, Africa, and Latin America. The course enables participants to develop an in-depth understanding of diverse local, national, and regional patterns of economic development, and to critically assess the design and potential social and economic consequences of global policy frameworks and national economic development strategies. The course starts with providing an outline of global trends in poverty, inequality and growth, including a discussion of key concepts and ways of measuring economic development. Part I focuses on classical, neoclassical, and institutional theories of economic development. Linkages between the intellectual basis of different theories and major political currents and ideologies, and the associated policy design, are assessed. In part II, core themes in economic development are explored, including agriculture, trade, industrialization, labor, and the environment. The analysis of diverse country studies illuminates how historically specific social, political, and institutional conditions shape development outcomes. In part III, we examine the design and implementation of economic development policy through an analysis of international aid agendas and institutional modalities of ODA, with a particular focus on emerging donors. We investigate the strength and weaknesses of national economic development policies through an in-depth study of selected country case studies. Please note that a mastering of quantitative economics is not a requirement for this course.

INTS 4355 Finance and Development (4 Credits)
An advanced course which examines the relationship between financial system organization and economic performance. The political economy of financial innovation, liberalization and globalization, state-finance-industry relations, micro-lending, stock markets and regional financing are discussed with reference to Latin America, Asia and African countries.

INTS 4362 Gender and Health (4 Credits)
INTS 4363 Discrimination, Minorities, and Rights of Indigenous People (4 Credits)
INTS 4364 Global Poverty and Human Rights (4 Credits)
This course explores the many dimensions of global poverty and human rights and well-being of people around the world. Three particular areas are emphasized and explored in detail. The first is the exact dimensions and extent of globalization. The second is the exact nature of another complex thought called poverty. The third area explores the connections between globalization, poverty, and human rights. After rigorous discussion of the conceptual foundations, we focus on the U.N. millennium development goals for poverty reduction in particular. At the end we will be able to explore the analytical foundation of alternative policies, strategies and evaluate these for formulating alternative strategies addressing human rights issues and global poverty reduction.

INTS 4365 Global Health Affairs (4 Credits)
Introductory survey class for all students interested in intersection of international affairs and global health and security, development and economics.
INTS 4368 HIV & AIDS in International Affairs (4 Credits)
Upon completion of the course, students will understand (a) the concept of global health security; (b) HIV/AIDS as an epidemiological phenomenon; (c) the political, economic and social contexts of HIV/AIDS in specific regions of the world; (d) HIV/AIDS as a threat to security and gender; (e) security considerations of HIV/AIDS impacts in development and as a human right.

INTS 4369 Political Economy of Global Poverty & Inequality (4 Credits)
The main purpose of this course is to understand the underlying causes of inequality and poverty in the world. In order to do this, we look at the relationship between economic growth, poverty, and inequalities in several different dimensions. First, the process of sustainable growth itself is analyzed. Second, the implications of different types of growth for income distribution and poverty are studied. Finally, the implications of such inequalities for human welfare in developing economies in particular are studied. After an initial exploration of the income-based measures of poverty and inequalities we focus on the more recently developed social capabilities approach developed by Amartya Sen and others.

INTS 4370 Political Economy of Globalization (4 Credits)
An introductory course on the nature of global economic integration in the postwar period, including contesting theoretic perspectives, and several applied issues and policy dilemmas such as the evolving nature of firms (e.g. globalization of production), the "new international of labor," and the status of national sovereignty/policy autonomy in an integrated world economy, politics and markets, and currents themes in political economy.

INTS 4372 Great Books in Political Economy (4 Credits)
This course investigates several contemporary approaches to Political Economy, ranging from institutionalist to Marxist, anti-essentialist, and (postmodernist) feminist thought. Rather than attempt to survey quickly a lot of literature, we carefully read a limited number of influential (and provocative) texts that present a range of perspectives with which most students are largely unfamiliar. These are very challenging texts, and students must be prepared to spend a good bit of time on the assigned readings weekly.

INTS 4374 The Ethical Foundations of Global Economic Policy (4 Credits)
This seminar course explores the contesting ethical theories that underlay contemporary debates over global economic policymaking. We explore the ethical foundations of neoclassical, Austrian, institutionalist and Marxian and economic theory (including utilitarianism, welfarism, libertarianism and egalitarianism) in order to better understand why and how these diverse economic theories generate distinct policy prescriptions. For example, we examine the controversy over "free trade" versus "fair" trade that is now at the center of policy debate in the U.S. and across the globe, and explore the contesting ethical theories that inform this debate. This is a reading intensive seminar. We examine central works of Amartya Sen, Milton Friedman, Robert Nozick, Michael Walzer, and other leading economists and political theorists.

INTS 4378 Terrorism, Transportation, and Homeland Security (4 Credits)
This course is designed to introduce students to the critical role that transportation plays in homeland security. Transportation is one of the most important critical infrastructures because society and economy are totally dependent upon the efficient movement of freight and people. Not surprisingly, terrorists, on numerous occasions and in many countries, have launched attacks against aircraft, ships, railway stations, airports and other transportation facilities. In the U.S. the devastating 9/11 attack proved to be a turning point and led to fundamental changes in the struggle against terrorism, including the largest governmental reorganization in many decades, the creation of the Department of Homeland Security and its Transportation Safety Administration. In this course, students analyze the degree to which a safe and secure transportation system for goods and people has emerged. Accordingly the course deals with such topics as the contemporary structure and role of transportation, the nature of the terrorist threat, including the potential of the weapons that are or might become available (ranging from WMD’s to suicide bombers to cyber-attacks), the difficulties inherent in safeguarding such facilities as airports, rapid transit, railroads, and seaports, the efficacy of the policies that have been implemented and the kinds of changes that might further enhance transportation and homeland security.

INTS 4379 Gender and Development (4 Credits)
This course is concerned with how and why gender matters in outcomes and impacts of planned and unplanned development. It is also concerned with gender as a human rights issue and the equity and ethical dimensions of development planning. Beyond these practical implications, the course engages theoretical and ideological underpinnings for the gendered structures of economic, political, and social power encountered in a wide range of economic and social development contexts. Throughout the quarter, the class examines interactions among structural and cultural (including ideational) factors that together comprise and construct gendered environments. Structural and cultural factors are, at the least, mutually reinforcing, and may be mutually constitutive. The class interrogates the ways in which each set of economic and social transformations broadly encompassed within a human-rights or human-development approach to international development. The class also engages interacting dimensions of change, including economic, social, political, physical environmental, and human biological dimensions. The class explicitly examines all interactions across scales from global to local. If we were looking for a label for this approach, it could be called “gendered political ecology.” We could also use a term coined by Diane Rocheleau and others, “feminist political ecology,” which suggests the need to examine the responsibilities, freedoms, and control of resources, together with the varying forms of agency, strategy, and tactic deployed by women (often in partnership with men) to redress these inequalities. The class considers numerous cases from the Global South, and some from the Global North. These case studies immerse us in the diversity and complexity of gender and development interactions and in the “grounded agency” (Radcliffe 2006) through which women and men attempt to secure livelihoods – that is, “making a living and making living meaningful” (Bebbington 2000) – to enjoy long and healthy lives, and to participate in full citizenship. These cases also illustrate myriad patterns of gender construction across ethnicity, class, age, marital status, and other differences among women and men. This is a policy-oriented course. The class explores the ways in which the gendered division of labor and resources, and the socio-cultural construction of masculinities and femininities, influence perceptions, formulation, and implementation of development policies and practices. The class traces the differential impacts of development policies and initiatives on women, men, and gender relations in the developing world as well as efforts to target women through more gender-sensitive development initiatives. Ultimately, this course considers how ideologies and institutions of global development might yet enable women’s empowerment and facilitate equity in a deeply unequal and interconnected world.
INTS 4384 Middle East and U.S. Security (4 Credits)
The course will examine current US strategies toward the Middle East, terrorism, and how Homeland Security in US will respond.

INTS 4386 Transnational Migration in the Americas (4 Credits)
The course examines movement of various nationalities from other nations into North, South and Central America.

INTS 4391 Financial Management and Fundraising of Non-Profits (4 Credits)
This course will introduce students to the legal, governance and financial structures that enable non-profit organizations to function effectively. It will also provide a practical orientation to financial management issues, such as budgeting, financial reporting, and independent audits. Finally, a comprehensive presentation will be given of the fundraising methods needed to sustain the viability of non-profit organizations. These methods include: annual campaigns, direct mail, special events, major gifts, corporate fundraising, foundation grants, and planned giving. The course combines exploration of the general conceptual issues with an emphasis on practical "how-to's" and skill building.

INTS 4394 Non-Profit Management Issues & Techniques (4 Credits)
Nonprofit management issues and techniques looks at current NGOs and issues in working with corporations.

INTS 4396 Education and Development (4 Credits)
Education is a major component of the human capital. It is both an indicator and a driver of an improved quality of life. Developed economies have already achieved high in terms of the average education of their populations. Most of the middle income and some low-income countries have also succeeded in enrolling a high percentage of their children in elementary schools, thanks to the internationally coordinated emphasis in this sector in the sixties and seventies of the last century. On the flip side, some of the developing regions are still struggling to provide basic education to a large share of their school age population. Research on economic growth and development has established a close connection between the economic performance of a country and the level of education of its population. These results have prompted a resurgence of focus on education in the global development agenda. From the Jomtien conference on Education for All (EFA) in 1990 to the Millennium Declaration, the world community has set targets on universal primary and gender balances at the higher levels of education. Despite the thrust on national commitment on education, supported by international efforts like the EFA/Fast Track Initiative, there still remains some inertia and uncertainties on issues like equity of access along different dimensions of deprivation - gender being an important one, balancing the demand and supply of education, the relative importance of basic education for capability creation and social cohesion versus mid-level education for knowledge diffusion or higher education for knowledge generation. Discussion of these issues in a regional comparative context is important in understanding and suggesting education policies for developing countries. This course is primarily intended for students who have a broader interest on human capital development, and specific interest on educational policies and their outcomes. Students with a general interest on development policies and developing economies would also find the course beneficial. It is expected that, after actively participating in the course, the students gather or enhance their understanding of the major education policy issues and debates in the context of developing countries. Students will also identify the best practices by analyzing the national education policies of some of the high performing countries and regions in the developing world. Students use this knowledge to examine the national and international education policy initiatives and develop their own recommendations as necessary.

INTS 4397 The Environment, The Economy, and Human Well-Being (4 Credits)
In this course we will explore the role of the environment plays in society and the determination of human well-being, and how this can be addressed from an economic perspective. A core premise of the course is that the human economy is embedded within the broader context of human society, which in turn is embedded within a natural environment. The natural environment provides a variety of goods and services, which, through interactions between the environment, individuals, and society, contribute to human well-being. Some of these services are directly used by people. Others contribute indirectly by allowing for the continued provision of other services. As such, any discussion of human well-being and development that ignores the natural environment is inherently problematic. We will specifically adopt an economic perspective, but one that goes well beyond that of conventional neoclassical economics.

INTS 4399 Issues in Global Economics and Financial Security (4 Credits)
This course is for Korbel in DC participants only. The course discusses global economic and financial security issues through the prism of the current crisis and its aftermath. We begin by developing the analytical framework and then applying it to key countries/regions. We consider the causes, the policy responses and prospects. We look at ways of ensuring global monetary and financial stability, including appropriate policies to ward off financial crises and asset prices bubbles. Other key topics, including food and energy security and the role of finance in promoting development, are also discussed as time permits. The focus is on applied economics and finance, and their importance as analytical tools in policy discussions on economic security and development. This course is less narrowly technical, more policy and political economy oriented, but nonetheless appropriate for students concentrating in global markets, development, finance and trade. These are a few guest speakers on special topics, in addition to answering questions about career choices and professional development.

INTS 4404 Cities, Security, and Health (4 Credits)
This course will present a framework to analyze the impact of urbanization on human development and security in a comparative context of major urban centers in the developed and developing world. It will provide a practicum for utilizing cross-disciplinary methods and perspectives to address specific challenges to urban and human development. We will examine urbanization through a framework of human development, environmental health and security, and explore how public policy and planning can create short- and long-term impacts on multiple outcomes.

INTS 4423 Introduction to Epidemiology (4 Credits)
Decisions and policy related to global health are based on data from various disciplines such as demography, medicine, and epidemiology. Therefore, it is crucial to correctly understand and interpret what health data and the data in general tell us. This course provides the knowledge and skills required to critically assess data, and understand both strengths and limitations of data and research. This course covers the basic principles and concepts of descriptive and analytic methods in epidemiology and their application to research and practice in public and global health.
This course introduces the political economy of sustainable Development in sub-Saharan Africa (SSA). It uses a multidisciplinary approach that draws on literature from development economics, international relations, comparative politics, sociology, and history, as well as a broad range of country case studies. We engage with the main theoretical and empirical debates on sustainable economic and human development in SSA and examine a diverse range of country case studies. The topics covered include past and current political and economic conditions for economic growth and the improvement of human welfare levels, sustainable agricultural development and governance of natural resources, increased resilience - socially and economically - to rapid environmental change, and the role of foreign aid in African development. We explore the region's integration into the global political economy and examine the role of the state in Africa's development today. The course helps students to understand the major development challenges facing African societies today by illuminating patterns as well as diversity in development trajectories across the region.

INTS 4428 Political Economy of Human Rights (4 Credits)
What does one mean by human rights? What can be the political economy of such rights? These are the two central questions that we will explore in this course. The goal is to understand the underlying social, political and economic processes that led in an evolutionary sense to the present human rights discourse. The nature and implications of economic rights will be given special attention. In particular, the implications of such rights for human wellbeing in both advanced capitalist and developing economies will be studied. The social capabilities approach to rights developed by Amartya Sen and others will be extended to the understanding of human rights.

INTS 4435 Health and Development (4 Credits)
Looks at how health status of populations affects culture and environment, and also how successful development affects health.

INTS 4437 American Public Opinion & Foreign Policy (4 Credits)
This course examines American public opinion and its impact of foreign policy. The course begins with an investigation of what is public opinion in general and how it is collected, analyzed and used. The primary sources of American public opinion data and analyses are identified. The course proceeds to outline the controversies of American public opinion related to foreign policy decision-making using historical perspectives and the most recent challenges from the first Iraq War to the Arab Spring. Although foreign policy is often a secondary issue for the public compared to domestic issues, in recent times it has been mostly responsible for the transition from a Republican-dominated era to the Democrats' ascendance. A series of principles that have informed practitioners and foreign policy experts concerning American opinion related to foreign policy is examined and affirmed or debunked. Also, media and its persuasive power in opinion formation are considered. At the conclusion of the course, students should be familiar with a selection of foreign policy challenges that America has confronted in the modern era, the role of public opinion in the national decision-making and the existence of guiding principles of public opinion and their exceptions.

INTS 4438 International Public Opinion and Foreign Policy (4 Credits)
This course examines international public opinion and introduces the major international opinion trends that impact foreign affairs. The course first reviews international public opinion worldwide, then by major regions and finally a selection of leading countries. The theoretical question is how public opinion influences foreign policy in countries around the world, and if and when it does, under what conditions. Also, how international opinion affects American foreign policy, including the views of foreign publics toward America and its policies, is also examined. The course begins with an investigation of the history of collection and diffusion of international survey research, the quality of the data and the techniques used to collect it. The relationship of public opinion research and democratic government and media freedom is examined. The second part of the course outlines some of the public opinion benchmarks, their variations and similarities among countries and regions, and their change over time. A variety of the best sources of opinion data are used. Benchmarks include: level of satisfaction with the direction of own nation; satisfaction with and preferences for form of government; satisfaction with and preferences for economic system, the role of government intervention and entrepreneurial values; nationalism and approach to neighbors; attitudes toward Americans, American leadership and foreign policy; and impact of cell phones and Internet on opinion formation and collection. The course's orientation is both from an American foreign policy perspective and from the perspective of key international organizations, such as the UN, OAS, EU, etc. At the conclusion of the course, students should be familiar with the history and sources of international public opinion research, the major similarities and differences in international and regional public opinion, and the impact that it has on both American and international, multinational organization foreign policy decision-making. When available, there are guest speakers concerning the impact of public opinion on foreign policy decision makers.

INTS 4447 Making of Chinese Foreign Policy (4 Credits)
This seminar course examines and analyzes the making of foreign policy in China, a rising power in the 21st-Century. We look at and identify major driving forces behind China's foreign policy-making, including ideological sources (historical legacy, strategic culture, communism, and nationalism), domestic and institutional sources (foreign policy making institutions, elite politics and key players), and international sources (international system and regimes). We also examine China's strategic relations with major powers and its Asian-Pacific neighbors. This course is aimed to equip students with sophisticated understanding of the ongoing debate about the role that a rising China has played and will play in world affairs.
INTS 4450 Democracy and Militarism in Latin America (4 Credits)
Many note that even as democratization has taken place throughout Latin America, there has been a persistent and evolving role for the military, police and private security forces in many cases. The purpose of the class is to explore this apparent contradiction by examining the various internal and external pressures that have come to bear on these societies. Through approaches derived from comparative politics and international political economy we study domestic factors such as interest groups, political parties, social movements and governing institutions on one hand, and the role of international relations and organizations on the other. From this standpoint, the state becomes a mediator of internal and external pressures and is shaped by these pressures in turn. In the first half of the class, we specifically apply institutions, political realist, class analytic and market globalization perspectives to the study of the military. In the second half, we look at the interplay between democratic development and security issues in a changing global environment. This includes a study of the nature of democratization in Latin America, so heavily applauded by scholars, politicians and others, the impact of the truth and reconciliation process that emerged after the bureaucratic-authoritarian era, and the role of civil society and international organizations. In the final part of the class, we turn to the issue of citizen security amid high levels of crime, gang activity, and drug trafficking with a focus on Central America.

INTS 4453 Political Economic Development in Latin America (4 Credits)
In the first five weeks of the class we consider various theories of political economy. These include dependency, hegemonic stability, class conflict, neoclassical economic theory, and the study of institutions and international regimes. Each approach is illustrated through and examination of a historic issue in development - patterns of land ownership, the role of the military, the rise or revolutionary politics, neoliberal development and the promotion of democracy. During this time, students are asked to choose a theoretical framework as a foundation for the required research paper. A term paper prospectus including a description of the framework is due week five. In the second five weeks of the class we consider specific topics in political economic development in the last three decades or what is often called the "global era." These topics include the emergence of "uneven" development, the rise of social movements and role of civil society, transnational migration, the rise of illicit networks of trade, and U.S. foreign policy considerations. Students are encouraged to draw from this or closely related material for the subject matter of the research.

INTS 4459 Global Business, Governance & Corporate Social Responsibility (4 Credits)
In an increasingly globalized world, civil society, states and businesses are trying to discern how to govern business conduct across the borders of nation-states. Many of the issues our society faces today—global financial crises, environmental degradation, and corruption, to name a few—are impossible to tackle within a given country. This course will dive into contemporary global governance mechanisms to better understand the opportunities and challenges that states, business, and civil society face when in engaging with issues such as global financial crises, labor standards, respect for human rights and the environment.

INTS 4460 Politics of China's Modernization (4 Credits)
After more than a century of decline and stagnation, China is reemerging as a great power in the twenty-first century. China's rise to the glorious has never been easy and still faces many changes in the year ahead. This course is designed to provide students with a comprehensive understanding of China's rise in the context of its political development. We examine how revolution, nationalism, communism and liberalization have all affected the development of modern China with a focus on the political dynamics of the People's Republic of China (PRC) and the politics of post-Mao economic and political reform. We start by analyzing the rise of the Chinese Communist Party and its state and nation building efforts in the early years of the PRC and move on to examine the Mao's failed socialist transformation and political campaigns (the Hundred Campaign, a Great Leap Forward, and the Cultural Revolution). The remainder of the course explores political dynamics of post-Mao economic and political reforms and the prospect for a democratic China. This course aims at equipping students with an analytical perspective for understanding contemporary Chinese politics.

INTS 4465 Population and Society (4 Credits)
Population can play a key role in defining the fates of societies, yet Auguste Comte's notion that "demography is destiny" has been subject to two centuries of oversimplification, misinterpretation, and manipulation. This course seeks to reverse key misconceptions and open up new avenues of inquiry through an in-depth look at the key elements of population - population size and growth, demographic events, and population structure - and their relationship to development, security, health, the environment, and human rights. The course begins with a look at theories on the relationship between population and the fates of societies from Malthus to Marx to the present day. In doing so, we move from thinking of population change in aggregate to considering the impact of three demographic events - birth, death, and migration - that occur according to highly measurable and predictable age and sex patterns. Armed with a powerful conception of demographic change as a product of population structures and events, we explore the implications of demographic shift and long-term demographic structures for national and global outcomes under a range of political, economic, and social conditions. We will use case studies to address salient issues such as the limits to the human life span; prospects for reversing or mitigating the effects of very low fertility; the consequences of coercive solutions to population control; prospects for global migration; and the impact of HIV/AIDS on society.

INTS 4468 Politics of Development (4 Credits)
Course explores political factors and parties which affect developing nations and hinder new development.

INTS 4478 Donald Trump, Democratic Decline and Authoritarian Populism (4 Credits)
To affirm that on a global level, liberal democracy is declining and authoritarian populism is ascendant, is to state the obvious. This confirms a trend that Larry Diamond predicted ten years ago about a “democratic recession” that shows no sign of abating. What is most intriguing and in need of explanation is the decline of democracy and the rise of authoritarianism in liberal societies of the West, where democracy has long been established and consolidated. According to the 2018 Democracy Index (published by the Economist Intelligence Unit), the United States in the era of Donald Trump, is better described as a “flawed democracy” rather than a “full democracy.” Similar trends are discernible in Europe, Latin America and Asia. How can we explain this development? What social conditions have produced this outcome and what are the implications for world order and the study of international affairs? Can the slide toward authoritarian populism be reversed? We will examine these questions theoretically, historically and comparatively.
INTS 4483 Practical Applications in Global Health (4 Credits)
This course is designed for students interested in a career in Global Health with a focus on low resource settings including humanitarian settings. This course focuses on analyzing and developing solutions to global health problems in a systematic and creative way. Students are introduced to a problem-solving paradigm and, working in small groups, apply this model to a global health issue of interest to them. In addition, we cover other critical issues that need to be considered in addressing global health issues including equity, social determinants, and health systems as well as leadership, innovation and working in multidisciplinary teams. At the completion of the course, students should be able to: apply a methodical approach to problem solving in global health; analyze the range of factors that contribute to global health problems and understand the importance for finding solutions; examine critically the implications of policy or programmatic solutions to global health problems; develop and present a program proposal.

INTS 4484 Agriculture and Sustainable Development (4 Credits)
This course provides an overview of world agriculture and an introduction to agricultural populations, politics, policy paradigms, and institutions. It contain modules in: the history of agricultural production for economic growth and food security; global distributions of (1) agricultural production regimes, (2) land (including historical and contemporary “land grabs”) and other productive factors, and (3) uses of agricultural products for food, fuel, feed, fiber, and agro-based construction materials; effects of agricultural trade on economic growth, livelihoods, and food security; relationship between humanitarian food aid and agricultural production and food security; social organization of agriculture and related productivity and human development issues, with special attention to gender; environmental constraints to agricultural sustainability and agricultural constraints to environmental sustainability (climate change, water demands and conversation, agricultural energy production and consumption, causes of soil loss and degradation); technological change and innovation in agriculture; and culture and agriculture.

INTS 4485 International Trade and Economic Negotiations (4 Credits)
This course is for Korbel in DC participants only. The purpose of the course is to explore the challenges confronting international trade and economic policy, as well as current negotiations designed to address these circumstances.

INTS 4492 Health and Humanitarian Aid (4 Credits)
According to the World Health Organization, “Health is a state of complete physical, mental, and social well-being and not merely the absence of disease or infirmity.” In order to address health in humanitarian settings we must therefore respond to a range of needs and consider the diversity within affected populations. In this course, students will have the opportunity to explore some key sectors of humanitarian aid and how they relate to health. By following a specific ongoing crisis throughout the quarter, each student will have the opportunity to gain a better understanding of the particular challenges inherent in humanitarian assistance and to analyze how the “theory” is actually implemented in practice. Whether the student’s future is in the field or at headquarters, internationally or at home, he or she will likely need to quickly and critically review and summarize available information in order to inform decision-making, and students will have ample opportunity to develop this skill during the quarter.

INTS 4495 Civil Wars and International Responses (4 Credits)
Throughout the post-cold war period and into the 21st century, the scourge of war today is seen in mostly internal conflicts fought along ethnic, religious, ideological, or economic lines that divide societies and lead to devastating armed conflict. This course investigates the problem of contemporary civil wars. This course explores theories, concepts, and empirical research in the analysis of contemporary civil wars and in-depth, student-led evaluation of specific cases. The course covers these themes: evaluation and patterns of armed conflict and war termination in the 1990s and early 2000s with a focus on methods for systematic, multi-causal conflict assessment methodologies; exploration of the processes of escalation in armed conflict and of concomitant peacemaking by international mediators; and evaluation of the concepts of “peace processes” and scrutiny of the terms of negotiated settlements in armed conflicts today. The principle learning outcomes for the course is to gain a complex and detailed understanding of the modal form of contemporary armed conflict-civil wars and concomitant international intervention by the international community (particularly the United Nations) to this form of armed conflict. Students who successfully complete the course gain an understanding of contemporary civil wars, issues in conflict duration and processes of war termination, and introduction to the scholarly and policy-relevant literature that has developed in the last two decades related to challenges of conflict prevention and of “peacemaking” or negotiation and mediation of civil war conflicts.

INTS 4496 Field Operations for Humanitarian Assistance (4 Credits)
Within a disaster response, various interrelating factors determine the ability of the humanitarian community to adequately respond. From coordination among governments, donors, non-governmental organizations (NGOs) to internal working components within an agency that drive programmatic support, the realm of humanitarian operations is a complex system that should be understood by anyone with an interest in supporting relief efforts. The main focus of this course is concentrating on the practical, specific systems that drive field operations - namely security, logistics, finance, monitoring and evaluation, human resources, administration, and advocacy that support program planning and implementation. Through understanding these components, the challenges that are encountered, and how each interrelates within an organization and the wider response community students gain a balanced understanding of humanitarian operations. While each emergency response comes with varying contextual challenges, the humanitarian imperative mandates the relief community to respond in a neutral manner based on need. Doing so, places strains on the operational systems that need to be overcome to provide quality interventions. Through this course we take an in depth look at both theoretical and practical ideals for humanitarian assistance.

INTS 4497 International Campaign Management (4 Credits)
This course will examine the principles of political campaign management and their application in a number of international political, public affairs and human rights campaigns. It will be an introduction to the tools of political campaign management: message development, survey research, audience targeting, paid and earned communications, fundraising and organizational structure. Case studies of campaigns in countries such as Sweden, the UK, and Australia will be used as examples of these techniques. Class will be comprised of lectures, discussion and some simulation exercises. Efforts will be made to bring outside specialists and experts to the class or by teleconference. Readings may include contemporary journals, periodicals, newspaper reports and excerpts from major studies of campaign and organizational management.
INTS 4499 Evolving Global Security Landscape (4 Credits)
This course is for Korbel in DC participants only. Change brings with it challenges—at the individual, organizational, and systemic levels. It involves behaviors and cultures with often deep-seated traditions. This course will explore the scope and magnitude of the transformational forces at work in the U.S. and to a lesser extent the global security and defense establishments. By its nature the course will be about peace and war—how the nation goes about the business of preparing, equipping, and training itself to deter and if necessary to fight traditional wars and the new kinds of challenges that might lead to armed conflict as well as shaping the post war environment for an enduring peace—but do NOT think about this as a linear process. It will also be about sociology, bureaucratic politics, the role of the media, economics, health care, power... Most of all this semester it will be about the transformational nature and effects of ROBOTICS, AUTONOMOUS SYSTEMS, and ARTIFICIAL INTELLIGENCE (RAS/AI) on security and the budget pressures on the national security/ defense budgets—and where to consider taking acceptable risks—geographically and functionally and force posture wise (for example, do we need a $1Trillion nuclear modernization program; or 2400+ F-35s; or 12 carrier battle groups?). THIS AGENDA NOW IS BEING SHAPED GOVERNMENTS and the PRIVATE SECTOR—COMMONLY KNOWN AS THE 3rd OFFSET. (The roots of this can be found in Secretary Hagel's 214 Innovation Initiative. http://www.defense.gov/News/Article/Article/603658).

INTS 4500 Social Science Methods (4 Credits)
Prerequisites: The course presumes a basic competence in statistics, social science, international relations, and comparative politics. This is an advanced, fast-paced course that seeks to provide students with a sensitivity to research design choices, both for designing their own projects and as critical consumers of the works of other scholars. The course is primarily intended for Ph.D. students at the pre-dissertation prospectus stage as well as for advanced MA candidates pursuing thesis projects. The course content covers diverse methodological approaches from the discipline of Political Science as well as methods from other fields. The course will cover topics including: research questions and 'puzzles' in political and social science; causality and causal inference; theory construction; measurement; the comparative method; case selection; and quantitative and qualitative methods. Students should enter the course with several research interests in mind since the final project for the course entails producing a research design that could serve as the basis for a future prospectus. The class sessions will include a formal introduction to different methods, a discussion of readings, and work-shopping of student work. We will also informally discuss tips and tradeoffs in the academic profession and for publishing. The class meetings will rely heavily on student participation and peer critique. At the end of the course, students should be able to identify the strengths and weaknesses of different research designs.

INTS 4501 Comparative Politics in the 21st Century (4 Credits)
INTS 4501, Comparative Politics: States and Societies in the 21st Century, is a core course in the graduate program curriculum of the Josef Korbel School of International Studies. The course explores theoretical perspectives and policy-relevant knowledge in comparative politics, a sub-field of contemporary political science that considers the ways in which states and societies govern themselves or "allocate value" in countries around the world. Governance is arguably the pivotal variable in the realization of contemporary global development and human security objectives. The principal question the course addresses is: What is "governance," and how does is serve to work for, or against, peace and development in countries around the world?

INTS 4502 Comparative Revolutions (4 Credits)
An intermediate course focused around the major revolutions that occurred in England, France, 19th century Europe, and in Russia and China during the 20th century. Emphasis is placed on historical facts, key theoretical debates generated during the various social upheavals, and diverse interpretations seeking to understand the nature and causes of revolutions and their impact on societies. Prerequisites: INTS 4702.

INTS 4509 Food Security, Nutrition, and Sustainable Development (4 Credits)
This policy-oriented course will examine structures and processes that result in varying food security outcomes across space and time. Food security outcomes reflect interactions among political, economic, socio-cultural, and physical environmental systems. These systems, which are both dynamic and permeable, give rise to particular forms and patterns of food production, distribution, and consumption, and to more or less environmentally-sustainable uses of the natural resources critical to food supply.

INTS 4514 Population, Environment, and Development in Latin America (4 Credits)
This course engages the complex and interlinked dynamics of changes in population, systems of production, and the physical environment. Navigating among scales from global to local, we examine the interactions of trade regimes, markets, natural resource tenure systems, migration, livelihoods, technologies, health, and natural resource stocks. Taking a political ecology perspective, we will interrogate the distributions of wealth and power that affect control of natural resources, human well-being, and environmental sustainability. We also investigate the multiple social and cultural meanings of "natural resources" to actors who are variously positioned in terms of class, ethnicity, and gender. These dimensions of the population/environment/development nexus are examined for the following sectors: water conflicts and watershed management in the Andes; colonization, cattle, and energy development in the Amazon; non-traditional agricultural exports and aquaculture development in Central America; and forests throughout Latin America.
INTS 4516 Major Diseases in Global Health (From Pathophysiology to Action) (4 Credits)
As future global health practitioners and policy makers, it is imperative that we each have a complete and solid understanding of the mechanisms, physiology, epidemiology, transmission patterns, and clinical impact of the major diseases affecting global health. How and when does a person transition from simple HIV infection to full-blown AIDS? Why is dracunculiasis so readily amenable to eradication whereas filariasis is not? For what populations is co-infection with HIV and TB or HIV and malaria so critical and why? On the individual patient level, how and why do certain diseases manifest so differently in resource-poor versus resource-rich or urban versus rural settings? Who are the vulnerable populations and how does disease impact them physiologically? When and where would specific program interventions work over other programs and for whom? In this course, the students develop an understanding of the etiology, agents, vectors, burden, methods of detection, basic treatment complexities, and life cycles of major diseases impacting the world. Specifically, this course details HIV/AIDS, TB, malaria, maternal/reproductive health, some protozoa, helminthes, and major parasites, chronic disease such as cancers and diabetes, and violence/trauma. As there is no shortage of amazing and interesting diseases globally, students learn a sound method of inquiry with which to address and disease process. Students also apply this method directly toward program analysis, and in the development of teaching sessions for community health workers.

INTS 4517 Politics of Deeply Divided Societies (4 Credits)
This course focuses on the politics, conflicts, and conflict transformation approaches to deeply-divided societies. While ethnic, religious, and other types of communal conflict have been around for millennia, since the decline of colonization, and especially since the end of the Cold War, such struggles seemed to have exploded onto the world scene. This course focuses on these "contemporary" ethnic, religious, racial, and other communal conflicts to better understand why and how such conflicts develop. We then examine both theory and practice on what can be done to ameliorate or remedy them. Units focus on the nature of identity and identity politics; the use of political violence to pursue identity or nationalistic goals, and nonviolent approaches to identity conflicts. We then look at alternative political and conflict-transformational approaches to such conflicts including frameworks for living together (such as consociationalism, federalism, and power-sharing, and scenarios for separation (partition or succession). We also look at the negotiation, mediation, and other peace processes that have been utilized to try to accomplish such ends, and examine which have worked better than others and (to the extent possible) why. Readings will include both case study and theoretical material. Students are required to make several short class presentations, participate actively in discussions and exercises, and prepare and present a term paper analyzing one currently destructive deeply-divided society, analyzing the cause of the current unrest, and possible remedies to that situation.

INTS 4521 Cultures of Development (4 Credits)
Explores cultural dimensions of economic and social change from perspectives of actors who create, promote, negotiate, and resist different agendas from global to local.

INTS 4522 Philosophy of Social Science (4 Credits)
What is the nature of social science and the knowledge that it produces? This course, which is intended to complement INTS 4500 Social Science Methodology and INTS 4010 Epistemology, introduces students to the leading mainstream perspectives on the philosophy of social science. Special attention is given to Positivism and Post-Positivism, Post-Structuralism, Pragmatism, and Scientific Realism.

INTS 4525 Religion-State Relations in Comparative Perspectives (4 Credits)
This seminar course provides an introduction to the key readings, concepts and debates on religion-state relations. While the focus is on the Western political tradition we explore the case of India and the Islamic world at the end of the course. Themes such as freedom of belief, the role of religion in the public sphere and debates over the political construction, location and meaning of secularism are examined.

INTS 4526 Modern Islamic Political Thought (4 Credits)
This seminar course explores the key writings of Muslim thinkers who have shaped Islamic political thought during the 20th Century. We begin with the writings of Jamal Eddin Al Afghani and his Egyptian disciple Muhammad Abduh. We then proceed to read from the selected writings and speeches of Hassan al-Banna (founder of the Muslim Brotherhood), Sayyid Qutb (radical Egyptian Islamist theoretician), Adul Ala Maududi (Pakistani Islamic thinker and founder of Jamaat-i Islami) and Ayatollah Ruhollah Khomeini (leader of Iran's 1979 Islamic Revolution). We also investigate some of the writings of Islamic reformist thinkers such as Abdolkarim Soroush, Nasser Hamed Abu Zayd and Khaled Abou El Fadl. The emphasis in this course is on understanding the historical and political context which has shaped Islamic political thought during the 20th Century.

INTS 4534 Topics in Middle East Politics (4 Credits)
The 2011 Arab Spring is widely viewed as a turning point in the modern politics of the Middle East and North Africa. Longstanding authoritarian regimes and dictators have fallen while others cling to power in the face of popular protests. The region is headed for uncertain waters with Islamist parties on the ascendancy, liberal and secular forces struggling to assert themselves while a Western world watches these developments with a combination of hope, concern and consternation. This course is devoted to examining the Arab Spring revolutions and more broadly the changing politics of the Arab-Islamic world. We do so by collectively reading one book per week on the Arab Spring and other situations in the Middle East. Specific themes that are analyzed include the legacy of authoritarianism, the process of democratization, religion-state relations, the role of external powers and the transformation of Islamist politics. Part of the course looks at how these books have been reviewed both in intellectual and scholarly journals. This class is designed for students who seek a deeper grasp of the Middle East and a more refined understanding of the politics and history of this region. This is not an introductory course on the Middle East, Islam, or the Arab world and previous course work is assumed. Those uncertain about their status should consult with the instructor before enrolling.

INTS 4536 Economics: Fundamental Knowledge, Global Applications (4 Credits)
This course provides an introduction to the methods used to analyze contemporary global economic events by examining the environment in which individual economic agents interact. We analyze what the economic problem is, how consumers and business firms make economic decisions, how markets work and how they fail, and how government public policy decisions affect individual and aggregate behavior in both domestic and international markets. A special feature of the course is the application of economic principles to real world problems.
INTS 4539 Food Security in the United States and the World (4 Credits)
This course discusses: food security in the United States (community food security, food insecurity); stunting and chronic nutritional deficiencies; global water crisis; land degradation; land deals; climate change; dictatorship and kleptocracy; economic approaches (westernized view, food justice, food sovereignty); World Food Summit; achieving food security (the agriculture-hunger-poverty nexus, biotechnology for smallholders in the (sub)tropics); risks to food security (fossil fuel dependence, genetic erosion in agricultural and livestock biodiversity, hybridization, genetic engineering and loss of biodiversity, price setting, treating food the same as other internationally traded commodities); access to basic food supplies; infant feeding; determining nutritional status; supplementary feeding; therapeutic feeding; malnutrition, nutrient requirements and sources.

INTS 4543 Religion and International Studies: The Apocalyptic Tradition (4 Credits)
The relationship between religion and international politics is an important and understudied topic. For year, religion was, at best, a handmaiden to international relations as scholars focused on state actors only. Since 9/11 this has changed in dramatic fashion because of the rise of radical Islam, the importance of the religious right in the United States and its role in Middle East politics, and a growing awareness of how religion can divide populations within states and in many regions of the world. This course begins with an evaluation of the thousand year history of religious conflict before 1648 when faith and international politics were inseparable. We study the struggles between Islam and Christianity as well as “heresy” in both of these religions which lead to events like the Protestant Reformation. We explore the role of religion in politics from the eighteenth to the twentieth centuries and conclude with readings on such topics as suicide bombing, shifting religious values, demographics, and projections on how religion will shape international politics in the 21st century.

INTS 4549 Managing Microfinance: Balancing Business with Development (4 Credits)
This course builds on the topics in “Introduction to Microfinance” and delves more deeply into the challenges of managing microfinance institutions (MFIs) and effective social entrepreneurship. How do MFIs make sure they stay in business (with good risk management and financial management) and make sure they have real social impact? How can they innovate financial services and other market-based solutions that create lasting economic opportunity or social change? Whether a market-oriented NGO or a socially-motivated business, an MFI needs a clear development strategy, a clear business strategy, and the operational tools to implement both strategies well. Regardless of legal structure, both NGO and for-profit MFIs need good management and financial information to meet both sustainability and social goals. Whether used for poverty alleviation and or banking services for the poor, there are shared characteristics among successful microfinance organizations, as well as common pitfalls and challenges. As organizations figure out the “business” side of providing loans and savings, they also need to figure out which development services have greatest benefit for clients, choose strategies for social change (e.g. basic education, health care, business skills), and assess how well those strategies are working. For example, large-scale MFIs in India and Latin America have been very successful financially, but have only recently focused on their social impact. Smaller NGOs may serve the poorest and provide many development services, yet struggle to find a viable business strategy and sustainability. MFIs share challenges faced by many development organizations: (1) How do we balance our financial and impact goals; (2) How do we choose where to invest resources for greatest impact (e.g. financial services for many or in-depth assistance for fewer?); (3) What information do we need to ensure financial transparency and accountability; (4) How do we assess social and financial performance to keep improving our business strategies? This class will use weekly readings and case studies of specific microfinance organizations to: Illustrate business challenges and specific business risks in microfinance; Review basic financial statements and key financial measures to assess financial performance and risk, for both for-profit and non-profits; Review different approaches to answering the question “are we making a difference?”; Analyze management situations of “too much profit” and “too much development”; Compare pros and cons of for-profit and NGO legal structures, and implications; Discuss governance and boards of directors, compare and evaluate approaches; Highlight examples of social entrepreneurship powering market-driven change in microfinance and other areas (mobile banking, small-scale solar electricity, etc). Cases include Adelante Foundation, BRAC, Fonkoze, Kenya Women’s Finance Trust, ACCION’s Center for Financial Inclusion, and others. The first half of each class focuses on a real MFI case study to highlight the issues and understand the topic; the second half on the financial implications of these risks, the financial principles involved, and how well the tools work. Students gain a better understanding of financial statements, MFI operations (with case studies from around the globe), and credit risk, as well as key principles of financial management and good governance.

INTS 4555 Professional Communications (4 Credits)
This course is designed to help graduate students improve their ability to communicate professionally to a variety of national and international/intercultural audiences for a variety of purposes, and to manage through communications. While INTS 4557, Cross-Cultural Communications, focused heavily on immersive experiences in verbal and non-verbal communication in professional, cross-cultural scenarios, this course will use professional writing in cross-cultural contexts as its starting point. Students will learn the tools they need to adapt their writing in varied professional, cross-cultural contexts and to translate it into effective verbal presentations in these settings. In particular, students will develop an awareness of professional language, written conventions, and multimodal communication, including verbal, written, and digital/visual modes. Students will learn skills in rhetorical analysis, which will enable them to adapt to multifaceted professional writing scenarios in the future. They will apply these skills in the context of case studies and other examples that will address challenges professionals must problem-solve using written communication. All students will complete a professional writing portfolio by the end of the quarter with the goal of being more prepared for the job search.
INTS 4557 Cross-Cultural Communications (4 Credits)
This course is designed to prepare graduate students for careers as international professionals by focusing on the cultural factors that influence communication in international relations as well as the rules that prescribe and prescribe behavior. The course emphasizes culture and will explore how different cultures: perceive and interpret their surroundings, and create and communicate a shared, cultural construct of reality and identity; develop unique communication rules; and evolve culture-specific verbal and non-verbal communication behaviors. Students will immerse themselves in a particular culture (its history, values, world views and associated thought processes, religion, gender and social perception, language, and nonverbal communication) and research its communication conventions, practices, standards, core metaphors, terms, cultural premises, and meaning systems. Students are expected to demonstrate a critical and informed awareness of cultural content and identity, as well as the communication imperatives and procedural issues in their country through class presentations, discussions, and a long paper. The course rationale is that cross-cultural communication is inevitable, and without an understanding of the cultural communication imperatives, it is very difficult, virtually impossible to understand, work with, manage, or influence individuals from another culture. The course will involve theory and proven models, but will primarily focus on cultural immersion, skills development, practical applications, and case studies—exploring how culture both influences and reflects communication dynamics, how to communicate effectively in a multicultural environment, and how to manage and resolve cross-cultural conflicts.

INTS 4566 Global and Sustainable Development (Case of Coffee & Chocolate) (4 Credits)
In recent years, the issue of sustainable development has received considerable attention from academia, governments, and international organizations. Of particular concern are countries that are heavily dependent on the export of commodities. Can sustainable development be achieved by such countries? Chocolate (cocoa) and coffee are not only among the world’s most popular little pleasures, they are also among the most traded commodities. Originating in Latin America and Africa respectively, their global diffusion has influenced the culture, society and politics of developed and developing countries for decades and continues to do so today. Coffee exports (the primary source of foreign exchange for many poor countries such as Ethiopia) are valued at about 9 billion annually. 25 million people in Asia, Latin America, and Africa struggle to earn a living through coffee production, it too is a major source of income for many countries in Latin America and West Africa. Yet, many problems have been identified such as farmers unable to earn a survival wage, the exploitation of child labor, and the damage that production processes inflict upon the environment. In short, these important commodities are apparently contributing little to sustainable development. Various organizations and individuals are involved in efforts to change this situation by promoting the establishment of specialty, organic and fair trade coffee and chocolate products. The degree to which these efforts can help turn the existing situation around remains unclear but the lives of millions of people and the future of many countries hangs in the balance. This seminar is designed to address such issues. We explore the meaning of sustainable development and consider the nature of globalization and the ways in which it has shaped the cultivation and consumption of coffee and chocolate over time. In order to understand this linkage, we utilize the concept of the “commodity chain”, an approach that allows us to conceptualize the nature of the international linkages, their key nodes, the distribution of power, and the ways in which external factors influence a country’s development efforts. The course is divided into three parts. In the first, we cover the basic concepts and seek to answer such questions as: 1) How have the coffee and cocoa commodity chains been shaped by globalization? 2) What has been the role of key actors - producers, local traders, governments, and multinational corporations - in shaping production and consumption patterns over time? In the second part we consider three basic forces that have shaped the commodity chains - the state and its policies, culture and consumption patterns, and entrepreneurs and technology. Here the questions are: 1) How have the policies of producing and consuming states affected the commodity chains? 2) How have changes in consumption patterns reflected in the growth of Starbucks influenced the situation in developing countries? 3) How have external technologies such as transportation and communication technologies as well as internal technologies such as instant coffee changed the chains?

INTS 4567 Democratization in Africa (4 Credits)
Since the mid-1970s, the world has seen an ongoing wave of democratization. Some 70 countries have undergone transitions to democracy since the 1970s, with some 40 countries having gone through such a transition in the 1990s and early 2000s. Perhaps nowhere is the "third wave" more fully felt than in sub-Saharan Africa, which has seen since the 1990s a myriad of transitions from one-party states to multiple-party democracies, as well as war-to-democracy transitions as countries today raise a number of important retrospective questions about the underlying drivers of democratization, the various paths that countries go through on the road to democracy; whether such changes are sustainable over time (and why or why not). The very word "transition" is rightly questioned: Is there a proverbial point of no return when democracy is "consolidated" and country goes from the transitional category to a fully formed democracy? While democratization may lead to peace over time, the actual process of political reform is destabilizing for societies, and that in the short term there may be real and direct threats to peace in democratizing societies as a result of the uncertainty and competition that democracy introduces into restive social environments. In Africa, despite celebrated transitional elections and a few clear success stories (such as Namibia), democratization has been fraught with challenges, from elections as the spark to civil war or massive political violence, to corruption, fraud, and rent-seeking by elected elites, to widespread discontent over the inability of democratically elected regimes to foster socio-economic development. As well, there is a critical concern that electoral processes in Africa are often accompanied by widespread political violence. Thus, Africa’s experience with democracy lies between the powerful force of liberation that guided the continent’s politics in the formative years, and the uneven, non-linear, and for the most part elusive goal of "consolidation." The course explores democratization - the means and methods by which countries in recent years have moved form a non-democratic to democratic regime type. What theories, concepts, and methods should be used to understand democracy and democratization in today’s complex, multiethnic societies? How does the Africa experience relate to broader theories and perspectives on democratization?
INTS 4569 Migration (4 Credits)
Migration is a fundamental feature of our lives. Indeed, every aspect of our civilization and our self-conception is shaped by the exodus of all humans from our origin as a species in Southern Africa 200,000 years ago. In our own era, the aging of western populations, the rise of new economic powers, and dramatic improvements in human capital have given rise to an era of labor migration unparalleled in magnitude and diversity, though not entirely unique. New technologies have risen to facilitate further migration, enable the transmission of resources and knowledge across borders, and create new transnational patterns of residence and livelihood that challenge our notions of nation, identity, and even the very meaning of the term migrant. To put it simply, migration is the human face of our modern era of globalization, entailing incredible costs, risks, and returns for migrants along with important impacts for host societies, and the global system. Migration comes in many varieties in terms of destruction, permanence, and level of coercion, yet common theoretical, empirical, and policy unite these different forms of mobility. This course offers a holistic view of the migration process from multiple perspectives, at multiple levels of analysis, and on multiple aspects of our world today. As a uniquely individual behavior, migration has proven over time to be notoriously unfriendly to policy, which is often ineffectual or even counterproductive. We explore this cross-cutting concern through case studies illustrating the promise and pitfalls of migration policy.

INTS 4575 Systems Thinking for Social Scientists (4 Credits)
The purpose of this course is to introduce students to systems thinking as an approach for understanding and analyzing real-world issues. In addition to introducing the basic principles of systems thinking, questions that will be addressed include: Why do systems behave the way they do? Why do systems resist change and often end up getting worse when we try to change them? How do you find points of leverage within a system? This course uses examples drawn from a range of issues across the field of international studies. In doing so, it illustrates how a systems perspective can allow you to see parallels between seemingly disparate issues. This course introduces both qualitative and quantitative approaches for analyzing systems and discusses the benefits and limitations of each. Quantitative, computer-based modeling is used in this course, but no background is required.

INTS 4576 Seminar: Community-Based Research Methods (4 Credits)
This course offers a weekly seminar in methods for community-based research in health, development, population, and humanitarian assistance. The course is intended as preparation for students preparing for a community-based research partnership in Delhi, Nairobi, Jerusalem, or Iquitos, Peru but is open to all students preparing to go to the field. Focus is on practical methods for gathering quantitative and qualitative data at the individual, household, village/neighborhood, facility, and total community level including "windshield observation", key informant surveys, household surveys, and gathering of secondary data from census and other government and non-government sources. Methods of data collection include Geographic Positioning System (GPS), facility/provider surveys, community governance/needs assessments, and knowledge-attitude-practice (KAP) behavioral surveys. Topics of particular emphasis include maternal and child health (MCH), water and sanitation (WASH), and primary health care (PHC).
Students learn to design, revise, collect, enter, and analyze basic surveys using Excel and the Stata statistical software package. The final project for the course includes a community "desktop assessment" document and a plan for further data acquisition and analysis for the student's focus community.

INTS 4579 International Futures (4 Credits)
Futures forecasting involved decisions about priorities. Decisions require forecasting the trajectory of a society with and without interventions of various kinds. This course involved students in the forecasting and analysis process. In the lab, students learn to use the International Futures (IFs) forecasting system. That system represents multiple issue areas (demographics, economics, energy, agriculture, education, health, socio-political, and environment subsystems) and is supported by a very large database. Students study the structure of each of these modules, learn how they represent the underlying subsystems, how they are linked to other subsystems, and what they tell us about the processes of change globally and in countries and regions around the world. Students use the system for forecasts and analyses of their own.

INTS 4581 Introduction to Humanitarian Systems (4 Credits)
The Humanitarian field has changed significantly since the founding, in 1863, of what is now the International Committee of the Red Cross. Since the early 1990s there have been efforts to improve coordination between humanitarian actors and to improve the quality of international humanitarian response. High profile humanitarian crises such as the Rwandan genocide, the 2004 Indian Ocean Tsunami, the Haitian earthquake, and the conflict in Syria have highlighted weaknesses in the system and spurred reform efforts. Through readings, class discussions, guest speakers, group work and individual assignments, students gain a better understanding of the development of humanitarian systems and policies and how these affect current humanitarian practice. Key debates in the humanitarian system are also discussed and students have the opportunity to grapple with some of the key ethical dilemmas facing humanitarians today. At the completion of the course, students should be able to: Discuss the history of humanitarianism; Recall key components of the humanitarian infrastructure; Describe the humanitarian principles, their interpretation and application; Identify ethical issues which may arise for humanitarians; and discuss the implications for humanitarian practice of key emerging challenges.

INTS 4583 International Protection in the Humanitarian Context (4 Credits)
At the conclusion of World War II after witnessing the horrific and historic loss of life, and in an effort to save future generations from the direct impact of war and conflict, the Western powers created several important legal instruments to protect civilians. These instruments are largely derived from human rights, refugee, and international humanitarian law. These initial legal instruments were later combined with additional instruments, both regional and international in scope, and are collectively and cumulatively considered the legal framework for "International Protections." After sixty years of the progressive legal and theoretical development of international protection and its practical implementation, a slow but evident shift has developed over time. Theoretically speaking, a shift from the end of the Cold War’s position of absolute sovereignty to the ideals of the 1990s and the “responsibility to protect” which developed in direct response to the failed efforts of the international community to protect in Bosnia, Rwanda and other conflicts. As a result of the changing nature of conflicts, confusing mandates, ambiguous definitions, and political will, we have witnessed the failure of international protection in numerous humanitarian settings.
INTS 4624 Private Actors and Conflict (4 Credits)
This course surveys a range of arguments about how, whether, and/or the conditions under which global or transnational issues are governed. It examines different ways of thinking about governance and the governance process. It unpacks the variety of authorities that govern transnational issues. This course also considers different arguments about how the variety of actors engaged in a particular issue affects to the amount and type of governance possible. The course is intended for both masters and PhD students.

INTS 4620 Introduction to Middle East and Islamic Politics (4 Credits)
According to 2017 Global Peace Index, the Middle East and North Africa are the least peaceful parts of the world. The instability from this region has gone global and is now destabilizing large parts of the entire world. Why? Answering this question is the focus of this course. The approach taken will be historical and comparative with an emphasis on the relationship between religion and politics in the Islamic Middle East.

INTS 4599 Ethics and International Affairs (4 Credits)
This course examines the following: social "science" and ethics, power-rivalry and capitalism versus human rights and democracy, what are the dimensions of poverty, what role does the World Bank play, "laws of people," two classes of human rights (according to Rawls), national interest, and tolerance.

INTS 4595 Civil Wars and International Responses: Evaluating Post-War Peacebuilding (4 Credits)
Today, civil wars constitute the principle, realized threat to international security (measured in lives lost). This seminar critically explores the problems to international peace and security posed by contemporary civil wars and the efforts of international - primarily, United Nations - "peace building" missions to implement negotiated settlements aimed at substantially ending such wars and preventing their recurrence. The concept of peace building seeks to capture the complex, multidimensional task of implementing the terms of settlements to end war preventing the recurrence of war, and addressing the deep-seated causes of social conflict and deep divisions that gave rise to protracted armed conflict in the first place. Furthermore, the notion of peace building have been augmented by the concept of state building, which implies that the principle strategic objective of external efforts is to help develop and create legitimate, capable states that are able to realize the provision of security and human development and to manage future social conflict through nonviolent bargaining processes and institutions. The scope of the course includes the analysis of theories, concepts and empirical research in the analysis of post-war international interventions in civil wars and in-depth, student led evaluation of specific cases. Prerequisite: INTS 4495.

INTS 4593 Knowledge for Development (4 Credits)
Knowledge plays a critical role in improving human welfare. Rapid progress in science and technology in the recent times and an increasingly interconnected world facilitated by such progress have raised the potential for using knowledge in bringing development everywhere in the world within foreseeable future. This course examines the role of science, technology and innovation in achieving economic and social development through creation, diffusion, transfer and adaptation of knowledge within and across national boundaries. Course participants examine the role of knowledge and innovation in fostering economic growth and social development. They scan the modern science and technology challenges and opportunities especially those useful for development. They also study the various activities, institutions and policies that can help developing countries devise (or strengthen) and maintain a state of the art knowledge system. They have hands-on experience of designing a knowledge policy plan for a developing country or region. The course brings in material from various disciplines though the major focus remains on international development. It can be cross listed as a development, a technology policy or a GTEI course. No prerequisites.

INTS 4591 Advanced Fundraising Workshop (4 Credits)
This course compliments INTS 4391, in which an overview of non-profit fundraising - along with financial management - is given. In this course, we take an in-depth look at the major methods of non-profit fundraising, namely, annual giving, special events, corporate fundraising, grant writing, major gifts, and planned giving. The teaching methodology to be employed is that each 3 hour class session is, in effect, an intense workshop on a specific fundraising topic. During each class session, a fundraising professional from the community, who is actively engaged in the particular fundraising activity being discussed, joins the professor in leading the workshop. Due to the advanced nature of this course, enrollment is limited to those who have already been introduced to the major methods of fundraising through the previous completion of INTS 4391, or previous fundraising experience or educational pursuit in the fundraising field that is judged by the professor to be sufficient to be an active participant in this course.

INTS 4592 Private Actors and Conflict (4 Credits)
General approaches to conflict focus on violence between the military forces or states. The conflicts of the last two decades, however, involved a variety of other actors: private military companies training or fighting with armies, relief workers trying to mitigate the impact of conflict on non-combatants, environmental NGOs working to lessen the impact of conflict on endangered species, multinational corporations trying to continue their business dealings, paramilitary and/or other citizen groups trying to defend their private property or other rights, criminal networks working to exploit conflict for personal gain, and terrorist networks. How do these different actors behave in conflict situations? Does their presence alter the way conflict unfolds, strategies of conflict (and conflict resolution), and/or the prospects for long-term security (peace, stability and development)? How? How do we decide whether these actors are public or private? How do today’s “private” actors in conflict compare with the past? Is this a new phenomenon or simply a return to what has been typical at numerous points in history? This course explores the questions presented by the variety of actors involved in conflict today, compare today’s situation with the past, and examine the way states and non-state actors are coming to terms with each other in conflict situations.
INTS 4625 East African Development and Human Rights (4 Credits)
For our purposes, East Africa encompasses the countries of Sudan, South Sudan, Ethiopia, Eritrea, Djibouti, Somalia, Kenya, Uganda, Rwanda, Burundi, and Tanzania. This course begins with an introduction to the cultural richness and diversity of East African societies, with an overview as to how tribes, chiefdoms, and states function. Religious influences are noted. This history of development, as externally conceptualized, begins with the Berlin Conference of 1884/85 and the so-called “scramble for Africa.” If features socio-economic and socio-political processes. 20th- and 21st-Century external development programs are covered, most recently exemplified by the former Soviet Union, the United States, and China. Principles of induced development and participatory development are contrasted. Regarding the latter, indigenous innovations are stressed. The history of human rights, as externally conceptualized, begin much later, with the 1969 refugee-related innovations of the Organization of African Unity (now, the African Union). The “classic” issues of tribalism, corruption, and resource exploitation are covered, as well as the “late-breaking” issues of food security, refugee repatriation, and child soldier rehabilitation. Conceptually and theoretically, the course is grounded in disciplinary understandings derived from cultural anthropology, political science, ecology, and history. Resource use, in the context of socio-cultural systems development, are foundational. Special projects are featured, exemplified by those involving University of Denver personnel in Kibera, Kenya (water and sanitation); Mai Misham, Ethiopia (literacy); and Juba, South Sudan (indigenous leadership). At the broadest level, examples are most often drawn from the water/sanitation, agricultural, and health/mental health sectors.

INTS 4626 Civil Resistance (4 Credits)
Civil resistance is the application of unarmed civilian power using nonviolent tactics such as protests, strikes, boycotts, demonstrations, without using or threatening physical harm against the opponent. This method of struggle occurs worldwide in places as diverse as Russia, Moldova, Serbia, Spain, Egypt, Iran, Maldives, the Niger Delta, the West Bank, Thailand, and Burma, among many others. As a consequence of the growing use of civil resistance, the foreign policy community has become interested in understanding the causes, dynamics, outcomes, and consequences of civil resistance campaigns. This course serves as a primer on the topic of civil resistance, introducing students to the primary texts in the field, as well as the policy implications of empirical research on the topic. This five primary goals of this course are to: (1) present leading theories and concepts for understanding civil resistance; (2) explore international history to evaluate theories of civil resistance; (3) apply these theories to analyze current trends and make predictions about future development; (4) provide students with opportunities to synthesize their knowledge in a major written assignment; and (5) allow students to deepen their knowledge about several historical cases around the globe.

INTS 4627 African Security (4 Credits)
This is intended to be an advanced political science graduate course examining African politics and (in)security. The aim of this course is to introduce students to theoretical frameworks that, in turn, facilitate their understanding of African politics, conflict and security issues – especially as they pertain to human security. Importantly, this class takes a critical look at the concept of sovereignty as it relates to security. Through the reading, students become familiar with major analytic frameworks and debates in the analysis of contemporary African politics; students become conversant in relevant political, civil-military and human security issues as they relate to sub-Saharan Africa. The focus of this course is for the student to develop an analytical framework by which to make sense of context. Context is important, but without a cohesive theoretical framework to inform the practitioner it is insufficient. With the understanding that modern elites benefit from the existing structures and associated incentives, this course seeks to understand the modern African state in order to best engage said structures/elites to further development and, most importantly, individual security. Of note, it is clear that security is a fundamental condition for effective governance and development. Further, whereas it is true that weak empirical states, interstate wars, and conflicts over natural resources have proliferated throughout the continent and that ethnic, religious and regional violence is a common syndrome, we often forget basic (human) security needs. Specifically, we overlook that importance of access to potable water or an individual’s ability to pursue economic gain without fear of violence. At the heart of security lies the individual. Weak states or elites might affect inter-state relations and security (e.g. militant groups in under-governed spaces), but it is the individual who suffers. Thus, security in this context seeks to understand issues that affect individual lives.

INTS 4628 Soc Movements: Latin America (4 Credits)
The past year has been witness to Tahrir Square and Occupy, reminding us of the power and innovation of popular sectors making their voices heard. Latin America is a particularly useful place to explore popular movements, as it has long been the site of popular protest and national revolution, and it is currently a region governed by a significant number of Leftist governments with important ties to social movements. This course addresses major theories of social movements, including classical, structural, and new social movement theories. These theories have attempted to answer fundamental questions of what triggers mobilization among excluded groups, how they facilitate their action, and what changes they potentially trigger to basic rights and identities. The course also places social movements in their broader context, locating them I the political, social and economic structures that have shaped exclusion in Latin America over time. In the process, the course explores the role of popular movements in broader processes of democratization, economic development, and citizenship. We examine traditional and well-studied examples of social movements, including movements among workers, indigenous, women, environmentalists, and advocates for democracy and human rights. We also explore newly emerging and transnational movements, including those that articulate alternative models of globalization. The course takes an interdisciplinary approach, drawing on economics, sociology, anthropology, and political science. It places special emphasis on the political economy of popular organization, acknowledging the contested nature of development and the ongoing struggle for deeper democracies and more equitable societies.
INTS 4629 Cultures of Globalization: Networks, Commodities, Affections (4 Credits)
This course explores the effects of neoliberal globalization on the lives of individuals and their communities. In an increasingly interconnected world, how do everyday people and communities negotiate the opportunities, dislocations, and/or disjunctures engendered by neoliberal globalization? Does globalization contribute to increasing global homogeneity or does it restructure difference and inequality in new ways? We explore how a ground-up view of globalization can highlight some of its contradictory effects. We discuss how globalization influences increasing inequality, restructures individual and group identities, as well as the relation between globalization and migration. From a ground-up perspective, we attune to growing global connections to understand how transnational commodity circuits intersect with individual lives and communities. We ask: How are commodity chains also cultural objects that shape, and are shaped by, how we see the world? Moreover, we pay attention to the development of grassroots networks and social movements that forge connections across borders to channel and/or challenge the current trajectory of globalization. We also find it imperative to understand the affects dimension-how do human beings think about their emotional relationships, families, and identities in relation to changing global dynamics? We end by examining alternatives to thinking in terms of neoliberalism, while examining its ramifications in the current economic context. A central question we ask is: As everyday life becomes increasingly commoditized, how do people cope, find support and value, and reveal alternate ways of conceptualizing how we can all connect to one another.

INTS 4630 Civilian Protection in Armed Conflicts (4 Credits)
Studies of armed conflict tend to focus on the production of violence to the neglect of how civilians might instead be protected. In this course, we will study how to limit violence against civilians. We will begin with an overview of theories of violence and legal and ethical frameworks governing the use of force. We will then consider how various actors throughout society, from state actors, to international actors, to illegal arms actors, to NGO’s, to civilians and their communities—the would-be victims of violence—can either promote or restrain the use of violence. We will also consider the conditions under which the protection of civilians is most feasible as well as research methods for analyzing populations and their protection strategies. In their final projects, students will analyze the threats of violence faced by a particular population and design appropriate protection strategies and policies to deal with them.

INTS 4631 The Politics of Civil Society (4 Credits)
Every intractable problem of politics, many significant changes in regimes and much of the pressure on government for good or ill, depending on the point of view, emerges from the civil association of citizens. There are limits, however, to what people can and cannot do. In this way, the overall objective of this class is to explore how people exert political power outside of the formal political structures. Towards this end, student gain a greater understanding of the make-up and roles of civil society, beginning with its origins and definitions and working up to current thinking, including the post-Berlin Wall opening up of civil society. The class considers the linkages between social and political objectives, studying how both formal and informal forms of associations limit and open up the possibilities of people's power.

INTS 4632 Qualitative Research Methods (4 Credits)
This course provides training in ethnographic and engaged research methods while giving students the opportunity to apply their skills to the local Denver immigrant community. This class requires a commitment to doing fieldwork outside of the classroom and to organizational partners in the community. Students should expect to spend 3-4 hours a week in the field and 1-2 hours on their field note write-ups. Students will work on the Wage Theft in the Denver Construction Industry project being led by Professor Galemba in collaboration with El Centro Humanitario, a day laborer center in Denver. Or they may choose projects with Casa de Paz and the Colorado Immigrant Rights Coalition. Students will gain experience with participant observation, qualitative interviews, data security protections, qualitative data coding, analysis, reflexivity and positionality in research, and writing. The course culminates in a public presentation to share results with the community. Spanish skills are a plus, but are not required for all students.

INTS 4633 Int’l Project Evaluation (4 Credits)
It can be beneficial for graduate students planning careers in multilateral and bilateral development agencies, non-profit organizations, private-sector companies, and professional services organizations to have an understanding of how to develop a project proposal, implement it, and evaluate its results. These are useful skills for entering or reentering employment with these organizations. The Josef Korbel School of International Studies currently offers a trilogy of courses in international project cycle management—international project design and monitoring, project management, and international project evaluation. The three courses are delivered in sequence during the academic year in conformance with the project cycle, but they can be taken out of sequence without prerequisite or need to take them all. Each course uses monitoring and evaluation methods and means to connect the design, management, and evaluation of a project. Students may have been exposed some of these methods in courses covering quantitative and qualitative techniques and field research methods. Each course also shares in common the development teams and managers of those teams to produce the key deliverables at three key stages of the international project cycle. The purpose of the International Project Evaluation course is to provide students with a better understanding of and practical tools for designing, implementing, and reporting project evaluations. In all cases, a good evaluation design that is well implemented will allow the project manager to identify supportable findings, conclusions, and recommendations. The recommendations from both performance and impact evaluations can be directed to decision makers to support changes necessary to correct project deficiencies or to provide lessons learned for designing subsequent development interventions. Project managers can also use community or stakeholder participation in the process to build evaluation capacity and to gain support for the results. More specifically, students will learn about similar approaches used by four organizations that evaluate project, programs, and policies—the U.S. Government Accountability Office, the World Bank, United Nations Development Program, and United States Agency for International Development (USAID). Each of these organizations has developed templates for evaluation design, use similar methods and techniques to collection and analyze data, and share common elements in the framework of their evaluation reports. Two of these organizations have protocols to contract out evaluations to other groups through the preparation of an evaluation statement of work (SOW) or terms of reference (TOR). In this course, students will have the opportunity to compare evaluation approaches and to apply these approaches in preparing evaluation products. Small student teams will produce an evaluation SOW patterned after USAID guidance and defend their design in a final presentation.
INTS 4634 Practical Public Diplomacy (4 Credits)
When Madeleine Albright spoke at the Korbel School, she made a plea for more courses on the nuts and bolts rather than the theory of diplomacy. This course is a response to that plea; drawing on 28 years of experience as a Foreign Service Officer and practitioner of public diplomacy. In this hyper-connected world of ours, public diplomacy has taken on ever more importance. It is essential to use the traditional tools of public diplomacy, such as exchanges, cultural centers, language courses, etc., and meld them with the new tools of social media and social networks. The course is a combination of lectures and student presentations as well as talks by numerous experts in various aspects of the practice of public diplomacy.

INTS 4635 Civil-Military Relations (4 Credits)
Who guards the guardians? has been a long-standing dilemma in international politics. How can we make sure that military leaders enjoying the control of coercive power submit to civilian political authorities? How can military organizations be powerful enough to counter external threats without becoming themselves a threat to the political community they should protect? How can hierarchical institutions created to exert physical violence be compelled to respect human rights and democratic values? These questions lie at the heart of civil-military relations theory. Analyzing the different ways in which military organizations, political authorities, and the broader society interact is crucial to understand political outcomes such as state-building, democratization, and the outbreak of war. This course provides students with a comprehensive understanding of the problems surrounding civil-military relations. Besides looking at the theoretical foundations of the field, it offers a comprehensive overview of civil-military relations over time and across countries. Specifically, it focuses on some topical and yet poorly understood cases and phenomena, such as the impact of the rise of private military and security companies on control over the use of force and the role played by military in Middle Eastern countries such as Turkey, Egypt, Syria, Libya, and Pakistan.

INTS 4636 Diplomacy in the 21st Century (4 Credits)
This course will focus on the array of factors, interactions, and mechanics that must be engaged and synchronized for the effective execution of diplomacy. The course will explore these themes using first via an array of historical case studies and then will take those same themes and apply them to the current and future context as framed by Ambassador Hill’s real world experience. In the end, the students will have gained professional insight into the array of key elements and challenges associated with carrying out diplomacy in the current context. Enforced Prerequisites and Restrictions: INTS 4700: US Foreign Policy, or INTS 4701: US National Security Policy, or INTS 4702: Major Issues in International Security.

INTS 4637 Comparative State building (4 Credits)
The modern state is of central interest to students of political science, Latin America, development, sociology, and public policy. For some, the state is an instrument of repression and domination; for others it is the shepherd of development. For all, it has been the fundamental unit of national political authority for at least the last two hundred years. This course explores the nature of stat authority and the processes by which different types of states emerged at different moments in world history and in different regions of the world, as well as how the nature of states has evolved over time. We explore the modern states that emerged first in Western Europe, and then the transplantation, imposition, and emergence of state authority in other regions, including Africa, East Asia, and Eastern Europe. The second half of the course focuses entirely on Latin America, highlighting the way in which states emerged and shifted over time in that region through close study of particular cases. We end the course with a consideration of the nature of state authority in the current world characterized by more intense flows of people, goods, capital, and ideas.

INTS 4638 Modern Iranian History and Politics (4 Credits)
The Islamic Republic of Iran remains a mystery for many in the West. The policies of the Iranian regime represent one of the greatest challenges to U.S. foreign policy today, as reflected in the global debate about Iran’s controversial nuclear program. War seems inevitable and Iran and the West are in confrontation on a number of fronts around the world. How did we get to this point in global affairs? What is the relevant historical background needed to understand Iranian culture, society, politics, and foreign policy at a deeper level? What are the key moments in modern Iranian history that have shaped the contours of the current conflict between Iran and the United States? These are the overarching questions that this course seeks to examine. The course is the first of a two course sequence that seeks to demystify Iranian politics and society. Themes explored include the origins of Iran’s troubled relationship with the West, the emergence of the modern Iranian state, the construction of Iranian national identity, the tension between religion and politics, the struggle for democracy and the persistence of authoritarianism and the roots of the 1979 Islamic Revolution.

INTS 4639 Post-Revolutionary Iranian Politics (4 Credits)
The focus of this course is on Iran’s post-revolutionary period. The goal is to provide students with an objective examination of Iranian society and politics. Several themes are explored: the rise of religious politics and the consolidation of clerical rule, the nature and interaction between Iranian state institutions, civil-military relations, the Iranian economy, the domestic opposition and the prospects for democracy, the crisis in US-Iranian relations, and the role of women in Iranian society.
INTS 4640 Global Financial Crisis (4 Credits)
This course provides an in-depth and critical analysis of the global economic crisis of 2007-2009. The goals of the course are to provide: a) an understanding of the causes of the crisis, b) an overview of the onset of the crisis, including its similarities and differences with past crises, and c) a critical appraisal of the policy response to the crisis, including financial bailouts, monetary policy, fiscal policy and regulatory reforms since 2009. The class will take both a US and a global perspective, and will conclude with an outline of the aftermath and general lessons to be drawn. This course goes well beyond a historical treatment of the global economic crisis and provides general analytical frameworks that can be used to understand economic crises more generally. Each class will be organized around one or two topics related to a theoretical understanding of economic crisis and will apply them to an understanding of the 2008 crisis. The frameworks draw from the fields of microeconomics, macroeconomics, finance, international relations, global political economy, real estate and international economics, integrating and extending the knowledge obtained from other economic and policy courses. Basic Macroeconomics and Microeconomics, while not strictly a prerequisite, is highly recommended. Basic economic concepts will be used repeatedly during the class and basic knowledge of economics will be assumed. The format of the course is a classroom discussion of the reading and class debate. As such, it is imperative that you come well-prepared, having done all of the readings as this course entails a substantial amount of readings to prepare for class. The instructor has a point of view, but challenging that point of view will be encouraged, and even required. Lively class participation will be essential to the success of the course. Visitors from the worlds of finance and policy will contribute on occasion and will be announced.

INTS 4641 East Asia in the Global Political Economy (4 Credits)
The main purpose of this course is to understand critically the conceptual and empirical issues underlying the linkages between the East Asian Regional Economy and the Global Economy. What is the role of the East Asian Regional Economy within the current global political economy (GPE). What is sustainable development in the East Asian Regional Economy? What are the global dimensions of sustainable development in the East Asian Regional Economy? What are the linkages between technology and sustainable development in the East Asian Regional Economy. After an initial exploration of these issues we focus critically on the more recently developed social capabilities approach developed by Amartya Sen and others. In particular, we explore the limits of policies under the existing institutional arrangements and examine the need for fundamental changes in the global political economy and the East Asian Regional Economy. For this purpose we try to find the approximate but deep casual structure of GPE and the place of the East Asian Regional Economy within this GPE.

INTS 4642 Environmental Security (4 Credits)
This course surveys the expanding literature on the complex interrelationships between the environment, natural resources, conflict, and human security. Since the dawn of agriculture (~7000 BCE), but rapidly accelerating in the industrial age (1750 CE to present), humanity has conducted an uncontrolled experiment in bending the natural environment to fit human needs and desires. Despite the perceived distance that technology has placed between our physical environments and our daily lives, human interactions with our natural environment are still fundamental. Since the end of the Cold War, much attention has been paid to the role of natural resources and environmental scarcity as a source of conflict, ranging from "water wars" between states sharing a common river basin to communal conflict between pastoralists and farmers in the Sahel. This course will survey the expanding literature on environmental impacts on conflict, as well as conflict impacts on the environment, and the potential for making co-management of valuable natural resources and wildlife a source of cooperation, rather than conflict, between communities and states.

INTS 4643 Japan in East Asia: Economic, Business, and Trade Relations (4 Credits)
This course presents an overview of Japan’s economic, business and trade relations in East Asia (ASEAN plus China, South Korea and Taiwan). The focus is on the evolution of Japan’s economy and big business and its shifting role and impact in East Asia. The course is organized to provide a backdrop to understanding: (a) the growth of big business in Japan; (b) the rise of the ‘developmental state’ in Japan and its impact on East Asia; (c) the experience of Japanese multinationals with foreign direct investment in East Asia and creation of Asian production networks; and (d) the current trend of free trade agreements and other emerging trade arrangements in East Asia. Students work in groups to explore, for example, the experiences of major Japanese companies in East Asia or a period or specific event connecting the economy of Japan with those in East Asia.

INTS 4644 Human Rights Research Methods (4 Credits)
This course is about how social science research can be used as a tool to understand and promote human rights. The field of human rights is bedeviled by several challenging obstacles to research, including reporting bias, hidden abuses, missing data and politicization of the facts. To deal with these obstacles, we learn about various methodological tools and how they are applied for the analysis of special human rights topics. By the end of the course, students are equipped to compile and present information to highlight patterns of rights abuses and identify patterns of cause and effects.
INTS 4646 European Integration: States in Transition (4 Credits)
Not only have the global financial turmoil threatened by the Eurozone crisis and the negotiations of a trade agreement between the European Union (EU) and the United States made the study of EU integration increasingly important for students of International Relations. As a unique political entity distinct from both states and traditional international organizations, the EU remains an unidentified object, whose development has challenged the traditional paradigms of both international relations and political science. Besides providing an in-depth knowledge of a crucial political and economic actor, the study of the EU integration process, its drivers and its shortcomings will therefore enhance students’ understanding of some of the most crucial theoretical debates underlying today’s international studies. This course intends to provide students with a comprehensive knowledge of the politics and institutions of the EU, analyzing its development from its origins until the present day and beyond. It will do so by focusing on the following core issues: Firstly, it will briefly analyze the history of the EU, seeking to identify the rivers of the integration process and explain why, after the end of World War II, European countries have set aside their centuries-old antagonism and embedded themselves within an ever closer political Union. Secondly, it will examine what the EU is and how it functions, analyzing its key institutions, the architecture of its system of multilevel governance and its policy-making processes. Thirdly, it will investigate some key consequences of European integration, focusing on topical debates such as whether and to what extent the shifting of national decision-making powers at the EU level has created a democratic deficit, what is the impact of EU enlargement on both the Union and the institutions, societies and economies of new member states and what have been the economic and political consequences of the introduction of a single currency. Finally, the course intends to engage students in a debate on what is the future of the European Union in light of the latest development brought about by the entering into force of the Lisbon Treaty and the economic and financial crisis suffered by Southern European member countries. Prerequisite:

INTS 4647 Critical Issues in International Humanitarian Assistance (4 Credits)
In recent decades, the humanitarian system has undergone significant changes related to developments in global governance, lessons learned and relationships between agencies (UN/NGO), governments (donors, affected countries), as the nature of crises themselves the contexts in which they occur and actors involved in crisis response continue to evolve, the humanitarian system and those that work within it must contend with new challenges and critiques. Through readings, class discussions, guest speakers and assignments, students have the opportunity to gain a better understanding of the major emerging policy issues and internal and external challenges facing the international humanitarian system. The class discusses important debates in the humanitarian system and students have the opportunity to grapple with some of the key ethical dilemmas facing humanitarians today. This course is aimed at those with an interest in humanitarian policy as well those who wish to explore the challenges that may face them as they prepare to work in the humanitarian field. Prerequisite: INTS 4581.

INTS 4648 Theories of Security in World Politics (4 Credits)
In the 40 years following World War II, the study of security assumed a divide between international relations (the politics between states) and domestic politics (the politics within states) and gradually became separated from studies of international economics. International or national security largely centered on one empirical and two different theoretical enterprises. The empirical enterprise explored the relationship between the US and Soviet Union, focusing particularly on deterrence and the effect of nuclear weapons. The theoretical enterprises explored the likelihood of conflict between states in different systems and scenarios (when does conflict occur? When is stability more likely?) and examined the causes and consequences for actors of pursuing different strategies (What determines which strategy states will choose and what are the consequences for security – i.e., war, conquest, security gain, security loss, etc. – of different choices). After the end of the Cold War debates about the meaning of security joined change in the prevalence of intra-state conflicts and growing attention to terrorism in ways that led many scholars to question the usefulness of assumed differences between international and domestic politics, and, to a lesser extent, between security and economics. Also studies of conflict and stability have increasingly focused on a variety of transitional and global actors that do not fall into the realm of the nation, the state, or even the “international” system at all. This course focuses on this post-Cold War security agenda. The class begins with a (rather old by now) debate over the definition of security, then consider the role of states and other actors and finally turn to a list of prominent questions. In examining these questions, the class reads studies based in a variety of explanations, research strategies and methods. Students are encouraged to think about prominent explanations that stretch across the questions in different weeks. Students should also consider the costs, benefits, and alternatives to the research strategies and methods that individual authors have chosen. While the focus is on the substance of debates in security studies, the professor hopes to also spend time each session talking about how to frame productive questions and research strategies. In the way of background, if students have never read Kenneth Waltz, Man, the State, and War, they are recommended to do so. It would also be useful to have some familiarity with some basic texts in political theory, particularly Hobbes, Machiavelli, Kant, and Weber.

INTS 4649 Human Rights and the Middle East (4 Credits)
This course is shaped in three parts; each focuses on a set of critical human rights questions drawn from different phases of the Arab uprisings. Part I focuses on the Arab Uprising and Promises of Human Rights Progress and asks: 1. What can we learn from past contagion of human rights struggles, while the class analyzes the Middle Eastern social transformation? 2. What are the main causes that shook the Arab Middle East? 3. What was/is the role of major social actors? Part II covers the Rise of the 2012 Islamist tides, which gained new momentum after the electoral victory of the Muslim Brotherhood in Tunisia and Egypt and asks: 1. Are these religious trends consistent with human rights efforts? What accounts for waves of contagious revival of religious fundamentalism in the Middle East and North African region before and after 2012? 3. What is the impact of religious fundamentalism and nationalism among Israelis and Palestinians? Part III analyses the Possible Paths of Democratization and Human Rights in the Middle East and explores: 1. What accounts for different Revolutionary Arab Paths? 2. Is there a human rights answer to the Israeli/Palestinian quandary regarding one or two state solution? What are the current and possible roles of external forces for the region (international and/or regional)?
INTS 4650 Globalization and Economic Crime (4 Credits)
This course explores the policy issues raised by international economic crime, a phenomenon that has mushroomed with globalization and now accounts by some estimates for one-fifth by value of all international commerce. But who gets to define “crime”? Are there standards applicable globally to all situations? Nation states, corporations, nongovernmental organizations and political advocacy groups have issued multiple and often conflicting definitions of acceptable and unacceptable behavior and have been free in affixing blame on other sectors. To assess the part played by economic liberalization in the increase of crime, readings focuses attention on the political, technological and economic factors that encourage criminal activity and on the direct and indirect economic costs of activities such as identity theft and counterfeiting; mislabeling and trade in illicit goods; political corruption; money-laundering; and securities and accounting fraud. The class discusses activities posing definitional challenges to policymakers, such as currency and commodity speculation, re-export, gray marketing and state sponsorship of organized crime. This class also looks at policy options available when state-supported criminal economic activity is deemed to violate peremptory norms, create a substantial domestic effect, or constitute an act of war. This course examines self-help programs such as due-diligence and know-your-customer rules as well as statutory regimes such as the U.S. Foreign Corrupt Practices Act, and the movement toward transparency and uniform financial standards.

INTS 4651 Field Knowledge for Agriculture and Sustainable Development (4 Credits)
Agriculture across the globe faces numerous challenges: feeding a growing population; adapting to climate change; reversing environmental degradation; and adapting to changing food consumption patterns, natural disasters, resource scarcity, global trade agreements and political pressure. Farmers and related businesses must deal with these challenges while also maintaining livelihoods and contributing to economic growth. These economic, environmental, social and political challenges shape the entire agricultural system. These challenges influence what the farmers grow and other important production and marketing decisions; these challenges also can discourage fundamental change. Farmers must negotiate tradeoffs that have negative consequences in one area to gain benefits in another. This class will analyze sustainability in agriculture through a regional lens, engaging with agricultural people and systems along the Front Range. We aim to understand the economic, environmental, social and political issues that regional farmers face while taking a fine-grained look at critical components of farming: land, labor and water.

INTS 4652 Contemporary Issues in Refugee Studies (4 Credits)
This course is designed to provide a stimulating interdisciplinary environment in which students explore contemporary issues in refugee studies. Through examination of relevant international instruments, research, case studies, agency policies and reports, students will begin to develop the skills necessary for understanding refugee-serving agencies and associated programs in large scale refugee operations. Specific emphasis will be given to recent developments in - refugee terminology, refugee status determination, urban refugee populations, refugee camps, durable solutions, and extremely vulnerable refugees. Throughout, the course will focus on humanitarian assistance and protection frameworks, including analysis of guiding principles and associated policies of refugee-serving organizations such as the United Nations High Commissioner for Refugees (UNHCR). The importance of reliance on refugee voices to frame the debate will also be emphasized. At the end of this course students should be able to integrate and apply knowledge of innovation policy and practice to begin to address contemporary challenges faced by humanitarian agencies working with refugee populations.

INTS 4653 Political Economy of the Resource Curse (4 Credits)
This course is about one of the more curious findings/non-findings in the history of economics and international relations; that valuable natural resources, such as oil, natural gas, and other mined commodities are not, in the main, associated with better development outcomes and may even depress long-run rates of economic growth and discourage democratization and effective governance. Common sense would seem to suggest that if one finds oneself sitting on a gold mine, then one should mine gold (or drill oil, as in the example above). But countries that have specialized in the production of extractive or “point-source” resources, such as mined commodities like gold, diamonds, and oil, tend to be poor, creating a nagging sense that specialization in extraction is a losing proposition in the global division of labor, condemning countries to be the "hewers of wood and drawers of water." This course briefly reviews the basic economics of the resource curse before turning to a discussion of its effects for deeper institutional determinants of long-run development outcomes: democracy, gender equality, state capacity, and civil strife. It then moves into the realm of interstate politics, examining the ways that resource wealth shapes the foreign relations of resource exporters and major importers, principally the United States and China. The last third of the class investigates both domestic and multilateral attempts to address the resource curse through policy interventions, including civil society-led good governance initiatives like the Kimberley Process and the Extractive Industries Transparency Initiative. This course presumes no deep knowledge of economics but will be of interest to students across the realms of security and development.

INTS 4654 Understanding Diplomacy in Peace and War (4 Credits)
The role of the US in the world has changed greatly in the past half-century. The purpose of this course is to examine how the practice of that change has been both informed by, and informs the scholarly political science literature. This course draws on several broad themes in international relations - democratic peace, balance of power, civil-military relations, war and its termination-and relates them to experiences in the practice of diplomacy worldwide.

INTS 4655 Emerging Powers: Development in Brazil, India and Beyond (4 Credits)
This course deals with two emerging powers, Brazil and India. We trace the political economy of both countries over time, and spend particular time exploring their historical trajectory, current emergence, challenges they face, and the significance of emerging powers for the international political economy. The course is organized around an understanding of their insertion into the international economy, the implications of international insertion for domestic transformation, and the politics of incorporating newly mobilized domestic social and political actors, especially as this plays out in existing political institutions. Students help define some areas of concentration for the course by identifying policy areas in which concentrated research will occur. This course takes an interdisciplinary approach by drawing on political science, economics, and sociology, and we are concerned to understand the potential for emerging powers to alter international relations, as well as the implications of different strategies of international insertion for domestic social sectors, especially those that have traditionally been excluded.
INTS 4665 Technology and War (4 Credits)
This course introduces graduate students to past, present, and future trends in warfare, focusing especially on the how technological advances affect the ways in which states engage in international conflict. The course begins by introducing students to a number of theories that help shed light on why technological developments occur and how they affect the conduct of war. Subsequent classes will then examine important technological developments and assess how each has impacted the use of force over time. Topics include the invention of gunpowder and the use of machine guns, the development of nuclear weapons, the use of unmanned technologies on the battlefield, and the growing importance of the cyber domain to future inter-state conflict.

INTS 4670 Gender, Security and Human Rights (4 Credits)
This course examines the gendered dimensions of security and human rights, with a particular focus on periods of violence and insecurity. Gender equality has been at the heart of human rights and development efforts over the past half-century. Legal and normative instruments have been created to address the ongoing marginalization of women and girls around the world, including the 1979 Convention on the Elimination of Discrimination Against Women (CEDAW) and the 1995 Beijing Platform of Action. More recently there has been increasing attention to the importance of “gendering” discussions of international security. For instance, UN Security Council Resolution 1325, passed in 2000, is widely seen as a landmark framework for ensuring women’s inclusion in the post-war peace process.

INTS 4671 Climate, Science, and Society (4 Credits)
This course examines the role of the natural and social sciences in the climate change issue. Climate change is a complex international problem that challenges scientific and policy analysis. Its effects will be far into the future, are globally widespread, and impact many aspects of society and ecosystems. Many of the costs of climate change policies will be borne in the short term, by countries and sectors that may not be the ones subject to the greatest impacts. There are also substantial uncertainties in the extent of future climate change, its consequences, and the effectiveness and cost of policy responses. All of these aspects of the climate issue make it ripe for political disagreement on how best to respond and for science to be used in various ways, from informing policymakers and the public to advancing political agendas.

INTS 4675 Advanced Topic: Defense and Security Policy Lab (4 Credits)
This is an advanced topics course centered on International Security students gaining, developing, and practicing their professional skills (specifically research and analytics, integration of creativity, academic material, and analysis, peer to peer leadership and coordination, project management and collaborative tools, and communications) via engagement with material/techniques associated with as well as the actual development and execution of a group based professional grade defense/security policy analysis. While the class will contain some traditional academic elements to provide all participants with an enhanced tool kit of skills and analytic options, the bulk of the class takes place through the development of the group defense/security policy analysis executed by 6 person student Project Teams that will be developed through an iterative process over the course and then presented to a group of defense and security professionals for their appraisal. Through this process, security students will be able to get a sense of how real world projects are developed and executed as well as the challenges that confront the production thereof.

INTS 4678 The Politics of Global Trade, Investment and Production: The Origins and Consequences of Open Border (4 Credits)
The last half century has seen national borders opened to the multiple flows now characterized as ‘globalization’ – the movement of traded goods, capital and people, all of which deserve attention. But if the financial crisis alerted the world to the consequences of free capital flows some years ago, the consensus on free trade and foreign direct investment outside of the developed economies is only now being questioned in national politics, most recently and notably in the 2016 US presidential campaign. In that campaign, both candidates questioned the wisdom of the mega-trade deals – the Trans-Pacific Partnership (TPP) and the Transatlantic Trade and Investment Partnership (TTIP) – and one of them promised reverse the tide of outward US company relocation. The loss by the Democrats of much support among voters in blue-collar states affected by deindustrialization has forced a rethinking of both political strategy and policy orientation. The renewed salience of trade politics invites a number of questions, first about how the world managed the politics of surrendering to a large extent trade protectionism from the 1970s onwards, and second, how countries and regions have managed to govern an increasingly open trading order, both in terms of regulating the flow of goods but also in dealing with the domestic consequences – including initially widespread opposition by organized interests and ongoing battles with labor organizations in particular. There is a third question that is central to understanding what has happened with trade, and that concerns the melding of trade as traditionally understood with the transnationalization of production, whereby older and new forms of foreign direct investment (FDI) have created an international web of supply chains within which the greater part of trade (so-called inter-trade) is now conducted.

INTS 4680 Introduction to Political Theory (4 Credits)
Political theory analyzes and interprets the foundations of political life and evaluates its principles, concepts and institutions. It is fundamentally concerned with the normative political relationships among human beings that revolve around the organization and basis of government. This course provides an introduction to Western political theory through key texts and thinkers that are essential reference points in the social science literature. The focus will be on the Enlightenment tradition and the approach will be geared toward understanding how the seminal texts and thinkers of this period have shaped—and continue to shape—our understanding of political ideas and norms. This course will also have a pragmatic component, where the books and ideas under consideration will be applied to contemporary international debates and issues. Please note that this course is geared toward students without a strong background in political theory. No previous knowledge is required or assumed. All that is needed is an open mind and willingness to work hard. Professor Nader Hashemi will be the course coordinator and guest lectures will be delivered by several Korbel faculty members. For more information about the study of political theory at the Josef Korbel School, go to: www.du.edu/korbel/politicaltheory/.

INTS 4700 United States Foreign Policy (4 Credits)
An intermediate course on issues and perspectives for evaluating American foreign policy. Topics discussed include theories of foreign policy; historical epochs in Superpower relations: the Cold War, Dente, and confrontation; America’s role in the post-Cold War; war, peace, and trade in relation to U.S foreign policy planning and assessment.
INTS 4701 US National Security Policy (4 Credits)
An intermediate course which examines the post-war history of U.S. policy and America's response to the post-Cold War environment. Current issues include alternative strategies in nuclear deterrence and arms control; and security policy toward the Third World, Europe and the Atlantic Alliance, and Japan. Prerequisite: INTS 4702.

INTS 4702 Major Issues in International Security Policy (4 Credits)
This course focuses on contemporary challenges to global security. It seeks to familiarize students with the nature of these challenges and analytical tools with which to make sense of (and consider potential responses to) them. In the context of thinking about general issues, students learn about prominent individual instances (or "cases") of problems, think about problems through different theoretical lenses, and consider both logic and empirical evidence in evaluating different arguments. Beyond the substantive focus, the course also encourages students to develop analytical skills and their ability to communicate their analyses effectively.

INTS 4703 Security & Strategy (4 Credits)
This course will focus on the array of factors, options, and realities associated with the creation and execution of Strategy in order to achieve security objectives. The course begins with and centers on the classic works, concepts, and thinkers associated with strategy and then seeks to apply the foundational ideas to a range of current security challenges.

INTS 4704 Globalization and Security (4 Credits)
Course uses historical approaches to evaluate connections between economics and security and how views on security have been shaped.

INTS 4706 Topics in Int'l Studies (1-4 Credits)
INTS 4708 Topics in International Studies (1-4 Credits)
INTS 4709 Topics in International Studies (1-4 Credits)
INTS 4710 Topics in International Studies (1-4 Credits)
INTS 4711 Topics in International Studies (1-4 Credits)

INTS 4715 Problems and Challenges of Democratization in Contemporary Democracies (4 Credits)
This is a course in the field of comparative democratization studies. The class covers political science perspective topics such as the transition to democracy, consolidation of democracies, how and why democracy has spread around the world and the debates on the virtues and perils of democracy and on the nature and quality of the resulting representative democracies. The class focuses on the major explanatory factors for democratization: the case study/actor-centric approach, the statistical/structure-centric approach, and the region-centric approach. Additionally, the class studies many of aspects that might influence the process of democratization such as: institutional design and institutional functioning, political culture, democratic support and the structure of the party system. The geographical focus is global, due to the comparative nature of the theoretical discussion, but it will be mostly focused upon the Southern, Eastern European, and Latin American cases and the time frame is concentrated to the so-called "Third Wave of Democratization" that it started with the Greek and Portuguese transition during the mid-1970s.

INTS 4720 Capital Markets in Africa (4 Credits)
Capital markets – the buying and selling of equity and debt – are vital to the functioning of an economy. Using a comparatives study of capital markets in America and Africa, we will explore how they work, and how inefficiencies and structural challenges can inhibit private investment and access to capital among middle and lower classes in emerging economies generally. The tools in this course will also allow students to assess the efficiency of capital markets in emerging economies throughout the world. The course comprises five modules: 1) Banking and microfinance; 2) Mortgage and housing finance; 3) Private equity (including venture capital); 4) Stock markets; 5) Mobile money. For each module, we will begin with a study of how the industry functions in the United States, which is widely regarded to have the most efficient capital markets. We will then compare the US model to markets in Africa, examining the structural and practical limitations that impede those markets in sub-Saharan Africa (and, by extension, other emerging markets). The course will not attempt a comprehensive analysis of specific African countries, although examples will be drawn from specific markets. Instead, we will focus on many of the structural challenges to the development of mature capital markets in sub-Saharan African countries (mostly excluding South Africa). We will explore questions such as, Can microfinance be profitable? Why isn’t housing finance widely available? What types of “mobile money” systems are developing in Africa, and what are their business models? Why aren’t there more IPOs in Africa? Class participation is important, as the subject matter will range beyond the readings.

INTS 4723 Citizens in Representative Democracies and Comparative Political Behavior (4 Credits)
Citizens’ behavior and attitudes are fundamental for understanding the nature of the relationship between citizens and the state, and for assessing the QUALITY OF representative contemporary democracies and the nature of modern citizenship. This course focuses on the core aspects of citizens’ behavior and their core political attitudes. First, departing from a classification of the different modes of political participation, the class discusses some of the most important aspects that might influence the individual act of participating. Second, departing from the classic models of voting behavior, the class discusses how citizens make up their mind when they vote and the theoretical implications of that process. Third, departing from Easton's and Almond and Verba’s seminal works, this course studies the key dimensions of political support and political attitudes and the relationship among them. This class deals extensively with key concepts such as democratic support, political disaffection, political disengagement, political discontent, and social capital. The study of the factors influencing the different levels and evolution of these attitudes across countries are also covered. This course and its materials refer to studies using survey data and survey indicators, so some basic knowledge of statistics is recommended, although it is not a must.
INTS 4730 Introduction to Homeland Security (4 Credits)
This course will examine the post-1945 history of United states efforts at homeland security, and include an overview of other national efforts (e.g., by the Soviet Union, Switzerland, and Israel.) It will then turn to identifying and analyzing the spectrum of issues associated with U.S. homeland security, in the context of evaluating the United States post-9/11 response to date. Those issues include: framing homeland security, prevention, response and recovery overview, foreign actors and issues, domestic actors/issues, problems of intelligence, terrorism vs. violent crime, public expectations, role of the media, funding and resources, and how to address broad spectrum threats.

INTS 4731 Homeland Defense: Prevention & Mitigation (4 Credits)
This course will examine the following issues: political leadership, foreign and domestic intelligence organization and functions, role of intelligence, principles of indications and warning, legal/civil rights issues: balancing human rights and security, law enforcement, Public health, and the role of various U.S. federal agencies: Department of Energy, Environmental Protection Agency, the INS, border security among others, plus the role of first responders in prevention/detection, and establishing indicators and reporting procedures.

INTS 4732 Introduction to Strategic Cyber Threats and Policy (4 Credits)
At its core, cyber is a suite of complex, interrelated technologies affiliated with computers, communications networks, and digitalization. Like any powerful technology, cyber provides the capabilities for a range of political actors across a range of levels of analysis to increase their capabilities to achieve both benevolent and malignant goals (and which of these any particular effort is often rests in the eyes of the beholder). Yet, the massive scale of the utilization, both current and future, of cyber technologies and the speed, range, and impact that these technologies potentially generate also make cyber a realm, an area of practice, action, and, thus, policy. The challenge with the rise of such a sweeping development in national and international security is understanding the nature of the threat, how unique the characteristics of the threat are versus how much they resemble previous security challenges, how much existing security mechanisms and policies are applicable versus the need for the development of novel solutions and what are the trade-offs that have to be made, and thus will come to define, cyber security policy at the national and international level. This course will engage all four of these basic questions in survey fashion, setting students up for follow-on academic or professional engagement with the realities of strategic level cyber security issues.

INTS 4733 Homeland Sec & Civil Soc (4 Credits)
Examines host of potential societal consequences of homeland security efforts.

INTS 4734 Defense and Security Methods (4 Credits)
The purpose of this overview course in defense analysis methods is to provide students with the foundations to successfully conduct research and analysis in defense-related topics, whether within the national security community, in academia, or as a contractor. This course should also help prepare the student to complete his or her Master’s thesis. The course aims to improve the student’s ability to comprehend and assess the graduate-level readings assigned in other courses, and to write research papers and complete other written assignments for those courses. The course is intended to provide take-away skills that can be applied to professional activities after graduation: in particular, students should have greater confidence in their abilities to locate, read, commission, design, or conduct relevant research, and to draft research proposals. This class focuses on methods employed in both policy analysis and the social sciences. The emphasis is on qualitative rather than quantitative methods.

INTS 4735 Strategic Intelligence Data Collection and Analysis (4 Credits)
Course focuses on analytical prod. of strategic intell relative to inf'l security issues.

INTS 4736 Current Issues in Strategic Intelligence (4 Credits)
Advanced seminar which investigates current issues relative to strategic intell within international studies.

INTS 4737 Defense and Security Quantitative Analysis (4 Credits)
This course is the follow-on to INTS 4735 Defense and Security Methods and is designed to engage students in a professional conversation about the applicability of quantitative analysis and big data based analytics for the execution of defense and security analysis/research. Continuing the development of the students' individual research design proposal, but now introducing an array of quantitative ideas, options, and methods, this course begins with the foundational realities of coding and descriptive statistics before introducing students to bivariate and multivariate analysis, index/scale construction, and hypothesis testing techniques. In addition, the course continues to develop the students ability to engage with and understand real world defense and security research, in this case particularly quantitative analysis. Prerequisites: INTS 4735.

INTS 4738 International Weapons Proliferation (4 Credits)
This course explores the worldwide proliferation of weapons and military hardware. Special attention is given to weapons of mass destruction including fundamental principles of weapons development and deployment; unique characteristics and effects of nuclear, biological, and chemical weapons; and delivery systems. Capabilities and strategies to counter this international problem are developed.

INTS 4739 Gender and International Security (4 Credits)
In this course we will pay particular attention to the gendered dimensions of human security as they relate to war and political violence. We will talk about how security is a distinct concept from human rights or human development, but will also discuss how all are necessary and related. We will explore feminist approaches to international security and critically engage concepts like militarization, peacekeeping, and intervention. We will emphasize the importance of looking at structural cases of insecurity and at the linkages between various forms of insecurity. We will pay particular attention to the agency of local actors and to the strategies employed by women and women's movements to oppose war, secure peace, and promote human security. We will cover landmark international resolutions—such as R2P and UN Resolution 1325—in order to breakdown the impact these resolutions have had on gendered power dynamics in conflict zones, as well as to identify areas where more attention is needed.
INTS 4746 Gender and Human Rights (4 Credits)
This course examines the gendered dimensions of human rights, with a particular focus on human rights during (and after) periods of violence and insecurity. Gender equality has been at the heart of human rights and development efforts over the past half-century. Legal and normative instruments have been created to address the ongoing marginalization of women and girls around the world, including the 1979 Convention on the Elimination of Discrimination Against Women (CEDAW), the 1995 Beijing Platform of Action, and the 2000 UN Security Council Resolution 1325. Indeed, measures to prevent discrimination based on sex have been ingrained in nearly every human rights treaty since the United Nations Charter in 1945. Yet, gender-based rights violations continue to occur around the globe with alarming pervasiveness and frequency. Drawing from critical gender analyses and postcolonial feminist thinking, this class will introduce you to the concept of gendered rights, challenge you to think about intersectionality as a way of considering “rights,” and introduce you to many of the contemporary human rights crises unfolding around the world today. Critically, this class takes an inclusive view of “gender,” examining the human rights of women, men, queer, trans, or gender non-conforming people.

INTS 4750 The Policy Making Process (4 Credits)
Governments make public policies through a complex process, which varies in its details from country to country and even from issue to issue within the same country. In this course we study various parts of those processes and some of the inputs into them. In addition, we play close attention to problem framing or problem definition in those policy processes. Within all these disparate policy processes political actors must have some notion of what problem they are trying to solve and what constitutes the set of feasible solutions to those problems. These ideas about problems and feasible solutions are not given exogenously, are not some fact of nature, but instead arise from complicated interactions among actors and institutions in the policy process. The quest we ask throughout the course is how policy problems and solutions could be framed differently, how we can learn to look outside the conceptual box that partisans to policy debates try to draw for us. Students write a series of papers during the course following a policy issue of their choice through the policy process.

INTS 4751 European Foreign and Defense Policy (4 Credits)
The focus of this course is on foreign and defense policies of key states and international organizations in modern Europe, from the Atlantic to the Urals. After introducing Europe as a cultural, political, and geographical construct, we focus on the North Atlantic Treaty Organization and the European Union before turning to a comparative analysis of six leading European states. Security in an increasingly globalized world deals not only with defense issues, but also with economics, human rights, and questions of identity. We focus on Germany, France, the United Kingdom, Italy, Russia, and Turkey, underscoring their bilateral and multilateral associations with other European states, the United States, and the European Union, NATO, OSCE, and Council of Europe. We conclude with considerations of what “Europe” really means, and what the future holds for this vital content.

INTS 4753 Intelligence and National Security (4 Credits)
Focuses on the craft of U.S. Intelligence and its role in the making and implementation of national security policy.

INTS 4760 Russian Foreign and Defense Policy (4 Credits)
Course explores Russian foreign and defense policy from Vladimir Lenin to Vladimir Putin - heavy focus on security policy.

INTS 4767 Cultures of Capitalism (4 Credits)
This seminar lays the theoretical foundations for a cultural critique of capitalism. With an eye towards colonialism, modernity, and globalization, readings are devoted primarily to different schools of thought parsing out capital as a social relationship, object of value, and form of mediation. The purpose of this class is to establish temporal and spatial commensurability across tendencies and discontinuities in capitalism by i) locating the phenomenological, ontological, and epistemological conditions of possibility for the reproduction of value and ii) asserting history, experience, and embodied praxis as productive features in the imagined abstraction of economic life and market discourse. More than an attempt to historicize the contemporary moment of deregulation, precariousness, or flexible accumulation, the course is designed primarily to unveil concurrent theories of value and the work of abstraction and reification, morality, and power, labor and materiality foregrounding the processual logics of capitalism. To do so, this course explores the theoretical stakes of production, circulation, and consumption occurring in time-space relations of commodity exchange, markets, and global finance in late capitalism. How to account for the increasing disconnect between the “real” economy and the “fictitious” value of virtual markets, financial derivatives, and future trading? How to make sense of the work of mediation - or perceived gaps therein - between consumers and producers, the labor of abstraction and the concrete reification of economic objects? Registration by departmental approval only; restricted to students participating in the Geneva travel program.

INTS 4768 Introduction to a Critique of Market Society and its Solidarity Alternatives (4 Credits)
This course is taught in French. Le séminaire propose d’introduire ou de conforter une vision "indignée" de l’hégémonie des marchés en s’appuyant principalement sur la lecture socialiste et chrétienne de l’économie par Karl Polanyi et ses critiques en particulier d’Adam Smith et de Karl Marx. Ceci se réfère surtout au concept de marchandise fictive (appliqué aux ressources naturelles comme au travail humain et à la monnaie), de richesse commune partagée et d’interdépendance économique (appliquée aux mécanismes complémentaires et antagoniques de concurrence, de redistribution, de solidarité et de partage). Une large part de cette réflexion interdisciplinaire doit ressortir des propres expériences des étudiant(e)s et de leurs recherches. Elles doivent aussi permettre de comprendre l’élaboration des alternatives, leurs potentialités et leurs limites. La situation de Genève, capitale des spéculations sur les matières premières sera notamment interpellée. Registration by departmental approval only; restricted to students participating in the Geneva travel program.
INTS 4770 The Politics and Economics of International Energy (4 Credits)
Although it is becoming increasingly evident that the world does not face an imminent shortage in the availability of fossil fuels, access to energy resources and security of energy supply remain important preoccupations for governments and companies alike. Utilization of fossil energy resources will be increasingly constrained by environmental considerations and the threat of global warming. Energy will remain a key concern in international relations for the coming decades and will influence the perception of national interest and the pattern of international exchanges and interdependence. The course aims at providing students with the critical knowledge and skills to avoid superficial generalizations and stereotypes - which unfortunately remain all too common. Requires departmental approval; registration is restricted to students participating in the Geneva travel program.

INTS 4771 Trade and Development (4 Credits)
Development, trade and their interlinkages are among the most controversial topics of today. Economics has much to say concerning these issues, and constitutes a powerful tool in terms of debunking commonly held misperceptions. This course considers a number of topics associated with the links between international trade and development. A particular emphasis is placed on the consequences of trade openness on outcomes in developing countries, i.e. on inequalities, growth and poverty, institutions and financial development, the impact of export instability and countries’ specialization, terms of trade, financial crises, trade and environment. The course is applied-oriented: after reviewing basic theories associated with each topic, each lecture involves presentations of recent empirical papers. By the end of the course, it is hoped that participants will be able to intelligently read and critically assess policy documents on the topics covered that are commonly produced by international institutions. Requires departmental approval; registration is restricted to students participating in the Geneva travel program.

INTS 4775 Droit diplomatique international (4 Credits)
Ce course vise à combler une lacune, l'enseignement du droit diplomatique ne faisant généralement l'objet que de développements à titre incident, ce malgré l'importance séculaire de ce domaine du droit international. AXé sur l'évolution de la pratique étatique des relations diplomatiques (y compris les relations avec les organisations internationales) et la jurisprudence pertinente de la CIJ, le cours se propose d'analyser les grands thèmes du droit diplomatique, tels que le droit de légitimation, la création et l'extinction des relations diplomatiques, les fonctions et droits/obligations liés à la mission diplomatique, le contenu et les limites des immunités des personnes, biens et locaux diplomatiques, ou encore les mécanismes sanctionnant les violations du droit diplomatiques. Il fera finalement une place à la pratique récente relative aux immunités des Chefs d'État et Ministres des affaires étrangères. Registration by departmental approval only; restricted to students participating in the Geneva travel program. Students must be fluent in French; course is taught in French only.

INTS 4776 Financial Crises (4 Credits)
This is a seminar designed to go over the literature on the sources, channels, characteristics and impacts of financial crises. The sessions are devoted to the study of papers, some older fundamental contributions and some very recent early analyses inspired by the crises that started in 2007 and is not yet over. The seminar is primarily designed for second-year Master and PhD students. Students from other programmes and departments may attend if they have a strong background in economics. Registration by departmental approval only; restricted to students participating in the Geneva travel program.

INTS 4777 Governing Global Threats: Expert and Legal Regimes (4 Credits)
This course examines major threats to human security (from climate change to nuclear proliferation and terrorism, and the global financial crises), and how these threats can be prevented by legal, political and social mechanisms. Theoretically, this course focuses on various socio-historical approaches to law and expertise in transnational settings. It focuses specifically on the role that legal regimes (either made of treaty-based rules or soft-law regulations articulated by experts) play in contemporary modes of global governance, which go beyond the forms of state authority that are traditionally called upon to interpret and enforce these rules. We will survey different disciplinary approaches to the topic and to illustrate their approach by research.

INTS 4778 Rise and Fall of the "Third World (4 Credits)
This seminar explores ideas and movements for colonial unity and solidarity since the late-19th Century and the programs for solidarity they inspired amongst nations emerging from decolonization. Where and who did these ideas originate? How effectively did they translate into political programs? How were such ideas and programs deployed in changing international contexts? What wider influences did they exert? In what ways did the international system deal with these ideas and programs? What prospects exist for such solidarities in the contemporary world? These and similar questions will be explored in this seminar.

INTS 4780 Terror in History: Challenges and Responses (4 Credits)
Terror/ism has been a feature of political relations for more than 2000 years and has a history that reaches back far beyond 9/11. This seminar will look at the historical evolution of terrorism and antiterrorism as well as the different stages they have gone through since antiquity. The main focus, however, will be the past 150 years, with the emergence of what David C. Rapoport calls "modern terror." The course will 1) highlight the difficulties of defining the phenomenon; 2) explore the different experiences with and debates about terror--anarchist/social-revolutionary, ethnic, religious, "lone wolf," state (-sponsored) terror—in various regions and countries since the 1880's (such as Russia, Italy, Germany, the US, Spain, Ireland, Israel/Palestine, Namibia, Algeria, etc.); and 3) address how the countries concerned and the international community at large dealt with the challenges deriving from terrorism (e.g., at the League of Nations and the UN).
INTS 4782 Law without the State (4 Credits)
This course discusses situations, theoretical and empirical, in which law is made primarily outside state power. It reviews instances of private ordering and governance that enjoy a relatively important autonomy from state law. The absence of the state as a possible cause of ethical issues will be entertained. Other parts of the course will proceed at a higher degree of abstraction, asking for instance whether the orderings identified properly deserve to be called law. It will thereby delve into preliminary questions, too often neglected, that influence how the debate is framed on the whereabouts of non-state law. Why does 'being law' matter? How do definitions of what law is matter? What makes a definition of law of good definition? Can something be relatively law but not fully? Who decides on what law is and for whom such pronouncements are authoritative?

INTS 4783 Economics and Development (4 Credits)
The course provides a broad overview of the sort of topics that development economists work on, both on the micro and on the macro side. On the macro side, we will cover fundamental topics such as household consumption, insurance, credit, land markets, and migration.

INTS 4784 Foreign Policy of Major Powers (4 Credits)
This course is designed to review and analyze leading puzzles of foreign policy, based on the substance of foreign policies of major countries in the present time and the recent past. The objective is to develop analytical skills to use when confronting new foreign policy puzzles. Much emphasis will be given in this course to the relevance of foreign policy scholarship to understanding real-world, contemporary world affairs. It is important that students make themselves aware of what is happening in the world.

INTS 4785 Modern China: Reform and Revolution (4 Credits)
This course introduces the modern Chinese history since 1840s. The focus is on the historical, cultural, political, and economic interactions between modern Chinese state and its people and between China and the outside world. The modern fate of China has been alternating between revolutions and reforms, internal wars and external conflict had been the norm rather than exception until recent decades. It examines the features of modern Chinese political system, economy and social and cultural identities. It also traces the roots of recent reforms in China that have transformed the country in a fundamental way. The relationships between state and society, between politics and economy and between China and foreign powers will be discussed in detail.

INTS 4786 Planning and Assessment in Complex Environments (4 Credits)
The primary mission of this course is to provide participating students grounding in the planning methodologies, approaches, and expectations used within the US government in both military and civilian agencies as well as increasingly in the security related private and non-profit sectors. The starting point for this effort is Operational Art & Design and the military’s Joint Operational Planning Process (JOPP) as well as related literature. Military planning serves as the starting point both because it is the most mature and sophisticated government planning methodology and because most other US government planning practices are direct, contextually appropriate derivatives of DoD planning mechanics.

INTS 4787 Civil-Military Practices in Humanitarian Responses (4 Credits)
Changing U.S. national security priorities following 9/11, including updated Department of Defense doctrine, have led to U.S. military actors prioritizing humanitarian assistance as a central component of theater security cooperation arrangements. This trend includes not only considerations of protection of civilians during military operations but also planning for natural disaster response and steady state engagement to build the capacities of host nations to address crises, including natural and man-made disasters. Through readings, class discussions, group work and individual assignments, students in this course will gain a better understanding of the issues and roles of civilian and military actors in the humanitarian space, with a specific focus on how legal and policy guidance impacts the decision to utilize U.S. military forces in disaster response situations. While this course will focus specifically on how the U.S. government approaches humanitarian activities and the role of the U.S. Department of Defense assets, it will locate this discussion within the broader about the appropriate use of Military and Civil and Defense Assets in international humanitarian community.

INTS 4788 To Save and Defend: The History of Politics of Humanitarian and Security Organizations (4 Credits)
This interdisciplinary seminar looks at the policies and politics of humanitarian and security organizations. We will critically explore and contrast the concepts of "protection," "save," and "defend." We will focus on the perspective of those who save and defend as well as on those who are supposed to be saved and defended. Attention will be given to theories, practices, geographies, organizational cultures and underpinning ideologies of saving and defending.

INTS 4789 Violence, Memory, Cinema: Comparative Perspectives on Latin America & the Middle East (4 Credits)
This seminar aims at investigating the role of cinema (documentaries and fiction) in (re) shaping the collective memories of societies living in a context of armed conflict, post-civil war or political transitions from authoritarian rule. We will focus in particular on the role of the different generations of film directors as social actors in these processes; on the effects of censorship (the State-sponsored one, the forms of self-censorship and its indirect forms through distribution and production); and on the role of film festivals as arenas of power and of circulation of ideas. The first part of the seminar will develop problematically the relations between memory and history through present debates related to the visual arts and the politics of memorialization in Latin America and the Middle East. The seminar topic being at the crossroad of several disciplines, we will explore different anthropological, political, and historical paradigms, including the contributions of film studies. In the second part of the seminar we will focus on the specific topic of 'exiles and refugees', their representation through cinema and the contribution of fictions and documentaries in forging national identity and in keeping the memory of those who left and came back or for whom the return has become not an option anymore. In parallel to the main seminar, a series of 3-4 workshops will be organized for watching movies, with the presence of external lecturers. Finally, the seminar is conceived in the larger framework of the contribution of arts to reconciliation and peace-building, an emerging field of academic interest and policy investment.
INTS 4790 International Law and Development (4 Credits)
The course aims at providing a systematic overview of the main issues related to sustainable development from the standpoint of public international law. It strikes a balance between theoretical and practical questions, focusing on primary sources and international decisions. After a concise discussion of the basic principles and notions of the international legal order, the course deals with the evolution of development law from the United Nations resolutions on the New International Economic Order to the Monterrey Consensus and its follow-up. Particular attention will be paid to the attempt to conciliate economic growth with the protection of the environment and human rights. The course is then completed with the examination of (a) the activities of the World Bank Group and the International Monetary Fund in the field of development; (b) the participation of developing countries in international trade; and (c) the promotion of foreign investment as a vehicle for economic growth and development.

INTS 4793 Development Economics (4 Credits)
The course covers major issues in development economics from both the macro and micro perspectives. Topics where research is active will be covered. The focus is on acquiring the necessary theoretical and empirical skills to understand the challenges related to the socio and economic transformation in developing countries.

INTS 4794 Inequality in Latin America and the Caribbean (4 Credits)
This course will examine the historical roots of inequality in Latin America and the Caribbean. It begins by introducing students to the concept of inequality and the social construction of race, ethnicity, gender, sexuality, and class. It then explores how these structures have been shaped by a variety of forces including Spanish and Portuguese colonization, labour systems, cultural practices, and religion. We will also explore how various actors have attempted to challenge this inequality at different points in time through everyday resistance and revolutionary, populist, feminist, black nationalist, and liberation theology movements. This course will approach these issues using a mix of historical and anthropological case studies from across the region that allow us to consider not only how inequality is created, maintained, and challenged on a large scale, but also how it has been experienced in the day to day life of Latin American and Caribbean people.

INTS 4802 Foundational Ideas in Social Science: Marx and Weber (4 Credits)
Marx’s is the most striking and complex theory of revolution change. It has inspired millions of workers, peasants, soldiers, students and intellectuals in three large international movements (the International Workingmen’s Association, the Second International, the Third International). “Capital” is perhaps the most striking depiction of how factories and capitalist society operate, from the point of view of workers, of any modern economic theory. It is a theory which novelly explains the tensions in the experience of most non-University educated people between their work experience and the current Washington “consensus” about free markets and democracy. It has motivated and empowered striking democratic movements, often across national boundaries, of the oppressed against the privileged. Where successful, however, Marxian movements both brought about significant, common good oriented improvements and failed to withstand external and internal attacks or resolve basic problems in radicals’ vision of a new society. Further, Marx’s vision has often been interpreted as, except in the immediate unfolding of the revolutions themselves, having little to do with democracy. In radical movements as well as in capitalist societies and academia, Marx has been fiercely attacked. For much of the Cold War, not having read Marx permitted one to expatriate on what Marx’s views are; reading Marx was, until the late 1970s and early 1980s a disqualification even in teaching, let alone in the media. Marx’s views are often misrepresented, dismissed without investigation as “obviously wrong.” This course provides an opportunity to read the first volume of “Capital” and some of Marx’s other main works and test them, in whatever depth desired, against Max Weber, the dominant theorist of American sociology and political science.

INTS 4804 Realism and Democracy (4 Credits)
Course answers questions such as: Can democracy check international cruelty? Why, according to Kant, Doyle, and Rawls, are democracies unlikely to go to war with other democracies? We discuss democratic individuality and Vietnam, democracy, and Realism as well.

INTS 4820 Democracy and War (4 Credits)
This course explores Socrates’ speech at his trial and decision to go to his death as, surprisingly, initiating two central features of modern democratic theory. First, Socrates is often depicted as simply hostile to the many, looking down on Athenian democracy. But what he in fact looks down on is tyrannical mob rule, the “democracy” of a particular interest arbitrarily enforced (what we might call a demented Joe McCarthy-kind of democracy). In contrast, Socrates also incarnates the idea of asking questions in a democracy, that is, dissent (prefiguring what is sometimes called today deliberative democracy). That makes a democracy capable of realizing, sometimes, a common good. Second, Socrates provides a paradigm for modern civil disobedience or satyagraha in Gandhi - we read Gandhi’s translation of Plato’s Apology - and Martin Luther King’s letter from the Birmingham City Jail. Nonviolent civil disobedience is necessary in a modern democracy because party-competition focuses mostly on personality issues and not on fundamental injustices. Further, this kind of protest promises major change even in dictatorships (consider Erica Chenoweth and Maria Stephan, Why Civil Resistance Works). Thus, this emphasis is a novel interpretation of Plato as opposed to, in scholarship and politics, Plato’s supposed link to authoritarian “commander-in-chief” power (Heidegger, Leo Strauss and William Kristol for example) which we also contrast in this course. The course explores the subtlety of these dialogues - the question of what Plato intended to teach his long-standing students like Aristotle who studied with him for 20 years - but leave the main points of Gandhi’s and King’s interpretation intact. Third, the course explores Thucydides, History of the Peloponnesian War and Plato’s response to it in the Republic in terms of modern critiques of Empire building and the “unhinged” wars by American democracy (we look at W. Robert Connors’s elegant break with previous understandings of Thucydides during Viet Nam and John Mearsheimer’s striking criticisms of post-Cold War American policy, echoing Obama’s 2013 speech at the National Defense University, in “America Unhinged.” Thucydides is a far deeper account of imperial expansion and the corruption of and threat to democracy at home than modern realist and neo-realist gestures at him. Neo-realists methodologically attempt to separate global politics from its domestic consequences as supposedly different levels of analysis; this interplay is the heart of Thucydides’ argument and deepest insight into the meaning of war and democracy.

INTS 4822 Contemporary Political Theory (4 Credits)
An examination of current 21st century political theory and how the events of the 20th century helped mold these ideas/concepts.
INTS 4851 Theories of Non-Violence (4 Credits)
Can a state be non-violent? Course explores topics such as the distinction between power and violence; whether nonviolent politics is possible; the distinction between an ethic of responsibility and an ethic of intention; is capitalism consistent with democracy? This seminar is interactive and class participation is required.

INTS 4854 Rising China and Challenges to the Global Order (4 Credits)
This course is for Korbel in DC program participants only. This seminar focuses on contemporary challenges to the global order posed by China’s growing economic power. The course charts China’s reform and opening, its development and integration into the global economy, and the challenges created for Western economic and security institutions and alliances. Specific topic areas covered include China’s non-market status and trade conflict, competition for technological leadership, ICT governance and standard setting, the Belt and Road Initiative, and the implications of China’s South China Sea activity. The course will combine extensive background readings, lectures, and discussion. Students will benefit from frequent guest lectures and discussions with experts from the Center for Strategic and International Studies.

INTS 4856 Global Sustainability and Development (4 Credits)
This course is for Korbel in DC participants only. This course considers the interaction of environmental, economics, and energy issues on global ecological systems. It offers an overview of relevant international legal frameworks and national governance systems, the state of major ecosystems – forests and species habitats; wetlands, oceans and rivers, and the atmosphere and selected policy issues related to each. Emphasis is less on “what” to think than “how” to think about and formulate policy responses to complex, multidimensional issues.

INTS 4875 Human Rights and Foreign Policy (4 Credits)
Global human rights issues and how those issues help mold foreign policy decisions.

INTS 4890 Revolutions and State Building (4 Credits)
Marx’s is the most striking and complex theory of revolutionary change. It has inspired millions of workers, peasants, soldiers, students and intellectuals in three large international movements (the International Workingmen’s Association, the Second International, the Third International). "Capital" is perhaps the most striking depiction of how factories and capitalist society operate, from the point of view of workers, of any modern economic theory. It is a theory which novelly explains the tensions in the experience of most non-University educated people between their work experience and the current Washington "consensus" about free markets and democracy. It has motivated and empowered striking democratic movements, often across national boundaries, of the oppressed against the privileged. Where successful, however, Marxian movements both brought about significant, common good oriented improvements and failed to withstand external and internal attacks or resolve basic problems in radicals' vision of a new society. Further, Marx’s vision has often been interpreted as, except in the immediate unfolding of the revolutions themselves, having little to do with democracy. In radical movements as well as in capitalist societies and academia, Marx has been fiercely attacked. For much of the Cold War, not having read Marx permitted one to expatiate on what Marx’s views are; reading Marx was, until the late 1970s and early 1980s a disqualification even in teaching, let alone in the media. Marx’s views are often misrepresented, dismissed without investigation as "obviously wrong." This course provides an opportunity to read the first volume of "Capital" and some of Marx’s other main works and test them, in whatever depth desired, against Max Weber, the dominant theorist of American sociology and political science.

INTS 4900 International Politics (4 Credits)
Topics on discussion include: levels of analysis; realism; neo-realist structuralism; international society and the English school; international anarchy; process variables and international institutions; international security institutions; rationalism, constructivism, and the purposes of theory; norms and ideas; gender and identity; and postmodernism and post-structuralism.

INTS 4903 Social Construction of International Society (4 Credits)
Examines recent theoretical work in the field of international relations that treats international society and its practices as social constructs.

INTS 4905 War and Peace (4 Credits)
An intermediate course which examines the historical relationship of war to politics, such as the military profession, military organizations, economics of defense planning, limited use of force, demobilization, war reconstruction, military rule, and civilian control. Current world trends toward democratization focus attention on the issue of creating a democratic army for a democratic state. Readings cover western industrialized, communist, post-communist, and 3rd world countries.

INTS 4906 Classics of International Theory (4 Credits)
Professor will choose various books by classic political theorists for students to read and discuss in class.

INTS 4907 International Terrorism (4 Credits)
This course will examine the literature on international terrorism both before and after 9/11. It will include an overview of the origins, history, goals, strategies, and capabilities of significant terrorist groups (emphasizing Al Qaeda). It will also examine the history of United States and international efforts to combat terror, focusing on post 9/11 debates over grand strategy and tactics (e.g., the relationship between offense and defense, active vs. passive defenses, intelligence reform, multilateralism vs. unilateralism, the relationship between "rogue states" and terror, etc.).
INTS 4909 Climate Justice (4 Credits)
The science of climate change, while continuing to become more exact and nuanced, is clear – human behavior has caused the planet to warm unnaturally. Now that the science has been established the next question is how will it affect the ecosystem and, especially human habitation. As seems to be the norm, those most affected by climate change will be the poor, the disempowered, and native populations. The understanding and the possible solutions must be interdisciplinary – human rights, law, economics, development, gender and race equity, security, science – to name a few. The course will look at the history and philosophy of climate justice, which includes such disciplines as environmental justice and sustainability, move through an analysis via a number of different viewpoints, and conclude with a look into the future in terms of education and activism. Climate justice requires a sharp, critical look at systems and an understanding of the interconnectedness of science, ethics, and politics. Examples of this might include the rising of sea levels displacing very large numbers of people adding to the already impossible strain on refugee and IDP resettlement. Or the Brazilian economy’s almost sole reliance on hydro-electric power in face of the drying up of rivers and water basins. Or the role of the world’s religions and religious leaders in climate justice. One of the unique characteristics of this course will be the number of guest lecturers. It is incumbent on universities and colleges to take a multi-disciplinary approach to climate justice and lower the “silos” between academic units. To that end colleagues from DU and other institutions will bring their disciplines and insights to bear on the topic.

INTS 4912 Development in Africa: Challenges, Constraints and Strategies (4 Credits)
This course is for Korbel in DC participants only. As the Developed World falters over its financial difficulties, many eyes are turning to the third world for resources, markets and solutions. In a real sense, Africa is the “last frontier.” With this in mind, this seminar provides an overview of Africa and Development through the eyes of practitioners and scholars from the US and Africa who have devoted considerable effort to trying to affect development on the continent and speculating on what more it will take to make Africa prosperous. Beginning with an overview, the course proceeds through traditional development sectors (agriculture, health and education), newer perspectives and drivers (private sector, ICTs, democratization and China), and the three “C” barriers (corruption, conflict and climate change). Lively exchanges over the role of outsiders and the efficacy of aid as well as Africa’s growing role in the outside world, balance more traditional development perspectives.

INTS 4914 Statecraft and Smart Power in the Digital Era (4 Credits)
This course is for Korbel in DC participants only. This course examines new approaches to the practice of statecraft in an era of rapid global change. Globalization is upsetting traditional international order and institutions, and changing the pace and intensity of decision making. Nation-state governments, while still the primary actors, must adjust to new sub-national, regional and transnational forces and players in a far more complex global arena. Digital Communication is revolutionizing relationships and interaction in the global arena. More groups and the general public are involved or mobilized in public participation than ever before. Vastly more information flows ever more quickly. Partisanship rises with segmentation, threatening fragmentation in public life. The new era reflects the imbalances and strains of major demographic change, especially the impact of an expanding tech-savvy younger generation. A significant youth bulge in volatile developing nations fuels reform efforts, but also creates the potential for conflict arising from continuing injustice and unmet expectations Foreign policy institutions and decision makers here and abroad are increasingly subject to cross-pressures from competing domestic and transnational interests. In the U.S. the Inter-Agency must balance influential single-issue stakeholders and constituencies here and abroad. The course explores how the U.S. and other governments are responding to the new global challenges. Participants see to frame new “rules” of statecraft in the digital era.

INTS 4920 Conflict Resolution (4 Credits)
An introductory course which identifies the collective factors leading to successful reconciliation or agreeable compromises in conflicts; analyzes the role and influence of cultural norms, gender conditioning and different bargaining strategies on the resolution process; applies the practical fundamental of negotiation on particular problem-solving techniques.

INTS 4924 Democratization in the Middle East (4 Credits)
The promotion of democracy process and its implementation of democracy have emerged as a major goal for U.S. and world policy makers and have attracted the attention of many scholars. Democracy is now widely regarded as a political system that minimizes conflict, promotes sustainable development, and is a vital tool in the struggle against terrorism. However, the results of efforts to create democracies in various countries, including Iraq and Afghanistan are a clear illustration of the difficulties involved in making transitions to democracy. In this seminar, we shall focus on what is known about democratization, consider the nature and role of Islam, examine the state of democracy in key countries of the region, and consider the ways in which the U.S. and other external actors might strengthen democratic forces in the region.

INTS 4928 Torture (4 Credits)
This is a reading/seminar course. Students are asked to be well-prepared and contribute to the discussion. We explore mostly modern forms of torture. The use of torture has not abated in the last 100 years despite conventions, treaties and watchdog organizations. What has occurred is that torture has become "stealth", to use Professor Rejali’s term. These "stealth" techniques leave no mark and have been developed equally by democratic states and totalitarian regimes. It is also clear that the U.S. has engaged in state sponsored torture (see The Constitution Project bi-partisan report of April, 2013). An important question before us is if there is any place for torture in the 21st century and if torture is an effective means to gather intelligence. If the answer to both questions is "no," and torture violates the most basic ethical, moral, and legal norms of humanity, why does it persist?.

INTS 4931 International Organizations (4 Credits)
An intermediate course on approaches to the study of international organizations, including institutionalism, neofunctionalism, complex interdependence, international regimes, and epistemic communities. Case studies examining collective security and peacekeeping, human rights, Antarctica, and the environment are discussed.

INTS 4934 Intervention: Policies & Pract (4 Credits)
Procedures, policies and practices of international organizations and the roles they play in helping resolve internal issues and conflicts.
INTS 4935 International Humanitarian Law of Armed Conflict (4 Credits)
This course is a theoretical and practical introduction to international humanitarian law (IHL). IHL is known by many other names such as "humanitarian law," "law of conflict," and "laws of war." All these terms refer to the rules regarding the treatment of civilians and non-combatants in areas of armed conflict and the rules of engagement for soldiers and combatants. These "rules" are especially important to know if you eventually work for an IO or NGO that finds itself in areas of armed conflict. Cross listed with CPSY 4560.

INTS 4936 International Law and Human Rights (4 Credits)
An introductory course examining the concept of human rights, including political, economic, social, and cultural rights. International, regional and national institutions, norms and procedures to protect individual and group rights are discussed. Recommended prerequisite: INTS 4940.

INTS 4939 Genocide and the Human Condition (4 Credits)
The well known Holocaust scholar, Daniel Jonah Goldhagen has argued that genocide is worse than war and we look at the mass killings of the past one hundred years he is probably correct. This course not only examines genocide comparatively by studying the Holocaust and genocide in Rwanda, Cambodia other countries and regions of the world but focuses on the question of if it can be ended. Does the popular phrase "Never Again" have any meaning or will genocide continue and even escalate in the twenty first century.

INTS 4940 Introduction to Human Rights (4 Credits)
An introductory course focused around historical and theoretically relevant texts in human rights. First and second generation rights are emphasized. Early liberal, conservative, and socialist understandings of human rights are highlighted against their respective historical background.

INTS 4941 Human Rights and International Organizations (4 Credits)
An introductory course exploring the changing roles of international organizations in their efforts to protect and promote human rights. Examination of both the global and regional levels of human rights activities of international intergovernmental organizations are discussed. Recommended prerequisite: INTS 4940.

INTS 4951 Comparing International Societies (4 Credits)
Course explores variations in societies of states across time and place.

INTS 4954 Human Rights Research and Design (4 Credits)
The purpose of this course is to acquaint students with graduate level research and writing strategies that facilitate the composition of concise, articulate, and informative pieces of scholarly and policy-oriented work. We explore an array of research options and techniques and look critically at the ways in which different uses of language are constitutive of meaning and structure in written works. This is considered a "skills" course which is designed to allow students to explore in depth a sub-topic of interest within a broader topic in the field of Human Rights. The topic varies each term. The work completed by students is edited minimally, and published in the Human Rights and Human Welfare Digest, the Josef Korbel School's online human rights journal. This digest is intended to serve as a resource for policymakers, non-profit organizations, and human rights advocates, by presenting concise and reliable information that is both informative and accessible. In the first half of the class, we focus on building practical research strategies, including: determining the parameters of research; identifying and accessing appropriate sources of information; using bibliographic management software; and compiling an annotated bibliography. The second half emphasizes the development of writing techniques that culminate in the production of an analytical essay and annotated bibliography of publishable quality. Attention is paid to grammar, syntax, structure, stylistics, and appropriate language use.

INTS 4955 Human Rights Clinic I (0 Credits)
Students in the Human Trafficking Clinic will be asked to undertake a case study on a human rights violation and provide an advocacy report (roughly 5000 words, i.e., 20 double-spaced pages) that includes (a) a synopsis of relevant facts, (b) pertinent domestic (usually constitutional) law of the country where the violation occurs as well as relevant regional and international human rights law, and (c) a recommended course of remedial action using the rule of law. Non-graduating law and JKSIS students may seek an overseas assignment in order to either advance their research or initiate the recommendations in their advocacy report. Additional internship or independent research credit may be available for these overseas ventures.

INTS 4956 Human Rights Clinic II (4 Credits)
Students in the Human Trafficking Clinic will be asked to undertake a case study on a human rights violation and provide an advocacy report (roughly 5000 words, i.e., 20 double-spaced pages) that includes (a) a synopsis of relevant facts, (b) pertinent domestic (usually constitutional) law of the country where the violation occurs as well as relevant regional and international human rights law, and (c) a recommended course of remedial action using the rule of law. Non-graduating law and JKSIS students may seek an overseas assignment in order to either advance their research or initiate the recommendations in their advocacy report. Additional internship or independent research credit may be available for these overseas ventures.

INTS 4964 Political Risk Analysis (4 Credits)
Investigates risks associated with political instability or uncertainty in countries with emerging markets.

INTS 4965 Technology and Sustainable Development (4 Credits)
Technology has always been a major influence on cultures and societies, national and international. Today, all countries recognize the key role that technology plays in achieving sustainable development and are striving to harness its potential while minimizing its negative impacts. New technologies such as robotics, genetics, information and communication all promise transformations that can greatly improve the quality of life of peoples everywhere. At the same, time they can also develop in ways that do not lead to as sustainable a future. Thus, they generate controversy and difficult policy choices for governments and peoples everywhere. Accordingly, it is essential to understand the nature of technology and its role in social and political change as well as the ways in which it can be controlled and harnessed for positive ends. In this seminar we will focus upon the relationship of technology to sustainable development and pay special attention to emerging technologies and to such issues as technology transfer, the relationship between technology and democracy, technology assessment and control, the role of appropriate technology, and how developing countries can develop modern scientific and technological capabilities that promote sustainable futures.
INTS 4966 Applied Field Methods (4 Credits)
An introductory course for students planning to conduct research in developing countries. Practical information is presented on transforming hypothesis into a fieldwork setting, questionnaire construction and administration, and interviewing techniques.

INTS 4972 Global Environmental Governance (4 Credits)
Global environmental problems pose seemingly intractable problems for international relations and policy. In this seminar, we probe some of the practical and theoretical difficulties associated with solving such problems. These problems include: How can sovereign nation-states agree to cooperate on environmental problems and how can such cooperation include businesses and civil society? No international institution can legitimately coerce nations into such cooperation. Therefore, international institutions must get them to agree to cooperate, must find ways to bring business and civil society into those agreements, and then find ways to monitor and enforce the agreements. This task is harder than it might seem, and we explore both theories and cases that illuminate it.

INTS 4981 Internship (0-4 Credits)
The Josef Korbel School of International Studies (JKSIS) recognizes the importance of practical experience as an integral component of a student’s education. An internship should both complement the student’s academic field of study and relate to his/her career goals. Through internships, students will: Apply acquired academic theory, knowledge, and skills to professional practice; Further develop knowledge and skills needed to work effectively in the field; Gain greater understanding of the private, public, or nonprofit/NGO sectors; Build a network of professional contacts; and Develop career-related skills applicable to the future job search. The course is open to currently enrolled Korbel MA candidates. Registration is by instructor approval after review of materials.

INTS 4987 Forced Labor and Human Trafficking (4 Credits)
This course looks at a brief history of slavery, especially as it pertains to the British, West African, West Indies, and American triangle. We then look at contemporary issues of forced labor, human trafficking and contemporary slavery. Human trafficking is a very complex problem that requires a sophisticated, inter-disciplinary critique.

INTS 4989 North American Defense and Security (4 Credits)
This course will challenge students to analyze the evolving North American Defense and Security environment since 1945. The course will begin by focusing on the history of the Canada - United Status (CANUS) defense and security relationship that began in the wake of World War Two and was precipitated upon protecting the North American continent from Soviet attack with the formation of the Permanent Joint board on Defense (PJBD), Military Cooperation committee (MCC), and North American Air Defense Command (NORAD). However, the end of the Cold War and subsequent terror attacks of 9/11 dramatically changed the North American Defense and Security environment and created the need for enhanced cooperation between the United States, Canada, and Mexico.

INTS 4991 Independent Study (1-12 Credits)
A special individual arrangement for students to pursue more advanced work beyond that available through regular courses. Such study is arranged between professor and student prior to registration. Academic grades are assigned for course performance. Tutorial Record Form required.

INTS 4992 Directed Study (2-4 Credits)
INTS 4993 International Students Writing Lab (0-1 Credits)
Emphasizes aiding international students in perfecting their English writing skills as well as assisting them in developing ideas and solutions for specific course papers. Students receive advice on writing logic and structure as the instructor individually reviews draft papers and provides written comments. Classroom sessions provide students with the opportunity to share ideas as well as problems. An online portion will provide students with samples of scholarly writing, exercises, and classroom discussion supplements. Former participants are welcome to attend as part of independent study. Course can be taken for 0 or 1 credit and may also be repeated.

INTS 4995 M.A. Thesis Research (1-8 Credits)
This course allows a student to receive credit for research and writing undertaken as part of the master’s thesis. Such study is arranged between professor and student. Academic grades are assigned for performance. Independent Research form required.

INTS 4996 Substantial Research Paper (0-4 Credits)
A Substantial Research Paper (SRP) is a problem-focused paper designed to engage student in the process of applied research. In contrast, an independent study tends to be a more general research project, while an MA thesis involves in-depth academic research typically undertaken by students interested in pursuing a PhD. An SRP is typically shorter than an MA thesis, and does not require a review committee or an oral defense. Rather, the SRP will be supervised and graded by a single appointed faculty member.

INTS 5991 Independent Study (1-12 Credits)
INTS 5992 Directed Study (1-5 Credits)
INTS 5995 Ph.D. Dissertation Research (1-8 Credits)
This course allows a student to receive credit for research and writing undertaken as part of the doctoral dissertation preparation. Grades of "P" (pass) are assigned after the dissertation is accepted by the committee. Prerequisite: Ph.D Candidacy (passing Comprehensive exams).

Morgridge College of Education
The University of Denver Morgridge College of Education is committed to preparing highly competent, socially responsible, ethical and caring professionals to promote learning in diverse settings. With a guiding commitment to excellence, our programs offer high-quality and rigorous
academics with an emphasis on relevant, practical experience through field experiences, research and community-oriented projects. Through our focus on inclusiveness and innovation, we strive to create purposeful learning experiences designed to transform people and ideas.

With several regionally and nationally recognized programs, the College is known for its diverse, high quality students and alumni. The College offers certificate, master’s and doctoral programs in Educational Research, Policy and Practice; Research Methods and Statistics; Library and Information Science; and School and Counseling Psychology.

Counseling Psychology
As a graduate student in the Department of Counseling Psychology (CP), you’ll develop the skills necessary to become an effective practitioner, researcher and/or leader in your field. Our goal is to develop professionals who are insightful and self-reflective, who are innovative risk takers and superior critical thinkers. Our highly selective doctoral program is accredited by the American Psychological Association and is well known for providing access to high-quality national internships for our students. This scientist-practitioner program has a strong focus on both research and practice. Similarly, the master’s program has excellent practicum and internship sites all over the Denver area, and is accredited by the Masters in Psychology and Counseling Accreditation Council. One of the strengths for our Counseling Psychology program for both master’s and doctoral students is the opportunity to provide counseling in our in-house clinic.

We want our students not only to demonstrate accurate and current knowledge, but to have expertise related to the many issues that confront society, and to have the skills to create effective strategies and approaches to address these challenges.

Doctor of Philosophy in Counseling Psychology
The goal of the CP doctoral curriculum at the University of Denver is to educate counseling psychologists who have a solid foundation in science, practice, and culture. Although CP programs may lie at various points on the continuum from a very heavy emphasis on science to a very heavy emphasis on practice, the Counseling Psychology department at DU lies closer to the middle of the continuum. Although the course of study provides students with some flexibility to emphasize either the practice or scientific side of the continuum, we expect that all students will have a solid foundation in science and practice and will approach each aspect of their training from a multicultural informed position. Many of our graduates work in practice settings after graduation, and some are in research/faculty positions across the country. However, when they do so, we believe they are trained to practice from a scientific/critical perspective infused with cultural awareness. In this way, our philosophy is consistent with the perspective of Pepinsky (1954), who suggested that the scientist portion of the scientist-practitioner model is reflected in the way counseling psychology practitioners think about and conduct their practice: they think critically and are appropriately skeptical about theories, research findings, and clinical practices, including their own as well as others. In addition, our students strive for cultural competence in order to be effective with diverse clients.

Counseling psychologists encourage groups of individuals in an array of cultural contexts to better understand themselves and their own behavior, to develop an increased repertoire of adaptive skills, and to more effectively approach life problems in light of this understanding and skill development. Counseling psychologists also help individuals make vocational-educational decisions, take productive action in marriage or family systems, and assist individuals with health-related crises, being careful to take cultural consideration into account. Counseling psychologists are also trained to provide supervision, consultation, and interprofessional/interdisciplinary skills and to use these skills in a variety of settings. Consistently, DU Counseling Psychology department emphasizes multicultural counseling and social justice, health psychology, psychological assessment, group dynamics, and treatment of addictions. Seminars are offered in all of these areas.

The faculty encourages students to develop individualized programs of study commensurate with their career goals. Practicum setting are arranged to further intensify training in particular specialty areas (e.g., college counseling, VA, in-patient, integrative care, correctional settings, community mental health). Students whose goals include college teaching are encouraged to co-facilitate introductory counseling classes with faculty and teach undergraduate courses. Students are also required to participate in and contribute to a pre-dissertation research project that leads to a presentation and/or a submission for publication.

Interim Master of Arts in Counseling Psychology with a Concentration in General Counseling (for PhD students only)
This concentration leads to a general Master’s degree in Counseling, and is available as an interim degree for PhD candidates only. This concentration requires a minimum of 55 quarter hour credits, including a 200-hour practicum, but it does not lead to licensure as a professional counselor on its own.
Master of Arts in Counseling Psychology with a Concentration in Clinical Mental Health Counseling

The Clinical Mental Health Counseling concentration has been designed to meet the requirements necessary to become a Licensed Professional Counselor. Students who complete this degree and two years of post-master’s work in the field can apply to become a Licensed Professional Counselor in the State of Colorado. **Other states may have other requirements.** Students completing this concentration often work in agencies or in community settings all over the Denver area. This degree requires two years and 90 quarter credits. It also includes a 200-hour practicum, a 600-hour internship, and two quarters of counseling in our in-house clinic.

Master of Arts in Counseling Psychology with a Concentration in Research Counseling

Some students wish to develop more advanced research skills as well as counseling skills. This concentration requires two years and 72 credit hours to complete. Students wishing to complete a master’s thesis are strongly encouraged to apply to participate in this concentration during the winter quarter of the first year of study. If the student chooses to apply for the Research concentration later, it will take longer to complete the degree. It is recommended they begin discussing this option with their advisor during their first quarter of graduate work. Students who complete a thesis are not required to take the comprehensive examination. This is the only concentration students may pursue if they are interested in writing a thesis. The Research concentration does not meet requirements to achieve licensure.

Doctor of Philosophy in Counseling Psychology

Degree and GPA Requirements

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Masters degree: This program requires a masters degree as well
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

Doctor of Philosophy in Counseling Psychology

Degree Requirements

A total of 135 hours are required for the doctorate in the Morgridge College of Education and up to 45 credits from a master’s degree may be eligible to be transferred depending on the content overlap with current courses. Students are able to transfer in up to an additional 15 hours for graduate work provided the credits have been earned after the master’s degree was awarded and it does not conflict with the doctoral residency requirement.

# (Register for this Fall, Winter, and Spring terms during internship year for 8 credits per quarter)

* Assumes completion of a supervised field experience of 400 hours in the MA/MS program (if not, see section on coursework required for those who did not complete a practicum as part of their MA/MS program)

** Advanced Practicum I and Advanced Practicum II students are required to spend 15 to 20 hours per week in practicum placement for three consecutive quarters for a total of 500-600 hours per practicum experience (of which 250-300 should be direct client time per practicum setting). Ideally a minimum of 500 to 600 direct service hours will be accumulated at the end of the two practicum experiences). All quarters must be at the same site and must be consecutive. Some students take an additional practicum placement if necessary based on goals for internship and career. For more information on practicum requirements, please see the separate practicum handbook.

*** PhD Clinic is generally taken for two consecutive quarters: either winter-spring, spring-summer, summer-fall, or fall-winter. Students are surveyed about their preferences and these are accommodated if possible.

**** Students must have successfully completed Advanced Practicum I and have completed or are completing Advanced Practicum II.

# (Register for this each term during internship year for 8 credits per term)

* Students must complete Basic Counseling Techniques with a grade of "B" or better before enrolling in Beginning Counseling Practicum. Beginning counseling is a 10 to 15 hour a week requirement in a practicum placement over two quarters, for a total of 200 hours on site.

** Advanced Practicum I and Advanced Practicum II students are required to spend 15 to 20 hours per week in practicum placement for three consecutive quarters for a total of 500-600 hours per practicum experience (of which 250-300 should be direct client time per practicum setting). Ideally a minimum of 500 to 600 direct service hours will be accumulated at the end of the two practicum experiences). All quarters must be at the same site and must be consecutive. Some students take an additional practicum placement if necessary based on goals for internship and career. For more information on practicum requirements, please see the separate practicum handbook.

*** PhD Clinic is generally taken for two consecutive quarters either winter-spring, spring-summer, summer-fall, or fall-winter. Students are surveyed about their preferences and these are accommodated if possible. Note that students who enter with a bachelor's degree are required to complete both MA Clinic and PhD Clinic, for a total of four quarters of clinic.

**** Students must have successfully completed Advanced Practicum I.

Dissertation Credits

CNP 5995  Dissertation Research (10 minimum)  1

1 Students can take up to 5 credits prior to comprehensive exams. In order to maintain degree candidacy, MCE doctoral students who have finished all requested coursework will register for one dissertation or doctoral research credit or other credit for consecutive terms fall through spring (summers not required) until the student graduates.

A minimum of 135 credits is required for the PhD in Counseling Psychology.

Interim Master of Arts in Counseling Psychology with a Concentration in General Counseling

To be eligible, students must enter the PhD program without an earned master's degree. Students must submit an application to graduate and meet with their advisor for candidacy sign-off by the deadline.

The interim MA does not prepare students for licensure as a Licensed Professional Counselor (LPC). It is intended for students who wish to complete a Master's degree as they pursue their PhD. Students must meet the requirements for the Master of Arts in Counseling Psychology with a Concentration in General Counseling listed below.

Master of Arts in Counseling Psychology with a Concentration in Clinical Mental Health Counseling

Total Credits  72
Courses
CNP 4303 Risk Resiliency and Prevention (3 Credits)
This course examines the history and theoretical bases of resiliency research and the characteristics of children at significant risk of delays, disorders, and low-incidence disabilities. Participants obtain practical information regarding the assessment, identification, amelioration, facilitative responses, and intervention in school and community settings for these populations. The course moves beyond a pathology approach that focuses on the deficits of children and families to an empowerment perspective that focuses on strengths. The course is grounded in child development research and educational and family systems theory as well as psychopathology and content associated with exceptional children. Prevention principles, curriculum, and policy agendas are discussed that build on a model of collaboration between and among disciplines in community and school settings.

CNP 4312 Counseling Psychology: Learning Application and Analysis (3 Credits)
Learning theories and the principles of behaviorism are active in shaping the individual person, groups of people, and society as a whole. In realizing which actions lead to desirable outcomes and which fail to do so, we alter or change our behaviors accordingly. Through the examination of learning theories and applied behavioral principles, we will explore how behaviors develop, especially those that may be maladaptive or related to psychological disorders, and how clinicians can intervene to enact effective behavior change. Learning will be examined at three levels: the observable or behavioral level, the cognitive process level, and the physiological level.

CNP 4342 Crisis Intervention and Prevention (3 Credits)
This course provides knowledge about crisis prevention and intervention theory and effective strategies for use in direct and indirect services for children and staff in schools and in practice with children. Emphasis is on application to child-centered and school-based crises such as bullying, child abuse, death, loss and grief, trauma, community and school-based violence, threats, and suicide. The course provides students with basic knowledge and skills for crisis intervention in school settings.

CNP 4641 Adolescent Development (3 Credits)
Physical, cognitive, emotional, social, and moral development in adolescents with emphasis on interaction of various aspects of development within an environmental context; focus on normal development with exploration of special problems of adolescents, e.g., substance abuse, teen-age pregnancy, eating disorders and delinquency; critical study, and discussion of literature on adolescence and interviews with adolescents.

CNP 4642 Adult Development (3 Credits)
Literature on normal development of adult thinking and problem-solving processes and the self-esteem. Physiological changes and relationship between cognitive development and developmental tasks of adults included.

CNP 4645 Lifespan Development (5 Credits)
Survey of the principles of development from conception to adulthood, emphasizing biological, environmental, and cultural factors affecting development.

CNP 4700 Counseling Theory (5 Credits)
Basic counseling theories and philosophical principles as a foundation for professional training including history, concepts, techniques and trends.

CNP 4701 Advanced Seminar: Counseling Theory (3 Credits)
Focus on advanced practice issues and (doctoral students only) integration of theory and practice.

CNP 4702 Introduction to Assessment (5 Credits)
This is a biweekly course designed to give students an introduction to the essentials of psychological testing, assessment, and report utilization. This course will provide students with exposure to basic objective tests, projective tests, personality tests and other diagnostic techniques.

CNP 4704 Psychological Assessment (5 Credits)
Administration, scoring and interpretation of objective and projective personality-assessment techniques, the DSM IV, diagnostic categories, report-writing skills, ethical standards for testing. Lab fee required. Prerequisite: counseling or school of psychology Ph.D. student or instructor approval.

CNP 4705 History and Systems of Psychology (3 Credits)
Historical and philosophical basis of modern psychological theories; basic issues as related to major school of psychology.

CNP 4706 Cognitive Assessment (5 Credits)
This course provides students in Counseling Psychology with experience in individual intelligence, learning and memory, and neurocognitive screening test administration, scoring, interpretation, and report writing. Each student has an opportunity to administer various cognitive measures, with particular emphasis on the Wechsler Scales. Contemporary issues pertinent to the assessment of intelligence are covered. Emphasis is placed on synthesizing and integrating information from cognitive assessment with other sources to produce effective intervention and therapeutic recommendations. Issues regarding the use of such tests are discussed, as well as appropriate use in agencies and clinical practice. Lab fee required.

CNP 4707 Introduction to Integrated Health (3 Credits)
This course is designed to provide students with an introduction to issues in the practice of integrated health psychology, including the topics of interprofessionalism, diagnosis and assessment, treatment, treatment adherence, and consultation. Students will learn about the roles held by behavioral health providers, particularly in the primary care medical setting. Emphasis is placed on evidence-based and culturally competent practice in the integrated health environment.
CNP 4710 Career Counseling (5 Credits)
This course is designed to facilitate student development of knowledge, skills and competencies to engage in counseling clients with career issues; utilize occupational/career resources including technology-based resources and assessments; examine theories of career development and decision-making; develop the ability to evaluate and implement appropriate assessments; collaborate with clients in identifying personal and career goals; and organize and implement program planning and techniques and do so in a diversity of work settings. Lab fee required.

CNP 4711 Advanced Group Counseling (3 Credits)
Advanced group course that concentrates on advanced leadership skills, leadership styles, and leader methods geared toward conducting counseling groups with diverse populations for different problem areas. This class will also focus on the theory and research on group counseling and psychotherapy.

CNP 4712 Grief and Loss (3 Credits)
This course is an opportunity for students to examine their own ideas about grief and loss and come to a clearer understanding of their meaning, with the goal of using this personal growth to facilitate the development of professional and clinical skills. The course will examine current theory, clinical applications, and research implications with an emphasis on personal exploration and cultural considerations.

CNP 4713 Multicultural Issues in Vocational Psychology (3 Credits)
This elective seminar course in Multicultural Vocational Psychology will critically examine existing career theory, research, and interventions from a multicultural perspective. Students will be exposed to cutting-edge literature and explore the future of multicultural vocational psychology. Issues pertaining to: gender, race, ethnicity, sexual orientation, gender identity, social class, aging, ability status, and immigration will be discussed in depth as they relate to career development and the psychology of working.

CNP 4720 Group Counseling Theory (5 Credits)
This course is designed to introduce graduate counseling students to group counseling theory, research, and practice. This course will focus on group theory and research but will also provide instruction and experiences in a variety of group techniques. The course is designed for students in counseling psychology, school psychology, and other related fields who work with persons in a group context. This course focuses on the entire age range from children, adolescents, and adults. This course aims to define therapeutic groups broadly. Students will learn about group theory, research, and techniques through class lectures and discussion, group demonstrations, videotapes on group topics, reading assignments, a group presentation, an experiential task group, a required paper related to the task group presentation, and other required assignments.

CNP 4730 Research Methods and Program Evaluation (5 Credits)
This course is designed to provide an introduction and overview of comprehensive program development and evaluation, and research methods. The course will provide direction on the following topics: causation, research hypotheses, independent and dependent variables, sampling, internal and external validity, experimental, quasi-experimental, single-subject, causal-comparative, and correlational designs, measurement and data collection procedures, types of instrumentation and methods for determining reliability.

CNP 4740 Basic Counseling Techniques (3 Credits)
Basic counseling and interviewing skills; emphasis on building counseling relationships and facilitating client’s self-exploration; skills of empathy, advanced empathy, self-disclosure, confrontation and immediacy.

CNP 4741 Int Counseling Techniques (3 Credits)
Sample of counseling techniques and effectiveness with different types of clients. Prerequisite: CNP 4740.

CNP 4743 Fieldwork in Counseling (1 Credit)
Introduction to the field of counseling with special emphasis on practicum placement. Prerequisite: admission to the MA program in counseling psychology.

CNP 4750 Counseling Psychology Beginning Practicum (1-4 Credits)
Supervised practice in counseling for master’s students. Prerequisite: CNP 4740, and be a counseling psychology student.

CNP 4751 M.A. Internship (1-5 Credits)
Yearlong, 600-hour supervised field practice for second-year master’s students with weekly seminar. Prerequisites: CNP 4750 and be a counseling psychology master’s students.

CNP 4752 Counseling Psychology Advanced Practicum I (3 Credits)
Supervised practice in counseling for doctoral students. Prerequisites: CNP 4750 or prior practicum, and be a counseling psychology student.

CNP 4753 Counseling Psychology Advanced Practicum II (1 Credit)
Group supervised practice in counseling for second-year doctoral students with emphasis on process and countertransference issues. Prerequisite: CNP 4752.

CNP 4754 Couns Psych: PhD Internship (1 Credit)
Meets 12-month internship requirement in counseling psychology. Prerequisites: completion of comprehensive examination and dissertation proposal.

CNP 4755 MA Clinic (2-5 Credits)
MA clinic is a required course for all students in the 90-credit Clinical Mental Health Counseling Concentration.

CNP 4756 PhD Counseling Clinic (1 Credit)
On-campus, advanced-experience counseling of clients from the community with close supervision and observation. Prerequisite: Doctoral student in counseling psychology.
CNP 4758 PhD Field Experience (8 Credits)
Required 12-month, 40-hour-per-week internship for doctoral students in Counseling Psychology. Registration for this course indicates full-time enrollment. This course is not graded. Prerequisites: completion of comprehensive examination and dissertation proposal. Department approval is required for registration. Fall quarter enrollment must be done in conjunction with CNP 4754.

CNP 4760 School Counseling Practicum (1-4 Credits)
A minimum of 100 hours supervised practice in School Counseling for Master’s students in the School Counseling Concentration. Students must be supervised by a licensed school counselor. Enforced Prerequisites: CNP 4740 with a minimum grade of C.

CNP 4761 School Counseling Internship I (1-4 Credits)
100-hour supervised field practice in a school setting for Master’s students in the School Counseling Concentration, with weekly seminar. Students must be supervised by a licensed school counselor.

CNP 4762 School Counseling Internship II (1 Credit)
A minimum of 600-hour supervised field practice in a school setting for master’s students in the School Counseling Concentration, with weekly seminar. Students must be supervised by a licensed school counselor.

CNP 4767 Relationship and Psychotherapy Research (3 Credits)
Students engage in inquiry through a critical analysis of major theoretical approaches to counseling and psychotherapy based on various research methods. Readings and class discussions include an extensive review of research literature associated with couple and individual psychotherapy. The use of actual case studies addresses the relevance and application of each theoretical approach to real world problems presented by clients. Students develop awareness of the importance of an advocacy role through the application of clinical practice to the unique needs of diverse and special populations in particular through the study of multicultural orientation.

CNP 4768 Counseling Psychology: Social Psychology (3 Credits)
Social Psychology is designed to provide students a broad and general understanding of social psychology. The course will cover aspects of self, cultural dynamics, group processes, emotional/cognitive aspects of social behavior.

CNP 4769 Cognitive Behavioral Therapy (4 Credits)
Cognitive Behavior Therapy (CBT) is a treatment approach that incorporates a multitude of evidence-based strategies to construct an individualized and comprehensive treatment plan for a wide variety of mental/behavioral disorders. CBT has been extensively investigated in both research and applied setting. CBT offers foundational knowledge and skills to provide an active, client involved approach to resolving individual and family challenges. CBT is structured, goal-directed, and focuses directly on client problem areas. Students will practice and develop the skills necessary to implement CBT techniques and strategies.

CNP 4770 Counseling Psychology Seminar: Research (3 Credits)
Review of current process and outcome research in counseling and psychotherapy; substantive issues, including client and therapist variables as well as methodological issues and experimental designs. Prerequisite: doctoral student.

CNP 4772 Diversity Seminar: Psycho-Social Issues (1-5 Credits)
Series of courses to analyze social and psychological impacts of oppression related to minority status, socioeconomic status, gender and family configurations; taught using an awareness and knowledge approach; implications for counseling; series includes general seminar and series of 1 credit follow-up seminars on particular topics, e.g., American Indian mental health, African-American mental health and women's mental health. Prerequisites: CNP 4773 and students must take the 3-credit general seminar prior to the individual seminars.

CNP 4773 Diversity: Multicultural Counseling Psychosocial Issues (5 Credits)
The purpose of this course is to provide an overview of multicultural and social justice issues in the United States. While this is not a skills training course, implications for multicultural counseling skills will also be discussed. Issues and concepts related to gender, race, ethnicity, sexual orientation, gender identity, and social class will be examined within a framework of privilege and oppression. This course is designed to present a general introduction to multicultural and social justice issues as well as culturally responsive counseling. Due to the extensive amount of material in this area, only some selected issues and topics will be presented. Students interested in gaining more specific, or in-depth knowledge of topics covered in this class may pursue the one-credit Counseling Psychology diversity seminars offered in the Counseling Psychology program. Significant emphasis will also be placed on experiential learning and the application of students’ awareness and knowledge accrued throughout the quarter.

CNP 4774 Counseling Psychology Seminar: LGBT Counseling (2 Credits)
Sexuality and gender are an integral part of human existence and are understood through the lenses of psychology, biology, culture, politics, and religion. As a result of a variety of converging factors including societal oppression, sexual and gender minorities are at greater risk for depression, anxiety, suicidality, substance abuse, and trauma than same-aged peers. Mental health professionals are vital in caring for these diverse populations and are well-positioned to break cycles of oppression both within therapy and through advocacy. The purpose of this class is to increase personal awareness, increase knowledge, and build greater clinical competency in working with sexual and gender minorities.

CNP 4775 Counseling Psychology: Cognitive & Affective Basis of Behavior (3 Credits)
The seminar is intended to enhance students’ understanding of the fundamental psychological concepts in cognitive and affective sciences and of the relevance of these theories and concepts to clinical practitioners. This seminar will provide weekly lectures to engage students in core issues surrounding the scientific study of affective and cognitive processes involved in human behavior. Academic inquiry and dialogue will also be fostered through group presentations and discussions of peer-reviewed journal articles and book chapters.
CNP 4776 Family Counseling (3 Credits)
Introduction to family counseling, including survey of major theories and research, and in-class demonstrations of techniques. Prerequisite: advanced master’s or doctoral student.

CNP 4778 Health Psychology (3 Credits)
Overview of rapidly expanding field of health psychology; wide variety of topics dealing with role of psychological processes in health and health care; includes impact of stress on physical health, and psychological factors that determine health-related behavior, psychological aspects of delivery of health care, and assessment issues in health psychology.

CNP 4780 Counseling Psychology Seminar: Supervision (3 Credits)
Introduces literature and research on counseling supervision, including awareness of individual differences; provides experience supervising master’s level counselors. Prerequisites: doctoral student and CNP 4752.

CNP 4781 Counseling Psychology: Introduction to Psychodynamic Theory (4 Credits)
This class will explore psychodynamic theory, with an emphasis on creating case formulations and practicing an analytic position in the treatment process. We will be focusing primarily on individual treatment with adults in outpatient settings using a developmental lens. You will be encouraged to develop and deepen your capacities for curiosity and self-reflection, in part as they relate to the exploration of countertransference reactions and meaning making. You will be learning both professionally and personally, as they mutually influence one another, what it means to be a psychodynamic clinician.

CNP 4782 Counseling Psychology: Mindfulness, Psychotherapy and Trauma (3 Credits)
The aim of this course is to provide students with the knowledge on major theories and research findings in the field of mindfulness and its relation to modern psychotherapies. The students will learn the foundations of Buddhist psychology and its similarities with and differences from the major Western modalities of psychotherapy, such as psychodynamic, cognitive-behavioral and humanistic.

CNP 4783 Counseling Psychology: Eating Disorders (3 Credits)
This class will offer the opportunity to learn about the diagnosis, assessment, theory, and treatment of eating, weight and shape disorders. While working with clients with eating disorders (EDs) can present unique challenges, we will explore the perception/stigma that these clients are notoriously difficult to treat. We will focus on the importance of integrative treatments, and the role of behavioral, symptom focused techniques in addition to psychodynamic approaches that explore underlying characterological and developmental issues. This class will also consider the impact of culture and media on body image, and the effects of these messages on personal beliefs, attitudes and behaviors.

CNP 4784 Psychopathology (5 Credits)
This course is designed to provide students with a thorough understanding of assessment, diagnosis and classification of psychological abnormalities. Psychopathology is typically characterized by deviance from cultural norms, personal distress, danger to oneself or others, or an inability to function in daily life. We will explore the empirical basis for understanding psychopathology as defined in the DSM 5, as well as, the inherent limitations of the current diagnostic system. Interactions of biological, social, psychological, cultural, political, and environmental factors will be stressed, particularly as they contribute to the development and maintenance of mental disorders. Cultural perspectives on each disorder will be addressed every week to attend to issues of social justice and multiculturalism related to diagnosis.

CNP 4787 Motivational Interviewing (4 Credits)
Motivational Interviewing is a client-centered collaborative style of therapeutic relationship designed to strengthen a person’s motivation for and commitment to change. This class will facilitate skill development in managing client ambivalence, eliciting change-talk and honoring the client’s autonomy regarding taking steps toward a commonly agreed upon goal.

CNP 4788 Physiological Psychology (3 Credits)
Physiological Psychology is designed to expose students to the field of physiology and highlights its reciprocal relationship with behavior. We will cover topics including the structure and function of the nervous system and areas of research relevant to clinical psychology (e.g., substance abuse, mental illness, and biological rhythms). Given the limited time devoted to each area, more in-depth coverage should be pursued by interested persons.

CNP 4789 Pharmacology of Addictive Behavior I and II (4 Credits)
This class provides a solid base of knowledge about the drugs of abuse including what occurs physiologically with drug use and other addictive behaviors. Additionally, this course explores neuroscience and genetic research on addiction to better understand the changes in the brain that underlie drug use and addictive behaviors.

CNP 4790 Counseling Psychology Seminar: Ethics (3 Credits)
Professional ethics in practice and research in counseling psychology, including informed consent, confidentiality, clients' rights, psychologists' obligations, etc.; basic APA documents. Prerequisite: doctoral student.

CNP 4791 Counseling Psychology Seminar: Counseling Couples (3 Credits)
Introduction to couples counseling, including survey of major theories and research.

CNP 4792 Pro-Seminar in Counseling Psychology (1 Credit)
Introduction to field of counseling psychology required for all first-quarter doctoral students. Prerequisite: counseling psychology doctoral students.

CNP 4794 Counseling Psychology Seminar: Special Topics (1-15 Credits)
Variety of special topics on research and practice in counseling psychology; readings, lectures and projects to provide an in-depth understanding of topics, which vary from to year and cover areas such as counseling women, counseling in business and industry, advanced group therapy, time-limit counseling, vocational counseling, etc.
CNP 4795 Master of Arts Counseling: Legal and Ethical Issues (5 Credits)
Introduction to ethical and legal issues in school and agency counseling for master's students. Prerequisite: Master's student in Counseling Psychology.

CNP 4797 Counseling Addictive Behavior (4 Credits)
Introduction to assessment, treatment and outcome evaluation of chemical and nonchemical addictive behaviors. Requirements include abstinence from a "compulsive" behavior; journaling about one's cognitive, emotional and behavioral reactions during the abstinence period; attending 12-step meetings; participating in a quasi-12-step in class meeting; critiquing a film depicting dynamics of an alcoholic family.

CNP 4799 Infectious Diseases in Addictive Behaviors (2 Credits)
Drug and alcohol abuse and infectious diseases go hand in hand. This class explores the high risk for contracting and spreading infectious diseases among drug abusers. This class helps prepare students to identify such diseases, determine client risk for infection, and educate students about disease prevention and treatment options.

CNP 4800 Consultation (1 Credit)
This course is designed to teach the basic theories of psychological consultation that can be used to guide practice in a variety of settings. Students learn to differentiate process, collaborative and expert consultation. The class format includes presentations from practitioners working in school, medical, forensic, and business settings. In addition, students also learn about the ethical principles that guide their practice and to also become sensitive to how their work with diverse cultural backgrounds may be perceived. Prerequisite: must be enrolled in the Counseling Psychology doctoral program.

CNP 4991 MA Independent Study (1-10 Credits)
CNP 4992 Directed Study (1-10 Credits)
CNP 4995 Research - M.A. Thesis (1-10 Credits)
CNP 5991 PhD Independent Study (1-10 Credits)
CNP 5992 Directed Study (1-10 Credits)
CNP 5995 Dissertation Research (1-20 Credits)

Educational Leadership and Policy Studies
The Educational Leadership and Policy Studies (ELPS) department prepares courageous, visionary and transformative leaders in educational settings at all levels of the education system. To achieve this, the program offers intensive and integrated academic and field-based experiences and competency-based learning that develop and support students as they obtain effective leadership competencies. Partnerships and memberships within national networks with the Carnegie Project on the Education Doctorate (CPED), Alliance to Reform Educational Leadership (AREL), University Council of Educational Administration (UCEA), Wallace Foundation, Carnegie Foundation, New York City Leadership Academy, Teach For America, Colorado Association of School Executives (CASE) and partnerships with local school districts help the program to continuously improve. The ELPS department is a CDE approved provider of School Turnaround Leadership (http://www2.ed.gov/programs/turnaroundschl/index.html?exp=0). Students within the department focus on leadership, policy studies and research that are relevant and appropriate for meeting today’s and tomorrow’s educational challenges.

All of the degree programs in ELPS engage students in rigorous content, collaborative inquiry, and reflective practice within a tightly connected cohort structure that intentionally builds learning communities and professional networks. Faculty members partner with individuals, schools, districts and organizations to build leadership capacity and improve all educational contexts. All components of ELPS programs incorporate the following practices to prepare students to generate new knowledge and expand career choices within the field of education.

• Leading change and demonstrating impact in K-12 education
• Learning through integrated academic and school-based experiences and projects
• Grounding all work in social justice, problems of practice and authentic contexts
• Creating learning communities that foster academic achievement and optimal growth and development for each learner
• Engaging in leadership, policy and research that are relevant and appropriate for meeting today’s and tomorrow’s educational challenges in complex and ever-changing educational contexts
Doctor of Philosophy in Educational Leadership & Policy Studies

The 90-credit-hour program beyond a master’s degree is a degree with coursework that includes a strong focus on quantitative and qualitative research methods, educational leadership, organizational theory, systems theory, and policy analysis. These areas are studied in an effort to expand and enhance research skills and add to the knowledge base needed for effective schools. The ELPS PhD prepares individuals for successful careers in research, academia, educational leadership and policy.

The program consists of two years of foundational doctoral coursework (two courses/quarter; one research and one leadership course), and a third year of coursework specializing in a research methodology and a specialized focus of study. The coursework in the initial two years of the program is offered in a doctoral cohort format with ELPS EdD students and this cohort structure builds a learning community of fellow educational leaders and scholars who support each other through the coursework and research. PhD students complete a traditional dissertation. In addition to the requirements for the degree, students have the option of completing a 300 hour Administrative Internship (requirement for Administrator License, Special Education Director License and Gifted Education Director license). Applicants must hold a master’s degree.

Program Accreditation

Colorado Department of Education (CDE) Approved Educator Preparation Program. Graduates who have completed the Administrative Internship may apply for Colorado Initial Administrator License (http://www.cde.state.co.us/cdeprof/checklist-initialadministratordirectorofspecialed) through the CDE.

Doctor of Education in Educational Leadership & Policy Studies

This 65-credit-hour program builds on prior leadership experience and preparation and/or a Master’s degree in a leadership related program and prepares students to be transformative leaders in a variety of educational settings. The program consists of two years of foundational doctoral coursework (two courses/quarter; one research and one leadership course). The coursework in the initial two years of the program is offered in a doctoral cohort format with ELPS PhD students and this cohort structure builds a learning community of fellow educational leaders and scholars who support each other through the coursework and research. After the initial two years of coursework, EdD students continue to develop and complete their Doctoral Research Project. The Doctoral Research Project is independent research regarding a persistent, complex problem of practice with a supportive structure of quarterly research seminars. In addition to the requirements for the degree, students have the option of completing a 300 hour Administrative Internship (requirement for Administrator License, Special Education Director License and Gifted Education Director license). Applicants must hold a master’s degree and have completed a principal, teacher-leadership, or other leadership related program or work experience.

Program Accreditation

Colorado Department of Education (CDE) Approved Educator Preparation Program. Graduates who have completed the Administrative Internship may apply for Colorado Initial Administrator License (http://www.cde.state.co.us/cdeprof/checklist-initialadministratordirectorofspecialed) through the CDE.

Master of Arts in Educational Leadership & Policy Studies with a Concentration in Principal Licensure

The MA in Educational Leadership and Policy Studies with a concentration in Principal Licensure is designed to be completed the year following the Certificate in Educational Leadership and Policy Studies program (see below) and offers extended study of transformative and turnaround leadership: issues of culture, diversity, poverty and special needs; business design, and entrepreneurial and data-driven leadership. The MA consists of a total of 45 credit hours - the Certificate in Educational Leadership and Policy Studies with a concentration in Principal Licensure program (30 credits) and four additional courses (15 credits). The completion of the MA culminates with the design and execution of an action research or school design project.

Program Accreditation

Colorado Department of Education (CDE) approved Educator Preparation Program and Turnaround Leader Program. Graduates may apply for Colorado Initial Principal License (http://www.cde.state.co.us/cdeprof/checklist-initialprincipal) through the CDE.

Certificate in Educational Leadership & Policy Studies with a Concentration in Principal Licensure

The certificate in Educational Leadership and Policy Studies leads to recommendation for Colorado Principal Certification. The program offers competency-based learning that is individualized to the leadership needs of the aspiring leader and the needs of the school in which the student is interning. It focuses not only on developing the skills and abilities necessary for success as a school leader, but also on developing a strong commitment to core values essential for ethical and responsible leadership.

The certificate consists of four quarters of coursework and requires a minimum of 300 internship hours that are integrated with coursework. During the first quarter of the program (usually Summer) students engage in a leadership retreat to build community and provide an experiential learning experience to practice the leadership theories and concepts that serve as the foundation of the program. The program can be completed as a certificate and/or combined with additional coursework (see above) for a master’s degree.
The cohort structure promotes the development of a rich learning community for collaboration and challenge with many different opportunities for interaction and analysis. Each quarter incorporates face-to-face sessions with cohort and faculty, inquiry projects, self-assessments, various online learning activities including discussion boards and reflection journals, as well as readings to guide instruction and learning.

Program Accreditation

Colorado Department of Education (CDE) Approved Educator Preparation Program. Graduates may apply for Colorado Initial Principal License (http://www.cde.state.co.us/cdeprof/checklist-initialprincipal) through the CDE.

Doctor of Philosophy in Educational Leadership & Policy Studies

Degree and GPA Requirements

- Bachelor’s degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master’s degree: This program requires a master’s degree as well
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

Total Credits 30

The program consists of four quarters of coursework and requires a minimum of 300 internship hours that are aligned with coursework.

Minimum number of credits required for degree:

30 credit hours

Courses

ADMN 4700 Special Topics in K-12 Administration (1-5 Credits)

ADMN 4810 School Administration: Case Studies (3 Credits)

ADMN 4812 Perspectives in District Leadership (4 Credits)

ADMN 4817 Administrative Internship (0-6 Credits)

Opportunity to be supervised in on-the-job experience to better prepare school administration students for district administration careers.

ADMN 4819 Organization Theory & Behavior (3 Credits)

Educational institutions are complex, political organizations with a wide variety of constituents and many layers of sometimes competing cultures, systems, and explicit and implicit goals. Leaders who work with these systems must find ways to make meaning of the organization and the context in which work occurs. This course will look at organizational behavior from several points of view, with the goal of understanding major theories that have been developed and learning to apply these theories in the management and study of organizations. The roles and responsibilities of various members of the organizations will be examined as well as the governance and control issues surrounding education. Organizational analysis will be viewed through the lens of structural, political, human resource and symbolic frames. This course includes an experiential learning component.

ADMN 4820 Educational Program Evaluation (4 Credits)

The purpose of this course is to review theories of program evaluation, evaluation designs and analysis, and current trends in evaluation. Program evaluation aims to determine whether a program, regulation, or policy is achieving its objectives by ascertaining whether it had the desired effect on intended outcomes. The evaluation process may include evaluation of programs, products, personnel, policy, performance, proposals, technology, research, theory, and even of evaluation itself. The course equips students with basic evaluation tools and understandings necessary to be thoughtful consumers and effective users of program evaluations in improving policy outcomes and designing more effective programs and policies. It is designed to provide students with the meaning and methods of program and policy instrument evaluation in education with the intent to contribute to informed decision making and enlightened change. Students analyze evaluations of the effectiveness of a variety of programs through discussion, field work, and case studies. This course includes an experiential learning component.
ADMN 4821 Improvement Science and Action Research (5 Credits)
The course focuses on school reform and improvement through improvement science and action research. Improvement science is an emerging concept which focuses on exploring how to undertake continuous quality improvement. Action Research is a strategy for professional development and collaborative, transformative school improvement. The aim of this class is to merge strategies of improvement science and action research to develop educators’ knowledge and skills to uncover and use data that exist in classrooms and schools for the purpose of promoting educational change and improvement. The participants in this course will create and conduct an action research or improvement science project. This course includes an experiential learning component.

ADMN 4822 Leadership in Complex Systems (4 Credits)
The purpose of this graduate course is to support leaders in melding theory and practice relative to sustaining complex organizations through developing skills that facilitate the convergence of leadership, communication and change. This course will focus on research applications of theoretical frameworks of leadership and successful leadership actions for complex systems. Leadership is a process that involves influence and goal attainment and occurs in a group context of uncertainty and complexity. Today’s solutions often become tomorrow’s problems. When changes occur in one part of the system, many others are affected in a cascading manner. Leadership is the lever for change. “Give me a lever long enough...and single-handed I can move the world” (Archimedes). The course is highly interactive and demands significant participation from students. This course includes an experiential learning component.

ADMN 4823 Educational Policy Making in the United States (4 Credits)
This course focuses on policy and advocacy in educational leadership. The course is designed to develop aspiring and current leaders' understanding of local, state, and federal policy systems with a focus on the socio-cultural context surrounding educational policy decision-making. The course examines the basic governmental structure, the expansion of federal powers in policy making, the role and power of interest groups, the function of the state board, and the role of local boards of education. This course includes an experiential learning component.

ADMN 4827 Foundations of Educational History and Philosophy (3 Credits)
This foundational course examines the various theoretical, ethical, historical and philosophical perspectives that will inform educational leaders as policy and change strategies are formulated. This course includes an experiential learning component.

ADMN 4828 Leadership for the 21st Century: Using Creativity to Build Effective Schools (3 Credits)
Designed to assist leaders, at the district or building level, in the implementation of standards-based education to improve student learning and achievement. Primary emphasis is given to applying strategies for addressing critical issues in sustaining the equitable access to learning in a standards-based educational organization.

ADMN 4834 Seminar in Multicultural Issues (3 Credits)
Extends understanding of complex systems' operations and responses by examining multicultural issues in the historical and social context and complexity of schools and school districts. Opportunities will be provided for students to develop an understanding of issues of diversity and the relationship of these issues to the roles and work of school/district administrators. The exploration of multicultural issues will occur through the examination of various themes relative to school/district administration such as curriculum, administration, human resources, policy and reform. Particular emphasis will be given to the exploration of the historical and future purposes of schooling in a democratic/pluralistic society in an effort to help students to develop critical knowledge and skills essential for providing leadership in 21st century schools.

ADMN 4835 Leading Teaching and Learning (4 Credits)
This course will examine educational practices that are meeting success as schools and districts attempt to learn, grow, and reinvent themselves using the principles of organizational learning and improvement science. Participants will understand basic systems theory and gain practical and theoretical tools to improve curriculum development, instruction, and student learning. This course includes an experiential learning component.

ADMN 4836 Improving Organizational Culture (4 Credits)
The purpose of this course is to understand organizational culture as a complex and challenging issue to shape and lead. The complex culture of schools or other educational organizations means many things including climate, organizational members' engagement, culturally competent practices and the quality of human relationships in the organizational environment. This course will enable leaders to analyze the components of an educational organization's culture and develop specific plans to create a culture that supports improved learning outcomes for every student, using high-quality, best instructional practices. Following the collection and analysis of data, students will be prepared to serve as Equity Oriented Change Agents (EOCA), leading the improvement of school culture focused on equitable access to high-quality instruction and services for every student. This course includes an experiential learning component.

ADMN 4840 Strategic and Transformative School Leadership (9 Credits)
Effective school administration is guided by research and best practices which inform governance, vision, leadership, and implementation processes. Effective principals base their work on commitment to moral principles, core values, and the many dimensions of effective theory and practice. Understanding personal values, developing leadership skills and building a strong knowledge base regarding research and best practice are a key focus of the course. In addition, this course also examines strategies for visioning, mission building and branding; defining and assessing value and quality; developing competitive strategy; building networks and partnerships; assessing risk and gauging opportunity; building systems and sustainability; recruiting and developing staff, boards and stakeholders; engaging communities; and acquiring sources of funding. Students must be accepted into an ELPS certificate or MA program.
ADMN 4841 Instructional Leadership for Equitable Schools (5 Credits)
This course serves aspiring principals in the development and application of skills and knowledge associated with standards-based instructional practices, curriculum planning and development, assessment, and program evaluation. Students are assisted in developing and understanding issues of diversity and multiculturalism and their influence on the development and supervision of the instructional program. Although the major focus is on local aspects of standards-based education, some attention is given to the national role in this area. School leaders need to apply quantitative and qualitative research skills in a variety of ways to understand and improve the work of schools. This course reviews methods, applications, and data sources, including assessments and large-scale datasets, for continuous school improvement and program evaluation. In addition to the issues of instructional leadership, considerable attention is given to the examination of the needs of the individual student in the learning environment as well as research on learning styles, learning theories and models of teaching. Primary focus areas are supports for special education students, English Language learners, gifted students, and students in poverty. Students must be accepted into an ELPS certificate or MA program.

ADMN 4842 Human Resource Leadership (5 Credits)
This course focuses upon specific content relative to helping the principal effectively manage human resources within the school setting. It provides examination of organizational dimensions, planning, recruitment, selection, placement and induction, staff development, appraisal, rewards, collective bargaining, and practice of negotiation skills. The course includes study and application of a variety of approaches for supervising and evaluating instruction, including approaches to classroom observation; adapting, adopting, and designing various evaluation systems; advantages and problems of various student achievement and engagement indicators; induction, mentoring, and peer support systems; and leading professional development for self and staff. It includes the relationship of supervision and evaluation of teachers to the improvement of student learning, instruction, assessment and professional development. The legal and technical aspects of teacher evaluation are discussed, while outlining the role and responsibilities of the licensed evaluator in the annual process. Formal and informal classroom observations and conferencing with practicing teachers are part of the requirements for this course. Students must be accepted into an ELPS certificate or MA program.

ADMN 4843 Strategic Resource Management for School Leadership (5 Credits)
This course focuses upon specific content relative to helping the principal effectively manage human resources within the school setting. It provides examination of organizational dimensions, planning, recruitment, selection, placement and induction, staff development, appraisal, rewards, collective bargaining, and practice of negotiation skills. The course includes study and application of a variety of approaches for supervising and evaluating instruction, including approaches to classroom observation; adapting, adopting, and designing various evaluation systems; advantages and problems of various student achievement and engagement indicators; induction, mentoring, and peer support systems; and leading professional development for self and staff. It includes the relationship of supervision and evaluation of teachers to the improvement of student learning, instruction, assessment and professional development. The legal and technical aspects of teacher evaluation will be discussed, while outlining the role and responsibilities of the licensed evaluator in the annual process. Formal and informal classroom observations and conferencing with practicing teachers are part of the requirements for this course. Students must be accepted into an ELPS certificate or MA program.

ADMN 4844 Policy Analysis for Educational Systems (4 Credits)
This course introduces students to theories and methods of policy analysis including analyzing resources used and benefits gained from educational programs, policies, and organizations. Prerequisites: Introductory Statistics; acceptable Program Evaluation course. This course includes an experiential learning component.

ADMN 4845 Network and Systems Analysis for Educational Settings (4 Credits)
This course works with a variety of applied research methods for analysis of networks, systems, and program and policy impacts, with a focus on education and community/social services settings. Prerequisites: Introductory Statistics; acceptable Program Evaluation course. This course includes an experiential learning component.

ADMN 4848 Business Design and Innovation for School Leaders (4 Credits)
A school district is a large and complex business organization. By design, the course has a broad focus ranging from legislative issues, to manners and matters of local governance, to school finance, capital planning and budgeting concerns to more directed school and district support services. The course demands practitioners become aware of and demonstrate critical thinking as to what constitutes an effective and equitable use of people, time, technology and money in order to ensure achievement for all students. Being able to think differently, create a culture of innovation, and lead a systematic approach to implementing new ways of doing things is one of the most critical aspects of being a school leader. This course will be enhanced with a design thinking framework that takes a human-centered design approach to helping organizations innovate and grow.

ADMN 4849 Action Research for School Leaders (4 Credits)
This course emphasizes the use of research methods which are linked to research needed in schools. Students will learn to identify, analyze and solve problems. Some of the action research methods include focus groups, interviews, observations, school records and surveys. Capstone project will relate directly to the improvement of school policy and practice.

ADMN 4859 Action Research Capstone (1 Credit)
Provides support for students as they develop their action research project into the Capstone for the Masters in Educational Administration.

ADMN 4860 Principal Internship (2 Credits)
The purpose of a formal internship with a principal is to participate in supervised practical training in many of the aspects of school building administration. It is imperative that an applicant have as many first hand experiences as possible in all phases of building administration which focus upon the standards set for principals in Colorado. Must be accepted into an ELPS certificate or MA program.
ADMN 4900 Advanced Inquiry and Analysis (4 Credits)
This course is part two of a two-part course series. In part one of this series, Introductory Qualitative Research (RMS 4941), you learned about the foundations of qualitative research including philosophical perspectives, theoretical underpinnings, key characteristics, and common approaches to inquiry and research design: case studies, ethnography, narrative (testimonios), grounded theory, phenomenology, and action research. You ended the course with a design of a qualitative study proposal informed by the extant literature and your personal, practical, and intellectual goals. You completed the course with the design of a qualitative research study. ADMN [xxxx], Advanced Inquiry and Analysis, is the counterpart where you will go in the field to execute your qualitative study designed in your Introductory Qualitative Course. This intermediate level qualitative course builds on the content of other qualitative research courses at the University of Denver. In this course, you will continue to learn the skills and competencies needed to gather, analyze, and report high quality data. You will leave the course well-grounded in the application of the IRB process, data collection, data analysis, data interpretation, handling concerns about reliability, validity, and ethics; and writing the final report. The final product for this course will be the execution of a rigorous qualitative research design with preliminary findings that could be presented at a professional conference and with further development for manuscript publication.

ADMN 4991 MA Independent Study (1-10 Credits)
ADMN 4992 Directed Study (1-10 Credits)
ADMN 4995 Research - M.A. Thesis (1-10 Credits)
ADMN 5900 Research Planning and Design (3 Credits)
This course is designed to support doctoral students to design research and successfully defend a research proposal for their culminating project/dissertation.
ADMN 5991 PhD Independent Study (1-10 Credits)
Special projects in the field of education, taken by arrangement of Educational Administration faculty.
ADMN 5992 Directed Study (2-10 Credits)
ADMN 5993 Doctoral Research Seminar (1-4 Credits)
The Doctoral Research Seminar is designed to prepare students to undertake the completion of doctoral research or a dissertation. The research process can often be confusing and overwhelming, especially for students coming from a cohort-based program. This course assists students in turning a research idea into the EDD doctoral research project or a polished dissertation proposal and provides students strategies for making the process manageable and enjoyable.
ADMN 5995 Dissertation Research (1-10 Credits)

Higher Education
Office: Morgridge Office of Admissions
Mail Code: 1999 E. Evans Avenue, Denver, CO 80208

Email: edinfo@du.edu
Web Site: morgridge.du.edu/programs/higher-education/

Colleges and universities all over the world face multiple challenges. These institutions need enlightened leaders and faculty who can guide various external audiences and internal constituencies toward new educational solutions to societal challenges. Our degrees provide students opportunities to study various subjects in the field of higher education, providing deep research-based understandings across a breadth of post-secondary education concerns. The Higher Education department (HED) mission is three-fold:

1. Prepare social justice professionals for careers in post-secondary education related to administration, policy, teaching and research, as well as careers in public and private agencies of higher education, for-profit and not-for-profit settings, and in a multicultural and changing world.
2. Conduct equity-based research about persistent and/or timely problems facing post-secondary education.
3. Provide meaningful service to the University of Denver and broader Colorado community in matters pertaining to post-secondary education, especially related to equity, diversity and social justice.

The Higher Education department is an “Inclusive Excellence Unit” (www.aacu.org) and supports the concept that inclusiveness and excellence are one and the same. That is, students and instructors from diverse social and cultural backgrounds who become part of the department all bring unique gifts, talents and experiences that make tremendous contributions to the teaching and learning climate of the Higher Education department.

Doctor of Philosophy in Higher Education
Students in the 90-credit Doctor of Philosophy degree program gain knowledge and demonstrate competence through coursework designed to provide a strong foundation in the field of higher education and research methods. In addition, students broaden their scope of study through a wide range of elective possibilities. Students are required to complete the doctoral comprehensive exam (also known as the preliminary oral examination) near the end of coursework. The culminating requirement for the degree is a dissertation, defended in a final oral defense.
Doctor of Education in Higher Education

Students in the 65-credit Doctor of Education degree program gain knowledge through coursework and research experience. Competence is demonstrated by the successful completion and oral defense of a doctoral comprehensive exam, and the successful oral defense of the doctoral research project (DRP). It is expected that the DRP will be a publication quality project that investigates a key issue or problem important to the field of higher education. Upon completing the research project, students will be able to translate what they have learned into real-world applications, and offer practical and policy related recommendations.

Master of Arts in Higher Education

The 50-credit Higher Education master’s degree is designed to prepare professionals for administrative, leadership, student-centered, and/or policy-focused careers in post-secondary institutions, private and public agencies of higher education, and other educational settings. This generalist program enables students to explore the academic and practitioner-oriented issues related to post-secondary settings and to expand their experiential awareness through practical activities in administration, policy, and research. Elective coursework allows students to complete an optional emphasis in one of three areas: College Student Affairs, Diversity and Higher Learning, or Public Policy & Organizational Change. The final degree requirement is the successful completion of a capstone portfolio.

Doctor of Philosophy in Higher Education

Degree and GPA Requirements

• Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Masters degree: This program requires a masters degree as well
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842. The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

• Minimum TOEFL Score (Internet-based test): 80
• Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

Courses

HED 3263 Sports and Higher Education (4 Credits)
This course provides an overview of the general history of college and university sports, athletics, intramurals, intramurals, and wellness programs as a broad introduction to this area; additional emphases center on issues related to intercollegiate sports e.g., athletic department positions, student-athlete support systems, ethical considerations, legal issues, politics and policies pertaining to institutional and NCAA norms/regulations, and current and future issues in collegiate athletics. Prerequisite: must be junior- or senior-level student.

HED 3264 Psychosocial Dimensions of Sports and Wellness (4 Credits)
Cross listed with HED 4264.

HED 3991 Independent Study (1-10 Credits)

HED 3992 Directed Study (1-10 Credits)

HED 4201 Assessment in Higher Education (4 Credits)
This course is designed to give student a broad understanding of assessment in higher education. This course will improve student's familiarity with existing assessment instruments for students, services, programs and facilities as well as provide an understanding importance of maintaining high standards of ethics and integrity in assessment of higher education and student affairs.

HED 4202 Program Evaluation in Higher Education (4 Credits)
This course is an overview of the craft of program evaluation, “…the systematic assessment of the operation and/or the outcomes of a program or policy, compared to a set of explicit or implicit standards, as a means of contributing to the improvement of the program or policy” (Weiss, 1998, p. 4). Program evaluation, simply put, is the craft of applying research methods in a thoughtful way to the task of finding out what and/or how interventions work in the context of the programs or policies in which they operate. This is accomplished by systematically investigating the effectiveness of program processes and outcomes within their political and organizational context. The goal is to inform social action and, by extension, improve conditions for program recipients and participants. Students in this course will explore program evaluation within the context of higher education. The purpose of this course is threefold: (1) Develop an understanding of existing evaluation theory and practice; (2) Apply evaluation theory and approaches to the context education evaluation; and (3) Develop an experiential base upon which to engage in evaluation in educational practice, and for many as a component of doctoral research projects.

HED 4210 Critical Higher Education (4 Credits)
This course examines the social and political context of U.S. education and provides an analysis of schooling, cultural politics, and global influences that inform current practices and structures of the higher education system. Central to this course is the development of a critical understanding of topics related to meritocracy, stratification, diversity, and decentralization in higher education. Prerequisite: Ph.D. student in higher education or permission of instructor.

HED 4211 Current Issues in Higher Ed (4 Credits)
A study of contemporary higher education as a specialized field of inquiry and as a professional area in which to work. Explores institutional missions as well as entities such as administration, faculty, curriculum, and student, in relationship to current issues.

HED 4212 Introduction to Public Policy and Higher Education (4 Credits)
This is an introductory course that gives students an overview of federal and state public policy, current issues, research methods, and practical skills required for the policy formation process. This is the introductory seminar to the Public Policy, Leadership and Organizational Change emphasis area for the master’s program.

HED 4213 Leadership and Supervision (4 Credits)
General leadership theory and its implications for higher education; specific focus on leadership skills, such as conflict resolution, problem solving, use of teams and change advocacy.

HED 4214 History American Higher Ed (4 Credits)
Development of North American higher education from colonial times to the present, focusing on important educators and institutions.

HED 4215 Curriculum Development and Teaching Strategies in Higher Education (4 Credits)
The goal of this course is to prepare those who will serve in higher education with the knowledge, skills, and dispositions necessary to design curriculum and pedagogical strategies that produce effective and equitable learning outcomes for all students and adults in postsecondary settings. This course pushes students to think about curriculum and instruction as a decision-making process that requires articulated goals, strategic alignment, and thoughtful planning in order to realize a more effective and inclusive pedagogy. Throughout the course students will come to understand the complexities of curriculum and teaching design, but also have the process clarified with a framework for choosing among different ways of teaching that result in significant and transformative learning experiences for their future students.

HED 4216 HED Research Processes (1-5 Credits)
Enables students to explore current research and theories associated with their scholarly interests and resources for doing research, and to address problems in conducting original inquiry and investigations in postsecondary education. Attention is directed to the investigation of a research problem of each student’s interest. Prerequisite: Successful completion of 10 credit hours of research courses or permission of instructor.
HED 4217 Student Affairs Administration (4 Credits)
A review of student services, emphasis on programmatic content and relationship to student development; organization of student service programs and national trends. To further describe the historical development of student affairs work including significant persons and activities and to begin the development of students’ own professional identities as a reflective practitioner and to understand the responsibilities for integrating assistantships/internships/work experiences to theory and new knowledge.

HED 4219 Introduction to Higher Education (4 Credits)
This course is designed to provide students an overview of higher education as a field of study and practice. The topics covered attempt to equip students with working knowledge of the structures, functions, challenges, concerns, and opportunities within higher education as a social institution. Grounded in values and principles of inclusive excellence, the course takes equity and diversity as departure points from which any and all productive understandings of higher education must engage.

HED 4220 Org & Governance of Higher Ed (4 Credits)
Study of theoretical perspectives and empirical research drawn from the social sciences related to higher education organizations and governance with an emphasis on application of theory and practice.

HED 4221 Financing Higher Education (4 Credits)
Financing public and private institutions of higher learning; sources of income, budgeting procedures, funding and control, use of simulated exercises to illustrate principles. Recommended prerequisites: HED 4210, HED 4211 and HED 4214.

HED 4222 Legal Issues in Higher Education (4 Credits)
Review of a broad range of administrative problems with legal dimensions; process for analyzing case law on issues of access, student rights, employment, collective bargaining, church-state relations, private sector and liability. Students gain practical experience (praxis) in analyzing and applying legal concepts to higher education subjects.

HED 4223 Inst Research & Enroll Mgmt (3 Credits)
Explores the important area of institutional research (IR) in a postsecondary setting. Issues relating to how an IR office functions and typical responsibilities of the professionals who staff these offices will be explored. Enrollment management concepts and themes will be highlighted along with data collection and reporting aspects of the college admissions and retention processes. Recommended prerequisites: HED 4213, HED 4217 and HED 4260 for master’s students; HED 4213, HED 4220 for doctoral students.

HED 4226 The Community College (4 Credits)
General issues related to community college, such as history, mission, characteristics, students, curricula, teaching and student services.

HED 4229 Student Support in College (4 Credits)
This class will introduce students to basic interpersonal helping skills required in Higher Education settings, including relationship building, listening, giving feedback, problem-solving, and resolving conflicts. Students will become familiar with crisis intervention models and techniques; signs and symptoms of distress and mental illness; strategies for making appropriate referrals to mental health providers; and considerations about self and other when engaged in helping relationships, particularly those with cultural differences. Central to the course will be discussion of the appropriate role Higher Education professionals have in helping students while recognizing their limitations.

HED 4230 Inclusive Excellence in Capstone (1-6 Credits)
The purpose of this course is to promote the integration of the core curriculum with practitioner related experiences in the masters program. Advanced students have an opportunity to use concepts and theories learned in previously complete coursework to understand and analyze current issues facing student affairs. The course is also designed to assist students by facilitating the transition in to professional positions in higher education.

HED 4232 Research Methods in Higher Education I (1-3 Credits)
Introductory research methods course for higher education professionals.

HED 4233 Research Methods in Higher Education II (1-4 Credits)
Introductory research methods course for higher education professionals, part II.

HED 4235 Organizational Change (4 Credits)
This course will focus on designing, implementing, and evaluating effective change in higher education through an equity-minded lens. The course is intended to assist students in developing a set of understandings in how to plan and implement change in higher education organizations, institutions, and as an industry. The course will introduce “equity-minded change” in higher education and will focus on how institutions can change to achieve equity, while addressing the importance of managing organizational development on a macro and micro level in higher education institutions and organizations. Students will acquire tools to manage and understand change through structural, political, human resource, and symbolic perspectives to understand the systemic interrelationships among these factors to effectively meet the changing socio/economic/political environments within higher education as they impact student success.
HED 4242 Educational Policy Analysis (4 Credits)
Students in this experiential course will develop critical policy analysis and Praxis skills that have relevance for the implementation of public policy and finance strategies for higher education. Students will employ critical thinking skills to analyze, evaluate and interpret public policy and finance with the goal of advancing the field of higher education's understanding of effective public policy and finance, as well as the unintended consequences that may arise with various policy solutions and funding strategies. Specifically, students will learn how to evaluate whether public policy and finance hinders or assists post-secondary institutions and their leaders in dismantling systemic oppression while promoting educational equity and opportunity and strengthening the public purposes of higher education. Students will interact directly with public policymakers, post-secondary administrators, policy researchers and policy analysts while assisting with a quarter-long experiential policy analysis project with an intermediary public policy organization. Students will also develop a policy analysis paper.

HED 4246 Issues of Access & Opportunity (4 Credits)
This course addresses theories and research on a variety of issues related to college preparation, school structures, and inequalities in college access. The course will cover different levels of analyses: theoretical, individual levels (i.e., race, ethnicity, and social class), organizational levels (family, geography, high school context, and outreach), and field levels (i.e., policy, testing, rankings, media, and policy). Special attention will be paid to the sociocultural context influencing issues of college access and opportunity for students.

HED 4247 Retention, Persistence, and Student Success in Postsecondary Settings (4 Credits)
This course introduces students to relevant research, theory, and practice related to college student retention and persistence. Students explore cultural, institutional, and individual factors that may impact college student persistence and critically examine theories attempting to explain why students leave college. In addition, students also closely explore the dynamics of oppression at the individual, institutional, and socio-cultural levels and the resulting impact on student retention. Effective retention practices, programs, and assessment procedures are also identified and examined.

HED 4260 Students and College Environments (4 Credits)
This course will serve as an introduction to college environments and the complexity of campus and culture. The purpose of this course is to familiarize you with today's higher education settings and provide you with strategies to maximize learning and development, for all students. In line with inclusive excellence, attention will be paid to the impact of campus environments on diverse student populations. Theoretical concepts will help explain, describe, and examine the college environments as a system and its impact on students, faculty, and staff.

HED 4261 College Student Development Theory (4 Credits)
An overview of human development theories relevant to college students, of traditional and non-traditional ages. This application will enhance the ability of student affairs professionals as they work to maximize the affective and cognitive development of students within the college setting.

HED 4264 Psychosocial Dimes of Sport (3 Credits)
Psychology and sociology of sports as related to college and university athletics and wellness. Cross listed with HED 3264.

HED 4270 Student Affairs Internship (1-6 Credits)

HED 4281 Inclusive Excellence Programming and Development (4 Credits)
IE in Programming and Development will provide an overview related to the development and implementation of cultural programming and cultural centers over time. This course will pay specific attention to the role of student activism in creating change on college campuses in the form of cultural programming, centers, diversity curriculum, and inclusive excellence initiatives. The course will also address the challenges and competencies associated with inclusive excellent programming and development.

HED 4282 Characteristics of College Students (3 Credits)
Characteristics to consider in working with adult learners, including aptitude, motivation, cognitive development, psycho-social development, intelligence, learning styles, gender, ethnicity and social class; practice in analyzing learning characteristics of a specific individual.

HED 4284 Inclusive Excellence in Organizations (4 Credits)
In recent years, major demographic and economic changes in this country and worldwide have contributed to the diversification of the workplace. As a result, the need for understanding how to enhance cultural diversity in organizations has taken on a greater importance. Accordingly, framed through the concept of Inclusive Excellence, this course focuses on the changing demographics of our society, especially related to race and culture, gender, age, physical ability, sexual orientation, and socio-economic status, emphasizing the implications these factors have for leadership and management in a variety of organizational settings.

HED 4287 Critical Race Theory and Education (4 Credits)
The purpose of this course is to provide students with an in-depth exposure to Critical Race Theory (CRT) as it pertains to education. Critical Race Theory is an analytical framework that provides race-based epistemological, methodological, and pedagogical approaches to the study of everyday inequalities in P-20 education.

HED 4288 Gender & Sexuality in Higher Education (4 Credits)
This course examines how the related constructs of gender and sexuality are understood within the context of higher education institutions, practices, policies and research. We'll begin this discussion by examining the evolution of thinking around gender and sexuality. Historically, these constructs have been portrayed primarily as a matter of "natural fact" (Halperin, 1989). In other words, gender and sexuality should be viewed as functions of the body and therefore objectively biological. There is, of course, a resounding counter-argument to this claim, lead by the likes of Michel Foucault, Judith Butler, David Halperin, Eve Sedgwick and others, who suggest that gender and sexuality are socially constructed ideas, fundamentally performative and enforced through existing configurations of power that regulate our bodies via a pervasive social norms and taken-for-granted patterns of socialization.
HED 4289 Race and Racism in Higher Education (4 Credits)
This course explores connections between race, racialization, and racism in American higher education. It draws on historical, political, economic, and cultural explanations of racial inequity in educational outcomes and processes. The course uses institutional and systemic levels of analysis to examine racial equity in higher education.

HED 4290 Inclusive Excellence in Praxis (1-6 Credits)
This course assesses and helps students develop critical self-reflection, leadership, and communication skills. Career plans are developed based on personal, academic, and professional goals. An emphasis is placed on applying theories discussed within the classroom to their respective professional roles on campus. Introductory course for all first-year master’s students. This course combines the professional development seminar and practicum.

HED 4291 Doctoral Professional Development Seminar (1-3 Credits)
This course is designed to introduce the first year doctoral students to the field and discipline of Higher Education and to prepare doctoral students for their academic study.

HED 4294 Seminar in Higher Education (1-4 Credits)
Advanced seminar to examine timely topics, issues, and problems. The course description is developed each time the course is offered to describe the topics to be investigated.

HED 4295 Internship in College and University Administration (1-6 Credits)
Supervised experience in administration at college or university level.

HED 4296 Internship in Public Policy (1-6 Credits)
Supervised experience in postsecondary public policy analysis or research, usually at a state or national compact or agency in the Denver-Boulder area. Recommended prerequisites: HED 4210, HED 4211, HED 4212, HED 4221, HED 4242, HED 4243.

HED 4297 Internship in College Teaching (1-6 Credits)
Supervised experience in teaching at college level.

HED 4991 MA Independent Study (1-10 Credits)
HED 4992 Directed Study (1-10 Credits)
HED 4995 Research - M.A. Thesis (1-10 Credits)
HED 5991 PhD Independent Study (1-10 Credits)
HED 5992 Directed Study (1-10 Credits)
HED 5993 Doctoral Research - EdD (1-20 Credits)
Doctoral research credits for doctoral research project toward the EdD. Prerequisite: Must be an EdD student in HED; must have completed at least 80% of coursework; cannot complete more than five credit hours of HED 5993 prior to passing the comprehensive exam.

HED 5995 Dissertation Research (1-20 Credits)

Doctor of Philosophy in Research Methods and Statistics
The goal of the Research Methods and Statistics (RMS) PhD is to prepare graduate students with the state-of-the-art skills needed to conduct research in education and the social and health sciences. The faculty members equip students with cutting-edge research skills, creative educational vision, social responsibility, and sufficient experience in the application of these skills and knowledge to achieve mastery. The faculty are committed to shaping a safe, sustainable, democratic, and just world and believe that high-quality research is one approach to achieving this goal.

The education and social and health sciences fields have a growing need for professionals with strong skills in research design, statistics, qualitative and mixed methods, and data analysis. The RMS PhD course plan provides the courses and experiences necessary to conduct and supervise effective social science research.

Graduates with RMS PhD degrees hold leadership positions in testing and program evaluation companies, universities, school districts, and state agencies, among others.
Doctor of Philosophy in Research Methods and Statistics with a Concentration in Institutional Research

The RMS concentration in Institutional Research is targeted towards professionals with career goals in institutional research in applied settings including higher education, K-12 schools, non-profits, government settings, and business. Foundational coursework will equip Institutional Research students with strong quantitative, qualitative, and mixed research methods skills. Students will specialize in higher education or library and information science and take institutional research content knowledge courses in management, business intelligence, and public policy.

Doctor of Philosophy in Research Methods and Statistics with a Concentration in Qualitative Research

The RMS concentration in Qualitative Research primarily focuses on preparing students with strong, versatile, qualitative research methods skills to be utilized in different fields.

Master of Arts in Research Methods and Statistics

The goal of the Research Methods and Statistics (RMS) MA is to enhance student development and use of research in education and the social and health sciences with a specific focus on program evaluation. The faculty equip students with cutting edge research skills, creative educational vision, social responsibility, and sufficient experience in application of your skills and knowledge to achieve mastery. RMS is committed to shaping a safe, sustainable, democratic and just world and believe that high-quality research is one approach to doing this.

The education and social and health sciences fields have a growing need for professionals with strong skills in research design, statistics, qualitative and mixed methods, and data analysis. The RMS MA degree requirements provide the courses and experiences necessary for graduates to conduct effective social science research.

Graduates with RMS MA degrees hold professional positions in program evaluation at non-profit organizations, service agencies, school districts, and state agencies, among others.

Master of Library and Information Science in Library and Information Science

Library and Information Science (LIS) has developed a distinctive program of study to serve the rapidly changing needs of future librarians, archivists and information professionals in the Rocky Mountain region. There are a number of areas of focus including: Archives and Special Collections, Digital Libraries, Early Childhood Librarianship, Academic Libraries, Public Libraries, School Libraries Concentration, Special Libraries, and Web Services Librarianship.

With a dedicated faculty, we get to know our students very well through face-to-face interaction so that we can connect them to the highly regarded professional network in the region (and beyond). Practitioners speak highly of our students and are eager to have DU MLIS students as interns and employees.

Program Accreditation
American Library Association

Master of Library and Information Science in Library and Information Science with a Concentration in Teacher Librarian

The DU Teacher Librarian (T-L) Program is authorized by the Colorado Department of Education (CDE). A concentration in School Libraries prepares students to work with children and young adults in K-12 school libraries as well as youth services departments in public libraries. Colorado endorsement as a Teacher Librarian requires applicants to have a valid teaching credential, one year of classroom teaching and pass the Place Exam (School Librarian endorsement is available for applicants without classroom teaching experience). Recommendation for the added endorsement as a school librarian is made by the DU LIS Program, but endorsement is granted by the State of Colorado. Individual State requirements vary and may include teaching experience and media examinations in addition to a valid teaching credential. Students should consult with the Colorado Department of Education for the most updated endorsement requirements. Dr. Mary Stansbury of the LIS faculty is the primary contact for this specialization.

Program Accreditation and Authorization
American Library Association

Colorado Department of Education (CDE)

Master of Library and Information Science in Library and Information Science with a Concentration in Research Data Management

Research Data Management responds to the emerging need for well-trained information professionals in the digital environment. The concentration prepares professionals to support the research data life-cycle in the areas of scholarly communication, open access, copyright advice, and research
CERTIFICATE in LIBRARY AND INFORMATION SCIENCE WITH A Concentration IN RESEARCH DATA MANAGEMENT

The knowledge students gain in our library information science certificate program can prepare them to provide support in many areas in research data management. Research data expertise can be invaluable in scholarly communication, open access, copyright advice and research data management. Students take part in rigorous coursework in information science, research methods and statistics, collaborating with classmates as part of this comprehensive 28-credit program.

Our students can learn how to manage research data at a variety of settings, including academic libraries, research service centers, scientific and research organizations, government agencies and non-profit organizations. Graduates can enter into fields with significant needs for well-trained information professionals who can manage, preserve and share data generated throughout the research process.

Doctor of Philosophy in Research Methods & Statistics

Degree and GPA Requirements

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Masters degree: This program requires a masters degree as well
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

Complete all of the following courses:

- RMS 4930 Quantitative Research Design
- RMS 4941 Introduction to Qualitative Research
- RMS 5995 Independent Research (Minimum 10 credits)  

II. Program requirements

A. Measurement

Complete all of the following courses:

- RMS 4921 Psychometric Theory
- RMS 4922 Item Response Theory
- RMS 4932 Meta-Analysis Social Science Research
- RMS 4924 Factor Analysis in the Social Sciences

B. Research Methods

Complete all of the following courses:

- RMS 4918 Propensity Score Analysis
- RMS 4940 Structural Foundations of Research in Social Sciences  
- RMS 4942 Qualitative Data Collection and Analysis
- RMS 4951 Mixed Method Research Design
RMS 4952 Research Ethics
RMS 4960 Introduction to Evaluation

Select at least one of the following:
RMS 4931 Survey and Design Analysis ²
RMS 4945 Community-Based Research ²
RMS 4946 Advanced Qualitative Research ²
RMS 4947 Arts-Based Research ²
RMS 4959 Topics in Research Design ²

C. Statistics

Complete all of the following courses:
RMS 4911 Correlation and Regression
or PSYC 4300 Correlation and Regression
RMS 4912 Analysis of Variance
or PSYC 4330 Analysis of Variance
RMS 4913 Multivariate Analysis
RMS 4914 Structural Equation Modeling
or PSYC 4350 Structural Equation Modeling for the Social Sciences
RMS 4915 Hierarchical Linear Modeling
RMS 4916 Latent Growth Curve Modeling

III. Practicum

Complete the following course:
RMS 4980 Practicum in Research

IV. Cognate (Minimum 10 credit hours)

Total Credits 90

1 In order to maintain degree candidacy, MCE doctoral students who have finished all requested course work will register for one dissertation or doctoral research credit or other credit for consecutive terms fall through spring (summers not required) until the student graduates.

Optional

A minimum of 90 credit hours is required beyond the earned master’s degree. No credit hours from the earned master's degree can be transferred into the PhD.

Non-coursework requirements
• Doctoral comprehensive exam
• Dissertation and oral defense

### Library Information Science Courses

- **LIS 4000 Foundations of Library, Archival, and Information Science (3 Credits)**
  An overview of the theoretical and conceptual foundations of library, archival, and information sciences and an introduction to the information professions, including principles, values, professional organizations, publications, current and future challenges.

- **LIS 4010 Organization of Information (3 Credits)**
  This course introduces basic concepts in the theoretical, practical, and technological aspects of information organization. It provides an overview of the methodologies for organizing and representing information resources in the library, archives, and museum settings.

- **LIS 4011 Information Access & Retrieval (3 Credits)**
  Information retrieval is defined as the process of searching for (and retrieving) relevant information within a document collection. The document collection could be textual (bibliographic records), structured and unstructured data, library databases, web based information resources, multimedia resources, and numerical data. This course introduces students to important access and retrieval tools and technologies used to retrieve information that are relevant to a user's information need. In addition to the underlying principles and processes revolving around access and retrieval such as text operations, indexing, query languages, and searching, the course covers relevant topics such as library discovery systems, web based information retrieval technologies, and enterprise search systems.

- **LIS 4015 User and Access Services (3 Credits)**
  Overview of human information processing and user services in the changing information environment and different communities of practice. This course introduces the concepts of user information needs, seeking, and processing as a foundation for understanding users and designing user-centered information services. The course examines both traditional reference and current/emerging information services in different settings and populations. Course also introduces the concepts of information literacy, user education, and assessment of information services. Recommend prerequisite: LIS 4015.

- **LIS 4040 Management of Information Organizations (3 Credits)**
  An introduction to current theory and practice of management in information organizations through the study of organizations, communications, decision making, planning, leadership, human resources and budgeting. Prerequisite: LIS 4000 or instructor approval.

- **LIS 4050 Library and Information Technologies (3 Credits)**
  A foundation course on the applications of information and communications technology in libraries and information agencies. Integrated library systems and the acquisition, evaluation, and implementation of library automation solutions, including electronic resource management systems are explored. The course further introduces database design, Internet technology, web services, cloud computing, computer networks, telecommunications, and computer security. Hardware, software, and other productivity tools and utilities from organizations such as OCLC, Amazon, and Google are discussed.
**LIS 4060 Reference (3 Credits)**
Information resources include a number of different kinds of reference materials in a wide variety of formats. These include guidebooks, encyclopedias and dictionaries, indexes and abstracts, handbooks, bibliographies, biographical finding tools and biographies, data sets and much more. Many of these resources are available on-line, as well as in print and other digital formats. This course will help students identify and evaluate the most likely resources for information queries in particular settings. It will also provide the opportunity to find answers to real research questions. The course will cover the primary resources for the broad disciplines of business, humanities, sciences, social sciences and government publications in print and electronic formats. Class exercises will reflect the multidisciplinary and multicultural interests and characteristics of library users. Prerequisite: LIS 4015. Recommended prerequisites: LIS 4000 and LIS 4011.

**LIS 4070 Cataloging & Classification (3 Credits)**

**LIS 4135 Scholarly Communication (3 Credits)**
This course will provide a broad understanding of scholarly communication systems regarding the creation, dissemination, and evaluation of scientific information. The concept of scholarly communication refers to the ways researchers publish and disseminate their research findings in the digital environment and encompasses formal and informal channels of communication among scholars. Traditionally, scholarly dissemination systems have involved conference presentations and publication of books and articles in subscription-based journals. Digital technology has transformed scholarly communication by introducing open access publishing models and alternative ways of measuring scholarly impact. This course will explore the changing nature of scholarship and will examine the topics of scholarly publishing, peer review, intellectual property, the open access movement, digital repositories, bibliometrics, and altmetrics.

**LIS 4206 Web Content Management (3 Credits)**
This course will include instruction in web page creation, selection, and evaluation of web content as well as web site management. Selection of web page content will be discussed in the context of organizational knowledge management and competitive intelligence needs. Differences in information needs for provision of public information and competitive intelligence on Internet pages versus the organizational information needs of Intranets in knowledge management will be explored. This course also will address human-computer interface design to allow web page designers to create effective web pages according to established principles of design.

**LIS 4208 Usability (3 Credits)**
This course provides an overview of usability analysis and user experience research and introduces students to practical methods and techniques in conduction usability evaluation. The focus of the course will be on the selection of appropriate evaluation methods, as well as planning, designing, and conduction usability evaluations of information services. In addition, the course will discuss the methods and tools of user-experience research, the theoretical underpinnings of usability, and the role of usability in iterative design and the development of information systems.

**LIS 4209 Information Architecture (3 Credits)**
The web is a complex information environment consisting of billions of web pages, users, and clicks and interaction every single day. This course introduces students to the fundamentals of web information architecture (IA) - a discipline that aims to understand the information needs and activities of web visitors and create design elements to help users find their way around in the complex information environment with ease. The course will cover various strategies and skills, in which information architects structure, organize, label, navigate, and search for information on large websites. A service learning component is built into this course so that students can transfer their IA knowledge and skills to a real-world project. The course is designed following a project management approach and students will be exposed to different activities from start to finish.

**LIS 4210 Data Visualization (3 Credits)**
This course provides a practical introduction to the principles, theories, and applications of information visualization in the research data context. This course contextualizes modern practices in information visualization by examining historical approaches to visualization with an eye on theories that inform contemporary visualization best practices. Using a hands-on component, students will get real-world experience in visualizing datasets, and building visualization dashboards that integrate multiple visualizations.

**LIS 4220 Data Curation (3 Credits)**
Across the academic domains, digital data are becoming more visible as critical products of scholarly work. Digital technologies, such as sensor networks in the environmental sciences, social networking tools in the social sciences, and the digitization of cultural artifacts in the humanities, allow researchers to produce far greater volumes and complexities of digital data than were possible in the past. Digital technologies, and the data that they produce, offer tremendous opportunity for researchers in every academic discipline to ask questions that were previously impossible to study. Some digital technologies enable researchers to study very local phenomena in great detail. Others enable the integration of many diverse data streams in order to conduct synthesis and longitudinal studies. But while the possibilities of digital data are exciting, they also present tremendous challenges: how to best organize and manage data, how to make data discoverable and accessible to diverse user communities, and how to store and preserve data over the long term.

**LIS 4230 Database Management Systems (3 Credits)**
This is a foundation course on the principles of database design and the use of database management systems for information professionals. The course covers database systems, data modeling, relational models, relational algebra, SQL, emerging NoSQL systems, data storage and querying, query languages, query optimization, OLAP, transaction management, data warehousing, and data mining. In addition, fundamentals on systems analysis and the database application lifecycle will be reviewed.
LIS 4235 Scripting for Large Databases (4 Credits)
This course will introduce students to the basics of data storage and acquisition as part of a multi-step data gathering, processing, analysis and visualization effort. The logic and structure of relational databases will be reviewed, exploring the more common databases like SQL Server and Postgres. along with exploration of JSON and NoSQL based data stores. Techniques and methods for automation and scalable data processing will be introduced under the Python programming language with a focus on using Pandas and other libraries to simplify data tasks. These skills will be integrated and applied by the student through the use of prepared data sources, along with use of APIs and web scraping technique to acquire data through internet sources.

LIS 4320 Outreach (3 Credits)
Outreach as a library service is evolving at a rapid pace. This course will examine the history, current practice, and future promise of outreach across all kind of library organizational settings. Topics addressed in this course will include competencies for outreach librarianship; practices in outreach services; definition and scope; planning, designing and budgeting for services; environmental scanning, key performance indicators, and barriers; developing and maintaining partnerships.

LIS 4321 Collection Management (3 Credits)
Topics addressed in this course include collection development and access policies, selection methods and practices, collection assessment, preservation and conservation, de-selection, treatment of rare material, manuscripts and archives, U.S. government publications, non-book and digital formats management, juvenile, and other special materials.

LIS 4330 Library Instruction (3 Credits)
This course provides an introduction to the principles of library instruction and information literacy including a historical overview of their place within the profession. Emphasis is on instruction within an academic setting, but students will learn important educational theories that can be applied to a variety of settings. ACRL and AASL standards will be examined as well as types of instruction, instructional design, collaboration with faculty, various competencies, assessment, and lifelong learning. The class has a strong emphasis on public speaking, communication skills, and the practical application of educational theory.

LIS 4350 Adult Materials & Services (3 Credits)
This course provides the student with an opportunity to explore readers advisory service from a customers perspective. Students study the readers advisory literature and examine all types of genre fiction. Lecture, readings and class discussion will focus on specific genres and authors within them. Students will also be required to read in all the genres.

LIS 4370 Database Searching (2 Credits)
Nearly all historic, traditional search and retrieval tools such as library catalogs, indexes, microform guides, and archival findings aids have migrated to web-based systems. This course explores the complexities of searching for materials in an online environment. Topics to be covered include database and field structures; controlled vocabularies and indexing schema; search syntaxes, reference linking; data exploring and manipulation; non-textual database searching including numerical, image, and multimedia data; metasearch and web-scale discovery technologies.

LIS 4404 Metadata Architectures (3 Credits)
Provides an overview of the principles and theories of metadata development in the digital environment. Focuses on the design and application of metadata schemas for distinct domains and information communities, issues in metadata interoperability, vocabulary control, quality control and evaluation. Examines international standards, activities and projects. Prerequisites: LIS 4010.

LIS 4510 Children's Materials and Services (3 Credits)
This course is designed to prepare librarians to work with children (ages birth to 12 years) in school and public libraries. Topics covered include children's development, reading interests and needs, materials selection, collection development (including print and non-print materials), discussions of specific genres, reading motivation skills, designing a children's area, and developing various programming ideas. Students read/view/listen to and evaluate a wide variety of materials for and about this age group, prepare and present booktalks and stories, become familiar with review sources, and design a one-year plan for youth services in a school or public library.

LIS 4520 Young Adult Materials & Services (3 Credits)
This course prepares librarians to work with young adults (ages 12-18) in school and public libraries. Topics covered include young adult development, reading interests and needs, materials selection, collection development (including print and non-print materials), and discussions of specific genres, reading motivation skills, designing a YA area, programming, and intellectual freedom issues. Participants will read/view/listen to and evaluate a wide variety of materials for and about this age group, prepare and present booktalks, become familiar with review sources, and design a one-year plan for a YA department in a small school or public library.

LIS 4535 School Libraries (2 Credits)
This course is a study of school libraries and the characteristics that make them different from other types of libraries. There is an emphasis on information literacy and educational technology standards as they apply to school libraries, the collaborative instructional process, and standards-based instruction including summative and formative assessment revision techniques. Collaborative planning and curriculum development through the school library program is addressed, as well as an understanding of networks and instructional delivery systems. Various strategies to improve students' reading will be addressed, as well as a variety of methods for promoting children's and teen literature through collaboration with classroom teachers. Administration of the school library is addressed in a review of mission statements, goals and objectives, strategic planning, policies and procedures, and communication with school administration. The discussions will create an awareness of the important of leadership and professionalism through educational and professional organizations, lifelong learning, educational research, and mentoring. Most of the concepts in this class will have been introduced in other classes. This class will specifically tie the concepts to the school library setting.
LIS 4700 Topics in LIS (1-5 Credits)
This flexible library and information science course will provide students with the opportunity to explore issues of current importance in the field. Topics and credit hours will vary and will address subjects such as emerging technologies, new methodologies, specific reader services, standards and practices, and social and economic trends in the profession. Prerequisite courses may be recommended or required as determined by the content of the specified course.

LIS 4701 Reference Topics (1 Credit)
This course provides the student with an opportunity to explore information resources in specific subject materials. Lecture, readings, class discussions, and exercises will address all formats of materials including print, electronic, and web resources.

LIS 4702 Type of Library: Topics (2 Credits)
This course is a study of specific types of libraries, such as public libraries, academic libraries, and special libraries, and the characteristics that make them different from other types of libraries. Specific topics covered will depend on the type of library, but may include collections, management, budgets and funding, as well as professional competencies.

LIS 4800 Intro Archives & Records Mgmt (3 Credits)
This course provides an introduction to the objectives and methods of the archival and records management professions including an overview of terminology, issues, and common practices. The systematic control of records throughout their life cycle from creation through processing, distribution, organization, retrieval and archival disposition will be covered. Prerequisites: LIS 4000 and LIS 4010; or instructor permission.

LIS 4805 Records Management (3 Credits)
This course covers the establishment of information maintenance plans, evaluations and audits of records and information management Programs, the records and information survey, retention policies and legal requirements, and techniques for integrating automation to records and information management.

LIS 4806 Advanced Archives (3 Credits)
In this course, students will be given the opportunity to put into practice basic archival principles and functions. Students will perform the actions of appraisal, accessioning, arrangement, description, and access solution review for both analog and digital archival collections. Additionally, students will be given the task of providing solutions for new paradigms in archival processing such as creating a web archive, processing email collections, and capturing social media content. The course will be a combination of lecture, demonstration, lab time, discussion, and projects.

LIS 4808 Digital Libraries (3 Credits)
This course provides a theoretical foundation for the study of digital libraries and discusses the technological, organizational, social, and legal issues associated with the development and use of digital libraries. Through this course students develop an understanding of digital library components and explore theoretical and practical approaches to constructing, maintaining, and evaluating digital libraries. Topics examined include digital library definitions, design and architecture of digital libraries. Topics examined include digital library definitions, design and architecture of digital libraries, information access in the digital library environment, digital library users and user services, data repositories, digital curation, digital preservation, digital library evaluation, and digital librarianship.

LIS 4820 Digitization (3 Credits)
The course offers an introduction to issues and trends in planning, developing and managing digitization projects at libraries, archives, and museums. The focus of the course is on the conversion process of analog materials into the digital format, online delivery, and preservation of master files. The course discusses collection development policy for digital projects, copyright, digital imaging technology, digitization standards and best practices for text, images, audio, and video, metadata for cultural heritage collections, delivery platforms, preservation, project management, sustainability, documentation, promotion, and evaluation of digital projects.

LIS 4830 Building Digital Collections (3 Credits)
This course provides a theoretical foundation and practical experience in building interoperable digital collections. It will introduce students to all aspects of building digital collections, including planning, user needs analysis, selecting standards and content management systems, creating digital objects and metadata, designing user interface, preservation of digital objects, and management and evaluation of digital collections. Topics covered include content creation standards and best practices, metadata, interoperability, sustainability, scalability of management systems, and concepts related to designing access tools and delivery systems. Discussion of technology and its application to digital library practices will be a major theme. The course will be a combination of lecture, discussion, and problem solving. It requires participants to conduct independent research and writing. Critical reading of course materials is essential to stimulate active participation in class discussions.

LIS 4850 Digital Preservation (3 Credits)
Students will learn the principles and practices of preserving access to information encoded in digital form. They will learn how to assess digital preservation needs within an institution, write digital preservation policies, and how to collect and present data to make a case for acquiring funds for digital preservation activities. Students will learn the basics of digital information encoding as it applies to the technological aspects of digital preservation, and will learn about current tools and practices used to preserve access to digitally encoded information over time. The course will be a combination of lecture, discussion, and problem solving. It requires participants to conduct independent research and writing. Critical reading of course materials is essential to stimulate active participation in class discussions.
LIS 4901 Capstone Course (3 Credits)
Students in this course will design and complete a project to demonstrate the ability to integrate and synthesize their masters course work and apply their knowledge to a topic. The class meets with an instructor regularly over the nine-week summer quarter. The instructor monitors and guides the students to ensure that they complete the phases of the project in accordance with the proposed timeline and goals. Evaluation will be based on individual performance, with respect to the quality and professionalism of the research, the management of the project, and analytical and writing skills. Prerequisite: Minimum of 45 quarter hours of graduate LIS course work completed, including all core courses, a proposal approved by the academic advisor and faculty permission.

LIS 4902 Internship (1-4 Credits)
This course will offer up to 4 credits for an internship position in libraries and archives. Students are encouraged to gain practical experience.

LIS 4910 Correlation and Regression (4 Credits)
This beginning statistics course examines use and interpretation of statistics in educational and human services research, including descriptive and inferential techniques. Prerequisite: Minimum of 45 quarter hours of graduate LIS course work completed, including all core courses, a proposal approved by the academic advisor and faculty permission.

LIS 4910 Culminating Internship (3 Credits)
This course is designed to supplement the classroom experience by giving students practical experience working in a library or information agency. Various options are available to students depending on their areas of interest and specialization. Opportunities for experience include fields of medicine, law, art, public, and academic libraries. It is the students responsibility to select a practicum site and a field supervisor, who must be approved by LIS faculty. One hundred hours of service over a 10-week quarter are required. The student, faculty, and field supervisor will determine specific requirements for the final paper or report. Students must notify the LIS academic advisor one quarter before enrolling in Culminating Internship. Prerequisites: Completion of a minimum of 38 quarter hours of graduate LIS coursework, including all core courses.

LIS 4911 Elementary School Culminating Internship (2 Credits)
This course is designed to provide elementary school practical experience for teacher-librarians by working a minimum of 80 hours in an elementary school library. Prerequisite: Students must have completed most of the required coursework for the degree before enrolling in the Practicum.

LIS 4912 Secondary School Culminating Internship (2 Credits)
This course is designed to provide secondary school practical experience for teacher-librarians by working a minimum of 80 hours in middle or high school library. Prerequisite: Students must have completed most of the required coursework for the degree before enrolling in the Practicum.

LIS 4920 Service Learning in LIS (1-4 Credits)
This course is designed to supplement the classroom experience by giving students an opportunity to participate in a service learning project. Students will propose an independent study component highlighting the learning aspects of the project. The experience should provide practical work in a library or information agency. Various options are available to students depending on their areas of interest and specialization. Opportunities for experience include many areas related to the information needs of an underserved population. It is the students responsibility to select a site and a field supervisor. The student, faculty coordinator, and field supervisor will work together to establish the goals and objectives of the experience. A minimum of 40 hours of service is required for two quarter hours of credit.

LIS 4991 MA Independent Study (1-10 Credits)
Independent study projects allow students more in-depth investigation of the many facets of library and information science. Students must work with an approved faculty advisor and submit a proposal outlining the objectives, scope, outcomes, and evaluation criteria. The faculty advisor and the department director must approve proposals. Prerequisites: Completion of a minimum of 30 quarter hours of graduate LIS coursework, including all core courses and a minimum GPA of 3.0.

LIS 4992 Directed Study (1-10 Credits)

Research Methods and Stats Courses
RMS 4900 Education Research and Measurement (4 Credits)
This course is intended for Master’s degree students in the College of Education. Quantitative research designs, empirical methods of data collection and interpretation, and measurement issues in research are examined.

RMS 4910 Introductory Statistics (5 Credits)
This beginning statistics course examines use and interpretation of statistics in educational and human services research, including descriptive and inferential techniques. Cross listed with SOWK 5930.

RMS 4911 Correlation and Regression (4 Credits)
This course focuses on the study of correlation and multiple regression research designs and their application to educational and social science programs. Cross listed with SOWK 5202. Prerequisite: RMS 4910.

RMS 4912 Analysis of Variance (5 Credits)
Conceptual and applied analyses of one-way through factorial nested analysis of variance designs and multivariate analysis of variance are presented. Prerequisite: RMS 4910.

RMS 4913 Multivariate Analysis (5 Credits)
Conceptual and applied analyses of common multivariate statistical techniques used in research in social sciences are presented as are assumptions and limitations of techniques and interpretation of results. Cross listed with SOWK 5950. Prerequisite: RMS 4911 or RMS 4912.

RMS 4914 Structural Equation Modeling (5 Credits)
This course covers major applications of and issues related to covariance structure modeling, specifically confirmatory factor analysis and latent variable path modeling; types of research applications for which covariance structure modeling analyses are appropriate. Prerequisite: RMS 4913.
RMS 4915 Hierarchical Linear Modeling (4 Credits)
This course introduces models that extend multiple regression to analysis of nested data structures common in education and other social sciences. Application of those methods to various forms of multilevel data, including repeated measure (growth trajectory) data is emphasized. Prerequisite: RMS 4911.

RMS 4916 Latent Growth Curve Modeling (4 Credits)
This course covers advanced issues in longitudinal data analysis using structural equation modeling and hierarchical linear modeling with latent variables. It involves both conceptual development and practical implementation of longitudinal data analysis. This course is intended to be a hands-on approach to working with data and addressing research questions that can be best answered by longitudinal data. Prerequisite: RMS 4914.

RMS 4917 Computer Applications in Social Science Research (3 Credits)
This course focuses on use of statistical software and other appropriate software programs in the analysis of quantitative data. Prerequisite: RMS 4910.

RMS 4918 Propensity Score Analysis (3 Credits)
Propensity score analysis provides a conceptual understanding of the rationale and importance of controlling for biases that might emerge during the selection process in experimental research. The common procedures of fitting a propensity score model and estimating the effect of the treatment after correction for biases are demonstrated.

RMS 4919 Topics in Statistics (1-5 Credits)
Topics vary by quarter but may include log-linear analysis, factor analysis, or missing data analysis.

RMS 4920 Educational Measurement (3 Credits)
This course examines the meaning, characteristics, and processes of educational measurement and evaluation. Development and interpretation of both standardized and informal tests are considered.

RMS 4921 Psychometric Theory (3 Credits)
This course examines major psychometric theories (e.g., classical, item response) as related to reliability, generalizability, validity, and item analysis methods. Prerequisite: RMS 4910.

RMS 4922 Item Response Theory (3 Credits)
Theory and methods for the educational and psychological measurement of latent variables using item response theory are covered in this course. Prerequisite: RMS 4910, RMS 4921.

RMS 4924 Factor Analysis in the Social Sciences (4 Credits)
This course instructs students in both exploratory and confirmatory factor analysis as those methodologies are employed in the social sciences.

RMS 4929 Topics in Psychometrics (1-3 Credits)
Topics vary, but include: large scale testing, computer applications of item response theory, affective measure construction, generalizability theory, additive conjoint measurement, and standing testing. Prerequisite: RMS 4921 or instructor permission.

RMS 4930 Empirical Research Methods (3 Credits)
This course provides in depth study of empirical research methods involved in experimental, quasi-experimental, correlational, and single-subject designs.

RMS 4931 Survey and Design Analysis (3 Credits)
Survey techniques, needs assessment, item construction, sampling, maximizing response rates and data analysis; survey construction and data analysis are required. Prerequisite: RMS 4910.

RMS 4932 Meta-Analysis Social Science Research (3 Credits)
This course examines meta analytic techniques in the social sciences. Included are discussions of review of critical data bases, coverage of all major methods of data collection and analysis, and coverage of how best to present meta analytic findings for publication. Prerequisite: RMS 4911, RMS 4930, and preferred RMS 4912.

RMS 4939 Topics in Quantitative Research Methods (1-5 Credits)
Topics vary, but include minimization as an alternative to randomization, propensity score modeling as an alternative to experimental control, and analysis of data from single-subject designs. Prerequisite: RMS 4930.

RMS 4940 Structural Foundations of Research in Social Sciences (3 Credits)
This introductory course on epistemology and research includes discussion of identification and development of problems for research; introduction to basic quantitative and qualitative methods of conducting research in social science settings, ethnographic, and criticism methods.

RMS 4941 Introduction to Qualitative Research (4 Credits)
This course is designed to provide students with more in-depth understanding of naturalistic, qualitative research methods. It is assumed that students enrolling in this course have already completed an introductory research methods course in either education or another discipline. Purposes and questions posed in their course include: Why should a researcher choose to conduct a qualitative study? How are data collection strategies carried out in a qualitative research design? What are some of the ethical concerns that impact qualitative research?.

RMS 4942 Qualitative Data Collection and Analysis (4 Credits)
In this intermediate level qualitative research course students learn about design, purposeful sampling, field work, observational approaches, and interviews, with special attention directed to the skills and competencies needed to gather and analyze high quality data. Prerequisite: RMS 4941 or instructor permission.
RMS 4943 Computer Applications in Qualitative Research (3 Credits)
Review of assumptions of qualitative designs, types of qualitative approaches and current data-analysis techniques; computer software to analyze qualitative data.

RMS 4944 Action Research (3 Credits)
Definition of action research, whether it improves classroom practice, methods of conducting, strengths and weaknesses; use to improve specific aspects of educational practice, to become more reflective practitioners.

RMS 4945 Community-Based Research (4 Credits)
This class introduces the emerging philosophical and methodological issues that arise when university faculty students collaborate on research with community-based organizations. Prerequisites: RMS 4942 and RMS 4946.

RMS 4946 Advanced Qualitative Research (4 Credits)
This course introduces exemplary qualitative studies and consideration of implications for education and the social sciences, and considers the types of questions asked by qualitative researchers and methods they use, particularly observation and interviewing. Students undertake their own qualitative study to consider application of theory, techniques, and practice to their dissertation research. Prerequisite: RMS 4941 and RMS 4942 or permission of instructor.

RMS 4947 Arts-Based Research (3 Credits)
In this course students explore the ground upon which arts-based research is built and become acquainted with salient issues regarding this kind of research. We practice interviewing, observations and a few arts-based practices. Prerequisites: RMS 4942 and RMS 4946 or permission of instructor.

RMS 4948 Criticism and Connoisseurship: Qualitative research and the enhancement of practice (3 Credits)
Qualitative inquiry in educational settings takes many forms: ethnography, grounded theory, case-study research, and more. What these methods have in common is a framework built upon social science. Criticism and connoisseurship, however, draws its conceptual underpinnings from the arts and humanities. What does it mean to have a conceptual framework dependent upon the arts? How are the methods of educational criticism different from other research methods? This class teaches students how to conduct research using this method and it provides responses to these types of questions in order that students can defend this type of research as well as others that depend on the arts and humanities as their basis. Prerequisite: RMS 4941.

RMS 4949 Topics in Qualitative Research (1-5 Credits)
This seminar builds on the content of other qualitative research courses offered in the RMS program and meets the students where they are on their dissertation journey; thus learning opportunities are tailored to individual needs as far as possible. Assignments focus on the issues pertinent to the design of dissertation proposals and writing, including ethical issues and IRB preparation, theoretical/conceptual framework, literature review, methodology, data collection and analysis strategies, and various forms of representation.

RMS 4950 Qualitative Research Methodologies (3 Credits)
Each year this course examines three qualitative research methods. The methods that might be covered in any given year include: phenomenology, grounded theory, narrative, case study, and ethnography. For each method, the following is addressed: philosophical and historical foundations, various ways the method has been utilized, and practical recommendations for conducting research utilizing this method.

RMS 4951 Mixed Method Research Design (4 Credits)
This course is designed as a fundamental exploration of mixed model and mixed method approaches. Students design mixed model and mixed method research studies with a particular emphasis on multi-site and longitudinal designs that are especially suited to educational issues. Students learn analysis approaches that incorporate previously learned quantitative and qualitative skills, and apply these in practice problem examples. Prerequisites: RMS 4911, RMS 4930 and RMS 4942.

RMS 4952 Research Ethics (3 Credits)
This course introduces ethical theory and a selection of current issues in research ethics.

RMS 4953 Topics in Data Management (1-3 Credits)
This is a preparatory course emphasizing the manipulation and analysis of data in electronic form.

RMS 4954 Grant Writing (3 Credits)
This course provides a focused overview of grant writing for educators. It examines the development of reference tools (paper, electronic, and online), websites, structuring, and writing funding requests, community collaboration and partnerships, project budgeting, management, evaluation, sustainability, and reporting activities.

RMS 4959 Topics in Research Design (1-5 Credits)
Topics vary, but include single subject design issues, minimization as an alternative to randomization, advances in quasi-experimental design. Prerequisite: RMS 4930.

RMS 4960 Program Evaluation Theory (3,4 Credits)
This course reviews theories of program evaluation and current trends in evaluation.

RMS 4961 Program Development & Evaluation (3 Credits)
This course focuses on the practice of program development and evaluation in school, business, or community agency settings. Both qualitative and quantitative methods of program evaluation are discussed. Students have the opportunity to focus on evaluation of a specific program.
RMS 4962 Program Development and Assessment (3 Credits)
This course focuses on how student affairs administrators conduct student outcomes assessment, evaluate program development, and monitor program and division budgets.

RMS 4969 Topics in Program Evaluation (1-5 Credits)
Topics vary, but include advocacy and policy change, assessment in higher education, multi-level evaluation, cost effectiveness analysis, data visualization and reporting, assessment in distance education, and evaluation in the arts and culture. Prerequisite: RMS 4960.

RMS 4978 Practicum in Qualitative Research (1-4 Credits)
Students may complete the Practicum in Qualitative Research with an individual professor or with a community partner. The goal of this practicum is to provide further experiences in thinking about, conceptualizing, designing, conducting, and/or presenting qualitative research. Prerequisites: RMS 4941, RMS 4942, and at least two of the following classes RMS 4945, RMS 4946, RMS 4947, RMS 4948.

RMS 4980 Practicum in Research (1-5 Credits)
This course provides a supervised experience in design and implementation of an empirical research or evaluation study. Organization of research proposals, completion of human subjects applications, collection, and analysis of data are emphasized. Students are expected to prepare a written report of their project which is suitable for professional presentation or publication.

RMS 4981 Community-Based Research Practicum (1-5 Credits)
Students provide community-based research assistance to a community partner (non-profit, school, community based organization, etc). Student researchers are supervised by DU faculty. This course is an excellent opportunity to match the student's research expertise with the real needs of community partners. Prerequisite: RMS 4945.

RMS 4991 Independent Study (1-10 Credits)
This course allows Masters students in RMS to study a topic area independently in conjunction with a cooperating faculty member.

RMS 4992 Directed Study (1-10 Credits)
RMS 4995 Independent Research (1-10 Credits)
This course is for Masters students in RMS whose program requires completion of a Master’s thesis.

RMS 5991 Independent Study (1-10 Credits)
This course allows Ph.D. students in RMS to study a topic area independently in conjunction with a cooperating faculty member.

RMS 5992 Directed Study (1-10 Credits)
RMS 5995 Independent Research (1-18 Credits)
This course is for Ph.D. students in RMS who are engaged in completing their doctoral dissertation.

Doctor of Philosophy in Child, Family, and School Psychology
Our doctoral training is designed to prepare highly competent, collaborative, ethical, and self-reflective scientist-practitioners who can problem-solve and share decision-making with others to optimize social, emotional, cognitive, academic, and behavioral outcomes for typically and atypically developing children and youth. The CFSP doctoral program student learning objectives aim to produce professionals who are competent in consultation, assessment, intervention, and scholarship/advocacy as they work on behalf of individuals, families, schools, and communities. These competency areas are defined as follows:

- **Consultation:** able to collaborate in strengths-based, problem-solving, interdisciplinary teams with families, teachers, administrators, and other school and community personnel and to demonstrate appropriate interpersonal relations and professional dispositions and work characteristics;

- **Assessment:** able to demonstrate evidence-based and culturally competent decision-making regarding selection, administration, and interpretation of assessments;

- **Intervention:** able to employ data-based decision-making and systems-thinking that links assessment outcomes to effective individual, family, and group change and to deliver preventative, remedial strategic accommodations, intervention, and crisis services in a timely and professional manner;

- **Scholarship and Advocacy:** able to apply, translate, and expand upon scientifically-based pedagogy and professional practice; able to advocate for the needs of children and families, to respect the dignity and worth of all persons, to exhibit compassion and self-awareness, and to demonstrate strong listening, oral and written communication skills.

Our PhD curriculum provides a strong foundation and core knowledge base in developmental, psychological, and learning theories, general and special education, and legal, ethical and professional standards of practice. Professional skills and advanced training are required in research, measurement,
program evaluation, assessment, prevention, intervention, and consultation with family, school and community professionals. All CFSP applied experiences are designed within the CoRE framework. Doctoral students in the PhD program gain competencies in conducting original research, grant writing, and in advanced qualitative and quantitative analysis, research design, and statistics. Graduates assume positions as administrators, university professors, and educational evaluators. PhD students are expected to gain a high level of collaborative and then independent research involvement with an assigned faculty mentor. Students with a Master’s or EdS Degree are accepted into the PhD programs.

**Program Accreditation**

The EdS Degree and School Psychology Licensure PhD degree programs are fully accredited by NASP. Graduates of approved degrees are assured eligibility for the National Certificate in School Psychology (NCSP), pending the completion of an internship consistent with NASP standards and the attainment of a passing score on the National School Psychology Examination administered by the Educational Testing Service (ETS) as a part of the Praxis II Series. For further information on NASP visit [http://www.nasponline.org/certification/NASPapproved.aspx](http://www.nasponline.org/certification/NASPapproved.aspx).

The School Psychology Licensure PhD degree program is under review for initial American Psychological Association (APA) approval.

**Doctor of Philosophy in Child, Family, and School Psychology - Pathway for EDS Professionals**

The CFSP PhD - Pathway for EdS Professionals is a unique PhD program designed for EdS professionals who wish to deepen their expertise in the dynamic field of education and school psychology. This degree program meets the needs of experienced professionals and recent graduates with an Educational Specialist (EdS) from a National Association of School Psychologists (NASP) approved program interested in enhancing their careers through the development of applied research and leadership skills. It is intended to link professional knowledge and research with the world of practice in a chosen specialty area of study. Students take a flexible array of advanced courses in child and family studies, family and systems service delivery, organizational management, research and program evaluation and policy development that are designed to develop expertise matched to individual interests and proficiency.

**Program Accreditation**

The EdS Degree and School Psychology Licensure PhD degree programs are fully accredited by NASP. Graduates of approved degrees are assured eligibility for the National Certificate in School Psychology (NCSP), pending the completion of an internship consistent with NASP standards and the attainment of a passing score on the National School Psychology Examination administered by the Educational Testing Service (ETS) as a part of the Praxis II Series. For further information on NASP visit [http://www.nasponline.org/certification/NASPapproved.aspx](http://www.nasponline.org/certification/NASPapproved.aspx).

The School Psychology Licensure PhD degree program is under review for initial American Psychological Association (APA) approval.

**Doctor of Philosophy in Curriculum and Instruction**

PhD students take a wide range of courses in the areas of curriculum, instruction, foundations, diversity and research. The PhD is particularly well suited for students interested in becoming higher education faculty in schools and colleges of education. Dissertation topics cover a broad assortment of theoretical and practical topics in schools or associated institutions or community groups. Additionally, students are encouraged to consider enrolling in courses in other academic units in the Morgridge College of Education and throughout the University in order to enhance or expand their educational experience. There are specializations in four areas: Curriculum Studies, Gifted Education, Mathematics Education, and Special Education.

**Doctor of Education in Curriculum and Instruction**

The EdD in Curriculum and Instruction is designed to prepare educational practitioners as experts of curriculum and instruction, capable of engaging in problems and challenges in a variety of education institutions and contexts particularly at the school or district level. The aim of this program is to produce graduates who are leaders and innovators in education (broadly defined), equipped with cutting-edge applied research skills, creative educational visions based on established academic disciplines, moral imagination, curricular expertise and commitments to issues of equity and social responsibility. There are specializations in four areas: Curriculum Studies, Gifted Education, Mathematics Education, and Special Education.

**Educational Specialist Degree in Child, Family and School Psychology**

The CFSP Educational Specialist degree – School Psychology Generalist (EdS-G) prepares professionals in all aspects of School Psychology services to work with children and families from birth to age 21 in school or community settings. All graduates of the Eds program are eligible for a Colorado Department of Education license in School Psychology and the National Association of School Psychologist’s National Certification (NCSP) after the successful completion of all coursework and passing the Praxis II/National Association of School Psychology licensing exam.

**Program Accreditation**

The EdS Degree and School Psychology Licensure PhD degree programs are fully accredited by NASP. Graduates of approved degrees are assured eligibility for the National Certificate in School Psychology (NCSP), pending the completion of an internship consistent with NASP standards and the attainment of a passing score on the National School Psychology Examination administered by the Educational Testing Service (ETS) as a part of the Praxis II Series. For further information on NASP visit [http://www.nasponline.org/certification/NASPapproved.aspx](http://www.nasponline.org/certification/NASPapproved.aspx). The School Psychology Licensure PhD degree program is under review for initial American Psychological Association (APA) approval.
Educational Specialist Degree in Child, Family, and School Psychology with a Concentration in Early Childhood

The CFSP Educational Specialist degree – School Psychology with Early Childhood Concentration prepares professionals in all aspects of School Psychology services to work with children and families from birth to age 21. This degree requires an additional 12 hours of integrated core and practical coursework, beyond that required for the EdS- Generalist degree. All graduates of the EdS program are eligible for a Colorado Department of Education license in School Psychology and the National Association of School Psychologist’s National Certification (NCSP) after the successful completion of all coursework and passing the Praxis II/National Association of School Psychology licensing exam.

Program Accreditation
The EdS Degree and School Psychology Licensure PhD degree programs are fully accredited by NASP. Graduates of approved degrees are assured eligibility for the National Certificate in School Psychology (NCSP), pending the completion of an internship consistent with NASP standards and the attainment of a passing score on the National School Psychology Examination administered by the Educational Testing Service (ETS) as a part of the Praxis II Series. For further information on NASP visit http://www.nasponline.org/certification/NASPapproved.aspx. The School Psychology Licensure PhD degree program is under review for initial American Psychological Association (APA) approval.

EDUCATIONAL SPECIALIST DEGREE IN CHILD, FAMILY, AND SCHOOL PSYCHOLOGY WITH A CONCENTRATION IN ADDICTIONS

The CFSP Educational Specialist degree – School Psychology with an Addictions Concentration prepares professionals in all aspects of School Psychology services to intervene early, with children and adolescents, to address and prevent substance abuse. This degree requires an additional 12 hours of integrated core and practical coursework, beyond that required for the EdS- Generalist degree. All graduates of the EdS program are eligible for a Colorado Department of Education license in School Psychology and the National Association of School Psychologist’s National Certification (NCSP) after the successful completion of all coursework and passing the Praxis II/National Association of School Psychology licensing exam.

Program Accreditation
The EdS Degree and School Psychology Licensure PhD degree programs are fully accredited by NASP. Graduates of approved degrees are assured eligibility for the National Certificate in School Psychology (NCSP), pending the completion of an internship consistent with NASP standards and the attainment of a passing score on the National School Psychology Examination administered by the Educational Testing Service (ETS) as a part of the Praxis II Series. For further information on NASP visit http://www.nasponline.org/certification/NASPapproved.aspx. The School Psychology Licensure PhD degree program is under review for initial American Psychological Association (APA) approval.

Master of Arts in Child, Family, and School Psychology

The CFSP Master’s (MA) degree prepares students interested in working in community agencies or educational settings that emphasize policy as it relates to direct service to young children and families. Licensure as a school psychologist is not available with the MA in CFSP degree. The MA courses are aligned with the CFSP School Psychology Doctoral degree and prepare students for further study.

Program Accreditation
The EdS Degree and School Psychology Licensure PhD degree programs are fully accredited by NASP. Graduates of approved degrees are assured eligibility for the National Certificate in School Psychology (NCSP), pending the completion of an internship consistent with NASP standards and the attainment of a passing score on the National School Psychology Examination administered by the Educational Testing Service (ETS) as a part of the Praxis II Series. For further information on NASP visit http://www.nasponline.org/certification/NASPapproved.aspx. The School Psychology Licensure PhD degree program is under review for initial American Psychological Association (APA) approval.

Master of Arts in Curriculum and Instruction

This degree program is designed with the individual student's background and career goals in mind. Most students prepare for traditional and non-traditional positions in education that require planning, consulting, research, curriculum development, evaluation and policy-making. Instructional coaching is established in a profession that is increasingly gaining national attention. Many school districts across the US, including several in Colorado, are implementing instructional coaching as a component of transformative school reform.

Master of Arts in Curriculum and Instruction with a Concentration in Teacher Education Program-Elementary/Secondary/K-12

The Teacher Education Program concentrations offer an intensive, integrated, professional preparation experience. The program is structured similar to clinical preparation models where course work and field experiences are purposeful, connected, gradual, and cumulative. Program features such as small class sizes, built-in peer support, high academic standards, and a year-long residency in closely supervised field experiences in linguistically and culturally diverse settings promote student success in mastering the competencies of an effective teacher. Apprentice teachers can complete this program in one year (52 credits), earning both a teaching licensure and a master's degree.
Apprentice teachers are required to complete 840 hours of field experience in diverse public school classrooms. Apprentice teachers are required to be at their fieldwork site three days a week during fall and winter quarters and four-five days a week in the spring quarter. A gradual release of responsibility leads to solo teaching throughout the year-long residency.

The mission of the University of Denver Morgridge College of Education (MCE) Teacher Education Program (TEP) concentrations is to provide an extensive, integrated, professional experience that supports apprentice teachers in developing the dispositions, knowledge, and skills of an effective teacher of diverse learners in under-served K-12 schools. Ultimately, effective teachers engage, plan, teach, and lead to promote the growth and development of all learners, and they take an active role in their own professional development.

**Dual Undergraduate-Graduate Program in Teacher Education**

The Dual Undergraduate-Graduate Degree program in Teacher Education concentration is an approved program in which a University of Denver undergraduate student begins taking classes toward a teaching license and a graduate degree program prior to earning a baccalaureate degree. Both degrees must be earned within five years of matriculation into the undergraduate degree program. Dual degree students in the program take nine hours of graduate course work in their senior year (all nine hours double-count as undergraduate and graduate level course work). The nine hours of MCE course work can be spread across the fall, winter, or spring quarter; or stacked into one or two quarters. Dual degree students should initiate the admissions process in the winter of their junior year.

**Program Authorization and Accreditation**

The program is authorized by the Colorado Department of Education (CDE) and accredited by the Council for Accreditation of Education Preparation (CAEP).

**Master of Arts in Early Childhood Special Education**

The master's degree in Early Childhood Special Education (EC SPED) is a four quarter (one to two year) program that focuses on expanding opportunities for specialized work with young children, youth, and families in school and community settings. It also is a pipeline to licensure and non-licensure degrees including a doctoral degree. Students in the MA in EC SPED degree program develop the knowledge and practical skills needed to work successfully within the early childhood school and community agencies that serve the birth to eight-years-old age group.

Our goal is to prepare highly competent, collaborative, ethical, and self-reflective Early Childhood Special Education Specialists who will serve young children with special needs and their families in schools, districts, and in community organizations. This program will facilitate your training and development as a scientist-practitioner who can solve problems and share decision-making with others to optimize social-emotional, cognitive, academic, and behavioral outcomes for children from birth to age eight with special needs, and their families.

**Certificate in Curriculum and Instruction with a Concentration in the Teacher Education Program - Elementary/Secondary/K-12**

The Teacher Education Program concentrations offer an intensive, integrated, professional preparation experience. The program is structured similar to clinical preparation models where course work and field experiences are purposeful, connected, gradual, and cumulative. Program features such as small class sizes, built-in peer support, high academic standards, and a year-long residency in closely supervised field experiences in linguistically and culturally diverse settings promote student success in mastering the competencies of an effective teacher. Upon completion of the certificate program (43 credits, four quarters) the student will be eligible to apply for teacher licensure through the Colorado Department of Education.

Apprentice teachers are required to complete 840 hours of field experience in diverse public school classrooms. Apprentice teachers are required to be at their fieldwork site three days a week during fall and winter quarters and four-five days a week in the spring quarter. A gradual release of responsibility leads to solo teaching throughout the year-long residency.

The mission of the University of Denver Morgridge College of Education (MCE) Teacher Education Program (TEP) concentrations is to provide an extensive, integrated, professional experience that supports apprentice teachers in developing the dispositions, knowledge, and skills of an effective teacher of diverse learners in under-served K-12 schools. Ultimately, effective teachers engage, plan, teach, and lead to promote the growth and development of all learners, and they take an active role in their own professional development.

**Program Authorization and Accreditation**

The program is authorized by the Colorado Department of Education (CDE) and accredited by the Council for Accreditation of Education Preparation (CAEP).

**Certificate in Early Childhood Special Education**

The Early Childhood Special Education Certificate is a 24-credit hour program that is aligned with the Masters of Arts in Early Childhood Special Education. As with the MA ECSE program, the candidates in the ECSE Certificate program are required to complete 600 hours of practicum over three age-levels (infant-toddler, preschool, school-age), pass the PLACE ECSE test or Praxis II, and apply to the state for the Early Childhood Special Education Specialist Endorsement.
Certificate in Gifted Core Education

The Certificate in Gifted Core Education seeks to prepare students to become gifted education educators and be eligible for the Colorado Department of Education endorsement, Core Gifted Education.

Certificate For Special Education Generalist

The Certificate for Special Education Generalist focuses on expanded learning opportunities for students interested in specialized work with children (5-21 years) with developmental delays and disabilities. Students in the SEG certificate program will develop knowledge and practical skills needed to work successfully with special education programs in public schools, private schools, and community agencies that serve families with children with developmental delays, disabilities, or have at-risk characteristics and qualities.

The program is authorized by the Colorado Department of Education (CDE).

Doctor of Philosophy in Child, Family, and School Psychology with a Concentration in School Psychology

Degree and GPA Requirements

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Masters degree: This program requires a masters degree as well
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

Doctor of Philosophy in Child, Family, and School Psychology (Pathway to PhD for EdS Professionals) with a Concentration in School Psychology

Degree and GPA Requirements

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Masters degree: This program requires a masters degree as well
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:

- Applicants must have the following minimum qualifications to be considered for admission: (1) Current NCSP or Colorado license in School Psychology, and (2) an EdS degree earned from NASP-approved program.
Standardized Test Scores

Other Requirements
- Other requirements for the PhD for EdS professionals program are: (1) an employer/supervisor evaluation, (2) an in-service or training presentation and (3) a case study in NASP format.
- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

Doctor of Philosophy in Curriculum & Instruction

Degree and GPA Requirements
- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores
- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

Doctor of Education in Education: Curriculum & Instruction

Degree and GPA Requirements
- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:
- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

**Master of Arts in Child, Family, and School Psychology**

</table>

1. In order to maintain degree candidacy, MCE doctoral students who have finished all requested coursework will register for one dissertation or doctoral research credit or other credit for consecutive terms fall through spring (summers not required) until the student graduates.

*Note: If you seek a CDE endorsement, you must follow the specialization plan outlined in the C&I Certificate handbook.

Please note: the numbers in each category above are either a minimum or range of credit hours required. The 65 minimum credit requirement is only for students with an earned master’s degree. No credit hours from the earned Master’s degree can be transferred into the EdD.

**As part of Required Research Coursework, a recommended prerequisite is RMS 4920 Educational Measurement.**

### Non-coursework Requirements
• Doctoral Applied Experiences (in at least two areas)
• Doctoral Comprehensive Exam
• Doctoral Research Paper
• Oral Defense of Dissertation

**Education Specialist in Child, Family, and School Psychology**

**Degree Requirements**

### C. Cognate Requirement

Complete 3 courses from one of the approved TEP cognates listed below. Choose courses in consultation with your advisor.

| Math Theory                  | 3 |
| Aesthetics                  | 3 |
| Gifted Education            | 3 |
| Special Education           | 3 |
| Culturally and Linguistically Diverse | 3 |

Total Credits: 52

Minimum number of credits required for degree: 52

### Non-coursework Requirements

- Comprehensive Portfolio for M.A. degree
- 840 hours of field experience in diverse public school classrooms

## Master of Arts in Early Childhood Special Education

### Degree Requirements

#### Coursework Requirements

The M.A. in Early Childhood Special Education program requires a minimum of 55 quarter hours depending on prior individual experiences and coursework.

Other Requirements:

- Praxis exam for CDE Endorsement for Special Education Generalist.

Child, Family School Psych Courses

CFSP 3900 Child Guidance (5 Credits)

Students in this class explore effective child guidance theories and factors that impact their classroom application with young children from birth to age 8. Empirically-based positive guidance techniques and strategies are reviewed and applied to everyday practice, especially as they relate to establishing prosocial environments, classroom management, and meeting the needs of children and families from diverse backgrounds.
CFSP 3910 Early Childhood Nutrition (3 Credits)
Young children have specific nutritional and physical needs. This course covers the nutritional needs of children, such as how to ensure that they get all the nutrients they need to stay healthy. The course explores what consists of safe foods at various stages in childhood, especially when not all foods can be eaten by infants and toddlers. Learn about the best practices in the field of early education regarding what foods to serve young children that promote positive health, hygiene and physical development.

CFSP 3991 Independent Study (1-10 Credits)

CFSP 3992 Directed Study (1-10 Credits)

CFSP 4000 Assessment for Non-Psychologists (2 Credits)
Foundation and methodology of assessment are considered in the context of informing practices of professionals who construct a variety of test formats including assessment of cognitive abilities, achievement testing, vocational assessment, and assessment of personality.

CFSP 4301 Professional, Legal and Ethical Issues in School Psychology (4 Credits)
This course examines professional, legal, and ethical issues pertinent to working with birth to age 21 populations in school and community settings. Attention is focused on federal and state education legislation, special and regular education case law, and psychological practice case law. Professional issues and contemporary service models are reviewed, including an introduction to ethical issues, federal mandates, professional training, and roles and responsibilities. Students engage in casework discussion regarding delivery of assessment, intervention, and consultation services. Special emphasis is given to current mental health and education regulations and reforms. Differential issues facing school psychology professionals in urban and rural settings are discussed, and students become acquainted with a variety of legal and ethical issues affecting practice in public schools, private settings, and higher education. Students learn about ethical standards, reasoning processes, and conduct in applied settings.

CFSP 4302 Special Education & Gifted Education Legal Issues (3 Credits)
This course is designed to provide students with foundational knowledge regarding the legal issues affecting special education and gifted education in early childhood and K-12 educational settings. Attention is focused on federal and state education legislation, special education case law and gifted statutes specific to Colorado. Consideration also is given to the interaction of ethical standards of practice as they relate to legal mandates and court decisions to meet the educational and psychological needs of all students, especially those with disabilities and twice exceptionalities. Students will be exposed to legal issues affecting practice in the public schools community agencies and early childhood environments.

CFSP 4303 Psychopathology: Prevention, Diagnosis, Treatment (3 Credits)
This course is designed to provide students with knowledge of mental health disorders, the diagnostic criteria as well as culturally-relevant prevention and intervention strategies. Participants obtain practical information regarding the assessment, identification, amelioration, facilitative responses, and intervention in school and community settings. Using a strengths-based approach, prevention principles, curriculum, and policy agendas are discussed. Additionally, this course explores implications for school psychologists and other school-based practitioners working with those at risk for or suffering from mental health disorders. Prerequisites: CFSP 4322, 4323, 4324, 4340, 4343.

CFSP 4304 Diversity in School and Community Settings (3 Credits)
This course explores diversity in children and families, and the impact of culture on personal and family development. Emphasis is placed on the intersection of school and community settings' cultures and those of children and families, and how this affects learning and development for individuals and groups of children. Attention is given to students' cultures and cultural experiences, and how these affect the work they do with children and families in school and community settings.

CFSP 4305 Exceptionalities in Education: High Incidence in Disabilities (3 Credits)
This course provides a broad survey of the field of exceptionality and special education. Included are discussions of current issues and controversies in the field, characteristics, classification, diagnosis, and educational interventions for early childhood and school-aged children with high-incidence and low-incidence disabilities who have exceptional educational needs. Biomedical and psychosocial etiologies are reviewed. Implications for child and family interventions and supports also are addressed. Prerequisites: CFSP 4310, 4311, 4312.

CFSP 4308 Early Academic Competencies and Interventions (3 Credits)
This course provides an overview of early language and literacy development across diverse settings and stakeholders, such as families, teachers/providers, programs, and communities. A comparative analysis of evidence-based early literacy strategies, environments, curriculum, and a review of current evaluation and instructional language and literacy practices for working with teachers, families, and young children are undertaken. Play-based and other informal methods of assessment and intervention are covered, including the integration of technology and strategies to promote early language and literacy with infants, toddlers, and preschoolers in natural environments. Prerequisite: CFSP 4310; None for ECSE CERT Students.

CFSP 4310 Early Childhood Development (3 Credits)
This course focuses on early childhood development during, from the prenatal period to approximately five years of age. Major theories of early childhood development and research methods for studying infant and early childhood behavior will be discussed. Emphasis will be on the physical, cognitive, communicative, social, and emotional aspects of development, for children who are typically developing, at risk or with special needs. All-inclusive issues, as well as health, risk and protective factors will be addressed. The importance of investing in early childhood programs, fostering nurturing relationships during the early years, and addressing the diverse needs of families will be emphasized.

CFSP 4311 Child and Adolescent Development (3 Credits)
This course provides an overview of growth and development from age five through 21 years of age. We will explore theories and research in developmental psychology to provide a context for typical child development. Attention will be given to the social, emotional, cognitive, and biological development of the child, with a particular focus on attachment as a framework for healthy development in these domains. Case studies will allow for the application and integration of child development theory and counseling practice.
CFSP 4312 Learning Theories & Behavioral Analysis (3 Credits)
This course examines learning theories and applied behavioral principles. Students learn to apply theories to case studies and fieldwork relating to children along the developmental spectrum and across cultural contexts. Students work to investigate and analyze concepts relating to learning and behavior at home and school, and to develop positive behavioral support and effective learning plans.

CFSP 4315 Professional, Leadership and Ethical Issues in Special Education: Birth to 21 (3 Credits)
This course provides students with an understanding of the roles & responsibilities of an Early Childhood Special Education Specialist and Special Education Generalist. This course serves as the foundation for students who are interested in pursuing a profession in special education and working with children with disabilities from birth to 21 years. This course includes the ethical and professional practice standards and understanding of the multiple roles and complex situations across wide age and developmental ranges. This course also briefly covers the historical laws and legal issues associated with the profession. The course also highlights why special educators engage in professional activities and learning communities that benefit individuals with developmental disabilities and their families, colleagues, and their own professional growth. This course promotes the idea that special educators are lifelong learners and regularly reflect on and adjust their practice.

CFSP 4317 Topics in Special Education: Learning Differences (1-3 Credits)
This course reviews the challenges that arise in special education settings related to children who exhibit academic and behavioral differences and delays. Academic and behavioral interventions and differentiation strategies will be addressed. Additionally, the course will cover the approaches for addressing children who require additional academic and behavioral support in the classroom.

CFSP 4320 Early Childhood Assessment: Formal & Standardized (3 Credits)
This course is designed to teach students how to assess young children (birth to 5 years) using a variety of formal and standardized methods. Assessment will focus on normed-referenced, standardized measures of cognitive, communication, emotional, social, sensory and physical development. Students will gain experience in administering assessments to young children, interpreting assessment results, writing assessment reports, and reporting the results to families and professionals. A variety of assessment tools will be studied for their appropriate use with young children and their families. Prerequisite: CFSP 4310.

CFSP 4322 Psycho-Educational Assessment I (4 Credits)
This course is one of two required courses designed to provide students in School Psychology with expertise in individual intelligence and achievement test administration, scoring, interpretation, and report writing. Each student has an opportunity to administer various cognitive and achievement measures, with particular emphasis on the Wechsler Scales. Contemporary issues pertinent to the assessment of intelligence are covered. Emphasis is placed synthesizing and integrating information from cognitive and achievement assessment with other sources to produce effective educational recommendations. In addition, the role of these tools in the special education qualification process is highlighted. Important issues regarding the use of such tests are discussed, as well as the use of tests in schools and clinical practice. The focus of the class is primarily on the assessment of school-aged children. Lab fee required. Prerequisites: RMS 4920, CFSP 4301.

CFSP 4323 Psycho-Educational Assessment II (4 Credits)
This course is the second of two required courses designed to provide students in School Psychology with expertise in individual intelligence and achievement test administration, scoring, interpretation, and report writing. Each student has an opportunity to administer various cognitive and achievement measures, with particular emphasis on the Woodcock Johnson Scales. Nontraditional forms of assessment, as well as adaptive behavior measures, are also covered. Integrating results of assessments with other data to provide effective educational recommendations continues to be an emphasis. The focus of the class is on the assessment of school-aged children. Lab fee required. Prerequisites: CFSP 4312, 4322.

CFSP 4324 Assessment III (4 Credits)
This course is designed to teach students how to assess young children (birth to 5 years) using a variety of formal and standardized methods. This course reviews the challenges that arise in special education settings related to children who exhibit academic and behavioral differences and delays. Academic and behavioral interventions and differentiation strategies will be addressed. Additionally, the course will cover the approaches for addressing children who require additional academic and behavioral support in the classroom.

CFSP 4326 Early Childhood Assessment: Informal & Play-Based (3 Credits)
This course is designed for students to learn informal and play-based assessment processes for young children (birth-6 years) using a variety of non-standardized, informal and play-based assessment methods. The entire assessment process, including screening, evaluation, interpreting results, writing an integrated report, and providing feedback to families and professionals, will be the focus. Assessment measures will be examined with consideration for when and why specific instruments should be used, in addition to the benefits and disadvantages of the instruments. Students will be trained in-depth in the administration and interpretation of a variety of instruments for assessment of the whole child including the cognitive, language, social-emotional, and sensorimotor developmental domains. Prerequisite: CFSP 4310.
CFSP 4330 Family-School Partnering and Consultation (3 Credits)
This course is designed to familiarize educational, mental health, and early childhood service providers with essential attitudes, approaches, and actions necessary to form successful family-school-community partnerships that can foster development and learning, especially for children with disabilities. Ecological, family systems, and family-centered theory and principles serve as the foundation for working collaboratively with families from diverse cultural and social backgrounds within school and community settings. Students gain skills in family interviewing; consultation to identify family strengths, needs, and resources; collaborative problem-solving; and multi-systemic learning. Evidence-based family involvement, education, and intervention strategies contribute to positive family-school partnering relationships are reviewed within a multi-tiered, school-based service delivery framework. Prerequisite: CFSP 4332; None for ECSE Students.

CFSP 4332 School Psychology Consultation and Collaboration (4 Credits)
This course is designed to acquaint students with current directions in classroom management and school-based consultation. Covered are issues related to consultant and consultee characteristics, consultation practices and processes, models and stages of consultation, facilitating desired outcomes in consultation, and evaluation of consultation outcomes. Special emphasis is also given to problems of classroom management and collaboration with parents, teachers and other educational and community personnel. Case analysis and practice are required. Prerequisites: All first year courses as listed in the handbook.

CFSP 4335 Infant & Family Interventions (3 Credits)
This course will describe various models for intervention with infants and toddlers with disabilities, emphasizing intervention within natural environments. Working with children and families in home, childcare, and other community settings will be emphasized and contrasted with intervention in more clinical settings. Students learn how to consult with parents and community professionals in providing coordinated transdisciplinary services when working with children in home and community settings. All areas of development will be addressed. Field experiences with children and families are expected to practice the skills addressed in class. Families will be asked to share their experiences to enable students to gain the "human" side of theory and practice.

CFSP 4336 Preschool Interventions (3 Credits)
This course covers early childhood interventions applicable within community, preschool and home environments. A hierarchy of intervention strategies is addressed including universal, targeted, and intensive approaches. There is a focus on building supportive networks, routine-based intervention strategies, and collaboration to enhance family resources. Students review empirically validated early interventions and curriculum for young children exhibiting both normal and delayed development. Prerequisite: CFSP 4310, 4312; None for ECSE Students.

CFSP 4337 School Age Academic Competencies and Interventions (3 Credits)
The purpose of this course is to review current theories of learning disability and practices that can support the diverse learning needs of school-aged students with and without disabilities. An integrated response to intervention model will be reviewed to identify difficulties, delays, and disabilities in the domains of literacy (oral, writing, speaking, listening), mathematics, and self-regulation. Students will learn to: a) evaluate differentiated instructional environments and adaptations that can support learning; b) employ focused assessments to identify academic strengths and weaknesses; c) formulate instructional hypotheses and learning goals; and d) link assessment results to evidence-based intervention approaches or instructional strategies designed to address phonemic awareness, decoding/phonics, reading fluency, listening/reading comprehension, spelling, written expression, vocabulary, mathematical calculation, mathematical problem-solving, and study/organization/test-taking skills. Effective practices will be reviewed to reduce learning barriers and increase learning supports across school, home, and community settings. Students will collaborate on the development of instructional hypotheses and learning goals that respect cultural diversity and language differences and will develop plans to monitor instructional fidelity and students' progress over time. These goals are accomplished through critical readings, classroom discussion, homework assignments, demonstrations, modeling, video analysis, and practice with hypothetical and authentic cases referred for learning and academic issues. Prerequisite: CFSP 4312.

CFSP 4338 Exceptionalities in Education: Low Incidence Disabilities (3 Credits)
This course reviews a wide range of neurodevelopmental disorders and low incidence disabilities such as blindness/visual impairment, deafness/hearing impairment, deaf blindness, traumatic brain injury, Fragile X syndrome, Fetal Alcohol Syndrome, traumatic brain injury, and syndromes associated with chromosomal deletions. Implications for assessment and intervention will be outlined including diagnostic criteria, prevalence and treatment. Research on identification and treatment including state of the art interventions and assistive technology will be addressed. Community experts on specific disabilities will be used as guest lecturers.

CFSP 4339 Introduction to Play Therapy (3 Credits)
This course examines the history and theoretical bases of major theories of play to enhance children's social-emotional and adaptive functioning. Child-centered, interpretive, and structured play therapy models are reviewed. Information is covered regarding preparation, selection of materials and toys, playroom characteristics, facilitative responses, and how to adapt play therapy in school, home and clinical settings. The play therapy process is illustrated from the initial referral and contact through termination, including observing and responding during sessions, facilitation and interpretation, therapeutic limit setting, and group play therapy strategies. Case studies, role play, video and script analysis are incorporated as is brief play therapy and applications with special populations. Efficacy, evaluation and future areas for professional development are reviewed. This course is designed as an introductory experience to prepare students for further supervised practica in play therapy. Prerequisite: CFSP 4310.
CFSP 4340 Counseling Children and Adolescent (4 Credits)
School Mental Health Counseling I is designed to provide in-depth knowledge of major theories behind contemporary school-based mental health counseling approaches for children and adolescents. Students will learn developmentally informed and empirically driven individual and group counseling strategies to enhance interpersonal, emotional, and social functioning within a multi-tiered system of support. Guidelines and ethical principles are reviewed to guide school-based practice and to help build collaborative partnerships between school, home, and community settings. These goals are accomplished through self and peer reflection, critical analysis of therapy research, evaluation of case studies, video modeling, and in-vivo practice and feedback. This course and its contents are a prerequisite to prepare students for School Mental Health Counseling II, an advanced class that incorporates supervised counseling experience. Prerequisite: CFSP 4301, 4304.

CFSP 4342 Crisis Intervention and Prevention (3 Credits)
This course provides knowledge about crisis prevention and intervention theory and effective strategies for use in direct and indirect services for children and staff in schools and in practice with children. Emphasis is on application to child-centered and school-based crises such as bullying, child abuse, death, loss and grief, trauma, community and school-based violence, threats, and suicide. The course provides students with basic knowledge and skills for crisis intervention in school settings. Prerequisites: CFSP 4301, 4304, 4310, 4311, 4340, 4343.

CFSP 4343 School Mental Health Counseling II (4 Credits)
School Mental Heath Counseling II is designed as an advanced counseling class that incorporates supervised counseling experiences to improve interpersonal, emotional and social functioning in young children to adolescents. Students learn to design, deliver and evaluate evidence-based prevention and intervention approaches and consultative mental health services. By working alongside a field site supervisor, students engage in case review, analysis, and delivery of counseling services designed to mirror expectations placed on mental health professionals in school and community settings. Self-reflection, transcript analysis, and peer, instructor, and supervisor feedback are employed to develop professional and personal individual and group counseling skills within a multi-tiered system of support. Prerequisites: CFSP 4310, 4311, 4340.

CFSP 4349 Community Practicum (2 Credits)
Taken during the first year of entry, the Practica is a supervised initial year field experience designed to expose students to a variety of home, community- and school-based settings that serve families with children who have developmental and special needs, and in the CFSP Clinic. Each week for up to four hours, students are expected to attend, observe, and participate in a range of site-specific team meetings and services offered to families and children. For the MA in Educational Psychology degree, students, during the fall or winter quarter, identify, develop and initiate a research project with input from the faculty. The MA project culminates during the fourth quarter (summer) and serves as the final project in lieu of a comprehensive exam. Prerequisites: CFSP 4310, 4311, 4340.

CFSP 4351 School Psychology Practicum: Clinic Assignment (1 Credit)
CFSP Clinic is a supervised field experience in the Morgridge College of Education's Counseling and Educational Services Clinic. Through all experiences, Clinic students will work with students and families within the zero to college age range. Casework may include: interview, assessment, data analysis, report writing for different audiences, diagnostics, data presentation, intervention, and consultation for a variety of psychoeducational and developmental concerns of children and families. Prerequisites: All prior first year courses as listed in the handbook, CFSP 4351 - prior quarters.

CFSP 4353 School Psychology Practicum II (2 Credits)
This is a 500 hour supervised field experience taken after the successful completion of core courses and Practica I experience. Practica is considered a critical professional transition year to help consolidate learning and professional competencies in preparation for a subsequent Internship. Students work throughout the year with Clinic Faculty and a licensed Field Supervisor within the University of Denver psycho-educational clinic and infant, preschool, elementary, middle or high school settings and also attend weekly Practicum seminars or individual supervision sessions with a University Faculty member. Supervision is designed to provide ongoing professional feedback, case analysis, peer consultation, continued professional development pertinent to the successful practice of School Psychology in urban and rural settings. Prerequisites: All prior first year courses as listed in the handbook, CFSP 4353 - prior quarters.

CFSP 4354 School Psychology Advanced Practicum (2 Credits)
This is a supervised field placement in public and/or private school, clinical, or community mental health settings or related child agency for the purpose of psychoeducational evaluation and concomitant consultation with service components in the area of school psychology. Advanced Practicum may extend beyond one term. (Repeateable). Prerequisite: PhD students only; Pass first year courses and CFSP 4353.

CFSP 4355 School Psychology Internship - EdS (1 Credit)
This course is designed to provide the student with their final supervised experience prior to graduation. The student will complete 1200 clock hours of supervised field experience across an academic year. The student will be closely supervised by a licensed school psychologist in the field based setting. The student will participate in all aspects of the role of a school psychologist including assessment of cognitive, social-emotional, academic, and behavioral traits of a student in need; consultation with teachers on interventions to meet student needs; presentation of information at case conferences; consultation with parents regarding ways to assist their children's learning; developing programs to address school-wide needs, including crisis intervention; and sharing of new ideas with educational staff. Prerequisite: Must have passed all other courses in degree plan.

CFSP 4356 School Psychology Pre-Doctoral Internship (4-8 Credits)
Meets 12-month internship requirement in school psychology. Prerequisites: completion of comprehensive examination and dissertation proposal.
CFSP 4357 Early Childhood Practicum (1-4 Credits)
This course provides students with a field experience in an Early Childhood environment for students who are interested in pursuing a profession in Early Childhood Special Education. Field Practicum in Early Childhood Special Education is an off-campus, 600-hour minimum supervised experience taken throughout your coursework. Field Practicum is designed to broaden one's professional skills and is considered a critical transition of substantial growth. Each student is required to successfully complete 3 practica; an infant/toddler, (Birth to 3 years) a preschool (3-5 years) and an early elementary focused (Kindergarten through 3rd grade). Practicum seminar is designed to facilitate case analysis, ongoing self-reflection, and to provide peer consultation and professional feedback relevant to best practice. The field practicum is considered a critical professional transition to help consolidate learning and professional competencies in preparation for employment. All students work with a licensed Field Supervisor. Students will be placed in infant, preschool, elementary school settings. During practicum, students provide direct and indirect services that support children and/or families in a variety of settings. All students attend weekly practicum seminars facilitated by a University Supervisor. Supervision is designed to provide ongoing professional feedback; case analysis; peer consultation; and continued professional development and experiences pertinent to successful practice. This course promotes the idea that special educators are lifelong learners and regularly reflect on and adjust their practice. Restricted to ECSE students only.

CFSP 4359 School Psychology Pre-Doctoral Internship (1 Credit)
This course is designed to provide the student with their final supervised experience prior to graduation. The student will complete 1200 clock hours of supervised field experience across an academic year. The student will be closely supervised by a licensed school psychologist in the field based setting. The student will participate in all aspects of the role of a school psychologist including assessment of cognitive, social-emotional, academic, and behavioral traits of a student in need; consultation with teachers on interventions to meet student needs; presentation of information at case conferences; consultation with parents regarding ways to assist their children's learning; developing programs to address school-wide needs, including crisis intervention; and sharing of new ideas with educational staff. Prerequisite: Must have passed all other courses in degree plan.

CFSP 4361 Supervision in School Psychology (2 Credits)
This is a supervised field placement in public and/or private school, clinical, or community mental health settings or related child agency for the purpose of psychoeducational evaluation and concomitant consultation with service components in the area of school psychology. Advanced Practicum may extend beyond one term. (Repeatable). Prerequisites: PhD Students only; CFSP 4351, 4353.

CFSP 4363 Child, Family, School Psychology Program Development and Evaluation (3 Credits)
This course focuses on theory and practice of program development and evaluation in school and community agency settings. Both qualitative and quantitative methods of program evaluation are discussed. Students have the opportunity to collaborate on a comprehensive evaluation of a specific educational, health, or mental health program. Prerequisites: RMS 4910, CFSP 4332.

CFSP 4365 School Psychology EdS Terminal Internship (1-8 Credits)
Meets 9-24 month internship requirement in school psychology. Prerequisites: Completion of all Practica and Program Permission. Students can only enroll in this course if they’re also enrolled in CFSP 4355.

CFSP 4369 School Psychology Pre-Doctoral Terminal Internship (1-8 Credits)
This course is designed to provide the student with their final supervised experience prior to graduation. The student will complete 2000 clock hours of supervised field experience across an academic year in public and/or private school, clinical, or community mental health settings or related child agency for the purpose of psychoeducational evaluation and concomitant consultation with service components in the area of school psychology. The student will be closely supervised by a licensed psychologist in the field based setting. The student will participate in all aspects of the role of a school psychologist including assessment of cognitive, social-emotional, academic, and behavioral traits of a student in need; consultation with teachers on interventions to meet student needs; presentation of information at case conferences; consultation with parents regarding ways to assist their children's learning; developing programs to address school-wide needs, including crisis intervention; and sharing of new ideas with educational staff. Prerequisites and Restrictions: Students must be enrolled in the CFSP doctoral program. They must have successfully completed Practicum I, Practicum II and Advanced Practicum. Additionally, they must have successfully passed comprehensive exams and dissertation proposal. All other students must obtain instructor permission. Corequisite: CFSP 4355.

CFSP 4991 MA Independent Study (1-10 Credits)
This course allows MA or EdS Child, Family, and School Psychology students to study a specific topic area in detail in conjunction with a cooperating faculty member.

CFSP 4992 Directed Study (1-10 Credits)

CFSP 4995 Research - M.A. Thesis (1-10 Credits)
This course is for students whose program requires completion of a masters level thesis.

CFSP 4999 Advanced Seminar in School Psychology (1-3 Credits)
This course is designed as an advanced topical seminar in which students will focus on the professional literature and research relevant to important topics in the field of School Psychology. There will be analysis and discussion of theses advanced topics with consideration of the implications for research and practice in School Psychology. Required meeting time and assignments would be commensurate with number of credits. (Repeatable).

CFSP 5991 PhD Independent Study (1-10 Credits)
This course allows PhD Child, Family, and School Psychology students to study a specific topic area in detail in conjunction with a cooperating faculty member.
CFSP 5992 Directed Study (1-10 Credits)
CFSP 5995 Dissertation Research (1-20 Credits)
This course is for PhD Child, Family, and School Psychology students engaged in completing their doctoral dissertation. Advisor permission required.

Curriculum and Instruction Courses
CUI 3055 Human Rights & Education (3 Credits)
Emphasis on human rights, both domestic and international, for the field of education; study of writings and research of leading educators encompassing concepts of human rights; focus on educational issues involving human rights, the Right of the Child, work of UNICEF, and implications of human rights for educational practice. Cross listed with CUI 4055.

CUI 3801 Current Issues in K-12 Education (3 Credits)
This course introduces prospective K-12 educators to the contemporary social, political, pedagogical and curricular context of schooling. Major areas of analysis and discussion will include: gender, social class, cultural competency, linguistically diverse education, funding, sexual orientation, educational policy, and diversity. The course will attempt a critical, reflective, and balanced view of schooling for the purpose of helping students develop the ability to interpret and respond to the challenges associated with teaching in modern schools. Coursework will be paired with a service-learning field experience in an urban educational setting characterized as linguistically and culturally diverse.

CUI 3802 Teacher Identity (3 Credits)
The most effective teachers combine the outer technical aspects of teaching (lesson plans, differentiated instruction, culturally responsive pedagogy, and content knowledge) with the inner non-technical elements (passion, heart, beliefs, and calling). In this course we examine the “inner-life” of the teacher with an emphasis on how understanding the themes of teacher selfhood impact the technical aspects of teaching. Key questions to examine include the following: How do the gifts, talents, and inner capacities of the teacher impact and influence communication and learning in the classroom; why do I teach; what will continue to fuel my passion for teaching; and what vision of the future do I hold for schools? Students should expect to complete 10-20 hours per week of service learning in area education settings.

CUI 3990 Service Learning in Community (1-4 Credits)
This course provides students with the opportunity to serve in the community and to reflect on their service experiences in a classroom setting through structured and meaningful reflection sessions. Students will examine a variety of topics, including the nature and significance of service-learning, motives for service, community action as a means for positive social change, and the relationship between service-learning, social justice, and civic responsibility. Cross-listed with AH 3580, SS 3580.

CUI 3991 Independent Study (1-10 Credits)
CUI 3992 Directed Study (1-10 Credits)
CUI 3995 Urban Education (5 Credits)
Historical, political and sociological influences that shape and socially construct urban schools. Characteristics, opportunities, and needs of students in urban schools and examples of current effective practice.

CUI 3996 Urban Youth Development (5 Credits)
This course examines urban youth development from several perspectives, including the social-psychological, the cognitive/creative, the physical and health-related, and the philosophical. Cross listed with CUI 3996.

CUI 4020 Introduction to Curriculum (3 Credits)
Introduces curriculum theory and curriculum as a field of study; includes study of issues such as standards, cognition, diversity, ecology, and social justice, among others.

CUI 4021 Models of Curriculum (3 Credits)
Reflects on ways various curriculum orientations may resolve modern issues or problems, with students’ independent pursuit of one or two orientations in depth; orientations examined include cognitive pluralism, developmentalism, rational humanism and reconceptualism, among others. Recommended prerequisite: CUI 4020.

CUI 4022 Curriculum Theory into Practice (3 Credits)
Helps students move from theoretical concepts and decisions involved in curriculum development to actual construction of curricula; survey of potential components encompassed in a variety of curricula followed by participation in designing a curriculum as a member of a student team; final facet requires students to develop a curriculum. Prerequisites: CUI 4020 and 4021 or instructor’s permission.

CUI 4027 Implementing Curriculum: A Practicum (3 Credits)
Opportunity to experience authentic role of curriculum on site; work at the Denver Zoo, the Denver Museum of Nature and Science, other museums and school sites; to develop and implement curriculum.

CUI 4028 Literacy Instruction and Assessment (3 Credits)
Organized around a developmental continuum for literacy acquisition. Addresses best research-based practices that allow teachers to assess students’ abilities and to select appropriate instructional strategies leading to communicative competence for all children.

CUI 4029 Issues in Literacy (3 Credits)
Prepares educators to participate thoughtfully and critically in often-contentious discourse about literacy. Examines the research base that supports sound policy and practice regarding literacy instruction for all children.
CUI 4031 Teaching and Learning (3 Credits)
Takes a disciplinary approach (e.g., sociological, historical, philosophical, and anthropological) to the analysis of teaching and learning environments in response to broad questions such as: What are effective teaching and learning environments? For whom and under what circumstances? How can we create such environments?

CUI 4032 Analysis of Teaching (3 Credits)
Provides a systematic introduction to the research base that characterizes effective practice and to the array of research methods that can be employed to study teaching and teacher development.

CUI 4033 The Practice of Teaching (3 Credits)
Course explores personal, conceptual, and empirical understandings of "teaching practice." Topics addressed have included: metaphors for teaching practice, best practices for equity and social justice, professional development practices.

CUI 4034 Curriculum & Cultural Context (3 Credits)
This course will address the influence of cultural, political, sociological, and economic factors on curriculum at the instructional, situational, societal, and ideological levels. Students should be interested and willing to explore these issues through readings and discussion. We will be exploring various perspectives, including our own, which inform the discussion on this critical area of education.

CUI 4035 e (3 Credits)
In this course, students will examine issues related to democracy, power, and privilege in public education. Specifically, students will learn about how anti-democratic groups are working to undermine public education in the U.S. Students will explore White privilege, racism, classism (and other "isms") and the impact they have had and continue to have in public school settings, particularly at schools that serve historically marginalized and oppressed students. Theoretical frameworks such as Critically Relevant Teaching and Critical Race Theory will be introduced in this class as well.

CUI 4038 Urban Youth Development (3 Credits)
This course examines urban youth development from several perspectives, including the social-psychological, the cognitive/creative, the physical and health-related, and the philosophical. We will explore the emerging field of youth development in an urban context, integrate theory and practice, and analyze youth policies and their implications. Cross listed with CUI 3996.

CUI 4039 Transformational Teaching and Learning (3 Credits)
This course takes an exploratory approach to the analysis of transformation teaching and learning. It asks questions such as "What are effective teaching and learning environments?" "For whom and under what circumstances?" "How can we create such environments?" We will explore how patterns of activities in the classroom can be designed to achieve simultaneously all of the major goals of educational reform. The term classroom is not restricted to the physical classroom space but "classroom" in the sense of the organized instructional activities that can extend outside of the school building into the community.

CUI 4041 School and Curricular Reform (3 Credits)
A look into school reform movements, why most fail and only a few succeed.

CUI 4042 Instructional Design & Web Development for Educators (3 Credits)
Introduces presentation software, basic HTML, and web page development software. Focuses on various Learning, Instructional Design, and Learning Style Theories and how they relate to the development of technology supported pedagogy. Students will create individualized instructional web pages for use in practice.

CUI 4043 Development of Technology Enhanced Educational Environments (3 Credits)
Utilizing emerging Learning Theories and complex Instructional Design Theories, students will move into advanced educational web page development including designing with style sheets and layers. Several customized technology mediated lessons or professional projects will be created for use in practice. Various tools, designed to enhance learning environments, will be explored.

CUI 4045 Technology Practicum (2 Credits)
Under the supervision of the professor, students will generate technological applications relevant to their own work settings using ideas and concepts learned in CUI 4040.

CUI 4046 Technology Leadership (3 Credits)
Explores the role of ethics, values, social, legal, and power issues associated with technology in education. Analyzes how technology is transforming learning, equitable distribution of information, and the implications for providing optimal education to diverse learning populations.

CUI 4050 Curriculum & Instr Rsrch Sem (0-3 Credits)
Students write proposals and learn about current relevant research in curriculum. Students learn about the proposal and dissertation process as well as current research in curriculum.

CUI 4051 Seminar in Dissertation Organization and Design (1-5 Credits)
Individualized assistance in developing the dissertation topic, issue, problem; guidance in preparation for proposal orals and application to the Institution Review Board (IRB), direction for dissertation chapter organization, writing and completion. This seminar is targeted for the student who needs support in completing the dissertation.

CUI 4055 Human Rights & Education (3 Credits)
Emphasis on human rights, both domestic and international, for the field of education; study of writings and research of leading educators encompassing concepts of human rights; focus on educational issues involving human rights, the Rights of the Child, work of UNICEF; and implications of human rights for educational practice. Cross listed with CUI 3065.
CUI 4058 Teacher as Researcher (3 Credits)
Emerging philosophical and methodological issues that arise when school practitioners undertake research within their own sites; range of research traditions including quantitative, statistical research and qualitative methodologies; mastering relevant skills and accessing resources for students to be better prepared to conduct their own inquiries and understand and solve problems.

CUI 4070 Clinical Internship (1-9 Credits)

CUI 4100 Sociocultural Foundation of Education (3 Credits)
Examination of the expanded conceptions of diversity to include difference based on ethnicity, biethnicity, and multiethnic identity; social class, differently-abled, age, gender, and sexual orientation; implications of terrorism on America for ethnically diverse populations in our schools and on educational establishments around the world; attention to the interactions of ethnicity with social class and gender identifications in the school setting; implications of the learning of another language as well as the impact of language diversity in our schools; consideration of new conceptual frameworks for multicultural and diversity education for educators for the 21st century.

CUI 4130 Philosophy of Education (3 Credits)
Focuses on 3-4 philosophers and examines the contributions their philosophical ideas have on education. Philosophers studied have included John Dewey, Cornel West, Nel Noddings and Maxine Greene.

CUI 4131 Spirituality in Education (3 Credits)
This course will explore the role of spirituality in education from both the student and educator point of view through an examination of the big questions that are held close to the heart; the ones that guide us toward meaning making in the world. The primary goal of the course is to plumb the depths of spirituality, a deep sense of inner meaning making, that calls us toward a particular profession. The course will focus on the interface between spirituality in education through the lenses of curriculum and instruction.

CUI 4150 Sociology of Education (3 Credits)
Sociology of education emphasizes the importance of the process of socialization on education, the interactions of ethnicity, gender, and social class in education, the formal roles and statuses within the bureaucracy of the school, the informal or "hidden" curriculum, the system of higher education and comparative views of educational systems around the world, and the impact on teaching and schools in an era of terrorism. Objectives of this course: to apply major concepts and theories in sociology to the institution of education; to interpret the applications of sociological theory to the school and the broader educational enterprise; and for personal expansion of philosophy and worldview through humanistic and social science perspectives.

CUI 4153 Practicum: Curriculum and Instruction (1-5 Credits)
Designed to fit the educational needs of the individual student who may choose from a wide variety of practicum (internship) experiences, including teaching, curriculum development, museum internships or research projects in curriculum and instruction.

CUI 4155 Special Topics (1-10 Credits)
Special topics in the field of education.

CUI 4159 Educating Multiethnic Populations (3 Credits)
Emphasizing a worldwide view in considering how education should be delivered to children and youth for life in the 21st century, especially since the World Trade Center Disaster of September, 2001. It is incumbent on those in teaching to find creative policies for working together with those in government and business, strategies that acknowledge our human diversity within and overall context of equality and peacefulness. This begins with raising social justice issues in the classroom in ways that encourage students to openly examine difficult and personally challenging materials, facilitating communication and understanding between members of diverse and unequal social groups.

CUI 4160 Race, Class and Gender in Education (3 Credits)
Ethnicity, Class & Gender in Education applies the concepts and theories of social science disciplines - sociology, social psychology, anthropology, historical perspectives and philosophical orientations - to the inclusive examination of the issues of racism, classism, sexism, and homophobia in education. This course seeks to conceptualize ethnicity, gender and social class as interactive systems, not as separate and independent variables, that impact students, teachers, school systems and the educational enterprise. We examine educational systems and practices that historically have disadvantaged women and peoples of color and discuss strategies and techniques for empowerment of the members of these groups.

CUI 4161 Ethnicity, Gender & Diversity in the Curriculum (3 Credits)
The focus of this course is to examine and explore the complexities of teaching in contemporary educational settings in which the forces of sexism, racism and classism are found. In our society where wide diversity characterizes our student population, it has become an imperative to recognize difference and relate effective teaching to these conditions. Major trends and influences that are impacting the school curriculum are explored.

CUI 4170 Engaging Learners through the Arts (3-5 Credits)
This seven day institute is designed to engage participants in a challenging exploration of the creative process through workshops with professional artists in the disciplines of dance, visual arts, creative writing, music, and theatre, and to provide a greater understanding of the theory and practical applications of school reform.

CUI 4171 The Arts in Education: Stage II (3-5 Credits)

CUI 4172 Aesthetic Foundation in Education (3 Credits)
Educational enterprise from aesthetic viewpoints; examination of a number of aesthetic theories and exploration of implications for curriculum, teaching, and evaluation.
CUI 4180 History of Education in the United States (3 Credits)
Traces historical context and development of K-12 schools in the United States from initial discovery of North and South America by Europeans to the present; understanding through examination of central issues that strongly influenced our current educational systems - evolution of schools, religion, social and political reform, women's issues, nationalism and ethnicity, industrialization of the nation and world.

CUI 4400 Nature and Needs of Gifted Learners (3 Credits)
This course is designed to provide participants with an understanding of 1) conceptual foundations and definitions of giftedness, 2) how intelligence, creativity, and non-intelligence factors are related to giftedness, 3) the nature, development, types, and needs of gifted individuals, 4) principles and issues in the identification of gifted individuals, and 5) the major issues and tensions in the education of gifted and talented individuals. Lectures, discussions, and other class activities and assigned readings and projects will include topics such as the history and nature of the giftedness construct; theories of intelligence and creativity and their relationship to conceptions of giftedness; types of giftedness; the diversity of gifted individuals and their personal and educational needs; the role of identification in the education and development of gifted children and youth; and purposes and perspectives in gifted education.

CUI 4401 Psychological Aspects of Giftedness (3 Credits)
The psychological development of gifted children is examined through a study of current theories, models, research, and case histories. Understanding of psychological development creates a foundation for applications and practices that nurture the psycho-social-emotional development of gifted individuals. Specific topics include the psychological nature and needs of the gifted; perfectionism, stress, and underachievement; special issues for gifted boys and gifted girls; highly gifted; and pertinent theories of psychological development. Emphasis is placed on synthesis of theories and application to specific situations.

CUI 4402 Curriculum for Gifted Learners (3 Credits)
This course is designed to provide participants with an understanding of the conceptual foundations in the design and development of curriculum for gifted and talented students. Includes theories, models and processes for curriculum modification and curriculum design; strategies for adapting educational content, process, product, and learning environment based on the educational characteristics and needs of gifted learners; and curriculum design and development approaches that are effective in the intellectual and personal growth of gifted and talented learners. Content in this course is aligned with appropriate instructional strategies and techniques recommended for use with gifted and talented learners. Lectures, discussions, class activities, assigned reading and projects include topics such as a general overview of curricular principles and perspectives; critical analysis of general curriculum; issues of diversity in curriculum development and modification including cultural congruence; recommended models of curriculum development for gifted and talented learners; and national trends in gifted education.

CUI 4403 Instructional Strategies for Gifted Learners (3 Credits)
This course provides a basic understanding of how to adapt curriculum for gifted learners through various instructional strategies. Strategies studied include: acceleration, enrichment, differentiation, compacting, grouping, independent study, and service learning. By selecting instructional strategies based on assessed learner needs, educators can reach many types of gifted learners in their classrooms including gifted students of poverty and gifted learners of cultural and ethnic diversity. The objectives of this class are that participants: know about and be able to define instructional strategies that meet assessed academic and affective needs of gifted learners and be able to adapt curriculum for gifted learners using learned instructional strategies.

CUI 4404 Twice-Exceptional Students (3 Credits)
The purpose of this course is to acquaint the student with the various areas of exceptionalities typically encountered with gifted students and to provide classroom related techniques to assist the teacher in identifying and working with twice-exceptional children in an effective manner. Environmental, behavioral, motivational, emotional and educational needs are addressed. Legal responsibilities, parent communication and staff development will be emphasized.

CUI 4405 Practicum in Gifted Education (1-3 Credits)
Students wishing to earn credit for the Practicum in Gifted Education must complete an experience in three of the five areas (Teaching, Assessment, Administration, Research, or Policy). Students must submit a Practicum Proposal outlining the intended practicum experiences. This Proposal must be approved by the practicum faculty supervisor when the practicum experiences are begun.

CUI 4407 Current Issues in Gifted Education: Identification (3 Credits)
This course focuses on the screening and selecting of gifted and talented students. It is designed for practicing professionals - teachers, counselors, psychologists, and administrators - who must make decisions about the identification and serving of gifted and talented students. Course uses multiple assessments, both quantitative and qualitative, to identify gifted students within an increasingly diverse population (including culturally- and ethically-diverse, high-potential, linguistically-different students with unique affective needs as well as high-potential economically-disadvantaged students). Students will use data to diagnose educational needs, prescribe appropriate educational strategies and to incorporate appropriate identification strategies for identifying gifted and talented students. Legal responsibilities and parent communication as well as staff development are emphasized. Students are required to develop an identification model based on relevant theory and current practices to be used in their particular setting. Enforced Prerequisites: CUI 4400 with a minimum grade of C- OR CUI 4401 with a minimum grade of C-.
CUI 4408 Creativity: Theory & Practice (3 Credits)
The essence of innovation is creativity, in thought, process and outcome. Classic and current theories provide a foundation for analysis of the concept of creativity. This course is designed to provide participants with an understanding of 1) the conceptual foundations and definitions of creativity; 2) how intelligence, creativity, and non-intellective factors are related to the constructs of giftedness; 3) documented brain research underlying exceptional cognition and/or creativity; 4) principles and issues in the identification and appropriate programming for creative individuals; and 5) the multiple perspectives and manifestations of creativity. Salon discussion groups, lectures, class activities and assigned readings and projects focus on the history and nature of the construct of creativity, theories of creativity, the role of innovation and transformation, assessment and measurement tools, environmental support of the creative process and creativity, and teaching and learning applications.

CUI 4410 Prog Dev/Ldrshp/Comm Gifted Ed (3 Credits)
This course emphasizes the concepts and practices involved in development and management of school- and district-based programs for the special education of gifted and talented children and youth. The course leads to in-depth understanding of program components and systems, program planning and evaluation, program leadership, advocacy in gifted education, and communications. In addition, emphasis is placed on planning and development of staff development in relation to gifted children. This course includes extensive in-class discussion and field applications.

CUI 4411 Wkshp: Gifted & Talented Educ (2-3 Credits)
This course is designed to provide participants with an overview of the education of gifted and talented students. Areas of focus within the course include definitions of gifted and talented students, characteristics, educational and psycho/social needs, common identification methods and concepts and common practices in curriculum and instructional differentiation.

CUI 4417 Independent Study: Gifted Educ (1-3 Credits)

CUI 4450 Education and Psychology of Exceptional Children (3 Credits)
Characteristics of students with moderate needs and state criteria used to determine eligibility for special education population.

CUI 4451 Teaching the Exceptional Child (3 Credits)
This course provides a broad overview of the field of exceptionality and special education. Included are discussions of current issues and controversies in the field, characteristics, classification, diagnosis, and educational interventions for early childhood and school-aged children with high-incidence and low-incidence disabilities who have exceptional education needs. This course also explores the characteristics of students with various disabilities, the history of Special Education, The Individuals with Disabilities Education Act (IDEA) and its current implications, the Response to Intervention Model (RtI) and the Individualized Education Plan (IEP). Prerequisite: CUI 4450.

CUI 4452 Low Incidence Disabilities and Behavior Intervention (3 Credits)
This course reviews a wide range of neurodevelopmental disorders and low-incidence disabilities including fragile X syndrome and Fetal Alcohol Syndrome, along with syndromes associated with chromosomal deletions. Implications for assessment and intervention are outlined including diagnostic criteria, prevalence and treatment. Research on identification and treatment including state of the art interventions and assistive technology are addressed. This class also addresses theories, research, effective practices, and background information needed to implement successful behavior intervention programs for whole classroom management and for students identified with behavioral needs. Prerequisites: TEP 4010 and CUI 4451.

CUI 4453 Curriculum Adaptations and Assessments for Children with Disabilities (3 Credits)
This course applies theories, research, effective practices, and background information for assessment for students with disabilities, monitoring student academic progress, and transition planning for students exiting K-12 schools.

CUI 4455 Assessment of Students with Special Needs (3 Credits)
Theories, research, effective practices and background information needed to develop, implement, analyze, and apply assessment data for mild/moderate-needs students.

CUI 4457 Behavior Intervention (3 Credits)
Theories, research, effective practices, and background information needed to implement successful behavior intervention programs for mild/moderate-needs students.

CUI 4459 Curriculum, Collaboration, and Transitions in K-12 Schools (3 Credits)
Knowledge, techniques to develop independent skills for K-12 moderate/mild-needs students and transitions across grade levels.

CUI 4500 Elementary Literacy: Theory and Practice I (1-3 Credits)
This course provides an introduction and overview to the many components that make up a quality balanced literacy program. During the course students will analyze current research and theory in reading and writing instruction. This course will use students’ classroom placements to create a foundational understanding on which to build solid literacy philosophy as well as instructional ideas and strategies.

CUI 4501 Elementary Literacy: Theory and Practice II (1-3 Credits)
This course is an extension of Elementary Literacy I and concentrates on the continued development of theories and practical strategies for teaching literacy in diverse classrooms. This course will supply K-6 teachers with the skills to assess student abilities, select appropriate instructional strategies, and design effective instructional programs that lead to increased listening, speaking, reading and writing achievement of all children.
CUI 4502 Elementary Science and Social Studies Methods for Cultural Linguistic Diversity (3-4 Credits)
This course will enable students to develop a deeper understanding of science and social studies content and curriculum in the elementary classroom. Students will explore a range of instructional materials and develop teaching strategies with the guidance of state content standards and research on effective classroom instruction for culturally and linguistically diverse students. This course will revolve around discussion of key questions in the following eight areas: The Role of Social Studies and Science; Instruction; Standards; Content Knowledge; Curriculum Integration; Technology; Culturally Responsive Pedagogy; Sheltered Instruction.

CUI 4503 Elementary Math Methods for Cultural Linguistic Diversity (3,4 Credits)
This course will prepare pre-service elementary teachers to engage students in mathematical learning activities guided by Colorado State Mathematics Content Standards and research. Pre-service teachers will develop an understanding of how students in the elementary grades construct meaning through active engagement in purposeful activities. In addition, students will develop an understanding of infusing best practice for culturally and linguistically diverse students into the math curriculum in terms of culturally relevant pedagogy and sheltered instruction. This course will revolve around the discussion of key questions in the following seven areas: Content Standards; Instruction; Assessment; Differentiated Instruction; Technology; Culturally Responsive Pedagogy; and Sheltered Instruction.

CUI 4504 Elementary Math, Science, and Social Studies Methods Cultural Linguistic Diversity I (3 Credits)
This course is the first of a two-course study that will prepare students to develop a deeper understanding of math, science and social studies content and curriculum in the elementary classroom as guided by Colorado Model Content Standards and research on effective sheltered content instruction for culturally and linguistically diverse students. Pre-service teachers will develop an understanding of how students in the elementary grades construct meaning through active engagement in purposeful learning opportunities.

CUI 4505 Mathematics across the Content Areas (2,3 Credits)
In this class, prospective secondary and k-12 teachers study fundamental mathematical ideas. Students learn about the five fraction sub-constructs and solve problems in all five areas. In addition, students study ideas that are fundamental to understand algebra. For instance, students learn how to build rules to represent functions. Finally, students learn about inquiry-based approaches to teaching that they can use in their secondary classrooms with their students.

CUI 4506 Mathematics for Elementary School Teachers I (2,3 Credits)
In this class, prospective elementary school teachers experience an in-depth look at the representations of rational numbers, including base-ten and decimal numbers, integers, fractions, and arithmetic operations on these sets. Problem solving is emphasized throughout. Students also learn about inquiry-based approaches to teaching that they can use in their classrooms with their students.

CUI 4507 Mathematics for Elementary School Teachers II (3 Credits)
In this class, prospective elementary school teachers study fundamental mathematical ideas typically taught in grades 5-8. Students learn about visualization and its importance in geometry. Students study geometric shapes and solve a variety of problems involving geometric shapes. In addition, students learn some fundamental ideas of measurement and study length, area, volume, dimension, error and precision. Students also solve problems involving area, learn about solid shapes, and solve volume and surface area problems. Finally, students learn about inquiry-based approaches to teaching that they can use in their classrooms with their students. Prerequisite: CUI 4506.

CUI 4508 Mathematics for Elementary School Teachers III (3 Credits)
In this class, prospective elementary school teachers study fundamental mathematical ideas typically taught in grades 5-8. Students learn about visualization and its importance in geometry. Students study geometric shapes and solve a variety of problems involving geometric shapes. In addition, students learn some fundamental ideas of measurement and study length, area, volume, dimension, error and precision. Students also solve problems involving area, learn about solid shapes, and solve volume and surface area problems. Finally, students learn about inquiry-based approaches to teaching that they can use in their classrooms with their students. Prerequisites: CUI 4506.

CUI 4509 Mathematics for Middle School Teachers (3 Credits)

CUI 4510 Adolescent Literacy (3 Credits)
This course provides secondary teacher candidates an understanding of the essential elements of adolescent literacy. Students learn how literacy develops in reading, writing, and oral language and will be able to relate this information to teaching reading and writing in all content areas for both middle school and high school students.

CUI 4511 Secondary Literacy: Reading and Writing Across Content Areas I (3 Credits)
This course is the first of a two-course study that is designed to give secondary Residents an introduction to best practices in content area literacy instruction for in 6-12 classrooms. In support of the instructional shifts presented by the Common Core State Standards, Residents will explore the rationale behind instructional strategies for literacy instruction in the content area classrooms, as well as examine tools and techniques for teaching students to become strategic readers and writers as they model their own thinking and scaffold students' use of strategies for content area literacy.

CUI 4512 High School Mathematics from an Advanced Perspective (3 Credits)
High school mathematics education. Meets Common Core State Standards.

CUI 4513 Elementary Math, Science, and Social Studies Methods Cultural Linguistic Diversity II (3 Credits)
This course is an extension of the Autumn quarter session and will prepare students to develop a deeper understanding of math, science and social studies content and curriculum in the elementary classroom as guided by Colorado Model Content Standards, Next Generation Science Standards and research on effective sheltered content instruction for culturally and linguistically diverse students. Pre-service teachers will develop an understanding of how students in the elementary grades construct meaning through active engagement in purposeful learning opportunities.
CUI 4514 Secondary Literacy: Reading and Writing Across Content Areas II (3 Credits)
This course is an extension of the Autumn quarter session. In this course, Residents will deepen their knowledge of the English language and linguistics, through an analysis of socio and psycholinguistics, as well as rigorous practice in grammar, syntax and semantics. As Residents gain a more practical understanding of the complexities of the English language, they will be better able to support their English Language Learners. This course addresses the following Common Core State Standards: L1: Demonstrate command of the conventions of standard English grammar and usage when writing or speaking L3: Apply knowledge of language to understand how language functions in different context to make effective choices for meaning or style, and to comprehend more fully when reading or listening. W4: Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.

CUI 4520 Urban Education I: Diversity and Social Justice (1 Credit)
This class will address questions about multicultural and social diversity in the classrooms, curricular and pedagogical theories and practices, access and equity, and the politics of education.

CUI 4521 Urban Education II: School, Student, Family and Community Influences on Student Learning (2-4 Credits)
This course will consider how teachers are able to foster meaningful connections between the educational goals of the schools and the personal and cultural experiences of young people. Students will study the child in relation to family, school, and community, as well as the relationships between teacher and pupil. We will emphasize the cultural complexity of an urban society and pay special attention to ways that curriculum, language, and literacy affect school success.

CUI 4522 Urban Education III: Sources of Pressures and Possibilities in High Poverty Schools (2,3 Credits)
This course will focus on the sources of problems in high poverty schools and examine educational reform efforts that attempt to transform high poverty schools and classrooms.

CUI 4527 Supporting English Language Learners and Students with Special Needs Across Content Areas (3 Credits)
This course evaluates similarities and differences in theory, methods, approaches, and techniques in meeting the needs of diverse learners including English Language Learners, special needs, and/or gifted. Differentiated instruction, Sheltered instruction, and Response to Intervention (RTI) are key methodologies in meeting needs of diverse learners.

CUI 4529 Foundations of Education for Culturally and Linguistically Diverse Learners (3 Credits)
This course will examine the essential knowledge and orientations educators must possess to effectively meet the needs of culturally and linguistically diverse (CLD) learners through the analysis of historical, political, ethical, and legal foundations of language education in the United States. This course will explore the immigrant experience and the experience of CLD learners in schools in order to understand how the psychosocial aspects of the immigrant experience can impact second language learning.

CUI 4530 Second Language Acquisition (1-3 Credits)

CUI 4531 Language Development and Strategies for Culturally and Linguistically Diverse Learners (3,4 Credits)
This course will evaluate methods, approaches, and techniques in language teaching. This course will also explore classroom strategies and practices for content-area instruction through sheltered instruction, and socio-cultural context of second language acquisition in U. S. public schools including how teachers can support bilingualism, multilingualism, biculturalism, and multiculturalism in the mainstream classroom. Furthermore, this course will explore the needs of special education and gifted culturally and linguistically diverse learners.

CUI 4532 Culturally Responsive Pedagogy (3,4 Credits)
This course examines the intricate web of variables that interact in the effort to create culturally responsive pedagogy. It examines the need and establishes a definition for culturally responsive pedagogy; and includes an examination of one’s conception of self and “others,” conception of social relations; and conception of knowledge teaching and learning in a culturally diverse context. Furthermore, it cultivates the practice of culturally responsive teaching as well as explores the reality of implementing cultural responsive pedagogy in an era of standardization. In sum, this course helps practicing teachers acquire the dispositions, cultural knowledge, and competencies to adapt their curriculum and instructional skills for culturally responsive classroom practice.

CUI 4533 Research Issues in the Education of Culturally and Linguistically Diverse Learners (3,4 Credits)
In this course, students will act as teacher-researchers in order to explore issues that impact the achievement of culturally and linguistically diverse learners. This course will allow students to use functional research tools that can inform practice and lead to better teaching and learning in urban schools, and access resources to enable educators to define and address challenges in their teaching. More importantly, classrooms will become sites for educational reform in that, essentially, educators will act as advocates for change.

CUI 4534 Language Teaching Lab (1 Credit)
This course will critically examine elements of best practice for culturally and linguistically diverse learners through formal observations of three exemplary teachers and evaluate their classroom practices, instructional strategies, assessment practices, and communication strategies. This course will apply our conceptual knowledge of first and second language acquisition and our knowledge of the foundations of the English language to critically analyze each classroom context.

CUI 4535 Language in Society and Schools (3,4 Credits)
This course will introduce students to the discipline of sociolinguistics, including ways language and society impact one another, and how this interaction is reflected in schools. The focus of this course will be on current sociolinguistic theory and research on language variation and its social, political, and cultural significance. Topics include bilingualism and multilingualism in society; formal and informal types of language discourse: language and dialect; cross-cultural communication; and ways language both reflects and creates such constructs as power, culture, gender, ethnicity, and social class. In addition, this course will explore language ideology and language policy and planning.
CUI 4536 Language and Cultural Issues in Assessment and Instruction (3-4 Credits)
This course expands the educators’ knowledge of the connection between data-based instruction and assessment. Educators assess student learning by utilizing strategies that provide continuous feedback on the effectiveness of instruction. Educators learn informal and formal assessment practices that promote student learning and achievement. Educators develop knowledge and understanding of initial assessment of culturally and linguistically diverse learners’ skills and abilities in order to provide appropriate placement and instruction. Educators utilize native language tests to promote adequate placement/transition of students. This course also helps educators develop a framework to analyze and develop culturally responsive assessment practices in order to improve student achievement. Finally, this course integrates Response to Intervention (RTI) strategies to improve student assessment.

CUI 4537 Seminar & Practicum in LDE (1-6 Credits)
This course is to provide students with the opportunity to merge theory and practice in real classroom situations. This course is organized around two main components. The seminar consists primarily of discussions on connections between theory and practice. The practicum centers on educators’ own respective teaching contexts. Students in this course are required to "log" 200 hours of direct teaching with linguistically diverse learners. Under the supervision of a practicum advisor, students will be evaluated for evidence of mastery of LDES standards.

CUI 4538 Literacy and Language Development for Culturally and Linguistically Diverse Learners (3,4 Credits)
Attaining age-appropriate English literacy skills poses many challenges to culturally and linguistically diverse (CLD) learners. Educators must therefore develop proficiency in effective literacy instruction for CLD learners. Effective literacy instruction includes a repertoire of teaching practices designed to scaffold literacy and language across the content areas, and culturally relevant curriculum as an essential component to support the achievement of CLD learners. This course will focus on helping educators gain the necessary skills, orientations, and competencies to advance the literacy of CLD learners through linguistic and cultural knowledge.

CUI 4540 Curriculum, Instruction and Assessment: Theory and Practice I (1-3 Credits)
This is the first quarter of an academic year-long weekly seminar to foster reflective, research-based classroom practice. Teacher candidates will deepen their understanding of teaching and learning in contemporary schools through a guided teaching apprenticeship with a trained mentor teacher, focused observations of a myriad of classrooms, readings, interviews, discussions, critical writing, and presentations.

CUI 4541 Curriculum, Instruction, and Assessment: Theory and Practice II (1-4 Credits)
This is the second quarter of an academic year-long weekly seminar to foster reflective, research-based classroom practice. Teacher candidates will deepen their understanding of teaching and learning in contemporary schools through a guided teaching apprenticeship with a trained mentor teacher, focused observations of a myriad of classrooms, readings, interviews, discussions, critical writing, and presentations.

CUI 4542 Curriculum, Instruction, and Assessment: Theory and Practice III (1-4 Credits)
This is the third and final quarter of an academic year-long weekly seminar to foster reflective, research-based classroom practice. Teacher candidates will deepen their understanding of teaching and learning in contemporary schools through a guided teaching apprenticeship with a trained mentor teacher, focused observations of a myriad of classrooms, readings, interviews, discussions, critical writing, and presentations.

CUI 4543 Educational Psychology: Learning and Development (1-3 Credits)
This course focuses on theories of learning and development, including behaviorism, cognition in context, and sociocultural perspectives, among others, as well as practical application of those theories. Issues of classroom management and student motivation are explored within the context of these theories.

CUI 4544 Ed Psych: Exceptional Child (1-3 Credits)
The focus of this course is on educating children and adolescents with special needs in the general education classroom. The intent is to enable future educators to better serve the needs of these children in their classrooms. Topics such as the special education process, information on specific disabilities, accommodations and modifications, behavior issues, mental health, and communicating with parents will be addressed.

CUI 4545 Perspectives on American Education I (1-3 Credits)
We expect that students will complete this 2-quarter-long class with an appreciation for and commitment to critical reflection, collegiality, ongoing professional growth, and educational reform. Through readings, reflective writing and activities, role-plays, case discussions, community-based field work, visits to a myriad of schools and classrooms, and guest presentations, we expect students to recognize and wrestle with the complexity that characterizes teaching in American society. Four central and recurring themes for this course include: democratic foundations of public schools, apprenticeship of observation, teaching as vocation, and the moral dimensions of teaching.

CUI 4546 Perspectives on American Education II (2 Credits)
We expect the students will complete this 2-quarter-long class with an appreciation for and commitment to critical reflection, collegiality, ongoing professional growth, and educational reform. Through readings, reflective writing and activities, role-plays, case discussions, community-based field work, visits to a myriad of schools and classrooms, and guest presentations, we expect students to recognize and wrestle with the complexity that characterizes teaching in American society. Four central and recurring themes for this course include: democratic foundations of public schools, apprenticeship of observation, teaching as vocation, and the moral dimensions of teaching.

CUI 4600 History and Philosophy in Mathematics Education (3 Credits)
Introduction to the effective integration of history and philosophy of mathematics into mathematics education.

CUI 4610 Learning and Teaching of Mathematics (3 Credits)
Introduction to foundational research literature on learning and teaching in mathematics education.

CUI 4620 Research on Diversity, Equity, and Social Justice in Mathematics Education (3 Credits)
Introduction to research related to issues of diversity, equity, and social justice in P-16 mathematics curriculum, instruction, and assessment.
CUI 4630 Learning Mathematics: Early Childhood (3 Credits)
Development of theories, materials, and methods used to teach mathematics in preschool to grade two and develop abilities in their use.

CUI 4640 Improving Elementary Math Instruction (3 Credits)
Teacher development of elementary mathematical content, pedagogy, curriculum, attitudes and power, and collaboration.

CUI 4690 Field Experience: Curriculum & Instruction (3 Credits)
This course provides students with an authentic field experience for those pursuing a degree in Curriculum & Instruction. Field Experience in Curriculum & Instruction is an off-campus, experience taken throughout the coursework plan. Field Experience is designed to broaden one's professional skills and is considered a critical transition of substantial growth. Field Experience is a hybrid on-line and face-to-face seminar that is designed to facilitate case analysis, ongoing self-reflection, and to provide peer consultation and professional feedback relevant to best practices. The Field Experience is considered a critical professional transition to help consolidate learning and professional competencies in preparation for employment. All students engage in weekly experience seminars (either on-line or face-to-face) facilitated by a University Supervisor. Supervision is designed to provide ongoing professional feedback, case analysis, peer consultation, and continued professional development and experiences pertinent to successful practice. This course promotes the idea that educators are lifelong learners and regularly reflect on and adjust their practice.

CUI 4700 Foundations of Education: Cognitive Theory I (3 Credits)
Introduction to cognitive research in education. Includes theories and research regarding the implementation of these theories in specific curricula.

CUI 4710 Foundations of Education: Cognitive Theory II (3 Credits)
Second course in cognitive research in education. Includes theories and research regarding the implementation of these theories in specific curricula. Prerequisite: CUI 4700.

CUI 4720 Discourse in the Mathematics Classroom (3 Credits)
The study of discourse as it relates to mathematics teaching and student learning.

CUI 4730 Mathematics and Instructional Technology (3 Credits)
Introduction to the principles of effective use of technology in mathematics instruction.

CUI 4740 Policy and Mathematics Education (3 Credits)
Introduction to educational politics and how those policies have influenced and continue to influence mathematics education.

CUI 4790 Seminar on Race in Mathematics Education (3 Credits)
Seminar course for advanced doctoral students on issues of race and mathematics education in the US.

CUI 4870 Education in International Settings (3 Credits)
Objectives of this course include: viewing education in the 21st century as cross-cultural and international; examining the role of schooling in shaping national identity and citizenship in nation-states around the globe; and identifying promising practices and exemplary curriculum material for teaching cross-cultural perspectives and world awareness.

CUI 4991 MA Independent Study (1-10 Credits)

CUI 4992 Directed Study (1-10 Credits)

CUI 4995 Research - M.A. Thesis (1-10 Credits)

CUI 5980 Research as Problem Analysis (3 Credits)
This course is the first of three culminating research courses for students in the Ed.D. in Curriculum and Instruction. This course is designed to guide candidates through the doctoral proposal process and introduce the initial stages of data collection and analysis.

CUI 5981 Research as Intervention (3 Credits)
This course is the second of three culminating research courses for students in the Ed.D. in Curriculum and Instruction and is designed to help candidates finish collecting their data and analyze their data. This course will also introduce and develop the evaluation or analysis section of the doctoral paper and the beginning steps of the dissemination of the research project.

CUI 5982 Applied Research (3 Credits)
This course is the final of three culminating research courses for students in the Ed.D. in Curriculum and Instruction and is designed to help candidates disseminate their project, reflect on their project, and defend their project. This course is specifically focused on writing the quasi-practical section of the doctoral paper and the dissemination of the research project to the community partner.

CUI 5983 Defense of Research (1 Credit)
This course will build on the "persistent problems of practice" and research questions identified in CUI: 5980, data collection and analysis in CUI 5981, and applied research skills in CUI 5982. By the end of the course you will be able to schedule and present your doctoral research project for defense. Completion of CUI: 5982 "Research as Applied Research" or permission of the instructor.

CUI 5991 PhD Independent Study (1-10 Credits)

CUI 5992 Directed Study (1-10 Credits)

CUI 5993 Doctoral Research Project (1-4 Credits)
Doctoral research credits for doctoral research project toward the EdD. Prerequisite: Must be an EdD student in C&I; must have completed C&I doctoral research courses (CUI 5980, CUI 5981, CUI 5982, and CUI 5983).
CUI 5994 Seminar in Dissertation Organization and Research (1-5 Credits)
Individualized assistance in developing the dissertation topic, issue, problem; guidance in preparation for proposal orals and application to the Institution Review Board (IRB), direction for dissertation chapter organization, writing and completion. This seminar is targeted for the student who needs support in completing the dissertation.

CUI 5995 Dissertation Research (1-10 Credits)

Teacher Ed Prep Courses

TEP 4010 Foundations of Special Education: Inclusive Pedagogy for Students with Dis/Abilities (2-4 Credits)
This course serves as the foundation for understanding children with disabilities and dis/abilities, as well as the philosophies, laws and policies that support the students. To be responsive to the diverse strengths, needs, and experiences children bring to the classroom, educators need a foundational knowledge of special education and opportunities that can influence student learning. We emphasize a strengths-based perspective and provide pedagogy for supporting for all learners. We introduce the classroom teacher’s role in understanding the Individual Education Program (IEP) process, designing lesson plans and inclusive practices based on differentiated and universal design learning instructional strategies and working collaboratively with families and interdisciplinary teams. In addition, we introduce potential commonalities of students with high-incidence disabilities, the history and legal aspects of Special Education and the Response to Intervention Model (RtI)/Multi-Tiered System of Supports (MTSS).

TEP 4520 Art Methods K-12 (3-4 Credits)
Throughout this course, Apprentice Teachers will analyze the following essential questions about teaching and learning in the visual arts field: 1) What type of visual arts classroom environment best supports student learning and skill development in a 21st century classroom?, 2) How do the Colorado Academic Standards guide arts instruction?, 3) What is the role of descriptive feedback in the reflective practice of teaching and learning?, 4) How can visual arts instruction enhance positive-identity development for diverse learners?, and 5) How can visual arts educators use arts assessment in curriculum planning and to gauge student learning?.

TEP 4561 Elementary Curriculum I (4-6 Credits)
Focuses on teaching and learning in the K-6 classroom and prepares teachers to design and implement effective classroom instruction. Frequently covered topics include: standards-based instruction, approaches to assessment, effective teaching strategies, sound lesson/unit planning, interdisciplinary instruction, individualizing instruction, technology, multicultural curriculum. Prerequisite: enrollment in the Teacher Education Program.

TEP 4562 Elementary Curriculum II (4-6 Credits)
Continuation of TEP 4561. Both must be completed for students planning to teach in elementary schools. Prerequisite: enrollment in the Teacher Education Program.

TEP 4572 Art Methods for K-12 (4 Credits)
In this course, Apprentice Teachers will gain an understanding of how the Colorado Academic Standards for Visual Arts and the Backward Design process are used in the development of curriculum for the arts. The course will culminate with a portfolio presentation consisting of the Apprentice Teacher’s philosophy of teaching, a lesson plan and artifact, and a teaching presentation to peers.

TEP 4581 Elementary Music Methods (3-6 Credits)
Prepares K-12 music teachers to design and implement effective instruction in the elementary school music classroom. Course introduces full array of sound teaching and assessment strategies for all aspects of music. Prerequisite: enrollment in the Teacher Education Program.

TEP 4582 Secondary Music Methods (3-4 Credits)
Prepares K-12 music teachers to design and implement effective instruction in the secondary school music classroom. Course introduces full array of sound teaching and assessment strategies for all aspects of music instruction. Prerequisite: enrollment in the Teacher Education Program.

TEP 4590 Literacy Instruction I (3,4 Credits)
Introduces developmental continuum for literacy. Prepares to assess students' abilities, to select appropriate instructional strategies and to design effective instructional programs leading to increased listening, speaking, reading and writing competencies for all children. At the elementary level, focuses on balanced approach to literacy instruction. At the secondary level, emphasizes reading and writing in the content areas and assistance of the struggling reader/writer. Prerequisite: enrollment in the Teacher Education Program.

TEP 4591 Literacy Instruction II (3-4 Credits)
Introduces developmental continuum for literacy. Prepares to assess students' abilities, to select appropriate instructional strategies and to design effective instructional programs leading to increased listening, speaking, reading and writing competencies for all children. At the elementary level, focuses on balanced approach to literacy instruction. At the secondary level, emphasizes reading and writing in the content areas and assistance of the struggling reader/writer. Prerequisite: enrollment in the Teacher Education Program and TEP 4590: Literacy Instruction I.

TEP 4600 Introduction to Secondary Methods (3-6 Credits)
Provides general introduction to principles of effective secondary instruction curriculum design and assessment. Frequently covered topics include: design of classroom environments, comparison of different instructional practices, purposes for and approaches to assessment, comparison of middle and high school philosophies, introduction to instructional unit plan development, and theories of instructional approach and design. Course lays a foundation for more specialized subject-matter methods courses. Prerequisite: enrollment in the Teacher Education Program.
Division of Natural Sciences and Mathematics

The Division of Natural Sciences & Mathematics offers graduate students the chance to collaborate with our faculty scholars to apply new knowledge and research which will change lives as well as challenge long-held ideas. Although not an inclusive list of opportunities, we offer access to resources such as the innovative geospatial software, a collection of high resolution fluorescence imaging systems as well as an ability to perform electron paramagnetic resonance. From the mystery of the blinking binary star system Epsilon Aurigae to the movement of an individual molecule inside a cell, the Division of Natural Sciences & Mathematics offers the expertise and resources to support your investigative journey.
Why study biology at the University of Denver?
The department of biological sciences offers graduate programs at the doctoral (PhD) or master's (MS) level. Students earn a degree in biological studies with a concentration in either cell and molecular biology or biology, ecology and evolution. Both program tracks involve a combination of course work, lab or field research and a defended thesis or dissertation. Students begin their research under the direction of a faculty member during the first year. All students are expected to present their work at scientific meetings and publish their work in peer-reviewed scientific journals. Doctoral students also have the opportunity to participate in teaching undergraduate courses.

Research areas
The PhD and MS programs are centered on primary research that coincides with faculty experience and expertise. Students will conduct their research in a university environment using state-of-the-art techniques and facilities. The current research emphases of the department are

• Cell and molecular biology is supported by major research facilities that include real-time PCR instruments, a DNA WAVE HPLC, a Hitachi transmission electron microscope and an Olympus Fluoview 1000 confocal microscope and other advanced imaging systems.
• Biology, ecology and evolution takes advantage of unique field study sites that include an alpine research station on Mt. Evans in the Arapaho National Forest and collaborative research opportunities with the Denver Botanic Gardens.

Career opportunities
A student who completes the MS degree is in a strong position to pursue a range of postgraduate opportunities, including a career in biotech, academic or government lab or agency, or continued studies in a professional or PhD program. The doctoral degree carries the credential for a professional career in research or academics.

Doctor of Philosophy in Biological Sciences with a Concentration in Biology, Ecology and Evolution

Degree and GPA Requirements
• Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:
• Students with an undergraduate major in chemistry, physics or mathematics and minimal preparation in biological sciences also will be considered but may be required to take undergraduate courses when the prerequisites are lacking. Course prerequisites include: one year of general chemistry, one year of calculus (recommended), one year of physics, two years of biology and one year of organic chemistry.

Standardized Test Scores
• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:
• Minimum TOEFL Score (Internet-based): 80
• Minimum TOEFL Score (Paper-based): 550
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 169
English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Doctor of Philosophy in Biological Sciences with a Concentration in Cell and Molecular Biology

Degree and GPA Requirements

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:

- Students with an undergraduate major in chemistry, physics or mathematics and minimal preparation in biological sciences also will be considered but may be required to take undergraduate courses when the prerequisites are lacking. Course prerequisites include: one year of general chemistry, one year of calculus (recommended), one year of physics, two years of biology and one year of organic chemistry.

Standardized Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Science in Biological Sciences with a Concentration in Biology, Ecology and Evolution

Degree and GPA Requirements

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Science in Biological Sciences with a Concentration in Cell and Molecular Biology

Degree and GPA Requirements
• Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores
• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

• Minimum TOEFL Score (Internet-based test): 80
• Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Graduate studies in the department of biological sciences provide graduate students with a set of structured core classes that establish a strong foundation of basic knowledge in cell and molecular biology or ecology and evolution and that allow the knowledge to be built upon in subsequent specialized courses and independent research. Research areas are usually linked to the interest of the supervising faculty member. The department's current research strengths center around the two areas: cell and molecular biology (biophysics, neuroscience, neuroendocrinology, cell signaling and physiology, developmental biology, aging, molecular forensics and molecular evolution) and ecology and evolution (biogeochemistry, conservation biology, restoration ecology, molecular evolution). To complete research commitments, MS students generally work with a major professor of choice in the laboratory and/or field for about two years, while PhD students generally work for five years.

DOCTOR OF PHILOSOPHY IN BIOLOGICAL SCIENCES WITH A CONCENTRATION IN BIOLOGY, ECOLOGY AND EVOLUTION

Degree Requirements
The major requirements for completion of the PhD degree are 90 quarter hours of graduate course work and research credit, completion of all candidacy exams, and successful defense of the PhD dissertation. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by their adviser and dissertation committee.

Coursework Requirements
The course work includes the following graduate core curriculum:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOL 4220</td>
<td>Grad Sem: Ecology &amp; Evolution</td>
<td></td>

</tr>
<tr>
<td>BIOL 4090</td>
<td>Biostatistics</td>
<td></td>
</tr>
<tr>
<td>or BIOL 4085</td>
<td>Accelerated Biostatistics</td>
<td></td>
</tr>
</tbody>
</table>
Non-coursework requirements

Additional requirements are attendance at departmental seminars, passing performance in the qualifying examination and the research proposal examination, presentation of one departmental seminar per year, completion of a research dissertation of publishable quality, and successful oral defense of the dissertation. PhD students are required to pass both a qualifying exam and research proposal exam to advance to candidacy.

Up to 10 quarter hours of graduate credit (or a blanket transfer of 45 quarter hours from a previous master's program) may be accepted as transfer credit with approval of the departmental graduate committee and the Office of Graduate Studies.

DOCTOR OF PHILOSOPHY IN BIOLOGICAL SCIENCES WITH A CONCENTRATION IN CELL AND MOLECULAR BIOLOGY

Degree Requirements

The major requirements for completion of the PhD degree are 90 quarter hours of graduate course work and research credit, completion of all candidacy exams, and successful defense of the PhD dissertation. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by their adviser and dissertation committee.

Coursework Requirements

The course work includes the 20-credit graduate core curriculum:

<table>
<thead>
<tr>
<th>Code</th>

• Courses that the dissertation committee judges to complement the student’s major field also may be used.

TOTAL CREDITS 0

Non-coursework requirements

Additional requirements are attendance at departmental seminars, passing performance in the qualifying examination and the research proposal examination, presentation of one departmental seminar per year, completion of a research dissertation of publishable quality, and successful oral defense of the dissertation. PhD students are required to pass both a qualifying exam and research proposal exam to advance to candidacy.

Up to 10 quarter hours of graduate credit (or a blanket transfer of 45 quarter hours from a previous master's program) may be accepted as transfer credit with approval of the departmental graduate committee and the Office of Graduate Studies.

MASTER OF SCIENCE IN BIOLOGICAL SCIENCES WITH A CONCENTRATION IN BIOLOGY, ECOLOGY AND EVOLUTION

Degree Requirements

The major requirements for completion of the MS degree are 45 quarter hours of course work and research credit, and successful defense of the MS thesis. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by the major adviser and thesis committee.
Coursework Requirements
The course work includes the following graduate core curriculum:

<table>

* Courses the thesis committee judges to complement the student’s major field also may be used.

Non-coursework Requirements
Additional requirements are attendance at all departmental seminars, a thesis based on a research project approved by the thesis committee, and a successful oral defense of the thesis.

MASTER OF SCIENCE IN BIOLOGICAL SCIENCES WITH A CONCENTRATION IN CELL AND MOLECULAR BIOLOGY

Degree Requirements
The major requirements for completion of the MS degree are 45 quarter hours of course work and research credit, and successful defense of the MS thesis. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by the major adviser and thesis committee.

Coursework Requirements
The course work includes the 16-credit graduate core curriculum:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>

* Courses the thesis committee judges to complement the student’s major field also may be used.

Non-coursework requirements
Additional requirements are attendance at all departmental seminars, a thesis based on a research project approved by the thesis committee and a successful oral defense of the thesis.

Courses

**BIOL 3010 Evolution and Speciation (4 Credits)**
Theories and supporting evidence explaining evolution from origin of universe to complex interrelationships of species. Prerequisites: BIOL 1010, BIOL 1011 and BIOL 2510.

**BIOL 3020 Aquatic Ecology (4 Credits)**
An introduction to the ecology of fresh-water and marine organisms including aquatic adaptations, community organization, food chains, nutrient cycling and man's impact on aquatic ecosystems. Prerequisite: BIOL 2010 or instructor's permission.
BIOL 3030 Alpine Ecology (4 Credits)
Ecology of alpine and subalpine regions of Colorado; organization and distribution of communities and populations, succession, energy flow, nutrient cycling, population adaptations in life-history physiology, behavior and morphology. Prerequisite: BIOL 2100.

BIOL 3035 Invasive Species Ecology (4 Credits)
This course investigates those plants and animal species that have dramatically expanded their ranges and cause ecological harm. Topics covered include the mechanisms of ecological impacts across the globe, how invasive species are used to test basic ecological theory, the application of this research for managing real species, and related issues such as the debate within the scientific community about the term "invasive." We use a case-study approach, and students have the opportunity to go into the field as a class to observe the real invasions and learn sampling methods.

BIOL 3044 Coral Reef Ecology (3 Credits)
Ecology of coral reefs; organization and distribution of reefs; review of reef organisms and their interactions with each other and their physical environment; threats to coral reef reef conservation. Prerequisite: (BIOL 2100 or BIOL 2105) OR (GEOG 1201, GEOG 1202, and GEOG 1203).

BIOL 3045 Coral Reef Ecology Lab (1 Credit)
Ecology of coral reefs laboratory to supplement lecture material; travel to the Caribbean over spring break to observe coral reefs firsthand; introduction to research methods. SCUBA certification and permission of instructor required. A travel and dive fee is associated with this course.

BIOL 3055 Ecology of the Rockies (4 Credits)
A week in residence at the Mt. Evans Field Station prior to the start of fall quarter includes field projects dealing with ecology and environmental issues. On campus classes involve data analysis and interpretation and formal scientific communication. Themes include terrestrial and aquatic ecosystems, taxonomic groups ranging from conifer stands to aquatic insects and mountain goats. Lab fee associated with this course. Prerequisite: BIOL 2100 or permission of instructor.

BIOL 3060 Tropical Ecology (3 Credits)
Biological composition of tropical ecosystems; biodiversity, biogeochemistry; causes and biological consequences of tropical deforestation; ecologically based approaches toward sustainable tropical forest use. Includes laboratory. Prerequisite: BIOL 2100.

BIOL 3070 Ecological Field Methods (4 Credits)
Series of field exercises for students to learn principles and procedures of field methodology, data analysis and technical writing in ecology; problems drawn from population, community and ecosystem ecology. Lab fee associated with this course. Prerequisite: BIOL 2100.

BIOL 3085 Insect Ecology (4 Credits)
A general introduction to insect biology and the science of entomology. Arthropods are the most diverse group of animals on Earth and insects account for more than half of all known living organisms. This course explores the biodiversity of insects on Earth, insect morphology and physiology. The evolutionary history and taxonomy of key orders of insects is emphasized as well as the importance of insects to our everyday lives. Prerequisites: BIOL 1010, BIOL 1011, and BIOL 2100.

BIOL 3090 Microbial Ecology (4 Credits)
Interactions among microorganisms and their environment. Impact of ecological principles on microbial diseases, pollutant degradation, nutrient cycles and global change. Prerequisites: BIOL 1010, BIOL 1020, AND BIOL 2100.

BIOL 3100 Histology: Medical Microanatomy (4 Credits)
Microscopic organization of tissues and organs; correlation of organization of organs with functions and pathologies; emphasis on mammalian systems. Includes laboratory. Lab fee associated with this course. Prerequisite: BIOL 2100.

BIOL 3110 Special Topics: Biology (1-5 Credits)
Topics of special interest to teaching/research faculty of department presented as needed to complement and expand existing curriculum. May be repeated for credit. PREREQUISITES: BIOL 1010.

BIOL 3120 General Microbiology (4 Credits)
Fundamental principles of microorganisms in the world and in disease; role of bacteria in biological phenomena. Includes laboratory. Lab fee associated with this course. Prerequisite: BIOL 2100.

BIOL 3130 Molecular Evolution (4 Credits)
Evolution of macromolecules and reconstruction of evolutionary history of genes and organisms. Prerequisite: BIOL 2510 or permission of instructor.

BIOL 3135 Topics in Cell Motility (4 Credits)
Fibrous elements of the cytoskeleton and associated proteins and their role in cellular motility is examined in detail. The physical forces involved in cellular motile function is applied in understanding cellular motile behavior. Prerequisite: BIOL 2110.

BIOL 3150 Intracellular Dynamics (4 Credits)
Focuses on spatial and temporal control of intracellular processes with an emphasis on neuronal and endocrine cells. Topics include vesicular traffic, protein targeting, dynamics and spatial organization of signaling complexes. Emphasis on modern techniques of cell and molecular biology with examples from primary literature. Prerequisite: BIOL 2120.

BIOL 3160 Biophysics: Ion Channels & Disease (4 Credits)
Examines ion channel structure and function and the ways in which this information provides insight into human disease. The focus is on the use of biophysical techniques in combination with molecular and genetic analysis of channel genes. General Physics recommended. Prerequisite: BIOL 2100.
BIOL 3200 Invertebrate Evolution (4 Credits)
Introduction to remarkable diversity of invertebrate life, both in terms of numbers of species, novel body plan and physiological adaptations. Includes laboratory. Prerequisites: BIOL 1010, BIOL 1011.

BIOL 3230 Nutrition (3 Credits)
Investigation of metabolism, all nutrients and various applications of nutrition to sports and healthy living. Prerequisite: BIOL 3250.

BIOL 3250 Human Physiology (5 Credits)
Functional relationships of human organ systems with coordinated laboratory activities and experiments that demonstrate and test physiological principles. Lab fee associated with this course. Prerequisites: BIOL 1010.

BIOL 3260 Nutrition (3 Credits)
From physiological and biochemical perspectives, this course explores the relationships of energy metabolism, nutrients, vitamins and minerals to human health. Prerequisite: BIOL 3250.

BIOL 3300 Biodiversity-Flowering Plants (4 Credits)
Basic techniques and principles of systematics with application to the origin, evolution, radiation, classification and biodiversity of flowering plants (angiosperms). Lab fee associated with this course. Prerequisites: (BIOL 1010 AND BIOL 1011) or (GEOG 1201, GEOG 1202, AND GEOG 1203), OR instructor’s permission.

BIOL 3400 Ornithology (4 Credits)
Biology of birds with emphasis on ecology and behavior; field and laboratory work to stress bird identification and ecological relationships of birds. Lab fee associated with this course. Prerequisites: BIOL 1010, BIOL 1011.

BIOL 3410 Animal Behavior (4 Credits)
This class examines animal behavior from an evolutionary and ecological perspective. The course provides the background needed to understand behavioral evolution, including a focus on the inheritance of behavior, natural selection, sexual selection, and kin selection. This class studies the evolution of a variety of behaviors, including communication and displays, mate choice, parental care, cooperation, mating systems, social behavior, habitat selection, foraging, and anti-predator behavior. The emphasis is on theoretical principles, design of experiments, and interpretation of data. Prerequisites: BIOL 1010 and BIOL 1011, AND BIOL 2010. RECOMMENDED PREREQUISITE: BIOL 2090.

BIOL 3560 Molecular Biology Laboratory (4 Credits)
Laboratory based course that covers techniques in gene excision, cloning and reinsertion and gene sequencing. Lab fee associated with this course. Prerequisite: BIOL 2510, or permission of instructor.

BIOL 3570 Proteins in Biological Systems (3 Credits)
Proteins considered in their biological setting; protein synthesis and degradation; survey of protein functions in vivo; evolution of proteins; introduction to protein biotechnology. Prerequisites: BIOL 2120, CHEM 2451, CHEM 2452 and CHEM 2453.

BIOL 3610 Developmental Biology (4 Credits)
Processes and mechanisms of development, exemplified by higher animal embryogenesis, with consideration of microbial model systems. Prerequisite: BIOL 2510 and BIOL 2120.

BIOL 3620 Vertebrate Embryology (4 Credits)
Development processes in placental mammals; analysis of vertebrate cyto-differentiation and morphogenesis. Laboratory on embryonic anatomy of amphibians, birds and mammals. Prerequisites: BIOL 1010, BIOL 1011 and BIOL 2120. Corequisites: BIOL 1010.

BIOL 3630 Cell Biology of Development (4 Credits)
Every organism has a stereotypical shape, but how does this shape arise? This course examines the cellular and molecular mechanisms that direct the forming of body and tissue shape. Prerequisite: BIOL 2120.

BIOL 3640 Introductory Neurobiology (4 Credits)
Organization and function of vertebrate central nervous system; nature of action potential, biochemistry of neurotransmitters, neuropeptides, functional anatomy of nervous system, phylogeny of nervous system. Prerequisite: BIOL 2120.

BIOL 3641 Systems Neuroscience (4 Credits)
Structure and function of the brain and spinal cord, emphasis on functional systems including sensory perception, motor control and consciousness. Prerequisite: BIOL 3640.

BIOL 3642 Neuropharmacology (4 Credits)
How psychoactive drugs exert their effects on the nervous system; drugs of abuse and drugs used in the treatment of psychotic and neurodegenerative disorders. Prerequisite: BIOL 2120. Recommended prerequisites: BIOL 3640.

BIOL 3643 Developmental Neurobiology (4 Credits)
This course investigates the mechanisms involved in the maturation of neurons, and signals that direct neurons to their proper position in the central nervous system. Prerequisite: BIOL 3640.

BIOL 3644 Neuromuscular Pathophysiology (4 Credits)
Cellular and molecular basis for normal nerve and muscle functions and the alteration of these functions by toxins, trauma and diseases of the brain, nerves and muscles; how specific insults produce clinical symptoms and pathology. Prerequisite: BIOL 2120. Recommended Prerequisite: BIOL 3640 or BIOL 3250.
BIOL 3646 Seminar: Cognitive Neuroscience (2 Credits)
This seminar is the capstone course for the neuroscience portion of the cognitive neuroscience program. Seminar topics include but are not limited to neurological disorders, model systems in neuroscience and sensory systems.

BIOL 3650 Endocrinology (4 Credits)
Mechanisms of hormone action, evolution of vertebrate endocrine systems, analysis of function integration of hormonal responses in maintenance of homeostasis. Prerequisite: BIOL 2120.

BIOL 3655 Molecular Neuroendocrinology (4 Credits)
Advanced laboratory course that uses anatomical/immunological, biochemical and molecular approaches to analyze neuroendocrine pathways in the hypothalamus/pituitary system. Lab fee associated with this course. Prerequisites: BIOL 3650 and instructor's permission.

BIOL 3670 Molecular Immunology (4 Credits)
The ability to distinguish self from non-self is crucial to all organisms. In humans Organs, cells and other higher animals, this task fall to the immune system. Suppression of this system is key to numerous pathogenic viruses including Ebola and human immunodeficiency virus. The failure to adequately regulate immune response underlies allergic reactions, arthritis and diabetes. This course will introduce students to the organs, cells and molecules that underlie mammalian immune response; immunogenetics and the fundamental mechanisms of cell mediated and humoral immune response; and the relationship of immune system to human disease. Prerequisite: BIOL 2510.

BIOL 3680 Advanced Techniques in Cell Biology (4 Credits)
Advanced laboratory course that covers current techniques used in cell biology research. Lab fee associated with this course. Prerequisite: BIOL 2120.

BIOL 3700 Topics in Ecology (1-4 Credits)
Topics vary; may include plant, animal, biochemical, alpine or aquatic; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: one quarter of undergraduate ecology and/or instructor's permission.

BIOL 3701 Topics in Genetics (1-4 Credits)
Topics vary; may include genetic methods, molecular genetics, human genetics, chromosomes or population genetics; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: varies with topic and instructor; instructor's permission usually required.

BIOL 3702 Advanced Topics in Regulatory Biology (1-4 Credits)
Topics vary; may include endocrinology, physiology or immunology; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: varies with topic and instructor; instructor's permission usually required.

BIOL 3703 Advanced Topics in Developmental Biology (1-4 Credits)
Topics vary; may include gene expression in development, developmental immunogenetics, developmental biochemistry or aging; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: instructor's permission.

BIOL 3704 Advanced Topics in Cell Biology (1-4 Credits)
Topics vary; may include supramolecular structure, microscopy, membranes and techniques. May be repeated for credit. Taught from original literature. Prerequisites: BIOL 2120.

BIOL 3705 Advanced Topics in Molecular Biology (1-4 Credits)
Topics vary, but may include biochemistry, supramolecular structure and function, molecular genetics, membrane biology. May be taken more than once for credit. Taught from original literature. Prerequisite: varies with course and instructor; instructor's permission usually required.

BIOL 3706 Topics in Evolution (1-4 Credits)
Topics vary, but may include molecular evolution, plant evolution and animal evolution. Prerequisite: BIOL 2120 and BIOL 2510.

BIOL 3707 Advanced Topics in Conservation Biology (1-4 Credits)
BIOL 3800 Human Molecular Biology (4 Credits)
Medical Genetics is the 24th member of the American Board of Medical Specialties. This course will introduce students to the fundamentals of molecular biology with an emphasis on understanding of how the field is applied in the context of medical diagnostics, personalized/precision medicine and other commercial applications. Students will be introduced to published research reports and provided with opportunities to critically examine the application of molecular biology to central questions in such areas as oncology, inherited diseases and genetically engineered organisms. Prerequisite: BIOL 2510.

BIOL 3910 Viruses & Infectious Human Diseases (4 Credits)
From sexually transmitted viruses to bacterial pneumonia, infectious pathogens are the number one threat to human health. This course will introduce students to prions, viruses and bacterial pathogens with an emphasis on those commonly encountered in clinical medical practice. Through the use of technical/scientific research journals students will be encouraged to investigate the etiology, pathogenesis and treatment of human infectious disease with an emphasis on the clinical, molecular diagnostic and therapeutic aspects of the disease. Prerequisite: BIOL 2510. Recommended prerequisite: BIOL 3800.

BIOL 3950 Undergraduate Research (1-10 Credits)
Participation in faculty research programs by agreement between student and faculty member. Maximum of 5 quarter hours of BIOL 3950 and/or BIOL 3991 may be applied to the 45-quarter-hour requirement for a major in biological sciences.

BIOL 3991 Independent Study (1-10 Credits)
Topic in biology studied under faculty supervision. Student's responsibility to identify faculty supervisor before registering for class. Maximum of 5 quarter hours of BIOL 3991 and/or BIOL 3950 may be applied toward the 45-quarter-hour requirement for a major in biological sciences.
BIOL 3992 Directed Study (1-10 Credits)
BIOL 3995 Independent Research (1-10 Credits)
BIOL 4010 Cellular Motile Function (2 Credits)
Current literature in area of cell motility; role of cytoskeletal elements as motile agents.
BIOL 4020 Microbial Genetic Model Syst (2 Credits)
BIOL 4030 Current Concepts in Evolution (2 Credits)
New ideas and theories in field of evolutionary biology.
BIOL 4040 Current Concepts-Animal Phys (2 Credits)
Selected topics in animal physiology.
BIOL 4050 Topics in Plant Biology (2 Credits)
Varying topics; areas of plant-animal interactions, co-evolution, plant ecology, plant biochemistry/physiology.
BIOL 4060 Gene Expression-Development (2 Credits)
Varying aspects of gene control in developing systems, a different aspect each time course is offered.
BIOL 4070 Hormone-Receptor Interaction (2 Credits)
Series of lectures; understanding molecular, cellular basis of hormone action; experimental analysis of binding of hormones with their receptors; structure-function relationships of hormone-receptor interactions; nature and action of mediators generated by hormone-receptor interaction.
BIOL 4080 Biological Membranes (2 Credits)
BIOL 4085 Accelerated Biostatistics (2 Credits)
This is an accelerated online statistics course for graduate students in Biology. Basic probability and hypothesis testing is the foundation of teaching applied statistics, including simple statistics (t-tests, F-tests, and chi square) and more advanced procedures (regression, correlation, analysis of variance). In addition, students learn more complex tools (multiple regression, multi-classification ANOVA, Student-Newman-Keuls tests), including non-parametric Tests (Mann-Whitney U, Sign test, Wilcoxon Rank Sum).
BIOL 4090 Biostatistics (4 Credits)
Statistic on biological research; emphasis on procedures, applications of regression, correlation, analysis of variance, and nonparametric tests. Include instruction on computer aided (Mac and PC) statistical analysis and presentation of results. Cross listed with BIOL 2090.
BIOL 4091 Ecology and Evolution Research Methods (1 Credit)
This course builds upon the concepts in BIOL 4090, Biostatistics, by covering in more detail and specificity issues involved in designing one's experiment to adequately test the hypotheses or describe the data of interest. Students bring and discuss their specific research projects as case studies to maximize the utility of the course.
BIOL 4100 Microbial Structure & Function (2 Credits)
BIOL 4110 Essentials of Immunology (2 Credits)
BIOL 4120 Human Chromosomes and Mutagenesis (2 Credits)
BIOL 4130 Microevolution (2 Credits)
Microevolution, the change of gene frequencies within populations; examination of forces that cause it, evaluation of its contribution to process of speciation.
BIOL 4140 Protein Biosynthesis (2 Credits)
Processes of protein synthesis in cells; emphasis on posttranslational modifications that occur to secretory proteins prior to secretion.
BIOL 4150 Special Topics in Adv Biology (1-4 Credits)
Topics of special interests to teaching and research faculty presented as needed to complement and expand existing curriculum. May be taken more than once for credit.
BIOL 4155 Leadership in Science (1 Credit)
This course addresses the basic leadership skills necessary to succeed in the dynamic professional environment of the biomedical sciences. Topics covered include leadership strategies and professional negotiation, conflict resolution, and team-building. Students will determine leadership strengths and weaknesses and use case studies to strengthen their leadership practices.
BIOL 4190 Biometry (3 Credits)
BIOL 4210 Grad Sem: Cell Biology (2 Credits)
A series of student presentations focusing on varied topics involving cell biology. May be taken more than once for credit.
BIOL 4211 Advanced Cell Biology (3 Credits)
Students study the subcellular structure and organization of the cell. Organelle structure and function are examined in detail as well as biogenesis and degradation (turnover) of these subcellular structures. Cytoskeletal dynamics are also a major focus. Specific topics covered include cell division, macromolecular synthesis, membrane transport, cell-matrix and cell-cell communication, cell migration, cell differentiation, and mechanisms of cell death. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students. Cross listed with BIOP 4150.
BIOL 4212 Advanced Molecular Biology (3 Credits)
This course focuses on a detailed analysis of regulated gene expression. The topics include lectures and readings of relevant literature in areas covering gene regulation at multiple steps, including transcription, RNA processing, and translation. In particular, the logic of experimental design and data analysis are emphasized.

BIOL 4213 Advanced Cell Signaling (3 Credits)
Students in this course investigate a large array of cellular signal transduction cascades. Specific signaling pathways to be covered include growth factor receptors, cytokine receptors, steroid receptors, integrin-extracellular matrix, heterotrimeric G-protein coupled receptors, monomeric G-proteins, transcription factors, lipids, cytoskeleton, cell cycle, and apoptosis. Each of these topics is examined in the context of normal cell physiology as well as their roles in specific disease processes. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students.

BIOL 4220 Grad Sem: Ecology & Evolution (2 Credits)
A series of student presentations focusing on varied topics involving ecology and evolution. May be taken more than once for credit.

BIOL 4230 Grad Sem: Molecular Biology (2 Credits)
A series of student presentations focusing on varied topics involving ecology and evolution. May be taken more than once for credit.

BIOL 4231 Responsible Conduct in Rsrch (1 Credit)
This course covers several topics regarding guidelines for ethical practices in research. Topics include: data ownership, conflict of interest and commitments, human subjects, animal welfare, research misconduct, authorship, mentoring, peer review, and collaboration. The course includes an online training component and meets one hour each week to discuss these topics.

BIOL 4300 Fall Graduate Reviews in Biol (1 Credit)
Students participate in a required review session that precedes selected departmental seminar presentations by faculty and outside speakers, and participate in a discussion session with the seminar speaker.

BIOL 4301 Wntr Graduate Reviews in Biol (1 Credit)
Students participate in a required review session that precedes selected departmental seminar presentations by faculty and outside speakers, and participate in a discussion session with the seminar speaker.

BIOL 4302 Spng Graduate Reviews in Biol (1 Credit)
Students participate in a required review session that precedes selected departmental seminar presentations by faculty and outside speakers, and participate in a discussion session with the seminar speaker.

BIOL 4303 Reviews in Biology (1 Credit)
The experience is built around the departmental seminar series offered every quarter.

BIOL 4310 Foundations in Literature: Cell and Molecular Biology (2 Credits)
Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Cell and Molecular Biology.

BIOL 4311 Wntr Selected Top: Reg Bio (2 Credits)
Students participate in a weekly discussion group that focus on recent papers from the primary literature in regulatory biology.

BIOL 4312 Spng Selected Top: Reg Bio (2 Credits)
Students participate in a weekly discussion group that focus on recent papers from the primary literature in regulatory biology.

BIOL 4322 Selected Tpcs: Molecular Biol (2 Credits)
The syllabus for the Selected Topics series varies each quarter. Each quarter a faculty member sets the theme for the quarter and identify a set of review articles to introduce the topic. The instructor leads the first session and provide important background material on the topic. Students select a paper from the primary literature to present to the class on the topic designated for the quarter.

BIOL 4330 Foundations in Literature: Ecology (2 Credits)
Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Ecology.

BIOL 4331 Foundations in Literature: Evolution (2 Credits)
Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Evolution.

BIOL 4332 Foundations in Literature: Conservation Biology (2 Credits)
Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Conservation Biology.

BIOL 4440 Current Concepts-Animal Phys (2 Credits)

BIOL 4610 Developmental Biology (4 Credits)
The processes and mechanisms of development, exemplified by higher animal embryogenesis, with consideration of simpler model systems. Laboratory sessions use live materials; course finishes with individual projects. Prerequisite: BIOL 2510 or equivalent.

BIOL 4700 Human Molecular Biology (4 Credits)
Molecular basis of heredity and genetic control, using in-vitro systems and microbial and eukaryotic models; molecular basis of heredity and genetic regulation considering in-vitro systems as well as prokaryotic and eukaryotic models. Restricted to MBA Bioenterprize students.
BIOL 4710 Endocrinology: Chemical Communication Systems (4 Credits)
Mechanisms of hormone action, evolution of vertebrate endocrine systems, analysis of function integration of hormonal responses in maintenance of homeostasis. Restricted to MBA Bioenterprize students.

BIOL 4720 Neuropharmacology (4 Credits)
How psychoactive drugs exert their effects on the nervous system; drugs of abuse and drugs used in the treatment of psychotic and neurodegenerative disorders. Restricted to MBA Bioenterprize students.

BIOL 4730 Molecular Lab Techniques (4 Credits)
Techniques in gene excision, cloning and reinserterion; gene sequencing. Restricted to MBA Bioenterprize students.

BIOL 4731 Cell and Molecular Techniques (4 Credits)
Analysis of neuroendocrine systems using a multidisciplinary approach. Anatomical/immunological, biochemical and molecular approaches used to analyze neuroendocrine pathways in the hypothalamus/pituitary system. Restricted to MBA Bioenterprize students.

BIOL 4740 Microbiology (4 Credits)
Fundamental principles; role of bacteriology in biological phenomena. Includes laboratory. Restricted to MBA Bioenterprize students.

BIOL 4750 Immunology (4 Credits)
Organs, cells and molecules that underlie mammalian immune response; relationship of immune system to disease. Restricted to MBA Bioenterprize students.

BIOL 4760 Advanced Cell Biology (4 Credits)
Focuses on spatial and temporal control of intracellular processes with an emphasis on neuronal and endocrine cells. Topics include vesicular traffic, protein targeting, dynamics and spatial organization of signaling complexes. Emphasis on modern techniques of cell and molecular biology with examples from primary literature. Restricted to MBA Bioenterprize students.

BIOL 4850 Laboratory Skills for Forensic Serological Analysis (5 Credits)
This course is designed to provide students with two major educational skills. First, is a thorough understanding of the fundamental science behind the identification and serological analysis of biological evidence in a forensic context. Second, is a rigorously developed set of practical hands-on proficiencies with the major commercial assay systems used by forensic laboratories for the identification of blood, saliva, semen, and other biological material with potential probative value to a criminal investigation.

BIOL 4860 Laboratory Skills for Forensic Genetic Analysis (4 Credits)
This course is designed to provide students with two major educational skills. First, is a thorough understanding of the fundamental science behind the molecular genetic analysis of biological evidence in a forensic context. Second, is a rigorously developed set of practical hands-on proficiencies with the major commercial assay systems and software used by forensic laboratories for the determination and analysis of DNA profiles.

BIOL 4870 Medical Ethics (4 Credits)
This course presents knowledge and discussion of ethical issues that arise from advances in the biomedical sciences and medicine. Several specific ethical issues and policies related to methodologies and procedures, emerging medical technologies, treatment decisions, doctor-patient relationship, informed consent, medical experimentation/clinical research, and health care reform.

BIOL 4880 Capstone in Biomedical Sciences (4 Credits)
This is the capstone course for students enrolled in the Professional Science Master’s program. In this course, students integrate advanced knowledge in science and math along with courses taken outside traditional science and math courses as their electives. This course incorporates lectures, guest speakers, and class discussions focusing on current issues or concerns in the chosen concentration. PSM students only. Requires instructor approval.

BIOL 4991 Independent Study (1-17 Credits)
BIOL 4992 Directed Study (1-10 Credits)
BIOL 4995 Independent Research (1-8 Credits)
BIOL 5991 Independent Study (1-17 Credits)
BIOL 5995 Independent Research PhD (1-8 Credits)

Chemistry and Biochemistry

Office: F.W. Olin Hall, Room 202

Why study chemistry at the University of Denver?
Consider the advantages:
• Excellent, research-active faculty
• Small classes, personal attention
• First-rate teaching facilities
• Modern, state-of-the-art equipment

At the University of Denver, we offer the training and activities to energize your graduate experience and help you develop into a professional scientist.

The Department of Chemistry and Biochemistry at the University of Denver offers programs leading to MA, MS or PhD degree in chemistry.

Our faculty members actively involve students in research programs supported with more than $1.5 million in annual funding from federal agencies, state governments and private industries. In our programs, you will enjoy the benefits of a friendly, personalized learning environment that offers nationally competitive and extremely productive research opportunities.

The Department of Chemistry and Biochemistry has much to offer a graduate student: close and frequent student-faculty interaction; an integrated program of courses; and excellent equipment and facilities including 500 MHz NMR, single-crystal X-ray diffraction, multiple EPR spectrometers, ICP-mass spectrometer, Raman microscope, photon counting lifetime fluorescence, nanosecond laser flash photolysis, aerosol particle monitoring spectrometer, and fluorescence microscopy.

Faculty research interests encompass biophysical, organic, analytical and environmental chemistry, and biochemistry. The department’s relatively small size allows a broader, more interdisciplinary approach than in large departments. Our instructional format merges traditional disciplines into interdisciplinary courses that more closely reflect current trends in chemistry.

The department of Chemistry and Biochemistry also participates in an interdepartmental PhD program in Molecular and Cellular Biophysics at the University of Denver. See the molecular and cellular biophysics bulletin (p. 660) for more specific details.

**Doctor of Philosophy in Chemistry**

**Degree and GPA Requirements**

• Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

**Prerequisites:**

• Applicants must earn and submit proof of earning the equivalent of a baccalaureate degree in chemistry, biochemistry or a related field from a regionally accredited institution prior to beginning graduate coursework at DU.

**Standardized Test Scores**

• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842. There is no minimum GRE score; the GRE is only one of multiple factors considered.

**English Language Proficiency Test Score Requirements**

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

• Minimum TOEFL Score (Internet-based test): 80
• Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

**Master of Arts in Chemistry**

**Degree and GPA Requirements**

• Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores
• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

• Minimum TOEFL Score (Internet-based test): 80
• Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Science in Chemistry
Degree and GPA Requirements
• Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:
• Applicants must earn and submit proof of earning the equivalent of a baccalaureate degree in chemistry, biochemistry or a related field from a regionally accredited institution prior to beginning graduate coursework at DU.

Standardized Test Scores
• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842. There is no minimum GRE score; the GRE is only one of multiple factors considered.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

• Minimum TOEFL Score (Internet-based test): 80
• Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Doctor of Philosophy in Chemistry
The PhD is the highest degree awarded and is intended for students seeking a career in scientific research. The ultimate aim of this degree is to train a scientist who can independently design and supervise a research project. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student's progress.

Minimum credits required for degree: 90 (of which a minimum of 75 hours must be earned at the University of Denver)

Because a PhD in chemistry is primarily a degree in which competence in research is learned and demonstrated, a large percentage of these hours are earned as credit for research (CHEM 4995 Independent Research). A minimum of 70 graduate level quarter hours must be in CHEM courses; a maximum of 20 quarter hours may be outside of CHEM courses, but must remain within natural sciences (e.g., courses with BIOL, MATH, GEOG and/or PHYS prefixes). The formal or classroom course requirements are the same as those for the MS degree.

The graduate core curriculum must be completed with a GPA of 3.0 or better.

Non-coursework Requirements

• Qualifying Examinations

All students in the PhD program are required to take a qualifying examination at the end of the spring quarter in their first academic year. This examination covers the material presented in the core curriculum, with each course contributing 100 points. To qualify for continuance in the program, the student must score at least 500 (out of 800 points). The faculty will meet to discuss exam results and decide whether the candidate will continue in the PhD program.

• Cumulative Examinations

The PhD candidate must complete the cumulative examination requirement by the seventh quarter in residence. These examinations are prepared from topics appearing in the current literature and fundamental materials found in review articles.

• Research Proposal Examination

By the end of the eighth quarter in residence, the student should give an oral presentation of a scholarly proposal developed by the student concerning a topic that is within the scope of the adviser’s research program. It is possible to propose a topic that is unrelated to the research program, but only with the prior approval of the adviser. After the public presentation, the student will defend the proposal before a committee of four faculty members (the advisory committee and one additional member). A written version of the proposal will also be required one week prior to the public presentation.

• Dissertation

A dissertation of publishable quality based on the student’s original research must be completed. A summary of the dissertation is presented in a public seminar and later defended in a private oral examination. The dissertation examination committee will consist of the three members of the student’s advisory committee, one additional member of the chemistry faculty to be selected by the advisory committee and an outside chair.

• Seminars
All students in the PhD program are expected to present a departmental “non-thesis” seminar. This seminar should be presented fairly early in the degree program. In addition, the student must present public seminars as part of the proposition oral exam and final thesis defense.

**Master of Arts in Chemistry**

The MA degree is intended primarily to meet the needs of students, such as those working full time in local industry or secondary education, who are seeking an advanced degree with only a small research component. The primary difference between the MA degree and the MS degree is that a research thesis is required for the MS degree. The research required for the MS degree is often not feasible for students who work full time or is not of interest to those preparing for a career, for example, in secondary education. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student’s progress.

Minimum credits required for degree: 45 (of which a minimum of 35 credit hours must be earned at the University of Denver)

The graduate core curriculum must be completed with a GPA of 3.0 or better. If it is appropriate, and approved by the graduate committee, other graduate courses may be substituted for part of the graduate core curriculum.

**Independent Study and/or Research**

A minimum of six credit hours of independent study and/or independent research approved by the student’s advisory committee must be completed.

**Courses in Other Departments**

A minimum of 35 credit hours must be taken in courses offered by the Department of Chemistry and Biochemistry. As many as 10 credit hours may be taken in science-related 3000- to 4000- graduate level courses approved by the student’s advisory committee.

**Seminars**

All students in the MA degree program must present a technical seminar (CHEM 4900 Chemistry Seminar).

**Master of Science in Chemistry**

The MS degree is intended for students who wish an advanced degree in chemistry primarily for the purpose of better preparation to conduct research work in chemistry or biochemistry. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student’s progress.

Minimum credits required for degree: 45 (of which a minimum of 35 credit hours must be earned at the University of Denver)

The graduate core curriculum must be completed with a GPA of 3.0 or better.

Seminars

All students in the MS program must present one departmental “non-thesis” seminar, in addition to the thesis seminar.

Non-coursework Requirements

Thesis- A thesis of publishable quality must be completed. A summary of the thesis is presented in an oral defense. The thesis defense committee will consist of a minimum of two faculty members from the Department of Chemistry and Biochemistry and an outside chair.

Courses

CHEM 3110 Chemical Systems I (3 Credits)
Advanced discussion of modern concepts of organic chemistry; bonding, stereochemistry, reaction mechanisms. Prerequisites: CHEM 2453 and equivalent of one year of physical chemistry.

CHEM 3120 Chemical Systems II (3 Credits)
Interpretation of trends in the chemistry of the elements in terms of orbital interactions. Most examples will be taken from the third row transition metals and the boron and carbon groups. Prerequisites: CHEM 2131, CHEM 3310 and CHEM 3110.

CHEM 3130 Chemical Systems III (3 Credits)
Advanced-level physical biochemistry course intended for advanced-level undergraduates and graduate students. Focuses on kinetic, thermodynamic and dynamic aspects of biopolymers; delineates the relationship of these properties to the mechanism and function of biological macromolecules. Prerequisites: CHEM 3811, CHEM 3812, CHEM 3813, CHEM 3610 or the equivalent.

CHEM 3220 Advanced Analytical Chemistry (3 Credits)
Principles of chemical instrumentation applied to analytical measurements; principles, instrumentation and applications of spectrometric and chromatographic measurements. Prerequisites: CHEM 3210 and CHEM 3621, or the equivalent.

CHEM 3310 Structure and Energetics I (3 Credits)
Fundamentals of quantum chemistry, and introduction to symmetry and molecular structure of small and large systems. Prerequisite: one year of physical chemistry.

CHEM 3320 Structure and Energetics II (3 Credits)
Computational methods in chemistry. Prerequisites: CHEM 3310, one year of physical chemistry.

CHEM 3410 Atmospheric Chemistry (3 Credits)
The concepts of equilibrium thermodynamics, kinetics, and photochemistry will be applied to understanding atmospheric processes. Covers urban air pollution in detail with focus on primary pollutants. Also covers stratospheric chemistry with focus on ozone chemistry and the chemistry of climate change. Prerequisites: (CHEM 2270 or CHEM 2011) and CHEM 2453.
CHEM 3411 Aquatic Chemistry (3 Credits)
The circulation of the oceans and their chemical make-up. 'Classical water pollution problems' like biological oxygen demand and turbidity are discussed. Also presented: aquifer structure and flow, ground water chemistry, pollutant partitioning between stationary and mobile phases, heterogeneous surface chemistry, and the detection of trace contaminants. Prerequisites: (CHEM 2270 or CHEM 2011) and CHEM 2453.

CHEM 3412 Environmental Chemistry & Toxicology (3 Credits)
A survey of environmental toxicology concepts: animal testing, dose-response data, epidemiology, risk assessment. The course includes ecotoxicology, focusing on the alteration of biological and chemical systems beyond the simple response of an individual to an environmental chemical. Prerequisites: (CHEM 2270 or CHEM 2011) and CHEM 2453.

CHEM 3610 Physical Chemistry I (3 Credits)
Fundamentals of thermodynamics, including phase and reaction equilibria, properties of solutions, and electrochemistry needed for advanced study in life sciences and for Physical Chemistry II and III. May be taken for graduate credit by nonchemistry majors. Prerequisites: CHEM 2453, calculus and physics.

CHEM 3620 Physical Chemistry II (3 Credits)
Fundamentals of quantum chemistry, including theories of atomic and molecular structure and spectroscopy. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3610.

CHEM 3621 Physical Chemistry III (3 Credits)
Fundamentals of kinetic theory and statistical mechanics. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3620.

CHEM 3703 Topics in Organic Chemistry (3 Credits)
May include organic photochemistry, organic synthesis, organic electrochemistry or natural products. May be repeated for credit. Prerequisites: CHEM 3110 or equivalent and others depending on topic.

CHEM 3705 Topics in Biochemistry (3,4 Credits)
May include physical techniques for exploring biological structure, biological catalysis, and selected fields within biochemistry taught from original literature. May be repeated for credit. Prerequisites: CHEM 3831 and 3813.

CHEM 3811 Biochemistry-Proteins (3 Credits)
Protein structure and function, starting with the building blocks and forces that drive the formation of protein structure and the basic concepts of protein structure, and continuing with enzyme catalysis, kinetics, and regulation. Prerequisites: CHEM 2453 or instructor permission.

CHEM 3812 Biochemistry-Membranes/Metabolism (3 Credits)
Membranes and membrane mediated cellular processes, energy and signal transduction, and metabolic/biosynthetic pathways. Prerequisite: CHEM 3811 or CHEM 3831.

CHEM 3813 Biochemistry-Nucleic Acids (3 Credits)
Molecular processes underlying heredity, gene expression and gene regulation in prokaryotes and eukaryotes. Prerequisites: CHEM 2453 and CHEM 3811.

CHEM 3831 Advanced Protein Biochemistry (3 Credits)
This course provides fundamental insights into the chemistry and physics of proteins. It investigates how amino acids form proteins with highly complex three-dimensional structures and how these structures mediate function. We examine key research articles and their contribution to our current understanding of proteins. Topics range from protein folding to enzyme kinetics and emphasize basic principles. Prerequisites: CHEM 2453 and instructor permission.

CHEM 3991 Independent Study (1-10 Credits)
May be repeated for credit.

CHEM 3992 Directed Study (1-10 Credits)

CHEM 3995 Research in Chemistry (1-10 Credits)
Research project conducted under guidance of a faculty member. Credit hours and projects arranged on an individual basis. May be repeated for credit.

CHEM 4400 Adv. Topics: Organic Chemistry (3 Credits)
Physical organic chemistry; reaction mechanisms, structure reactivity relationships, kinetics, photochemistry, molecular orbital theory, etc.; current literature. May be taken for credit more than once. Prerequisite: CHEM 3110.

CHEM 4900 Chemistry Seminar (1 Credit)
A weekly presentations of research in progress and of current literature by outside speakers. faculty and graduate students.

CHEM 4991 Independent Study (1-10 Credits)

CHEM 4992 Directed Study (1-10 Credits)

CHEM 4995 Independent Research (1-10 Credits)

CHEM 5991 Independent Study (1-10 Credits)

CHEM 5995 Independent Research (1-10 Credits)

Why study geography at the University of Denver?
Consider these advantages:

• Engaged and research-active faculty
• Small classes and personal attention
• State-of-the-art geospatial technology laboratories
• Strong and exciting field orientation
• Excellent location for applied research in physical and human geography

Situated at the foot of the Rocky Mountains in the dynamic city of Denver, the University of Denver is an ideal laboratory for physical and human geographers, as well as those studying human-environment interaction and geographic information science.

Since it was founded in 1945, the University of Denver’s department of geography has offered excellent opportunities for graduate students in teaching, research, academia, government and the private sector.

We have state-of-the-art facilities and resources:

• Fully networked labs with frequent upgrades in hardware, specialized equipment and software
• Four Geographic Information Science (GIS) labs which include most industry standard GIS software (All ESRI products, ERDAS Imagine, E-cognition, ENVI, Web Mapping and Geovisualization products)
• USDA-approved soil and sediment lab and the Hoyt Mineral Collection
• Multimedia teaching classrooms
• National and international field trips
• The Mount Evans field station (elevation 10,600 feet), is just 45 minutes from campus

Come visit our facilities, meet our faculty and students and see the advantages for yourself.

The Department of Geography and the Environment at the University of Denver offers programs leading to the MA in Geography, MS in Geographic Information Science (GISc) (on-campus and online programs) and PhD in Geography. Areas of teaching and research include biogeography, climatology, computer-assisted cartography, cultural geography, development, economic geography, environmental geology, geographic information science, geovisualization, geomorphology, global change, hydrology, land use/land cover analysis, Latin America, natural resources, paleoenvironmental change, political ecology, Quaternary studies, remote sensing, soils, spatial analysis, sustainability, transportation, and urban geography and planning. With 12 tenure-line faculty and five full-time teaching faculty, our faculty is very active in research, publishing numerous journal articles and presenting many conference papers every year. Our faculty members also are known for their excellence as instructors, with several faculty having earned major teaching awards.

Doctor of Philosophy in Geography

Degree and GPA Requirements

• Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 3.5 on a 4.0 scale.

Standardized Test Scores

• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.
English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 88
- Minimum TOEFL Score (Paper-based test): 570
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Arts in Geography
Degree and GPA Requirements
- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 3.0 on a 4.0 scale.

Standardized Test Scores
- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.
- This program has minimum GRE score requirements. The minimum overall score for the GRE is 300.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 88
- Minimum TOEFL Score (Paper-based test): 570
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 176

Master of Science in Geographic Information Science
Degree and GPA Requirements
- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 3.0 on a 4.0 scale.

Standardized Test Scores
- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.
- This program has minimum GRE score requirements. The minimum overall score for the GRE is 300.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:
• Minimum TOEFL Score (Internet-based test): 88
• Minimum TOEFL Score (Paper-based test): 570
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Science in Geographic Information Science (Online Program)

Degree and GPA Requirements

• Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 3.0 on a 4.0 scale.

Standardized Test Scores

• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842. Applicants who have completed at least 12 hours in the University’s GIS certificate program, with a GPA of 3.5 or better, could waive the GRE requirement or the undergraduate GPA requirement, but not both. Students who have completed the certificate program can automatically waive the GRE requirement.
• This program has minimum GRE score requirements. The minimum overall score for the GRE is 300.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:
• Minimum TOEFL Score (Internet-based test): 88
• Minimum TOEFL Score (Paper-based test): 570
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Doctor of Philosophy in Geography

Degree Requirements

Coursework Requirements

A minimum of 117 quarter hours of credit is required for the doctoral degree, up to 45 hours of which may be transferred from an earned master's degree from a regionally accredited university.

Geography courses

Complete at least 32 additional credits in geography courses (at least 3000 or higher level) directed toward the dissertation research

Cognate courses

Complete at least 12 additional credits in cognate coursework in a related field

Additional coursework

0-16
Complete 2 graduate seminar courses and 2 research tools to reach the number of minimum credits required for the degree

Transfer Credit

A maximum of 45 credits may be accepted as transferred in from a MA or MS program, including credits substituting core coursework requirements

Total Credits

Minimum number of credits required for the degree: 117 credits

Non-coursework requirements:

- Two Research Tools Requirement
- PhD Research Proposal Presentation
- Comprehensive Examination
- Dissertation
- Oral Defense

Two Research Tools Requirement

The options to meet the tool requirement include languages, geographic information systems, computer cartography, remote sensing and geographic statistics.

PhD Research Proposal Presentation

Each student is required to prepare and present a dissertation proposal and have it formally approved by the student’s faculty committee. This should be completed by the end of the second year for a full-time PhD student.

Comprehensive Exam

This exam, which includes both written and oral parts, is designed to evaluate the student's work at the University of Denver.

This exam is usually scheduled after all substantive course work has been completed and the dissertation proposal has been approved. It must be taken at least three quarters prior to expected graduation. Students should consult with their adviser and committee members to achieve a greater understanding of what will be on the exam. The written portion of the exam can be taken in one of two formats: a written examination conducted in the department usually taken over two days, lasting four hours each day, or a take-home examination in which the student has five days to complete the exam. An oral examination is held two weeks after the written exam has been completed. A candidate who fails one or all parts of the comprehensive exam may petition the department for re-examination. Re-examination, if granted by the department, may not be scheduled until the succeeding quarter and cannot be retaken more than once.

Dissertation and Oral Defense

Upon completion of course work, approved proposal, comprehensive exam and the dissertation, each student will undergo a final oral defense. An oral defense may not be scheduled until at least the second quarter following the quarter in which the comprehensive exam was successfully completed (the summer may count as a quarter, though no examinations should be scheduled during the summer). The final oral defense is to be conducted at least two weeks before the end of the quarter in which the degree is to be awarded. This defense is usually about two hours in length, and is composed of a 20–25 minute presentation by the student followed by questions from the committee. The examining committee is comprised of at least four members: an advisor and three other committee members. The advisor must be a full-time tenure-line faculty member in the Department of Geography & the Environment with a research record and interest appropriate to the student’s proposed research area of specialization. All members of the committee must be full-time appointed faculty at DU and have research records appropriate to the student’s area of specialization. Faculty from appropriately-related units who hold the terminal degree in their field may serve on the committee as long as the candidate’s graduate unit has the majority representation and a two-thirds majority of the committee hold the earned doctorate. There is also a non-voting Oral Defense Committee Chair who must be a tenured faculty member from another department at the University of Denver serving as the university representative for the final oral defense.

For doctoral programs, research areas are limited to the fields of biogeography, climatology, cultural geography, economic geography, geographic information science, geomorphology, global change, human environment interaction, Latin America, paleoenvironmental change, Quaternary studies, transportation geography and urban geography in accordance with current faculty expertise.

Master of Arts in Geography

Requirements for students with prior degrees in geography:

For the MA degree, 45 quarter hours of course work and a thesis are required. Students can specialize in subfields within physical geography, human geography or human-environment interaction (please see the Department of Geography and the Environment Graduate Student Handbook for detailed information).

Note: Students must take a minimum of 33 credits in GEOG courses

Minimum number of credits required for degree: 45 credits

Non-coursework requirements:
- Research proposal presentation
- Thesis
- Final Oral Defense

Research Proposal Presentation
Each student is required to prepare and present a thesis proposal and have it formally approved by the student's faculty committee.

Thesis Requirement
Original research of a geographic topic is required, the scope of which is determined by the thesis committee. The thesis should be of publishable quality.

Final Oral Defense
Upon completion of required course work, proposal approval and the thesis, each student will undergo a final oral defense. This defense is usually about two hours in length. The defense will address both course work and the thesis research. The final oral defense is to be conducted at least two weeks before the end of the quarter in which the degree is to be awarded. The oral defense committee is comprised of at least three members: an advisor and two other committee members. The advisor must be a full-time tenure-line faculty member in the Department of Geography & the Environment with a research record and interest appropriate to the student's proposed research area of specialization. All members of the committee must be full-time appointed faculty at DU and have research records appropriate to the student's area of specialization. DU faculty from appropriately-related units who hold the terminal degree in their field may serve on the committee as long as the candidate's graduate unit has the majority representation. There is also a non-voting Oral Defense Committee Chair who must be a tenure-line faculty member from another department at the University of Denver serving as the university representative for the final oral defense.

Note: At least 24 quarter hours must be completed in courses taken within the Department of Geography & the Environment at the University of Denver. No more than 24 credits will be accepted in transfer from the GIS certificate program.
Minimum number of credits required for degree: 48 credits

Non-coursework requirements:
- Capstone project
- Capstone project presentation

Capstone Project

Students will be required to produce a final project of professional quality demonstrating their ability to apply geographic information science to their chosen area of specialization. The project is done for, and with, a company, agency, nongovernmental organization or faculty member who is referred to as the client. The project must be used by the client and may be predominantly technical in nature or may include a research component. The project must demonstrate a mastery of one or more of the several geospatial technologies. It must require the student to engage in all facets of a project, from design to implementation. At the completion of the project, students will present their work to their peers.

Master of Science in Geographic Information Science (Online Program)

This option is designed for people wishing to complete the degree via an online format.

</tr>
</tbody>
</table>

Total Credits

Note: At least 24 credits counted towards the degree must be taken within the Department of Geography & the Environment at the University of Denver. No more than 24 credits will be accepted in transfer from the GIS certificate program. GIS 4101 Introduction to GIS, and GIS 4110 Geographic Statistics are not transferable to the online MS-GISc degree program.

Minimum number of credits required for degree: 48 credits

Non-coursework requirements:
- Capstone project

http://universitycollege.du.edu/gis/degree/certificate/geographic-information-systems-online/degreeid/31#courses
**Geography Courses**

**GEOG 3000 Advanced Geographic Statistics (4 Credits)**
The second in a sequence of two courses that address general statistical applications particular to geography, environmental science and other disciplines dealing with a spatial dimension in the data they work with. The focus of this second course is on the more advanced multivariate statistical techniques. The course has a strong applied orientation as particular attention is given to which technique is the most appropriate to use for a given type of problem and how to interpret and apply the resulting statistics. Extensive use is made of computer statistics packages. Homework exercises involving such statistical techniques as multiple correlation and regression analysis, principle components analysis, discriminate analysis and canonical correlation. Prerequisite: GEOG 2000.

**GEOG 3010 Geographic Information Analysis (4 Credits)**
Reviews many basic statistical methods and applies them to various spatial datasets. In addition, several spatial statistical methods are applied to spatial datasets. This course is an in-depth study of the interface between GIS, spatial data, and statistical analysis. Preferred prerequisite: GEOG 2000. Prerequisite: GEOG 2100.

**GEOG 3030 Advanced Field Methods (4 Credits)**
Various field methods used by researchers in physical geography; techniques include field mapping, laboratory analyses, geologic field methods. Prerequisite: GEOG 1201 or equivalent.

**GEOG 3040 GPS for Resource Mapping (4 Credits)**
This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Assurance issues for data collection programs. Hands-on lab exercises include navigation, mission planning for a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, differential correction, and data integration into a GIS and map production.

**GEOG 3100 Geospatial Data (4 Credits)**
This graduate-level course is designed to provide graduate students from a broad range of disciplines with the skills to carry out applied research projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems are also discussed. Cross listed with GEOG 2100.

**GEOG 3110 GIS Modeling (4 Credits)**
This course focuses on the concepts and procedures used in discovering and applying relationships within and among maps. It extends the mapping and geo-query capabilities of GIS to map analysis and construction of spatial models. The course establishes a comprehensive framework that addresses a wide range of applications from natural resources to retail marketing. Topics include the nature of spatial data introduction to spatial statistics and surface modeling in the first five weeks followed by spatial analysis operations and modeling techniques in the second five weeks. The lectures, discussions and independent exercises provide a foundation for creative application of GIS technology in spatial reasoning and decision making.

**GEOG 3130 Advanced Geographic Information Systems (4 Credits)**
This advanced course explores the more technical aspects of GIS functions and data structures. Students have hands-on access to both raster (grid-cell) and vector-based software packages in the form of lab exercises that culminate in a small student-designed GIS project. Prerequisite: GEOG 2100.

**GEOG 3140 GIS Database Design (4 Credits)**
Designing databases to provide a foundation for GIS functions and applications, including investigating techniques used for designing databases in non-spatial environments and learning the applicability to GIS problems. Building on concepts and techniques introduced in the first half to extend traditional techniques and methodologies to model the requirements of spatial problems. Students learn to translate the conceptual spatial model into a physical implementation specific to GIS products. Prerequisite: GEOG 2100 or GEOG 3100.

**GEOG 3150 GIS Project Management (4 Credits)**
This course provides graduate students seeking a career in GIS, or anyone managing a GIS project, with the knowledge, skill and abilities to take a GIS project or program past the design and implementation phase and into day-to-day operation. Students evaluate and analyze the role of GIS in an organization's overall information system strategy and communicate the importance of geography in an information system. Data sharing in the organization is examined to determine the benefits and costs of distributing data creation and maintenance activities throughout an organization. Finally, the role of GIS professionals and the skill sets required to manage GIS effectively are examined. Students review case studies of successful and not-so-successful GIS projects in North America. GIS management issues are addressed by a series of case studies focusing on various management aspects. Students are also expected to visit operational GIS programs in the metropolitan area and interview GIS managers. Students prepare case study evaluations for review in the classroom. Required for all MSGIS students because of the critical importance of GIS project management.
GEOG 3160 Web GIS (4 Credits)
With the development of internet technologies, the architecture of Geographic Information System (GIS) has evolved from the centralized desktop architecture to the distributed web architecture. Numerous web GIS applications are available (e.g., Google Map, Earth Explorer, and National Map). A web GIS application allows GIS analysts to access, manipulate, and visualize geospatial data from the web without the installation of GIS software. To facilitate the development of web GIS applications, geospatial technology vendors have provided application programming interfaces (APIs) through which GIS professionals can build customized web applications. This course focuses on the concepts and the development of web based GIS applications using industry-relevant geospatial APIs and core web technologies of HTML, CSS, and JavaScript. This is an upper-level undergraduate, to graduate-level course in GIS that introduces fundamental Web GIS concepts, applications and development kits. Concepts and techniques to be covered in this course include:

GEOG 3200 Remote Sensing (4 Credits)
This course acquaints students with the basic techniques of the collection, processing and interpretation of information about the character of the earth’s surface from remote locations. Students become familiar with the use of the visible, infrared, thermal and microwave portions of the electromagnetic spectrum as a means of determining land cover and/or land use. Both manual and computer-assisted techniques are discussed and include hands-on applications.

GEOG 3230 Advanced Remote Sensing (4 Credits)
This course will build on the basic remote sensing concepts presented in GEOG 3200. Students will explore more in-depth concepts relevant to satellite and airborne remote sensing, including radiative transfer and information extraction. In addition, students will be introduced to two cutting-edge sources of data about the Earth’s surface: hyperspectral and lidar (Light Detection and Ranging) sensors. Students will study specific applications of advanced digital image processing techniques for environmental monitoring, natural resource management, and land-use planning. Finally, students will integrate remote sensing and other spatial datasets in the context of Geographic Information System (GIS) analysis. Prerequisite: GEOG 3200.

GEOG 3300 Cultural Geography (4 Credits)
Themes and methods of cultural geography including cultural area, landscape, history and ecology.

GEOG 3310 Culture/Nature/Economics-Human Ecology (4 Credits)
Cultural adaptation, livelihood strategies and environmental modification among subsistence and peasant societies: responses of such groups to technological change and economic integration.

GEOG 3330 Political Geography (4 Credits)
GEOG 3340 Geographies of Migration (4 Credits)
This course examines politics and patterns of migration, transnational migration, and immigration to the United States.

GEOG 3350 Qualitative Methods in Geography (4 Credits)
This course focuses upon qualitative methods in the production of geographic knowledge. Qualitative methods are widely employed by geographers to understand patterns and underlying processes of human and human-environment issues in society. The course is designed to expose participants to the theories, purpose, scope, and procedures of qualitative research. Specific topics include: epistemological theories (ways of knowing); ethics and power in research; research design; data collection techniques in interviewing, participant observation and landscape interpretation, discourse and archive analysis, and case studies; data analysis; and writing and disseminating qualitative findings.

GEOG 3360 Web GIS (4 Credits)
Urbanization as a process; national urban systems; internal spatial structure of cities; role of transportation in urban development; location of residential, commercial and industrial activities; agglomeration economies; residential congregation and segregation; environmental justice; urban growth and growth coalitions; decentralization and urban sprawl; edge cities; impacts on the urban environment; world cities; globalization.

GEOG 3410 Urban Applications in GIS (4 Credits)
This course uses the tools of geographic information systems (GIS) to explore concepts of traditional urban geography, including defining cities/metropolis, internal urban structures, urban systems, industrial location, social and residential patterns, urban form, environmental problems, and urban planning. The course allows students to practice fundamental skills in GIS (e.g., working with attribute tables, spatial analysis, spatial queries) and cartography (map design, color theory, display of information). Depending on the quarter, students pursue individual projects of interest or client-based projects. Prerequisite: GEOG 2100 or GEOG 3100 or equivalent.

GEOG 3420 Urban and Regional Planning (4 Credits)
Historical evolution of planning theory and practices; comprehensive planning process; legal, political, economic, social, environmental aspects of urban planning; urban design; urban renewal and community development; transportation planning; economic development planning; growth management; environmental and energy planning; planning for metropolitan regions; national planning.
GEOG 3425 Urban Sustainability (4 Credits)
The 21st century is being called the 'century of the city.' Now more than ever, humans across the globe call the city their home. Many of the world's most pressing crises are manifest in cities, including: greenhouse gas emissions, land degradation, high mass production and consumption, widespread poverty and hunger, and expanding socio-economic disparities. As 'sustainability' becomes part of mainstream discourse, this course explores what sustainability means for urban contexts around the globe. Arguably, the city has the potential to be the most efficient, equitable, and environmental form of modern human settlement. Covering all dimensions of sustainability from a social science perspective, this course focuses on theoretical groundings, practices of urban sustainability, and new research agendas. Major topics include cities and nature; planning and land use; urban form; community and neighborhoods; transportation systems and accessibility; livelihood and urban economies; and social justice and the city.

GEOG 3440 Urban Transportation Planning (4 Credits)
A specialized course in the urban planning sequence focusing on issues, practices and policies of urban transportation planning. Recommended for anyone interested in timely transportation topics, such as the feasibility and impacts of light rail transit, the planning and implementation of highway projects, and the role of freight and passenger transportation companies in transportation planning.

GEOG 3445 Sustainability and Transportation (4 Credits)
Sustainable transportation aims at promoting better and healthier ways of meeting individual and community needs while reducing the social and environmental impacts of current mobility practices. Given the importance of transport for economic growth, the uncertainties surrounding the availability and price of future sources of energy for transport use, as well as the social and environmental externalities of currently-utilized transport modes, it is imperative that more sustainable ways of providing transportation be developed and utilized.

GEOG 3450 Transportation and Mobilities (4 Credits)
The geographical study of transport has grown considerably and become more diverse, encompassing new areas of inquiry generated from economic, urban, environmental, political, social, and cultural geography, as well as from transport geography itself. The most notable expansion has been in the area of 'mobilities' research, which is focused on the social aspects of mobility, including both the large-scale movements of people, objects, capital, and information across the world, as well as the more local processes of daily transportation, movement through public space and the travel of material things within everyday life.

GEOG 3460 Air Transportation & Tourism (4 Credits)
This course delves into the world of commercial air passenger transportation, studying the foundations of the industry, its role in the travel and tourism, and strategies for the future. Foundational topics include the history and geography of air transportation, air travel and tourism, the geography of tourism, airline corporate cultures, the role of government, aviation law, regulation, deregulation, and globalization. Study of the principal elements of airline economics, finance, planning, management, operations, pricing, promotion, cost containment, marketing, and policy provide the opportunity for consideration of strategic options within the contemporary airline industry. Further discussion focuses on the planning and management of airport and airway system infrastructure, the issue of sustainable air transportation, and the role of the airline industry within the context of intermodalism.

GEOG 3470 GIS & Environmental Health Geography (4 Credits)
This course is designed to acquaint students with the spatial distributions of populations and their relationships to environmental pollution sources and health outcomes. It utilizes real-life scenarios using population data from the U.S. census, EPA pollution data and various types of vital statistics data. The goal is to implement novel geographic techniques such as spatial analytical techniques and atmospheric modeling of pollutants to assess possible health risks and outcomes. This class requires basic GIS knowledge.

GEOG 3500 Reconstructing Quaternary Environments (4 Credits)
Nature, magnitude, sequence and causes of Pleistocene and Holocene climatic changes; effects of climatic change on plant/animal distributions and human populations; paleoclimatic research methods. Laboratory and field trips. Prerequisites: GEOG core, ENVI 3000.

GEOG 3510 Biogeography (4 Credits)
Biogeography focuses on present and past distributions of plants and animals. In this course we consider a number of themes central to biogeography, including plate tectonics and biogeography, the effects of climate change on plant and animal distributions, biogeographic realms, island biogeography, biodiversity, human impacts on plants and animals, and the origins of agriculture.

GEOG 3520 Geography of Soils (4 Credits)
Spatial variation in soil characteristics; soil processes, soil morphology, their application in soil studies. Prerequisite: GEOG 1201-1203 Environmental Systems or instructor's permission.

GEOG 3550 Topics in Physical Geography (1-5 Credits)
Investigations into various aspects of physical environment.

GEOG 3560 Fluvial Geomorphology (4 Credits)
Examines how water and sediment interact at Earth's surface to create a variety of landforms ranging from small rills to continental-scale river systems. Introduces fundamental fluvial processes or channel hydraulics and sediment transport. Examines common alluvial streams, bedrock streams, floodplains and alluvial fans. Combines traditional lectures and in-class discussions with numerous field excursions to rivers in the Rocky Mountains and Great Plains. Prerequisite: GEOG 1203, GEOG 1218, or GEOG 1266.

GEOG 3600 Meteorology (4 Credits)
The basic theory and skills of weather forecasting. Topics include thorough coverage of atmosphere dynamics and thermodynamics, the evolution of various weather types, the mechanics of storm systems (cyclones, severe storms, hurricanes), creation and interpretation of weather maps, and forecasting techniques.
GEOG 3610 Climatology (4 Credits)
Climatology is the study of the processes that result in spatial and temporal variation of weather. This course introduces the student to the processes responsible for the transfer of matter and energy between the Earth’s surface and the atmosphere and the average weather conditions that result. In addition, topics of global concern, such as greenhouse effect, El Nino, urban heat islands and acid rain, are discussed. Laboratory exercises provide an opportunity to investigate climate variation and climatic change through the use of a variety of computer simulations.

GEOG 3620 Applied Climatology (4 Credits)
Climatic impact on environmental systems and human behavior; techniques to investigate climatic characteristics of environmental extremes (floods, blizzards), urban climatology and socioeconomic impacts of climate. Prerequisite: GEOG 1201. Recommended Prerequisite: GEOG 3600 or GEOG 3610.

GEOG 3630 Dendroclimatology (2-4 Credits)
Systematic variations in tree ring width and/or density can be used to reconstruct changes in precipitation or temperature well before humans were around to record the variability. This class utilizes hands on methods to introduce the fundamental principles of dendroclimatology. Through readings and lectures, students will learn how tree ring growth can be correlated to climate change. Students will then undertake several research projects to reconstruct past climate variability in the Denver metro area using tree rings. Prerequisite: permission of instructor.

GEOG 3640 Climate Change and Society (4 Credits)
The science of anthropogenic climate change will be presented with an emphasis on critical evaluation of the evidence of climate change and future scenarios and migration strategies. Students will be introduced to the latest climate change research, including the Intergovernmental Panel on Climate Change report, and the most recent literature from the field. The societal and cultural implications of climate change will also be discussed. Prerequisites: GEOG 1201, GEOG 1216, or GEOG 1264.

GEOG 3700 Environment & Development (4 Credits)
Course examines interrelated nature of environmental and development issues in the Third World; addresses the place of environment in development theory and practice and the political ecology of Third World environmental problems and sustainable development approaches.

GEOG 3701 Topics in Geographic Information Science (1-4 Credits)
Topics vary by instructor.

GEOG 3710 Environmental Change in the Eastern Mediterranean (2 Credits)
We tend to associate environmental problems with modern societies and high technology. However, humans have had impacts on the environment, and have had to cope with challenges brought by the environment, throughout their history. Western cultures are intimately linked to the eastern Mediterranean, where some of the earliest centralized governments arose, agriculture developed, and humans first began living in permanent settlements, so the region has a long history of human-environment interaction. This class focuses on historical, archaeological, and paleoenvironmental records from the region to investigate the impacts of human activities, including deforestation, intensive agriculture, and urban development, on the environment, and the ways in which societies in the region responded to natural environmental perturbations, including drought, earthquakes, and volcanic eruptions.

GEOG 3720 Mountain Environments and Sustainability (4 Credits)
Mountain Environments and Sustainability explores the unique physical and cultural aspects of high relief and/or high altitude environments. Covering one quarter of the Earth's land surface, mountains directly or indirectly impact the lives of millions of people. We examine the significance of mountains to climate, water resources, and human activities, and discuss the sustainability of these environments and communities in light of rapid changes in many mountain regions resulting from anthropogenic factors and global change. GEOG 1201, 1202, and 1203 or instructor approval.

GEOG 3730 International Environmental Policy (4 Credits)
This course acquaints students with the global perspective on current problems of environmental protection and resource use. Population growth, food production, industrialization, technology and cultural change are considered, with heavy emphasis on the social dynamics of environmental problems. A variety of political views are studied, and an attempt is made to develop a perspective useful to students in personal and political decisions.

GEOG 3740 Environmental Justice in the City (4 Credits)
This course is designed to acquaint students with environmental justice in the urban environment. This class focuses on the City of Denver as a laboratory to explore the disproportionate impacts of social justice issues, particularly urban pollution, healthy food sources, gentrification, light rail, and employment opportunities, on neighborhoods and communities. A variety of views are studied, and an attempt is made to develop a perspective useful to students to explain urban social justice conditions.

GEOG 3750 Topics in Human-Environment Interactions (1-4 Credits)
This course investigates various aspects of the relationships between human societies and the natural environment.

GEOG 3755 Geography of Health (4 Credits)
The geography of health is a thriving area of study that considers the impact of natural, built, and social environments on human health. This course introduces students to three geographical contributions to health studies. First, it emphasizes the importance of ecological approaches to health, which consider interactions between humans and their environments, including topics such as how climate change might influence disease distributions, and how the built environment can influence patterns of physical activity. A second focus is social theory, exploring how aspects such as race, socioeconomic status, and identity play a critical role in influencing human health. A third section of the course considers how spatial methods (cartography, GIS, and spacial statistics) can help answer health-related questions.
GEOG 3760 Health & Environment, England (4 Credits)
This field course meets in England, visiting several sites in the Midlands. It focuses on ecological approaches to health, which emphasize the relationship between humans and their environment as a critical influence on the health status of populations. This environmental influence may come from the natural, built, or social environment. The course will use a case study approach to emphasize i) the importance of the natural, built, and social environment to human health, and ii) how the relationship between humans and their environments and its sustainability has changed over time. We will explore eight different time periods, asking in each case how people’s relationships with their natural, built, and social environments have influenced health at the population scale, and how these influences can inform sustainable health and environment in the future.

GEOG 3800 Geography of Colorado (4 Credits)
This course focuses on the physical and human geography of Colorado, a state that includes the western Great Plains, the southern Rocky Mountains, and the eastern Colorado Plateau. Colorado’s varied natural landscapes provide equally varied settings for human settlement and resource use. Recommended Prerequisites: GEOG 1201, GEOG 1202, and GEOG 1203.

GEOG 3830 Natural Resource Analysis & Planning (4 Credits)
Natural resources provide the basis for all human agricultural and industrial activities. This course discusses our resource distribution, conservation, management and sustainable use.

GEOG 3840 Water Resource Analysis (4 Credits)
The focus of this course is on complex policy, economic and local, national and international, and political issues surrounding resource use in the western U.S. Issues include exploitation of nonrenewable and renewable energy and mineral resources; and flexible responses to changing public policy.

GEOG 3850 International Comparison of Economic and Social, Positive and Negative Aspects of Urban Systems (4 Credits)
An advanced course that examines how Earth’s landforms are created by a range of physical processes. Most landforms can be viewed as a result of some combination of erosion, transport and deposition of rock, soil and sediment. The most common agents causing these geomorphic processes are water, wind, ice and waves. This course examines the processes responsible for eroding, transporting and depositing earth materials and compares these processes with the resulting landforms. Prerequisites: GEOG 1202 or GEOG 1217 or instructor’s permission.

GEOG 3910 Geomorphology (4 Credits)
An advanced course that examines how Earth’s landforms are created by a range of physical processes. Most landforms can be viewed as a result of some combination of erosion, transport and deposition of rock, soil and sediment. The most common agents causing these geomorphic processes are water, wind, ice and waves. This course examines the processes responsible for eroding, transporting and depositing earth materials and compares these processes with the resulting landforms. Prerequisites: GEOG 1202 or GEOG 1217 or instructor’s permission.

GEOG 3920 Remote Sensing Seminar (4 Credits)
Special topics in advanced remote sensing.

GEOG 3930 Cultural Geography Seminar (4 Credits)
Topics, methods and current research in cultural geography.

GEOG 3940 Urban Geography Seminar (4 Credits)
International comparison of economic and social, positive and negative aspects of urban systems.
GEOG 3950 Physical Geography Seminar (2-4 Credits)
GEOG 3955 Pollen Analysis Seminar (3 Credits)
Pollen grains preserved in sediment provide long-term records of vegetation conditions. Changing proportions of pollen types may reflect climatic fluctuation or human impacts. We review important recent research in pollen analysis (palynology), pollen sampling, laboratory techniques and pollen identification. Students are responsible for counting a number of samples and contributing data for a pollen diagram.

GEOG 3990 Undergraduate Research Seminar (1 Credit)
This course is designed to prepare students who will participate in faculty-supervised summer research projects. Students are introduced to research design, use of the scientific method, research expectations and reporting of results. Preparation of formal research proposal with adviser.

GEOG 3991 Independent Study (1-5 Credits)
GEOG 3992 Directed Study (1-10 Credits)
GEOG 3995 Independent Research (1-5 Credits)

GEOG 4000 Fundamental Geographic Perspectives (4 Credits)
A foundation course for persons in the community, without a degree in geography, who want to pursue an education in or make use of computer-based geographic technology but who need a foundation in geographic concepts and perspectives.

GEOG 4020 Geographic Research Methodology (4 Credits)
This class prepares students to undertake creative geographic research leading to the generation of new knowledge. Students produce a NSF proposal by the end of the class. In class, students focus on methods rather than philosophy. This does not mean students go through a laundry list of the many methods employed by geographers (they can do this on their own). Students, however, focus on the methods that are appropriate for their research questions and, at the same time, maintain a healthy awareness and respect for methods employed by geographers in other fields. The class does not focus on the philosophy of the discipline or a particular field. However, these concerns should be apparent in your proposals. Indeed, various philosophical frameworks guide research questions and how students choose to answer those questions.

GEOG 4030 Advanced Field Research (1-5 Credits)
GEOG 4040 Research Topic Identification (0-5 Credits)

GEOG 4100 Application/Design/ProductionI (4 Credits)
First of a two quarter sequence designed to be a culminating educational experience. Primarily lab-based with some lecture material, the various application requirements and guidance on how to go about accomplishing Application Design and Production tasks is provided. Prerequisites: GEOG 2000, GEOG 2100, GEOG 3100 or equivalent.

GEOG 4105 Application/Design/ProductionII (4 Credits)
This course places emphasis on programming and producing technical reports and/or papers that will be published in the Geography Department's on-line applications library. Prerequisite: GEOG 4100.

GEOG 4110 Geospatial Data (4 Credits)
This graduate-level course is designed to provide graduate students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems are also discussed.

GEOG 4400 Urban Landscapes (4 Credits)
Urbanization as a process; national urban systems; internal spatial structure of cities; role of transportation in urban development; location of residential, commercial and industrial activities; agglomeration economies; residential congregation and segregation; environmental justice; urban growth and growth coalitions; decentralization and urban sprawl; edge cities; impacts on the urban environment; world cities; globalization.

GEOG 4410 Economic Geography (4 Credits)
The study of the location and spatial organization of economic activities at the local, national, and global scales. Concerned with the spatial configuration of firms, networks, industries, and regions within the emerging global economy. Cross listed with INTS 4410.

GEOG 4460 Air Transportation & Tourism (4 Credits)
This course will be cross listed with GEOG 3460 Air Transportation & Tourism.

GEOG 4584 Geographic Information Systems for Humanitarian Assistance (4 Credits)
This class prepares students for future employment and enables them to bring more wisdom and expertise to the practice of their professions. Geographic Information Systems (GIS) technology is critical to support decision making throughout the process of response, assistance, and development – key stages in any humanitarian action. Much of the information practitioner’s encounter is spatial in nature and GIS provides a toolbox from which to better understand and utilize this type of information. This class introduces students to GIS technology functionality and information management, and examines GIS’ usefulness in humanitarian response. Today, GIS is an essential technology for emergent managers which support decision making on various levels during preparedness, mitigation, response and recovery. One of the main reasons for that is that much of the information is spatial by nature. Additionally, geospatial and geospatial-temporal analysis of data allows us to quickly access and display relevant information through the creation of maps and reports. This course introduces students to the theoretical principles of geographic information systems and examines its potential for humanitarian assistance through case studies and hands-on training with GIS software. Prerequisite: INTS 4056.
GEOG 4701 Topics in Geography (4 Credits)
Topics vary by instructor.

GEOG 4810 Geography of Latin America (4 Credits)
In this course, we examine how past and present cultural preferences and political economies affect changes in Latin American landscapes. Cross listed with GEOG 2810.

GEOG 4825 Geographies of International Development in Africa (4 Credits)
What are the historical roots of (under)development in sub-Saharan Africa? How is sub-Saharan Africa typically depicted in the media? How can we explain the fact that the Niger Delta provides the bulk of Nigeria’s revenue, and yet, it remains the poorest part of the country? Is climate change the major cause of persistent food insecurity in the drylands of Ethiopia and Burkina Faso? How can we make sense of the uneven geography of poverty in Ghana? What explains urban food insecurity in Cape Town, or land struggles in rural South Africa? What are the social processes underlying the spatial disparity in health status in Malawi, or gender differences in HIV rates in Nyanza province, Kenya? And why do land users often resist state conservation efforts in Tanzania? These are some of the critical questions explored in this course. The primary aim is to provide a critical introduction to the geography of sub-Saharan Africa. We will begin by exploring how “the Africa story” is told by the media, scholars and policymakers. Attention will then shift to understanding the key historical processes that shape (under)development in the region. We will cover a broad range of topics, including governance, colonial history, debt and structural adjustment, foreign aid, food and agriculture, gender, climate change, land grabbing, health, poverty growth, migration, remittances, and resource extraction. We cannot possibly cover all these topics in greater detail; indeed, some are too vast and complex. We will however use specific case studies to illustrate and discuss each of the topics.

GEOG 4880 Geographies of South Africa (4 Credits)
This travel course is designed to give students a first-hand look at the physical and cultural landscapes of South Africa. We will study the varied natural landscapes that produce the commodities (e.g., gold, diamonds, wine, and agriculture) that have attracted the interest of outsiders for centuries and that have influenced the cultural landscapes particular to South Africa. A systematic presentation of the geology of South Africa, and its human history, will unfold throughout our travels.

GEOG 4900 Graduate Colloquium in Geog (0 Credits)
Solid foundation in history and philosophy of the discipline of geography; basis for further exploration of major research specialization.

GEOG 4930 Nicaragua: Development Dilemmas (4 Credits)
This class takes students to post-revolutionary Nicaragua to examine the consequences of recent land grabs by foreigners and transnational companies. Students learn to operate in a country with minimal "western" infrastructure. They learn to examine developing landscapes (that is, resorts and tourism infrastructure) with new eyes and from the perspective of locals who have been left out of the development loop. By the end of the class, students begin to understand the "development game", begin to question the role of tourism in developing economies, begin to know how to interact with other cultures, and finally learn to question the landscapes we "see" and begin to peel back the layers to understand the social and physical evolution of the landscape before their eyes. This class takes an experiential approach and requires students to participate in a service learning experience. Service learning is defined as a course-based, credit bearing educational experience in which faculty, students, and community members participate in an organized service activity that addresses a self-identified community need. We work with several community-based and non-governmental organizations to ensure a good fit between community needs and student expertise.

GEOG 4950 Advanced Field Research (1-17 Credits)

GEOG 4991 Independent Study (1-5 Credits)

GEOG 4992 Directed Study (1-10 Credits)

GEOG 4993 Capstone or Project (1-4 Credits)
Includes technical design and development for MA geotechnical track project and MS-GIS capstone project.

GEOG 4994 Report (1-5 Credits)

GEOG 4995 Independent Research (1-5 Credits)
Includes field research for doctoral dissertation.

GEOG 4999 Geographic Internship (0-5 Credits)
Supervised internship in a government office at local, state or federal level or within private sector. Prerequisite: Permission of instructor.

GEOG 5991 Independent Study (1-5 Credits)

GEOG 5992 Directed Study (1-5 Credits)

GEOG 5995 Independent Research (1-10 Credits)

Geology Courses

GEOL 3010 Process Geomorphology (4 Credits)
The land surface of Earth is continuously altered by geomorphic processes. This class focuses upon the nature of these processes, the work that they perform and the resulting landforms. In addition, the student becomes familiar with various methods of geomorphic analysis through the laboratory component of the class. Cross listed with GEOG 3910. Prerequisite: GEOL 1010, GEOG 1202 or permission of instructor.
**GEOL 3100 Environmental Geology (4 Credits)**
Environmental geology examines geologic hazards, both natural and those attributable to human impacts on the environment from urban and regional development. Specific topics may include disposal of municipal solid waste and radioactive waste; flood, earthquake, volcanic hazards; groundwater pollution and withdrawal; mass-wasting phenomena; and energy-related issues. Prerequisite: GEOL 1010, GEOG 1203 or instructor’s permission.

**GEOL 3200 Sedimentology/Stratigraphy (4 Credits)**
This course reviews the origin, geologic history, and depositional environments of sediments and sedimentary rocks. Course work concentrates on the identification of sedimentary rocks and depositional environments by first-hand observations of rocks in the Denver area. Prerequisite: GEOL 1010, GEOG 1203 or instructor’s permission.

**GEOL 3300 Petroleum Geology (4 Credits)**
This class examines the geological occurrences of petroleum including the origin, migration, and accumulation of oil and natural gas. This class differs from traditional petroleum geology classes by offering an examination of the economics and politics underlying the oil and gas industry and by considering alternatives to traditional hydrocarbon resources. Prerequisite: GEOL 1010, GEOG 1203 or instructor’s permission.

**GEOL 3520 Erosion Process & Measurement (4 Credits)**
Soil erosion is arguably the most serious environmental problem worldwide. This course focuses upon the significance of this problem, the factors affecting erosion rates, the nature of the processes themselves, methods of measurement, estimation of erosion rates and erosion control practices. Prerequisites: GEOG 1203, GEOG 1218, or GEOG 1266.

**GEOL 3540 Hydrology (4 Credits)**
This course provides an overview of the hydrologic cycle with emphasis placed on the study of applied hydrology. Discussions include the fundamental characteristics of precipitation, runoff processes, calculation of flood hazards, aquifers (porosity and permeability), the geologic settings of groundwater, the basic physics of groundwater flow, and water supply and use. Prerequisite: GEOL 1010, GEOG 1203 or instructor’s permission. Recommended prerequisite: one introductory statistics course.

**GEOL 3900 Geomorphology Seminar (1-5 Credits)**
Hill slopes comprise the vast majority of the Earth’s land surface. It is upon these surfaces that nearly all of the human population must exist and, hopefully, flourish. Hill slopes assume various forms, and their shape influences their utility for various human endeavors. Numerous geomorphic processes operate upon hill slopes to determine their form, and human activities strongly influence the frequency and magnitude of these geomorphic processes. Consequently, hill slopes are an interface between the Earth and the human population. Prerequisite: GEOL 3010 or permission of instructor.

**GEOL 3991 Independent Study (1-5 Credits)**

The Department of Mathematics at the University of Denver offers MA, MS and PhD degrees in mathematics. Our graduate programs enroll about 30 students and provide a personalized, congenial and rewarding educational atmosphere where you will interact with faculty from the start. We have an extraordinarily active faculty of accomplished teachers and researchers with expertise in algebraic logic, computational geometry, dynamical systems, functional analysis, nonassociative mathematics, ordered structures, probabilistic combinatorics, quantum structures, and set theory.

The MS and MA degrees prepare students for careers in which mathematics plays a central role. The PhD is a research degree that prepares students to advance the frontiers of knowledge within a specific area of mathematics.

Our graduates are highly sought, not only for their knowledge of mathematics, but also for their ability to solve problems, to think abstractly, to see the big picture, and to articulate their ideas with clarity and precision. Our graduates have been successful in a remarkably diverse collection of careers, including industry, business, education and academia.

---

**Doctor of Philosophy in Mathematics**

**Degree and GPA Requirements**

- **Bachelors degree:** All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- **Grade point average:** The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the
baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

**Standardized Test Scores**

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

**English Language Proficiency Test Score Requirements**

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

**Master of Arts in Mathematics**

**Degree and GPA Requirements**

Standardized Test Scores
• The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

• Minimum TOEFL Score (Internet-based test): 80
• Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Doctor of Philosophy in Mathematics
This degree requires completion of at least 135 graduate-level credits beyond the BA or BS degree; passing of preliminary examinations; completion of a tool requirement; and completion of a written dissertation.

Although a master's degree is not a prerequisite for acceptance into the PhD program, each student is required to obtain a master's degree in mathematics before completing 80 credits in the PhD program.

Degree Requirements
Course Requirements
Students are required to pass both of the sequences MATH 3161, MATH 4165, MATH 4110 and MATH 3170, MATH 4166, MATH 4176 in their first year. Based on performance in preliminary examinations or other considerations, students may be allowed to replace some courses in a sequence by other offerings.

Every student’s course of study must be approved in consultation with a designated departmental advisor.

Minimum credits required for degree: 135

Non-coursework Requirements
• Preliminary Examinations

Every student admitted to the PhD program is expected to pass a written preliminary examination in analysis and a written preliminary examination in algebra. Both preliminary examinations are designed to test whether students in the PhD program have the adequate undergraduate preparation to continue in the program with a reasonable chance of success.

Both examinations are offered twice per year: during the week immediately preceding the first week of the fall quarter, and during the first week of the winter quarter. A student must pass both exams by no later than the end of the winter quarter of his/her second year in the program unless the graduate committee grants an extension of this deadline for exceptional and documented reasons.

• Tool Requirement

It is strongly recommended that students satisfy their tool requirement by demonstrating the ability to use a modern computer typesetting system. Other options include: reading competency in two languages selected from French, German and Russian; a series of outside courses in another discipline; a significant laboratory experience involving mathematics.

• Dissertation and Oral Defense

The dissertation must make a significant contribution to the research literature in mathematics.

After the dissertation has been completed, the student must defend it in a final examination, as specified by the Office of Graduate Education.

Minimum credits required for degree: 45

This degree requires completion of 45 credits of graduate-level MATH courses, including at least 12 credits of approved MATH courses at the 4000 level. Students are required to pass at least one of the sequences MATH 3161, MATH 4165, MATH 4110 or MATH 3170, MATH 4166, MATH 4176.

Up to 15 credits may be in an approved cognate area. At most 10 credits from another university may count toward the degree, and such credits must be approved in writing by an advisor from the Mathematics faculty.

Non-coursework Requirements

- Students are required to give an oral presentation in mathematics. This will typically occur after the completion of at least 24 credits of coursework, and should be scheduled after approval from a Mathematics faculty advisor.

No thesis is required.

Master of Science in Mathematics

Degree Requirements

Coursework Requirements
Every student’s course of study must be approved in consultation with a designated departmental advisor.

Minimum credits required for degree: 45

This degree requires completion of 45 credits of graduate-level MATH courses, including at least 12 credits of approved MATH courses at the 4000 level. Students are required to pass both of the sequences MATH 3161, MATH 4165, MATH 4110 and MATH 3170, MATH 4166, MATH 4176.

Up to 15 credits may be in an approved cognate area. At most 10 credits from another university may count toward the degree, and such credits must be approved in writing by an advisor from the Mathematics faculty.

Non-coursework Requirements

- Tool requirement- Demonstrated competency in a tool is required and may be chosen from among the following: proficiency in the use of a modern computing typesetting system; approved outside courses; laboratory experience; or reading competency in French, German or Russian.

- Students are required to give an oral presentation in mathematics. This will typically occur after the completion of at least 24 credits of coursework, and should be scheduled after approval from a Mathematics faculty advisor.

No thesis is required.

Courses

MATH 3000 The Real World Seminar (1 Credit)
Lectures by alumni and others on surviving culture shock when leaving the University and entering the job world. Open to all students regardless of major. Cross listed with COMP 3000.

MATH 3040 Lattices and Order (4 Credits)
Ordered sets, lattices as relational and as algebraic structures, ideals and filters, complete lattices, distributive and modular lattices, Boolean algebras, duality for finite distributive lattices. Prerequisite: MATH 2200.

MATH 3050 Set Theory (4 Credits)
Zermelo-Fraenkel axioms, axiom of choice, Zorn's Lemma, ordinals, cardinals, cardinal arithmetic. Prerequisite: MATH 2200.
MATH 3060 Mathematical Logic (4 Credits)
Classical propositional calculus (deductive systems and truth-table semantics), first-order logic (axiomatization and completeness), elements of recursion theory, introduction to nonclassical logics. Prerequisite: MATH 2200.

MATH 3090 Mathematical Probability (4 Credits)
Limit theorems for independent random variables, multivariate distributions, generating functions. Prerequisites: MATH 2080 and MATH 3080.

MATH 3151 Advanced Linear Algebra (4 Credits)
Vector spaces, linear mappings, matrices, inner product spaces, eigenvalues and eigenvectors. Prerequisite: MATH 2060 and MATH 2200.

MATH 3161 Introduction to Real Analysis (4 Credits)
A theoretical introduction to the structure of real numbers, to convergence of sequences and series, and to the topology of the real line, including limits and continuity. Prerequisites: MATH 2080 and MATH 2200.

MATH 3162 Introduction to Real Analysis II (4 Credits)
A rigorous introduction to the analysis of functions of a real variable, including differentiation, Riemann integration, and the notions of pointwise and uniform convergence for sequences of functions. Prerequisite: MATH 3161.

MATH 3166 Group Theory (4 Credits)
Groups and homomorphisms, isomorphism theorems, symmetric groups and G-sets, the Sylow theorems, normal series, fundamental theorem of finitely generated abelian groups. Cross listed with MATH 4166. Prerequisite: MATH 3170.

MATH 3170 Introduction to Abstract Algebra (4 Credits)
Examples of groups, permutations, subgroups, cosets, Lagrange theorem, normal subgroups, factor groups, homomorphisms, isomorphisms, rings, integral domains, quaternions, rings of polynomials, Euclid algorithm, ideals, factor rings, maximal ideals, principal ideals, fields, construction of finite fields. Prerequisite: MATH 2060 and MATH 2200.

MATH 3260 Metric Spaces (4 Credits)
Metric spaces and continuous functions; completeness and compactness; examples including norm spaces; pointwise and uniform convergence; Baire Category Theorem. Cross listed with MATH 4260. Prerequisite: MATH 3161 or equivalent.

MATH 3311 Linear Programming (4 Credits)
Linear optimization models, simplex algorithm, sensitivity analysis and duality, network models, dynamic programming, applications to physical, social and management sciences. Prerequisite: MATH 2060.

MATH 3312 Markov Chains (4 Credits)
Discrete-time and continuous Markov Chains, ergodic theorems, random processes, elementary queueing theory, applications. Prerequisite: MATH 2060 and MATH 3080.

MATH 3340 Introduction to Geometry (4 Credits)
Specific geometrical systems including finite, Euclidean, non-Euclidean and projective geometries. Prerequisite: MATH 2200.

MATH 3451 Chaos, Dynamics & Fractals (4 Credits)
Introduction to one-dimensional dynamical systems, fractals; fixed and periodic points; sources and sinks; period doubling and tangent node bifurcations; chaotic dynamical systems; Sarkovskii’s Theorem. Prerequisite: MATH 3161.

MATH 3550 Introduction to Theory of Numbers (4 Credits)
Concepts of nonanalytic number theory and its history; prime numbers, divisibility, continued fractions, modular arithmetic, Diophantine equations and unsolved conjectures. Prerequisites: MATH 2200.

MATH 3651 Ordinary Differential Equations (4 Credits)
Modeling of phenomena by ordinary differential equations; techniques of analysis and solution of such equations; oscillation theory and boundary value problems, power series methods, special functions, Laplace transforms and difference equations. Prerequisites: MATH 2060 and MATH 2070.

MATH 3661 Partial Differential Equations (4 Credits)
First and second order linear equations, Fourier series, the wave equation, the Cauchy problem, the heat equation, maximum principles, Laplace’s equation, Green’s functions. Prerequisites: MATH 2070 and MATH 2080.

MATH 3701 Combinatorics (4 Credits)
The principle of inclusion and exclusion, elementary counting techniques, systems of distinct representatives, partitions, recursion and generating functions, Latin squares, designs and projective planes. Prerequisite: MATH 2200.

MATH 3705 Topics in Mathematics (4 Credits)
Varying selected advanced topics in mathematics, depending on student demand and instructor interest.

MATH 3710 Graph Theory (4 Credits)
Paths, cycles, trees, Euler tours and Hamilton cycles, bipartite graphs, matchings, basic connectivity theorems, planar graphs, Kuratowski’s theorem, chromatic number, n-color theorems, introduction to Ramsey theory. Prerequisite: MATH 2200.

MATH 3720 Coding Theory (4 Credits)
Goals of coding theory and information theory, instantaneous and Huffman codes, Shannon theorems, block and linear codes, generating and parity-check matrices, Hamming codes, perfect codes, binary Golay code, Reed-Muller codes, cyclic codes, BCH codes, Reed-Solomon codes, ideas of convolutional and turbo codes. Prerequisite: MATH 3170.
MATH 3851 Functions Complex Variable (4 Credits)
Complex numbers, analytic functions, complex integration, series expansions, residue theory, conformal maps, advanced topics and applications. Prerequisites: MATH 2060 and MATH 2080 and MATH 2200.

MATH 3900 Mathematics Internship (0-1 Credits)
Graduate students in mathematics may receive elective credit for mathematically related work performed for employers with the approval of the department. At the end of the term, a student report on the work is required, and a recommendation will be required from the employer before a grade is assigned.

MATH 3991 Independent Study (1-10 Credits)
Cannot be arranged for any course that appears in regular course schedule for that particular year.

MATH 3992 Directed Study (1-10 Credits)

MATH 4050 Combinatorial Set Theory (4 Credits)
Beginning with a quick review of ZFC, the standard axioms of set theory, the course covers advanced ordinal and cardinal arithmetic and infinitary combinatorics, including Ramsey theory. Additional axioms such as the Continuum Hypothesis, Martin's Axiom, and combinatorial principles such as Diamond and their consequences for mathematics are studied. Prerequisite: MATH 3050.

MATH 4060 Descriptive Set Theory (4 Credits)
Descriptive Set Theory is one of the main branches of modern set theory. Set theory provides techniques for the precise study of real analysis. This course covers trees as tools for analyzing sets of real numbers, Polish spaces, the Borel hierarchy, Baire-measurability, extensions of continuous functions, separation theorems, and more. Prerequisite: MATH 3050.

MATH 4070 Proof Theory (4 Credits)
Hilbert-style systems, Natural deduction, (simply typed) lambda calculus, combinatory logic, the Curry-Howard correspondence, normalization, cartesian closed categories, Sequent calculi, cut elimination and applications, structural rules; logical systems: classical, intuitionistic, relevance, linear, algebraic semantics. Recommended prerequisite: MATH 2200.

MATH 4080 Algebraic Logic (4 Credits)
Elements of universal algebra, lattice theory and first-order logic; elements of abstract algebraic logic (deductive systems, algebraization, deduction filters, deduction theorems, matrix semantics); sequent calculi for substructural logics, residuated lattices, structure theory for congruences and deductive filters; subvariety lattices (atomic varieties, axiomatizations of joins, translations); algebraic cut elimination; (un)decidability and finite model property. Prerequisites: MATH 3170 and either MATH 3040 or MATH 3060.

MATH 4110 Topology (4 Credits)
Point set topology including topological spaces, connectedness, compactness and separate axioms; preparation for advanced courses in analysis. Prerequisite: MATH 3161. Cross listed with MATH 3110.

MATH 4120 Algebraic Topology (4 Credits)
Fundamental groups, simplicial homology, Euler characteristic classification of surfaces, manifolds. Prerequisites: MATH 3170 and MATH 3110/4110.

MATH 4162 Rings and Modules (4 Credits)
Ideals, left and right R-modules, simple modules, totally decomposable modules, Wedderburn-Artin theorems, Artinian and Noetherian rings and modules, Hopkins theorem, Hilbert basis theorem, free modules, projective and injective modules, Kaplanski theorem. Prerequisites: MATH 3176 or MATH 4176.

MATH 4163 Universal Algebra (4 Credits)
Universal algebras, congruences, lattices, distributive lattices, modular lattices, Boolean algebras, subdirectly irreducible algebras, Maľcev theorems, varieties, Birkhoff theorem. Prerequisites: MATH 3170 and either MATH 3040 or MATH 3060.

MATH 4164 Galois Theory (4 Credits)
The fundamental theorem of algebra, field extensions, ruler and compass constructions, normal and separable extensions, field automorphisms, Galois correspondence, solvability and simplicity, calculating Galois groups. Prerequisite: MATH 3176/MATH 4176 and MATH 3166/MATH 4166.

MATH 4165 Introduction to Real Analysis II (4 Credits)
A rigorous introduction to the analysis of functions of a real variable, including differentiation, Riemann integration, and the notions of pointwise and uniform convergence for sequences of functions. Prerequisites: MATH 3161.

MATH 4166 Group Theory (4 Credits)
Groups and homomorphisms, isomorphism theorems, symmetric groups and G-sets, the Sylow theorems, normal series, fundamental theorem of finitely generated abelian groups. Cross listed with MATH 3166. Prerequisite: MATH 3160.

MATH 4168 Lie Groups and Lie Algebras (4 Credits)
Lie groups and Lie algebras, fundamental theorems of Lie, general structure theory; compact, nilpotent, solvable, semisimple Lie groups; classification of semisimple Lie algebras; representation theory of compact and semisimple Lie algebras and Lie groups. Additional topics as time permits: universal enveloping algebras, symmetric spaces. Prerequisites: MATH 3161 and MATH 3170.

MATH 4176 Rings and Fields (4 Credits)
Rings, domains, fields; ideals, quotient rings, polynomials; PIDs, UFDs, Euclidean domains; maximal and prime ideals, chain conditions; extensions of fields, splitting fields, algebraic and transcendental extensions; brief introduction to Galois theory. Cross listed with MATH 3176. Prerequisite: MATH 3170 or equivalent.
MATH 4181 Loop Theory (4 Credits)
Quasigroups, loops, latin squares, 3-nets, isotopy, multiplication groups, inner mapping groups, nuclei, commutant, center, associator subloop, inverse properties, power-associative loops, Bruck loops, Bol loops, Moufang loops, octonions. Prerequisites: MATH 3166 or MATH 4166.

MATH 4260 Metric Spaces (4 Credits)
Metric spaces and continuous functions; completeness and compactness; examples including norm spaces; pointwise and uniform convergence; Baire Category Theorem. Cross listed with MATH 3260. Prerequisite: MATH 3161 or equivalent.

MATH 4270 Hilbert Spaces (4 Credits)
Schwarz and triangle inequalities, Reisz lemma, subspaces and orthogonal projections, orthonormal bases, spectrum of bounded linear operators, compact, self-adjoint, normal and unitary operators, spectral theorem and, if time permits, unbounded operators. Also, if time permits, applications to partial differential equations, physics and engineering. Prerequisites: MATH 3260 or MATH 4260 or MATH 3110 or MATH 4110.

MATH 4280 Measure Theory and Applications (4 Credits)
Definition of Measure spaces; Lebesgue measure; limit theorems; Raydon-Nikodym Theorem; introduction to L_p spaces. Prerequisite: (MATH 3260 with a minimum grade of D- or MATH 4260 with a minimum grade of C-) or (MATH 3110 with a minimum grade of D- or MATH 4110 with a minimum grade of C).

MATH 4290 Dynamical Systems (4 Credits)
Topological and measure theoretic dynamical systems; properties and invariants of systems; symbolic dynamics; Ergodic Theorems; applications. Prerequisites: MATH 3110/4110 or MATH 3260/4260.

MATH 4300 Graduate Seminar (1-4 Credits)
Students research a topic of their choosing with the aid of a faculty member, and then prepare and present a formal lecture on the subject. Prerequisite: graduate standing or consent of the instructor.

MATH 4400 Differential Geometry (4 Credits)
Planar and spatial curves, global properties of curves, surfaces in three dimensions, the first fundamental form, curvature of surfaces, Gaussian curvatures, geodesics, Theorema Egregium, hyperbolic geometry. Prerequisites: MATH 3170 and either MATH 3110/4110 or MATH 3260/4260.

MATH 4501 Functional Analysis (4 Credits)
Advanced topics in structure of linear spaces; Banach spaces; Hahn-Banach Theorem and Duality; Uniform Boundedness Theorem; Open Mapping and Closed Graph Theorems; Stone-Weierstrass Theorem; Topics in Hilbert Spaces. Prerequisite: MATH 4280.

MATH 4700 Special Topics in Mathematics (1-4 Credits)
MATH 4701 Combinatorial Algorithms (4 Credits)
Basic enumeration techniques; representations of combinatorial objects; algorithms for searching, sorting, generating combinatorial objects, graph algorithms. Prerequisites: MATH 3701 or MATH 3710.

MATH 4705 Special Topics Applied Math (1-5 Credits)
Varying selected advanced topics in mathematics, depending on student demand. Possible alternatives include of variations, partial differential equations, algebraic topology, differential manifolds, special functions.

MATH 4991 Independent Study (1-10 Credits)
Cannot be arranged for any course that appears in course schedule for that particular year.

MATH 4992 Directed Study (1-10 Credits)
MATH 4995 Independent Research (1-10 Credits)
Research projects undertaken in conjunction with a faculty member.

MATH 5000 Doctoral Seminar (3 Credits)
Techniques, methods used in mathematical, computing research. Includes proofs, bibliographic searching, writing styles, what constitutes an acceptable dissertation.

MATH 5991 Independent Study (1-10 Credits)
Cannot be arranged for any course that appears in the regular course schedule for that particular year.

MATH 5995 Independent Research (1-10 Credits)
Research leading to a dissertation.

**Professional Science Master in Biological Sciences**

The Professional Science Master's (PSM) with a concentration in Biomedical Sciences offers rigorous academic training and professional practical skills to prepare students for challenging careers in the biomedical sciences and allied health sciences. The program strives to provide strong scientific knowledge and promote global-awareness, ethics, communication and other important professional skills through acquiring knowledge within and across disciplines at DU. Students will gain an awareness and knowledge of the many current issues and concerns facing the fields of allied health and biomedical sciences industries.

This multi- and inter-disciplinary program is designed to be very individualized with one-on-one advising to customize the curriculum and capstone internship in order to complement and expand on the student’s past academics and experiences and to prepare them for their future career goals.

The student is matched with a capstone mentor whose professional experiences aligns with the student’s future career goals. The overall goal of the capstone experience is for the student to gain advanced disciplinary knowledge and professional skills by applying the appropriate modes of inquiry, research and professional skills to address a specific current problem or concern in the biomedical sciences.

The PSM program emphasized active communication with an external Advisory Board to ensure that the curriculum and capstone experiences are relevant and beneficial to both students and the bioscience and healthcare industries. The advisory board, comprised of leaders in biomedical research, biotechnology, clinical healthcare, health institutes and hospital administration, provides input regarding the knowledge and skill set and professional competencies most sought by employers and academic graduate programs in biomedical fields. This Master’s program is recognized and approves as an affiliated PSM program with the National Professional Science Association.

**Molecular and Cellular Biophysics**

The Molecular and Cellular Biophysics PhD (MCB) program provides opportunities for doctoral studies in the interdisciplinary field of biophysics. Participation of faculty from the Departments of Biological Sciences, Chemistry & Biochemistry, and Physics & Astronomy enhances the strength and breadth of our program by incorporating cross-disciplinary and collaborative approaches to research. The MCB PhD program is centered on research activities that coincide with faculty experience and expertise. Areas of research in the MCB program include cellular physiology, developmental dynamics, protein folding and aggregation, protein network analysis, signal transduction cascades, synthetic biology, systems biology and the development of novel imaging techniques. Projects at the interface of traditional disciplines of physics, biology and chemistry as well as methods of mathematical analysis and computer modeling are particularly encouraged.

The MCB PhD program offers both a core foundation in biophysical theory and practice yet provides flexibility and individualized attention such that students with diverse scientific backgrounds will have the opportunity to be trained in molecular and cellular biophysics. During their first year in the program, students conduct lab rotations, take a year-long course sequence that covers foundations of molecular and cellular biophysics and take additional graduate courses to supplement their undergraduate training. At the end of their first year, students will join the lab in which they will conduct their thesis research.

Students with strong quantitative undergraduate backgrounds (e.g., undergraduate degrees in physics, chemistry, mathematics, computer science/engineering) who desire to apply these skills to various biological problems, as well as students with a background in cell or molecular biology with a solid foundation in mathematics and physics are particularly encouraged to apply. Financial aid is usually offered in the form of Graduate Teaching or Graduate Research Assistantships, which cover tuition costs and provide a stipend for living expenses.

**Doctor of Philosophy in Molecular & Cellular Biophysics**

**Degree and GPA Requirements**

- **Bachelors degree:** All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- **Grade point average:** The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- **Program GPA requirement:** The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

**Prerequisites:**

- A minimum of one year of calculus and one year of college physics (preferably calculus-based), regardless of undergraduate major, are required.

**Standardized Test Scores**

- The Graduate Record Examination (GRE) is required and a subject test is recommended. Competitive subject GRE scores will strengthen a candidate’s application. Applicants can report subject GRE scores in any of the following disciplines: Physics, Chemistry, Biology, Biochemistry, Cell and Molecular Biology. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.
English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

Professional Science Master in Biological Sciences with a Concentration in Biomedical Sciences

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:

- Students with an undergraduate major in chemistry, physics or mathematics and minimal preparation in biological sciences also will be considered but may be required to take undergraduate courses when the prerequisites are lacking. Course prerequisites include: one year of chemistry, one year of calculus (recommended), one year of physics, and two years of biology.

Standardized Test Scores

- Application to the PSM program requires the Graduate Record Examination (GRE) general test or the MCAT. The GRE subject test is not required. Scores must be received directly from the appropriate testing agency by the program's stated deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Doctor of Philosophy in Molecular and Cellular Biophysics

Graduate studies in the program are highly individualized; programs should fit each student's unique needs and interests. Students are required to perform original, publishable research and to present a thesis based on research to the faculty of the molecular and cellular biophysics program.

A student qualifies for the PhD degree after demonstrating growth as an independent investigator—identifying a significant research question; proposing a hypothesis or model to answer the question; testing the hypothesis with appropriate experiments; and writing a dissertation acceptable to the department.

The structure of the PhD program in Molecular and Cellular Biophysics is as follows:

- required core courses and elective courses during the first year
- required lab rotations during the first year
- required seminar/special topics courses during the second year
- qualifying exams first year and second year
- thesis research second year to completion

**Minimum credits required for the degree: 90 (must be approved by the program Steering committee)**

#### Non-coursework Requirements

- passing performance in the qualifying examinations
- completion of a research dissertation of publishable quality
- successful oral defense of the dissertation

#### Additional requirements:

- successful completion of research rotations during the first year
- maintaining a minimum GPA of 3.0
- passing performance in the qualifying examinations
- attendance at departmental seminars and the presentation of one seminar per year
- completion of a research dissertation of publishable quality
- successful oral defense of the dissertation

A complete description of the program’s official requirements and details of qualifying examinations are available on the Natural Sciences & Mathematics (http://www.du.edu/nsm/departments/molecularandcellular) website.

### Master of Science in Molecular and Cellular Biophysics

The MS in Molecular and Cellular Biophysics is a terminal master’s degree for students who enter the PhD in Molecular and Cellular Biophysics but demonstrate a mastery in the program that indicates an MS degree is more suitable.

**Total Credits**: 45

1. Students may take ENBI 4800 Advanced Topics: Bio-Fluid Mechanics or ENBI 4800 Advanced Topics: Computational Biomechanics.

**Minimum credits required for degree**: 45

**Non-coursework Requirements**
- Capstone project: The capstone project includes a written and public oral presentation of the project. The program requires a capstone project which involves interactions with health or biomedical professions from outside of the DU community. The capstone experience will be culminated in a formal scholarly work (both written and orally presented) that reflects a student’s individual interest and the integration of science with strong professional skills.

**Additional requirements**:
- Maintain a minimum GPA of 3.0
- Successful completion of capstone project
- Completion of capstone paper
- Successful oral defense of capstone project

The Department of Physics and Astronomy at the University of Denver combines a tradition of individualized instruction with a contemporary research focus. The department underwent a strong expansion with eight tenure-track and two teaching professor positions filled in the last 12 years. Our diverse and dynamic faculty of 12 includes four women and come from seven different countries. We provide an attentive, hands-on research and learning community for undergraduate and graduate students up through the PhD level. The department also offers a low student-to-faculty ratio in all advanced and graduate physics and astronomy courses and stresses individualized attention to each student. The program is recognized by the APS among US PhD-granting departments for our high percentage (50%) of female graduates: placing second nationally at the undergraduate level and third at the graduate level (APS data for the period 2011-2013).

The department has major research thrusts in stellar astronomy/astrophysics, biophysics, and condensed matter/materials physics. Our faculty members are internationally recognized and accomplished researchers. The department is a part of the University of Denver’s interdisciplinary Molecular and Cellular Biophysics program (http://www.du.edu/nsm/departments/biophysics). Major state-of-the-art instrumentation is available both in the department and through collaborations with nearby national institutes in the region (NIST and NREL). Also, the University of Denver maintains our own Linux cluster for in-house high-performance computational needs.

---

**Doctor of Philosophy in Physics**

**Degree and GPA Requirements**
- Bachelor’s degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the
baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

**Standardized Test Scores**

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

**English Language Proficiency Test Score Requirements**

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

**Master of Arts in Physics**

**Degree and GPA Requirements**

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. Doctor of Philosophy in Physics
The Department of Physics and Astronomy offers PhD degree in physics that prepares students for careers across a spectrum of scientific pursuits. At the conclusion of your degree, you'll be equipped with the experience and knowledge necessary to build a career in the advancement of scientific knowledge or education at the highest levels, which can open doors to careers in research and development in academia, government, and private industry.

Our department offers research opportunities in theoretical, experimental and computational astronomy and astrophysics, biophysics, and condensed matter and materials physics. PhD candidates in the program will work closely with faculty advisors to create a path of study that culminates in a dissertation defense based on independent research of a publishable quality.

Degree Requirements
Coursework Requirements
Both 4000- and 3000-graduate level courses may be applied toward the degree, with the approval of the Graduate Committee or the Dissertation Committee.

Minimum credits required for the degree: 90 of which a minimum of 60 must be in Physics and Astronomy including the Graduate Core Courses, which constitute 19-23 quarter hours.

Non-Course Requirements
- Regular attendance at the Physics and Astronomy colloquia;
- Annual presentation at the Physics and Astronomy colloquia;
- Passing Comprehensive Examination at the PhD level;
- Advancement to Preliminary Candidacy at the PhD level;
- Formation of the Dissertation Committee;
- Passing Oral Dissertation Research Proposal;
- Advancement to Candidacy at the PhD level;
- Dissertation;
- Dissertation Defense. Three departmental faculty members and an Outside Chair are required for the Oral Defense.

Other Degree Requirements
- Good academic standing: a GPA of 3.0 or higher;
- No grades lower than C- are accepted toward the degree;
- No more than one-fourth of the hours accepted toward the degree may be of C+, C, or C- grade;
Master of ARTS in Physics

The Department of Physics and Astronomy offers a Master of Arts (MA) in Physics that prepares the student for a wide variety of jobs. The MA degree is intended primarily for students who are seeking an advanced degree without a significant research component. For instance, the MA degree is appropriate for students pursuing careers in pre-college or community college teaching, planetarium or museums, or as technical representatives of various organizations. With complementary courses in education, MA graduates are well qualified to teach at the secondary level. The main difference between the MA and MS degree is that a research thesis is not required for the MA degree. However, students pursuing the MA degree will get exposed to some research experience through Introduction to Research courses in their first year in the program.

Degree Requirements

Coursework Requirements
Both 4000- and 3000-graduate level courses may be applied toward the degree, with the approval of the Graduate Committee or the Master’s Committee.

Master of Science in Physics

The Department of Physics and Astronomy offers a Master of Science (MS) in Physics that prepares the student for a wide variety of jobs in industry, government and educational institutions. Our graduates have obtained industrial or governmental laboratory research positions, entered pre-college or community college teaching, joined planetarium or museum staffs, and become technical representatives of various organizations. With complementary courses in education, MS graduates are well qualified to teach at the secondary level. The MS in Physics is also a popular course of study and professional improvement for people already working in industry. For those currently employed, research projects can usually be matched to the employer’s programs, and often someone from the industry can serve as co-advisor so that the continuing education benefits both the student and the employer.

Degree Requirements

Coursework Requirements
Both 4000- and 3000-graduate level courses may be applied toward the degree, with the approval of the Graduate Committee or the Master’s Committee.

Courses

PHYS 3111 Quantum Physics I (4 Credits)
First of a two-quarter sequence. The Schrödinger equation: interpretation of wave functions; the uncertainty principle; stationary states; the free particle and wave packets; the harmonic oscillator; square well potentials. Hilbert space: observables, commutator algebra, eigenfunctions of a Hermitian operator; the hydrogen atom and hydrogenic atoms. Prerequisites: PHYS 2252, PHYS 2260, PHYS 2556, PHYS 3612 and MATH 2070.

PHYS 3112 Quantum Physics II (4 Credits)
Second of a two-quarter sequence. Angular momentum and spin; identical particles; the Pauli exclusion principle; atoms and solids: band theory; perturbation theory; the fine structure of hydrogen; the Zeeman effect; hyperfine splitting; the variational principle; the WKB approximation; tunneling; time dependent perturbation theory; emission and absorption of radiation. Scattering: partial wave analysis; the Born approximation. Prerequisite: PHYS 3111.

PHYS 3251 Astrophysics: Radiative Processes (4 Credits)
Because light is the primary means by which astronomers learn about the Universe, understanding the production and subsequent behavior of light is key to interpreting astronomical observations. This course introduces students to the physics of astrophysical radiation and its interaction with matter as it travels from its source to our detectors. Topics may include radiative transfer, emission and absorption processes, Compton processes, synchrotron radiation, thermodynamic equilibrium, radiative and collisional excitation, and spectroscopy of atoms and molecules. The course is aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. Credit can apply toward physics or astrophysics minor. Prerequisites: PHYS 2252 and MATH 1953, or instructor’s permission.

PHYS 3252 Astrophysics: Observations (4 Credits)
Astronomy is fundamentally an observational science and as such it is important for practitioners to understand how their data are collected and analyzed. This course is therefore a comprehensive review of current observational techniques and instruments, aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. This class introduces students to the capabilities and limitations of different types of instruments while exploring the sources and types of noise and providing statistical tools necessary for interpreting observational data. Credit can apply toward physics or astrophysics minor. Prerequisites: PHYS 2252 and MATH 1953, or instructor’s permission.

PHYS 3270 Workshop: Practical Astronomy (1-5 Credits)
Capstone coursework featuring studies in experimental, computational, and/or theoretical work in astronomy and astrophysics. Credit can apply toward physics or astrophysics minor.

PHYS 3311 Advanced Laboratory I (1 Credit)
First of a three-quarter sequence. Advanced experimental techniques in physics. Meets with PHYS 2311. Prerequisite: instructor’s permission.

PHYS 3312 Advanced Laboratory II (1 Credit)
Second of a three-quarter sequence. Advanced experimental techniques in physics. Meets with PHYS 2312. Prerequisite: instructor’s permission.

PHYS 3313 Advanced Laboratory III (1 Credit)
Third of a three-quarter sequence. Advanced experimental techniques in physics. Meets with PHYS 2313. Prerequisite: instructor’s permission.

PHYS 3510 Analytical Mechanics I (4 Credits)
Lagrangian and Hamiltonian mechanics. Prerequisites: PHYS 1113, PHYS 1213, or PHYS 1214 and MATH 2070 and consent of instructor.
PHYS 3611 Electromagnetism I (4 Credits)
First of a two-quarter sequence. Vector algebra; differential vector calculus (gradient, divergence and curl); integral vector calculus (gradient, divergence and Stokes' Theorems); line, surface and volume integrals; Electrostatics: the electric field, electric potential, work and energy in electrostatics; method of images, boundary value problems and solutions to Laplace's equation in Cartesian, spherical and cylindrical coordinates; multipole expansion of the electric potential; electric fields in matter: polarization; the electric displacement vector; boundary conditions, linear dielectrics. Magnetostatics: magnetic fields and forces. Prerequisites: PHYS 1113, PHYS 1213, or PHYS 1214 and MATH 2070.

PHYS 3612 Electromagnetism II (4 Credits)
Second of a two-quarter sequence. Magnetic vector potential; magnetic fields in matter: magnetization; fields of magnetized objects; linear and nonlinear magnetic materials; electromotive force, Ohm's law; electromagnetic induction; Faraday's law; Maxwell's equations; the displacement current; boundary conditions; the Poynting theorem; momentum and energy density of the fields; the Maxwell stress tensor; the wave equation and electromagnetic waves in vacuum and matter; absorption and dispersion; wave guides; the potential formulation and gauge transformations; retarded potentials; dipole radiation. Prerequisite: PHYS 3611.

PHYS 3700 Advanced Topics: General (3 Credits)
Offered irregularly, depending on demand. May be taken more than once for credit. Prerequisite: instructor's permission.

PHYS 3711 Optics I (4 Credits)
First of a two-quarter sequence. Gaussian optics and ray tracing; matrix methods and application to optical design; elementary theory of aberrations; light as electromagnetic wave, diffraction and interference; interferometers and their applications. Elementary theory of coherence; selected topics. May include laboratory work as appropriate. Prerequisites: PHYS 1113, PHYS 1213 or PHYS 1214, and MATH 2070.

PHYS 3781 Thermal Physics I (4 Credits)
First of a two-quarter sequence. Laws of thermodynamics; thermal properties of gases and condensed matter; kinetic theory of gases, classical and quantum statistics. Prerequisites: PHYS 1113, PHYS 1213 or PHYS 1214 and MATH 2070.

PHYS 3991 Independent Study (1-10 Credits)
PHYS 3992 Directed Study (1-10 Credits)
PHYS 3995 Independent Research (1-10 Credits)

PHYS 4001 Introduction to Research I (1,2 Credit)
This course is the first of the 3-course sequence designed to provide the opportunity of learning fundamental skills to conduct independent research in any physical science discipline. In this course, students review essential material in mathematical physics, learn basic programming techniques and improve upon their skills in literature search and scientific writing, especially proposal writing. Special in-class seminars in collaboration with the Penrose Library and Writing and Research Center are scheduled. Student are introduced to research conducted by Physics and Astronomy faculty so that they can choose a faculty member with whom to take on a Winter Research Project during the winter interterm and winter quarter as part of Introduction to Research II. Students must prepare and submit a research proposal before the end of the fall quarter.

PHYS 4002 Introduction to Research II (1-3 Credits)
This is the second of the 3-course sequence to provide the opportunity of learning fundamental skills to conduct independent research in any physical science discipline. In this course, students conduct an independent research or study project that they have outlined in the research proposal they submitted as part of Introduction to Research I under supervision of a faculty advisor of their choosing. At the same time, students have time to review issues that we face as researchers. Prerequisites: PHYS 4001 and consent of a faculty research advisor.

PHYS 4003 Introduction to Research III (1,2 Credit)
This is the third of the 3-course sequence to provide students with the opportunity of learning fundamental skills to conduct independent research in any physical science disciplines. In this course, students complete their Winter research project conducted as part of Introduction to Research II and present the results in writing as a term paper and in oral presentation as part of the Departmental Colloquia. Special in-class sessions in collaboration with the Writing and Research Center are included. Prerequisite: PHYS 4002.

PHYS 4100 Foundations of Biophysics (3 Credits)
Focus of the course is on application of basic physics principles to the study of cells and macromolecules. Topics include diffusion, random processes, thermodynamics, reaction equilibriums and kinetics, computer modeling. Must be admitted to the MCB PhD program or related graduate program with instructor approval. Cross listed with BIOP 4100.

PHYS 4111 Quantum Mechanics I (3 Credits)
PHYS 4112 Quantum Mechanics II (3 Credits)
PHYS 4251 Intro to Astrophysics I (3 Credits)
PHYS 4252 Intro to Astrophysics II (3 Credits)
PHYS 4253 Intro to Astrophysics III (3 Credits)
PHYS 4411 Advanced Condensed Matter I (3 Credits)
Materials structure; structure analysis; elastic properties; defects; plastic mechanical properties; thermal properties and phonons; free electron gas; energy bands and Fermi surfaces; crystalline and amorphous semiconductors; quasiparticles and excitations; electrical properties and ferroelectrics; magnetic properties and ferromagnetics; classical and high-Tc superconductors; other advanced materials. Co-requisite: PHYS 4111.
PHYS 4412 Advanced Condensed Matter II (3 Credits)
Materials structure; structure analysis; elastic properties; defects; plastic mechanical properties; thermal properties and phonons; free electron gas; energy bands and Fermi surfaces; crystalline and amorphous semiconductors; quasiparticles and excitations; electrical properties and ferroelectrics; magnetic properties and ferromagnetics; classical and high-Tc superconductors; other advanced materials. Co-requisite: PHYS 4112.

PHYS 4413 Advanced Condensed Matter III (3 Credits)
Materials structure; structure analysis; elastic properties; defects; plastic mechanical properties; thermal properties and phonons; free electron gas; energy bands and Fermi surfaces; crystalline and amorphous semiconductors; quasiparticles and excitations; electrical properties and ferroelectrics; magnetic properties and ferromagnetics; classical and high-Tc superconductors; other advanced materials. Co-requisite: PHYS 4113.

PHYS 4511 Advanced Dynamics I (4 Credits)

PHYS 4611 Adv Electricity & Magnetism I (3 Credits)

PHYS 4612 Adv Electricity & Magnetism II (3 Credits)

PHYS 4720 Light-Matter Interaction (4 Credits)
This course will introduce the theory and applications of light-matter interactions. Fundamental theory will be explored from both semi-classical and quantum perspectives, and photon-carrier interactions will be studied in a variety of physical systems, including atoms, glasses, semiconductors, and metals. Experimental techniques will also be discussed, such as absorption, photoluminescence, and coherent spectroscopies, in addition to ultrafast nonlinear optical interactions. Students will also build their own demonstration and teaching module for elementary-age children, and will use their module to teach children at a local school.

PHYS 4750 Seminar in Physics (1 Credit)

PHYS 4811 Statistical Mechanics I (4 Credits)
Fundamentals of thermodynamics, microcanonical and canonical ensemble, quantum formulation noninteracting particle systems.

PHYS 4860 Numerical and Computational Methods in Physics (4 Credits)
The main goal of this course is to gain a better understanding of physical problems by solving them numerically; in the process, students learn about several numerical methods and computational techniques that have a very broad range of applications in many other scientific fields. Depending on the problem, students work with a software package (Mathematica), and also acquire coding experience in different programming languages. Graduate students carry out projects involving more complex simulation and numerical methods currently used in many areas of condensed matter physics, quantum chemistry and biophysics, such as Density Functional calculations, Monte Carlo and Molecular Dynamics methods.

PHYS 4910 Special Topics Physics (1-5 Credits)

PHYS 4991 Independent Study (M.S.) (1-10 Credits)

PHYS 4992 Directed Study (M.S.) (1-10 Credits)

PHYS 4995 Independent Research (M.S.) (1-10 Credits)

PHYS 6991 Independent Study (PhD) (1-10 Credits)

PHYS 6995 Independent Research (PhD) (1-10 Credits)

Sturm College of Law

At the University of Denver Sturm College of Law, we balance rigorous academics with the demands of the outside world and help you focus on things that matter to you: your career, your future, your life in law. Our nationally ranked specialty programs provide opportunities to pursue your interest in areas such as Corporate and Commercial Law, International Legal Studies, Environmental and Natural Resources Law, Workplace Law and Constitutional Rights and Remedies. Because we recognize that a legal education grounded in practical skills training is the key to a successful legal career, we created the Experiential Advantage Curriculum which allows you to spend an entire year in real or simulated practice settings. By the time you graduate, you will have a year's worth of legal practice experience – via clinics, externships, and in-depth course simulations, including our new Semester in Practice Externship – and be poised to distinguish yourself in a competitive job market. Your time at Denver Law will be well spent – reaching within yourself while reaching out to the world.

Denver Law offers a number of advanced degrees (LLM and Master’s) that can supplement a student’s law degree with specialized knowledge, introduce foreign lawyers and those educated in other disciplines to the U.S. legal system, or train students in the unique rigors of tax or legal administration. It is the goal of each academic program to bridge the objectives of its students to the curriculum and the University of Denver’s mission to make a meaningful impact, both locally and globally.

Juris Doctor

Degree and GPA Requirements

• To be enrolled at the University of Denver Sturm College of Law, you must hold a bachelor of arts or a bachelor of science degree from a regionally accredited college or university. No undergraduate field of study is favored, based on evidence that a strong student in any major can develop the skills of writing, analysis and persuasion necessary for success in law school.

Standardized Test Scores

• Valid Law School Admissions Test (LSAT) score

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS test score requirements for this degree program are:

• TOEFL Paper-based test: 587
• TOEFL Internet-based test: 95
• IELTS: 7.0

Additional Requirements for International Students

• LSAC Credential Assembly Service (CAS)
  • If you have completed any post-secondary work outside the US (including its territories) or Canada, these transcripts must be submitted to the LSAC to be translated and evaluated. A foreign credential evaluation will be completed by the American Association of Collegiate Registrars and Admissions Officers and included with your CAS report.
  • We will not accept any other translation or evaluation services for the admissions process.
  • If you have questions, contact LSAC at LSACINFO@LSAC.org

Master of Laws in American Law Practice

Degree and GPA Requirements

• Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Other Requirements

• A Juris Doctorate (JD) or equivalent is required.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:
• Minimum TOEFL Score (Internet-based test): 80
• Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Sturm College of Law may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Laws in Environmental/Natural Resource Law Policy

Degree and GPA Requirements
• Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Other Requirements
• A Juris Doctorate (JD) or equivalent is required.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:
• Minimum TOEFL Score (Internet-based test): 80
• Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5
• Minimum CAE Score: 169

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Sturm College of Law may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Laws in International Business Transactions

Degree and GPA Requirements
• Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Other Requirements
• A Juris Doctorate (JD) or equivalent is required.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:
• Minimum TOEFL Score (Internet-based test): 85
• Minimum TOEFL Score (Paper-based test): 567
• Minimum IELTS Score: 0
• Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Sturm College of Law may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.
Master of Legal Studies in Legal Studies

Degree and GPA Requirements

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

Juris Doctor

Degree Requirements

The Sturm College of Law awards the degree of Juris Doctor to those students who successfully fulfill the following requirements:

- Completion of ninety [90] semester credit hours with passing grades. Only a grade of F constitutes a failing grade for purposes of this requirement. Students receive no credit hours toward graduation for courses in which they earn a grade of F.
- Maintenance of the required cumulative grade point average. For students who enter the Sturm College of Law in the 2007 Fall, or any subsequent, semester: a cumulative GPA of 2.3 or higher
- Successful completion of all required courses (as defined in the chart that follows this section). A student who receives a grade of F in a required course must retake the course and earn a passing grade. Both grades remain on the student's transcript and affect the student's cumulative GPA.
- Completion of the Upper Level Legal Writing requirement
- Completion of the Public Service requirement
- Completion of the Professional Skills Requirement. [All students entering the College of Law in Fall 2013 through Spring 2015 must successfully complete a curricular offering of two or more semester credit hours. A list of qualifying courses will be made available.]
- Completion of Experiential Coursework Requirement. [All students entering the College of Law in Summer 2015 or thereafter must successfully complete a curricular offering of six or more semester credit hours. A list of qualifying courses will be made available each semester prior to registration.]
- Completion of Career & Professional Development requirement
- Resolution of all financial obligations to the University of Denver
- Completion of all credit hours within a specified time period following initial matriculation at law school. The American Bar Association requires law students to complete their legal educations within seven years. Full-time day-division students at the Sturm College of Law normally meet all JD requirements by the end of their third year. Part-time evening-division students at the Sturm College of Law normally complete all JD requirements by the end of their fourth year.

Good Standing

All students who enter the Sturm College of Law in the 2007 Fall, or any subsequent, semester must maintain a cumulative grade point average of at least a 2.3 to remain in good standing.

Students may check their Degree Audit on MyWeb. Students have the responsibility to check MyWeb carefully and to contact the Registrar's Office if students note any discrepancy between their understanding of their degree requirements and their Degree Audit. Students have the sole responsibility to ensure that they have completed all graduation requirements.

Public Service Requirement

All law students must satisfy the Public Service Requirement (PSR) in order to graduate. To satisfy the requirement, each student must perform a minimum of 50 hours of supervised, uncompensated, legal public service work. You must complete 22 academic credit hours prior to satisfying the requirement.

You can satisfy the requirement in one of the following ways:

1. Registering for, and passing, an externship for credit at a government agency, judicial chambers, nonprofit organization, or private firm (as long as the 50 hours is pro bono at the firm) via the Legal Externship Office (http://www.law.du.edu/index.php/legal-externship-program).
2. Registering for, and receiving a grade of C or better, in a clinic via the Student Law Office (http://www.law.du.edu/index.php/law-school-clinical-program).
3. Registering for, and receiving a grade of C or better, in an eligible course. Eligible courses currently include: Federal Appellate Advocacy, Homeless Advocacy Seminar, International Criminal Law Practicum, Live Client Lab, Low-Income Taxpayer Clinic Mediation Practicum, Poverty and Low Wage Work in America, Public Interest Lawyering Lab, Probate Practicum, Street Law, Trial Practice III: Instructor’s Practicum, Trial Practice III: Mentor’s Practicum, Wills Lab, and the Workplace Rights Project Lab.
4. Volunteering, and engaging in 50 hours of supervised, uncompensated legal work, at a government agency, judicial chambers, nonprofit organization, or private firm, as long as the work at the firm is pro bono. This is known as a Volunteer Legal Experience.

**In order to satisfy the requirement via option #4, a Volunteer Legal Experience, you must abide by all rules and regulations for the Public Service Requirement indicated on our website (https://www.law.du.edu/index.php/public-service-requirement). You must complete an online student certification and evaluation form about your volunteer experience. Your supervisor, who must be licensed to practice law for at least three years, must complete an online supervisor certification and evaluation form which asks for the number of hours worked (must be at least 50), the timeframe in which the work was completed, and an evaluation of the student’s work. When both of these forms are completed and submitted online, and it is confirmed that the work satisfies the requirement, at the conclusion of the relevant semester, your Academic Progress Report will reflect that you satisfied the PSR. Students engaging in this option are strongly encouraged to check in with the Public Interest Office prior to do the work to confirm it is eligible.

Please note: You are not required to complete the steps outlined above if you are satisfying the public service requirement via options #1, 2, or 3 above. For these options, your Academic Progress Report will reflect that you satisfied the PSR via a PUBL designation at the conclusion of the relevant semester.

Students are strongly encouraged to complete this requirement before their last semester of law school.

For more information about the PSR, visit this page (http://www.law.du.edu/index.php/public-service-requirement) and/or contact the Director of Public Interest at publicinterest@law.du.edu.

Upper Level Legal Writing Requirement

All law students must satisfy the Upper Level Legal Writing requirement prior to graduation. The requirement provides students additional instruction and practice in research, organization and expression.

To satisfy the requirement, each student must:

- Complete a written product of at least ten (10) pages on an appropriate legal subject determined by a professor and the student.
- Secure the professor’s written comments as to the substance and style of the student’s written project
- Prepare a second draft of the written project in response to the professor’s comments to the professor’s satisfaction.
Students may satisfy the Upper Level Legal Writing requirement in the following ways:

1. **Advanced Legal Writing Course**
   A student can enroll in and successfully complete the upper level legal writing course entitled "Advanced Legal Writing."

2. **Designated Seminar Classes or Clinics**
   A student can enroll in and successfully complete a seminar that satisfies the Upper Level Legal Writing requirement. The student also can enroll in and successfully complete a clinical course that satisfies the Upper Level Legal Writing requirement. Clinics and seminars do not necessarily satisfy the Upper Level Legal Writing requirement. Students must clarify with individual professors whether the seminar or clinic will satisfy the Upper Level Legal Writing requirement. A student who elects to fulfill the Upper Level Legal Writing requirement under this option must make certain that the Registrar's Office receives certification from the professor that the student successfully fulfilled the Upper Level Legal Writing requirement. Only after the Registrar's Office has received official certification has the student completed this graduation requirement.

3. **Directed Research Projects**
   The student may enroll in and successfully complete a 2-3 credit hour Directed Research Project with a full-time faculty member. If the student successfully completes a Directed Research project that fulfills the Upper Level Legal Writing requirement, the professor must certify to the Registrar that the student has completed the Upper Level Legal Writing requirement. A student who elects to fulfill the Upper Level Legal Writing requirement under this option must make certain that the Registrar’s Office receives certification from the professor that the student successfully fulfilled the Upper Level Legal Writing requirement. Only after the Registrar’s Office has received official certification has the student completed this graduation requirement.

4. **Certification by Professor**
   Any full-time or adjunct professor can offer a student the opportunity to complete the Upper Level Legal Writing requirement within the course taught by the professor or independently of the course taught by the professor. Upon successful completion of the Upper Level Legal Writing requirement, the professor must certify to the Registrar that the student has completed the requirement. A student who elects to fulfill the Upper Level Legal Writing requirement under this option must make certain that the Registrar's Office receives certification from the professor that the student successfully fulfilled the Upper Level Legal Writing requirement. Only after the Registrar's Office has received official certification has the student completed this graduation requirement.

**Professional Skills Requirement**

1. All law students entering the College of Law in the Fall 2013 or Fall 2014 Term must successfully complete a curricular offering of two or more semester credits hours that provides substantial instruction in professional skills generally regarded as necessary for effective and responsible participation in the legal profession beyond legal research, writing, and analysis.

2. Professional skills include pre-trial practice, trial advocacy, appellate advocacy, alternate dispute resolution processes, client communication, counseling, negotiation, legal document drafting, fact investigation, interaction with regulators (such as drafting of regulatory ruling requests), interviewing, law practice management, legal problem solving, recognizing and resolving ethical dilemmas, and similar skills.

3. To fulfill this requirement, a curricular offering must provide at least one credit (700 classroom minutes) of instruction in the performance of professional skills beyond legal research, writing, and analysis, and must engage each student in multiple (more than one) hands-on skills performances that are evaluated by the instructor.

4. The College of Law Registrar shall maintain a list of courses that satisfy the professional skills requirement on the College of Law webpage. The College of Law Modern Learning Committee and Curriculum Committee shall be responsible for approving courses that satisfy the professional skills requirement, and for periodically updating that list. Each course description for each class that satisfies the professional skills requirement shall indicate that it does so.

A student may not use the same curricular offering to satisfy both the upper level writing requirement and the professional skills requirement.

**Experiential Coursework Requirement**

1. All law students entering the College of Law in the Fall 2015 Term or thereafter must successfully complete a curricular offering of six or more semester credits hours of experiential coursework.

2. Experiential courses include simulations, clinics, and field placements. To satisfy this requirement, the course must be primarily experiential in nature and must (a) integrate doctrine, theory, skills, and legal ethics, and engage students in the performance of professional skills, which include knowledge and understanding of the law, legal analysis and research, problem-solving, written and oral advocacy, and the exercise of proper professional and ethical responsibilities to clients and the legal system; (b) develop the concepts underlying the professional skills being taught; (c) provide multiple opportunities for performance; and (d) provide opportunities for self-evaluation.

3. The College of Law Registrar shall maintain a list of courses that satisfy the experiential skills requirement on the College of Law webpage. The College of Law Modern Learning Committee and Curriculum Committee shall be responsible for approving courses that satisfy the experiential requirement, and for periodically updating that list. Each course description for each class that satisfies the experiential requirement shall indicate that it does so.

4. A student may not use the same curricular offering to satisfy both the upper level writing requirement and the experiential requirement.

**Career & Professional Development Requirement**
The Career & Professional Development Requirement ensures that Denver Law students will graduate with the knowledge and skills they need to thrive in the entry-level job market. Beginning in the summer of 2016, all incoming JD students will need to complete a total of seven Career & Professional Development experiences through a combination of qualifying programs and individual career advising appointments in order to graduate. The CPD requirement is administered and tracked by the Office of Career Development & Opportunities (“CDO”).

Master of Laws (LLM) in American Law Practice

Degree Requirements

Coursework Requirements

This customizable LLM degree introduces foreign-trained attorneys to the US Legal framework and allows for area specializations with a particular emphasis on College of Law's Experiential Advantage Curriculum. Course requirements vary based on individual student’s objectives. Sample concentrations are listed below.

Complete for credit one of the following live-client experiences or simulations in the ENRL program:

- An ENRL-related experience through the Student Law Office
- An ENRL-related full semester externship through the legal externship program
- A simulated experience course such as the Natural Resources Distinguished Practitioner Seminar

Complete a research paper satisfying the upper-level writing requirement on an ENRL topic, either through a course or directed research.

Minimum Number of Credits Required 15

Certificate in Law with a Concentration in Intellectual Property Law

Students must complete a minimum of two courses from the list of core International and Comparative Law courses provided by the ILSP Director.

Minimum Number of Credits Required 6

A minimum of 15 credits is required.
The remainder of credits required for the certificate must be satisfied by taking electives chosen from either the list of core courses or the list of Elective International, Comparative, and Foreign Law Courses provided by the ILSP director.

Upper-Level Writing Requirement.

**Certificate in Law with a Concentration in International Law and Human Rights**

**Certificate Requirements**

**Coursework Requirements**

Completing the certificate requires 35 quarter hours (for Korbel students) or 24 semester hours of credit (for Sturm students). By its nature, the certificate also requires taking courses both on the quarter system (at Korbel) and on the semester system (at Sturm). These are the same courses, just taken for different numbers of credit because of the differences between the quarter and semester systems for Korbel and Sturm, respectively.

**Total Credits**: 16

**Law Courses**

**LAWS 4002 Accounting for the Small Legal Practice (3 Credits)**

This course will provide an introduction to basic accounting fundamentals, provide key concepts that apply to attorneys and solo practitioners, and explore situations where accounting plays a role in the practice of law. Topics include: understanding the balance sheet, income statement, statement accounting, partnership vs. LLC, income tax accounting; money management and cash flow in a law practice; retainers; trust accounts; income measurement; auditing; and billing/fees/timekeeping.

**LAWS 4003 Appellate Advocacy (3 Credits)**

This course focuses on developing skills necessary for effective appellate advocacy. It includes discussion of the critical differences between trial and appellate practice and techniques for presenting a persuasive case on appeal. Students will write appellate briefs and present oral argument to a panel of judges. Students will also observe oral arguments presented in Colorado appellate courts.

**LAWS 4006 Accounting for Lawyers (3 Credits)**

This class introduces students to accounting principles and practices to prepare them for the manner in which transactional and other lawyers will be presented with accounting, auditing, and financial matters that must be understood to enable them to provide effective legal representation to clients. The course includes an introduction to basic concepts of bookkeeping and financial accounting, reading and understanding traditional financial statements, financial statement analysis and the use of financial ratios, and legal issues involving accountancy. The class will also examine the role and responsibilities of the independent auditor and the concept of full and fair disclosure of financial information as required by generally accepted accounting principles.

**LAWS 4007 Business Development: Marketing and Client Service (3 Credits)**

This course provides students with the tools to effectively market a solo practice and connect with the client. Topics include: client relationship management; social media; building a brand; networking fundamentals; website development; managing client expectations; effective communications; and, referrals.

**LAWS 4008 Privacy Law (3 Credits)**

This Privacy Law seminar examines the development of privacy rights as a key consideration in the business and governmental policy debates within the U.S. and E.U. These debates range from the appropriate role of government collection retention and usage of personal identifiable information (PII) as well as regulating the private sectors’ usage of PII. The E.U. has taken the lead in establishing an all-encompassing privacy policy for both the public and private sectors, whereas the U.S. has established a sectorial approach to establishing privacy law and regulations. Lawyers will continue to play a significant role in shaping governmental privacy policy, drafting statues and regulations, as well as business drafting and negotiating technology contracts.
The spread of democracy, the rapid development of open information regimes, and the Internet means that it is increasingly important what local communities want, and how they view natural resource production. Sustainable development is a set of concepts that attempts to harmonize a number of seemingly competing goals. These include providing better conditions of life and more opportunities for people, especially the poor. They also include bringing production and consumption within limits that an ecosystem can tolerate in the long run. The new legal challenges need to be understood on a variety of levels: 1) the emerging set of international standards and requirements governing foreign direct investment; 2) changing national priorities in mineral legislation and the laws governing the extraction and use of mineral products; and 3) meeting community expectations for sustainable development.

This class addresses critical topics for the attorney representing clients in international business transactions, including the role of the international lawyer, performing international research and locating international and foreign law resources, jurisdiction, provisional relief, choice of law, proof of foreign law, choice of forum or arbitration, service of process, obtaining the evidence, act of state, sovereign immunity, law of the seas, and enforcement of judgments. The class will consider relevant treaties and U.S. law, including the Hague Convention on Choice of Courts Agreement, the Uniform Foreign Country Money-Judgments Recognition Act, and potential litigation under such laws as the U.S. Foreign Corrupt Practices Act. The course addresses topics relevant to both litigation and arbitration.

The goal of this class is for students to research and write a scholarly law review article of publishable quality. Students will select topics relating to current issues in labor and employment law and will write publishable articles based on independent research. Students will present their papers to the class toward the end of the semester. The top two papers will be selected for entry in the Jackson, Lewis National Labor and Employment Writing Competition.

The first portion of this seminar will cover topics such as general international conventions and treaties designed to protect intellectual property; conventions and treaties are designed specifically for patents, trademarks and copyrights. Students will determine what protections to try to seek for a variety of intellectual property examples and, in pairs, if possible, negotiate and draft a licensing agreement and a manufacturing agreement. Students will then choose a topic from a selection of hypothetical problems, such as filing for patent protection in various jurisdictions, service of process on a foreign corporation, enforcing an arbitral award, resolving conflicts of laws, pre-litigation options. Each student will prepare a presentation for the class on the topic. The students will use the class feedback their research for the presentation to complete a paper on their topic. The drafting and paper will take the place of the final exam.

A deposition is the most important pre-trial discovery tool for the litigator. A successful deposition requires technical skills and extensive preparation. Most cases are won or lost based upon deposition testimony. The objectives of this class are to understand the applicable rules of civil procedure and the rules of evidence, the fundamentals of taking and defending depositions, utilizing depositions in discovery, settlement and trial, preparing witness for depositions, and applying proven strategies and techniques for successful depositions. The class will be taught using actual cases, deposition transcripts and video depositions.

The class will be taught using actual cases, deposition transcripts and video depositions.

This course will focus on emerging international standards, legal, and "law-like" instruments designed to form the "rules of the road" in the dealings among private investors, host country governments, local communities, and other actors involved with sustainably developing natural resources. We will look at the track record of development: to what extent have natural resource projects helped make the world's poor better off? And what is meant by "better off?" What is a "fair deal" between a corporation from, for example, Europe or North America and a developing country government in Africa? How are disputes resolved?

Intermediate Legal Analysis provides second year students with instruction in analytical skills in a particular substantive area taught in the first year curriculum, utilizing multiple short-writing assignments with no more than 30 students per section. The course is a skills-based course, designed to develop analytical strategies necessary for success in law school, including rule synthesis and application, statutory interpretation, case analysis and briefing, fact evaluation, discernment of legal principles and theories, and effectiveness in written communication. The course will provide multiple opportunities for practice and feedback with exercises designed to help students learn, understand, and recall course materials with a particular emphasis in developing writing approaches and strengths for solving hypothetical legal problems. This course satisfies the Upper Level Writing requirement (ULW).

This course examines actual criminal cases from around the world and the application of the law at the time and place of the crime. The students will then compare this to the law today in the same jurisdiction and the Model Penal Code as applied to the same facts. This course also reviews current Colorado Law as it relates to liability and punishment based on the same fact pattern. The course will encourage analysis of what the law is and should be, and the aftermath of each case will lead to discussion about what actually happened to the defendant and why.

Students who have participated in the Civil Litigation Clinic for one semester are eligible to enroll in the Advanced Civil Litigation Clinic. The purpose of the advanced clinic is to provide students who have developed fundamental trial skills in the areas of landlord-tenant, domestic violence, and workplace law to further develop those skills and to work on cases and matters with greater independence for an additional semester without repeating the seminar component of the clinic.
LAWS 4022 Criminal Clinic (Advanced) (3 Credits)

LAWS 4023 Civil Litigation Clinic (Adv.) (1-10 Credits)

LAWS 4025 Administrative Law (3 Credits)

This class provides an introduction to the administrative process of government. Topics include Constitutional issues of separation of powers; delegation of legislative and judicial power; legislative and judicial authority in government agencies; agency exercise of policy-making functions; and controls imposed on agencies by administrative procedure legislation, Constitutional principles, and judicial review of agency action.

LAWS 4026 Criminal Procedure (Adv.) (3 Credits)

From the commencement of formal proceedings to collateral attacks on convictions, this course guides students through the laws regulating criminal prosecutions. The course topics typically include pleas; trial rights; discovery; bail procedures; sentencing; double jeopardy; the death penalty; and habeas corpus. The focus of the course is on the federal constitutional rights and the federal rules of procedure that are applicable to each stage of a criminal proceeding. Prerequisite: LAWS 4200.

LAWS 4027 Trial Practice II: Voir Dire (3 Credits)

This course covers the practical process of jury selection including the court rules and statutes that apply as well as Constitutional issues including fair cross-section and discriminatory challenges. An exploration of the demographic, legal, and case-specific issues that can be addressed in jury selection. The course couples traditional lectures with emphasis on student exercises. The course culminates in a final voir dire where the student is given a case problem and required to incorporate persuasive introductions, law questions, case-specific questions, and conclusions. Student participation throughout the class is required as both the inquiring attorney and as a juror.

LAWS 4028 Civil Procedure (Advanced) (3 Credits)

Topics for this course include post-trial procedure, injunctions, and other advanced civil procedure matters.

LAWS 4030 Family Law (Adv.) (3 Credits)

Advanced Family Law is a practicum oriented class. This class has some lecture components, but there will be significant practicum aspects for students interested in learning about the practice of family law. Students will gain a general knowledge of family law, and more specifically the substantive and procedural aspects of dispute resolution oriented domestic relations practice. The subjects covered are divorce, custody and child support jurisdiction (intrastate and interstate); domestic case procedure, meeting with and managing your client; working with opposing counsel; temporary status conferences and agreements, Domestic Violence, discovery and use of experts, unbundled legal services, access to justice issues, and the permanent orders (final orders in the divorce); and attorney's fees. Prerequisite: LAWS 4240.

LAWS 4031 Mediation (3 Credits)

Students who have completed the basic Alternative Dispute Resolution course may enroll in this program that focuses on clients with more complex cases in both the civil and criminal arenas. Clients will be selected based on both public interest aspect and the propriety of the case as a learning vehicle for planning, pleading, negotiation, discovery, research and trial work. Prerequisite: LAWS 4060.

LAWS 4032 Legal Analysis Strategies (3 Credits)

This course provides last semester graduating students with instruction, guidance and feedback to develop foundational skills necessary to achieve success on both the bar exam and in the legal profession as skilled legal analysts. Substantively, the course will focus on core bar exam subjects (constitutional law, contracts, property, evidence, torts and criminal law/procedure) using practical problems in all three examination formats of the bar exam - essays, performance tests, and multiple-choice questions. Initially, the course provides a diagnostic evaluation of analytical and communicative strengths using a performance test and multiple-choice questions. Subsequent classes require submission of written practice exams with follow-up class presentations by students of analytical strategies used to solve hypothetical problems posed in essay questions, performance tests and multiple-choice questions. The course includes a final exam given during the final exam period designed to simulate bar exam protocols.

LAWS 4033 Representing the Spanish Speaking Client (3 Credits)

This course is a survey of the substantive law of matters likely to be encountered by attorneys representing Spanish-speaking clients in the United States. Topics may include, among others, immigration law, family law, criminal law, employment law, wills and estates, and consumer rights. The course will introduce vocabulary required to communicate with Spanish-speaking clients in the United States, as well as, survey the basic substantive law in each area. The course will be taught in Spanish.

LAWS 4035 Advanced Legal Research (3 Credits)

Students select an area of practice in which to explore all major legal research resources, formats, and costs, and refine their ability to formulate cost-effective research strategies. They will identify an issue of interest and formulate a Legal Research Plan for analysis on the issue; draft a Library Purchase Plan for the practice area; write and revise a legal analysis on the issue; draft a client letter on the legal analysis; consider potential ethical issues for the practice area and write a short paper on these concerns; give an oral presentation; and write a final reflection. This course does satisfy the Upper Level Writing requirement (ULW).

LAWS 4037 European Union Environmental Law and Policy (3 Credits)

The European Union (EU) has become a leading player in the context of European environmental legislation and policy making. Of particular interest has been the underpinning of the EU's single market, and environmental protectin, the importance of which is clearly set out in the European Community Treaty. Matters dealing with climate change, genetically modified organisms, and recycling are now dealt with on a regular basis at EU level.

LAWS 4042 Trial Practice (Advanced) (3 Credits)

This class is an advanced study of trial practice issues and skills. Prerequisite: LAWS 4635.
LAWS 4048 Agency Partnership & LLC (3 Credits)
This is a survey of legal doctrines and legislation that governs the Limited Liability Corporation (LLC). The course material also explores employment and agency relationships and partnerships.

LAWS 4050 Topics in Constitutional Law (3 Credits)
This course provides upper level exposure to constitutional issues not covered in the basic required Constitutional Law course. Topics vary from semester to semester and may include the following: Sexuality, Individual Rights, Causation, Poverty and First Amendment.

LAWS 4060 Alternative Dispute Resolution (3 Credits)
The course examines the full range of contemporaneous dispute resolution processes: negotiation, mediation, arbitration and formal litigation. Conceptual and functional similarities and distinctions between these processes are explored. Additionally, the processes; impacts upon disputants, role of the lawyer, the legal system and social order are reviewed.

LAWS 4064 Introduction to the American Legal System (3 Credits)
This course is designed for international LLM students who have not previously had exposure to either the US legal system or other common law systems. It focuses on the American legal system, include the three branches of government, federalism, the hierarchy of courts, and the anatomy of a law suit. Students will get a rigorous writing experience, drafting at least on legal document, such as a memorandum or a brief. In doing so, students will learn about legal research, analysis, writing, and Bluebooking. Students may also be asked to deliver and oral argument.

LAWS 4065 American Legal History (3 Credits)
This course concerns itself with the interaction between the legal system and social change in what is now the United States. Chronologically, the course materials run from the colonial period to the New Deal, although the nineteenth century will receive particular emphasis. A principal focus is the interrelationship of law, social life, economy, and ideology.

LAWS 4070 Antitrust and Unfair Competition (3 Credits)
The expansion of our economy over time has required the federal government and the courts to rethink their respective roles in regulating business conduct in the United States. The laws regulating business conduct are as dynamic as the notion of competition itself. This course teaches the history and fundamentals of antitrust and unfair competition laws in the United States. This course discusses the competitive problems which arise from monopolization, price and supply agreements, tying arrangements, exclusive dealings, cartel activity and mergers. The course also examines the interplay between federal, state and private enforcement of these laws.

LAWS 4080 Real Estate, Title and Finance (3 Credits)
This is an introduction to real estate transactions as they are encountered in the practice of law. We have shortened the course to a two-hour format to make it more accessible. Our emphasis will be on the representation of a client or an institution in the title and finance aspects of the real estate deal, which are central to every transaction. We will spend less time on contract formation and the role of brokers.

LAWS 4085 Trial Practice III: Trial Practicum (3 Credits)
Trial Practice III - The Trial Practicum (TP) is based upon the same educational platform as Trial Practice III - The National Trial Team (NTT). They are the same course, with the only difference being the TP students do not travel to compete against other schools, rather TP students compete in intra-school tournaments. TTP was created in response to the students who desire to benefit from the intensive study and simulated pre-trial and trial experience received by students on the National Trial Team course, and be "practice ready" upon licensure. This year-long, nine credit (three per semester), course is by invitation-only, and is demanding and intensive.

LAWS 4089 Business Development: Marketing & Client Services (3 Credits)
This course provides students with the tools to effectively market a solo practice and connect with the client. Topics include: client relationship management; social media; building a brand; networking fundamentals; website development; managing client expectations; effective communications; and referrals.

LAWS 4090 Bankruptcy (4 Credits)
This course introduces the federal bankruptcy system and Bankruptcy Code, including both the law of consumer bankruptcy and the law of corporate reorganizations. Topics include the rights of creditors in bankruptcy law and state law, the scope of the automatic stay, the treatment of executory contracts, the sale of assets in bankruptcy, the avoiding powers, bankruptcy planning, the restructuring of corporations in Chapter 11, and the procedure for confirming plans of reorganization.

LAWS 4095 Real Estate (3 Credits)
This course serves as an introduction to contractual, priority of right, and title assurance issues involved in transferring real estate. This is a highly recommended survey course for all law students regardless of specialization because much of the course material is heavily examined on the Multi-state, Colorado and other state Bar Exams. This class also serves as a gateway course for real estate specialists.

LAWS 4096 Patent Law (3 Credits)
This course review the major patent law doctrines. Topics include patentability requirements under 35 U.S.C. 101, 102, 103, and 112, claim construction, various infringement doctrines, affirmative defenses and remedies.

LAWS 4100 Basic Tax (4 Credits)
This course provides students with a general understanding of tax law. Materials cover topics from personal and business deductions, to property basis and depreciation.
LAWS 4105 Business & Commercial Law Sem (1-3 Credits)
Topical seminars scheduled periodically to afford students the opportunity for focused study of business and commercial law matters such as: consumer credit; mergers and acquisitions; corporate practice; bankruptcy; antitrust; quantitative evidence; representation of minority–and women–owned business firms. Prerequisite: LAWS 4190.

LAWS 4110 Business Planning (3 Credits)
The course introduces students to the transactional lawyering considerations involved in forming and representing an emerging growth business. The course examines the life cycle of a start-up company, including selecting the appropriate entity form, structuring the economic interests and managerial control among various owners, considering the lawyer's duties to the entity in dealing with its founders and management, and documenting various approaches to raising capital. Using a simulated deal format, students will draft, review and analyze documents typically used in organizing and financing a start-up business.

LAWS 4112 Trademark Law (Advanced) (2 Credits)
This seminar focuses on complex practical and legal issues confronted by today's trademark practitioners, ranging from brand protection strategies to litigating equitable relief claims for trademark infringement. The course also covers how trademark principles are being applied to the internet and e-Commerce. The course focuses on U.S. trademark law, but includes exposure to the aspects of international trademark law that are most frequently encountered by U.S. trademark practitioners. The course calls for students to participate in hands-on exercises, such as developing a new brand and arguing a preliminary injunction motion. The course requires a basic familiarity with trademark law, but the specific Trademark Law class is not a prerequisite. Prerequisite: LAWS 4310 or equivalent.

LAWS 4115 Trademark Law (3 Credits)
This course covers common law doctrines. Topics include the acquisition and preservation of trademark rights, false advertising claims, infringement doctrines, defenses, and remedies, with attention to internet issues and recent developments in the law. Recommended prerequisite: LAWS 4310.

LAWS 4117 Taxation of Property Transactions (3 Credits)
This course includes basis of property; capital expenditures and current expense comparison; depreciable status; amortization of intangible property; depreciation methods; property casualties and losses; profit or loss computation and characterization for taxable property dispositions; limitations on passive losses; lessor and lessee reporting; tax-deferred dispositions. Cross listed with TAX 4110.

LAWS 4120 Civil Procedure (4 Credits)
This required introductory course examines how Constitutional statutory and judicial rules frame the determination of court controversies. They also explore the doctrines, remedies, and other principles pertinent to judicial dispute resolution.

LAWS 4129 Comparative Corporate Law Seminar (2 Credits)
Comparative Corporate Law examines the system for forming and managing businesses in the United States and overseas. We examine the impact of culture and other factors on legal regimes and examine whether a uniform international system is developing. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4131 Commercial Law Survey (4 Credits)
This course provides an introduction to the concepts and methods of commercial law. As a survey course, it explores the major Articles of the Uniform Commercial Code, namely, Article 2 (Sales), Article 9 (Secured Transactions), Article 3 (Payment Systems), as well as Article 5 (Letters of Credit) and Article 7 (Documents of Title). In addition, the intersection of Article 9 and Bankruptcy Law will be discussed in some depth. The completion of this course gives students a firm footing for any advanced course in commercial law. Students taking only one course in commercial law receive broad exposure to the basics of commercial law.

LAWS 4132 Colorado Legal Research (2 Credits)
This course introduces students to legal materials generated by executive/administrative, legislative, and judicial branches of Colorado government. Students develop research strategies for answering legal questions using primary and secondary resources and learn to relate the various sources of authority to the structure of Colorado government. Students are required to bring laptop computers to class.

LAWS 4133 Corporate Social Responsibility (3 Credits)
Corporate Social Responsibility represents the integration of a various environmental, social, ethical, and even political considerations into basic business strategies to produce a positive impact on society while still earning profits. With increasing frequency, consumers and investors reward companies that embrace CSR by purchasing their products and stock. This seminar in Corporate Social Responsibility explores a variety of pressing legal issues involving corporate governance, sustainable development, shareholder activism, executive compensation, the role of religion in the boardroom, international regulation, and CSR certification, among other topics. Through the readings and discussions, students examine the American approach to CSR in light of international regulatory efforts and models of socially responsible business practices in various countries around the world. Students gain a greater sense of the special role lawyers play in the burgeoning CSR movement by examining some sophisticated examples of corporate strategy, planning, and litigation on CSR matters. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4135 Comparative Law (3 Credits)
Comparative Law is the study of the foundation of legal traditions and systems which exist in the world today. The major topics covered in this course are legal history and culture; legal structures; legal actors; and procedure and sources of law. The interactive course begins with an overview followed with coverage of each of the topics in relation to the United States legal system. We then cover the same topics in relationship to the common law tradition and the civil law tradition.
LAWS 4137 Comparative Environmental Law (3 Credits)
Comparative Environmental Law is an introduction to the growing network of international law (multilateral and bilateral treaties, customary law, adjudications, etc.) that govern environmental law. The course focuses on international legal issues including global climate change; trans boundary pollution; resource depletion; toxic waste export; biodiversity and wildlife/plant extinction; deforestation; desertification; ocean pollution; sustainable development; etc. (The internal domestic environmental laws of individual countries receive some attention as does trade law, but these are covered with more detail in Comparative Law and International Business Transactions, respectively).

LAWS 4139 Commercial Law for Foreign Investors in Guatemala (2 Credits)
This class uses the Dominican republic-Central America-United States Free Trade Agreement (CAFTA-DR) and the North American Free Trade Agreement (NAFTA) to examine the legal framework regulating foreign investment in Central America and Mexico. With Guatemala’s ratification of CAFTA-DR, Guatemala opened its doors not only to trade but also to foreign investment, including from U.S. companies looking to do business in Guatemala. While the CAFTA-DR includes norms that govern the relationship between foreign investors and Member States, the domestic laws of each Member State continue to provide the central regulatory structure that governs relations among the parties, including in the areas of commerce, intellectual property, labor and the environment. This is an introductory course that examines the principle commercial norms that would apply to foreign investors in Guatemala, with a special emphasis on the law of contracts. The course examines the comparable norms applicable under NAFTA and introduces the topic of how CAFTA’s ratification has promoted rule of law reforms in Guatemala in the areas of commerce, intellectual property, labor and the environment. This course is taught in Spanish.

LAWS 4143 Commercial Paper (2,3 Credits)
This course introduces students to Article 3 of the Uniform Commercial Code, Negotiable Instruments. After studying this part of the UCC at the beginning of the semester, students will engage in a simulated, complex business transaction for the remainder of the course. The simulation involves problem solving, extensive document drafting, client counseling and professionalism, among other topics. The simulation involves transactions in a business/banking context, but is not an overview of banking law.

LAWS 4144 Comparative Free Speech and Access to Information in the Americas (2 Credits)
This course looks at the history and text of the guarantees of free speech in the constitutions of the United States and Latin American countries, including Guatemala; at judicial decisions interpreting them; and at the actual scope of those guarantees of free speech in practice, with emphasis on the function of free speech in facilitating democracy. The course also looks at the impact of globalization on free speech guarantees, including the impact of international treaties, the activities of NGOs, and speech on the Internet. The course compares the systems for providing citizens access to government information in the U.S. and Latin America, particularly Guatemala, and looks closely at areas where interest in disclosure and secrecy conflict.

LAWS 4145 Computer and Internet Law (3 Credits)
Computers and Internet Law is designed to consider the areas in which computer technology and the legal environment intersect. This includes legal protection of computer software; contracting for computer services; computer data banks and privacy; the check-less society; and the relationships between Federal Communications Commission policies and computers.

LAWS 4160 Conflict of Laws (3 Credits)
Conflict of Laws is an analysis of legal problems arising in cases when at least one of the operative facts cuts across state or national boundaries. Topics covered include problems of interstate jurisdiction over parties and subject matter: the application of principles of full faith and credit and comity on the recognition and enforcement of interstate and multinational judgments; the comparison of various theories of law choice in the context of the Constitutional threshold constraints of the due process and full faith and credit clauses.

LAWS 4164 Constitutional Law (4 Credits)
This required introductory course examines the role of the United States Supreme Court and, in particular, the Court’s power in exercising judicial review in cases interpreting the U.S. Constitution. The course focuses primarily on two topics. First is the doctrine of Separation of Powers: examining the structure and interrelationship of the three branches of the federal government, Congress, the Executive Branch, and the federal judiciary. Second is the doctrine of Federalism: the relationship and power distribution between the federal government and state governments. In addition, all sections devote part of the course to an introduction to at least one aspect of the large field of individual constitutional rights. The specific rights covered vary by instructor. Among the possible topics are: the Equal Protection Clause and Due Process Clause of the Fourteenth Amendment, the First Amendment, and/or the Fifth Amendment’s Takings Clause. Students who wish to gain a deeper understanding of these topics are strongly encouraged to take Constitutional Law II.

LAWS 4166 Constitutional Law II: Individual Rights (3 Credits)
Topics vary from semester to semester and may include the following: Sexuality, Individual Rights, Causation, Poverty and First Amendment. This course provides upper level students exposure to constitutional issues not covered in the basic required Constitutional Law course.

LAWS 4168 Constitutional Litigation Seminar (3 Credits)
This course examines individual and class action litigation brought against government officials for the violation of constitutional rights under 42 U.S.C. section 1983, the primary federal civil rights statute, and other civil rights statutes. The historic interplay between substantive Constitutional law and traditional doctrines of tort liability has developed into an entire body of law under section 1983 that any civil rights or government lawyer must regularly confront. The seminar focuses on the most critical substantive issues in pursuing Constitutional litigation. This includes the history and purposes of section 1983; the elements of constitutional torts; rules governing liability of government officials and municipal liability; immunity doctrines; remedies; jurisdictional and procedural barriers to section 1983 litigation; and recovery of attorney’s fees. The class also discusses the availability and viability of alternative remedial mechanisms to section 1983. Prerequisites: LAWS 4165 and LAWS 4166.
LAWS 4169 Constitutional Law Writing Seminar (3 Credits)
This course satisfies the Upper Level Writing requirement (ULM). Permission by instructor only.

LAWS 4175 Contracts (4 Credits)
Consideration of the restatement of contracts and the relevant provisions of the Uniform Commercial Code. Legal protection accorded contracts: remedies and measure of recovery; damages; specific performance; restitution. Elements of agreement: preliminary negotiations; agreements unenforceable for indefiniteness; mutual assent. Consideration and the seal; bases of contractual liability; consideration; reliance and estoppel; mutualty. Problems of offer and acceptance; termination of offeree's power of acceptance; contracts concluded by correspondence; unilateral contacts—notice, knowledge, revocation of offer; contracts implied from conduct. Special problems of consideration. Third-party beneficiaries. Assignment. Effects of changes or unforeseen circumstances. Conditions in contracts—problems of craftsmanship; express and implied conditions; conditions precedent, subsequent and concurrent; severability of contract provisions. Procedures after default. The Statue of Frauds.

LAWS 4178 Contracts Drafting (3 Credits)
This course addresses the perspectives and skills that a lawyer must develop in order to assist clients with transactional work and aligning business objectives and contracts. In addition to delving deeper into selected areas of substantive contract law, students read materials that focus on writing and interpreting contractual provisions. Because a core focus of the class is writing for contracts, students regularly engage in drafting exercises to hone their drafting skills. The course also focuses on negotiation in a transactional setting, and how discussions with both clients and other parties can distill the key business terms that are to be reflected in a contract. Although substantive law and theory is utilized throughout the course, the primary objective of the course is exposing students to some of the practical, real-world skills essential to a transactional law practice.

LAWS 4179 Construction Law Seminar (3 Credits)
This course examines the legal relationships, obligations, rights, and remedies that govern the diverse parties to a construction project, including owners, lenders, contractors, material men, sureties, insurers, subcontractors, laborers, and others. A substantial portion of construction law (and accordingly, the primary focus of this class) is advanced contract law. Experience in the construction industry is not required, but those students who are unfamiliar with construction will benefit from spending a little extra time learning basic construction concepts and processes.

LAWS 4181 Corporate Drafting Seminar (3 Credits)
Corporate drafting focuses on writing responsive, lucid, unambiguous corporate documents. Students assume the role of the in-house counsel and other members of the corporate negotiating team as the team structures, negotiates, drafts, and implements corporate transactions. This course requires extensive writing. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4185 Business Entities (4 Credits)
The course provides an overview of the differences in the operation of a trade or a business as an LLC/LLP an S-Corporation and a C-Corporation. The class offers an overview of the state law requirements for the operation of each type of business (Model Business act and LLC/LLP state statutes) and the difference in the tax treatment for each type of business. The objective is to give students a basic understanding of some of the do's and don'ts for each business and how they might advise a client as to the preferred business form in typical factual situations. The class explores both the legal and tax effects during the life cycle of any business, including formation, operation, distribution, redemption, sale of an interest, liquidation, mergers and divisions, and the death of the owner. Prerequisite: LAWS 4100.

LAWS 4186 Corporate Taxation I (3 Credits)
The federal income taxation of corporations and their shareholders with emphasis on the creation of the corporation, establishment of its capital structure, operational alternatives, distribution to shareholders, stock dividends and redemptions, personal holding company, and accumulated earnings tax. Cross listed with TAX 4200.

LAWS 4187 Corporate Taxation II (3 Credits)
A continuation of Corporate Taxation I with emphasis on corporate reorganizations, operation, liquidation of subsidiary corporations and corporate division, and carryover of tax attributes. Cross listed with TAX 4300. Prerequisite: LAWS 4186.

LAWS 4188 Corporate Taxation III (3 Credits)
Advanced corporate taxation problems with emphasis on collapsible corporations; liquidations; detailed study of sections 305, 36, 307; loss carryovers and Subchapter S corporations. Cross listed with TAX 4330. Prerequisite: LAWS 4186.

LAWS 4190 Corporations (4 Credits)
Corporations provides students with a basic introduction to corporations, including the roles of shareholders and creditors. The instructor also covers the various duties and liabilities of offices and directors, and supplies a brief overview of the applicability of the federal securities laws.

LAWS 4195 Criminal Law (4 Credits)
The course explores the definition of crime and criminal liability.

LAWS 4197 Victim's Rights (3 Credits)
Victim's rights has emerged as an important arena for the criminal justice field in the 21st Century. Anyone planning a career in criminal justice will want to engage in this seminar class to learn about the law and its application to victim's rights. This class is designed to explore beyond advanced criminal procedure the role of the criminal justice system and its response to victim's. In-depth discussions will be held about victim's rights and criminal procedure.

LAWS 4200 Criminal Procedure (3 Credits)
Criminal Procedure outlines Constitutional and other rules regulating pretrial evidence acquisition by government officials in criminal matters. The course commonly includes the following topics: an overview of criminal justice administration; arrest; search and seizure; the exclusionary rule and its administration; wiretapping electronic eavesdropping; entrapment; interrogation; and confessions and lineup practices.
LAWS 4201 Death Penalty Jurisprudence (3 Credits)
The course is designed to make students aware of the substantive body of law surrounding the modern death penalty and the policy issues raised by the law. The course begins with the class constructing a fair death penalty. Students decide whether they, as the omnipotent legislature, want a death penalty. Then, students construct one that is fair, just and humane, and that achieves the goals that they have established for their death penalty.

LAWS 4202 Disability Law (3 Credits)
This course examines the growing area of disability law. Topics to be covered include discrimination based on disability in employment and public accommodations, as well as the requirement for educational institutions to provide special education services to disabled students. Relevant federal statutes are examined, including the Americans with Disabilities Act (with special emphasis on the ADA Amendments Act of 2009), Section 504 of the Rehabilitation Act, and the Individuals with Disabilities in Education Act.

LAWS 4203 Elder Law (3 Credits)
The course explores a range of issues relevant to legal counseling of elderly clients, such as mental and physical impairments, public assistance, Medicaid, social security, nursing homes, guardianships, trusts, and right to die issues.

LAWS 4205 Employment Law Survey (3 Credits)
This course provides a broad overview of the field of employment law. It begins with an exploration of the employer/employee relationship and the "at will" rule. It then addresses various constitutional, statutory, and common law doctrines that tend to be applied to the employer/employee relationship, often as exceptions to the "at will" rule. Contract, tort, and anti-discrimination doctrines will be covered, as well as constitutional doctrines addressing free speech and privacy in the workplace, and regulatory regimes addressing wages and hours. Finally, this course explores the post-employment relationship, including trade-secrets and non-competition agreements. These topics are addressed at both a theoretical and practical level.

LAWS 4206 Environmental Law Clinic (3-6 Credits)
The goal of the Environmental Law Clinic of the Student Law Office (SLO) is to protect the environment and public health, while teaching students practical legal skills that will translate into any practice area. Students applying for the Environmental Law Clinic are asked to select between two tracks: the Federal Wildlife Project or the Colorado Urban Project. Students who select the Federal Wildlife Project (FWP) track in the Environmental Law Clinic will work on the preservation of endangered species and their habitats throughout Colorado and the western United States. Students who select the Colorado Urban Project (CUP) track in the Environmental Law Clinic will work to address the emerging environmental issues along Colorado's urban Front Range. This course may satisfy the Upper Level Writing Requirement (ULW). Corequisite: LAWS 4802. Prerequisite: LAWS 4235 and LAWS 4425.

LAWS 4210 Energy Law (3 Credits)
Energy Law presents the regulation of production, conversion, transportation, distribution and pricing of fossil, hydro, nuclear, and other conventional sources of primary energy. It also offers insight into the regulation of renewable energy resources, including energy from the sun, wind, biomass, oceans, earth (geothermal), and rivers (including low-head hydro). There is an emphasis on new legislative and judicial development relating to these various energy sources. The course is taught in a seminar format, and students present and critique classmate papers as part of the class. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4212 Public Interest Capstone (0 Credits)
This is a zero-credit opportunity for JD students nearing graduation that will allow for the informal community building that is so critical for sustaining student commitment and public interest attorneys for the long term. It will be a time for sharing, refection, camaraderie, and connections, as well as advising and planning for a career in the public sector.

LAWS 4214 Copyright Law (3 Credits)
This course covers the major copyright law doctrines. Topics include the subject matter of copyright, the scope of protection, rights conferred, infringement doctrines, defenses, remedies, and attention to particular industries and recent development in the law. Recommended prerequisite: LAWS 4310.

LAWS 4215 Entertainment Law (3 Credits)
Entertainment Law focuses on issues that have an impact on the entertainment industry. Topics include copyright; service and trademark; licensing; publishing; unfair competition; antitrust; agency; and labor law. The class also explores publishing agreements.

LAWS 4218 Discovery Practicum (3 Credits)
Most civil litigations never get to trial. Instead, these cases are settled after the discovery period has revealed the strengths and weaknesses in the case. This course focuses on the instruments, rules, and case law governing discovery of information in litigation: interrogatories, document requests, requests for admissions, and depositions. It is taught in the form of a "whole-course simulation," which means students will represent a party and have an opposing counsel in a simulated litigation throughout the course. Students prepare and serve discovery documents (just as in practice), take, defend, and act as a witness in a deposition, and reach a settlement of the case at the end of the course. Because of the nature of the course and the many practice documents prepared during the semester, there is no final examination. This course will satisfy the Upper Level Writing requirement (ULW). This course is a "Carnegie Integrated Course."

LAWS 4219 Environmental Ethics & Justice (3 Credits)
This course provides a broad analytical consideration of ethical environmental policy-making. Students consider the historical aspect of environmental ethics as the various ethical approaches to making a decision concerning the environment. The class also explores the roles that the law, economics, and society's values play in environmental ethics.
LAWS 4220 Environmental Law (3 Credits)
Environmental Law covers the major federal laws and programs for environmental protection. These laws and programs include the National Environmental Policy Act; Clean Water Act; Clean Air Act; Resource Conservation and Recovery Act; and Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Although the course focuses primarily on federal statutory law, it also incorporates some discussion of common law remedies. Recommended prerequisite: LAWS 4025.

LAWS 4224 Employment Law Benefits (3 Credits)
This course is a statute and case law course that introduces students to Employment Retirement Income Security Act (ERISA), the important federal law that controls the design and operation of virtually all employee benefit plans. The course offers students an understanding of the application of ERISA and how ERISA issues arise in business and private law practice. The classroom scenarios include lecture, problem solving and role playing to identify the kinds of experiences students are likely to experience in private practice.

LAWS 4225 Estate and Gift Taxation (3 Credits)
This class is a study of the federal estate tax; federal gift tax; and federal generation skipping transfer tax.

LAWS 4227 Employment Discrimination Law (3 Credits)
This course concerns federal constitutional and statutory law that prohibits discrimination in the workplace, including regulation of both private employers and the federal government. The course covers theoretical issues, such as the definition of equality, and practical problems that involve the complex procedural requirements of the applicable statutes.

LAWS 4229 Employment Law Seminar (3 Credits)
Students select topics relating to current issues in labor and employment law and will write publishable articles based on independent research. Students present their papers to the class toward the end of the semester. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4230 Estate Planning (2 Credits)
Estate analysis, including fact gathering and the analysis of data; the psychological aspects of “role playing” in estate planning; the members of the team (the attorney, the CPA, the life underwriter, the trust officer); life insurance in an estate and business planning context; planning with trusts, including revocable, short-term, and irrevocable; the transfer of a closely held business interest from one generation to the next, including full and partial stock redemptions, cross purchase agreements, private annuity, installment sale, retirement, recapitalization, qualified and nonqualified plans of deferred compensation; special estate planning considerations for the professional corporation, the highly paid executive, and the farmer and rancher; specific cases analyzed.

LAWS 4232 European Union Law (3 Credits)
The European Union (EU) has been described as the 21st century's newest superpower. Bearing in mind the rapidly growing importance of the EU, this course introduces EU law, and emphasizes its historical underpinnings, institutional framework, legal procedures, and internal market. Moreover, emerging policies (e.g. enlargement, environment) are considered. The course examines these topics in the context of European political integration and where appropriate, the ongoing tension in the trans-Atlantic relationship between the EU and United States.

LAWS 4233 Evidence (4 Credits)
This required course is an introduction to procedural rules that regulate the use of evidence at trial, including coverage of the mode of examination, relevance, impeachment, character evidence, hearsay, expert evidence, and privileges. Particular attention is paid to the Federal Rules of Evidence.

LAWS 4236 Election Law (3 Credits)
This course examines Federal Election Law, specifically the Voting Rights Act; federal legislative districting; federal regulation of political parties; and the evolution of federal campaign finance law. The course does not address state campaign finance issues, ballot initiatives, or term limits. However, it may touch on those topics if time permits.

LAWS 4237 Evidence Practicum (3 Credits)
This practicum is designed to help students build trial skills and make the transition from evidence law learned in the classroom to evidence used in the courtroom. It provides simulation-type experiences requiring students to understand the foundations required to admit different kinds of evidence, to anticipate evidentiary issues, to make and to respond to objections, and to prepare examinations designed to avoid objections. The course supplements Trial Practice by focusing heavily on the rules of evidence. Prerequisites: LAWS 4235.

LAWS 4238 Exempt Organizations (2 Credits)
The statutory exemption for “charities,” social welfare and social clubs, homeowners' associations, fraternal orders, employee benefit organizations, mutual or cooperative companies, business and professional leagues, labor unions, exempt organizations, property title companies, federally organized or chartered organizations, and political organizations' activities, funds, and lobbying activities; prohibited transaction rules; the private foundation; the unrelated business and debt-financed income tax exposures; excise tax exemptions; administrative appeal and declaratory judgment procedures; anti-discrimination considerations; charitable contributions. Crosslisted with TAX 4430.

LAWS 4240 Family Law (3 Credits)
This course is an examination of laws that involve and/or regulate families. Students learn the legal rights of families in cases incidental to marriage or without marriage. This includes child-parent relationships and the dissolution of marriage. This class also provides students with an understanding of new familial relationships.
LAWS 4250 Federal Courts (3 Credits)
This is an advanced public law course that examines the role of the federal courts in our constitutional system. It focuses on the federal courts' role and power in relation to the other branches of the national government (separation of powers) and in relation to state and local governments (federalism). Specific topics include: the organic judicial powers of the federal judiciary, including Article III's Case or Controversy requirement; congressional power to restrict or expand federal jurisdiction, the Supreme Court's power to review state court rulings on federal law by direct appeal and on collateral review (habeas corpus), federal question jurisdiction, federal civil rights law under 42 U.S.C. § 1983, and many of the doctrines that limit federal judicial power to provide remedies to parties whose federal constitutional and civil rights have been violated, including official immunity, state sovereign immunity, and the abstention doctrines. It is highly recommended for students interested in pursuing federal judicial clerkships and/or careers in federal civil rights litigation, government representation, or other federal litigation.

LAWS 4251 Federal Wildlife Law (3 Credits)
This course covers federal wildlife law beginning with the Constitutional underpinnings of federal wildlife law. It focuses on the Endangered Species Act with some coverage of the Migratory Bird Treaty Act. The course takes new approaches to species and habitat preservation, paying particular attention to Colorado species.

LAWS 4259 Global Climate Change Law and Policy (3 Credits)
As concern over the threat of global climate change spreads, action on greenhouse gas emissions (GHGs) is increasingly commanding attention. This seminar consists of supervised research and writing on the issue of climate change and the legal and policy responses. The course focuses on the effects of climate change on development and the environment in industrialized and developing countries and the laws in the international, regional and domestic arenas that address the problem.

LAWS 4260 Gender and the Law (3 Credits)
The course examines the role of gender in many areas of the law, including employment discrimination and reproductive rights. Provides perspectives on the effects of gender-based hierarchy on the structure of the law and legal processes. Explore contemporary feminist jurisprudence and the impact of women in the legal profession.

LAWS 4262 Sexual Orientation Law Seminar (3 Credits)
This seminar offers an opportunity for students of any or no sexual orientation to study the relationship between law and sexual orientation to study the relationship between law and sexual orientation. Historically, law in the United States consistently and pervasively regulated the realm of human identity and behavior we call sexuality. Questions and claims challenging traditional assumptions about sexual orientation surfaced in the last twenty-five years. Our study of sexual orientation and law allows us to view the relationship between law and society through a new lens, that of sexual orientation. Specifically, we examine issues of sexual orientation arising in areas ranging from constitutional law criminal law, employment law, family law, health law, immigration law, to tax law. We discuss some or all of the currently controversial issues relating to sexual orientation and law, including such topics as the proliferation of both nondiscrimination laws and anti-gay initiatives like amendment 2 in Colorado, the constitutionality of laws prohibiting specified sexual behavior between different-sex and same-sex adults, the constitutionality of laws limiting the right to speak about sexual identity, public and private employment discrimination against gays and lesbians including the military ban on persons who are openly gay or lesbian, and discrimination against same-sex couples with respect to marriage, parenting, health benefits, and taxes.

LAWS 4265 Government Contracts Seminar (3 Credits)
This seminar provides an in depth examination of the unique statutory, regulatory and administrative process used by the U.S. Government when it annually spends more than $1 trillion taxpayer dollars to contract for goods and services used by Federal departments and agencies. Topics include the contract award and contract administration processes, with an emphasis on practical solutions to issues which routinely confront attorneys who advise businesses that do business with the Government.

LAWS 4270 LLCs and Operating Agreements (1 Credit)
This course provides an overview of limited liability companies, including the attributes and characteristics of LLCs, the pros and cons of the LLC form, and a comparison of LLCs to other types of entities. The course also covers the structure and components of the operating agreement, including an in-depth examination of various provisions included in operating agreements. In conjunction with the course content, students will also be exposed to client interview techniques for in person client meetings, as well as client conference calls.

LAWS 4276 Health Law (3 Credits)
This survey course introduces students to the legal environment of health care shapes both its quality and its distribution. The course begins with a foundation in how health care is both provided and financed in the U.S., including managed care, Medicare, and Medicaid. This foundation sets the stage for studying the laws and policies that impact health law, including ERISA, antitrust, fraud and abuse, the False Claims Act, Stark, and HIPAA. This course does not focus on bioethics or medical malpractice. Students must submit a publishable quality paper on a health law topic approved by the professor. This course will satisfy the Upper Level Writing requirement (ULW).

LAWS 4277 Holocaust Seminar (3 Credits)
This class focuses on conceptions of individual and state accountability. By understanding how the Holocaust occurred, and how individual and collective acquiescence combined with affirmative conduct, we can begin to grasp the complex web that created a moment in time where morality and civilization were abdicated and almost eradicated. We examine how law, culture, power, ignorance and fear combined to create the Final Solution, and how conceptions of moral agency and accountability were forged in flames that marked the death camps. Students read narratives of resistance and collaboration and historical accounts of how the U.S., Europe and religious institutions interacted with the Third Reich. Through the readings and discourse that follow, students have the unique opportunity to question what constitutes moral agency and how individuals and cultural systems should be held accountable for circumstances that created the Third Reich and its ideology. This class is interdisciplinary thereby integrating law with literature, political theory and philosophy. Prerequisite: instructor's permission.
LAWS 4280 Huges Research Seminar (1-5 Credits)
Topic of Seminar to be determined by Hughes Research professor teaching the course.

LAWS 4285 Legal Research Skills - Advanced (0 Credits)
This zero-credit course introduces students to sources and methods for administrative law and legislative history research as well as subject-specific research on selected topics such as securities, natural resources, intellectual property, immigration, environmental and international law. Topics change each semester. Print and electronic materials are used throughout the course. Students must attend twelve (12) classes and pass the post-class assignments to complete the course successfully.

LAWS 4287 Legal Research Skills - Basic (0 Credits)
This zero-credit course introduces students to the basic primary sources of American law (cases and statutes), secondary sources, the Bluebook and citators and other tools for updating research. Print and electronic materials are used throughout the course. Students must attend eight (8) classes and pass the post-class assignments to complete the course successfully.

LAWS 4288 International and Human Rights: Indigenous Peoples (3 Credits)
This course explores some of the major contemporary legal issues facing indigenous peoples across the globe. The course covers issues as far ranging as: how indigenous groups are defined under the law; ethical and legal issues pertaining to indigenous self-governance including the tension between minority rights, individual rights, and democratic precepts; the uneasy application of self-determination law to indigenous self-governance; the implications of human rights, environmental, intellectual property, and international trade regimes for indigenous peoples; and international legal texts affecting indigenous peoples, such as the United Nations Declaration of the Rights of Indigenous Peoples. At the option of the individual student, this course can be used to satisfy the Upper Level Writing requirement (ULW).

LAWS 4289 Legal Research Skills - International (0 Credits)
This zero-credit course introduces students to sources and methods for international, comparative and foreign law research. Topics may include treaty research, international trade law, human rights law, international intellectual property law, customary international law and private international law. Topics change each semester. Print and electronic materials are used throughout the course. Students must attend twelve (12) classes and pass the post-class assignments to complete the course successfully.

LAWS 4290 Human Rights Law (2 Credits)
The course provides an introduction to international civil and political rights and economic, social, and cultural rights in the international arena. It also covers the means available to protect such rights of the individual and groups. The focus is on the implementation part at the United Nations and other international, regional and national settings. Prerequisite: LAWS 4320.

LAWS 4292 Individual Tax Problems (3 Credits)
Using the Internal Revenue Code and the Federal Income Tax Regulations as a basis, substantive issues relating to individual taxation are covered. Areas included are general concepts of gross income, individual employee benefits and deductions, charitable deductions, alternative minimum tax, deductibility and classes of interest, office in home and vacation homes, and a general overview of the interrelationships of various statutory and non-statutory principles. Cross listed with TAX 4020.

LAWS 4295 Immigration Law (3 Credits)
This is a study of the historical development and current jurisprudence in American immigration law. The course examines such concepts as sovereign authority, exclusion, expulsion and asylum, and current developments in the area.

LAWS 4299 Immigration Law Advanced (3 Credits)
This course provides theoretical and practical approaches to the representation of non-citizens in removal proceedings. This course is designed for students who have an interest in practicing immigration law with a focus on deportation and removal practice before the Department of Homeland Security, the Executive Office for Immigration Review, and the federal courts. The goal of this course is to give students a theoretical framework for identifying and assessing immigration issues, including immigration consequences of criminal convictions, and for formulating strategies for effective prosecution and representation of non-citizens in removal proceedings. The instructor also teaches the practical tools and procedures, which students may apply to actual case representation. Prerequisite: LAWS 4295 or an immigration related externship.

LAWS 4300 Federal Indian Law (3 Credits)
This introductory course surveys the body of “Federal Indian Law,” focusing on the legal relationship between Indian nations and the United States, including implications of this relationship for states and individual citizens. The course covers the historical origins of federal Indian common law, the development of federal Indian policy, and tribal sovereignty in the modern era (tribal property, jurisdiction, criminal and civil governance, and economic development including gaming). It may provide a brief introduction to the Indian Child Welfare Act, religious and cultural freedoms, tribal law, and indigenous peoples in international law, if time allows.

LAWS 4303 International Criminal Law Practicum (3 Credits)
In this course, the class collectively analyzes the genocide, war crimes and crimes against humanity charges against an accused in a major international tribunal prosecution. Each student is assigned witnesses in the case and is expected to analyze that testimony and record their work in the case database using Casemap software meticulously following previously established protocols. The work involves the students learning the nature of the conflict generally, thoroughly learning the indictment against Taylor, getting up to speed on the law of war crimes and crimes against humanity, and finally assessing the witness testimony for relevant facts and attributing those facts to the legal outline in the case.
LAWS 4304 Insurance Law (3 Credits)
A comprehensive overview of laws, standards, concepts and remedies related to Insurance, including: interests protected by Insurance; selection and control of risks; insurable interest; the principle of indemnity; types and classifications of Insurance; making, dealing with and termination of insurance contracts; underwriting and claims handling; regulation of Insurance and insurers; subrogation; and extra-contractual liability. This course will satisfy the Upper Level Writing requirement (ULW).

LAWS 4309 International Law and the Use of Force (3 Credits)
This course deals with the two aspects of the use of force by countries: the initial decision to resort to force and then the regulation of that force once the conflict begins. In 1945, the United Nations Charter set out to prohibit the resort to force by its member states except in two limited situations: self-defense or where authorized by the Security Council. The Geneva Conventions and its protocols, as well as customary international law, regulate how that force is applied. The subject of this course is how these provisions have been interpreted since 1945 and trends in the law that will guide us in the future.

LAWS 4310 Introduction to Intellectual Property (3 Credits)
This survey course covers the basics of United States intellectual property law, including patents, copyrights, trademarks, and trade secrets. The course addresses the policies underlying the protection of intellectual property and compares the different ways organizations and individuals can use intellectual property to protect their interests. This course is intended both for students who want an introduction to intellectual property and for those who intend to pursue a career in intellectual property law.

LAWS 4315 International Business Transactions: Survey Course (3 Credits)
This course provides students with a general overview of international business transactions. The course examines the legal framework of international sales transactions including the commercial terms of the sales agreements, shipping contracts, insurance, financing arrangements and customs documentation. The course also examines the foreign direct investment transaction, international franchise and distribution agreements. The regulation of international business is reviewed, with special attention to the World Trade Organization agreements and regional trade areas.

LAWS 4317 International Environmental Law (3 Credits)
This is an introduction to International Environmental Law -- the expanding field of multi-nation treaties, laws, judicial decisions, policies, practices, and politics governing the global environment. IEL backgrounds students on the 21st century's hottest international law topics -- sustainable development, climate change, transboundary air and water pollution, natural resources development, international trade, toxic waste and recycling, and protection of wildlife, ecosystems, human life, and human rights.

LAWS 4318 International Business Transactions: Federal Regulation (3 Credits)
IBT: Federal regulation examines the ability of the federal government to control international trade. The focus of the course is US export controls, embargoes, anti-terrorism regulations that apply to international commerce, and the Foreign Corrupt Practices Act. Students prepare a compliance program integrating these regulations into a workable framework for a company.

LAWS 4319 International Human Rights (3 Credits)
The seminar begins with a general overview of international human rights as put forth in the International Bill of Rights. The second part of the course focuses on the emerging area of corporate social responsibility and human rights. The last part of the seminar consists of student presentations on the topics of the research papers required for the course. This course will satisfy the Upper Level Writing requirement (ULW).

LAWS 4320 International Law (3 Credits)
International Law is the foundational course in public law, treaties, systems, and policies that bind nations into a world community of law. The class places special emphasis on the origins of international law; statehood; international responsibility and claims; use of force; and human rights.

LAWS 4341 International Commercial Arbitration (3 Credits)
This course uses the Willem C. Vis International Commercial Arbitration Moot Competition to give students practical skills-based training in the most important aspects of international commercial arbitration and international sales law. The Vis Moot is based on a problem governed by the U.N. Convention on Contracts for the International Sale of Goods (the “CISG”).

LAWS 4342 International and Comparative Mining Law (3 Credits)
The course deals with basic concepts of mineral law, as practiced in various jurisdictions. This includes exploration, mining and environmental protection and reclamation issues. It then focuses on the current evolution and legal and policy status of mining legislation, mineral investment agreements, and major actors. Students completing this course develop a basic understanding of the general approaches, legal frameworks, policies and agreements used to regulate the mining industry in key jurisdictions outside the United States. This course is taught in English.

LAWS 4343 International and Comparative Petroleum Law (3 Credits)
The course deals with basic concepts of international law relating to petroleum investment, current elements of petroleum legislation, and petroleum investment agreements (production-sharing, concession, joint venture, service, management contracts). Also, students explore such aspects of petroleum law as dispute settlement and legal status. The instructor will discuss the major actors (international petroleum companies, state petroleum enterprises, Ministries of Energy) and their legal and policy status. Students completing the course leave with a basic understanding of the general approaches, policies, and agreements used to regulate the petroleum industry in key selected jurisdictions outside the United States.
LAWS 4344 International Tax (3 Credits)
Introduction to U.S. international taxation with an equal emphasis on inbound and outbound transactions. Resident and nonresident alien taxation, withholding taxes, effectively connected (business) income, foreign investment in U.S. real estate, tax treaties, branch taxes, earnings stripping, conduit financing rules, foreign earned income exclusion, classification of foreign entities, foreign tax credit, foreign personal holding companies, controlled foreign corporations, passive foreign investment companies, export transactions, Subpart F manufacturing rules, outbound property transfers, and transfer pricing. Cross listed with TAX 4420.

LAWS 4345 Jurisprudence (3 Credits)
The course is designed to introduce several contemporary modes of legal thought. The course is an exploration and critical evaluation of these differing perspectives on law are pursued to foster an understanding of the interdependency between legal philosophy and legal decision process, the role law plays in our culture, and the social and philosophical impediments to law's effectiveness.

LAWS 4347 International Environmental Law in Latin America (2 Credits)
This course examines the role of international law in promoting cooperative solutions to some of the most pressing environmental problems confronting the planet. The course begins with an introduction to the international law framework within which international environmental law has developed, and emphasizes the relationship between international environmental law and international human rights law. The course then uses several case studies to analyze the legal regimes that have developed to address environmental problems of particular relevance to Latin America, including protection of biodiversity, climate change adaptation and mitigation, and protection of water resources. This course is taught in Spanish.

LAWS 4348 International Criminal Procedure and Practice (3 Credits)
The International Criminal Court and the various international and internationalized tribunals such as the International Criminal Tribunal for Rwanda and for the former Yugoslavia prosecute a unique and evolving set of international criminal laws designed to end the impunity of military and political leaders engaged in mass violence. The post-World War II Nuremberg trials were the first attempt to use tribunals to hold individuals criminally responsible. Later, the Nuremberg present was the basis of the creation of ad hoc war crimes tribunals for the former Yugoslavia and Rwanda in the early 1990s, which then opened the door to other tribunals such as the Special Court for Sierra Leone, the Extraordinary Chambers for Cambodia and the International Criminal Court. The practitioners of the tribunals represent the range of cultures, mores and legal traditions of the world. These varied experiences create different expectations as to the conduct of proceedings and what amounts to procedural fairness. This course studies the rules of procedure and practice that have developed at the international tribunals in the multi-cultural context.

LAWS 4350 Juvenile Law (3 Credits)
This course examines the legal parameters surrounding juveniles. Students gain a basic understanding of juvenile law, such as the legal definition of who is considered a child and the allocation of power between the state, parent(s), and the children. The class examines what protection the Constitution provides children and the historical development and philosophy of juvenile justice to understand the foundation of juvenile law. The focus of the class also includes an examination of rights of abused children and children who are delinquents and status offenders.

LAWS 4351 International Mergers and Acquisitions (3 Credits)

LAWS 4355 Labor Law (3 Credits)
Labor Law provides a background of modern labor relations law and union pressures with an historical review of the laws that shape this field. Laws covered include the National Labor Relations Act; National Labor Management Relations Act; Labor-Management Reporting and Disclosure Act of 1959; Civil Rights Act of 1964; employer unfair labor practices; union unfair labor practices; internal affairs of labor organizations; collective bargaining and settlement of labor disputes; and state labor legislation. Also, it explores employer and union labor practices and manners in which disputes concerning these practices may be resolved.

LAWS 4358 Land Conservation Transactions (3 Credits)
This course covers the fundamental law and principles related to land conservation. It is a research based class, and students are responsible for researching, presenting information and drafting regarding a specific conservation project. This course provides all the background necessary to allow students to conduct a meaningful research foray in and to create conservation easements for land conservation.

LAWS 4360 Land Use Planning (3 Credits)
This course examines government controls used in the regulation of land use and development and the urbanization of the built environment in cities and metropolitan areas in the United States. The course includes an analysis of state and local laws and federal constitutional issues related to the use of master plans, zoning and land development codes, growth management and smart growth development techniques, as well as the topics of subdivision regulation, eminent domain and urban renewal. Special problems in land use planning studied include exclusionary zoning, regulation of aesthetics, design controls and visual beauty, signs and billboard, religious land use, protection of natural lands and wildlife habitat, regulation of natural resources development, fair housing laws, and the protection of private property rights in the urban regulatory process.

LAWS 4362 Latin American Law (3 Credits)
This course seeks to provide students with a basic understanding of Latin American legal traditions. Intended for students who will come into contact with Latin American law in their work as lawyers, international civil servants, business executives and diplomats. The course examines the civil law tradition and constitutional law issues and current developments, such as Latin American economic integration, reform of the public sector, and the emergence of the Inter-American system for the protection of human rights.

LAWS 4365 Law and Economics (3 Credits)
This course is an examination of selected common law, regulatory law, and Constitutional law issues from the perspective of economic efficiency analysis.
LAWS 4370 International Investments (3 Credits)
The global investor is faced with a complicated task. He must deal with multiple currencies, multiple markets, multiple cultures, and multiple regulatory environments. However, the most important aspect of international investment is the use of multiple currencies. Accordingly, the first module of this course lays the foundation of foreign exchange rates: the basic facts of foreign exchange quotations, international parity conditions and arbitrage implications, and exchange rate forecasting. The second module covers the various assets and markets available for global investing: international bonds, equities, alternative investments, and optimal international portfolio selection. The third and final module develops risk control techniques available with derivatives: forwards, futures, options, and swaps. Overall, this course will emphasize conceptual understanding and applications, rather than lengthy theoretical exposition and mathematical analysis.

LAWS 4375 Law and Society (3 Credits)
The primary focus of this seminar is on law as a product of the structure of society. The subject matter can be divided into four distinct sections: 1) What factors affect the development of substantive law? This section examines the influence of values, beliefs and norms. 2) Given the existence of substantive law, what organizations develop to carry out the administration of law? Here concentration is on the phenomena classified as legal roles, organizations, institutions, and inter-institutional relations - e.g., juries, the legal profession, courts, legislature, etc. 3) How does law affect social behavior? and 4) What is the role of law in social change?.

LAWS 4378 Race, Class & Reproductive Justice (3 Credits)
This course examines how race and class status affect women's reproductive rights and how both legal rules and medical practices in this area rely on stereotypes and enforce norms of "good motherhood" on women. Topics covered include some or all of the following: abortion, contract parenthood ("surrogacy"), cloning, sterilization, embryo freezing, pregnancy-based employment discrimination, criminal prosecutions of women for prenatal substance abuse, and court-ordered Cesarean sections.

LAWS 4379 International Trade Law (3 Credits)
This course examines the law of international trade in goods and services, focusing principally on the law of the World Trade Organization and the General Agreement on Tariffs and Trade. We examine the trading system's rules restraining national restrictions on trade that address, among other things, tariff and non-tariff barriers, discrimination, regionalism, anti-dumping, countervailing duties, and safeguards. The course also spends time considering the relationship between trade and other regulatory areas or social values, such as environmental protection, health and safety standards, human rights, intellectual property protection, and other facets of globalization. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4380 Hazardous Waste and Toxic Substances (3 Credits)
This practical, hands-on course reviews the major federal environmental protection programs, with an emphasis on the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or "Superfund") and the Resource Conservation and Recovery Act (RCRA). It also covers Toxic Torts, Underground Storage Tanks, the Clean Water Act, Safe Water Drinking Act, and the Clean Air Act. Other materials may be distributed by the instructor on OSHA, NEPA, TSCA, OPA, the Colorado state voluntary cleanup program (VCUP), toxicology, and immunity issues. The course emphasizes practical application of major environmental laws. Students become familiar with statutory and regulatory schemes, and are expected to be able to identify environmental legal issues and apply environmental laws and regulations to hypothetical problems. JD student prerequisites: LAWS 4220, LAWS 4450, or LAWS 4495. LLM and MRLS student prerequisites: LAWS 4220, LAWS 4450, or LAWS 4495, or be registered to take any of these.

LAWS 4382 Legislative Process: Institutions & Interpretations (3 Credits)
This course is designed to be a three credit introductory course on the legislative process. This course focuses on theories of the process through an examination of theories of representation, theories of deliberation, direct democracy, and due process of lawmaking. Finally, this course will also explore legisprudence. Legisprudence explores theories of statutory interpretation and constitutional/statutory provisions which govern the political process and its participants. This course is intended to serve very practical goals. Students considering careers as legislative drafters, legislative staffs, elected officials, lobbyists or activists should emerge from this course with an understanding of the legislative process and a sense of how courts, agencies, and the executive branch are likely to interpret statutes. This course provides litigators with the tools to convince the courts that their interpretation of a statute is the correct one. For those students whose careers will require advising others about the meaning of statutes, this course helps provide the skills needed to perform that task.

LAWS 4383 Doing Business-Latin America (3 Credits)
Taught in Spanish, this course acquaints students with the legal framework of business transactions in Latin America. The course exposes students to the civil law system used in most Latin American countries and covers selected topics of importance to lawyers advising clients doing business, or seeking to do business in Latin America. Topics may include the development of Latin American law, types of corporate and partnership organization, trade law, foreign investment, intellectual property, taxation of foreign income, environmental and labor standards, and dispute resolution.

LAWS 4385 Lawyering Process I (3 Credits)
The Lawyering Process Course provides first-year law students with a foundation in the essential lawyering skills that are necessary to be an effective, ethical, and professional member of the legal community in a rigorous, supportive learning environment that uses a client-centered approach. The first semester focuses on introducing students to the legal system, legal research, and providing client advice through written analysis.

LAWS 4386 Lawyering Process II (3 Credits)
The Lawyering Process Course provides first-year law students with a foundation in the essential lawyering skills that are necessary to be an effective, ethical, and professional member of the legal community in a rigorous, supportive learning environment that uses a client-centered approach. The first semester focuses on introducing students to the legal system, legal research, and providing client advice through written analysis. The second semester builds on students' research, writing, analytical, and oral presentation skills in the context of advocating for a client.
LAWS 4390 Law and Neuroscience (3 Credits)
In this survey course, we will cover some neuroscience basics, including a brief history of neuroscience, how neurons and neurotransmitters work, what is currently known about how the brain is organized, both structurally and functionally, how modern neuroscience views the so-called Cartesian dichotomy between emotion and cognition, and the basics of the most common types of neuroimaging. We will then explore the law and neuroscience of pain, memory, lie detection and criminal responsibility, discussing how neuroscientific discoveries might or might not change how the law handles these discrete problems, and the related evidentiary issues of how to get neuroscientific evidence admitted or excluded in cases involving these problems. We will finish, time permitting, with some speculations about artificial intelligence and neuropsychotics.

LAWS 4395 Military Law (3 Credits)
This course will review the history, nature and sources of military law; the Uniform Code of Military Justice and the functions and procedures of military courts-martial, including the rights and status of military personnel. It will also cover an overview of the laws of armed conflict; national security and domestic application of operational military law; and the policies and international treaties affecting the detention and prosecution of enemy combatants and other foreign nationals. The course materials will rely on primary sources including statutes, cases, treaties, and selected law review and other articles, which will be provided electronically to each student. The course will review these military law topics with an emphasis on cases studies and policy discussions in the context of recent current events.

LAWS 4400 Lobbying Law (3 Credits)
This course will focus on the role and nature of advocacy and lobbying before state and federal legislative and regulatory bodies. The areas will include but are not limited to the role of financing with emphasis on Citizens United, the issues involved in Department of Interior Policy and public lands, the structure and lobbying of new tax legislation, high frequency trading in securities markets, Dodd-Frank and the new regulations, the JOBS Act and crowdfunding, immigration law and border security, state legislative lobbying and healthcare lobbying. Some guest lecturers will be invited, including former cabinet members at the federal level, judges, former White House counsel, financial analysts who are lawyers, members of Congress and Senators. Students will be required to develop a lobbying and advocacy program in an area assigned by the Professor.

LAWS 4410 Public Sector Employment Law (2 Credits)
In Public Sector Employment Law, students will learn the law unique to public employment. Particular emphasis will be placed on constitutional legal claims brought under 42 USC Sec. 1983, including claims for violation of the freedoms of speech and association, equal protection, due process, and privacy. The class will also cover public administrative remedies, various governmental immunities, and open records laws. The course materials will be taught through a combination of traditional Socratic method and practical real world exercises, including the drafting of pleadings, interviewing of parties, and arguing of substantive legal motions.

LAWS 4411 Mergers & Acquisitions (4 Credits)
This course investigates the legal framework and strategies for structuring mergers and acquisitions ("M&A"). The class will be taught in the "modern learning" format to help students develop practical skills that will improve their readiness upon graduation for the practice of law in diverse business contexts. Among other topics, the course will address structuring various acquisition transactions, negotiating terms of the deal, drafting deal documents, conducting due diligence, advising boards on fiduciary obligations, interpreting relevant state law and federal securities laws, and exploring litigation to thwart potential business combinations. Throughout the course, students will engage in a variety of research, drafting, interviewing, counseling, and advocacy exercises. Through those exercises, group reflections on various assignments, and class discussions of other assigned readings, students will enhance their ability to think critically about a variety of M&A issues from both transactional and litigation perspectives.

LAWS 4412 Sustainable Cities Practicum (3 Credits)
Communities around the west are increasingly working to accommodate population growth without promoting sprawl. From transit oriented development in the suburbs to urban infill projects in the city center, cities are exploring ways of promoting new, more sustainable forms of development – sometimes in places that are not ready to accept increased density and amidst changing notions of what Americans really want. This course will explore issues of sustainability, as they relate to land use, and will help prepare students to work in the field of urban planning and development. Partnering with a local organization and utilizing the concept of "Action Learning," students will work in teams as they engage in real-time problem solving of a complex issue involving land use and sustainability. It is anticipated the course will include a field trip and work with practitioners engaged in the issue of concern. A research paper and final presentation will be required.

LAWS 4413 Trail Tactics (3 Credits)
This course is intended for those who truly desire to be a trial lawyer. It is an advanced, hands-on course which is designed to teach you how to be successful in trial – not just trial practice, but overall trial strategy. This course will teach you not just what to do in trial, but will also answer the question as to why you do what you do. It involves the strategy of trying cases, including trial themes, as well as preparation and participation in doing voir dire, opening statements, direct and cross examination of witnesses, when to make objections and when not to make objections, as well as closing. You will learn to use various trial techniques included in the text Rules of the Road, and will learn all the ins and outs of trying a case in front of a jury.

LAWS 4414 Private Equity Seminar (3 Credits)
In this course students will learn legal doctrine and practical skills through the examination of various aspects of private equity groups. The class will focus on legal issues arising in private equity investment cycles, including raising a fund, investing the fund, managing the investment, and exiting the investment. Students will consider the legal foundations of fund formation, business law, and structuring investments, including state and federal laws affecting business associations and corporate transactions. The class will also highlight tax and regulatory considerations of private equity groups and their investments. The class will have a heavy emphasis on practical skills, including critical thinking, and best practices for beginning lawyers, including structuring transactions, drafting transactional documents, and negotiating deals.
LAWS 4415 Protecting Intellectual Property in International Business Transactions (3 Credits)
The first portion of this seminar will cover topics such as general international conventions and treaties designed to protect intellectual property; conventions and treaties designed specifically for patents, trademarks and copyrights. Students will determine what protections to try to seek for a variety of intellectual property examples and, in pairs, if possible, negotiate and draft a licensing agreement, a manufacturing agreement, an employment agreement or some other agreement that embodies international intellectual property issues. Students will then choose a topic, such as patent, trademark or copyright issues in a particular region or particular industry. Each student will prepare a presentation for the class on the topic. Then the student will use the class feedback in conjunction with research for the presentation to complete a paper on the topic. The drafting and paper will take the place of a final exam. The paper qualifies for the Upper Level Writing Requirement.

LAWS 4416 Representing the Marijuana Client (3 Credits)
This class is designed to provide students with an understanding of the realities of representing a marijuana client (either private or public) in the current turbulent legal environment. We will study the background of marijuana regulation at the state and federal levels in the United States, with particular attention paid to the federalism implications of the dispute between state and federal law in this area. We will then turn to specific areas of law impacted by marijuana law reform in the states, from legal ethics, to regulatory compliance, to criminal law enforcement, to the financial and tax aspects of running a marijuana business in the current legal regime.

LAWS 4417 Representing the Spanish Speaking Client (3 Credits)
This course is a survey of the substantive law of matters likely to be encountered by attorneys representing Spanish-speaking clients in the United States. Topics may include, among others, immigration law, family law, criminal law, employment law, wills and estates, and consumer rights. The course will introduce vocabulary required to communicate with Spanish-speaking clients in the United States, as well as, survey the basic substantive law in each area. The course will be taught in Spanish.

LAWS 4418 Workplace Law Practicum: Sports & Entertainment Law (3 Credits)
This course will expose students to contemporary sports law practice as an aspect of general entertainment law from a labor and employment perspective. Students will learn relevant doctrine regarding such matters as collective bargaining, individual contract rights, administrative law, interest and grievance arbitration and the impact of the anti-trust laws on labor and employment relations at the professional and collegiate levels. They will have the opportunity to develop practical skills by drafting documents for a simulated NLRB union organizing or unfair labor practice proceeding, reading and interpreting actual transcripts of NLRB or arbitration proceedings, acting as an advocate in a mock baseball arbitration, and engaging in simulated negotiations by drafting bargaining proposals and arguing for those proposals in a bargaining session among classmates.

LAWS 4421 Introduction to Small Practice Management (3 Credits)
This course provides an introduction to the administrative needs necessary to open and operate a solo or small legal practice. Topics include: administrative needs specific to various types of legal practice; space and facilities; technology; document management systems; malpractice insurance; outsourcing; health insurance; conflicts; and human resources issues.

LAWS 4423 Legal Databases Research (3 Credits)
This course introduces students to a variety of legal databases, both fee-based and free, that can be utilized for conducting effective legal research as a student and practicing lawyer. Students learn to analyze and critically evaluate whether or not a database provides accurate information and resources. Students learn to determine which legal databases are most useful for specific types of information and resource needs. Students learn to construct successful search strategies that can be employed to search a database and find the information required. This course equips students to become expert searchers in the online environment.

LAWS 4424 Legal Spanish for Lawyers (2 Credits)
This course prepares students with basic Spanish proficiency to represent Spanish-speaking clients in the U.S. legal system or to work in Spanish on transnational matters involving Latin America. It combines one-on-one Spanish immersion instruction with a structured classroom component. The Spanish immersion component introduces and builds on each student’s legal Spanish vocabulary in areas of law likely to require lawyering in Spanish or in areas identified as priorities by the student. The structured classroom component allows students to practice skills in Spanish, such as client interviewing, intake, and client counseling, through simulations and group exercises. This course is taught in Spanish.

LAWS 4425 Legal Profession (3 Credits)
This required course is the study of the legal profession in American society. Topics include the history, structure, and function of the legal profession; the role of lawyers in the delivery of legal services; standards of professional ethics (including the Code of Professional Responsibility and the Rules of Professional Conduct); professional responsibility problems that confront the legal profession; developments in the delivery of legal services; disciplinary procedures; and admission to the practice of law.

LAWS 4430 Mediation and Arbitration Clinic (3 Credits)
This is a course offering clinical experience in both mediation and arbitration. The student learns mediation skills, performs mediation simulations, and mediates actual cases. Students are oriented to the role of arbitrator, perform arbitration simulations, and attend actual arbitrations. By gaining experience in both roles, students learn which process to choose for resolving a particular dispute. In addition, students learn lawyering skills such as communication, negotiation, problem solving, and drafting agreements. Application must be sent to the Student Law Office for admission to this course. Students will earn 3 out of class credits for this course and 2 in class credits through the corequisite course L4803, Mediation and Arbitration Clinic Seminar. Corerequisite: LAWS 4803. Prerequisite: permission of faculty supervisor.
LAWS 4433 Media Law (3 Credits)
This course addresses the First Amendment, statutory, and common law regimes under which the news media operate in the United States, ranging from the seminal New York Times v. Sullivan to the recent decisions on anonymity for online bloggers. This course is designed to provide opportunities for serious study/discussion of legal issues affecting the news media, as well as opportunities for practical experience in the tasks confronted by today's media lawyers. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4436 Litigation Technology (3 Credits)
Litigation Technology gives students up-close, hands-on learning to prepare and effectively use electronic illustrative aids and demonstrative exhibits in trial and alternative dispute settings. Each student prepares opening statements, closing arguments, and direct and cross-examinations, utilizing litigation software. Students learn to create their own presentations, and how to advocate most effectively using technology.

LAWS 4441 Business Mergers & Acquisition (3 Credits)
This is a transactions based course that focuses on teaching future junior associates practical deal skills in the context of M&A law. The course covers how M&A deals (e.g. asset sales and triangular mergers) are structured, how lawyers interact with various parties to engineer a transaction, the basics of a negotiated document, allocation of value and risk, drafting techniques, advising boards, and due diligence concerns. We work with statutes relevant to M&A transactions (with a focus on Delaware law and the MBCA), federal securities laws (the Act, proxy rules and the Williams Act), and survey tax and antitrust laws. Finally, the course also covers anti-takeover defenses, deal protection devices, and board fiduciary obligations. While the course includes theory and policy discussions, it also incorporates practical assignments, a drafting exercise, and a team presentation. Prerequisite: LAWS 4190.

LAWS 4442 Trial Practice III: Mentors Practicum (3 Credits)
Advanced Trial Practice: Mentors Practicum is a year-long, skills-based course for law school students seeking to refine their trial skills, and improve their understanding and application of evidence and criminal procedure, through teaching these skills to local area high school mock trial students. The course consists of two classes a week. The first takes place at the law school. This weekly class involves case analysis and evidentiary discussion, resulting in the law students preparing their lesson plans to be taught to the high school students. Lesson plans include trial topics such as case analysis and evidentiary discussions, direct and cross-examination, objections and the rules of evidence, opening statements, closing arguments, and development of theme and theory. The second weekly class takes place at a local area high school, where the law students act as mentor-coaches to high school mock trial teams.

LAWS 4444 Multiculturalism, Race and the Law Seminar (3 Credits)
This course is designed to examine the interstices of cultures, race, identity and the law as manifested in legislation and jurisprudence. Through case law and articles, we uncover and examine the ways in which legal systems define and promote certain racial and cultural activities, identities, and classifications and discourage others. Some are advanced as legitimate, and deserving of protection, and others not so. These endorsements have a significant impact on the makeup of American society. We see ourselves as a melting pot of cultures and peoples from all over the world, but do our laws really promote this vision? Have our laws evolved to promote racial and cultural harmony, or to discourage it? While most discussion focuses on these issues as they appear in the United States, we also discuss cases and materials from other nations, including Australia, Canada, India, Israel, Europe and Africa. Race and culture have played a pivotal role in historical and current political events and these will also be examined from a global perspective. There is no final exam, but written work is assigned throughout the term, and a final research paper is required.

LAWS 4445 Mining Law (3 Credits)
This course provides the basic framework of mining law. It begins with the acquisition of title to and development of deposits of hard minerals and energy resources under the mining and mineral leasing laws of the federal and state governments in the western United States. Next, it emphasizes the practices and procedures of the various proprietary and regulatory agencies responsible for the management and administration of public lands. Finally, students learn how to resolve competitive demands for exclusive and multiple use of public lands for mineral production and conservation.

LAWS 4446 Multiculturalism, Race and the Law Seminar (3 Credits)
This course is designed to examine the interstices of cultures, race, identity and the law as manifested in legislation and jurisprudence. Through case law and articles, we uncover and examine the ways in which legal systems define and promote certain racial and cultural activities, identities, and classifications and discourage others. Some are advanced as legitimate, and deserving of protection, and others not so. These endorsements have a significant impact on the makeup of American society. We see ourselves as a melting pot of cultures and peoples from all over the world, but do our laws really promote this vision? Have our laws evolved to promote racial and cultural harmony, or to discourage it? While most discussion focuses on these issues as they appear in the United States, we also discuss cases and materials from other nations, including Australia, Canada, India, Israel, Europe and Africa. Race and culture have played a pivotal role in historical and current political events and these will also be examined from a global perspective. There is no final exam, but written work is assigned throughout the term, and a final research paper is required.

LAWS 4450 Natural Resource Law (3 Credits)
The course is designed primarily for students who wish to have an introduction to and an overview of the entire natural resources law area in one course. Students survey the primary natural resources subject matter areas: water law; mining law; oil and gas law; public land law; environmental law; and energy law.

LAWS 4452 Economics of Natural Resource and the Environment: Policy, Markets, and Economic Measurement (3 Credits)
This course deals with the basic concepts of financial evaluation of a natural resources project. The emphasis is on financial evaluation topics and issues relevant to a lawyer's participation in a project. Students are introduced to the time-value of money; spreadsheet analysis; discounted cash flow; and spreadsheets, with relevancy to negotiations. Students are encouraged to consult with the director of this program before enrollment.
LAWS 4454 Psychiatry and the Law (3 Credits)
This course explores the relationships between psychiatry, psychology, medicine and the law. Subjects to be covered include: DSM-IV diagnoses and psychopharmacology; sanity and competency determinations; role of mental health experts in the court; special issues involving the mentally ill and death penalty; issues particular to juvenile offenders; third party protections and reporting requirements in child abuse and danger to third parties; civil commitment and involuntary treatment of the mentally ill; malpractice including professional misconduct and sexual boundary violations, and standards of mental health care; professional ethics in medicine and the law; law of informed consent and proxy decision making for medical treatment; confidentiality; clinical and legal aspects of end of life care; and prisoners’ rights in correctional settings including sex offender treatment. Readings include landmark state and federal decisions shaping each of these areas, along with readings from legal and mental health literature.

LAWS 4460 Negotiation and Mediation (3 Credits)
The course examines principles of negotiation, bargaining and dispute problem solving. Builds the development of skills in negotiation and later mediation. Principles of problem solving introduced in negotiation are further developed in an exploration of mediation, it’s legal, economic, skills context and its propriety as a process to resolve disputes in varying circumstances.

LAWS 4462 Negotiating Natural Resources Agreements (3 Credits)
Students completing this course leave with an understanding of the general approaches, and primary issues and motivations pertaining to the negotiation of large, internationally funded petroleum and mining projects. They particularly gain a perspective on the negotiation of first-tier agreements between trans-national companies and governments, and joint venture agreements between private parties.

LAWS 4463 Qualified Pension and Profit Sharing Plans (3 Credits)
An in-depth study of ERISA, labor department rules, and Internal Revenue Code provisions relating to qualified deferred compensation. The course is geared toward an understanding of all the pension and profit sharing rules required for plan qualification, with emphasis on qualified plan planning for both incorporated and unincorporated forms of business. Cross listed with TAX 4120.

LAWS 4464 Natural Resources Distinguished Practitioner Seminar (3 Credits)
The Distinguished Natural Resources Practitioner in Residence Seminar is a “capstone seminar” taught each year in the Spring Semester by a different but prominent natural resources or environmental law lawyer who has extensive experience in energy, resources, or environmental law work. The focus of the Seminar is on skills training, where the skills taught are those that all lawyers need in order to have a successful career in the practice of law. Among the “how-to” skills typically addressed are: (1) how to open a job, either as a lawyer or as a law-trained worker; (2) how to obtain and retain clients; (3) how to work in the private sector, government sector, business sector, and in-house sector; (4) how to write; (5) how to work with associates and colleagues; (6) how to deal with technical or scientific matters in a legal context; (7) how to work in the litigation arena, before trial and appellate courts; (8) how to practice or appear before administrative agencies; (9) how to organize and refine a mass of complicated information so that a decision-maker can make sense of it. There is no final exam or paper expected; the grade is usually by class participation and small writing exercises. Prerequisite: permission of instructor.

LAWS 4465 Oil and Gas Law (3 Credits)
This course surveys the various characteristics of oil and gas interests. Topics include mineral rights, and how ownership leases and transfers of these rights should be handled. The instructor also distinguishes the field of oil and gas law on private lands from those in the public domain.

LAWS 4466 Pre-Trial and Discovery Practicum (3 Credits)
This “hands-on” course provides students with a practical understanding of the pretrial process and how discovery procedures shape and impact civil litigation today. The progression of class topics mirror the pretrial process within the context of a hypothetical case. Starting with initial client interviews, class topics include interrogatories, requests for production, electronic discovery, depositions, and expert discovery. Students also consider ethical issues relating to discovery and the pretrial process, and what remedies or sanctions are available for discovery abuses. This course will satisfy the Upper Level Writing requirement (ULW).

LAWS 4470 Banking Law (3 Credits)
This course provides an overview of the banking system, including the economic function of banks, the role of the central bank, and U.S. banking history. This course will cover the evolution of banking regulation, as well as recent developments that have intensified scrutiny on banks. Additionally, a “Real Deal” Workshop will provide students with an opportunity to a) gain hands-on training in transactional practice, b) experience a “deal” from a lawyer’s perspective and learn about what transactional practice entails and c) learn to draft stock purchase agreements, credit documents and other fundamental transactional agreements. Topics that will be covered include permissible activities of banks, the role of the FDIC, the Federal Reserve Board, and the Comptroller of Currency; and the regulatory response to crises in the banking system.

LAWS 4474 Patent Prosecution (2 Credits)
This course explores more than a dozen advanced topics in patent law. These issues include claim drafting; international patent applications; opinion letters; remedies in patent cases; security interests; patent ability of software; and patent ability of genetic sequences. While Patent Law is not a formal prerequisite for this course, students who have not taken Patent Law should be prepared to do extra reading in the first few weeks of the semester to familiarize themselves with the basic concepts of patent law.

LAWS 4480 Professional Ethics Seminar (3 Credits)
This seminar begins with brief introductions to ethics in general and professional ethics specifically, and then turns to in-depth consideration of theoretical perspectives on lawyer's ethics. For the remainder of the semester the seminar focuses on: (1) Comparative professional ethics: comparing the ethics of other professions--medicine, journalism and business, for example--with the ethics of lawyering. (2) Narrative ethics: stories (from literature, biography, or tradition) and how they inform ethical perception and choice. (3) Topics chosen by students for research and presentation.
LAWS 4481 Partnership Taxation (3 Credits)
Tax treatment of partnership income in the hands of the partner; the conduit rule; problems associated with the formation, operation, and dissolution of the partnership; sale of the partnership interest; withdrawal and retirement of partners; basis adjustments, unrealized receivables, and substantially appreciated inventory. Cross listed with TAX 4320.

LAWS 4483 Patent Litigation (3 Credits)
This is an in-depth study of laws, strategies and tactics of patent litigation. Topics include legal principles, procedures and strategies associated with patent claim construction, infringement, invalidity and unenforceability. Also, students cover patent trial practice with a focus on both the knowledge and practical skills necessary to litigate patent cases.

LAWS 4485 Business & Commercial Law Seminar (3 Credits)
Topical seminars scheduled periodically to afford students the opportunity for focused study of business and commercial law matters such as: consumer credit; mergers and acquisitions; corporate practice; bankruptcy; antitrust; quantitative evidence; representation of minority--and women--owned business firms.

LAWS 4487 Prosecutor as Protagonist (3 Credits)
This seminar is an in depth examination of the role of the prosecutor in our justice system. Attorney General Suthers leads wide ranging discussions about crime and punishment. Topics discussed and debated include the purpose of criminal sentencing, minimum mandatory sentences, the death penalty, the juvenile justice system, plea bargaining, prosecutor ethics, special prosecutors, criminal justice interest groups, prosecution oversight of police, forensic science, federalization of crime, attorney general activism, jury reform, reform of drug laws, and mental illness in the criminal justice system. Some of the top experts in Colorado on these subjects speak to the seminar participants.

LAWS 4489 Civil and Criminal Tax Procedure (2-4 Credits)
Statute of limitations on assessment/collection of deficiencies, definition of deficiency, restrictions on assessment and collection; statute of limitations on overpayments, claims and suits for refund, and limitations for criminal prosecutions; regulations and rulings—retroactive revocation; administrative settlements, closing agreements and compromises; civil penalties; tax return preparer penalties; civil litigation—injunctions, jurisdiction of Tax Court, District Court, and Court of Claims, small claims procedure, authority to increase deficiencies, choice of forum; jeopardy assessments and termination of taxable years; criminal tax investigations—administrative summons, document production (taxpayer and third party), constitutional protections, common law privileges, strategies; professional responsibilities and ethics for the tax practitioner. Cross listed with TAX 4310.

LAWS 4490 Property (4 Credits)
This course introduces selected topics relating to rights and interests in land and personal property. These topics include estates in land and future interests; private and/or public restriction of land use; conveyancing; interests and estates in land; and landlord/tenant relations.

LAWS 4495 Public Land & Resources Law (3 Credits)
This course provides an overview of law, policy, and procedures governing the third of United States land managed by the federal government for the benefit of all the people. The course traces the interwoven law, history, and economics controlling acquisition and allocation of public lands and resources and examines a selection of significant commercial uses and resource categories of land use practices. Recommended prerequisite: LAWS 4025.

LAWS 4497 Law & Popular Culture (3 Credits)
Why are there so many jokes about lawyers? Why is John Grisham so popular? What explains the success of the "Law and Order" franchise? Does popular culture affect the outcomes of trials? This seminar explores the role law plays in popular culture (for example, how law and lawyers are portrayed and perceived; how law shapes and defines pop culture) and the role popular culture plays in law and in the lives of lawyers (for example, the impact of cameras in the courtroom); should lawyers be allowed to write books and sell their clients' stories? The reading list includes traditional materials (case law and legal scholarship) as well as movies, novels and other popular culture materials. Recommended prerequisite: LAWS 4425.

LAWS 4498 Public Interest Practicum (1 Credit)
The Public Interest Practicum is one option for students to satisfy the Public Service Requirement. The only satisfying course offered for only zero or one credit, it requires participation of the JD student in a 50-hour, non-compensated, law-related, public interest placement under the supervision of an attorney or judge who has been in practice or on the bench for a minimum of three years. A practicum student must complete the minimum of 50 hours in one of the following settings: judicial internship; government agency; private law firm doing pro bono or low bono work; non-profit (501(c)(3)) organization; or pre-approved uncompensated research project for a faculty member. A student may decide to take the Public Interest Practicum for 1 credit or 0 credit. The Public Interest Practicum for 1 Academic Credit requires a Public Interest Practicum Online Seminar component to supplement the practical experience. The Public Interest Practicum is beneficial for students who are not planning on satisfying the Public Service Requirement through other opportunities.

LAWS 4500 Public Utility Regulation (3 Credits)
This intensive, 1-week course presents law practitioners with recent innovations in the economics and policy of utility regulation. Course features guest lectures with individuals from industry and government sectors that are involved with utility regulation. Students learn the social science of utility regulation and gain insight into how utility regulation is conducted.

LAWS 4506 Energy & Project Finance Law (3 Credits)
This course explores the legal, economic, technological, and policy underpinnings of the Renewable Energy Industry, global warming, and associated implications to the electric utility and transportation sectors. The course addresses both domestic and international perspectives on renewable energy development.
LAWS 4508 Renewable Energy for the 21st Century: Law, Policy & Markets (3 Credits)
Renewable Energy for the 21st Century helps prepare students for future involvement in this dynamic sector. Students are introduced to the policy and legal framework involving renewables and energy efficiency as well as important technological and market-based issues.

LAWS 4509 Renewable Energy: Project Development and Regulation (3 Credits)
This course examines the broad range of legal topics that a renewable energy lawyer must understand in order to practice effectively. We examine the structure, regulation, and functioning of the electric energy industry in the United States. We explore in detail the law applicable to the development, ownership and operation of renewable projects across the spectrum of technologies. Significant emphasis is placed on the practical "real world" issues encountered in developing, financing and operating these projects.

LAWS 4510 Business Legal Research (2 Credits)
This course will introduce the legal material, research methodologies, and resources used in conducting business legal research. Students will gain experience locating and using law and guidance produced by government agencies, business-oriented legal treatises, transactional materials, and company/industry research. This class will take an integrative approach between the different business-related disciplines to provide students with a well-rounded knowledge base.

LAWS 4511 Renewable Energy Law (3 Credits)
The development of renewable energy sources has grown exponentially both nationally and worldwide. The increased appetite for renewable energy sources has driven a need for more information about those sources and the significant legal implications arising from the development of those sources. This course is organized by resource—solar, wind, hydropower, biomass, and geothermal. It focuses primarily on critical legal issues in tort, property, and contract areas raised by the expansion of these key renewable energy sources. The course also addresses the role of energy efficiency and some of the broader legal hurdles facing renewable energy use from a nationwide perspective.

LAWS 4520 Remedies (3 Credits)
Remedies provides students with the basic principles and problems of damages, restitution, and equity. Students enter into an investigation of fundamental concepts, such as remedial goals, problems of proof, and the relationship between remedies and substantive rights. The course also explores equitable remedies and alternative remedial devices available in any given situation.

LAWS 4524 Russian for Lawyers I (3 Credits)
This is a unique chance to break stereotypes about Russia! This sequence of courses introduces students to the fundamentals of the Russian language, with emphasis on legal and economic vocabulary. More specifically, this includes vocabulary and reading assignments that involve finance, international trade, stock exchange, and with a special focus on Natural Resources and Environmental Law in Russia. No prior knowledge of Russian is required.

LAWS 4525 Russian for Lawyers II (3 Credits)
This course picks up where Russian for Lawyers I leaves off by continuing to introduce students to the fundamentals of the Russian language, but with an emphasis on legal and economic vocabulary. More specifically, this includes vocabulary and reading assignments that involve finance and banking, insurance, international trade, and stock exchange/securities matters. Prerequisite: LAWS 4524.

LAWS 4526 Sales and Leases (3 Credits)
This course examines the formation and terms, as well as remedies for breach, of contracts for the sale of goods under Article 2 of the Uniform Commercial Code (UCC). The course completes the coverage of Article 2 of the UCC that was introduced in the first-year Contracts course. In addition, the course also examines the provisions on leases in Article 2A, sales transactions involving the use of documents of title (Article 7) and letters of credit (Article 5).

LAWS 4527 School of Mines Exchange (3 Credits)

LAWS 4528 Securities Law (3 Credits)
Students in this course study the statutes and regulations regulating the offer and sale of securities by private and public corporations. Course material information pertaining to the Securities Exchange Act of 1934; federal regulation of the public securities markets; insider trading; broker-dealer regulation; tender offers; and public corporations. Recommended prerequisites: LAWS 4190 or LAWS 4048.

LAWS 4529 Securities Litigation (3 Credits)
The main focus of this course is the granting of a security interest in collateral in exchange for a loan and the priority among creditors to the collateral in case the debtor defaults on its obligation to repay. Secured transactions can be involved in a wide variety of legal representations, including transactional matters and litigation. The Secured Transactions Class is designed to provide students with a working understanding of Article 9 of the Uniform Commercial Code and how it comes into play in these transactions.

LAWS 4530 Secured Transactions (3 Credits)
This course covers the law of secured transactions in personal property. It is not a securities course. Students who have taken the Commercial Law Survey course should not take this unless they wish to study this subject in greater depth. The main focus of this course is the granting of a security interest in collateral in exchange for a loan and the priority among creditors to the collateral in case the debtor defaults on its obligation to repay. Secured transactions can be involved in a wide variety of legal representations, including transactional matters and litigation. The Secured Transactions Class is designed to provide students with a working understanding of Article 9 of the Uniform Commercial Code and how it comes into play in these transactions.
LAWS 4539 Social Change Lawyering (2 Credits)
This seminar explores the role of law and the legal profession in pursuing broader social causes across the political spectrum, such as the pursuit of civil rights for racial minorities or the effort to overturn the constitutional right to abortion. Distinguished from the practice of law solely advocating the interests of individual clients, social change lawyering is a major component of the legal profession of the 21st century. Known variously as “public interest law,” cause lawyering, and by numerous other labels, this area of practice implicates many important issues worthy of serious scholarly consideration. Some of the topics that may be examined include: the competing definitions of social change lawyering and the relevance of such definitions; the history of American law and social change; the role of progressive/conservative ideologies in social change lawyering; the role of government and private firm lawyers in effectuating social change; strategies and organizational models for social change lawyering groups; the relationship between social change lawyers and their clients; the economics and financing of social change lawyering; ethics and social change lawyering; legal education and social change. Throughout the course, students are asked to critically examine the role of lawyers in social change, and question whether and how lawyers have been effective agents of social change in American society. The course does not use a traditional casebook. Rather, students study a set of materials comprised of excerpts from law review articles and books, historical and sociological materials, and problems. Students are required to write short, reflective discussion board posts on each week’s readings, as well as a more comprehensive final paper. Students may elect to use this seminar to fulfill the upper level writing requirement if they submit a draft of the final paper and do a substantial rewrite after receiving the instructor’s feedback. Prerequisite: permission of instructor.

LAWS 4543 Sexual Orientation and the Law (3 Credits)
This seminar offers an opportunity for students to study the relationship between law and sexual orientation. Historically, law in this country consistently and pervasively regulated the realm of human identity and behavior we call sexuality. However, questions and claims challenging traditional assumptions about sexual orientation have surfaced in the last twenty-five years. Our study of sexual orientation and law allows students to view the relationship between law and society through a new lens, that of sexual orientation.

LAWS 4545 Sports Law (3 Credits)
The course studies the legal problems of professional athletics. It applies the application of contract law, antitrust, labor law and income tax to the functioning of a professional league. The question of governmental regulation of professional sports is a constant focus of students’ work. Special attention is given to the impact of these questions on negotiating players’ contracts.

LAWS 4550 State & Local Government (2,3 Credits)
The institutional framework within which the decision-making process affecting urban areas operate; the rules by which the formal power to govern in urban areas is organized, limited and divided among decision-making units. Although dealing largely with the subject matter of traditional courses in municipal corporations, this course broadens that perspective to include newer institutional and organizational arrangements.

LAWS 4552 Securities Law Seminar (3 Credits)

LAWS 4553 Spanish for Lawyers (3 Credits)
This course is in beginning Spanish with an emphasis on the development of listening, speaking, reading and writing skills. The focus is on creating conversational exchanges about selected topics and situations in the present and future tenses. Students practice oral communication skills needed to converse with Spanish-speaking clients, using basic legal terminology. The customs and culture of Spanish-speaking people are also examined with the aid of video programs, CDs and readings. Topics: Greetings, spelling names and addresses, personal descriptions, numbers, coordinating meetings (times, driving directions), family members, housing arrangements and meals, grammatical structures, present and future tenses of verbs, ser and estar, possessive adjectives, commands, por and para and direct object pronouns. Legal Topics: intake, phone etiquette, interview, fees, and confidentiality.

LAWS 4554 Spanish for Lawyers II (3 Credits)
This course is the second of a two part series in beginning Spanish with an emphasis on the development of listening, speaking, reading and writing skills. The focus is on creating conversational exchanges about selected topics and situations in the present and past tenses. Students practice oral communication skills needed to converse with Spanish-speaking clients using basic legal terminology. The customs and culture of Spanish-speaking people are also examined with the aid of video programs, CDs and readings. Topics: Daily routine, the concept of time, shopping, sports and pastimes, holidays and traditions, transportation and travel. Grammatical structures: past tenses, uses of ser and estar, reflexive verbs, double object pronouns, verbs like gustar. Legal Topics: interviewing client (divorce, robbery, domestic violence, and traffic accident), explaining civil and criminal court proceedings.

LAWS 4555 Street Law (3 Credits)
Under faculty supervision, students in two-person teams will teach law in urban high schools. An underlying principle of the course is that one of the best ways to learn is to teach. There will be weekly seminars and field performances supervised by the instructor. Students will develop skills in: practical application of legal concepts; substantive topics in federal and Colorado Law; teaching techniques; classroom management; and the multi-faceted roles of lawyers in the community. Each student will participate in researching, drafting, and presenting a course in a particular field of substantive law.

LAWS 4556 Sustainable Dev & Trade (3 Credits)
This seminar is designed to give an introduction to the convergence of trade, environment, and development issues and law, addressing areas of conflict and synergies among them. It focuses on rules, procedures, and institutions aimed at making globalization compatible with sustainable development by integrating trade policy and law with policies that address other aspects of “human development”, such as, environmental concerns, social concerns, human rights, gender issues, and governance. This course satisfies the Upper Level Writing requirement (ULW).
LAWS 4560 Colorado Legal Research (1 Credit)
This course will focus on Colorado-specific primary and secondary sources using a problem-based approach, so as to simulate the type of work performed in law firms. It is geared toward students who have some experience with research and want to improve their skills and writing ability before they finish law school. Students will gain hands-on experience researching judicial (case law), legislative (statutory), and executive (administrative) legal materials and will learn research methodologies and strategies to tackle research problems effectively. Classes will combine instruction with hands-on scenarios using print and electronic resources and students will complete research and writing projects for this course, which runs for the first seven weeks of the semester. Students are required to bring their laptops to class.

LAWS 4561 Crimmigration Law Seminar: The Intersection of Criminal Law and Immigration Law (3 Credits)
This seminar addresses the historical and contemporary relationship between criminal and immigration law. In particular, the course explores how individuals perceived to have violated a criminal offense are treated in the immigration law system, how individuals thought not to be citizens of the United States are uniquely affected by criminal procedure norms and substantive criminal law, and how states and the federal government have sought to police criminal activity by noncitizens. In the process, course participants will learn to analyze constitutional, statutory, and regulatory provisions concerning immigration, as well as procedural and substantive requirements concerning criminal proceedings as they affect noncitizens. Participants will also consider the motivations that resulted in various enforcement policies grounded in civil or criminal law related to immigration and immigrants.

LAWS 4562 E-Discovery (3 Credits)
LJigation is undergoing a significant transformation as technology continues to evolve and Society transitions from a “paper” to a “digital” world. That transformation inevitably impacts the legal community, confronting lawyers and clients with the choice of conducting discovery on a pre-computer, “business as usual” basis or embracing the challenges and opportunities presented by “e-discovery.” This course provides students with an understanding of the legal and practical challenges presented by “e-discovery” and how electronically stored information (“ESI”) shapes and impacts litigation and the pretrial process.

LAWS 4563 Environmental Law, Energy, & Natural Resources in Indian Country (3 Credits)
This Seminar explores energy and natural resources development on Native American tribal lands in the United States, and how tribes, states and the federal government regulate and enforce environmental quality within Indian Country. The Seminar is open to all interested students and does not require any previous study or experience in American Indian law. It provides an introduction to tribal sovereignty and self-determination, along with some of the basics of Indian Country jurisdiction and tribal sovereign immunity. Students will examine the federal governments trust responsibility to Indian tribes and nations. The Seminar also examines the legal framework used to regulate and enforce environmental quality, traditional and renewable energy development, and the use and stewardship of other natural resources on Indian lands. The goal of this Seminar is for students to gain a greater awareness of Indian tribes and nations and the critical role they play in overall U.S. environmental, energy, and natural resource law and public policy.

LAWS 4564 Immigration Law in Spanish (3 Credits)
Immigration Law in Spanish is a survey of the fundamental concepts of U.S. immigration law. In addition, students learn and practice the vocabulary required to appropriately communicate these concepts to Spanish-speaking clients. The class is taught entirely in Spanish, and requires a working-level written and spoken proficiency in the language.

LAWS 4565 Intellectual Property Capstone (3 Credits)
The intellectual property capstone is a simulation based course that crosses different intellectual property disciplines. Several different adjuncts are asked to prepare real world problems in different substantive and procedural contexts. The problems vary from year to year, but generally deal with patent, copyright and trademark law from litigation, administrative (i.e. representation before the patent and trademark office) and business perspectives. Students are expected to have taken at least one prior intellectual property course. This course fulfills the experiential component of the IP Certificate requirement.

LAWS 4589 LLM and Master's Internship (0 Credits)
The Sturm College of Law encourages students to gain practical experience and to develop professional skills in the legal and policy fields. Some students may elect to pursue externships for credit while others may choose to pursue paid opportunities during their study in the program. Internships are supervised by faculty and GLS department who interact with the eligible student and the employer or organization that provides the externship. The externship should provide a new learning experience for the student intern and must be related to their field of studies (e.g. business and commercial law; environmental law and policy). Satisfactory completion of the internship will result in a passing grade for the externship. The Program Director and/or GLS Advisor may serve as Supervisor for non-JD interns.

LAWS 4605 Taxation of Natural Resource (2 Credits)
This course outlines the financial, business, and legal tax problems that may be encountered during the acquisition, operation, and disposition of natural resources properties. It is a strong course for students to develop skills in general tax planning for natural resources ventures.

LAWS 4610 Torts (4 Credits)
This introductory course considers compensation for private wrongs, covering harm to persons and property, with attention to legal theories of intentional torts, negligence and strict liability.

LAWS 4615 Torts (Advanced) (3 Credits)
Advanced Torts combines practical and theoretical discussion of issues that personal injury lawyers face in practice. The topics in the seminar vary but generally include fee agreements, damages, use of experts, medical malpractice, hospital and other liens, subrogation, and governmental immunity. The seminar emphasizes the empirical reality of injuries, claims, and litigation. Prerequisite: LAWS 4610.
LAWS 4618 Representing Clients Before the SEC (3 Credits)
SEC insiders explain the processes and practices of the Division, intertwined with discussion and analysis of SEC enforcement actions past and present. This course gives students critical information to effectively represent a wide variety of clients before the Division, among them public companies, regulated entities, defrauded investors, and perpetrators of crime.

LAWS 4631 Space and Technology Law (3 Credits)
Space and Technology Law is not one particular area of law. Rather it is best thought of as a combination of numerous areas of policy and law (including the Communications Act, the COMSAT Act, the Defense Production Act, the Land Remote Sensing Act, the Commercial Space Act, the Arms Export Control Act, the Export Administration Act, and several other bodies of law) that come together to govern the Space and High Technology industries. There is extensive overlap between what is considered high tech and what is considered space and how they are treated from a legal and policy standpoint. The course explores many of these interrelated issues.

LAWS 4634 Motions Practice (3 Credits)
In this class, students learn how to present and argue pre-trial motions. These motions include motions from civil practice (motion for preliminary injunction, motion to dismiss, motion for summary judgment, etc.) criminal practice (motion to suppress, Rule 35 (c), etc.) and evidentiary motions (Rules 403, 404, and 405.) In addition, the course covers both legal and evidentiary motions in limine. Each student is asked to prepare, present, and argue a motion, as well as decide motions presented by others after making appropriate findings of fact and conclusions of law. Because a number of the motions involve the presentation of witnesses and appropriate case and statutory law, students learn trial skills, as well as refresh their knowledge of criminal and civil procedure, and the rules of evidence. Students are not asked to draft motions or prepare written briefs.

LAWS 4635 Trial Practice I: Basic Courtroom Skills (3 Credits)
The course is designed to teach the concepts and organizing principles of the formal trial process. It emphasizes the understanding necessary to develop, evaluate, prepare, and present a case for trial before a judge, jury, or other fact-finder. Exercises and simulations are used to demonstrate the importance of theory building and teach the functions of each stage of a trial. Students develop the advocacy skills appropriate to adversary adjudication. Prerequisite or corequisite: LAWS 4235.

LAWS 4637 Civil Litigation Practicum (3 Credits)
This course provides students a practical, hands-on approach to civil pretrial litigation. Students draft pleadings, motions and discovery requests essential in the litigation process prior to the actual trial stage.

LAWS 4638 Trial Practice III: Mentor's Practicum (3 Credits)
The Mentor's Practicum employs and relies upon integrated teaching, feedback, student collaboration, and multiple assessment. The practicum is designed for law school students who have exhibited advanced skills in trial advocacy, client advocacy, case analysis and communication.

LAWS 4640 Trusts and Estates (4 Credits)
Students enrolled in this course learn the ins-and-outs of trusts and estates planning. The course surveys everything involving succession wills, trusts, the role of third parties to a trust or estate, and property disposition.

LAWS 4651 Legal Writing (Advanced) (3 Credits)
Course involves a series of writing assignments, normally related. Typically, students research an initial legal issue, and then draft a first office memo. After receiving detailed feedback, students do at least one revision of that first office memo. Students then undertake research for a second legal issue, and then draft a second office memo. After receiving detailed feedback, students then do a revision of that second office memo. Finally, students use the final versions of those two office memos to create a court document, which they then revise as their final assignment. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4660 Scientific Evidence (3 Credits)
The course begins with the U.S. Supreme Court decision in Daubert v. Merrell Dow Pharmaceuticals, Inc. (113 S.Ct. 2786 (1993)). This decision threw out the Frye Rule that had governed the admission of scientific evidence in federal courts since 1923. While the Daubert rule now applies in all federal courts, states are free to either stay with the Frye Rule, adopt the new Daubert Standard or adopt some combination of the two. Students discuss the implications of these evidentiary changes in a number of areas of legal controversy. The course concentrates primarily on the use of social science evidence; however, topics include tort litigation involving Bendectin, and the controversy over the use of DNA testing in criminal cases. Other topics include the use of scientific evidence in consumer confusion cases; obscenity cases and the question of community standards; and the number of syndrome evidence cases, including post-traumatic stress disorder, battered woman syndrome, and rape trauma syndrome. Constitutional law cases include coverage of death penalty issues, jury size cases, and school segregation by race and gender (including the controversy over single-sex education, and the ending of school busing mandates by the federal courts). The goal of this course is to increase the proficiency of lawyers to use scientific evidence on behalf of clients and be able to defend against such evidence when presented by the opposing counsel.

LAWS 4670 Water Law (3 Credits)
Water Law is an introductory course for students interested in pursuing water law. It covers private property rights in water, and the legal and environmental controls surrounding it. Recommended prerequisite: LAWS 4025.

LAWS 4672 International Water Law (3 Credits)
This course presents a global overview of water law, systems, and practice in the modern world. It includes coverage of hydrology, history, national legal systems, and modern international treaties and cases. It has a special emphasis on sustainable development, equitable utilization, pollution control, and ecosystem protection utilized for multi-nation water basins. LAWS 4670 Water Law and LAWS 4320 International Law courses are not a prerequisite, as basics will be covered.
LAWS 4674 White Collar Crime (3 Credits)
This course is designed for students with an interest in advanced criminal law practice, particularly the growing legal field of white collar crime. This seminar course will introduce students to the major substantive legal areas that make up the white collar field, including mail and securities fraud, bribery, health care fraud, conspiracy, and money laundering. In addition, students will learn the basics of conducting a corporate internal investigation, dealing with search warrants and subpoenas, criminal pre-trial matters, special considerations for criminal discovery, and common ethical issues. By the end of the course, students will have learned the basic substantive and procedural issues involved in white collar practice. Students will learn from and interact with a variety of practitioners drawn from the private and government sector. Instructor permission is required for enrollment.

LAWS 4686 Wills Lab (1 Credit)
This lab is designed to provide students with practical experience with interviewing and drafting for a real client while under the close supervision of a practicing attorney. Clients come primarily from Legal Aid. Each student is individually supervised by a volunteer attorney or by Prof. Marsh. The attorney goes with the student to the first interview with the client to assist the student if any difficulties come up in the interview. Then the student drafts the appropriate documents from scratch, and the attorney helps the student determine what revisions are necessary. When documents are in final form the attorney assists the student in having the documents properly signed. Documents include will, living will, and medical or financial powers of attorney, as appropriate. Letter grades are given by Prof. Marsh. Note that no student is allowed to drop the Wills Lab after the first interview with the client unless there is a severe medical emergency. There will be one introductory meeting scheduled during lunch time. All the rest of the work is scheduled individually by the student, supervising attorney, and client. NOTE: Students will NOT be allowed to drop the course after the first interview with the client. Prerequisite: LAWS 4640.

LAWS 4700 Special Topics (1-5 Credits)
LAWS 4701 Special Topics (1-5 Credits)
LAWS 4702 Special Topics (1-6 Credits)
LAWS 4703 Special Topics (1-5 Credits)
LAWS 4704 Special Topics (1-5 Credits)
LAWS 4705 Special Topics (1-5 Credits)
LAWS 4706 Special Topics (1-5 Credits)
LAWS 4707 Special Topics (1-5 Credits)
LAWS 4708 Special Topics (1-5 Credits)
LAWS 4709 Special Topics (1-15 Credits)

LAWS 4800 Criminal Defense Clinic (3-6 Credits)
This clinic offers students the opportunity to defend low-income clients charged with various criminal offenses. These offenses include DUI/DDWAI; domestic violence; assault; theft; disturbance; child abuse and neglect; menacing; etc. Students represent their clients in various municipal and county courts in the area. This course requires numerous court appearances for arraignments, pre-trial motions, and sentencing. Students should be prepared for an intense litigation experience in misdemeanor criminal defense. Corequisite: LAWS 4801. Prerequisite: permission of faculty supervisor.

LAWS 4801 Criminal Defense Clinic Seminar (3-4 Credits)
The Criminal Law Clinic Seminar must be taken in conjunction with the Criminal Law Clinic. Class sessions will be devoted to a variety of topics, including classes on lawyering skills, substantive law, issues of lawyering and society, and case review sessions, in which student attorneys will present information about their cases/projects to each other and give and solicit feedback about issues they are confronting in the representation of their clients. The classes include simulation exercises that are critiqued by faculty, and field exercises that involve trips to the Denver jail. Classes are taught by clinical faculty and by guest speakers who include area judges, practitioners, interpreters and other court personnel. Co-requisite: LAWS 4800.

LAWS 4802 Environmental Law Clinic Seminar (3 Credits)
The ELCP clinic seminar must be taken in conjunction with the ELCP Clinic. During class, students will review federal civil procedure through a lecture series entitled "anatomy of a lawsuit," have specific lectures on effective legal writing, and commonly used statues such as the Freedom of Information Act, and Endangered Species Act. Each student must also prepare a class presentation on their assigned major case, and participate in random, less formal docket meetings. Students must also attend four guest lectures from lawyers and other professionals on environmental law advocacy issues. Students earn 3 in class credits for this course and 3 out of class credits through the corequisite course. Corequisite: LAWS 4206.

LAWS 4803 Mediation & Arbitration Clinic Seminar (2 Credits)
The Mediation and Arbitration Clinic Seminar must be taken in conjunction with the Mediation and Arbitration Clinic. The seminar meets once a week for 90 minutes. Students read articles on mediation issues and receive intensive training in the classroom that is reinforced with classroom simulations. Students are also required to critique each other in the simulations. The seminar focuses upon identifying and resolving issues that arise during actual mediations. Students will earn 2 in class credits for this course and 3 out of class credits through the corequisite course. Corequisite: LAWS 4430.
The Corporate Apprenticeship Program's purpose is to provide the opportunity for law students to learn about the distinct challenges facing corporate law. Students have represented clients in areas involving wage and hour claims, housing discrimination, eviction defense and domestic violence protection orders. Additionally, the Corporate Apprenticeship Program requires some form of community outreach project enabling the student to learn about the client populations they serve. Students will earn 3 out of class for this course and 3 in class credits through the corequisite course. Corequisite: LAWS 4806.

LAWS 4806 Civil Litigation Clinic Semnr (3 Credits)

The Civil Litigation Clinic students represent low-income clients in a variety of civil disputes. The clinic permits students to participate in the selection of cases and problems they work on. Students have represented clients in areas involving wage and hour claims, housing discrimination, eviction defense and domestic violence protection orders. Additionally, the Civil Litigation Clinic requires some form of community outreach project enabling the student to learn about the client populations they serve. Students will earn 3 out of class for this course and 3 in class credits through the corequisite course. Corequisite: LAWS 4805.

LAWS 4807 Child Advocacy Seminar (2 Credits)

The Child Advocacy Externship Seminar is a course and taught by the Rocky Mountain Children's Law Center. In the fall semester, the seminar course focuses on the laws surrounding advocacy for children in dependency & neglect, delinquency, civil protection order, and education cases. In the spring, students can enroll in a 2-credit Advanced Child Advocacy seminar to expand on the fall semester with topics such as the overlap of child welfare and family law, immigration advocacy, appellate advocacy for children, trial practice in the child welfare context, ethical issues in the representation of children, and a variety of other hot topic child advocacy issues. Students can choose to also enroll in a corresponding externship for credit. For more information on the field work component, please visit http://www.law.du.edu/index.php/legal-externship-program/specific-externship-programs/child-advocacy-externship-program.

LAWS 4809 Civil Rights Clinic (3 Credits)

The Civil Rights Clinic (CRC) represents individuals and groups in civil and human rights matters. The CRC's current cases address a range of complex constitutional issues litigated before the Federal District Court for the District of Colorado. Some of the claims currently being litigated in the CRC will impact constitutional jurisprudence nationwide. The current CRC docket is focused on the constitutional rights of prisoners. These cases challenge prison conditions and policies pursuant to the First, Fifth, Eighth and Fourteenth Amendments on issues such as: indefinite solitary confinement, failure to provide prisoners with adequate medical or mental health care, long-term denial of outdoor exercise, and the prison's refusal to provide meaningful process to individuals placed in long-term segregation. Students will earn 3 out of class for this course and 3 in class credits through the corequisite course L4812, Civil Rights Clinic Seminar. This course meets the Upper Level Writing requirement (ULW).

LAWS 4812 Civil Rights and Disability Law Clinic Seminar (3 Credits)

The Civil Rights Clinic (CRC) represents individuals and groups in civil and human rights matters. The CRC's current cases address a range of complex constitutional issues litigated before the Federal District Court for the District of Colorado. Some of the claims currently being litigated in the CRC will impact constitutional jurisprudence nationwide. The current CRC docket is focused on the constitutional rights of prisoners. These cases challenge prison conditions and policies pursuant to the First, Fifth, Eighth and Fourteenth Amendments on issues such as: indefinite solitary confinement, failure to provide prisoners with adequate medical or mental health care, long-term denial of outdoor exercise, and the prison's refusal to provide meaningful process to individuals placed in long-term segregation. Students will earn 3 in class credits for this course and 3 out of class through the corequisite course L4805, Civil Rights Clinic. This course meets the Upper Level Writing requirement (ULW).

LAWS 4867 Advising the Adviser: Compliance and Enforcement under the Investment Advisers Act (3 Credits)

This class will focus generally on investment adviser (IA) compliance with the federal securities laws and the Securities and Exchange Commission's (SEC) role with respect to that compliance. We will focus on how to advise an IA with respect to SEC regulations, touching on topics such as an IA's fiduciary role as a fiduciary and an IA's requirements with respect to marketing, best execution, and principal and cross trading. We will also focus on what's necessary to establish and operate a robust IA compliance program.

LAWS 4880 DU Law Journal (0-3 Credits)

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4884 Int'l Law Journal (0-3 Credits)

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4888 Transportation Law Journal (0-3 Credits)

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4889 Water Law Review (0-3 Credits)

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4991 Corporate Apprenticeship Program (4 Credits)

The Corporate Apprenticeship Program's purpose is to provide the opportunity for law students to learn about the distinct challenges facing corporate counsel. This program is offered solely in the spring term and consists of four mandatory seminars and 15 hours of work per week (preferably on consecutive days) in the legal department of sponsoring corporations. The interactive seminars are designed to introduce students to the practice environment and operations of an in-house corporate legal department.
LAWS 4996 Thesis (1-10 Credits)
The program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and the community. Example placements include public defenders' offices; prosecutors' offices; the Attorney General's office; Legal Service offices; judicial clerkships; and selected private firms. Need special enrollment permission from Internship/Externship Office. A maximum of 10 credit hours may be awarded for this program.

LAWS 4999 Directed Research (1-5 Credits)
Direct Research is an opportunity for students to research and write on any area of law approved by a full-time faculty member who agrees to direct the project. The research project must be completed within the semester for which the student is registered. The research is compiled into a paper of publishable quality. A copy is delivered to the supervising faculty member for grading and a second copy is delivered to the associate dean for academic affairs by the last day of exams for that semester. Students may petition for either two or three semester hours. A maximum of five semester hours credit for Directed Research is permitted in satisfaction of the 90-credit degree requirement. A Directed Research application form (available in the registrar's office) signed by both the faculty supervisor and student is required for enrollment. The registrar's office will register the student for his or her directed research once the student's application form has been approved. All directed research projects must conform with the upper level writing requirement, which involves a mandatory rewrite, in addition to any other requirements. This course satisfies the upper level writing requirement (ULWR). Permission is required from the faculty supervisor and the Assistant Dean for Student Affairs to increase credit hours to 4 or 5.

LAWS 5025 Externship (1-10 Credits)
The program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and community. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; judicial clerkships; and selected private firms. Externship Seminar: In conjunction with the above field placement each student shall meet in a seminar under the supervision of a member of the law faculty to explore common and contrasting areas of professional responsibility, professional tasks and skills, decision making and dispute resolution presented in the various extern settings.

LAWS 5026 Trial Practice III: National Trial Team (3 Credits)
The Trial Teams Course is for the new and veteran students who are selected to represent the school on one of the national trial teams. The course meets one night a week during the summer session for five hours each night. The course is split into two sections, one for returning team members, and one for the newly-selected team members. The course is an advanced courtroom-simulation course in which students work intensely with other students and the instructor, delving into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. The veteran section begins the first class with students presenting both sides of a criminal case. The new member section begins with refreshers on case analysis, evidence, and courtroom strategies, and culminates with final trials. There is weekly out-of-class case analysis, drafting, and preparation required. Grading is based on classroom participation, written homework, simulated courtroom presentations, and a final trial.

LAWS 5027 American Association for Justice Trial Team (3 Credits)
Sturm's American Association for Justice Trial Team (AAJ) is one of four of the school's advanced courtroom-simulation based "team-courses" in which students find themselves working intensely with five other students and an instructor, delving deeply into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. Students must invited to be on one of Sturm's National Trial Teams, after tryouts that are held every spring (April). The team-courses meet all three semesters (fall, spring, and summer). Being invited onto one of the teams is a two-year commitment. Starting the first week of each semester, and continuing throughout the entire semester, the AAJ team-course meets once a week in a classroom environment, for a total of 2.5 classroom hours per week. The AAJ team-course also meets a second time each week for courtroom simulation performances and video review, for an additional four (4) hours. There is also substantial out-of-class case analysis and examination drafting required. The team competes on the national level in the fall at an "invitational" tournament, and in the spring in the AAJ tournament against other ranked law schools from around the country. Grading is based on classroom participation, written homework, simulated courtroom presentations, and a final trial.

LAWS 5028 ABA Trial Team (3 Credits)
Sturm's ABA/NTC team is one of four of the school's advanced courtroom-simulation based "team-courses" in which students find themselves working intensely with five other students and an instructor, delving deeply into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. Students must be invited to be on one of Sturm's National Trial Teams, after tryouts that are held every spring (April). The team-courses meet all three semesters (fall, spring, and summer). Being invited onto one of the teams is a two-year commitment. Starting the first week of each semester and continuing throughout the entire semester, the ABA/NTC team-course meets twice a week in a classroom environment, for a total of five (5) classroom hours per week. The ABA/NTC team-course also meets a third time each week for courtroom simulation performances and video review, for an additional four (4) hours. There is also substantial out-of-class case analysis and drafting required. The team competes on the national level in the fall at an "invitational" tournament, and in the spring in the ABA/NTC tournament against other ranked law schools from around the country. Grading is based on classroom participation, written homework, and simulated courtroom presentations.
LAWS 5029 Semester in Practice (1-12 Credits)
The Semester in Practice program is designed to allow students the opportunity to develop practice skills by working full-time in legal programs of concern to the legal profession and community. This is a capstone experience offered to students in their last year of law school, where students have significant exposure to the substantive law in their externship. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; judicial clerkships; and selected private firms. As this is an externship, credit may vary, up to 12 credits, depending on the student. Externship Seminar: In conjunction with the above field placement, each student shall meet in a three-credit graded seminar under the supervision of a member of the externship faculty to explore common and contrasting areas of professional responsibility, professional tasks and skills, decision making and dispute resolution presented in the various extern settings.

LAWS 5030 Semester in Practice Seminar (3 Credits)
This seminar is the classroom component of the Semester in Practice (SIP) course. Through class discussion, we explore a variety of issues that provide students with the opportunity to reflect on the legal profession and how they perceive their role in the profession - currently and prospectively. We focus primarily on professional identity and ethical issues of key importance to the practice of law.

LAWS 5031 Legal Externship Seminar (1-3 Credits)
The Legal Externship Program is divided into practice-specific programs. Students enrolled in each of these programs are required to also enroll in an accompanying for-credit seminar that addresses topics specific to each practice area.

LAWS 5035 Public Service Externship (2-6 Credits)
The externship program is designed to allow students to gain experience working in legal programs of concern to the legal profession and community. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; and judicial clerkships. To ensure that the College of Law remains in the forefront of public service, every Juris Doctor student is required to perform a minimum of 50 hours of supervised, uncompensated, law-related public service work during his or her law school career as a prerequisite to graduation. This requirement may be fulfilled by registering for, and passing, an externship for credit at a government agency, judicial chambers, or nonprofit organization via the Legal Externship Office, as long as no financial compensation of any kind whether from the employer or outside source was received for the externship.

Legal Administration Courses
MSLA 4050 The Impact of Court Governance (1 Credit)
This course informs students on the policy making process of local court governance and the impact of the process on court operations and public services. Various governance structures are explored to include the benefits of principle based governance. Students gain in-depth insight into the roles and relationships of judges and court administrators as leaders and governing authorities within the judicial system. Course knowledge is applicable to all levels of national and international court jurisdiction.

MSLA 4080 Law Firm Information Technology (2 Credits)
This course is designed to inform the student on the complexities of information technology in a law firm setting. Topics include time and billing, assessing the IT needs of the office, networking abilities, creating a paperless office, security, case management, outsourcing, and knowledge management.

MSLA 4090 Court Information Technology (2 Credits)
This course is designed to introduce students to the intricacies of information technology in a court setting and the importance of an efficient and effective system. Topics include communications technology (internal and external), virtual courthouses, electronic case filing, legal research systems, information and systems security, networking abilities and needs, court reporting/recording and accessibility to the public (website).

MSLA 4100 Court Fiscal Management (3 Credits)
This course focuses on the key aspects of fiscal management in a court setting. Students learn models of public budgeting, internal controls, procurement, outsourcing, RFPs, internal and external auditing, and government funding models. Prerequisite: MSLA 4410.

MSLA 4121 Human Res & Performance Mgmt (3 Credits)
This course will provide a broad overview of the field of human resource and performance management. Students learn what managers and administrators need to know to effectively address Human Resource issues in today's workplace. The course will provide major concepts and techniques of performance management in law and court environments. By employing perspectives of both the employer and employee the class will focus on "best practices" utilized by managers and administrators and emphasize decision-making skills and processes in the context of Human Resources law and policy. Students will learn how to achieve organizational goals via management of a company's most precious resource, their people. This textbook provides an overview of the content upon which the most common HR certification (SPHR, PHR) are based.

MSLA 4151 Applied Leadership and Management Theory (3 Credits)
This course is designed to provide the student with an understanding of the importance of effective leadership and management in the workplace. Students will learn the tools necessary to manage conflict, build strong teams, function as a team, manage performance, create and maintain a positive work environment, and motivate others.

MSLA 4180 Court Case Flow and Load Management (2 Credits)
This course is designed to provide the student with the fundamental principles of managing an effective case management system. Students will learn the importance of an efficient case flow management system, the history of case management, electronic case filing, civil and criminal rules of procedure, case assignment, quality assurance and time standards and major case, records management and reporting systems, strategies necessary to gain judicial support, leadership and cooperation to effectuate effective case flow management practices, and improve judicial performance as it relates to the disposition of actions.
MSLA 4181 Inclusiveness in the Legal Profession - The Next Generation of Diversity Efforts (1 Credit)
Diversity and inclusiveness are hot topics in the legal profession. This highly interactive course will educate students about the state of diversity and inclusiveness within the legal profession, the systemic underpinnings of the lack of diversity, how to create inclusive environments for successful retention and advancement of female and diverse attorneys and staff, as well as the importance of diversity and inclusiveness to the viability of the legal profession. Students will be challenged to draw upon their own life experiences, to consider different perspectives, and provide thoughtful analysis on how they can incorporate diversity and inclusiveness practices with their career path and future legal organizations.

MSLA 4200 The Business of Courts (3 Credits)
This course is designed to provide the student with the fundamental principles and elements of the key functions performed by the courts. These functions include jury management, court based mediation and arbitration programs, court reporting, client expectations, contingency planning, continuity of operations planning, needs and expectations of litigants without lawyers, interpreter services, court and staff performance measurement and management, and the role of the court administrator.

MSLA 4201 Law Firm Administration (3 Credits)
This course informs the student of the fundamental principles, elements and day-to-day operational processes of law office management. Topics covered in this course include law office culture, law firm organization, succession planning, practice areas, client communication flow, collection challenges, and understanding and working with law office timekeeping, accounting, and billing systems.

MSLA 4205 Lawyer Recruitment, Development, and Advancement in Law Firms (2 Credits)
This course will focus on the key aspects of lawyer recruitment, development and advancement in law firms. Students will learn the primary methods for recruiting and hiring lawyers at all experience levels, and the most important elements of lawyer development, including orientation, integration, legal and core skills training, experiential learning, mentoring, performance management, and evaluations. Traditional compensation and advancement models, as well as emerging trends in all of these areas, will also be covered during the course.

MSLA 4215 Court Space, Facilities and Security (2 Credits)
This course is designed to inform the students of the fundamentals of managing the court's space, facilities and security. Aspects of this course include: facilities management, operational standards and management, safety and security, assessing courthouse building needs, developing space planning reports, the management of all types of space projects, building and personnel security issues, contingency planning, and disaster recovery.

MSLA 4300 Introduction to the United States Judicial System (3 Credits)
This course provides the student with an overview of the United States judicial system. Students learn the fundamentals of our legal system, historical basis of the U.S. judicial system, the foundation, structure, purpose, what it stands for, and the varying levels of the U.S. court system.

MSLA 4301 Judicial Performance and Evaluation (1 Credit)
This course informs students on the complexities of judicial performance and evaluation. Students learn the fundamentals of developing a judicial performance program, measuring the effectiveness of performance recommendations, commissions on judicial performance, and the components of the evaluation process.

MSLA 4310 World Judicial Systems (3 Credits)
The goal of this course is to compare and contrast the role of the judiciary in various legal systems. Topics include types of courts and court systems (including domestic, supranational, i.e., the European Union, and international courts), judicial independence, separation of powers, and challenges facing the judiciary such as miscarriages of justice. Students also compare court procedures (civil, criminal, appellate review) in different types of legal systems.

MSLA 4320 Fundamentals of Comparative Law (3 Credits)
This course introduces the classifications of the world's legal systems: (civil law, common law, Islamic law, customary law, and mixed law systems). Students will learn the general elements of a legal system then compare and contrast these features in different types of legal systems as they are used in various countries or other jurisdictions including the European Union. Students will also explore internet and electronic resources to research and analyze foreign legal systems.

MSLA 4330 Specialty Courts (2 Credits)
This course will provide the students with an understanding of the purpose, functionality and effectiveness of specialty courts. Topics will include the types of specialty courts and how to create them, maintaining sustainability, treatment options, demographics, budgeting and measuring specialty court performance.

MSLA 4340 Communication, Writing, and Research in Legal Business (3 Credits)
This is a foundation course is designed to provide students with effective, productive, and relevant communication, writing, and research skills used in legal business today. Topics will include writing press releases, social media news/headlines/updates, executive summaries, email strategies based on audience, etc.

MSLA 4384 Court Comm & Media Relations (2 Credits)
This course will inform the students how to address communications and manage media relations for the courts. Topics will include views of the court from multiple perspectives, communicating to different constituencies, public relations and customer satisfaction, and educational outreach programs.
MSLA 4385 Law Firm Communications and Technology (3 Credits)
This course is designed to build student’s foundation knowledge of technology in the legal environment. The competitive landscape in the law firm setting is stronger than it ever has been, and this competitiveness forces law firms to find efficient and innovative ways to conduct business in this new landscape through the use of technology. Topics of this course will include identification of technologies used in law firms and legal departments as well as thoughts about how to leverage those technologies to help gain efficiencies.

MSLA 4386 Law Firm Client Services and Satisfaction (2 Credits)
This course is designed to inform the student of the importance of client service and satisfaction and its value to the law firm. Topics covered in this course include external communication, client feedback, partnering with clients, client relationship management, and evaluation and survey design.

MSLA 4410 Accounting and Financial Management in Legal Business (3 Credits)
This course will explore the principals and practices of financial accounting including the standards that govern the preparation of financial statements in legal business. Students will gain a comprehensive overview of double entry accounting, a detailed understanding of assets, liability, equity, revenue and expenses and how they affect the income statement, balance sheet, and statement of cash flows. Special attention will be given to the unique attributes of financial reports related to law firms.

MSLA 4415 Statistics for the Legal Administrator (2 Credits)
This course will introduce the fundamentals of statistics for the legal administrator. Students will learn how to measure efficiencies and work performance, perform and analyze needs assessment, track productivity; measure cases flows, and assess client needs.

MSLA 4420 Legal Practice Seminar-Law as a Business (3 Credits)
This course provides an overview of the business functions of a law practice. Students learn how effective law practice administrators and managers base policy and management decisions on a comprehensive understanding of the law firm as a complex and interdependent equation. MSLA course, open to JD students with approval from Associate Dean.

MSLA 4460 ADR for the Court and Law Firm Administrators (1 Credit)
This course has been designed for the Court/Legal Administrator to explore and understand the skills essential when negotiating/mediating conflict and to examine the ADR system designed for court-annexed, Federal/state agency and private sector arbitration/mediation programs. Students will have an opportunity to explore issues related to ADR in the public and private sector by actively participating in weekly online discussions and experience hands-on learning buy developing an ADR system to include the process for selecting a panel of ADR specialists, and a process for implementing and managing the program.

MSLA 4901 Law Firm Financial Management (3 Credits)
This course focuses on the key aspects of financial management in a law firm setting. Students analyze financial reports/data, work flow analysis and assessment, understand trust accounts, client billing and internal controls, to ultimately recognize and understand the financial health of the law firm. Prerequisite: MSLA 4410.

MSLA 4950 Strategic Planning in Courts (2 Credits)
This course is designed to prepare the student in creating a strategic plan for the courts. Students learn to think strategically, design surveys, perform an environmental analysis, set goals, develop action plans, and measurement tools.

MSLA 4954 Project Management (3 Credits)
This course is designed to provide students with the tools to effectively manage a project regardless of its size. Topics include clarifying the project goals, using objectives to define responsibilities, understanding GANTT and PERT charts, goal setting, prioritization, time management, consensus building, developing creative teams, empower the project team, motivating the team, communications tools, how to handle conflicts, and how to celebrate your success.

MSLA 4999 Directed Research MSLA (1-17 Credits)
MSLA Directed Research is an opportunity for students to research and write on any area of legal administration approved by an MSLA faculty member who agrees to direct the project. The research project must be completed within the semester for which the student is registered. The research is compiled into a paper of publishable quality that is delivered to the MSLA program director by the last day of exams for that semester. A Directed Research application form (available in the Registrar’s Office) signed by both the faculty supervisor and student is required for enrollment. The Registrar’s Office will register the student for his or her directed research once the student’s application form has been approved.

MSLA 5010 Capstone: Externship/Project (3 Credits)
The externship or creative project is designed to complement the student’s area of study. The externship enables the student to work in a practical setting and acquire the experience in a legal environment. The creative project option provides students, already working in the legal environment, an opportunity to complete a project or research paper on a topic determined by student and MSLA office. A grade of “pass” is given after the work is completed, and a letter from the supervisor summarizing the student’s experience is submitted to the MSLA Office.

University College

University College (http://universitycollege.du.edu/answers/why-university-college.cfm), the college of professional and continuing studies at the University of Denver, provides a fully accredited educational experience that engages, challenges, and energizes our students. At University College, career-focused content is designed and delivered for busy adults through online, on campus, or hybrid courses. Hone your talent and master new skills by earning a master’s degree (http://universitycollege.du.edu/masters-degrees.cfm) in 18 months, or finish a graduate certificate (https://universitycollege.du.edu/certificate) in less than a year.
Arts and Culture Management

Office: University College Student Support Center
Mail Code: 2211 S. Josephine St., Denver, CO 80208
Phone: 303-871-2291, 800-347-2042
Email: ucolsupport@du.edu
Web Site: http://www.universitycollege.du.edu

The Arts and Culture Management program helps students enhance their ability to support, promote, and lead both public and private sector arts and cultural organizations. The program’s larger aim is to prepare students to strengthen their communities through the dissemination of artistic and cultural creations that address and celebrate diverse constituencies, whether based on age, ethnic background, religious/philosophical identity, or political commitments. The program fosters the study of best practices in areas such as advocacy, community outreach, marketing, fundraising, facilities management, organizational development, budgeting, and governance. The program develops critical and creative thought through a combination of academic and applied inquiry to fully understand the needs of communities and organizations and to meet those needs in the most effective possible ways.

This program prepares students to:

- Develop careers in public and/or private arts and culture organizations
- Implement best practices to support organizational stability and creative vibrancy
- Cultivate strong connections between arts and culture organizations and the communities they serve
- Effectively deliver well-planned programs and events tailored to particular audiences

Master of Arts in Arts and Culture Management with a Concentration in Arts and Culture Outreach and Advocacy

Students in the Arts and Culture Outreach and Advocacy concentration learn strategies and methods for creating strong relationships between arts and culture organizations and the communities they serve. Instructors with current expertise in arts and culture outreach and advocacy offer current industry insight and help students develop the practical knowledge they need to advocate for arts and culture in communities of all kinds. By designing engaging events and targeted programs, applying entrepreneurial thinking and skills to issues of community outreach, and developing effective approaches to securing grant support, graduates with this concentration will bring core skills to any organization they join in the arts and culture sector.

This degree prepares students to:

- Design events and programs that cultivate connections between arts and culture organizations and the communities they serve
- Develop winning proposals to secure grant support for outreach and advocacy initiatives
- Evaluate the opportunities to build a strategic marketing plan using various forms of media
- Apply creative, entrepreneurial approaches to help both nonprofit and for-profit organizations develop a strong, productive community presence

Master of Arts in Arts and Culture Management with a Concentration in Arts and Culture Marketing

In the Arts and Culture Marketing concentration, students learn to plan, sustain, and develop strategic marketing initiatives and campaign assessment methodologies on behalf of arts and culture organizations, both nonprofit and for-profit. Instructors with current expertise in arts and culture marketing provide industry insight and help students develop the practical knowledge they need to work as effective members of arts and culture marketing teams.

This degree prepares students to:

- Design effective marketing strategies to cultivate audiences for arts and culture events
- Identify, develop, and retain key audiences
- Evaluate the opportunities to build strategic marketing plans using various forms of promotion, advertising, digital communications, and social media
- Assess individual campaigns and overarching strategies in order to improve them over time

Master of Arts in Arts and Culture Management with a Concentration in Arts and Culture Fundraising and Development

Students in the Arts and Culture Fundraising concentration learn the practical steps involved in creating successful fundraising campaigns on behalf of nonprofit arts and culture organizations. Instructors with current expertise in arts and culture fundraising help students understand how to
leverage an organization’s senior staff, board of directors, and volunteers to secure support from four major funding groups: businesses, foundations, individuals, and government agencies. Coursework also addresses how to build a stable patron base and mount special events that build a sense of ownership on the part of donors.

This degree prepares students to:

• Design effective annual arts and culture fundraising campaigns
• Determine the giving policies of businesses and foundations
• Create special events for donors that instill a sense of ownership in the arts and culture organization’s mission
• Evaluate the success of each campaign to apply lessons learned to future efforts

Master of Arts in Arts and Culture Management with a Concentration in Arts and Culture Leadership

In the Arts and Culture Leadership concentration, students learn how to establish strong leadership practices in four key areas: organizational operations, management of people and programs, creation of sustainable business models designed to build healthy organizations, and activities aimed at fostering social change. Instructors with experience as arts and culture leaders provide industry insight and help students develop the practical knowledge and sophisticated skillset they need to effectively lead arts and culture organizations.

This degree prepares students to:

• Develop strategic approaches to managing an organization’s operations
• Manage people and programs in ways that encourage commitment, innovation, and audience loyalty
• Explore a variety of sustainable business models to choose one that best matches the mission of a particular organization

Graduate Certificate in Arts and Culture management with a Concentration in Arts and Culture Outreach and Advocacy

Students earning a certificate in the Arts and Culture Outreach and Advocacy learn strategies and methods for creating strong relationships between arts and culture organizations and the communities they serve. Instructors with current expertise in arts and culture outreach and advocacy offer current industry insight and help students begin to develop the practical knowledge they need to advocate for arts and culture in communities of all kinds. By designing engaging events and targeted programs, applying entrepreneurial thinking and skills to issues of community outreach, and developing effective approaches to securing grant support, certificate students will develop core skills that are easily transferable to any organization they join in the arts and culture sector. Students will also learn additional skills and knowledge in arts and culture through elective coursework.

Graduate Certificate in Arts and Culture Management with a Concentration in Arts and Culture Marketing

Students earning a certificate in Arts and Culture Marketing learn to plan, sustain, and develop strategic marketing initiatives and campaign assessment methodologies on behalf of arts and culture organizations, both nonprofit and for-profit. Instructors with current expertise in arts and culture marketing provide industry insight and help students begin to develop the practical knowledge they need to work as effective members of arts and culture marketing teams. Students will also learn additional skills and knowledge in arts and culture through elective coursework.

Graduate Certificate in Arts and Culture Management with a Concentration in Arts and Culture Fundraising and Development

Master of Arts in Arts and Culture Management with a Concentration in Arts and Culture Outreach and Advocacy, Arts and Culture Marketing, Arts and Culture Fundraising, Arts and Culture Leadership

Master’s Degree Admission

Degree and GPA Requirements

• Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

• Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
• Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
• Minimum CAE Score: 169

English Conditional Admission: Master’s degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, English Conditional Acceptance

Certificate in Arts and Culture Management with a Concentration in Arts and Culture Outreach and Advocacy, Arts and Culture Marketing, Arts and Culture Fundraising, Arts and Culture Leadership

Minimum number of credits required: 48

Students will work with their program’s Enrollment Manager to determine the best set of courses to choose for their electives.

A satisfactory quality of achievement with a grade point average of “B” (3.0) or better is required in graduate coursework accepted for the degree. The average is determined on the basis of the University’s grading system. In no case, may more than one-fourth of the hours accepted toward the degree be of “C” grade. A grade lower than “C” renders the credit unacceptable for meeting degree requirements. Students must earn a grade of B- or better in the Capstone Project or Capstone Seminar.

Courses

**MALS 4020 Graduate Research and Writing (4 Credits)**
Critical thinking, accomplished through solid research and clear writing, is paramount to success in one's academic and professional pursuits. This course enables students to develop clear analytic and rhetorical writing skills at the graduate level; these skills are utilized throughout the curriculum in all degree areas. Each student organizes and produces a focused paper on a topic related to the student's degree field that contains a continuing argument centered around a clear thesis statement supported by the work of experts. Sources are evaluated for validity and incorporated in the paper with regard to the absence of plagiarism and proper Turabian author-date documentation. Focusing on the thesis statement, students research and analyze current data and trends in the field, build a rhetorical argument, and draw conclusions. The course stresses editing and revision for mechanics, style, and language. It is designed to improve writing and communication skills for use in academic and professional settings. This course is required of all degree seeking students and should be taken in the first two quarter of enrollment. A final grade of B or better must be earned in this course to meet degree requirements.

**MALS 4050 World Visual & Performance Art (4 Credits)**
This course draws upon global artistic traditions of visual art and performance in conveying how human beings express ideas, themes, and emotions. Students view and experience artistic forms and movements throughout history and from a variety of traditions across the world, critically analyzing art movements and forms across time. They synthesize ideas across cultures, traditions, and types of creative expression and make connections and distinctions between genres and art forms. A different, rich, artistic theme is the focus each time the course is taught.

**MALS 4200 Grant Writing for Arts and Culture (4 Credits)**
This course explores the unique approaches to grant writing required by a variety of government and private entities that offer support for the arts and humanities. By identifying the special character of each entity's mission, its funding history, its place in the funding ecosystem, and the personalities involved, students learn how to produce effective funding proposals that align the goals of the funding entity with the programming goals of arts and culture organizations.

**MALS 4210 Inspiring Individual Donations for Arts and Culture (4 Credits)**
Students in this course learn the most effective ways to cultivate relationships with individuals in their community who are engaged with arts and culture and then inspire them to donate both time and money to organizations that align with their interests.

**MALS 4220 Acquiring Sponsorships for Arts and Culture (4 Credits)**
Students in this course learn how to identify businesses in their communities that care about arts and culture programming and value their programming enough to sponsor their efforts. The course presents case studies of sponsorship acquisitions, and students develop approaches of their own based on the most successful methods used by similar organizations.

**MALS 4280 Funding Arts and Culture Programming and Development (4 Credits)**
Arts organizations must always consider funding when developing programming. Organizational strategic planning is analyzed, and fundraising is examined as a major component of that planning. Various tools and techniques for fundraising, including communication and planning skills, are analyzed and applied to case studies. Students explore different forms of fundraising and their implications for programming, which may include private or public grants, governmental funding, fundraising events, and private donations.

**MALS 4281 Event Planning (4 Credits)**
Events and festivals play a large role in promoting the arts and developing links between the arts community and wider audiences and patrons. Students address various topics associated with event and festival planning and management, such as program development, marketing and audience development, venue considerations, and building partnerships. Students create an event program and plan.

**MALS 4283 Strategic Marketing Planning for Arts and Culture (4 Credits)**
This course provides a strategic approach to audience and markets. Students study basic principles of marketing and audience identification. They build strategic marketing plans that are cohesive with the mission and programming of the organization, utilizing various forms of media. Audience characteristics are examined from various perspectives, and theories of creating commitment to the arts are studied. Students create an arts marketing plan for an organization or event.

**MALS 4284 Arts and Culture Entrepreneurship (4 Credits)**
In any sector of the Arts and Culture field, whether government, non-profit, or for profit, it is essential to be able to develop programs and/or organizations from conception through implementation and assessment. This development requires the clear communication of what is needed to develop, implement, and sustain this plan over time. In this course, students take an entrepreneurial approach to develop a program or organization in the arts and culture field. Students develop and present a comprehensive business plan to define, map, structure, and assess the program / organization in either the non-profit or for profit sector.
MALS 4285 Basics of Arts and Culture Marketing (4 Credits)
This course provides a strategic approach to audiences and markets through an arts and cultural lens. Students will study basic principles of marketing, audience characteristics, and theories of creating commitment to the arts.

MALS 4286 Social Media and Digital Marketing for Arts and Culture (4 Credits)
Marketing arts and culture in the digital age is an art unto itself. Today's arts marketers are expected to produce visual, audio, and written content that matches the quality of the art, on stage or in the gallery, or the cultural programming presented to the public. This course provides students with a framework for producing engaging digital campaigns that build communities around art and culture, a skill that is immediately marketable in their job search after graduation.

MALS 4287 Managing Demand and Pricing for Arts and Culture (4 Credits)
Tomorrow’s arts leaders need to be prepared to face the emotional subject of pricing in a way that is responsive to the community yet supports a sustainable business model. This class takes an evidence-based approach to determining demand for arts and culture programming and setting prices for programs and events offered by arts and culture organizations. Students will explore dynamic pricing strategies, approaches to communicating the relationship between price and value, and how artistic and cultural programming enriches the broader community.

MALS 4300 Operational Strategy for Arts and Culture (4 Credits)
This course introduces students to the operational challenges faced by leaders in arts and culture organizations. Operational leaders shape the structures and systems that help organizations realize their strategies and objectives. These structures and systems enable creative solutions at every level of the organization, cultivating a relatively open culture that encourages individual commitment and innovation as well as effective group collaboration. Students learn to analyze and assess productive operational strategies based on understanding the organization's goals; its financial, technical, and regulatory constraints, and the limitations and opportunities presented by the communities it seeks to serve.

MALS 4310 Program and People Management (4 Credits)
In this course, students learn a variety of approaches to managing people and programs in arts and culture organizations, with the aim of encouraging creative engagement and commitment to the mission of the organization as expressed in its programming.

MALS 4340 Arts and Culture Leadership for Social Change (4 Credits)
Arts and Culture organizations historically have been at the forefront of social change. In this course, students examine the role of arts and humanities in inspiring and shaping social change and learn how to integrate social change goals into the programming of arts and culture organizations.

MALS 4410 Writing and Healing (4 Credits)
Many writers attest to the emotional, spiritual, and even physical benefits of writing. In this course, students will explore a variety of ways in which written expression can help them navigate the human journey. Students learn leading theoretical models of journal and poetry therapy (interactive bibliotherapy), assess poems based on their usefulness in personal growth contexts, and participate in experiential discussions and writing exercises. Students focus on the writing and healing process rather than their own self-explanations of healing through writing. Students submit a portfolio of reflection writings, as well as complete a final paper on a writing topic that intersects with a personal growth experience or interest. Cross-listed with PWRI 4410 Writing and Healing.

MALS 4440 Artists on Art (4 Credits)
This course explores the professional life of the artist, including how artists conceive of a vision for their work, organize their time and space, and communicate about their art. Students read significant works (diaries, correspondence, and essays) by and about artists, and have opportunities to interact with working artists. Students keep and produce a journal to explore ideas, plan projects, and describe methods and media to be used in their current or proposed work.

MALS 4444 Emerging Trends in Art (4 Credits)
This course focuses on what is "going on" in the arts: contemporary trends, what’s hot, what’s not, and why. Selected themes in modern and contemporary art are reviewed to help students discover how their art will fit into or counter emerging trends in art. The latest cutting edge developments in art are explored, and students are challenged to describe the place and purpose for their work.

MALS 4470 Arts and Culture: History, Context, and Trends (4 Credits)
This course examines the significant and growing economic, social, and educational impact of the arts in today’s rapidly changing environment. Discussion of current and historical trends in the visual, performing, literary, and media arts provide a context for practical applications in the field.

MALS 4475 Organizational Vibrancy and Measurement (4 Credits)
As database and analytics systems for arts organizations grow ever more sophisticated, arts leaders must be literate in basics concepts of statistics, finance, and data analysis. This course will prepare students to examine data critically, explore the stories that data can tell, and determine how to measure success and vibrancy.

MALS 4480 Arts and Culture: Best Practices and Practical Skills (4 Credits)
This course provides a comprehensive overview of nonprofit best practices with specific applications to arts and culture organizations. Governance, budget planning and management, organizational development, advocacy, marketing and fundraising, community and rural development, event planning and facilities management are discussed using exemplary and diverse arts organizations as case studies.

MALS 4485 Legal Landscape of Arts and Culture (4 Credits)
Professionals in arts and culture, whether they are artists, managers, directors, or others working in the private, government, or nonprofit sector, will encounter a variety of legal issues during their careers. Through readings, case studies, assignments, and research, students will be introduced to a complex interdisciplinary system of relevant laws that impact and, in some cases, govern arts and culture organizational activities.
MALS 4490 Cultural Participation and Program Planning (4 Credits)
In this course, students explore changing attitudes and participation in the arts and the need for innovative approaches to engage audiences. Audience development and involvement is explored, especially in terms of arts education. The connection between cultural participation and program planning is closely examined. Various models are discussed on a theoretical level, and diverse arts organizations serve as case studies for practical applications.

MALS 4701 Topics in Literature (4 Credits)
The content of this course varies each term. The topics may include time-sensitive issues in the area of literature, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

MALS 4702 Topics in Writing (1-4 Credits)
The content of this course varies each time it is offered. The topics may include time-sensitive issues in the areas of writing and literature, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

MALS 4703 Topics in Film (1-5 Credits)
The content of this course varies each time it is offered. The topics may include time-sensitive issues from the film industry, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

MALS 4704 Topics in Art (1-5 Credits)
The content of this course varies each time it is offered. The topics may include time-sensitive issues from the film industry, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

MALS 4740 Natural Science and Literature (4 Credits)
The natural sciences have inspired some of the most entertaining, creative and provocative works in international literature. Writers like Thoreau, Gould, McPhee, Kingsolver and others have explored some of the most complex theories that explain the majesty of the physical world. Students read and analyze many works in this popular genre. Specifically, the class looks at how these writers use story to shape their work, how they introduce and explain multifaceted theories for the layperson, and how recent scientific theory has shaped our culture. Students also have an opportunity to write about scientific subjects in their own voice.

MALS 4745 Children's Literature (4 Credits)
This course is an introductory study of all levels of children’s literature for the student who is interested in literature, the student who is planning to teach, and for those who are or will be parents. This course introduces students to types, genres, and varieties of literature for reading to children as well as reading by children. The main focus is to remember the joys and wonders of reading as a child and young adult, and to approach the literature selected not as “just a kid's book,” but as literature with real quality standards and room for critical and analytical discussions.

MALS 4750 Literature to Film (4 Credits)
In this course, we examine the adaptation of literary works into films. We closely study selected modern literary works and the film interpretations of each work. Focusing on the transition from one narrative form to another, the course aims at enhancing the critical skill of students as well as their creative ability. Therefore, we also have mini scripting workshops as a way of imaginatively highlighting the sort of considerations that go into the making of the film script.

MALS 4755 World Literature (4 Credits)
In this course, students take a literary tour of the world in 70 days. Stops along the way include classic works of the 20th-Century from Africa, Asia, Europe, and Latin America - fiction, nonfiction, and poetry. As with any whirlwind tour, students learn a little about "the other" and a lot about themselves. An emphasis can help us see our own literary and cultural assumptions with new eyes. Students are also asked to reflect on thematic relationships and differences among texts from different times and places.

MALS 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required to pass.
MALS 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students’ research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

MALS 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

MALS 4905 Graduate Social Research Methods (4 Credits)
Graduate Social Research Methods is an exploration of the methods and purposes of social science research from the perspective of the researcher as well as that of the informed professional and consumer of information. Students will learn about the process of research, including the development of research questions, the purpose of various social science research methods, the role of professional ethics, and general approaches to the analysis and interpretation of data. Students will develop the ability to read and critique basic social science research articles and to implement simple research designs. Students will develop and write a research proposal around a specific research question informed by a review of the literature. Technical requirements include the ability to read and modify Microsoft Excel documents. This course is required of all degree-seeking students and should be taken in the first three quarters of enrollment.

MALS 4915 Research in Humanities (4 Credits)
Graduate Social Research Methods is an exploration of the methods and purposes of social science research from the perspective of the researcher as well as that of the informed professional and consumer of information. Students will learn about the process of research, including the development of research questions, the purpose of various social science research methods, the role of professional ethics, and general approaches to the analysis and interpretation of data. Students will develop the ability to read and critique basic social science research articles and to implement simple research designs. Students will develop and write a research proposal around a specific research question informed by a review of the literature. Technical requirements include the ability to read and modify Microsoft Excel documents. This course is required of all degree-seeking students and should be taken in the first three quarters of enrollment.

MALS 4920 Portfolio Capstone (4 Credits)
The Portfolio Capstone course provides students the opportunity to reflect upon the work they have done throughout their graduate studies at University College and synthesize their learning. Students in the Portfolio Capstone produce deliverables that include: (1) a thorough annotation of their portfolio, a process requiring critical and creative thinking about their educational experience, and (2) a pinnacle project that identifies, analyzes, and elaborates significant themes in their program experience, evaluates their accomplishments, connects their coursework to their professional goals, and assesses those goals in the context of their chosen field. Students must complete the Portfolio Capstone with a grade of B or better.

MALS 4980 Internship (1-4 Credits)
The internship is designed to offer students a purposeful experience in a practical, industry-related setting. The internship is an individualized learning experience and a training plain is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master’s programs.

MALS 4991 Independent Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

MALS 4992 Directed Study (1-8 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Directed Study is offered only on a for-credit basis.
Communication Management

Office: University College Student Support Center
Mail Code: 2211 S. Josephine St., Denver, CO 80208
Phone: 303-871-2291, 800-347-2042
Email: ucolsupport@du.edu
Web Site: http://www.universitycollege.du.edu

Learn the art and science of powerful communication that persuades your audience to take desired actions. From the nuance required to handle interpersonal conversations or lead organizational change, to the strategy behind impactful digital communication or training, our curriculum develops your expertise in meaningful, data-driven storytelling.

In this program, you'll enhance your abilities to strategically craft messages, measure their impact, and create desired outcomes—whether that's gaining employee buy-in, gathering participant feedback, engaging customers, or building brand awareness.

This degree prepares students to do the following:
• Demonstrate ability to integrate learning, including creating links between course concepts and personal and professional experiences in order to synthesize learning and apply it to new situations.
• Demonstrate critical thinking abilities, including exploring issues, ideas, and events before formulating an opinion or drawing a conclusion.
• Demonstrate behaviors, skills, and characteristics of intercultural communication and competence, including appropriate application of these in varied contexts.
• Demonstrate organizational literacy, specifically the role of communication efforts in organizations and the relationship between these efforts and essential organizational functions (structures, finance, strategy, etc.).
• Demonstrate effective communication skills by crafting strategic plans, campaigns, or interventions that meet organizational/client needs.

Master of Arts in Communication Management with a Concentration in Dispute Resolution

Enhance your ability to assess, manage, and resolve conflict. No matter what role or sector you find yourself in, dispute resolution skills are essential for relationships among individuals, within organizations, and in our communities. You will analyze the nature, roots, and resolution of conflict in a variety of settings. Guided by practitioner-faculty, students develop contextually appropriate conflict management strategies and hone mediation, negotiation, and facilitation skills in order to find acceptable resolution for all parties.

This concentration prepares students to do the following:
• Apply conflict theories in understanding and analyzing conflict situations
• Assess the role of culture in conflict situations
• Articulate and defend a variety of processes to resolve conflict
• Develop contextually appropriate conflict management systems for work with diverse stakeholders
• Perform alternative dispute resolution practices while adhering to applicable codes of ethics

Master of Arts in Communication Management with a Concentration in Learning and Development

Gain insight to the strategies needed to effectively facilitate adult learning. Organizations continue to invest in improving employee performance, and in this program you will learn to lead learning and development efforts by leveraging your technology, facilitation, and evaluation skills. From design to implementation, learn to strategically execute entire L&D programs and specialized initiatives from start to finish.

This concentration prepares students to do the following:
• Design and execute projects from needs assessment through design, delivery, implementation, and evaluation
• Elucidate key components of adult learning theories; assess contributions of these theories; articulate challenges to, limits of, and new directions for these theories; and apply them to meet organizational needs
• Identify, analyze, choose, and defend best instructional strategies and techniques to achieve learning objectives
• Develop advanced facilitation and communication skills and demonstrate the ability to respond appropriately to varied audiences with diverse needs and across platforms
• Evaluate and communicate impact of projects using most relevant metrics and analytics
Master of Arts in Communication Management with a Concentration in Marketing Communication

Create integrated marketing campaigns that are driven by strategic objectives, reach clearly defined audiences, and deliver desired results. You'll discover the power of brands and determine how to craft, deploy, and measure campaigns from start to finish. Receive hands-on experience as you evaluate traditional and digital marketing communication tactics and dig deep into marketing trends: social, mobile, email, search, and more.

This concentration prepares students to do the following:

• Design, manage, and measure persuasive, integrated marketing communication campaigns
• Assess the current scope and learn how to anticipate future trends in traditional, social, mobile, email, and search marketing
• Measure marketing communication efforts and create plans to adjust future campaigns based on results
• Create strategies to elevate an organization's or client's marketing and branding efforts through the use of appropriate tactics

Master of Arts in Communication Management with a Concentration in Leadership Communication

Effective communication and advanced problem-solving skills are at the top of every organization's wish list. Are you prepared to meet the demand? You've already mastered your area of expertise, but now you need to harness the potential of your team, manage change initiatives, and meet needs by persuading stakeholders. In this program, you will enhance and deepen your interpersonal, organizational, and managerial abilities.

This concentration prepares students to do the following:

• Articulate and defend various persuasion and crisis management techniques to make contextually appropriate selections
• Evaluate and utilize business communication concepts, tools, and presentation techniques
• Assess and apply theories and best practices of group and team dynamics
• Identify barriers of effective communication and develop plans to ensure productive outcomes
• Create strategies to lead change by applying principles of change, critical change dynamics, and processes for knowledge transfer within organizations

Master of Arts in Communication Management with a Concentration in Organizational Development

Learn to improve individual and organizational performance using the tenets of organizational development. As organizations continue to evolve to meet the shifting demands of consumers and technology, develop your own philosophy around organizational change. This program prepares you to better facilitate communication between and among leadership and stakeholders, all in an effort to create a more effective organization.

This concentration prepares students to do the following:

• Articulate and define organizational development, history of OD, and challenges and possibilities using an intentional OD intervention
• Develop and defend a personal philosophy of organizational change
• Evaluate the impact of organizational culture and core values on OD interventions
• Integrate the contract for a successful OD intervention with the organizational culture and determine the role of an OD practitioner in each stage of an OD intervention, distinguishing between an internal and external consultant
• Assess, compare, and contrast different models of change and describe the impact of each model on an OD process
• Define and organize OD strategies for different types of organizations (sectors, life cycle, size, industry, types of innovation, or other defining characteristics) for maximizing impacts of OD interventions
• Summarize the importance and impact of the different organizational structures and design on OD strategy and interventions
• Construct an organizational diagnosis plan by using interviewing, group facilitation, process observation, synthesis of data, and writing effective reports, while providing effective presentations of the findings
• Analyze the human side of change and build strategies for successful implementation of an OD intervention that honor the loss, resistance and acceptance of changes
Master of Arts in Communication Management with a Concentration in Public Relations

Expertly reach stakeholders, manage your organization’s identity, and maximize the impact of its reputation. You’ll learn strategies to connect with influencers, utilize mass media, and leverage social media, all while employing principles of persuasion and quality content creation. From researching and evaluating audiences, to assessing the value of PR campaigns, you will apply critical thinking, precise writing, and complex reasoning.

This concentration prepares students to do the following:

- Communicate persuasively to targeted audiences to meet specific organizational outcomes
- Create communication plans with measurable results using public relations best practices, tactics, and strategies
- Develop, manage, and analyze effective media relations practices
- Articulate and defend the selection of techniques to measure, monitor, and influence an organization’s reputation
- Articulate the primary principles and practices of public relations in an increasingly interconnected, global economy

Certificate in Communication Management with a Concentration in Dispute Resolution

Enhance your ability to assess, manage, and resolve conflict. No matter what role or sector you find yourself in, dispute resolution skills are essential for relationships among individuals, within organizations, and in our communities. You will analyze the nature, roots, and resolution of conflict in a variety of settings. Guided by practitioner-faculty, students develop contextually appropriate conflict management strategies and hone mediation, negotiation, and facilitation skills in order to find acceptable resolution for all parties. Students will also gain additional skills and knowledge in communication management through elective coursework.

Master's Degree Admission
Degree and GPA Requirements
• Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
• Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:
• Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
• Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
• Minimum CAE Score: 169

English Conditional Admission: Master’s degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, English Conditional Acceptance

Certificate Admission
Degree and GPA Requirements
• Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
• Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. Elective requirements (Choose three courses) 12

Total Credits 48

Minimum number of credits required: 48

Students may choose electives from the Communication Management program, related University College programs, and through consultation with their academic advisor.

A satisfactory quality of achievement with a grade point average of "B" (3.0) or better is required in graduate coursework accepted for the degree. The average is determined on the basis of the University's grading system. In no case, may more than one-fourth of the hours accepted toward the degree be of "C" grade. A grade lower than "C" renders the credit unacceptable for meeting degree requirements. Students must earn a grade of B- or better in the Capstone Project or Capstone Seminar.

The average is determined on the basis of the University's grading system. In no case, may more than one-fourth of the hours accepted toward the degree be of "C" grade. A grade lower than "C" renders the credit unacceptable for meeting degree requirements. Students must earn a grade of B- or better in the Capstone Project or Capstone Seminar.

Courses

COMM 4001 Portfolio Foundations (0 Credits)

Master's and certificate-seeking students in Communication Management must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.
COMM 4002 Effective Facilitation and Presentation (4 Credits)
The evolution and increasing presence of technology in the workplace has changed the way we conduct meetings, present information, and facilitate in-person and virtual group conversations. In this course, students hone their presentation and facilitation skills by assessing their audience, purpose, and the desired outcomes of the engagement. Students learn to use appropriate and memorable visual aids, maximize audience and/or participant engagement, and employ communication competencies to increase sensitivity to group dynamics and verbal and nonverbal cues. Whether facilitating high-level face-to-face meetings, conducting virtual interactions, or presenting to groups, students will gain the skills and confidence needed for effective communication across varied delivery methods.

COMM 4006 Building High-Performing Teams (4 Credits)
High-performing teams are invaluable to every organization. Ensuring productive and satisfying group and team interactional outcomes in organizational, professional, and personal settings can be difficult. Students focus on theory, application, and the practice of working together to learn the fundamentals of building high-performing teams. Students learn about the development of group dynamics, assessment, and leadership while also gaining knowledge about their strengths and weaknesses in teams, developing new skills, and learning how to enhance productivity while reducing barriers to effective communication.

COMM 4010 Business Fundamentals for Communicators (4 Credits)
Communications leaders must speak the language of business to effectively craft strategies, execute deliverables, and measure outcomes that create tangible value and advance their organizations’ objectives. Whether in an industry, public sector, or non-profit role, these leaders gain an edge through supplementing strong technical literacy with the ability to assess operational priorities and execute deliverables accordingly. In this class, students will sharpen their understanding of balance sheets and budgets; demystify key aspects of Information Technology infrastructure (intranets, cloud and on-premises computing, databases, security, etc.); delve into various organizational and divisional/departmental models, functions, and political positions; address the benefits and challenges of globalizing and cross-cultural communication; and touch on an assortment of other relevant topics, including managing upward and workflow prioritization. Along the way, students will hone their strategic planning competencies and perspectives by putting all elements learned in this course together. Materials and assessments are geared toward application in relevant contexts.

COMM 4016 Persuasion and Influence (4 Credits)
The ability to write and speak in a persuasive manner is often the difference between success and failure. In this hands-on course, students learn to 1) recognize persuasive activities; 2) develop skills in persuading others; and 3) develop skills in defending themselves against unwanted persuasive activities. In this course, students will examine a variety of concepts, techniques, and tools designed to improve the persuasiveness of written and spoken interactions. Students will discuss persuasion both in the sense of how people behave and in the sense of how people use language. Students will also discuss how people argue and how persuasive techniques can be used not so much to "win" an argument but to gain agreement with others. Throughout the course, students will learn to use persuasive techniques in an ethical manner.

COMM 4020 Communication in Professions and Organizations (4 Credits)
In this course, students develop and refine interpersonal, intercultural, and organizational communication competencies while applying foundational communication models and concepts to a variety of contexts. The mastery of these communication skills leads to more productive written, virtual, and face-to-face interactions, resulting in personal, professional, and organizational success.

COMM 4030 Managing Learning in Organizations (4 Credits)
In today’s highly competitive information society, there is a tremendous need for continuous learning and employee development at all levels of an organization. New knowledge is the foundational resource for the creation and implementation of new visions, structures, and outcomes leading to organizational success. The learning organization, when effectively managed, is engaged in continuous improvement, and grows beyond its current state to widen its creative capacity for the future. In this course, students explore concepts, processes, models, and tools to cultivate a learning organization, and to manage the learning and development function within an organization. The focus of this course is on preparing students to be able to identify major business challenges and the competencies needed to support them from a learning and development perspective.

COMM 4032 Managing Organizational Change (4 Credits)
This course prepares students to create and implement effective communication strategies for change management. The course begins with a discussion of seminal organizational change models, how these models support change management communications, and how change affects employees and individuals. Concepts and practices for facilitating change communications are explored, as well as methods of supporting change leaders. Students develop competencies in change communication through discussion, lecture, video, and change assessment inventories.

COMM 4035 Communicating Across Cultures (4 Credits)
There is a growing need to communicate effectively across cultural differences. Writer James Neuliep defines culture as an accumulated pattern of values, beliefs, and behaviors shared by an identifiable group of people with a common history and verbal and nonverbal code system. Culture pervades every aspect of the communicative process. This course uses a contextual approach to examine the ways culture, communication, context, and power intersect in intercultural communication interactions. Students will identify and analyze obstacles and barriers to effective intercultural communication. Finally, students will examine strategies and skills needed to become a competent and effective intercultural communicator.

COMM 4045 Applied Critical Thinking in Communication (4 Credits)
This course provides an examination of the critical thinking processes and models of decision making and problem solving. The suitability, usage, and effectiveness of critical thinking models in achieving positive organizational outcomes are emphasized. Faculty and student perspectives and experiences, along with case studies, demonstrate applications of the critical thinking and problem solving processes within various communication settings and specialties.
COMM 4050 Communication and Society: Theories and Applications (4 Credits)
This course provides an overview of seminal mass and mediated communication theories and applies them to today's workplace. Additionally, students develop a command of mediated communication frameworks using emerging theoretical approaches to digitization, convergence, and networked culture. Readings and assessments are geared toward active comprehension of communication theories so that students are able to recall and implement theoretical concepts in their professional environments.

COMM 4070 Understanding Human Communication (4 Credits)
This course emphasizes the many communication theories, their origin, and applied use in personal, organizational and smaller professional settings. The course utilizes case studies, surveys, projects, and self-assessment to encourage students to reflect on personal experiences with issues like interpersonal communication and group and team dynamics to facilitate understanding of the importance of applying theory to practice. Key skills and strengths are identified as they relate to students' professional goals and objectives.

COMM 4117 International Technical Comm (3 Credits)
This course focuses on communication and technical writing skills needed to address today's international business environment. Students will develop the foundational skills necessary to write for translation, as well as develop an understanding of, and sensitivity to, the challenges inherent in intercultural technical communication. Additionally, international standards organizations and the role they play in international communication will be discussed.

COMM 4140 Marketing Strategy and Process (4 Credits)
COMM 4140 Marketing Strategy and Process is an application-oriented course to help students examine the fundamentals of marketing, and develop the insights and skills to formulate and implement sound, ethical marketing strategies and processes. The weekly topics covered in this course are divided into three main content areas: 1) foundations, 2) marketing mix elements with an emphasis on communications, and 3) strategy and planning. Each content area helps students apply strategic concepts through discussion and teamwork. Throughout the quarter, students explore marketing decisions by examining how information and research are used to inform marketing management decisions. Because marketing communication plays such a critical role in marketing success, special emphasis is placed on message and media factors. All of the course material culminates in the development of a marketing plan.

COMM 4144 Public Relations Strategies and Process (4 Credits)
In a complex global environment, business, government, nonprofit, and other organizations require professional public relations practitioners who can effectively develop two-way relationships with constituents/publics to enable strategic and effective communication processes. This course explores the essential components of public relations through an examination of the profession, its publics, and effective processes. Areas studied include the nature and history of public relations; applying theories; use of strategy; the value of relationship development; an overview of the range of PR tactics; the evolving role of digital communications and social media to PR; and the importance of ethics and transparency in PR practice.

COMM 4145 Public Relations Writing and Tactics (4 Credits)
Leveraging effective and persuasive writing to develop relationships with media and other target audiences is an integral part of public relations. This course deepens students' knowledge of the strategic use of public relations tactics, while ensuring they become effective, creative, clear, and concise architects and translators of the written word. To assist in this development, public relations practitioners have a number of communication tools at their disposal. Determining the correct tool to use is based on a strategic approach to all public relations efforts. Professionals must consider their objectives, publics, and key messages in choosing tactics to effectively influence the intended audience. In this course, students examine the purposes, style, format, content, and distribution of tactics used to support public relations programs and the concepts behind generating effective public relations copy. Tactics such as news releases, fact sheets, media alerts/advisories, feature articles, newsletters, emails, pitches, brochures, and social media will enable the creation of a public relations writing portfolio by the end of class.

COMM 4150 Dimensions of Reputation Management (4 Credits)
Reputation management is the process of tracking, maintaining, and defending a consistent message and positive image across all media. It applies to corporations and individuals, to billion-dollar brands and grassroots causes. Today's reputation management integrates public relations, search engine optimization (SEO), content marketing, and social media management. It requires constant monitoring and participation in the dialogues that comprise modern media as the traditional roles of sender and receiver merge and evolve. Awareness of the ethical and global considerations surrounding the digital landscape is imperative. As digital presence has become the front lines of reputation management, systems use various predefined criteria for processing complex data to report behavior and activity surrounding a reputation, thereby automating the process of determining positive sentiment, influence, and trustworthiness. This course will present the history of managing reputations in the mass media era, from the dawn of the 20th century to present day. Through the study of proactive and reactive programs, students will learn how to apply reputation management principles in times of quiet and crisis, monitoring, positioning, and measuring a brand's presence online.

COMM 4155 Public Relations Research and Measurement (4 Credits)
Public relations practitioners leverage research at the formative stage of every campaign: during the campaign to measure effectiveness, and at the conclusion of a campaign, to show results. This requires strategic processes to guide organizations toward the best possible actions in creating and sustaining relationships with target publics. This course introduces students to research methods available to public relations professionals, which are dependent on writing measurable objectives to drive accurate evaluation during and following a campaign. Students will explore how to creatively, effectively, efficiently, and ethically adapt research methods to practical application based on available budget, time constraints, and other resources. They then justify these methods to potential clients.
COMM 4200 Instructional Design (4 Credits)
Designing training that maximizes results is a central concern in organizations. Students in this course identify the elements of effective training, they identify and discuss how learning occurs both formally and informally in organizations, and how trainers must plan for learning in order to meet organizational needs and objectives. The stages of systematic instructional design are presented and students are given an opportunity to create an instructional design project that might be applied in their work settings.

COMM 4203 Adult Learning Strategies and Theories (4 Credits)
Adult learning is very different from the learning processes in children. Adults bring a great deal of experience to the learning situation and are intent on the application of their newfound knowledge and skills. The factors that determine how adults learn, as well as appropriate instructional strategies to best reach these learners, are discussed. Students in this course focus on using adult learning principles to strategically design training materials and facilitate adult learning in various workplace settings.

COMM 4206 Evaluating Learning and Development Effectiveness (4 Credits)
Assessment and evaluation enable learning and development professionals to determine if learners acquired the intended content, knowledge, skills and/or attitudes; if the benefits of the training endeavors are worth the costs; whether training has met organizational goals; and if further training is necessary. Through case studies, practice exercises, and the development of an authentic assessment plan, students learn how to design, interpret, and apply different types of learning and development evaluation concepts and methods to their respective or intended work settings.

COMM 4220 Conflict Resolution Strategies and Process (4 Credits)
Conflict is a natural and common part of human interaction. This course prepares students to thoughtfully and creatively manage and resolve conflict in interpersonal and organizational contexts. Students study the sources, causes, and dynamics of conflict in order to explain and predict the patterns of conflict interactions. Students analyze case studies and develop the most appropriate conflict management and resolution strategies based on analysis and evaluation of the personal, interpersonal, historical, and cultural dynamics of a given conflict. By focusing on the application of conflict resolutions strategies and processes, students develop their interpersonal, analytical, and managerial competencies to creatively address conflict in a variety of situations.

COMM 4222 Negotiation Strategies and Process (4 Credits)
Negotiation is at the core of dispute resolution. This course presents the theoretical groundwork for interest-based dispute resolution upon which principled negotiation and other dispute resolution methods are founded. Topics include the definition of the negotiation process, different types of negotiation, and negotiation strategies. Students have an opportunity to practice and compare different negotiation techniques. Teaching methods are experiential in nature and include mini-lectures, discussions, and role-plays. Students also develop strategies for managing challenging negotiations and breakdowns.

COMM 4226 Managing Organizational Conflict (4 Credits)
Conflict is a part of all businesses, government, and nonprofit organizations. It is a product of human existence and diversity in an interrelated society. Though many people fear conflict as a threat to a productive work environment, it is not conflict itself that jeopardizes harmony but unresolved conflict, and the associated costs are well documented. Organizations increasingly recognize that conflict need not carry costly financial and interpersonal burdens and can, in fact, serve as a productive change agent. Students in this course explore the nature and sources of organizational conflict and facilitate development of practical skills to recognize and manage conflict using case studies, exercises, speakers, and field research. Students are introduced to the concept of various conflict resolution methods, including individual initiative, negotiation, mediation, restorative justice, and arbitration. This course is well suited for leaders and aspiring leaders in any profession who want to increase their interpersonal capability and enhance their value in organizations.

COMM 4235 Integrating Learning and Development Technologies (4 Credits)
Organizational learning and talent development are changing rapidly in the face of staggering technological advances. As organizations become increasingly decentralized, teams interact virtually, and collaboration becomes dependent on digital tools. In this context, it is imperative that learning and development professionals harness technology to meet the changing needs of individuals and the places/spaces in which they work. In this course, students explore the latest technological trends in Learning and Development, while also learning how to evaluate technologies for their appropriateness in meeting organizational learning and development goals. In recognition of the rapidly changing nature of this field, students also develop strategies for future learning to keep their work relevant and engaged.

COMM 4270 Forty-Hour Mediation (4 Credits)
This course is designed specifically for individuals interested in becoming mediators or integrating mediation skills into their current positions within (but not limited to) human resources, public service, healthcare, law, non-profit management, etc. The course satisfies the initial training requirements for professional mediators in accordance with the Mediation Association of Colorado (the MAC) and the Association for Conflict Resolution (ACR). The DU mediation training is distinctive for several reasons, including: small class size (limited to 24 people) and the opportunity to network with accomplished mediators and mediation coaches.

COMM 4301 Brand Management Strategies (4 Credits)
Organizations of all types – private, public, and nonprofit – increasingly recognize that a strong brand can ultimately become one of an organization's greatest assets. Executing on a strategy designed to build long-lasting brand recognition, resonance, and loyalty is a critical marketing responsibility. In today's dynamic business landscape, brand management requires complex decisions to create meaning and value for consumers. This course covers the essential components of branding with a focus on how to maintain consistent alignment between brand vision and marketing strategies.
COMM 4318 Mobile Marketing (4 Credits)
Mobile technologies can be found in your pocket, on your coffee table, at your workplace, and even on your wrist. If a business's marketing plan doesn't include mobile, that business plan simply isn't complete. The growing field of mobile marketing has created a new set of communication imperatives and business opportunities. This course is designed to familiarize students to the tools used to implement a robust mobile marketing strategy. Current and future organization and business leaders will learn mobile marketing best practices and gain the knowledge to implement and analyze the results of their mobile marketing efforts.

COMM 4320 Social Media Strategy (4 Credits)
Social media is a critical communication channel that is constantly evolving. Learn to plan, manage, measure, and anticipate social media efforts that add value to your target audiences through organic and paid options. In this course, students will explore motivations that prompt audiences to engage, identify the tools and technology needed to execute social media campaigns or communication interventions, and devise effective strategy and tactics needed to cut through the noise. Create a stronger online presence, show personality, and build your brand by gaining skills needed to successfully communicate on behalf of any organization or individual using social media. Through online research, case studies, and practical exercises, students will gain first-hand knowledge of social media techniques and how to leverage social media as a communications tool.

COMM 4321 Digital Marketing Communication (4 Credits)
At its most basic level, digital marketing leverages digital technologies and media that allow brands to promote their products and services to very targeted audiences in a highly measurable way. Digital marketing as a category has become so integral to overall marketing and communication efforts that the term “digital” as a differentiator may soon become obsolete. Digital marketing continues to grow and evolve, so the focus of this course is to provide an expansive grasp of digital marketing communication tactics, including how to utilize them and how to integrate them into the marketing mix. Through discussion, research, application, and evaluation of case studies and projects, students will learn about the essential tactics utilized by digital marketers.

COMM 4322 Digital Campaign Management (4 Credits)
Today's consumer expectations for relevant, engaging, and timely messages have made email marketing an essential component of the multichannel marketing mix. The creation and delivery of personalized, targeted messages to subscribers can drive both engagement and ROI. This course examines the development and integration of email marketing (including tools, copy, design, service providers, tracking and measurement) to enhance business relationships, encourage customer loyalty and acquire new customers.

COMM 4323 Marketing Analytics (4 Credits)
Marketing analytics leverages business metrics to better understand marketing performance and return on investment (ROI). Through data analysis, attribution modeling, and reporting, marketers are able to measure and optimize their initiatives. The focus of this class is on developing a performance measurement system for marketing channels, incorporating measuring website traffic, conducting market research, estimating usage patterns, and interpreting website visitor behavior. Key performance indicators are tied to marketing goals and tactical campaigns. Students conduct a review of online metrics, compare marketing analytics vendors, and develop ways to communicate performance.

COMM 4324 Search Marketing (4 Credits)
Search marketing is a communicator's medium and a vital part of any marketing mix. This type of digital marketing specifically focuses on increasing a website's visibility in the search engine results pages (SERPs) through organic Search Engine Optimization (SEO) and pay-per-click (PPC) while also drawing attention to quality website content or well-crafted paid ad messaging. This class will provide deep insight into the tools and tactics of search marketing. Students will learn what makes search marketing demanding and how to overcome the challenges presented by regular search engine algorithm updates, increasing mobile device usage, and the influence of social media. Two key techniques of SEM will be explored: search engine optimization (SEO) to improve results from the natural or organic listings, and paid search marketing, or pay-per-click (PPC), to deliver results from the sponsored listings within search engines. A variety of search practices, including mobile and local, will be explored.

COMM 4325 Digital Campaign Management (4 Credits)
Any successful marketing or communication campaign — digital or traditional — is dependent on many factors, from its strategic beginnings through its final readout. However, perhaps the most critical factors driving the success of a digital campaign are rooted within the human, technical, and business processes through which that campaign comes to life. Assuming a foundational understanding of digital marketing techniques (i.e., web, search marketing, social media, etc.), this course will focus on the practical management of digital marketing and communication campaign efforts, including planning, management, and measurement. Pre-requisite: COMM 4321.

COMM 4326 Digital Content Creation (4 Credits)
Content is at the heart of any communication intervention, and creating quality digital content requires an understanding of how digital users experience and consume content. Whether driving consumer behavior or keeping co-workers engaged and effective, quality content will help deliver messages clearly and persuasively. In this course, students explore the relationships between the strategies that drive content creation, the tools used to deliver messages, and the theory behind making content work for the target audience. In addition to hands-on exposure to a variety of content creation tools, students will learn key components of visual communication, the principles of user experience design, and how to match tools to strategies.

COMM 4701 Topics in Communication Management (4 Credits)
The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of communication, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects, such as ethics, human communication theory, or interpersonal communication. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.
COMM 4900 Experiential Learning in Communication Management (4 Credits)
This course is designed especially for students transitioning into the professional fields of communication. Through an experiential learning process, students will actively engage in their chosen communication field in order to develop the essential networking, writing, inquiry, and investigation skills required to be successful professional communicators. The course has three central components: first, students will develop professional networks to cultivate mentorship, gain intimate knowledge of the field, and become familiar with the field's norms and values. Second, students will strengthen their business-writing skills by creating industry-standard documents, communicating clearly and effectively, and activating their voice to convey their points with authenticity. Finally, students will explore their chosen field of communication to determine the current state of the field and its future trajectory, while also exploring how they may adapt and grow to meet the demands of the future.

COMM 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of a B- or better is required to pass.

COMM 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students’ research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

COMM 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

COMM 4905 Storytelling through Research and Measurement (4 Credits)
Whether conducting a needs assessment, attempting to understand your audience, or developing a new product, communication professionals regularly harness the power of research, measurement, and storytelling. Divided into three parts that culminate in an individualized project, this course explores essential research methods; strategies for measuring the impact of communication interventions; and the fundamentals of telling data-driven stories that persuade stakeholders and demonstrate ROI. On their own, each of these pieces is informative; together they enable confident problem solving, enhance organizational decision making, and influence external stakeholder behavior.

COMM 4920 Portfolio Capstone (4 Credits)
The Portfolio Capstone course provides students the opportunity to reflect upon the work they have done throughout their graduate studies at University College and synthesize their learning. Students in the seminar produce deliverables that include: (1) a thorough annotation of their portfolio, a process requiring critical and creative thinking about their educational experience, and (2) a pinnacle project that identifies, analyzes, and elaborates significant themes in their program experience, evaluates their accomplishments, connects their coursework to their professional goals, and assesses those goals in the context of their chosen field. Students must complete the Portfolio Capstone with a grade of B or better.

COMM 4980 Internship (1-4 Credits)
The Organizational and Professional Communication Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all COMM students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.
COMM 4991 Independent Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent course of study. Before registering for the independent study, the student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices. Independent Study is offered only on a for-credit basis.

COMM 4992 Directed Study (1-5 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Directed Study is offered only on a for-credit basis.

Master of Science in Environmental Policy and Management with a Concentration in Energy and Sustainability

The Energy and Sustainability master’s degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Students are prepared to enter the dynamic industry of energy and sustainability, which is emerging in importance and popularity around the world. Students will establish a solid foundation in energy and sustainability concepts, and then learn to integrate environmental systems, put policy into practice, and develop effective sustainability plans. Regulatory and policy issues related to energy development, implementation, and use, energy finance, and alternative and renewable energy processes will be examined, along with renewable energy sources, plans for integration, and trends within the field of energy.

Sustainable systems must be considered and developed in the areas of growth, transportation, energy, policy, and business models in order to head off looming environmental, political, and humanitarian problems. This will be accomplished through a comprehensive study of sustainability in the areas of economic development, green building, land use, transportation, and water resources. Customize your Environmental Policy and Management master’s degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to do the following:

• Demonstrate a solid understanding of how non-renewable and renewable energy sources are developed, used, regulated, and financed
• Articulate a strong working knowledge of sustainability concepts
• Show an understanding of trends and issues in areas of traffic management, climate science, water supplies, and green buildings
• Develop plans for the integration of sustainable practices into products, business and marketing plans, environmental policies, and organizational processes
• Build finance schemes and marketing strategies for their plans so they can be presented to an organization leader as an executable idea

Master of Science in Environmental Policy and Management with a Concentration in Environmental Analytics and Reporting

The Environmental Analytics and Reporting master’s degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. This certificate and concentration emphasizes learning how to utilize the tools and insights of the data analytics revolution to perform sophisticated environmental analyses and reports. Students learn possible uses of data analytics in an era of sustainability and ever-increasing complexity to manage the environmental elements of their organizations more effectively. Constructively reporting these results, trends, and accomplishments is an important avenue of communication in any organization. Environmental professionals will learn to identify and obtain a data set from a publicly traded company, from their own organization, or another public or governmental source suitable to use for carrying out analytics projects. Clear questions will be formulated and framed; analytical algorithms will be run on cloud technologies to reveal relevant insight into environmental issues. Context for these analyses will be provided through study of ISO 14001, fundamental U.S. environmental statutes, and governmental and NGO environmental reporting standards and requirements.

This degree prepares students to do the following:
• Analyze the value, function, and use of data and analytics and assess the promise of cognitive computing techniques
• Assess effective management techniques for analytics projects by evaluating the people and process implementations and changes associated with data and analytics efforts
• Differentiate between the most commonly used analytical techniques and formulate business cases and define an analytics modeling pilot project for data and analytics initiatives specific to your field
• Evaluate how and when to use analytics to create or enhance business value.
• Apply the ISO 14001 framework as a proactive and systematic approach to environmental management develop ISO 14001 environmental policies including objectives and targets, implement an environmental management program, monitor and measure program results, and review the program to ensure continual improvement.
• Make informed judgments based on the requirements of, and interrelationships of, key environmental statutes including: National Environmental Policy Act (NEPA), Clean Air Act (CAA), Clean Water Act (CWA), Resource Conservation and Recovery Act (RCRA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Emergency Planning and Community Right-to-Know Act (EPCRA), Occupational Safety and Health Act (OSHA), and related toxics laws; and the legal system and the roles of Congress, the President, executive agencies, states, and courts in shaping environmental laws.
• Conduct analyses and craft reports addressing SEC requirements and NGO standards, e.g., the 30 GRI environmental performance indicators, and Sustainability Accounting Standards Board recommendations.
• Design and perform analyses on a structured data set using a choice of software analysis and statistics tools and craft the environmental reporting elements of organizational reports addressing matters such as sustainability, risk, efficiency, impacts, permit status, routine releases, unplanned events, strategies, operations monitoring, management monitoring, ethics, stakeholder perceptions, innovation, and collaboration.

Master of Science in Environmental Policy and Management with a Concentration in Environmental, Health and Safety

The Environmental, Health and Safety master’s degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Whether students currently work in environmental and safety positions for commercial or government operations, or aspire to, the Environmental, Health and Safety master’s degree prepares them with the management skills and technical knowledge required to become a health and safety manager or officer. Students will begin with the foundational statutory and regulatory origins of environmental health and safety compliance management and learn how to effectively and efficiently streamline resources to integrate safety and health regulations across sectors and industries.

Critical instruction is given on relevant training, emergency planning, procedural operations, and the management of worker health and safety, in addition to environmental management and reporting systems and business and finance strategy. Customize your Environmental Policy and Management master’s degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to do the following:
• Evaluate the benefits and barriers to integration of environmental health and safety including the fundamentals of safety management, training requirements, emergency planning, setting goals, objectives, and operating procedures, and how management views environmental health and safety
• Describe the Occupational Safety and Health Act and other rules governing workplace safety with emphasis on the overlap between safety and environmental laws, OSHA’s inspection and enforcement authority, employee and employer rights and record keeping requirements
• Develop and apply compliance programs including how to reduce losses of direct and indirect costs due to accidents and how to convince management and employees that safety programs are beneficial
• Investigate workplace safety topics including costs of accidents, investigation programs, practical application of worker’s compensation, confined space entry programs, injury/illness records and reporting, programs for new fall protective rules and personal protective equipment programs

Master of Science in Environmental Policy and Management with a Concentration in Environmental Management

The Environmental Management master’s degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Master’s degree students will learn environmental management and leadership essentials, providing them with critical knowledge related to technology, law, and economics as they each relate to the environment.
Facilitating environmental innovation, development plans, and integration will be discussed, along with essential permitting and regulatory issues that environmental managers need.

Students in the Environmental Management master’s concentration will receive engaging instruction from professional practitioners who work in the fields in which they teach in topics ranging from economics to law, leadership to regulations, as each topic relates to the environment. Designed for students seeking a combination of leadership, policy, and environmental issue education, the concentration prepares graduates to address and manage complex environmental systems. Customize your Environmental Management master’s degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to do the following:

• Examine the requirements and implementation strategies of the National Environmental Policy Act and the requirements of various federal agencies which are responsible for National Environmental Policy Act implementation.
• Critique Environmental Impact Statements and Environmental Assessments for regulatory compliance and thoroughness in disclosing environmental effects of proposed actions.
• Investigate the Resource Conservation and Recovery Act’s regulations governing performance requirements for treatment, storage and disposal of solid and hazardous waste generation and disposal.
• Explain and summarize developing trends in waste minimization, solid waste management and special waste controls.
• Demonstrate how to use the ISO 14001 framework as a proactive and systematic approach to environmental management and develop a complete program that integrates the ISO 14001 requirements with the existing strategic management methods of an organization.
• Assess personal leadership attributes and construct a personal leadership development plan that integrates leadership principles necessary for advancement including interpersonal communication and leading environmental innovation using the natural world as a model.

Master of Science in Environmental Policy and Management with a Concentration in Environmental Policy

The Environmental Policy master’s degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Designed for professionals working in organizations focused on environmental policy development or advocacy such as legislatures, regulatory agencies, consultants, and advocacy groups, the Environmental Policy master’s concentration provides students with policy analysis and development skills needed to serve as a senior analyst or manager within a policy-making organization.

Students will receive valuable instruction—from professional practitioners who work in the fields in which they teach—in topics ranging from economics to law, ethics to finance, as each topic relates to environmental policy. A master’s degree concentration in Environmental Policy will prepare students for careers that impact environmental decisions. Foundational public environmental policy analysis will be discussed, including contemporary methods of policy analysis, agenda-setting, models of policy formulation and implementation, and policy evaluation. Customize your Environmental Policy and Management master’s degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to do the following:

• Outline the legal and philosophical underpinnings of the environmental movement, both in the United States and internationally, including the use of international laws and treaties to mitigate, lessen, or eliminate damage to various aspects of the environment.
• Analyze global environmental issues including endangered species, overpopulation, resource depletion, biodiversity, ocean dumping, deforestation, desertification, global warming, and ozone depletion.
• Explain how to encourage sustainability through consumption patterns that ensure a continuing resource supply for future generations and through achieving a balance between environmental protection and economic development.
• Describe the field of public environmental policy including contemporary methods of policy analysis, agenda-setting, models of policy formulation and implementation, and policy evaluation.
• Examine ethical considerations in environmental management and decision making and explore various philosophies of humankind’s relationship with the environment.
• Develop and express a personal philosophy addressing one’s own role in the regulatory, technical, scientific, and financial management of the environment.
Master of Science in Environmental Policy and Management with a Concentration in Natural Resource Management

The Natural Resource Management master's degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Designed for professionals whose primary interest is the management of natural resources for organizations which plan or regulate the use of natural resources, or commercial operations which extract and use natural resources (e.g., mining or forestry management), the Natural Resource Management concentration prepares students to work in professional roles overseeing natural resource management for commercial or government purposes. Learn historic and contemporary management systems and principles, along with key policies and procedures needed to excel in the public or private sectors related to natural resource management.

Degree-seeking students are exposed to a breadth of knowledge pertaining to natural resources, water management, zoning, forestry management, mining, and land use issues. Focused skills concentrate on technology, management, and communication knowledge that is critical to success in the natural resource management field. Customize your Environmental Policy and Management master's degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to do the following:

• Analyze the practical and theoretical basis of recreational land use in the context of ecosystem management and explore the responsibilities of various federal, state and local agencies, environmental and wildlife interest groups, and other organizations involved in wildlife management issues.

• Discuss the statutory and regulatory policies and current issues regarding the management and use of lands in wilderness systems, wild and scenic river corridors, parks, and open spaces.

• Explain historic and contemporary management systems and principles by examining key policies, guidelines, and planning procedures of governmental agencies, resource-based industry and the public.

• Describe how the biological, physical, social, and economic aspects of lands, waters, and natural resources work together to achieve sustainable conditions that encourage preservation and management of natural resources for recreation.

• Investigate the basic principles, trends, challenges, and controversies of the administration of maintaining certain wildlife species including threats from water and air pollution, poaching and other illegal actions.

• Characterize the field of public environmental policy including contemporary methods of policy analysis, agenda-setting, models of policy formulation and implementation, and policy evaluation.

Master of Science in Environmental Policy and Management with a Concentration in Supply Chain Management

The Supply Chain Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students learn tactical innovation and change management using vision, values, and mission as an overall guide. Led by professional practitioners who work in the fields in which they teach, leadership classes provide professionals the skills to manage change, encourage innovation, and develop effective strategic initiatives while fulfilling an organization's mission.

The Supply Chain Management concentration will teach students to apply principles of environmental sustainability as they plan for and manage the end-to-end flow of products, including closed loop supply chains. Students will explore the many links in the supply chain that have significant impact on the environment, from raw material sourcing to energy use to transportation. Students will gain hands-on experience, learn new technologies, and develop skills ranging from logistics to organizational development.

This degree prepares students to do the following:

• Articulate the six pillars of supply chain management to diagram the process to appraise their role in the market system.

• Apply the six pillars of supply chain management to realistic problem scenarios to develop strategies to diagnose and address future supply chain problems.

• Assess supply chains using a multidimensional perspective that includes connections between supply chain processes and fundamental business topics such as financial management and technology.

• Solve supply chain problems using a nonlinear process that addresses connections between supply chain pillars, market trends, and business best practices.

• Apply best practices to address an authentic supply chain problem in a work setting.
Certificate in Environmental Policy and Management with a Concentration in Energy and Sustainability

The graduate certificate in Energy and Sustainability concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Busy adults who already hold master's degrees, or professionals who work within the field of energy development, will benefit from a graduate certificate in Energy and Sustainability, a dynamic field that is emerging in importance and popularity. Ideal for students seeking further study related to sustainable systems, energy development and use, energy finance, and alternative and renewable energy process, the graduate certificate in Energy and Sustainability may be earned online or on campus in the evenings. Students will develop integration strategies, build finance schemes and marketing plans, articulate a strong working knowledge of sustainability concepts, and learn about energy and sustainability systems. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

Sustainable systems must be considered and developed in the areas of growth, transportation, energy, policy, and business models in order to head off looming environmental, political, and humanitarian problems. This will be accomplished through a comprehensive study of sustainability in the areas of economic development, green building, land use, transportation, and water resources. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

Certificate in Environmental Policy and Management with a Concentration in Environmental Analytics and Reporting

The Environmental Analytics and Reporting certificate may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. This certificate emphasizes learning how to utilize the tools and insights of the data analytics revolution to perform sophisticated environmental analyses and reports. Students learn possible uses of data analytics in an era of sustainability and ever-increasing complexity to manage the environmental elements of their organizations more effectively. Constructively reporting these results, trends, and accomplishments is an important avenue of communication in any organization. Environmental professionals will learn to identify and obtain a data set from a publicly traded company, from their own organization, or another public or governmental source suitable to use for carrying out analytics projects. Clear questions will be formulated and framed; analytical algorithms will be run on cloud technologies to reveal relevant insight into environmental issues. Context for these analyses will be provided through study of ISO 14001, fundamental U.S. environmental statutes, and governmental and NGO environmental reporting standards and requirements. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

Certificate in Environmental Policy and Management with a Concentration in Environmental, Health and Safety

The graduate certificate in Environmental, Health and Safety concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Designed and delivered for professionals who already holds a master's degree, or for professionals looking to further their environmental career with a new skillset, the graduate certificate in Environmental, Health and Safety concentration may be earned online or on campus in the evenings. Certificate students will explore the foundational statutory and regulatory origins of environmental health and safety compliance management and learn how to effectively and efficiently streamline resources to integrate safety and health regulations across sectors and industries. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

Students pursuing this graduate certificate, either online or on campus, will acquire environmental management skills and technical knowledge that prepare them to work with health and safety statutes and regulations, management of worker health and safety issues, environmental management and reporting systems, and business and finance. Credits earned through this graduate certificate may apply toward a master’s degree in Environmental Policy and Management.

Certificate in Environmental Policy and Management with a Concentration in Environmental Management

The graduate certificate in Environmental Management concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Environmental Management certificate students will develop essential management skills and technical knowledge required to function in a variety of managerial positions within the environmental field. Certificate students learn to facilitate environmental innovation and integrate systems while complying with regulatory and policy matters.

The Environmental Management certificate is designed for busy adults who already hold a master's degree, or for professionals looking to further their environmental career with a new skillset in leadership, policy, and environmental issues. The graduate certificate in Environmental Management concentration provides detailed instruction on statutes and regulations, management and reporting systems, business and finance strategy, and communication and negotiation skills as they each relate to environmental management. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework. Environmental Management graduate certificate students take master's-level
classes but do not complete a capstone project. Credits earned through this graduate certificate may apply toward a master’s degree in Environmental Policy and Management.

**Certificate in Environmental Policy and Management with a Concentration in Environmental Policy**

The graduate certificate in Environmental Policy concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Designed and delivered for professionals who already hold master’s degrees or for those looking to further their environmental career with a new skillset, the graduate certificate in Environmental Policy concentration is ideal for adult students seeking an innovative, career relevant graduate certificate. Environmental policy analysis at the public level will be discussed, including contemporary methods for analytical model development, implementation, and evaluation. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

Environmental Management and Policy students who are currently in the field of environmental policy, or for those aspiring to join the field, will develop skills through the online graduate certificate program that will serve them well in a policy making organization, such as values and ethics, communication and negotiation, policy analysis, and environmental laws and regulations. Environmental Policy graduate certificate students take master’s level classes, but do not complete a capstone project. Credits earned through this graduate certificate may apply toward a master’s degree in Environmental Policy and Management.

**Certificate in Environmental Policy and Management with a Concentration in Natural Resource Management**

The Natural Resource Management graduate certificate concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Designed for professionals who already hold master’s degrees, or for busy adults looking to further their environmental career with a new skillset, the graduate certificate in Natural Resource Management will prepare students to work in natural resource management roles for commercial or government organizations. Certificate students will learn historic and contemporary management systems and principles, in addition to essential policies and procedures needed to thrive in natural resource management in the public or private sectors. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

The graduate certificate is designed for professionals whose primary interest is the management of natural resources for organizations which plan or regulate the use of natural resources, or commercial operations which extract and use natural resources. Graduate certificate students will develop organizational leadership skills and learn environmental statutes and regulations pertaining to natural resource management. Credits earned through this graduate certificate may apply toward a master’s degree in Environmental Policy and Management.

**SPECIALIZED GRADUATE CERTIFICATE IN ENVIRONMENTAL ANALYTICS AND REPORTING**

The Environmental Analytics and Reporting specialized graduate certificate emphasizes learning how to utilize the tools and insights of the data analytics revolution to perform sophisticated environmental analyses and reports. Students learn possible uses of data analytics in an era of sustainability and ever-increasing complexity to manage the environmental elements of their organizations more effectively. Constructively reporting these results, trends, and accomplishments is an important avenue of communication in any organization. Environmental professionals will learn to identify and obtain a data set from a publicly traded company, from their own organization, or another public or governmental source suitable to use for carrying out analytics projects. Clear questions will be formulated and framed; analytical algorithms will be run on cloud technologies to reveal relevant insight into environmental issues. Context for these analyses will be provided through study of ISO 14001, fundamental U.S. environmental statutes, and governmental and NGO environmental reporting standards and requirements.

**SPECIALIZED GRADUATE CERTIFICATE IN ENVIRONMENTAL, HEALTH AND SAFETY**

The specialized graduate certificate in Environmental, Health and Safety may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Students will explore the foundational statutory and regulatory origins of environmental health and safety compliance management and learn how to effectively and efficiently streamline resources to integrate safety and health regulations across sectors and industries.

Students pursuing this certificate will acquire environmental management skills and technical knowledge that prepare them to work with health and safety statutes and regulations, management of worker health and safety issues, environmental management and reporting systems, and business and finance. Credits earned through the specialized graduate certificate may apply toward a master’s degree in Environmental Policy and Management.

**SPECIALIZED GRADUATE CERTIFICATE IN ENVIRONMENTAL MANAGEMENT**

The specialized graduate certificate in Environmental Management may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. The Environmental Management specialized graduate certificate is designed for busy adults who already hold a master’s degree, or for professionals looking to further their environmental career with a new skillset in
leadership, policy, and environmental issues. The graduate certificate in Environmental Management concentration provides detailed instruction on statutes and regulations, management and reporting systems, business and finance strategy, and communication and negotiation skills as they each relate to environmental management. Students will take master’s-level classes but do not complete a capstone project. Credits earned through this certificate may apply toward a master’s degree in Environmental Policy and Management.

**SPECIALIZED GRADUATE CERTIFICATE IN ENVIRONMENTAL POLICY**

The specialized graduate certificate in Environmental Policy may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Designed and delivered for professionals who already hold master’s degrees or for those looking to further their environmental career with a new skillset. Environmental policy analysis at the public level will be discussed, including contemporary methods for analytical model development, implementation, and evaluation.

Environmental Management and Policy students will develop skills that will serve them well in a policy making organization, such as values and ethics, communication and negotiation, policy analysis, and environmental laws and regulations. Environmental Policy specialized graduate certificate students take master’s level classes, but do not complete a capstone project. Credits earned through this graduate certificate may apply toward a master’s degree in Environmental Policy and Management.

**SPECIALIZED GRADUATE CERTIFICATE IN ENERGY AND SUSTAINABILITY**

The specialized graduate certificate in Energy and Sustainability may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Students will develop integration strategies, build finance schemes and marketing plans, articulate a strong working knowledge of sustainability concepts, and learn about energy and sustainability systems.

Sustainable systems must be considered and developed in the areas of growth, transportation, energy, policy, and business models in order to head off looming environmental, political, and humanitarian problems. This will be accomplished through a comprehensive study of sustainability in the areas of economic development, green building, land use, transportation, and water resources. Credits earned through this certificate may apply toward a master’s degree in Environmental Policy and Management.

**SPECIALIZED GRADUATE CERTIFICATE IN NATURAL RESOURCE MANAGEMENT**

The Natural Resource Management specialized graduate certificate may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Students will learn historic and contemporary management systems and principles, in addition to essential policies and procedures needed to thrive in natural resource management in the public or private sectors.

The certificate is designed for professionals whose primary interest is the management of natural resources for organizations which plan or regulate the use of natural resources, or commercial operations which extract and use natural resources. Students will develop organizational leadership skills and learn environmental statutes and regulations pertaining to natural resource management. Credits earned through this certificate may apply toward a master’s degree in Environmental Policy and Management.

**Master's Degree Admission**

**Degree and GPA Requirements**

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

**English Language Proficiency Test Score Requirements**

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum CAE Score: 169

English Conditional Admission: Master’s degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, English Conditional Acceptance
Certificate Admission

Degree and GPA Requirements

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum CAE Score: 169

English Conditional Admission: No, this program does not offer English Conditional Admission.

Total Credits 48

Minimum number of credits required: 48

Students may choose from the elective options above, or they may work with their advisor to choose electives.

A satisfactory quality of achievement with a grade point average of "B" (3.0) or better is required in graduate coursework accepted for the degree. The average is determined on the basis of the University's grading system. In no case, may more than one-fourth of the hours accepted toward the degree be of "C" grade. A grade lower than "C" renders the credit unacceptable for meeting degree requirements. Students must earn a grade of B- or better in the Capstone Project or Capstone Seminar.

Total Credits 16
Courses

EPM 4001 Environmental Foundations and Principles (4 Credits)

Each major federal environmental law has a basis in protecting human health, as well as the environment. Although protection of the environment is claimed to be the purpose of the law, protection of the public’s health ultimately becomes its foremost effort. This course provides an overview of how government institutions address environmental health concerns, develop policy, apply the law, and implement environmental public health protections. In addition, how environmental health law is implemented by agencies; the responsibilities of local, state and federal agencies; the rights of the citizens subject to these rules; and the role of the courts throughout the process are explored.

EPM 4002 Integrated Environmental Systems (4 Credits)

The earth as a whole is comprised of many systems that affect the environment. Some have large wide ranging reach, while others are restricted to a relatively small area. Included is everything in between. Actions in one area or system may have unintended secondary and tertiary consequences in that system or others. This course uses various tools and materials to study a few environmental systems and determine connections, consequences, impacts, barriers, decision making, life cycle costs, etc.

EPM 4003 Environmental Finance and Economics (4 Credits)

This class provides an overview of economics and finance in an environmental context. Topics include an overview of the economic system, efficiency, equity, market failure, environmental regulation, benefit-cost analysis, valuing the environment, pollution control, energy, conservation of natural resources, performance metrics, risk and return, time value of money, cost of capital, returns on investments, and standard financial reports. The class makes use of reading assignments, written assignments, case studies, and class participation. The course emphasizes relationship between business management and environmental quality, and provides students with a financial and economic decision-making framework for understanding and analyzing environmental issues.

EPM 4040 Wetland Ecology and Management (4 Credits)

This course provides a detailed examination of aquatic communities and habitats with an emphasis on freshwater systems. The recognition, identification, classification, and maintenance requirements of various wetland communities are stressed. Students analyze Section 404 of the Clean Water Act and the permitting process. Guidelines for placing dredge and fill materials in wetlands and other construction projects that directly or indirectly affect these areas are reviewed. Students explore concepts related to regulatory enforcement, mitigation, and the need for additional policies and actions to sustain as well as protect these critical communities.

EPM 4108 Impacts of Recreational Use (4 Credits)

The practical and theoretical basis of recreational use of public and private lands is examined in the context of ecosystem management. The statutory and regulatory policies and current issues regarding the management and use of lands in wilderness systems, wild and scenic river corridors, parks, and open spaces are discussed in detail. The impacts of recreational uses on the environment and conflicts with other uses of land and resources are discussed. Land use planning policies and decisions which respond to recreation, wilderness and open space issues are examined. Field trips to Rocky Mountain National Park, Chatfield State Park, or other outdoor recreation sites will be scheduled to supplement classroom meetings.

EPM 4115 Introduction to Ecology (4 Credits)

This course examines the concepts of the ecosystem, populations, communities, the flows of energy, material cycles, and the necessity of diversity. Concepts including the unity of organisms and inseparable interactions with the physical environment are analyzed. Class discussions include topics such as the formation, distribution, and organization of ecological communities; plant succession and nutrient cycling; evolutionary trends of plant and animal populations; and species interactions in subalpine and alpine forests, prairies, and plains.

EPM 4120 Introduction to Natural Resource Management (4 Credits)

This course provides an introduction to natural resource management with an overview of historic and contemporary management systems and principles. Students examine key policies, guidelines, and planning procedures of governmental agencies, resource-based industry and the public. Topics include the simultaneous consideration of biological, physical, social, and economic aspects of lands, waters, and natural resources to achieve sustainable conditions. Other topics are multiple use/sustained yield management; soil and water conservation and protection; use, restoration, and preservation of renewable and non-renewable resources; and the preservation and management of natural resources for recreation, spiritual renewal, and other amenity values.

EPM 4140 NEPA (4 Credits)

Students examine the requirements and implementation strategies of the National Environmental Policy Act. The Council on Environmental Quality, National Environmental Policy Act Regulations and the rules and requirements of various federal agencies which are responsible for National Environmental Policy Act implementation are examined in detail. Specific applications of National Environmental Policy Act to private and public activities which constitute major federal actions significantly affecting the quality of the human environment are discussed. Representative Environmental Impact Statements and Environmental Assessments are presented and critiqued for regulatory compliance and thoroughness in disclosing environmental effects of proposed actions. Prerequisite: EPM 4200 (Environmental Protection Law).

EPM 4150 Global Environmental Law and Policy (4 Credits)

This course explores the legal and philosophical underpinnings of the environmental movement, both in the United States and internationally. Students will analyze global environmental issues including endangered species, overpopulation, resource depletion, biodiversity, ocean dumping, deforestation, desertification, global warming, and ozone depletion. Emphasis is placed on management options and the use of international laws and treaties to mitigate, lessen, or eliminate damage to various aspects of the environment.
EPM 4200 Environmental Protection Law (4 Credits)
This course reviews a wide spectrum of laws which protect our environment and health. Students will discuss the purpose, context and implications of the most important laws, regulations and court cases that affect the quality of our lives. Coverage includes: National Environmental Policy Act (NEPA), Clean Air Act (CAA), Clean Water Act (CWA), Resource Conservation and Recovery Act (RCRA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Emergency Planning and Community Right-to-Know Act (EPCRA), Occupational Safety and Health Act (OSHA), and related toxics laws. It provides an overview of the legal system and the roles of Congress, the President, executive agencies, states, and courts in shaping environmental laws.

EPM 4220 Endangered Species and Wildlife (4 Credits)
This course provides an overview of the basic principles, trends, challenges, and controversies of the administration of maintaining certain wildlife species. Threats from water and air pollution, poaching and other illegal actions, interrelationships of wildlife and their habitats, and biodiversity will be discussed. Students gain an understanding of the roles and responsibilities of various federal, state and local agencies, environmental and wildlife interest groups, and other organizations involved in wildlife management issues.

EPM 4230 Renewable and Alternative Energies (4 Credits)
This course provides a well-rounded primer on energy as a resource and its importance in the economy and the world today. Renewable energy and alternative fuels as well as nuclear and hydrogen-based technologies will be explored. This course also provides an in-depth view of issues surrounding the development, enforcement and application of energy regulatory policy.

EPM 4232 Sustainability Policy and Practice (4 Credits)
In 1987, the Brundtland Commission, formerly the World Commission on Environment and Development, defined sustainability as "development that meets the needs of the present without compromising the ability of future generations to meet their own needs." Sustainability covers many disciplines, and the concept is very broad. Sustainability relates to some of the most challenging questions of our time, and the United Nations has developed sustainability goals to meet these challenges. The UN Sustainable Development Goals range from reducing poverty to building sustainable communities. Not only are countries working on sustainability goals but corporations have joined as well. Shareholders of many corporations have requested their corporations meet sustainability needs. Sustainability reports are now required in the annual reports. This course will look at sustainability goals as it relates to environmental policy and practice. Students will understand the language of sustainability and analyze sustainability reports for greenwashing versus legitimate actions toward sustainable practices. They will also be able to put into practice possible policies to meet sustainability goals.

EPM 4233 Sustainable Transportation (4 Credits)
21st Century transportation planning on the local and global scale involves consideration of environmental policies and sustainable practices. Development of an efficient system for moving goods and people along highways, airways and public transit networks must coordinate with legal requirements governing automobile source emissions, water pollution, mitigation of congestion, and crisis management. Conflicts occur along political fault lines between public interest groups, environmental justice advocates, the business community, government regulators, and the ordinary commuter. Consideration is given to different fuel sources, including carbon-based, hydrogen, electricity, and biofuels. The course also examines fuel efficiency (CAFE) and trends in emission science and regulation.

EPM 4234 Climate Change and Science (4 Credits)
Global Warming* is a cause celebre, but how much do we really know about the science involved in studying the earth's climate? Moving beyond the social and political opinions espoused in the current debate on climate change, this course delves into the chemical and physical forces at play in the arena. This course covers scientific processes used in measuring climate dynamics, among them ozone chemistry, carbon and oxygen cycles, and heat and water budgets. It explores scales and methods for detecting climate change, including analyzing ice cores, instrumental records, and time series. Some attention will be dedicated to "climate forcing" caused by such things as orbital variations, volcanism, plate tectonics, and solar variability.

EPM 4235 Green Building (4 Credits)
 Builders, developers and designers increasingly are promoting the use of green construction practices in the pursuit of healthier, smarter buildings. Students in this course examine sustainable building strategies and tools, including LEED (Leadership in Energy and Environmental Design), the nationally-accepted benchmark for the design, construction and operation of high-performance green buildings. LEED promotes a whole-building approach by recognizing performance in five areas: sustainable site development water savings, energy efficiency, materials selection and indoor air quality. What materials are best in the design and operation of green building? How can a designer or building owner make better use of power and water efficiency programs? What are the recent developments, trends and case studies of green buildings and materials?.

EPM 4236 Nuclear and Hydrogen Energy (4 Credits)
Two future- and high-tech oriented energy sources are explored in this course, nuclear power and hydrogen fuel. The course covers principles used in fissioenergy and in nuclear power engineering, including controlled chain reactions and reactor design criteria. It also attends to issues of radioactive waste treatment and storage and the mitigation of other radiation hazards. Currently, some 20% of the United States electric power comes from nuclear plants that use low-enriched uranium as fuel, burn nothing, and emit virtually no CO2. What is the future for this form of energy? In addition to nuclear power technology, the course focuses on fuel cells and the hydrogen economy, which brings its own questions concerning cost-benefit analysis and risks. Do these new economy, relatively "clean" energies present a way to avoid the downward trend of depleting natural resources, or do they send a siren song with the waste and safety problems they present?.
EPM 4238 Water and Food Sustainability (4 Credits)
For such basic human needs, water and food present their own highly-technical challenges inside legal, political and environmental spheres. This course delves into environmental, economic, and social implications in water usage and water resources regulation. This course also takes a broad look at food and farming systems at community, society, and ecosystem levels.

EPM 4280 RCRA Permitting and Compliance (4 Credits)
This course presents Resource Conservation and Recovery Act’s cradle-to-grave regulations governing solid and hazardous waste generation and disposal, the various permitting requirements, and the process by which permits are obtained. Design and performance requirements for treatment, storage, and disposal facilities are examined. Developing trends in waste minimization, solid waste management, and special waste controls are also examined.

EPM 4355 ISO 14001 Standards (4 Credits)
This advanced course introduces the new ISO 14001 standard for environmental management systems. It includes a history and developmental context review of the ISO 14001 standard. This class reviews the specific elements and processes that form certifiable 14001 environmental management systems. Using an example, students develop a complete program that integrates the 14001 requirements with the existing strategic management methods of an organization. This program demonstrates how to use the 14001 framework as a proactive and systematic approach to environmental management. Class discussions include developing an environmental policy, specifying objectives and targets, implementing an environmental management program, monitoring and measuring program results, and reviewing the program to ensure continual improvement.

EPM 4390 Environmental Policy Analysis (4 Credits)
This course provides a basic introduction to the field of public environmental policy analysis. Specifically, it serves as a foundation course that introduces contemporary methods of policy analysis, agenda-setting, models of policy formulation and implementation, and policy evaluation. The focus is principally on concepts, analytical approaches, and research methods.

EPM 4400 Environmental Values and Ethics (4 Credits)
Students examine ethical considerations in environmental management and decision making. Discussions cover personal versus organizational attitudes; cultural, economic, and historic values; science versus politics; and international and intergenerational policies. The course also explores various philosophies of humankind's relationship with the environment. Students are encouraged to develop and express a personal philosophy relative to their role in the regulatory, technical, scientific, and financial management of the environment.

EPM 4460 Land And Visual Resources (4 Credits)
This course is designed to provide students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems is also be discussed.

EPM 4461 Assessment of Social Impacts (4 Credits)
Students examine how the introduction of nuclear power systems or a nuclear waste treatment facilities affect the demographic and economic characteristics of a specific region. Basic analysis of archaeological resources, historic buildings and structures, and traditional cultural properties are also considered. Pertinent areas of environmental law provides guidelines and regulations with relation to the nuclear industry and current policy issues including the importance of the Energy Policy Act of 2005.

EPM 4462 Ecology, Soil, and Water (4 Credits)
A general overview of the potential effects of nuclear power facilities on ecosystems and ecological resources. These include terrestrial resources, wetlands, floodplains, aquatic resources, protected and sensitive species, geology, soil mechanics and seepage. In site-specific scales, the following items need to be considered, such as physical alteration of the landscape, disruption of natural processes, such as flooding and fires, and pollution.

EPM 4463 Air Quality, Noise and Transportation (4 Credits)
Air quality, noise and transportation issues can potentially be affected in the area surrounding a nuclear power plant in a variety of ways. Students become acquainted with the methodology of the dose rate estimations to the public and workers; the methods that are in place to monitor and reduce the risk to the public and workers from all hazards; and various pathways of exposure from possible nuclear contaminants and related pollution. Perceptions of citizens as stakeholders are considered. Identifying and profiling atmospheric toxic sources, developing and assessing emerging measurement methods, characterizing the degree and extent of local air toxicity problems, and tracking progress of air toxics reduction efforts. The impact of transportation on human and environmental risk assessment, including the primary methods and routes used to transport to a specific site, affected employees, commercial shipments, hazardous and radioactive material shipments, transportation packaging, transportation accidents, and onsite and offsite traffic volumes.

EPM 4464 Nuclear Power Plant Systems (4 Credits)
This course presents the basic components of nuclear power plant systems, their functional purpose, and operating conditions, including an overview of the equipments design and components from the safety point of view. An overview of nuclear power plants is presented in context of their impact on the environment and human health, including active and passive safety aspects.
EPM 4465 Environmental Restoration and Waste Management (4 Credits)
Environmental Restoration is the identification and elimination of hazardous materials from a designated site such that the risks to human health and the environment are reduced to an acceptable level for an intended future land use. This course examines successful environmental restoration activities that were used to reduce and mitigate risk associated with past operations of nuclear and nuclear-related facilities and the significant potential to release harmful contaminants. Environmental restoration effects on the ecological and human health risk assessments and analyses related to the transport, treatment, storage, and disposal of waste from the contaminated site are presented. Remediation processes for radioactive materials and other hazardous wastes and the eventual storage, processing, and disposal and the potential effect on humans and the environment is studied. An overview is given on the development of a radiological protection program for an EIS report. External and internal hazards: control measures and monitoring, and other important limits and measurements are explored.

EPM 4500 Leadership for Environmental Managers (4 Credits)
This course is an overview of basic leadership and management skills with an emphasis on topics germane to practicing environmental professionals. It addresses three main subject areas: performance metrics and standard financial reports (i.e., how organizations and businesses keep score); leadership (i.e., changes in behavior and work habits necessary for advancement from staff to management; and achieving clarity in organizational values and mission); and basic elements of internal and external communications. The class will make use of reading assignments, written assignments and class participation.

EPM 4510 Environmental, Health & Safety (4 Credits)
The exponential growth in regulations and the increased demand to streamline resources present a unique opportunity for the environmental professional to integrate safety and health practices both horizontally and vertically within the organization. Students will evaluate the benefits and barriers to integrating environmental, health and safety programs with applicable laws and regulations. Topics addressed in the class will include a brief review of EPA and OSHA standards as well as an introduction to industrial hygiene, workplace safety management, hazard evaluation and control, and the integration of environment, health, and safety. The course also reviews concepts essential for the understanding and implementation of environmental safety and health policies for use in the workplace.

EPM 4520 OSHA Law (4 Credits)
This course provides an in-depth review of the laws and regulations that govern the safety and health of workers. The course is of value to students seeking to expand knowledge of the Occupational Safety and Health Act. Emphasis is on the areas of overlap between safety and environmental laws, OSHA’s inspection and enforcement authority, employee and employer rights, record keeping requirements and an outline of labor’s interest in OSHA cases. Current topics such as OSHA reform legislation and regulatory agenda are discussed.

EPM 4525 Workplace Safety Management (4 Credits)
This course introduces students to core elements in a health and safety management systems approach to identifying and preventing workplace injuries and illnesses. Students examine the five elements of developing an effective occupational health and safety management program. The course also explores the common challenges and obstacles encountered during the development and implementation of these programs. This course includes a general overview of common OSHA regulations, rights, and responsibilities for developing a safety and health program. The format of this class is highly interactive, affording students an opportunity to engage with case studies and their peers, as well as to practice developing health, safety, and environmental programs at their respective establishments.

EPM 4610 Analytics I (4 Credits)
This course explores how companies can and do use data analytics in an era of sustainability and ever-increasing complexity to manage their businesses more effectively. The course has a managerial focus rather than a technical one. Students do not need a statistics or analytics background. It is designed to provide managers with sufficient background on the potential value of data analytics, the business process change associated with data analytics, and the underlying technologies to enable them to interface effectively with analysts and data scientists. A key component of the course is developing a pilot project or business case for an analytics project of your choice.

EPM 4615 Analytics II (4 Credits)
Building on the course content of Environmental Analytics I, this course retains a managerial focus rather than a technical one. Students do not need a statistics or analytics background. It is designed to prepare managers to identify and obtain a publicly available data set (or one from their own organization), suitable to use for carrying out an analytics project, often the pilot project identified in the previous course. In addition, the course goes into the next level of detail on analytical algorithms and cloud technologies to enable students to frame the questions to be answered or insights revealed from running an analytics application. Finally, the course provides an introduction to cognitive computing and its applications, trends, and potential impacts.

EPM 4620 Environmental Reporting Standards and Models (4 Credits)
Students learn the reporting requirements of existing and emerging environmental reporting standards, e.g., SEC requirements, EU standards, NGO standards, Global Reporting Initiative environmental performance indicators, and Sustainability Accounting Standards Board recommendations, and how to craft mandatory and optional reports that conform to these standards and requirements.

EPM 4625 Environmental Analysis and Reporting Project (4 Credits)
This is the concluding class for the Environment Analytics and Reporting concentration and graduate certificate. The class centers on performing sophisticated investigations of sustainability-related datasets utilizing the tools and insights of the data analytics revolution. The focus of the course is on applying advanced data analytics techniques (e.g., data mining, predictive analytics, and prescriptive analytics) to support innovative approaches for organizational sustainability, business performance, stakeholder relations, and/or environmental policy. Students will engage in readings, develop an analysis project using Watson Analytics, and prepare a report covering conclusions and recommendations.
EPM 4701 Topics in EPM (2-5 Credits)
The content of this course will vary each time it is offered. The topics may include time-sensitive issues in the field of environmental policy and management, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content will be announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

EPM 4705 Land Use Planning (4 Credits)
This course includes a comprehensive examination of the land use planning efforts of federal, state, and local governments. The legal authorities, responsibilities, and conflicts of these governmental entities are examined in detail. Class discussions include: setting goals and objectives for specific components of ecosystems; design of projects to achieve desired ecologic conditions; the interrelationship between home rule authority, local zoning and planning requirements, and federal/state natural resource plans; use of new technologies in planning; and public participation in land use plans.

EPM 4710 Environmental Project Management (4 Credits)
Students discuss environmental project management from the government, industry, and contractor perspectives. The course looks at successful project management organization, planning, and communication strategies. Using examples, students will also examine complex projects needing management. The types of contractual assistance needed will be reviewed.

EPM 4780 Air, Water and Soil Pollution (4 Credits)
This course addresses sources, reactions, and remediation of pollutants occurring in the atmosphere, waters, and soil. The deposition of pollutants from the atmosphere to soil and surface waters (acid rain) is covered. The migration of pollutants from surface waters through the soil to ground waters are also discussed.

EPM 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of a B- or better is required to pass.

EPM 4902 Capstone Seminar (4 Credits)
The purpose of this Capstone Seminar is to develop and apply transferable professional skills to persuade decision makers. This is accomplished through the following: investigate questions and issues found within a discipline-specific area of interest. To do this, a clear question/issue will be researched in order to create (a) several different arguments for (b) several different audiences in (c) several different professional contexts. Peer-to-peer conversations will support the development of the questions/issues, and throughout the process, peer-to-peer critiques will take place to foster a developed sense of community where peers rely on one another for what is working, what is not working, and possible ways forward. Part of this process will also include intentional moments spent reflecting upon the process and the knowledge gained by it. Thus, through reflection and meaningful dialogues and conversations, students learn how to be active agents of change where they can successfully contribute to any professional exchange. In sum, the Capstone Seminar focuses on how to investigate problem(s) found within professional settings, how to analyze and critique those problems, and ultimately, how to generate effective arguments for the various stakeholders involved throughout this process. The knowledge gained within this course should transfer forward informing a current or future job.

EPM 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.
EPM 4910 Research Practices and Applications (4 Credits)
This course develops competency in principles of research and measurement for use in the professional setting. As an initial course in the program of study, students will learn research methods to apply to program and systems design and evaluation to achieve successful measurement of outcomes and goals. Students will become critical consumers of pertinent literature to provide background and support for the choice and application of proper qualitative and quantitative research methods and data analysis for professional application. Critical thinking through comparing and contrasting cause and effect is used to build logic models. Research, design, and evaluation processes that address issues of implementation, feasibility, and sustainability are emphasized. At the conclusion of this course students will be prepared to apply and clearly communicate the practice of scientific research principles in the professional environment to ensure that the question being asked can be answered through rigorous research and the design and formative assessment of the program or system. Completion of Institutional Review Board (IRB) training via CITI Program is required as a basis for discussion of research ethics and IRB procedures. Competencies gained in this course, including practices of inquiry, self-analysis, and evaluation, will be applied and integrated throughout the course of study and demonstrated in the culminating capstone work of the master's degree. This course is required of all degree-seeking students and should be taken in the first three quarters of enrollment.

EPM 4980 Internship (1-4 Credits)
The EPM Internship is designed to offer students a purposeful experience in the field of environmental policy and management. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

EPM 4991 Independent Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed it with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

EPM 4992 Directed Study (1-10 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Directed Study is offered only on a for-credit basis.

Geographic Information Systems
Office: University College Student Support Center
Mail Code: 2211 S. Josephine St., Denver, CO 80208

Certificate in Geographic Information Systems
The certificate in Geographic Information Systems is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. University College offers the region's first complete graduate certificate program in Geographic Information Systems. Designed and delivered for busy adults, the Geographic Information Systems graduate certificate helps professionals add to their skillset with technology skills that help solve real-world spatial problems.

Certificate students receive applied instruction from professional practitioners who work in the fields in which they teach as they learn to plan, implement, and execute a project using GIS, GPS, remote sensing, internet mapping, or digital image processing. The GIS certificate allows students to explore training fundamentals at a very hands-on, applied level necessary to succeed in the field.

Gain a contextual background in GIS, from the management of natural resources to public utility management, public works engineering, environmental impact assessment, and even market research. In a burgeoning integrative world, it is vital to grasp the diverse fundamentals of each topic within the Geographic Information Systems industry and gain an insider’s perspective to specific fields as they each relate to GIS training. Credits earned through this graduate certificate may apply toward a master's degree in Geographic Information Science offered in the Department of Geography and the Environment or Information and Communications Technology.

Geographic Information Systems Outcomes
This program prepares students to do the following:

- Describe, analyze, and evaluate the nature of geographic data
- Compare, contrast, and apply appropriate applications of GIS technology to solve spatial problems
- Apply GIS technology to solve real-world problems
- Plan, implement, and execute a GIS project
## Certificate Admission

### Degree and GPA Requirements
- **Bachelors degree:** All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- **Grade point average:** The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- **Program GPA requirement:** The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum CAE Score: 169

**English Conditional Admission:** No, this program does not offer English Conditional Admission.

**Total Credits**  |  16

**Courses**

**GIS 4077 Creative Problem Solving and Programming (4 Credits)**

In this course students will develop, or improve upon, their problem-solving skills and how to use those skills to analyze problems and determine how to create solutions. Students will document their solutions (e.g., in pseudocode or UML diagrams) and, by the end of the course, translate their solutions into running programs written in at least two languages (e.g., Python and C#). Students will learn programming concepts including the use of variables, program input and output, flow control (if-then-else, looping, etc.), and error testing. Students will learn how to set up Integrated Development Environments (IDE) such as Visual Studio Code on their personal computers in which they will write programs.
GIS 4070 ArcObjects (4 Credits)
This class is an introduction to the development of custom applications and tools in GIS. It combines ESRI's ArcObjects with C#.NET programming language to introduce students to desktop GIS development. Students learn about the C# language, Object Oriented Programming, ESRI's Object Model Diagrams, conversion of VBA code to C# code, the creation of custom GIS based forms, buttons, and tools, and the automation of the GIS workflow. Students leave this class with the ability to create embedded tools as well as distributable C#.NET GIS applications based on ArcGIS 10.

GIS 4080 Python Programming in GIS (4 Credits)
This course introduces Python concepts and the Python scripting environment in a GIS environment. Python is a free, open-source scripting language that has been integrated with ArcGIS. Python is a dynamic, interpreted language that can be used to automate redundant tasks and workflows in GIS. Students learn tools and techniques of Python syntax, script flow, and error handling. Students learn to write scripts that allow them to automate redundant tasks and workflows in GIS. Students learn to write scripts that allow them to automate geoprocessing processes and GIS workflow more efficiently. This course teaches fundamental concepts needed to create Python scripts in ArcGIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4101 Introduction to Geographic Information Systems (4 Credits)
This is the initial course in Geographic Information Systems (GIS). General introduction including background, development, trends, prospects in this rapidly evolving technology; basic components, functions of GIS, fundamental spatial, geographic concepts explored through use of GIS software.

GIS 4110 Geographic Statistics (4 Credits)
This course introduces the basic concepts of probability and statistics with an emphasis on applications and an ongoing focus regarding the nature and problems associated with spatial or geographic data. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4200 Geospatial Intelligence (4 Credits)
The term geospatial intelligence (GEOINT) means the exploitation and analysis of imagery and geospatial information to describe, assess, and visually depict physical features and geographically referenced activities on the earth. GEOINT consists of imagery, imagery intelligence and geospatial information. This course serves as an introduction to the fundamentals of the geospatial intelligence community, core GEOINT technologies and operations, and the role of GEOINT in national, regional and local security affairs supporting decision makers and operations. The course is built on a framework of data, technology and analysis in support of the GEOINT community which may include natural disasters, first responders, military problems, homeland defense, and law enforcement. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4504 Cartography and Geovisualization (4 Credits)
The theory and art of map making developed over several thousand years and has recently been revolutionized by computer technology. This course is designed to expose students to the use of computer techniques in assessing technical design issues in the compilation of accurate and meaningful automated geographic mapping products. ArcView is used in a series of hands-on lab exercises to produce typical GIS mapping products. Each class includes lecture and discussion of cartographic design concepts. Emphasis is placed on reader perception of map design elements, and also includes an introduction to appropriate software tools and application of concepts through lab exercises. In-class time is provided for work on lab exercises. It is likely that additional lab time outside of class will be necessary and/or valuable for students, particularly in completion of the final project. Prerequisite: GIS 4101.

GIS 4510 GIS in Business (4 Credits)
Businesses continue to embrace GIS as an effective alternative to traditional manual mapping analysis methods. GIS has emerged as an affordable solution for performing essential revenue producing and expense reducing functions. Many years ago, successful GIS implementation required huge capital investment and a large staff of GIS experts; however, with the introduction of more powerful inexpensive computers and easier to use software, companies of all sizes are unleashing the business potential of GIS on the marketplace. This course exposes students to various business applications and uses of GIS as well as the underlying theories and technology behind the applications. This course emphasizes various business disciplines including Marketing, Real Estate, Transportation, and Oil & Gas using ArcView GIS in practical, hands-on exercises that demonstrate the theories and concepts discussed in the lectures. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4520 GIS in Telecommunications (4 Credits)
Telecommunications is a thriving technology and business, accounting for a significant percentage of technical advances and revenue around the globe. GIS has emerged as a crucial tool in the telecommunications field for maintaining existing entities, planning for additional ones, and for gaining an advantage in this very competitive marketplace. The use of GIS in the telecom industry continues to grow because GIS technology accommodates the many CAD programs and drawings representing plant and transmission towers/coverage as well as the geographic representations of those items. Only a few years ago, introducing GIS into a telecom business required significant cash outlay, but through less expensive hardware and more user-friendly software, now even a modest CLEC can implement an effective GIS. This course exposes students to the various applications and uses for GIS in the telecom arena by breaking down the miscellaneous telecom requirements into GIS components and technological solutions. This course emphasizes specific telecom technology application requirements and allows students, through hands-on lab work, to discover the power of GIS in delivering superior telecom solutions. This course also focuses on OSP/ISP applications and solutions, network connectivity issues as well as the exploding future of wireless technology. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4530 Crime Mapping and Analysis (4 Credits)
Municipal police departments, county sheriff departments, and other state and federal law enforcement agencies use GIS technology as a tool to analyze crime statistics and patterns. This course explores how GIS technology is used in law enforcement to provide strategic, tactical, and administrative crime analysis. Prerequisite: GIS 4504 or similar GIS course and/or work experience.
GIS 4540 Conservation GIS (4 Credits)
This course is designed to provide students with an introduction to the use of geographic information systems (GIS) in conservation. Students receive an introduction to the use of GIS in various types of conservation studies and preservation. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support planning and management of land, species, and habitats. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4570 Geographic Information Systems in Public Health (4 Credits)
GIS offers many applications and functionality that are tremendously beneficial to the Public Health industry. The ability to visualize cases in space (geographically) and time is invaluable in analyzing spatial clusters of health related events. Further the ability to model the spread of a potential epidemic can literally be a life saver. GIS is a natural choice for solving many Public Health issues including: analyzing the location of diseases; the spread of contagious diseases (both vector borne as well as the spread through human contact); the cause and effect of environmental factors; as well as the availability of Health facilities. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4620 Geodatabase Application (4 Credits)
This course in Geodatabase Application is logically broken into two separate component parts; the first section deals with Geodatabase concepts and provides a general overview of the Geodatabase structure and implementation including: background, object classes, feature classes, relationship classes, domains, validation rules, and Geodatabase topology. The second portion of the course focuses on Geodatabase Application introducing advanced features of Geodatabase, providing a solid foundation for the application of the Geodatabase to model and address complex real world issues. Geodatabase Linear Referencing, Geodatabase Surface Modeling, and Geocoding Services in the Geodatabase, are explored. This course incorporates a hands-on lab component. Computer lab exercises are designed to introduce the student to concepts and Geodatabase application. Strong emphasis is placed on Geodatabase design. Design objectives, design guidelines and functional requirements of the resulting Geodatabase model are addressed. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4630 Public Domain Data for GIS (4 Credits)
Geospatial data are the foundation upon which GIS and spatial analysis rests. As GIS has matured, the challenge has evolved from generating data to managing the enormous volume of data from government agencies, nonprofit organizations, and industry, and increasingly, from ordinary citizens through citizen science and volunteered geographic information efforts. Key to working with this volume of data are essential issues such as privacy, copyright, public domain, cost recovery, metadata standards, and data quality that GIS professionals must grapple with to be effective in the 21st Century. This class discusses and applies these issues and works with a rich array of data sources to enable effective decision-making in a Geographic Information System. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4650 Demographic Analysis Using GIS (4 Credits)
This course offers an overview of US Decennial Census data, covering a brief historical overview of why census information is collected, collection procedures, geographic coverage, and subject matter contained in census reports. Using a popular PC-based desktop mapping software program, students learn how to navigate through census files and create a variety of thematic maps. Several application areas, such as marketing, demographic analysis and facility planning, are used in sample exercises. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4660 GIS in Municipal Government (4 Credits)
There are many areas of government where desktop mapping can be extremely helpful in solving problems that are spatial in nature. This course explores the many types of data collected by city and county government agencies from crime and election data to building, assessment, and zoning data and how it can be displayed in map form. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4670 GIS and the Law (4 Credits)
This course explores the legal and technical ramifications created by Geographic Information Systems (GIS), Mobility and the Law, including the legal and policy issues related to the science of GIS, the sharing of geographic information, the data generated by mobile devices, the intellectual property issues, security and privacy issues, business and contractual issues related to GIS, and the standards of care and liability related to GIS. This course also examines the types of issues and concerns that exist in the U.S. and the world created by geographic information science and the mobile device. The evolution of GIS and the mobile device directly impacts governments, companies, and individuals on a daily basis. In today's world, more than three billion people have smart phones in their hands constantly. This creates issues about how to handle data, security and privacy, civil and criminal laws, rules and regulations, contractual agreements, and service-level agreements between parties on many levels from service providers in different states, countries and parts of the world. All of these issues need to be balanced by the differing cultural standards and mores from all over the world and legal (and sometimes not so legal) methods of protecting governments and companies in this ever-changing “always-connected” world created by GIS and the mobile device. Prerequisite: GIS 4101 - Intro to GIS, and GIS 4700 - Remote Sensing I and/or similar GIS course and/or work experience.

GIS 4680 Environmental Applications (4 Credits)
This class provides students with an introduction to practical applications of computerized Geographic Information Systems (GIS) in environmental assessment and natural resource management. Emphasis is placed on automated analytical techniques and data presentation methods that support facility site selection, environmental impact analyses, resource management, and characterization of environmental hazards. This course is designed to provide students who participate in environmental assessment projects with introductory preparation for practice as GIS professionals in public agencies or in the private sector. Prerequisite: GIS 4101 or similar GIS course and/or work experience.
GIS 4683 GIS for Disaster Management (4 Credits)
This course serves as an introduction to Geographic Information Systems and their application in Emergency Operations. The basic concepts of geography, cartography and Global Positioning Systems will be covered, along with the basic components and capabilities of a geographic information system. Students will learn about the fundamental types of GIS analysis and applications, focusing on those used in Emergency Operations. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4685 GIS and Natural Hazards (4 Credits)
This course is designed to provide students with an introduction to the use of GIS in natural hazard assessment. Students receive an introduction to the use of geographical information systems (GIS) in various types of natural disasters and response management. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support hazard risk and assessment, mitigation, and emergency response planning. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4687 Hydrologic Modeling in GIS (4 Credits)
Hydrology is concerned with movement of the earth's waters through the hydrologic cycle, and the transport of constituents carried in its flow. In GIS, the landscape is represented by means of geographically referenced data describing the character and shape of relief features. A spatial hydrology model simulates the water flow and transport in a specific locale using GIS data structures. Hydrologic modeling in GIS allows us to automatically delineate a drainage system and quantify the characteristics of the system. It focuses on the movement of water across a land surface. This course looks at the basic inputs to hydrological modeling in GIS, walks students through established modeling procedures, and has students work on projects that are real and relevant as model applications. Instruction is largely hands-on, project-oriented. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4690 GPS for GIS (4 Credits)
This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Assurance issues for data collection programs. Lab exercises include planning a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, and data integration into a GIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4700 Remote Sensing I (4 Credits)
This course provides a survey of remote sensing technologies, applications, and the industry. This course is designed for GIS, Geography and Geoscience students who seek to broaden their understanding of remote sensing in support of Geographic Information Systems. Introductions to the electromagnetic spectrum, energy sources, radiation principles, aerial cameras, and electronic imaging provide the student with the initial building blocks to a thorough understanding of remote sensing. This course provides an overview of the various high altitude and space-based collection systems and their characteristics, with a view toward future systems and capabilities. In addition, this course exposes students to the techniques of extracting relevant information from both hard copy and digital imagery. Pre-requisite: This course is a pre-requisite for GIS 4740 – Remote Sensing II.

GIS 4701 Topics in Geographic Information Systems (2-5 Credits)
The content of this course varies each time it is offered, depending on the interests and needs of the students. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

GIS 4740 Remote Sensing II (4 Credits)
This course is the second in the two-course Remote Sensing emphasis of University College's GIS Certificate Program. The curriculum is a rigorous presentation of digital imaging processing theory with emphasis on its application to airborne and space borne imagery. The course includes computer laboratory exercises and workshops, where the students apply theory to satellite and air photo data. Interpretation of the digitally processed data is also included in the class exercises. Examples of vector and raster data integration are shown as well. Prerequisite: GIS 4700.

GIS 4750 UAVs and GIS (4 Credits)
The purpose of this course is to introduce GIS students to the emerging world of using Unmanned Aerial Vehicles (UAV) in the GIS workplace for data collection, reconnaissance, and research. UAVs are in the news every day, highlighting their use in a military context. Soon the Federal Aviation Administration (FAA) will release new rules and regulations governing the use of UAVs in the civilian sector. This course will prepare students to be conversant in the world of UAVs, basic aviation, safety, flying, mission planning, and general data gathering techniques for use in GIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4760 UAS Photogrammetry (4 Credits)
Surveying, photogrammetric mapping, GPS, and remote sensing are critical components to working in the UAV and GIS domain. The second course in this two-course sequence will expand on the data collection process highlighted in the first class and deliver the foundations required by GIS professionals workings with UAVs. Prerequisite: GIS 4101 or similar GIS course and/or work experience and GIS 4750-UAVS and GIS.
Global Community Engagement

GIS 4770 UAV Ground School Practical (4 Credits)
Course Description: The purpose of this course is to provide skills and abilities to become a remote pilot in command (RPIC) within the United States. The class content will focus on 14 CFR 107, the rules and regulations that allow RPICs to operate unmanned aircraft vehicles (UAVs) safely and legally. In addition, students will be given hands-on training in the best practices for flying UAVs. Course Overview/Purpose: The release of 14 CFR 107 by the FAA has set a legal framework for commercial UAVs operations in the United States. The purpose of this course is to help students become well versed in 107 and gain hands-on experience operating UAVs. Students will become proficient with UAV aeronautical operation standards, discover the rules and regulations of airspace that all RPICs must comply with, and evaluate the effects that weather has on UAVs as well as sources of weather information. Students will also assess the performance abilities and limitations of UAVs and explore standard UAV operations as outlined in the 107 regulations. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4860 Internet Mapping (4 Credits)
Creating web-based maps allows city and local governments, businesses, and other organizations to publish, discover, and share geospatial information. This course introduces the fundamentals of various web-based mapping systems and software applications. Students complete comprehensive projects, each resulting in the creation of a working web site using different technologies. Students make use of WMS (Web Map Services) and WFS (Web Feature Services), integrating them into their web sites and creating their own web map service. Prerequisite: GIS 4101 and GIS 4504 or similar GIS course and/or work experience.

GIS 4980 Internship (1-4 Credits)
GIS students may fulfill up to four quarter hours of electives by enrolling in a GIS internship with a GIS company or an agency actively engaged in GIS activities. Students incorporating professional work experience must work with an approved mentor, who evaluates the student's performance and learning. The internship is designed to provide practical experience to students without prior professional experience in the field. Students who are employed on a full-time basis in the GIS industry may not use paid work experience as part of the academic program.

GIS 4991 Independent Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

GIS 4992 Directed Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the directed study. Directed Study is offered only on a for-credit basis.

Master of Arts in Global Community Engagement

Professional success in an increasingly globalized world requires a nuanced understanding of how events, actors, and processes worldwide impact work at the local level. It requires the ability to interact effectively with people from diverse cultural, national, and linguistic backgrounds, in addition to adapting industry-specific policies and practices to the ever-changing demands of multinational and multicultural environments. This program provides working professionals with the knowledge and skills necessary to effectively navigate the complexities of their profession in an increasingly diverse 21st-century workplace. Hands-on opportunities enable students to apply knowledge gained through the program to their own professional lives. Students acquire the tools necessary to thrive in diverse environments and to achieve organizational goals while developing a greater understanding of their own roles as citizens of the greater global community.

This degree prepares students to:

- Optimize organizational effectiveness by taking into account the impact of diversity and shifting global perspectives
- Interact effectively with people whose ideas are rooted in cultural backgrounds other than one's own
- Apply global cultural awareness to the structures and process of specific professions and industries
- Engage effectively with communities impacted by timely global struggles
- Leverage global and cultural practices of organizations and/or communities to effect change at home or abroad

Certificate in Global Community Engagement with a Concentration in Culture and Diversity

The graduate certificate in Culture and Diversity offered at University College provides working professionals with knowledge and skills necessary to navigate the complexities of their profession in an increasingly diverse 21st-century workplace. Students learn to thrive in diverse environments and
achieve organizational goals while developing a greater understanding of their own roles as citizens of the greater global community. Credits earned through this certificate may be applied toward a master’s degree in Global Affairs.

**Certificate in Global Community Engagement with a Concentration in Global Issues**
The graduate certificate in Global Issues offered at University College focuses on the impact of global events, actors, and processes worldwide on students’ work and experiences at the local level. Students will assess the effects of global issues on domestic organizations, structures, and procedures in addition to relating their own roles as citizens in a globalizing world. Credits earned through this certificate may be applied toward a master’s degree in Global Affairs.

**Certificate in Global Community Engagement with a Concentration in Translation Studies**
The graduate certificate in Translation Studies is offered entirely online to meet the needs of busy adults and help students expand their translator or interpreter skills and stay ahead of the curve in this competitive industry. Translation Studies students will gain the knowledge and transferable skills needed to become effective translators or interpreters in a professional capacity, either from English to Spanish or Spanish to English. Certificate students with proficiency in Spanish and English will gain a broad theoretical and practical background through translation studies, as well as practice in different types of translation and/or interpretation. Classes are led by translation and interpretation experts who work in the field and are taught online. Learn what it takes to become a professional and gain valuable training and experience by interning in a professional setting. The online graduate translation certificate will cover essential terminology, computer applications for translators and interpreters, and issues related to working in a multi-cultural context. Up to twelve credits earned through this graduate certificate may be applied toward a master’s degree in Global Affairs.

**Master of Arts in Global Community Engagement**

**Degree and GPA Requirements**
- **Bachelors degree:** All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- **Grade point average:** The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- **Program GPA requirement:** The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

**English Language Proficiency Test Score Requirements**
The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:
- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum CAE Score: 169

**Certificate in Global Community Engagement with a Concentration in Global Issues**

**Total Credits**: 24

**Minimum number of credits required**: 24
Courses

GS 4010 Global Society: Structures and Stakeholders (4 Credits)
This course provides students with an introduction to the major actors, structures, and issues in contemporary global society. Moving beyond a state-centric view of the global landscape, the course considers the values, interests, and ideas of a variety of stakeholders—including businesses, corporations, institutions, governmental and non-governmental organizations, and grass-roots initiatives—in order to assess some of the ways in which these actors both compete and cooperate for opportunities and resources. Students will apply relevant concepts to their own personal and professional experiences so as to gain a better understanding of how global issues and actors at a variety of levels impact their work and how their work constitutes an important part of global society.

GS 4020 Culture, Identity, Power (4 Credits)
In a rapidly globalizing world, culture and identity are increasingly recognized as having profound implications for professional success across a range of industries and practices. From health care to education, law enforcement to social work, an understanding and appreciation of difference are central to effective professional interactions and institutional progress. This course introduces the concepts of culture and cultural competency, presenting approaches for thinking about culture, identity, and power in professional environments, and for mitigating cultural and identity-based conflict in the workplace and beyond.

GS 4030 Working Internationally (4 Credits)
This course addresses some of the logistical and conceptual challenges of working internationally and provides students with knowledge and skills necessary to succeed in the global workplace. Legal, corporate, and cultural issues are addressed, as well as different approaches to conducting business across national, cultural, and linguistic borders.

GS 4040 Managing Across Cultures (4 Credits)
This course addresses the impact of cultural difference on management and provides students with approaches to managing effectively in cross-cultural and multicultural contexts. Additionally, the course enables students to analyze the impact of global issues and events on the management process in different times and places and to evaluate managerial practices in different cultures and institutional environments. The impact of culture and cultural competence on managerial performance is also addressed.

GS 4050 Diversity and Organizational Structure (4 Credits)
Organizational diversity is often conceptualized in terms of legally protected categories and related anti-discrimination and accommodation policies. Yet diversity presents opportunities and challenges that go far beyond legal considerations. The ability to appreciate and accommodate differences in experience, knowledge, and perspective is crucial for maximizing institutional effectiveness. This course focuses on the ways in which organizations at various levels benefit from diversity and struggle to manage it effectively. Students will develop a comprehensive understanding of the many forms diversity takes and will explore various strategies for maximizing effective professional interactions and institutional success.

GS 4060 Communication and Cultural Memory (4 Credits)
The ability to communicate effectively with employees, stakeholders, and clients from diverse cultural backgrounds requires an understanding of the cultural memories, experiences, and values of everyone involved. The culturally-inflected meanings attached to historical events such as 9/11, the Civil Rights Movement, the Holocaust, and colonialism profoundly influence how people imagine the world and their role in it. This course focuses on the impact of cultural memory on identity, looking in particular at the implications for effective professional communication across an array of organizational contexts. Students will gain an understanding of how history comes to be contested and changed, creating diversity in cultural memories that must be taken into account in professional communication.

GS 4130 Gender and Social Justice: Sex and Power in Global Perspective (4 Credits)
This course provides students with a critical understanding of gender and sexuality in relation to social and institutional processes, particularly as they impact professional interactions and conduct. Issues such as inequalities in the labor force, low wage work and poverty, work/family conflict, and domestic work will be addressed. The course will take an intersectional approach to analyzing gender and sexuality in the workplace and beyond.

GS 4140 Contemporary Racial and Ethnic Relations (4 Credits)
This course provides students with ways of assessing the effects of race and ethnicity in professional settings. Topics addressed will include forms of prejudice and discrimination, manifestations of privilege and inequality, and the intersection of race and ethnicity with other markers of identity. Students will analyze social and institutional practices that foster inclusivity and the implications of such practices on workplace equity and social justice.

GS 4150 Global Trade: The Intersection of Main Street and the World (4 Credits)
Trade is often characterized in terms of economic flows—the exchange of goods and services across borders and the electronic transfer of funds worldwide, as well as associated taxes, tariffs, labor, and production costs in different parts of the world. Yet trade also involves the exchange of ideas, cultures, languages, and people, all of which have profound implications for doing business worldwide. This course addresses trade in its different manifestations and explores the impact of trade on work in a variety of contexts. Students will approach trade from a holistic perspective to analyze its connections to globalization and their own work environments.

GS 4200 Globalization and Global Citizenship (4 Credits)
Over the past century the world has witnessed unprecedented developments in communication, technology, and mobility. These have enabled the rapid exchange of money, people, materials, ideas, and cultures across national borders. With these changes have come questions about the roles and responsibilities of individuals, companies, and organizations within this increasingly complex and interconnected global society. Globalization is often used as a buzzword for this ever-evolving context, although its meaning is sometimes unclear. This course clarifies the nature of globalization by introducing students to fundamental concepts of global citizenship, focusing in particular on relationships between the local and the global, and on the necessity of developing a cosmopolitan perspective in order to be more successful in an increasingly globalizing workplace.
GS 4210 The Force of Faith: Religion in the Global Workplace (4 Credits)
This course examines the role of religion in the global workplace, addressing issues involved in working with clients, stakeholders, and employees from diverse religious backgrounds with the aim of increasing students’ awareness of their own attitudes toward religious beliefs and professional responsibilities. Students will develop an understanding of the ways in which different religious beliefs impact conceptions of professional communication and conduct, in addition to exploring relationships between religious faiths and business ethics.

GS 4300 Foundations of Translation: The Role of the Professional Translator (4 Credits)
This course examines fundamental translation ideas and theories through assigned readings, lectures, and class discussions. It explores the links between linguistic and cultural factors and their relevance to translation. The course covers the different aspects of translation, surveys translation tools and reference materials, discusses professional roles of translators, analyzes the public perception of the profession, and examines standard business practices and professional codes of ethics. It also introduces the actual practice of translation through realistic exercises.

GS 4301 Written & Sight Translation for Translators & Interpreters (4 Credits)
This is an introductory course for translators and interpreters covering a variety of registers: commercial, journalistic, legal, literary, medical, and technical. Students learn to apply text analysis, text typology, and contrastive analysis of their working languages to identify, analyze, and resolve translation/interpretation problems while independently developing an efficient and rational approach to the process of translation or interpretation. In addition, course assignments include practice and graded exercises in translation and sight translation, utilizing authentic texts drawn from an extensive variety of text categories that include, but are not limited to, current events, general political economy, general legal documents, and scientific and technical topics for general audiences. Language-specific.

GS 4302 Computer Aided Translation (CAT): An Introduction to Software for Translators (4 Credits)
In this course, students examine the various technologies and software used by professional translators. Students will explore the differences between Computer Assisted Translation (CAT) and Machine Translation (MT) and become familiar with the concept of Translation Memory (TM), especially how TM differs from term bases and glossaries. Students will also learn the main features of a professional translation tool and use them in conjunction with QA functionalities, as well as practicing how to revise translation drafts in a consistent work-flow.

GS 4303 Language Services Practicum for Translators or Interpreters (4 Credits)
The Practicum helps students develop and establish an identity as professionals because it builds a practical knowledge of translation or interpretation as a profession. Its goal is to empower students to identify and pursue professional development opportunities and specializations. Students are expected to apply the knowledge, skills, and attitudes attained in the translation and interpretation curriculum by apprenticing under qualified translators or interpreters, language agencies, law firms, government agencies (e.g., school districts, the IRS, police departments, social services agencies), and/or healthcare and community-based organizations in a variety of general work situations. Interns shadow their mentors and then move into actual translation or interpretation assignments in monitored situations. Initiation into the language industry through interaction with members of the profession, professional organizations, and institutions is encouraged. Students must prepare a final project based on their practicum experience, following the University College Internship Handbook. The practicum should be taken as one of the last two Translation Studies classes.

GS 4304 Introduction to Legal Translation (4 Credits)
Because a legal document bears legal liabilities, the translation of a legal document has the same legal effect as the original. As a result, the requirements for accuracy in legal translation (meaning, tone, and style) are quite high. This course provides an overview of the nature of legal translation and an introduction to the principles of comparative law, such as how to research legal issues in the countries of the language pair. The concepts of equivalence and zero equivalence are analyzed. Participants translate different types of agreements; certificates; and affidavits, as well as a wide array of documents focusing on probate, family, poverty, and criminal law. Students are given assignments on the research approach, steps, and skills needed to tackle a legal translation project from start to finish. Fundamental legal translation theory is emphasized at the beginning of the course and conveyed in the form of assigned readings, lectures, class discussions, and independent research. Language specific. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4305 Localization and Translation of Software and Web Pages (4 Credits)
This course provides students with a general overview of the field of web page translation and an introduction to software localization. Class topics range from technical discussions on computer architecture to tips for managing localization projects. Students gain a thorough understanding of the basic components of a localization project (web, software, online help, and documentation) and insight into the larger context of software/web localization and internationalization processes. Using real-life examples and hands-on exercises, students explore the cultural, technical, and organizational challenges in the adaptation of culturally sensitive elements. Language generic. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4306 Translation of Medical Texts for the Health Care Industry (4 Credits)
This course covers medical terminology involving patient education, medical research, drug development, the human body and systems, major diseases, as well as the most common injuries. Students translate documents used in general medical practice and are introduced to the common roots, prefixes and suffixes in medical terminology. Translation skills are reinforced by analyzing different levels of difficulty in medical texts, by translating, and by addressing requests for editing and rewriting translated materials for patient populations and audiences of different education levels. Students practice translating medical office correspondence, informational brochures, patient letters, discharge information, hospital intake questionnaires, living wills, patient outreach/educational materials, instructions for taking medications, laboratory tests, and medical disability reports, among others. Language-specific. Prerequisites: GS 4301.
GS 4307 Translation Project Management (4 Credits)
This course gives students the opportunity to address both translation and non-translation related issues associated with planning, executing, controlling, and delivering a final translation for a client (either direct or as an agency). Particular focus is given to hands-on practice of the various communications between the parties. The course outlines an effective project management methodology that can be applied to large or small translation/localization projects. Language generic. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4308 Introduction to Terminology for Translators and Interpreters (4 Credits)
Terminology is a fundamental part of both translation and interpretation, and knowing how to create and use terminology is a skill necessary both to translators and interpreters. This course will introduce what terminology is, how a termbase differs from a simple glossary or from a dictionary, and how terminology differs from allied fields such as lexicography. It will further introduce some tools used by translators, interpreters and terminologists in their work. Language generic.

GS 4309 Foundations of Interpretation: The Role of the Professional Interpreter (4 Credits)
This course examines the profession of interpreting, including employment opportunities, the role of the interpreter, administrative matters, and ethical considerations. In addition, an overview will be given of the three modes of interpretation (sight, consecutive, and simultaneous), as well as the different areas of interpretation, such as legal, medical, business, community, and conference interpretation.

GS 4310 The Language Services Business for Translators & Interpreters (4 Credits)
Translation and interpretation are professions that typically require their practitioners to set up businesses on their own. This course addresses the key issues involved in being an independent contractor in the language industry, including how to acquire clients, how to price professional language services, how to estimate different types of service, and how to manage different client relationships, from government entities to private individuals. The course also analyzes the differences between working directly for clients and working with translation agencies or as a staff translator or interpreter, where it is crucial to know how to work on a team with other language professionals and content experts. The course also covers basic standard business practices in the language industry and business codes of ethics.

GS 4311 Research for Translation & Interpretation (4 Credits)
Not so long ago, the only way for translators to conduct research for their assignments was to consult the reference works they happened to own, or (if they lived near a good library), go to the library and hope what they needed was available there. The Internet changed all that, revolutionizing the translation and interpretation professions. Now translators and interpreters have at their disposal a seemingly bottomless well of information. At the same time, the research skills needed for translation and interpretation also have changed. This course teaches students how to conduct research using a variety of online tools, how to distinguish between reliable and unreliable sources of information, how to take advantage of the research tools made available by libraries, and in particular how to leverage the various types of resources offered by different types of libraries. Language-generic.

GS 4312 Translation for the Publishing Industry (4 Credits)
Most professional translators work outside the publishing industry; they work as freelancers or staff translators in business, technical, medical, legal translation—or in some other translation specialization. But when people outside our industry think of translators, it is likely they think of book translators, i.e., translators who work for the publishing industry. Working as a translator for the publishing industry may be rewarding, but in many respects it is different from the kind of work most translators are accustomed to. This course will explore such themes as the difference between working on book-length projects and shorter projects, and the differences between translations performed as "work done for hire" and copyrighted translations. It will look at publishing contracts, and at the difference between translating non-fiction and fiction works. It will also survey the most prominent theories of translation, past and present, to see how they apply to the translation of literature. Language-specific.

GS 4313 Translation & Interpretation for Law Enforcement (4 Credits)
This course explores the scope and nature of translating and interpreting in a law enforcement context, including the kinds of documents a translator is likely to encounter and how an interpreter interacts with both law enforcement professionals and members of the public who lack fluency in English. Language-specific.

GS 4314 Interpreting for Health Care (4 Credits)
In this course, students analyze and learn to apply the correct interpreting mode for different healthcare situations. They develop personalized introductions for use in interpreted sessions to provide a framework for interpretation that is clear to both providers and patients. Students learn to apply the medical code of ethics to different interpreting situations. Selecting from a list of various medical specialties, students create interpreting role plays with classmates that include appropriate introductions, interpreting modes, and terminology in both Spanish and English to simulate real-life interpretation situations. This course cultivates many of the skills needed to pass medical interpreter examinations and helps to prepare students for work as professional healthcare interpreters.

GS 4315 Interpreting in the U.S. Court System (4 Credits)
This course explores the general body of knowledge that serves as the context for the U.S. court interpreting profession and covers the special skills and abilities court interpreters must demonstrate. It addresses the court interpreter code of ethics, essential legal concepts and terminology, and the different modes of interpreting used in courtroom settings. The course also covers the practical aspects of legal interpreting and will be a skills-based course.

GS 4701 Topics in Global Affairs (4 Credits)
The content of this course varies each time it is offered. Specific course content is detailed on quarterly schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.
GS 4900 The Puerto Rican Paradox: Challenges and Opportunities in Uncertain Times (4 Credits)
The Commonwealth of Puerto Rico is a tropical paradise boasting vibrant communities, rich cultures, and abundant natural resources. Once coined a “natural jewelry box” by the BBC, Puerto Rico offers sparkling turquoise waters, bioluminescent bays, lush mountainous terrain, and colorful colonial architecture. It is also plagued by a debilitating debt crisis, political corruption, and a crumbling infrastructure, which, particularly in the aftermath of hurricanes Irma and Maria, have caused many residents to flee the island in search of better opportunities and more stable living conditions. In this course, students will examine the paradox that is Puerto Rico. Drawing from literature on culture, history, power, and politics, students will research a topic of their choosing, with the professor’s approval. They will then work with local communities in Puerto Rico on a project of mutual interest and importan, culminating in an approach or proposal for addressing the issue(s) at hand. Students will be required to spend 5 days on-site in Puerto Rico, plus any necessary travel time. This course will give students broad exposure to the history and culture of Puerto Rico, in addition to a nuanced understanding of a specific industry, issue, or problem. It will additionally highlight the power, privilege, and oppression that exists in our own backyards on this U.S. Commonwealth island.

GS 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of a B- or better is required to pass.

GS 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students’ research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

GS 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

GS 4905 Graduate Social Research Methods (4 Credits)
Graduate Social Research Methods is an exploration of the methods and purposes of social science research from the perspective of the researcher as well as that of the informed professional and consumer of information. Students will learn about the process of research, including the development of research questions, the purpose of various social science research methods, the role of professional ethics, and general approaches to the analysis and interpretation of data. Students will develop the ability to read and critique basic social science research articles and to implement simple research designs. Students will develop and write a research proposal around a specific research question informed by a review of the literature. Technical requirements include the ability to read and modify Microsoft Excel documents. This course is required of all degree-seeking students and should be taken in the first three quarters of enrollment.

GS 4980 Internship (1-4 Credits)
The internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master’s programs.

GS 4991 Independent Study (1-5 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.
GS 4992 Directed Study (1-5 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Directed Study is offered only on a for-credit basis.

Master of Science in Healthcare Management with a Concentration in Global Health Program Management
The Healthcare Management master’s degree concentration in Global Health Program Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership. The concentration focuses on the delivery and support of the global health industry has increasingly emerged as a multinational, multi-organizational endeavor, pulling together individuals and groups from multiple locations and backgrounds to provide services. Individuals, organizations and corporations routinely come together, providing a range of services from public health to emergency and long-term medical services. Individuals and groups engaged in management of direct and indirect health industry service programs, as well as those responsible for the development and marketing of medical devices, products, and services to support the health industry, require specialized skill when operating in the international market. This concentration builds on general knowledge of leadership and management in the health industry with a focus on global application.

Students will gain transferable skills across functions, assisting them in managing services and projects related to the health industry within international settings. Knowledge gained through this concentration will also be of assistance to those writing grants for global healthcare programming, services and product development. Curriculum includes topics such as working with remote teams, regional governance, employment and labor law, independent cross-functional decision making, customs and importation laws, regulatory compliance and other management and legal concerns. Building on desirable areas of expertise identified by those hiring in these fields, this course of study is designed to create a portfolio of skills applicable to various aspects of global health management that can be applied in a multitude of settings throughout the world.

This degree prepares students to:

- Generate and analyze strategies to transfer management skills across a variety of organizational, geographic and/or cultural settings
- Create team management and communication plans for face-to-face, virtual, and remote teams
- Develop and evaluate decision-making strategies to integrate systems, processes, and procedures across various organizational functions
- Assess global legal, cultural, and governance issues and challenges in both delivery of healthcare services and marketing of products to determine most effective implementation strategies
- Examine regional attitudes, traditions, and cultural differences to apply understanding of those concepts to global-health-related critical thinking and decision-making skills
- Evaluate the health industry and health delivery systems in developed and emerging countries in terms of successes, opportunities, and challenges to inform adaptation and application of lessons learned
- Assemble regulatory compliance requirements for research, development, and marketing of healthcare products in the international setting to recommend appropriate courses of action for an organization
- Appraise management principles for healthcare related Non-Government Organizations (NGO’s)

Master of Science in Healthcare Management with a Concentration in Health Data Informatics and Analytics
The Health Data Informatics and Analytics master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership. The concentration prepares students for the evolving environment in the health industry and healthcare system informatics and analytics. In addition, this concentration presents many opportunities to bridge the divide between field-level and director-level positions related to informatics and analytics within the healthcare delivery system. The program incorporates lessons learned from
across the training spectrum, and produces graduates with the necessary skills to create and populate the new mid- and higher-level management positions. This degree concentration focuses on three areas of development.

First, students develop a solid base of knowledge about healthcare delivery in the U.S. within the framework of the “4 Ps”: Patients/People, Providers, Payers, and Population. This framework allows students to understand both informatics and analytics related to the process of transforming data into information, knowledge, and then insight (DIKI) along the broad scope that exists in health industry and U.S. healthcare today. Second, students will: (1) compare and contrast the similarities and differences between asking and answering research and business questions and (2) demonstrate competencies in this area. Third, students will learn how to collaborate, organize projects, and formulate real-life solutions to existing healthcare industry issues.

This degree prepares students to:

- Compare how healthcare data is generated, routed, and analyzed within the U.S. healthcare delivery system and the health industry from the perspectives of patients/people, providers, payers, and populations and how these processes affect interoperability
- Distinguish major, as well as innovative, health information systems as they relate to the perspectives of patients/people, providers, payers, and populations - utilizing both active and passive informatics
- Appraise healthcare and health industry informatics tools as they relate to the past, present, and future directions of healthcare reform - as well as how these differ from other industries
- Articulate the ways in which HIPPA regulations and biostatistics principles influence data informatics and analytics
- Evaluate the impact of data governance challenges, ethical implications, and security issues on stakeholders in healthcare data research, business workflows, and compliance
- Recommend study and project designs for healthcare informatics and analytics-based case studies incorporating frameworks such as database architecture, data warehousing, natural language processing, and epidemiology
- Defend the fundamental DIKI process of transforming data to information, knowledge, then insight through integrating disparate public data sets and modeling predictive analytics to create solutions, complete with data visualizations, to healthcare and health industry challenges
- Develop a professional, actionable implementation, change management, and assessment plan for bringing IT, clinical, engineering, and business individuals together to solve a healthcare industry challenge

Master of Science in Healthcare Management with a Concentration in Healthcare Policy and Regulatory Leadership

The Healthcare Policy and Regulatory Leadership master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership. The career-relevant courses within the concentration provide students with the knowledge and tools to help them achieve leadership and management skills with a pulse on the dynamism in healthcare and continuing emergence of reform leading to changes in healthcare policy.

Students acquire the essential tools necessary to become leaders and managers who help shape, interpret, and implement policies and regulations that impact a value-driven healthcare system. Students improve their understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare regulatory systems and public policy. Students examine the relationship between public policy, the patient as the consumer, and the impact of culture on the formation of policy and practice within a transitioning healthcare environment.

This degree prepares students to:

- Compare variations in healthcare delivery domestically and internationally
- Examine the legislative process involved in the creation of healthcare public policy
- Assess how change leads to resistance and what measures must be adopted to incorporate change
- Correlate how professional standards and accreditation relate to quality assurance in various areas of healthcare
- Analyze the processes involved in the implementation of healthcare public policy and healthcare reform

Master of Science in Healthcare Management with a Concentration in Managing Legal Issues in Healthcare

The Managing Legal Issues in Healthcare master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory
environments, finance, and communication and leadership. The concentration provides legal professionals, health providers, practice managers, healthcare administrators, and others with the concentrated knowledge of how law and medicine must work in cooperation to deliver better health, better care, and lower costs while ensuring patient safety. Students interested in policy and advocacy find this concentration applicable to career advancement.

In the Managing Legal Issues in Healthcare program, students explore the intersection of law and health systems as they navigate business and practice management in the health industry. Students will acquire specialized skills related to the economic and legal structures associated with healthcare systems and delivery mechanisms in order to assess and respond to common legal and policy issues facing health organizations.

Principles of change management will be applied throughout all coursework to provide leadership skills necessary to develop, facilitate, and maintain change across health systems.

The curriculum focuses on legal and policy issues including transactional law, professional liability, professional review, patient privacy, and anti-discrimination—all discussed in relation to both inpatient and outpatient facilities and providers. Unique legal concerns related to academic and entrepreneurial medicine are addressed including research regulations, intellectual property, and product development.

This degree prepares students to:

• Analyze the intersection of law and healthcare in health administration
• Assess legal and regulatory systems that impact healthcare payment and delivery
• Summarize legal issues that influence academic medical research and health entrepreneurship
• Examine ethical considerations that affect healthcare
• Identify business principles necessary to manage the legal components of healthcare systems

Master of Science in Healthcare Management with a Concentration in Medical and Healthcare Information Technologies

The Medical and Healthcare Information Technologies master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership. The innovative classes in the concentration cover how to reduce costs and improve access to quality healthcare through technologies that comprise the framework of modern interconnected healthcare.

Students stay at the cutting edge of emerging healthcare information technology, telehealth, digital, and virtual health with a master’s degree concentration by learning how technology affects and improves diagnosis, treatment, training, patient records, and financial transactions. You’ll gain high-level knowledge of the interoperability of healthcare information systems, the benefits and barriers associated with electronic health records systems, and the emerging use of distance medicine.

Courses emphasize provider and patient interaction and how to improve overall efficiency through relevant health data interoperability.

This degree prepares students to:

• Assess how technology affects diagnosis, treatment, training, record keeping, financial transactions and data outcome analysis
• Compare and contrast emerging trends in medical and healthcare information technology including electronic health records, telehealth, digital, and virtual health
• Analyze how technology can help improve quality of patient care and reduce costs as healthcare moves from a volume-based to value-based system
• Recommend different ways to facilitate discussion and communication between clinical providers and their counterparts

Master of Science in Healthcare Management with a Concentration in Strategic Leadership in Healthcare Organizations

The Strategic Leadership in Healthcare Organizations master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership. The concentration prepares students to develop and administer strategic plans for various types of healthcare systems.

Students acquire the skills needed to successfully and strategically lead within healthcare organizations through the integrative process of a changing healthcare industry. Through analysis of the interrelationships of value, quality, and price, students examine the financial state of healthcare at the macro level, allowing them to better understand budgetary restraints while striving to realize an organization’s vision and goals.
Using case-based study techniques, students explore practice and system management, strategic planning, and change leadership.

This degree prepares students to:

- Compare and contrast leadership and administration characteristics that contribute to success in the provision of healthcare
- Evaluate basic components of a strategic plan and change management, relating them to financial planning and patient value within the healthcare system
- Analyze issues that support and detract from a harmonious workplace environment, and how these issues affect patient services, and provide solutions in effectively dealing with these issues
- Compare and contrast the strategic management functions required to lead and administer various types of healthcare systems
- Demonstrate expertise in the complex history and process of healthcare economics

**Master of Science in Healthcare Management with a Concentration in Supply Chain Management**

The Supply Chain Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students learn tactical innovation and change management using vision, values, and mission as an overall guide. Led by professional practitioners who work in the fields in which they teach, leadership classes provide professionals the skills to manage change, encourage innovation, and develop effective strategic initiatives while fulfilling an organization’s mission.

In the Supply Chain Management concentration, students will build end-to-end knowledge of the complex process that provides the many products healthcare organizations need to function. Students will learn to plan for and manage the flow of supplies from raw material sourcing to manufacturing, transportation, and inventory management. Students will use the latest technology to execute plans that deliver healthcare products in the most cost-effective, streamlined way possible.

This degree prepares students to do the following:

- Understand how the six core supply chain processes work collectively to provide goods from design to markets.
- Develop an understanding of the sub-elements of each core supply chain process to demonstrate an aptitude of each function at a tactical to strategic level.
- Investigate the key operating and financial measures of supply chain management to explain the impact on users and providers of services.
- Assess a supply chain to recommend current technology and processes, including solutions to overcome potential barriers to implementation, to improve the existing structure.
- Create strategies to address transportation related issues using basic principles of supply chain management.

**Certificate in Healthcare Management with a Concentration in Global Health Program Management**

The Healthcare Management certificate in Global Health Program Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Delivery and support of healthcare in the global health industry has increasingly emerged as a multinational, multi-organizational endeavor, pulling together individuals and groups from multiple locations and backgrounds to provide services. Individuals, organizations and corporations routinely come together, a range of services from public health to emergency and long-term medical services. Individuals and groups engaged in management of direct and indirect health industry service programs, as well as those responsible for the development and marketing of medical devices and products and services to support the health industry, require specialized skill when operating in the international market. Students will gain transferable skills across functions, assisting them in managing services and projects related to the health industry within international settings. Knowledge gained through this concentration will also be of assistance to those writing grants for global healthcare programming, services and product development. Curriculum includes topics such as working with remote teams, regional governance, employment and labor law, independent cross-functional decision making, customs and importation laws, regulatory compliance and other management and legal concerns. Building on desirable areas of expertise identified by those hiring in these fields, this course of study is designed to create a portfolio of skills applicable to various aspects of global health management that can be applied in a multitude of settings throughout the world. Students will also gain additional skills and knowledge in healthcare management through elective coursework.

**Certificate in Healthcare Management with a Concentration in Health Data Informatics and Analytics**

The Health Data Informatics and Analytics certificate is offered completely online to meet the needs of busy adults. This certificate is designed for three principal types of students. This certificate is appropriate for individuals in the health data informatics or analytics field who are currently working beyond their skillset capacity. This certificate seeks to match their skills to the competencies they would like to acquire. These students will
benefit from instruction on theory and validation of their on-the-job experiences. Students will also gain additional skills and knowledge in healthcare management through elective coursework.

Alternatively, this certificate is appropriate for those who are ready to move to a managerial position and may need a new skillset to make this conversion. Additionally, this certificate is appropriate for individuals with solid business skills looking to transition from another industry into the health industry or healthcare but need support for the move. This certificate will aid in the transition to a health data informatics and analytics position within the healthcare or health industry. To this end, the certificate curriculum is aligned with AHIMA and HIMSS certification specific core objectives. This certificate focuses on three concentrated areas of development.

First, students develop a solid base of knowledge about the healthcare delivery in the U.S. within the framework of the “4 Ps”: Patients/People, Providers, Payers, and Population. This framework allows students to understand both informatics and analytics related to the process of transforming data into information, knowledge, and then insight (DIKI) along the broad scope that exists in health industry and U.S. healthcare today. Second, students will compare and contrast the similarities and differences between asking and answering research and business questions. Third, students will learn how to collaborate, organize projects, and formulate real-life solutions to existing healthcare industry issues.

Certificate in Healthcare Management with a Concentration in Healthcare Policy and Regulatory Leadership

The graduate certificate in Healthcare Policy and Regulatory Leadership concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will add new skills to their portfolio, including knowledge of how to help shape, interpret, and implement policies and regulations that impact a value-driven healthcare system. The Healthcare Policy and Regulatory Leadership concentration will provide an improved understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare-related public policy and healthcare law.

Career-relevant courses provide students with the knowledge and tools to help them achieve leadership and management with a pulse on the dynamism in healthcare and continuing emergence of reform leading to changes in healthcare policy. Improve your understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare regulatory systems and public policy by earning a certificate. You’ll examine the relationship between public policy, the patient as the consumer, and the impact of culture on the formation of policy and practice within a transitioning healthcare environment. Students will also gain additional skills and knowledge in healthcare management through elective coursework. Credits earned through this certificate may apply toward a master's degree in Healthcare Management.

Certificate in Healthcare Management with a Concentration in Managing Legal Issues in Healthcare

The Managing Legal Issues in Healthcare graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate program provides legal professionals, health providers, practice managers, healthcare administrators, and others with the concentrated knowledge of how law and medicine must work in cooperation to deliver better health, better care, and lower costs while ensuring patient safety.

Certificate students will explore the intersection of law and health systems as they navigate business and practice management in the health industry. Earn specialized skills related to the economic and legal structures associated with healthcare systems and delivery mechanisms in order to assess and respond to common legal and policy issues facing health organizations. Principles of change management will be applied throughout all coursework to provide leadership skills necessary to develop, facilitate, and maintain change across health systems.

Certificate curriculum focuses on legal and policy issues including transactional law, professional liability, professional review, patient privacy, and anti-discrimination—all discussed in relation to both inpatient and outpatient facilities and providers. Students will also gain additional skills and knowledge in healthcare management through elective coursework. Credits earned through the graduate certificate may apply toward a master's degree in Healthcare Management.

Certificate in Healthcare Management with a Concentration in Medical and Healthcare Information Technologies

The Medical and Healthcare Information Technologies graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate courses emphasize provider and patient interaction and how to improve overall efficiency through relevant health data interoperability. Innovative classes cover how to reduce costs and improve access to quality healthcare through technologies that comprise the framework of modern interconnected healthcare.

Certificate students stay at the cutting edge of emerging healthcare information technology, telehealth, digital, and virtual health by learning how technology affects and improves diagnosis, treatment, training, patient records, and financial transactions. You’ll gain high-level knowledge of the interoperability of healthcare information systems, the benefits and barriers associated with electronic health records systems, and the emerging use of distance medicine. Students will also gain additional skills and knowledge in healthcare management through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in Healthcare Management.
Certificate in Healthcare Management with a Concentration in Strategic Leadership in Healthcare Organizations

The Strategic Leadership in Healthcare Organizations graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate prepares students to develop and administer strategic plans for various types of healthcare systems.

Certificate students will acquire the skills needed to successfully and strategically lead within healthcare organizations through the integrative process of a changing healthcare industry. Through analysis of the interrelationships of value, quality, and price, students examine the financial state of healthcare at the macro level, allowing them to better understand budgetary restraints while striving to realize an organization’s vision and goals. Using case-based study techniques, students explore practice and system management, strategic planning, and change leadership. Students will also gain additional skills and knowledge in healthcare management through elective coursework. Credits earned in the graduate certificate may apply toward a master’s degree in Healthcare Management.

SPECIALIZED GRADUATE CERTIFICATE IN GLOBAL HEALTH PROGRAM MANAGEMENT

The specialized graduate certificate in Global Health Program Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Delivery and support of healthcare in the global health industry has increasingly emerged as a multinational, multi-organizational endeavor, pulling together individuals and groups from multiple locations and backgrounds to provide services. Individuals, organizations and corporations routinely come together, a range of services from public health to emergency and long-term medical services. Individuals and groups engaged in management of direct and indirect health industry service programs, as well as those responsible for the development and marketing of medical devices and products and services to support the health industry, require specialized skill when operating in the international market. Students will gain transferable skills across functions, assisting them in managing services and projects related to the health industry within international settings. Knowledge gained through this concentration will also be of assistance to those writing grants for global healthcare programming, services and product development. Curriculum includes topics such as working with remote teams, regional governance, employment and labor law, independent cross-functional decision making, customs and importation laws, regulatory compliance and other management and legal concerns. Building on desirable areas of expertise identified by those hiring in these fields, this course of study is designed to create a portfolio of skills applicable to various aspects of global health management that can be applied in a multitude of settings throughout the world.

SPECIALIZED GRADUATE CERTIFICATE IN HEALTH DATA INFORMATICS AND ANALYTICS

The Health Data Informatics and Analytics specialized graduate certificate is offered completely online to meet the needs of busy adults. This certificate is designed for three principal types of students. This certificate is appropriate for individuals in the health data informatics or analytics field who are currently working beyond their skillset capacity. This certificate seeks to match their skills to the competencies they would like to acquire. These students will benefit from instruction on theory and validation of their on-the-job experiences.

Alternatively, this certificate is appropriate for those who are ready to move to a managerial position and may need a new skillset to make this conversion. Additionally, this certificate is appropriate for individuals with solid business skills looking to transition from another industry into the health industry or healthcare but need support for the move. This certificate will aid in the transition to a health data informatics and analytics position within the healthcare or health industry. To this end, the certificate curriculum is aligned with AHIMA and HIMSS certification specific core objectives. This certificate focuses on three concentrated areas of development.

First, students develop a solid base of knowledge about the healthcare delivery in the U.S. within the framework of the “4 Ps”: Patients/People, Providers, Payers, and Population. This framework allows students to understand both informatics and analytics related to the process of transforming data into information, knowledge, and then insight (DIKI) along the broad scope that exists in health industry and U.S. healthcare today. Second, students will compare and contrast the similarities and differences between asking and answering research and business questions. Third, students will learn how to collaborate, organize projects, and formulate real-life solutions to existing healthcare industry issues.

SPECIALIZED GRADUATE CERTIFICATE IN HEALTHCARE POLICY AND REGULATORY LEADERSHIP

The specialized graduate certificate in Healthcare Policy and Regulatory Leadership concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will add new skills to their portfolio, including knowledge of how to help shape, interpret, and implement policies and regulations that impact a value-driven healthcare system. The Healthcare Policy and Regulatory Leadership concentration will provide an improved understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare regulatory systems and public policy by earning a certificate. You’ll examine
the relationship between public policy, the patient as the consumer, and the impact of culture on the formation of policy and practice within a transitioning healthcare environment. Credits earned through this certificate may be applied toward a master's degree in Healthcare Management.

**SPECIALIZED GRADUATE CERTIFICATE IN MEDICAL AND HEALTHCARE INFORMATION TECHNOLOGIES**

The Medical and Healthcare Information Technologies specialized graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate courses emphasize provider and patient interaction and how to improve overall efficiency through relevant health data interoperability. Innovative classes cover how to reduce costs and improve access to quality healthcare through technologies that comprise the framework of modern interconnected healthcare.

Students stay at the cutting edge of emerging healthcare information technology, telehealth, digital, and virtual health by learning how technology affects and improves diagnosis, treatment, training, patient records, and financial transactions. You'll gain high-level knowledge of the interoperability of healthcare information systems, the benefits and barriers associated with electronic health records systems, and the emerging use of distance medicine. Credits earned through this certificate may be applied toward a master's degree in Healthcare Management.

**SPECIALIZED GRADUATE CERTIFICATE IN MANAGING LEGAL ISSUES IN HEALTHCARE**

The Managing Legal Issues in Healthcare specialized graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate provides legal professionals, health providers, practice managers, healthcare administrators, and others with the concentrated knowledge of how law and medicine must work in cooperation to deliver better health, better care, and lower costs while ensuring patient safety.

Students will explore the intersection of law and health systems as they navigate business and practice management in the health industry. Earn specialized skills related to the economic and legal structures associated with healthcare systems and delivery mechanisms in order to assess and respond to common legal and policy issues facing health organizations. Principles of change management will be applied throughout all coursework to provide leadership skills necessary to develop, facilitate, and maintain change across health systems.

The curriculum focuses on legal and policy issues including transactional law, professional liability, professional review, patient privacy, and anti-discrimination—all discussed in relation to both inpatient and outpatient facilities and providers. Credits earned through this certificate may be applied toward a master's degree in Healthcare Management.

**SPECIALIZED GRADUATE CERTIFICATE IN STRATEGIC LEADERSHIP IN HEALTHCARE ORGANIZATIONS**

The Strategic Leadership in Healthcare Organizations specialized graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate prepares students to develop and administer strategic plans for various types of healthcare systems.

Students will acquire the skills needed to successfully and strategically lead within healthcare organizations through the integrative process of a changing healthcare industry. Through analysis of the interrelationships of value, quality, and price, students examine the financial state of healthcare at the macro level, allowing them to better understand budgetary restraints while striving to realize an organization’s vision and goals. Using case-based study techniques, students explore practice and system management, strategic planning, and change leadership. Credits earned in the certificate may be applied toward a master’s degree in Healthcare Management.

**Master’s Degree Admission**

**Degree and GPA Requirements**

- Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master’s degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master’s degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

**English Language Proficiency Test Score Requirements**

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum TOEFL Score (Paper-based test): 550
• Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
• Minimum CAE Score: 169

English Conditional Admission: Master’s degree applicants who do not meet the required level of English proficiency may be considered for conditional acceptance if all other admission criteria are met. Prior to enrolling in any graduate-level coursework, English Conditional Acceptance

Certificate Admission

Total Credits 48
Minimum number of credits required: 48

Students may choose from the elective options above, or they may work with their advisor to choose electives.

A satisfactory quality of achievement with a grade point average of “B” (3.0) or better is required in graduate coursework accepted for the degree. The average is determined on the basis of the University's grading system. In no case, may more than one-fourth of the hours accepted toward the degree be of “C” grade. A grade lower than “C” renders the credit unacceptable for meeting degree requirements. Students must earn a grade of B- or better in the Capstone Project or Capstone Seminar.

Courses

**HC 4000 Healthcare Systems and Regulatory Environments (4 Credits)**
This course opens with a comprehensive overview of the functions of various types of healthcare organizations: providers, insurance companies, government agencies, and professional associations. Alternative payment and provider models are reviewed, regulatory bodies and issues are explored, and healthcare reform efforts and proposals are discussed. Supply and demand projections for personnel are examined. The work of key federal agencies (NIH, National Center for Disease Control, and Food and Drug Administration) is reviewed as well as the activity of national and international non-governmental organizations. Major national and global public health challenges are introduced.

**HC 4005 Healthcare Macroeconomics (4 Credits)**
This course focuses on macro analysis of the current financial state of healthcare in the United States. The relationships of value, quality, and price are analyzed. Transparency related to price and quality is considered. Fundamental items such as balance sheets/income statements, accounting vs. financial reporting, equity, cash flows, and debt financing are covered in detail. Payment and incentive models are considered in connection with employer-furnished benefits, private health insurance plans, Medicare and Medicaid. Current issues, such as pay for performance, shared savings, cost shifting, and healthcare for the aging, under and uninsured are discussed. Students will discuss variations in health policy related to payment and coverage systems.

**HC 4010 Healthcare Communication and Leadership (4 Credits)**
This course focuses on the welfare of patient, family, and community in the context of medical team communication and leadership. Models for communicating highly technical medical information with patients and others involved in their care are examined. Students weigh and assess differences in personal and organizational cultures to optimize patient-centered outcomes. Students acquire a sound body of knowledge and terminology to facilitate communication and leadership across a multitude of disciplines essential in the delivery of healthcare. NOTE: This course is strongly recommended within the first 3 terms of study.

**HC 4015 Healthcare Finance (4 Credits)**
This course presents an overview of financial management in healthcare organizations operating in the United States. Students will gain a broad overview of the business of healthcare in the United States, including interpretation of financial statements, budgeting, variance analysis, operational analysis, capital investment analysis, expense management issues, revenues, and payment systems used in the current United States healthcare system. The course will use a case-based approach where students will demonstrate mastery of financial management skills through application of knowledge to real-life scenarios from the industry.
HC 4100 Management Principles in Healthcare Systems (4 Credits)
Healthcare systems are complex, dynamic, multilayered and unpredictable. They require constant situational awareness to maintain safety, efficiency, compliance, relevance and fiscal responsibility. Management and leadership need to have the vision to respond to changes and unexpected events. In this course, students encounter and explore the management functions required to lead and administer various types of healthcare systems. Students will engage in activities such as analyzing a healthcare system or organization's current level of performance or culture to inform ways to lead that organization toward excellence.

HC 4110 Healthcare: Innovative Strategies and Change Management (4 Credits)
Effective healthcare takes continual innovation to meet the ever-changing needs of the population. Through an examination of disruptions that create a catalyst for change, this course focuses on teaching students how innovative strategies can enable quality care and sustainability both within the healthcare delivery system and the health industry. Further, the drivers of innovation are explored from their use in grassroots efforts through regulatory reform through the lens of supply and demand. Finally, strategic planning for maximum use of financial resources to meet stakeholder expectations is ventured into in this course.

HC 4130 Organizational Behavior in Healthcare (4 Credits)
Customer and employee satisfaction elements of healthcare management are often a result of how well the entire healthcare system functions. Students examine successful and less successful examples of cooperation, compatibility, and dedication within the workplace and explore what contributes to a harmonious and effective healthcare environment. Interpersonal skills are discussed, as are ethical guidelines and laws that define acceptable workplace behavior.

HC 4200 Comparative Healthcare Systems (4 Credits)
This course describes variations in healthcare delivery systems locally, nationally, and globally as they relate to policy, structure, and finance. Comparisons of systems are made relative to expenditure of resources and outcomes. Students learn about healthcare coverage, access to care, healthcare rationing, provider manpower distribution, and seeking healthcare in foreign countries (medical tourism). The discrepancy between the desirable and the practical is explored, and students are asked to outline and defend a system that they believe is both desirable and practical.

HC 4210 Quality Improvement for HC Leaders (4 Credits)
This course is designed to review the body of knowledge and core competencies needed to function at the level of Certified Professional in Healthcare Quality (CPHQ) in a healthcare organization. Skills gained are applicable to managers and administrators of hospitals, practices, and clinics. Course content is beneficial to clinicians and others interested in quality and patient safety. This course facilitates the successful pursuit of the CPHQ certification exam. Core competencies, aligned with the CPHQ certification exam, to be explored in detail include: Leadership and Management; Quality and Performance Improvement; Healthcare Safety; Information Management and Regulation, Accreditation and Continuous Readiness. Students are strongly encouraged to complete HC4000 and HC4220 prior to registering for the course.

HC 4220 Ethical Considerations in Healthcare (4 Credits)
This course explores ethical considerations encountered throughout the United States' healthcare industry as well as within the broader global environment. Both clinical and non-clinical scenarios will be examined. Students will learn to apply ethical principles, theories, and concepts to analyze and draw conclusions for a broad range of ethical dilemmas. Through readings, class discussions, and assignments, students will recognize how ethical considerations vary depending on the perspective of the stakeholder or assessor, a critical step in making ethical decisions with no single right answer.

HC 4225 Healthcare Public Policy and the Legislative Process (4 Credits)
This class provides students with an understanding of the political and legislative procedures that lead to healthcare policy change and reform. Students examine the influences and functions of government agencies, legislative processes and procedures and executive branch rule-making. Students objectively evaluate how policy changes occur at the federal and state levels and subsequently affect the functioning as a citizen and a professional. Class lecture focuses on the legislative path of federal law and then follows it through to the outcomes at the state level. Students explore the importance of developing relationships, communication and advocacy strategies with elected officials and various stakeholder groups that interact with the federal and state legislative processes.

HC 4230 Implementation and Evaluation of Healthcare Public Policy (4 Credits)
This course examines strategies for implementation and evaluation of healthcare public policy. Students develop skills in analyzing issues, considering and weighing pros and cons of proposed policy, and defending strategies for bringing about change. Beginning with the passage of a new law, policy, or regulation, students track the process to implement and evaluate new policy. Topics related to implementation of a new policy include funding the implementation, effect on constituents and the overall national economy, sustainability, and short- and long-term evaluation of the policy. At the conclusion of this course, students will prepare an implementation plan for selected recently passed state legislation. Students are strongly encouraged to complete HC 4000 prior to registering for this course.

HC 4301 Fundamentals of Healthcare Information Systems (4 Credits)
Health information technology (HIT) can improve cost and efficiency when systems are properly evaluated, implemented, and optimized. Effective IT systems are also increasingly being associated with better patient outcomes and reduced costs. However, healthcare has lagged behind other industries in the adoption of IT systems. A major challenge to healthcare professionals is to articulate the major underlying technical concepts involved in the jargon-filled world of health information technology. This foundational course provides a working knowledge of key HIT definitions and concepts. It is not designed to turn students into network administrators or software developers; rather it is to equip students to become an active and valuable participant – or even a team leader – in the evaluation, selection, implementation and ongoing operation of health information systems.

NOTE: This course is a prerequisite for HC 4325 unless approved by the academic director.
HC 4310 Electronic Health Records Systems and Health Information Exchanges (4 Credits)
Electronic health records systems (electronic medical records (EMRs), electronic health records (EHRs), personal health records (PHRs), and health information exchanges (HIEs)) are all the buzz these days, yet for the past 30 years the healthcare sector has clung to paper records, file folders, and clipboards. This course will explore the technical and controversial aspects of healthcare information technology in general, and the specific factors involving evaluation and adoption of EMR systems. The course also covers the fundamental components of modern electronic records systems and reviews their impact on both business and clinical functions. Key areas of interoperability, interfaces, and standards will be introduced. The course will be practical and thought-provoking as it emphasizes critical thinking and the synthesis of ideas from multiple sources and perspectives. Participants will be challenged to develop their own viewpoints and opinions, substantiated by the published work of those who are thought leaders in the field of HIT, as well as the participants’ own experiences.

HC 4315 Telehealth, Digital, and Virtual Health (4 Credits)
The lack of access to proper medical facilities presents a gap in quality healthcare, particularly populations, geographies, and specialties. Other populations simply prefer receiving some healthcare services in locations and/or during times that are more patient-centric. This course will present the advantages and challenges of telehealth services to close these gaps, and to develop more efficiencies in providing healthcare services across populations. This course will also cover a broad variety of healthcare services and specialties but will focus on services and specialties that primarily utilize synchronous technologies. After a broad review of the telehealth field, this course will focus on how to set up, sustain, and lead a telehealth, digital, or virtual program. This will include regulatory issues such as state-based licensure, state-based licensing boards, emergency management procedures, reimbursement, and credentialing and privileging. In addition to these regulatory issues, the course will focus on current and emerging technologies, how to conduct a needs assessment, define staff training needs, overcome resistance, market services, implement different business models, and evaluate best practices for leading virtual teams. The course will also cover how some innovative and emerging technologies such as mobile apps and virtual reality are being used in healthcare.

HC 4325 Healthcare Information Technology Applications (4 Credits)
This course covers the major healthcare information technologies and topics other than electronic health records systems. Electronic health records systems represent a large focus in healthcare technology; however, many other important systems form the complete framework of modern connected healthcare. These include electronic practice management (EPM/PMS) systems, scheduling, billing, diagnostics/labs, reporting, payment interfaces, and business intelligence in healthcare. This course focuses on the fundamentals of how to be an analyst of health IT technology. Prerequisite: HC 4301 or approval by the academic director.

HC 4335 Information Systems Security in Healthcare (4 Credits)
This course will introduce students to information security risks facing the healthcare industry. Students will learn how to protect healthcare organizations and their patients’ data better. Students will learn about recent security breaches, the impact of those breaches on healthcare organizations, and all of the key players involved. This course also covers the evolution of healthcare IT and the continuously evolving risk and regulatory landscape. Students will explore regulations of HIPAA, NIST/ONC, HITECH, and Meaningful Use and how they relate to day-to-day operations in healthcare organizations. Additionally, this course will prepare students to support information security initiatives in order to protect the organization while furthering the advancement of healthcare IT capabilities. This is not a technical course; however, the course covers how security is impacted by technology and what one must do across technology to secure healthcare systems, organizations and patients.

HC 4400 Legal Issues: Healthcare Providers and Facilities (4 Credits)
This course is a primer on the legal and compliance considerations associated with organization, payment, and administration of facilities and provider groups. Topics will include the corporate and contract law, Stark and anti-kickback law, licensure and credentialing, professional liability, professional review and patient safety, HIPAA and patient privacy, and other laws affecting healthcare providers and organizations.

HC 4410 Legal Issues: Research, Reform, and Government (4 Credits)
This course reviews the recent history of healthcare reform in the United States beginning with the 2010 Affordable Care Act (ACA) and moving to health reform since the ACA. Students examine the influences and functions of Medicare and Medicaid as well as the Department of Health and Human Services’ (HHS) role in shaping benefit coverage throughout the healthcare industry. Students will explore the importance of, and examine legal issues related to, public health and healthcare provided by entities within the Federal Government such as the Department of Veterans Affairs (VA), Department of Defense (DoD), and Indian Health Service (IHS). Students will objectively evaluate the legalities and ethical issues associated with clinical research as well as the Food and Drug Administration (FDA)’s involvement in the development of pharmaceutical agents and medical devices. The course concludes with students analyzing the future landscape of health reform and public sector influence in healthcare.

HC 4420 Legal Issues: Healthcare Delivery and Payment Systems (4 Credits)
This course provides an understanding of the legal complexities of creating and managing delivery and payment models for healthcare services. Course content revolves around the current challenges of evolving from volume-based to value-based payment principles. Topics will include fraud and abuse and compliance, legal foundations of private and public payment systems, fee for service, managed care, value-based systems, and a review of current healthcare payment reform efforts. The course wraps up with the role of clinical health information and related data systems in healthcare delivery and payment.
HC 4430 Significant Healthcare Law (4 Credits)
As a foundation, students begin with an overview of healthcare law and an analysis of the sources of law to include the Constitution, statutes, regulations, and case law. Throughout the course, students will objectively analyze constitutional issues and major federal healthcare laws and will further delve into regulations implementing statutes as well as cases interpreting them. Students will examine the intersection of traditional areas of law and healthcare to include torts, antitrust, contracts, and intellectual property. They will explore the contemporary and emerging areas of information and innovation in healthcare law as well as the Affordable Care Act, to include the Supreme Court’s landmark decision. The course concludes with a consideration of the pervasive problem of fraud, waste, and abuse. This course is delivered in a seminar style with significant independent work/research on the part of students and should be taken after introductory and concentration courses.

HC 4500 Operational Challenges in Global Health Management (4 Credits)
This course presents challenges in operations that are unique to healthcare services and products being delivered in the international market. Topics include international marketing of services and healthcare products, negotiation styles, ethical considerations, organizational structure, transporting of medical goods and personnel, individual travel health and medical tourism as a business model. Cultural and religious considerations in healthcare delivery are discussed. Grants and research management for global health are compared with domestic procedures.

HC 4510 Legal and Employment Issues in Global Health Management (4 Credits)
This course presents legal considerations involved in conducting global programs and business related to healthcare services and products. Employment and labor law are discussed in relationship to employment across international lines and within foreign countries. Intellectual property, patent and copyright of healthcare products, curriculum, and programs are examined. Customs laws, foreign trade, and other regulations such as healthcare licensing and credentialing of personnel are developed. Human resource challenges such as remote team management are discussed.

HC 4520 Global Health NGO Management (4 Credits)
Students will examine factors that impact organizational performance in the global nonprofit health sector. Students expore current challenges associated with Non-Government Organizations (NGOs) that operate in low-income and middle-income countries. Examples include Doctors Without Borders, Shoulder to Shoulder, and others. Students are empowered to research and compare different NGOs and analyze factors that impact organizational effectiveness. Key challenges facing NGO leaders are analyzed and students provide recommendations to improve organizational performance. Course topics include assessment of NGO strategies, organizational resources and financing, and stakeholder relations. Other topics include analysis of countries' demographics, culture, healthcare delivery, policies, and external environment. It is recommended that students in the Global Health Program Management concentration or certificate complete HC4500 and HC4510 prior to registering for this course. Students in other concentrations or programs may take this course at any time as an elective.

HC 4530 Regulatory Affairs in Global Health Management (4 Credits)
This course discusses the various regulatory requirements of conducting healthcare related business from the perspective of research, development, and marketing of medical devices and pharmaceuticals. Both domestic and international requirements will be examined. Students will develop a template of skills for investigating healthcare related compliance issues that can be adapted to specific markets as needed.

HC 4600 Healthcare Data and Delivery by Perspective (4 Credits)
This course evaluates the environment of the U.S. healthcare delivery system and introduces the 4P (patient, provider, payer, population) perspective framework. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, towards the payer, and evolving into population health. Students will learn about the associated data that is generated from the patient as a consumer, from the provider through clinical operations, from the payer perspective, and finally how all of these contribute toward population health data. This course will cover the basics of U.S. healthcare research and clinical intervention, and students will have the ability to model the conceptual as well as practical application of health informatics.

HC 4610 Healthcare Ethics and Biostatistics (4 Credits)
This course discusses research investigator training and outlines the progression of the Institutional Review Board (IRB) process. In addition, this IRB process will be compared with the business process improvement cycle. Health Insurance Portability and Accountability Act (HIPAA) as well as data governance issues are surveyed from the patient, provider, payer, and population perspectives. The connections between these topics and ethics are explored, and the principles of biostatistics are discussed. Common statistical packages used within healthcare research and business applications are covered, and this course concludes with an analysis of resulting ethical implications of short- and long-term healthcare data. Prerequisite: HC 4600.

HC 4620 Healthcare Methods and Programming (4 Credits)
This course presents the basic study designs of epidemiology and illustrates the field's benefit to the healthcare industry. Randomized control trials (RCT) through correlation studies are explained through case studies as well as practical application. Informatics tools such as machine learning, clinical decision support, and natural language processing (NLP) are categorized with respect to their relative positions in the 4P (patient, provider, payer, population) perspective framework. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. This course concludes with the many benefits of auditing as a check and balance for healthcare methods and programming. Prerequisite: HC 4600.
HC 4630 Healthcare Data Mining, Integration, and Interpretation (4 Credits)
This course explores available public healthcare data sets and the data mining process. In addition, this course articulates the value of mapping relationships between data points and workflows. This process determines the level of integration of disparate data sources and is explored through the 4P (patient, provider, payer, population) perspectives. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. Once the data sources are integrated, the focus becomes how to turn this data into information, knowledge, and insight. This course wraps up by exploring both business and research options for interpreting data through visualizations and predictive analytics. Prerequisite: HC 4600.

HC 4640 Healthcare Database Applications (4 Credits)
This course covers the growing functions of security in healthcare data and specifically elaborates on the vulnerabilities and emerging solutions for dealing with data once it is stored. Database architecture is surveyed, which transitions into an exploration of terminologies and standards and how these impact interoperability of data in warehouses. A significant portion of this course focuses on the specifics of medical coding and how coding is affected by the 4P perspectives. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. The course wraps up with a compilation of Structured Query Language (SQL) capabilities and a study of their influence of their practical application.

HC 4650 Healthcare Project Management and Professionalism (4 Credits)
This course applies skillsets acquired during the course of the program. It is important to learn how to utilize these skillsets, as well as to understand how cultural issues influence processes within the healthcare delivery system. In addition, this course compares research collaborations and business mergers and acquisitions. Finally, the course includes exercises to build professionalism in reporting to convey actionable items. The combination of all of these skillsets informs students’ strategies for addressing change management, program implementation, and evaluation. At the culmination of this course, students will have a baseline proficiency in the cultural aspects that are required to succeed as a healthcare informatics and analytics professional. Prerequisites: HC 4600, HC 4610, HC 4620, HC 4630, and HC 4640.

HC 4701 Topics in Healthcare Management (1-10 Credits)
This is an advanced special topics seminar course. The focus is on specialized areas of interest. Topics courses may be used as electives within the Healthcare Leadership degree and certificates, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate programs.

HC 4900 Experiential Learning in Healthcare (4 Credits)
This course is for students who want to do independent research by completing an industry project and serves as a connector between research methods and a student’s Capstone Project. The course will connect an academic research question with an experiential learning opportunity in healthcare for students as they prepare for their Capstone Project experience. Students will choose a Capstone Advisor, choose a topic, develop a thesis statement, explore project methodologies, write a proposal, and complete the necessary Institutional Review Board (IRB) requirements. Students will also agree to the structure and deliverables of their projects. There is an expectation for face to face (virtual is acceptable) meetings between students and their prospective Capstone Advisor during this course. This course is a prerequisite for any students planning to complete the Capstone Project (HC 4901) as it is the beginning of the Capstone Project process. Prerequisites: approval by Academic Director, acceptance as a degree candidate, and completion of between 30-40 quarter-hours. This course meets an elective option.

HC 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of a B- or better is required to pass.

HC 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students’ research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.
This degree prepares students to do the following:

- Knowledge and the specific skills needed to put the student on the path to earn key industry certifications for vendor database platforms. Oracle PL/SQL, Transact-SQL programming, and NoSQL databases. This comprehensive content delivered in a hands-on manner provides both the

- The combination of required and elective courses in the master's degree program covers key database system (DBS) technologies such as SQL Server, which they teach, providing cutting-edge insight to what is needed to work efficiently and effectively in this sector of ICT.

- To design, administer, fine-tune, and maintain databases with a database administration degree, plus develop business acumen that will help them

The Database Design and Administration master's degree concentration is offered online or on campus at the University of Denver in the evenings, or

HC 4904 Interdisciplinary Capstone Seminar (4 Credits)
The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program
to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from
various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student
produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic
work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and
academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion
and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions
of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a
cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the
Capstone Seminar in one quarter; no incomplete grades are assigned.

HC 4910 Research Practices and Applications (4 Credits)
This course develops competency in principles of research and measurement for use in the professional setting. As an initial course in the program of
study, students will learn research methods to apply to program and systems design and evaluation to achieve successful measurement of outcomes
and goals. Students will become critical consumers of pertinent literature to provide background and support for the choice and application of proper
qualitative and quantitative research methods and data analysis for professional application. Critical thinking through comparing and contrasting
cause and effect is used to build logic models. Research, design, and evaluation processes that address issues of implementation, feasibility, and
sustainability are emphasized. At the conclusion of this course students will be prepared to apply and clearly communicate the practice of scientific
research principles in the professional environment to ensure that the question being asked can be answered through rigorous research and the
design and formative assessment of the program or system. Completion of Institutional Review Board (IRB) training via CITI Program is required as
a basis for discussion of research ethics and IRB procedures. Competencies gained in this course, including practices of inquiry, self-analysis, and
evaluation, will be applied and integrated throughout the course of study and demonstrated in the culminating capstone work of the master's degree.
This course is required of all degree-seeking students and should be taken in the first three quarters of enrollment.

HC 4980 Internship (1-10 Credits)
The Healthcare Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an
individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences
related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for
finding their own internship site and proposing their internship ideas. University College will send notification to all Healthcare students if they hear of
internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences.

HC 4991 Independent Study (1-8 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have
earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and
filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

HC 4992 Directed Study (1-8 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned
a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Directed Study form and filed the form
with all appropriate offices before registering for the directed study. Directed Study is offered only on a for-credit basis.

Master of Science in Information and Communications Technology with a
Concentration in Database Design and Administration
The Database Design and Administration master's degree concentration is offered online or on campus at the University of Denver in the evenings, or
in a combination of both, to meet the needs of busy adults who are current or aspiring database designers and administrators. Students will learn how
to design, administer, fine-tune, and maintain databases with a database administration degree, plus develop business acumen that will help them
excel in the Information and Communications Technology (ICT) field. Master's degree students learn from expert instructors who work in the fields in
which they teach, providing cutting-edge insight to what is needed to work efficiently and effectively in this sector of ICT.

The combination of required and elective courses in the master's degree program covers key database system (DBS) technologies such as SQL Server,
Oracle PL/SQL, Transact-SQL programming, and NoSQL databases. This comprehensive content delivered in a hands-on manner provides both the
knowledge and the specific skills needed to put the student on the path to earn key industry certifications for vendor database platforms.

This degree prepares students to do the following:
• Analyze, design, develop, test, deploy, administer and maintain database applications and database security based on industry best practices and end-user requirements
• Apply data modeling, data warehousing, performance tuning, programming and maintenance through technologies such as SQL Server, Oracle, PL/SQL Transact-SQL, and NoSQL
• Create plans to solve organizational issues using business management strategies directly related to database administration theories and applications
• Formulate plans for database installation and configuration, maintenance, and backup and recovery

Master of Science in Information and Communications Technology with a Concentration in Geographic Information Systems

The Geographic Information Systems (GIS) master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. GIS training prepares students to apply geographic information systems technology to solve real-world problems, whether determining the best location for a new store, analyzing environmental damage, or detecting crime patterns in a city. GIS solutions provide the capability to store, retrieve, and analyze spatial information by combining layers of data to yield valuable understanding of a locale.

As a current or aspiring GIS professional, you will receive applied instruction from professional practitioners who work in the fields in which they teach as you learn to plan, implement, and execute a GIS project through remote sensing, internet mapping, or digital image processing. Also, you will develop a valuable business background with creative, solution-oriented techniques through this versatile program, which emphasizes applied education that will propel your GIS career forward. Students will explore GIS fundamentals at a very hands-on, practical level necessary to succeed in the field of GIS. Customize your Information and Communications Technology master’s degree through the innovative Professional Options Curriculum using our convenient online degree builder tool, which allows you to select courses that cater to your specific career needs.

This degree prepares students to do the following:
• Analyze the nature of, uses for, and implementation processes for geographic data
• Select appropriate applications of GIS technology to solve spatial problems based on organizational/client needs
• Analyze real-world problems and select the appropriate GIS tools and processes to address the issues
• Plan, implement, and execute a GIS project

Master of Science in Information and Communications Technology with a Concentration in Information Systems Security

The Information Systems Security master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A master’s degree concentration in Information Systems Security from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Information and Communications Technology (ICT) security.

Master’s degree students receive applied instruction as they learn to navigate real-world security challenges, such as setting up a secure network, securing servers, and problem solving hypothetical security situations. Students also garner career-relevant knowledge on related ICT subjects to better relate the challenges of the rapidly evolving world of information security and cyber threats to other key trends in the ICT industry. To ensure up-to-the-minute knowledge and skills, the curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)². In addition, the program was developed in collaboration with the Colorado Springs and Denver chapters of the Information Security Systems Association (ISSA), and the courses have been mapped to the Committee on National Security Systems (CNSS) standards. The University of Denver has been designated by NSA/DHS as a National Center of Academic Excellence in Cyber Defense Education.

This degree prepares students to do the following:
• Develop and implement technical information security tools, policies and procedures to meet organizational needs based on best practices
• Analyze security scenarios to design secure network solutions and applications
• Create strategies to establish secure operations, access control methods, and system security to meet organizational/client requirements
• Evaluate encryption standards and solutions
• Conduct computer forensics analysis

Master of Science in Information and Communications Technology with a Concentration in Mobile Application Development

The Mobile Application Development master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. With mobile application development on the rise, current software and web developers need
to update their mobile app design skills to meet the growing demand in the marketplace. In this master’s degree program, students will learn best practices in browser-based and packaged apps, 3rd-party native extensions, distribution to app stores, and cross-platform application development. Degree-seekers will acquire specialized developer knowledge and the technical skillset needed to succeed as professional mobile app designers and developers.

With a wide range of electives to choose from, students can expand their technical skills in JavaScript, learn about next-gen wireless networks, learn PHP, or brush up on their knowledge of relevant programming languages. In the rapidly evolving, converged world of ICT, it is vital to grasp the diverse industry fundamentals, while also gaining an insider's perspective regarding specific areas of ICT such as mobile application design and development. The master's degree in Mobile Application Development provides a high level of applied knowledge pertaining to mobile app design and development that will help launch a career as a mobile app developer, or elevate students to new current positions.

This degree prepares students to do the following:

• Analyze and apply best practices in browser-based and packaged apps, 3rd-party native extensions, distribution to app stores, and cross-platform application development
• Compare, contrast, and use IDEs such as FDT or IntelliJ IDEA and SDKs
• Critique and build mobile applications in programming languages such as MXML, ActionScript, and Java
• Design and develop mobile applications applying best practices in code reuse, mobile usability, and mobile web standards such as HTML5, CSS3, and JavaScript
• Integrate XML for data description and exchange

Master of Science in Information and Communications Technology with a Concentration in Project Management

The Project Management master’s degree specialty through the Information and Communications Technology (ICT) program is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will combine information and communication technology skills with a project management and business background and become a proficient leader within the IT field. Students will receive hands-on, practical instruction from professional practitioners, who work in the fields in which they teach, on the tools and techniques of effective project management. Students will learn how to develop a clear plan that places a project in the context of an organization’s strategic plan, while considering the implications information and communication technologies present in any given project.

Graduates of the Project Management program will gain a firm grasp on converging information and communication technologies and learn to understand the fundamentals of each sector. Recognizing how each ICT subject connects to one another, from information security systems to geographic information systems, will give students the competitive edge needed in this dynamic industry. The content for this concentration has been developed to parallel the Project Management Institute’s (PMI)® A Guide to the Project Management Body of Knowledge, (PMBOK® Guide) – Sixth Edition, Project Management Institute, Inc. The unique curriculum prepares students to succeed on the PMI® Project Management Professional (PMP)® Certification Exam.

This degree prepares students to do the following:

• Summarize and apply the basic principles of project management and become proficient in the use of project management software
• Analyze and apply agile concepts and techniques
• Design a comprehensive risk management plan for a project
• Create strategies to manage the complexity inherent in large-scale projects
• Relate project scope to cost, time, and resource requirements
• Develop procurement plans and assess project contracts

Master of Science in Information and Communications Technology with a Concentration in Software Design and Programming

The Software Design and Programming master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will expand their knowledge of software design and programming principles, while developing the in-depth skills needed to succeed in the field with a Software Design and Programming master’s degree. Current or aspiring programmers will practice Object Oriented methods and programming, with a focus on modern web-based, client-server applications and systems. Students are able to select from a variety of elective courses that best meet their specific Information and Communications Technology (ICT) career goals.

Degree-seekers learn how to develop quality software programs and applications, apply Software Quality Assurance practices, use software management processes such as the Unified Software Development Process, and code in languages such as C#, Java, Python, and PHP. Skills are applied in hands-on assignments, with expert instructors guiding software degree students to identify and overcome the challenges presented by designing and programming software with various languages and development tools.
This degree prepares students to do the following:

- Generate program code in languages such as C#, Java, Python, and PHP
- Create database programming and queries
- Analyze the concepts of object oriented methods and programming and create code using the methodology
- Compare and contrast the features and benefits of multiple IDEs
- Assess appropriate implementations of frameworks such as J2EE, .NET, and Ruby on Rails

**Master of Science in Information and Communications Technology with a Concentration in Technology Management**

The Technology Management master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The Technology Management degree concentration represents the convergence of business and technology and emphasizes the impact technology can have on strategic and operational objectives when applied through sound business management practices. With the right technical skills, combined with a strategic perspective regarding critical business needs, students will be prepared to meet current industry demands, and positioned to meet the demands of tomorrow.

Graduates with a Technology Management master’s degree concentration or graduate certificate become proficient in creating, managing, and using technology to accomplish strategic organizational goals as they expand and strengthen their knowledge and skills in creative thinking, strategic and tactical decision making, and global awareness. In addition to the practical education received online or on campus, Technology Management master’s degree students will also receive a broader understanding of how related IT sectors impact their technology management roles.

This degree prepares students to do the following:

- Formulate plans to manage technologies for strategic advantage
- Develop and evaluate business cases based on organizational and client requirements
- Assess the role of strategic alliances within an organization
- Summarize project management principles and processes in relation to technology management strategies
- Create and defend IT service assurance plans
- Analyze cloud and internet law across various IT scenarios
- Evaluate strategies and utilize best practices in technology forecasting and innovation

**Master of Science in Information and Communications Technology with a Concentration in Telecommunications Technology**

The Telecommunications Technology master’s degree concentration is offered online to meet the needs of busy adults. This degree prepares students to become proficient, technical leaders within the Information and Communications Technology (ICT). Students will learn how to evaluate emerging telecommunications technologies, wireless networks and services, and the convergence of voice, data, and multimedia services on the global IP network.

Students will learn how to assess and analyze telecommunications technologies, plus gain vital skills necessary to design, develop, and implement telecommunications systems such as wireless networks. The program emphasizes the challenges and approaches to deal with the immense wireless data traffic explosion from devices such as the iPhone, iPad, Android smartphones, connected laptops and the Internet of Things (IoT), as well as broadband services like VOIP and mobile video and the move to 5G networks.

This degree prepares students to do the following:

- Analyze and design network solutions
- Analyze the "triple play" convergence of voice, video, and data over wireless networks
- Evaluate and apply best practices in network security
- Create plans to manage global telecommunications projects
- Evaluate next generation wireless networks and services such as 5G networks

**Master of Science in Information and Communications Technology with a Concentration in Web Design and Development**

The Web Design and Development master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The program provides an in–depth knowledge of web design and web development through hands–on instruction. Students will move beyond the development of first-generation HTML–based Web pages and learn to create interactive, state–of
data modeling, data warehousing, performance tuning, programming, and building and maintaining client–server databases. The combination of

This certificate prepares students to become leaders in database design, development, and administration while expanding their skillsets to include
efficiently and effectively in this sector of IT.

and administration concentration. Expert instructors who work in the fields in which they teach, result in a highly career–relevant, innovative degree in web design and development.

In addition to IT fundamentals, students will also develop essential business and problem–solving skills that will help them thrive in any organization.

In an increasingly technological world, it is vital to understand the fundamentals of other areas of the Information and Communications Technology (ICT) field, and how each converges with web design and web development.

This degree prepares students to do the following:

- Create interactive web-based applications for e-business processes and consumer demands using tools such as cascading style sheets, web graphics construction, interface design and usability, web scripting, and databases
- Create requirements for and design the user experience by applying UX principles such as user personas, information design, wireframing, and prototyping
- Analyze enterprise goals and apply information architecture and web-design foundational principles and theories to create client-server and cloud-based solutions
- Compare and contrast potential solutions for web, app, and mobile scenarios and apply technology such as JavaScript, HTML5, CSS3, XML, PHP, Python, and Ruby on Rails
- Assess how web design and development converges within the context of security, software, database design, and telecommunications

MASTER OF SCIENCE IN INFORMATION AND COMMUNICATIONS TECHNOLOGY WITH A CONCENTRATION IN Cybersecurity Management

The Cybersecurity Management master’s degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A master’s degree concentration Cybersecurity Management from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Information and Communications Technology (ICT) security.

The Cybersecurity Management concentration is designed to equip students with knowledge of industry best practices and management skills demanded by private and public sector employers in today’s rapidly evolving cybersecurity industry. Through hands-on interaction with a set of relevant industry case studies, students will gain knowledge of management tools and principles needed to define, establish, and grow effective and mature cybersecurity management programs for a wide range of organizations. Through experiential learning activities, students will gain an understanding of governance, compliance, regulatory, and business operations domains. These experiences will be enhanced with knowledge of policy and risk management frameworks most relevant to the cybersecurity management profession. The curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)² and supports the National Initiative for Cybersecurity Education (NICE) framework.

Students will be prepared to serve in a range of cybersecurity management and leadership roles to continuously strengthen security postures in a fluid environment of constantly changing human, machine, and state actor threats.

This degree prepares students to do the following:

- Analyze methods to develop and implement cybersecurity management policies and procedures to meet organizational needs based on best practices
- Evaluate methods for the development and delivery of cybersecurity training and education at the institutional level
- Plan cybersecurity management oversight and governance through development of strategic cybersecurity policies and plans
- Examine best practices for communicating cybersecurity management issues with Boards of Director and other management leadership teams
- Evaluate methods for performing cybersecurity audits and documenting audit responses

Certificate in Information and Communications Technology with a Concentration in Database Design and Administration

The graduate certificate in Database Design and Administration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults who are current or aspiring database designers and administrators. Certificate students will expand their skillsets to include designing, administering, fine–tuning, and maintaining databases with a graduate certificate in database design and administration concentration. Expert instructors who work in the fields in which they teach provide excellent insight to what is needed to work efficiently and effectively in this sector of IT.

This certificate prepares students to become leaders in database design, development, and administration while expanding their skillsets to include data modeling, data warehousing, performance tuning, programming, and building and maintaining client–server databases. The combination of
Certificate in Information and Communications Technology with a Concentration in Information Systems Security

The graduate certificate Information Systems Security offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A graduate certificate in Information Systems Security from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in IT security.

Certificate classes at University College use innovative lab experiences to provide hands-on expertise with industry-current security tools. Students also garner career-relevant knowledge on related IT subjects to better relate the challenges of the rapidly evolving world of cyber security and cyber threats to other key trends in the ICT industry. To ensure up-to-the-minute knowledge and skills, the curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)². In addition, the program was developed in collaboration with the Colorado Springs and Denver chapters of the Information Security Systems Association (ISSA), and the courses have been mapped to the Committee on National Security Systems (CNSS) standards. The University of Denver has been designated by NSA/DHS as a National Center of Academic Excellence in Cyber Defense Education. Credits earned through this graduate certificate may apply toward a master’s degree in Information and Communications Technology.

Certificate in Information and Communications Technology with a Concentration in Mobile Application Development

The graduate certificate in Mobile Application Development is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Current software and web developers need to update their mobile app design skills to meet the growing demand in the marketplace, and a graduate certificate will help expand skills and provide credentials needed to be competitive in the field. Students in the mobile application concentration will learn best practices in browser-based and packaged apps, 3rd-party native extensions, distribution to app stores, and cross-platform application development. Certificate students will also acquire specialized developer knowledge and the technical skillset needed to succeed as professional mobile app designers and developers. Students will also gain additional skills and knowledge in mobile application development through elective coursework.

Certificate students will be able to expand their technical skills in JavaScript, learn about next gen wireless networks, learn PHP, or brush up on knowledge of other mobile application development tools. Students at University College gain a strategic business perspective and problem-solving skills that will help them thrive in any organization. In the rapidly evolving, converged world of ICT, it is vital to grasp the diverse industry fundamentals, while also gaining an insider’s perspective regarding specific areas of ICT such as mobile application design and development. Credits earned through this graduate certificate may apply toward a master’s degree in Information and Communications Technology.

Certificate in Information and Communications Technology with a Concentration in Project Management

The graduate certificate in Project Management through the Information and Communications Technology program is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will learn to combine information and communication technology skills with a project management and business background and become a proficient leader within the Information and Communications Technology (ICT) field. Students will receive hands-on, practical instruction from professional practitioners who work in the fields in which they teach on the tools and techniques of effective project management. Additionally, students will learn how to develop a clear plan that places a project in the context of an organization’s strategic plan, while considering the implications information and communication technologies present in any given project. Students will also gain additional skills and knowledge in project management through elective coursework.

Project Management concentration students will learn about converging information and communication technologies and the fundamentals of each sector. Recognizing how each ICT subject connects to one another, from information security systems to geographic information systems, will give students the competitive edge needed in this dynamic industry. The content for this graduate certificate has been developed to parallel the Project Management Institute’s (PMI) A Guide to the Project Management Body of Knowledge, (PMBOK® Guide) – Sixth Edition, Project Management Institute, Inc. The unique curriculum prepares students to succeed on the PMI® Project Management Professional (PMP)® Certification Exam. Credits earned through this graduate certificate may apply toward a master’s degree in the Information and Communications Technology program.
Certificate in Information and Communications Technology with a Concentration in Software Design and Programming

The graduate certificate in Software Design and Programming is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will be able to expand their skillsets to include software design and programming principles, while developing the in-depth knowledge needed to succeed in the field of Software Design and Programming. Current or aspiring programmers will practice Object Oriented methods and programming, with a focus on modern web-based, client-server applications and systems.

Certificate students learn how to develop quality software programs and applications, apply Software Quality Assurance practices, use software management processes such as the Unified Software Development Process, and code in languages such as C#, Java, Python, and PHP. Expert instructors guide software certificate students to identify and overcome the challenges presented by designing and programming software with various languages and development tools. A comprehensive perspective is also provided at University College, conveying how other technology domains such as application security and database design, affect software programming. Students will also gain additional skills and knowledge in software design and programming through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in the Information and Communications Technology program.

Certificate in Information and Communications Technology with a Concentration in Technology Management

The graduate certificate in Technology Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will learn how the convergence of business and technology impacts the strategic and operational objectives. Students will gain the right technical skills, combined with a strategic perspective regarding critical business needs, as they are prepared to meet current industry demands, and positioned to meet the demands of tomorrow.

The Technology Management concentration allows students to become proficient in creating, managing, and using technology to accomplish strategic organizational goals as they expand and strengthen their knowledge and skills in creative thinking, strategic and tactical decision making, and global awareness. This applied Technology Management certificate offers professionals an opportunity to receive applied instruction from professional practitioners who bring deep expertise in business management strategies and their technological implications. Students will also gain additional skills and knowledge in technology management through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in the Information and Communications Technology program.

Certificate in Information and Communications Technology with a Concentration in Telecommunications Technology

The graduate certificate in Telecommunications Technology is offered online to meet the needs of busy adults. The Telecommunications Technology concentration provides practical telecommunications instruction, including evaluating emerging telecommunications technologies, wireless networks and services, and the convergence of voice, data, and multimedia services on the global IP network. Certificate students will learn how to assess and analyze telecommunications technologies, plus gain vital skills necessary to design, develop, and implement telecommunications systems such as wireless networks. The dominant wireless telecom technologies and protocols are presented, including OFDM, MIMO, mobile IP, WiMAX, LTE, and WPANs.

In addition to ICT fundamentals, students will also develop essential strategic business and problem-solving skills that will help them thrive in any organization by creating effective alliances throughout the technology sector. Students will also gain additional skills and knowledge in telecommunication technology through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in the Information and Communications Technology program.

Certificate in Information and Communications Technology with a Concentration in Web Design and Development

The Web Design and Development graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will move beyond developing first-generation HTML-based Web pages and learn to create interactive, state-of-the-art, Web-based applications that support the demands of contemporary e-business processes. The certificate program provides an in-depth knowledge of web design and web development through hands-on instruction. Students will gain the competitive advantage needed to meet current industry demands, as well as the foundations to meet the demands of tomorrow by expanding their IT skillset with a certificate.

Students will use a variety of essential software tools employed in professional web development projects, such as Animate CC, AJAX, and Ruby on Rails. The real-world development scenarios, coupled with the hands-on learning experience provided by professional practitioners who work in the fields in which they teach, result in a highly career-relevant, innovative graduate certificate in web design and development. Web design and development will be put in the context of subjects such as information systems security, software and database design, and telecommunications, and students will learn how their work is impacted by these different sectors. Students will also gain additional skills and knowledge in web design and...
CERTIFICATE IN INFORMATION AND COMMUNICATIONS TECHNOLOGY WITH A
CONCENTRATION IN cybersecurity management

The graduate certificate in Cybersecurity Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A graduate certificate in Cybersecurity Management from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Cybersecurity Management.

Certificate classes at University College are designed to equip students with knowledge of industry best practices and management skills demanded by private and public sector employers in today’s rapidly evolving cybersecurity industry. Through hands-on interaction with a set of relevant industry case studies, students will gain knowledge of management tools and principles needed to define, establish, and grow effective and mature cybersecurity management programs for a wide range of organizations. Through experiential learning activities, students will gain an understanding of governance, compliance, regulatory, and business operations domains. These experiences will be enhanced with knowledge of policy and risk management frameworks most relevant to the cybersecurity management profession. The curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)² and supports the National Initiative for Cybersecurity Education (NICE) framework.

specialized graduate CERTIFICATE IN DATABASE DESIGN AND ADMINISTRATION

Students in this specialized graduate certificate will expand their skillsets to include designing, administering, fine-tuning, and maintaining databases with a graduate certificate in database design and administration concentration. Expert instructors who work in the fields in which they teach provide excellent insight to what is needed to work efficiently and effectively in this sector of IT.

This certificate prepares students to become leaders in database design, development, and administration while expanding their skillsets to include data modeling, data warehousing, performance tuning, programming, and building and maintaining client-server databases. The combination of required and elective courses covers key database system (DBS) technologies such as SQL Server, Oracle PL/SQL, Transact-SQL programming, and NoSQL databases. This extensive content delivered in a hands-on manner provides both the knowledge and the specific skills needed to put the student on the path to earn key industry certifications for vendor database platforms. Credits earned through this certificate may apply toward a master's degree in Information and Communications Technology.

specialized graduate CERTIFICATE IN INFORMATION SYSTEMS SECURITY

A specialized graduate certificate in Information Systems Security from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in IT security.

Certificate classes at University College use innovative lab experiences to provide hands-on expertise with industry-current security tools. Students also garner career-relevant knowledge on related IT subjects to better relate the challenges of the rapidly evolving world of cyber security and cyber threats to other key trends in the ICT industry. To ensure up-to-the-minute knowledge and skills, the curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)². In addition, the program was developed in collaboration with the Colorado Springs and Denver chapters of the Information Security Systems Association (ISSA), and the courses have been mapped to the Committee on National Security Systems (CNSS) standards. The University of Denver has been designated by NSA/DHS as a National Center of Academic Excellence in Cyber Defense Education. Credits earned through this certificate may apply toward a master's degree in Information and Communications Technology.

specialized graduate CERTIFICATE IN MOBILE APPLICATION DEVELOPMENT

Current software and web developers need to update their mobile app design skills to meet the growing demand in the marketplace, and a specialized graduate certificate will help expand skills and provide credentials needed to be competitive in the field. Students will learn best practices in browser-based and packaged apps, 3rd-party native extensions, distribution to app stores, and cross-platform application development. Certificate students will also acquire specialized developer knowledge and the technical skillset needed to succeed as professional mobile app designers and developers.

Students will be able to expand their technical skills in JavaScript, learn about next gen wireless networks, learn PHP, or brush up on knowledge of other mobile application development tools. Students at University College gain a strategic business perspective and problem-solving skills that will help them thrive in any organization. In the rapidly evolving, converged world of ICT, it is vital to grasp the diverse industry fundamentals, while also gaining an insider's perspective regarding specific areas of ICT such as mobile application design and development. Credits earned through this certificate may apply toward a master's degree in Information and Communications Technology.
specialized graduate CERTIFICATE IN PROJECT MANAGEMENT

Students in the specialized graduate certificate in Project Management will learn to combine information and communication technology skills with a project management and business background and become a proficient leader within the Information and Communications Technology (ICT) field. Students will receive hands-on, practical instruction from professional practitioners who work in the fields in which they teach on the tools and techniques of effective project management. Additionally, students will learn how to develop a clear plan that places a project in the context of an organization's strategic plan, while considering the implications information and communication technologies present in any given project.

Students will learn about converging information and communication technologies and the fundamentals of each sector. Recognizing how each ICT subject connects to one another, from information security systems to geographic information systems, will give students the competitive edge needed in this dynamic industry. The content for this graduate certificate has been developed to parallel the Project Management Institute's (PMI® A Guide to the Project Management Body of Knowledge, (PMBOK® Guide) – Sixth edition, Project Management Institute, Inc. The unique curriculum prepares students to succeed on the PMI® Project Management Professional (PMP)® Certification Exam. Credits earned through this certificate may apply toward a master’s degree in the Information and Communications Technology program.

specialized graduate CERTIFICATE IN SOFTWARE DESIGN AND PROGRAMMING

Students in this specialized graduate certificate will be able to expand their skillsets to include software design and programming principles, while developing the in−depth knowledge needed to succeed in the field with a Software Design and Programming certificate. Current or aspiring programmers will practice Object Oriented methods and programming, with a focus on modern web-based, client-server applications and systems.

Students learn how to develop quality software programs and applications, apply Software Quality Assurance practices, use software management processes such as the Unified Software Development Process, and code in languages such as C#, Java, Python, and PHP. Expert instructors guide software certificate students to identify and overcome the challenges presented by designing and programming software with various languages and development tools. A comprehensive perspective is also provided at University College, conveying how other technology domains such as application security and database design, affect software programming. Credits earned through this certificate may apply toward a master’s degree in the Information and Communications Technology program.

specialized graduate CERTIFICATE IN TECHNOLOGY MANAGEMENT

Students in the specialized graduate certificate in technology Management will learn how the convergence of business and technology impacts the strategic and operational objectives. Students will gain the right technical skills, combined with a strategic perspective regarding critical business needs, as they are prepared to meet current industry demands, and positioned to meet the demands of tomorrow.

The Technology Management certificate allows students to become proficient in creating, managing, and using technology to accomplish strategic organizational goals as they expand and strengthen their knowledge and skills in creative thinking, strategic and tactical decision making, and global awareness. This applied Technology Management certificate offers professionals an opportunity to receive applied instruction from professional practitioners who bring deep expertise in business management strategies and their technological implications. Credits earned through this certificate may apply toward a master’s degree in the Information and Communications Technology program.

specialized graduate CERTIFICATE IN TELECOMMUNICATIONS TECHNOLOGY

The Telecommunications Technology specialized graduate certificate provides practical telecommunications instruction, including evaluating emerging telecommunications technologies, wireless networks and services, and the convergence of voice, data, and multimedia services on the global IP network. Certificate students will learn how to assess and analyze telecommunications technologies, plus gain vital skills necessary to design, develop, and implement telecommunications systems such as wireless networks. The dominant wireless telecom technologies and protocols are presented, including OFDM, MIMO, mobile IP, WiMAX, LTE, and WPANs.

In addition to ICT fundamentals, students will also develop essential strategic business and problem−solving skills that will help them thrive in any organization by creating effective alliances throughout the technology sector. Credits earned through this certificate may apply toward a master’s degree in the Information and Communications Technology program.

specialized graduate CERTIFICATE IN WEB DESIGN AND DEVELOPMENT

Students in the specialized graduate certificate in Web Design and Development will move beyond developing first-generation HTML−based Web pages and learn to create interactive, state-of-the-art, Web−based applications that support the demands of contemporary e−business processes. This certificate provides an in−depth knowledge of web design and web development through hands−on instruction. Students will gain the competitive advantage needed to meet current industry demands, as well as the foundations to meet the demands of tomorrow by expanding their IT skillset with a certificate.

Students will use a variety of essential software tools employed in professional web development projects, such as Animate CC, AJAX, and Ruby on Rails. The real−world development scenarios, coupled with the hands−on learning experience provided by professional practitioners who work in the fields in which they teach, result in a highly career−relevant, innovative graduate certificate in web design and development. Web design and development will be put in the context of subjects such as information systems security, software and database design, and telecommunications, and
students will learn how their work is impacted by these different sectors. Credits earned through this certificate may apply toward a master's degree in the Information and Communications Technology program.

**specialized graduate CERTIFICATE IN CYBERSECURITY MANAGEMENT**

A specialized graduate certificate in Cybersecurity Management from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Cybersecurity Management.

Certificate classes at University College are designed to equip students with knowledge of industry best practices and management skills demanded by private and public sector employers in today's rapidly evolving cybersecurity industry. Through hands-on interaction with a set of relevant industry case studies, students will gain knowledge of management tools and principles needed to define, establish, and grow effective and mature cybersecurity management programs for a wide range of organizations. Through experiential learning activities, students will gain an understanding of governance, compliance, regulatory, and business operations domains. These experiences will be enhanced with knowledge of policy and risk management frameworks most relevant to the cybersecurity management profession. The curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)² and supports the National Initiative for Cybersecurity Education (NICE) framework.

**Master's Degree Admission**

**Degree and GPA Requirements**

- **Bachelors degree:** All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- **Grade point average:** The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- **Program GPA requirement:** The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

**English Language Proficiency Test Score Requirements**

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum CAE Score: 169

**Certificate Admission**

**Degree and GPA Requirements**

- **Bachelors degree:** All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- **Grade point average:** The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- **Program GPA requirement:** The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

**English Language Proficiency Test Score Requirements**

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum TOEFL Score (Paper-based test): 550
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum CAE Score: 169
English Conditional Admission: No, this program does not offer English Conditional Admission.

**Total Credits**

48

Minimum number of credits required: 48

Students may choose from the elective options above, or they may work with their advisor to choose electives.

A satisfactory quality of achievement with a grade point average of "B" (3.0) or better is required in graduate coursework accepted for the degree. The average is determined on the basis of the University's grading system. In no case, may more than one-fourth of the hours accepted toward the degree be of "C" grade. A grade lower than "C" renders the credit unacceptable for meeting degree requirements. Students must earn a grade of B- or better in the Capstone Project or Capstone Seminar.

**Total Credits**

48

Minimum number of credits required: 48

Students may choose from the elective options above, or they may work with their advisor to choose electives.

A satisfactory quality of achievement with a grade point average of “B” (3.0) or better is required in graduate coursework accepted for the degree. The average is determined on the basis of the University’s grading system. In no case, may more than one-fourth of the hours accepted toward the degree be of “C” grade. A grade lower than “C” renders the credit unacceptable for meeting degree requirements. Students must earn a grade of B- or better in the Capstone Project or Capstone Seminar.

Master of Science in Information and Communications Technology with a Concentration in Technology Management

Total Credits  16
Courses

ICT 20005 ICT Transfer (1-12 Credits)

ICT 4000 ICT Business Foundations (4 Credits)
This course provides an overview of the relationships between business needs and Information & Communications Technology solutions. The course focuses on fundamental attributes of business research and analysis in the ICT field. Applying appropriate research methods is a critical course requirement. Students demonstrate the critical skills required to define a problem, establish a business and technical context, perform appropriate research, propose and analyze alternative solutions, identify decision criteria, and make recommendations based on such considerations as benefits, technical feasibility, costs, risks, and resources. Students assess the relevance of research findings, considering the credibility of the source, relevance to the research question, and validity of the underlying data. Taking into account current industry trends and customer/user needs, students apply the product development process to create a product or service proposal, including business requirements and a detailed business case. The course establishes the professional and academic framework for the ICT master's degree program, setting a relevant industry context for all ICT concentrations.

ICT 4005 ICT Technical Foundations (4 Credits)
This course provides a substantive review of the technology at the core of the ICT industry. Coverage includes hardware, networking technology, databases, information services, applications, and content in enterprise contexts. The application development process is briefly reviewed. A framework is developed around data at rest, data in transit, and data being processed. This framework is used to detail the roles of a variety of hardware and software artifacts, and their use in the production, processing, protection, and use of organizational information. The role of the ICT user interface and web systems in providing user access to content anywhere anywhere is reviewed. The security requirements associated with a variety of information types are introduced, along with the current best practices used in information security.

ICT 4007 Creative Problem Solving and Programming Concepts (4 Credits)
In this course students will develop, or improve upon, their problem-solving skills. Students will learn to use those problem-solving skills to analyze problems and determine how to create solutions. Students will document their solutions (e.g., in pseudocode or UML diagrams) and, by the end of the course, translate their solutions into running programs written in at least two languages (e.g., Python and C#). Students will learn programming concepts including the use of variables, program input and output, flow control (if-then-else, looping, etc.), and error testing. Students will learn how to set up Integrated Development Environments (IDE) such as X-code and MS Visual Studio on their personal computers in which they will write programs.

ICT 4010 Enterprise Architecture (4 Credits)
In this course, students learn how to effectively and efficiently integrate information and communications technologies to support business goals. The course provides an overview of the global, enterprise-wide architectural framework that drives business decisions regarding selection and implementation of ICT systems and solutions. Topics include supporting and transforming Global Value Chains, e-business designs; creating enterprise architecture; and the various methodologies, tools and techniques used in the design and implementation of the enterprise architecture. The course encompasses all aspects of information and communications technology, including data networks, applications, operating systems, database systems, telecommunications systems, and hardware components in the context of a total enterprise-wide framework.

ICT 4015 Managing Technology for Strategic Value (4 Credits)
In this course, students acquire an in-depth understanding of the key management skills necessary to manage technology for strategic value. It concentrates on providing in-depth knowledge of strategic planning, the role of technology in business, and business process automation. It also provides students with the management skills and tools to prioritize technology investments, and manage technology products and projects. Topics include strategic planning and business alignment, managing business applications, business process automation, the role of web 2.0 in business processes, technology management, budgeting and capital investment prioritization, and build/buy decision-making in regards to custom-built and off-the-shelf solutions.

ICT 4020 Business Forecasting and Planning (4 Credits)
Business forecasting and planning brings together a wide diversity of skills: economic, financial, marketing, and technical analysis. This course brings together these concepts and extends prior coursework with coverage of budgeting, finance, costing, business planning, revenue forecasting, profit and loss statements, and balance sheet analysis as applied to information systems and services. Coverage includes the economics of software and other intellectual property, network effects, usage and sharing effects, sunk costs and monopoly effects, capacity and resource planning issues, and an introduction to the related regulatory issues. Students develop budgets or business plans for several increasingly difficult scenarios addressing a range of technology applications and services.

ICT 4025 Technology and Innovation Management (4 Credits)
Leaders of innovative firms build commitment to new directions, re-design structures to support new missions, and transform cultures. This course concentrates on the implementation of business strategy through effective structures and systems. Students learn why only 7% of companies are able to revitalize their organization once growth has stalled; students also learn what to do about it. Students analyze key aspects of strategic deployment, including organizational structure, cross-functional teams, product development, business model design, and change management. The course concludes with students developing a strategy for implementing an innovation. In this course students integrate the areas of knowledge covered in the ICT Foundations courses and the Technology Management concentration. It should be taken as the last of the four required courses in the Technology Management concentration. Prerequisites: ICT 4010, ICT 4015, ICT 4020, ICT 4100.
ICT 4030 Enterprise Architecture Frameworks (4 Credits)
This course covers the application of Enterprise Architecture (EA) frameworks as systems of methods, tools, and standards for transforming the operations of business, non-profit, and government organizations. The course concentrates on TOGAF, The Open Group Architecture Framework, as the primary instructional vehicle, but also outlines other EA frameworks and illustrates their individual purposes. The course demonstrates how EA frameworks can be combined and customized to meet specific objectives. The class starts with a high-level overview of EA, TOGAF; and other EA frameworks, then moves toward covering each component of the TOGAF framework. As the course moves through each component of TOGAF, key concepts such as governance, building blocks, views, viewpoints, and stakeholders are presented in context. Students will choose and apply EA frameworks with transition planning to current industry case studies and scenarios.

ICT 4035 Applied Enterprise Architecture Solutions (4 Credits)
This course addresses how Enterprise Architecture (EA) frameworks and associated methodologies can be combined and customized for targeted organizations for their specific, overarching EA program/capability. It then lays out how to construct a strategic architecture initiative using the customized EA capability, which will include the use of full life cycle transformation activities, leading EA graphical languages and a variety of EA planning and modeling tools. The first half of the course will provide students with the information necessary for them to develop their customized EA capability. The second half will focus on applying the capability for a robust business transformation initiative in their respective final projects. Prerequisite: ICT 4030.

ICT 4045 Information Technology Service Assurance (4 Credits)
In today's technology-centric work environment, simply delivering IT services is no longer sufficient. Organizations must provide "assurance" that IT services and the underlying data assets are reliable, highly available and secure. IT Service Assurance or IT Quality Assurance includes many functions including IT service delivery, service level management, quality assurance testing and monitoring, change and release management, project management, security, and compliance, all within a risk management framework. This course evaluates these functions as integrated components of a service assurance program and their impact on the organization. It also investigates how service assurance is intertwined with the strategic and tactical initiatives of the organization. The use of case studies and actual IT related challenges and opportunities are utilized to anchor the course concepts. The combined in-class meetings and online course structure lend itself to ongoing interaction, collaboration, and sharing of ideas.

ICT 4100 Principles of Project Management (4 Credits)
This course is designed to provide students with practical skills in project management and the students who are continuing in the Project Management course sequence with a framework for the concepts and tools covered in the remainder of the program. The various elements of the project management processes, tools and techniques are explored, applying the software used in managing projects. Topics include a review of processes to initiate, plan, execute, monitor and control, and close a project. Project integration, scope (including requirements), time, cost management, and planning human resources are emphasized. Students learn project management skills through hands-on exercises using project management tools and techniques and project management software to emphasize the real world of managing a project.

ICT 4105 Project Contracts and Procurement (4 Credits)
This course is designed to provide students with practical skills in project contracts and procurement. This course introduces the various elements of the contract and procurement process, including exposure to procurement plans, Request for Information (RFI), Request for Quote (RFQ) and Request for Proposal (RFP), as well as the various types of contracts and change order procedures. The course builds upon the framework from the remainder of the program. Topics include how to develop a procurement plan, what type of RFs to use and why, selection criteria for vendors, and contract selection. Students learn project management skills through hands-on exercises developing procurement plans, RFx's and contracts. No prerequisites.

ICT 4110 Project Risk and Quality Management (4 Credits)
This course introduces students to project risk and quality management and develops advanced skills in applying the project management tools and techniques learned in ICT 4100 (prerequisite course). A focused examination of scheduling, cost, quality, and risk management processes using advanced tools and techniques is included. Emphasis is placed on the project planning, execution, and monitoring and controlling processes. This course is on the Project Management Institute's (PMI) certification track. Prerequisite: ICT 4100 or equivalent knowledge.

ICT 4115 Project Management Dynamics (4 Credits)
This is an advanced course that applies the knowledge and skills learned in the prerequisite courses to a complex program. The planning, monitoring and controlling, and project close process groups are explored using case analyses of program and project plans. Learning is based on reading case material and the practical application of project management tools and techniques. Students receive hands on simulation experiences in planning and running subprojects, and work in Project Management Office (PMO) roles. Students develop a workable change management system, exercise project integration and communication skills, and demonstrate the ability to keep an overall program on track. They also demonstrate decision making skills, with emphasis on making tradeoffs based on solid business rationale. This course is on the Project Management Institute's (PMI) certification track. Prerequisites: ICT 4100 and ICT 4110.

ICT 4120 Lean Six Sigma-Getting Started (4 Credits)
Students use Lean tools and techniques to define and scope a problem, determine project objectives and benefits, and create a project charter. The students also learn to define the ‘as is’ process, validate the measurement system and measure outputs, and quantify process performance.

ICT 4125 Lean Six Sigma-Analyze (4 Credits)
Students apply Lean tools and techniques to identify potential causes (x’s), investigate the significance of x’s, identify significant causes, and provide a preliminary definition of process outcomes as a function of causes \( y=f(x) \).

ICT 4130 Lean Six Sigma: Improve and Control (4 Credits)
Students apply Lean tools and techniques to generate potential solutions, select and test a solution, develop an implementation plan, and create a control and monitoring plan. The students also learn the methods and techniques for implementing a full scale solution and finalizing transition.
ICT 4305 Strategic Alliances in the Technology Sector (4 Credits)
Strategic alliances are one of the key drivers in today's global economy and have gradually replaced vertical integration as the chief method of corporate expansion. Business-to-business alliances provide organizations with a variety of benefits, including enhancing the capability of organizations and helping to extract maximum value from available resources. While applicable to any industry, strategic alliances are particularly important in the technology sector. This course defines and discusses the roles of various types of strategic alliances in the technology sector, including informal alliances, partnerships, joint ventures, and outsourcing arrangements. It also explores strategies for managing profitable and exploiting these external business relationships. Case studies will be an integral part of the learning experience. Successful and unsuccessful alliances will be analyzed from the perspective of each alliance participant, 3rd-party vendors, customers, and a variety of other stakeholders.

ICT 4160 Advanced Methods for Complex Projects (4 Credits)
This course explores the planning and execution challenges that often cause complex projects to fail. The course provides a historical perspective regarding project management practices, and reviews evidence regarding trends in project outcomes. For example, despite the use of commonly accepted methods for project management and systems engineering, the success rate of NASA and DoD programs, as measured by schedule, budget, and requirements performance, is trending downward. The evidence shows similar trends in commercial industries (e.g., the Airbus A380 and Boeing 787 aircraft programs). The course addresses why the methods embodied in the Project Management Institute's (PMI) A Guide to the Project Management Body of Knowledge (PMBOK Guide) are sometimes insufficient to assure project success. The course then explores remedies drawn from recent research and cases in complex systems development and global teaming case studies. The instructor will host online reviews of readings and discussion. Students will learn and leverage visual modeling and simulation tools for the design of complex projects. Participation is voluntary, but recommended. Methods to handle complex, concurrent, and mutual dependencies across organizations and cultures will be applied. Based on case studies, the instructor will introduce Project Design methods, including student access to TeamPort project modeling and simulation software. The course culminates with teams in an online role play exercise to demonstrate collaborative planning and decision-making using these advanced methods. This exercise will require dedicated, synchronous interaction with other team members. Prerequisite: ICT 4100 or equivalent experience.

ICT 4165 Project Collaboration with SharePoint (4 Credits)
This course focuses on the role of collaboration as a critical success factor in project planning and execution. Complex projects typically entail cross-functional teams that are often geographically distributed, culturally diverse, and require collaboration across both organizational and corporate boundaries. This course covers best collaboration practices and the use of collaborative websites to facilitate communication, create shared understanding of processes and deliverable, and apply tools to achieve successful project completion. Hands-on assignments are used to illustrate how collaborative sites allow a project team to post, edit, and jointly work on documents of all types, such as project charters, project plans, WBS, requirements, budgets, schedules, procurement activities and closeout activities. Students collaborate within the course to learn how collaborative sites can be used to control project documentation and enforce the security levels associated with those documents. Students also learn how these sites can be used for such activities as assigning tasks, building a project calendar, setting up logs for gathering information, and performing other typical project management duties. The lab portion of the courses uses SharePoint as a template and shows how to set up a site to create folders, lists, tasks lists, calendars, and set the associated security levels. A SharePoint site is created for each student and students have access to both the class site and their individual sites.

ICT 4170 Agile Techniques and Practices in Project Management (4 Credits)
Is the Agile vs. traditional project management debate over? At least in the world of software development, the debate is largely over, as evidenced by the widespread adoption of Agile methods. For example, according to Gartner, in 2012 Agile development methodologies will be used in 80 percent of all software development projects. As the term implies, however, the techniques and best practices for the successful application of Agile project management processes are not static, they will continue to evolve. And, Agile principles and practices are used across many project domains, each with their own unique characteristics and challenges. So, best Agile project management practices will continue to be dynamic. The Agile debate is now turning from the tactical to the strategic. Realizing the full benefits of Agile (e.g., faster time to market, improved responsiveness to customers, higher quality, and greater efficiency), means more than improving project execution. It requires transforming the business into an Agile enterprise. This course examines both the Agile processes and practices for delivering projects, and the cultural and programmatic challenges encountered in transforming the business into an Agile enterprise. The course content, in addition to reading assignments, uses practical assignments such as case studies, projects, and simulations to provide applied experience with Agile practices.

ICT 4300 Web Enabled Information Systems (4 Credits)
This course is an introduction to the design of web enabled information systems. The course reviews modern design and programming principles, introduces database design and object oriented principles, and introduces security issues and best practices related to web application development. The course introduces object-oriented modeling methods, including use cases, class, and activity diagrams that describe the informational and behavioral content of a system's objects. Basic OOM design tools are introduced. The class addresses organizational concerns around web applications, exploitation of technology in today's market, and retention of data integrity. This should be the first course taken in each of the following specialties: Software Design and Programming, Database Design and Administration, Web Design and Development, and Information Systems Security.

ICT 4305 Object-Oriented Methods (4 Credits)
This course introduces the object-oriented view of software analysis, modeling, and design. It defines all of the relevant concepts needed to understand the paradigm. A complete graphical notational scheme is taught for the purpose of diagramming objects and object interactions. The course covers the design, evolution, modification, and test/verifications phases of object-oriented development in some depth. Since project management plays a key role in the success of object-oriented development, its relation to the development process is discussed. The course also surveys the various object-oriented languages and tools available.
ICT 4310 Distributed Computing (4 Credits)
This course provides a practical introduction to client-server applications and programming. The course examines key aspects of client-server computing such as systems requirements for operating systems, middleware, networks, servers and clients. The course develops students' understanding of alternative client-server architectures to meet business requirements, the selection of application development tools, and the use of object-oriented analysis and design practices to implement client-server applications. Students also develop client applications using a variety of techniques. Prerequisite: ICT 4300.

ICT 4315 Object-Oriented Programming (4 Credits)
This course covers modern programming techniques using object-oriented methods. The course familiarizes the student with development tools and the syntax of a programming language by developing simple programs that use control flow techniques and basic input/output techniques. Basic methods to harden code against malicious attack are introduced, and basic verification techniques presented. Prerequisites: ICT 4300 and ICT 4305.

ICT 4351 .NET Programming with C# (4 Credits)
Students identify and describe the fundamentals of the .NET architecture, explain various .NET components, their respective responsibilities and functions, identify and explain .NET design issues and development solutions; identify and describe the fundamental .NET components; explain CLR execution, and have some familiarity with predominant .NET languages.

ICT 4361 Java Programming (4 Credits)
This course enhances the student’s experience in object-oriented design and software development by performing and discussing object-oriented design for re-use of general purpose applications and small Java applications, including using the Java Collection API and Swing user interface classes. Topics include the use of Java as an object-oriented programming language, including encapsulation, simple inheritance, and polymorphism; design of Java classes using Java interfaces and packages; implementation of design patterns in working Java code; and use of Java Base Classes. The course also addresses the use of JAVA IDEs such as Eclipse and NetBeans. Note: This course does not address JavaScript. Prerequisites: ICT 4300, ICT 4305, ICT 4315.

ICT 4370 Python Programming (4 Credits)
This course starts with an introduction to Python programming covering basic programming concepts and Python syntax. It then continues to deepen students’ knowledge of Python by teaching how to access data (text files, databases and other data storage technologies), and process and manipulate that data. Basics of creating front-end interfaces with Python are covered in order to allow students to produce more intuitive interaction with application users. Beyond core Python libraries, other commonly used Python libraries will also be utilized in the course. The course will focus on good programming practices and solving problems effectively. At the successful completion of the class, students will be able to create a number of different types of projects and execute them in Python, as well as continue learning and applying Python skills to data analytics, GIS and other areas of focus. Prerequisite: ICT 4300.

ICT 4400 Database Administration (4 Credits)
This course introduces the roles and responsibilities, as well as the critical knowledge and skills needed to function as a database administrator. The course focuses on Oracle and Microsoft SQL Server, the two dominant global database platforms. Core components include installation and configuration of both database products and implementation of appropriate account privileges. Lab environments are used for hands-on lab assignments in the course, as well as in subsequent courses in the ICT Database Design and Administration concentration. Primary job responsibilities of database administrators are examined, including monitoring, maintaining, and administering database platforms and schemas, while applying best practices in database security. Broader topics, such as metadata, business intelligence, and data warehousing are examined from an organizational perspective. Prerequisite: ICT 4300.

ICT 4405 Database Design and Implementation (4 Credits)
This course concentrates on the relational database model and the conceptual, logical, and physical phases of database design and development. Entity-relationship modeling, data normalization, and Structured Query Language programming are core components of the class. The role and responsibilities of a database administrator are examined; and the concepts of database integrity and transaction management, concurrency protocols, and security schemes are examined. In addition, emerging data warehouse technologies are introduced. The course culminates in a project that allows students to demonstrate an understanding of all phases of the database life cycle (DBLC). Prerequisites: ICT 4300, ICT 4400.

ICT 4410 Data Warehousing Design (4 Credits)
Organizations with vision and courage are gaining competitive advantage by implementing data warehouses. Under the guidance of an executive sponsor, a team of data administrators, database specialists, and organizational analysts creates these contemporary decision support environments. Building a data warehouse is fundamentally different than building a subject area database for an operational system. In this course students use such data warehouse (DW) concepts as partitioning, granularity, record of source, and metadata as they learn how to build a viable decision support environment. Students further their understanding of such topics as architect development, data migration and integration, use of operational data stores, and transactional systems. Prerequisite: ICT 4400.

ICT 4415 Database Backup and Recovery with Lab (4 Credits)
This course explores basic database backup and recovery strategies and tactics using an Oracle database system. Topics include preparing backup, recovery and disaster plans, and performing complete and incomplete database recoveries using the Oracle Export/Import utility. Using hands-on activities and labs, students also gain experience with Oracle troubleshooting utilities, RMAN architecture and setting up Oracle standby databases. Prerequisites: ICT 4300, ICT 4400, ICT 4405.
ICT 4430 Database Security (4 Credits)
Information Technology has become increasingly data-driven, requiring I.T. professionals to dramatically rethink how we protect corporate assets. This course strives to provide a perspective that intersects several technology disciplines: database administration, web-based application development, and technology management. Taking a defense-in-layers perspective, Database Security will provide students with an opportunity to gain an understanding of how data is protected from the perimeter to the data. Students will understand the nature of the types of threats and vulnerabilities to the web-based applications and underlying databases, and how to develop strategies to most effectively protect an enterprise's data.

ICT 4451 Database Programming: Oracle PL/SQL (4 Credits)
This course builds on ICT 4405 Database Design and Programming, allowing students to transform a database schema design into a database application prototype using Oracle's PL/SQL. Topics include advanced SQL DDL, DML, and scripting, PL/SQL constructs, stored procedures, modular design and development, software development processes, views, sequences, cursors, dynamic SQL, error handling, locking, as well as performance and tuning, and database security. Using virtual E-Labs, students design and develop a database and related PL/SQL applications.

ICT 4461 SQL Server with Lab (4 Credits)
This course is an introduction to Microsoft SQL Server for both the DBA and Developer. The key new features of SQL Server are introduced and explored, and the various editions of SQL Server are contrasted. In-depth coverage is provided on how to use the new Microsoft SQL Server Management Studio for both administrative and development tasks. Special emphasis is given to query optimization techniques. An introduction to SQL Integration Services, SQL Analysis Services and SQL Reporting Services is also presented. Prerequisites: ICT 4300 and ICT 4405.

ICT 4462 Transact - SQL Programming (4 Credits)
Transact-SQL is the primary programming interface between applications and the Microsoft SQL Server database. Transact-SQL can be sent from programs or applications to the SQL Server database or can be built into reusable database stored procedures. This course focuses on Transact-SQL in a stored procedure context. Topics include: basic and advanced SQL, SQL functions, stored procedure declaration and execution, cursors, temp tables, error handling, transaction management, security, and performance issues. The course uses a combination of lecture, textbook reading assignments, and hands-on lab assignments to meet its objectives.

ICT 4485 NoSQL Databases (4 Credits)
Relational database systems have been dominant in the market for over forty years, and remain so today. However, the emergence of distributed and cloud computing, as well as the increasing need for storage of large datasets, have created the need for alternate data storage solutions. A number of different models / database management systems have been developed, that as a group are being referred to as NoSQL databases. A number of large, well-known companies use such databases. Some of the companies use more than one variety of NoSQL databases. This course will examine different non-relational (NoSQL) data models, those being Key-Value, Document, Column, Graph and the Object-Oriented database models. Students will learn about advantages and disadvantages of the different approaches. The class will include hands-on experience with a representative sample of NoSQL databases. Computing developments that spurred the existence of NoSQL databases, such as big data, distributed and cloud computing, will also be discussed. Prerequisites: ICT 4300 and ICT 4405.

ICT 4505 Website Design and Management (4 Credits)
This course extends student web design and development skills, and includes advanced HTML techniques and enhanced page design capabilities using CSS. The key to great web design is rooted in a solid foundation, which requires a plan or a "blueprint". We explore best-practices in information architecture (IA) and how to incorporate user-centered design (UCD) techniques as a standard practice in web design. Students also develop an understanding and working knowledge of Cascading Style Sheets (CSS). Through the use of readings, examples, hands-on projects, and discussions the class builds an understanding of the foundations and applications of user-centered design to plan, build and manage a website. Through participation in a project and regular discussions, class members experience working as active and contributing members of the class and knowledge-building community. Prerequisite: ICT 3500, ICT 4300 or equivalent experience.

ICT 4510 Advanced Website Design and Management (4 Credits)
This course explores advanced techniques for web programming using current client-side web technologies. Use of JavaScript, jQuery and Ajax are covered. HTML5 technologies such as Forms, Local Storage and Web workers are introduced. Students create an interactive website. This is a hands-on course where students apply what they learn as they learn it. Students demonstrate mastery of the materials by applying the principles introduced in class to laboratory exercise, class discussions, and projects. Prerequisite: ICT 4505.

ICT 4515 Usability Design for Websites (4 Credits)
This course expands the student's basic knowledge of Web page and website development (ICT 4505) by providing in-depth understanding of how to design Web applications with the user in mind. Students gain knowledge about how the fields of human factors engineering and psychology (e.g., visual perception, cognition, learning, and memory) relate to usability design as well as how usability assessments are conducted. Usability guidelines, design problems and design strengths, and best practices for common functions such as Web navigation, menus, scrolling, graphics and icons are explored. The class is a combination of lectures and lab experiences, culminating in the student's developing a website, conducting a usability evaluation, and reporting on the results and recommendations from the evaluation.

ICT 4520 User Experience: A Human-Centered Approach to Product Design (4 Credits)
This course is an introduction to User Experience (UX) design. The course will take theoretical and practical approaches to guiding students through the principles, practices, process, and tools to design usable, useful, and desirable experiences. Students will explore the methods for conducting UX research to determine needs, processes for designing products that meet those needs, and effective techniques for presenting designs to stakeholders. Throughout the process, students will consider the "why" behind each phase of the approach. The course will culminate in the application of UX best practices to build a functional prototype. Prerequisites: ICT 4505 Website Design & Development.
ICT 4540 XML and Data in Application Development (4 Credits)
XML is an open, text-based markup language that provides structural and semantic information to data. This "data about data," or metadata, provides meaning and context to the application using it, and supports manipulation and display. The course focuses on techniques to make this data useful for business applications, as well as for browser display. Hands-on experience with the XML formats and manipulation, which includes programming techniques, forms the weekly assignments, culminating in a summary project. Other standards, such as JSON, are discussed, as well as use of CSS for display of XML data. Some JavaScript is introduced to illustrate the document model and techniques for integration of data. Prerequisites: Students should have familiarity with constructing HTML web pages and data concepts. Familiarity with a data manipulation or programming language will be helpful.

ICT 4555 Introduction to Animate CC (4 Credits)
This course introduces students to rich media design, animation, and interactive development for the web, desktop, mobile, and more using Adobe Animate CC. Students learn the fundamentals of working in the Adobe Animate CC authoring environment to produce web assets, small animations, and basic interactive modules for multiple target platforms.

ICT 4560 Web Graphics Production (4 Credits)
This course introduces the fundamental concepts and techniques of digital graphics creation and image processing for both online publication and website interface design. Students learn the basics of correcting and modifying images, bitmap painting tools, vector drawing tools, typography, masking, web production techniques, and advanced image compositing. Integration of images and generated code into a website layout employing CSS is also covered.

ICT 4561 Web Development with PHP (4 Credits)
This course introduces students to programming Web applications using PHP and MySQL. Topics include processing form data, file uploads, object-oriented programming and database access. Students leverage a PHP framework and learn to install and configure a local development environment to test and develop their Web applications. Prerequisite: ICT 4510 or previous programming experience.

ICT 4570 Web Scripting with JavaScript (4 Credits)
This course presents students with the principles necessary to design and develop client-side scripts used to build dynamic websites and applications. JavaScript concepts such as data types, control structures, functions and objects are discussed. Students learn how to write beginner and intermediate scripts. In addition, students are introduced to advanced JavaScript topics, including module development, distributed computing and security. Students are presented with real world examples of JavaScript and build an interactive and dynamic client-side application. Technologies covered in the course include JavaScript/ECMAScript, jQuery (a JavaScript library), JSON (a JavaScript-friendly data format), JavaScript as the J in AJAX, and JavaScript in HTML5 form interaction and validation. Prerequisite: Knowledge of HTML, ICT 4505, or previous programming experience.

ICT 4576 Native Application Development on Mobile Devices (4 Credits)
During this course students learn how to use a set of languages and tools to build business and media-centric applications that run on mobile devices such as laptops, tablets, smartphones, and eReaders running on Windows, MAC OS, iOS, and Android. This course illustrates best practices for reusing code, structuring projects, and submitting applications to app stores. Throughout the course students utilize an IDE such as FDT or IntelliJ, MXML, and ActionScript to build cross-device native applications. Students also learn how to add functionality to their Adobe AIR native applications by leveraging third-party Native Extensions to access native features. Prerequisite: ICT 4300 or previous programming experience.

ICT 4580 Mobile Application Development with Web Standards (4 Credits)
This course enables students to take advantage of web standards (HTML5, CSS3, JavaScript) along with various popular frameworks and tools in the generation of both mobile web applications for the browser and packaged mobile applications for devices. We examine the fundamentals behind good user and interaction design when targeting mobile devices and see what is appropriate for implementation on these platforms. We also employ a popular cross-compilation tool to perform distribution onto multiple platforms. Prerequisite: ICT 4300 or previous programming experience.

ICT 4585 Web Development with Ruby on Rails (4 Credits)
Ruby is a dynamic, general-purpose, object-oriented programming language that has an associated web application framework, Rails. The Ruby on Rails (RoR) web application paradigm is powerful and flexible, and has been widely adopted by other frameworks. It allows for the rapid and agile creation of dynamic web applications with little of the overhead associated with other approaches. The student learns how to quickly develop, test, and deploy dynamic web applications using RoR. The student also learns how to manage both the user experience and a backend database from within the RoR framework. Prerequisite: ICT 4510 or previous programming experience.

ICT 4605 Principles of Information Security (4 Credits)
This is a comprehensive Information Systems Security management course covering the eight basic principles of Information Assurance and Information Systems Security. The course follows the Common Body of Knowledge (CBK) convention established by the International Information System Security Certification Consortium, Inc. (ISC)². This course serves as an introduction to the eight domains of information systems security with the emphasis on management issues. It provides the foundation of information systems security and the methodologies that organizations apply to analyze and achieve their security goals. Students learn about significant computer security laws and regulations, system security engineering, the development of effective security policies, system access controls, network security, encryption and security models. The course also covers specific security measures to include, but not limited to, physical security controls, network security, cloud security, telecommunications, and cryptography. Information covered includes contemporary issues of cybercrime, and business continuity and disaster recovery planning. The course applies a systems approach to security issues to analyze and develop security solutions. All topics are discussed in the context of a total enterprise-wide framework. Prerequisite: ICT 4300.
ICT 4610 TCP/IP Networks (4 Credits)
This course explores the operation of the TCP/IP protocol stack including its history, development, current applications, and future implications. The full range of TCP/IP protocols from IP and TCP to basic RPC issues and application protocols such as DNS, SMTP, FTP, SNMP and HTTP are studied. Students also study TCP/IP capabilities, alternatives, and performance issues. Security-specific protocols including SSL and IPSec are examined along with the security aspects of all other protocols. Mechanisms for Internet connectivity for homes and businesses are also covered. The course concludes with a survey of modern topics including Real-Time Communications and IPv6.

ICT 4615 Computer and Physical Security (4 Credits)
Controlling access to computers and controlling access to a building can no longer be viewed as two separate worlds. Today, IT access control and physical security need to be integrated if organizations are to be fully protected from threats. This course concentrates on seeing IT access control as integrated with physical security within an organization. Students investigate how various technologies and methodologies can work together to manage access to computer systems; how to manage elements of physical security; and the issues involved in creating a unified and complete enterprise security system. Security technologies to physically protect an organization’s people, facility and resources, access control techniques and administration, identification and authentication techniques and methods of attack are emphasized. Prerequisites: ICT 4300 and ICT 4605.

ICT 4670 Disaster Recovery and Operations Security (4 Credits)
This course focuses on the planning and operations security required to effectively recover from natural disasters and security attacks and to ensure the operations and integrity of computer systems and staff. Topics include defining continuity requirements, choosing appropriate recovery strategies and understanding the key elements of a continuity plan. Students create a Business Continuity Plan including business impact analysis, recovery strategies, and recovery plan implementation. The course also provides an understanding of controls over resources, facilities, hardware, systems, and the people who create, modify, and use them. Control mechanisms and operations security "best practices" are identified.

ICT 4675 Information Systems Security in Healthcare (4 Credits)
This course will introduce students to information security risks facing the healthcare industry. Students will learn how to better protect healthcare organizations and their patients’ data. Students will learn about recent security breaches, the impact of those breaches on healthcare organizations, and all of the key players involved. This course also covers the evolution of healthcare IT and the continuously evolving risk and regulatory landscape. Students will explore the regulations of HIPAA and how they relate to day-to-day operations in healthcare organizations. Additionally, this course will prepare students to support information security initiatives in order to protect the organization while furthering the advancement of healthcare IT capabilities. This is not a technical course, however we will be learning about how security is impacted by technology and what we must do across technology in order to secure our healthcare systems, our organizations, and our patients.

ICT 4680 Principles of Cryptography (4 Credits)
E-commerce has made cryptography a cornerstone of modern information systems security. Cryptology is one of the 10 domains required for the CISSP, and is a core component of all other recognized information security certifications. Surprisingly, it is the least understood of the information security disciplines. This course focuses on the terminology and concepts needed to understand how cryptographic techniques are used to protect sensitive information. Topics include: Advanced Encryption Standard (AES), the Secure Hash Algorithm (SHA), Digital Signatures and Message Authentication Codes, Diffie-Hellman Key Exchange, public key infrastructure (PKI), secure sockets layer (SSL), and IPsec among others. Lecture and reading materials are reinforced by hands-on experimentation with cryptographic software tools. Internet resources are used to tie the course material to current technology trends. No programming experience or advanced mathematical skills are required for this course. Prerequisite: ICT 4605.

ICT 4685 Cloud and Internet Law (4 Credits)
The legal ramifications of Cloud Computing, Cyber and Internet Law are effecting dynamic change in our country and all throughout the world. This course explores the laws of the new paradigm of Cloud Computing, Cyber and Internet Law and describes the types of issues and concerns that exist. Such issues include the civil and criminal laws, rules and regulation, privacy issues, contractual agreements between parties (on many levels from providers in numerous different states and countries), the impact of differing cultural standards and mores from all over the world, and legal methods of protecting companies from these issues and worries in the world of Cloud Computing, the Internet and Cyber Law.

ICT 4690 Computer Forensics with Lab (4 Credits)
This course is concerned with providing an overview of the methods and tools utilized for collecting and preserving electronic digital evidence for the computer forensic process; the forensic examination, analysis, and report writing; and preparing for courtroom testimony about the forensic results. The course is supplemented by hands-on-exercises, case studies, and a moot court exercise in which each student will testify.

ICT 4695 Application Security (4 Credits)
In this course, students explore the security principles and practices that apply to application software development throughout the entire software development lifecycle (SDLC). Topics include characteristics of secure and resilient applications, proven best practices for secure software, and designing for security and resilience. The course also provides an overview of programming best practices. Other topics include testing custom application, testing off-the-shelf commercial applications, implementing development security methodologies, and evaluating the models used to measure the maturity of software development organizations. Prerequisites: ICT 4300 and ICT 4605.

ICT 4701 Topics in Information and Communication Technology (4 Credits)
From time to time a special topics course may be offered that addresses a new issue, a developing concept, industry trends, or new technology.
ICT 4800 Network Communications and the Internet (4 Credits)
This course focuses on the fundamental concepts and technologies of communications networks and the Internet, including the information theory that is the foundation of modern communication systems. It emphasizes application of these concepts to the analysis and design of network solutions to meet various service provider and IT business requirements. Topics include network media, communications protocols and standards, LAN and WAN network architectures, the Public Switched Telephone Network, and current trends in networking via the Internet. Network components, such as modems, routers, switches, and voice communications systems are analyzed. The various transport media of copper, fiber, and wireless infrastructures are compared. Critical thinking is emphasized via discussions of current and future trends in network technology, global regulatory and political issues in voice/data/video communications, and Internet governance.

ICT 4815 Managing Global Telecommunications Projects (4 Credits)
Set in the context of today’s convergence from the traditional telco/telephony world to next generation all-IP networks brought about by the Internet revolution, this course addresses managing across borders, cultures, time zones, and continents. In addition, the course explores managing conflicts of interest between carriers and over-the-top (OTT) players such as Apple, Google/Android and Skype. Related topics include the challenges and opportunities in vendor management between the old telco vendors of the West and their new competitors from the East. Finally, the course analyzes stakeholder management at the C- and SVP-level of the organization. A variety of assignments create opportunities for students to work in teams, and at other times to work individually on a set of real-world case studies derived from typical projects at leading global network operators and telecom vendors. This course applies project management best practices to the typical challenges faced by project managers in today’s fast-paced, complex and highly competitive global telecom industry. Case studies are used to exemplify core project management challenges at an advanced level. Prerequisites: two courses in any of the following areas: Project Management, Technology Management, Telecommunications Technology.

ICT 4830 Broadband Wireless Networks (4 Credits)
This course examines the key broadband radio technologies at the center of today’s rapid innovation in wireless networks. Wireless telecommunications networks are studied with an emphasis on the challenges and the approaches to deal with the immense wireless data traffic explosion from devices such as the iPhone, iPad, Android smartphones and connected laptops, as well as broadband services like VoIP and mobile video. The dominant wireless telecom technologies and protocols are presented, including 4G LTE, 5G, OFDM, MIMO, mobile IP, WiMAX, Wi-Fi and WPANs. The "triple play" convergence of voice, video, and data over wireless networks is analyzed. The wireless telecom industry is studied from standards, carrier, and technology perspectives, with an emphasis on radio networks as well as key application use cases.

ICT 4835 Advanced Network Technologies (4 Credits)
Technological advancements in networking within the last few years are revolutionizing concepts of networking for both Enterprises and Service Providers. This course demystifies these latest advancements in network technologies. Topics include in-depth coverage of modern networking elements, network requirements, Network Virtualization technologies, Software Defined Network (SDN), and Network Function Virtualization (NFV). Coverage of latest technology requirements includes elastic traffic, big data, mobility, QoS, QoE, and more. The course discusses SDN and NFV components, architecture, protocols, and use cases. Virtualization technologies include VLANs, OpenFlow, VPNs – IPSec and MPLS-based. The course emphasizes deep understanding, analyses, and evaluation of modern network architectures. Prerequisites: ICT 4800 (required), ICT 4830 (strongly recommended).

ICT 4840 Next Generation Wireless Networks and Services (4 Credits)
The rapid innovation in wireless networks that is at the center of today’s ICT industry takes place in the four areas of broadband radio, core & edge networks, wireless services, as well as devices and smart objects. This course focuses on the key next generation technologies at the core network, service and object layers. First, the role of the Internet Protocol Multimedia Subsystem (IMS) in the core network is examined, which is at the heart of many next generation deployments. At the service layer, this course explores wireless service architecture, including popular applications such as mobile real-time messaging, TV/video and mobile web services. The Internet of Things (IoT) plays an increasingly prominent role at the object layer of modern wireless network designs. A case study approach is taken to highlight core use cases from key industries including Smart Cities, the Smart Grid and Industry 4.0. Finally, wireless product development, deployment and operations are examined in the critical context of the conflict between over-the-top (OTT) and network operator based ecosystems. Prerequisite: ICT 4800 or departmental permission.

ICT 4845 Network Security with Lab (4 Credits)
This course examines the key broadband radio technologies at the center of today’s rapid innovation in wireless networks. Wireless telecommunications networks are studied with an emphasis on the challenges and the approaches to deal with the immense wireless data traffic explosion from devices such as the iPhone, iPad, Android smartphones and connected laptops, as well as broadband services like VoIP and mobile video. The dominant wireless telecom technologies and protocols are presented, including OFDM, MIMO, mobile IP, WiMAX, LTE, and WPANs. The “triple play” convergence of voice, video, and data over wireless networks is analyzed. The wireless telecom industry is studied from standards, carrier, and technology perspectives. Important radio network concepts are addressed, including network design, cell selections and traffic concepts, mobility handoff signaling, radio resources management, location updates, roaming, as well as authentication and encryption. Prerequisite: ICT 4800 or departmental permission.
ICT 4901 Capstone Project (4 Credits)
The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and who can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of a B- or better is required to pass.

ICT 4902 Capstone Seminar (4 Credits)
The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students’ research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

ICT 4903 Applied Capstone Seminar (4 Credits)
In the Applied Capstone Seminar, students propose, develop and deliver a cloud-based application that demonstrates the ability to apply the technical knowledge developed throughout their program of studies. In addition to demonstrating competence in applying what they have learned to date, students are challenged to expand their skills by virtue of the development environments, tools, and technologies they use to develop and deliver their projects. The primary deliverables are functional software, accompanied by representative design documents. As such, the project represents in microcosm the development processes, practices and deliverables that are typically entailed in producing robust, cloud-based software solutions. Although each student develops an individual project, the seminar also requires student collaboration via such activities as design reviews, quality reviews and peer exchanges on such topics as suggestions for solving problems and improving code. Prerequisite: To register for this course, a student must be accepted as a degree candidate, have completed at least 40 quarter-hours (including all core courses), and have a cumulative GPA of 3.0 or better. In addition, the student must be approved for registration by the course professor and the ICT Director. This seminar is limited to students in the Software Design & Programming, Web Design & Development, Mobile Application Development, and Database Design & Programming concentrations, and who are judged to have the requisite level of technical skills to be successful in this demanding seminar. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Applied Capstone Seminar in one quarter; no incomplete grades are permitted.

ICT 4980 Internship (1-4 Credits)
The ICT internship is designed to offer students a practical educational experience in an industry related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the ICT master’s degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all ICT students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the ICT degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.

ICT 4991 Independent Study (1-4 Credits)
This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

ICT 4992 Directed Study (1-4 Credits)
This is an advanced course for students wishing to pursue a directed course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Directed Study form and filed the form with all appropriate offices before registering for the directed study. Directed Study is offered only on a for-credit basis.

**Nonprofit Leadership**
The Nonprofit Leadership program prepares graduates to think critically, act ethically, and lead the changes needed to solve the pressing issues in nonprofits, nongovernmental organizations and civil society abroad. Students will develop practical knowledge, critical thinking, and innovation skills needed to craft fundraising strategy, program operations, and social enterprises that address societal problems through healthy organizations. Coursework engages across the four concentrations of Executive Leadership; Philanthropy and Resource Development; Social Enterprise, Innovation and Entrepreneurship; and Mission-driven Operations and Programs. Courses engage students in legal, ethical, financial, equitable and scalable considerations of program and organizational leadership and management. Faculty are experienced in development and fundraising, social innovation,
governance, program management; they are leadership experts who explore future trends, historical context, and current nonprofit theory and practice with practical and cutting-edge learning. Graduates will increase their community and world impact with tools that make change happen.

This program prepares students to:

• Evaluate leadership behaviors, skills and characteristics that positively impact nonprofit organizational health, governance, performance, and/or community.
• Demonstrate critical thinking that integrates leadership, financial, fund raising, program design, and organizational strategy to influence decision making.
• Demonstrate communication skills that advance nonprofit/nongovernmental organization's mission and community impact.
• Demonstrate the integration of financial knowledge and nonprofit governance into strategic and resource development plans, as well as technological approaches, and/or campaigns to develop organizational health.
• Apply analytic methods to examining problems and designing solutions to nonprofit organization or societal issues.

Master of Science in Nonprofit Leadership with a concentration in philanthropy and resource development

Changes in philanthropy, development and fundraising are shaping the giving environment influencing how nonprofit/nongovernmental organizations plan for funding resources. From crowdsourcing and kick-starting campaigns to capital fundraising and legacy gifts nonprofits must cultivate and retain donors from diverse contexts, prospect for new gifts, and demonstrate impact. Philanthropy and Resource Development students will demonstrate the knowledge and skills to navigate these changing trends to increase the impact and drive ahead their nonprofit's mission through diverse development approaches and fund raising. Students will apply their passion and pragmatism as they learn about the scale and planning needed to develop the resources to carry out their nonprofit's mission.

This degree prepares students to:

• Assess different development approaches to determine the scale and mission appropriateness for nonprofit/nongovernmental organizations of different sizes.
• Synthesize knowledge about different development approaches.
