**CUI 4032 Analysis of Teaching (3 Credits)**

Provides a systematic introduction to the research base that characterizes effective practice and to the array of research methods that can be employed to study teaching and teacher development.

**CUI 4033 The Practice of Teaching (3 Credits)**

Course explores personal, conceptual, and empirical understandings of "teaching practice." Topics addressed have included: metaphors for teaching practice, best practices for equity and social justice, professional development practices.

**CUI 4034 Curriculum & Cultural Context (3 Credits)**

This course will address the influence of cultural, political, sociological, and economic factors on curriculum at the instructional, situational, societal, and ideological levels. Students should be interested and willing to explore these issues through readings and discussion. We will be exploring various perspectives, including our own, which inform the discussion on this critical area of education.

**CUI 4035 Critical Perspectives in Education (3 Credits)**

In this course, students will examine issues related to democracy, power, and privilege in public education. Specifically, students will learn about how anti-democratic groups are working to undermine public education in the U.S. Students will explore White privilege, racism, classism (and other "isms") and the impact they have had and continue to have in public school settings, particularly at schools that serve historically marginalized and oppressed students. Theoretical frameworks such as Critically Relevant Teaching and Critical Race Theory will be introduced in this class as well.

**CUI 4039 Transformational Teaching and Learning (3 Credits)**

This course takes an exploratory approach to the analysis of transformation teaching and learning. It asks questions such as "What are effective teaching and learning environments?" "For whom and under what circumstances?" "How can we create such environments?" We will explore how patterns of activities in the classroom can be designed to achieve simultaneously all of the major goals of educational reform. The term classroom is not restricted to the physical classroom space but "classroom" in the sense of the organized instructional activities that can extend outside of the school building into the community.

**CUI 4041 School and Curricular Reform (3 Credits)**

A look into school reform movements, why most fail and only a few succeed.

**CUI 4043 Development of Technology Enhanced Educational Environments (3 Credits)**

Utilizing emerging Learning Theories and complex Instructional Design Theories, students will move into advanced educational web page development including designing with style sheets and layers. Several customized technology mediated lessons or professional projects will be created for use in practice. Various tools, designed to enhance learning environments, will be explored.

**CUI 4046 Technology Leadership (3 Credits)**

Explores the role of ethics, values, social, legal, and power issues associated with technology in education. Analyzes how technology is transforming learning, equitable distribution of information, and the implications for providing optimal education to diverse learning populations.

**CUI 4047 Humanizing Pedagogies (3 Credits)**

This course will provide a foundation in the conceptualization, design, and implementation of a humanizing pedagogy. A humanizing pedagogy is a "revolutionary approach to instruction that ceases to be an instrument by which teachers can manipulate students, but rather expresses the consciousness of students themselves" (Freire, 1970, p. 51). Students in this course will apply their knowledge of humanizing pedagogy to specific content areas, practice, and research through the tenets of a humanizing pedagogy. Moreover, students will explore humanizing literacy and math as fundamental human rights that afford access and equity to historically marginalized communities.

**CUI 4050 Research Seminar: Conducting Systematic Reviews (0-3 Credits)**

The Curriculum and Instruction (C&I) Research Seminar: Conducting Systematic Reviews (CUI 4050, 3 credits) is the first of a series of courses for doctoral-level students in the Curriculum and Instruction Program. It is also available to students in other programs who would like to learn how to complete a systematic literature review, as well as think about identifying a research problem to address and research purpose.

**CUI 4051 Seminar in Dissertation Organization and Design (1-5 Credits)**

Individualized assistance in developing the dissertation topic, issue, problem; guidance in preparation for proposal orals and application to the Institution Review Board (IRB), direction for dissertation chapter organization, writing and completion. This seminar is targeted for the student who needs support in completing the dissertation.

**CUI 4058 Teacher as Researcher (3 Credits)**

Emerging philosophical and methodological issues that arise when school practitioners undertake research within their own sites; range of research traditions including quantitative, statistical research and qualitative methodologies; mastering relevant skills and accessing resources for students to be better prepared to conduct their own inquiries and understand and solve problems.

**CUI 4130 Philosophy of Education (3 Credits)**

Focuses on 3-4 philosophers and examines the contributions their philosophical ideas have on education. Philosophers studied have included John Dewey, Cornel West, Nel Noddings and Maxine Greene.

**CUI 4131 Spirituality in Education (3 Credits)**

This course will explore the role of spirituality in education from both the student and educator point of view through an examination of the big questions that are held close to the heart; the ones that guide us toward meaning making in the world. The primary goal of the course is to plumb the depths of spirituality, a deep sense of inner meaning making, that calls us toward a particular profession. The course will focus on the interface between spirituality in education through the lenses of curriculum and instruction.

**CUI 4153 Practicum: Curriculum and Instruction (0-5 Credits)**

Designed to fit the educational needs of the individual student who may choose from a wide variety of practicum (internship) experiences, including teaching, curriculum development, museum internships or research projects in curriculum and instruction on or off campus. In the case of taking on a paid position, students should consult the Office of Internationalization about their visa status and requirements. Students should work with their advisor before they plan to register in order to get this course in the class schedule when it will be needed.

**CUI 4155 Special Topics (1-10 Credits)**

Special topics in the field of education.

**CUI 4160 Race, Class and Gender in Education (3 Credits)**

Ethnicity, Class & Gender in Education applies the concepts and theories of social science disciplines - sociology, social psychology, anthropology, historical perspectives and philosophical orientations - to the inclusive examination of the issues of racism, classism, sexism, and homophobia in education. This course seeks to conceptualize ethnicity, gender and social class as interactive systems, not as separate and independent variables, that impact students, teachers, school systems and the educational enterprise. We examine educational systems and practices that historically have disadvantaged women and peoples of color and discuss strategies and techniques for empowerment of the members of these groups.

**CUI 4170 Engaging Learners through the Arts (3-5 Credits)**

This seven day institute is designed to engage participants in a challenging exploration of the creative process through workshops with professional artists in the disciplines of dance, visual arts, creative writing, music, and theatre, and to provide a greater understanding of the theory and practical applications of school reform.

**CUI 4172 Aesthetic Foundation in Education (3 Credits)**

Educational enterprise from aesthetic viewpoints; examination of a number of aesthetic theories and exploration of implications for curriculum, teaching, and evaluation.

**CUI 4180 History of Education in the United States (3 Credits)**

Traces historical context and development of K-12 schools in the United States from initial discovery of North and South America by Europeans to the present; understanding through examination of central issues that strongly influenced our current educational systems - evolution of schools, religion, social and political reform, women's issues, nationalism and ethnicity, industrialization of the nation and world.

**CUI 4310 Supporting Apprentice Teachers (3 Credits)**

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn as they learn to create culturally responsive classroom environments and to address the strengths and needs of all students particularly Culturally and Linguistically Diverse (CLD) Learners and students in Special Education. Topics addressed include mentor support for apprentice teachers' planning, teaching of reading and writing, applying a teacher evaluation framework, designing and interpreting formative and summative assessment, using data to inform instruction and differentiation for ELLs and GT identified students.

**CUI 4311 Supporting Apprentice Teachers II (3 Credits)**

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn about developing unit and lesson plans, literacy (specifically reading), and developing competencies in the evaluative framework for residency or student teaching used in a teacher education program.

**CUI 4312 Supporting Apprentice Teachers III (3 Credits)**

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn about developing formative assessment plans, literacy (specifically writing), and developing competencies in the evaluative framework for residency or student teaching used in a teacher education program.

**CUI 4313 Supporting Apprentice Teachers IV (3 Credits)**

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn about using data to inform instruction, differentiating instruction for English Language Learners and Gifted and Talented identified students, and developing competencies in the evaluative framework for residency or student teaching used in a teacher education program.

**CUI 4400 Nature and Needs of Gifted Learners (3 Credits)**

This course is designed to provide participants with an understanding of 1) conceptual foundations and definitions of giftedness, 2) how intelligence, creativity, and non-intelligence factors are related to giftedness, 3) the nature, development, types, and needs of gifted individuals, 4) principles and issues in the identification of gifted individuals, and 5) the major issues and tensions in the education of gifted and talented individuals. Lectures, discussions, and other class activities and assigned readings and projects will include topics such as the history and nature of the giftedness construct; theories of intelligence and creativity and their relationship to conceptions of giftedness; types of giftedness; the diversity of gifted individuals and their personal and educational needs; the role of identification in the education and development of gifted children and youth; and purposes and perspectives in gifted education.

**CUI 4401 Psychological Aspects of Giftedness (3 Credits)**

The psychological development of gifted children is examined through a study of current theories, models, research, and case histories. Understanding of psychological development creates a foundation for applications and practices that nurture the psycho-social-emotional development of gifted individuals. Specific topics include the psychological nature and needs of the gifted; perfectionism, stress, and underachievement; special issues for gifted boys and gifted girls; highly gifted; and pertinent theories of psychological development. Emphasis is placed on synthesis of theories and application to specific situations.

**CUI 4402 Curriculum for Gifted Learners (3 Credits)**

This course is designed to provide participants with an understanding of the conceptual foundations in the design and development of curriculum for gifted and talented students. Includes theories, models and processes for curriculum modification and curriculum design; strategies for adapting educational content, process, product, and learning environment based on the educational characteristics and needs of gifted learners; and curriculum design and development approaches that are effective in the intellectual and personal growth of gifted and talented learners. Content in this course is aligned with appropriate instructional strategies and techniques recommended for use with gifted and talented learners. Lectures, discussions, class activities, assigned reading and projects include topics such as a general overview of curricular principles and perspectives; critical analysis of general curriculum; issues of diversity in curriculum development and modification including cultural congruence; recommended models of curriculum development for gifted and talented learners; and national trends in gifted education.

**CUI 4403 Instructional Strategies for Gifted Learners (3 Credits)**

This course provides a basic understanding of how to adapt curriculum for gifted learners through various instructional strategies. Strategies studied include: acceleration, enrichment, differentiation, compacting, grouping, independent study, and service learning. By selecting instructional strategies based on assessed learner needs, educators can reach many types of gifted learners in their classrooms including gifted students of poverty and gifted learners of cultural and ethnic diversity. The objectives of this class are that participants: know about and be able to define instructional strategies that meet assessed academic and affective needs of gifted learners and be able to adapt curriculum for gifted learners using learned instructional strategies.

**CUI 4404 Twice-Exceptional Students (3 Credits)**

The purpose of this course is to acquaint the student with the various areas of exceptionalities typically encountered with gifted students and to provide classroom related techniques to assist the teacher in identifying and working with twice-exceptional children in an effective manner. Environmental, behavioral, motivational, emotional and educational needs are addressed. Legal responsibilities, parent communication and staff development will be emphasized.

**CUI 4405 Practicum in Gifted Education (1-3 Credits)**

Students wishing to earn credit for the Practicum in Gifted Education must complete an experience in three of the five areas (Teaching, Assessment, Administration, Research, or Policy). Students must submit a Practicum Proposal outlining the intended practicum experiences. This Proposal must be approved by the practicum faculty supervisor when the practicum experiences are begun.

**CUI 4407 Current Issues in Gifted Education: Identification (3 Credits)**

This course focuses on the screening and selecting of gifted and talented students. It is designed for practicing professionals - teachers, counselors, psychologists, and administrators - who must make decisions about the identification and serving of gifted and talented students. Course uses multiple assessments, both quantitative and qualitative, to identify gifted students within an increasingly diverse population (including culturally- and ethnically-diverse, high-potential, linguistically-different students with unique affective needs as well as high-potential economically-disadvantaged students). Students will use data to diagnose educational needs, prescribe appropriate educational strategies and to incorporate appropriate identification strategies for identifying gifted and talented students. Legal responsibilities and parent communication as well as staff development are emphasized. Students are required to develop an identification model based on relevant theory and current practices to be used in their particular setting. Enforced Prerequisites: CUI 4400 with a minimum grade of C- OR CUI 4401 with a minimum grade of C-.

**CUI 4408 Creativity: Theory & Practice (3 Credits)**

The essence of innovation is creativity, in thought, process and outcome. Classic and current theories provide a foundation for analysis of the concept of creativity. This course is designed to provide participants with an understanding of 1) the conceptual foundations and definitions of creativity; 2) how intelligence, creativity, and non-intellective factors are related to the constructs of giftedness; 3) documented brain research underlying exceptional cognition and/or creativity; 4) principles and issues in the identification and appropriate programming for creative individuals; and 5) the multiple perspectives and manifestations of creativity. Salon discussion groups, lectures, class activities and assigned readings and projects focus on the history and nature of the construct of creativity, theories of creativity, the role of innovation and transformation, assessment and measurement tools, environmental support of the creative process and creativity, and teaching and learning applications.

**CUI 4410 Prog Dev/Ldrshp/Comm Gifted Ed (3 Credits)**

This course emphasizes the concepts and practices involved in development and management of school- and district-based programs for the special education of gifted and talented children and youth. The course leads to in-depth understanding of program components and systems, program planning and evaluation, program leadership, advocacy in gifted education, and communications. In addition, emphasis is placed on planning and development of staff development in relation to gifted children. This course includes extensive in-class discussion and field applications.

**CUI 4411 Wkshp: Gifted & Talented Educ (1-3 Credits)**

This blended course is designed to provide participants with an overview of the education of gifted and talented students. Areas of focus within the course include definitions of gifted and talented learners, gifted learner characteristics, educational/academic and affective/psychosocial needs, common identification methods, and research-based instructional strategies for gifted learners. Course restricted to students in TEP program or instructor approval.

**CUI 4412 Culturally and Linguistically Diverse Learners in Gifted Education (3 Credits)**

Culturally and Linguistically Diverse Learners have inequitable access to gifted programming, curricula and services; therefore, they do not receive instruction that nurtures their learning talents, culture, and emergent bilingualism. This course is designed to address the needs of the Culturally and Linguistically Diverse (CLD) and the Gifted and Talented (GT) learner. Upon completion of this course, students should be able to meet the approved standards for the English Language Learner Professional Development Pathway. In addition to ELL standards, this course is aligned with state gifted education standards.

**CUI 4450 Education and Psychology of Exceptional Children (3 Credits)**

Characteristics of students with moderate needs and state criteria used to determine eligibility for special education population.

**CUI 4451 Teaching the Exceptional Child (3 Credits)**

This course provides a broad overview of the field of exceptionality and special education. Included are discussions of current issues and controversies in the field, characteristics, classification, diagnosis, and educational interventions for early childhood and school-aged children with high-incidence and low-incidence disabilities who have exceptional education needs. This course also explores the characteristics of students with various disabilities, the history of Special Education, The Individuals with Disabilities Education Act (IDEA) and its current implications, the Response to Intervention Model (RtI) and the Individualized Education Plan (IEP). Prerequisite: CUI 4450.

**CUI 4452 Low Incidence Disabilities and Behavior Intervention (3 Credits)**

This course reviews a wide range of neurodevelopmental disorders and low-incidence disabilities including fragile X syndrome and Fetal Alcohol Syndrome, along with syndromes associated with chromosomal deletions. Implications for assessment and intervention are outlined including diagnostic criteria, prevalence and treatment. Research on identification and treatment including state of the art interventions and assistive technology are addressed. This class also addresses theories, research, effective practices, and background information needed to implement successful behavior intervention programs for whole classroom management and for students identified with behavioral needs. Prerequisites: TEP 4010 and CUI 4451.

**CUI 4453 Curriculum Adaptations and Assessments for Children with Disabilities (3 Credits)**

This course applies theories, research, effective practices, and background information for assessment for students with disabilities, monitoring student academic progress, and transition planning for students exiting K-12 schools.

**CUI 4455 Assessment of Students with Special Needs (3 Credits)**

Theories, research, effective practices and background information needed to develop, implement, analyze, and apply assessment data for mild/moderate-needs students.

**CUI 4457 Behavior Intervention (3 Credits)**

Theories, research, effective practices, and background information needed to implement successful behavior intervention programs for mild/moderate-needs students.

**CUI 4459 Curriculum, Collaboration, and Transitions in K-12 Schools (3 Credits)**

Knowledge, techniques to develop independent skills for K-12 moderate/mild-needs students and transitions across grade levels.

**CUI 4500 Elementary Literacy: Theory and Practice I (1-3 Credits)**

This course provides an introduction and overview to the many components that make up a quality balanced literacy program. During the course students will analyze current research and theory in reading and writing instruction. This course will use students' classroom placements to create a foundational understanding on which to build solid literacy philosophy as well as instructional ideas and strategies.

**CUI 4501 Elementary Literacy: Theory and Practice II (1-3 Credits)**

This course is an extension of Elementary Literacy I and concentrates on the continued development of theories and practical strategies for teaching literacy in diverse classrooms. This course will supply K-6 teachers with the skills to assess student abilities, select appropriate instructional strategies, and design effective instructional programs that lead to increased listening, speaking, reading and writing achievement of all children.

**CUI 4502 Elementary Science and Social Studies Methods for Cultural Linguistic Diversity (3-4 Credits)**

This course will enable students to develop a deeper understanding of science and social studies content and curriculum in the elementary classroom. Students will explore a range of instructional materials and develop teaching strategies with the guidance of state content standards and research on effective classroom instruction for culturally and linguistically diverse students. This course will revolve around discussion of key questions in the following eight areas: The Role of Social Studies and Science; Instruction; Standards; Content Knowledge; Curriculum Integration; Technology; Culturally Responsive Pedagogy; Sheltered Instruction. Course restricted to students in TEP program or instructor approval.

**CUI 4503 Elementary Math Methods for Culturally and Linguistically Diverse Learners (3,4 Credits)**

This course prepares students for mathematics instruction in elementary classrooms. We will study theories of learning, the development of children's mathematical thinking, and research-based instructional practices in mathematics. Students will solve mathematical problems using a variety of methods, practice giving math lessons, engage in continuous instructional improvement activities, grapple with issues of equity—race, class, gender, ability, and the intersections therein—as they pertain to math teaching and explore digital resources related to teaching math for understanding. Course restricted to students in TEP program or instructor approval.

**CUI 4504 Elementary Math, Science, and Social Studies Methods Cultural Linguistic Diversity I (3 Credits)**

This course is the first of a two-course study that will prepare students to develop a deeper understanding of math, science and social studies content and curriculum in the elementary classroom as guided by Colorado Model Content Standards and research on effective sheltered content instruction for culturally and linguistically diverse students. Pre-service teachers will develop an understanding of how students in the elementary grades construct meaning through active engagement in purposeful learning opportunities.

**CUI 4505 Mathematics across the Content Areas (2,3 Credits)**

In this class, prospective secondary teachers study fundamental mathematical ideas and how they apply to various real-world settings. For instance, students may explore the mathematics of gerrymandering and map projections. Students will also engage in mathematical practices such as argumentation and justification. Finally, students will learn about inquiry-based approaches to teaching that they can use in their secondary classrooms with their students.

**CUI 4506 Mathematics for Elementary School Teachers I (2,3 Credits)**

In this class, prospective elementary school teachers experience an in-depth look at the representations of rational numbers, including base-ten and decimal numbers, integers, fractions, and arithmetic operations on these sets. Problem solving is emphasized throughout. Students also learn about inquiry-based approaches to teaching that they can use in their classrooms with their students.

**CUI 4507 Mathematics for Elementary School Teachers II (3 Credits)**

In this class, prospective elementary school teachers study fundamental mathematical ideas typically taught in grades 5-8. Students learn about visualization and its importance in geometry. Students study geometric shapes and solve a variety of problems involving geometric shapes. In addition, students learn some fundamental ideas of measurement and study length, area, volume, dimension, error and precision. Students also solve problems involving area, learn about solid shapes, and solve volume and surface area problems. Finally, students learn about inquiry-based approaches to teaching that they can use in their classrooms with their students. Prerequisite: CUI 4506.

**CUI 4508 Mathematics for Elementary School Teachers III (3 Credits)**

In this class, prospective elementary school teachers study fundamental mathematical ideas typically taught in grades 5-8. Students learn about visualization and its importance in geometry. Students study geometric shapes and solve a variety of problems involving geometric shapes. In addition, students learn some fundamental ideas of measurement and study length, area, volume, dimension, error and precision. Students also solve problems involving area, learn about solid shapes, and solve volume and surface area problems. Finally, students learn about inquiry-based approaches to teaching that they can use in their classrooms with their students. Prerequisites: CUI 4506.

**CUI 4509 Mathematics for Middle School Teachers (3 Credits)**

Mathematics education for middle school teachers. Meets Common Core State Standards.

**CUI 4511 Secondary Literacy: Reading and Writing Across Content Areas I (3 Credits)**

This course is the first of a two-course study that is designed to give secondary Residents an introduction to best practices in content area literacy instruction for in 6-12 classrooms. In support of the instructional shifts presented by the Common Core State Standards, Residents will explore the rationale behind instructional strategies for literacy instruction in the content area classrooms, as well as examine tools and techniques for teaching students to become strategic readers and writers as they model their own thinking and scaffold students' use of strategies for content area literacy.

**CUI 4512 High School Mathematics from an Advanced Perspective (3 Credits)**

High School mathematics education. Meets Common Core State Standards.

**CUI 4513 Elementary Math, Science, and Social Studies Methods Cultural Linguistic Diversity II (3 Credits)**

This course is an extension of the Autumn quarter session and will prepare students to develop a deeper understanding of math, science and social studies content and curriculum in the elementary classroom as guided by Colorado Model Content Standards, Next Generation Science Standards and research on effective sheltered content instruction for culturally and linguistically diverse students. Pre-service teachers will develop an understanding of how students in the elementary grades construct meaning through active engagement in purposeful learning opportunities.

**CUI 4514 Secondary Literacy: Reading and Writing Across Content Areas II (3 Credits)**

This course is an extension of the Autumn quarter session. In this course, Residents will deepen their knowledge of the English language and linguistics, through an analysis of socio and psycholinguistics, as well as rigorous practice in grammar, syntax and semantics. As Residents gain a more practical understanding of the complexities of the English language, they will be better able to support their English Language Learners. This course addresses the following Common Core State Standards: L1: Demonstrate command of the conventions of standard English grammar and usage when writing or speaking L3: Apply knowledge of language to understand how language functions in different context to make effective choices for meaning or style, and to comprehend more fully when reading or listening. W4: Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.

**CUI 4521 Urban Education II: School, Student, Family and Community Influences on Student Learning (2-4 Credits)**

This course will consider how teachers are able to foster meaningful connections between the educational goals of the schools and the personal and cultural experiences of young people. Students will study the child in relation to family, school, and community, as well as the relationships between teacher and pupil. We will emphasize the cultural complexity of an urban society and pay special attention to ways that curriculum, language, and literacy affect school success.

**CUI 4527 Supporting English Language Learners and Students with Special Needs Across Content Areas (3 Credits)**

This course evaluates similarities and differences in theory, methods, approaches, and techniques in meeting the needs of diverse learners including English Language Learners, special needs, and/or gifted. Differentiated instruction, Sheltered instruction, and Response to Intervention (RTI) are key methodologies in meeting needs of diverse learners.

**CUI 4529 Foundations of Education for Culturally and Linguistically Diverse Learners (3 Credits)**

This course will examine the essential knowledge and orientations educators must possess to effectively meet the needs of culturally and linguistically diverse (CLD) learners through the analysis of historical, political, ethical, and legal foundations of language education in the United States. This course will explore the immigrant experience and the experience of CLD learners in schools in order to understand how the psychosocial aspects of the immigrant experience can impact second language learning. Course restricted to students in TEP program or instructor approval.

**CUI 4530 Second Language Acquisition (1-3 Credits)****CUI 4531 Language Development and Strategies for Culturally and Linguistically Diverse Learners (3,4 Credits)**

This course will evaluate methods, approaches, and techniques in language teaching. This course will also explore classroom strategies and practices for content-area instruction through sheltered instruction, and socio-cultural context of second language acquisition in U. S. public schools including how teachers can support bilingualism, multilingualism, biculturalism, and multiculturalism in the mainstream classroom. Furthermore, this course will explore the needs of special education and gifted culturally and linguistically diverse learners.

**CUI 4532 Culturally Responsive Pedagogy (3,4 Credits)**

This course examines the intricate web of variables that interact in the effort to create culturally responsive pedagogy. It examines the need and establishes a definition for culturally responsive pedagogy; and includes an examination of one's conception of self and "others;" conception of social relations; and conception of knowledge teaching and learning in a culturally diverse context. Furthermore, it cultivates the practice of culturally responsive teaching as well as explores the reality of implementing cultural responsive pedagogy in an era of standardization. In sum, this course helps practicing teachers acquire the dispositions, cultural knowledge, and competencies to adapt their curriculum and instructional skills for culturally responsive classroom practice.

**CUI 4536 Language and Cultural Issues in Assessment and Instruction (3-4 Credits)**

This course expands the educators' knowledge of the connection between data-based instruction and assessment. Educators assess student learning by utilizing strategies that provide continuous feedback on the effectiveness of instruction. Educators learn informal and formal assessment practices that promote student learning and achievement. Educators develop knowledge and understanding of initial assessment of culturally and linguistically diverse learners' skills and abilities in order to provide appropriate placement and instruction. Educators utilize native language tests to promote adequate placement/transition of students. This course also helps educators develop a framework to analyze and develop culturally responsive assessment practices in order to improve student achievement. Finally, this course integrates Response to Intervention (RTI) strategies to improve student assessment.

**CUI 4538 Literacy and Language Development for Culturally and Linguistically Diverse Learners (3,4 Credits)**

Attaining age-appropriate English literacy skills poses many challenges to culturally and linguistically diverse (CLD) learners. Educators must therefore develop proficiency in effective literacy instruction for CLD learners. Effective literacy instruction includes a repertoire of teaching practices designed to scaffold literacy and language across the content areas, and culturally relevant curriculum as an essential component to support the achievement of CLD learners. This course will focus on helping educators gain the necessary skills, orientations, and competencies to advance the literacy of CLD learners through linguistic and cultural knowledge.

**CUI 4540 Curriculum, Instruction and Assessment: Theory and Practice I (1-3 Credits)**

This course explores the theoretical underpinning and practical application of curriculum design. Students design their own curriculum unit aligned to standards, essential questions, big understandings, and social justice themes. Course restricted to students in TEP program or instructor approval.

**CUI 4541 Curriculum, Instruction, and Assessment: Theory and Practice II (1-4 Credits)**

In this course, apprentice teachers will explore the theoretical underpinnings and practical application of data and assessment. This course will build essential knowledge and skills in school and classroom assessments, research methodology, and equity in assessment practices. Students will design a series of assessments aligned to unit goals. Course restricted to students in TEP program or instructor approval.

**CUI 4542 Curriculum, Instruction, and Assessment: Theory and Practice III (1-4 Credits)**

This is the third and final quarter of an academic year-long weekly seminar to foster reflective, research-based classroom practice. Teacher candidates will deepen their understanding of teaching and learning in contemporary schools through a guided teaching apprenticeship with a trained mentor teacher, focused observations of a myriad of classrooms, readings, interviews, discussions, critical writing, and presentations. Course restricted to students in TEP program or instructor approval.

**CUI 4544 Ed Psych: Exceptional Child (1-3 Credits)**

The focus of this course is on educating children and adolescents with special needs in the general education classroom. The intent is to enable future educators to better serve the needs of these children in their classrooms. Topics such as the special education process, information on specific disabilities, accommodations and modifications, behavior issues, mental health, and communicating with parents will be addressed.

**CUI 4600 History and Philosophy of STEM Education (3 Credits)**

The goal of this course is to help future Science, Technology, Engineering, and Mathematics (STEM) education leaders understand the historical trajectory of public education in relation to the larger sociopolitical forces of American history. Two premises guide this course: 1. Social and political conditions in society exert intense pressure on STEM fields and STEM education, which poses significant challenges to STEM education leaders. 2. Education in general – and STEM education in particular – are political, economic, and social endeavors that reflect social arrangements. This course will enable students to view their specialization as part of a complex and larger milieu; that is the U.S. educational system.

**CUI 4610 Learning & Teaching of STEM (3 Credits)**

In this course, students will be introduced to foundational research literature on learning and teaching in STEM education. The research introduced will focus extensively on theories of learning and how these theories are influencing P-16 STEM curriculum, instruction and assessment. The literature base introduced is foundational to research conducted in STEM education.

**CUI 4620 Research on Diversity, Equity, and Social Justice in STEM Education (3 Credits)**

The goal of this course is to help future STEM education leaders understand the current context of issues of diversity, equity and social justice in STEM education and explore its implications for access and opportunity for traditionally marginalized students. Two premises guide this course: 1. Social and political conditions in contemporary society exert intense pressure on STEM fields and STEM education. 2. Education in general – and STEM education in particular – are political, economic, and social endeavors that reflect social arrangements. This course will enable students to view their specialization as part of a complex and larger milieu; that is the U.S. educational system.

**CUI 4640 Improving STEM Instruction (3 Credits)**

For as long as the United States has implemented public education—well over 100 years—many features of schooling have stayed the same. Despite waves of curricular and policy reforms, widespread anxiety over student achievement (especially in comparison to other countries), and concerted efforts to “disrupt” education, many elements of teaching and learning persist. In STEM education, especially, scholars and practitioners have been advocating for the same things for decades: teaching for conceptual understanding, using rich tasks that encourage student collaboration, incorporating discourse in the classroom, and supporting students to engage in STEM practices like proof, argumentation, and the scientific method. We know that these things can support meaningful student learning. But most K-12 STEM classrooms are centered on memorization and standardized testing. Why is it so hard to change? The short answer: It's complicated. In this course, students will critically examine various instructional improvement efforts, identifying both the ways in which these efforts are potentially productive and potentially destructive. We'll juxtapose these efforts with relevant research on teacher learning and organizational change in order to critique reform efforts. Ultimately, students will become more critical consumers of instructional improvement efforts and will be better prepared to translate research into practice. Although STEM is the focus of this class, the overarching ideas of the course are applicable to many other subjects.

**CUI 4690 Field Experience: Curriculum & Instruction (3 Credits)**

This course provides students with an authentic field experience for those pursuing a degree in Curriculum & Instruction. Field Experience in Curriculum & Instruction is an off-campus, experience taken throughout the coursework plan. Field Experience is designed to broaden one's professional skills and is considered a critical transition of substantial growth. Field Experience is a hybrid on-line and face-to-face seminar that is designed to facilitate case analysis, ongoing self-reflection, and to provide peer consultation and professional feedback relevant to best practices. The Field Experience is considered a critical professional transition to help consolidate learning and professional competencies in preparation for employment. All students engage in weekly experience seminars (either on-line or face-to-face) facilitated by a University Supervisor. Supervision is designed to provide ongoing professional feedback, case analysis, peer consultation, and continued professional development and experiences pertinent to successful practice. This course promotes the idea that educators are lifelong learners and regularly reflect on and adjust their practice.

**CUI 4700 Foundations of Education: Cognitive Theory I (3 Credits)**

Introduction to cognitive research in education. Includes theories and research regarding the implementation of these theories in specific curricula.

**CUI 4710 Foundations of Education: Cognitive Theory II (3 Credits)**

Second course in cognitive research in education. Includes theories and research regarding the implementation of these theories in specific curricula. Prerequisite: CUI 4700.

**CUI 4720 Discourse in the Mathematics Classroom (3 Credits)**

The study of discourse as it relates to mathematics teaching and student learning.

**CUI 4730 STEM and Instructional Technology (3 Credits)**

The goal of this course is to help students understand the role of technology in teaching and learning, particularly in Science, Technology, Engineering, and Mathematics (STEM) courses. Three premises guide this course: 1) Technology offers great potential for innovation in education, but it also can be dangerous if used inappropriately and indiscriminately; 2) Social and political conditions in society exert intense pressures on technology in STEM education, which poses significant challenges to STEM education leaders; and, 3) Education in general – and STEM education in particular – are political, economic, and social endeavors that reflect social arrangements. This course will enable students to view their specialization as part of a complex and larger milieu; that is the U.S. educational system.

**CUI 4740 Policy and STEM Education (3 Credits)**

In this course, students will be introduced to and explore a range of educational policies and how those policies have influenced and continue to influence Science, Technology, Engineering, and Mathematics (STEM) education. A particular focus of the class will be the underlying ideologies of policies that have had a strong influence on the development of curriculum and research in STEM education. Students will learn how to critique educational policies in general and policies that have influenced STEM education in particular. Students will also develop a policy brief that is specific to some area of STEM education that they will publicly disseminate.

**CUI 4991 MA Independent Study (1-10 Credits)****CUI 4995 Independent Research (1-10 Credits)****CUI 5980 Research as Problem Analysis (3 Credits)**

This course is the first of three culminating research courses for students in the Ed.D. in Curriculum and Instruction. This course is designed to guide candidates through the doctoral proposal process and introduce the initial stages of data collection and analysis.

**CUI 5981 Research as Intervention (3 Credits)**

This course is the second of three culminating research courses for students in the Ed.D. in Curriculum and Instruction and is designed to help candidates finish collecting their data and analyze their data. This course will also introduce and develop the evaluation or analysis section of the doctoral paper and the beginning steps of the dissemination of the research project.

**CUI 5982 Applied Research (3 Credits)**

This course is the final of three culminating research courses for students in the Ed.D. in Curriculum and Instruction and is designed to help candidates disseminate their project, reflect on their project, and defend their project. This course is specifically focused on writing the quasi-practical section of the doctoral paper and the dissemination of the research project to the community partner.

**CUI 5983 Defense of Research (1 Credit)**

This course will build on the “persistent problems of practice” and research questions identified in CUI: 5980, data collection and analysis in CUI 5981, and applied research skills in CUI 5982. By the end of the course you will be able to schedule and present your doctoral research project for defense. Completion of CUI: 5982 “Research as Applied Research” or permission of the instructor.

**CUI 5991 PhD Independent Study (1-10 Credits)****CUI 5993 Dissertation in Practice (1-4 Credits)**

Doctoral research credits for doctoral research project toward the EdD. Prerequisite: Must be an EdD student in C&I; must have completed C&I doctoral research courses (CUI 5980, CUI 5981, and CUI 5982).

**CUI 5995 Independent Research (1-10 Credits)****Special Education Courses****SPED 4001 Teaching Individuals with Developmental Disabilities DD and Behavioral Disorders (5 Credits)**

This course will introduce students to the concepts and principles of behavior on which the discipline of applied behavior analysis was founded. Topics of study will include the history and dimensions of applied behavior analysis, defining and measuring behavior, procedures and factors related to behavior change, and the role of the basic principles of behavior (positive and negative reinforcement, punishment, stimulus control, and motivating operations) in establishing new behavior and decreasing problem behavior.

**SPED 4002 Teaching Individuals with Developmental Disabilities and Behavioral Disorders (4 Credits)**

This course focuses on the basic principles of assessment, instruction, and curriculum development; application of formal and informal assessment procedures for goal selection, formulating instructional plans, and adapting instructional materials to accommodate learning needs of students with developmental disabilities and/or behavioral disorders.

**SPED 4003 Advanced Concepts and Principles in Behavior Analysis (5 Credits)**

This course focuses on the definitions and characteristics of applied behavior analysis and the concepts, principles, and processes. Concepts related to ethics and behavior change procedures will also be discussed. The purpose of this graduate-level course is to provide students pursuing a BACB® credential with 45 hours of instruction in advanced content areas of philosophical underpinnings and concepts and principles as outlined by the coursework requirements for BACB® credentials. The course covers content from areas A & B from the 5th edition of the BACB®’s Behavior Analyst Task List®.

**SPED 4004 Single Case Research Design (5 Credits)**

The purpose of this course is to provide master’s level students with 45 hours of instruction in the content areas of measurement, data display, data analysis, and single-case research experimental design and evaluation. This course describes the rationales for single-case research in applied settings. It will equip students to critique, design, and conduct single-case research for applied behavior analysis applications. The course covers content from areas C and D from the 5th edition of the BACB®’s Behavior Analyst Task List®.

**SPED 4005 Ethics in Applied Behavior Analysis (5 Credits)**

This course focuses on ethical and professional conduct in the field of applied behavior analysis. An overview of the profession of behavior analysis is addressed, including the history, foundations, and ethics of the field, as well as professional skills for ethical practice. During this course, we will specifically review the BACB's Compliance Code and disciplinary systems.

**SPED 4991 Independent Study (1-10 Credits)**

Independent study/research.

**SPED 5001 Multi-tiered Systems of Support (3 Credits)**

This course will provide (a) an overview of the historical, legal, and theoretical foundations of multi-tiered systems of support; (b) review the research and evidence-base of a multi-tiered system of support approach for behavior; and (c) explore the influence of behavior analytic procedures within a multi-tiered system of support.

**SPED 5002 FBA's and BIP's in Schools (3 Credits)**

This course will enable students to develop the skills needed for completing Functional Behavior Assessments (FBA), developing Behavior Intervention Plans (BIP), and applying behavior analytic principles to (1) implement the developed BIP, (2) monitor BIP implementation, (3) measure BIP effectiveness, and (4) collaborate with others to improve BIP implementation. Additionally, the course will focus on applying behavior analytic principles through a developmentally appropriate and culturally responsive lens.

**SPED 5003 Supervision and Management (3 Credits)**

This course focuses on supervision and management practices in the field of applied behavior analysis and related settings (i.e., clinics, schools). An overview of supervision is addressed, including foundations, ethics, and professional skills for both the supervisor and the supervisee. During this course, we will specifically review the BACB's standards for supervisory practices as they relate to improving and maintaining the behavior-analytic, professional, and ethical repertoires of practitioners and facilitate the delivery of high-quality services to his/her clients.

**Teacher Ed Prep Courses****TEP 4010 Foundations of Special Education: Inclusive Pedagogy for Students with Dis/Abilities (2-4 Credits)**

This course serves as the foundation for understanding children with disabilities and dis/abilities, as well as the philosophies, laws and policies that support the students. To be responsive to the diverse strengths, needs, and experiences children bring to the classroom, educators need a foundational knowledge of special education and opportunities that can influence student learning. We emphasize a strengths-based perspective and provide pedagogy for supporting for all learners. We introduce the classroom teacher's role in understanding the Individual Education Program (IEP) process, designing lesson plans and inclusive practices based on differentiated and universal design learning instructional strategies and working collaboratively with families and interdisciplinary teams. In addition, we introduce potential commonalities of students with high-incidence disabilities, the history and legal aspects of Special Education and the Response to Intervention Model (RtI)/Multi-Tiered System of Supports (MTSS). Course restricted to students in TEP program or instructor approval.

**TEP 4520 Art Methods K-12 (3-4 Credits)**

Throughout this course, Apprentice Teachers will analyze the following essential questions about teaching and learning in the visual arts field: 1) What type of visual arts classroom environment best supports student learning and skill development in a 21st century classroom?, 2) How do the Colorado Academic Standards guide arts instruction?, 3) What is the role of descriptive feedback in the reflective practice of teaching and learning?, 4) How can visual arts instruction enhance positive-identity development for diverse learners?, and 5) How can visual arts educators use arts assessment in curriculum planning and to gauge student learning?.

**TEP 4590 Elementary Literacy Instruction I (3,4 Credits)**

This is the first of two elementary literacy classes. The purpose of Literacy Instruction I is to provide apprentice teachers with the research-based foundations of reading processes for diverse learners. Teacher candidates will be knowledgeable about the development of reading, the science of reading research, and its application to effective instructional practices within the language domains of reading, writing, speaking, and listening. Teacher candidates will learn how to plan and organize core literacy practices such as interactive read alouds and small group reading instruction in conjunction with Colorado Academic Standards and the Common Core State Standards. The National Reading Panel (NRP) summarized their findings in five components of reading instruction that will guide our work together: phonemic awareness, phonics, fluency, vocabulary development, and text comprehension. Course restricted to students in TEP program or instructor approval.

**TEP 4591 Elementary Literacy Instruction II (3-4 Credits)**

This is the second quarter of a twenty-week course focused on literacy with an emphasis on language, phonics, and writing. The purpose of TEP 4591 or Literacy Instruction is to provide teacher candidates with the research-based foundations and processes employed in skillful speaking, listening, reading and writing. Specifically, we will look at the building blocks of literacy that include phonics and language acquisition: phonology, morphology, and syntax and its application to reading and writing as we build from our reading emphasis the previous quarter. In this course, there will be a shift from literacy input (reading and listening) from the previous quarter to literacy output (writing and speaking). Further, at the end of the course, teacher candidates will reflect upon their literacy philosophy as we review key concepts and classroom strategies. Course restricted to students in TEP program or instructor approval.

**TEP 4592 Secondary Literacy Instruction I (3,4 Credits)**

This is the first quarter of a twenty-week course on literacy. The purpose of this course is to provide teacher candidates with the research-based foundations of literacy and cognitive processes employed in skillful reading and writing for effective secondary instruction. In this first course, teacher candidates will be knowledgeable about the stages of reading as well as student literacy development in reading, writing, speaking, and listening. Teacher candidates will practice recognizing and evaluating these skills on a micro level through a mini-case study of an individual student. Teacher candidates will learn how to plan, organize, and tailor literacy instruction in their specific content area using ongoing and summative assessment in conjunction with the Common Core State Standards/Colorado Academic Standards. Teacher candidates will develop the knowledge, skills and understanding of the science of reading as it applies to all students from a wide range of backgrounds. There is a special emphasis in this course on literacy instruction in urban, diverse, and multi-lingual settings. Course restricted to students in TEP program or instructor approval.

**TEP 4593 Secondary Literacy Instruction II (3,4 Credits)**

This is a literacy course for secondary-level English, math, science and social studies teacher candidates. In this course, there will be a shift of focus from literacy input (reading) from the previous quarter to literacy output (writing), and we will broaden our scope from analyzing one student at a time to assessing and addressing students' literacy needs in a whole-classroom environment. This quarter we will also examine outside influences – such as culture, language, and technology – on classroom literacy and how literacy practices and teaching methods can be adapted for multiple contexts. Throughout the course, teacher candidates will develop and reflect upon their literacy philosophy in terms of planning and instruction in a specific content area. Course restricted to students in TEP program or instructor approval.

**TEP 4600 Introduction to Secondary Methods (3-6 Credits)**

Provides general introduction to principles of effective secondary instruction curriculum design and assessment. Frequently covered topics include: design of classroom environments, comparison of different instructional practices, purposes for and approaches to assessment, comparison of middle and high school philosophies, introduction to instructional unit plan development, and theories of instructional approach and design. Course lays a foundation for more specialized subject-matter methods courses. Prerequisite: enrollment in the Teacher Education Program.

**TEP 4610 English in Secondary School (3-5 Credits)**

In this course, Apprentice Teachers will explore the theory and practice of teaching English Language Arts at the secondary level. Topics include standards alignment, student cognitive development, and pedagogical content knowledge. Course restricted to students in TEP program or instructor approval.

**TEP 4620 Social Science in Secondary School (3-5 Credits)**

In this course, Apprentice Teachers will explore the theory and practice of teaching Social Studies at the secondary level. Topics include standards alignment, student cognitive development, and pedagogical content knowledge. Course restricted to students in TEP program or instructor approval.

**TEP 4630 Science in Secondary School (3-5 Credits)**

In this course, Apprentice Teachers will explore the theory and practice of teaching Science at the secondary level. Topics include standards alignment, student cognitive development, and pedagogical content knowledge.

**TEP 4640 Math in Secondary School (3-5 Credits)**

In this course, Apprentice Teachers will explore the theory and practice of teaching Mathematics at the secondary level. Topics include standards alignment, student cognitive development, and pedagogical content knowledge. Course restricted to students in TEP program or instructor approval.

**TEP 4650 Foreign Language Methods in K-12 Schools (3-5 Credits)**

In this course, Apprentice Teachers will explore the theory and practice of teaching Foreign Language at the secondary level. Topics include standards alignment, student cognitive development, and pedagogical content knowledge.

**TEP 4690 Field Experience (1-12 Credits)**

Involves field experiences, including full-day teaching for 12 weeks in elementary or secondary school classroom and regularly scheduled seminar discussions with supervisor. Prerequisite: enrollment in the Teacher Education Program.

**TEP 4691 Field Experience I (1 Credit)**

This is the first quarter of an academic year-long field experience to develop and reflect upon effective teaching practices in an urban school setting. Following the gradual release calendar of teaching responsibilities, Residents will be observed, coached and evaluated on specific LEAP indicators in the domains of learning environment, instruction, and professionalism. In conjunction with the CUI 4540 Curriculum, Instruction and Assessment course, Residents will deepen their understanding of teaching and learning in diverse schools to increase student achievement for all students.

**TEP 4692 Field Experience II (1 Credit)**

This is the second quarter of an academic year-long field experience to develop and reflect upon effective teaching practices in an urban school setting. Following the gradual release calendar of teaching responsibilities, Residents will be observed, coached and evaluated on specific LEAP indicators in the domains of learning environment, instruction, and professionalism. In conjunction with the CUI 4541 Curriculum, Instruction and Assessment course, Residents will deepen their understanding of teaching and learning in diverse schools to increase student achievement for all students.

**TEP 4693 Field Experience III (1 Credit)**

This is the final quarter of an academic year-long field experience to develop and reflect upon effective teaching practices in an urban school setting. Following the gradual release calendar of teaching responsibilities, Residents will be observed, coached and evaluated on specific LEAP indicators in the domains of learning environment, instruction, and professionalism. In conjunction with the CUI 4542 Curriculum, Instruction and Assessment course, Residents will deepen their understanding of teaching and learning in diverse schools to increase student achievement for all students.

**TEP 4781 Elementary Art Methods (3-6 Credits)**

Prepares K-12 art teachers to design and implement effective instruction in elementary school classrooms. Course introduces full array of sound teaching and assessment strategies for all aspects of art. Prerequisite: enrollment in the Teacher Education Program.

**TEP 4782 Secondary Art Methods (3-4 Credits)**

Prepares K-12 art teachers to design and implement effective instruction in secondary school classrooms. Course introduces full array of sound teaching and assessment strategies for all aspects of art. Prerequisite: enrollment in the Teacher Education Program.

**TEP 4991 Independent Study (1-10 Credits)****TEP 4995 Independent Research (1-10 Credits)**

## College of Natural Sciences and Mathematics

The College of Natural Sciences & Mathematics offers graduate students opportunities to collaborate with faculty scholars to apply new knowledge and research that changes lives and challenges entrenched ideas. We offer access to resources such as innovative geospatial software, high resolution fluorescence imaging systems, and electron paramagnetic resonance—amongst much more. From the mystery of a blinking binary star system to the movement of a molecule inside a cell, the College of Natural Sciences & Mathematics offers the expertise and resources to support your investigative journey.

## Biological Sciences

Office: F.W. Olin Hall, Room 102

Mailing Address: 2190 E. Iliff Ave., Denver, CO 80208-9010

Phone: 303-871-3661

Fax: 303-871-3471

Email: [biology@du.edu](mailto:biology@du.edu) ([Biology@du.edu](mailto:biology@du.edu))

Website: <http://www.biology.du.edu> (<https://www.du.edu/nsm/departments/biologicalsciences/>)

### Why study biology at the University of Denver?

The department of biological sciences offers graduate programs at the doctoral (PhD) or master's (MS) level. Students earn a degree in biological studies with a concentration in either cell and molecular biology or biology, ecology and evolution. Both program tracks involve a combination of course work, lab or field research and a defended thesis or dissertation. Students begin their research under the direction of a faculty member during the first year. All students are expected to present their work at scientific meetings and publish their work in peer-reviewed scientific journals. Doctoral students also have the opportunity to participate in teaching undergraduate courses.

### Research areas

The PhD and MS programs are centered on primary research that coincides with faculty experience and expertise. Students will conduct their research in a university environment using state-of-the-art techniques and facilities. The current research emphases of the department are

- Cell and molecular biology is supported by major research facilities that include real-time PCR instruments, a DNA WAVE HPLC, a Hitachi transmission electron microscope and an Olympus Fluoview 1000 confocal microscope and other advanced imaging systems.
- Biology, ecology and evolution takes advantage of unique field study sites that include an alpine research station on Mt. Evans in the Arapaho National Forest and collaborative research opportunities with the Denver Botanic Gardens.

### Career opportunities

A student who completes the MS degree is in a strong position to pursue a range of postgraduate opportunities, including a career in biotech, academic or government lab or agency, or continued studies in a professional or PhD program. The doctoral degree carries the credential for a professional career in research or academics.

## Doctor of Philosophy in Biological Sciences with a Concentration in Biology, Ecology and Evolution

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

**Prerequisites**

- Students with an undergraduate major in chemistry, physics or mathematics and minimal preparation in biological sciences also will be considered but may be required to take undergraduate courses when the prerequisites are lacking. Course prerequisites include: one year of general chemistry, one year of calculus (recommended), one year of physics, two years of biology and one year of organic chemistry.

**Standardized Test Scores**

- GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.

If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

**English Language Proficiency Test Score Requirements**

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

## Professional Science Master in Biomedical Sciences

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### Prerequisites

- Applicants must earn and submit proof of earning the equivalent of a baccalaureate degree in biology, biochemistry, biomedical sciences or a related field from a regionally accredited institution prior to beginning graduate coursework at DU. Students with an undergraduate major in chemistry, physics or mathematics and minimal preparation in biological sciences will also be considered but may be required to take undergraduate courses when the prerequisites are lacking. Course prerequisites include: two years of biology and one year of chemistry, one year of calculus (recommended), and one year of physics (recommended).

### Standardized Test Scores

- GRE, MCAT or DAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Acceptance Offered: No, this program does not offer English Conditional Admission.

---

## Professional Science Master in Biomedical Sciences with a Concentration in Clinical Exercise Physiology

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The ETS institution code to submit GRE scores to the University of Denver is 4842.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Acceptance Offered: No, this program does not offer English Conditional Admission.

## Master of Science in Clinical Exercise Physiology

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Acceptance Offered: No, this program does not offer English Conditional Admission.

Graduate studies in the department of biological sciences provide graduate students with a set of structured core classes that establish a strong foundation of basic knowledge in cell and molecular biology or ecology and evolution and that allow the knowledge to be built upon in subsequent specialized courses and independent research. Research areas are usually linked to the interest of the supervising faculty member. The department's current research strengths center around the two areas: cell and molecular biology (biophysics, neuroscience, neuroendocrinology, cell signaling and physiology, developmental biology, aging, molecular forensics and molecular evolution) and ecology and evolution (biogeochemistry, conservation biology, restoration ecology, molecular evolution). To complete research commitments, MS students generally work with a major professor of choice in the laboratory and/or field for about two years, while PhD students generally work for five years.

## Doctoral Programs

### Doctor of Philosophy in Biological Sciences with a Concentration in Biology, Ecology and Evolution

#### Degree Requirements

The major requirements for completion of the PhD degree are 90 quarter hours of graduate course work and research credit, completion of all candidacy exams, and successful defense of the PhD dissertation. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by their adviser and dissertation committee.

#### Coursework Requirements

The course work includes the following graduate core curriculum:

Code	Title	Credits
BIOL 4220	Grad Sem: Ecology & Evolution	
BIOL 4090 or BIOL 4085	Biostatistics Accelerated Biostatistics	
BIOL 4095	Research Methods and Analysis	
BIOL 4330	Foundations in Literature: Ecology (3 terms required)	

BIOL 4231	Responsible Conduct in Rsrch
BIOL 4991 or BIOL 4995	Independent Study (*) Independent Research

- Courses that the dissertation committee judges to complement the student's major field also may be used.

**Total Credits****90****Non-coursework requirements**

Additional requirements are attendance at departmental seminars, passing performance in the qualifying examination and the research proposal examination, presentation of one departmental seminar per year, completion of a research dissertation of publishable quality, and successful oral defense of the dissertation. PhD students are required to pass both a qualifying exam and research proposal exam to advance to candidacy.

Up to 10 quarter hours of graduate credit (or a blanket transfer of 45 quarter hours from a previous master's program) may be accepted as transfer credit with approval of the departmental graduate committee and the Office of Graduate Studies.

**Doctor of Philosophy in Biological Sciences with a Concentration in Cell and Molecular Biology****Degree Requirements**

The major requirements for completion of the PhD degree are 90 quarter hours of graduate course work and research credit, completion of all candidacy exams, and successful defense of the PhD dissertation. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by their adviser and dissertation committee.

**Coursework Requirements**

The course work includes the 20-credit graduate core curriculum:

Code	Title	Credits
BIOL 4211	Advanced Cell Biology	
BIOL 4212	Advanced Molecular Biology	
BIOL 4213	Advanced Cell Signaling	
BIOL 4310	Foundations in Literature: Cell and Molecular Biology (3 terms required)	
BIOL 4090 or BIOL 4085	Biostatistics Accelerated Biostatistics	
BIOL 4231	Responsible Conduct in Rsrch	
BIOL 4991 or BIOL 4995	Independent Study (*) Independent Research	

- Courses the dissertation committee judges to complement the student's major field also may be used.

**Total Credits****90****Non-coursework requirements**

Additional requirements are attendance at departmental seminars, passing performance in the qualifying examination and the research proposal examination, presentation of one departmental seminar per year, completion of a research dissertation of publishable quality, and successful oral defense of the dissertation. PhD students are required to pass both a qualifying exam and research proposal exam to advance to candidacy.

Up to 10 quarter hours of graduate credit (or a blanket transfer of 45 quarter hours from a previous master's program) may be accepted as transfer credit with approval of the departmental graduate committee and the Office of Graduate Studies.

**Professional Science Master Programs****Professional Science Master in Biomedical Sciences**

The Professional Science Master's (PSM) program in Biomedical Sciences offers rigorous academic training and professional practical skills to prepare students for challenging careers in the biomedical and health sciences. Through advanced coursework in the natural sciences and complementary coursework, students gain in-depth scientific knowledge and a strong foundation in ethics, leadership, communication and professional skills. Furthermore, the students will gain awareness of the many issues, concerns, and future directions of health and biomedical sciences fields.

This multi- and inter-disciplinary program is designed to be very individualized with one-on-one advising to customize the curriculum and capstone internship in order to complement and expand on the student's past academics and experiences and to prepare them for their future career goals. The student is matched with a capstone mentor whose professional experiences aligns with the student's future career goals. The overall goal of the

capstone experience is for the student to gain advanced disciplinary knowledge and professional skills by applying the appropriate modes of inquiry, research and professional skills to address a specific problem or concern in the biomedical sciences.

The PSM program emphasizes active communication with an external Advisory Board to ensure that the curriculum and capstone experiences are relevant and beneficial to both students and the bioscience and healthcare industries. The advisory board, comprised of leaders in biomedical research, biotechnology, clinical healthcare, health institutions and hospital administration, provides input regarding the knowledge and skill set and professional competencies most sought by employers and academic graduate programs in biomedical fields. This Master's program is recognized and approved as an affiliated PSM program with the National Professional Science Association.

<b>Total Credits</b>		<b>45</b>

Minimum credits required for degree: 45

#### Non-coursework Requirements

- Capstone project- The program requires a capstone project which involves interactions with health or biomedical professions from outside of the DU community. The capstone experience will be culminated in a formal scholarly work (both written and orally presented) that reflects a student's individual professional interest and the integration of science with strong professional skills. Thus, the capstone project includes a written and public oral presentation of the project.

#### Additional requirements:

- maintain a minimum GPA of 3.0
- successful completion of capstone project
- completion of capstone paper
- successful oral defense of capstone project

---

## Professional Science Master in Biomedical Sciences with a Concentration in Clinical Exercise Physiology

The Professional Science Master's (PSM) in Biomedical Sciences program offers rigorous advanced academic training and professional practical skills in order to prepare students for challenging careers in the biomedical sciences and health sciences. The PSM in Biomedical Sciences is a rigorous one-year academic program requiring 45-credit hours of course work and successful completion of the written and oral defense of a capstone project. The concentration in Clinical Exercise Physiology provides expanding academic offerings in the area of integrative human physiology, as well as advanced knowledge of cardiovascular, pulmonary and metabolic diseases, orthopedic or musculoskeletal, neuromuscular, and neoplastic immunological or hematological diseases.

Students who enroll in the concentration in Clinical Exercise Physiology are required to complete the PSM required coursework and choose from the physiology-selected elective coursework. The physiology coursework is relatively flexible to consider the academic background of the individual student. All coursework plans will be determined in collaboration with the program director and approved by the director. For the concentration in CEP, student will complete a capstone project related to exercise physiology with a capstone mentor who specializes in a specific physiological system and/or exercise physiology.

- successful completion of capstone project
- completion of capstone paper
- successful oral defense of capstone project

## Master of Science Programs

### Master of Science in Biological Sciences with a Concentration in Biology, Ecology and Evolution

#### Degree Requirements

The major requirements for completion of the MS degree are 45 quarter hours of course work and research credit, and successful defense of the MS thesis. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by the major adviser and thesis committee.

#### Coursework Requirements

The course work includes the following graduate core curriculum:

Code	Title	Credits
BIOL 4220	Grad Sem: Ecology & Evolution	
BIOL 4090	Biostatistics	
or BIOL 4085	Accelerated Biostatistics	
BIOL 4095	Research Methods and Analysis	
BIOL 4330	Foundations in Literature: Ecology (2 terms needed)	
BIOL 4231	Responsible Conduct in Rsrch	
BIOL 4991	Independent Study (*)	
or BIOL 4995	Independent Research	

- Courses the thesis committee judges to complement the student's major field also may be used.

#### Total Credits

45

#### Non-coursework Requirements

Additional requirements are attendance at all departmental seminars, a thesis based on a research project approved by the thesis committee, and a successful oral defense of the thesis.

## Master of Science in Biological Sciences with a Concentration in Cell and Molecular Biology

### Degree Requirements

The major requirements for completion of the MS degree are 45 quarter hours of course work and research credit, and successful defense of the MS thesis. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by the major adviser and thesis committee.

### Coursework Requirements

The course work includes the 16-credit graduate core curriculum:

Code	Title	Credits
BIOL 4211	Advanced Cell Biology	
BIOL 4310	Foundations in Literature: Cell and Molecular Biology (3 terms required)	
BIOL 4231	Responsible Conduct in Rsrch

BIOL 4212	Advanced Molecular Biology	
BIOL 4213	Advanced Cell Signaling	
BIOL 4991 or BIOL 4995	Independent Study (*) Independent Research	
• Courses the thesis committee judges to complement the student's major field also may be used.		
<b>Total Credits</b>		<b>45</b>

### Non-coursework requirements

Additional requirements are attendance at all departmental seminars, a thesis based on a research project approved by the thesis committee and a successful oral defense of the thesis.

---

## Master of Science in Clinical Exercise Physiology

In clinical exercise physiology (CEP), exercise is used to help patients manage or reduce their risk of chronic disease. Clinicians develop exercise recommendations, administer diagnostics tests and provide guidance that promotes healthy lifestyles. This Master's degree program provides in-depth knowledge and hands-on experiences in preventive and rehabilitative practices for patients at-risk of or challenged by cardiovascular, pulmonary and metabolic diseases, orthopedic or musculoskeletal, neuromuscular, and neoplastic immunological or hematological diseases, as well as healthy and low risk populations. The curriculum provides the knowledge, clinical experience and skills needed by individuals preparing for successful completion of the exam for the ACSM clinical exercise physiologist certification. The program prepares students for clinical and research careers in clinics, research centers, or health and wellness centers, especially careers in cardiac rehabilitation, pulmonary rehabilitation, diabetes prevention, cancer prevention and rehabilitation, obesity prevention and treatment, and other related careers. CEPs also could pursue positions working with both amateur and professional athletes who aspire to improve their performance. If further advanced education is of interest, this program provides an excellent foundation for doctoral work in physical therapy, occupational therapy, and other related disciplines or in preparation for medical school.

## Biology (BIOL)

### **BIOL 3005 Science Communication (4 Credits)**

Science communication has shaped, and continues to shape, the world in which we live (e.g., why you wash your hands, why we don't feed bears in U.S. national parks anymore, and why some students imagine themselves becoming scientists or not). Sharing how science is conducted and how new knowledge is generated through the scientific method also plays a critical role in our future: creating engaged citizens, shaping the next generation of scientists, increasing diversity and diverse perspectives in the sciences, informing policy-makers and lawyers, combatting misconceptions, increasing trust of scientists, and guiding our own individual behaviors. But, like any other complex skillset, science communication takes practice. This course provides students with a range of resources and skills for effective, ethical, and evidence-based communication of complex socio-scientific issues. It provides a supportive environment in which students will practice and refine their science communication through peer feedback and engagement with real audiences. The focus is on cultivating practical communication skills, with emphasis on effective speaking, writing and exhibition of scientific topics with the variety of audiences students will encounter in their future careers. Course readings, activities, and final projects also examine how identity shapes both the science we do and the lenses we and other stakeholders bring to communication tasks. The course is hybrid, highly interactive, and writing-intensive. This course is restricted to Junior or Senior Standing UG majoring in the College of Natural Sciences and Mathematics.

### **BIOL 3025 Science and the Law (2,4 Credits)**

This course will focus on the intersection of science and US law. Four major areas of focus that will be covered are the admissibility of expert witnesses / scientific evidence in court; how advances in forensic genetics and national DNA databases raise legal issues pertaining to expectations of privacy and the standards for reaching a verdict; the impact of US Supreme Court opinions on the patenting of genes used as diagnostic markers for human disease and the legal landscape surrounding issues of evolution and creationism/intelligent design. Students will then explore how the law impacts their own areas of scientific interest. The goal of this course is to increase our understanding as scientists of how advances in science impact and are impacted by the US judicial system. PREREQUISITES: BIOL 1010 AND BIOL 1011.

### **BIOL 3035 Invasive Species Ecology (4 Credits)**

This course investigates those plants and animal species that have dramatically expanded their ranges and cause ecological harm. Topics covered include the mechanisms of ecological impacts across the globe, how invasive species are used to test basic ecological theory, the application of this research for managing real species, and related issues such as the debate within the scientific community about the term "invasive." We use a case-study approach, and students have the opportunity to go into the field as a class to observe the real invasions and learn sampling methods.

### **BIOL 3044 Coral Reef Ecology (3 Credits)**

Ecology of coral reefs; organization and distribution of reefs; review of reef organisms and their interactions with each other and their physical environment; threats to coral reef conservation. This course counts as a category elective for Ecology and Biodiversity majors. Prerequisite: (BIOL 2010 or BIOL 2050) OR (GEOG 1201, GEOG 1202, and GEOG 1203).

### **BIOL 3045 Coral Reef Ecology Lab (1 Credit)**

Ecology of coral reefs laboratory to supplement lecture material; travel to the Caribbean over spring break to observe coral reefs firsthand; introduction to research methods. SCUBA certification and permission of instructor required. A travel and dive fee is associated with this course.

### **BIOL 3055 Ecology of the Rockies (4 Credits)**

A week in residence at the Mt. Evans Field Station prior to the start of fall quarter includes field projects dealing with ecology and environmental issues. On campus classes involve data analysis and interpretation and formal scientific communication. Themes include terrestrial and aquatic ecosystems, taxonomic groups ranging from conifer stands to aquatic insects and mountain goats. Lab fee associated with this course. Prerequisite: BIOL 2010 or permission of instructor.

**BIOL 3070 Ecological Field Methods (4 Credits)**

Series of field exercises for students to learn principles and procedures of field methodology, data analysis and technical writing in ecology; problems drawn from population, community and ecosystem ecology. Lab fee associated with this course. Prerequisite: BIOL 2010.

**BIOL 3074 Forest Ecology (4 Credits)**

This course provides an overview of the distribution, structure, function, and dynamics of forest ecosystems. Topics include: paleoecology, ecophysiology, disturbance, succession, community analysis, forest hydrology, primary productivity, and nutrient cycling. Throughout, we maintain an emphasis on the scientific process and how it is used to study the controls on the distribution and abundance of organisms.

**BIOL 3085 Insect Ecology (4 Credits)**

A general introduction to insect biology and the science of entomology. Arthropods are the most diverse group of animals on Earth and insects account for more than half of all known living organisms. This course explores the biodiversity of insects on Earth, insect morphology and physiology. The evolutionary history and taxonomy of key orders of insects is emphasized as well as the importance of insects to our everyday lives. This course counts as a category elective for Ecology and Biodiversity majors. Prerequisites: BIOL 1010, BIOL 1011, and BIOL 2010.

**BIOL 3090 Microbial Ecology (4 Credits)**

Interactions among microorganisms and their environment. Impact of ecological principles on microbial diseases, pollutant degradation, nutrient cycles and global change. Prerequisites: BIOL 1010, BIOL 1020, AND BIOL 2510.

**BIOL 3095 Global Change Ecology (4 Credits)**

Over the past century, the mean surface temperature of our planet has increased slightly less than 1°C. While this may seem like a small increment, this change is already profoundly affecting Earth's organisms and ecological communities, and predictions for the impacts of continued change range from severe to catastrophic. Humans are also changing the environment through alteration of nutrient and water regimes. Topics include cause of climate change, comparison to past climatic change, human contribution to change and effect on organisms, communities and ecosystems. Prerequisites: BIOL 1010, BIOL 1011, AND BIOL 2010. RECOMMENDED PREREQUISITES/COREQUISITES: BIOL 2090.

**BIOL 3110 Special Topics: Biology (1-5 Credits)**

Topics of special interest to teaching/research faculty of department presented as needed to complement and expand existing curriculum. May be repeated for credit. PREREQUISITES: BIOL 1010.

**BIOL 3120 General Microbiology (4 Credits)**

Fundamental principles of microorganisms in the world and in disease; role of bacteria in biological phenomena. Includes laboratory. Lab fee associated with this course. Counts as a category elective for Ecology and Biodiversity majors. Prerequisite: BIOL 2120.

**BIOL 3145 Cellular and Molecular Biology of Cancer (4 Credits)**

This course examines the mechanisms that underlie the development and progression of cancer. The cellular and molecular events that drive uncontrolled cell proliferation and eventual metastasis of tumors are discussed. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

**BIOL 3150 Intracellular Dynamics (4 Credits)**

Focuses on spatial and temporal control of intracellular processes with an emphasis on neuronal and endocrine cells. Topics include vesicular traffic, protein targeting, dynamics and spatial organization of signaling complexes. Emphasis on modern techniques of cell and molecular biology with examples from primary literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

**BIOL 3160 Biophysics: Ion Channels & Disease (4 Credits)**

Examines ion channel structure and function and the ways in which this information provides insight into human disease. The focus is on the use of biophysical techniques in combination with molecular and genetic analysis of channel genes. General Physics recommended. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

**BIOL 3230 Nutrition (3 Credits)**

Investigation of metabolism, all nutrients and various applications of nutrition to sports and healthy living. Prerequisite: BIOL 3250.

**BIOL 3241 Anatomy and Physiology of the Skeletal, Nervous and Muscular systems (0-5 Credits)**

This course is designed to introduce students to the fundamental concepts, content and scientific bases of Skeletal, Muscular, and Nervous system anatomy and physiology at both macroscopic and microscopic levels. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. The course will utilize diverse resources, exercises, and activities to engage you in the learning process, including, text, video, animations, models, dissections, inquiry-based learning, and a variety of assessments. Please note that the lab portion of this course does require dissection. Prerequisites: BIOL 2120.

**BIOL 3242 Human Anatomy and Physiology - Systems of homeostasis (0-5 Credits)**

This course is designed to introduce students to the fundamental concepts, content and scientific bases of Cardiovascular, Respiratory, Urinary, Digestive, Immune and Reproductive system anatomy and physiology at both macroscopic and microscopic levels. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. The course will utilize diverse resources, exercises, and activities to engage you in the learning process, including, text, video, animations, models, dissections, inquiry-based learning, and a variety of assessments. Please note that the lab portion of this course does require dissection. Prerequisites: BIOL 2120.

**BIOL 3251 Exercise Physiology (4 Credits)**

This course will cover exercise physiology topics included but not limited to: energy systems, physiological response to exercise/training, and exercise programming. A strong background in human physiology is recommended. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 1010.

**BIOL 3252 High Altitude Physiology (4 Credits)**

This course is an advanced course in physiology for those interested in both the impacts of altitude exposure on health and athletic performance. We live at altitude in Denver, and in fact there are many factors affecting our bodies (which we may or may not realize) that impact our daily lives. This course aims to provide insight on the acute and chronic physiological responses of altitude as well as to provide a deeper understanding into the use of hypoxic environments for improving health and benefiting athletic performance. We will explore the physiological mechanisms related to these reduced oxygen environments as well as develop projects that contribute to the understanding of using this environment as a stimulus. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 3242.

**BIOL 3253 Environmental Physiology of Animals (4 Credits)**

By studying species across the animal kingdom, we will learn about the vast array of physiological strategies that have evolved to help animals maintain homeostasis in the face of varied environmental challenges. We will cover foundational principals of animal physiological ecology and evolution, as well as new and exciting discoveries through weekly discussions of primary literature. We will focus primary literature discussions on "extreme environments," as Earth's harshest landscapes provide exciting and powerful examples of adaptations of physiological systems. This course will be delivered through a combination of lectures, active learning assignments, readings from the scientific literature, and group discussions. By the end of this course, you will develop a new perspective on the ecological and evolutionary factors that shape physiological similarities and differences among the animals of our planet (including humans). This course counts as a category elective for the Ecology and Biodiversity major and Physiology in Health and Disease major. Prerequisites: BIOL 1010 and BIOL 1011.

**BIOL 3256 Advanced Human Anatomy & Physiology (0-5 Credits)**

This one quarter course is intended for advanced biology and physiology majors with an interest in the anatomical structure and physiological functioning of body systems. This course builds upon the Human Anatomy and Human Physiology courses that are prerequisites. This advanced course will explore in greater depth understanding mechanisms of action of major body systems and elaborate on the relationship between structure and function. In addition to didactic content, students will complete evaluation of primary literature and design laboratory experiments to test hypotheses of interest. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, models, dissections, inquiry-based learning, experimentation and a variety of assessments. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. Please note that the lab portion of this course requires dissection. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisites: BIOL 3241 and BIOL 3242.

**BIOL 3260 Nutritional Physiology (4 Credits)**

This course is designed to introduce the fundamental concepts, content and scientific bases of nutritional physiology at the levels. This course will examine the scientific structure and properties of carbohydrates, proteins and lipids as the major macronutrients required for human health. In addition, it includes exploration of the digestion, absorption and metabolism of both macronutrients and micronutrients. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, inquiry-based learning, experimentation and a variety of assessments. Prerequisite: BIOL 2120.

**BIOL 3280 Intro to Pathophysiology (4 Credits)**

This course is designed as an introduction of the mechanisms and consequences of disease based on physiological dysfunction in the major organ systems. The course will focus on the fundamental concepts and processes of human pathophysiology through exploration of the unique physiological roles of several body systems, how these systems have important integrative relationships that underlie the overall physiological functioning of healthy humans, and how system function is altered in disease and the clinical manifestations of these changes. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 2120. A course in human physiology is recommended.

**BIOL 3410 Animal Behavior (4 Credits)**

This class examines animal behavior from an evolutionary and ecological perspective. The course provides the background needed to understand behavioral evolution, including a focus on the inheritance of behavior, natural selection, sexual selection, and kin selection. This class studies the evolution of a variety of behaviors, including communication and displays, mate choice, parental care, cooperation, mating systems, social behavior, habitat selection, foraging, and anti-predator behavior. The emphasis is on theoretical principles, design of experiments, and interpretation of data. This course counts as a category elective for the Ecology and Biodiversity major. Prerequisites: BIOL 1010 and BIOL 1011, and BIOL 2010. Recommended Prerequisite: BIOL 2090.

**BIOL 3560 Molecular Biology Laboratory (4 Credits)**

Laboratory based course that covers techniques in gene excision, cloning and reinsertion and gene sequencing. Lab fee associated with this course. Prerequisite: BIOL 2510, or permission of instructor.

**BIOL 3570 Proteins in Biological Systems (4 Credits)**

Proteins considered in their biological setting; protein synthesis and degradation; survey of protein functions in vivo; introduction to protein biotechnology. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120.

**BIOL 3610 Developmental Biology (4 Credits)**

Processes and mechanisms of development, exemplified by higher animal embryogenesis, with consideration of microbial model systems. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120 and 2510.

**BIOL 3615 Blood Vessel Development and Disease (4 Credits)**

This course details the underlying biological programs during blood vessel development and mechanisms that lead to vascular pathologies. The class will incorporate aspects embryology, signaling transduction, and genetics as well as current techniques in developmental biology to comprehensively cover how blood vessels are formed embryonically. Additionally, we will discuss in detail how defects in blood vessel-related signaling programs later manifest into disease. Prerequisite for this course is Cell Structure and Function (BIOL2120/2121).

**BIOL 3630 Cell Biology of Development (4 Credits)**

Every organism has a stereotypical shape, but how does this shape arise? This course examines the cellular and molecular mechanisms that direct the forming of body and tissue shape. This course counts a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

**BIOL 3640 Introductory Neurobiology (4 Credits)**

Organization and function of vertebrate central nervous system; nature of action potential, biochemistry of neurotransmitters, neuropeptides, functional anatomy of nervous system, phylogeny of nervous system. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

**BIOL 3641 Systems Neuroscience (4 Credits)**

Structure and function of the brain and spinal cord, emphasis on functional systems including sensory perception, motor control and consciousness. This course counts as a category elective for the Cognitive Neuroscience concentration. Prerequisite: BIOL 3640 or 3241.

**BIOL 3642 Neuropharmacology (4 Credits)**

How psychoactive drugs exert their effects on the nervous system; drugs of abuse and drugs used in the treatment of psychotic and neurodegenerative disorders. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120. Recommended prerequisites: BIOL 3640.

**BIOL 3644 Neuromuscular Pathophysiology (4 Credits)**

Cellular and molecular basis for normal nerve and muscle functions and the alteration of these functions by toxins, trauma and diseases of the brain, nerves and muscles; how specific insults produce clinical symptoms and pathology. Prerequisite: BIOL 2120.

**BIOL 3646 Seminar: Cognitive Neuroscience (2 Credits)**

This seminar is the capstone course for the neuroscience portion of the cognitive neuroscience program. Seminar topics include but are not limited to neurological disorders, model systems in neuroscience and sensory systems.

**BIOL 3647 Neuroscience of Movement (4 Credits)**

Producing the vast array of movements that humans (and many animals) use everyday represents one of the body's greatest challenges and greatest successes. These various movements require that the nervous, muscular, and skeletal systems work in concert to achieve a common goal. This course will explore the scientific basis of movement production, with particular emphasis on the neuroscience of motor control. We will explore how the nervous system drives the development of movement strategies at an early age, modifies movement strategies to adapt to changing demands throughout life, and how injury, dysfunction, and/or aging can lead to movement challenges. This course counts as a category elective for the Physiology in Health and Disease major and Cognitive Neuroscience concentration. Required prerequisite: Cell Structure & Function (BIOL 2120); Recommended prerequisite (1 or more of the following): Introduction to Neuroscience (BIOL 3640) or permission of instructor.

**BIOL 3648 Molecular Mechanisms of Neurological Disease (4 Credits)**

This course will be an in-depth study into some of the key molecular mechanisms involved in the pathogenesis of human neurological disease. A particular emphasis will be placed on the role of RNA regulation and metabolism. The primary focus will be on five devastating diseases: 1. Spinal Muscular Atrophy (SMA) 2. Fragile X Syndrome (FXS) and Fragile X Tremor Ataxia Syndrome (FXTAS) 3. Myotonic Dystrophy type 1 and 2 (DM1 and DM2) 4. Spinocerebellar Ataxia type 2 (SCA2) 5. Amyotrophic Lateral Sclerosis (ALS) and Frontotemporal Dementia (FTD) This course will cover a variety of topics including disease pathophysiology and pathogenesis. However, readings will be assigned from the recent primary literature discussing cellular and molecular mechanisms. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2510 Genetics.

**BIOL 3649 Neurodegeneration and Neurotrauma: Mechanisms and Therapeutics (4 Credits)**

Neurodegeneration and Neurotrauma: Mechanisms and Therapeutics covers the following disorders: Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, Huntington's disease, spinocerebellar ataxia, Creutzfeldt-Jakob disease, multiple sclerosis, traumatic brain injury and spinal cord injury. Course literature includes primary journal articles and review papers describing the etiology and pathophysiological mechanisms of these disorders. Potential therapeutic approaches to treatment are also investigated. The course format typically includes a lecture reviewing the basic biology, symptoms, and current treatments for each disorder, followed by a thorough analysis of primary research papers focused on novel molecular mechanisms and new targets for therapeutic development. Grading is based on 3 exams throughout the academic quarter and participation in discussing journal articles in class. This course counts as a category elective for the Cognitive Neuroscience concentration. Prerequisite: BIOL 2120 Cell Structure and Function. Recommended: BIOL 3640 Introductory Neurobiology. For Graduate Students: an additional term paper is required with the exact topic to be agreed upon by the student and instructor.

**BIOL 3650 Endocrinology (4 Credits)**

Mechanisms of hormone action, evolution of vertebrate endocrine systems, analysis of function integration of hormonal responses in maintenance of homeostasis. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

**BIOL 3656 Cellular Aspects of Diabetes and Obesity (4 Credits)**

This course focuses on specific cellular and molecular events key to the understanding of the pathological conditions of diabetes and obesity. Topics include the endocrine pancreas, adipose tissue and neuroendocrine control energy expenditure and feeding behavior. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

**BIOL 3670 Molecular Immunology (4 Credits)**

The ability to distinguish self from non-self is crucial to all organisms. In humans Organs, cells and other higher animals, this task fall to the immune system. Suppression of this system is key to numerous pathogenic viruses including Ebola and human immunodeficiency virus. The failure to adequately regulate immune response underlies allergic reactions, arthritis and diabetes. This course will introduce students to the organs, cells and molecules that underlie mammalian immune response; immunogenetics and the fundamental mechanisms of cell mediated and humoral immune response; and the relationship of immune system to human disease. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510.

**BIOL 3675 Virology (4 Credits)**

Viruses are the ultimate cell biologists. They usurp essential cellular components to create new virus progeny leading to pathological cellular physiology. This course will delve into the genetic and cellular principles that govern virus entry, replication, and assembly and cover a broad range of DNA and RNA-based virus families. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120 and BIOL 2510.

**BIOL 3700 Topics in Ecology (1-4 Credits)**

Topics vary; may include plant, animal, biochemical, alpine or aquatic; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: one quarter of undergraduate ecology and/or instructor's permission.

**BIOL 3701 Topics in Genetics (1-4 Credits)**

Topics vary; may include genetic methods, molecular genetics, human genetics, chromosomes or population genetics; one topic per quarter. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510 and/or instructor's permission.

**BIOL 3702 Advanced Topics in Regulatory Biology (1-4 Credits)**

Topics vary; may include endocrinology, physiology or immunology; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: varies with topic and instructor; instructor's permission usually required.

**BIOL 3703 Advanced Topics in Developmental Biology (1-4 Credits)**

Topics vary; may include gene expression in development, developmental immunogenetics, developmental biochemistry or aging; one topic per quarter. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: instructor's permission.

**BIOL 3704 Advanced Topics in Cell Biology (1-4 Credits)**

Topics vary; may include supramolecular structure, microscopy, membranes and techniques. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120.

**BIOL 3705 Advanced Topics in Molecular Biology (1-4 Credits)**

Topics vary, but may include biochemistry, supramolecular structure and function, molecular genetics, membrane biology. May be taken more than once for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: varies with course and instructor; instructor's permission usually required.

**BIOL 3706 Topics in Evolution (1-4 Credits)**

Topics vary, but may include molecular evolution, plant evolution and animal evolution. Prerequisite: BIOL 2120 and BIOL 2510.

**BIOL 3707 Advanced Topics in Conservation Biology (1-4 Credits)****BIOL 3708 Topics in Integrative Physiology (2-4 Credits)**

Topics for this course include, but are not limited to, human physiology and disease, integrative physiology, environmental or social impacts on human physiology and health, and comparative physiology. Students will gain knowledge of a specific topic in physiology and/or pathophysiology through discussion of current literature and research. May be repeated for credit. Prerequisite: BIOL 2120.

**BIOL 3800 Human Molecular Biology (4 Credits)**

Medical Genetics is the 24th member of the American Board of Medical Specialties. This course will introduce students to the fundamentals of molecular biology with an emphasis on understanding of how the field is applied in the context of medical diagnostics, personalized/precision medicine and other commercial applications. Students will be introduced to published research reports and provided with opportunities to critically examine the application of molecular biology to central questions in such areas as oncology, inherited diseases and genetically engineered organisms. Prerequisite: BIOL 2510.

**BIOL 3850 Genetic Engineering (4 Credits)**

This course will cover principles in gene manipulation and its application in research, medicine and industry. More specifically, this course will explain emerging technologies in genetic engineering and its practical and ethical implications. Topics will incorporate historical and emerging aspects of developmental biology, chemistry, and genetics as well as current techniques in genetic manipulation that are related to genomic editing. Additionally, students will be trained to interface with genomic databases and employ DNA sequence editing software to manipulate DNA sequences to achieve novel cloned products. This course counts as a category elective for the Molecular Biology major. Prerequisite for this course is Genetics BIOL 2510.

**BIOL 3855 Genetic Model Organisms in Health & Disease (4 Credits)**

This course is focused on how basic science studies using genetic model organisms have had a major impact on human health and disease in addition to helping us understand fundamental aspects of biology. We will cover clinically relevant recent advances from bacterial studies (i.e. CRISPR/Cas9-mediated genome editing) to how studies in fruit flies revealed insights into immune disease. Students will gain a better appreciation for why researchers using model organisms were awarded Nobel prizes as well as why major medical funding organizations like the National Institutes of Health, American Cancer Society, and American Heart Association support research using non-human systems. This course will prepare students to understand health-relevant research from varied model systems. Students will learn practical aspects for determining which model systems are best suited to answer which types of questions. They will also practice designing experiments and defending their importance in grant abstract-style essays. Prerequisites: BIOL 2120 and BIOL 2510.

**BIOL 3910 Viruses & Infectious Human Diseases (4 Credits)**

From sexually transmitted viruses to bacterial pneumonia, infectious pathogens are the number one threat to human health. This course will introduce students to prions, viruses and bacterial pathogens with an emphasis on those commonly encountered in clinical medical practice. Through the use of technical/scientific research journals students will be encouraged to investigate the etiology, pathogenesis and treatment of human infectious disease with an emphasis on the clinical, molecular diagnostic and therapeutic aspects of the disease. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510. Recommended prerequisite: BIOL 3800.

**BIOL 3950 Undergraduate Research (1-10 Credits)**

Participation in faculty research programs by agreement between student and faculty member. Maximum of 5 quarter hours of BIOL 3950 and/or BIOL 3991 may be applied to the 45-quarter-hour requirement for a major in biological sciences.

**BIOL 3991 Independent Study (1-10 Credits)**

Topic in biology studied under faculty supervision. Student's responsibility to identify faculty supervisor before registering for class. Maximum of 5 quarter hours of BIOL 3991 and/or BIOL 3950 may be applied toward the 45-quarter-hour requirement for a major in biological sciences.

**BIOL 3995 Independent Research (1-10 Credits)****BIOL 4050 Topics in Plant Biology (2 Credits)**

Varying topics; areas of plant-animal interactions, co-evolution, plant ecology, plant biochemistry/physiology.

**BIOL 4085 Accelerated Biostatistics (2 Credits)**

This is an accelerated online statistics course for graduate students in Biology. Basic probability and hypothesis testing is the foundation of teaching applied statistics, including simple statistics (t-tests, F-tests, and chi square) and more advanced procedures (regression, correlation, analysis of variance). In addition, students learn more complex tools (multiple regression, multi-classification ANOVA, Student-Newman-Keuls tests), including non-parametric Tests (Mann-Whitney U, Sign test, Wilcoxon Rank Sum).

**BIOL 4090 Biostatistics (4 Credits)**

Statistic on biological research; emphasis on procedures, applications of regression, correlation, analysis of variance, and nonparametric tests. Include instruction on computer aided (Mac and PC) statistical analysis and presentation of results. Cross listed with BIOL 2090.

**BIOL 4095 Research Methods and Analysis (4 Credits)**

The purpose of this course is to introduce you to topics of applying statistical knowledge to real data, including specific tests/models as well as issues related to project design such as adequate sample size, avoiding confounding variables, unexplained error, and other common challenges. It is geared toward both field and lab-based projects, but the topics covered are relevant to research generally. Each week we will discuss the reading for that week with the objective of clarifying points and where possible, applying the concepts to real data from our own work. Prerequisites: BIOL 4090 or permission of instructor. Prerequisites: BIOL 4090.

**BIOL 4150 Special Topics in Adv Biology (1-4 Credits)**

Topics of special interests to teaching and research faculty presented as needed to complement and expand existing curriculum. May be taken more than once for credit.

**BIOL 4155 Leadership in Science (1 Credit)**

This course addresses the basic leadership skills necessary to succeed in the dynamic professional environment of the biomedical sciences. Topics covered include leadership strategies and professional negotiation, conflict resolution, and team-building. Students will determine leadership strengths and weaknesses and use case studies to strengthen their leadership practices.

**BIOL 4211 Advanced Cell Biology (4 Credits)**

Students study the subcellular structure and organization of the cell. Organelle structure and function are examined in detail as well as biogenesis and degradation (turnover) of these subcellular structures. Cytoskeletal dynamics are also a major focus. Specific topics covered include cell division, macromolecular synthesis, membrane transport, cell-matrix and cell-cell communication, cell migration, cell differentiation, and mechanisms of cell death. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students. Cross listed with BIOL 4150.

**BIOL 4212 Advanced Molecular Biology (3 Credits)**

This course focuses on a detailed analysis of regulated gene expression. The topics include lectures and readings of relevant literature in areas covering gene regulation at multiple steps, including transcription, RNA processing, and translation. In particular, the logic of experimental design and data analysis are emphasized.

**BIOL 4213 Advanced Cell Signaling (3 Credits)**

Students in this course investigate a large array of cellular signal transduction cascades. Specific signaling pathways to be covered include growth factor receptors, cytokine receptors, steroid receptors, integrin-extracellular matrix, heterotrimeric G-protein coupled receptors, monomeric G-proteins, transcription factors, lipids, cytoskeleton, cell cycle, and apoptosis. Each of these topics is examined in the context of normal cell physiology as well as their roles in specific disease processes. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students.

**BIOL 4220 Grad Sem: Ecology & Evolution (2 Credits)**

A series of student presentations focusing on varied topics involving ecology and evolution. May be taken more than once for credit.

**BIOL 4231 Responsible Conduct in Rsrch (1 Credit)**

This course covers several topics regarding guidelines for ethical practices in research. Topics include: data ownership, conflict of interest and commitments, human subjects, animal welfare, research misconduct, authorship, mentoring, peer review, and collaboration. The course includes an online training component and meets one hour each week to discuss these topics.

**BIOL 4310 Foundations in Literature: Cell and Molecular Biology (2 Credits)**

Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Cell and Molecular Biology.

**BIOL 4330 Foundations in Literature: Ecology (2 Credits)**

Students participate in a weekly discuss group that focuses on recent papers from the primary literature in Ecology.

**BIOL 4331 Foundations in Literature: Evolution (2 Credits)**

Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Evolution.

**BIOL 4500 Clinical Exercise Physiology (5 Credits)**

This graduate course in clinical physiology will provide an understanding of fundamental practices and assessments within clinical settings. We will combine knowledge from various backgrounds in physiology and tie theoretical and practical concepts together for assessing body function and developing methods for improving health and performance. We will connect the physiological concepts related to the cardiovascular, respiratory, and muscle systems as well as develop projects that require combining knowledge of the assessment skills and evaluation for clear communication and exercise prescription to special populations.

**BIOL 4510 Exercise Testing & Prescription (4 Credits)**

The purpose of this graduate course is to develop knowledge combined with hands-on skills for integration of exercise testing and prescription concepts. Material in this course will be applicable for performance as well as clinical considerations. This is an active course which will require your participation as both the subject and technician, giving perspective and understanding of methods and protocols along with their justification for various purposes. Prerequisite: BIOL 4500.

**BIOL 4515 Research Techniques in Exercise Physiology (4 Credits)**

This graduate level course is designed to provide exposure to several methods of research within the area of exercise physiology. This is a hands-on course that combines theory and literature with practical research experiences in physiology. In this course, students will perform data collection and analysis of differing topics. These may include the following topics: pulse and tissue oxygenation, signaling (heart rate variability, oxygen kinetics), respiratory loops, Doppler ultrasound (blood flow and tissue structure), etc. Our aims will focus on understanding how and why the method works, how to collect data, as well as the analysis and reporting of variables for proper interpretation.

**BIOL 4520 Advanced Nutrition and Exercise (4 Credits)**

This is a one quarter course intended for graduate students and advanced biology and physiology majors. This course builds upon the prerequisite introductory nutrition course. The course will focus on understanding, evaluating and implementing the fundamental principles and evidence based best practices of nutrition related to exercise, physical activity and health. Starting with a review of nutritional biochemistry and exercise, major macromolecule and micronutrient metabolism will be addressed in depth. Applications of nutritional science to various types of exercise (endurance, power, speed) will be explored, as well as nutrition and exercise specific to age and sex across the lifespan. In addition to didactic content, students will complete evaluation of primary literature and propose a nutritional program for a specific population of interest. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, inquiry-based learning, experimentation and a variety of assessments. Prerequisite: BIOL 3260 Nutrition or the equivalent.

**BIOL 4530 Advanced Cardiovascular and Pulmonary Physiology (4 Credits)**

This course is developed to provide a deeper level of physiological knowledge of the cardiac, vascular, circulatory, and pulmonary systems and their functions. With both lecture materials as well as in-class discussion of concepts and research articles, we will go deep into the basic levels of composition and function and facilitate the understanding of mechanisms that limit disease populations, elderly, etc. How can we adapt our lifestyles to improve our cardiovascular health? Prerequisite: BIOL 3250.

**BIOL 4540 Electrocardiogram Interpretation (2 Credits)**

This course is an advanced course in cardiac physiology for those interested in understanding principles associated with cardiac function, electrical physiology of the heart, and interpretation of the electrocardiogram. As the functions related to our heart drive our cardiovascular system, we will find ways to relate our experiences of daily life to the concepts and principles learned throughout this course to deepen our knowledge and retain this information. We will explore the physiological mechanisms related to the cardiac system as well as develop projects that require combining knowledge of the electrical pathways and of use of electrocardiography for proper interpretation.

**BIOL 4550 Cardiopulmonary Rehabilitation (2 Credits)**

This course focuses specifically on cardiopulmonary rehabilitation. Students will gain an understanding of (1) the impact of lung and heart disease on daily physical activity levels, (2) common mechanisms limiting exercise tolerance, and (3) risks and benefits of exercise for patients with lung and heart disease. Students will learn guidelines for exercise prescription and rehabilitation programs for patients with cardiovascular and pulmonary diseases. Practical application of knowledge and skills gained in BIOL 4530 will be emphasized. Prerequisite: BIOL 4530 Advanced Cardiovascular & Pulmonary Physiology.

**BIOL 4570 Advanced Human Pharmacology (2 Credits)**

This class will focus on how drugs and other therapeutics can be used to treat and prevent diseases. Students will develop a deep understanding of pharmacokinetics/ pharmacodynamics, the major classes of drugs, how and why they are used, drug side effects, and drug interactions. Specific emphasis will relate to effects of drugs utilized for disease prevention or treatment on physical activity and exercise.

**BIOL 4580 Physical Activity for Management of Chronic Diseases (3 Credits)**

This one quarter course is intended for graduate students in the clinical exercise physiology program or other related programs. This course builds upon previous coursework in clinical exercise physiology. It will focus on understanding, evaluating and implementing the fundamental principles and evidence based best practices of exercise management for persons with chronic diseases and disabilities. Starting with an overview of the concept of "exercise as medicine," the principles of safe exercise as a method for improving health outcomes will be applied to individuals with chronic diseases. Various chronic disease states and their associated medical challenges will be explored, and the recommendations for modified exercise activities, durations and outcomes to support healthy and safe outcomes will be addressed. In addition to didactic content, students will complete evaluation of primary literature in the field. Prerequisite BIOL 4500/4510 Clinical Exercise Physiology I and II.

**BIOL 4870 Medical Ethics (4 Credits)**

This course presents knowledge and discussion of ethical issues that arise from advances in the biomedical sciences and medicine. Several specific ethical issues and policies related to methodologies and procedures, emerging medical technologies, treatment decisions, doctor-patient relationship, informed consent, medical experimentation/clinical research, and health care reform.

**BIOL 4880 Capstone in Biomedical Sciences (4 Credits)**

This is the capstone course for students enrolled in the Professional Science Master's program. In this course, students integrate advanced knowledge in science and math along with courses taken outside traditional science and math courses as their electives. This course incorporates lectures, guest speakers, and class discussions focusing on current issues or concerns in the chosen concentration. PSM students only. Requires instructor approval.

**BIOL 4980 Internship in Biomedical Sciences (1-4 Credits)**

The internship course provides individualized opportunities to gain experience and professional skills. This course includes a structured practical and productive internship experience that allows for the integration and application of disciplinary knowledge in a professional setting. The internship can be administrative, clinical, programmatic, or research focused. Students will work with a professional from healthcare, pharmaceutical and biotech companies, or private and public health services to identify the student's specific project focus.

**BIOL 4991 Independent Study (1-17 Credits)****BIOL 4995 Independent Research (1-8 Credits)****BIOL 5991 Independent Study (1-17 Credits)****BIOL 5995 Independent Research (1-8 Credits)**

## Health Sciences (HLTH)

**HLTH 3000 Seminar in Health Science (1-2 Credits)**

This seminar is the capstone course for the Human Health Science & Systems program. This class will focus on the current understanding of several topics in human health. Emphasis will be on critical reading and discussion of current scientific literature related to human health and health care. Students will learn to recognize and appreciate different approaches and methods of health-related research. Students will utilize and integrate knowledge from previous courses to understand to present effective discussions on current topics in health. For students' continued development of strong oral communication skills, student presentations of primary literature will generate the basis of discussion. Prerequisites: HLTH 2000 and 2010.

**HLTH 3600 Cultural Responsiveness in Health Care (2 Credits)**

To contribute to reducing health inequities and improving health outcomes, this course will promote an improved understanding and responsiveness to the realities of social and structural impacts that influence the health of an individual or community. Topics will include health care delivery and access, political economy of health care, implicit biases, professionalism, relational leadership, dealing with patients in difficult situations, and health equity. The course will help students learn to provide more informed and effective care and promote a more culturally sensitive and responsive future workforce in healthcare, while also serving community needs. Prerequisite: HLTH 2000 or equivalent.

**HLTH 3700 Topics in Health (1-4 Credits)**

Topics in the area of, but are not limited to, human health and disease, environmental or social impacts on health, healthcare delivery, evidence-based medicine. Students will gain knowledge of a specific topic in human health and/or health care through discussion of current literature and research. May be repeated for credit. Prerequisites: HLTH 2000 or 2010.

**HLTH 4210 Advanced Health Education and Promotion (2 Credits)**

This course will provide students foundational knowledge about how to deliver health education and promote healthy behaviors to patients and community. This course will provide students with the practical skills and best practices for communicating and educating others about health, clinical tests and results, and clinical plans of action. Students will gain practical skills for encouraging goal setting and behavioral change and will develop an understanding of motivational considerations especially for patients with mental health challenges or psychosocial concerns related to acute and chronic physical disorders. Students will focus on integrating evidence-based research and strategies for the purpose of leading culturally sensitive discussions and/or difficult conversations and encouraging healthy behaviors.

**HLTH 4300 Basic Legal Consideration in Healthcare (2 Credits)**

This course will provide a basic understanding of legal issues that may affect care providers and business owners. Basic legal terminology and concepts will be presented, in addition to basic court processes and procedures. A goal of establishing this basic understanding is to prevent or reduce the consequences of lawsuits. Professionalism and the code of ethics will also be discussed.

**Biology Courses****BIOL 3005 Science Communication (4 Credits)**

Science communication has shaped, and continues to shape, the world in which we live (e.g., why you wash your hands, why we don't feed bears in U.S. national parks anymore, and why some students imagine themselves becoming scientists or not). Sharing how science is conducted and how new knowledge is generated through the scientific method also plays a critical role in our future: creating engaged citizens, shaping the next generation of scientists, increasing diversity and diverse perspectives in the sciences, informing policy-makers and lawyers, combatting misconceptions, increasing trust of scientists, and guiding our own individual behaviors. But, like any other complex skillset, science communication takes practice. This course provides students with a range of resources and skills for effective, ethical, and evidence-based communication of complex socio-scientific issues. It provides a supportive environment in which students will practice and refine their science communication through peer feedback and engagement with real audiences. The focus is on cultivating practical communication skills, with emphasis on effective speaking, writing and exhibition of scientific topics with the variety of audiences students will encounter in their future careers. Course readings, activities, and final projects also examine how identity shapes both the science we do and the lenses we and other stakeholders bring to communication tasks. The course is hybrid, highly interactive, and writing-intensive. This course is restricted to Junior or Senior Standing UG majoring in the College of Natural Sciences and Mathematics.

**BIOL 3025 Science and the Law (2,4 Credits)**

This course will focus on the intersection of science and US law. Four major areas of focus that will be covered are the admissibility of expert witnesses / scientific evidence in court; how advances in forensic genetics and national DNA databases raise legal issues pertaining to expectations of privacy and the standards for reaching a verdict; the impact of US Supreme Court opinions on the patenting of genes used as diagnostic markers for human disease and the legal landscape surrounding issues of evolution and creationism/intelligent design. Students will then explore how the law impacts their own areas of scientific interest. The goal of this course is to increase our understanding as scientists of how advances in science impact and are impacted by the US judicial system. PREREQUISITES: BIOL 1010 AND BIOL 1011.

**BIOL 3035 Invasive Species Ecology (4 Credits)**

This course investigates those plants and animal species that have dramatically expanded their ranges and cause ecological harm. Topics covered include the mechanisms of ecological impacts across the globe, how invasive species are used to test basic ecological theory, the application of this research for managing real species, and related issues such as the debate within the scientific community about the term "invasive." We use a case-study approach, and students have the opportunity to go into the field as a class to observe the real invasions and learn sampling methods.

**BIOL 3044 Coral Reef Ecology (3 Credits)**

Ecology of coral reefs; organization and distribution of reefs; review of reef organisms and their interactions with each other and their physical environment; threats to coral reef conservation. This course counts as a category elective for Ecology and Biodiversity majors. Prerequisite: (BIOL 2010 or BIOL 2050) OR (GEOG 1201, GEOG 1202, and GEOG 1203).

**BIOL 3045 Coral Reef Ecology Lab (1 Credit)**

Ecology of coral reefs laboratory to supplement lecture material; travel to the Caribbean over spring break to observe coral reefs firsthand; introduction to research methods. SCUBA certification and permission of instructor required. A travel and dive fee is associated with this course.

**BIOL 3055 Ecology of the Rockies (4 Credits)**

A week in residence at the Mt. Evans Field Station prior to the start of fall quarter includes field projects dealing with ecology and environmental issues. On campus classes involve data analysis and interpretation and formal scientific communication. Themes include terrestrial and aquatic ecosystems, taxonomic groups ranging from conifer stands to aquatic insects and mountain goats. Lab fee associated with this course. Prerequisite: BIOL 2010 or permission of instructor.

**BIOL 3070 Ecological Field Methods (4 Credits)**

Series of field exercises for students to learn principles and procedures of field methodology, data analysis and technical writing in ecology; problems drawn from population, community and ecosystem ecology. Lab fee associated with this course. Prerequisite: BIOL 2010.

**BIOL 3074 Forest Ecology (4 Credits)**

This course provides an overview of the distribution, structure, function, and dynamics of forest ecosystems. Topics include: paleoecology, ecophysiology, disturbance, succession, community analysis, forest hydrology, primary productivity, and nutrient cycling. Throughout, we maintain an emphasis on the scientific process and how it is used to study the controls on the distribution and abundance of organisms.

**BIOL 3085 Insect Ecology (4 Credits)**

A general introduction to insect biology and the science of entomology. Arthropods are the most diverse group of animals on Earth and insects account for more than half of all known living organisms. This course explores the biodiversity of insects on Earth, insect morphology and physiology. The evolutionary history and taxonomy of key orders of insects is emphasized as well as the importance of insects to our everyday lives. This course counts as a category elective for Ecology and Biodiversity majors. Prerequisites: BIOL 1010, BIOL 1011, and BIOL 2010.

**BIOL 3090 Microbial Ecology (4 Credits)**

Interactions among microorganisms and their environment. Impact of ecological principles on microbial diseases, pollutant degradation, nutrient cycles and global change. Prerequisites: BIOL 1010, BIOL 1020, AND BIOL 2510.

**BIOL 3095 Global Change Ecology (4 Credits)**

Over the past century, the mean surface temperature of our planet has increased slightly less than 1°C. While this may seem like a small increment, this change is already profoundly affecting Earth's organisms and ecological communities, and predictions for the impacts of continued change range from severe to catastrophic. Humans are also changing the environment through alteration of nutrient and water regimes. Topics include cause of climate change, comparison to past climatic change, human contribution to change and effect on organisms, communities and ecosystems. Prerequisites: BIOL 1010, BIOL 1011, AND BIOL 2010. RECOMMENDED PREREQUISITES/COREQUISITES: BIOL 2090.

**BIOL 3110 Special Topics: Biology (1-5 Credits)**

Topics of special interest to teaching/research faculty of department presented as needed to complement and expand existing curriculum. May be repeated for credit. PREREQUISITES: BIOL 1010.

**BIOL 3120 General Microbiology (4 Credits)**

Fundamental principles of microorganisms in the world and in disease; role of bacteria in biological phenomena. Includes laboratory. Lab fee associated with this course. Counts as a category elective for Ecology and Biodiversity majors. Prerequisite: BIOL 2120.

**BIOL 3145 Cellular and Molecular Biology of Cancer (4 Credits)**

This course examines the mechanisms that underlie the development and progression of cancer. The cellular and molecular events that drive uncontrolled cell proliferation and eventual metastasis of tumors are discussed. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

**BIOL 3150 Intracellular Dynamics (4 Credits)**

Focuses on spatial and temporal control of intracellular processes with an emphasis on neuronal and endocrine cells. Topics include vesicular traffic, protein targeting, dynamics and spatial organization of signaling complexes. Emphasis on modern techniques of cell and molecular biology with examples from primary literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

**BIOL 3160 Biophysics: Ion Channels & Disease (4 Credits)**

Examines ion channel structure and function and the ways in which this information provides insight into human disease. The focus is on the use of biophysical techniques in combination with molecular and genetic analysis of channel genes. General Physics recommended. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

**BIOL 3230 Nutrition (3 Credits)**

Investigation of metabolism, all nutrients and various applications of nutrition to sports and healthy living. Prerequisite: BIOL 3250.

**BIOL 3241 Anatomy and Physiology of the Skeletal, Nervous and Muscular systems (0-5 Credits)**

This course is designed to introduce students to the fundamental concepts, content and scientific bases of Skeletal, Muscular, and Nervous system anatomy and physiology at both macroscopic and microscopic levels. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. The course will utilize diverse resources, exercises, and activities to engage you in the learning process, including, text, video, animations, models, dissections, inquiry-based learning, and a variety of assessments. Please note that the lab portion of this course does require dissection. Prerequisites: BIOL 2120.

**BIOL 3242 Human Anatomy and Physiology - Systems of homeostasis (0-5 Credits)**

This course is designed to introduce students to the fundamental concepts, content and scientific bases of Cardiovascular, Respiratory, Urinary, Digestive, Immune and Reproductive system anatomy and physiology at both macroscopic and microscopic levels. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. The course will utilize diverse resources, exercises, and activities to engage you in the learning process, including, text, video, animations, models, dissections, inquiry-based learning, and a variety of assessments. Please note that the lab portion of this course does require dissection. Prerequisites: BIOL 2120.

**BIOL 3251 Exercise Physiology (4 Credits)**

This course will cover exercise physiology topics included but not limited to: energy systems, physiological response to exercise/training, and exercise programming. A strong background in human physiology is recommended. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 1010.

**BIOL 3252 High Altitude Physiology (4 Credits)**

This course is an advanced course in physiology for those interested in both the impacts of altitude exposure on health and athletic performance. We live at altitude in Denver, and in fact there are many factors affecting our bodies (which we may or may not realize) that impact our daily lives. This course aims to provide insight on the acute and chronic physiological responses of altitude as well as to provide a deeper understanding into the use of hypoxic environments for improving health and benefiting athletic performance. We will explore the physiological mechanisms related to these reduced oxygen environments as well as develop projects that contribute to the understanding of using this environment as a stimulus. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 3242.

**BIOL 3253 Environmental Physiology of Animals (4 Credits)**

By studying species across the animal kingdom, we will learn about the vast array of physiological strategies that have evolved to help animals maintain homeostasis in the face of varied environmental challenges. We will cover foundational principals of animal physiological ecology and evolution, as well as new and exciting discoveries through weekly discussions of primary literature. We will focus primary literature discussions on "extreme environments," as Earth's harshest landscapes provide exciting and powerful examples of adaptations of physiological systems. This course will be delivered through a combination of lectures, active learning assignments, readings from the scientific literature, and group discussions. By the end of this course, you will develop a new perspective on the ecological and evolutionary factors that shape physiological similarities and differences among the animals of our planet (including humans). This course counts as a category elective for the Ecology and Biodiversity major and Physiology in Health and Disease major. Prerequisites: BIOL 1010 and BIOL 1011.

**BIOL 3256 Advanced Human Anatomy & Physiology (0-5 Credits)**

This one quarter course is intended for advanced biology and physiology majors with an interest in the anatomical structure and physiological functioning of body systems. This course builds upon the Human Anatomy and Human Physiology courses that are prerequisites. This advanced course will explore in greater depth understanding mechanisms of action of major body systems and elaborate on the relationship between structure and function. In addition to didactic content, students will complete evaluation of primary literature and design laboratory experiments to test hypotheses of interest. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, models, dissections, inquiry-based learning, experimentation and a variety of assessments. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. Please note that the lab portion of this course requires dissection. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisites: BIOL 3241 and BIOL 3242.

**BIOL 3260 Nutritional Physiology (4 Credits)**

This course is designed to introduce the fundamental concepts, content and scientific bases of nutritional physiology at the levels. This course will examine the scientific structure and properties of carbohydrates, proteins and lipids as the major macronutrients required for human health. In addition, it includes exploration of the digestion, absorption and metabolism of both macronutrients and micronutrients. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, inquiry-based learning, experimentation and a variety of assessments. Prerequisite: BIOL 2120.

**BIOL 3280 Intro to Pathophysiology (4 Credits)**

This course is designed as an introduction of the mechanisms and consequences of disease based on physiological dysfunction in the major organ systems. The course will focus on the fundamental concepts and processes of human pathophysiology through exploration of the unique physiological roles of several body systems, how these systems have important integrative relationships that underlie the overall physiological functioning of healthy humans, and how system function is altered in disease and the clinical manifestations of these changes. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 2120. A course in human physiology is recommended.

**BIOL 3410 Animal Behavior (4 Credits)**

This class examines animal behavior from an evolutionary and ecological perspective. The course provides the background needed to understand behavioral evolution, including a focus on the inheritance of behavior, natural selection, sexual selection, and kin selection. This class studies the evolution of a variety of behaviors, including communication and displays, mate choice, parental care, cooperation, mating systems, social behavior, habitat selection, foraging, and anti-predator behavior. The emphasis is on theoretical principles, design of experiments, and interpretation of data. This course counts as a category elective for the Ecology and Biodiversity major. Prerequisites: BIOL 1010 and BIOL 1011, and BIOL 2010. Recommended Prerequisite: BIOL 2090.

**BIOL 3560 Molecular Biology Laboratory (4 Credits)**

Laboratory based course that covers techniques in gene excision, cloning and reinsertion and gene sequencing. Lab fee associated with this course. Prerequisite: BIOL 2510, or permission of instructor.

**BIOL 3570 Proteins in Biological Systems (4 Credits)**

Proteins considered in their biological setting; protein synthesis and degradation; survey of protein functions in vivo; introduction to protein biotechnology. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120.

**BIOL 3610 Developmental Biology (4 Credits)**

Processes and mechanisms of development, exemplified by higher animal embryogenesis, with consideration of microbial model systems. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120 and 2510.

**BIOL 3615 Blood Vessel Development and Disease (4 Credits)**

This course details the underlying biological programs during blood vessel development and mechanisms that lead to vascular pathologies. The class will incorporate aspects embryology, signaling transduction, and genetics as well as current techniques in developmental biology to comprehensively cover how blood vessels are formed embryonically. Additionally, we will discuss in detail how defects in blood vessel-related signaling programs later manifest into disease. Prerequisite for this course is Cell Structure and Function (BIOL2120/2121).

**BIOL 3630 Cell Biology of Development (4 Credits)**

Every organism has a stereotypical shape, but how does this shape arise? This course examines the cellular and molecular mechanisms that direct the forming of body and tissue shape. This course counts a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

**BIOL 3640 Introductory Neurobiology (4 Credits)**

Organization and function of vertebrate central nervous system; nature of action potential, biochemistry of neurotransmitters, neuropeptides, functional anatomy of nervous system, phylogeny of nervous system. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

**BIOL 3641 Systems Neuroscience (4 Credits)**

Structure and function of the brain and spinal cord, emphasis on functional systems including sensory perception, motor control and consciousness. This course counts as a category elective for the Cognitive Neuroscience concentration. Prerequisite: BIOL 3640 or 3241.

**BIOL 3642 Neuropharmacology (4 Credits)**

How psychoactive drugs exert their effects on the nervous system; drugs of abuse and drugs used in the treatment of psychotic and neurodegenerative disorders. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120. Recommended prerequisites: BIOL 3640.

**BIOL 3644 Neuromuscular Pathophysiology (4 Credits)**

Cellular and molecular basis for normal nerve and muscle functions and the alteration of these functions by toxins, trauma and diseases of the brain, nerves and muscles; how specific insults produce clinical symptoms and pathology. Prerequisite: BIOL 2120.

**BIOL 3646 Seminar: Cognitive Neuroscience (2 Credits)**

This seminar is the capstone course for the neuroscience portion of the cognitive neuroscience program. Seminar topics include but are not limited to neurological disorders, model systems in neuroscience and sensory systems.

**BIOL 3647 Neuroscience of Movement (4 Credits)**

Producing the vast array of movements that humans (and many animals) use everyday represents one of the body's greatest challenges and greatest successes. These various movements require that the nervous, muscular, and skeletal systems work in concert to achieve a common goal. This course will explore the scientific basis of movement production, with particular emphasis on the neuroscience of motor control. We will explore how the nervous system drives the development of movement strategies at an early age, modifies movement strategies to adapt to changing demands throughout life, and how injury, dysfunction, and/or aging can lead to movement challenges. This course counts as a category elective for the Physiology in Health and Disease major and Cognitive Neuroscience concentration. Required prerequisite: Cell Structure & Function (BIOL 2120); Recommended prerequisite (1 or more of the following): Introduction to Neuroscience (BIOL 3640) or permission of instructor.

**BIOL 3648 Molecular Mechanisms of Neurological Disease (4 Credits)**

This course will be an in-depth study into some of the key molecular mechanisms involved in the pathogenesis of human neurological disease. A particular emphasis will be placed on the role of RNA regulation and metabolism. The primary focus will be on five devastating diseases: 1. Spinal Muscular Atrophy (SMA) 2. Fragile X Syndrome (FXS) and Fragile X Tremor Ataxia Syndrome (FXTAS) 3. Myotonic Dystrophy type 1 and 2 (DM1 and DM2) 4. Spinocerebellar Ataxia type 2 (SCA2) 5. Amyotrophic Lateral Sclerosis (ALS) and Frontotemporal Dementia (FTD) This course will cover a variety of topics including disease pathophysiology and pathogenesis. However, readings will be assigned from the recent primary literature discussing cellular and molecular mechanisms. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2510 Genetics.

**BIOL 3649 Neurodegeneration and Neurotrauma: Mechanisms and Therapeutics (4 Credits)**

Neurodegeneration and Neurotrauma: Mechanisms and Therapeutics covers the following disorders: Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, Huntington's disease, spinocerebellar ataxia, Creutzfeldt-Jakob disease, multiple sclerosis, traumatic brain injury and spinal cord injury. Course literature includes primary journal articles and review papers describing the etiology and pathophysiological mechanisms of these disorders. Potential therapeutic approaches to treatment are also investigated. The course format typically includes a lecture reviewing the basic biology, symptoms, and current treatments for each disorder, followed by a thorough analysis of primary research papers focused on novel molecular mechanisms and new targets for therapeutic development. Grading is based on 3 exams throughout the academic quarter and participation in discussing journal articles in class. This course counts as a category elective for the Cognitive Neuroscience concentration. Prerequisite: BIOL 2120 Cell Structure and Function. Recommended: BIOL 3640 Introductory Neurobiology. For Graduate Students: an additional term paper is required with the exact topic to be agreed upon by the student and instructor.

**BIOL 3650 Endocrinology (4 Credits)**

Mechanisms of hormone action, evolution of vertebrate endocrine systems, analysis of function integration of hormonal responses in maintenance of homeostasis. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

**BIOL 3656 Cellular Aspects of Diabetes and Obesity (4 Credits)**

This course focuses on specific cellular and molecular events key to the understanding of the pathological conditions of diabetes and obesity. Topics include the endocrine pancreas, adipose tissue and neuroendocrine control energy expenditure and feeding behavior. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

**BIOL 3670 Molecular Immunology (4 Credits)**

The ability to distinguish self from non-self is crucial to all organisms. In humans Organs, cells and other higher animals, this task fall to the immune system. Suppression of this system is key to numerous pathogenic viruses including Ebola and human immunodeficiency virus. The failure to adequately regulate immune response underlies allergic reactions, arthritis and diabetes. This course will introduce students to the organs, cells and molecules that underlie mammalian immune response; immunogenetics and the fundamental mechanisms of cell mediated and humoral immune response; and the relationship of immune system to human disease. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510.

**BIOL 3675 Virology (4 Credits)**

Viruses are the ultimate cell biologists. They usurp essential cellular components to create new virus progeny leading to pathological cellular physiology. This course will delve into the genetic and cellular principles that govern virus entry, replication, and assembly and cover a broad range of DNA and RNA-based virus families. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120 and BIOL 2510.

**BIOL 3700 Topics in Ecology (1-4 Credits)**

Topics vary; may include plant, animal, biochemical, alpine or aquatic; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: one quarter of undergraduate ecology and/or instructor's permission.

**BIOL 3701 Topics in Genetics (1-4 Credits)**

Topics vary; may include genetic methods, molecular genetics, human genetics, chromosomes or population genetics; one topic per quarter. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510 and/or instructor's permission.

**BIOL 3702 Advanced Topics in Regulatory Biology (1-4 Credits)**

Topics vary; may include endocrinology, physiology or immunology; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: varies with topic and instructor; instructor's permission usually required.

**BIOL 3703 Advanced Topics in Developmental Biology (1-4 Credits)**

Topics vary; may include gene expression in development, developmental immunogenetics, developmental biochemistry or aging; one topic per quarter. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: instructor's permission.

**BIOL 3704 Advanced Topics in Cell Biology (1-4 Credits)**

Topics vary; may include supramolecular structure, microscopy, membranes and techniques. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120.

**BIOL 3705 Advanced Topics in Molecular Biology (1-4 Credits)**

Topics vary, but may include biochemistry, supramolecular structure and function, molecular genetics, membrane biology. May be taken more than once for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: varies with course and instructor; instructor's permission usually required.

**BIOL 3706 Topics in Evolution (1-4 Credits)**

Topics vary, but may include molecular evolution, plant evolution and animal evolution. Prerequisite: BIOL 2120 and BIOL 2510.

**BIOL 3707 Advanced Topics in Conservation Biology (1-4 Credits)****BIOL 3708 Topics in Integrative Physiology (2-4 Credits)**

Topics for this course include, but are not limited to, human physiology and disease, integrative physiology, environmental or social impacts on human physiology and health, and comparative physiology. Students will gain knowledge of a specific topic in physiology and/or pathophysiology through discussion of current literature and research. May be repeated for credit. Prerequisite: BIOL 2120.

**BIOL 3800 Human Molecular Biology (4 Credits)**

Medical Genetics is the 24th member of the American Board of Medical Specialties. This course will introduce students to the fundamentals of molecular biology with an emphasis on understanding of how the field is applied in the context of medical diagnostics, personalized/precision medicine and other commercial applications. Students will be introduced to published research reports and provided with opportunities to critically examine the application of molecular biology to central questions in such areas as oncology, inherited diseases and genetically engineered organisms. Prerequisite: BIOL 2510.

**BIOL 3850 Genetic Engineering (4 Credits)**

This course will cover principles in gene manipulation and its application in research, medicine and industry. More specifically, this course will explain emerging technologies in genetic engineering and its practical and ethical implications. Topics will incorporate historical and emerging aspects of developmental biology, chemistry, and genetics as well as current techniques in genetic manipulation that are related to genomic editing. Additionally, students will be trained to interface with genomic databases and employ DNA sequence editing software to manipulate DNA sequences to achieve novel cloned products. This course counts as a category elective for the Molecular Biology major. Prerequisite for this course is Genetics BIOL 2510.

**BIOL 3855 Genetic Model Organisms in Health & Disease (4 Credits)**

This course is focused on how basic science studies using genetic model organisms have had a major impact on human health and disease in addition to helping us understand fundamental aspects of biology. We will cover clinically relevant recent advances from bacterial studies (i.e. CRISPR/Cas9-mediated genome editing) to how studies in fruit flies revealed insights into immune disease. Students will gain a better appreciation for why researchers using model organisms were awarded Nobel prizes as well as why major medical funding organizations like the National Institutes of Health, American Cancer Society, and American Heart Association support research using non-human systems. This course will prepare students to understand health-relevant research from varied model systems. Students will learn practical aspects for determining which model systems are best suited to answer which types of questions. They will also practice designing experiments and defending their importance in grant abstract-style essays. Prerequisites: BIOL 2120 and BIOL 2510.

**BIOL 3910 Viruses & Infectious Human Diseases (4 Credits)**

From sexually transmitted viruses to bacterial pneumonia, infectious pathogens are the number one threat to human health. This course will introduce students to prions, viruses and bacterial pathogens with an emphasis on those commonly encountered in clinical medical practice. Through the use of technical/scientific research journals students will be encouraged to investigate the etiology, pathogenesis and treatment of human infectious disease with an emphasis on the clinical, molecular diagnostic and therapeutic aspects of the disease. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510. Recommended prerequisite: BIOL 3800.

**BIOL 3950 Undergraduate Research (1-10 Credits)**

Participation in faculty research programs by agreement between student and faculty member. Maximum of 5 quarter hours of BIOL 3950 and/or BIOL 3991 may be applied to the 45-quarter-hour requirement for a major in biological sciences.

**BIOL 3991 Independent Study (1-10 Credits)**

Topic in biology studied under faculty supervision. Student's responsibility to identify faculty supervisor before registering for class. Maximum of 5 quarter hours of BIOL 3991 and/or BIOL 3950 may be applied toward the 45-quarter-hour requirement for a major in biological sciences.

**BIOL 3995 Independent Research (1-10 Credits)****BIOL 4050 Topics in Plant Biology (2 Credits)**

Varying topics; areas of plant-animal interactions, co-evolution, plant ecology, plant biochemistry/physiology.

**BIOL 4085 Accelerated Biostatistics (2 Credits)**

This is an accelerated online statistics course for graduate students in Biology. Basic probability and hypothesis testing is the foundation of teaching applied statistics, including simple statistics (t-tests, F-tests, and chi square) and more advanced procedures (regression, correlation, analysis of variance). In addition, students learn more complex tools (multiple regression, multi-classification ANOVA, Student-Newman-Keuls tests), including non-parametric Tests (Mann-Whitney U, Sign test, Wilcoxon Rank Sum).

**BIOL 4090 Biostatistics (4 Credits)**

Statistic on biological research; emphasis on procedures, applications of regression, correlation, analysis of variance, and nonparametric tests. Include instruction on computer aided (Mac and PC) statistical analysis and presentation of results. Cross listed with BIOL 2090.

**BIOL 4095 Research Methods and Analysis (4 Credits)**

The purpose of this course is to introduce you to topics of applying statistical knowledge to real data, including specific tests/models as well as issues related to project design such as adequate sample size, avoiding confounding variables, unexplained error, and other common challenges. It is geared toward both field and lab-based projects, but the topics covered are relevant to research generally. Each week we will discuss the reading for that week with the objective of clarifying points and where possible, applying the concepts to real data from our own work. Prerequisites: BIOL 4090 or permission of instructor. Prerequisites: BIOL 4090.

**BIOL 4150 Special Topics in Adv Biology (1-4 Credits)**

Topics of special interests to teaching and research faculty presented as needed to complement and expand existing curriculum. May be taken more than once for credit.

**BIOL 4155 Leadership in Science (1 Credit)**

This course addresses the basic leadership skills necessary to succeed in the dynamic professional environment of the biomedical sciences. Topics covered include leadership strategies and professional negotiation, conflict resolution, and team-building. Students will determine leadership strengths and weaknesses and use case studies to strengthen their leadership practices.

**BIOL 4211 Advanced Cell Biology (4 Credits)**

Students study the subcellular structure and organization of the cell. Organelle structure and function are examined in detail as well as biogenesis and degradation (turnover) of these subcellular structures. Cytoskeletal dynamics are also a major focus. Specific topics covered include cell division, macromolecular synthesis, membrane transport, cell-matrix and cell-cell communication, cell migration, cell differentiation, and mechanisms of cell death. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students. Cross listed with BIOP 4150.

**BIOL 4212 Advanced Molecular Biology (3 Credits)**

This course focuses on a detailed analysis of regulated gene expression. The topics include lectures and readings of relevant literature in areas covering gene regulation at multiple steps, including transcription, RNA processing, and translation. In particular, the logic of experimental design and data analysis are emphasized.

**BIOL 4213 Advanced Cell Signaling (3 Credits)**

Students in this course investigate a large array of cellular signal transduction cascades. Specific signaling pathways to be covered include growth factor receptors, cytokine receptors, steroid receptors, integrin-extracellular matrix, heterotrimeric G-protein coupled receptors, monomeric G-proteins, transcription factors, lipids, cytoskeleton, cell cycle, and apoptosis. Each of these topics is examined in the context of normal cell physiology as well as their roles in specific disease processes. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students.

**BIOL 4220 Grad Sem: Ecology & Evolution (2 Credits)**

A series of student presentations focusing on varied topics involving ecology and evolution. May be taken more than once for credit.

**BIOL 4231 Responsible Conduct in Rsrch (1 Credit)**

This course covers several topics regarding guidelines for ethical practices in research. Topics include: data ownership, conflict of interest and commitments, human subjects, animal welfare, research misconduct, authorship, mentoring, peer review, and collaboration. The course includes an online training component and meets one hour each week to discuss these topics.

**BIOL 4310 Foundations in Literature: Cell and Molecular Biology (2 Credits)**

Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Cell and Molecular Biology.

**BIOL 4330 Foundations in Literature: Ecology (2 Credits)**

Students participate in a weekly discuss group that focuses on recent papers from the primary literature in Ecology.

**BIOL 4331 Foundations in Literature: Evolution (2 Credits)**

Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Evolution.

**BIOL 4500 Clinical Exercise Physiology (5 Credits)**

This graduate course in clinical physiology will provide an understanding of fundamental practices and assessments within clinical settings. We will combine knowledge from various backgrounds in physiology and tie theoretical and practical concepts together for assessing body function and developing methods for improving health and performance. We will connect the physiological concepts related to the cardiovascular, respiratory, and muscle systems as well as develop projects that require combining knowledge of the assessment skills and evaluation for clear communication and exercise prescription to special populations.

**BIOL 4510 Exercise Testing & Prescription (4 Credits)**

The purpose of this graduate course is to develop knowledge combined with hands-on skills for integration of exercise testing and prescription concepts. Material in this course will be applicable for performance as well as clinical considerations. This is an active course which will require your participation as both the subject and technician, giving perspective and understanding of methods and protocols along with their justification for various purposes. Prerequisite: BIOL 4500.

**BIOL 4515 Research Techniques in Exercise Physiology (4 Credits)**

This graduate level course is designed to provide exposure to several methods of research within the area of exercise physiology. This is a hands-on course that combines theory and literature with practical research experiences in physiology. In this course, students will perform data collection and analysis of differing topics. These may include the following topics: pulse and tissue oxygenation, signaling (heart rate variability, oxygen kinetics), respiratory loops, Doppler ultrasound (blood flow and tissue structure), etc. Our aims will focus on understanding how and why the method works, how to collect data, as well as the analysis and reporting of variables for proper interpretation.

**BIOL 4520 Advanced Nutrition and Exercise (4 Credits)**

This is a one quarter course intended for graduate students and advanced biology and physiology majors. This course builds upon the prerequisite introductory nutrition course. The course will focus on understanding, evaluating and implementing the fundamental principles and evidence based best practices of nutrition related to exercise, physical activity and health. Starting with a review of nutritional biochemistry and exercise, major macromolecule and micronutrient metabolism will be addressed in depth. Applications of nutritional science to various types of exercise (endurance, power, speed) will be explored, as well as nutrition and exercise specific to age and sex across the lifespan. In addition to didactic content, students will complete evaluation of primary literature and propose a nutritional program for a specific population of interest. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, inquiry-based learning, experimentation and a variety of assessments. Prerequisite: BIOL 3260 Nutrition or the equivalent.

**BIOL 4530 Advanced Cardiovascular and Pulmonary Physiology (4 Credits)**

This course is developed to provide a deeper level of physiological knowledge of the cardiac, vascular, circulatory, and pulmonary systems and their functions. With both lecture materials as well as in-class discussion of concepts and research articles, we will go deep into the basic levels of composition and function and facilitate the understanding of mechanisms that limit disease populations, elderly, etc. How can we adapt our lifestyles to improve our cardiovascular health? Prerequisite: BIOL 3250.

**BIOL 4540 Electrocardiogram Interpretation (2 Credits)**

This course is an advanced course in cardiac physiology for those interested in understanding principles associated with cardiac function, electrical physiology of the heart, and interpretation of the electrocardiogram. As the functions related to our heart drive our cardiovascular system, we will find ways to relate our experiences of daily life to the concepts and principles learned throughout this course to deepen our knowledge and retain this information. We will explore the physiological mechanisms related to the cardiac system as well as develop projects that require combining knowledge of the electrical pathways and of use of electrocardiography for proper interpretation.

**BIOL 4550 Cardiopulmonary Rehabilitation (2 Credits)**

This course focuses specifically on cardiopulmonary rehabilitation. Students will gain an understanding of (1) the impact of lung and heart disease on daily physical activity levels, (2) common mechanisms limiting exercise tolerance, and (3) risks and benefits of exercise for patients with lung and heart disease. Students will learn guidelines for exercise prescription and rehabilitation programs for patients with cardiovascular and pulmonary diseases. Practical application of knowledge and skills gained in BIOL 4530 will be emphasized. Prerequisite: BIOL 4530 Advanced Cardiovascular & Pulmonary Physiology.

**BIOL 4570 Advanced Human Pharmacology (2 Credits)**

This class will focus on how drugs and other therapeutics can be used to treat and prevent diseases. Students will develop a deep understanding of pharmacokinetics/ pharmacodynamics, the major classes of drugs, how and why they are used, drug side effects, and drug interactions. Specific emphasis will relate to effects of drugs utilized for disease prevention or treatment on physical activity and exercise.

**BIOL 4580 Physical Activity for Management of Chronic Diseases (3 Credits)**

This one quarter course is intended for graduate students in the clinical exercise physiology program or other related programs. This course builds upon previous coursework in clinical exercise physiology. It will focus on understanding, evaluating and implementing the fundamental principles and evidence based best practices of exercise management for persons with chronic diseases and disabilities. Starting with an overview of the concept of "exercise as medicine," the principles of safe exercise as a method for improving health outcomes will be applied to individuals with chronic diseases. Various chronic disease states and their associated medical challenges will be explored, and the recommendations for modified exercise activities, durations and outcomes to support healthy and safe outcomes will be addressed. In addition to didactic content, students will complete evaluation of primary literature in the field. Prerequisite: BIOL 4500/4510 Clinical Exercise Physiology I and II.

**BIOL 4870 Medical Ethics (4 Credits)**

This course presents knowledge and discussion of ethical issues that arise from advances in the biomedical sciences and medicine. Several specific ethical issues and policies related to methodologies and procedures, emerging medical technologies, treatment decisions, doctor-patient relationship, informed consent, medical experimentation/clinical research, and health care reform.

**BIOL 4880 Capstone in Biomedical Sciences (4 Credits)**

This is the capstone course for students enrolled in the Professional Science Master's program. In this course, students integrate advanced knowledge in science and math along with courses taken outside traditional science and math courses as their electives. This course incorporates lectures, guest speakers, and class discussions focusing on current issues or concerns in the chosen concentration. PSM students only. Requires instructor approval.

**BIOL 4980 Internship in Biomedical Sciences (1-4 Credits)**

The internship course provides individualized opportunities to gain experience and professional skills. This course includes a structured practical and productive internship experience that allows for the integration and application of disciplinary knowledge in a professional setting. The internship can be administrative, clinical, programmatic, or research focused. Students will work with a professional from healthcare, pharmaceutical and biotech companies, or private and public health services to identify the student's specific project focus.

**BIOL 4991 Independent Study (1-17 Credits)****BIOL 4995 Independent Research (1-8 Credits)****BIOL 5991 Independent Study (1-17 Credits)****BIOL 5995 Independent Research (1-8 Credits)****Health Sciences Courses****HLTH 3000 Seminar in Health Science (1-2 Credits)**

This seminar is the capstone course for the Human Health Science & Systems program. This class will focus on the current understanding of several topics in human health. Emphasis will be on critical reading and discussion of current scientific literature related to human health and health care. Students will learn to recognize and appreciate different approaches and methods of health-related research. Students will utilize and integrate knowledge from previous courses to understand to present effective discussions on current topics in health. For students' continued development of strong oral communication skills, student presentations of primary literature will generate the basis of discussion. Prerequisites: HLTH 2000 and 2010.

**HLTH 3600 Cultural Responsiveness in Health Care (2 Credits)**

To contribute to reducing health inequities and improving health outcomes, this course will promote an improved understanding and responsiveness to the realities of social and structural impacts that influence the health of an individual or community. Topics will include health care delivery and access, political economy of health care, implicit biases, professionalism, relational leadership, dealing with patients in difficult situations, and health equity. The course will help students learn to provide more informed and effective care and promote a more culturally sensitive and responsive future workforce in healthcare, while also serving community needs. Prerequisite: HLTH 2000 or equivalent.

**HLTH 3700 Topics in Health (1-4 Credits)**

Topics in the area of, but are not limited to, human health and disease, environmental or social impacts on health, healthcare delivery, evidence-based medicine. Students will gain knowledge of a specific topic in human health and/or health care through discussion of current literature and research. May be repeated for credit. Prerequisites: HLTH 2000 or 2010.

**HLTH 4210 Advanced Health Education and Promotion (2 Credits)**

This course will provide students foundational knowledge about how to deliver health education and promote healthy behaviors to patients and community. This course will provide students with the practical skills and best practices for communicating and educating others about health, clinical tests and results, and clinical plans of action. Students will gain practical skills for encouraging goal setting and behavioral change and will develop an understanding of motivational considerations especially for patients with mental health challenges or psychosocial concerns related to acute and chronic physical disorders. Students will focus on integrating evidence-based research and strategies for the purpose of leading culturally sensitive discussions and/or difficult conversations and encouraging healthy behaviors.

**HLTH 4300 Basic Legal Consideration in Healthcare (2 Credits)**

This course will provide a basic understanding of legal issues that may affect care providers and business owners. Basic legal terminology and concepts will be presented, in addition to basic court processes and procedures. A goal of establishing this basic understanding is to prevent or reduce the consequences of lawsuits. Professionalism and the code of ethics will also be discussed.

# Chemistry and Biochemistry

Office: F.W. Olin Hall, Room 202

## Why study chemistry at the University of Denver?

Consider the advantages:

- Excellent, research-active faculty
- Small classes, personal attention
- First-rate teaching facilities
- Modern, state-of-the-art equipment

At the University of Denver, we offer the training and activities to energize your graduate experience and help you develop into a professional scientist.

The Department of Chemistry and Biochemistry at the University of Denver offers programs leading to MA, MS or PhD degree in chemistry.

Our faculty members actively involve students in research programs supported with more than \$1.5 million in annual funding from federal agencies, state governments and private industries. In our programs, you will enjoy the benefits of a friendly, personalized learning environment that offers nationally competitive and extremely productive research opportunities.

The Department of Chemistry and Biochemistry has much to offer a graduate student: close and frequent student-faculty interaction; an integrated program of courses; and excellent equipment and facilities including 500 MHz NMR, 600 MHz NMR, multiple custom-built and commercial EPR spectrometers, ICP-mass spectrometer and OES, Raman microscope, photon counting lifetime fluorescence, nanosecond laser flash photolysis, atmospheric aerosol particle monitoring and collection equipment, circular dichroism, fluorescence microscopy, and multiple gloveboxes, HPLCs and FPLCs.

Faculty research interests encompass biophysical, organic, analytical and environmental chemistry, and biochemistry. The department's relatively small size allows a broader, more interdisciplinary approach than in large departments. Collaboration between research groups is very common. Our instructional format merges traditional disciplines into interdisciplinary courses that more closely reflect current trends in chemistry.

The department of Chemistry and Biochemistry also participates in an interdepartmental PhD program in Molecular and Cellular Biophysics at the University of Denver. See the molecular and cellular biophysics bulletin (p. 880) for more specific details.

## Doctor of Philosophy in Chemistry

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### Prerequisites

- Applicants must earn and submit proof of earning the equivalent of a baccalaureate degree in chemistry, biochemistry or a related field from a regionally accredited institution prior to beginning graduate coursework at DU.

### Additional Requirements

- Applicants may be contacted to schedule an admissions interview.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5

- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

---

## Master of Arts in Chemistry

### Degree and GPA Requirements

- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

# Doctoral Program

## Doctor of Philosophy in Chemistry

The PhD is the highest degree awarded and is intended for students seeking a career in scientific research. The ultimate aim of this degree is to train a scientist who can independently design and supervise a research project. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student's progress.

### Degree Requirements

#### Coursework Requirements

Code	Title	Credits
<b>Required Courses</b>		
<b>Chemical systems (three-quarter sequence)</b>		
CHEM 3110	Chemical Systems I	3
CHEM 3120	Chemical Systems II	3
CHEM 3130	Chemical Systems III	3
<b>Molecular structure and energetics (two-quarter sequence)</b>		
CHEM 3310	Structure and Energetics I	3
CHEM 3320	Structure and Energetics II	3
<b>Biochemistry (two-quarter sequence)</b>		
CHEM 3831	Advanced Protein Biochemistry	3
CHEM 3705	Topics in Biochemistry	3
<b>Analytical</b>		
CHEM 3220	Advanced Analytical Chemistry	3
<b>Independent research (repeats allowed)</b>		<b>62-66</b>
CHEM 4995	Independent Research	1-8
<b>Additional Coursework</b>		<b>0-4</b>
Advanced topics		
CHEM 3XXX or 4XXX or others if pre-approved by the graduate committee		
<b>Total Credits</b>		<b>90</b>

Minimum credits required for degree: 90 (of which a minimum of 75 hours must be earned at the University of Denver)

Because a PhD in chemistry is primarily a degree in which competence in research is learned and demonstrated, a large percentage of these hours are earned as credit for research (CHEM 4995 Independent Research). A minimum of 70 graduate level quarter hours must be in CHEM courses; a maximum of 20 quarter hours may be outside of CHEM courses, but must remain within natural sciences (e.g., courses with BIOL, MATH, GEOG and/or PHYS prefixes). The formal or classroom course requirements are the same as those for the MS degree.

The graduate core curriculum must be completed with a GPA of 3.0 or better.

#### Non-coursework Requirements

- Cumulative Examinations

The PhD candidate must complete the cumulative examination requirement by the seventh quarter in residence. These examinations are prepared from topics appearing in the current literature and fundamental materials found in review articles.

- Research Proposal Examination

By the end of the eighth quarter in residence, the student should give an oral presentation of a scholarly proposal developed by the student concerning a topic that is within the scope of the adviser's research program. It is possible to propose a topic that is unrelated to the research program, but only with the prior approval of the adviser. After the public presentation, the student will defend the proposal before a committee of four faculty members (the advisory committee and one additional member). A written version of the proposal will also be required one week prior to the public presentation.

- Dissertation

A dissertation of publishable quality based on the student's original research must be completed. A summary of the dissertation is presented in a public seminar and later defended in a private oral examination. The dissertation examination committee will consist of the three members of the student's advisory committee, one additional member of the chemistry faculty to be selected by the advisory committee and an outside chair.

- Seminars

All students in the PhD program are expected to present a departmental “non-thesis” seminar. This seminar should be presented fairly early in the degree program. In addition, the student must present public seminars as part of the proposition oral exam and final thesis defense. The student is also expected to attend Departmental seminars.

## Master's Programs

### Master of Arts in Chemistry

The MA degree is intended primarily to meet the needs of students, such as those working full time in local industry or secondary education, who are seeking an advance degree with only a small research component. The primary difference between the MA degree and the MS degree is that a research thesis is required for the MS degree. The research required for the MS degree is often not feasible for students who work full time or is not of interest to those preparing for a career, for example, in secondary education. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student's progress.

CHEM 4995	Independent Research	
<b>Additional Coursework</b>		<b>15</b>
One advanced topic course or additional research credits		
CHEM 4XXX or others if pre-approved by the graduate committee		
<b>Total Credits</b>		<b>45</b>

Minimum credits required for degree: 45 (of which a minimum of 35 credit hours must be earned at the University of Denver)

The graduate core curriculum must be completed with a GPA of 3.0 or better. If it is appropriate, and approved by the graduate committee, other graduate courses may be substituted for part of the graduate core curriculum.

#### Independent Study and/or Research

A minimum of six credit hours of independent study and/or independent research approved by the student's advisory committee must be completed.

#### Courses in Other Departments

A minimum of 35 credit hours must be taken in courses offered by the Department of Chemistry and Biochemistry. As many as 10 credit hours may be taken in science-related 3000- to 4000- graduate level courses approved by the student's advisory committee.

#### Seminars

All students in the MA degree program must present a technical seminar and attend Departmental seminars.

## Master of Science in Chemistry

The MS degree is intended for students who wish an advanced degree in chemistry primarily for the purpose of better preparation to conduct research work in chemistry or biochemistry. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student's progress.

The graduate core curriculum must be completed with a GPA of 3.0 or better.

#### Seminars

All students in the MS program must present one departmental "non-thesis" seminar, in addition to the thesis seminar and attend Departmental seminars.

#### Non-coursework Requirements

Thesis- A thesis of publishable quality must be completed. A summary of the thesis is presented in an oral defense. The thesis defense committee will consist of a minimum of two faculty members from the Department of Chemistry and Biochemistry and an outside chair.

##### CHEM 3110 Chemical Systems I (3 Credits)

Advanced discussion of modern concepts of organic chemistry; bonding, stereochemistry, reaction mechanisms. Prerequisites: CHEM 2453 and equivalent of one year of physical chemistry.

##### CHEM 3120 Chemical Systems II (3 Credits)

Interpretation of trends in the chemistry of the elements in terms of orbital interactions. Most examples will be taken from the third row transition metals and the boron and carbon groups. Prerequisites: CHEM 2131, CHEM 3310 and CHEM 3110.

##### CHEM 3130 Chemical Systems III (3 Credits)

Advanced-level physical biochemistry course intended for advanced-level undergraduates and graduate students. Focuses on kinetic, thermodynamic and dynamic aspects of biopolymers; delineates the relationship of these properties to the mechanism and function of biological macromolecules. Prerequisites: CHEM 3811, CHEM 3812, CHEM 3813, CHEM 3610 or the equivalent.

##### CHEM 3220 Advanced Analytical Chemistry (3 Credits)

Principles of chemical instrumentation applied to analytical measurements; principles, instrumentation and applications of spectrometric and chromatographic measurements. Prerequisites: CHEM 3210 and CHEM 3621, or the equivalent.

##### CHEM 3310 Structure and Energetics I (3 Credits)

Fundamentals of quantum chemistry, and introduction to symmetry and molecular structure of small and large systems. Prerequisite: one year of physical chemistry.

**CHEM 3320 Structure and Energetics II (3 Credits)**

Computational methods in chemistry. Prerequisites: CHEM 3310, one year of physical chemistry.

**CHEM 3410 Atmospheric Chemistry (3 Credits)**

The concepts of equilibrium thermodynamics, kinetics, and photochemistry will be applied to understanding atmospheric processes. Covers urban air pollution in detail with focus on primary pollutants. Also covers stratospheric chemistry with focus on ozone chemistry and the chemistry of climate change. Prerequisites: (CHEM 2270 and CHEM 2453) OR CHEM 2240.

**CHEM 3411 Aquatic Chemistry (3 Credits)**

The circulation of the oceans and their chemical make-up. 'Classical water pollution problems' like biological oxygen demand and turbidity are discussed. Also presented: aquifer structure and flow, ground water chemistry, pollutant partitioning between stationary and mobile phases, heterogeneous surface chemistry, and the detection of trace contaminants. Prerequisites: (CHEM 2270 and CHEM 2453) or CHEM 2240.

**CHEM 3412 Environmental Chemistry & Toxicology (3 Credits)**

A survey of environmental toxicology concepts: animal testing, dose-response data, epidemiology, risk assessment. The course includes ecotoxicology, focusing on the alteration of biological and chemical systems beyond the simple response of an individual to an environmental chemical. Prerequisites: CHEM 2270 and CHEM 2453.

**CHEM 3413 Aerosol Science (3 Credits)**

CHEM 3413 is an introductory course that presents fundamental concepts associated with atmospheric aerosols in both natural and human environments. The course will focus on the sources, behavior, and effects of atmospheric aerosols, or particulate matter (PM) within the contexts of the natural environment and climate, human health, and industrial applications. The course will provide an overview of the chemical and physical characteristics of particulate matter and measurement methods, including chemical reactions that lead to aerosol formation and transformation. Examples and demonstrations will discuss applications to medical science, public health, clouds and climate, air pollution, colors in the sky, the built environment, mechanical engineering, chemical industry, and many other topics that stimulate curiosity. Aerosols affect almost every aspect of the environment and human health and are an important part of countless industrial processes or commercial products. The course is designed to provide a background to students interested in further study or careers broadly in (a) the environmental sciences, (b) medical or health sciences, or (c) many chemical or other scientific or engineering fields where aerosol processes are involved. CHEM 3413 will be taught at an upper-division (3000) level, but with enough flexibility to expect all environmental science, chemistry, biochemistry, biology, ecology, or engineering majors with the prerequisite year of chemistry to have fun and be able to learn effectively and succeed. The course is lecture-only; no lab is required, although demonstrations and hands on activities will be involved. The course fulfills requirements for the Environmental Chemistry B.S. major or minor, elective credit toward the Environmental Science B.S. or B.A. majors, and elective credit toward graduate programs in Chemistry. Prerequisite: CHEM 2240 or CHEM 2131.

**CHEM 3610 Physical Chemistry I (3 Credits)**

Fundamentals of thermodynamics, including phase and reaction equilibria, properties of solutions, and electrochemistry needed for advanced study in life sciences and for Physical Chemistry II and III. May be taken for graduate credit by nonchemistry majors. Prerequisites: CHEM 2453, calculus and physics.

**CHEM 3620 Physical Chemistry II (3 Credits)**

Fundamentals of quantum chemistry, including theories of atomic and molecular structure and spectroscopy. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3610.

**CHEM 3621 Physical Chemistry III (3 Credits)**

Fundamentals of kinetic theory and statistical mechanics. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3620.

**CHEM 3703 Topics in Organic Chemistry (3 Credits)**

May include organic photochemistry, organic synthesis, organic electrochemistry or natural products. May be repeated for credit. Prerequisites: CHEM 3110 or equivalent and others depending on topic.

**CHEM 3705 Topics in Biochemistry (3,4 Credits)**

May include physical techniques for exploring biological structure, biological catalysis, and selected fields within biochemistry taught from original literature. May be repeated for credit. Prerequisites: CHEM 3831 and 3813.

**CHEM 3811 Biochemistry-Proteins (3 Credits)**

Protein structure and function, starting with the building blocks and forces that drive the formation of protein structure and the basic concepts of protein structure, and continuing with enzyme catalysis, kinetics, and regulation. Prerequisites: CHEM 2453 or instructor permission.

**CHEM 3812 Biochemistry-Membranes/Metabolism (3 Credits)**

Membranes and membrane mediated cellular processes, energy and signal transduction, and metabolic/biosynthetic pathways. Prerequisite: CHEM 3811 or CHEM 3831.

**CHEM 3813 Biochemistry-Nucleic Acids (3 Credits)**

Molecular processes underlying heredity, gene expression and gene regulation in prokaryotes and eukaryotes. Prerequisites: CHEM 2453 and CHEM 3811.

**CHEM 3831 Advanced Protein Biochemistry (3 Credits)**

This course provides fundamental insights into the chemistry and physics of proteins. It investigates how amino acids form proteins with highly complex three-dimensional structures and how these structures mediate function. We examine key research articles and their contribution to our current understanding of proteins. Topics range from protein folding to enzyme kinetics and emphasize basic principles. Prerequisites: CHEM 2453 and instructor permission.

**CHEM 3991 Independent Study (1-10 Credits)**

May be repeated for credit.

**CHEM 3995 Independent Research (1-10 Credits)**

Research project conducted under guidance of a faculty member. Credit hours and projects arranged on an individual basis. May be repeated for credit.

**CHEM 4900 Chemistry Seminar (0 Credits)**

A weekly presentations of research in progress and of current literature by outside speakers. faculty and graduate students.

**CHEM 4980 Internship-Graduate (0 Credits)**

The work will have a well-defined chemistry or biochemistry component that will enhance the student's understanding of the field and provide hands-on real-world experience.

**CHEM 4991 Independent Study (1-10 Credits)****CHEM 4995 Independent Research (1-10 Credits)****CHEM 5991 Independent Study (1-10 Credits)****CHEM 5995 Independent Research (1-10 Credits)**

## Courses

**CHEM 3110 Chemical Systems I (3 Credits)**

Advanced discussion of modern concepts of organic chemistry; bonding, stereochemistry, reaction mechanisms. Prerequisites: CHEM 2453 and equivalent of one year of physical chemistry.

**CHEM 3120 Chemical Systems II (3 Credits)**

The concepts of equilibrium thermodynamics, kinetics, and photochemistry will be applied to understanding atmospheric processes. Covers urban air pollution in detail with focus on primary pollutants. Also covers stratospheric chemistry with focus on ozone chemistry and the chemistry of climate change. Prerequisites: (CHEM 2270 and CHEM 2453) OR CHEM 2240.

**CHEM 3411 Aquatic Chemistry (3 Credits)**

The circulation of the oceans and their chemical make-up. 'Classical water pollution problems' like biological oxygen demand and turbidity are discussed. Also presented: aquifer structure and flow, ground water chemistry, pollutant partitioning between stationary and mobile phases, heterogeneous surface chemistry, and the detection of trace contaminants. Prerequisites: (CHEM 2270 and CHEM 2453) or CHEM 2240.

**CHEM 3412 Environmental Chemistry & Toxicology (3 Credits)**

A survey of environmental toxicology concepts: animal testing, dose-response data, epidemiology, risk assessment. The course includes ecotoxicology, focusing on the alteration of biological and chemical systems beyond the simple response of an individual to an environmental chemical. Prerequisites: CHEM 2270 and CHEM 2453.

**CHEM 3413 Aerosol Science (3 Credits)**

CHEM 3413 is an introductory course that presents fundamental concepts associated with atmospheric aerosols in both natural and human environments. The course will focus on the sources, behavior, and effects of atmospheric aerosols, or particulate matter (PM) within the contexts of the natural environment and climate, human health, and industrial applications. The course will provide an overview of the chemical and physical characteristics of particulate matter and measurement methods, including chemical reactions that lead to aerosol formation and transformation. Examples and demonstrations will discuss applications to medical science, public health, clouds and climate, air pollution, colors in the sky, the built environment, mechanical engineering, chemical industry, and many other topics that stimulate curiosity. Aerosols affect almost every aspect of the environment and human health and are an important part of countless industrial processes or commercial products. The course is designed to provide a background to students interested in further study or careers broadly in (a) the environmental sciences, (b) medical or health sciences, or (c) many chemical or other scientific or engineering fields where aerosol processes are involved. CHEM 3413 will be taught at an upper-division (3000) level, but with enough flexibility to expect all environmental science, chemistry, biochemistry, biology, ecology, or engineering majors with the prerequisite year of chemistry to have fun and be able to learn effectively and succeed. The course is lecture-only; no lab is required, although demonstrations and hands on activities will be involved. The course fulfills requirements for the Environmental Chemistry B.S. major or minor, elective credit toward the Environmental Science B.S. or B.A. majors, and elective credit toward graduate programs in Chemistry. Prerequisite: CHEM 2240 or CHEM 2131.

**CHEM 3610 Physical Chemistry I (3 Credits)**

Fundamentals of thermodynamics, including phase and reaction equilibria, properties of solutions, and electrochemistry needed for advanced study in life sciences and for Physical Chemistry II and III. May be taken for graduate credit by nonchemistry majors. Prerequisites: CHEM 2453, calculus and physics.

**CHEM 3620 Physical Chemistry II (3 Credits)**

Fundamentals of quantum chemistry, including theories of atomic and molecular structure and spectroscopy. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3610.

**CHEM 3621 Physical Chemistry III (3 Credits)**

Fundamentals of kinetic theory and statistical mechanics. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3620.

**CHEM 3703 Topics in Organic Chemistry (3 Credits)**

May include organic photochemistry, organic synthesis, organic electrochemistry or natural products. May be repeated for credit. Prerequisites: CHEM 3110 or equivalent and others depending on topic.

**CHEM 3705 Topics in Biochemistry (3,4 Credits)**

May include physical techniques for exploring biological structure, biological catalysis, and selected fields within biochemistry taught from original literature. May be repeated for credit. Prerequisites: CHEM 3831 and 3813.

**CHEM 3811 Biochemistry-Proteins (3 Credits)**

Protein structure and function, starting with the building blocks and forces that drive the formation of protein structure and the basic concepts of protein structure, and continuing with enzyme catalysis, kinetics, and regulation. Prerequisites: CHEM 2453 or instructor permission.

**CHEM 3812 Biochemistry-Membranes/Metabolism (3 Credits)**

Membranes and membrane mediated cellular processes, energy and signal transduction, and metabolic/biosynthetic pathways. Prerequisite: CHEM 3811 or CHEM 3831.

**CHEM 3813 Biochemistry-Nucleic Acids (3 Credits)**

Molecular processes underlying heredity, gene expression and gene regulation in prokaryotes and eukaryotes. Prerequisites: CHEM 2453 and CHEM 3811.

**CHEM 3831 Advanced Protein Biochemistry (3 Credits)**

This course provides fundamental insights into the chemistry and physics of proteins. It investigates how amino acids form proteins with highly complex three-dimensional structures and how these structures mediate function. We examine key research articles and their contribution to our current understanding of proteins. Topics range from protein folding to enzyme kinetics and emphasize basic principles. Prerequisites: CHEM 2453 and instructor permission.

**CHEM 3991 Independent Study (1-10 Credits)**

May be repeated for credit.

**CHEM 3995 Independent Research (1-10 Credits)**

Research project conducted under guidance of a faculty member. Credit hours and projects arranged on an individual basis. May be repeated for credit.

**CHEM 4900 Chemistry Seminar (0 Credits)**

A weekly presentations of research in progress and of current literature by outside speakers. faculty and graduate students.

**CHEM 4980 Internship-Graduate (0 Credits)**

The work will have a well-defined chemistry or biochemistry component that will enhance the student's understanding of the field and provide hands-on real-world experience.

CHEM 4991 Independent Study (1-10 Credits)

CHEM 4995 Independent Research (1-10 Credits)

CHEM 5991 Independent Study (1-10 Credits)

CHEM 5995 Independent Research (1-10 Credits)

## Geography and the Environment

Office: Boettcher Center West, Room 120

Mailing Address: 2050 E. Iliff Avenue, Denver, CO 80208

### Why study geography at the University of Denver?

Consider these advantages:

- Engaged and research-active faculty
- Small classes and personal attention
- State-of-the-art geospatial technology laboratories
- Strong and exciting field orientation
- Excellent location for applied research in physical and human geography

Situated at the foot of the Rocky Mountains in the dynamic city of Denver, the University of Denver is an ideal laboratory for physical and human geographers, as well as those studying human-environment interaction and geographic information science.

Since it was founded in 1945, the University of Denver's department of geography has offered excellent opportunities for graduate students in teaching, research, academia, government and the private sector.

We have state-of-the-art facilities and resources:

- Fully networked labs with frequent upgrades in hardware, specialized equipment and software
- Four Geographic Information Science (GIS) labs which include most industry standard GIS software (All ESRI products, ERDAS Imagine, E-cognition, ENVI, Web Mapping and Geovisualization products)
- USDA-approved soil and sediment lab and the Hoyt Mineral Collection
- Multimedia teaching classrooms
- National and international field trips
- The Mount Evans field station (elevation 10,600 feet), is just 45 minutes from campus

Come visit our facilities, meet our faculty and students and see the advantages for yourself.

The Department of Geography and the Environment at the University of Denver offers programs leading to the MA in Geography, MS in Geographic Information Science (GISc) (on-campus and online programs) and PhD in Geography. Areas of teaching and research include biogeography, climatology, computer-assisted cartography, cultural geography, development, economic geography, environmental geology, geographic information science, geovisualization, geomorphology, global change, hydrology, land use/land cover analysis, Latin America, natural resources, paleoenvironmental change, political ecology, Quaternary studies, remote sensing, soils, spatial analysis, sustainability, transportation, and urban geography and planning. With 12 tenure-line faculty and five full-time teaching faculty, our faculty is very active in research, publishing numerous journal articles and presenting many conference papers every year. Our faculty members also are known for their excellence as instructors, with several faculty having earned major teaching awards.

### Doctor of Philosophy in Geography

#### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well as the baccalaureate.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the

baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Acceptance Offered: No, this program does not offer English Conditional Admission.

## Master of Arts in Geography

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

## Master of Science in Geographic Information Science

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

English Conditional Admission: No, this program does not offer English Conditional Admission.

## Doctoral Program

### Doctor of Philosophy in Geography

#### Degree Requirements

#### Coursework Requirements

A minimum of 117 quarter hours of credit is required for the doctoral degree, up to 45 hours of which may be transferred from an earned master's degree from a regionally accredited university.

Code	Title	Credits
<b>Core coursework requirements</b>		<b>12</b>
Complete the following courses or work with your advisor if the equivalent of the following courses were taken as part of your MA or MS program.		
GEOG 3000	Advanced Geographic Statistics	
GEOG 4000	Fundamental Geographic Perspectives	
GEOG 4020	Geographic Research Design	
GEOG 4900	Graduate Colloquium in Geog	
<b>Geography courses</b>		<b>32</b>
Complete at least 32 additional credits in geography courses (at least 3000 or higher level) directed toward the dissertation research		
<b>Cognate courses</b>		<b>12</b>
Complete at least 12 additional credits in cognate coursework in a related field		
<b>Additional coursework</b>		<b>0-16</b>
Complete 2 graduate seminar courses and 2 research tools to reach the number of minimum credits required for the degree		
<b>Transfer Credit</b>		<b>0-45</b>
A maximum of 45 credits may be accepted as transferred in from a MA or MS program, including credits substituting core coursework requirements		
<b>Total Credits</b>		<b>117</b>

Minimum number of credits required for the degree: 117 credits

#### Non-coursework requirements:

- Two Research Tools Requirement
- PhD Research Proposal Presentation
- Comprehensive Examination
- Dissertation
- Oral Defense

### Two Research Tools Requirement

The options to meet the tool requirement include languages, geographic information systems, computer cartography, remote sensing and geographic statistics.

### PhD Research Proposal Presentation

Each student is required to prepare and present a dissertation proposal and have it formally approved by the student's faculty committee. This should be completed by the end of the second year for a full-time PhD student.

### Comprehensive Exam

This exam, which includes both written and oral parts, is designed to evaluate the student's work at the University of Denver.

This exam is usually scheduled after all substantive course work has been completed and the dissertation proposal has been approved. It must be taken at least three quarters prior to expected graduation. Students should consult with their adviser and committee members to achieve a greater understanding of what will be on the exam. The written portion of the exam can be taken in one of two formats: a written examination conducted in the department usually taken over two days, lasting four hours each day, or a take-home examination in which the student has five days to complete the exam. An oral examination is held two weeks after the written exam has been completed. A candidate who fails one or all parts of the comprehensive exam may petition the department for re-examination. Re-examination, if granted by the department, may not be scheduled until the succeeding quarter and cannot be retaken more than once.

### Dissertation and Oral Defense

Upon completion of course work, approved proposal, comprehensive exam and the dissertation, each student will undergo a final oral defense. An oral defense may not be scheduled until at least the second quarter following the quarter in which the comprehensive exam was successfully completed (the summer may count as a quarter, though no examinations should be scheduled during the summer). The final oral defense is to be conducted at least two weeks before the end of the quarter in which the degree is to be awarded. This defense is usually about two hours in length, and is composed of a 20–25 minute presentation by the student followed by questions from the committee. The examining committee is comprised of at least four members: an advisor and three other committee members. The advisor must be a full-time tenure-line faculty member in the Department of Geography & the Environment with a research record and interest appropriate to the student's proposed research area of specialization. All members of the committee must be full-time appointed faculty at DU and have research records appropriate to the student's area of specialization. Faculty from appropriately-related units who hold the terminal degree in their field may serve on the committee as long as the candidate's graduate unit has the majority representation and a two-thirds majority of the committee hold the earned doctorate. There is also a non-voting Oral Defense Committee Chair who must be a tenured faculty member from another department at the University of Denver serving as the university representative for the final oral defense.

For doctoral programs, research areas are limited to the fields of biogeography, climatology, cultural geography, economic geography, geographic information science, geomorphology, global change, human environment interaction, Latin America, paleoenvironmental change, Quaternary studies, transportation geography and urban geography in accordance with current faculty expertise.

## Master's Programs

### Master of Arts in Geography

#### Requirements for students with prior degrees in geography:

For the MA degree, 45 quarter hours of course work and a thesis are required. Students can specialize in subfields within physical geography, human geography or human-environment interaction (please see the Department of Geography and the Environment Graduate Student Handbook for detailed information).

#### Degree requirements

##### Coursework requirements

Code	Title	Credits
Core coursework requirements:		
GEOG 3000	Advanced Geographic Statistics	4
GEOG 4000	Fundamental Geographic Perspectives	4
GEOG 4020	Geographic Research Design	4
GEOG 4900	Graduate Colloquium in Geog	0
Additional transfer, departmental, and other university courses		0-33
<b>Total Credits</b>		<b>45</b>
Note: Students must take a minimum of 33 credits in GEOG courses		

Minimum number of credits required for degree: 45 credits

**Non-coursework requirements:**

- Research proposal presentation
- Thesis
- Final Oral Defense

**Research Proposal Presentation**

Each student is required to prepare and present a thesis proposal and have it formally approved by the student's faculty committee.

**Thesis Requirement**

Original research of a geographic topic is required, the scope of which is determined by the thesis committee. The thesis should be of publishable quality.

**Final Oral Defense**

Upon completion of required course work, proposal approval and the thesis, each student will undergo a final oral defense. This defense is usually about two hours in length. The defense will address both course work and the thesis research. The final oral defense is to be conducted at least two weeks before the end of the quarter in which the degree is to be awarded. The oral defense committee is comprised of at least three members: an advisor and two other committee members. The advisor must be a full-time tenure-line faculty member in the Department of Geography & the Environment with a research record and interest appropriate to the student's proposed research area of specialization. All members of the committee must be full-time appointed faculty at DU and have research records appropriate to the student's area of specialization. DU faculty from appropriately related units who hold the terminal degree in their field may serve on the committee as long as the candidate's graduate unit has the majority representation. There is also a non-voting Oral Defense Committee Chair who must be a tenure-line faculty member from another department at the University of Denver serving as the university representative for the final oral defense.

---

## Master of Science in Geographic Information Science

**Degree requirements****Coursework requirements**

Code	Title	Credits
<b>Core coursework requirements</b>		<b>28</b>
GEOG 3000	Advanced Geographic Statistics	
GEOG 3010	Geographic Information Analysis	
GEOG 3140	GIS Database Design	
GEOG 3150	GIS Project Management	
or GEOG 4170	Geospatial Analysis and Project Management	
GEOG 3200	Remote Sensing	
GEOG 4020	Geographic Research Design	
GEOG 4900	Graduate Colloquium in Geog	
GEOG 4993	Capstone or Project	

**Electives** **8-20**

A minimum of 8 quarter hours of electives must be taken in geography from any of the GEOG courses at 3000 level or above. It is strongly recommended that students take GEOG 4000 Fundamental Geographic Perspectives as one of their elective courses.

**Total Credits** **48**

Note: At least 24 quarter hours must be completed in courses taken within the Department of Geography & the Environment at the University of Denver. No more than 24 credits will be accepted in transfer from the GIS certificate program.

Minimum number of credits required for degree: 48 credits

**Non-coursework requirements:**

- Capstone project
- Capstone project presentation

**Capstone Project**

Students will be required to produce a final project of professional quality demonstrating their ability to apply geographic information science to their chosen area of specialization. The project is done for, and with, a company, agency, nongovernmental organization or faculty member who is referred to as the client. The project must be used by the client and may be predominantly technical in nature or may include a research component. The project must demonstrate a mastery of one or more of the several geospatial technologies. It must require the student to engage in all facets of a project, from design to implementation. At the completion of the project, students will present their work to their peers.

## Master of Science in Geographic Information Science (Online Program)

This option is designed for people wishing to complete the degree via an online format.

### Degree requirements

#### Coursework requirements

Code	Title	Credits
<b>Core coursework requirements</b>		<b>20</b>
Complete all of the following courses:		
GEOG 3000	Advanced Geographic Statistics	
GEOG 3010	Geographic Information Analysis	
GEOG 3140	GIS Database Design	
GEOG 3150 or GEOG 4170	GIS Project Management Geospatial Analysis and Project Management	
GEOG 3200 or GIS 4700	Remote Sensing (Remote Sensing is elective in GIS certificate program) Remote Sensing I	
<b>Geography/GIS Elective Courses</b>		<b>20</b>
Complete a minimum of five elective courses from any University College GIS certificate program course and not already used to meet a required course, or choose from the courses below.		
GEOG 3040	GPS for Resource Mapping	
GEOG 3410	Urban Applications in GIS	
GEOG 3860	GIS Applications and Natural Resources	
GEOG 3130	GIS Programming with Python	
Acceptable University College GIS certificate electives can be found at the University College GIS certificate program website. <sup>1</sup>		
<b>Capstone courses</b>		<b>8</b>
Complete both of the following courses:		
GEOG 4020	Geographic Research Design	
GEOG 4993	Capstone or Project	
<b>Total Credits</b>		<b>48</b>

Note: At least 24 credits counted towards the degree must be taken within the Department of Geography & the Environment at the University of Denver. No more than 24 credits will be accepted in transfer from the GIS certificate program.

Minimum number of credits required for degree: 48 credits

#### Non-coursework requirements:

- Capstone project

<sup>1</sup> <http://universitycollege.du.edu/gis/degree/certificate/geographic-information-systems-online/degreeid/31#courses> (<http://universitycollege.du.edu/gis/degree/certificate/geographic-information-systems-online/degreeid/31/#courses>)

#### GEOG 3000 Advanced Geographic Statistics (4 Credits)

The second in a sequence of two courses that address general statistical applications particular to geography, environmental science and other disciplines dealing with a spatial dimension in the data they work with. The focus of this second course is on the more advanced multivariate statistical techniques. The course has a strong applied orientation as particular attention is given to which technique is the most appropriate to use for a given type of problem and how to interpret and apply the resulting statistics. Extensive use is made of computer statistics packages. Homework exercises involving such statistical techniques as multiple correlation and regression analysis, principle components analysis, discriminate analysis and canonical correlation. Prerequisite: GEOG 2000.

#### GEOG 3010 Geographic Information Analysis (4 Credits)

Reviews many basic statistical methods and applies them to various spatial datasets. In addition, several spatial statistical methods are applied to spatial datasets. This course is an in-depth study of the interface between GIS, spatial data, and statistical analysis. Preferred prerequisite: GEOG 2000. Prerequisite: GEOG 2100.

#### GEOG 3030 Advanced Field Methods (4 Credits)

Various field methods used by researchers in physical geography; techniques include field mapping, laboratory analyses, geologic field methods. Prerequisite: GEOG 1201 or equivalent.

**GEOG 3040 GPS for Resource Mapping (4 Credits)**

This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Control and Quality Assurance issues for data collection programs. Hands-on lab exercises include navigation, mission planning for a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, differential correction, and data integration into a GIS and map production.

**GEOG 3100 Geospatial Data (4 Credits)**

This graduate-level course is designed to provide graduate students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems are also discussed.

**GEOG 3110 GIS Modeling (4 Credits)**

This course focuses on the concepts and procedures used in discovering and applying relationships within and among maps. It extends the mapping and geo-query capabilities of GIS to map analysis and construction of spatial models. The course establishes a comprehensive framework that addresses a wide range of applications from natural resources to retail marketing. Topics include the nature of spatial data introduction to spatial statistics and surface modeling in the first five weeks followed by spatial analysis operations and modeling techniques in the second five weeks. The lectures, discussions and independent exercises provide a foundation for creative application of GIS technology in spatial reasoning and decision making.

**GEOG 3120 Environmental/GIS Modeling (4 Credits)**

Facing challenges brought by the dramatically changing global environment, environmental modeling is increasingly used to support geographical and environmental decision making (e.g., spatial conservation prioritization). Environmental modeling is concerned with the characterization, modeling and simulation of environmental phenomena and processes using conceptual and mathematical models. Environmental phenomena and processes taking place in the geographic space are regulated by spatial principles. They also interact with other phenomena or processes in the attribute space. For example, species distribution is not only constrained by spatial factors such as proximity to other species, but also influenced by environmental factors such as terrain and climatic conditions. Due to its superior capabilities of handling spatial data and modeling spatial and attribute relationships, geographic information system (GIS) provides the ideal tools for environmental modeling. This upper-level undergraduate/graduate-level course surveys the concepts and techniques of GIS supported environmental modeling in three general categories: 1) Modeling in the spatial domain where the focus is on modeling spatial principles (e.g., spatial autocorrelation); 2) Modeling in the attribute domain where the emphasis is on environmental correlations (e.g., environmental niche modeling); 3) Modeling in the combined spatial and attribute domain where both spatial principles and environmental correlations are exploited (e.g., geographically weighted regression). Throughout this course, several real-world applications are used to demonstrate the ideas, concepts, and techniques of GIS supported environmental modeling, including crime spatial pattern modeling, species distribution modeling, and soil-landscape modeling and mapping. Prerequisites: GEOG 2000 and GEOG 2100.

**GEOG 3130 GIS Programming with Python (4 Credits)**

This advanced course explores the more technical aspects of GIS functions and data structures. Students have hands-on access to both raster (grid-cell) and vector-based software packages in the form of lab exercises that culminate in a small student-designed GIS project. Prerequisite: GEOG 2100.

**GEOG 3140 GIS Database Design (4 Credits)**

Designing databases to provide a foundation for GIS functions and applications, including investigating techniques used for designing databases in non-spatial environments and learning the applicability to GIS problems. Building on concepts and techniques introduced in the first half to extend traditional techniques and methodologies to model the requirements of spatial problems. Students learn to translate the conceptual spatial model into a physical implementation specific to GIS products. Prerequisite: GEOG 2100 or GEOG 3100.

**GEOG 3150 GIS Project Management (4 Credits)**

This course provides graduate students seeking a career in GIS, or anyone managing a GIS project, with the knowledge, skill and abilities to take a GIS project or program past the design and implementation phase and into day-to-day operation. Students evaluate and analyze the role of GIS in an organization's overall information system strategy and communicate the importance of geography in an information system. Data sharing in the organization is examined to determine the benefits and costs of distributing data creation and maintenance activities throughout an organization. Finally, the role of GIS professionals and the skill sets required to manage GIS effectively are examined. Students review case studies of successful and not-so-successful GIS projects in North America. GIS management issues are addressed by a series of case studies focusing on various management aspects. Students are also expected to visit operational GIS programs in the metropolitan area and interview GIS managers. Students prepare case study evaluations for review in the classroom. Required for all MSGIS students because of the critical importance of GIS project management.

**GEOG 3160 Web GIS (4 Credits)**

With the development of internet technologies, the architecture of Geographic Information System (GIS) has evolved from the centralized desktop architecture to the distributed web architecture. Numerous web GIS applications are available (e.g., Google Map, Earth Explorer, and National Map). A web GIS application allows GIS analysts to access, manipulate, and visualize geospatial data from the web without the installation of GIS software. To facilitate the development of web GIS applications, geospatial technology vendors have provided application programming interfaces (APIs) through which GIS professionals can build customized web applications. This course focuses on the concepts and the development of web based GIS applications using industry-relevant geospatial APIs and core web technologies of HTML, CSS, and JavaScript. This is an upper-level undergraduate, to graduate-level course in GIS that introduces fundamental Web GIS concepts, applications and development kits. Concepts and techniques to be covered in this course include: • Web GIS concepts: system architecture, components, and workflow • Web programming languages: Hypertext Transfer Markup Language (HTML), Cascading Style Sheet (CSS) and JavaScript • Web mapping tools: ArcGIS online, Leaflet and their APIs. Prerequisites: GEOG 2100 and GEOG 3130.

**GEOG 3190 Lidar. Theory and Applications (4 Credits)**

Overview: Lidar (Light Detection and Ranging) is an active remote sensing system that uses laser pulses to measure the distance between the sensor and a surface or objects. Lidar has become an established method for collecting very dense and accurate elevation values, as well as for characterizing the three-dimensional structure of vegetation and urban land cover. In this course, we will build an understanding of the physical principles behind lidar, develop experience working with Lidar datasets, and survey a wide array of lidar applications for mapping and natural resource management. The course will culminate with a student-directed final project. Prerequisites: GEOG 2100 or GEOG 3200.

**GEOG 3200 Remote Sensing (4 Credits)**

This course acquaints students with the basic techniques of the collection, processing and interpretation of information about the character of the earth's surface from remote locations. Students become familiar with the use of the visible, infrared, thermal and microwave portions of the electromagnetic spectrum as a means of determining land cover and/or land use. Both manual and computer-assisted techniques are discussed and include hands-on applications.

**GEOG 3230 Advanced Remote Sensing (4 Credits)**

This course will build on the basic remote sensing concepts presented in GEOG 3200. Students will explore more in-depth concepts relevant to satellite and airborne remote sensing, including radiative transfer and information extraction. In addition, students will be introduced to two cutting-edge sources of data about the Earth's surface: hyperspectral and lidar (Light Detection and Ranging) sensors. Students will study specific applications of advanced digital image processing techniques for environmental monitoring, natural resource management, and land-use planning. Finally, students will integrate remote sensing and other spatial datasets in the context of Geographic Information System (GIS) analysis. Prerequisite: GEOG 3200.

**GEOG 3300 Cultural Geography (4 Credits)**

Themes and methods of cultural geography including cultural area, landscape, history and ecology.

**GEOG 3310 Culture/Nature/Economics-Human Ecology (4 Credits)**

Cultural adaptation, livelihood strategies and environmental modification among subsistence and peasant societies: responses of such groups to technological change and economic integration.

**GEOG 3330 Political Geography (4 Credits)****GEOG 3340 Geographies of Migration (4 Credits)**

This course explores contemporary movement of people across international borders and the social, cultural, political, economic, and environmental repercussions of such movements. The class looks at the global flow of people across national boundaries and the ways in which these dispersed peoples build and maintain social networks across national borders. While doing so, we address the role of globalization in international migration processes. What motivates people to move long distances, often across several international borders and at considerable financial and psychological cost? How do migrants change—and how in turn do they bring change, social as well as economic, to new destinations as well as places left behind? This course examines politics and patterns of migration, transnational migration, and immigration to the United States.

**GEOG 3350 Qualitative Methods in Geography (4 Credits)**

This course focuses upon qualitative methods in the production of geographic knowledge. Qualitative methods are widely employed by geographers to understand patterns and underlying processes of human and human-environment issues in society. The course is designed to expose participants to the theories, purpose, scope, and procedures of qualitative research. Specific topics include: epistemological theories (ways of knowing); ethics and power in research; research design; data collection techniques in interviewing, participant observation and landscape interpretation, discourse and archive analysis, and case studies; data analysis; and writing and disseminating qualitative findings.

**GEOG 3400 Urban Landscapes (4 Credits)**

Urbanization as a process; national urban systems; internal spatial structure of cities; role of transportation in urban development; location of residential, commercial and industrial activities; agglomeration economies; residential congregation and segregation; environmental justice; urban growth and growth coalitions; decentralization and urban sprawl; edge cities; impacts on the urban environment; world cities; globalization.

**GEOG 3410 Urban Applications in GIS (4 Credits)**

This course uses the tools of geographic information systems (GIS) to explore concepts of traditional urban geography, including defining cities/metropolis, internal urban structures, urban systems, industrial location, social and residential patterns, urban form, environmental problems, and urban planning. The course allows students to practice fundamental skills in GIS (e.g., working with attribute tables, spatial analysis, spatial queries) and cartography (map design, color theory, display of information). Depending on the quarter, students pursue individual projects of interest or client-based projects. Prerequisite: GEOG 2100 or GEOG 3100 or equivalent.

**GEOG 3420 Urban and Regional Planning (4 Credits)**

Historical evolution of planning theory and practices; comprehensive planning process; legal, political, economic, social, environmental aspects of urban planning; urban design; urban renewal and community development; transportation planning; economic development planning; growth management; environmental and energy planning; planning for metropolitan regions; national planning.

**GEOG 3425 Urban Sustainability (4 Credits)**

The 21st century is being called the 'century of the city.' Now more than ever, humans across the globe call the city their home. Many of the world's most pressing crises are manifest in cities, including: greenhouse gas emissions, land degradation, high mass production and consumption, widespread poverty and hunger, and expanding socio-economic disparities. As 'sustainability' becomes part of mainstream discourse, this course explores what sustainability means for urban contexts around the globe. Arguably, the city has the potential to be the most efficient, equitable, and environmental form of modern human settlement. Covering all dimensions of sustainability from a social science perspective, this course focuses on theoretical groundings, practices of urban sustainability, and new research agendas. Major topics include cities and nature; planning and land use; urban form; community and neighborhoods; transportation systems and accessibility; livelihood and urban economies; and social justice and the city.

**GEOG 3440 Urban Transportation Planning (4 Credits)**

A specialized course in the urban planning sequence focusing on issues, practices and policies of urban transportation planning. Recommended for anyone interested in timely transportation topics, such as the feasibility and impacts of light rail transit, the planning and implementation of highway projects, and the role of freight and passenger transportation companies in transportation planning.

**GEOG 3445 Sustainability and Transportation (4 Credits)**

Sustainable transportation aims at promoting better and healthier ways of meeting individual and community needs while reducing the social and environmental impacts of current mobility practices. Given the importance of transport for economic growth, the uncertainties surrounding the availability and price of future sources of energy for transport use, as well as the social and environmental externalities of currently-utilized transport modes, it is imperative that more sustainable ways of providing transportation be developed and utilized.

**GEOG 3450 Transportation and Mobilities (4 Credits)**

The geographical study of transport has grown considerably and become more diverse, encompassing new areas of inquiry generated from economic, urban, environmental, political, social, and cultural geography, as well as from transport geography itself. The most notable expansion has been in the area of 'mobilities' research, which is focused on the social aspects of mobility, including both the large-scale movements of people, objects, capital, and information across the world, as well as the more local processes of daily transportation, movement through public space and the travel of material things within everyday life.

**GEOG 3500 Reconstructing Quaternary Environments (4 Credits)**

Nature, magnitude, sequence and causes of Pleistocene and Holocene climatic changes; effects of climatic change on plant/animal distributions and human populations; paleoclimatic research methods. Laboratory and field trips. Prerequisites: GEOG core, ENVI 3000.

**GEOG 3510 Biogeography (4 Credits)**

Biogeography focuses on present and past distributions of plants and animals. In this course we consider a number of themes central to biogeography, including plate tectonics and biogeography, the effects of climate change of plant and animal distributions, biogeographic realms, island biogeography, biodiversity, human impacts on plants and animals, and the origins of agriculture.

**GEOG 3520 Geography of Soils (4 Credits)**

Spatial variation in soil characteristics; soil processes, soil morphology, their application in soil studies. Prerequisite: GEOG 1201-1203 Environmental Systems or instructor's permission.

**GEOG 3550 Topics in Physical Geography (1-5 Credits)**

Investigations into various aspects of physical environment.

**GEOG 3560 Fluvial Geomorphology (4 Credits)**

Examines how water and sediment interact at Earth's surface to create a variety of landforms ranging from small rills to continental-scale river systems. Introduces fundamental fluvial processes or channel hydraulics and sediment transport. Examines common fluvial landforms including alluvial streams, bedrock streams, floodplains and alluvial fans. Combines traditional lectures and in-class discussions with numerous field excursions to rivers in the Rocky Mountains and Great Plains. Prerequisite: GEOG 1203, GEOG 1218, or GEOG 1266.

**GEOG 3600 Meteorology (4 Credits)**

The basic theory and skills of weather forecasting. Topics include thorough coverage of atmosphere dynamics and thermodynamics, the evolution of various weather types, the mechanics of storm systems (cyclones, severe storms, hurricanes), creation and interpretation of weather maps, and forecasting techniques.

**GEOG 3610 Climatology (4 Credits)**

Climatology is the study of the processes that result in spatial and temporal variation of weather. This course introduces the student to the processes responsible for the transfer of matter and energy between the Earth's surface and the atmosphere and the average weather conditions that result. In addition, topics of global concern, such as greenhouse effect, El Nino, urban heat islands and acid rain, are discussed. Laboratory exercises provide an opportunity to investigate climate variation and climatic change through the use of a variety of computer simulations. Prerequisites: GEOG 1201, GEOG 1216, & GEOG 1264.

**GEOG 3620 Applied Climatology (4 Credits)**

Climatic impact on environmental systems and human behavior; techniques to investigate climatic characteristics of environmental extremes (floods, blizzards), urban climatology and socioeconomic impacts of climate. Prerequisite: GEOG 1201. Recommended Prerequisite: GEOG 3600 or GEOG 3610.

**GEOG 3630 Dendroclimatology (2-4 Credits)**

Systematic variations in tree ring width and/or density can be used to reconstruct changes in precipitation or temperature well before humans were around to record the variability. This class utilizes hands on methods to introduce the fundamental principles of dendroclimatology. Through readings and lectures, students will learn how tree ring growth can be correlated to climate change. Students will then undertake several research projects to reconstruct past climate variability in the Denver metro area using tree rings. Prerequisite: permission of instructor.

**GEOG 3640 Climate Change and Society (4 Credits)**

The science of anthropogenic climate change will be presented with an emphasis on critical evaluation of the evidence of climate change and future scenarios and migration strategies. Students will be introduced to the latest climate change research, including the Intergovernmental Panel on Climate Change report, and the most recent literature from the field. The societal and cultural implications of climate change will also be discussed. Prerequisites: GEOG 1201, GEOG 1216, or GEOG 1264.

**GEOG 3701 Topics in Geographic Information Science (1-4 Credits)**

Topics vary by instructor.

**GEOG 3720 Mountain Environments and Sustainability (4 Credits)**

Mountain Environments and Sustainability explores the unique physical and cultural aspects of high relief and/or high altitude environments. Covering one quarter of the Earth's land surface, mountains directly or indirectly impact the lives of millions of people. We examine the significance of mountains to climate, water resources, and human activities, and discuss the sustainability of these environments and communities in light of rapid changes in many mountain regions resulting from anthropogenic factors and global change. GEOG 1201, 1202, and 1203 or instructor approval.

**GEOG 3750 Topics in Human-Environment Interactions (1-4 Credits)**

This course investigates various aspects of the relationships between human societies and the natural environment.

**GEOG 3755 Geography of Health (4 Credits)**

The geography of health is a thriving area of study that considers the impact of natural, built, and social environments on human health. This course introduces students to three geographical contributions to health studies. First, it emphasizes the importance of ecological approaches to health, which consider interactions between humans and their environments, including topics such as how climate change might influence disease distributions, and how the built environment can influence patterns of physical activity. A second focus is social theory, exploring how aspects such as race, socioeconomic status, and identity play a critical role in influencing human health. A third section of the course considers how spatial methods (cartography, GIS, and spacial statistics) can help answer health-related questions.

**GEOG 3800 Geography of Colorado (4 Credits)**

This course focuses on the physical and human geography of Colorado, a state that includes the western Great Plains, the southern Rocky Mountains, and the eastern Colorado Plateau. Colorado's varied natural landscapes provide equally varied settings for human settlement and resource use. Recommended Prerequisites: GEOG 1201, GEOG 1202, and GEOG 1203.

**GEOG 3820 Kiwis and Kauris: Sustainability in New Zealand (4 Credits)**

With its tourist tagline of "100% Pure New Zealand," New Zealand prides itself as a world leader in sustainability, with great efforts made towards sustainable use of resources and renewable energy, conservation of indigenous species, and integration of indigenous Maori understandings of the land into sustainability approaches. At the same time, New Zealand faces significant sustainability challenges, particularly related to climate change, invasive species, continued reliance on extractive industries, and histories of oppression/exploitation of native peoples. This class uses a field-based case study approach to unpick some of these complex issues, as we visit local sites and explore topics such as preserving native species, sustainable resource use, ecotourism, and indigeneity.

**GEOG 3840 Water Resource Analysis (4 Credits)**

The focus of this course is on complex policy, economic and local, national and international, and political issues surrounding resource use in the western U.S. Issues include exploitation of nonrenewable and renewable energy and mineral resources; and flexible responses to changing public policy.

**GEOG 3860 GIS Applications and Natural Resources (4 Credits)**

In this course we will use a case study approach to examine domestic and international natural resources such as oil, coal, timber, minerals, and recycled materials. We will use a case study approach to look at resource distribution, and the environmental impacts of extraction, production, and disposal, as well as the legal and economic context. We will use GIS data and analysis to enhance our understanding of these case studies, and students will do a project and paper using GIS data and image analysis at a local, regional or global scale. Prerequisite: Introduction to GIS or Introduction to GIS Modeling.

**GEOG 3870 Water Resources & Sustainability (4 Credits)**

In this course, we look at water as both a local and global resource and examine what sustainability means for human and ecological realms. After an overview of the physical processes that drive the hydrologic cycle, surface and groundwater hydrology, we examine how we humans have harnessed water for our use and how we both alter and treat its quality. We examine the legal aspects of water allocation in the U.S. and the groups and agencies that are most involved in managing and overseeing water issues. Finally, we examine the most pressing water "issues" related to wildlife, development, scarcity and conflict. We look forward to imagining the power of both the individual and the collective in meeting our future, global water needs.

**GEOG 3890 Ecological Economics (4 Credits)**

Ecological Economics is an emerging transdisciplinary endeavor that reintegrates the natural and social sciences toward the goal of developing a united understanding of natural and human-dominated ecosystems and designing a sustainable and desirable future for humans on a materially finite planet. In this course we start with a basic overview and summary of the neo-classical economic perspective with a particular focus on the recognized market failures of public goods, common property, and externalities. We begin with a reconceptualization of economic theory by imposing scientific constraints (e.g. conservation of mass and energy, the laws of thermodynamics, evolutionary theory, etc.). Using the ideas developed in this reconceptualization of economic theory we explore the implications for international trade and myriad public policies associated with the ethical, environmental, and economic aspects of sustainability.

**GEOG 3910 Geomorphology (4 Credits)**

An advanced course that examines how Earth's landforms are created by a range of physical processes. Most landforms can be viewed as a result of some combination of erosion, transport and deposition of rock, soil and sediment. The most common agents causing these geomorphic processes are water, wind, ice and waves. This course examines the processes responsible for eroding, transporting and depositing earth materials and compares these processes with the resulting landforms. Prerequisites: GEOG 1202 or GEOG 1217 or instructor's permission.

**GEOG 3920 Remote Sensing Seminar (4 Credits)**

Special topics in advanced remote sensing.

**GEOG 3930 Cultural Geography Seminar (4 Credits)**

Topics, methods and current research in cultural geography.

**GEOG 3940 Urban Geography Seminar (4 Credits)**

International comparison of economic and social, positive and negative aspects of urban systems.

**GEOG 3950 Physical Geography Seminar (2-4 Credits)****GEOG 3955 Pollen Analysis Seminar (3 Credits)**

Pollen grains preserved in sediment provide long-term records of vegetation conditions. Changing proportions of pollen types may reflect climatic fluctuation or human impacts. We review important recent research in pollen analysis (palynology), pollen sampling, laboratory techniques and pollen identification. Students are responsible for counting a number of samples and contributing data for a pollen diagram.

**GEOG 3990 Undergraduate Research Seminar (1 Credit)**

This course is designed to prepare students who will participate in faculty-supervised summer research projects. Students are introduced to research design, use of the scientific method, research expectations and reporting of results. Preparation of formal research proposal with adviser.

**GEOG 3991 Independent Study (1-5 Credits)****GEOG 3995 Independent Research (1-5 Credits)****GEOG 4000 Fundamental Geographic Perspectives (4 Credits)**

A foundation course for persons in the community, without a degree in geography, who want to pursue an education in or make use of computer-based geographic technology but who need a foundation in geographic concepts and perspectives.

**GEOG 4020 Geographic Research Design (4 Credits)**

This class prepares you to undertake creative geographic research leading to the generation of new knowledge. You will produce a NSF-style proposal by the end of the class. In this class, we focus on your idea generation and proposal writing rather than philosophy or specific methods. Specific objectives of the course include providing you the following skills: 1. The ability to create and communicate scholarly work in writing and orally 2. The ability to critique your own work and the work of other in a constructive fashion 3. Incorporation of the core ideas of geography and your field into your research 4. An understanding and appreciation of the various research methods in geography and other cognate disciplines. This understanding includes a discussion of ethics in research. 5. Ability to write an effective vita, statement of area of specialization, literature review, problem statement, and research proposal.

**GEOG 4030 Advanced Field Research (1-5 Credits)****GEOG 4040 Research Topic Identification (0-5 Credits)****GEOG 4110 Geospatial Data (4 Credits)**

This graduate-level course is designed to provide graduate students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems are also discussed.

**GEOG 4140 GIS Database Design (4 Credits)**

Designing databases to provide a foundation for GIS functions and applications, including investigating techniques used for designing databases in non-spatial environments and learning the applicability to GIS problems. Building on concepts and techniques introduced in the first half to extend traditional techniques and methodologies to model the requirements of spatial problems. Students learn to translate the conceptual spatial model into a physical implementation specific to GIS products.

**GEOG 4150 GIS Project Management (4 Credits)**

This course provides graduate students seeking a career in GIS, or anyone managing a GIS project, with the knowledge, skill and abilities to take a GIS project or program past the design and implementation phase and into day-to-day operation. Students evaluate and analyze the role of GIS in an organization's overall information system strategy and communicate the importance of geography in an information system. Data sharing in the organization is examined to determine the benefits and costs of distributing data creation and maintenance activities throughout an organization. Finally, the role of GIS professionals and the skill sets required to manage GIS effectively are examined. Students review case studies of successful and not-so-successful GIS projects in North America. GIS management issues are addressed by a series of case studies focusing on various management aspects. Students are also expected to visit operational GIS programs in the metropolitan area and interview GIS managers. Students prepare case study evaluations for review in the classroom. Required for all MSGIS students because of the critical importance of GIS project management.

**GEOG 4170 Geospatial Analysis and Project Management (4 Credits)**

This course provides an opportunity for students to apply geospatial data analysis to real-world applications. Students will work as a team to develop a project that requires GIS analysis and/or application development, design a project work flow and management plan, and implement a solution. Students will demonstrate competence in GIS techniques, geospatial data analysis, and project management at a professional level. This course may substitute for GEOG 3150 - GIS Project Management. Prerequisites: Completion of a minimum of two GISc courses.

**GEOG 4400 Urban Landscapes (4 Credits)**

Urbanization as a process; national urban systems; internal spatial structure of cities; role of transportation in urban development; location of residential, commercial and industrial activities; agglomeration economies; residential congregation and segregation; environmental justice; urban growth and growth coalitions; decentralization and urban sprawl; edge cities; impacts on the urban environment; world cities; globalization.

**GEOG 4410 Economic Geography (4 Credits)**

The study of the location and spatial organization of economic activities at the local, national, and global scales. Concerned with the spatial configuration of firms, networks, industries, and regions within the emerging global economy. Cross listed with INTS 4410.

**GEOG 4420 Urban and Regional Planning (4 Credits)**

The field of urban and regional planning is concerned with the future of cities, neighborhoods, metropolitan areas, and extended regions. How do local governments (cities, counties) and metropolitan planning organizations (regional planning agencies, councils of governments) work with community stakeholders (neighborhood associations, chambers of commerce, businesses, citizens, non-governmental organizations) to formulate plans that will guide the future development of a city and its region? Cities and their regions face numerous challenges including population and employment growth or decline, economic development, neighborhood vitality, housing availability and affordability, urban design, land use, transportation, sustainability, access to parks and open space, air quality, floodplain management, water resources, and social equity among many others. How places address these challenges is critical to the future health and livability of our cities, neighborhoods, metropolitan areas, and extended regions. This course will have a community-engaged service learning component. Community-engaged scholarship and teaching comprise intellectually and methodologically rigorous work that is grounded in the norms of democratic education: inclusiveness, participation, task sharing, reciprocity in public problem solving, and an equality of respect for the knowledge and experience that everyone involved contributes to education and community building. The specific service learning project for the class will be to assist the Metropolitan Denver Nature Alliance (Metro DNA) with its goal to increase the community's engagement with nearby nature by reviewing, analyzing, and collecting data from park/ open space plans of cities and counties in the Denver metropolitan area. Cross-listed with GEOG 3420.

**GEOG 4425 Urban Sustainability (4 Credits)**

The 21st century is being called the 'century of the city'. Now more than ever, humans across the globe call the city their home. Many of the world's most pressing crises are manifest in cities, including: greenhouse gas emissions, land degradation, high mass production and consumption, widespread poverty and hunger, and expanding socio-economic disparities. As 'sustainability' becomes part of mainstream discourse, this course will explore what sustainability means for urban contexts around the globe. Arguably, the city has the potential to be the most efficient, equitable, and environmental form of modern human settlement. Covering all dimensions of sustainability from a social science perspective, this course will focus on theoretical groundings, practices of urban sustainability, and new research agendas. Major topics include: cities and nature; planning and land use; urban form; community and neighborhoods; transportation systems and accessibility; livelihood and urban economies; and social justice and the city.

**GEOG 4440 Urban Transportation Planning (4 Credits)**

A specialized course in the urban planning sequence focusing on issues, practices and policies of urban transportation planning. Recommended for anyone interested in timely transportation topics, such as the feasibility and impacts of light rail transit, the planning and implementation of highway projects, and the role of freight and passenger transportation companies in transportation planning.

**GEOG 4445 Sustainability and Transportation (4 Credits)**

Sustainable transportation aims at promoting better and healthier ways of meeting individual and community needs while reducing the social and environmental impacts of current and future mobility practices. Given the importance of transport for economic growth, the uncertainties surrounding the availability and price of future sources of energy for transport use, as well as the social and environmental externalities of currently-utilized transport modes, it is imperative that more sustainable ways of providing transportation be developed and utilized.

**GEOG 4460 Air Transportation, High-Speed Rail and Tourism (4 Credits)**

This course delves into the world of commercial air passenger transportation, studying the foundations of the industry, its role in the travel and tourism, and strategies for the future. Foundational topics include the history and geography of air transportation, air travel and tourism, the geography of tourism, airline corporate cultures, the role of government, aviation law, regulation, deregulation, and globalization. Study of the principal elements of airline economics, finance, planning, management, operations, pricing, promotion, cost containment, marketing, and policy provide the opportunity for consideration of strategic options within the contemporary airline industry. Further discussion focuses on the planning and management of airport and airway system infrastructure, the issue of sustainable air transportation, and the role of the airline industry within the context of intermodalism. Cross listed with GEOG 3460.

**GEOG 4701 Topics in Geography (4 Credits)**

Topics vary by instructor.

**GEOG 4810 Geography of Latin America (4 Credits)**

In this course, we examine how past and present cultural preferences and political economies effect changes in Latin American landscapes. Cross listed with GEOG 2810.

**GEOG 4815 Geographies of Conquest: Christian, Jewish, and Islamic societies in Andalusia (4 Credits)**

This course introduces students to the cultural landscapes, former and current, of the different societies that converged in Iberia. The class will focus on medieval Al-Andalus, the Islamic kingdoms that flourished there. During medieval times, Christian, Islamic, and Jewish societies lived side by side in an environment that oscillated between tolerance and open persecution. Science, art, scholarship, and political strategy motivated tolerance while religious fundamentalism and geopolitical considerations motivated persecution. This class will cover the human-environment interactions in the landscapes medieval and modern Andalusia through an immersive field study and travel experience. This field class equals 4 academic credits. Over a period of 8 days we will visit the cities and surroundings of Madrid, Cordoba, Seville, and Granada in Spain where we will examine and compare cultural geographic, historical, religious, and anthropological issues surrounding the communities that interacted in Al-Andalus/Andalusia (past and present). Through observations, lectures, discussions, readings, assignments, and immersion, the course will stress the development of in-situ critical thinking skills and the promotion of cultural diversity, tolerance, and global awareness. This class fulfills geography, sustainability minor, and intercultural global studies minor requirements.

**GEOG 4825 Geographies of International Development in Africa (4 Credits)**

What are the historical roots of (under)development in sub-Saharan Africa? How is sub-Saharan Africa typically depicted in the media? How can we explain the fact that the Niger Delta provides the bulk of Nigeria's revenue, and yet, it remains the poorest part of the country? Is climate change the major cause of persistent food insecurity in the drylands of Ethiopia and Burkina Faso? How can we make sense of the uneven geography of poverty in Ghana? What explains urban food insecurity in Cape Town, or land struggles in rural South Africa? What are the social processes underlying the spatial disparity in health status in Malawi, or gender differences in HIV rates in Nyanza province, Kenya? And why do land users often resist state conservation efforts in Tanzania? These are some of the critical questions explored in this course. The primary aim is to provide a critical introduction to the geography of sub-Saharan Africa. We will begin by exploring how "the Africa story" is told by the media, scholars and policymakers. Attention will then shift to understanding the key historical processes that shape (under)development in the region. We will cover a broad range of topics, including governance, colonial history, debt and structural adjustment, foreign aid, food and agriculture, gender, climate change, land grabbing, health, population growth, migration, remittances, and resource extraction. We cannot possibly cover all these topics in greater detail; indeed, some are too vast and complex. We will however use specific case studies to illustrate and discuss each of the topics.

**GEOG 4880 Geographies of South Africa (4 Credits)**

This travel course is designed to give students a first-hand look at the physical and cultural landscapes of South Africa. We will study the varied natural landscapes that produce the commodities (e.g., gold, diamonds, wine, and agriculture) that have attracted the interest of outsiders for centuries and that have influenced the cultural landscapes particular to South Africa. A systematic presentation of the geology of South Africa, and its human history, will unfold throughout our travels.

**GEOG 4900 Graduate Colloquium in Geog (0 Credits)**

Solid foundation in history and philosophy of the discipline of geography; basis for further exploration of major research specialization.

**GEOG 4930 Nicaragua: Development Dilemmas (4 Credits)**

This class takes students to post-revolutionary Nicaragua to examine the consequences of recent land grabs by foreigners and transnational companies. Students learn to operate in a country with minimal "western" infrastructure. They learn to examine developing landscapes (that is, resorts and tourism infrastructure) with new eyes and from the perspective of locals who have been left out of the development loop. By the end of the class, students begin to understand the "development game", begin to question the role of tourism in developing economies, begin to know how to interact with other cultures, and finally learn to question the landscapes we "see" and begin to peel back the layers to understand the social and physical evolution of the landscape before their eyes. This class takes an experiential approach and requires students to participate in a service learning experience. Service learning is defined as a course-based, credit bearing educational experience in which faculty, students, and community members participate in an organized service activity that addresses a self-identified community need. We work with several community-based and non-governmental organizations to ensure a good fit between community needs and student expertise.

**GEOG 4950 Advanced Field Research (1-17 Credits)****GEOG 4991 Independent Study (1-5 Credits)****GEOG 4993 Capstone or Project (1-4 Credits)**

Includes technical design and development for MA geotechnical track project and MS-GIS capstone project.

**GEOG 4994 Report (1-5 Credits)****GEOG 4995 Independent Research (1-5 Credits)**

Includes field research for doctoral dissertation.

**GEOG 4999 Geographic Internship (0-5 Credits)**

Supervised internship in a government office at local, state or federal level or within private sector. Prerequisite: Permission of instructor.

**GEOG 5991 Independent Study (1-5 Credits)****GEOG 5995 Independent Research (1-10 Credits)****Geography Courses****GEOG 3000 Advanced Geographic Statistics (4 Credits)**

The second in a sequence of two courses that address general statistical applications particular to geography, environmental science and other disciplines dealing with a spatial dimension in the data they work with. The focus of this second course is on the more advanced multivariate statistical techniques. The course has a strong applied orientation as particular attention is given to which technique is the most appropriate to use for a given type of problem and how to interpret and apply the resulting statistics. Extensive use is made of computer statistics packages. Homework exercises involving such statistical techniques as multiple correlation and regression analysis, principle components analysis, discriminate analysis and canonical correlation. Prerequisite: GEOG 2000.

**GEOG 3010 Geographic Information Analysis (4 Credits)**

Reviews many basic statistical methods and applies them to various spatial datasets. In addition, several spatial statistical methods are applied to spatial datasets. This course is an in-depth study of the interface between GIS, spatial data, and statistical analysis. Preferred prerequisite: GEOG 2000. Prerequisite: GEOG 2100.

**GEOG 3030 Advanced Field Methods (4 Credits)**

Various field methods used by researchers in physical geography; techniques include field mapping, laboratory analyses, geologic field methods. Prerequisite: GEOG 1201 or equivalent.

**GEOG 3040 GPS for Resource Mapping (4 Credits)**

This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Control and Quality Assurance issues for data collection programs. Hands-on lab exercises include navigation, mission planning for a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, differential correction, and data integration into a GIS and map production.

**GEOG 3100 Geospatial Data (4 Credits)**

This graduate-level course is designed to provide graduate students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems are also discussed.

**GEOG 3110 GIS Modeling (4 Credits)**

This course focuses on the concepts and procedures used in discovering and applying relationships within and among maps. It extends the mapping and geo-query capabilities of GIS to map analysis and construction of spatial models. The course establishes a comprehensive framework that addresses a wide range of applications from natural resources to retail marketing. Topics include the nature of spatial data introduction to spatial statistics and surface modeling in the first five weeks followed by spatial analysis operations and modeling techniques in the second five weeks. The lectures, discussions and independent exercises provide a foundation for creative application of GIS technology in spatial reasoning and decision making.

**GEOG 3120 Environmental/GIS Modeling (4 Credits)**

Facing challenges brought by the dramatically changing global environment, environmental modeling is increasingly used to support geographical and environmental decision making (e.g., spatial conservation prioritization). Environmental modeling is concerned with the characterization, modeling and simulation of environmental phenomena and processes using conceptual and mathematical models. Environmental phenomena and processes taking place in the geographic space are regulated by spatial principles. They also interact with other phenomena or processes in the attribute space. For example, species distribution is not only constrained by spatial factors such as proximity to other species, but also influenced by environmental factors such as terrain and climatic conditions. Due to its superior capabilities of handling spatial data and modeling spatial and attribute relationships, geographic information system (GIS) provides the ideal tools for environmental modeling. This upper-level undergraduate/graduate-level course surveys the concepts and techniques of GIS supported environmental modeling in three general categories: 1) Modeling in the spatial domain where the focus is on modeling spatial principles (e.g., spatial autocorrelation); 2) Modeling in the attribute domain where the emphasis is on environmental correlations (e.g., environmental niche modeling); 3) Modeling in the combined spatial and attribute domain where both spatial principles and environmental correlations are exploited (e.g., geographically weighted regression). Throughout this course, several real-world applications are used to demonstrate the ideas, concepts, and techniques of GIS supported environmental modeling, including crime spatial pattern modeling, species distribution modeling, and soil-landscape modeling and mapping. Prerequisites: GEOG 2000 and GEOG 2100.

**GEOG 3130 GIS Programming with Python (4 Credits)**

This advanced course explores the more technical aspects of GIS functions and data structures. Students have hands-on access to both raster (grid-cell) and vector-based software packages in the form of lab exercises that culminate in a small student-designed GIS project. Prerequisite: GEOG 2100.

**GEOG 3140 GIS Database Design (4 Credits)**

Designing databases to provide a foundation for GIS functions and applications, including investigating techniques used for designing databases in non-spatial environments and learning the applicability to GIS problems. Building on concepts and techniques introduced in the first half to extend traditional techniques and methodologies to model the requirements of spatial problems. Students learn to translate the conceptual spatial model into a physical implementation specific to GIS products. Prerequisite: GEOG 2100 or GEOG 3100.

**GEOG 3150 GIS Project Management (4 Credits)**

This course provides graduate students seeking a career in GIS, or anyone managing a GIS project, with the knowledge, skill and abilities to take a GIS project or program past the design and implementation phase and into day-to-day operation. Students evaluate and analyze the role of GIS in an organization's overall information system strategy and communicate the importance of geography in an information system. Data sharing in the organization is examined to determine the benefits and costs of distributing data creation and maintenance activities throughout an organization. Finally, the role of GIS professionals and the skill sets required to manage GIS effectively are examined. Students review case studies of successful and not-so-successful GIS projects in North America. GIS management issues are addressed by a series of case studies focusing on various management aspects. Students are also expected to visit operational GIS programs in the metropolitan area and interview GIS managers. Students prepare case study evaluations for review in the classroom. Required for all MSGIS students because of the critical importance of GIS project management.

**GEOG 3160 Web GIS (4 Credits)**

With the development of internet technologies, the architecture of Geographic Information System (GIS) has evolved from the centralized desktop architecture to the distributed web architecture. Numerous web GIS applications are available (e.g., Google Map, Earth Explorer, and National Map). A web GIS application allows GIS analysts to access, manipulate, and visualize geospatial data from the web without the installation of GIS software. To facilitate the development of web GIS applications, geospatial technology vendors have provided application programming interfaces (APIs) through which GIS professionals can build customized web applications. This course focuses on the concepts and the development of web based GIS applications using industry-relevant geospatial APIs and core web technologies of HTML, CSS, and JavaScript. This is an upper-level undergraduate, to graduate-level course in GIS that introduces fundamental Web GIS concepts, applications and development kits. Concepts and techniques to be covered in this course include: • Web GIS concepts: system architecture, components, and workflow • Web programming languages: Hypertext Transfer Markup Language (HTML), Cascading Style Sheet (CSS) and JavaScript • Web mapping tools: ArcGIS online, Leaflet and their APIs. Prerequisites: GEOG 2100 and GEOG 3130.

**GEOG 3190 Lidar: Theory and Applications (4 Credits)**

Overview: Lidar (Light Detection and Ranging) is an active remote sensing system that uses laser pulses to measure the distance between the sensor and a surface or objects. Lidar has become an established method for collecting very dense and accurate elevation values, as well as for characterizing the three-dimensional structure of vegetation and urban land cover. In this course, we will build an understanding of the physical principles behind lidar, develop experience working with Lidar datasets, and survey a wide array of lidar applications for mapping and natural resource management. The course will culminate with a student-directed final projects. Prerequisites: GEOG 2100 or GEOG 3200.

**GEOG 3200 Remote Sensing (4 Credits)**

This course acquaints students with the basic techniques of the collection, processing and interpretation of information about the character of the earth's surface from remote locations. Students become familiar with the use of the visible, infrared, thermal and microwave portions of the electromagnetic spectrum as a means of determining land cover and/or land use. Both manual and computer-assisted techniques are discussed and include hands-on applications.

**GEOG 3230 Advanced Remote Sensing (4 Credits)**

This course will build on the basic remote sensing concepts presented in GEOG 3200. Students will explore more in-depth concepts relevant to satellite and airborne remote sensing, including radiative transfer and information extraction. In addition, students will be introduced to two cutting-edge sources of data about the Earth's surface: hyperspectral and lidar (Light Detection and Ranging) sensors. Students will study specific applications of advanced digital image processing techniques for environmental monitoring, natural resource management, and land-use planning. Finally, students will integrate remote sensing and other spatial datasets in the context of Geographic Information System (GIS) analysis. Prerequisite: GEOG 3200.

**GEOG 3300 Cultural Geography (4 Credits)**

Themes and methods of cultural geography including cultural area, landscape, history and ecology.

**GEOG 3310 Culture/Nature/Economics-Human Ecology (4 Credits)**

Cultural adaptation, livelihood strategies and environmental modification among subsistence and peasant societies: responses of such groups to technological change and economic integration.

**GEOG 3330 Political Geography (4 Credits)****GEOG 3340 Geographies of Migration (4 Credits)**

This course explores contemporary movement of people across international borders and the social, cultural, political, economic, and environmental repercussions of such movements. The class looks at the global flow of people across national boundaries and the ways in which these dispersed peoples build and maintain social networks across national borders. While doing so, we address the role of globalization in international migration processes. What motivates people to move long distances, often across several international borders and at considerable financial and psychological cost? How do migrants change—and how in turn do they bring change, social as well as economic, to new destinations as well as places left behind? This course examines politics and patterns of migration, transnational migration, and immigration to the United States.

**GEOG 3350 Qualitative Methods in Geography (4 Credits)**

This course focuses upon qualitative methods in the production of geographic knowledge. Qualitative methods are widely employed by geographers to understand patterns and underlying processes of human and human-environment issues in society. The course is designed to expose participants to the theories, purpose, scope, and procedures of qualitative research. Specific topics include: epistemological theories (ways of knowing); ethics and power in research; research design; data collection techniques in interviewing, participant observation and landscape interpretation, discourse and archive analysis, and case studies; data analysis; and writing and disseminating qualitative findings.

**GEOG 3400 Urban Landscapes (4 Credits)**

Urbanization as a process; national urban systems; internal spatial structure of cities; role of transportation in urban development; location of residential, commercial and industrial activities; agglomeration economies; residential congregation and segregation; environmental justice; urban growth and growth coalitions; decentralization and urban sprawl; edge cities; impacts on the urban environment; world cities; globalization.

**GEOG 3410 Urban Applications in GIS (4 Credits)**

This course uses the tools of geographic information systems (GIS) to explore concepts of traditional urban geography, including defining cities/metropolis, internal urban structures, urban systems, industrial location, social and residential patterns, urban form, environmental problems, and urban planning. The course allows students to practice fundamental skills in GIS (e.g., working with attribute tables, spatial analysis, spatial queries) and cartography (map design, color theory, display of information). Depending on the quarter, students pursue individual projects of interest or client-based projects. Prerequisite: GEOG 2100 or GEOG 3100 or equivalent.

**GEOG 3420 Urban and Regional Planning (4 Credits)**

Historical evolution of planning theory and practices; comprehensive planning process; legal, political, economic, social, environmental aspects of urban planning; urban design; urban renewal and community development; transportation planning; economic development planning; growth management; environmental and energy planning; planning for metropolitan regions; national planning.

**GEOG 3425 Urban Sustainability (4 Credits)**

The 21st century is being called the 'century of the city.' Now more than ever, humans across the globe call the city their home. Many of the world's most pressing crises are manifest in cities, including: greenhouse gas emissions, land degradation, high mass production and consumption, widespread poverty and hunger, and expanding socio-economic disparities. As 'sustainability' becomes part of mainstream discourse, this course explores what sustainability means for urban contexts around the globe. Arguably, the city has the potential to be the most efficient, equitable, and environmental form of modern human settlement. Covering all dimensions of sustainability from a social science perspective, this course focuses on theoretical groundings, practices of urban sustainability, and new research agendas. Major topics include cities and nature; planning and land use; urban form; community and neighborhoods; transportation systems and accessibility; livelihood and urban economies; and social justice and the city.

**GEOG 3440 Urban Transportation Planning (4 Credits)**

A specialized course in the urban planning sequence focusing on issues, practices and policies of urban transportation planning. Recommended for anyone interested in timely transportation topics, such as the feasibility and impacts of light rail transit, the planning and implementation of highway projects, and the role of freight and passenger transportation companies in transportation planning.

**GEOG 3445 Sustainability and Transportation (4 Credits)**

Sustainable transportation aims at promoting better and healthier ways of meeting individual and community needs while reducing the social and environmental impacts of current mobility practices. Given the importance of transport for economic growth, the uncertainties surrounding the availability and price of future sources of energy for transport use, as well as the social and environmental externalities of currently-utilized transport modes, it is imperative that more sustainable ways of providing transportation be developed and utilized.

**GEOG 3450 Transportation and Mobilities (4 Credits)**

The geographical study of transport has grown considerably and become more diverse, encompassing new areas of inquiry generated from economic, urban, environmental, political, social, and cultural geography, as well as from transport geography itself. The most notable expansion has been in the area of 'mobilities' research, which is focused on the social aspects of mobility, including both the large-scale movements of people, objects, capital, and information across the world, as well as the more local processes of daily transportation, movement through public space and the travel of material things within everyday life.

**GEOG 3500 Reconstructing Quaternary Environments (4 Credits)**

Nature, magnitude, sequence and causes of Pleistocene and Holocene climatic changes; effects of climatic change on plant/animal distributions and human populations; paleoclimatic research methods. Laboratory and field trips. Prerequisites: GEOG core, ENVI 3000.

**GEOG 3510 Biogeography (4 Credits)**

Biogeography focuses on present and past distributions of plants and animals. In this course we consider a number of themes central to biogeography, including plate tectonics and biogeography, the effects of climate change of plant and animal distributions, biogeographic realms, island biogeography, biodiversity, human impacts on plants and animals, and the origins of agriculture.

**GEOG 3520 Geography of Soils (4 Credits)**

Spatial variation in soil characteristics; soil processes, soil morphology, their application in soil studies. Prerequisite: GEOG 1201-1203 Environmental Systems or instructor's permission.

**GEOG 3550 Topics in Physical Geography (1-5 Credits)**

Investigations into various aspects of physical environment.

**GEOG 3560 Fluvial Geomorphology (4 Credits)**

Examines how water and sediment interact at Earth's surface to create a variety of landforms ranging from small rills to continental-scale river systems. Introduces fundamental fluvial processes or channel hydraulics and sediment transport. Examines common fluvial landforms including alluvial streams, bedrock streams, floodplains and alluvial fans. Combines traditional lectures and in-class discussions with numerous field excursions to rivers in the Rocky Mountains and Great Plains. Prerequisite: GEOG 1203, GEOG 1218, or GEOG 1266.

**GEOG 3600 Meteorology (4 Credits)**

The basic theory and skills of weather forecasting. Topics include thorough coverage of atmosphere dynamics and thermodynamics, the evolution of various weather types, the mechanics of storm systems (cyclones, severe storms, hurricanes), creation and interpretation of weather maps, and forecasting techniques.

**GEOG 3610 Climatology (4 Credits)**

Climatology is the study of the processes that result in spatial and temporal variation of weather. This course introduces the student to the processes responsible for the transfer of matter and energy between the Earth's surface and the atmosphere and the average weather conditions that result. In addition, topics of global concern, such as greenhouse effect, El Nino, urban heat islands and acid rain, are discussed. Laboratory exercises provide an opportunity to investigate climate variation and climatic change through the use of a variety of computer simulations. Prerequisites: GEOG 1201, GEOG 1216, & GEOG 1264.

**GEOG 3620 Applied Climatology (4 Credits)**

Climatic impact on environmental systems and human behavior; techniques to investigate climatic characteristics of environmental extremes (floods, blizzards), urban climatology and socioeconomic impacts of climate. Prerequisite: GEOG 1201. Recommended Prerequisite: GEOG 3600 or GEOG 3610.

**GEOG 3630 Dendroclimatology (2-4 Credits)**

Systematic variations in tree ring width and/or density can be used to reconstruct changes in precipitation or temperature well before humans were around to record the variability. This class utilizes hands on methods to introduce the fundamental principles of dendroclimatology. Through readings and lectures, students will learn how tree ring growth can be correlated to climate change. Students will then undertake several research projects to reconstruct past climate variability in the Denver metro area using tree rings. Prerequisite: permission of instructor.

**GEOG 3640 Climate Change and Society (4 Credits)**

The science of anthropogenic climate change will be presented with an emphasis on critical evaluation of the evidence of climate change and future scenarios and migration strategies. Students will be introduced to the latest climate change research, including the Intergovernmental Panel on Climate Change report, and the most recent literature from the field. The societal and cultural implications of climate change will also be discussed. Prerequisites: GEOG 1201, GEOG 1216, or GEOG 1264.

**GEOG 3701 Topics in Geographic Information Science (1-4 Credits)**

Topics vary by instructor.

**GEOG 3720 Mountain Environments and Sustainability (4 Credits)**

Mountain Environments and Sustainability explores the unique physical and cultural aspects of high relief and/or high altitude environments. Covering one quarter of the Earth's land surface, mountains directly or indirectly impact the lives of millions of people. We examine the significance of mountains to climate, water resources, and human activities, and discuss the sustainability of these environments and communities in light of rapid changes in many mountain regions resulting from anthropogenic factors and global change. GEOG 1201, 1202, and 1203 or instructor approval.

**GEOG 3750 Topics in Human-Environment Interactions (1-4 Credits)**

This course investigates various aspects of the relationships between human societies and the natural environment.

**GEOG 3755 Geography of Health (4 Credits)**

The geography of health is a thriving area of study that considers the impact of natural, built, and social environments on human health. This course introduces students to three geographical contributions to health studies. First, it emphasizes the importance of ecological approaches to health, which consider interactions between humans and their environments, including topics such as how climate change might influence disease distributions, and how the built environment can influence patterns of physical activity. A second focus is social theory, exploring how aspects such as race, socioeconomic status, and identity play a critical role in influencing human health. A third section of the course considers how spatial methods (cartography, GIS, and spacial statistics) can help answer health-related questions.

**GEOG 3800 Geography of Colorado (4 Credits)**

This course focuses on the physical and human geography of Colorado, a state that includes the western Great Plains, the southern Rocky Mountains, and the eastern Colorado Plateau. Colorado's varied natural landscapes provide equally varied settings for human settlement and resource use. Recommended Prerequisites: GEOG 1201, GEOG 1202, and GEOG 1203.

**GEOG 3820 Kiwis and Kauris: Sustainability in New Zealand (4 Credits)**

With its tourist tagline of "100% Pure New Zealand," New Zealand prides itself as a world leader in sustainability, with great efforts made towards sustainable use of resources and renewable energy, conservation of indigenous species, and integration of indigenous Maori understandings of the land into sustainability approaches. At the same time, New Zealand faces significant sustainability challenges, particularly related to climate change, invasive species, continued reliance on extractive industries, and histories of oppression/exploitation of native peoples. This class uses a field-based case study approach to unpick some of these complex issues, as we visit local sites and explore topics such as preserving native species, sustainable resource use, ecotourism, and indigeneity.

**GEOG 3840 Water Resource Analysis (4 Credits)**

The focus of this course is on complex policy, economic and local, national and international, and political issues surrounding resource use in the western U.S. Issues include exploitation of nonrenewable and renewable energy and mineral resources; and flexible responses to changing public policy.

**GEOG 3860 GIS Applications and Natural Resources (4 Credits)**

In this course we will use a case study approach to examine domestic and international natural resources such as oil, coal, timber, minerals, and recycled materials. We will use a case study approach to look at resource distribution, and the environmental impacts of extraction, production, and disposal, as well as the legal and economic context. We will use GIS data and analysis to enhance our understanding of these case studies, and students will do a project and paper using GIS data and image analysis at a local, regional or global scale. Prerequisite: Introduction to GIS or Introduction to GIS Modeling.

**GEOG 3870 Water Resources & Sustainability (4 Credits)**

In this course, we look at water as both a local and global resource and examine what sustainability means for human and ecological realms. After an overview of the physical processes that drive the hydrologic cycle, surface and groundwater hydrology, we examine how we humans have harnessed water for our use and how we both alter and treat its quality. We examine the legal aspects of water allocation in the U.S. and the groups and agencies that are most involved in managing and overseeing water issues. Finally, we examine the most pressing water "issues" related to wildlife, development, scarcity and conflict. We look forward to imagining the power of both the individual and the collective in meeting our future, global water needs.

**GEOG 3890 Ecological Economics (4 Credits)**

Ecological Economics is an emerging transdisciplinary endeavor that reintegrates the natural and social sciences toward the goal of developing a united understanding of natural and human-dominated ecosystems and designing a sustainable and desirable future for humans on a materially finite planet. In this course we start with a basic overview and summary of the neo-classical economic perspective with a particular focus on the recognized market failures of public goods, common property, and externalities. We begin with a reconceptualization of economic theory by imposing scientific constraints (e.g. conservation of mass and energy, the laws of thermodynamics, evolutionary theory, etc.). Using the ideas developed in this reconceptualization of economic theory we explore the implications for international trade and myriad public policies associated with the ethical, environmental, and economic aspects of sustainability.

**GEOG 3910 Geomorphology (4 Credits)**

An advanced course that examines how Earth's landforms are created by a range of physical processes. Most landforms can be viewed as a result of some combination of erosion, transport and deposition of rock, soil and sediment. The most common agents causing these geomorphic processes are water, wind, ice and waves. This course examines the processes responsible for eroding, transporting and depositing earth materials and compares these processes with the resulting landforms. Prerequisites: GEOG 1202 or GEOG 1217 or instructor's permission.

**GEOG 3920 Remote Sensing Seminar (4 Credits)**

Special topics in advanced remote sensing.

**GEOG 3930 Cultural Geography Seminar (4 Credits)**

Topics, methods and current research in cultural geography.

**GEOG 3940 Urban Geography Seminar (4 Credits)**

International comparison of economic and social, positive and negative aspects of urban systems.

**GEOG 3950 Physical Geography Seminar (2-4 Credits)****GEOG 3955 Pollen Analysis Seminar (3 Credits)**

Pollen grains preserved in sediment provide long-term records of vegetation conditions. Changing proportions of pollen types may reflect climatic fluctuation or human impacts. We review important recent research in pollen analysis (palynology), pollen sampling, laboratory techniques and pollen identification. Students are responsible for counting a number of samples and contributing data for a pollen diagram.

**GEOG 3990 Undergraduate Research Seminar (1 Credit)**

This course is designed to prepare students who will participate in faculty-supervised summer research projects. Students are introduced to research design, use of the scientific method, research expectations and reporting of results. Preparation of formal research proposal with adviser.

**GEOG 3991 Independent Study (1-5 Credits)****GEOG 3995 Independent Research (1-5 Credits)****GEOG 4000 Fundamental Geographic Perspectives (4 Credits)**

A foundation course for persons in the community, without a degree in geography, who want to pursue an education in or make use of computer-based geographic technology but who need a foundation in geographic concepts and perspectives.

**GEOG 4020 Geographic Research Design (4 Credits)**

This class prepares you to undertake creative geographic research leading to the generation of new knowledge. You will produce a NSF-style proposal by the end of the class. In this class, we focus on your idea generation and proposal writing rather than philosophy or specific methods. Specific objectives of the course include providing you the following skills: 1. The ability to create and communicate scholarly work in writing and orally 2. The ability to critique your own work and the work of other in a constructive fashion 3. Incorporation of the core ideas of geography and your field into your research 4. An understanding and appreciation of the various research methods in geography and other cognate disciplines. This understanding includes a discussion of ethics in research. 5. Ability to write an effective vita, statement of area of specialization, literature review, problem statement, and research proposal.

**GEOG 4030 Advanced Field Research (1-5 Credits)****GEOG 4040 Research Topic Identification (0-5 Credits)****GEOG 4110 Geospatial Data (4 Credits)**

This graduate-level course is designed to provide graduate students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems are also discussed.

**GEOG 4140 GIS Database Design (4 Credits)**

Designing databases to provide a foundation for GIS functions and applications, including investigating techniques used for designing databases in non-spatial environments and learning the applicability to GIS problems. Building on concepts and techniques introduced in the first half to extend traditional techniques and methodologies to model the requirements of spatial problems. Students learn to translate the conceptual spatial model into a physical implementation specific to GIS products.

**GEOG 4150 GIS Project Management (4 Credits)**

This course provides graduate students seeking a career in GIS, or anyone managing a GIS project, with the knowledge, skill and abilities to take a GIS project or program past the design and implementation phase and into day-to-day operation. Students evaluate and analyze the role of GIS in an organization's overall information system strategy and communicate the importance of geography in an information system. Data sharing in the organization is examined to determine the benefits and costs of distributing data creation and maintenance activities throughout an organization. Finally, the role of GIS professionals and the skill sets required to manage GIS effectively are examined. Students review case studies of successful and not-so-successful GIS projects in North America. GIS management issues are addressed by a series of case studies focusing on various management aspects. Students are also expected to visit operational GIS programs in the metropolitan area and interview GIS managers. Students prepare case study evaluations for review in the classroom. Required for all MSGIS students because of the critical importance of GIS project management.

**GEOG 4170 Geospatial Analysis and Project Management (4 Credits)**

This course provides an opportunity for students to apply geospatial data analysis to real-world applications. Students will work as a team to develop a project that requires GIS analysis and/or application development, design a project work flow and management plan, and implement a solution. Students will demonstrate competence in GIS techniques, geospatial data analysis, and project management at a professional level. This course may substitute for GEOG 3150 - GIS Project Management. Prerequisites: Completion of a minimum of two GISc courses.

**GEOG 4400 Urban Landscapes (4 Credits)**

Urbanization as a process; national urban systems; internal spatial structure of cities; role of transportation in urban development; location of residential, commercial and industrial activities; agglomeration economies; residential congregation and segregation; environmental justice; urban growth and growth coalitions; decentralization and urban sprawl; edge cities; impacts on the urban environment; world cities; globalization.

**GEOG 4410 Economic Geography (4 Credits)**

The study of the location and spatial organization of economic activities at the local, national, and global scales. Concerned with the spatial configuration of firms, networks, industries, and regions within the emerging global economy. Cross listed with INTS 4410.

**GEOG 4420 Urban and Regional Planning (4 Credits)**

The field of urban and regional planning is concerned with the future of cities, neighborhoods, metropolitan areas, and extended regions. How do local governments (cities, counties) and metropolitan planning organizations (regional planning agencies, councils of governments) work with community stakeholders (neighborhood associations, chambers of commerce, businesses, citizens, non-governmental organizations) to formulate plans that will guide the future development of a city and its region? Cities and their regions face numerous challenges including population and employment growth or decline, economic development, neighborhood vitality, housing availability and affordability, urban design, land use, transportation, sustainability, access to parks and open space, air quality, floodplain management, water resources, and social equity among many others. How places address these challenges is critical to the future health and livability of our cities, neighborhoods, metropolitan areas, and extended regions. This course will have a community-engaged service learning component. Community-engaged scholarship and teaching comprise intellectually and methodologically rigorous work that is grounded in the norms of democratic education: inclusiveness, participation, task sharing, reciprocity in public problem solving, and an equality of respect for the knowledge and experience that everyone involved contributes to education and community building. The specific service learning project for the class will be to assist the Metropolitan Denver Nature Alliance (Metro DNA) with its goal to increase the community's engagement with nearby nature by reviewing, analyzing, and collecting data from park/ open space plans of cities and counties in the Denver metropolitan area. Cross-listed with GEOG 3420.

**GEOG 4425 Urban Sustainability (4 Credits)**

The 21st century is being called the 'century of the city'. Now more than ever, humans across the globe call the city their home. Many of the world's most pressing crises are manifest in cities, including: greenhouse gas emissions, land degradation, high mass production and consumption, widespread poverty and hunger, and expanding socio-economic disparities. As 'sustainability' becomes part of mainstream discourse, this course will explore what sustainability means for urban contexts around the globe. Arguably, the city has the potential to be the most efficient, equitable, and environmental form of modern human settlement. Covering all dimensions of sustainability from a social science perspective, this course will focus on theoretical groundings, practices of urban sustainability, and new research agendas. Major topics include: cities and nature; planning and land use; urban form; community and neighborhoods; transportation systems and accessibility; livelihood and urban economies; and social justice and the city.

**GEOG 4440 Urban Transportation Planning (4 Credits)**

A specialized course in the urban planning sequence focusing on issues, practices and policies of urban transportation planning. Recommended for anyone interested in timely transportation topics, such as the feasibility and impacts of light rail transit, the planning and implementation of highway projects, and the role of freight and passenger transportation companies in transportation planning.

**GEOG 4445 Sustainability and Transportation (4 Credits)**

Sustainable transportation aims at promoting better and healthier ways of meeting individual and community needs while reducing the social and environmental impacts of current and future mobility practices. Given the importance of transport for economic growth, the uncertainties surrounding the availability and price of future sources of energy for transport use, as well as the social and environmental externalities of currently-utilized transport modes, it is imperative that more sustainable ways of providing transportation be developed and utilized.

**GEOG 4460 Air Transportation, High-Speed Rail and Tourism (4 Credits)**

This course delves into the world of commercial air passenger transportation, studying the foundations of the industry, its role in the travel and tourism, and strategies for the future. Foundational topics include the history and geography of air transportation, air travel and tourism, the geography of tourism, airline corporate cultures, the role of government, aviation law, regulation, deregulation, and globalization. Study of the principal elements of airline economics, finance, planning, management, operations, pricing, promotion, cost containment, marketing, and policy provide the opportunity for consideration of strategic options within the contemporary airline industry. Further discussion focuses on the planning and management of airport and airway system infrastructure, the issue of sustainable air transportation, and the role of the airline industry within the context of intermodalism. Cross listed with GEOG 3460.

**GEOG 4701 Topics in Geography (4 Credits)**

Topics vary by instructor.

**GEOG 4810 Geography of Latin America (4 Credits)**

In this course, we examine how past and present cultural preferences and political economies effect changes in Latin American landscapes. Cross listed with GEOG 2810.

**GEOG 4815 Geographies of Conquest: Christian, Jewish, and Islamic societies in Andalusia (4 Credits)**

This course introduces students to the cultural landscapes, former and current, of the different societies that converged in Iberia. The class will focus on medieval Al-Andalus, the Islamic kingdoms that flourished there. During medieval times, Christian, Islamic, and Jewish societies lived side by side in an environment that oscillated between tolerance and open persecution. Science, art, scholarship, and political strategy motivated tolerance while religious fundamentalism and geopolitical considerations motivated persecution. This class will cover the human-environment interactions in the landscapes medieval and modern Andalusia through an immersive field study and travel experience. This field class equals 4 academic credits. Over a period of 8 days we will visit the cities and surroundings of Madrid, Cordoba, Seville, and Granada in Spain where we will examine and compare cultural geographic, historical, religious, and anthropological issues surrounding the communities that interacted in Al-Andalus/Andalusia (past and present). Through observations, lectures, discussions, readings, assignments, and immersion, the course will stress the development of in-situ critical thinking skills and the promotion of cultural diversity, tolerance, and global awareness. This class fulfills geography, sustainability minor, and intercultural global studies minor requirements.

**GEOG 4825 Geographies of International Development in Africa (4 Credits)**

What are the historical roots of (under)development in sub-Saharan Africa? How is sub-Saharan Africa typically depicted in the media? How can we explain the fact that the Niger Delta provides the bulk of Nigeria's revenue, and yet, it remains the poorest part of the country? Is climate change the major cause of persistent food insecurity in the drylands of Ethiopia and Burkina Faso? How can we make sense of the uneven geography of poverty in Ghana? What explains urban food insecurity in Cape Town, or land struggles in rural South Africa? What are the social processes underlying the spatial disparity in health status in Malawi, or gender differences in HIV rates in Nyanza province, Kenya? And why do land users often resist state conservation efforts in Tanzania? These are some of the critical questions explored in this course. The primary aim is to provide a critical introduction to the geography of sub-Saharan Africa. We will begin by exploring how "the Africa story" is told by the media, scholars and policymakers. Attention will then shift to understanding the key historical processes that shape (under)development in the region. We will cover a broad range of topics, including governance, colonial history, debt and structural adjustment, foreign aid, food and agriculture, gender, climate change, land grabbing, health, population growth, migration, remittances, and resource extraction. We cannot possibly cover all these topics in greater detail; indeed, some are too vast and complex. We will however use specific case studies to illustrate and discuss each of the topics.

**GEOG 4880 Geographies of South Africa (4 Credits)**

This travel course is designed to give students a first-hand look at the physical and cultural landscapes of South Africa. We will study the varied natural landscapes that produce the commodities (e.g., gold, diamonds, wine, and agriculture) that have attracted the interest of outsiders for centuries and that have influenced the cultural landscapes particular to South Africa. A systematic presentation of the geology of South Africa, and its human history, will unfold throughout our travels.

**GEOG 4900 Graduate Colloquium in Geog (0 Credits)**

Solid foundation in history and philosophy of the discipline of geography; basis for further exploration of major research specialization.

**GEOG 4930 Nicaragua: Development Dilemmas (4 Credits)**

This class takes students to post-revolutionary Nicaragua to examine the consequences of recent land grabs by foreigners and transnational companies. Students learn to operate in a country with minimal "western" infrastructure. They learn to examine developing landscapes (that is, resorts and tourism infrastructure) with new eyes and from the perspective of locals who have been left out of the development loop. By the end of the class, students begin to understand the "development game", begin to question the role of tourism in developing economies, begin to know how to interact with other cultures, and finally learn to question the landscapes we "see" and begin to peel back the layers to understand the social and physical evolution of the landscape before their eyes. This class takes an experiential approach and requires students to participate in a service learning experience. Service learning is defined as a course-based, credit bearing educational experience in which faculty, students, and community members participate in an organized service activity that addresses a self-identified community need. We work with several community-based and non-governmental organizations to ensure a good fit between community needs and student expertise.

**GEOG 4950 Advanced Field Research (1-17 Credits)****GEOG 4991 Independent Study (1-5 Credits)****GEOG 4993 Capstone or Project (1-4 Credits)**

Includes technical design and development for MA geotechnical track project and MS-GIS capstone project.

**GEOG 4994 Report (1-5 Credits)****GEOG 4995 Independent Research (1-5 Credits)**

Includes field research for doctoral dissertation.

**GEOG 4999 Geographic Internship (0-5 Credits)**

Supervised internship in a government office at local, state or federal level or within private sector. Prerequisite: Permission of instructor.

**GEOG 5991 Independent Study (1-5 Credits)****GEOG 5995 Independent Research (1-10 Credits)**

## Geology Courses

**GEOL 3100 Environmental Geology (4 Credits)**

Environmental geology examines geologic hazards, both natural and those attributable to human impacts on the environment from urban and regional development. Specific topics may include disposal of municipal solid waste and radioactive waste; flood, earthquake, volcanic hazards; groundwater pollution and withdrawal; mass-wasting phenomena; and energy-related issues. Prerequisite: GEOL 1010, GEOG 1203 or instructor's permission.

**GEOL 3200 Sedimentology/Stratigraphy (4 Credits)**

This course reviews the origin, geologic history, and depositional environments of sediments and sedimentary rocks. Course work concentrates on the identification of sedimentary rocks and depositional environments by first-hand observations of rocks in the Denver area. Prerequisite: GEOL 1010, GEOG 1203 or instructor's permission.

**GEOL 3540 Hydrology (4 Credits)**

This course provides an overview of the hydrologic cycle with emphasis placed on the study of applied hydrology. Discussions include the fundamental characteristics of precipitation, runoff processes, calculation of flood hazards, aquifers (porosity and permeability), the geologic settings of groundwater, the basic physics of groundwater flow, and water supply and use. Prerequisite: GEOL 1010, GEOG 1203 or instructor's permission. Recommended prerequisite: one introductory statistics course.

**GEOL 3900 Geomorphology Seminar (1-5 Credits)**

Hill slopes comprise the vast majority of the Earth's land surface. It is upon these surfaces that nearly all of the human population must exist and, hopefully, flourish. Hill slopes assume various forms, and their shape influences their utility for various human endeavors. Numerous geomorphic processes operate upon hill slopes to determine their form, and human activities strongly influence the frequency and magnitude of these geomorphic processes. Consequently, hill slopes are an interface between the Earth and the human population. Prerequisite: GEOL 3010 or permission of instructor.

**GEOL 3991 Independent Study (1-5 Credits)**

## Mathematics

The Department of Mathematics at the University of Denver offers MA, MS and PhD degrees in mathematics. Our graduate programs enroll about 30 students and provide a personalized, congenial and rewarding educational atmosphere where you will interact with faculty from the start. We have an extraordinarily active faculty of accomplished teachers and researchers with expertise in algebraic logic, computational geometry, dynamical systems, functional analysis, nonassociative mathematics, ordered structures, probabilistic combinatorics, quantum structures, and set theory.

The MS and MA degrees prepare students for careers in which mathematics plays a central role. The PhD is a research degree that prepares students to advance the frontiers of knowledge within a specific area of mathematics.

Our graduates are highly sought, not only for their knowledge of mathematics, but also for their ability to solve problems, to think abstractly, to see the big picture, and to articulate their ideas with clarity and precision. Our graduates have been successful in a remarkably diverse collection of careers, including industry, business, education and academia.

## Doctor of Philosophy in Mathematics

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### Standardized Test Scores

- GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Acceptance Offered: No, this program does not offer English Conditional Admission.

## Master of Arts in Mathematics

## Doctoral Program

### Doctor of Philosophy in Mathematics

This degree requires completion of at least 135 graduate-level credits beyond the BA or BS degree; passing of preliminary examinations; completion of a tool requirement; and completion of a written dissertation.

Although a master's degree is not a prerequisite for acceptance into the PhD program, each student is required to obtain a master's degree in mathematics before completing 80 credits in the PhD program.

### Degree Requirements

#### Course Requirements

Students are required to pass both of the sequences MATH 3161, MATH 4165, MATH 4110 and MATH 3170, MATH 4166, MATH 4176 in their first year. Based on performance in preliminary examinations or other considerations, students may be allowed to replace some courses in a sequence by other offerings.

Every student's course of study must be approved in consultation with a designated departmental advisor.

Code	Title	Credits
MATH 4XXX courses	(minimum of 36 credits)	
Additional Coursework (Chosen in consultation with the student's academic advisor.)		
Up to 35 credits may be taken in other relevant disciplines, as approved by the mathematics department graduate committee.		
<b>Total Credits</b>		<b>135</b>

Minimum credits required for degree: 135

**Non-coursework Requirements**

- Preliminary Examinations

Every student admitted to the PhD program is expected to pass a written preliminary examination in analysis and a written preliminary examination in algebra. Both preliminary examinations are designed to test whether students in the PhD program have the adequate undergraduate preparation to continue in the program with a reasonable chance of success.

Both examinations are offered twice per year: during the week immediately preceding the first week of the fall quarter, and during the first week of the winter quarter. A student must pass both exams by no later than the end of the winter quarter of his/her second year in the program unless the graduate committee grants an extension of this deadline for exceptional and documented reasons.

- Tool Requirement

It is strongly recommended that students satisfy their tool requirement by demonstrating the ability to use a modern computer typesetting system. Other options include: reading competency in two languages selected from French, German and Russian; a series of outside courses in another discipline; a significant laboratory experience involving mathematics.

- Dissertation and Oral Defense

The dissertation must make a significant contribution to the research literature in mathematics.

After the dissertation has been completed, the student must defend it in a final examination, as specified by the Office of Graduate Education.

## Master's Programs

### Master of Arts in Mathematics

**Degree Requirements****Coursework Requirements**

Every student's course of study must be approved in consultation with a designated departmental advisor.

Code	Title	Credits
Approved MATH 4XXX courses (minimum 12 credits)		
Approved cognate area (up to 15 credits)		
Additional graduate-level MATH courses		
<b>Total Credits</b>		<b>45</b>

Minimum credits required for degree: 45

This degree requires completion of 45 credits of graduate-level MATH courses, including at least 12 credits of approved MATH courses at the 4000 level. Students are required to pass at least one of the sequences MATH 3161, MATH 4165, MATH 4110 or MATH 3170, MATH 4166, MATH 4176.

Up to 15 credits may be in an approved cognate area. At most 10 credits from another university may count toward the degree, and such credits must be approved in writing by an advisor from the Mathematics faculty.

**Non-coursework Requirements**

- Students are required to give an oral presentation in mathematics. This will typically occur after the completion of at least 24 credits of coursework, and should be scheduled after approval from a Mathematics faculty advisor.

No thesis is required.

### Master of Science in Mathematics

**Degree Requirements****Coursework Requirements**

Every student's course of study must be approved in consultation with a designated departmental advisor.

Code	Title	Credits
Approved MATH 4XXX courses (minimum 12 credits)		
Approved cognate area (up to 15 credits)		

Additional graduate-level MATH courses

**Total Credits**

**45**

Minimum credits required for degree: 45

This degree requires completion of 45 credits of graduate-level MATH courses, including at least 12 credits of approved MATH courses at the 4000 level. Students are required to pass both of the sequences MATH 3161, MATH 4165, MATH 4110 and MATH 3170, MATH 4166, MATH 4176.

Up to 15 credits may be in an approved cognate area. At most 10 credits from another university may count toward the degree, and such credits must be approved in writing by an advisor from the Mathematics faculty.

**Non-coursework Requirements**

- Tool requirement- Demonstrated competency in a tool is required and may be chosen from among the following: proficiency in the use of a modern computing typesetting system; approved outside courses; laboratory experience; or reading competency in French, German or Russian.
- Students are required to give an oral presentation in mathematics. This will typically occur after the completion of at least 24 credits of coursework, and should be scheduled after approval from a Mathematics faculty advisor.

No thesis is required.

**MATH 3000 The Real World Seminar (1 Credit)**

Lectures by alumni and others on surviving culture shock when leaving the University and entering the job world. Open to all students regardless of major. Cross listed with COMP 3000.

**MATH 3040 Lattices and Order (4 Credits)**

Ordered sets, lattices as relational and as algebraic structures, ideals and filters, complete lattices, distributive and modular lattices, Boolean algebras, duality for finite distributive lattices. Prerequisite: MATH 2200.

**MATH 3050 Set Theory (4 Credits)**

Zermelo-Fraenkel axioms, axiom of choice, Zorn's Lemma, ordinals, cardinals, cardinal arithmetic. Prerequisite: MATH 2200.

**MATH 3060 Mathematical Logic (4 Credits)**

Classical propositional calculus (deductive systems and truth-table semantics), first-order logic (axiomatization and completeness), elements of recursion theory, introduction to nonclassical logics. Prerequisite: MATH 2200.

**MATH 3090 Mathematical Probability (4 Credits)**

Limit theorems for independent random variables, multivariate distributions, generating functions. Prerequisites: MATH 2080 and MATH 3080.

**MATH 3151 Advanced Linear Algebra (4 Credits)**

Vector spaces, linear mappings, matrices, inner product spaces, eigenvalues and eigenvectors. Prerequisite: MATH 2060 and MATH 2200.

**MATH 3161 Introduction to Real Analysis (4 Credits)**

A theoretical introduction to the structure of real numbers, to convergence of sequences and series, and to the topology of the real line, including limits and continuity. Prerequisites: MATH 2080 and MATH 2200.

**MATH 3162 Introduction to Real Analysis II (4 Credits)**

A rigorous introduction to the analysis of functions of a real variable, including differentiation, Riemann integration, and the notions of pointwise and uniform convergence for sequences of functions. Prerequisite: MATH 3161.

**MATH 3166 Group Theory (4 Credits)**

Groups and homomorphisms, isomorphism theorems, symmetric groups and  $G$ -sets, the Sylow theorems, normal series, fundamental theorem of finitely generated abelian groups. Cross listed with MATH 4166. Prerequisite: MATH 3170.

**MATH 3170 Introduction to Abstract Algebra (4 Credits)**

Examples of groups, permutations, subgroups, cosets, Lagrange theorem, normal subgroups, factor groups, homomorphisms, isomorphisms, rings, integral domains, quaternions, rings of polynomials, Euclid algorithm, ideals, factor rings, maximal ideals, principal ideals, fields, construction of finite fields. Prerequisite: MATH 2060 and MATH 2200.

**MATH 3260 Metric Spaces (4 Credits)**

Metric spaces and continuous functions; completeness and compactness; examples including norm spaces; pointwise and uniform convergence; Baire Category Theorem. Cross listed with MATH 4260. Prerequisite: MATH 3161 or equivalent.

**MATH 3311 Linear Programming (4 Credits)**

Linear optimization models, simplex algorithm, sensitivity analysis and duality, network models, dynamic programming, applications to physical, social and management sciences. Prerequisite: MATH 2060.

**MATH 3312 Markov Chains (4 Credits)**

Discrete-time and continuous Markov Chains, ergodic theorems, random processes, elementary queueing theory, applications. Prerequisite: MATH 2060 and MATH 3080.

**MATH 3351 Introduction to Dynamical Systems (4 Credits)**

Dynamical systems (one-parameter families such as circle rotations/tent maps, shift spaces); global properties (transitivity/mixing/sensitivity); behavior of trajectories (chaos, long-term averages, periodicity). Prerequisite: MATH 3161.

**MATH 3400 Introduction to Geometry (4 Credits)**

Specific geometrical systems including finite, Euclidean, non-Euclidean and projective geometries. Prerequisite: MATH 2200.

**MATH 3451 Chaos, Dynamics & Fractals (4 Credits)**

Introduction to one-dimensional dynamical systems, fractals; fixed and periodic points; sources and sinks; period doubling and tangent node bifurcations; chaotic dynamical systems; Sarkovskii's Theorem. Prerequisite: MATH 3161.

**MATH 3550 Introduction to Theory of Numbers (4 Credits)**

Concepts of nonanalytic number theory and its history; prime numbers, divisibility, continued fractions, modular arithmetic, Diophantine equations and unsolved conjectures. Prerequisites: MATH 2200.

**MATH 3651 Ordinary Differential Equations (4 Credits)**

Modeling of phenomena by ordinary differential equations; techniques of analysis and solution of such equations; oscillation theory and boundary value problems, power series methods, special functions, Laplace transforms and difference equations. Prerequisites: MATH 2060 and MATH 2070.

**MATH 3661 Partial Differential Equations (4 Credits)**

First and second order linear equations, Fourier series, the wave equation, the Cauchy problem, the heat equation, maximum principles, Laplace's equation, Green's functions. Prerequisites: MATH 2070 and MATH 2080.

**MATH 3701 Combinatorics (4 Credits)**

The principle of inclusion and exclusion, elementary counting techniques, systems of distinct representatives, partitions, recursion and generating functions, Latin squares, designs and projective planes. Prerequisite: MATH 2200.

**MATH 3705 Topics in Mathematics (4 Credits)**

Varying selected advanced topics in mathematics, depending on student demand and instructor interest.

**MATH 3710 Graph Theory (4 Credits)**

Paths, cycles, trees, Euler tours and Hamilton cycles, bipartite graphs, matchings, basic connectivity theorems, planar graphs, Kuratowski's theorem, chromatic number,  $n$ -color theorems, introduction to Ramsey theory. Prerequisite: MATH 2200.

**MATH 3720 Coding Theory (4 Credits)**

Goals of coding theory and information theory, instantaneous and Huffman codes, Shannon theorems, block and linear codes, generating and parity-check matrices, Hamming codes, perfect codes, binary Golay code, Reed-Muller codes, cyclic codes, BCH codes, Reed-Solomon codes, ideas of convolutional and turbo codes. Prerequisite: MATH 3170.

**MATH 3851 Functions Complex Variable (4 Credits)**

Complex numbers, analytic functions, complex integration, series expansions, residue theory, conformal maps, advanced topics and applications. Prerequisites: MATH 2060 and MATH 2080 and MATH 2200.

**MATH 3900 Mathematics Internship (0-1 Credits)**

Graduate students in mathematics may receive elective credit for mathematically related work performed for employers with the approval of the department. At the end of the term, a student report on the work is required, and a recommendation will be required from the employer before a grade is assigned.

**MATH 3988 Study Abroad Resident Credit (0-18 Credits)****MATH 3991 Independent Study (1-10 Credits)**

Cannot be arranged for any course that appears in regular course schedule for that particular year.

**MATH 4050 Combinatorial Set Theory (4 Credits)**

Beginning with a quick review of ZFC, the standard axioms of set theory, the course covers advanced ordinal and cardinal arithmetic and infinitary combinatorics, including Ramsey theory. Additional axioms such as the Continuum Hypothesis, Martin's Axiom, and combinatorial principles such as Diamond and their consequences for mathematics are studied. Prerequisite: MATH 3050.

**MATH 4060 Descriptive Set Theory (4 Credits)**

Descriptive Set Theory is one of the main branches of modern set theory. Set theory provides techniques for the precise study of real analysis. This course covers trees as tools for analyzing sets of real numbers, Polish spaces, the Borel hierarchy, Baire-measurability, extensions of continuous functions, separation theorems, and more. Prerequisite: MATH 3050.

**MATH 4070 Proof Theory (4 Credits)**

Hilbert-style systems, Natural deduction, (simply typed) lambda calculus, combinatory logic, the Curry-Howard correspondence, normalization, cartesian closed categories, Sequent calculi, cut elimination and applications, structural rules; logical systems: classical, intuitionistic, relevance, linear; algebraic semantics. Recommended prerequisite: MATH 2200.

**MATH 4080 Algebraic Logic (4 Credits)**

Elements of universal algebra, lattice theory and first-order logic; elements of abstract algebraic logic (deductive systems, algebraization, deduction filters, deduction theorems, matrix semantics); sequent calculi for substructural logics, residuated lattices, structure theory for congruences and deductive filters; subvariety lattices (atomic varieties, axiomatizations of joins, translations); algebraic cut elimination; (un)decidability and finite model property. Prerequisites: MATH 3170 and either MATH 3040 or MATH 3060.

**MATH 4110 Topology (4 Credits)**

Point set topology including topological spaces, connectedness, compactness and separate axioms; preparation for advanced courses in analysis. Prerequisite: MATH 3161. Cross listed with MATH 3110.

**MATH 4120 Algebraic Topology (4 Credits)**

Fundamental groups, simplicial homology, Euler characteristic classification of surfaces, manifolds. Prerequisites: MATH 3170 and MATH 3110/4110.

**MATH 4162 Rings and Modules (4 Credits)**

Ideals, left and right R-modules, simple modules, totally decomposable modules, Wedderburn-Artin theorems, Artinian and Noetherian rings and modules, Hopkins theorem, Hilbert basis theorem, free modules, projective and injective modules, Kaplanski theorem. Prerequisites: MATH 3176 or MATH 4176.

**MATH 4163 Universal Algebra (4 Credits)**

Universal algebras, congruences, lattices, distributive lattices, modular lattices, Boolean algebras, subdirectly irreducible algebras, Mal'cev theorems, varieties, Birkhoff theorem. Prerequisites: MATH 3170 and either MATH 3040 or MATH 3060.

**MATH 4164 Galois Theory (4 Credits)**

The fundamental theorem of algebra, field extensions, ruler and compass constructions, normal and separable extensions, field automorphisms, Galois correspondence, solvability and simplicity, calculating Galois groups. Prerequisite: MATH 3176/MATH 4176 and MATH 3166/MATH 4166.

**MATH 4165 Introduction to Real Analysis II (4 Credits)**

A rigorous introduction to the analysis of functions of a real variable, including differentiation, Riemann integration, and the notions of pointwise and uniform convergence for sequences of functions. Prerequisites: MATH 3161.

**MATH 4166 Group Theory (4 Credits)**

Groups and homomorphisms, isomorphism theorems, symmetric groups and G-sets, the Sylow theorems, normal series, fundamental theorem of finitely generated abelian groups. Cross listed with MATH 3166. Prerequisite: MATH 3170.

**MATH 4168 Lie Groups and Lie Algebras (4 Credits)**

Lie groups and Lie algebras, fundamental theorems of Lie, general structure theory; compact, nilpotent, solvable, semisimple Lie groups; classification of semisimple Lie algebras; representation theory of compact and semisimple Lie algebras and Lie groups. Additional topics as time permits: universal enveloping algebras, symmetric spaces. Prerequisites: MATH 3161 and MATH 3170.

**MATH 4176 Rings and Fields (4 Credits)**

Rings, domains, fields; ideals, quotient rings, polynomials; PIDs, UFDs, Euclidean domains; maximal and prime ideals, chain conditions; extensions of fields, splitting fields, algebraic and transcendental extensions; brief introduction to Galois theory. Cross listed with MATH 3176. Prerequisite: MATH 3170 or equivalent.

**MATH 4181 Loop Theory (4 Credits)**

Quasigroups, loops, latin squares, 3-nets, isotopy, multiplication groups, inner mapping groups, nuclei, commutant, center, associator subloop, inverse properties, power-associative loops, Bruck loops, Bol loops, Moufang loops, octonions. Prerequisites: MATH 3166 or MATH 4166.

**MATH 4260 Metric Spaces (4 Credits)**

Metric spaces and continuous functions; completeness and compactness; examples including norm spaces; pointwise and uniform convergence; Baire Category Theorem. Cross listed with MATH 3260. Prerequisite: MATH 3161 or equivalent.

**MATH 4270 Hilbert Spaces (4 Credits)**

Schwarz and triangle inequalities, Riesz lemma, subspaces and orthogonal projections, orthonormal bases, spectrum of bounded linear operators, compact, self-adjoint, normal and unitary operators, spectral theorem and, if time permits, unbounded operators. Also, if time permits, applications to partial differential equations, physics and engineering. Prerequisites: MATH 3260 or MATH 4260 or MATH 3110 or MATH 4110.

**MATH 4280 Measure Theory and Applications (4 Credits)**

Definition of Measure spaces; Lebesgue measure; limit theorems; Raydon-Nikodym Theorem; introduction to  $L_p$  spaces. Prerequisite: (MATH 3260 with a minimum grade of D- or MATH 4260 with a minimum grade of C-) or (MATH 3110 with a minimum grade of D- or MATH 4110 with a minimum grade of C-).

**MATH 4290 Dynamical Systems (4 Credits)**

Topological and measure theoretic dynamical systems; properties and invariants of systems; symbolic dynamics; Ergodic Theorems; applications. Prerequisites: MATH 3110/4110 or MATH 3260/4260.

**MATH 4300 Graduate Seminar (1-4 Credits)**

Students research a topic of their choosing with the aid of a faculty member, and then prepare and present a formal lecture on the subject. Prerequisite: graduate standing or consent of the instructor.

**MATH 4400 Differential Geometry (4 Credits)**

Planar and spatial curves, global properties of curves, surfaces in three dimensions, the first fundamental form, curvature of surfaces, Gaussian curvatures, geodesics, Theorema Egregium, hyperbolic geometry. Prerequisites: MATH 3170 and either MATH 3110/4110 or MATH 3260/4260.

**MATH 4501 Functional Analysis (4 Credits)**

Advanced topics in structure of linear spaces; Banach spaces; Hahn-Banach Theorem and Duality; Uniform Boundedness Theorem; Open Mapping and Closed Graph Theorems; Stone-Weierstrass Theorem; Topics in Hilbert Spaces. Prerequisite: MATH 4280.

**MATH 4700 Special Topics in Mathematics (1-4 Credits)****MATH 4701 Combinatorial Algorithms (4 Credits)**

Basic enumeration techniques; representations of combinatorial objects; algorithms for searching, sorting, generating combinatorial objects, graph algorithms. Prerequisites: MATH 3701 or MATH 3710.

**MATH 4705 Special Topics Applied Math (1-5 Credits)**

Varying selected advanced topics in mathematics, depending on student demand. Possible alternatives include of variations, partial differential equations, algebraic topology, differential manifolds, special functions.

**MATH 4991 Independent Study (1-10 Credits)**

Cannot be arranged for any course that appears in course schedule for that particular year.

**MATH 4995 Independent Research (1-10 Credits)**

Research projects undertaken in conjunction with a faculty member.

**MATH 5000 Doctoral Seminar (3 Credits)**

Techniques, methods used in mathematical, computing research. Includes proofs, bibliographic searching, writing styles, what constitutes an acceptable dissertation.

**MATH 5991 Independent Study (1-10 Credits)**

Cannot be arranged for any course that appears in the regular course schedule for that particular year.

**MATH 5995 Independent Research (1-10 Credits)**

Research leading to a dissertation.

## Courses

**MATH 3000 The Real World Seminar (1 Credit)**

Lectures by alumni and others on surviving culture shock when leaving the University and entering the job world. Open to all students regardless of major. Cross listed with COMP 3000.

**MATH 3040 Lattices and Order (4 Credits)**

Ordered sets, lattices as relational and as algebraic structures, ideals and filters, complete lattices, distributive and modular lattices, Boolean algebras, duality for finite distributive lattices. Prerequisite: MATH 2200.

**MATH 3050 Set Theory (4 Credits)**

Zermelo-Fraenkel axioms, axiom of choice, Zorn's Lemma, ordinals, cardinals, cardinal arithmetic. Prerequisite: MATH 2200.

**MATH 3060 Mathematical Logic (4 Credits)**

Classical propositional calculus (deductive systems and truth-table semantics), first-order logic (axiomatization and completeness), elements of recursion theory, introduction to nonclassical logics. Prerequisite: MATH 2200.

**MATH 3090 Mathematical Probability (4 Credits)**

Limit theorems for independent random variables, multivariate distributions, generating functions. Prerequisites: MATH 2080 and MATH 3080.

**MATH 3151 Advanced Linear Algebra (4 Credits)**

Vector spaces, linear mappings, matrices, inner product spaces, eigenvalues and eigenvectors. Prerequisite: MATH 2060 and MATH 2200.

**MATH 3161 Introduction to Real Analysis (4 Credits)**

A theoretical introduction to the structure of real numbers, to convergence of sequences and series, and to the topology of the real line, including limits and continuity. Prerequisites: MATH 2080 and MATH 2200.

**MATH 3162 Introduction to Real Analysis II (4 Credits)**

A rigorous introduction to the analysis of functions of a real variable, including differentiation, Riemann integration, and the notions of pointwise and uniform convergence for sequences of functions. Prerequisite: MATH 3161.

**MATH 3166 Group Theory (4 Credits)**

Groups and homomorphisms, isomorphism theorems, symmetric groups and  $G$ -sets, the Sylow theorems, normal series, fundamental theorem of finitely generated abelian groups. Cross listed with MATH 4166. Prerequisite: MATH 3170.

**MATH 3170 Introduction to Abstract Algebra (4 Credits)**

Examples of groups, permutations, subgroups, cosets, Lagrange theorem, normal subgroups, factor groups, homomorphisms, isomorphisms, rings, integral domains, quaternions, rings of polynomials, Euclid algorithm, ideals, factor rings, maximal ideals, principal ideals, fields, construction of finite fields. Prerequisite: MATH 2060 and MATH 2200.

**MATH 3260 Metric Spaces (4 Credits)**

Metric spaces and continuous functions; completeness and compactness; examples including norm spaces; pointwise and uniform convergence; Baire Category Theorem. Cross listed with MATH 4260. Prerequisite: MATH 3161 or equivalent.

**MATH 3311 Linear Programming (4 Credits)**

Linear optimization models, simplex algorithm, sensitivity analysis and duality, network models, dynamic programming, applications to physical, social and management sciences. Prerequisite: MATH 2060.

**MATH 3312 Markov Chains (4 Credits)**

Discrete-time and continuous Markov Chains, ergodic theorems, random processes, elementary queueing theory, applications. Prerequisite: MATH 2060 and MATH 3080.

**MATH 3351 Introduction to Dynamical Systems (4 Credits)**

Dynamical systems (one-parameter families such as circle rotations/tent maps, shift spaces); global properties (transitivity/mixing/sensitivity); behavior of trajectories (chaos, long-term averages, periodicity). Prerequisite: MATH 3161.

**MATH 3400 Introduction to Geometry (4 Credits)**

Specific geometrical systems including finite, Euclidean, non-Euclidean and projective geometries. Prerequisite: MATH 2200.

**MATH 3451 Chaos, Dynamics & Fractals (4 Credits)**

Introduction to one-dimensional dynamical systems, fractals; fixed and periodic points; sources and sinks; period doubling and tangent node bifurcations; chaotic dynamical systems; Sarkovskii's Theorem. Prerequisite: MATH 3161.

**MATH 3550 Introduction to Theory of Numbers (4 Credits)**

Concepts of nonanalytic number theory and its history; prime numbers, divisibility, continued fractions, modular arithmetic, Diophantine equations and unsolved conjectures. Prerequisites: MATH 2200.

**MATH 3651 Ordinary Differential Equations (4 Credits)**

Modeling of phenomena by ordinary differential equations; techniques of analysis and solution of such equations; oscillation theory and boundary value problems, power series methods, special functions, Laplace transforms and difference equations. Prerequisites: MATH 2060 and MATH 2070.

**MATH 3661 Partial Differential Equations (4 Credits)**

First and second order linear equations, Fourier series, the wave equation, the Cauchy problem, the heat equation, maximum principles, Laplace's equation, Green's functions. Prerequisites: MATH 2070 and MATH 2080.

**MATH 3701 Combinatorics (4 Credits)**

The principle of inclusion and exclusion, elementary counting techniques, systems of distinct representatives, partitions, recursion and generating functions, Latin squares, designs and projective planes. Prerequisite: MATH 2200.

**MATH 3705 Topics in Mathematics (4 Credits)**

Varying selected advanced topics in mathematics, depending on student demand and instructor interest.

**MATH 3710 Graph Theory (4 Credits)**

Paths, cycles, trees, Euler tours and Hamilton cycles, bipartite graphs, matchings, basic connectivity theorems, planar graphs, Kuratowski's theorem, chromatic number,  $n$ -color theorems, introduction to Ramsey theory. Prerequisite: MATH 2200.

**MATH 3720 Coding Theory (4 Credits)**

Goals of coding theory and information theory, instantaneous and Huffman codes, Shannon theorems, block and linear codes, generating and parity-check matrices, Hamming codes, perfect codes, binary Golay code, Reed-Muller codes, cyclic codes, BCH codes, Reed-Solomon codes, ideas of convolutional and turbo codes. Prerequisite: MATH 3170.

**MATH 3851 Functions Complex Variable (4 Credits)**

Complex numbers, analytic functions, complex integration, series expansions, residue theory, conformal maps, advanced topics and applications. Prerequisites: MATH 2060 and MATH 2080 and MATH 2200.

**MATH 3900 Mathematics Internship (0-1 Credits)**

Graduate students in mathematics may receive elective credit for mathematically related work performed for employers with the approval of the department. At the end of the term, a student report on the work is required, and a recommendation will be required from the employer before a grade is assigned.

**MATH 3991 Independent Study (1-10 Credits)**

Cannot be arranged for any course that appears in regular course schedule for that particular year.

**MATH 4050 Combinatorial Set Theory (4 Credits)**

Beginning with a quick review of ZFC, the standard axioms of set theory, the course covers advanced ordinal and cardinal arithmetic and infinitary combinatorics, including Ramsey theory. Additional axioms such as the Continuum Hypothesis, Martin's Axiom, and combinatorial principles such as Diamond and their consequences for mathematics are studied. Prerequisite: MATH 3050.

**MATH 4060 Descriptive Set Theory (4 Credits)**

Descriptive Set Theory is one of the main branches of modern set theory. Set theory provides techniques for the precise study of real analysis. This course covers trees as tools for analyzing sets of real numbers, Polish spaces, the Borel hierarchy, Baire-measurability, extensions of continuous functions, separation theorems, and more. Prerequisite: MATH 3050.

**MATH 4070 Proof Theory (4 Credits)**

Hilbert-style systems, Natural deduction, (simply typed) lambda calculus, combinatory logic, the Curry-Howard correspondence, normalization, cartesian closed categories, Sequent calculi, cut elimination and applications, structural rules; logical systems: classical, intuitionistic, relevance, linear; algebraic semantics. Recommended prerequisite: MATH 2200.

**MATH 4080 Algebraic Logic (4 Credits)**

Elements of universal algebra, lattice theory and first-order logic; elements of abstract algebraic logic (deductive systems, algebraization, deduction filters, deduction theorems, matrix semantics); sequent calculi for substructural logics, residuated lattices, structure theory for congruences and deductive filters; subvariety lattices (atomic varieties, axiomatizations of joins, translations); algebraic cut elimination; (un)decidability and finite model property. Prerequisites: MATH 3170 and either MATH 3040 or MATH 3060.

**MATH 4110 Topology (4 Credits)**

Point set topology including topological spaces, connectedness, compactness and separate axioms; preparation for advanced courses in analysis. Prerequisite: MATH 3161. Cross listed with MATH 3110.

**MATH 4120 Algebraic Topology (4 Credits)**

Fundamental groups, simplicial homology, Euler characteristic classification of surfaces, manifolds. Prerequisites: MATH 3170 and MATH 3110/4110.

**MATH 4162 Rings and Modules (4 Credits)**

Ideals, left and right R-modules, simple modules, totally decomposable modules, Wedderburn-Artin theorems, Artinian and Noetherian rings and modules, Hopkins theorem, Hilbert basis theorem, free modules, projective and injective modules, Kaplanski theorem. Prerequisites: MATH 3176 or MATH 4176.

**MATH 4163 Universal Algebra (4 Credits)**

Universal algebras, congruences, lattices, distributive lattices, modular lattices, Boolean algebras, subdirectly irreducible algebras, Mal'cev theorems, varieties, Birkhoff theorem. Prerequisites: MATH 3170 and either MATH 3040 or MATH 3060.

**MATH 4164 Galois Theory (4 Credits)**

The fundamental theorem of algebra, field extensions, ruler and compass constructions, normal and separable extensions, field automorphisms, Galois correspondence, solvability and simplicity, calculating Galois groups. Prerequisite: MATH 3176/MATH 4176 and MATH 3166/MATH 4166.

**MATH 4165 Introduction to Real Analysis II (4 Credits)**

A rigorous introduction to the analysis of functions of a real variable, including differentiation, Riemann integration, and the notions of pointwise and uniform convergence for sequences of functions. Prerequisites: MATH 3161.

**MATH 4166 Group Theory (4 Credits)**

Groups and homomorphisms, isomorphism theorems, symmetric groups and G-sets, the Sylow theorems, normal series, fundamental theorem of finitely generated abelian groups. Cross listed with MATH 3166. Prerequisite: MATH 3170.

**MATH 4168 Lie Groups and Lie Algebras (4 Credits)**

Lie groups and Lie algebras, fundamental theorems of Lie, general structure theory; compact, nilpotent, solvable, semisimple Lie groups; classification of semisimple Lie algebras; representation theory of compact and semisimple Lie algebras and Lie groups. Additional topics as time permits: universal enveloping algebras, symmetric spaces. Prerequisites: MATH 3161 and MATH 3170.

**MATH 4176 Rings and Fields (4 Credits)**

Rings, domains, fields; ideals, quotient rings, polynomials; PIDs, UFDs, Euclidean domains; maximal and prime ideals, chain conditions; extensions of fields, splitting fields, algebraic and transcendental extensions; brief introduction to Galois theory. Cross listed with MATH 3176. Prerequisite: MATH 3170 or equivalent.

**MATH 4181 Loop Theory (4 Credits)**

Quasigroups, loops, latin squares, 3-nets, isotopy, multiplication groups, inner mapping groups, nuclei, commutant, center, associator subloop, inverse properties, power-associative loops, Bruck loops, Bol loops, Moufang loops, octonions. Prerequisites: MATH 3166 or MATH 4166.

**MATH 4260 Metric Spaces (4 Credits)**

Metric spaces and continuous functions; completeness and compactness; examples including norm spaces; pointwise and uniform convergence; Baire Category Theorem. Cross listed with MATH 3260. Prerequisite: MATH 3161 or equivalent.

**MATH 4270 Hilbert Spaces (4 Credits)**

Schwarz and triangle inequalities, Riesz lemma, subspaces and orthogonal projections, orthonormal bases, spectrum of bounded linear operators, compact, self-adjoint, normal and unitary operators, spectral theorem and, if time permits, unbounded operators. Also, if time permits, applications to partial differential equations, physics and engineering. Prerequisites: MATH 3260 or MATH 4260 or MATH 3110 or MATH 4110.

**MATH 4280 Measure Theory and Applications (4 Credits)**

Definition of Measure spaces; Lebesgue measure; limit theorems; Raydon-Nikodym Theorem; introduction to  $L_p$  spaces. Prerequisite: (MATH 3260 with a minimum grade of D- or MATH 4260 with a minimum grade of C-) or (MATH 3110 with a minimum grade of D- or MATH 4110 with a minimum grade of C-).

**MATH 4290 Dynamical Systems (4 Credits)**

Topological and measure theoretic dynamical systems; properties and invariants of systems; symbolic dynamics; Ergodic Theorems; applications. Prerequisites: MATH 3110/4110 or MATH 3260/4260.

**MATH 4300 Graduate Seminar (1-4 Credits)**

Students research a topic of their choosing with the aid of a faculty member, and then prepare and present a formal lecture on the subject.

Prerequisite: graduate standing or consent of the instructor.

**MATH 4400 Differential Geometry (4 Credits)**

Planar and spatial curves, global properties of curves, surfaces in three dimensions, the first fundamental form, curvature of surfaces, Gaussian curvatures, geodesics, Theorema Egregium, hyperbolic geometry. Prerequisites: MATH 3170 and either MATH 3110/4110 or MATH 3260/4260.

**MATH 4501 Functional Analysis (4 Credits)**

Advanced topics in structure of linear spaces; Banach spaces; Hahn-Banach Theorem and Duality; Uniform Boundedness Theorem; Open Mapping and Closed Graph Theorems; Stone-Weierstrass Theorem; Topics in Hilbert Spaces. Prerequisite: MATH 4280.

**MATH 4700 Special Topics in Mathematics (1-4 Credits)****MATH 4701 Combinatorial Algorithms (4 Credits)**

Basic enumeration techniques; representations of combinatorial objects; algorithms for searching, sorting, generating combinatorial objects, graph algorithms. Prerequisites: MATH 3701 or MATH 3710.

**MATH 4705 Special Topics Applied Math (1-5 Credits)**

Varying selected advanced topics in mathematics, depending on student demand. Possible alternatives include of variations, partial differential equations, algebraic topology, differential manifolds, special functions.

**MATH 4991 Independent Study (1-10 Credits)**

Cannot be arranged for any course that appears in course schedule for that particular year.

**MATH 4995 Independent Research (1-10 Credits)**

Research projects undertaken in conjunction with a faculty member.

**MATH 5000 Doctoral Seminar (3 Credits)**

Techniques, methods used in mathematical, computing research. Includes proofs, bibliographic searching, writing styles, what constitutes an acceptable dissertation.

**MATH 5991 Independent Study (1-10 Credits)**

Cannot be arranged for any course that appears in the regular course schedule for that particular year.

**MATH 5995 Independent Research (1-10 Credits)**

Research leading to a dissertation.

## Molecular and Cellular Biophysics

Office: Boettcher West, Room 228

### Molecular and Cellular Biophysics

The Molecular and Cellular Biophysics PhD (MCB) program provides opportunities for doctoral studies in the interdisciplinary field of biophysics. Participation of faculty from the Departments of Biological Sciences, Chemistry & Biochemistry, and Physics & Astronomy enhances the strength and breadth of our program by incorporating cross-disciplinary and collaborative approaches to research. The MCB PhD program is centered on research activities that coincide with faculty experience and expertise. Areas of research in the MCB program include cellular physiology, developmental dynamics, protein folding and aggregation, protein network analysis, signal transduction cascades, synthetic biology, systems biology and the development of novel imaging techniques. Projects at the interface of traditional disciplines of physics, biology and chemistry as well as methods of mathematical analysis and computer modeling are particularly encouraged.

The MCB PhD program offers both a core foundation in biophysical theory and practice yet provides flexibility and individualized attention such that students with diverse scientific backgrounds will have the opportunity to be trained in molecular and cellular biophysics. During their first year in the program, students conduct lab rotations, take a year-long course sequence that covers foundations of molecular and cellular biophysics and take additional graduate courses to supplement their undergraduate training. At the end of their first year, students will join the lab in which they will conduct their thesis research.

Students with strong quantitative undergraduate backgrounds (e.g., undergraduate degrees in physics, chemistry, mathematics, computer science/engineering) who desire to apply these skills to various biological problems, as well as students with a background in cell or molecular biology with a solid foundation in mathematics and physics are particularly encouraged to apply. Financial aid is usually offered in the form of Graduate Teaching or Graduate Research Assistantships, which cover tuition costs and provide a stipend for living expenses.

## Doctor of Philosophy in Molecular & Cellular Biophysics

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### Prerequisites

- A minimum of one year of calculus and one year of college physics (preferably calculus-based), regardless of undergraduate major, are required.

### Standardized Test Scores

- GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.

If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

### Additional Requirements

- Applicants may be contacted to schedule an admissions interview.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

## Doctoral Program

### Doctor of Philosophy in Molecular and Cellular Biophysics

Graduate studies in the program are highly individualized; programs should fit each student's unique needs and interests. Students are required to perform original, publishable research and to present a thesis based on research to the faculty of the molecular and cellular biophysics program.

A student qualifies for the PhD degree after demonstrating growth as an independent investigator—identifying a significant research question; proposing a hypothesis or model to answer the question; testing the hypothesis with appropriate experiments; and writing a dissertation acceptable to the department.

The structure of the PhD program in Molecular and Cellular Biophysics is as follows:

- required core courses and elective courses during the first year
- required lab rotations during the first year
- required seminar/special topics courses during the second year
- qualifying exams first year and second year
- thesis research second year to completion

### Degree Requirements

#### Coursework Requirements

Code	Title	Credits
<b>Required Courses</b>		
First Year		
BIOP 4100	Foundations in Biophysics	3
BIOP 4150	Cellular Biophysics	3
CHEM 3130	Chemical Systems III	3

BIOP 4995	Independent Research	1-9
Second Year		
3 quarters of BIOP 4210 are required		
BIOP 4210	Current Topics in Biophysics	2
BIOP 4210	Current Topics in Biophysics	2
BIOP 4210	Current Topics in Biophysics	2
<b>Electives</b>		
During the first two years electives can be chosen from existing 3000- or 4000-level courses in the Division and must be chosen with consultation and the approval of the Steering committee. This use of electives is critical given the interdisciplinary nature of this PhD program and scientific discipline and the fact that incoming students will come from a range of disciplines in the physical sciences and life sciences.		
<b>The remainder of the credit hours required for the degree may include:</b>		
BIOP 4992		
BIOP 4995	Independent Research	
BIOP 5995	Independent Research	
<b>Total Credits</b>		<b>90</b>

Minimum credits required for the degree: 90 (must be approved by the program Steering committee)

#### Non-coursework Requirements

- passing performance in the qualifying examinations
- completion of a research dissertation of publishable quality
- successful oral defense of the dissertation

#### Additional requirements:

- successful completion of research rotations during the first year
- maintaining a minimum GPA of 3.0
- passing performance in the qualifying examinations
- attendance at departmental seminars and the presentation of one seminar per year
- completion of a research dissertation of publishable quality
- successful oral defense of the dissertation

A complete description of the program's official requirements and details of qualifying examinations are available on the Natural Sciences & Mathematics (<http://www.du.edu/nsm/departments/molecularandcellular/>) website.

## Master's Program

### Master of Science in Molecular and Cellular Biophysics

The MS in Molecular and Cellular Biophysics is a terminal master's degree for students who enter the PhD in Molecular and Cellular Biophysics but demonstrate a mastery in the program that indicates an MS degree is more suitable.

#### Degree Requirements

##### Coursework Requirements

Code	Title	Credits
<b>Required courses</b>		
BIOP 4100	Foundations in Biophysics	3
BIOP 4150	Cellular Biophysics	3
CHEM 3130	Chemical Systems III	3
BIOP 4210	Current Topics in Biophysics (Three quarters are required.)	2
BIOP 4210	Current Topics in Biophysics (Three quarters are required.)	2
BIOP 4210	Current Topics in Biophysics (Three quarters are required.)	2

BIOP 4995	Independent Research (Student must reach a minimum of 45 credit hours with approved independent research coursework.)	1-9
<b>Minimum Number of Credits Required</b>		<b>45</b>

Minimum credits required for the degree: 45

#### Non-coursework requirements

- Thesis
- Oral Defense

#### BIOP 4100 Foundations in Biophysics (3 Credits)

Focus of the course is on application of basic physics principles to the study of cells and macromolecules. Topics include diffusion, random processes, thermodynamics, reaction equilibria and kinetics, computer modeling. Must be admitted to the MCB PhD program or related graduate program with instructor approval. Cross listed with PHYS 4100.

#### BIOP 4150 Cellular Biophysics (4 Credits)

Biophysical approaches to understanding cell function. We emphasize the various experimental approaches that biophysicists use to study basic cellular processes, including a variety of fluorescence images, optical and electrophysiological techniques. Cross listed with BIOL 4211.

#### BIOP 4210 Current Topics in Biophysics (2 Credits)

This is a seminar course that focuses on current primary literature in the fields of molecular and cellular biophysics. This is the first of a three course, year-long sequence.

#### BIOP 4993 Lab Rotation (2-9 Credits)

Lab rotation in Molecular and Cellular Biophysics before students pass the first phase of their qualifying exam.

#### BIOP 4995 Independent Research (1-9 Credits)

Independent research in Molecular and Cellular Biophysics before students pass the first phase of their qualifying exam.

#### BIOP 5991 Independent Study (1-10 Credits)

#### BIOP 5995 Independent Research (2-9 Credits)

#### BIOP 6991 Independent Study (1-10 Credits)

#### BIOP 6995 Independent Research (1-10 Credits)

## Physics and Astronomy

Office: Physics Building, Room 211

Mailing Address: 2112 East Wesley Ave., Denver, CO. 80208

Phone: 303-871-2238

Email: Faun.Lee@du.edu

Website: <https://physics.du.edu/>

The Department of Physics and Astronomy at the University of Denver combines a tradition of individualized instruction with a contemporary research focus. The department underwent a strong expansion with nine tenure-track and two teaching professor positions filled since 2006. Our diverse and dynamic faculty of 12 includes four women and come from seven different countries. We provide an attentive, hands-on research and learning community for undergraduate and graduate students up to the Ph.D. level. The department also offers a low student-to-faculty ratio in all advanced and graduate physics and astronomy courses and stresses individualized attention to each student. The program is recognized by the APS among US PhD-granting departments for our high percentage (50%) of female graduates: placing second nationally at the undergraduate level and third at the graduate level (APS data for the period 2011-2013).

The department has major research thrusts in stellar astronomy/astrophysics, biophysics, and condensed matter/materials physics. Our faculty members are internationally recognized and accomplished researchers. The department is a part of the University of Denver's interdisciplinary Molecular and Cellular Biophysics program (<https://science.du.edu/biophysics/>). Major state-of-the-art instrumentation is available both in the department and through collaborations with nearby national institutes in the region (NIST and NREL). Also, the University of Denver maintains our own Linux cluster for in-house high-performance computational needs.

## Doctor of Philosophy in Physics

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the

baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### Standardized Test Scores

- GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.

If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

## Doctoral Program

### Doctor of Philosophy in Physics

The Department of Physics and Astronomy offers PhD degree in physics that prepares students for careers across a spectrum of scientific pursuits. At the conclusion of your degree, you'll be equipped with the experience and knowledge necessary to build a career in the advancement of scientific knowledge or education at the highest levels, which can open doors to careers in research and development in academia, government, and private industry.

Our department offers research opportunities in theoretical, experimental and computational astronomy and astrophysics, biophysics, and condensed matter and materials physics. PhD candidates in the program will work closely with faculty advisors to create a path of study that culminates in a dissertation defense based on independent research of a publishable quality.

### Degree Requirements

#### Coursework Requirements

Both 4000- and 3000-graduate level courses may be applied toward the degree, with the approval of the Graduate Committee or the Dissertation Committee.

Code	Title	Credits
<b>Graduate Core Courses</b>		<b>19-23</b>
Physics & Astronomy Graduate Core Courses are the following 8 courses (19-23 qtr hrs) that all students are expected to take during the first two years in the program:		
PHYS 4611	Adv Electricity & Magnetism I	3
PHYS 4612	Adv Electricity & Magnetism II	3
PHYS 4111	Quantum Mechanics I	3
PHYS 4112	Quantum Mechanics II	3
PHYS 4811	Statistical Mechanics I	4
PHYS 4001	Introduction to Research I	1,2
PHYS 4002	Introduction to Research II	1-3
PHYS 4003	Introduction to Research III	1,2
<b>Additional Coursework</b>		<b>71-67</b>
<b>Minimum credits required for the degree</b>		<b>90</b>

Minimum credits required for degree: 90 of which a minimum of 60 must be in Physics and Astronomy including the Graduate Core Courses, which constitute 19-23 quarter hours.

**Non-Course Requirements**

- Regular attendance at the Physics and Astronomy colloquia;
- Annual presentation at the Physics and Astronomy colloquia;
- Passing Comprehensive Examination at the PhD level;
- Advancement to Preliminary Candidacy at the PhD level;
- Formation of the Dissertation Committee;
- Passing Oral Dissertation Research Proposal;
- Advancement to Candidacy at the PhD level;
- Dissertation;
- Dissertation Defense. Three departmental faculty members and an Outside Chair are required for the Oral Defense.

**Other Degree Requirements**

- Good academic standing: a GPA of 3.0 or higher;
- No grades lower than C- are accepted toward the degree;

## Master's Programs

### Master of Arts in Physics

The Department of Physics and Astronomy offers a Master of Arts (MA) in Physics that prepares the student for a wide variety of jobs. The MA degree is intended primarily for students who are seeking an advanced degree without a significant research component. For instance, the MA degree is appropriate for students pursuing careers in pre-college or community college teaching, planetarium or museums, or as technical representatives of various organizations. With complementary courses in education, MA graduates are well qualified to teach at the secondary level. The main difference between the MA and MS degree is that a research thesis is not required for the MA degree. However, students pursuing the MA degree will get exposed to some research experience through Introduction to Research courses in their first year in the program.

**Degree Requirements****Coursework Requirements**

Both 4000- and 3000-graduate level courses may be applied toward the degree, with the approval of the Graduate Committee or the Master's Committee.

PHYS 4003	Introduction to Research III	1,2
<b>Additional Coursework</b>		<b>26-22</b>
<b>Minimum credits required for the degree</b>		<b>45</b>

Minimum credits required for degree: 45 including the Graduate Core Courses, which constitute 19-23 quarter hours

**Non-course requirements:**

- Good academic standing: a GPA of 3.0 or higher;
- No grades lower than C- are accepted toward the degree;
- Regular attendance at the Physics and Astronomy colloquia.

### Master of Science in Physics

The Department of Physics and Astronomy offers a Master of Science (MS) in Physics that prepares the student for a wide variety of jobs in industry, government and educational institutions. Our graduates have obtained industrial or governmental laboratory research positions, entered pre-college or community college teaching, joined planetarium or museum staffs, and become technical representatives of various organizations. With complementary courses in education, MS graduates are well qualified to teach at the secondary level. The MS in Physics is also a popular course of

study and professional improvement for people already working in industry. For those currently employed, research projects can usually be matched to the employer's programs, and often someone from the industry can serve as co-advisor so that the continuing education benefits both the student and the employer.

## Degree Requirements

### Coursework Requirements

Both 4000- and 3000-graduate level courses may be applied toward the degree, with the approval of the Graduate Committee or the Master's Committee.

Code	Title	Credits
<b>Graduate Core Courses</b>		<b>19-23</b>
Physics & Astronomy Graduate Core Courses are the following 8 courses (19-23 qtr hrs) that all students are expected to take during the first two years in the program:		
PHYS 4611	Adv Electricity & Magnetism I	3
PHYS 4612	Adv Electricity & Magnetism II	3
PHYS 4111	Quantum Mechanics I	3
PHYS 4112	Quantum Mechanics II	3
PHYS 4811	Statistical Mechanics I	4
PHYS 4001	Introduction to Research I	1,2
PHYS 4002	Introduction to Research II	1-3
PHYS 4003	Introduction to Research III	1,2
<b>Additional Coursework</b>		<b>26-22</b>
<b>Minimum credits required for the degree</b>		<b>45</b>

Minimum credits required for degree: 45 including the Graduate Core Courses, which constitute 19-23 quarter hours

### Non-Course Requirements

- Regular attendance at the Physics and Astronomy colloquia;
- Annual presentation at the Physics and Astronomy colloquia;
- Passing Comprehensive Examination at the MS level;
- Advancement to MS Candidacy;
- Formation of the Master's Committee;
- Thesis;
- Thesis Defense. Two departmental faculty members and an Outside Chair are required for the Oral Defense.

### Other Degree Requirements

- Good academic standing: a GPA of 3.0 or higher;
- No grades lower than C- are accepted toward the degree;

#### PHYS 3111 Quantum Physics I (4 Credits)

First of a two-quarter sequence. The Schrödinger equation: interpretation of wave functions; the uncertainty principle; stationary states; the free particle and wave packets; the harmonic oscillator; square well potentials. Hilbert space: observables, commutator algebra, eigenfunctions of a Hermitian operator; the hydrogen atom and hydrogenic atoms. Prerequisites: PHYS 2252, PHYS 2260, PHYS 2556, PHYS 3612 and MATH 2070.

#### PHYS 3112 Quantum Physics II (4 Credits)

Second of a two-quarter sequence. Angular momentum and spin; identical particles; the Pauli exclusion principle; atoms and solids: band theory; perturbation theory; the fine structure of hydrogen; the Zeeman effect; hyperfine splitting; the variational principle; the WKB approximation; tunneling; time dependent perturbation theory; emission and absorption of radiation. Scattering: partial wave analysis; the Born approximation. Prerequisite: PHYS 3111.

#### PHYS 3251 Astrophysics: Radiative Processes (4 Credits)

Because light is the primary means by which astronomers learn about the Universe, understanding the production and subsequent behavior of light is key to interpreting astronomical observations. This course introduces students to the physics of astrophysical radiation and its interaction with matter as it travels from its source to our detectors. Topics may include radiative transfer, emission and absorption processes, Compton processes, synchrotron radiation, thermodynamic equilibrium, radiative and collisional excitation, and spectroscopy of atoms and molecules. The course is aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. Credit can apply toward physics or astrophysics minor. Prerequisites: PHYS 2252 and MATH 1953, or instructor's permission.

**PHYS 3252 Astrophysics: Observations (4 Credits)**

Astronomy is fundamentally an observational science and as such it is important for practitioners to understand how their data are collected and analyzed. This course is therefore a comprehensive review of current observational techniques and instruments, aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. This class introduces students to the capabilities and limitations of different types of instruments while exploring the sources and types of noise and providing statistical tools necessary for interpreting observational data. Credit can apply toward physics or astrophysics minor. Prerequisites: PHYS 2252 and MATH 1953, or instructor's permission.

**PHYS 3254 Astrophysics: Stars (4 Credits)**

Stars are the fundamental building blocks of the Universe. Hence, understanding the nature of stars is the first step toward understanding the Universe. This course is therefore intended to introduce students to the rigorous physical and mathematical treatise of stellar structure and evolution. Topics may include the theoretical origins and applications fundamental equations of stellar structure and other supporting equations, and theoretical and observational applications of stellar evolution. The course is aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. Credit can apply toward Physics major or Astrophysics minor. Prerequisites: PHYS 2252 and MATH 1953, or instructor's permission.

**PHYS 3270 Workshop: Practical Astronomy (1-5 Credits)**

Capstone coursework featuring studies in experimental, computational, and/or theoretical work in astronomy and astrophysics. Credit can apply toward physics or astrophysics minor.

**PHYS 3510 Analytical Mechanics I (4 Credits)**

Lagrangian and Hamiltonian mechanics. Prerequisites: PHYS 1113, PHYS 1213, or PHYS 1214 and MATH 2070 and consent of instructor.

**PHYS 3611 Electromagnetism I (4 Credits)**

First of a two-quarter sequence. Vector algebra; differential vector calculus (gradient, divergence and curl); integral vector calculus (gradient, divergence and Stokes' Theorems); line, surface and volume integrals; Electrostatics: the electric field, electric potential, work and energy in electrostatics; method of images, boundary value problems and solutions to Laplace's equation in Cartesian, spherical and cylindrical coordinates; multipole expansion of the electric potential; electric fields in matter: polarization; the electric displacement vector; boundary conditions, linear dielectrics. Magnetostatics: magnetic fields and forces. Prerequisites: PHYS 1113, PHYS 1213, or PHYS 1214 and MATH 2070.

**PHYS 3612 Electromagnetism II (4 Credits)**

Second of a two-quarter sequence. Magnetic vector potential; magnetic fields in matter: magnetization; fields of magnetized objects; linear and nonlinear magnetic materials; electromotive force, Ohm's law; electromagnetic induction; Faraday's law; Maxwell's equations; the displacement current; boundary conditions; the Poynting theorem; momentum and energy density of the fields; the Maxwell stress tensor; the wave equation and electromagnetic waves in vacuum and matter; absorption and dispersion; wave guides; the potential formulation and gauge transformations; retarded potentials; dipole radiation. Prerequisite: PHYS 3611.

**PHYS 3700 Advanced Topics: General (3 Credits)**

Offered irregularly, depending on demand. May be taken more than once for credit. Prerequisite: instructor's permission.

**PHYS 3711 Optics I (4 Credits)**

First of a two-quarter sequence. Gaussian optics and ray tracing; matrix methods and application to optical design; elementary theory of aberrations; light as electromagnetic wave, diffraction and interference; interferometers and their applications. Elementary theory of coherence; selected topics. May include laboratory work as appropriate. Prerequisites: PHYS 1113, PHYS 1213 or PHYS 1214, and MATH 2070.

**PHYS 3841 Thermal Physics I (4 Credits)**

First of a two-quarter sequence. Laws of thermodynamics; thermal properties of gases and condensed matter; kinetic theory of gases, classical and quantum statistics. Prerequisites: PHYS 1113, PHYS 1213 or PHYS 1214 and MATH 2070.

**PHYS 3991 Independent Study (1-10 Credits)****PHYS 3995 Independent Research (1-10 Credits)****PHYS 4001 Introduction to Research I (1,2 Credit)**

This course is the first of the 3-course sequence designed to provide the opportunity of learning fundamental skills to conduct independent research in any physical science discipline. In this course, students review essential material in mathematical physics, learn basic programming techniques and improve upon their skills in literature search and scientific writing, especially proposal writing. Special in-class seminars in collaboration with the Penrose Library and Writing and Research Center are scheduled. Student are introduced to research conducted by Physics and Astronomy faculty so that they can choose a faculty member with whom to take on a Winter Research Project during the winter interterm and winter quarter as part of Introduction to Research II. Students must prepare and submit a research proposal before the end of the fall quarter.

**PHYS 4002 Introduction to Research II (1-3 Credits)**

This is the second of the 3-course sequence to provide the opportunity of learning fundamental skills to conduct independent research in any physical science discipline. In this course, students conduct an independent research or study project that they have outlined in the research proposal they submitted as part of Introduction to Research I under supervision of a faculty advisor of their choosing. At the same time, students have time to review issues that we face as researchers. Prerequisites: PHYS 4001 and consent of a faculty research advisor.

**PHYS 4003 Introduction to Research III (1,2 Credit)**

This is the third of the 3-course sequence to provide students with the opportunity of learning fundamental skills to conduct independent research in any physical science disciplines. In this course, students complete their Winter research project conducted as part of Introduction to Research II and present the results in writing as a term paper and in oral presentation as part of the Departmental Colloquia. Special in-class sessions in collaboration with the Writing and Research Center are included. Prerequisite: PHYS 4002.

**PHYS 4100 Foundations of Biophysics (3 Credits)**

Focus of the course is on application of basic physics principles to the study of cells and macromolecules. Topics include diffusion, random processes, thermodynamics, reaction equilibriums and kinetics, computer modeling. Must be admitted to the MCB PhD program or related graduate program with instructor approval. Cross listed with BIOP 4100.

**PHYS 4111 Quantum Mechanics I (3 Credits)****PHYS 4112 Quantum Mechanics II (3 Credits)****PHYS 4251 Intro to Astrophysics I (3 Credits)****PHYS 4252 Intro to Astrophysics II (3 Credits)****PHYS 4255 Astrophysics: Black Holes, Cosmology, and Relation to Other Systems (4 Credits)**

The very small, the very large, and the very gravitational provide extreme tests of physics. In this course, we will cover two of these: cosmology, i.e., the universe on large scales, or as a whole (the very large) and black holes (the very gravitational). We will cover some basics of special and general relativity and quantum mechanics relevant to these topics, and discuss recent research testing these frontiers of physics, emphasizing analogies that help to relate these exotica to more familiar physical systems.

**PHYS 4320 Introduction to Quantum Materials (4 Credits)**

This physics course will introduce students to the recent experimental and theoretical developments in the field of quantum materials. Students will gain a basic understanding of how reducing the dimensions of materials to the nanoscale can produce extraordinary physical properties. The course will focus on fundamentals and recent advances in the fields of quantum transport, 2D materials, strongly correlated electronic systems, topological materials, and superconductivity. The goal of this course is to prepare students to engage with the modern condensed matter physics research and application engineering of novel quantum materials. Prerequisites: PHYS 4411 Advanced Condensed Matter or instructor's permission.

**PHYS 4350 Physics and information (4 Credits)**

Students in Physical Sciences are often well versed in the art of model building but less so in the process of model-selection when multiple models can describe the same data. Students rarely learn tools beyond curve fitting and least square error minimization for model selection. Consequently, students are often unaware of the scope of different tools and fail to make judicious choice of algorithms/theories when faced with diverse problems. For example, building a model from data is very different from generating data (stochastic or deterministic) from a model. Next consider two contrasting challenges of model building i) when there is limited data vs ii) when there is too much data. For the first problem – inferring models from limited data – the solution can be traced back to Boltzmann's formulation of Statistical Physics describing motion of atoms. The connection between Information theory, Inference and Boltzmann's description, however, is often overlooked in introductory or even advanced classes in Physics, and Statistics. Studying these similarities can unlock novel solutions for problems well outside of thermodynamics, even as far as Image processing, Biology and Network science. Inference also requires us to appreciate fundamental topics in Probability – difference between frequentist and non-frequentist approach, Bayesian formalism – that are rarely taught to physical scientists, life scientists or engineers. At the other extreme, faced with data deluge, we routinely ask: how do we make sense of too much data? We use clustering, PCA, Neural Networks. In this course we will discuss and connect all these seemingly disparate concepts and apply them – at the appropriate context – to diverse problems in Physics, Chemistry, Biology and beyond. In the process we will gain an in-depth knowledge about commonly heard but perhaps less understood topics such as: Entropy, Likelihood maximization, Bayesian statistics, PCA, Classification algorithms, and Neural Networks. We will also address another often overlooked but fundamental and fascinating topic, biology's inherent ability to encode and decode information. Currently there is no such course that address all these topics in Information and Data Science in an unified manner – deeply connecting their formal basis, regime of applicability – grounded on physical principles, with a forward looking approach towards application in many areas well outside of traditional sciences. A lot of learning in the course will happen 'on the fly', where the tools and application problems are learnt as needed.

**PHYS 4411 Advanced Condensed Matter I (3 Credits)**

Materials structure; structure analysis; elastic properties; defects; plastic mechanical properties; thermal properties and phonons; free electron gas; energy bands and Fermi surfaces; crystalline and amorphous semiconductors; quasiparticles and excitations; electrical properties and ferroelectrics; magnetic properties and ferromagnetics; classical and high-Tc superconductors; other advanced materials. Co-requisite: PHYS 4111.

**PHYS 4412 Advanced Condensed Matter II (3 Credits)**

Materials structure; structure analysis; elastic properties; defects; plastic mechanical properties; thermal properties and phonons; free electron gas; energy bands and Fermi surfaces; crystalline and amorphous semiconductors; quasiparticles and excitations; electrical properties and ferroelectrics; magnetic properties and ferromagnetics; classical and high-Tc superconductors; other advanced materials. Co-requisite: PHYS 4112.

**PHYS 4511 Advanced Dynamics I (4 Credits)****PHYS 4611 Adv Electricity & Magnetism I (3 Credits)****PHYS 4612 Adv Electricity & Magnetism II (3 Credits)****PHYS 4720 Light-Matter Interaction (4 Credits)**

This course will introduce the theory and applications of light-matter interactions. Fundamental theory will be explored from both semi-classical and quantum perspectives, and photon-carrier interactions will be studied in a variety of physical systems, including atoms, glasses, semiconductors, and metals. Experimental techniques will also be discussed, such as absorption, photoluminescence, and coherent spectroscopies, in addition to ultrafast nonlinear optical interactions. Students will also build their own demonstration and teaching module for elementary-age children, and will use their module to teach children at a local school.

**PHYS 4750 Seminar in Physics (1 Credit)****PHYS 4811 Statistical Mechanics I (4 Credits)**

Fundamentals of thermodynamics, microcanonical and canonical ensemble, quantum formulation noninteracting particle systems.

**PHYS 4860 Numerical and Computational Methods in Physics (4 Credits)**

The main goal of this course is to gain a better understanding of physical problems by solving them numerically; in the process, students learn about several numerical methods and computational techniques that have a very broad range of applications in many other scientific fields. Depending on the problem, students work with a software package (Mathematica), and also acquire coding experience in different programming languages. Graduate students carry out projects involving more complex simulation and numerical methods currently used in many areas of condensed matter physics, quantum chemistry and biophysics, such as Density Functional calculations, Monte Carlo and Molecular Dynamics methods.

**PHYS 4870 Special and General Relativity (4 Credits)**

This course will start with the techniques in Special Relativity and build familiarity with tensors. In the second part of the quarter, we will generalize to curved spaces and the Schwarzschild solution. And, finally, we will set up and solve the Einstein equations using the Cartan equations of structure to study the Robertson Walker metric spacetime used to construct the energy budget of the universe.

**PHYS 4910 Special Topics Physics (1-5 Credits)****PHYS 4991 Independent Study (1-10 Credits)****PHYS 4995 Independent Research (1-10 Credits)**

## Courses

**PHYS 3111 Quantum Physics I (4 Credits)**

First of a two-quarter sequence. The Schrödinger equation: interpretation of wave functions; the uncertainty principle; stationary states; the free particle and wave packets; the harmonic oscillator; square well potentials. Hilbert space: observables, commutator algebra, eigenfunctions of a Hermitian operator; the hydrogen atom and hydrogenic atoms. Prerequisites: PHYS 2252, PHYS 2260, PHYS 2556, PHYS 3612 and MATH 2070.

**PHYS 3112 Quantum Physics II (4 Credits)**

Second of a two-quarter sequence. Angular momentum and spin; identical particles; the Pauli exclusion principle; atoms and solids: band theory; perturbation theory; the fine structure of hydrogen; the Zeeman effect; hyperfine splitting; the variational principle; the WKB approximation; tunneling; time dependent perturbation theory; emission and absorption of radiation. Scattering: partial wave analysis; the Born approximation. Prerequisite: PHYS 3111.

**PHYS 3251 Astrophysics: Radiative Processes (4 Credits)**

Because light is the primary means by which astronomers learn about the Universe, understanding the production and subsequent behavior of light is key to interpreting astronomical observations. This course introduces students to the physics of astrophysical radiation and its interaction with matter as it travels from its source to our detectors. Topics may include radiative transfer, emission and absorption processes, Compton processes, synchrotron radiation, thermodynamic equilibrium, radiative and collisional excitation, and spectroscopy of atoms and molecules. The course is aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. Credit can apply toward physics or astrophysics minor. Prerequisites: PHYS 2252 and MATH 1953, or instructor's permission.

**PHYS 3252 Astrophysics: Observations (4 Credits)**

Astronomy is fundamentally an observational science and as such it is important for practitioners to understand how their data are collected and analyzed. This course is therefore a comprehensive review of current observational techniques and instruments, aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. This class introduces students to the capabilities and limitations of different types of instruments while exploring the sources and types of noise and providing statistical tools necessary for interpreting observational data. Credit can apply toward physics or astrophysics minor. Prerequisites: PHYS 2252 and MATH 1953, or instructor's permission.

**PHYS 3254 Astrophysics: Stars (4 Credits)**

Stars are the fundamental building blocks of the Universe. Hence, understanding the nature of stars is the first step toward understanding the Universe. This course is therefore intended to introduce students to the rigorous physical and mathematical treatise of stellar structure and evolution. Topics may include the theoretical origins and applications fundamental equations of stellar structure and other supporting equations, and theoretical and observational applications of stellar evolution. The course is aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. Credit can apply toward Physics major or Astrophysics minor. Prerequisites: PHYS 2252 and MATH 1953, or instructor's permission.

**PHYS 3270 Workshop: Practical Astronomy (1-5 Credits)**

Capstone coursework featuring studies in experimental, computational, and/or theoretical work in astronomy and astrophysics. Credit can apply toward physics or astrophysics minor.

**PHYS 3510 Analytical Mechanics I (4 Credits)**

Lagrangian and Hamiltonian mechanics. Prerequisites: PHYS 1113, PHYS 1213, or PHYS 1214 and MATH 2070 and consent of instructor.

**PHYS 3611 Electromagnetism I (4 Credits)**

First of a two-quarter sequence. Vector algebra; differential vector calculus (gradient, divergence and curl); integral vector calculus (gradient, divergence and Stokes' Theorems); line, surface and volume integrals; Electrostatics: the electric field, electric potential, work and energy in electrostatics; method of images, boundary value problems and solutions to Laplace's equation in Cartesian, spherical and cylindrical coordinates; multipole expansion of the electric potential; electric fields in matter: polarization; the electric displacement vector; boundary conditions, linear dielectrics. Magnetostatics: magnetic fields and forces. Prerequisites: PHYS 1113, PHYS 1213, or PHYS 1214 and MATH 2070.

**PHYS 3612 Electromagnetism II (4 Credits)**

Second of a two-quarter sequence. Magnetic vector potential; magnetic fields in matter: magnetization; fields of magnetized objects; linear and nonlinear magnetic materials; electromotive force, Ohm's law; electromagnetic induction; Faraday's law; Maxwell's equations; the displacement current; boundary conditions; the Poynting theorem; momentum and energy density of the fields; the Maxwell stress tensor; the wave equation and electromagnetic waves in vacuum and matter; absorption and dispersion; wave guides; the potential formulation and gauge transformations; retarded potentials; dipole radiation. ## Sturm College of Law

At the University of Denver Sturm College of Law, students don't just study law, they *experience* it. As a leader in experiential learning, our practical skills offerings are among the top-ranked programs in the nation. Our nine in#house clinics, multiple simulation-based classes, along with one of the largest externship programs in the country, provide students with abundant opportunities to develop their lawyering skills before entering the legal marketplace. We balance rigorous academics with the demands of the outside world and help students focus on what matters most: your career, your future and your life in law. With the legal practice experience you gain, you will be poised to distinguish yourself in a competitive job market even before graduation.

Denver Law faculty members are national leaders in their fields of animal law, corporate governance, energy law, free speech, intellectual property, health law and sports law. Our full-time juris doctor (JD) program and part-time JD program enable our students to pursue their passion by earning a certificate in one of our nationally ranked specialty programs including Constitutional Law, Corporate and Commercial Law, Criminal Law, Environmental Law, Health Law, International Law and Intellectual Property & Technology Law. We also offer an extensive range of master's degrees, including leading programs in environmental law and tax.

Since opening our doors in 1892, innovation has defined our culture. In 1904, we launched the nation's first legal aid clinic. In the 1960s, we helped found the Law and Society Movement, combining the study of law with cutting-edge perspectives from the social sciences. In 2003, we constructed the nation's first LEED Gold-certified "green" law building. And, in 2018, we launched our top-ranked Professional Part-Time JD Program, a hybrid learning a program that allows working professionals to advance their careers on their own schedules from virtually any location in the nation.

Throughout our history, the Sturm College of Law has been committed to diversity, equity and inclusion, and we continue to be recognized as a top law school for diversity by *preLaw* magazine. Our Associate Dean of Diversity, Equity and Inclusion, Office of Student Affairs, Professional Mentoring Program, student affinity groups and Law Alumni Council work together to forge a culture of respect and belonging that prepare our graduates to practice in an increasingly diverse and globalized workplace.

Denver Law offers a number of advanced degrees (LLM and Master's) that can supplement a student's law degree with specialized knowledge, introduce foreign lawyers and those educated in other disciplines to the U.S. legal system, or train students in the unique rigors of tax or legal administration. It is the goal of each academic program to bridge the objectives of its students to the curriculum and the University of Denver's mission to make a meaningful impact, both locally and globally.

## Juris Doctor

### Degree and GPA Requirements

- To be enrolled at the University of Denver Sturm College of Law, you must hold a bachelor of arts or a bachelor of science degree from a regionally accredited college or university. No undergraduate field of study is favored, based on evidence that a strong student in any major can develop the skills of writing, analysis and persuasion necessary for success in law school.

### Standardized Test Scores

- Valid Law School Admissions Test ( (<http://www.lsac.org/jd/lsat/about-the-lsat.asp>)LSAT) score

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS test score requirements for this degree program are:

- TOEFL Paper-based test: 587
- TOEFL Internet-based test: 95
- IELTS: 7.0

### Additional Requirements for International Students

- LSAC Credential Assembly Service (CAS)
  - If you have completed any post-secondary work outside the US (including its territories) or Canada, these transcripts must be submitted to the LSAC to be translated and evaluated. A foreign credential evaluation will be completed by the American Association of Collegiate Registrars and Admissions Officers and included with your CAS report.
    - We will not accept any other translation or evaluation services for the admissions process.
    - If you have questions, contact the office of admissions at [admissions@law.du.edu](mailto:admissions@law.du.edu)

---

## Master of Laws in American Law Practice

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### Other Requirements

- A Juris Doctorate (JD) or equivalent is required.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Sturm College of Law may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

---

## Master of Laws in Global Natural Resources, Energy, and Environmental Law

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

## Juris Doctor Program

### Juris Doctor

#### Degree Requirements

The Sturm College of Law awards the degree of Juris Doctor to those students who successfully fulfill the following requirements:

- Completion of ninety [90] semester credit hours with passing grades. A grade of F or NP (No Pass) constitutes a failing grade for purposes of this requirement. Students receive no credit hours toward graduation for courses in which they earn a grade of F or NP.
- Maintenance of the required cumulative grade point average: **a cumulative GPA of 2.3 or higher**
- **Successful completion of all required courses** (as defined in the chart that follows this section). A student who receives a grade of F in a required course must retake the course and earn a passing grade. Both grades remain on the student's transcript and affect the student's cumulative GPA.
- **Completion of the Upper Level Legal Writing requirement**
- **Completion of the Public Service requirement**
- **Completion of Experiential Coursework Requirement. All students must successfully complete a curricular offering of six or more semester credit hours. A list of qualifying courses will be made available each semester prior to registration.**
- **Students may not exceed 25 or more total Out-of-Class credits. Out-of-class credits include clinics, directed research or experiential projects, externships, Semester in Practice, journals, and non-JD courses. The additional limits apply:**
  - Clinics-25 credits or less
  - Directed Experiential Project-5 credits or less
  - Directed Research-5 credits or less
  - Externships-15 credits or less
  - Semester in Practice-19 credits or less
  - Journals-6 credits or less
  - Non-JD courses-8 semester credits (12 quarter credits) or less. Dual degree students may take up to 10 semester credits (15 quarter credits)
- **Completion of Career & Professional Development requirement**
- **Completion of ABA Standard 303(c) Requirement**

- **Resolution of all financial obligations to the University of Denver**

- Completion of all credit hours within a specified time period following initial matriculation at law school. Students are expected to complete their legal educations within seven years from the time of matriculation. Full-time day-division students at the Sturm College of Law normally meet all JD requirements by the end of their third year. Part-time evening or weekend-division students at the Sturm College of Law normally complete all JD requirements by the end of their fourth year.

### Good Standing

All students who enter the Sturm College of Law must maintain a cumulative grade point average of at least a 2.3 to remain in good standing.

Students may check their Degree Audit on My.DU.edu. Students have the responsibility to check their Degree Audit carefully and to contact the Registrar's Office if they note any discrepancy between their understanding of their degree requirements and their Degree Audit. Students have the sole responsibility to ensure that they have completed all graduation requirements.

### Coursework Requirements

LAWS 4425	Legal Profession	3
LAWS 4235	Evidence	4
LAWS 4025	Administrative Law	3
<b>Electives</b>		<b>50</b>
<b>Total Credits</b>		<b>90</b>

### Public Service Requirement

All law students must satisfy the Public Service Requirement (PSR) in order to graduate. To satisfy the requirement, each student must perform a minimum of 50 hours of supervised, uncompensated, legal public service work that is approved through the Director of Externships & Public Interest Initiatives. Generally, you must complete 28 academic credit hours prior to satisfying the requirement. However, if you have completed at least one academic year, even if you have not completed 28 academic credit hours, you may satisfy the PSR via Option #4 (Volunteer Legal Experience) below.

You can satisfy the requirement in one of the following ways:

1. Registering for, and passing, an externship for credit at a government agency, judicial chambers, nonprofit organization, or private firm (as long as the 50 hours is pro bono at the firm) via the Legal Externship Office (<http://www.law.du.edu/index.php/legal-externship-program/>).
2. Registering for, and receiving a grade of C or better, in a clinic via the Student Law Office (<http://www.law.du.edu/index.php/law-school-clinical-program/>).
3. Registering for, and receiving a grade of C or better, in an eligible course. Eligible courses are indicated as such on the course schedule and may include: Live Client Lab, Low-Income Taxpayer Clinic, Poverty and Low Wage Work in America, Public Interest Lawyering Lab, Trial Practice III: Instructor's Practicum, Trial Practice III: Mentor's Practicum, Wills Lab, Workplace Rights Projects Lab, Youth Rights Workshop, and/or the Animal Activist Legal Defense Fund.
4. Volunteering, and engaging in 50 hours of supervised, uncompensated legal work, at a government agency, judicial chambers, nonprofit organization, or private firm, as long as the work at the firm is pro bono. This is known as a Volunteer Legal Experience.

\*\*In order to satisfy the requirement via option #4, a Volunteer Legal Experience, you must abide by all rules and regulations for the Public Service Requirement indicated on the website (<https://www.law.du.edu/index.php/public-service-requirement/>). You must complete an online **student certification and evaluation form** about your volunteer experience. Your supervisor, who must be licensed to practice law for at least three years, must complete an online **supervisor certification and evaluation form** which asks for the number of hours worked (must be at least 50), the timeframe in which the work was completed, and an evaluation of the student's work. When both of these forms are completed and submitted online, and it is confirmed that the work satisfies the requirement, your Degree Audit will be updated to reflect that you satisfied the PSR. Students engaging in this option are strongly encouraged to check in with the Public Interest Office prior to do the work to confirm it is eligible.

Please note: You are not required to complete the steps outlined above if you are satisfying the public service requirement via options #1, 2, or 3 above. For these options, your Degree Audit will reflect that you satisfied the PSR at the conclusion of the relevant semester.

Students are strongly encouraged to complete this requirement before their last semester of law school.

For more information about the PSR, visit this page (<http://www.law.du.edu/index.php/public-service-requirement/>) and/or contact the Public Interest Office at [publicinterest@law.du.edu](mailto:publicinterest@law.du.edu).

### Upper Level Legal Writing Requirement

All law students must satisfy the Upper Level Legal Writing requirement prior to graduation. The requirement provides students additional instruction and practice in research, organization and expression.

To satisfy the requirement, each student must\*:

- Complete a written product of at least ten (10) pages on an appropriate legal subject determined by a professor and the student.
- Secure the professor's written comments as to the substance and style of the student's written project
- Prepare a second draft of the written project in response to the professor's comments to the professor's satisfaction.

Students may satisfy the Upper Level Legal Writing requirement in the following ways:

1. *Advanced Legal Writing Course*

A student can enroll in and successfully complete the upper level legal writing course entitled "Advanced Legal Writing."

2. *Designated Seminar Classes or Clinics*

A student can enroll in and successfully complete a seminar or clinical course that satisfies the Upper Level Legal Writing requirement. Eligible courses are indicated on the course schedule. Not all clinics and seminars satisfy this requirement.

3. *Directed Research Projects*

The student may enroll in and successfully complete a Directed Research Project with a full-time faculty member. If the student successfully completes a Directed Research project that fulfills the Upper Level Legal Writing requirement, the professor must certify to the Registrar that the student has completed the Upper Level Legal Writing requirement. A student who elects to fulfill the Upper Level Legal Writing requirement under this option must make certain that the Registrar's Office receives certification from the professor that the student successfully fulfilled the Upper Level Legal Writing requirement. Only after the Registrar's Office has received official certification has the student completed this graduation requirement.

4. *Certification by Professor*

Any full-time or adjunct professor can offer a student the opportunity to complete the Upper Level Legal Writing requirement within the course taught by the professor or independently of the course taught by the professor. Upon successful completion of the Upper Level Legal Writing requirement, the professor must certify to the Registrar that the student has completed the requirement. A student who elects to fulfill the Upper Level Legal Writing requirement under this option must make certain that the Registrar's Office receives certification from the professor that the student successfully fulfilled the Upper Level Legal Writing requirement. Only after the Registrar's Office has received official certification has the student completed this graduation requirement.

5. A student may not use the same curricular offering to satisfy both the upper level writing requirement and the experiential requirement

### Experiential Coursework Requirement

1. All law students must successfully complete a curricular offering of six or more semester credits hours of experiential coursework.
2. Experiential courses include simulations, clinics, and field placements. To satisfy this requirement, the course must be primarily experiential in nature and must (a) integrate doctrine, theory, skills, and legal ethics, and engage students in the performance of professional skills, which include knowledge and understanding of the law, legal analysis and research, problem-solving, written and oral advocacy, and the exercise of proper professional and ethical responsibilities to clients and the legal system; (b) develop the concepts underlying the professional skills being taught; (c) provide multiple opportunities for performance; and (d) provide opportunities for self-evaluation.
3. Eligible courses are indicated on the course schedule.
4. A student may not use the same curricular offering to satisfy both the upper level writing requirement and the experiential requirement

### Career & Professional Development Requirement

- The Career & Professional Development Requirement ensures that Denver Law students will graduate with the knowledge and skills they need to thrive in the entry-level job market. All incoming JD students need to complete a total of seven Career & Professional Development experiences through a combination of qualifying programs and individual career advising appointments in order to graduate.

- To satisfy the CPD Requirement, each 1L student must complete 5 sessions of their choice during the 1L year from any or all of the following core competency areas:
  - Career & Academic Planning
  - Interviewing and Networking
  - Job Search Documents
  - Professional Development
  - Wellness / Personal Development
  - The Office of Career Development & Opportunities (“CDO”) will maintain a list of qualifying programs. Students may satisfy up to 2 of the 1L sessions through individual career advising appointments with the CDO.
- In addition, each JD student must participate in at least 2 individual career advising appointments after the 1L year.
- Students who have secured postgraduate employment and are no longer seeking employment may opt-out of the CPD requirement at any time by providing all ABA-required employment information to the CDO. The CPD requirement is administered and tracked by the Office of Career Development & Opportunities (“CDO”) and recorded by the Office of the Registrar. Completion of this requirement is indicated on the Degree Audit.

#### ABA Standard 303(c) Requirement

- All students must complete education on bias, cross-cultural competency, and racism that meets the requirements of ABA Standard 303(c) by completing the following:
- applicable mandatory orientation programming and one of the following:
  - successful completion of a non-credit bearing program designed to meet the standards of ABA Standard 303(c), or
  - successful completion of a clinic run by the Student Law Office (SLO), or
  - successful completion of an externship through the Externship Office, or
  - successful completion of a class designated by the law school as meeting the requirement. Class offerings in this area will vary.
- Note: Students involved in a class working with live clients (e.g law clinics, field placements, etc.) must complete the ABA Standard 303(c) education prior to or concurrently with enrollment in the live-client experiential class.

## Master of Laws Programs

### Master of Laws (LLM) in American Law Practice

#### Degree Requirements

#### Coursework Requirements

LAWS 5030	Semester in Practice Seminar (Titles vary, as approved.)	
LAWS 4701-4709	Special Topics courses—Titles Vary, as approved	
LAWS 4556	Subsustainable Dev & Trade	
LAWS 4115	Trademark Law	
<b>Total credits</b>		<b>24</b>

Dual JD/ IBT LLM degree available to those pursuing a JD at the Sturm College of Law. (<http://www.law.du.edu/index.php/graduate-legal-studies/dual-degrees/>)

## Master of Laws in Clinical Legal Education

Graduate fellows in the Clinical Teaching LLM program enroll in a three-year program during which they are in residence in a particular clinic at the Student Law Office, the College of Law's in-house clinical program. Fellows earn between four and six credits per semester for each of the eight semesters they are enrolled. Over the course of their three-year term, fellows also supervise JD students enrolled in the clinics, work on cases and other legal matters, assist in teaching clinic seminars, and engage in scholarship.

Fellows earn academic credit for supervision of students and for scholarship, which culminates in the production of a publishable quality article. Fellows also participate in a teacher training courses as well as structured teaching rounds and scholarship workshops. Fellows must maintain a minimum GPA of 3.0 to remain in good standing and graduate from the program.

### Degree Requirements

All students must complete a minimum of 48 credits in the program curriculum and complete a final, publishable quality paper.

Code	Title	Credits
<b>Orientation:</b>		
LAWS 4000	Fellowship Orientation (4 credits)	
<b>Seminars:</b>		
LAWS 4900	Introduction to Clinical Pedagogy & Scholarship (First Semester-Year 1)	2
LAWS 4900	Introduction to Clinical Pedagogy & Scholarship (Second Semester-Year 1)	2
LAWS 4905	Scholarship Seminar I	4
LAWS 4921	Clinical Pedagogy & Design I (First Semester-Year 2)	1
LAWS 4921	Clinical Pedagogy & Design I (Second Semester-Year 2)	1
LAWS 4925	Scholarship Seminar II	4
LAWS 4931	Advanced Clinical Pedagogy & Design (First Semester-Year 3)	1
LAWS 4931	Advanced Clinical Pedagogy & Design (First Semester-Year 3)	1
<b>Student Supervision:</b>		
LAWS 4910	Co/Shadow Supervision Practicum	8 total credits
LAWS 4920	Supervision Practicum II	8 total credits
LAWS 4930	Supervision Practicum III	12 total credits

#### Non-course requirement:

Students must submit a final paper of publishable quality to the scholarship mentor for approval, ideally by end of second year.

**Minimum GPA: 2.7**

**Total Credits: 48**

## Master of Legal Studies Programs

### Master of Legal Studies (General)

#### Degree Requirements

#### Coursework Requirements

Code	Title	Credits
<b>Core Coursework Requirements</b>		
LAWS 4064	Introduction to the American Legal System	2

**Students must select one of the following courses:**

**3-4**

LAWS 4025	Administrative Law
LAWS 4120	Civil Procedure
LAWS 4164	Constitutional Law
LAWS 4175	Contracts
LAWS 4195	Criminal Law
LAWS 4425	Legal Profession
LAWS 4490	Property
LAWS 4610	Torts

**Elective Requirements** **18-19**

For the remaining course requirements, students may customize their course of study depending upon individual professional goals and availability of courses in the JD program. Possible areas of specialization include: finance and trade law and policy, intellectual property, international law, family law and workplace law. Students may also elect to pursue certain courses in the MSLA curriculum, with approval from the MLS Program Director.

**Minimum GPA: 2.7**

**Total Credits** **24**

**Non-coursework Requirements**

- Capstone: Students must complete a Capstone requirement by submitting a written product of at least 15-25 pages on an appropriate legal subject and with significant legal research component, approved by the MLS Program Director (either through an elective course taken after the first term of the program or by registering for a separate Directed Research project for 2-3 credits). Students must submit an approved Capstone Completion form to the Office of the Registrar no later than the last day of the final examination period for the student's term of intended graduation.

Formal Dual Master of Legal Studies-Master of Social Work (<http://www.law.du.edu/index.php/graduate-legal-studies/dual-degrees/>) program and other flexible dual degree options are available.

---

d. Publishing a note on a workplace law topic in the Denver University Law Review under the supervision of a Workplace Law faculty member.		
e. In the event that the SCOL obtains or establishes a workplace law publication, serving as a student editor for the review or journal.		
f. Completion of a designated experiential advantage course in the Workplace Law curriculum.		
<b>Minimum Number of Credits Required</b>		<b>12</b>

A minimum of 12 credits is required.

## Law (LAWS)

### LAWS 4001 Introduction to Law for Non-Lawyers (1 Credit)

This course is designed to introduce non-lawyers to legal tools and methodologies so that they become competent at reading, understanding, and applying the law to new scenarios. It will also introduce them to legal research and writing. The course will cover reading and briefing cases, understanding and interpreting legislation, applying legal rules to new fact situations, and the relationship between different legal sources.

**LAWS 4002 Accounting for the Small Legal Practice (3 Credits)**

This course will provide an introduction to basic accounting fundamentals, provide key concepts that apply to attorneys and solo practitioners, and explore situations where accounting plays a role in the practice of law. Topics include: understanding the balance sheet, income statement, statement accounting; partnership vs. LLC; income tax accounting; money management and cash flow in a law practice; retainers; trust accounts; income measurement; auditing; and billing/fees/timekeeping.

**LAWS 4003 Appellate Advocacy (3 Credits)**

This course focuses on developing skills necessary for effective appellate advocacy. It includes discussion of the critical differences between trial and appellate practice and techniques for presenting a persuasive case on appeal. Students will write appellate briefs and present oral argument to a panel of judges. Students will also observe oral arguments presented in Colorado appellate courts.

**LAWS 4006 Accounting for Lawyers (3 Credits)**

This class introduces students to accounting principles and practices to prepare them for the manner in which transactional and other lawyers will be presented with accounting, auditing, and financial matters that must be understood to enable them to provide effective legal representation to clients. The course includes an introduction to basic concepts of bookkeeping and financial accounting, reading and understanding traditional financial statements, financial statement analysis and the use of financial ratios, and legal issues involving accountancy. The class will also examine the role and responsibilities of the independent auditor and the concept of full and fair disclosure of financial information as required by generally accepted accounting principles.

**LAWS 4007 Business Development: Marketing and Client Service (3 Credits)**

This course provides students with the tools to effectively market a solo practice and connect with the client. Topics include: client relationship management; social media; building a brand; networking fundamentals; website development; managing client expectations; effective communications; and, referrals.

**LAWS 4008 Privacy Law (3 Credits)**

This Privacy Law seminar examines the development of privacy rights as a key consideration in the business and governmental policy debates within the U.S. and E.U. These debates range from the appropriate role of government collection retention and usage of personal identifiable information (PII) as well as regulating the private sectors' usage of PII. The E.U. has taken the lead in establishing an all-encompassing privacy policy for both the public and private sectors, whereas the U.S. has established a sectorial approach to establishing privacy law and regulations. Lawyers will continue to play a significant role in shaping governmental privacy policy, drafting statutes and regulations, as well as business drafting and negotiating technology contracts.

**LAWS 4009 Community Expectations in Sustainable Development of Natural Resources (3 Credits)**

The spread of democracy, the rapid development of open information regimes, and the Internet means that it is increasingly important what local communities want, and how they view natural resource production. Sustainable development is a set of concepts that attempts to harmonize a number of seemingly competing goals. These include providing better conditions of life and more opportunities for people, especially the poor. They also include bringing production and consumption within limits that an ecosystem can tolerate in the long run. The new legal challenges need to be understood on a variety of levels: 1) the emerging set of international standards and requirements governing foreign direct investment; 2) changing national priorities in mineral legislation and the laws governing the extraction and use of mineral products; and 3) meeting community expectations for sustainable development.

**LAWS 4010 International Dispute Resolution (3 Credits)**

This class addresses critical topics for the attorney representing clients in international business transactions, including the role of the international lawyer, performing international research and locating international and foreign law resources, jurisdiction, provisional relief, choice of law, proof of foreign law, choice of forum or arbitration, service of process, obtaining the evidence, act of state, sovereign immunity, law of the seas, and enforcement of judgments. The class will consider relevant treaties and U.S. law, including the Hague Convention on Choice of Courts Agreement, the Uniform Foreign Country Money-Judgments Recognition Act, and potential litigation under such laws as the U.S. Foreign Corrupt Practices Act. The course addresses topics relevant to both litigation and arbitration.

**LAWS 4011 Labor and Employment Writing Seminar (3 Credits)**

The goal of this class is for students to research and write a scholarly law review article of publishable quality. Students will select topics relating to current issues in labor and employment law and will write publishable articles based on independent research. Students will present their papers to the class toward the end of the semester. The top two papers will be selected for entry in the Jackson, Lewis National Labor and Employment Writing Competition.

**LAWS 4012 Protecting Intellectual Property in International Business Transactions (3 Credits)**

The first portion of this seminar will cover topics such as general international conventions and treaties designed to protect intellectual property; conventions and treaties are designed specifically for patents, trademarks and copyrights. Students will determine what protections to try to seek for a variety of intellectual property examples and, in pairs, if possible, negotiate and draft a licensing agreement and a manufacturing agreement. Students will then choose a topic from a selection of hypothetical problems, such as filing for patent protection in various jurisdictions, service of process on a foreign corporation, enforcing an arbitral award, resolving conflicts of laws, pre-litigation options. Each student will prepare a presentation for the class on the topic. The students will use the class feedback their research for the presentation to complete a paper on their topic. The drafting and paper will take the place of the final exam.

**LAWS 4013 Trial Practice II - Juries and Expert Witnesses (3 Credits)**

This course is for students who have already taken Trial Practice I. It will teach you more about how trial practice really works, build on what you learned in TP I, and allow you to sharpen and refine your skills. Since this class is taught using principles and methods developed by the National Institute for Trial Advocacy (NITA), you will accomplish this by actually doing the work, asking questions, introducing exhibits, working with experts, selecting juries and making arguments that help your client get a verdict. The class will have a focus on experts and juries. We will have real experts – psychiatrists, psychologists, and financial experts – for the expert witness exercises. We will also focus on juries and jurors: how to select them, how to persuade them and (I hope) how not to make them angry. In addition, you will prepare and conduct direct examination, cross examination, introduce exhibits, do opening and closing arguments, etc. In addition, we will cover redirect examination, dealing with difficult or obstreperous witnesses, working with interpreters, working with court reporters, and presentation of difficult issues such as damages.

**LAWS 4014 Emerging International Standards for Sustainable Development of Natural Resources (3 Credits)**

This course will focus on emerging international standards, legal, and “law-like” instruments designed to form the “rules of the road” in the dealings among private investors, host country governments, local communities, and other actors involved with sustainably developing natural resources. We will look at the track record of development: to what extent have natural resource projects helped make the world’s poor better off? And what is meant by “better off?” What is a “fair deal” between a corporation from, for example, Europe or North America and a developing country government in Africa? How are disputes resolved?.

**LAWS 4015 Intermediate Legal Analysis (3 Credits)**

Intermediate Legal Analysis will provide students with instruction in analytical skills in substantive areas of the law taught in the first year curriculum. Students will do multiple short assignments, primarily practice exams, in small sections. The course is a skills-based course, designed to develop analytical strategies necessary for success in law school, including rule synthesis and application, statutory interpretation, case analysis and briefing, fact evaluation, discernment of legal principles and theories, and effectiveness in written communication. The course will provide multiple opportunities for practice and feedback with exercises designed to help students learn, understand, and recall course materials with a particular emphasis in developing writing approaches and strengths for solving hypothetical legal problems. Upon successful completion of the coursework, students should be able to separate relevant from irrelevant facts, analyze statutory and case materials, apply relevant law to material facts in a competent manner to solve hypothetical legal problems, communicate effectively in writing, and complete analytical tasks within limited time constraints. The course will conclude with a final exam.

**LAWS 4018 Criminal Law (Advanced) (3 Credits)**

This course examines actual criminal cases from around the world and the application of the law at the time and place of the crime. The students will then compare this to the law today in the same jurisdiction and the Model Penal Code as applied to the same facts. This course also reviews current Colorado Law as it relates to liability and punishment based on the same fact pattern. The course will encourage analysis of what the law is and should be, and the aftermath of each case will lead to discussion about what actually happened to the defendant and why.

**LAWS 4019 Animal Rights (3 Credits)**

Students who have participated in the Civil Litigation Clinic for one semester are eligible to enroll in the Advanced Civil Litigation Clinic. The purpose of the advanced clinic is to provide students who have developed fundamental trial skills in the areas of landlord-tenant, domestic violence, and workplace law to further develop those skills and to work on cases and matters with greater independence for an additional semester without repeating the seminar component of the clinic.

**LAWS 4022 Criminal Clinic (Advanced) (3 Credits)****LAWS 4023 Civil Litigation Clinic (Adv.) (1-10 Credits)****LAWS 4025 Administrative Law (3 Credits)**

This class provides an introduction to the administrative process of government. Topics include Constitutional issues of separation of powers; delegation of legislative and judicial power; legislative and judicial authority in government agencies; agency exercise of policy-making functions; and controls imposed on agencies by administrative procedure legislation, Constitutional principles, and judicial review of agency action. Pre-req or co-req: LAWS 4164-Constitutional Law. Non-JD students must request permission to register.

**LAWS 4026 Criminal Procedure (Adv.) (3 Credits)**

From the commencement of formal proceedings to collateral attacks on convictions, this course guides students through the laws regulating criminal prosecutions. The course topics typically include pleas; trial rights; discovery; bail procedures; sentencing; double jeopardy; the death penalty; and habeas corpus. The focus of the course is on the federal constitutional rights and the federal rules of procedure that are applicable to each stage of a criminal proceeding. Prerequisite: LAWS 4200.

**LAWS 4027 Trial Practice II: Voir Dire (3 Credits)**

This course covers the practical process of jury selection including the court rules and statutes that apply as well as Constitutional issues including fair cross-section and discriminatory challenges. An exploration of the demographic, legal, and case-specific issues that can be addressed in jury selection. The course couples traditional lectures with emphasis on student exercises. The course culminates in a final voir dire where the student is given a case problem and required to incorporate persuasive introductions, law questions, case-specific questions, and conclusions. Student participation throughout the class is required as both the inquiring attorney and as a juror.

**LAWS 4028 Civil Procedure II: Trial and Post-Trial (3 Credits)**

Topics for this course include post-trial procedure, injunctions, and other advanced civil procedure matters.

**LAWS 4030 Family Law (Adv.) (3 Credits)**

Advanced Family Law is a practicum oriented class. This class has some lecture components, but there will be significant practicum aspects for students interested in learning about the practice of family law. Students will gain a general knowledge of family law, and more specifically the substantive and procedural aspects of dispute resolution oriented domestic relations practice. The subjects covered are divorce, custody and child support jurisdiction (intrastate and interstate); domestic case procedure, meeting with and managing your client; working with opposing counsel; temporary status conferences and agreements, Domestic Violence, discovery and use of experts, unbundled legal services, access to justice issues, and the permanent orders (final orders in the divorce); and attorney's fees. Prerequisite: LAWS 4240.

**LAWS 4031 Mediation (3 Credits)**

Students who have completed the basic Alternative Dispute Resolution course may enroll in this program that focuses on clients with more complex cases in both the civil and criminal arenas. Clients will be selected based on both public interest aspect and the propriety of the case as a learning vehicle for planning, pleading, negotiation, discovery, research and trial work. Prerequisite: LAWS 4060.

**LAWS 4032 Legal Analysis Strategies (3 Credits)**

This course provides last semester graduating students with instruction, guidance and feedback to develop foundational skills necessary to achieve success on both the bar exam and in the legal profession as skilled legal analysts. Substantively, the course will focus on core bar exam subjects (constitutional law, contracts, property, evidence, torts and criminal law/procedure) using practical problems in all three examination formats of the bar exam - essays, performance tests, and multiple-choice questions. Initially, the course provides a diagnostic evaluation of analytical and communicative strengths using a performance test and multiple-choice questions. Subsequent classes require submission of written practice exams with follow-up class presentations by students of analytical strategies used to solve hypothetical problems posed in essay questions, performance tests and multiple-choice questions. The course includes a final exam given during the final exam period designed to simulate bar exam protocols.

**LAWS 4033 Representing the Spanish Speaking Client (3 Credits)**

This course is a survey of the substantive law of matters likely to be encountered by attorneys representing Spanish-speaking clients in the United States. Topics may include, among others, immigration law, family law, criminal law, employment law, wills and estates, and consumer rights. The course will introduce vocabulary required to communicate with Spanish-speaking clients in the United States, as well as, survey the basic substantive law in each area. The course will be taught in Spanish.

**LAWS 4034 Legal Research and Writing for Graduate Students (2 Credits)**

This course will introduce students to the fundamentals of legal analysis in a common law system and various forms of legal writing. The course will also introduce students to current practice in legal research in the US legal system. This course is available to non-JD students only.

**LAWS 4035 Legal Research for Practice (2 Credits)**

Most new lawyers spend the bulk of their time conducting legal research. This course provides students with the practical research skills needed to succeed in today's law practice settings. The course follows an innovative sequence of classes structured around the most important research methods, tools, and search techniques for legal research proficiency. This approach teaches students the skills they need to be as effective and efficient as possible in their research, regardless of the research platform selected or the type of legal source one wishes to search. This course also uses a problem-based approach designed to simulate the types of research requests made in law practice settings. Course assignments include a variety of exercises, both in-class and outside of class, as well as four research assignments that demonstrate students' understanding of practice-focused research. Laptops are required for this course.

**LAWS 4037 European Union Environmental Law and Policy (3 Credits)**

The European Union (EU) has become a leading player in the context of European environmental legislation and policy making. Of particular interest has been the underpinning of the EU's single market, and environmental protection, the importance of which is clearly set out in the European Community Treaty. Matters dealing with climate change, genetically modified organisms, and recycling are now dealt with on a regular basis at EU level.

**LAWS 4042 Trial Practice II - Persuasion and Communication (3 Credits)**

This course is for students who are already skilled in the basic techniques of trials. This course will focus more on the "art" of advocacy. This course will focus on presentation and persuasion techniques that go beyond just getting the facts out. Students will practice storytelling techniques throughout trial, learn more persuasive use of visuals in storytelling, and think more critically about the use of case analysis and development of themes in advocacy. Prerequisite: LAWS 4635.

**LAWS 4048 Agency Partnership & LLC (4 Credits)**

This course investigates the structure and implications of various unincorporated business entities within three main categories: agency relationships, partnerships, and limited liability companies. Through the readings and various practice-oriented exercises, students will learn to understand and apply the rules, statutes, and doctrines that establish the governing framework for those entities, which range from some of the most basic to some of the most sophisticated forms of doing business. In addition to enhancing their ability to think critically and strategically about a variety of unincorporated business organization structures, students will develop practical skills that will improve their readiness upon graduation for the practice of law in various business contexts.

**LAWS 4050 Topics in Constitutional Law: Individual Rights (3 Credits)**

This course is an advanced constitutional law course, focusing on a selection of individual rights: equal protection; substantive due process; speech; the free exercise of religion; and the free establishment of religion. In each area, the course will seek to achieve a deep, descriptive understanding of the doctrine, and the ability to evaluate the doctrine in that area from a normative perspective.

**LAWS 4051 Topics in Constitutional Law-First Amendment (3 Credits)**

This is an advanced course in constitutional law that focuses on the law of the First Amendment. Most of the course will examine topics concerning the Free Speech Clause, including the theories of free speech, regulation of incitement, fighting words, defamation, offensive speech, hate speech, sexually explicit speech, and speech in the context of new communication media. It will also cover free speech doctrine and how it applies to symbolic speech, speech on government property, government compelled speech, speech in schools and by public employees as well as some topics concerning freedom of the press. The last part of the course will cover issues of freedom of religion under the First Amendment's Free Exercise Clause and Establishment Clause.

**LAWS 4055 Environmental and Agricultural Law (3 Credits)**

Agriculture contributes more than \$800 billion to the U.S. gross domestic product and provides 11 percent of US employment. As important as the food and fiber industries are to the American economy, devoting land to agriculture significantly affects the environment. Crop production can diminish habitat for wildlife, destroy wetland areas, erode the soil, cause nutrient and pesticide runoff, and pollute the air and water. This course addresses the complex and interconnected relationship of agriculture and environmental law, agriculture's historical roots in the United States, the evolution of agricultural policy, and modern developments in agriculture and environmental protection. The course is divided into three parts. In Part I, we will explore agriculture in a historical legal context and discuss USDA and Farm Bill programs. In Part II, we will focus on key environmental statutes and regulatory schemes that affect agriculture, including the Swampbuster program designed to prevent soil erosion and protect wetlands, the Clean Water Act, and the problems presented by Confined Animal Feeding Operations (CAFOs). In Part III, we will focus on emerging food systems in the United States, including certification and labeling programs, regulation of genetically engineered crops, the challenges (and opportunities) presented to farmers by climate change, as well as current and future trends in food production. We will discuss key policy and legal issues that surround each of these topics, with a particular focus on administrative law. Case studies of specific lawsuits will often be used to illustrate fault lines in how our society attempts to balance the need to produce cheap and abundant food against the need to protect the environment and public health.

**LAWS 4060 Alternative Dispute Resolution (3 Credits)**

The course examines the full range of contemporize dispute resolution processes: negotiation, mediation, arbitration and formal litigation. Conceptual and functional similarities and distinctions between these processes are explored. Additionally the processes; impacts upon disputants, role of the lawyer, the legal system and social order are reviewed.

**LAWS 4064 Introduction to the American Legal System (2 Credits)**

This course is designed for international LLM students who have not previously had exposure to either the US legal system or other common law systems. It focuses on the American legal system, include the three branches of government, federalism, the hierarchy of courts, and the anatomy of a law suit. Students will get a rigorous writing experience, drafting at least on legal document, such as a memorandum or a brief. In doing so, students will learn about legal research, analysis, writing, and Bluebooking. Students may also be asked to deliver and oral argument.

**LAWS 4065 American Legal History (3 Credits)**

This course concerns itself with the interaction between the legal system and social change in what is now the United States. Chronologically, the course materials run from the colonial period to the New Deal, although the nineteenth century will receive particular emphasis. A principal focus is the interrelationship of law, social life, economy, and ideology.

**LAWS 4070 Antitrust and Unfair Competition (3 Credits)**

The expansion of our economy over time has required the federal government and the courts to rethink their respective roles in regulating business conduct in the United States. The laws regulating business conduct are as dynamic as the notion of competition itself. This course teaches the history and fundamentals of antitrust and unfair competition laws in the United States. This course discusses the competitive problems which arise from monopolization, price and supply agreements, tying arrangements, exclusive dealings, cartel activity and mergers. The course also examines the interplay between federal, state and private enforcement of these laws.

**LAWS 4080 Real Estate, Title and Finance (3 Credits)**

This is an introduction to real estate transactions as they are encountered in the practice of law. We have shortened the course to a two-hour format to make it more accessible. Our emphasis will be on the representation of a client or an institution in the title and finance aspects of the real estate deal, which are central to every transaction. We will spend less time on contract formation and the role of brokers.

**LAWS 4085 Trial Practice III: Trial Practicum (3 Credits)**

Trial Practice III - The Trial Practicum (TP) is based upon the same educational platform as Trial Practice III - The National Trial Team (NTT). They are the same course, with the only difference being the TP students do not travel to compete against other schools, rather TP students compete in intra-school tournaments. TTP was created in response to the students who desire to benefit from the intensive study and simulated pre-trial and trial experience received by students on the National Trial Team course, and be "practice ready" upon licensure. This year-long, nine credit (three per semester), course is by invitation-only, and is demanding and intensive.

**LAWS 4089 Business Development: Marketing & Client Services (3 Credits)**

This course provides students with the tools to effectively market a solo practice and connect with the client. Topics include: client relationship management; social media; building a brand; networking fundamentals; website development; managing client expectations; effective communications; and referrals.

**LAWS 4090 Bankruptcy (4 Credits)**

This course introduces the federal bankruptcy system and Bankruptcy Code, including both the law of consumer bankruptcy and the law of corporate reorganizations. Topics include the rights of creditors in bankruptcy law and state law, the scope of the automatic stay, the treatment of executory contracts, the sale of assets in bankruptcy, the avoiding powers, bankruptcy planning, the restructuring of corporations in Chapter 11, and the procedure for confirming plans of reorganization.

**LAWS 4095 Real Estate Transactions (3 Credits)**

This is a problem-based course that covers both residential and commercial real estate transactions. Students will learn about the different phases of a real estate deal and examine sample documents that are involved in real estate transactions including purchase and sale agreements, brokerage arrangements, deeds of conveyance, and title insurance policies. Students will also address topics that appear on the bar exam such as the recording system and the financing of real estate acquisitions through mortgages and other tools.

**LAWS 4096 Patent Law (3 Credits)**

This course review the major patent law doctrines. Topics include patentability requirements under 35 U.S.C. 101, 102, 103, and 112, claim construction, various infringement doctrines, affirmative defenses and remedies.

**LAWS 4100 Basic Tax (4 Credits)**

This course provides students with a general understanding of tax law. Materials cover topics from personal and business deductions, to property basis and depreciation.

**LAWS 4101 Fundamentals of Taxation-JD (4 Credits)**

This class will cover fundamental concepts of the federal income tax system, including the definition of income, adjusted gross income, taxable income, exclusions from income, business and personal deductions, tax credits, basis, amount realized, gain and loss, capital gains and losses, depreciation, involuntary conversions, like-kind exchanges. This class is also intended to give the student a familiarity with the source materials of the tax law, including the Internal Revenue Code, Treasury regulations, case law and administrative materials.

**LAWS 4105 Business & Commercial Law Sem (1-3 Credits)**

Topical seminars scheduled periodically to afford students the opportunity for focused study of business and commercial law matters such as: consumer credit; mergers and acquisitions; corporate practice; bankruptcy; antitrust; quantitative evidence; representation of minority- and women-owned business firms. Prerequisite: LAWS 4190.

**LAWS 4108 Governance Workshop: Transparency and Privacy (2 Credits)**

This seminar will focus on cutting-edge legal issues related to governance, with a special focus on information: transparency, government accountability, information collection, and privacy. It will also provide an opportunity for students to engage in substantial scholarship of their own, improving their writing skills and providing insights into avenues for publishing written work. Most weeks, the Workshop will host a professor from another school to present a draft of a paper that has not yet been published. Students will carefully read the draft and participate in an in-depth discussion with the author. Through this process, students will have the opportunity to engage with many of the leading thinkers in the field. Some weeks, substantive material will be covered related to the course topics, including topics related to writing legal scholarship. Students will develop their own writing both in the workshop itself, and in scholarship groups of other students that will be assigned for the semester. Students will be expected to produce a significant piece of scholarship related to the topical area of this course by the end of the semester.

**LAWS 4110 Business Planning (3 Credits)**

The course introduces students to the transactional lawyering considerations involved in forming and representing an emerging growth business. The course examines the life cycle of a start-up company, including selecting the appropriate entity form, structuring the economic interests and managerial control among various owners, considering the lawyer's duties to the entity in dealing with its founders and management, and documenting various approaches to raising capital. Using a simulated deal format, students will draft, review and analyze documents typically used in organizing and financing a start-up business.

**LAWS 4112 Trademark Law (Advanced) (2 Credits)**

This seminar focuses on complex practical and legal issues confronted by today's trademark practitioners, ranging from brand protection strategies to litigating equitable relief claims for trademark infringement. The course also covers how trademark principles are being applied to the internet and e-Commerce. The course focuses on U.S. trademark law, but includes exposure to the aspects of international trademark law that are most frequently encountered by U.S. trademark practitioners. The course calls for students to participate in hands-on exercises, such as developing a new brand and arguing a preliminary injunction motion. The course requires a basic familiarity with trademark law, but the specific Trademark Law class is not a prerequisite. Prerequisite: LAWS 4310 or equivalent.

**LAWS 4115 Trademark Law (3 Credits)**

This course covers common law doctrines. Topics include the acquisition and preservation of trademark rights, false advertising claims, infringement doctrines, defenses, and remedies, with attention to internet issues and recent developments in the law. Recommended prerequisite: LAWS 4310.

**LAWS 4117 Taxation of Property Transactions (3 Credits)**

This course includes basis of property; capital expenditures and current expense comparison; depreciable status; amortization of intangible property; depreciation methods; property casualties and losses; profit or loss computation and characterization for taxable property dispositions; limitations on passive losses; lessor and lessee reporting; tax-deferred dispositions. Cross listed with TAX 4110.

**LAWS 4119 Animal Law Survey (2 Credits)**

This class is an introduction to the field of law referred to as "animal law." It is a survey course; we will study a range of legal topics that implicate the status and well-being of non-human animals. The course will not simply look casually or superficially at a spattering of areas where the law intersects with animals. Rather, the goal is to demonstrate that the field of animal law, like all great topics of legal study, is relevant to understanding general trends and overarching themes in U.S. law and policy. The course is a blend of theoretical and doctrinal materials, of historical reflections and future strategies. We will explore a variety of animal law topics and approaches for understanding "animal rights," but an overriding theme of the course is to understand whether and to what extent animal protection should be considered a civil rights movement. What is the role of activists versus lawyers? What is the role of criminal law in advancing the agenda of the movement? What is the role of constitutional law, and of science? And, do some species deserve more legal protections than others, and if so why?.

**LAWS 4120 Civil Procedure (4 Credits)**

This required introductory course examines how Constitutional statutory and judicial rules frame the determination of court controversies. They also explore the doctrines, remedies, and other principles pertinent to judicial dispute resolution.

**LAWS 4129 Comparative Corporate Law Seminar (2 Credits)**

Comparative Corporate Law examines the system for forming and managing businesses in the United States and overseas. We examine the impact of culture and other factors on legal regimes and examine whether a uniform international system is developing. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4131 Commercial Law Survey (4 Credits)**

This course provides an introduction to the concepts and methods of commercial law. As a survey course, it explores the major Articles of the Uniform Commercial Code, namely, Article 2 (Sales), Article 9 (Secured Transactions), Article 3 (Payment Systems), as well as Article 5 (Letters of Credit) and Article 7 (Documents of Title). In addition, the intersection of Article 9 and Bankruptcy Law will be discussed in some depth. The completion of this course gives students a firm footing for any advanced course in commercial law. Students taking only one course in commercial law receive broad exposure to the basics of commercial law.

**LAWS 4132 Colorado Legal Research (2 Credits)**

This course introduces students to legal materials generated by executive/administrative, legislative, and judicial branches of Colorado government. Students develop research strategies for answering legal questions using primary and secondary resources and learn to relate the various sources of authority to the structure of Colorado government. Students are required to bring laptop computers to class.

**LAWS 4133 Corporate Social Responsibility (3 Credits)**

Corporate Social Responsibility represents the integration of a various environmental, social, ethical, and even political considerations into basic business strategies to produce a positive impact on society while still earning profits. With increasing frequency, consumers and investors reward companies that embrace CSR by purchasing their products and stock. This seminar in Corporate Social Responsibility explores a variety of pressing legal issues involving corporate governance, sustainable development, shareholder activism, executive compensation, the role of religion in the boardroom, international regulation, and CSR certification, among other topics. Through the readings and discussions, students examine the American approach to CSR in light of international regulatory efforts and models of socially responsible business practices in various countries around the world. Students gain a greater sense of the special role lawyers play in burgeoning CSR movement by examining some sophisticated examples of corporate strategy, planning, and litigation on CSR matters. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4135 Comparative Law (3 Credits)**

Comparative Law is the study of the foundation of legal traditions and systems which exist in the world today. The major topics covered in this course are legal history and culture; legal structures; legal actors; and procedure and sources of law. The interactive course begins with an overview followed with coverage of each of the topics in relation to the United States legal system. We then cover the same topics in relationship to the common law tradition and the civil law tradition.

**LAWS 4137 Comparative Environmental Law (3 Credits)**

Comparative Environmental Law is an introduction to the growing network of international law (multilateral and bilateral treaties, customary law, adjudications, etc.) that govern environmental law. The course focuses on international legal issues including global climate change; trans boundary pollution; resource depletion; toxic waste export; biodiversity and wildlife/plant extinction; deforestation; desertification; ocean pollution; sustainable development; etc. (The internal domestic environmental laws of individual countries receive some attention as does trade law, but these are covered with more detail in Comparative Law and International Business Transactions, respectively.)

**LAWS 4139 Commercial Law for Foreign Investors in Guatemala (2 Credits)**

This class uses the Dominican republic-Central America-United States Free Trade Agreement (CAFTA-DR) and the North American Free Trade Agreement (NAFTA) to examine the legal framework regulating foreign investment in Central America and Mexico. With Guatemala's ratification of CAFTA-DR, Guatemala opened its doors not only to trade but also to foreign investment, including from U.S. companies looking to do business in Guatemala. While the CAFTA-DR includes norms that govern the relationship between foreign investors and Member States, the domestic laws of each Member State continue to provide the central regulatory structure that governs relations among the parties, including in the areas of commerce, intellectual property, labor and the environment. This is an introductory course that examines the principle commercial norms that would apply to foreign investors in Guatemala, with a special emphasis on the law of contracts. The course examines the comparable norms applicable under NAFTA and introduces the topic of how CAFTA's ratification has promoted rule of law reforms in Guatemala in the areas of commerce, intellectual property, labor and the environment. This course is taught in Spanish.

**LAWS 4143 Commercial Paper (2,3 Credits)**

This course introduces students to Article 3 of the Uniform Commercial Code, Negotiable Instruments. After studying this part of the UCC at the beginning of the semester, students will engage in a simulated, complex business transaction for the remainder of the course. The simulation involves problem solving, extensive document drafting, client counseling and professionalism, among other topics. The simulation involves transactions in a business/banking context, but is not an overview of banking law.

**LAWS 4144 Comparative Free Speech and Access to Information in the Americas (2 Credits)**

This course looks at the history and text of the guarantees of free speech in the constitutions of the United States and Latin American countries, including Guatemala; at judicial decisions interpreting them; and at the actual scope of those guarantees of free speech in practice, with emphasis on the function of free speech in facilitating democracy. The course also looks at the impact of globalization on free speech guarantees, including the impact of international treaties, the activities of NGOs, and speech on the Internet. The course compares the systems for providing citizens access to government information in the U.S. and Latin America, particularly Guatemala, and looks closely at areas where interest in disclosure and secrecy conflict.

**LAWS 4145 Computer and Internet Law (3 Credits)**

Computers and Internet Law is designed to consider the areas in which computer technology and the legal environment intersect. This includes legal protection of computer software; contracting for computer services; computer data banks and privacy; the check-less society; and the relationships between Federal Communications Commission policies and computers.

**LAWS 4160 Conflict of Laws (3 Credits)**

Conflict of Laws is an analysis of legal problems arising in cases when at least one of the operative facts cuts across state or national boundaries. Topics covered include problems of interstate jurisdiction over parties and subject matter the application of principles of full faith and credit and comity on the recognition and enforcement of interstate and multinational judgments; the comparison of various theories of law choice in the context of the Constitutional threshold constraints of the due process and full faith and credit clauses.

**LAWS 4164 Constitutional Law (4 Credits)**

This required introductory course examines the role of the United States Supreme Court and, in particular, the Court's power in exercising judicial review in cases interpreting the U.S. Constitution. The course focuses primarily on two topics. First is the doctrine of Separation of Powers: examining the structure and interrelationship of the three branches of the federal government, Congress, the Executive Branch, and the federal judiciary. Second is the doctrine of Federalism: the relationship and power distribution between the federal government and state governments. In addition, all sections devote part of the course to an introduction to at least one aspect of the large field of individual constitutional rights. The specific rights covered vary by instructor. Among the possible topics are: the Equal Protection Clause and Due Process Clause of the Fourteenth Amendment, the First Amendment, and/or the Fifth Amendment's Takings Clause. Students who wish to gain a deeper understanding of these topics are strongly encouraged to take Constitutional Law II.

**LAWS 4166 Constitutional Law II (3 Credits)**

This course provides upper level students exposure to a range of constitutional issues not covered in the basic required Constitutional Law course. At the discretion of the faculty, and in addition to a survey of constitutional law issues, this course may emphasize one or more specific topics, including but not limited to Sexuality, Causation, Poverty, First Amendment and Individual Rights.

**LAWS 4168 Constitutional Litigation Seminar (3 Credits)**

This course examines individual and class action litigation brought against government officials for the violation of constitutional rights under 42 U.S.C. section 1983, the primary federal civil rights statute, and other civil rights statutes. The historic interplay between substantive Constitutional law and traditional doctrines of tort liability has developed into an entire body of law under section 1983 that any civil rights or government lawyer must regularly confront. The seminar focuses on the most critical substantive issues in pursuing Constitutional litigation. This includes the history and purposes of section 1983; the elements of constitutional torts; rules governing liability of government officials and municipal liability; immunity doctrines; remedies; jurisdictional and procedural barriers to section 1983 litigation; and recovery of attorney's fees. The class also discusses the availability and viability of alternative remedial mechanisms to section 1983. Prerequisite: LAWS 4164.

**LAWS 4169 Constitutional Law Writing Seminar (3 Credits)**

This course satisfies the Upper Level Writing requirement (ULM). Permission by instructor only.

**LAWS 4175 Contracts (4 Credits)**

Consideration of the restatement of contracts and the relevant provisions of the Uniform Commercial Code. Legal protection accorded contracts: remedies and measure of recovery; damages; specific performance; restitution. Elements of agreement: preliminary negotiations; agreements unenforceable for indefiniteness; mutual assent. Consideration and the seal; bases of contractual liability; consideration; reliance and estoppel; mutuality. Problems of offer and acceptance; termination of offeree's power of acceptance; contracts concluded by correspondence; unilateral contracts—notice, knowledge, revocation of offer; contracts implied from conduct. Special problems of consideration. Third-party beneficiaries. Assignment. Effects of changes or unforeseen circumstances. Conditions in contracts—problems of draftsmanship: express and implied conditions; conditions precedent, subsequent and concurrent; severability of contract provisions. Procedures after default. The Statute of Frauds.

**LAWS 4178 Contracts Drafting (3 Credits)**

This course addresses the perspectives and skills that a lawyer must develop in order to assist clients with transactional work and aligning business objectives and contracts. In addition to delving deeper into selected areas of substantive contract law, students read materials that focus on writing and interpreting contractual provisions. Because a core focus of the class is writing for contracts, students regularly engage in drafting exercises to hone their drafting skills. The course also focuses on negotiation in a transactional setting, and how discussions with both clients and other parties can distill the key business terms that are to be reflected in a contract. Although substantive law and theory is utilized throughout the course, the primary objective of the course is exposing students to some of the practical, real-world skills essential to a transactional law practice.

**LAWS 4179 Construction Law (3 Credits)**

This course examines the legal relationships, obligations, rights, and remedies that govern the diverse parties to a construction project, including owners, lenders, contractors, material men, sureties, insurers, subcontractors, laborers, and others. A substantial portion of construction law (and accordingly, the primary focus of this class) is advanced contract law. Experience in the construction industry is not required, but those students who are unfamiliar with construction will benefit from spending a little extra time learning basic construction concepts and processes.

**LAWS 4181 Corporate Drafting Seminar (3 Credits)**

Corporate drafting focuses on writing responsive, lucid, unambiguous corporate documents. Students assume the role of the in-house counsel and other members of the corporate negotiating team as the team structures, negotiates, drafts, and implements corporate transactions. This course requires extensive writing. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4182 Negotiation and Drafting in an International Business Context (4 Credits)**

This course will focus on the basic principles of negotiation and contract drafting, as applied to international business transactions. Special emphasis will be placed on financial and corporate contracts, with a focus on a cross-border merger and acquisition transaction. The class will have three major components. First, we will cover the basic principles of effective contracts negotiation, paying particular attention to issues of cultural understanding and inter-cultural communication. Second, we will cover the basic principles of clear and unambiguous contract drafting and we will study and apply the basic 'geography' or building blocks of a cross border merger contract. Finally, we will draft and revise specific documents and agreements necessary to complete a cross border merger transaction. The seminar is taught through a combination of lectures, simulations, and hands-on drafting and negotiation exercises. This class requires extensive writing and team-based negotiations.

**LAWS 4185 Business Entities (4 Credits)**

The course provides an overview of the differences in the operation of a trade or a business as an LLC/LLP, an S-Corporation and a C-Corporation. The class offers an overview of the state law requirements for the operation of each type of business (Model Business act and LLC/LLP state statutes) and the difference in the tax treatment for each type of business. The objective is to give students a basic understanding of some of the do's and don'ts for each business and how they might advise a client as to the preferred business form in typical factual situations. The class explores both the legal and tax effects during the life cycle of any business, including formation, operation, distribution, redemption, sale of an interest, liquidation, mergers and divisions, and the death of the owner. Prerequisite: LAWS 4100.

**LAWS 4186 Corporate Taxation I (3 Credits)**

The federal income taxation of corporations and their shareholders with emphasis on the creation of the corporation, establishment of its capital structure, operational alternatives, distribution to shareholders, stock dividends and redemptions, personal holding company, and accumulated earnings tax. Cross listed with TAX 4200.

**LAWS 4187 Corporate Taxation II (3 Credits)**

A continuation of Corporate Taxation I with emphasis on corporate reorganizations, operation, liquidation of subsidiary corporations and corporate division, and carryover of tax attributes. Cross listed with TAX 4300. Prerequisite: LAWS 4186.

**LAWS 4188 Corporate Taxation III (3 Credits)**

Advanced corporate taxation problems with emphasis on collapsible corporations; liquidations; detailed study of sections 305, 36, 307; loss carryovers and Subchapter S corporations. Cross listed with TAX 4330. Prerequisite: LAWS 4186.

**LAWS 4190 Corporations (4 Credits)**

Corporations provides students with a basic introduction to corporations, including the roles of shareholders and creditors. The instructor also covers the various duties and liabilities of officers and directors, and supplies a brief overview of the applicability of the federal securities laws.

**LAWS 4195 Criminal Law (4 Credits)**

The course explores the definition of crime and criminal liability.

**LAWS 4197 Victim's Rights (3 Credits)**

Victim's rights has emerged as an important arena for the criminal justice field in the 21st Century. Anyone planning a career in criminal justice will want to engage in this seminar class to learn about the law and its application to victim's rights. This class is designed to explore beyond advanced criminal procedure the role of the criminal justice system and its response to victim's. In-depth discussions will be held about victim's rights and criminal procedure.

**LAWS 4200 Criminal Procedure (3 Credits)**

Criminal Procedure outlines Constitutional and other rules regulating pretrial evidence acquisition by government officials in criminal matters. The course commonly includes the following topics: an overview of criminal justice administration; arrest; search and seizure; the exclusionary rule and its administration; wiretapping electronic eavesdropping; entrapment; interrogation; and confessions and lineup practices.

**LAWS 4201 Death Penalty Jurisprudence (3 Credits)**

The course is designed to make students aware of the substantive body of law surrounding the modern death penalty and the policy issues raised by the law. The course begins with the class constructing a fair death penalty. Students decide whether they, as the omnipotent legislature, want a death penalty. Then, students construct one that is fair, just and humane, and that achieves the goals that they have established for their death penalty.

**LAWS 4202 Disability Law (2-3 Credits)**

This course covers theories of disability and provides a brief history of disability rights in the United States. The course will explore the major federal laws protecting individuals with disabilities in various contexts such as housing, public accommodations, schools, and employment. Relevant federal statutes we will examine include Section 504, the Americans with Disabilities Act, the Fair Housing Act, and the Individuals with Disabilities Education Act. The course will also provide an overview of the Supreme Court's landmark decision in *Olmstead v. LC*.

**LAWS 4203 Elder Law (3 Credits)**

The course explores a range of issues relevant to legal counseling of elderly clients, such as mental and physical impairments, public assistance, Medicaid, social security, nursing homes, guardianships, trusts, and right to die issues.

**LAWS 4205 Employment Law Survey (3 Credits)**

This course provides a broad overview of the field of employment law. It begins with an exploration of the employer/employee relationship and the "at will" rule. It then addresses various constitutional, statutory, and common law doctrines that tend to be applied to the employer/employee relationship, often as exceptions to the "at will" rule. Contract, tort, and anti-discrimination doctrines will be covered, as well as constitutional doctrines addressing free speech and privacy in the workplace, and regulatory regimes addressing wages and hours. Finally, this course explores the post-employment relationship, including trade-secrets and non-competition agreements. These topics are addressed at both a theoretical and practical level.

**LAWS 4206 Environmental Law Clinic (3-6 Credits)**

The goal of the Environmental Law Clinic of the Student Law Office (SLO) is to protect the environment and public health, while teaching students practical legal skills that will translate into any practice area. Students applying for the Environmental Law Clinic are asked to select between two tracks: the Federal Wildlife Project or the Colorado Urban Project. Students who select the Federal Wildlife Project (FWP) track in the Environmental Law Clinic will work on the preservation of endangered species and their habitats throughout Colorado and the western United States. Students who select the Colorado Urban Project (CUP) track in the Environmental Law Clinic will work to address the emerging environmental issues along Colorado's urban Front Range. This course may satisfy the Upper Level Writing Requirement (ULW). Corequisite: LAWS 4802. It is recommended, but not required, that students complete Evidence and Legal Profession before registering for this clinic.

**LAWS 4210 Energy Law (3 Credits)**

Energy Law presents the regulation of production, conversion, transportation, distribution and pricing of fossil, hydro, nuclear, and other conventional sources of primary energy. It also offers insight into the regulation of renewable energy resources, including energy from the sun, wind, biomass, oceans, earth (geothermal), and rivers (including low-head hydro). There is an emphasis on new legislative and judicial development relating to these various energy sources. The course is taught in a seminar format, and students present and critique classmate papers as part of the class. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4212 Public Interest Capstone (0 Credits)**

This is a zero-credit opportunity for JD students nearing graduation that will allow for the informal community building that is so critical for sustaining student commitment and public interest attorneys for the long term. It will be a time for sharing, reflection, camaraderie, and connections, as well as advising and planning for a career in the public sector.

**LAWS 4214 Copyright Law (3 Credits)**

This course covers the major copyright law doctrines. Topics include the subject matter of copyright, the scope of protection, rights conferred, infringement doctrines, defenses, remedies, and attention to particular industries and recent development in the law. Recommended prerequisite: LAWS 4310.

**LAWS 4215 Entertainment Law (3 Credits)**

Entertainment Law focuses on issues that have an impact on the entertainment industry. Topics include copyright; service and trademark; licensing; publishing; unfair competition; antitrust; agency; and labor law. The class also explores publishing agreements.

**LAWS 4218 Discovery Practicum (3 Credits)**

Most civil litigations never get to trial. Instead, these cases are settled after the discovery period has revealed the strengths and weaknesses in the case. This course focuses on the instruments, rules, and case law governing discovery of information in litigation: interrogatories, document requests, requests for admissions, and depositions. It is taught in the form of a "whole-course simulation," which means students will represent a party and have an opposing counsel in a simulated litigation throughout the course. Students prepare and serve discovery documents (just as in practice), take, defend, and act as a witness in a deposition, and reach a settlement of the case at the end of the course. Because of the nature of the course and the many practice documents prepared during the semester, there is no final examination. This course will satisfy the Upper Level Writing requirement (ULW). This course is a "Carnegie Integrated Course."

**LAWS 4219 Environmental Justice (3 Credits)**

This course will introduce students to environmental injustice - the disproportionate environmental impacts to low-income and of color communities. The study of environmental justice delves into environmental, civil rights and poverty issues. Specifically, environmental justice seeks to remove these disproportionate impacts through a combination of laws, most notably civil rights, environmental and tort. Students completing this course will understand what environmental justice is, the history of the Environmental Justice movement in the United States and the tools used to try to level the playing field regarding environmental justice decision-making. The class will include hands-on exposure to those facing such environmental injustices. The grade for this course will be based on class participation, short assignments and a final paper.

**LAWS 4220 Environmental Law (3 Credits)**

Environmental Law covers the major federal laws and programs for environmental protection. These laws and programs include the National Environmental Policy Act; Clean Water Act; Clean Air Act; Resource Conservation and Recovery Act; and Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Although the course focuses primarily on federal statutory law, it also incorporates some discussion of common law remedies. Recommended prerequisite: LAWS 4025.

**LAWS 4221 Navigating the National Environmental Policy Act (NEPA) (2 Credits)**

The National Environmental Policy Act (NEPA) was the first major environmental law enacted in the United States, requiring Federal agencies to evaluate the environmental impacts of their proposed actions prior to making decisions. Both scorned and praised, familiarity with NEPA is must-know territory for any environmental lawyer. This class will leave you with a solid understanding of NEPA regulations and caselaw, categorical exclusions, environmental assessments and environmental impact statements, public involvement and public comment, interaction with other environmental laws and processes, recent and far-reaching streamlining efforts, how to write a NEPA document, and advice for working with Federal land management agencies.

**LAWS 4224 Employment Law Benefits (3 Credits)**

This course is a statute and case law course that introduces students to Employment Retirement Income Security Act (ERISA), the important federal law that controls the design and operation of virtually all employee benefit plans. The course offers students an understanding of the application of ERISA and how ERISA issues arise in business and private law practice. The classroom scenarios include lecture, problem solving and role playing to identify the kinds of experiences students are likely to experience in private practice.

**LAWS 4225 Estate and Gift Taxation (3 Credits)**

This class is a study of the federal estate tax; federal gift tax; and federal generation skipping transfer tax.

**LAWS 4227 Employment Discrimination Law (3 Credits)**

This course concerns federal constitutional and statutory law that prohibits discrimination in the workplace, including regulation of both private employers and the federal government. The course covers theoretical issues, such as the definition of equality, and practical problems that involve the complex procedural requirements of the applicable statutes.

**LAWS 4229 Employment Law Seminar (3 Credits)**

Students select topics relating to current issues in labor and employment law and will write publishable articles based on independent research. Students present their papers to the class toward the end of the semester. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4230 Estate Planning (2 Credits)**

Estate analysis, including fact gathering and the analysis of data; the psychological aspects of "role playing" in estate planning; the members of the team (the attorney, the CPA, the life underwriter, the trust officer); life insurance in an estate and business planning context; planning with trusts, including revocable, short-term, and irrevocable; the transfer of a closely held business interest from one generation to the next, including full and partial stock redemptions, cross purchase agreements, private annuity, installment sale, retirement, recapitalization, qualified and nonqualified plans of deferred compensation; special estate planning considerations for the professional corporation, the highly paid executive, and the farmer and rancher; specific cases analyzed.

**LAWS 4232 European Union Law (3 Credits)**

The European Union (EU) has been described as the 21st century's newest superpower. Bearing in mind the rapidly growing importance of the EU, this course introduces EU law, and emphasizes its historical underpinnings, institutional framework, legal procedures, and internal market. Moreover, emerging policies (e.g. enlargement, environment) are considered. The course examines these topics in the context of European political integration and where appropriate, the ongoing tension in the trans-Atlantic relationship between the EU and United States.

**LAWS 4235 Evidence (4 Credits)**

This required course is an introduction to procedural rules that regulate the use of evidence at trial, including coverage of the mode of examination, relevance, impeachment, character evidence, hearsay, expert evidence, and privileges. Particular attention is paid to the Federal Rules of Evidence. Non-JD students must request permission to register. Non-JD students must request permission to register.

**LAWS 4236 Election Law (3 Credits)**

This course examines federal and state election laws. Topics to be covered include the Voting Rights Act, redistricting, the Electoral College, gerrymandering, ballot initiatives, and campaign finance. Time permitting, we'll also cover open records laws and regulations around lobbying.

**LAWS 4237 Evidence Practicum (3 Credits)**

This practicum is designed to help students build trial skills and make the transition from evidence law learned in the classroom to evidence used in the courtroom. It provides simulation-type experiences requiring students to understand the foundations required to admit different kinds of evidence, to anticipate evidentiary issues, to make and to respond to objections, and to prepare examinations designed to avoid objections. The course supplements Trial Practice by focusing heavily on the rules of evidence. Prerequisite: LAWS 4235.

**LAWS 4238 Exempt Organizations (2 Credits)**

The statutory exemption for "charities," social welfare and social clubs, homeowners' associations, fraternal orders, employee benefit organizations, mutual or cooperative companies, business and professional leagues, labor unions, exempt organizations, property title companies, federally organized or chartered organizations, and political organizations' activities, funds, and lobbying activities; prohibited transaction rules; the private foundation; the unrelated business and debt-financed income tax exposures; excise tax exemptions; administrative appeal and declaratory judgment procedures; anti-discrimination considerations; charitable contributions. Crosslisted with TAX 4430.

**LAWS 4240 Family Law (3 Credits)**

This course is an examination of laws that involve and/or regulate families. Students learn the legal rights of families in cases incidental to marriage or without marriage. This includes child-parent relationships and the dissolution of marriage. This class also provides students with an understanding of new familial relationships.

**LAWS 4250 Federal Courts (3 Credits)**

This is an advanced public law course that examines the role of the federal courts in our constitutional system. It focuses on the federal courts' role and power in relation to the other branches of the national government (separation of powers) and in relation to state and local governments (federalism). Specific topics include: the organic judicial powers of the federal judiciary, including Article III's Case or Controversy requirement; congressional power to restrict or expand federal jurisdiction, the Supreme Court's power to review state court rulings on federal law by direct appeal and on collateral review (habeas corpus), federal question jurisdiction, federal civil rights law under 42 U.S.C. § 1983, and many of the doctrines that limit federal judicial power to provide remedies to parties whose federal constitutional and civil rights have been violated, including official immunity, state sovereign immunity, and the abstention doctrines. It is highly recommended for students interested in pursuing federal judicial clerkships and/or careers in federal civil rights litigation, government representation, or other federal litigation.

**LAWS 4251 Wildlife Law (3 Credits)**

This course covers wildlife law, with a focus on federal wildlife law. The course will cover the constitutional underpinnings of federal wildlife law and its core statutory framework, as well as looking at different conservation approaches. Time permitting, the course will also cover some state and international wildlife law.

**LAWS 4259 Global Climate Change Law and Policy (3 Credits)**

As concern over the threat of global climate change spreads, action on greenhouse gas emissions (GHGs) is increasingly commanding attention. This seminar consists of supervised research and writing on the issue of climate change and the legal and policy responses. The course focuses on the effects of climate change on development and the environment in industrialized and developing countries and the laws in the international, regional and domestic arenas that address the problem.

**LAWS 4260 Gender and the Law (3 Credits)**

This course examines the role of gender in many areas of the law, including employment discrimination and reproductive rights. Provides perspectives on the effects of gender-based hierarchy on the structure of the law and legal processes. Explore contemporary feminist jurisprudence and the impact of women in the legal profession.

**LAWS 4262 Sexual Orientation Law Seminar (3 Credits)**

This seminar offers an opportunity for students of any or no sexual orientation to study the relationship between law and sexual orientation to study the relationship between law and sexual orientation. Historically, law in the United States consistently and pervasively regulated the realm of human identity and behavior we call sexuality. Questions and claims challenging traditional assumptions about sexual orientation surfaced in the last twenty-five years. Our study of sexual orientation and law allows us to view the relationship between law and society through a new lens, that of sexual orientation. Specifically, we examine issues of sexual orientation arising in areas ranging from constitutional law criminal law, employment law, family law, health law, immigration law, to tax law. We discuss some or all of the currently controversial issues relating to sexual orientation and law, including such topics as the proliferation of both nondiscrimination laws and anti-gay initiatives like amendment 2 in Colorado, the constitutionality of laws prohibiting specified sexual behavior between different-sex and same-sex adults, the constitutionality of laws limiting the right to speak about sexual identity, public and private employment discrimination against gays and lesbians including the military ban on persons who are openly gay or lesbian, and discrimination against same-sex couples with respect to marriage, parenting, health benefits, and taxes.

**LAWS 4265 Government Contracts Seminar (3 Credits)**

This seminar provides an in depth examination of the unique statutory, regulatory and administrative process used by the U.S. Government when it annually spends more than \$1 trillion taxpayer dollars to contract for goods and services used by Federal departments and agencies. Topics include the contract award and contract administration processes, with an emphasis on practical solutions to issues which routinely confront attorneys who advise businesses that do business with the Government.

**LAWS 4270 LLCs and Operating Agreements (1 Credit)**

This course provides an overview of limited liability companies, including the attributes and characteristics of LLCs, the pros and cons of the LLC form, and a comparison of LLCs to other types of entities. The course also covers the structure and components of the operating agreement, including an in-depth examination of various provisions included in operating agreements. In conjunction with the course content, students will also be exposed to client interview techniques for in person client meetings, as well as client conference calls.

**LAWS 4276 Health Law (3 Credits)**

This survey course introduces students to how the legal environment of health care shapes both its quality and its distribution. The course begins with a foundation in how health care is both provided and financed in the U.S., including managed care, Medicare, and Medicaid. This foundation sets the stage for studying the laws and policies that impact health law, including ERISA, antitrust, fraud and abuse, the False Claims Act, Stark, and HIPAA. This course does not focus on bioethics or medical malpractice. Students must submit a publishable quality paper on a health law topic approved by the professor.

**LAWS 4277 Holocaust Seminar (2-3 Credits)**

This class focuses on conceptions of individual and state accountability. By understanding how the Holocaust occurred, and how individual and collective acquiescence combined with affirmative conduct, we can begin to grasp the complex web that created a moment in time where morality and civilization were abdicated and almost eradicated. We examine how law, culture, power, ignorance and fear combined to create the Final Solution, and how conceptions of moral agency and accountability were forged in flames that marked the death camps. Students read narratives of resistance and collaboration and historical accounts of how the U.S., Europe and religious institutions interacted with the Third Reich. Through the readings and discourse that follow, students have the unique opportunity to question what constitutes moral agency and how individuals and cultural systems should be held accountable for circumstances that created the Third Reich and its ideology. This class is interdisciplinary thereby integrating law with literature, political theory and philosophy. Prerequisite: instructor's permission.

**LAWS 4278 Lawyering for Racial Justice (1 Credit)**

This seminar provides a unique opportunity for Denver Law students to earn one credit by studying a significant topic related to the law and racial justice. The seminar will allow students to begin to develop 1) a substantive understanding of the application of critical race theory to a variety of contemporary legal and social issues, and 2) a sense of professional identity through the examination of lawyering practice in the context of critical race theory. Topics discussed generally change each semester to respond to current events and pressing needs and interests. The course may include guest lectures from faculty and practitioners in other disciplines. Students will thus have an opportunity to interact with an array of professors who have expertise and interest in critical race theory and practice.

**LAWS 4279 Access to Justice (3 Credits)**

This class will explore the justice gap in the United States, focusing primarily on the civil side. We will first consider what has caused the dearth of legal services available to low and moderate income people. We will then examine what solutions states have tried to address the justice gap and why those solutions have been only modestly effective. Finally, while the class is focused primarily on the civil justice gap, we will spend some time discussing the inadequacy of criminal representation for indigent defendants.

**LAWS 4280 Hughes Research Seminar (1-5 Credits)**

Topic of Seminar to be determined by Hughes Research professor teaching the course.

**LAWS 4285 Legal Research Skills - Specialized (0 Credits)**

This zero-credit course introduces students to sources and methods for administrative law and legislative history research as well as subject-specific research on selected topics such as securities, natural resources, intellectual property, immigration, environmental and international law. Topics change each semester. Print and electronic materials are used throughout the course. Students must attend twelve (12) classes and pass the post-class assignments to complete the course successfully.

**LAWS 4287 Legal Research Skills - Basic (0 Credits)**

This zero-credit course introduces students to the basic primary sources of American law (cases and statutes), secondary sources, the Bluebook and citators and other tools for updating research. Print and electronic materials are used throughout the course. Students must attend eight (8) classes and pass the post-class assignments to complete the course successfully.

**LAWS 4288 International and Human Rights: Indigenous Peoples (3 Credits)**

This course explores some of the major contemporary legal issues facing indigenous peoples across the globe. The course covers issues as far ranging as: how indigenous groups are defined under the law; ethical and legal issues pertaining to indigenous self-governance including the tension between minority rights, individual rights, and democratic precepts; the uneasy application of self-determination law to indigenous self-governance; the implications of human rights, environmental, intellectual property, and international trade regimes for indigenous peoples; and international legal texts affecting indigenous peoples, such as the United Nations Declaration of the Rights of Indigenous Peoples. At the option of the individual student, this course can be used to satisfy the Upper Level Writing requirement (ULW).

**LAWS 4289 Legal Research Skills - International (0 Credits)**

This zero-credit course introduces students to sources and methods for international, comparative and foreign law research. Topics may include treaty research, international trade law, human rights law, international intellectual property law, customary international law and private international law. Topics change each semester. Print and electronic materials are used throughout the course. Students must attend twelve (12) classes and pass the post-class assignments to complete the course successfully.

**LAWS 4290 Human Rights Law (2 Credits)**

The course provides an introduction to international civil and political rights and economic, social, and cultural rights in the international arena. It also covers the means available to protect such rights of the individual and groups. The focus is on the implementation part at the United Nations and other international, regional and national settings. Prerequisite: LAWS 4320.

**LAWS 4292 Individual Tax Problems (3 Credits)**

Using the Internal Revenue Code and the Federal Income Tax Regulations as a basis, substantive issues relating to individual taxation are covered. Areas included are general concepts of gross income, individual employee benefits and deductions, charitable deductions, alternative minimum tax, deductibility and classes of interest, office in home and vacation homes, and a general overview of the interrelationships of various statutory and non-statutory principles. Cross listed with TAX 4020.

**LAWS 4295 Immigration Law (3 Credits)**

This is a study of the historical development and current jurisprudence in American immigration law. The course examines such concepts as sovereign authority, exclusion, expulsion and asylum, and current developments in the area.

**LAWS 4297 Forced Migration & Human Trafficking (3 Credits)**

This course will examine the laws and policies governing forced migration. Students will get an overview of the scale, scope, and causes of forced migration, and will explore what it means to be a refugee according to the international conventions and U.S. law. We will ask and try to answer questions including: what conduct constitutes "persecution"? How is someone fleeing violence different from a refugee? What kinds of durable solutions exist to address the refugee crisis? In this participatory class students will also learn about human trafficking and the national and international efforts to respond to this crime. In addition to the normal substantive course work, students are required to observe 4-6 hours of refugee-related hears at the Executive Office of Immigration Review in Denver.

**LAWS 4298 Immigration Law Advanced (3 Credits)**

This course provides theoretical and practical approaches to the representation of non-citizens in removal proceedings. This course is designed for students who have an interest in practicing immigration law with a focus on deportation and removal practice before the Department of Homeland Security, the Executive Office for Immigration Review, and the federal courts. The goal of this course is to give students a theoretical framework for identifying and assessing immigration issues, including immigration consequences of criminal convictions, and for formulating strategies for effective prosecution and representation of non-citizens in removal proceedings. The instructor also teaches the practical tools and procedures, which students may apply to actual case representation. Prerequisite: LAWS 4295 or an immigration related externship.

**LAWS 4300 Native American Tribes and Federal Law (3 Credits)**

This course introduces the legal relationship between Native American tribes and the federal government. This body of law, consisting of hundreds of treaties and Presidential executive orders, thousands of Congressional statutes, and tens of thousands of reported court decisions, is also known as Federal Indian Law. The course explores the legal development of Native American tribal sovereignty and self-determination from the British Crown to the present day, including tribes' rights to land and natural resources; the federal government's trust responsibility to tribes; tribe's inherent powers of self-government; modern civil and criminal jurisdiction; the relationship of tribes to state and local governments; the federal government's legal obligation to consult with tribal leaders on decision-making by executive branch departments and agencies, including with respect to cultural resource protection; and the legal and political status and civil rights of individual Native Americans and Alaska Natives in the federal constitutional system.

**LAWS 4303 International Criminal Law Practicum (3 Credits)**

In this course, the class collectively analyzes the genocide, war crimes and crimes against humanity charges against an accused in a major international tribunal prosecution. Each student is assigned witnesses in the case and is expected to analyze that testimony and record their work in the case database using Casemap software meticulously following previously established protocols. The work involves the students learning the nature of the conflict generally, thoroughly learning the indictment against Taylor, getting up to speed on the law of war crimes and crimes against humanity, and finally assessing the witness testimony for relevant facts and attributing those facts to the legal outline in the case.

**LAWS 4304 Insurance Law (3 Credits)**

A comprehensive overview of laws, standards, concepts and remedies related to Insurance, including: interests protected by Insurance; selection and control of risks; insurable interest; the principle of indemnity; types and classifications of Insurance; making, dealing with and termination of insurance contracts; underwriting and claims handling; regulation of Insurance and insurers; subrogation; and extra-contractual liability. This course will satisfy the Upper Level Writing requirement (ULW).

**LAWS 4309 International Law and the Use of Force (3 Credits)**

This course deals with the two aspects of the use of force by countries: the initial decision to resort to force and then the regulation of that force once the conflict begins. In 1945, the United Nations Charter set out to prohibit the resort to force by its member states except in two limited situations: self-defense or where authorized by the Security Council. The Geneva Conventions and its protocols, as well as customary international law, regulate how that force is applied. The subject of this course is how these provisions have been interpreted since 1945 and trends in the law that will guide us in the future.

**LAWS 4310 Introduction to Intellectual Property (3 Credits)**

This survey course covers the basics of United States intellectual property law, including patents, copyrights, trademarks, and trade secrets. The course addresses the policies underlying the protection of intellectual property and compares the different ways organizations and individuals can use intellectual property to protect their interests. This course is intended both for students who want an introduction to intellectual property and for those who intend to pursue a career in intellectual property law.

**LAWS 4315 International Business Transactions: Survey Course (3 Credits)**

This course provides students with a general overview of international business transactions. The course examines the legal framework of international sales transactions including the commercial terms of the sales agreements, shipping contracts, insurance, financing arrangements and customs documentation. The course also examines the foreign direct investment transaction, international franchise and distribution agreements. The regulation of international business is reviewed, with special attention to the World Trade Organization agreements and regional trade areas.

**LAWS 4317 International Environmental Law (3 Credits)**

This is an introduction to International Environmental Law – the expanding field of multi-nation treaties, laws, judicial decisions, policies, practices, and politics governing the global environment. IEL backgrounds students on the 21st century's hottest international law topics – sustainable development, climate change, transboundary air and water pollution, natural resources development, international trade, toxic waste and recycling, and protection of wildlife, ecosystems, human life, and human rights.

**LAWS 4318 International Business Transactions: Federal Regulation (3 Credits)**

IBT: Federal regulation examines the ability of the federal government to control international trade. The focus of the course is US export controls, embargoes, anti-terrorism regulations that apply to international commerce, and the Foreign Corrupt Practices Act. Students prepare a compliance program integrating these regulations into a workable framework for a company.

**LAWS 4319 International Human Rights (3 Credits)**

The seminar begins with a general overview of international human rights as put forth in the International Bill of Rights. The second part of the course focuses on the emerging area of corporate social responsibility and human rights. The last part of the seminar consists of student presentations on the topics of the research papers required for the course.

**LAWS 4320 International Law (3 Credits)**

International Law is the foundational course in public law, treaties, systems, and policies that bind nations into a world community of law. The class places special emphasis on the origins of international law; statehood; international responsibility and claims; use of force; and human rights.

**LAWS 4341 International Commercial Arbitration Moot (3 Credits)**

This course uses the Willem C. Vis International Commercial Arbitration Moot Competition to give students practical skills-based training in the most important aspects of international commercial arbitration and international sales law. The Vis Moot is based on a problem governed by the U.N. Convention on Contracts for the International Sale of Goods (the "CISG").

**LAWS 4342 International and Comparative Mining Law (3 Credits)**

The course deals with basic concepts of mineral law, as practiced in various jurisdictions. This includes exploration, mining and environmental protection and reclamation issues. It then focuses on the current evolution and legal and policy status of mining legislation, mineral investment agreements, and major actors. Students completing this course develop a basic understanding of the general approaches, legal frameworks, policies and agreements used to regulate the mining industry in key jurisdictions outside the United States. This course is taught in Spanish.

**LAWS 4343 International and Comparative Petroleum Law (3 Credits)**

The course deals with basic concepts of international law relating to petroleum investment, current elements of petroleum legislation, and petroleum investment agreements (production-sharing, concession, joint venture, service, management contracts). Also, students explore such aspects of petroleum law as dispute settlement and legal status. The instructor will discuss the major actors (international petroleum companies, state petroleum enterprises, Ministries of Energy) and their legal and policy status. Students completing the course leave with a basic understanding of the general approaches, policies, and agreements used to regulate the petroleum industry in key selected jurisdictions outside the United States.

**LAWS 4344 International Tax (3 Credits)**

Introduction to U.S. international taxation with an equal emphasis on inbound and outbound transactions. Resident and nonresident alien taxation, withholding taxes, effectively connected (business) income, foreign investment in U.S. real estate, tax treaties, branch taxes, earnings stripping, conduit financing rules, foreign earned income exclusion, classification of foreign entities, foreign tax credit, foreign personal holding companies, controlled foreign corporations, passive foreign investment companies, export transactions, Subpart F manufacturing rules, outbound property transfers, and transfer pricing. Cross listed with TAX 4420.

**LAWS 4345 Jurisprudence (3 Credits)**

The course is designed to introduce several contemporary modes of legal thought. The course is an exploration and critical evaluation of these differing perspectives on law are pursued to foster an understanding of the interdependency between legal philosophy and legal decision process, the role law plays in our culture, and the social and philosophical impediments to law's effectiveness.

**LAWS 4346 International Sales (3 Credits)**

This course will examine the laws governing the international sale of goods, including the Unidroit Principles, the relevant rules adopted by the United Nations Commission on International Trade Law, the Convention on the International Sale of Goods (CISG), and the International Chamber of Commerce (ICC) Modern International Sale Contract. Special emphasis shall be given to the CISG as well as to comparing the law of international sale of goods with United States contract law. Issues such as international payments methods, letters of credit, customs clearing procedures, and dispute resolution will also be discussed. Two large topics - (1) the CISG and (2) letters of credit and other means of financing cross-border transactions - comprise the bulk of the course.

**LAWS 4347 International Environmental Law in Latin America (2 Credits)**

This course examines the role of international law in promoting cooperative solutions to some of the most pressing environmental problems confronting the planet. The course begins with an introduction to the international law framework within which international environmental law has developed, and emphasizes the relationship between international environmental law and international human rights law. The course then uses several case studies to analyze the legal regimes that have developed to address environmental problems of particular relevance to Latin America, including protection of biodiversity, climate change adaptation and mitigation, and protection of water resources. This course is taught in Spanish.

**LAWS 4348 International Criminal Procedure and Practice (3 Credits)**

The International Criminal Court and the various international and internationalized tribunals such as the International Criminal Tribunal for Rwanda and for the former Yugoslavia prosecute a unique and evolving set of international criminal laws designed to end the impunity of military and political leaders engaged in mass violence. The post-World War II Nuremberg trials were the first attempt to use tribunals to hold individuals criminally responsible. Later, the Nuremberg present was the basis of the creation of ad hoc war crimes tribunals for the former Yugoslavia and Rwanda in the early 1990s, which then opened the door to other tribunals such as the Special Court for Sierra Leone, the Extraordinary Chambers for Cambodia and the International Criminal Court. The practitioners of the tribunals represent the range of cultures, mores and legal traditions of the world. These varied experiences create different expectations as to the conduct of proceedings and what amounts to procedural fairness. This course studies the rules of procedure and practice that have developed at the international tribunals in the multi-cultural context.

**LAWS 4350 Juvenile Law (3 Credits)**

This course examines the legal parameters surrounding juveniles. Students gain a basic understanding of juvenile law, such as the legal definition of who is considered a child and the allocation of power between the state, parent(s), and the children. The class examines what protection the Constitution provides children and the historical development and philosophy of juvenile justice to understand the foundation of juvenile law. The focus of the class also includes an examination of rights of abused children and children who are delinquents and status offenders.

**LAWS 4351 International Mergers and Acquisitions (3 Credits)**

Using recent articles as case studies, students will consider what motivates corporations to undertake cross-border acquisitions and divestitures, why most transactions ultimately fail to meet expectations, and how lawyers structure transactions to avoid these pitfalls, including (i) corporate forms worldwide (corporations, partnerships, LLCs); (ii) the timeline of M&A transactions from the initial idea through transfer of ownership and the 5 years thereafter; (iii) forms of acquisition (merger, asset purchase and stock purchase); and finally (iv) negotiation of the pertinent legal documents. This course has become increasingly relevant as the world becomes less open and congenial, while businesses continue to seek geographically and culturally diverse markets. This course is appropriate for both students with no business background and students with extensive business and legal experience.

**LAWS 4355 Labor Law (3 Credits)**

Labor Law provides a background of modern labor relations law and union pressures with an historical review of the laws that shape this field. Laws covered include the National Labor Relations Act; National Labor Management Relations Act; Labor-Management Reporting and Disclosure Act of 1959; Civil Rights Act of 1964; employer unfair labor practices; union unfair labor practices; internal affairs of labor organizations; collective bargaining and settlement of labor disputes; and state labor legislation. Also, it explores employer and union labor practices and manners in which disputes concerning these practices may be resolved.

**LAWS 4358 Land Conservation Transactions (3 Credits)**

This course covers the fundamental law and principles related to land conservation. It is a research based class, and students are responsible for researching, presenting information and drafting regarding a specific conservation project. This course provides all the background necessary to allow students to conduct a meaningful research foray in and to create conservation easements for land conservation.

**LAWS 4360 Land Use Planning (3 Credits)**

This course examines government controls used in the regulation of land use and development and the urbanization of the built environment in cities and metropolitan areas in the United States. The course includes an analysis of state and local laws and federal constitutional issues related to the use of master plans, zoning and land development codes, growth management and smart growth development techniques, as well as the topics of subdivision regulation, eminent domain and urban renewal. Special problems in land use planning studied include exclusionary zoning, regulation of aesthetics, design controls and visual beauty, signs and billboard, religious land use, protection of natural lands and wildlife habitat, regulation of natural resources development, fair housing laws, and the protection of private property rights in the urban regulatory process.

**LAWS 4362 Latin American Law (3 Credits)**

This course seeks to provide students with a basic understanding of Latin American legal traditions. Intended for students who will come into contact with Latin American law in their work as lawyers, international civil servants, business executives and diplomats. The course examines the civil law tradition and constitutional law issues and current developments, such as Latin American economic integration, reform of the public sector, and the emergence of the Inter-American system for the protection of human rights.

**LAWS 4365 Law and Economics (3 Credits)**

This course is an examination of selected common law, regulatory law, and Constitutional law issues from the perspective of economic efficiency analysis.

**LAWS 4370 International Investments (3 Credits)**

The global investor is faced with a complicated task. He must deal with multiple currencies, multiple markets, multiple cultures, and multiple regulatory environments. However, the most important aspect of international investment is the use of multiple currencies. Accordingly, the first module of this course lays the foundation of foreign exchange rates: the basic facts of foreign exchange quotations, international parity conditions and arbitrage implications, and exchange rate forecasting. The second module covers the various assets and markets available for global investing: international bonds, equities, alternative investments, and optimal international portfolio selection. The third and final module develops risk control techniques available with derivatives: forwards, futures, options, and swaps. Overall, this course will emphasize conceptual understanding and applications, rather than lengthy theoretical exposition and mathematical analysis.

**LAWS 4371 International Investment Arbitration Practice & Procedure (3 Credits)**

International investment arbitration has a few names. It has been referred to as investor-state arbitration, investor-state dispute settlement (ISDS), and sometimes simply international arbitration. Investor-state arbitration is a powerful and relatively new form of dispute resolution. It largely originates from the many bilateral investment treaties (BITs) developed in the 1950s, and has expanded to larger and more complicated international treaties such as NAFTA, CAFTA, and the Trans Pacific Partnership (TPP). Today, this is the fastest growing field for international legal practitioners. Any international transaction with the characteristics of a foreign investment implicates investment treaties. With the development of new trade agreements such as the TPP and Transatlantic Trade and Investment Partnership (TTIP) the field will only continue to grow. This course is experiential in nature. It examines the field of investor-state arbitration from the perspective of an investment dispute. The class will simulate an investment dispute in the context of an International Centre for the Settlement of Investment Disputes (ICSID) proceeding. The course will move through a typical ICSID case from beginning to end (in an abbreviated format) and focus on key areas in the field of investor-state arbitration. This course will only be taught in the spring semester and serves as the gateway to the University of Denver Foreign Direct Investment Moot Team (<http://www.fdimoot.org>). Students with a strong interest in joining the FDI Moot Team and attending the FDI Moot as counsel the following fall semester will be given preference to join the class.

**LAWS 4373 International Practice and Procedure (3 Credits)**

This course is only open to members of the current Jessup Team and focuses upon the practice and procedure before the International Court of Justice. Students will examine the ICJ's history, organization, competence, and role as the primary judicial organ of the United Nations and permanent institution for the pacific settlement of disputes between States. The course will be split between both theory and practice, wherein students will study the major landmark cases of the ICJ affecting the practice of international law, and be exposed to the rules of procedure and style of practice before the ICJ through the use of a hypothetical contentious case between two States. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4375 Law and Society (3 Credits)**

The primary focus of this seminar is on law as a product of the structure of society. The subject matter can be divided into four distinct sections: 1) What factors affect the development of substantive law? This section examines the influence of values, beliefs and norms. 2) Given the existence of substantive law, what organizations develop to carry out the administration of law? Here concentration is on the phenomena classified as legal roles, organizations, institutions, and inter-institutional relations -e.g., juries, the legal profession, courts, legislature, etc. 3) How does law affect social behavior? and 4) What is the role of law in social change?.

**LAWS 4376 Law and Emerging Technologies (3 Credits)**

Technological innovations have created challenges for regulators and policymakers. This course focuses on recent emerging technologies and introduces law students to ways law interacts with technology. Students are encouraged to think creatively to address the current challenges and anticipate future legal impacts. It also familiarizes students with the recent legal scholarship in this field. Topics covered in this course include autonomous vehicles, AI and facial recognition, big data, digital privacy, deep fakes, platform governance, and quantum computing.

**LAWS 4378 Race, Class & Reproductive Justice (2,3 Credits)**

This course examines how race and class status affect women's reproductive rights and how both legal rules and medical practices in this area rely on stereotypes and enforce norms of "good motherhood" on women. Topics covered include some or all of the following: abortion, contract parenthood ("surrogacy"), cloning, sterilization, embryo freezing, pregnancy-based employment discrimination, criminal prosecutions of women for prenatal substance abuse, and court-ordered Cesarean sections.

**LAWS 4379 International Trade Law (3 Credits)**

This course examines the law of international trade in goods and services, focusing principally on the law of the World Trade Organization and the General Agreement on Tariffs and Trade. We examine the trading system's rules restraining national restrictions on trade that address, among other things, tariff and non-tariff barriers, discrimination, regionalism, anti-dumping, countervailing duties, and safeguards. The course also spends time considering the relationship between trade and other regulatory areas or social values, such as environmental protection, health and safety standards, human rights, intellectual property protection, and other facets of globalization. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4380 Hazardous Waste and Toxic Substances (3 Credits)**

This practical, hands-on course reviews the major federal environmental protection programs, with an emphasis on the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or "Superfund") and the Resource Conservation and Recovery Act (RCRA). It also covers Toxic Torts, Underground Storage Tanks, the Clean Water Act, Safe Water Drinking Act, and the Clean Air Act. Other materials may be distributed by the instructor on OSHA, NEPA, TSCA, OPA, the Colorado state voluntary cleanup program (VCUP), toxicology, and immunity issues. The course emphasizes practical application of major environmental laws. Students become familiar with statutory and regulatory schemes, and are expected to be able to identify environmental legal issues and apply environmental laws and regulations to hypothetical problems. JD student prerequisites: LAWS 4220, LAWS 4450, or LAWS 4495. LLM and MRLS student prerequisites: LAWS 4220, LAWS 4450, or LAWS 4495, or be registered to take any of these.

**LAWS 4382 Legislative Process: Institutions & Interpretations (3 Credits)**

This course is designed to be a three credit introductory course on the legislative process. This course focuses on theories of the process through an examination of theories of representation, theories of deliberation, direct democracy, and due process of lawmaking. Finally, this course will also explore legisprudence. Legisprudence explores theories of statutory interpretation and constitutional/statutory provisions which govern the political process and its participants. This course is intended to serve very practical goals. Students considering careers as legislative drafters, legislative staffers, elected officials, lobbyists or activists should emerge from this course with an understanding of the legislative process and a sense of how courts, agencies, and the executive branch are likely to interpret statutes. This course provides litigators with the tools to convince the courts that their interpretation of a statute is the correct one. For those students whose careers will require advising others about the meaning of statutes, this course helps provide the skills needed to perform that task.

**LAWS 4383 Doing Business-Latin America (3 Credits)**

Taught in Spanish, this course acquaints students with the legal framework of business transactions in Latin America. The course exposes students to the civil law system used in most Latin American countries and covers selected topics of importance to lawyers advising clients doing business, or seeking to do business in Latin America. Topics may include the development of Latin American law, types of corporate and partnership organization, trade law, foreign investment, intellectual property, taxation of foreign income, environmental and labor standards, and dispute resolution.

**LAWS 4385 Lawyering Process I (3 Credits)**

The Lawyering Process Course provides first-year law students with a foundation in the essential lawyering skills that are necessary to be an effective, ethical, and professional member of the legal community in a rigorous, supportive learning environment that uses a client-centered approach. The first semester focuses on introducing students to the legal system, legal research, and providing client advice through written analysis.

**LAWS 4386 Lawyering Process II (3 Credits)**

The Lawyering Process Course provides first-year law students with a foundation in the essential lawyering skills that are necessary to be an effective, ethical, and professional member of the legal community in a rigorous, supportive learning environment that uses a client-centered approach. The first semester focuses on introducing students to the legal system, legal research, and providing client advice through written analysis. The second semester builds on students' research, writing, analytical, and oral presentation skills in the context of advocating for a client.

**LAWS 4387 Professionalism and Well-being Skills for the Effective Lawyer (2 Credits)**

The objective of this course is to support professional identity formation and growth in the professionalism and well-being skills of future lawyers as they progress toward growing competence as professionals. The first half of the course focuses on law student well-being and optimizing brain health and mental strength to enhance performance. The second half of the course is devoted to the development of professionalism skills such as professional development, self-awareness, bias, social proficiency, wisdom, and leadership, essential attributes of a high-performance legal practice.

**LAWS 4390 Law and Neuroscience (3 Credits)**

In this survey course, we will cover some neuroscience basics, including a brief history of neuroscience, how neurons and neurotransmitters work, what is currently known about how the brain is organized, both structurally and functionally, how modern neuroscience views the so-called Cartesian dichotomy between emotion and cognition, and the basics of the most common types of neuroimaging. We will then explore the law and neuroscience of pain, memory, lie detection and criminal responsibility, discussing how neuroscientific discoveries might or might not change how the law handles these discrete problems, and the related evidentiary issues of how to get neuroscientific evidence admitted or excluded in cases involving these problems. We will finish, time permitting, with some speculations about artificial intelligence and neuroprosthetics.

**LAWS 4395 Military Law (3 Credits)**

This course will review the history, nature and sources of military law; the Uniform Code of Military Justice and the functions and procedures of military courts-martial, including the rights and status of military personnel. It will also cover an overview of the laws of armed conflict; national security and domestic application of operational military law; and the policies and international treaties affecting the detention and prosecution of enemy combatants and other foreign nationals. The course materials will rely on primary sources including statutes, cases, treaties, and selected law review and other articles, which will be provided electronically to each student. The course will review these military law topics with an emphasis on case studies and policy discussions in the context of recent current events.

**LAWS 4400 Lobbying Law (3 Credits)**

This course will focus on the role and nature of advocacy and lobbying before state and federal legislative and regulatory bodies. The areas will include but are not limited to the role of financing with emphasis on Citizens United, the issues involved in Department of Interior Policy and public lands, the structure and lobbying of new tax legislation, high frequency trading in securities markets, Dodd-Frank and the new regulations, the JOBS Act and crowdfunding, immigration law and border security, state legislative lobbying and healthcare lobbying. Some guest lecturers will be invited, including former cabinet members at the federal level, judges, former White House counsel, financial analysts who are lawyers, members of Congress and Senators. Students will be required to develop a lobbying and advocacy program in an area assigned by the Professor.

**LAWS 4410 Public Sector Employment Law (2 Credits)**

In Public Sector Employment Law, students will learn the law unique to public employment. Particular emphasis will be placed on constitutional legal claims brought under 42 USC Sec. 1983, including claims for violation of the freedoms of speech and association, equal protection, due process, and privacy. The class will also cover public administrative remedies, various governmental immunities, and open records laws. The course materials will be taught through a combination of traditional Socratic method and practical real world exercises, including the drafting of pleadings, interviewing of parties, and arguing of substantive legal motions.

**LAWS 4411 Mergers & Acquisitions (4 Credits)**

This course investigates the legal framework and strategies for structuring mergers and acquisitions ("M&A"). The class will be taught in the "modern learning" format to help students develop practical skills that will improve their readiness upon graduation for the practice of law in diverse business contexts. Among other topics, the course will address structuring various acquisition transactions, negotiating terms of the deal, drafting deal documents, conducting due diligence, advising boards on fiduciary obligations, interpreting relevant state law and federal securities laws, and exploring litigation to thwart potential business combinations. Throughout the course, students will engage in a variety of research, drafting, interviewing, counseling, and advocacy exercises. Through those exercises, group reflections on various assignments, and class discussions of other assigned readings, students will enhance their ability to think critically about a variety of M&A issues from both transactional and litigation perspectives. Pre-req: LAWS 4190.

**LAWS 4412 Sustainable Cities Practicum (3 Credits)**

Communities around the west are increasingly working to accommodate population growth without promoting sprawl. From transit oriented development in the suburbs to urban infill projects in the city center, cities are exploring ways of promoting new, more sustainable forms of development – sometimes in places that are not ready to accept increased density and amidst changing notions of what Americans really want. This course will explore issues of sustainability, as they relate to land use, and will help prepare students to work in the field of urban planning and development. Partnering with a local organization and utilizing the concept of "Action Learning," students will work in teams as they engage in real-time problem solving of a complex issue involving land use and sustainability. It is anticipated the course will include a field trip and work with practitioners engaged in the issue of concern. A research paper and final presentation will be required.

**LAWS 4413 Trail Tactics (3 Credits)**

This course is intended for those who truly desire to be a trial lawyer. It is an advanced, hands-on course which is designed to teach you how to be successful in trial – not just trial practice, but overall trial strategy. This course will teach you not just what to do in trial, but will also answer the question as to why you do what you do. It involves the strategy of trying cases, including trial themes, as well as preparation and participation in doing voir dire, opening statements, direct and cross examination of witnesses, when to make objections and when not to make objections, as well as closing. You will learn to use various trial techniques included in the text *Rules of the Road*, and will learn all the ins and outs of trying a case in front of a jury.

**LAWS 4414 Private Equity Seminar (3 Credits)**

In this course students will learn legal doctrine and practical skills through the examination of various aspects of private equity groups. The class will focus on legal issues arising in private equity investment cycles, including raising a fund, investing the fund, managing the investment, and exiting the investment. Students will consider the legal foundations of fund formation, business law, and structuring investments, including state and federal laws affecting business associations and corporate transactions. The class will also highlight tax and regulatory considerations of private equity groups and their investments. The class will have a heavy emphasis on practical skills, including critical thinking, and best practices for beginning lawyers, including structuring transactions, drafting transactional documents, and negotiating deals.

**LAWS 4415 Protecting Intellectual Property in International Business Transactions (3 Credits)**

The first portion of this seminar will cover topics such as general international conventions and treaties designed to protect intellectual property; conventions and treaties designed specifically for patents, trademarks and copyrights. Students will determine what protections to try to seek for a variety of intellectual property examples and, in pairs, if possible, negotiate and draft a licensing agreement, a manufacturing agreement, an employment agreement or some other agreement that embodies international intellectual property issues. Students will then choose a topic, such as patent, trademark or copyright issues in a particular region or particular industry. Each student will prepare a presentation for the class on the topic. Then the student will use the class feedback in conjunction with research for the presentation to complete a paper on the topic. The drafting and paper will take the place of a final exam. The paper qualifies for the Upper Level Writing Requirement.

**LAWS 4416 Representing the Marijuana Client (3 Credits)**

This class is designed to provide students with an understanding of the realities of representing a marijuana client (either private or public) in the current turbulent legal environment. We will study the background of marijuana regulation at the state and federal levels in the United States, with particular attention paid to the federalism implications of the dispute between state and federal law in this area. We will then turn to specific areas of law impacted by marijuana law reform in the states, from legal ethics, to regulatory compliance, to criminal law enforcement, to the financial and tax aspects of running a marijuana business in the current legal regime.

**LAWS 4417 Representing the Spanish Speaking Client (3 Credits)**

This course is a survey of the substantive law of matters likely to be encountered by attorneys representing Spanish-speaking clients in the United States. Topics may include, among others, immigration law, family law, criminal law, employment law, wills and estates, and consumer rights. The course will introduce vocabulary required to communicate with Spanish-speaking clients in the United States, as well as, survey the basic substantive law in each area. The course will be taught in Spanish.

**LAWS 4418 Workplace Law Practicum: Sports & Entertainment Law (3 Credits)**

This course will expose students to contemporary sports law practice as an aspect of general entertainment law from a of labor and employment perspective. Students will learn relevant doctrine regarding such matters as collective bargaining, individual contract rights, administrative law, interest and grievance arbitration and the impact of the anti-trust laws on labor and employment relations at the professional and collegiate levels. They will have the opportunity to develop practical skills by drafting documents for a simulated NLRB union organizing or unfair labor practice proceeding, reading and interpreting actual transcripts of NLRB or arbitration proceedings, acting as an advocate in a mock baseball arbitration, and engaging in simulated negotiations by drafting bargaining proposals and arguing for those proposals in a bargaining session among classmates.

**LAWS 4421 Introduction to Small Practice Management (3 Credits)**

This course provides an introduction to the administrative needs necessary to open and operate a solo or small legal practice. Topics include: administrative needs specific to various types of legal practice; space and facilities; technology; document management systems; malpractice insurance; outsourcing; health insurance; conflicts; and human resources issues.

**LAWS 4423 Legal Databases Research (3 Credits)**

This course introduces students to a variety of legal databases, both fee-based and free, that can be utilized for conducting effective legal research as a student and practicing lawyer. Students learn to analyze and critically evaluate whether or not a database provides accurate information and resources. Students learn to determine which legal databases are most useful for specific types of information and resource needs. Students learn to construct successful search strategies that can be employed to search a database and find the information required. This course equips students to become expert searchers in the online environment.

**LAWS 4424 Legal Spanish for Lawyers (2 Credits)**

This course prepares students with basic Spanish proficiency to represent Spanish-speaking clients in the U.S. legal system or to work in Spanish on transnational matters involving Latin America. It combines one-on-one Spanish immersion instruction with a structured classroom component. The Spanish immersion component introduces and builds on each student's legal Spanish vocabulary in areas of law likely to require lawyering in Spanish or in areas identified as priorities by the student. The structured classroom component allows students to practice skills in Spanish, such as client interviewing, intake, and client counseling, through simulations and group exercises. This course is taught in Spanish.

**LAWS 4425 Legal Profession (3 Credits)**

This required course is the study of the legal profession in American society. Topics include the history, structure, and function of the legal profession; the role of lawyers in the delivery of legal services; standards of professional ethics (including the Code of Professional Responsibility and the Rules of Professional Conduct); professional responsibility problems that confront the legal profession; developments in the delivery of legal services; disciplinary procedures; and admission to the practice of law. Non-JD students must request permission to register.

**LAWS 4430 Mediation and Arbitration Clinic (3 Credits)**

This is a course offering clinical experience in both mediation and arbitration. The student learns mediation skills, performs mediation simulations, and mediates actual cases. Students are oriented to the role of arbitrator, perform arbitration simulations, and attend actual arbitrations. By gaining experience in both roles, students learn which process to choose for resolving a particular dispute. In addition, students learn lawyering skills such as communication, negotiation, problem solving, and drafting agreements. Application must be sent to the Student Law Office for admission to this course. Students will earn 3 out of class credits for this course and 2 in class credits through the corequisite course L4803, Mediation and Arbitration Clinic Seminar. Corequisite: LAWS 4803. Prerequisite: permission of faculty supervisor.

**LAWS 4433 Media Law (3 Credits)**

This course addresses the First Amendment, statutory, and common law regimes under which the news media operate in the United States, ranging from the seminal *New York Times v. Sullivan* to the recent decisions on anonymity for online bloggers. This course is designed to provide opportunities for serious study/discussion of legal issues affecting the news media, as well as opportunities for practical experience in the tasks confronted by today's media lawyers. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4436 Litigation Technology (3 Credits)**

Litigation Technology gives students up-close, hands-on learning to prepare and effectively use electronic illustrative aids and demonstrative exhibits in trial and alternative dispute settings. Each student prepares opening statements, closing arguments, and direct and cross-examinations, utilizing litigation software. Students learn to create their own presentations, and how to advocate most effectively using technology.

**LAWS 4440 Mental Health and the Law (3 Credits)**

This course will help students understand how mental illness and psychopathology interface with the legal system, in both the civil and the criminal justice systems. Taught by a practicing lawyer and a board-certified forensic psychiatrist, the course will begin with an overview of approaches to diagnosing and treating mental disorders, a brief discussion of psychotropic medications, and a description of the process for conducting forensic mental examinations of the sort used in court proceedings. We then will survey the many different contexts in which mental health intersects with the law before examining some of those contexts in detail. Specific areas of focus will include risk assessment and civil commitment, the right to treatment, informed consent and the right to refuse treatment, special competency issues involving children and older people, workplace discrimination based on mental illness, and a series of criminal law issues, including competency to stand trial and mental status defenses, sentencing, mental health and the death penalty, the evaluation and incarceration of sexual predators, and mental health issues involving incarcerated persons.

**LAWS 4442 Trial Practice III: Mentors Practicum (3 Credits)**

Advanced Trial Practice: Mentors Practicum is a year-long, skills-based course for law school students seeking to refine their trial skills, and improve their understanding and application of evidence and criminal procedure, through teaching these skills to local area high school mock trial students. The course consists of two classes a week. The first takes place at the law school. This weekly class involves case analysis and evidentiary discussion, resulting in the law students preparing their lesson plans to be taught to the high school students. Lesson plans include trial topics such as case analysis and evidentiary discussions, direct and cross-examination, objections and the rules of evidence, opening statements, closing arguments, and development of theme and theory. The second weekly class takes place at a local area high school, where the law students act as mentor-coaches to high school mock trial teams.

**LAWS 4444 Medical Malpractice (3 Credits)**

This course is a study of the various types of medical malpractice claims, and special issues encountered in medical malpractice litigation. Students learn how to select and prepare medical negligence cases for trial, with focus on the use of discovery tools in medical cases, hiring and working with medical experts, and explore settlement, subrogation, and probate approval for the settled claims of a minor. Medicine is central to medical malpractice litigation, so students are also exposed to concepts in anatomy, physiology, pathology, medical terminology, and medical records in this course.

**LAWS 4445 Mining Law (3 Credits)**

This course provides the basic framework of mining law. It begins with the acquisition of title to and development of deposits of hard minerals and energy resources under the mining and mineral leasing laws of the federal and state governments in the western United States. Next, it emphasizes the practices and procedures of the various proprietary and regulatory agencies responsible for the management and administration of public lands. Finally, students learn how to resolve competitive demands for exclusive and multiple use of public lands for mineral production and conservation.

**LAWS 4446 Multiculturalism, Race and the Law Seminar (3 Credits)**

This course is designed to examine the interstices of cultures, race, identity and the law as manifested in legislation and jurisprudence. Through case law and articles, we uncover and examine the ways in which legal systems define and promote certain racial and cultural activities, identities, and classifications and discourage others. Some are advanced as legitimate, and deserving of protection, and others not so. These endorsements have a significant impact on the makeup of American society. We see ourselves as a melting pot of cultures and peoples from all over the world, but do our laws really promote this vision? Have our laws evolved to promote racial and cultural harmony, or to discourage it? While most discussion focuses on these issues as they appear in the United States, we also discuss cases and materials from other nations, including Australia, Canada, India, Israel, Europe and Africa. Race and culture have played a pivotal role in historical and current political events and these will also be examined from a global perspective. There is no final exam, but written work is assigned throughout the term, and a final research paper is required.

**LAWS 4450 Natural Resource Law (3 Credits)**

The course is designed primarily for students who wish to have an introduction to and an overview of the entire natural resources law area in one course. Students survey the primary natural resources subject matter areas: water law; mining law; oil and gas law; public land law; environmental law; and energy law.

**LAWS 4452 Economics of Natural Resource and the Environment: Policy, Markets, and Economic Measurement (3 Credits)**

This course deals with the basic concepts of financial evaluation of a natural resources project. The emphasis is on financial evaluation topics and issues relevant to a lawyer's participation in a project. Students are introduced to the time-value of money; spreadsheet analysis; discounted cash flow; and spreadsheets, with relevancy to negotiations. Students are encouraged to consult with the director of this program before enrollment.

**LAWS 4454 Psychiatry and the Law (3 Credits)**

This course explores the relationships between psychiatry, psychology, medicine and the law. Subjects to be covered include: DSM-IV diagnoses and psychopharmacology; sanity and competency determinations; role of mental health experts in the court; special issues involving the mentally ill and death penalty; issues particular to juvenile offenders; third party protections and reporting requirements in child abuse and danger to third parties; civil commitment and involuntary treatment of the mentally ill; malpractice including professional misconduct and sexual boundary violations, and standards of mental health care; professional ethics in medicine and the law; law of informed consent and proxy decision making for medical treatment; confidentiality; clinical and legal aspects of end of life care; and prisoners' rights in correctional settings including sex offender treatment. Readings include landmark state and federal decisions shaping each of these areas, along with readings from legal and mental health literature.

**LAWS 4460 Negotiation and Mediation (3 Credits)**

The course examines principles of negotiation, bargaining and dispute problem solving. Builds the development of skills in negotiation and later mediation. Principles of problem solving introduced in negotiation are further developed in an exploration of mediation, it's legal, economic, skills context and its propriety as a process to resolve disputes in varying circumstances.

**LAWS 4462 Negotiating Natural Resources Agreements (3 Credits)**

Students completing this course leave with an understanding of the general approaches, and primary issues and motivations pertaining to the negotiation of large, internationally funded petroleum and mining projects. They particularly gain a perspective on the negotiation of first-tier agreements between trans-national companies and governments, and joint venture agreements between private parties.

**LAWS 4463 Qualified Pension and Profit Sharing Plans (3 Credits)**

An in-depth study of ERISA, labor department rules, and Internal Revenue Code provisions relating to qualified deferred compensation. The course is geared toward an understanding of all the pension and profit sharing rules required for plan qualification, with emphasis on qualified plan planning for both incorporated and unincorporated forms of business. Cross listed with TAX 4120.

**LAWS 4464 Natural Resources Distinguished Practitioner Seminar (3 Credits)**

The Distinguished Natural Resources Practitioner in Residence Seminar is a "capstone seminar" taught each year in the Spring Semester by a different but prominent natural resources or environmental law lawyer who has extensive experience in energy, resources, or environmental law work. The focus of the Seminar is on skills training, where the skills taught are those that all lawyers need in order to have a successful career in the practice of law. Among the "how-to" skills typically addressed are (1) how to obtain a job, either as a lawyer or as a law-trained worker; (2) how to obtain and retain clients; (3) how to work in the private sector, government sector, business sector, and in-house sector; (4) how to write; (5) how to work with associates and colleagues; (6) how to deal with technical or scientific matters in a legal context; (7) how to work in the litigation arena, before trial and appellate courts; (8) how to practice or appear before administrative agencies; (9) how to organize and refine a mass of complicated information so that a decision-maker can make sense of it. There is no final exam or paper expected; the grade is usually by class participation and small writing exercises. Prerequisite: permission of instructor.

**LAWS 4465 Oil and Gas Law (3 Credits)**

This course surveys the various characteristics of oil and gas interests. Topics include mineral rights, and how ownership leases and transfers of these rights should be handled. The instructor also distinguishes the field of oil and gas law on private lands from those in the public domain.

**LAWS 4468 Pre-Trial and Discovery Practicum (3 Credits)**

This "hands-on" course provides students with a practical understanding of the pretrial process and how discovery procedures shape and impact civil litigation today. The progression of class topics mirror the pretrial process within the context of a hypothetical case. Starting with initial client interviews, class topics include interrogatories, requests for production, electronic discovery, depositions, and expert discovery. Students also consider ethical issues relating to discovery and the pretrial process, and what remedies or sanctions are available for discovery abuses. This course will satisfy the Upper Level Writing requirement (ULW).

**LAWS 4470 Banking Law (3 Credits)**

This course provides an overview of the banking system, including the economic function of banks, the role of the central bank, and U.S. banking history. This course will cover the evolution of banking regulation, as well as recent developments that have intensified scrutiny on banks. Additionally, a "Real Deal" Workshop will provide students with an opportunity to a) gain hands-on training in transactional practice, (b) experience a "deal" from a lawyer's perspective and learn about what transactional practice entails and (c) learn to draft stock purchase agreements, credit documents and other fundamental transactional agreements. Topics that will be covered include permissible activities of banks, the role of the FDIC, the Federal Reserve Board, and the Comptroller of Currency; and the regulatory response to crises in the banking system.

**LAWS 4474 Patent Prosecution (2-3 Credits)**

This course explores practical and procedural aspects of patent law. These aspects include application drafting, patent examination and prosecution, and patent appeals. Students will be expected to do some role playing as inventor, patent attorney, and/or examiner. While Patent Law is not a formal prerequisite for this course, students who have not taken Patent Law should be prepared to do extra reading in the first few weeks of the semester to familiarize themselves with the basic concepts of patent law.

**LAWS 4480 Professional Ethics Seminar (3 Credits)**

This seminar begins with brief introductions to ethics in general and professional ethics specifically, and then turns to in depth consideration of theoretical perspectives on lawyer's ethics. For the remainder of the semester the seminar focuses on: (1) Comparative professional ethics: comparing the ethics of other professions—medicine, journalism and business, for example—with the ethics of lawyering. (2) Narrative ethics: stories (from literature, biography, or tradition) and how they inform ethical perception and choice. (3) Topics chosen by students for research and presentation.

**LAWS 4481 Partnership Taxation (3 Credits)**

Tax treatment of partnership income in the hands of the partner; the conduit rule; problems associated with the formation, operation, and dissolution of the partnership; sale of the partnership interest; withdrawal and retirement of partners; basis adjustments, unrealized receivables, and substantially appreciated inventory. Cross listed with TAX 4320.

**LAWS 4483 Patent Litigation (3 Credits)**

This is an in-depth study of laws, strategies and tactics of patent litigation. Topics include legal principles, procedures and strategies associated with patent claim construction, infringement, invalidity and unenforceability. Also, students cover patent trial practice with a focus on both the knowledge and practical skills necessary to litigate patent cases.

**LAWS 4485 Business & Commercial Law Seminar (3 Credits)**

Topical seminars scheduled periodically to afford students the opportunity for focused study of business and commercial law matters such as: consumer credit; mergers and acquisitions; corporate practice; bankruptcy; antitrust; quantitative evidence; representation of minority—and women—owned business firms.

**LAWS 4487 Prosecutor as Protagonist (3 Credits)**

This seminar is an in depth examination of the role of the prosecutor in our justice system. Attorney General Suthers leads wide ranging discussions about crime and punishment. Topics discussed and debated include the purpose of criminal sentencing, minimum mandatory sentences, the death penalty, the juvenile justice system, plea bargaining, prosecutor ethics, special prosecutors, criminal justice interest groups, prosecution oversight of police, forensic science, federalization of crime, attorney general activism, jury reform, reform of drug laws, and mental illness in the criminal justice system. Some of the top experts in Colorado on these subjects speak to the seminar participants.

**LAWS 4489 Civil and Criminal Tax Procedure (2-4 Credits)**

Statute of limitations on assessment/collection of deficiencies, definition of deficiency, restrictions on assessment and collection; statute of limitations on overpayments, claims and suits for refund, and limitations for criminal prosecutions; regulations and rulings—retroactive revocation; administrative settlements, closing agreements and compromises; civil penalties; tax return preparer penalties; civil litigation—injunctions, jurisdiction of Tax Court, District Court, and Court of Claims, small claims procedure, authority to increase deficiencies, choice of forum; jeopardy assessments and termination of taxable years; criminal tax investigations—administrative summons, document production (taxpayer and third party), constitutional protections, common law privileges, strategies; professional responsibilities and ethics for the tax practitioner. Cross listed with TAX 4310.

**LAWS 4490 Property (4 Credits)**

This course introduces selected topics relating to rights and interests in land and personal property. These topics include estates in land and future interests; private and/or public restriction of land use; conveyancing; interests and estates in land; and landlord/tenant relations.

**LAWS 4495 Public Land & Resources Law (3 Credits)**

This course provides an overview of law, policy, and procedures governing the third of United States land managed by the federal government for the benefit of all the people. The course traces the interwoven law, history, and economics controlling acquisition and allocation of public lands and resources and examines a selection of significant commercial uses and resource categories of land use practices. Recommended prerequisite: LAWS 4025.

**LAWS 4497 Law & Popular Culture (3 Credits)**

Why are there so many jokes about lawyers? Why is John Grisham so popular? What explains the success of the "Law and Order" franchise? Does popular culture affect the outcomes of trials? This seminar explores the role law plays in popular culture (for example, how law and lawyers are portrayed and perceived; how law shapes and defines pop culture) and the role popular culture plays in law and in the lives of lawyers (for example, the impact of cameras in the courtroom); should lawyers be allowed to write books and sell their clients' stories? The reading list includes traditional materials (case law and legal scholarship) as well as movies, novels and other popular culture materials. Recommended prerequisite: LAWS 4425.

**LAWS 4498 Public Interest Practicum (1 Credit)**

The Public Interest Practicum is one option for students to satisfy the Public Service Requirement. The only satisfying course offered for only zero or one credit, it requires participation of the JD student in a 50-hour, non-compensated, law-related, public interest placement under the supervision of an attorney or judge who has been in practice or on the bench for a minimum of three years. A practicum student must complete the minimum of 50 hours in one of the following settings: judicial internship; government agency; private law firm doing pro bono or low bono work; non-profit (501(c)(3)) organization; or pre-approved uncompensated research project for a faculty member. A student may decide to take the Public Interest Practicum for 1 credit or 0 credit. The Public Interest Practicum for 1 Academic Credit requires a Public Interest Practicum Online Seminar component to supplement the practical experience. The Public Interest Practicum is beneficial for students who are not planning on satisfying the Public Service Requirement through other opportunities.

**LAWS 4500 Public Utility Regulation (3 Credits)**

This intensive, 1-week course presents law practitioners with recent innovations in the economics and policy of utility regulation. Course features guest lectures with individuals from industry and government sectors that are involved with utility regulation. Students learn the social science of utility regulation and gain insight into how utility regulation is conducted.

**LAWS 4506 Energy & Project Finance Law (3 Credits)**

This course explores the legal, economic, technological, and policy underpinnings of the Renewable Energy Industry, global warming, and associated implications to the electric utility and transportation sectors. The course addresses both domestic and international perspectives on renewable energy development.

**LAWS 4508 Renewable Energy for the 21st Century: Law, Policy & Markets (3 Credits)**

Renewable Energy for the 21st Century helps prepare students for future involvement in this dynamic sector. Students are introduced to the policy and legal framework involving renewables and energy efficiency as well as important technological and market-based issues.

**LAWS 4509 Renewable Energy: Project Development and Regulation (3 Credits)**

This course examines the broad range of legal topics that a renewable energy lawyer must understand in order to practice effectively. We examine the structure, regulation, and functioning of the electric energy industry in the United States. We explore in detail the law applicable to the development, ownership and operation of renewable projects across the spectrum of technologies. Significant emphasis is placed on the practical "real world" issues encountered in developing, financing and operating these projects.

**LAWS 4510 Transactional Legal Research (2 Credits)**

This course will introduce the legal material, research methodologies, and resources used in conducting transactional legal research. Students will gain experience locating and using law and guidance produced by government agencies, business-oriented legal treatises, transactional materials, and company/industry research. This class will take an integrative approach between the different business-related disciplines to provide students with a well-rounded knowledge base.

**LAWS 4511 Renewable Energy Law (3 Credits)**

The development of renewable energy sources has grown exponentially both nationally and worldwide. The increased appetite for renewable energy sources has driven a need for more information about those sources and the significant legal implications arising from the development of those sources. This course is organized by resource—solar, wind, hydropower, biomass, and geothermal. It focuses primarily on critical legal issues in tort, property, and contract areas raised by the expansion of these key renewable energy sources. The course also addresses the role of energy efficiency and some of the broader legal hurdles facing renewable energy use from a nationwide perspective.

**LAWS 4520 Remedies (3 Credits)**

Remedies provides students with the basic principles and problems of damages, restitution, and equity. Students enter into an investigation of fundamental concepts, such as remedial goals, problems of proof, and the relationship between remedies and substantive rights. The course also explores equitable remedies and alternative remedial devices available in any given situation.

**LAWS 4524 Russian for Lawyers I (3 Credits)**

This is a unique chance to break stereotypes about Russia! This sequence of courses introduces students to the fundamentals of the Russian language, with emphasis on legal and economic vocabulary. More specifically, this includes vocabulary and reading assignments that involve finance, international trade, stock exchange, and with a special focus on Natural Resources and Environmental Law in Russia. No prior knowledge of Russian is required.

**LAWS 4525 Russian for Lawyers II (3 Credits)**

This course picks up where Russian for Lawyers I leaves off by continuing to introduce students to the fundamentals of the Russian language, but with an emphasis on legal and economic vocabulary. More specifically, this includes vocabulary and reading assignments that involve finance and banking, insurance, international trade, and stock exchange/securities matters. Prerequisite: LAWS 4524.

**LAWS 4526 Sales and Leases (3 Credits)**

This course examines the formation and terms, as well as remedies for breach, of contracts for the sale of goods under Article 2 of the Uniform Commercial Code (UCC). The course completes the coverage of Article 2 of the UCC that was introduced in the first-year Contracts course. In addition, the course also examines the provisions on leases in Article 2A, sales transactions involving the use of documents of title (Article 7) and letters of credit (Article 5).

**LAWS 4527 School of Mines Exchange (3 Credits)****LAWS 4528 Securities Law (3 Credits)**

Students in this course study the statutes and regulations regulating the offer and sale of securities by private and public corporations. Course material information pertaining to the Securities Exchange Act of 1934; federal regulation of the public securities markets; insider trading; broker-dealer regulation; tender offers; and public corporations. Recommended prerequisites: LAWS 4190 or LAWS 4048.

**LAWS 4529 Securities Litigation (3 Credits)**

The main focus of this course is the granting of a security interest in collateral in exchange for a loan and the priority among creditors to the collateral in case the debtor defaults on its obligation to repay. Secured transactions can be involved in a wide variety of legal representations, including transactional matters and litigation. The Secured Transactions Class is designed to provide students with a working understanding of Article 9 of the Uniform Commercial Code and how it comes into play in these transactions. Students who have taken the Commercial Law Survey course should not take this unless they wish to study this subject in greater depth.

**LAWS 4530 Secured Transactions (3 Credits)**

This course covers the law of secured transactions in personal property. It is not a securities course. Students who have taken the Commercial Law Survey course should not take this unless they wish to study this subject in greater depth. The main focus of this course is the granting of a security interest in collateral in exchange for a loan and the priority among creditors to the collateral in case the debtor defaults on its obligation to repay. Secured transactions can be involved in a wide variety of legal representations, including transactional matters and litigation. The Secured Transactions Class is designed to provide students with a working understanding of Article 9 of the Uniform Commercial Code and how it comes into play in these transactions.

**LAWS 4539 Social Change Lawyering (2 Credits)**

This seminar explores the role of law and the legal profession in pursuing broader social causes across the political spectrum, such as the pursuit of civil rights for racial minorities or the effort to overturn the constitutional right to abortion. Distinguished from the practice of law solely advocating the interests of individual clients, social change lawyering is a major component of the legal profession of the 21st century. Known variously as “public interest law,” cause lawyering, and by numerous other labels, this area of practice implicates many important issues worthy of serious scholarly consideration. Some of the topics that may be examined include: the competing definitions of social change lawyering and the relevance of such definitions; the history of American law and social change; the role of progressive/conservative ideologies in social change lawyering; the role of government and private firm lawyers in effectuating social change; strategies and organizational models for social change lawyering groups; the relationship between social change lawyers and their clients; the economics and financing of social change lawyering; ethics and social change lawyering; legal education and social change. Throughout the course, students are asked to critically examine the role of lawyers in social change, and question whether and how lawyers have been effective agents of social change in American society. The course does not use a traditional casebook. Rather, students study a set of materials comprised of excerpts from law review articles and books, historical and sociological materials, and problems. Students are required to write short, reflective discussion board posts on each week’s readings, as well as a more comprehensive final paper. Students may elect to use this seminar to fulfill the upper level writing requirement if they submit a draft of the final paper and do a substantial rewrite after receiving the instructor’s feedback. Prerequisite: permission of instructor.

**LAWS 4543 Sexual Orientation and the Law (3 Credits)**

This seminar offers an opportunity for students to study the relationship between law and sexual orientation. Historically, law in this country consistently and pervasively regulated the realm of human identity and behavior we call sexuality. However, questions and claims challenging traditional assumptions about sexual orientation have surfaced in the last twenty-five years. Our study of sexual orientation and law allows students to view the relationship between law and society through a new lens, that of sexual orientation.

**LAWS 4545 Sports Law (3 Credits)**

The course studies the legal problems of professional athletics. It applies the application of contract law, antitrust, labor law and income tax to the functioning of a professional league. The question of governmental regulation of professional sports is a constant focus of students’ work. Special attention is given to the impact of these questions on negotiating players’ contracts.

**LAWS 4550 Local Government Law (3 Credits)**

Although barely touched upon in many law school courses, states and local governments play an important role in our everyday lives. They enjoy substantial law-making power; are responsible for financing and providing many public goods and services; and are the location of a great deal of political participation. This course will examine the theory behind and sources of local government power as well as the advantages and disadvantages of decentralized decision-making. Specific topics include: voting rights, local government formation and boundary change, state-local relations and local home rule, interlocal conflicts, school finance reform, and regional governance.

**LAWS 4552 Securities Law Seminar (3 Credits)****LAWS 4553 The Spanish Speaking Lawyer: Introductory Legal Skills and Vocabulary in Spanish (3 Credits)**

This introductory course will provide law students an avenue to become more comfortable speaking about legal matters in Spanish. Students will acquire Spanish-language vocabulary relating to the lawyer-client relationship, litigation, and various substantive areas of law, with the opportunity to utilize this vocabulary. Students can expect to gain legal skills in Spanish, including performing intake, managing good phone etiquette, interviewing clients, drafting correspondence, communicating fees, explaining civil and criminal court proceedings, and understanding ethics and confidentiality. The course will also provide students with an opportunity to begin to achieve cultural competency when representing Spanish-speaking clients. The class will be interactive, and may include: discussions of readings, small group discussions, simulations, presentations, arguments, speakers on different substantive areas of law and viewing of law-related films. This course will primarily be taught in Spanish.

**LAWS 4555 Street Law (3 Credits)**

Under faculty supervision, students in two-person teams will teach law in urban high schools. An underlying principle of the course is that one of the best ways to learn is to teach. There will be weekly seminars and field performances supervised by the instructor. Students will develop skills in: practical application of legal concepts; substantive topics in federal and Colorado Law; teaching techniques; classroom management; and the multi-faceted roles of lawyers in the community. Each student will participate in researching, drafting, and presenting a course in a particular field of substantive law.

**LAWS 4556 Sustainable Dev & Trade (3 Credits)**

This seminar is designed to give an introduction to the convergence of trade, environment, and development issues and law, addressing areas of conflict and synergies among them. It focuses on rules, procedures, and institutions aimed at making globalization compatible with sustainable development by integrating trade policy and law with policies that address other aspects of "human development", such as, environmental concerns, social concerns, human rights, gender issues, and governance. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4560 Colorado Legal Research (1 Credit)**

This course will focus on Colorado-specific primary and secondary sources using a problem-based approach, so as to simulate the type of work performed at law firms. It is geared toward students who have some experience with research and want to improve their skills and writing ability before they finish law school. Students will gain hands-on experience researching judicial (case law), legislative (statutory), and executive (administrative) legal materials and will learn research methodologies and strategies to tackle research problems effectively. Classes will combine instruction with hands-on scenarios using print and electronic resources and students will complete research and writing projects for this course, which runs for the first seven weeks of the semester. Students are required to bring their laptops to class.

**LAWS 4561 Crimmigration Law Seminar: The Intersection of Criminal Law and Immigration Law (3 Credits)**

This seminar addresses the historical and contemporary relationship between criminal and immigration law. In particular, the course explores how individuals perceived to have violated a criminal offense are treated in the immigration law system, how individuals thought not to be citizens of the United States are uniquely affected by criminal procedure norms and substantive criminal law, and how states and the federal government have sought to police criminal activity by noncitizens. In the process, course participants will learn to analyze constitutional, statutory, and regulatory provisions concerning immigration, as well as procedural and substantive requirements concerning criminal proceedings as they affect noncitizens. Participants will also consider the motivations that resulted in various enforcement policies grounded in civil or criminal law related to immigration and immigrants.

**LAWS 4562 E-Discovery (3 Credits)**

Litigation is undergoing a significant transformation as technology continues to evolve and Society transitions from a "paper" to a "digital" world. That transformation inevitably impacts the legal community, confronting lawyers and clients with the choice of conducting discovery on a pre-computer, "business as usual" basis or embracing the challenges and opportunities presented by "e-discovery." This course provides students with an understanding of the legal and practical challenges presented by "e-discovery" and how electronically stored information ("ESI") shapes and impacts litigation and the pretrial process.

**LAWS 4563 Environmental Law, Energy, & Natural Resources in Indian Country (3 Credits)**

This Seminar explores energy and natural resources development on Native American tribal lands in the United States, and how tribes, states and the federal government regulate and enforce environmental quality within Indian Country. The Seminar is open to all interested students and does not require any previous study or experience in American Indian law. It provides an introduction to tribal sovereignty and self-determination, along with some of the basics of Indian Country jurisdiction and tribal sovereign immunity. Students will examine the federal governments trust responsibility to Indian tribes and nations. The Seminar also examines the legal framework used to regulate and enforce environmental quality, traditional and renewable energy development, and the use and stewardship of other natural resources on Indian lands. The goal of this Seminar is for students to gain a greater awareness of Indian tribes and nations and the critical role they play in overall U.S. environmental, energy, and natural resource law and public policy.

**LAWS 4564 Immigration Law in Spanish (3 Credits)**

Immigration Law in Spanish is a survey of the fundamental concepts of U.S. immigration law. In addition, students learn and practice the vocabulary required to appropriately communicate these concepts to Spanish-speaking clients. The class is taught entirely in Spanish, and requires a working-level written and spoken proficiency in the language.

**LAWS 4565 Intellectual Property Capstone (1-3 Credits)**

The intellectual property capstone is a simulation based course that crosses different intellectual property disciplines. Several different adjuncts are asked to prepare real world problems in different substantive and procedural contexts. The problems vary from year to year, but generally deal with patent, copyright and trademark law from litigation, administrative (i.e. representation before the patent and trademark office) and business perspectives. Students are expected to have taken at least one prior intellectual property course. This course fulfills the experiential component of the IP Certificate requirement.

**LAWS 4570 Introduction to Contracts and Torts (3 Credits)**

This online course provides an introduction to the foundational principles of Contract Law, including the restatement of contracts and the relevant provisions of the Uniform Commercial Code, and foundational principles of Tort Law, including intentional torts, negligence, and strict liability. This course is available to non-JD students only.

**LAWS 4571 Introduction to Forensic Engineering and Construction Dispute Resolution (3 Credits)**

This online course introduces students to the forensics industry and how forensics applies to claims and disputes in design and construction issues. The course addresses common disputes such as insurance claims, contract disputes, negligence claims, etc. This course will also discuss the different dispute resolution forums and venues, from insurance appraisals, to mediation, to arbitration or litigation. This course is available to non-JD students only, and is required for students in the Master of Legal Studies in Forensic Engineering.

**LAWS 4572 Forensic Scheduling (1 Credit)**

This online course covers the five standard forensic scheduling methods: Impacted As-Planned Method, As-Planned v. As-Built Method, Time Impact Analysis, Windows Analysis, and Collapsed As-Built Method. This class will use Primavera P6 scheduling software. This class is limited to non-JD students only.

**LAWS 4574 Expert Report Preparation (1 Credit)**

Forensic consultants need to understand how to outline, assemble, and clearly communicate issues and opinions within expert reports. This course reviews standard report templates and covers how to prepare report sections including-but not limited to-executive summaries, summary of opinions, assignment, documents reviewed, analysis, conclusions, and demonstratives.

**LAWS 4575 Civil Trial Practice-Forensic Engineering (3 Credits)**

This online class will cover the main aspects of civil litigation and trial practice as they relate to forensic engineering including discovery, trial, examination and cross-examination, and expert testimony. Pre-requisite: LAWS 4571.

**LAWS 4576 Building Envelop & Civil Construction Review (1 Credit)**

This course would review the components of building envelope and civil design. It would also review standard contract drawing details, manufacturer's recommendations, and code requirements for various building components.

**LAWS 4577 Introduction to Contract Law (2 Credits)**

This online course provides an introduction to the foundational principles of Contract Law, including the principles and law governing the formation of contracts (offer, acceptance, and consideration), contractual terms and duty, breach of contract, and some discussion of remedies. This course is available to non-JD students only.

**LAWS 4578 Introduction to Tort Law (2 Credits)**

This online course provides an introduction to the foundational principles of tort law, including intentional torts, negligence, and strict liability. This course is available to non-JD students only.

**LAWS 4579 Expert Witness Role (2 Credits)**

Expert witnesses play a number of roles as they take on their role, including serving as consultants, writing expert reports, and providing testimony. This course will focus on the core requirements needed for this role, providing an overview of the dispute resolution setting in which they work, with particular emphasis on ethical responsibilities and the task of writing an expert report. It will also cover how to write an expert report by outlining, assembling, and clearly communicating issues and opinions within expert reports. This online course will review standard report templates and cover how to prepare report sections including-but not limited to-executive summaries, summary of opinions, assignment, documents reviewed, analysis, conclusions, and demonstratives.

**LAWS 4580 Forensic & Scientific Evidence (3 Credits)**

This course will cover the key elements of Evidence Law with a particular focus on evidence law governing forensic and scientific evidence. This includes an introduction to the preparation of scientific evidence, rules governing admissibility of forensic and scientific evidence in the courtroom, and rules applicable to expert witnesses and their testimony.

**LAWS 4581 Remedies in Construction Law (2 Credits)**

This course will address the remedies that are applicable in construction law disputes, including remedies applicable to contracts and torts disputes. It will cover the basic principles and problems of damages, restitution, and equity. Prerequisites: LAWS 4179.

**LAWS 4589 LLM and Master's Internship (0 Credits)**

The Sturm College of Law encourages students to gain practical experience and to develop professional skills in the legal and policy fields. Some students may elect to pursue externships for credit while others may choose to pursue paid opportunities during their study in the program. Internships are supervised by faculty and GLS department who interact with the eligible student and the employer or organization that provides the externship. The internship should provide a new learning experience for the student intern and must be related to their field of studies (e.g. business and commercial law; environmental law and policy). Satisfactory completion of the internship will result in a passing grade for the externship. The Program Director and/or GLS Advisor may serve as Supervisor for non-JD interns.

**LAWS 4590 JD Internship (0 Credits)**

The Sturm College of Law encourages students to gain practical experience and to develop professional skills in the legal and policy fields. Some students may elect to pursue externships for credit while others may choose to pursue paid opportunities during their study in the program. The internship should provide a new learning experience for the student intern and must be related to their field of studies (e.g. business and commercial law; environmental law and policy). Satisfactory completion of the internship is determined by review of an Internship Assessment Form submitted to the externship office at the end of the term.

**LAWS 4599 Expert Witness Practicum (3 Credits)**

This class will cover the main aspects of civil litigation and trial practice as they relate to forensic engineering and the process of being an expert witness including discovery, trial, examination and cross-examination, and expert testimony. The course will be taught in a practicum style, with students taking on the role of expert witness. Prerequisites: LAWS 4579.

**LAWS 4605 Taxation of Natural Resource (2 Credits)**

This course outlines the financial, business, and legal tax problems that may be encountered during the acquisition, operation, and disposition of natural resources properties. It is a strong course for students to develop skills in general tax planning for natural resources ventures.

**LAWS 4610 Torts (4 Credits)**

This introductory course considers compensation for private wrongs, covering harm to persons and property, with attention to legal theories of intentional torts, negligence and strict liability.

**LAWS 4615 Torts (Advanced) (3 Credits)**

Advanced Torts combines practical and theoretical discussion of issues that personal injury lawyers face in practice. The topics in the seminar vary but generally include fee agreements, damages, use of experts, medical malpractice, hospital and other liens, subrogation, and governmental immunity. The seminar emphasizes the empirical reality of injuries, claims, and litigation. Prerequisite: LAWS 4610.

**LAWS 4618 Representing Clients Before the SEC (3 Credits)**

SEC insiders explain the processes and practices of the Division, intertwined with discussion and analysis of SEC enforcement actions past and present. This course gives students critical information to effectively represent a wide variety of clients before the Division, among them public companies, regulated entities, defrauded investors, and perpetrators of crime.

**LAWS 4631 Commercial Space Law (2 Credits)**

This course is designed to provide a basic understanding of legal principles and issues in international and domestic space law, with a focus on commercial space law. You will study issues of importance to the Colorado space industry. Those issues, however, touch everyone in the world. For example, we will evaluate issues relating to the use of GPS timing and location signals, remote sensing of the earth from space, and the use of satellite communication. These technologies and associated legal issues reach every country in the world. We start with a survey of the international laws that govern outer space activity. You will be introduced to space law treaties addressing the use of outer space for peaceful purposes, liability for damage caused by space objects, jurisdiction and control of space objects, the rescue and return of astronauts and space objects, property rights in space, and other matters. We will discuss the influence on space laws of cold war politics, developing versus developed country tensions, and the impact of sovereignty interests on technologies that can broadcast television signals direct to homes and extract information about a country's natural resources – all from space. Then we will address U.S. space laws and regulations impacting space activities. Finally, the class will explore specific commercial space activities such as satellite communication, space stations, space tourism, space launches, remote sensing of the earth from space, and the financing and insuring of space activities.

**LAWS 4633 Day One: Civil Practice Lab (3 Credits)**

Day One: Civil Practice Lab is designed to take students from client intake through to the eve of trial, simulating the research, analysis, drafting, and verbal argument that lawyers encounter every day in civil cases. Through the course, students learn about the practical aspects of running a firm, valuing cases, and managing client and firm expectations. They also learn how to draft memoranda, disclosures, discovery, motions and mediation statements, while practicing the skills of examining witnesses, negotiating, and oral argument through mock depositions, mediation, and evidentiary hearings. The classes provide a procedurally chronological picture of a civil case and weave throughout practical considerations and application of the rules of professional conduct. In short, the class prepares students to practice on day one of their new career.

**LAWS 4634 Motions Practice (3 Credits)**

In this class, students learn how to present and argue pre-trial motions. These motions include motions from civil practice (motion for preliminary injunction, motion to dismiss, motion for summary judgment, etc.) criminal practice (motion to suppress, Rule 35 (c), etc.) and evidentiary motions (Rules 403, 404, and 405.) In addition, the course covers both legal and evidentiary motions in limine. Each student is asked to prepare, present, and argue a motion, as well as decide motions presented by others after making appropriate findings of fact and conclusions of law. Because a number of the motions involve the presentation of witnesses and appropriate case and statutory law, students learn trial skills, as well as refresh their knowledge of criminal and civil procedure, and the rules of evidence. Students are not asked to draft motions or prepare written briefs.

**LAWS 4635 Trial Practice I: Basic Courtroom Skills (2-3 Credits)**

The course is designed to teach the concepts and organizing principles of the formal trial process. It emphasizes the understanding necessary to develop, evaluate, prepare, and present a case for trial before a judge, jury, or other fact-finder. Exercises and simulations are used to demonstrate the importance of theory building and teach the functions of each stage of a trial. Students develop the advocacy skills appropriate to adversary adjudication. Prerequisite or corequisite: LAWS 4235.

**LAWS 4637 Civil Litigation Practicum (3 Credits)**

This course provides students a practical, hands-on approach to civil pretrial litigation. Students draft pleadings, motions and discovery requests essential in the litigation process prior to the actual trial stage.

**LAWS 4638 Trial Practice III: Mentor's Practicum (3 Credits)**

The Mentor's Practicum employs and relies upon integrated teaching, feedback, student collaboration, and multiple assessment. The practicum is designed for law school students who have exhibited advanced skills in trial advocacy, client advocacy, case analysis and communication.

**LAWS 4639 Survey of Trusts and Estates (3 Credits)**

This course will provide a broad introduction to trusts and estate planning, including an overview of property disposition through intestate succession, wills, and trusts.

**LAWS 4640 Trusts and Estates (4 Credits)**

Students enrolled in this course learn the ins-and-outs of trusts and estates planning. The course surveys everything involving succession wills, trusts, the role of third parties to a trust or estate, and property disposition.

**LAWS 4651 Advanced Legal Writing and Research (3 Credits)**

This course provides students with practical experience in drafting various documents they will likely encounter in the practice of law, including both objective and persuasive writing. Students will learn the advanced research skills they need to locate relevant legal materials, including an in-depth knowledge of legal research methods and resources. Students will then use their research results to create precise, clear, effective, and legally sound written documents for a series of modern law practice situations. There will be in-class exercises designed to develop student expertise with particular legal research and writing skills. Course assessments include an internal memorandum, a pleading, a motion, and a decision. This course satisfies the upper-level writing requirement. Laptops are required for this course.

**LAWS 4660 Scientific Evidence (3 Credits)**

The course begins with the U.S. Supreme Court decision in *Daubert v. Merrell Dow Pharmaceuticals, Inc.* (113 S.Ct. 2786 (1993)). This decision threw out the Frye Rule that had governed the admission of scientific evidence in federal courts since 1923. While the Daubert rule now applies in all federal courts, states are free to either stay with the Frye Rule, adopt the new Daubert Standard or adopt some combination of the two. Students discuss the implications of these evidentiary changes in a number of areas of legal controversy. The course concentrates primarily on the use of social science evidence; however, topics include tort litigation involving Bendectin, and the controversy over the use of DNA testing in criminal cases. Other topics include the use of scientific evidence in consumer confusion cases; obscenity cases and the question of community standards; and the number of syndrome evidence cases, including post-traumatic stress disorder, battered woman syndrome, and rape trauma syndrome. Constitutional law cases include coverage of death penalty issues, jury size cases, and school segregation by race and gender (including the controversy over single-sex education, and the ending of school busing mandates by the federal courts). The goal of this course is to increase the proficiency of lawyers to use scientific evidence on behalf of clients and be able to defend against such evidence when presented by the opposing counsel.

**LAWS 4670 Water Law (3 Credits)**

Water Law is an introductory course for students interested in pursuing water law. It covers private property rights in water, and the legal and environmental controls surrounding it. Recommended prerequisite: LAWS 4025.

**LAWS 4672 International Water Law (3 Credits)**

This course presents a global overview of water law, systems, and practice in the modern world. It includes coverage of hydrology, history, national legal systems, and modern international treaties and cases. It has a special emphasis on sustainable development, equitable utilization, pollution control, and ecosystem protection utilized for multi-nation water basins. LAWS 4670 Water Law and LAWS 4320 International Law courses are not a prerequisite, as basics will be covered.

**LAWS 4674 White Collar Crime (3 Credits)**

This course is designed for students with an interest in advanced criminal law practice, particularly the growing legal field of white collar crime. This seminar course will introduce students to the major substantive legal areas that make up the white collar field, including mail and securities fraud, bribery, health care fraud, conspiracy, and money laundering. In addition, students will learn the basics of conducting a corporate internal investigation, dealing with search warrants and subpoenas, criminal pre-trial matters, special considerations for criminal discovery, and common ethical issues. By the end of the course, students will have learned the basic substantive and procedural issues involved in white collar practice. Students will learn from and interact with a variety of practitioners drawn from the private and government sector. Instructor permission is required for enrollment.

**LAWS 4686 Wills Lab (1 Credit)**

This lab is designed to provide students with practical experience with interviewing and drafting for a real client while under the close supervision of a practicing attorney. Clients come primarily from Legal Aid. Each student is individually supervised by a volunteer attorney or by Prof. Marsh. The attorney goes with the student to the first interview with the client to assist the student if any difficulties come up in the interview. Then the student drafts the appropriate documents from scratch, and the attorney helps the student determine what revisions are necessary. When documents are in final form the attorney assists the student in having the documents properly signed. Documents include will, living will, and medical or financial powers of attorney, as appropriate. Letter grades are given by Prof. Marsh. Note that no student is allowed to drop the Wills Lab after the first interview with the client unless there is a severe medical emergency. There will be one introductory meeting scheduled during lunch time. All the rest of the work is scheduled individually by the student, supervising attorney, and client. NOTE: Students will NOT be allowed to drop the course after the first interview with the client. Prerequisite: LAWS 4640 or LAWS 4639.

**LAWS 4700 Special Topics (1-5 Credits)****LAWS 4701 Special Topics (1-5 Credits)****LAWS 4702 Special Topics (1-6 Credits)****LAWS 4703 Special Topics (1-5 Credits)****LAWS 4704 Special Topics (1-5 Credits)****LAWS 4705 Special Topics (1-5 Credits)****LAWS 4706 Special Topics (1-5 Credits)****LAWS 4707 Special Topics (1-5 Credits)****LAWS 4708 Special Topics (1-5 Credits)****LAWS 4709 Special Topics (1-15 Credits)****LAWS 4800 Criminal Defense Clinic (3-6 Credits)**

This clinic offers students the opportunity to defend low-income clients charged with various criminal offenses. These offenses include DUI/DDWAI; domestic violence; assault; theft; disturbance; child abuse and neglect; menacing; etc. Students represent their clients in various municipal and county courts in the area. This course requires numerous court appearances for arraignments, pre-trial motions, and sentencing. Students should be prepared for an intense litigation experience in misdemeanor criminal defense. Corequisite: LAWS 4801. Prerequisite: permission of faculty supervisor.

**LAWS 4801 Criminal Defense Clinic Seminar (3-4 Credits)**

The Criminal Law Clinic Seminar must be taken in conjunction with the Criminal Law Clinic. Class sessions will be devoted to a variety of topics, including classes on lawyering skills, substantive law, issues of lawyering and society, and case review sessions, in which student attorneys will present information about their cases/projects to each other and give and solicit feedback about issues they are confronting in the representation of their clients. The classes include simulation exercises that are critiqued by faculty, and field exercises that involve trips to the Denver jail. Classes are taught by clinical faculty and by guest speakers who include area judges, practitioners, interpreters and other court personnel. Co-requisite: LAWS 4800.

**LAWS 4802 Environmental Law Clinic Seminar (3 Credits)**

THE ELCP clinic seminar must be taken in conjunction with the ELCP Clinic. During class, students will review federal civil procedure through a lecture series entitled "anatomy of a lawsuit," have specific lectures on effective legal writing, and commonly used statutes such as the Freedom of Information Act, and Endangered Species Act. Each student must also prepare a class presentation on their assigned major case, and participate in random, less formal docket meetings. Students must also attend four guest lectures from lawyers and other professionals on environmental law advocacy issues. Students earn 3 in class credits for this course and 3 out of class credits through the corequisite course. Corequisite: LAWS 4206.

**LAWS 4803 Mediation & Arbitration Clinic Seminar (2 Credits)**

The Mediation and Arbitration Clinic Seminar must be taken in conjunction with the Mediation and Arbitration Clinic. The seminar meets once a week for 90 minutes. Students read articles on mediation issues and receive intensive training in the classroom that is reinforced with classroom simulations. Students are also required to critique each other in the simulations. The seminar focuses upon identifying and resolving issues that arise during actual mediations. Students will earn 2 in class credits for this course and 3 out of class credits through the corequisite course. Corequisite: LAWS 4430.

**LAWS 4805 Civil Litigation Clinic (5 Credits)**

The Civil Litigation Clinic students represent low-income clients in a variety of civil disputes. The clinic permits students to participate in the selection of cases and problems they work on. Students have represented clients in areas involving wage and hour claims, housing discrimination, eviction defense and domestic violence protection orders. Additionally, the Civil Litigation Clinic requires some form of community outreach project enabling the student to learn about the client populations they serve. Students will earn 5 out of class for this course and 4 in class credits through the co-requisite course. Corequisite: LAWS 4806.

**LAWS 4806 Civil Litigation Clinic Seminar (4 Credits)**

The Civil Litigation Clinic students represent low-income clients in a variety of civil disputes. The clinic permits students to participate in the selection of cases and problems they work on. Students have represented clients in areas involving wage and hour claims, housing discrimination, eviction defense and domestic violence protection orders. Additionally, the Civil Litigation Clinic requires some form of community outreach project enabling the student to learn about the client populations they serve. Students will earn 4 in-class credits for this course and 5 out-of-class credits through the co-requisite course. Corequisite: LAWS 4805.

**LAWS 4807 Child Advocacy Seminar (2 Credits)**

The Child Advocacy Externship Seminar is a course and taught by the Rocky Mountain Children's Law Center. In the fall semester, the seminar course focuses on the laws surrounding advocacy for children in dependency & neglect, delinquency, civil protection order, and education cases. In the spring, students can enroll in a 2-credit Advanced Child Advocacy seminar to expand on the fall semester with topics such as the overlap of child welfare and family law, immigration advocacy, appellate advocacy for children, trial practice in the child welfare context, ethical issues in the representation of children, and a variety of other hot topic child advocacy issues. Students can choose to also enroll in a corresponding externship for credit. For more information on the field work component, please visit <http://www.law.du.edu/index.php/legal-externship-program/specific-externship-programs/child-advocacy-externship-program>.

**LAWS 4809 Civil Rights Clinic (3-6 Credits)**

The Civil Rights Clinic (CRC) represents individuals and groups in civil and human rights matters. The CRC's current cases address a range of complex constitutional issues litigated before the Federal District Court for the District of Colorado. Some of the claims currently being litigated in the CRC will impact constitutional jurisprudence nationwide. The current CRC docket is focused on the constitutional rights of prisoners. These cases challenge prison conditions and policies pursuant to the First, Fifth, Eighth and Fourteenth Amendments on issues such as: indefinite solitary confinement, failure to provide prisoners with adequate medical or mental health care, long-term denial of outdoor exercise, and the prison's refusal to provide meaningful process to individuals placed in long-term segregation. Co-requisite course LAWS 4812, Civil Rights Clinic Seminar. Pre-requisite or co-requisite course: LAWS 4425, Legal Profession. This course meets the Upper Level Writing requirement (ULW).

**LAWS 4812 Civil Rights and Disability Law Clinic Seminar (3 Credits)**

The Civil Rights Clinic (CRC) represents individuals and groups in civil and human rights matters. The CRC's current cases address a range of complex constitutional issues litigated before the Federal District Court for the District of Colorado. Some of the claims currently being litigated in the CRC will impact constitutional jurisprudence nationwide. The current CRC docket is focused on the constitutional rights of prisoners. These cases challenge prison conditions and policies pursuant to the First, Fifth, Eighth and Fourteenth Amendments on issues such as: indefinite solitary confinement, failure to provide prisoners with adequate medical or mental health care, long-term denial of outdoor exercise, and prison's refusal to provide meaningful process to individuals placed in long-term segregation. Students will earn 3 in class credits for this course and 3 out of class through the corequisite course L4805, Civil Rights Clinic. This course meets the Upper Level Writing requirement (ULW).

**LAWS 4813 Low Income Taxpayer Clinic-JD (1-4 Credits)**

Using a focused series of classes related to issues facing individual low income taxpayers embroiled in conflict with the Internal Revenue Service or in litigation before the United States Tax Court (innocent spouse relief, earned income credit, dependency exemptions, appeals of audits and collection due process issues, tax litigation), this course first prepares tax students to represent taxpayers regarding such issues, then provides the opportunity to practice before the IRS and in the Tax Court. In a clinical setting, students are trained in all facets of practice before the IRS and the Tax Court. Once trained, under the supervision of clinical staff, the students undertake representation of low income taxpayers in tax audits, appeals, collection proceedings, and, if necessary, before the Tax Court. All facets of client representation, including initial client meetings, representation agreements, client advocacy, and ending the representation, are experienced by each clinic participant. Cross listed with TAX 4415.

**LAWS 4825 Immigration Law and Policy Clinic (5 Credits)**

For the fieldwork component of the Immigration Law and Policy Clinic (ILPC), student attorneys appear in immigration court representing indigent, detained clients in bond and/or removal proceedings. Students may also provide consultations with student counsel in the Criminal Defense Clinic on the immigration consequences facing CDC clients. There may be additional opportunities for advocacy in post-conviction and/or federal habeas litigation, and in matters in which the ILPC will provide counsel and legal assistance to non-profit advocacy organizations pursuing policy or legislative reform or other non-litigation (or possibly litigation) matters. Throughout their fieldwork, student attorneys apply knowledge gained through the ILPC seminar by practicing lawyering skills such as interviewing, client counseling, fact investigation, legal research and writing, oral advocacy, negotiation, policy advocacy, and preparation for, and advocacy in, contested hearings. Through the ILPC fieldwork, students will have opportunities to explore systemic problems in the immigration enforcement system—particularly where immigration and criminal enforcement are conflated and entwined—such as racial and economic bias, law enforcement accountability, hyperincarceration, and access to justice. Credit Hours: 5 out-of-class credits (Fall term) / 2 to 7 out-of-class credits (Spring term) ULW: This course does not automatically meet the Upper Level Writing (ULW) requirement. Students who, in the course of their fieldwork, complete written work sufficient to meet the ULW requirement may obtain certification from their instructor.

**LAWS 4826 Immigration Law and Policy Seminar (2-4 Credits)**

The Immigration Law and Policy Clinic (ILPC) seminar provides timely instruction in topics relevant to student attorneys appearing in immigration court representing indigent, detained clients in bond and removal proceedings. In seminar, students will learn lawyering skills such as interviewing, client counseling, fact investigation, legal research and writing, oral advocacy, negotiation, policy advocacy, and preparation for, and advocacy in, contested hearings. Some classes may address issues that have not yet arisen in their clinic cases, with the goal of exposing students to different lawyering methods and advocacy tools. Through the ILPC seminar classes and related fieldwork, students will have opportunities to explore systemic problems in the immigration enforcement system—particularly where immigration and criminal enforcement are conflated and entwined—such as racial and economic bias, law enforcement accountability, hyperincarceration, and access to justice. This course does not meet the Upper Level Writing (ULW) requirement. Credit Hours: 4 in-class credits (Fall) / 2 in-class credits (Spring).

**LAWS 4835 Community Economic Development Clinic (3 Credits)**

The Community Economic Development ("CED") Clinic is a clinical legal education program that provides free transactional (non-litigation) legal services to small businesses, low-wealth entrepreneurs, community-based enterprises, nonprofit organizations, and artists. The Clinic is designed to simultaneously teach student attorneys the fundamentals of transactional practice while providing high-quality and invaluable legal representation to its clients. Through the representation of the Clinic's clients, student attorneys are exposed to the intersection of business law concepts and CED practice. Student attorneys learn that transactional lawyering is preventive lawyering, which involves avoiding conflict, litigation, and other negative outcomes. The Clinic's focus on the legal practice of CED will expose student attorneys to the variety of social systems, government programs, and federal, state, and local government laws that impact their clients. Client work includes drafting corporate formation documents; assisting nonprofit organizations with tax-exempt applications and maintenance of tax-exempt status; drafting and negotiating contracts; and acting as general counsel to both small businesses and non-profit organizations. In addition, students may research issues related to public policies that affect clinic clients and provide community education workshops on substantive law issues pertinent to one of the clinic's practice areas. Co-req: LAWS 4836, co-req/pre-req: LAWS 4425.

**LAWS 4836 Community Economic Development Clinic Seminar (3 Credits)**

The Community Economic Development ("CED") Clinic is a clinical legal education program that provides free transactional (non-litigation) legal services to small businesses, low-wealth entrepreneurs, community-based enterprises, nonprofit organizations, and artists. Clinic students are required to attend this bi-weekly 75 minute seminar while participating in the clinic. The seminar focuses on both substantive corporate law and transactional lawyering skills and is reinforced with complex simulations that students perform and then critique with faculty. Co-req LAWS 4835, pre-req/co-req LAWS 4425-Legal Profession.

**LAWS 4867 Advising the Adviser: Compliance and Enforcement under the Investment Advisers Act (3 Credits)**

This class will focus generally on investment adviser (IA) compliance with the federal securities laws and the Securities and Exchange Commission's (SEC) role with respect to that compliance. We will focus on how to advise an IA with respect to SEC regulations, touching on topics such as an IAs role as a fiduciary and an IAs requirements with respect to marketing, best execution, and principal and cross trading. We will also focus on what's necessary to establish and operate a robust IA compliance program.

**LAWS 4880 DU Law Journal (0-3 Credits)**

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

**LAWS 4884 Int'l Law Journal (0-3 Credits)**

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

**LAWS 4885 Preventive Law Journal (0-6 Credits)**

An enrollment card obtained from the Managing Editor is required.

**LAWS 4888 Transportation Law Journal (0-3 Credits)**

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

**LAWS 4889 Water Law Review (0-3 Credits)**

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

**LAWS 4900 Introduction to Clinical Pedagogy & Scholarship (1-2 Credits)**

The purpose of this yearlong, two-credit (total) seminar is to introduce graduate teaching fellows to fundamental concepts of teaching and scholarship. Upon completion of this course, students understand: theoretical frameworks for supervision of J.D. students in the fieldwork portion of a clinic; the goals of seminar teaching, including the theory of backward design and the use of case rounds and other signature pedagogies; and the key differences between legal writing and academic scholarship, with an emphasis on developing a habit of and timeline for scholarly writing.

**LAWS 4905 Scholarship Seminar I (4 Credits)**

This is a semester-long, four-credit, intensive course taken after completion of the first academic year in which students produce and present drafts of scholarly articles along a timeline set out at the start of the semester.

**LAWS 4910 Co/Shadow Supervision Practicum (1-8 Credits)**

During their first academic year enrolled in the clinical LL.M. program, fellows will "shadow" or "co-supervise" law students with experienced faculty. Throughout the fellowship term, the fellows will receive instruction and feedback about their supervision that will continue to facilitate their development as clinical teachers. Clinical fellows are expected to participate in mid-semester or mid-year evaluation sessions with students and to participate in a traditional grading process.

**LAWS 4920 Supervision Practicum II (1-4 Credits)**

During their first academic year enrolled in the clinical LL.M. program, fellows "shadowed" or "co-supervised" law students with experienced faculty (for which they will receive four credits per semester). In their second year, fellows supervise on their own two students and in their third year, four students. Throughout the fellowship term, the fellows will receive instruction and feedback about their supervision that will continue to facilitate their development as clinical teachers. Clinical fellows are expected to participate in mid-semester or mid-year evaluation sessions with students and to participate in a traditional grading process.

**LAWS 4921 Clinical Pedagogy & Design I (1 Credit)**

The purpose of this yearlong, two-credit course is to explore more deeply the pedagogy and methods for teaching in both student supervision and classroom seminar settings. This series of courses accomplishes two important goals: (1) building a learning community through which a group of faculty come together and increase faculty collaboration around a shared enterprise of teaching; and (2) improving teaching. Graduate fellows will talk about events in their classrooms/supervision sessions, present "problems" to be unpacked and re-conceptualized, solicit ideas about what and how to teach, and share innovative assessment tools. Fellows reflect with supportive colleagues about the relationship between what they have done and their teaching goals and formulate plans with the benefit of the insights of others. The objective of this course is to have discussions that will facilitate the development of both concrete solutions and broader themes in the fellows' teaching.

**LAWS 4925 Scholarship Seminar II (4 Credits)**

This is a semester-long, four-credit, intensive course taken after completion of the second academic year in which students produce and present drafts of scholarly articles along a timeline set out at the start of the semester.

**LAWS 4930 Supervision Practicum III (1-6 Credits)**

The expectations for student supervision increase in the third year. Throughout the fellowship term, the fellows will receive instruction and feedback about their supervision that will continue to facilitate their development as clinical teachers. Clinical fellows are expected to participate in mid-semester or mid-year evaluation sessions with students and to participate in a traditional grading process.

**LAWS 4931 Advanced Clinical Pedagogy & Design (1 Credit)**

The purpose of this yearlong, two-credit course is to explore more deeply the pedagogy and methods for teaching in prior years; hone methods to fellows' unique professional, academic identities; and reflect on these and their experiences teaching in both supervision and classroom settings to articulate and design their own clinics. This course accomplishes two important goals: (1) building a learning community through which a group of faculty come together and increase faculty collaboration around a shared enterprise of teaching; and (2) improving teaching. During rounds, graduate fellows talk about events in their classrooms/supervision sessions, present "problems" to be unpacked and re-conceptualized, solicit ideas about what and how to teach, and share innovative assessment tools. Fellows reflect with supportive colleagues about the relationship between what they have done and their teaching goals and formulate plans with the benefit of the insights of others.

**LAWS 4950 Scholarship (1 Credit)**

The transition from legal advocacy writing to academic legal scholarship is challenging. In addition to learning a new style of writing and new methods of research, fellows must devote substantial time to the academic writing endeavor. Most students (and faculty) reflect in hindsight that writing a law review article for the first time takes substantially longer than they anticipated. Over the course of the fellowship, fellows earn one credit per semester for making progress toward completion of a paper of publishable quality. In this course, fellows apply theories of research and writing to the activities of writing (choosing topics, creating timelines, researching, and drafting sections of their articles).

**LAWS 4991 Corporate Apprenticeship Program (4 Credits)**

The Corporate Apprenticeship Program's purpose is to provide the opportunity for law students to learn about the distinct challenges facing corporate counsel. This program is offered solely in the spring term and consists of four mandatory seminars and 15 hours of work per week (preferably on consecutive days) in the legal department of sponsoring corporations. The interactive seminars are designed to introduce students to the practice environment and operations of an in-house corporate legal department.

**LAWS 4996 Thesis (1-10 Credits)**

The program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and the the community. Example placements include public defenders' offices; prosecutors' offices; the Attorney General's office; Legal Service offices; judicial clerkships; and selected private firms. Need special enrollment permission from Internship/Externship Office. A maximum of 10 credit hours may be awarded for this program.

**LAWS 4999 Directed Research (1-5 Credits)**

Direct Research is an opportunity for students to research and write on any area of law approved by a full-time faculty member who agrees to direct the project. The research project must be completed within the semester for which the student is registered. The research is compiled into a paper of publishable quality. A copy is delivered to the supervising faculty member for grading and a second copy is delivered to the associate dean for academic affairs by the last day of exams for that semester. Students may petition for either two or three semester hours. A maximum of five semester hours credit for Directed Research is permitted in satisfaction of the 90-credit degree requirement. A Directed Research application form (available in the registrar's office) signed by both the faculty supervisor and student is required for enrollment. The registrar's office will register the student for his or her directed research once the student's application form has been approved. All directed research projects must conform with the upper level writing requirement, which involves a mandatory rewrite, in addition to any other requirements. This course satisfies the Upper Level Writing requirement (ULW). Permission is required from the faculty supervisor and the Assistant Dean for Student Affairs to increase credit hours to 4 or 5.

**LAWS 5025 Externship (1-10 Credits)**

The program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and community. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; judicial clerkships; and selected private firms. Externship Seminar: In conjunction with the above field placement each student shall meet in a seminar under the supervision of a member of the law faculty to explore common and contrasting areas of professional responsibility, professional tasks and skills, decision making and dispute resolution presented in the various extern settings.

**LAWS 5026 Trial Practice III: National Trial Team (3 Credits)**

The Trial Teams Course is for the new and veteran students who are selected to represent the school on one of the national trial teams. The course meets one night a week during the summer session for five hours each night. The course is split into two sections, one for returning team members, and one for the newly-selected team members. The course is an advanced courtroom-simulation course in which students work intensely with other students and the instructor, delving into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. The veteran section begins the first class with students presenting both sides of a criminal case. The new member section begins with refreshers on case analysis, evidence, and courtroom strategies, and culminates with final trials. There is weekly out-of-class case analysis, drafting, and preparation required. Grading is based on classroom participation, written homework, simulated courtroom presentations, and a final trial.

**LAWS 5027 American Association for Justice Trial Team (3 Credits)**

Sturm's American Association for Justice Trial Team (AAJ) is one of four of the school's advanced courtroom-simulation based "team-courses" in which students find themselves working intensely with five other students and an instructor, delving deeply into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. Students must be invited to be on one of Sturm's National Trial Teams, after tryouts that are held every spring (April). The team-courses meet all three semesters (fall, spring and summer). Being invited onto one of the teams is a two-year commitment. Starting the first week of each semester, and continuing throughout the entire semester, the AAJ team-course meets once a week in a classroom environment, for a total of 2.5 classroom hours per week. The AAJ team-course also meets a second time each week for courtroom simulation performances and video review, for an additional four (4) hours. There is also substantial out-of-class case analysis and examination drafting required. The team competes on the national level in the fall at an "invitational" tournament, and in the spring in the AAJ tournament against other ranked law schools from around the country. Grading is based on classroom participation, written homework, and simulated courtroom presentations. Prerequisite: LAWS 4635.

**LAWS 5028 ABA Trial Team (3 Credits)**

Sturm's ABA/NTC team is one of four of the school's advanced courtroom-simulation based "team-courses" in which students find themselves working intensely with five other students and an instructor, delving deeply into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. Students must be invited to be on one of Sturm's National Trial Teams, after tryouts that are held every spring (April). The team-courses meet all three semesters (fall, spring, and summer). Being invited onto one of the teams is a two-year commitment. Starting the first week of each semester and continuing throughout the entire semester, the ABA/NTC team-course meets twice a week in a classroom environment, for a total of five (5) classroom hours per week. The ABA/NTC team-course also meets a third time each week for courtroom simulation performances and video review, for an additional four (4) hours. There is also substantial out-of-class case analysis and drafting required. The team competes on the national level in the fall at an "invitational" tournament, and in the spring in the ABA/NTC tournament against other ranked law schools from around the country. Grading is based on classroom participation, written homework, and simulated courtroom presentations.

**LAWS 5029 Semester in Practice (1-12 Credits)**

The Semester in Practice program is designed to allow students the opportunity to develop practice skills by working full-time in legal programs of concern to the legal profession and community. This is a capstone experience offered to students in their last year of law school, where students have significant exposure to the substantive law in their externship. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; judicial clerkships; and selected private firms. As this is an externship, credit may vary, up to 12 credits, depending on the student. Externship Seminar: In conjunction with the above field placement, each student shall meet in a three-credit graded seminar under the supervision of a member of the externship faculty to explore common and contrasting areas of professional responsibility, professional tasks and skills, decision making and dispute resolution presented in the various extern settings.

**LAWS 5030 Semester in Practice Seminar (3 Credits)**

This seminar is the classroom component of the Semester in Practice (SIP) course. Through class discussion, we explore a variety of issues that provide students with the opportunity to reflect on the legal profession and how they perceive their role in the profession - currently and prospectively. We focus primarily on professional identity and ethical issues of key importance to the practice of law.

**LAWS 5031 Legal Externship Seminar (1-3 Credits)**

The Legal Externship Program is divided into practice-specific programs. Students enrolled in each of these programs are required to also enroll in an accompanying for-credit seminar that addresses topics specific to each practice area.

**LAWS 5035 Public Service Externship (2-6 Credits)**

The externship program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and community. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; and judicial clerkships. To ensure that the College of Law remains in the forefront of public service, every Juris Doctor student is required to perform a minimum of 50 hours of supervised, uncompensated, law-related public service work during his or her law school career as a prerequisite to graduation. This requirement may be fulfilled by registering for, and passing, an externship for credit at a government agency, judicial chambers, or nonprofit organization via the Legal Externship Office, as long as no financial compensation of any kind whether from the employer or outside source was received for the externship.

**LAWS 5999 Law Consortium Visit (0-18 Credits)**

This is a placeholder course that allows students to remain actively enrolled at Sturm College of Law for purposes of enrollment reporting and financial aid disbursement while students are participating in an approved visit at another ABA approved law school per a consortium agreement. Credits associated for this course are replaced by transfer credit once a final transcript is received by the host institution.

## Legal Administration (MSLA)

**MSLA 4050 The Impact of Court Governance (1 Credit)**

This course informs students on the policy making process of local court governance and the impact of the process on court operations and public services. Various governance structures are explored to include the benefits of principle based governance. Students gain in-depth insight into the roles and relationships of judges and court administrators as leaders and governing authorities within the judicial system. Course knowledge is applicable to all levels of national and international court jurisdiction.

**MSLA 4080 Law Firm Information Technology (2 Credits)**

This course is designed to inform the student on the complexities of information technology in a law firm setting. Topics include time and billing, assessing the IT needs of the office, networking abilities, creating a paperless office, security, case management, outsourcing, and knowledge management.

**MSLA 4090 Court Information Technology (2 Credits)**

This course is designed to introduce students to the intricacies of information technology in a court setting and the importance of an efficient and effective system. Topics include communications technology (internal and external), virtual courthouses, electronic case filing, legal research systems, information and systems security, networking abilities and needs, court reporting/recording and accessibility to the public (website).

**MSLA 4100 Court Fiscal Management (3 Credits)**

This course focuses on the key aspects of fiscal management in a court setting. Students learn models of public budgeting, internal controls, procurement, outsourcing, RFPs, internal and external auditing, and government funding models. Prerequisite: MSLA 4410.

**MSLA 4121 Human Res & Performance Mgmt (3 Credits)**

This course will provide a broad overview of the field of human resource and performance management. Students learn what managers and administrators need to know to effectively address Human Resource issues in today's workplace. The course will provide major concepts and techniques of performance management in law and court environments. By employing perspectives of both the employer and employee the class will focus on "best practices" utilized by managers and administrators and emphasize decision-making skills and processes in the context of Human Resources law and policy. Students will learn how to achieve organizational goals via management of a company's most precious resource, their people. This textbook provides an overview of the content upon which the most common HRCI certifications (SPHR, PHR) are based.

**MSLA 4151 Applied Leadership and Management Theory (3 Credits)**

This course is designed to provide the student with an understanding of the importance of effective leadership and management in the workplace. Students will learn the tools necessary to manage conflict, build strong teams, function as a team, manage performance, create and maintain a positive work environment, and motivate others.

**MSLA 4180 Court Case Flow and Load Management (2 Credits)**

This course is designed to provide the student with the fundamental principles of managing an effective case management system. Students will learn the importance of an efficient case flow management system, the history of case management, electronic case filing, civil and criminal rules of procedure, case assignment, quality assurance and time standards and major case, records management and reporting systems, strategies necessary to gain judicial support, leadership and cooperation to effectuate effective case flow management practices, and improve judicial performance as it relates to the disposition of actions.

**MSLA 4181 Inclusiveness in the Legal Profession - The Next Generation of Diversity Efforts (1 Credit)**

Diversity and inclusiveness are hot topics in the legal profession. This highly interactive course will educate students about the state of diversity and inclusiveness within the legal profession, the systemic underpinnings of the lack of diversity, how to create inclusive environments for successful retention and advancement of female and diverse attorneys and staff, as well as the importance of diversity and inclusiveness to the viability of the legal profession. Students will be challenged to draw upon their own life experiences, to consider different perspectives, and provide thoughtful analysis on how they can incorporate diversity and inclusiveness practices with their career path and future legal organizations.

**MSLA 4200 The Business of Courts (3 Credits)**

This course is designed to provide the student with the fundamental principles and elements of the key functions performed by the courts. These functions include jury management, court based mediation and arbitration programs, court reporting, client expectations, contingency planning, continuity of operations planning, needs and expectations of litigants without lawyers, interpreter services, court and staff performance measurement and management, and the role of the court administrator.

**MSLA 4201 Law Firm Administration (3 Credits)**

This course informs the student of the fundamental principles, elements and day-to-day operational processes of law office management. Topics covered in this course include law office culture, law firm organization, succession planning, practice areas, client communication flow, collection challenges, and understanding and working with law office timekeeping, accounting, and billing systems.

**MSLA 4205 Lawyer Recruitment, Development, and Advancement in Law Firms (2 Credits)**

This course will focus on the key aspects of lawyer recruitment, development and advancement in law firms. Students will learn the primary methods for recruiting and hiring lawyers at all experience levels, and the most important elements of lawyer development, including orientation, integration, legal and core skills training, experiential learning, mentoring, performance management, and evaluations. Traditional compensation and advancement models, as well as emerging trends in all of these areas, will also be covered during the course.

**MSLA 4215 Court Space, Facilities and Security (2 Credits)**

This course is designed to inform the students of the fundamentals of managing the court's space, facilities and security. Aspects of this course include: facilities management, operational standards and management, safety and security, assessing courthouse building needs, developing space planning reports, the management of all types of space projects, building and personnel security issues, contingency planning, and disaster recovery.

**MSLA 4300 Introduction to the United States Judicial System (3 Credits)**

This course provides the student with an overview of the United States judicial system. Students learn the fundamentals of our legal system, historical basis of the U.S. judicial system, the foundation, structure, purpose, what it stands for, and the varying levels of the U.S. court system.

**MSLA 4301 Judicial Performance and Evaluation (1 Credit)**

This course informs students on the complexities of judicial performance and evaluation. Students learn the fundamentals of developing a judicial performance program, measuring the effectiveness of performance recommendations, commissions on judicial performance, and the components of the evaluation process.

**MSLA 4310 World Judicial Systems (3 Credits)**

The goal of this course is to compare and contrast the role of the judiciary in various legal systems. Topics include types of courts and court systems (including domestic, supranational, i.e., the European Union, and international courts), judicial independence, separation of powers, and challenges facing the judiciary such as miscarriages of justice. Students also compare court procedures (civil, criminal, appellate review) in different types of legal systems.

**MSLA 4320 Fundamentals of Comparative Law (3 Credits)**

This course introduces the classifications of the world's legal systems: (civil law, common law, Islamic law, customary law, and mixed law systems). Students will learn the general elements of a legal system then compare and contrast these features in different types of legal systems as they are used in various countries or other jurisdictions including the European Union. Students will also explore internet and electronic resources to research and analyze foreign legal systems.

**MSLA 4330 Specialty Courts (2 Credits)**

This course will provide the students with an understanding of the purpose, functionality and effectiveness of specialty courts. Topics will include the types of specialty courts and how to create them, maintaining sustainability, treatment options, demographics, budgeting and measuring specialty court performance.

**MSLA 4380 Communication, Writing, and Research in Legal Business (3 Credits)**

This is a foundation course is designed to provide students with effective, productive, and relevant communication, writing, and research skills used in legal business today. Topics will include writing press releases, social media news/headlines/updates, executive summaries, email strategies based on audience, etc.

**MSLA 4384 Court Comm & Media Relations (2 Credits)**

This course will inform the students how to address communications and manage media relations for the courts. Topics will include views of the court from multiple perspectives, communicating to different constituencies, public relations and customer satisfaction, and educational outreach programs.

**MSLA 4385 Law Firm Communications and Technology (3 Credits)**

This course is designed to build student's foundation knowledge of technology in the legal environment. The competitive landscape<sup>3</sup> in the law firm setting is stronger than it ever has been, and this competitiveness forces law firms to find efficient and innovative ways to conduct business in this new landscape through the use of technology. Topics of this course will include identification of technologies used in law firms and legal departments as well as thoughts about how to leverage those technologies to help gain efficiencies.

**MSLA 4386 Law Firm Client Services and Satisfaction (2 Credits)**

This course is designed to inform the student of the importance of client service and satisfaction and its value to the law firm. Topics covered in this course include external communication, client feedback, partnering with clients, client relationship management, and evaluation and survey design.

**MSLA 4410 Accounting and Financial Management in Legal Business (3 Credits)**

This course will explore the principals and practices of financial accounting including the standards that govern the preparation of financial statements in legal business. Students will gain a comprehensive overview of double entry accounting, a detailed understanding of assets, liability, equity, revenue and expenses and how they affect the income statement, balance sheet, and statement of cash flows. Special attention will be given to the unique attributes of financial reports related to law firms.

**MSLA 4415 Statistics for the Legal Administrator (2 Credits)**

This course will introduce the fundamentals of statistics for the legal administrator. Students will learn how to measure efficiencies and work performance, perform and analyze needs assessment, track productivity; measure cases flows, and assess client needs.

**MSLA 4420 Legal Practice Seminar-Law as a Business (3 Credits)**

This course provides an overview of the business functions of a law practice. Students learn how effective law practice administrators and managers base policy and management decisions on a comprehensive understanding of the law firm as a complex and interdependent equation. MSLA course, open to JD students with approval from Associate Dean.

**MSLA 4640 ADR for the Court and Law Firm Administrators (3 Credits)**

This course has been designed for the Court/Legal Administrator to explore and understand the skills essential when negotiating/mediating conflict and to examine the ADR system designed for court-annexed, Federal/state agency and private sector arbitration/mediation programs. Students will have an opportunity to explore issues related to ADR in the public and private sector by actively participating in weekly online discussions and experience hands-on learning by developing an ADR system to include the process for selecting a panel of ADR specialists, and a process for implementing and managing the program.

**MSLA 4700 Special Topics (1-5 Credits)**

Special topics courses are used for timely offerings of specialized courses not otherwise found in the course catalog. Titles will vary. Please see [law.du.edu/registrar](http://law.du.edu/registrar) for more information.

**MSLA 4901 Law Firm Financial Management (3 Credits)**

This course focuses on the key aspects of financial management in a law firm setting. Students analyze financial reports/data, work flow analysis and assessment, understand trust accounts, client billing and internal controls, to ultimately recognize and understand the financial health of the law firm. Prerequisite: MSLA 4410.

**MSLA 4950 Strategic Planning in Courts (2 Credits)**

This course is designed to prepare the student in creating a strategic plan for the courts. Students learn to think strategically, design surveys, perform an environmental analysis, set goals, develop action plans, and measurement tools.

**MSLA 4954 Project Management (3 Credits)**

This course is designed to provide students with the tools to effectively manage a project regardless of its size. Topics include clarifying the project goals, using objectives to define responsibilities, understanding GANTT and PERT charts, goal setting, prioritization, time management, consensus building, developing creative teams, empower the project team, motivating the team, communications tools, how to handle conflicts, and how to celebrate your success.

**MSLA 4999 Directed Research MSLA (1-3 Credits)**

MSLA Directed Research is an opportunity for students to research and write on any area of legal administration approved by an approved faculty member who agrees to direct the project. The research project must be completed within the semester for which the student is registered. The research is compiled into a paper of publishable quality that is delivered to the supervising faculty member by the last day of exams for that semester. A Directed Research application form (available in the Registrar's Office) signed by both the faculty supervisor and student is required for enrollment.

**MSLA 5010 Capstone: Externship/Project (3 Credits)**

The externship or creative project is designed to complement the student's area of study. The externship enables the student to work in a practical setting and acquire the experience in a legal environment. The creative project option provides students, already working in the legal environment, an opportunity to complete a project or research paper on a topic determined by student and MSLA office. A grade of "pass" is given after the work is completed, and a letter from the supervisor summarizing the student's experience is submitted to the MSLA Office.

**Law Courses****LAWS 4001 Introduction to Law for Non-Lawyers (1 Credit)**

This course is designed to introduce non-lawyers to legal tools and methodologies so that they become competent at reading, understanding, and applying the law to new scenarios. It will also introduce them to legal research and writing. The course will cover reading and briefing cases, understanding and interpreting legislation, applying legal rules to new fact situations, and the relationship between different legal sources.

**LAWS 4002 Accounting for the Small Legal Practice (3 Credits)**

This course will provide an introduction to basic accounting fundamentals, provide key concepts that apply to attorneys and solo practitioners, and explore situations where accounting plays a role in the practice of law. Topics include: understanding the balance sheet, income statement, statement accounting; partnership vs. LLC; income tax accounting; money management and cash flow in a law practice; retainers; trust accounts; income measurement; auditing; and billing/fees/timekeeping.

**LAWS 4003 Appellate Advocacy (3 Credits)**

This course focuses on developing skills necessary for effective appellate advocacy. It includes discussion of the critical differences between trial and appellate practice and techniques for presenting a persuasive case on appeal. Students will write appellate briefs and present oral argument to a panel of judges. Students will also observe oral arguments presented in Colorado appellate courts.

**LAWS 4006 Accounting for Lawyers (3 Credits)**

This class introduces students to accounting principles and practices to prepare them for the manner in which transactional and other lawyers will be presented with accounting, auditing, and financial matters that must be understood to enable them to provide effective legal representation to clients. The course includes an introduction to basic concepts of bookkeeping and financial accounting, reading and understanding traditional financial statements, financial statement analysis and the use of financial ratios, and legal issues involving accountancy. The class will also examine the role and responsibilities of the independent auditor and the concept of full and fair disclosure of financial information as required by generally accepted accounting principles.

**LAWS 4007 Business Development: Marketing and Client Service (3 Credits)**

This course provides students with the tools to effectively market a solo practice and connect with the client. Topics include: client relationship management; social media; building a brand; networking fundamentals; website development; managing client expectations; effective communications; and, referrals.

**LAWS 4008 Privacy Law (3 Credits)**

This Privacy Law seminar examines the development of privacy rights as a key consideration in the business and governmental policy debates within the U.S. and E.U. These debates range from the appropriate role of government collection retention and usage of personal identifiable information (PII) as well as regulating the private sectors' usage of PII. The E.U. has taken the lead in establishing an all-encompassing privacy policy for both the public and private sectors, whereas the U.S. has established a sectorial approach to establishing privacy law and regulations. Lawyers will continue to play a significant role in shaping governmental privacy policy, drafting statutes and regulations, as well as business drafting and negotiating technology contracts.

**LAWS 4009 Community Expectations in Sustainable Development of Natural Resources (3 Credits)**

The spread of democracy, the rapid development of open information regimes, and the Internet means that it is increasingly important what local communities want, and how they view natural resource production. Sustainable development is a set of concepts that attempts to harmonize a number of seemingly competing goals. These include providing better conditions of life and more opportunities for people, especially the poor. They also include bringing production and consumption within limits that an ecosystem can tolerate in the long run. The new legal challenges need to be understood on a variety of levels: 1) the emerging set of international standards and requirements governing foreign direct investment; 2) changing national priorities in mineral legislation and the laws governing the extraction and use of mineral products; and 3) meeting community expectations for sustainable development.

**LAWS 4010 International Dispute Resolution (3 Credits)**

This class addresses critical topics for the attorney representing clients in international business transactions, including the role of the international lawyer, performing international research and locating international and foreign law resources, jurisdiction, provisional relief, choice of law, proof of foreign law, choice of forum or arbitration, service of process, obtaining the evidence, act of state, sovereign immunity, law of the seas, and enforcement of judgments. The class will consider relevant treaties and U.S. law, including the Hague Convention on Choice of Courts Agreement, the Uniform Foreign Country Money-Judgments Recognition Act, and potential litigation under such laws as the U.S. Foreign Corrupt Practices Act. The course addresses topics relevant to both litigation and arbitration.

**LAWS 4011 Labor and Employment Writing Seminar (3 Credits)**

The goal of this class is for students to research and write a scholarly law review article of publishable quality. Students will select topics relating to current issues in labor and employment law and will write publishable articles based on independent research. Students will present their papers to the class toward the end of the semester. The top two papers will be selected for entry in the Jackson, Lewis National Labor and Employment Writing Competition.

**LAWS 4012 Protecting Intellectual Property in International Business Transactions (3 Credits)**

The first portion of this seminar will cover topics such as general international conventions and treaties designed to protect intellectual property; conventions and treaties are designed specifically for patents, trademarks and copyrights. Students will determine what protections to try to seek for a variety of intellectual property examples and, in pairs, if possible, negotiate and draft a licensing agreement and a manufacturing agreement. Students will then choose a topic from a selection of hypothetical problems, such as filing for patent protection in various jurisdictions, service of process on a foreign corporation, enforcing an arbitral award, resolving conflicts of laws, pre-litigation options. Each student will prepare a presentation for the class on the topic. The students will use the class feedback their research for the presentation to complete a paper on their topic. The drafting and paper will take the place of the final exam.

**LAWS 4013 Trial Practice II - Juries and Expert Witnesses (3 Credits)**

This course is for students who have already taken Trial Practice I. It will teach you more about how trial practice really works, build on what you learned in TP I, and allow you to sharpen and refine your skills. Since this class is taught using principles and methods developed by the National Institute for Trial Advocacy (NITA), you will accomplish this by actually doing the work, asking questions, introducing exhibits, working with experts, selecting juries and making arguments that help your client get a verdict. The class will have a focus on experts and juries. We will have real experts – psychiatrists, psychologists, and financial experts – for the expert witness exercises. We will also focus on juries and jurors: how to select them, how to persuade them and (I hope) how not to make them angry. In addition, you will prepare and conduct direct examination, cross examination, introduce exhibits, do opening and closing arguments, etc. In addition, we will cover redirect examination, dealing with difficult or obstreperous witnesses, working with interpreters, working with court reporters, and presentation of difficult issues such as damages.

**LAWS 4014 Emerging International Standards for Sustainable Development of Natural Resources (3 Credits)**

This course will focus on emerging international standards, legal, and "law-like" instruments designed to form the "rules of the road" in the dealings among private investors, host country governments, local communities, and other actors involved with sustainably developing natural resources. We will look at the track record of development: to what extent have natural resource projects helped make the world's poor better off? And what is meant by "better off?" What is a "fair deal" between a corporation from, for example, Europe or North America and a developing country government in Africa? How are disputes resolved?

**LAWS 4015 Intermediate Legal Analysis (3 Credits)**

Intermediate Legal Analysis will provide students with instruction in analytical skills in substantive areas of the law taught in the first year curriculum. Students will do multiple short assignments, primarily practice exams, in small sections. The course is a skills-based course, designed to develop analytical strategies necessary for success in law school, including rule synthesis and application, statutory interpretation, case analysis and briefing, fact evaluation, discernment of legal principles and theories, and effectiveness in written communication. The course will provide multiple opportunities for practice and feedback with exercises designed to help students learn, understand, and recall course materials with a particular emphasis in developing writing approaches and strengths for solving hypothetical legal problems. Upon successful completion of the coursework, students should be able to separate relevant from irrelevant facts, analyze statutory and case materials, apply relevant law to material facts in a competent manner to solve hypothetical legal problems, communicate effectively in writing, and complete analytical tasks within limited time constraints. The course will conclude with a final exam.

**LAWS 4018 Criminal Law (Advanced) (3 Credits)**

This course examines actual criminal cases from around the world and the application of the law at the time and place of the crime. The students will then compare this to the law today in the same jurisdiction and the Model Penal Code as applied to the same facts. This course also reviews current Colorado Law as it relates to liability and punishment based on the same fact pattern. The course will encourage analysis of what the law is and should be, and the aftermath of each case will lead to discussion about what actually happened to the defendant and why.

**LAWS 4019 Animal Rights (3 Credits)**

Students who have participated in the Civil Litigation Clinic for one semester are eligible to enroll in the Advanced Civil Litigation Clinic. The purpose of the advanced clinic is to provide students who have developed fundamental trial skills in the areas of landlord-tenant, domestic violence, and workplace law to further develop those skills and to work on cases and matters with greater independence for an additional semester without repeating the seminar component of the clinic.

**LAWS 4022 Criminal Clinic (Advanced) (3 Credits)****LAWS 4023 Civil Litigation Clinic (Adv.) (1-10 Credits)****LAWS 4025 Administrative Law (3 Credits)**

This class provides an introduction to the administrative process of government. Topics include Constitutional issues of separation of powers; delegation of legislative and judicial power; legislative and judicial authority in government agencies; agency exercise of policy-making functions; and controls imposed on agencies by administrative procedure legislation, Constitutional principles, and judicial review of agency action. Pre-req or co-req: LAWS 4164-Constitutional Law. Non-JD students must request permission to register.

**LAWS 4026 Criminal Procedure (Adv.) (3 Credits)**

From the commencement of formal proceedings to collateral attacks on convictions, this course guides students through the laws regulating criminal prosecutions. The course topics typically include pleas; trial rights; discovery; bail procedures; sentencing; double jeopardy; the death penalty; and habeas corpus. The focus of the course is on the federal constitutional rights and the federal rules of procedure that are applicable to each stage of a criminal proceeding. Prerequisite: LAWS 4200.

**LAWS 4027 Trial Practice II: Voir Dire (3 Credits)**

This course covers the practical process of jury selection including the court rules and statutes that apply as well as Constitutional issues including fair cross-section and discriminatory challenges. An exploration of the demographic, legal, and case-specific issues that can be addressed in jury selection. The course couples traditional lectures with emphasis on student exercises. The course culminates in a final voir dire where the student is given a case problem and required to incorporate persuasive introductions, law questions, case-specific questions, and conclusions. Student participation throughout the class is required as both the inquiring attorney and as a juror.

**LAWS 4028 Civil Procedure II: Trial and Post-Trial (3 Credits)**

Topics for this course include post-trial procedure, injunctions, and other advanced civil procedure matters.

**LAWS 4030 Family Law (Adv.) (3 Credits)**

Advanced Family Law is a practicum oriented class. This class has some lecture components, but there will be significant practicum aspects for students interested in learning about the practice of family law. Students will gain a general knowledge of family law, and more specifically the substantive and procedural aspects of dispute resolution oriented domestic relations practice. The subjects covered are divorce, custody and child support jurisdiction (intrastate and interstate); domestic case procedure, meeting with and managing your client; working with opposing counsel; temporary status conferences and agreements, Domestic Violence, discovery and use of experts, unbundled legal services, access to justice issues, and the permanent orders (final orders in the divorce); and attorney's fees. Prerequisite: LAWS 4240.

**LAWS 4031 Mediation (3 Credits)**

Students who have completed the basic Alternative Dispute Resolution course may enroll in this program that focuses on clients with more complex cases in both the civil and criminal arenas. Clients will be selected based on both public interest aspect and the propriety of the case as a learning vehicle for planning, pleading, negotiation, discovery, research and trial work. Prerequisite: LAWS 4060.

**LAWS 4032 Legal Analysis Strategies (3 Credits)**

This course provides last semester graduating students with instruction, guidance and feedback to develop foundational skills necessary to achieve success on both the bar exam and in the legal profession as skilled legal analysts. Substantively, the course will focus on core bar exam subjects (constitutional law, contracts, property, evidence, torts and criminal law/procedure) using practical problems in all three examination formats of the bar exam - essays, performance tests, and multiple-choice questions. Initially, the course provides a diagnostic evaluation of analytical and communicative strengths using a performance test and multiple-choice questions. Subsequent classes require submission of written practice exams with follow-up class presentations by students of analytical strategies used to solve hypothetical problems posed in essay questions, performance tests and multiple-choice questions. The course includes a final exam given during the final exam period designed to simulate bar exam protocols.

**LAWS 4033 Representing the Spanish Speaking Client (3 Credits)**

This course is a survey of the substantive law of matters likely to be encountered by attorneys representing Spanish-speaking clients in the United States. Topics may include, among others, immigration law, family law, criminal law, employment law, wills and estates, and consumer rights. The course will introduce vocabulary required to communicate with Spanish-speaking clients in the United States, as well as, survey the basic substantive law in each area. The course will be taught in Spanish.

**LAWS 4034 Legal Research and Writing for Graduate Students (2 Credits)**

This course will introduce students to the fundamentals of legal analysis in a common law system and various forms of legal writing. The course will also introduce students to current practice in legal research in the US legal system. This course is available to non-JD students only.

**LAWS 4035 Legal Research for Practice (2 Credits)**

Most new lawyers spend the bulk of their time conducting legal research. This course provides students with the practical research skills needed to succeed in today's law practice settings. The course follows an innovative sequence of classes structured around the most important research methods, tools, and search techniques for legal research proficiency. This approach teaches students the skills they need to be as effective and efficient as possible in their research, regardless of the research platform selected or the type of legal source one wishes to search. This course also uses a problem-based approach designed to simulate the types of research requests made in law practice settings. Course assignments include a variety of exercises, both in-class and outside of class, as well as four research assignments that demonstrate students' understanding of practice-focused research. Laptops are required for this course.

**LAWS 4037 European Union Environmental Law and Policy (3 Credits)**

The European Union (EU) has become a leading player in the context of European environmental legislation and policy making. Of particular interest has been the underpinning of the EU's single market, and environmental protection, the importance of which is clearly set out in the European Community Treaty. Matters dealing with climate change, genetically modified organisms, and recycling are now dealt with on a regular basis at EU level.

**LAWS 4042 Trial Practice II - Persuasion and Communication (3 Credits)**

This course is for students who are already skilled in the basic techniques of trials. This course will focus more on the "art" of advocacy. This course will focus on presentation and persuasion techniques that go beyond just getting the facts out. Students will practice storytelling techniques throughout trial, learn more persuasive use of visuals in storytelling, and think more critically about the use of case analysis and development of themes in advocacy. Prerequisite: LAWS 4635.

**LAWS 4048 Agency Partnership & LLC (4 Credits)**

This course investigates the structure and implications of various unincorporated business entities within three main categories: agency relationships, partnerships, and limited liability companies. Through the readings and various practice-oriented exercises, students will learn to understand and apply the rules, statutes, and doctrines that establish the governing framework for those entities, which range from some of the most basic to some of the most sophisticated forms of doing business. In addition to enhancing their ability to think critically and strategically about a variety of unincorporated business organization structures, students will develop practical skills that will improve their readiness upon graduation for the practice of law in various business contexts.

**LAWS 4050 Topics in Constitutional Law: Individual Rights (3 Credits)**

This course is an advanced constitutional law course, focusing on a selection of individual rights: equal protection; substantive due process; speech; the free exercise of religion; and the free establishment of religion. In each area, the course will seek to achieve a deep, descriptive understanding of the doctrine, and the ability to evaluate the doctrine in that area from a normative perspective.

**LAWS 4051 Topics in Constitutional Law-First Amendment (3 Credits)**

This is an advanced course in constitutional law that focuses on the law of the First Amendment. Most of the course will examine topics concerning the Free Speech Clause, including the theories of free speech, regulation of incitement, fighting words, defamation, offensive speech, hate speech, sexually explicit speech, and speech in the context of new communication media. It will also cover free speech doctrine and how it applies to symbolic speech, speech on government property, government compelled speech, speech in schools and by public employees as well as some topics concerning freedom of the press. The last part of the course will cover issues of freedom of religion under the First Amendment's Free Exercise Clause and Establishment Clause.

**LAWS 4055 Environmental and Agricultural Law (3 Credits)**

Agriculture contributes more than \$800 billion to the U.S. gross domestic product and provides 11 percent of US employment. As important as the food and fiber industries are to the American economy, devoting land to agriculture significantly affects the environment. Crop production can diminish habitat for wildlife, destroy wetland areas, erode the soil, cause nutrient and pesticide runoff, and pollute the air and water. This course addresses the complex and interconnected relationship of agriculture and environmental law, agriculture's historical roots in the United States, the evolution of agricultural policy, and modern developments in agriculture and environmental protection. The course is divided into three parts. In Part I, we will explore agriculture in a historical legal context and discuss USDA and Farm Bill programs. In Part II, we will focus on key environmental statutes and regulatory schemes that affect agriculture, including the Swampbuster program designed to prevent soil erosion and protect wetlands, the Clean Water Act, and the problems presented by Confined Animal Feeding Operations (CAFOs). In Part III, we will focus on emerging food systems in the United States, including certification and labeling programs, regulation of genetically engineered crops, the challenges (and opportunities) presented to farmers by climate change, as well as current and future trends in food production. We will discuss key policy and legal issues that surround each of these topics, with a particular focus on administrative law. Case studies of specific lawsuits will often be used to illustrate fault lines in how our society attempts to balance the need to produce cheap and abundant food against the need to protect the environment and public health.

**LAWS 4060 Alternative Dispute Resolution (3 Credits)**

The course examines the full range of contemporize dispute resolution processes: negotiation, mediation, arbitration and formal litigation. Conceptual and functional similarities and distinctions between these processes are explored. Additionally the processes; impacts upon disputants, role of the lawyer, the legal system and social order are reviewed.

**LAWS 4064 Introduction to the American Legal System (2 Credits)**

This course is designed for international LLM students who have not previously had exposure to either the US legal system or other common law systems. It focuses on the American legal system, include the three branches of government, federalism, the hierarchy of courts, and the anatomy of a law suit. Students will get a rigorous writing experience, drafting at least on legal document, such as a memorandum or a brief. In doing so, students will learn about legal research, analysis, writing, and Bluebooking. Students may also be asked to deliver and oral argument.

**LAWS 4065 American Legal History (3 Credits)**

This course concerns itself with the interaction between the legal system and social change in what is now the United States. Chronologically, the course materials run from the colonial period to the New Deal, although the nineteenth century will receive particular emphasis. A principal focus is the interrelationship of law, social life, economy, and ideology.

**LAWS 4070 Antitrust and Unfair Competition (3 Credits)**

The expansion of our economy over time has required the federal government and the courts to rethink their respective roles in regulating business conduct in the United States. The laws regulating business conduct are as dynamic as the notion of competition itself. This course teaches the history and fundamentals of antitrust and unfair competition laws in the United States. This course discusses the competitive problems which arise from monopolization, price and supply agreements, tying arrangements, exclusive dealings, cartel activity and mergers. The course also examines the interplay between federal, state and private enforcement of these laws.

**LAWS 4080 Real Estate, Title and Finance (3 Credits)**

This is an introduction to real estate transactions as they are encountered in the practice of law. We have shortened the course to a two-hour format to make it more accessible. Our emphasis will be on the representation of a client or an institution in the title and finance aspects of the real estate deal, which are central to every transaction. We will spend less time on contract formation and the role of brokers.

**LAWS 4085 Trial Practice III: Trial Practicum (3 Credits)**

Trial Practice III - The Trial Practicum (TP) is based upon the same educational platform as Trial Practice III - The National Trial Team (NTT). They are the same course, with the only difference being the TP students do not travel to compete against other schools, rather TP students compete in intra-school tournaments. TTP was created in response to the students who desire to benefit from the intensive study and simulated pre-trial and trial experience received by students on the National Trial Team course, and be "practice ready" upon licensure. This year-long, nine credit (three per semester), course is by invitation-only, and is demanding and intensive.

**LAWS 4089 Business Development: Marketing & Client Services (3 Credits)**

This course provides students with the tools to effectively market a solo practice and connect with the client. Topics include: client relationship management; social media; building a brand; networking fundamentals; website development; managing client expectations; effective communications; and referrals.

**LAWS 4090 Bankruptcy (4 Credits)**

This course introduces the federal bankruptcy system and Bankruptcy Code, including both the law of consumer bankruptcy and the law of corporate reorganizations. Topics include the rights of creditors in bankruptcy law and state law, the scope of the automatic stay, the treatment of executory contracts, the sale of assets in bankruptcy, the avoiding powers, bankruptcy planning, the restructuring of corporations in Chapter 11, and the procedure for confirming plans of reorganization.

**LAWS 4095 Real Estate Transactions (3 Credits)**

This is a problem-based course that covers both residential and commercial real estate transactions. Students will learn about the different phases of a real estate deal and examine sample documents that are involved in real estate transactions including purchase and sale agreements, brokerage arrangements, deeds of conveyance, and title insurance policies. Students will also address topics that appear on the bar exam such as the recording system and the financing of real estate acquisitions through mortgages and other tools.

**LAWS 4096 Patent Law (3 Credits)**

This course review the major patent law doctrines. Topics include patentability requirements under 35 U.S.C. 101, 102, 103, and 112, claim construction, various infringement doctrines, affirmative defenses and remedies.

**LAWS 4100 Basic Tax (4 Credits)**

This course provides students with a general understanding of tax law. Materials cover topics from personal and business deductions, to property basis and depreciation.

**LAWS 4101 Fundamentals of Taxation-JD (4 Credits)**

This class will cover fundamental concepts of the federal income tax system, including the definition of income, adjusted gross income, taxable income, exclusions from income, business and personal deductions, tax credits, basis, amount realized, gain and loss, capital gains and losses, depreciation, involuntary conversions, like-kind exchanges. This class is also intended to give the student a familiarity with the source materials of the tax law, including the Internal Revenue Code, Treasury regulations, case law and administrative materials.

**LAWS 4105 Business & Commercial Law Sem (1-3 Credits)**

Topical seminars scheduled periodically to afford students the opportunity for focused study of business and commercial law matters such as: consumer credit; mergers and acquisitions; corporate practice; bankruptcy; antitrust; quantitative evidence; representation of minority- and women-owned business firms. Prerequisite: LAWS 4190.

**LAWS 4108 Governance Workshop: Transparency and Privacy (2 Credits)**

This seminar will focus on cutting-edge legal issues related to governance, with a special focus on information: transparency, government accountability, information collection, and privacy. It will also provide an opportunity for students to engage in substantial scholarship of their own, improving their writing skills and providing insights into avenues for publishing written work. Most weeks, the Workshop will host a professor from another school to present a draft of a paper that has not yet been published. Students will carefully read the draft and participate in an in-depth discussion with the author. Through this process, students will have the opportunity to engage with many of the leading thinkers in the field. Some weeks, substantive material will be covered related to the course topics, including topics related to writing legal scholarship. Students will develop their own writing both in the workshop itself, and in scholarship groups of other students that will be assigned for the semester. Students will be expected to produce a significant piece of scholarship related to the topical area of this course by the end of the semester.

**LAWS 4110 Business Planning (3 Credits)**

The course introduces students to the transactional lawyering considerations involved in forming and representing an emerging growth business. The course examines the life cycle of a start-up company, including selecting the appropriate entity form, structuring the economic interests and managerial control among various owners, considering the lawyer's duties to the entity in dealing with its founders and management, and documenting various approaches to raising capital. Using a simulated deal format, students will draft, review and analyze documents typically used in organizing and financing a start-up business.

**LAWS 4112 Trademark Law (Advanced) (2 Credits)**

This seminar focuses on complex practical and legal issues confronted by today's trademark practitioners, ranging from brand protection strategies to litigating equitable relief claims for trademark infringement. The course also covers how trademark principles are being applied to the internet and e-Commerce. The course focuses on U.S. trademark law, but includes exposure to the aspects of international trademark law that are most frequently encountered by U.S. trademark practitioners. The course calls for students to participate in hands-on exercises, such as developing a new brand and arguing a preliminary injunction motion. The course requires a basic familiarity with trademark law, but the specific Trademark Law class is not a prerequisite. Prerequisite: LAWS 4310 or equivalent.

**LAWS 4115 Trademark Law (3 Credits)**

This course covers common law doctrines. Topics include the acquisition and preservation of trademark rights, false advertising claims, infringement doctrines, defenses, and remedies, with attention to internet issues and recent developments in the law. Recommended prerequisite: LAWS 4310.

**LAWS 4117 Taxation of Property Transactions (3 Credits)**

This course includes basis of property; capital expenditures and current expense comparison; depreciable status; amortization of intangible property; depreciation methods; property casualties and losses; profit or loss computation and characterization for taxable property dispositions; limitations on passive losses; lessor and lessee reporting; tax-deferred dispositions. Cross listed with TAX 4110.

**LAWS 4119 Animal Law Survey (2 Credits)**

This class is an introduction to the field of law referred to as "animal law." It is a survey course; we will study a range of legal topics that implicate the status and well-being of non-human animals. The course will not simply look casually or superficially at a spattering of areas where the law intersects with animals. Rather, the goal is to demonstrate that the field of animal law, like all great topics of legal study, is relevant to understanding general trends and overarching themes in U.S. law and policy. The course is a blend of theoretical and doctrinal materials, of historical reflections and future strategies. We will explore a variety of animal law topics and approaches for understanding "animal rights," but an overriding theme of the course is to understand whether and to what extent animal protection should be considered a civil rights movement. What is the role of activists versus lawyers? What is the role of criminal law in advancing the agenda of the movement? What is the role of constitutional law, and of science? And, do some species deserve more legal protections than others, and if so why?

**LAWS 4120 Civil Procedure (4 Credits)**

This required introductory course examines how Constitutional statutory and judicial rules frame the determination of court controversies. They also explore the doctrines, remedies, and other principles pertinent to judicial dispute resolution.

**LAWS 4129 Comparative Corporate Law Seminar (2 Credits)**

Comparative Corporate Law examines the system for forming and managing businesses in the United States and overseas. We examine the impact of culture and other factors on legal regimes and examine whether a uniform international system is developing. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4131 Commercial Law Survey (4 Credits)**

This course provides an introduction to the concepts and methods of commercial law. As a survey course, it explores the major Articles of the Uniform Commercial Code, namely, Article 2 (Sales), Article 9 (Secured Transactions), Article 3 (Payment Systems), as well as Article 5 (Letters of Credit) and Article 7 (Documents of Title). In addition, the intersection of Article 9 and Bankruptcy Law will be discussed in some depth. The completion of this course gives students a firm footing for any advanced course in commercial law. Students taking only one course in commercial law receive broad exposure to the basics of commercial law.

**LAWS 4132 Colorado Legal Research (2 Credits)**

This course introduces students to legal materials generated by executive/administrative, legislative, and judicial branches of Colorado government. Students develop research strategies for answering legal questions using primary and secondary resources and learn to relate the various sources of authority to the structure of Colorado government. Students are required to bring laptop computers to class.

**LAWS 4133 Corporate Social Responsibility (3 Credits)**

Corporate Social Responsibility represents the integration of a various environmental, social, ethical, and even political considerations into basic business strategies to produce a positive impact on society while still earning profits. With increasing frequency, consumers and investors reward companies that embrace CSR by purchasing their products and stock. This seminar in Corporate Social Responsibility explores a variety of pressing legal issues involving corporate governance, sustainable development, shareholder activism, executive compensation, the role of religion in the boardroom, international regulation, and CSR certification, among other topics. Through the readings and discussions, students examine the American approach to CSR in light of international regulatory efforts and models of socially responsible business practices in various countries around the world. Students gain a greater sense of the special role lawyers play in burgeoning CSR movement by examining some sophisticated examples of corporate strategy, planning, and litigation on CSR matters. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4135 Comparative Law (3 Credits)**

Comparative Law is the study of the foundation of legal traditions and systems which exist in the world today. The major topics covered in this course are legal history and culture; legal structures; legal actors; and procedure and sources of law. The interactive course begins with an overview followed with coverage of each of the topics in relation to the United States legal system. We then cover the same topics in relationship to the common law tradition and the civil law tradition.

**LAWS 4137 Comparative Environmental Law (3 Credits)**

Comparative Environmental Law is an introduction to the growing network of international law (multilateral and bilateral treaties, customary law, adjudications, etc.) that govern environmental law. The course focuses on international legal issues including global climate change; trans boundary pollution; resource depletion; toxic waste export; biodiversity and wildlife/plant extinction; deforestation; desertification; ocean pollution; sustainable development; etc. (The internal domestic environmental laws of individual countries receive some attention as does trade law, but these are covered with more detail in Comparative Law and International Business Transactions, respectively).

**LAWS 4139 Commercial Law for Foreign Investors in Guatemala (2 Credits)**

This class uses the Dominican republic-Central America-United States Free Trade Agreement (CAFTA-DR) and the North American Free Trade Agreement (NAFTA) to examine the legal framework regulating foreign investment in Central America and Mexico. With Guatemala's ratification of CAFTA-DR, Guatemala opened its doors not only to trade but also to foreign investment, including from U.S. companies looking to do business in Guatemala. While the CAFTA-DR includes norms that govern the relationship between foreign investors and Member States, the domestic laws of each Member State continue to provide the central regulatory structure that governs relations among the parties, including in the areas of commerce, intellectual property, labor and the environment. This is an introductory course that examines the principle commercial norms that would apply to foreign investors in Guatemala, with a special emphasis on the law of contracts. The course examines the comparable norms applicable under NAFTA and introduces the topic of how CAFTA's ratification has promoted rule of law reforms in Guatemala in the areas of commerce, intellectual property, labor and the environment. This course is taught in Spanish.

**LAWS 4143 Commercial Paper (2,3 Credits)**

This course introduces students to Article 3 of the Uniform Commercial Code, Negotiable Instruments. After studying this part of the UCC at the beginning of the semester, students will engage in a simulated, complex business transaction for the remainder of the course. The simulation involves problem solving, extensive document drafting, client counseling and professionalism, among other topics. The simulation involves transactions in a business/banking context, but is not an overview of banking law.

**LAWS 4144 Comparative Free Speech and Access to Information in the Americas (2 Credits)**

This course looks at the history and text of the guarantees of free speech in the constitutions of the United States and Latin American countries, including Guatemala; at judicial decisions interpreting them; and at the actual scope of those guarantees of free speech in practice, with emphasis on the function of free speech in facilitating democracy. The course also looks at the impact of globalization on free speech guarantees, including the impact of international treaties, the activities of NGOs, and speech on the Internet. The course compares the systems for providing citizens access to government information in the U.S. and Latin America, particularly Guatemala, and looks closely at areas where interest in disclosure and secrecy conflict.

**LAWS 4145 Computer and Internet Law (3 Credits)**

Computers and Internet Law is designed to consider the areas in which computer technology and the legal environment intersect. This includes legal protection of computer software; contracting for computer services; computer data banks and privacy; the check-less society; and the relationships between Federal Communications Commission policies and computers.

**LAWS 4160 Conflict of Laws (3 Credits)**

Conflict of Laws is an analysis of legal problems arising in cases when at least one of the operative facts cuts across state or national boundaries. Topics covered include problems of interstate jurisdiction over parties and subject matter the application of principles of full faith and credit and comity on the recognition and enforcement of interstate and multinational judgments; the comparison of various theories of law choice in the context of the Constitutional threshold constraints of the due process and full faith and credit clauses.

**LAWS 4164 Constitutional Law (4 Credits)**

This required introductory course examines the role of the United States Supreme Court and, in particular, the Court's power in exercising judicial review in cases interpreting the U.S. Constitution. The course focuses primarily on two topics. First is the doctrine of Separation of Powers: examining the structure and interrelationship of the three branches of the federal government, Congress, the Executive Branch, and the federal judiciary. Second is the doctrine of Federalism: the relationship and power distribution between the federal government and state governments. In addition, all sections devote part of the course to an introduction to at least one aspect of the large field of individual constitutional rights. The specific rights covered vary by instructor. Among the possible topics are: the Equal Protection Clause and Due Process Clause of the Fourteenth Amendment, the First Amendment, and/or the Fifth Amendment's Takings Clause. Students who wish to gain a deeper understanding of these topics are strongly encouraged to take Constitutional Law II.

**LAWS 4166 Constitutional Law II (3 Credits)**

This course provides upper level students exposure to a range of constitutional issues not covered in the basic required Constitutional Law course. At the discretion of the faculty, and in addition to a survey of constitutional law issues, this course may emphasize one or more specific topics, including but not limited to Sexuality, Causation, Poverty, First Amendment and Individual Rights.

**LAWS 4168 Constitutional Litigation Seminar (3 Credits)**

This course examines individual and class action litigation brought against government officials for the violation of constitutional rights under 42 U.S.C. section 1983, the primary federal civil rights statute, and other civil rights statutes. The historic interplay between substantive Constitutional law and traditional doctrines of tort liability has developed into an entire body of law under section 1983 that any civil rights or government lawyer must regularly confront. The seminar focuses on the most critical substantive issues in pursuing Constitutional litigation. This includes the history and purposes of section 1983; the elements of constitutional torts; rules governing liability of government officials and municipal liability; immunity doctrines; remedies; jurisdictional and procedural barriers to section 1983 litigation; and recovery of attorney's fees. The class also discusses the availability and viability of alternative remedial mechanisms to section 1983. Prerequisite: LAWS 4164.

**LAWS 4169 Constitutional Law Writing Seminar (3 Credits)**

This course satisfies the Upper Level Writing requirement (ULM). Permission by instructor only.

**LAWS 4175 Contracts (4 Credits)**

Consideration of the restatement of contracts and the relevant provisions of the Uniform Commercial Code. Legal protection accorded contracts: remedies and measure of recovery; damages; specific performance; restitution. Elements of agreement: preliminary negotiations; agreements unenforceable for indefiniteness; mutual assent. Consideration and the seal; bases of contractual liability; consideration; reliance and estoppel; mutuality. Problems of offer and acceptance; termination of offeree's power of acceptance; contracts concluded by correspondence; unilateral contracts—notice, knowledge, revocation of offer; contracts implied from conduct. Special problems of consideration. Third-party beneficiaries. Assignment. Effects of changes or unforeseen circumstances. Conditions in contracts—problems of draftsmanship: express and implied conditions; conditions precedent, subsequent and concurrent; severability of contract provisions. Procedures after default. The Statute of Frauds.

**LAWS 4178 Contracts Drafting (3 Credits)**

This course addresses the perspectives and skills that a lawyer must develop in order to assist clients with transactional work and aligning business objectives and contracts. In addition to delving deeper into selected areas of substantive contract law, students read materials that focus on writing and interpreting contractual provisions. Because a core focus of the class is writing for contracts, students regularly engage in drafting exercises to hone their drafting skills. The course also focuses on negotiation in a transactional setting, and how discussions with both clients and other parties can distill the key business terms that are to be reflected in a contract. Although substantive law and theory is utilized throughout the course, the primary objective of the course is exposing students to some of the practical, real-world skills essential to a transactional law practice.

**LAWS 4179 Construction Law (3 Credits)**

This course examines the legal relationships, obligations, rights, and remedies that govern the diverse parties to a construction project, including owners, lenders, contractors, material men, sureties, insurers, subcontractors, laborers, and others. A substantial portion of construction law (and accordingly, the primary focus of this class) is advanced contract law. Experience in the construction industry is not required, but those students who are unfamiliar with construction will benefit from spending a little extra time learning basic construction concepts and processes.

**LAWS 4181 Corporate Drafting Seminar (3 Credits)**

Corporate drafting focuses on writing responsive, lucid, unambiguous corporate documents. Students assume the role of the in-house counsel and other members of the corporate negotiating team as the team structures, negotiates, drafts, and implements corporate transactions. This course requires extensive writing. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4182 Negotiation and Drafting in an International Business Context (4 Credits)**

This course will focus on the basic principles of negotiation and contract drafting, as applied to international business transactions. Special emphasis will be placed on financial and corporate contracts, with a focus on a cross-border merger and acquisition transaction. The class will have three major components. First, we will cover the basic principles of effective contracts negotiation, paying particular attention to issues of cultural understanding and inter-cultural communication. Second, we will cover the basic principles of clear and unambiguous contract drafting and we will study and apply the basic 'geography' or building blocks of a cross border merger contract. Finally, we will draft and revise specific documents and agreements necessary to complete a cross border merger transaction. The seminar is taught through a combination of lectures, simulations, and hands-on drafting and negotiation exercises. This class requires extensive writing and team-based negotiations.

**LAWS 4185 Business Entities (4 Credits)**

The course provides an overview of the differences in the operation of a trade or a business as an LLC/LLP, an S-Corporation and a C-Corporation. The class offers an overview of the state law requirements for the operation of each type of business (Model Business act and LLC/LLP state statutes) and the difference in the tax treatment for each type of business. The objective is to give students a basic understanding of some of the do's and don'ts for each business and how they might advise a client as to the preferred business form in typical factual situations. The class explores both the legal and tax effects during the life cycle of any business, including formation, operation, distribution, redemption, sale of an interest, liquidation, mergers and divisions, and the death of the owner. Prerequisite: LAWS 4100.

**LAWS 4186 Corporate Taxation I (3 Credits)**

The federal income taxation of corporations and their shareholders with emphasis on the creation of the corporation, establishment of its capital structure, operational alternatives, distribution to shareholders, stock dividends and redemptions, personal holding company, and accumulated earnings tax. Cross listed with TAX 4200.

**LAWS 4187 Corporate Taxation II (3 Credits)**

A continuation of Corporate Taxation I with emphasis on corporate reorganizations, operation, liquidation of subsidiary corporations and corporate division, and carryover of tax attributes. Cross listed with TAX 4300. Prerequisite: LAWS 4186.

**LAWS 4188 Corporate Taxation III (3 Credits)**

Advanced corporate taxation problems with emphasis on collapsible corporations; liquidations; detailed study of sections 305, 36, 307; loss carryovers and Subchapter S corporations. Cross listed with TAX 4330. Prerequisite: LAWS 4186.

**LAWS 4190 Corporations (4 Credits)**

Corporations provides students with a basic introduction to corporations, including the roles of shareholders and creditors. The instructor also covers the various duties and liabilities of officers and directors, and supplies a brief overview of the applicability of the federal securities laws.

**LAWS 4195 Criminal Law (4 Credits)**

The course explores the definition of crime and criminal liability.

**LAWS 4197 Victim's Rights (3 Credits)**

Victim's rights has emerged as an important arena for the criminal justice field in the 21st Century. Anyone planning a career in criminal justice will want to engage in this seminar class to learn about the law and its application to victim's rights. This class is designed to explore beyond advanced criminal procedure the role of the criminal justice system and its response to victim's. In-depth discussions will be held about victim's rights and criminal procedure.

**LAWS 4200 Criminal Procedure (3 Credits)**

Criminal Procedure outlines Constitutional and other rules regulating pretrial evidence acquisition by government officials in criminal matters. The course commonly includes the following topics: an overview of criminal justice administration; arrest; search and seizure; the exclusionary rule and its administration; wiretapping electronic eavesdropping; entrapment; interrogation; and confessions and lineup practices.

**LAWS 4201 Death Penalty Jurisprudence (3 Credits)**

The course is designed to make students aware of the substantive body of law surrounding the modern death penalty and the policy issues raised by the law. The course begins with the class constructing a fair death penalty. Students decide whether they, as the omnipotent legislature, want a death penalty. Then, students construct one that is fair, just and humane, and that achieves the goals that they have established for their death penalty.

**LAWS 4202 Disability Law (2-3 Credits)**

This course covers theories of disability and provides a brief history of disability rights in the United States. The course will explore the major federal laws protecting individuals with disabilities in various contexts such as housing, public accommodations, schools, and employment. Relevant federal statutes we will examine include Section 504, the Americans with Disabilities Act, the Fair Housing Act, and the Individuals with Disabilities Education Act. The course will also provide an overview of the Supreme Court's landmark decision in *Olmstead v. LC*.

**LAWS 4203 Elder Law (3 Credits)**

The course explores a range of issues relevant to legal counseling of elderly clients, such as mental and physical impairments, public assistance, Medicaid, social security, nursing homes, guardianships, trusts, and right to die issues.

**LAWS 4205 Employment Law Survey (3 Credits)**

This course provides a broad overview of the field of employment law. It begins with an exploration of the employer/employee relationship and the "at will" rule. It then addresses various constitutional, statutory, and common law doctrines that tend to be applied to the employer/employee relationship, often as exceptions to the "at will" rule. Contract, tort, and anti-discrimination doctrines will be covered, as well as constitutional doctrines addressing free speech and privacy in the workplace, and regulatory regimes addressing wages and hours. Finally, this course explores the post-employment relationship, including trade-secrets and non-competition agreements. These topics are addressed at both a theoretical and practical level.

**LAWS 4206 Environmental Law Clinic (3-6 Credits)**

The goal of the Environmental Law Clinic of the Student Law Office (SLO) is to protect the environment and public health, while teaching students practical legal skills that will translate into any practice area. Students applying for the Environmental Law Clinic are asked to select between two tracks: the Federal Wildlife Project or the Colorado Urban Project. Students who select the Federal Wildlife Project (FWP) track in the Environmental Law Clinic will work on the preservation of endangered species and their habitats throughout Colorado and the western United States. Students who select the Colorado Urban Project (CUP) track in the Environmental Law Clinic will work to address the emerging environmental issues along Colorado's urban Front Range. This course may satisfy the Upper Level Writing Requirement (ULW). Corequisite: LAWS 4802. It is recommended, but not required, that students complete Evidence and Legal Profession before registering for this clinic.

**LAWS 4210 Energy Law (3 Credits)**

Energy Law presents the regulation of production, conversion, transportation, distribution and pricing of fossil, hydro, nuclear, and other conventional sources of primary energy. It also offers insight into the regulation of renewable energy resources, including energy from the sun, wind, biomass, oceans, earth (geothermal), and rivers (including low-head hydro). There is an emphasis on new legislative and judicial development relating to these various energy sources. The course is taught in a seminar format, and students present and critique classmate papers as part of the class. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4212 Public Interest Capstone (0 Credits)**

This is a zero-credit opportunity for JD students nearing graduation that will allow for the informal community building that is so critical for sustaining student commitment and public interest attorneys for the long term. It will be a time for sharing, reflection, camaraderie, and connections, as well as advising and planning for a career in the public sector.

**LAWS 4214 Copyright Law (3 Credits)**

This course covers the major copyright law doctrines. Topics include the subject matter of copyright, the scope of protection, rights conferred, infringement doctrines, defenses, remedies, and attention to particular industries and recent development in the law. Recommended prerequisite: LAWS 4310.

**LAWS 4215 Entertainment Law (3 Credits)**

Entertainment Law focuses on issues that have an impact on the entertainment industry. Topics include copyright; service and trademark; licensing; publishing; unfair competition; antitrust; agency; and labor law. The class also explores publishing agreements.

**LAWS 4218 Discovery Practicum (3 Credits)**

Most civil litigations never get to trial. Instead, these cases are settled after the discovery period has revealed the strengths and weaknesses in the case. This course focuses on the instruments, rules, and case law governing discovery of information in litigation: interrogatories, document requests, requests for admissions, and depositions. It is taught in the form of a "whole-course simulation," which means students will represent a party and have an opposing counsel in a simulated litigation throughout the course. Students prepare and serve discovery documents (just as in practice), take, defend, and act as a witness in a deposition, and reach a settlement of the case at the end of the course. Because of the nature of the course and the many practice documents prepared during the semester, there is no final examination. This course will satisfy the Upper Level Writing requirement (ULW). This course is a "Carnegie Integrated Course."

**LAWS 4219 Environmental Justice (3 Credits)**

This course will introduce students to environmental injustice - the disproportionate environmental impacts to low-income and of color communities. The study of environmental injustice delves into environmental, civil rights and poverty issues. Specifically, environmental justice seeks to remove these disproportionate impacts through a combination of laws, most notably civil rights, environmental and tort. Students completing this course will understand what environmental injustice is, the history of the Environmental Justice movement in the United States and the tools used to try to level the playing field regarding environmental justice decision-making. The class will include hands-on exposure to those facing such environmental injustices. The grade for this course will be based on class participation, short assignments and a final paper.

**LAWS 4220 Environmental Law (3 Credits)**

Environmental Law covers the major federal laws and programs for environmental protection. These laws and programs include the National Environmental Policy Act; Clean Water Act; Clean Air Act; Resource Conservation and Recovery Act; and Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Although the course focuses primarily on federal statutory law, it also incorporates some discussion of common law remedies. Recommended prerequisite: LAWS 4025.

**LAWS 4221 Navigating the National Environmental Policy Act (NEPA) (2 Credits)**

The National Environmental Policy Act (NEPA) was the first major environmental law enacted in the United States, requiring Federal agencies to evaluate the environmental impacts of their proposed actions prior to making decisions. Both scorned and praised, familiarity with NEPA is must-know territory for any environmental lawyer. This class will leave you with a solid understanding of NEPA regulations and caselaw, categorical exclusions, environmental assessments and environmental impact statements, public involvement and public comment, interaction with other environmental laws and processes, recent and far-reaching streamlining efforts, how to write a NEPA document, and advice for working with Federal land management agencies.

**LAWS 4224 Employment Law Benefits (3 Credits)**

This course is a statute and case law course that introduces students to Employment Retirement Income Security Act (ERISA), the important federal law that controls the design and operation of virtually all employee benefit plans. The course offers students an understanding of the application of ERISA and how ERISA issues arise in business and private law practice. The classroom scenarios include lecture, problem solving and role playing to identify the kinds of experiences students are likely to experience in private practice.

**LAWS 4225 Estate and Gift Taxation (3 Credits)**

This class is a study of the federal estate tax; federal gift tax; and federal generation skipping transfer tax.

**LAWS 4227 Employment Discrimination Law (3 Credits)**

This course concerns federal constitutional and statutory law that prohibits discrimination in the workplace, including regulation of both private employers and the federal government. The course covers theoretical issues, such as the definition of equality, and practical problems that involve the complex procedural requirements of the applicable statutes.

**LAWS 4229 Employment Law Seminar (3 Credits)**

Students select topics relating to current issues in labor and employment law and will write publishable articles based on independent research. Students present their papers to the class toward the end of the semester. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4230 Estate Planning (2 Credits)**

Estate analysis, including fact gathering and the analysis of data; the psychological aspects of "role playing" in estate planning; the members of the team (the attorney, the CPA, the life underwriter, the trust officer); life insurance in an estate and business planning context; planning with trusts, including revocable, short-term, and irrevocable; the transfer of a closely held business interest from one generation to the next, including full and partial stock redemptions, cross purchase agreements, private annuity, installment sale, retirement, recapitalization, qualified and nonqualified plans of deferred compensation; special estate planning considerations for the professional corporation, the highly paid executive, and the farmer and rancher; specific cases analyzed.

**LAWS 4232 European Union Law (3 Credits)**

The European Union (EU) has been described as the 21st century's newest superpower. Bearing in mind the rapidly growing importance of the EU, this course introduces EU law, and emphasizes its historical underpinnings, institutional framework, legal procedures, and internal market. Moreover, emerging policies (e.g. enlargement, environment) are considered. The course examines these topics in the context of European political integration and where appropriate, the ongoing tension in the trans-Atlantic relationship between the EU and United States.

**LAWS 4235 Evidence (4 Credits)**

This required course is an introduction to procedural rules that regulate the use of evidence at trial, including coverage of the mode of examination, relevance, impeachment, character evidence, hearsay, expert evidence, and privileges. Particular attention is paid to the Federal Rules of Evidence. Non-JD students must request permission to register. Non-JD students must request permission to register.

**LAWS 4236 Election Law (3 Credits)**

This course examines federal and state election laws. Topics to be covered include the Voting Rights Act, redistricting, the Electoral College, gerrymandering, ballot initiatives, and campaign finance. Time permitting, we'll also cover open records laws and regulations around lobbying.

**LAWS 4237 Evidence Practicum (3 Credits)**

This practicum is designed to help students build trial skills and make the transition from evidence law learned in the classroom to evidence used in the courtroom. It provides simulation-type experiences requiring students to understand the foundations required to admit different kinds of evidence, to anticipate evidentiary issues, to make and to respond to objections, and to prepare examinations designed to avoid objections. The course supplements Trial Practice by focusing heavily on the rules of evidence. Prerequisite: LAWS 4235.

**LAWS 4238 Exempt Organizations (2 Credits)**

The statutory exemption for "charities," social welfare and social clubs, homeowners' associations, fraternal orders, employee benefit organizations, mutual or cooperative companies, business and professional leagues, labor unions, exempt organizations, property title companies, federally organized or chartered organizations, and political organizations' activities, funds, and lobbying activities; prohibited transaction rules; the private foundation; the unrelated business and debt-financed income tax exposures; excise tax exemptions; administrative appeal and declaratory judgment procedures; anti-discrimination considerations; charitable contributions. Crosslisted with TAX 4430.

**LAWS 4240 Family Law (3 Credits)**

This course is an examination of laws that involve and/or regulate families. Students learn the legal rights of families in cases incidental to marriage or without marriage. This includes child-parent relationships and the dissolution of marriage. This class also provides students with an understanding of new familial relationships.

**LAWS 4250 Federal Courts (3 Credits)**

This is an advanced public law course that examines the role of the federal courts in our constitutional system. It focuses on the federal courts' role and power in relation to the other branches of the national government (separation of powers) and in relation to state and local governments (federalism). Specific topics include: the organic judicial powers of the federal judiciary, including Article III's Case or Controversy requirement; congressional power to restrict or expand federal jurisdiction, the Supreme Court's power to review state court rulings on federal law by direct appeal and on collateral review (habeas corpus), federal question jurisdiction, federal civil rights law under 42 U.S.C. § 1983, and many of the doctrines that limit federal judicial power to provide remedies to parties whose federal constitutional and civil rights have been violated, including official immunity, state sovereign immunity, and the abstention doctrines. It is highly recommended for students interested in pursuing federal judicial clerkships and/or careers in federal civil rights litigation, government representation, or other federal litigation.

**LAWS 4251 Wildlife Law (3 Credits)**

This course covers wildlife law, with a focus on federal wildlife law. The course will cover the constitutional underpinnings of federal wildlife law and its core statutory framework, as well as looking at different conservation approaches. Time permitting, the course will also cover some state and international wildlife law.

**LAWS 4259 Global Climate Change Law and Policy (3 Credits)**

As concern over the threat of global climate change spreads, action on greenhouse gas emissions (GHGs) is increasingly commanding attention. This seminar consists of supervised research and writing on the issue of climate change and the legal and policy responses. The course focuses on the effects of climate change on development and the environment in industrialized and developing countries and the laws in the international, regional and domestic arenas that address the problem.

**LAWS 4260 Gender and the Law (3 Credits)**

This course examines the role of gender in many areas of the law, including employment discrimination and reproductive rights. Provides perspectives on the effects of gender-based hierarchy on the structure of the law and legal processes. Explore contemporary feminist jurisprudence and the impact of women in the legal profession.

**LAWS 4262 Sexual Orientation Law Seminar (3 Credits)**

This seminar offers an opportunity for students of any or no sexual orientation to study the relationship between law and sexual orientation. Historically, law in the United States consistently and pervasively regulated the realm of human identity and behavior we call sexuality. Questions and claims challenging traditional assumptions about sexual orientation surfaced in the last twenty-five years. Our study of sexual orientation and law allows us to view the relationship between law and society through a new lens, that of sexual orientation. Specifically, we examine issues of sexual orientation arising in areas ranging from constitutional law criminal law, employment law, family law, health law, immigration law, to tax law. We discuss some or all of the currently controversial issues relating to sexual orientation and law, including such topics as the proliferation of both nondiscrimination laws and anti-gay initiatives like amendment 2 in Colorado, the constitutionality of laws prohibiting specified sexual behavior between different-sex and same-sex adults, the constitutionality of laws limiting the right to speak about sexual identity, public and private employment discrimination against gays and lesbians including the military ban on persons who are openly gay or lesbian, and discrimination against same-sex couples with respect to marriage, parenting, health benefits, and taxes.

**LAWS 4265 Government Contracts Seminar (3 Credits)**

This seminar provides an in depth examination of the unique statutory, regulatory and administrative process used by the U.S. Government when it annually spends more than \$1 trillion taxpayer dollars to contract for goods and services used by Federal departments and agencies. Topics include the contract award and contract administration processes, with an emphasis on practical solutions to issues which routinely confront attorneys who advise businesses that do business with the Government.

**LAWS 4270 LLCs and Operating Agreements (1 Credit)**

This course provides an overview of limited liability companies, including the attributes and characteristics of LLCs, the pros and cons of the LLC form, and a comparison of LLCs to other types of entities. The course also covers the structure and components of the operating agreement, including an in-depth examination of various provisions included in operating agreements. In conjunction with the course content, students will also be exposed to client interview techniques for in person client meetings, as well as client conference calls.

**LAWS 4276 Health Law (3 Credits)**

This survey course introduces students to how the legal environment of health care shapes both its quality and its distribution. The course begins with a foundation in how health care is both provided and financed in the U.S., including managed care, Medicare, and Medicaid. This foundation sets the stage for studying the laws and policies that impact health law, including ERISA, antitrust, fraud and abuse, the False Claims Act, Stark, and HIPAA. This course does not focus on bioethics or medical malpractice. Students must submit a publishable quality paper on a health law topic approved by the professor.

**LAWS 4277 Holocaust Seminar (2-3 Credits)**

This class focuses on conceptions of individual and state accountability. By understanding how the Holocaust occurred, and how individual and collective acquiescence combined with affirmative conduct, we can begin to grasp the complex web that created a moment in time where morality and civilization were abdicated and almost eradicated. We examine how law, culture, power, ignorance and fear combined to create the Final Solution, and how conceptions of moral agency and accountability were forged in flames that marked the death camps. Students read narratives of resistance and collaboration and historical accounts of how the U.S., Europe and religious institutions interacted with the Third Reich. Through the readings and discourse that follow, students have the unique opportunity to question what constitutes moral agency and how individuals and cultural systems should be held accountable for circumstances that created the Third Reich and its ideology. This class is interdisciplinary thereby integrating law with literature, political theory and philosophy. Prerequisite: instructor's permission.

**LAWS 4278 Lawyering for Racial Justice (1 Credit)**

This seminar provides a unique opportunity for Denver Law students to earn one credit by studying a significant topic related to the law and racial justice. The seminar will allow students to begin to develop 1) a substantive understanding of the application of critical race theory to a variety of contemporary legal and social issues, and 2) a sense of professional identity through the examination of lawyering practice in the context of critical race theory. Topics discussed generally change each semester to respond to current events and pressing needs and interests. The course may include guest lectures from faculty and practitioners in other disciplines. Students will thus have an opportunity to interact with an array of professors who have expertise and interest in critical race theory and practice.

**LAWS 4279 Access to Justice (3 Credits)**

This class will explore the justice gap in the United States, focusing primarily on the civil side. We will first consider what has caused the dearth of legal services available to low and moderate income people. We will then examine what solutions states have tried to address the justice gap and why those solutions have been only modestly effective. Finally, while the class is focused primarily on the civil justice gap, we will spend some time discussing the inadequacy of criminal representation for indigent defendants.

**LAWS 4280 Huges Research Seminar (1-5 Credits)**

Topic of Seminar to be determined by Hughes Research professor teaching the course.

**LAWS 4285 Legal Research Skills - Specialized (0 Credits)**

This zero-credit course introduces students to sources and methods for administrative law and legislative history research as well as subject-specific research on selected topics such as securities, natural resources, intellectual property, immigration, environmental and international law. Topics change each semester. Print and electronic materials are used throughout the course. Students must attend twelve (12) classes and pass the post-class assignments to complete the course successfully.

**LAWS 4287 Legal Research Skills - Basic (0 Credits)**

This zero-credit course introduces students to the basic primary sources of American law (cases and statutes), secondary sources, the Bluebook and citators and other tools for updating research. Print and electronic materials are used throughout the course. Students must attend eight (8) classes and pass the post-class assignments to complete the course successfully.

**LAWS 4288 International and Human Rights: Indigenous Peoples (3 Credits)**

This course explores some of the major contemporary legal issues facing indigenous peoples across the globe. The course covers issues as far ranging as: how indigenous groups are defined under the law; ethical and legal issues pertaining to indigenous self-governance including the tension between minority rights, individual rights, and democratic precepts; the uneasy application of self-determination law to indigenous self-governance; the implications of human rights, environmental, intellectual property, and international trade regimes for indigenous peoples; and international legal texts affecting indigenous peoples, such as the United Nations Declaration of the Rights of Indigenous Peoples. At the option of the individual student, this course can be used to satisfy the Upper Level Writing requirement (ULW).

**LAWS 4289 Legal Research Skills - International (0 Credits)**

This zero-credit course introduces students to sources and methods for international, comparative and foreign law research. Topics may include treaty research, international trade law, human rights law, international intellectual property law, customary international law and private international law. Topics change each semester. Print and electronic materials are used throughout the course. Students must attend twelve (12) classes and pass the post-class assignments to complete the course successfully.

**LAWS 4290 Human Rights Law (2 Credits)**

The course provides an introduction to international civil and political rights and economic, social, and cultural rights in the international arena. It also covers the means available to protect such rights of the individual and groups. The focus is on the implementation part at the United Nations and other international, regional and national settings. Prerequisite: LAWS 4320.

**LAWS 4292 Individual Tax Problems (3 Credits)**

Using the Internal Revenue Code and the Federal Income Tax Regulations as a basis, substantive issues relating to individual taxation are covered. Areas included are general concepts of gross income, individual employee benefits and deductions, charitable deductions, alternative minimum tax, deductibility and classes of interest, office in home and vacation homes, and a general overview of the interrelationships of various statutory and non-statutory principles. Cross listed with TAX 4020.

**LAWS 4295 Immigration Law (3 Credits)**

This is a study of the historical development and current jurisprudence in American immigration law. The course examines such concepts as sovereign authority, exclusion, expulsion and asylum, and current developments in the area.

**LAWS 4297 Forced Migration & Human Trafficking (3 Credits)**

This course will examine the laws and policies governing forced migration. Students will get an overview of the scale, scope, and causes of forced migration, and will explore what it means to be a refugee according to the international conventions and U.S. law. We will ask and try to answer questions including: what conduct constitutes "persecution"? How is someone fleeing violence different from a refugee? What kinds of durable solutions exist to address the refugee crisis? In this participatory class students will also learn about human trafficking and the national and international efforts to respond to this crime. In addition to the normal substantive course work, students are required to observe 4-6 hours of refugee-related hears at the Executive Office of Immigration Review in Denver.

**LAWS 4298 Immigration Law Advanced (3 Credits)**

This course provides theoretical and practical approaches to the representation of non-citizens in removal proceedings. This course is designed for students who have an interest in practicing immigration law with a focus on deportation and removal practice before the Department of Homeland Security, the Executive Office for Immigration Review, and the federal courts. The goal of this course is to give students a theoretical framework for identifying and assessing immigration issues, including immigration consequences of criminal convictions, and for formulating strategies for effective prosecution and representation of non-citizens in removal proceedings. The instructor also teaches the practical tools and procedures, which students may apply to actual case representation. Prerequisite: LAWS 4295 or an immigration related externship.

**LAWS 4300 Native American Tribes and Federal Law (3 Credits)**

This course introduces the legal relationship between Native American tribes and the federal government. This body of law, consisting of hundreds of treaties and Presidential executive orders, thousands of Congressional statutes, and tens of thousands of reported court decisions, is also known as Federal Indian Law. The course explores the legal development of Native American tribal sovereignty and self-determination from the British Crown to the present day, including tribes' rights to land and natural resources; the federal government's trust responsibility to tribes; tribe's inherent powers of self-government; modern civil and criminal jurisdiction; the relationship of tribes to state and local governments; the federal government's legal obligation to consult with tribal leaders on decision-making by executive branch departments and agencies, including with respect to cultural resource protection; and the legal and political status and civil rights of individual Native Americans and Alaska Natives in the federal constitutional system.

**LAWS 4303 International Criminal Law Practicum (3 Credits)**

In this course, the class collectively analyzes the genocide, war crimes and crimes against humanity charges against an accused in a major international tribunal prosecution. Each student is assigned witnesses in the case and is expected to analyze that testimony and record their work in the case database using Casemap software meticulously following previously established protocols. The work involves the students learning the nature of the conflict generally, thoroughly learning the indictment against Taylor, getting up to speed on the law of war crimes and crimes against humanity, and finally assessing the witness testimony for relevant facts and attributing those facts to the legal outline in the case.

**LAWS 4304 Insurance Law (3 Credits)**

A comprehensive overview of laws, standards, concepts and remedies related to Insurance, including: interests protected by Insurance; selection and control of risks; insurable interest; the principle of indemnity; types and classifications of Insurance; making, dealing with and termination of insurance contracts; underwriting and claims handling; regulation of Insurance and insurers; subrogation; and extra-contractual liability. This course will satisfy the Upper Level Writing requirement (ULW).

**LAWS 4309 International Law and the Use of Force (3 Credits)**

This course deals with the two aspects of the use of force by countries: the initial decision to resort to force and then the regulation of that force once the conflict begins. In 1945, the United Nations Charter set out to prohibit the resort to force by its member states except in two limited situations: self-defense or where authorized by the Security Council. The Geneva Conventions and its protocols, as well as customary international law, regulate how that force is applied. The subject of this course is how these provisions have been interpreted since 1945 and trends in the law that will guide us in the future.

**LAWS 4310 Introduction to Intellectual Property (3 Credits)**

This survey course covers the basics of United States intellectual property law, including patents, copyrights, trademarks, and trade secrets. The course addresses the policies underlying the protection of intellectual property and compares the different ways organizations and individuals can use intellectual property to protect their interests. This course is intended both for students who want an introduction to intellectual property and for those who intend to pursue a career in intellectual property law.

**LAWS 4315 International Business Transactions: Survey Course (3 Credits)**

This course provides students with a general overview of international business transactions. The course examines the legal framework of international sales transactions including the commercial terms of the sales agreements, shipping contracts, insurance, financing arrangements and customs documentation. The course also examines the foreign direct investment transaction, international franchise and distribution agreements. The regulation of international business is reviewed, with special attention to the World Trade Organization agreements and regional trade areas.

**LAWS 4317 International Environmental Law (3 Credits)**

This is an introduction to International Environmental Law – the expanding field of multi-nation treaties, laws, judicial decisions, policies, practices, and politics governing the global environment. IEL backgrounds students on the 21st century's hottest international law topics – sustainable development, climate change, transboundary air and water pollution, natural resources development, international trade, toxic waste and recycling, and protection of wildlife, ecosystems, human life, and human rights.

**LAWS 4318 International Business Transactions: Federal Regulation (3 Credits)**

IBT: Federal regulation examines the ability of the federal government to control international trade. The focus of the course is US export controls, embargoes, anti-terrorism regulations that apply to international commerce, and the Foreign Corrupt Practices Act. Students prepare a compliance program integrating these regulations into a workable framework for a company.

**LAWS 4319 International Human Rights (3 Credits)**

The seminar begins with a general overview of international human rights as put forth in the International Bill of Rights. The second part of the course focuses on the emerging area of corporate social responsibility and human rights. The last part of the seminar consists of student presentations on the topics of the research papers required for the course.

**LAWS 4320 International Law (3 Credits)**

International Law is the foundational course in public law, treaties, systems, and policies that bind nations into a world community of law. The class places special emphasis on the origins of international law; statehood; international responsibility and claims; use of force; and human rights.

**LAWS 4341 International Commercial Arbitration Moot (3 Credits)**

This course uses the Willem C. Vis International Commercial Arbitration Moot Competition to give students practical skills-based training in the most important aspects of international commercial arbitration and international sales law. The Vis Moot is based on a problem governed by the U.N. Convention on Contracts for the International Sale of Goods (the "CISG").

**LAWS 4342 International and Comparative Mining Law (3 Credits)**

The course deals with basic concepts of mineral law, as practiced in various jurisdictions. This includes exploration, mining and environmental protection and reclamation issues. It then focuses on the current evolution and legal and policy status of mining legislation, mineral investment agreements, and major actors. Students completing this course develop a basic understanding of the general approaches, legal frameworks, policies and agreements used to regulate the mining industry in key jurisdictions outside the United States. This course is taught in Spanish.

**LAWS 4343 International and Comparative Petroleum Law (3 Credits)**

The course deals with basic concepts of international law relating to petroleum investment, current elements of petroleum legislation, and petroleum investment agreements (production-sharing, concession, joint venture, service, management contracts). Also, students explore such aspects of petroleum law as dispute settlement and legal status. The instructor will discuss the major actors (international petroleum companies, state petroleum enterprises, Ministries of Energy) and their legal and policy status. Students completing the course leave with a basic understanding of the general approaches, policies, and agreements used to regulate the petroleum industry in key selected jurisdictions outside the United States.

**LAWS 4344 International Tax (3 Credits)**

Introduction to U.S. international taxation with an equal emphasis on inbound and outbound transactions. Resident and nonresident alien taxation, withholding taxes, effectively connected (business) income, foreign investment in U.S. real estate, tax treaties, branch taxes, earnings stripping, conduit financing rules, foreign earned income exclusion, classification of foreign entities, foreign tax credit, foreign personal holding companies, controlled foreign corporations, passive foreign investment companies, export transactions, Subpart F manufacturing rules, outbound property transfers, and transfer pricing. Cross listed with TAX 4420.

**LAWS 4345 Jurisprudence (3 Credits)**

The course is designed to introduce several contemporary modes of legal thought. The course is an exploration and critical evaluation of these differing perspectives on law are pursued to foster an understanding of the interdependency between legal philosophy and legal decision process, the role law plays in our culture, and the social and philosophical impediments to law's effectiveness.

**LAWS 4346 International Sales (3 Credits)**

This course will examine the laws governing the international sale of goods, including the Unidroit Principles, the relevant rules adopted by the United Nations Commission on International Trade Law, the Convention on the International Sale of Goods (CISG), and the International Chamber of Commerce (ICC) Modern International Sale Contract. Special emphasis shall be given to the CISG as well as to comparing the law of international sale of goods with United States contract law. Issues such as international payments methods, letters of credit, customs clearing procedures, and dispute resolution will also be discussed. Two large topics - (1) the CISG and (2) letters of credit and other means of financing cross-border transactions - comprise the bulk of the course.

**LAWS 4347 International Environmental Law in Latin America (2 Credits)**

This course examines the role of international law in promoting cooperative solutions to some of the most pressing environmental problems confronting the planet. The course begins with an introduction to the international law framework within which international environmental law has developed, and emphasizes the relationship between international environmental law and international human rights law. The course then uses several case studies to analyze the legal regimes that have developed to address environmental problems of particular relevance to Latin America, including protection of biodiversity, climate change adaptation and mitigation, and protection of water resources. This course is taught in Spanish.

**LAWS 4348 International Criminal Procedure and Practice (3 Credits)**

The International Criminal Court and the various international and internationalized tribunals such as the International Criminal Tribunal for Rwanda and for the former Yugoslavia prosecute a unique and evolving set of international criminal laws designed to end the impunity of military and political leaders engaged in mass violence. The post-World War II Nuremberg trials were the first attempt to use tribunals to hold individuals criminally responsible. Later, the Nuremberg present was the basis of the creation of ad hoc war crimes tribunals for the former Yugoslavia and Rwanda in the early 1990s, which then opened the door to other tribunals such as the Special Court for Sierra Leone, the Extraordinary Chambers for Cambodia and the International Criminal Court. The practitioners of the tribunals represent the range of cultures, mores and legal traditions of the world. These varied experiences create different expectations as to the conduct of proceedings and what amounts to procedural fairness. This course studies the rules of procedure and practice that have developed at the international tribunals in the multi-cultural context.

**LAWS 4350 Juvenile Law (3 Credits)**

This course examines the legal parameters surrounding juveniles. Students gain a basic understanding of juvenile law, such as the legal definition of who is considered a child and the allocation of power between the state, parent(s), and the children. The class examines what protection the Constitution provides children and the historical development and philosophy of juvenile justice to understand the foundation of juvenile law. The focus of the class also includes an examination of rights of abused children and children who are delinquents and status offenders.

**LAWS 4351 International Mergers and Acquisitions (3 Credits)**

Using recent articles as case studies, students will consider what motivates corporations to undertake cross-border acquisitions and divestitures, why most transactions ultimately fail to meet expectations, and how lawyers structure transactions to avoid these pitfalls, including (i) corporate forms worldwide (corporations, partnerships, LLCs); (ii) the timeline of M&A transactions from the initial idea through transfer of ownership and the 5 years thereafter; (iii) forms of acquisition (merger, asset purchase and stock purchase); and finally (iv) negotiation of the pertinent legal documents. This course has become increasingly relevant as the world becomes less open and congenial, while businesses continue to seek geographically and culturally diverse markets. This course is appropriate for both students with no business background and students with extensive business and legal experience.

**LAWS 4355 Labor Law (3 Credits)**

Labor Law provides a background of modern labor relations law and union pressures with an historical review of the laws that shape this field. Laws covered include the National Labor Relations Act; National Labor Management Relations Act; Labor-Management Reporting and Disclosure Act of 1959; Civil Rights Act of 1964; employer unfair labor practices; union unfair labor practices; internal affairs of labor organizations; collective bargaining and settlement of labor disputes; and state labor legislation. Also, it explores employer and union labor practices and manners in which disputes concerning these practices may be resolved.

**LAWS 4358 Land Conservation Transactions (3 Credits)**

This course covers the fundamental law and principles related to land conservation. It is a research based class, and students are responsible for researching, presenting information and drafting regarding a specific conservation project. This course provides all the background necessary to allow students to conduct a meaningful research foray in and to create conservation easements for land conservation.

**LAWS 4360 Land Use Planning (3 Credits)**

This course examines government controls used in the regulation of land use and development and the urbanization of the built environment in cities and metropolitan areas in the United States. The course includes an analysis of state and local laws and federal constitutional issues related to the use of master plans, zoning and land development codes, growth management and smart growth development techniques, as well as the topics of subdivision regulation, eminent domain and urban renewal. Special problems in land use planning studied include exclusionary zoning, regulation of aesthetics, design controls and visual beauty, signs and billboard, religious land use, protection of natural lands and wildlife habitat, regulation of natural resources development, fair housing laws, and the protection of private property rights in the urban regulatory process.

**LAWS 4362 Latin American Law (3 Credits)**

This course seeks to provide students with a basic understanding of Latin American legal traditions. Intended for students who will come into contact with Latin American law in their work as lawyers, international civil servants, business executives and diplomats. The course examines the civil law tradition and constitutional law issues and current developments, such as Latin American economic integration, reform of the public sector, and the emergence of the Inter-American system for the protection of human rights.

**LAWS 4365 Law and Economics (3 Credits)**

This course is an examination of selected common law, regulatory law, and Constitutional law issues from the perspective of economic efficiency analysis.

**LAWS 4370 International Investments (3 Credits)**

The global investor is faced with a complicated task. He must deal with multiple currencies, multiple markets, multiple cultures, and multiple regulatory environments. However, the most important aspect of international investment is the use of multiple currencies. Accordingly, the first module of this course lays the foundation of foreign exchange rates: the basic facts of foreign exchange quotations, international parity conditions and arbitrage implications, and exchange rate forecasting. The second module covers the various assets and markets available for global investing: international bonds, equities, alternative investments, and optimal international portfolio selection. The third and final module develops risk control techniques available with derivatives: forwards, futures, options, and swaps. Overall, this course will emphasize conceptual understanding and applications, rather than lengthy theoretical exposition and mathematical analysis.

**LAWS 4371 International Investment Arbitration Practice & Procedure (3 Credits)**

International investment arbitration has a few names. It has been referred to as investor-state arbitration, investor-state dispute settlement (ISDS), and sometimes simply international arbitration. Investor-state arbitration is a powerful and relatively new form of dispute resolution. It largely originates from the many bilateral investment treaties (BITs) developed in the 1950s, and has expanded to larger and more complicated international treaties such as NAFTA, CAFTA, and the Trans Pacific Partnership (TPP). Today, this is the fastest growing field for international legal practitioners. Any international transaction with the characteristics of a foreign investment implicates investment treaties. With the development of new trade agreements such as the TPP and Transatlantic Trade and Investment Partnership (TTIP) the field will only continue to grow. This course is experiential in nature. It examines the field of investor-state arbitration from the perspective of an investment dispute. The class will simulate an investment dispute in the context of an International Centre for the Settlement of Investment Disputes (ICSID) proceeding. The course will move through a typical ICSID case from beginning to end (in an abbreviated format) and focus on key areas in the field of investor-state arbitration. This course will only be taught in the spring semester and serves as the gateway to the University of Denver Foreign Direct Investment Moot Team (<http://www.fdimoot.org>). Students with a strong interest in joining the FDI Moot Team and attending the FDI Moot as counsel the following fall semester will be given preference to join the class.

**LAWS 4373 International Practice and Procedure (3 Credits)**

This course is only open to members of the current Jessup Team and focuses upon the practice and procedure before the International Court of Justice. Students will examine the ICJ's history, organization, competence, and role as the primary judicial organ of the United Nations and permanent institution for the pacific settlement of disputes between States. The course will be split between both theory and practice, wherein students will study the major landmark cases of the ICJ affecting the practice of international law, and be exposed to the rules of procedure and style of practice before the ICJ through the use of a hypothetical contentious case between two States. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4375 Law and Society (3 Credits)**

The primary focus of this seminar is on law as a product of the structure of society. The subject matter can be divided into four distinct sections: 1) What factors affect the development of substantive law? This section examines the influence of values, beliefs and norms. 2) Given the existence of substantive law, what organizations develop to carry out the administration of law? Here concentration is on the phenomena classified as legal roles, organizations, institutions, and inter-institutional relations -e.g., juries, the legal profession, courts, legislature, etc. 3) How does law affect social behavior? and 4) What is the role of law in social change?.

**LAWS 4376 Law and Emerging Technologies (3 Credits)**

Technological innovations have created challenges for regulators and policymakers. This course focuses on recent emerging technologies and introduces law students to ways law interacts with technology. Students are encouraged to think creatively to address the current challenges and anticipate future legal impacts. It also familiarizes students with the recent legal scholarship in this field. Topics covered in this course include autonomous vehicles, AI and facial recognition, big data, digital privacy, deep fakes, platform governance, and quantum computing.

**LAWS 4378 Race, Class & Reproductive Justice (2,3 Credits)**

This course examines how race and class status affect women's reproductive rights and how both legal rules and medical practices in this area rely on stereotypes and enforce norms of "good motherhood" on women. Topics covered include some or all of the following: abortion, contract parenthood ("surrogacy"), cloning, sterilization, embryo freezing, pregnancy-based employment discrimination, criminal prosecutions of women for prenatal substance abuse, and court-ordered Cesarean sections.

**LAWS 4379 International Trade Law (3 Credits)**

This course examines the law of international trade in goods and services, focusing principally on the law of the World Trade Organization and the General Agreement on Tariffs and Trade. We examine the trading system's rules restraining national restrictions on trade that address, among other things, tariff and non-tariff barriers, discrimination, regionalism, anti-dumping, countervailing duties, and safeguards. The course also spends time considering the relationship between trade and other regulatory areas or social values, such as environmental protection, health and safety standards, human rights, intellectual property protection, and other facets of globalization. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4380 Hazardous Waste and Toxic Substances (3 Credits)**

This practical, hands-on course reviews the major federal environmental protection programs, with an emphasis on the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or "Superfund") and the Resource Conservation and Recovery Act (RCRA). It also covers Toxic Torts, Underground Storage Tanks, the Clean Water Act, Safe Water Drinking Act, and the Clean Air Act. Other materials may be distributed by the instructor on OSHA, NEPA, TSCA, OPA, the Colorado state voluntary cleanup program (VCUP), toxicology, and immunity issues. The course emphasizes practical application of major environmental laws. Students become familiar with statutory and regulatory schemes, and are expected to be able to identify environmental legal issues and apply environmental laws and regulations to hypothetical problems. JD student prerequisites: LAWS 4220, LAWS 4450, or LAWS 4495. LLM and MRLS student prerequisites: LAWS 4220, LAWS 4450, or LAWS 4495, or be registered to take any of these.

**LAWS 4382 Legislative Process: Institutions & Interpretations (3 Credits)**

This course is designed to be a three credit introductory course on the legislative process. This course focuses on theories of the process through an examination of theories of representation, theories of deliberation, direct democracy, and due process of lawmaking. Finally, this course will also explore legisprudence. Legisprudence explores theories of statutory interpretation and constitutional/statutory provisions which govern the political process and its participants. This course is intended to serve very practical goals. Students considering careers as legislative drafters, legislative staffers, elected officials, lobbyists or activists should emerge from this course with an understanding of the legislative process and a sense of how courts, agencies, and the executive branch are likely to interpret statutes. This course provides litigators with the tools to convince the courts that their interpretation of a statute is the correct one. For those students whose careers will require advising others about the meaning of statutes, this course helps provide the skills needed to perform that task.

**LAWS 4383 Doing Business-Latin America (3 Credits)**

Taught in Spanish, this course acquaints students with the legal framework of business transactions in Latin America. The course exposes students to the civil law system used in most Latin American countries and covers selected topics of importance to lawyers advising clients doing business, or seeking to do business in Latin America. Topics may include the development of Latin American law, types of corporate and partnership organization, trade law, foreign investment, intellectual property, taxation of foreign income, environmental and labor standards, and dispute resolution.

**LAWS 4385 Lawyering Process I (3 Credits)**

The Lawyering Process Course provides first-year law students with a foundation in the essential lawyering skills that are necessary to be an effective, ethical, and professional member of the legal community in a rigorous, supportive learning environment that uses a client-centered approach. The first semester focuses on introducing students to the legal system, legal research, and providing client advice through written analysis.

**LAWS 4386 Lawyering Process II (3 Credits)**

The Lawyering Process Course provides first-year law students with a foundation in the essential lawyering skills that are necessary to be an effective, ethical, and professional member of the legal community in a rigorous, supportive learning environment that uses a client-centered approach. The first semester focuses on introducing students to the legal system, legal research, and providing client advice through written analysis. The second semester builds on students' research, writing, analytical, and oral presentation skills in the context of advocating for a client.

**LAWS 4387 Professionalism and Well-being Skills for the Effective Lawyer (2 Credits)**

The objective of this course is to support professional identity formation and growth in the professionalism and well-being skills of future lawyers as they progress toward growing competence as professionals. The first half of the course focuses on law student well-being and optimizing brain health and mental strength to enhance performance. The second half of the course is devoted to the development of professionalism skills such as professional development, self-awareness, bias, social proficiency, wisdom, and leadership, essential attributes of a high-performance legal practice.

**LAWS 4390 Law and Neuroscience (3 Credits)**

In this survey course, we will cover some neuroscience basics, including a brief history of neuroscience, how neurons and neurotransmitters work, what is currently known about how the brain is organized, both structurally and functionally, how modern neuroscience views the so-called Cartesian dichotomy between emotion and cognition, and the basics of the most common types of neuroimaging. We will then explore the law and neuroscience of pain, memory, lie detection and criminal responsibility, discussing how neuroscientific discoveries might or might not change how the law handles these discrete problems, and the related evidentiary issues of how to get neuroscientific evidence admitted or excluded in cases involving these problems. We will finish, time permitting, with some speculations about artificial intelligence and neuroprosthetics.

**LAWS 4395 Military Law (3 Credits)**

This course will review the history, nature and sources of military law; the Uniform Code of Military Justice and the functions and procedures of military courts-martial, including the rights and status of military personnel. It will also cover an overview of the laws of armed conflict; national security and domestic application of operational military law; and the policies and international treaties affecting the detention and prosecution of enemy combatants and other foreign nationals. The course materials will rely on primary sources including statutes, cases, treaties, and selected law review and other articles, which will be provided electronically to each student. The course will review these military law topics with an emphasis on case studies and policy discussions in the context of recent current events.

**LAWS 4400 Lobbying Law (3 Credits)**

This course will focus on the role and nature of advocacy and lobbying before state and federal legislative and regulatory bodies. The areas will include but are not limited to the role of financing with emphasis on Citizens United, the issues involved in Department of Interior Policy and public lands, the structure and lobbying of new tax legislation, high frequency trading in securities markets, Dodd-Frank and the new regulations, the JOBS Act and crowdfunding, immigration law and border security, state legislative lobbying and healthcare lobbying. Some guest lecturers will be invited, including former cabinet members at the federal level, judges, former White House counsel, financial analysts who are lawyers, members of Congress and Senators. Students will be required to develop a lobbying and advocacy program in an area assigned by the Professor.

**LAWS 4410 Public Sector Employment Law (2 Credits)**

In Public Sector Employment Law, students will learn the law unique to public employment. Particular emphasis will be placed on constitutional legal claims brought under 42 USC Sec. 1983, including claims for violation of the freedoms of speech and association, equal protection, due process, and privacy. The class will also cover public administrative remedies, various governmental immunities, and open records laws. The course materials will be taught through a combination of traditional Socratic method and practical real world exercises, including the drafting of pleadings, interviewing of parties, and arguing of substantive legal motions.

**LAWS 4411 Mergers & Acquisitions (4 Credits)**

This course investigates the legal framework and strategies for structuring mergers and acquisitions ("M&A"). The class will be taught in the "modern learning" format to help students develop practical skills that will improve their readiness upon graduation for the practice of law in diverse business contexts. Among other topics, the course will address structuring various acquisition transactions, negotiating terms of the deal, drafting deal documents, conducting due diligence, advising boards on fiduciary obligations, interpreting relevant state law and federal securities laws, and exploring litigation to thwart potential business combinations. Throughout the course, students will engage in a variety of research, drafting, interviewing, counseling, and advocacy exercises. Through those exercises, group reflections on various assignments, and class discussions of other assigned readings, students will enhance their ability to think critically about a variety of M&A issues from both transactional and litigation perspectives. Pre-req: LAWS 4190.

**LAWS 4412 Sustainable Cities Practicum (3 Credits)**

Communities around the west are increasingly working to accommodate population growth without promoting sprawl. From transit oriented development in the suburbs to urban infill projects in the city center, cities are exploring ways of promoting new, more sustainable forms of development – sometimes in places that are not ready to accept increased density and amidst changing notions of what Americans really want. This course will explore issues of sustainability, as they relate to land use, and will help prepare students to work in the field of urban planning and development. Partnering with a local organization and utilizing the concept of "Action Learning," students will work in teams as they engage in real-time problem solving of a complex issue involving land use and sustainability. It is anticipated the course will include a field trip and work with practitioners engaged in the issue of concern. A research paper and final presentation will be required.

**LAWS 4413 Trial Tactics (3 Credits)**

This course is intended for those who truly desire to be a trial lawyer. It is an advanced, hands-on course which is designed to teach you how to be successful in trial – not just trial practice, but overall trial strategy. This course will teach you not just what to do in trial, but will also answer the question as to why you do what you do. It involves the strategy of trying cases, including trial themes, as well as preparation and participation in doing voir dire, opening statements, direct and cross examination of witnesses, when to make objections and when not to make objections, as well as closing. You will learn to use various trial techniques included in the text Rules of the Road, and will learn all the ins and outs of trying a case in front of a jury.

**LAWS 4414 Private Equity Seminar (3 Credits)**

In this course students will learn legal doctrine and practical skills through the examination of various aspects of private equity groups. The class will focus on legal issues arising in private equity investment cycles, including raising a fund, investing the fund, managing the investment, and exiting the investment. Students will consider the legal foundations of fund formation, business law, and structuring investments, including state and federal laws affecting business associations and corporate transactions. The class will also highlight tax and regulatory considerations of private equity groups and their investments. The class will have a heavy emphasis on practical skills, including critical thinking, and best practices for beginning lawyers, including structuring transactions, drafting transactional documents, and negotiating deals.

**LAWS 4415 Protecting Intellectual Property in International Business Transactions (3 Credits)**

The first portion of this seminar will cover topics such as general international conventions and treaties designed to protect intellectual property; conventions and treaties designed specifically for patents, trademarks and copyrights. Students will determine what protections to try to seek for a variety of intellectual property examples and, in pairs, if possible, negotiate and draft a licensing agreement, a manufacturing agreement, an employment agreement or some other agreement that embodies international intellectual property issues. Students will then choose a topic, such as patent, trademark or copyright issues in a particular region or particular industry. Each student will prepare a presentation for the class on the topic. Then the student will use the class feedback in conjunction with research for the presentation to complete a paper on the topic. The drafting and paper will take the place of a final exam. The paper qualifies for the Upper Level Writing Requirement.

**LAWS 4416 Representing the Marijuana Client (3 Credits)**

This class is designed to provide students with an understanding of the realities of representing a marijuana client (either private or public) in the current turbulent legal environment. We will study the background of marijuana regulation at the state and federal levels in the United States, with particular attention paid to the federalism implications of the dispute between state and federal law in this area. We will then turn to specific areas of law impacted by marijuana law reform in the states, from legal ethics, to regulatory compliance, to criminal law enforcement, to the financial and tax aspects of running a marijuana business in the current legal regime.

**LAWS 4417 Representing the Spanish Speaking Client (3 Credits)**

This course is a survey of the substantive law of matters likely to be encountered by attorneys representing Spanish-speaking clients in the United States. Topics may include, among others, immigration law, family law, criminal law, employment law, wills and estates, and consumer rights. The course will introduce vocabulary required to communicate with Spanish-speaking clients in the United States, as well as, survey the basic substantive law in each area. The course will be taught in Spanish.

**LAWS 4418 Workplace Law Practicum: Sports & Entertainment Law (3 Credits)**

This course will expose students to contemporary sports law practice as an aspect of general entertainment law from a of labor and employment perspective. Students will learn relevant doctrine regarding such matters as collective bargaining, individual contract rights, administrative law, interest and grievance arbitration and the impact of the anti-trust laws on labor and employment relations at the professional and collegiate levels. They will have the opportunity to develop practical skills by drafting documents for a simulated NLRB union organizing or unfair labor practice proceeding, reading and interpreting actual transcripts of NLRB or arbitration proceedings, acting as an advocate in a mock baseball arbitration, and engaging in simulated negotiations by drafting bargaining proposals and arguing for those proposals in a bargaining session among classmates.

**LAWS 4421 Introduction to Small Practice Management (3 Credits)**

This course provides an introduction to the administrative needs necessary to open and operate a solo or small legal practice. Topics include: administrative needs specific to various types of legal practice; space and facilities; technology; document management systems; malpractice insurance; outsourcing; health insurance; conflicts; and human resources issues.

**LAWS 4423 Legal Databases Research (3 Credits)**

This course introduces students to a variety of legal databases, both fee-based and free, that can be utilized for conducting effective legal research as a student and practicing lawyer. Students learn to analyze and critically evaluate whether or not a database provides accurate information and resources. Students learn to determine which legal databases are most useful for specific types of information and resource needs. Students learn to construct successful search strategies that can be employed to search a database and find the information required. This course equips students to become expert searchers in the online environment.

**LAWS 4424 Legal Spanish for Lawyers (2 Credits)**

This course prepares students with basic Spanish proficiency to represent Spanish-speaking clients in the U.S. legal system or to work in Spanish on transnational matters involving Latin America. It combines one-on-one Spanish immersion instruction with a structured classroom component. The Spanish immersion component introduces and builds on each student's legal Spanish vocabulary in areas of law likely to require lawyering in Spanish or in areas identified as priorities by the student. The structured classroom component allows students to practice skills in Spanish, such as client interviewing, intake, and client counseling, through simulations and group exercises. This course is taught in Spanish.

**LAWS 4425 Legal Profession (3 Credits)**

This required course is the study of the legal profession in American society. Topics include the history, structure, and function of the legal profession; the role of lawyers in the delivery of legal services; standards of professional ethics (including the Code of Professional Responsibility and the Rules of Professional Conduct); professional responsibility problems that confront the legal profession; developments in the delivery of legal services; disciplinary procedures; and admission to the practice of law. Non-JD students must request permission to register.

**LAWS 4430 Mediation and Arbitration Clinic (3 Credits)**

This is a course offering clinical experience in both mediation and arbitration. The student learns mediation skills, performs mediation simulations, and mediates actual cases. Students are oriented to the role of arbitrator, perform arbitration simulations, and attend actual arbitrations. By gaining experience in both roles, students learn which process to choose for resolving a particular dispute. In addition, students learn lawyering skills such as communication, negotiation, problem solving, and drafting agreements. Application must be sent to the Student Law Office for admission to this course. Students will earn 3 out of class credits for this course and 2 in class credits through the corequisite course L4803, Mediation and Arbitration Clinic Seminar. Corerequisite: LAWS 4803. Prerequisite: permission of faculty supervisor.

**LAWS 4433 Media Law (3 Credits)**

This course addresses the First Amendment, statutory, and common law regimes under which the news media operate in the United States, ranging from the seminal *New York Times v. Sullivan* to the recent decisions on anonymity for online bloggers. This course is designed to provide opportunities for serious study/discussion of legal issues affecting the news media, as well as opportunities for practical experience in the tasks confronted by today's media lawyers. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4436 Litigation Technology (3 Credits)**

Litigation Technology gives students up-close, hands-on learning to prepare and effectively use electronic illustrative aids and demonstrative exhibits in trial and alternative dispute settings. Each student prepares opening statements, closing arguments, and direct and cross-examinations, utilizing litigation software. Students learn to create their own presentations, and how to advocate most effectively using technology.

**LAWS 4440 Mental Health and the Law (3 Credits)**

This course will help students understand how mental illness and psychopathology interface with the legal system, in both the civil and the criminal justice systems. Taught by a practicing lawyer and a board-certified forensic psychiatrist, the course will begin with an overview of approaches to diagnosing and treating mental disorders, a brief discussion of psychotropic medications, and a description of the process for conducting forensic mental examinations of the sort used in court proceedings. We then will survey the many different contexts in which mental health intersects with the law before examining some of those contexts in detail. Specific areas of focus will include risk assessment and civil commitment, the right to treatment, informed consent and the right to refuse treatment, special competency issues involving children and older people, workplace discrimination based on mental illness, and a series of criminal law issues, including competency to stand trial and mental status defenses, sentencing, mental health and the death penalty, the evaluation and incarceration of sexual predators, and mental health issues involving incarcerated persons.

**LAWS 4442 Trial Practice III: Mentors Practicum (3 Credits)**

Advanced Trial Practice: Mentors Practicum is a year-long, skills-based course for law school students seeking to refine their trial skills, and improve their understanding and application of evidence and criminal procedure, through teaching these skills to local area high school mock trial students. The course consists of two classes a week. The first takes place at the law school. This weekly class involves case analysis and evidentiary discussion, resulting in the law students preparing their lesson plans to be taught to the high school students. Lesson plans include trial topics such as case analysis and evidentiary discussions, direct and cross-examination, objections and the rules of evidence, opening statements, closing arguments, and development of theme and theory. The second weekly class takes place at a local area high school, where the law students act as mentor-coaches to high school mock trial teams.

**LAWS 4444 Medical Malpractice (3 Credits)**

This course is a study of the various types of medical malpractice claims, and special issues encountered in medical malpractice litigation. Students learn how to select and prepare medical negligence cases for trial, with focus on the use of discovery tools in medical cases, hiring and working with medical experts, and explore settlement, subrogation, and probate approval for the settled claims of a minor. Medicine is central to medical malpractice litigation, so students are also exposed to concepts in anatomy, physiology, pathology, medical terminology, and medical records in this course.

**LAWS 4445 Mining Law (3 Credits)**

This course provides the basic framework of mining law. It begins with the acquisition of title to and development of deposits of hard minerals and energy resources under the mining and mineral leasing laws of the federal and state governments in the western United States. Next, it emphasizes the practices and procedures of the various proprietary and regulatory agencies responsible for the management and administration of public lands. Finally, students learn how to resolve competitive demands for exclusive and multiple use of public lands for mineral production and conservation.

**LAWS 4446 Multiculturalism, Race and the Law Seminar (3 Credits)**

This course is designed to examine the interstices of cultures, race, identity and the law as manifested in legislation and jurisprudence. Through case law and articles, we uncover and examine the ways in which legal systems define and promote certain racial and cultural activities, identities, and classifications and discourage others. Some are advanced as legitimate, and deserving of protection, and others not so. These endorsements have a significant impact on the makeup of American society. We see ourselves as a melting pot of cultures and peoples from all over the world, but do our laws really promote this vision? Have our laws evolved to promote racial and cultural harmony, or to discourage it? While most discussion focuses on these issues as they appear in the United States, we also discuss cases and materials from other nations, including Australia, Canada, India, Israel, Europe and Africa. Race and culture have played a pivotal role in historical and current political events and these will also be examined from a global perspective. There is no final exam, but written work is assigned throughout the term, and a final research paper is required.

**LAWS 4450 Natural Resource Law (3 Credits)**

The course is designed primarily for students who wish to have an introduction to and an overview of the entire natural resources law area in one course. Students survey the primary natural resources subject matter areas: water law; mining law; oil and gas law; public land law; environmental law; and energy law.

**LAWS 4452 Economics of Natural Resource and the Environment: Policy, Markets, and Economic Measurement (3 Credits)**

This course deals with the basic concepts of financial evaluation of a natural resources project. The emphasis is on financial evaluation topics and issues relevant to a lawyer's participation in a project. Students are introduced to the time-value of money; spreadsheet analysis; discounted cash flow; and spreadsheets, with relevancy to negotiations. Students are encouraged to consult with the director of this program before enrollment.

**LAWS 4454 Psychiatry and the Law (3 Credits)**

This course explores the relationships between psychiatry, psychology, medicine and the law. Subjects to be covered include: DSM-IV diagnoses and psychopharmacology; sanity and competency determinations; role of mental health experts in the court; special issues involving the mentally ill and death penalty; issues particular to juvenile offenders; third party protections and reporting requirements in child abuse and danger to third parties; civil commitment and involuntary treatment of the mentally ill; malpractice including professional misconduct and sexual boundary violations, and standards of mental health care; professional ethics in medicine and the law; law of informed consent and proxy decision making for medical treatment; confidentiality; clinical and legal aspects of end of life care; and prisoners' rights in correctional settings including sex offender treatment. Readings include landmark state and federal decisions shaping each of these areas, along with readings from legal and mental health literature.

**LAWS 4460 Negotiation and Mediation (3 Credits)**

The course examines principles of negotiation, bargaining and dispute problem solving. Builds the development of skills in negotiation and later mediation. Principles of problem solving introduced in negotiation are further developed in an exploration of mediation, it's legal, economic, skills context and its propriety as a process to resolve disputes in varying circumstances.

**LAWS 4462 Negotiating Natural Resources Agreements (3 Credits)**

Students completing this course leave with an understanding of the general approaches, and primary issues and motivations pertaining to the negotiation of large, internationally funded petroleum and mining projects. They particularly gain a perspective on the negotiation of first-tier agreements between trans-national companies and governments, and joint venture agreements between private parties.

**LAWS 4463 Qualified Pension and Profit Sharing Plans (3 Credits)**

An in-depth study of ERISA, labor department rules, and Internal Revenue Code provisions relating to qualified deferred compensation. The course is geared toward an understanding of all the pension and profit sharing rules required for plan qualification, with emphasis on qualified plan planning for both incorporated and unincorporated forms of business. Cross listed with TAX 4120.

**LAWS 4464 Natural Resources Distinguished Practitioner Seminar (3 Credits)**

The Distinguished Natural Resources Practitioner in Residence Seminar is a "capstone seminar" taught each year in the Spring Semester by a different but prominent natural resources or environmental law lawyer who has extensive experience in energy, resources, or environmental law work. The focus of the Seminar is on skills training, where the skills taught are those that all lawyers need in order to have a successful career in the practice of law. Among the "how-to" skills typically addressed are (1) how to obtain a job, either as a lawyer or as a law-trained worker; (2) how to obtain and retain clients; (3) how to work in the private sector, government sector, business sector, and in-house sector; (4) how to write; (5) how to work with associates and colleagues; (6) how to deal with technical or scientific matters in a legal context; (7) how to work in the litigation arena, before trial and appellate courts; (8) how to practice or appear before administrative agencies; (9) how to organize and refine a mass of complicated information so that a decision-maker can make sense of it. There is no final exam or paper expected; the grade is usually by class participation and small writing exercises. Prerequisite: permission of instructor.

**LAWS 4465 Oil and Gas Law (3 Credits)**

This course surveys the various characteristics of oil and gas interests. Topics include mineral rights, and how ownership leases and transfers of these rights should be handled. The instructor also distinguishes the field of oil and gas law on private lands from those in the public domain.

**LAWS 4468 Pre-Trial and Discovery Practicum (3 Credits)**

This "hands-on" course provides students with a practical understanding of the pretrial process and how discovery procedures shape and impact civil litigation today. The progression of class topics mirror the pretrial process within the context of a hypothetical case. Starting with initial client interviews, class topics include interrogatories, requests for production, electronic discovery, depositions, and expert discovery. Students also consider ethical issues relating to discovery and the pretrial process, and what remedies or sanctions are available for discovery abuses. This course will satisfy the Upper Level Writing requirement (ULW).

**LAWS 4470 Banking Law (3 Credits)**

This course provides an overview of the banking system, including the economic function of banks, the role of the central bank, and U.S. banking history. This course will cover the evolution of banking regulation, as well as recent developments that have intensified scrutiny on banks. Additionally, a "Real Deal" Workshop will provide students with an opportunity to a) gain hands-on training in transactional practice, (b) experience a "deal" from a lawyer's perspective and learn about what transactional practice entails and (c) learn to draft stock purchase agreements, credit documents and other fundamental transactional agreements. Topics that will be covered include permissible activities of banks, the role of the FDIC, the Federal Reserve Board, and the Comptroller of Currency; and the regulatory response to crises in the banking system.

**LAWS 4474 Patent Prosecution (2-3 Credits)**

This course explores practical and procedural aspects of patent law. These aspects include application drafting, patent examination and prosecution, and patent appeals. Students will be expected to do some role playing as inventor, patent attorney, and/or examiner. While Patent Law is not a formal prerequisite for this course, students who have not taken Patent Law should be prepared to do extra reading in the first few weeks of the semester to familiarize themselves with the basic concepts of patent law.

**LAWS 4480 Professional Ethics Seminar (3 Credits)**

This seminar begins with brief introductions to ethics in general and professional ethics specifically, and then turns to in depth consideration of theoretical perspectives on lawyer's ethics. For the remainder of the semester the seminar focuses on: (1) Comparative professional ethics: comparing the ethics of other professions—medicine, journalism and business, for example—with the ethics of lawyering. (2) Narrative ethics: stories (from literature, biography, or tradition) and how they inform ethical perception and choice. (3) Topics chosen by students for research and presentation.

**LAWS 4481 Partnership Taxation (3 Credits)**

Tax treatment of partnership income in the hands of the partner; the conduit rule; problems associated with the formation, operation, and dissolution of the partnership; sale of the partnership interest; withdrawal and retirement of partners; basis adjustments, unrealized receivables, and substantially appreciated inventory. Cross listed with TAX 4320.

**LAWS 4483 Patent Litigation (3 Credits)**

This is an in-depth study of laws, strategies and tactics of patent litigation. Topics include legal principles, procedures and strategies associated with patent claim construction, infringement, invalidity and unenforceability. Also, students cover patent trial practice with a focus on both the knowledge and practical skills necessary to litigate patent cases.

**LAWS 4485 Business & Commercial Law Seminar (3 Credits)**

Topical seminars scheduled periodically to afford students the opportunity for focused study of business and commercial law matters such as: consumer credit; mergers and acquisitions; corporate practice; bankruptcy; antitrust; quantitative evidence; representation of minority—and women—owned business firms.

**LAWS 4487 Prosecutor as Protagonist (3 Credits)**

This seminar is an in depth examination of the role of the prosecutor in our justice system. Attorney General Suthers leads wide ranging discussions about crime and punishment. Topics discussed and debated include the purpose of criminal sentencing, minimum mandatory sentences, the death penalty, the juvenile justice system, plea bargaining, prosecutor ethics, special prosecutors, criminal justice interest groups, prosecution oversight of police, forensic science, federalization of crime, attorney general activism, jury reform, reform of drug laws, and mental illness in the criminal justice system. Some of the top experts in Colorado on these subjects speak to the seminar participants.

**LAWS 4489 Civil and Criminal Tax Procedure (2-4 Credits)**

Statute of limitations on assessment/collection of deficiencies, definition of deficiency, restrictions on assessment and collection; statute of limitations on overpayments, claims and suits for refund, and limitations for criminal prosecutions; regulations and rulings—retroactive revocation; administrative settlements, closing agreements and compromises; civil penalties; tax return preparer penalties; civil litigation—injunctions, jurisdiction of Tax Court, District Court, and Court of Claims, small claims procedure, authority to increase deficiencies, choice of forum; jeopardy assessments and termination of taxable years; criminal tax investigations—administrative summons, document production (taxpayer and third party), constitutional protections, common law privileges, strategies; professional responsibilities and ethics for the tax practitioner. Cross listed with TAX 4310.

**LAWS 4490 Property (4 Credits)**

This course introduces selected topics relating to rights and interests in land and personal property. These topics include estates in land and future interests; private and/or public restriction of land use; conveyancing; interests and estates in land; and landlord/tenant relations.

**LAWS 4495 Public Land & Resources Law (3 Credits)**

This course provides an overview of law, policy, and procedures governing the third of United States land managed by the federal government for the benefit of all the people. The course traces the interwoven law, history, and economics controlling acquisition and allocation of public lands and resources and examines a selection of significant commercial uses and resource categories of land use practices. Recommended prerequisite: LAWS 4025.

**LAWS 4497 Law & Popular Culture (3 Credits)**

Why are there so many jokes about lawyers? Why is John Grisham so popular? What explains the success of the "Law and Order" franchise? Does popular culture affect the outcomes of trials? This seminar explores the role law plays in popular culture (for example, how law and lawyers are portrayed and perceived; how law shapes and defines pop culture) and the role popular culture plays in law and in the lives of lawyers (for example, the impact of cameras in the courtroom); should lawyers be allowed to write books and sell their clients' stories? The reading list includes traditional materials (case law and legal scholarship) as well as movies, novels and other popular culture materials. Recommended prerequisite: LAWS 4425.

**LAWS 4498 Public Interest Practicum (1 Credit)**

The Public Interest Practicum is one option for students to satisfy the Public Service Requirement. The only satisfying course offered for only zero or one credit, it requires participation of the JD student in a 50-hour, non-compensated, law-related, public interest placement under the supervision of an attorney or judge who has been in practice or on the bench for a minimum of three years. A practicum student must complete the minimum of 50 hours in one of the following settings: judicial internship; government agency; private law firm doing pro bono or low bono work; non-profit (501(c)(3)) organization; or pre-approved uncompensated research project for a faculty member. A student may decide to take the Public Interest Practicum for 1 credit or 0 credit. The Public Interest Practicum for 1 Academic Credit requires a Public Interest Practicum Online Seminar component to supplement the practical experience. The Public Interest Practicum is beneficial for students who are not planning on satisfying the Public Service Requirement through other opportunities.

**LAWS 4500 Public Utility Regulation (3 Credits)**

This intensive, 1-week course presents law practitioners with recent innovations in the economics and policy of utility regulation. Course features guest lectures with individuals from industry and government sectors that are involved with utility regulation. Students learn the social science of utility regulation and gain insight into how utility regulation is conducted.

**LAWS 4506 Energy & Project Finance Law (3 Credits)**

This course explores the legal, economic, technological, and policy underpinnings of the Renewable Energy Industry, global warming, and associated implications to the electric utility and transportation sectors. The course addresses both domestic and international perspectives on renewable energy development.

**LAWS 4508 Renewable Energy for the 21st Century: Law, Policy & Markets (3 Credits)**

Renewable Energy for the 21st Century helps prepare students for future involvement in this dynamic sector. Students are introduced to the policy and legal framework involving renewables and energy efficiency as well as important technological and market-based issues.

**LAWS 4509 Renewable Energy: Project Development and Regulation (3 Credits)**

This course examines the broad range of legal topics that a renewable energy lawyer must understand in order to practice effectively. We examine the structure, regulation, and functioning of the electric energy industry in the United States. We explore in detail the law applicable to the development, ownership and operation of renewable projects across the spectrum of technologies. Significant emphasis is placed on the practical "real world" issues encountered in developing, financing and operating these projects.

**LAWS 4510 Transactional Legal Research (2 Credits)**

This course will introduce the legal material, research methodologies, and resources used in conducting transactional legal research. Students will gain experience locating and using law and guidance produced by government agencies, business-oriented legal treatises, transactional materials, and company/industry research. This class will take an integrative approach between the different business-related disciplines to provide students with a well-rounded knowledge base.

**LAWS 4511 Renewable Energy Law (3 Credits)**

The development of renewable energy sources has grown exponentially both nationally and worldwide. The increased appetite for renewable energy sources has driven a need for more information about those sources and the significant legal implications arising from the development of those sources. This course is organized by resource—solar, wind, hydropower, biomass, and geothermal. It focuses primarily on critical legal issues in tort, property, and contract areas raised by the expansion of these key renewable energy sources. The course also addresses the role of energy efficiency and some of the broader legal hurdles facing renewable energy use from a nationwide perspective.

**LAWS 4520 Remedies (3 Credits)**

Remedies provides students with the basic principles and problems of damages, restitution, and equity. Students enter into an investigation of fundamental concepts, such as remedial goals, problems of proof, and the relationship between remedies and substantive rights. The course also explores equitable remedies and alternative remedial devices available in any given situation.

**LAWS 4524 Russian for Lawyers I (3 Credits)**

This is a unique chance to break stereotypes about Russia! This sequence of courses introduces students to the fundamentals of the Russian language, with emphasis on legal and economic vocabulary. More specifically, this includes vocabulary and reading assignments that involve finance, international trade, stock exchange, and with a special focus on Natural Resources and Environmental Law in Russia. No prior knowledge of Russian is required.

**LAWS 4525 Russian for Lawyers II (3 Credits)**

This course picks up where Russian for Lawyers I leaves off by continuing to introduce students to the fundamentals of the Russian language, but with an emphasis on legal and economic vocabulary. More specifically, this includes vocabulary and reading assignments that involve finance and banking, insurance, international trade, and stock exchange/securities matters. Prerequisite: LAWS 4524.

**LAWS 4526 Sales and Leases (3 Credits)**

This course examines the formation and terms, as well as remedies for breach, of contracts for the sale of goods under Article 2 of the Uniform Commercial Code (UCC). The course completes the coverage of Article 2 of the UCC that was introduced in the first-year Contracts course. In addition, the course also examines the provisions on leases in Article 2A, sales transactions involving the use of documents of title (Article 7) and letters of credit (Article 5).

**LAWS 4527 School of Mines Exchange (3 Credits)****LAWS 4528 Securities Law (3 Credits)**

Students in this course study the statutes and regulations regulating the offer and sale of securities by private and public corporations. Course material information pertaining to the Securities Exchange Act of 1934; federal regulation of the public securities markets; insider trading; broker-dealer regulation; tender offers; and public corporations. Recommended prerequisites: LAWS 4190 or LAWS 4048.

**LAWS 4529 Securities Litigation (3 Credits)**

The main focus of this course is the granting of a security interest in collateral in exchange for a loan and the priority among creditors to the collateral in case the debtor defaults on its obligation to repay. Secured transactions can be involved in a wide variety of legal representations, including transactional matters and litigation. The Secured Transactions Class is designed to provide students with a working understanding of Article 9 of the Uniform Commercial Code and how it comes into play in these transactions. Students who have taken the Commercial Law Survey course should not take this unless they wish to study this subject in greater depth.

**LAWS 4530 Secured Transactions (3 Credits)**

This course covers the law of secured transactions in personal property. It is not a securities course. Students who have taken the Commercial Law Survey course should not take this unless they wish to study this subject in greater depth. The main focus of this course is the granting of a security interest in collateral in exchange for a loan and the priority among creditors to the collateral in case the debtor defaults on its obligation to repay. Secured transactions can be involved in a wide variety of legal representations, including transactional matters and litigation. The Secured Transactions Class is designed to provide students with a working understanding of Article 9 of the Uniform Commercial Code and how it comes into play in these transactions.

**LAWS 4539 Social Change Lawyering (2 Credits)**

This seminar explores the role of law and the legal profession in pursuing broader social causes across the political spectrum, such as the pursuit of civil rights for racial minorities or the effort to overturn the constitutional right to abortion. Distinguished from the practice of law solely advocating the interests of individual clients, social change lawyering is a major component of the legal profession of the 21st century. Known variously as “public interest law,” cause lawyering, and by numerous other labels, this area of practice implicates many important issues worthy of serious scholarly consideration. Some of the topics that may be examined include: the competing definitions of social change lawyering and the relevance of such definitions; the history of American law and social change; the role of progressive/conservative ideologies in social change lawyering; the role of government and private firm lawyers in effectuating social change; strategies and organizational models for social change lawyering groups; the relationship between social change lawyers and their clients; the economics and financing of social change lawyering; ethics and social change lawyering; legal education and social change. Throughout the course, students are asked to critically examine the role of lawyers in social change, and question whether and how lawyers have been effective agents of social change in American society. The course does not use a traditional casebook. Rather, students study a set of materials comprised of excerpts from law review articles and books, historical and sociological materials, and problems. Students are required to write short, reflective discussion board posts on each week’s readings, as well as a more comprehensive final paper. Students may elect to use this seminar to fulfill the upper level writing requirement if they submit a draft of the final paper and do a substantial rewrite after receiving the instructor’s feedback. Prerequisite: permission of instructor.

**LAWS 4543 Sexual Orientation and the Law (3 Credits)**

This seminar offers an opportunity for students to study the relationship between law and sexual orientation. Historically, law in this country consistently and pervasively regulated the realm of human identity and behavior we call sexuality. However, questions and claims challenging traditional assumptions about sexual orientation have surfaced in the last twenty-five years. Our study of sexual orientation and law allows students to view the relationship between law and society through a new lens, that of sexual orientation.

**LAWS 4545 Sports Law (3 Credits)**

The course studies the legal problems of professional athletics. It applies the application of contract law, antitrust, labor law and income tax to the functioning of a professional league. The question of governmental regulation of professional sports is a constant focus of students' work. Special attention is given to the impact of these questions on negotiating players' contracts.

**LAWS 4550 Local Government Law (3 Credits)**

Although barely touched upon in many law school courses, states and local governments play an important role in our everyday lives. They enjoy substantial law-making power; are responsible for financing and providing many public goods and services; and are the location of a great deal of political participation. This course will examine the theory behind and sources of local government power as well as the advantages and disadvantages of decentralized decision-making. Specific topics include: voting rights, local government formation and boundary change, state-local relations and local home rule, interlocal conflicts, school finance reform, and regional governance.

**LAWS 4552 Securities Law Seminar (3 Credits)****LAWS 4553 The Spanish Speaking Lawyer: Introductory Legal Skills and Vocabulary in Spanish (3 Credits)**

This introductory course will provide law students an avenue to become more comfortable speaking about legal matters in Spanish. Students will acquire Spanish-language vocabulary relating to the lawyer-client relationship, litigation, and various substantive areas of law, with the opportunity to utilize this vocabulary. Students can expect to gain legal skills in Spanish, including performing intake, managing good phone etiquette, interviewing clients, drafting correspondence, communicating fees, explaining civil and criminal court proceedings, and understanding ethics and confidentiality. The course will also provide students with an opportunity to begin to achieve cultural competency when representing Spanish-speaking clients. The class will be interactive, and may include: discussions of readings, small group discussions, simulations, presentations, arguments, speakers on different substantive areas of law and viewing of law-related films. This course will primarily be taught in Spanish.

**LAWS 4555 Street Law (3 Credits)**

Under faculty supervision, students in two-person teams will teach law in urban high schools. An underlying principle of the course is that one of the best ways to learn is to teach. There will be weekly seminars and field performances supervised by the instructor. Students will develop skills in: practical application of legal concepts; substantive topics in federal and Colorado Law; teaching techniques; classroom management; and the multi-faceted roles of lawyers in the community. Each student will participate in researching, drafting, and presenting a course in a particular field of substantive law.

**LAWS 4556 Sustainable Dev & Trade (3 Credits)**

This seminar is designed to give an introduction to the convergence of trade, environment, and development issues and law, addressing areas of conflict and synergies among them. It focuses on rules, procedures, and institutions aimed at making globalization compatible with sustainable development by integrating trade policy and law with policies that address other aspects of "human development", such as, environmental concerns, social concerns, human rights, gender issues, and governance. This course satisfies the Upper Level Writing requirement (ULW).

**LAWS 4560 Colorado Legal Research (1 Credit)**

This course will focus on Colorado-specific primary and secondary sources using a problem-based approach, so as to simulate the type of work performed at law firms. It is geared toward students who have some experience with research and want to improve their skills and writing ability before they finish law school. Students will gain hands-on experience researching judicial (case law), legislative (statutory), and executive (administrative) legal materials and will learn research methodologies and strategies to tackle research problems effectively. Classes will combine instruction with hands-on scenarios using print and electronic resources and students will complete research and writing projects for this course, which runs for the first seven weeks of the semester. Students are required to bring their laptops to class.

**LAWS 4561 Crimmigration Law Seminar: The Intersection of Criminal Law and Immigration Law (3 Credits)**

This seminar addresses the historical and contemporary relationship between criminal and immigration law. In particular, the course explores how individuals perceived to have violated a criminal offense are treated in the immigration law system, how individuals thought not to be citizens of the United States are uniquely affected by criminal procedure norms and substantive criminal law, and how states and the federal government have sought to police criminal activity by noncitizens. In the process, course participants will learn to analyze constitutional, statutory, and regulatory provisions concerning immigration, as well as procedural and substantive requirements concerning criminal proceedings as they affect noncitizens. Participants will also consider the motivations that resulted in various enforcement policies grounded in civil or criminal law related to immigration and immigrants.

**LAWS 4562 E-Discovery (3 Credits)**

Litigation is undergoing a significant transformation as technology continues to evolve and Society transitions from a "paper" to a "digital" world. That transformation inevitably impacts the legal community, confronting lawyers and clients with the choice of conducting discovery on a pre-computer, "business as usual" basis or embracing the challenges and opportunities presented by "e-discovery." This course provides students with an understanding of the legal and practical challenges presented by "e-discovery" and how electronically stored information ("ESI") shapes and impacts litigation and the pretrial process.

**LAWS 4563 Environmental Law, Energy, & Natural Resources in Indian Country (3 Credits)**

This Seminar explores energy and natural resources development on Native American tribal lands in the United States, and how tribes, states and the federal government regulate and enforce environmental quality within Indian Country. The Seminar is open to all interested students and does not require any previous study or experience in American Indian law. It provides an introduction to tribal sovereignty and self-determination, along with some of the basics of Indian Country jurisdiction and tribal sovereign immunity. Students will examine the federal governments trust responsibility to Indian tribes and nations. The Seminar also examines the legal framework used to regulate and enforce environmental quality, traditional and renewable energy development, and the use and stewardship of other natural resources on Indian lands. The goal of this Seminar is for students to gain a greater awareness of Indian tribes and nations and the critical role they play in overall U.S. environmental, energy, and natural resource law and public policy.

**LAWS 4564 Immigration Law in Spanish (3 Credits)**

Immigration Law in Spanish is a survey of the fundamental concepts of U.S. immigration law. In addition, students learn and practice the vocabulary required to appropriately communicate these concepts to Spanish-speaking clients. The class is taught entirely in Spanish, and requires a working-level written and spoken proficiency in the language.

**LAWS 4565 Intellectual Property Capstone (1-3 Credits)**

The intellectual property capstone is a simulation based course that crosses different intellectual property disciplines. Several different adjuncts are asked to prepare real world problems in different substantive and procedural contexts. The problems vary from year to year, but generally deal with patent, copyright and trademark law from litigation, administrative (i.e. representation before the patent and trademark office) and business perspectives. Students are expected to have taken at least one prior intellectual property course. This course fulfills the experiential component of the IP Certificate requirement.

**LAWS 4570 Introduction to Contracts and Torts (3 Credits)**

This online course provides an introduction to the foundational principles of Contract Law, including the restatement of contracts and the relevant provisions of the Uniform Commercial Code, and foundational principles of Tort Law, including intentional torts, negligence, and strict liability. This course is available to non-JD students only.

**LAWS 4571 Introduction to Forensic Engineering and Construction Dispute Resolution (3 Credits)**

This online course introduces students to the forensics industry and how forensics applies to claims and disputes in design and construction issues. The course addresses common disputes such as insurance claims, contract disputes, negligence claims, etc. This course will also discuss the different dispute resolution forums and venues, from insurance appraisals, to mediation, to arbitration or litigation. This course is available to non-JD students only, and is required for students in the Master of Legal Studies in Forensic Engineering.

**LAWS 4572 Forensic Scheduling (1 Credit)**

This online course covers the five standard forensic scheduling methods: Impacted As-Planned Method, As-Planned v. As-Built Method, Time Impact Analysis, Windows Analysis, and Collapsed As-Built Method. This class will use Primavera P6 scheduling software. This class is limited to non-JD students only.

**LAWS 4574 Expert Report Preparation (1 Credit)**

Forensic consultants need to understand how to outline, assemble, and clearly communicate issues and opinions within expert reports. This course reviews standard report templates and covers how to prepare report sections including-but not limited to-executive summaries, summary of opinions, assignment, documents reviewed, analysis, conclusions, and demonstratives.

**LAWS 4575 Civil Trial Practice-Forensic Engineering (3 Credits)**

This online class will cover the main aspects of civil litigation and trial practice as they relate to forensic engineering including discovery, trial, examination and cross-examination, and expert testimony. Pre-requisite: LAWS 4571.

**LAWS 4576 Building Envelop & Civil Construction Review (1 Credit)**

This course would review the components of building envelope and civil design. It would also review standard contract drawing details, manufacturer's recommendations, and code requirements for various building components.

**LAWS 4577 Introduction to Contract Law (2 Credits)**

This online course provides an introduction to the foundational principles of Contract Law, including the principles and law governing the formation of contracts (offer, acceptance, and consideration), contractual terms and duty, breach of contract, and some discussion of remedies. This course is available to non-JD students only.

**LAWS 4578 Introduction to Tort Law (2 Credits)**

This online course provides an introduction to the foundational principles of tort law, including intentional torts, negligence, and strict liability. This course is available to non-JD students only.

**LAWS 4579 Expert Witness Role (2 Credits)**

Expert witnesses play a number of roles as they take on their role, including serving as consultants, writing expert reports, and providing testimony. This course will focus on the core requirements needed for this role, providing an overview of the dispute resolution setting in which they work, with particular emphasis on ethical responsibilities and the task of writing an expert report. It will also cover how to write an expert report by outlining, assembling, and clearly communicating issues and opinions within expert reports. This online course will review standard report templates and cover how to prepare report sections including-but not limited to-executive summaries, summary of opinions, assignment, documents reviewed, analysis, conclusions, and demonstratives.

**LAWS 4580 Forensic & Scientific Evidence (3 Credits)**

This course will cover the key elements of Evidence Law with a particular focus on evidence law governing forensic and scientific evidence. This includes an introduction to the preparation of scientific evidence, rules governing admissibility of forensic and scientific evidence in the courtroom, and rules applicable to expert witnesses and their testimony.

**LAWS 4581 Remedies in Construction Law (2 Credits)**

This course will address the remedies that are applicable in construction law disputes, including remedies applicable to contracts and torts disputes. It will cover the basic principles and problems of damages, restitution, and equity. Prerequisites: LAWS 4179.

**LAWS 4589 LLM and Master's Internship (0 Credits)**

The Sturm College of Law encourages students to gain practical experience and to develop professional skills in the legal and policy fields. Some students may elect to pursue externships for credit while others may choose to pursue paid opportunities during their study in the program. Internships are supervised by faculty and GLS department who interact with the eligible student and the employer or organization that provides the externship. The internship should provide a new learning experience for the student intern and must be related to their field of studies (e.g. business and commercial law; environmental law and policy). Satisfactory completion of the internship will result in a passing grade for the externship. The Program Director and/or GLS Advisor may serve as Supervisor for non-JD interns.

**LAWS 4590 JD Internship (0 Credits)**

The Sturm College of Law encourages students to gain practical experience and to develop professional skills in the legal and policy fields. Some students may elect to pursue externships for credit while others may choose to pursue paid opportunities during their study in the program. The internship should provide a new learning experience for the student intern and must be related to their field of studies (e.g. business and commercial law; environmental law and policy). Satisfactory completion of the internship is determined by review of an Internship Assessment Form submitted to the externship office at the end of the term.

**LAWS 4599 Expert Witness Practicum (3 Credits)**

This class will cover the main aspects of civil litigation and trial practice as they relate to forensic engineering and the process of being an expert witness including discovery, trial, examination and cross-examination, and expert testimony. The course will be taught in a practicum style, with students taking on the role of expert witness. Prerequisites: LAWS 4579.

**LAWS 4605 Taxation of Natural Resource (2 Credits)**

This course outlines the financial, business, and legal tax problems that may be encountered during the acquisition, operation, and disposition of natural resources properties. It is a strong course for students to develop skills in general tax planning for natural resources ventures.

**LAWS 4610 Torts (4 Credits)**

This introductory course considers compensation for private wrongs, covering harm to persons and property, with attention to legal theories of intentional torts, negligence and strict liability.

**LAWS 4615 Torts (Advanced) (3 Credits)**

Advanced Torts combines practical and theoretical discussion of issues that personal injury lawyers face in practice. The topics in the seminar vary but generally include fee agreements, damages, use of experts, medical malpractice, hospital and other liens, subrogation, and governmental immunity. The seminar emphasizes the empirical reality of injuries, claims, and litigation. Prerequisite: LAWS 4610.

**LAWS 4618 Representing Clients Before the SEC (3 Credits)**

SEC insiders explain the processes and practices of the Division, intertwined with discussion and analysis of SEC enforcement actions past and present. This course gives students critical information to effectively represent a wide variety of clients before the Division, among them public companies, regulated entities, defrauded investors, and perpetrators of crime.

**LAWS 4631 Commercial Space Law (2 Credits)**

This course is designed to provide a basic understanding of legal principles and issues in international and domestic space law, with a focus on commercial space law. You will study issues of importance to the Colorado space industry. Those issues, however, touch everyone in the world. For example, we will evaluate issues relating to the use of GPS timing and location signals, remote sensing of the earth from space, and the use of satellite communication. These technologies and associated legal issues reach every country in the world. We start with a survey of the international laws that govern outer space activity. You will be introduced to space law treaties addressing the use of outer space for peaceful purposes, liability for damage caused by space objects, jurisdiction and control of space objects, the rescue and return of astronauts and space objects, property rights in space, and other matters. We will discuss the influence on space laws of cold war politics, developing versus developed country tensions, and the impact of sovereignty interests on technologies that can broadcast television signals direct to homes and extract information about a country's natural resources – all from space. Then we will address U.S. space laws and regulations impacting space activities. Finally, the class will explore specific commercial space activities such as satellite communication, space stations, space tourism, space launches, remote sensing of the earth from space, and the financing and insuring of space activities.

**LAWS 4633 Day One: Civil Practice Lab (3 Credits)**

Day One: Civil Practice Lab is designed to take students from client intake through to the eve of trial, simulating the research, analysis, drafting, and verbal argument that lawyers encounter every day in civil cases. Through the course, students learn about the practical aspects of running a firm, valuing cases, and managing client and firm expectations. They also learn how to draft memoranda, disclosures, discovery, motions and mediation statements, while practicing the skills of examining witnesses, negotiating, and oral argument through mock depositions, mediation, and evidentiary hearings. The classes provide a procedurally chronological picture of a civil case and weave throughout practical considerations and application of the rules of professional conduct. In short, the class prepares students to practice on day one of their new career.

**LAWS 4634 Motions Practice (3 Credits)**

In this class, students learn how to present and argue pre-trial motions. These motions include motions from civil practice (motion for preliminary injunction, motion to dismiss, motion for summary judgment, etc.) criminal practice (motion to suppress, Rule 35 (c), etc.) and evidentiary motions (Rules 403, 404, and 405.) In addition, the course covers both legal and evidentiary motions in limine. Each student is asked to prepare, present, and argue a motion, as well as decide motions presented by others after making appropriate findings of fact and conclusions of law. Because a number of the motions involve the presentation of witnesses and appropriate case and statutory law, students learn trial skills, as well as refresh their knowledge of criminal and civil procedure, and the rules of evidence. Students are not asked to draft motions or prepare written briefs.

**LAWS 4635 Trial Practice I: Basic Courtroom Skills (2-3 Credits)**

The course is designed to teach the concepts and organizing principles of the formal trial process. It emphasizes the understanding necessary to develop, evaluate, prepare, and present a case for trial before a judge, jury, or other fact-finder. Exercises and simulations are used to demonstrate the importance of theory building and teach the functions of each stage of a trial. Students develop the advocacy skills appropriate to adversary adjudication. Prerequisite or corequisite: LAWS 4235.

**LAWS 4637 Civil Litigation Practicum (3 Credits)**

This course provides students a practical, hands-on approach to civil pretrial litigation. Students draft pleadings, motions and discovery requests essential in the litigation process prior to the actual trial stage.

**LAWS 4638 Trial Practice III: Mentor's Practicum (3 Credits)**

The Mentor's Practicum employs and relies upon integrated teaching, feedback, student collaboration, and multiple assessment. The practicum is designed for law school students who have exhibited advanced skills in trial advocacy, client advocacy, case analysis and communication.

**LAWS 4639 Survey of Trusts and Estates (3 Credits)**

This course will provide a broad introduction to trusts and estate planning, including an overview of property disposition through intestate succession, wills, and trusts.

**LAWS 4640 Trusts and Estates (4 Credits)**

Students enrolled in this course learn the ins-and-outs of trusts and estates planning. The course surveys everything involving succession wills, trusts, the role of third parties to a trust or estate, and property disposition.

**LAWS 4651 Advanced Legal Writing and Research (3 Credits)**

This course provides students with practical experience in drafting various documents they will likely encounter in the practice of law, including both objective and persuasive writing. Students will learn the advanced research skills they need to locate relevant legal materials, including an in-depth knowledge of legal research methods and resources. Students will then use their research results to create precise, clear, effective, and legally sound written documents for a series of modern law practice situations. There will be in-class exercises designed to develop student expertise with particular legal research and writing skills. Course assessments include an internal memorandum, a pleading, a motion, and a decision. This course satisfies the upper-level writing requirement. Laptops are required for this course.

**LAWS 4660 Scientific Evidence (3 Credits)**

The course begins with the U.S. Supreme Court decision in *Daubert v. Merrell Dow Pharmaceuticals, Inc.* (113 S.Ct. 2786 (1993)). This decision threw out the Frye Rule that had governed the admission of scientific evidence in federal courts since 1923. While the Daubert rule now applies in all federal courts, states are free to either stay with the Frye Rule, adopt the new Daubert Standard or adopt some combination of the two. Students discuss the implications of these evidentiary changes in a number of areas of legal controversy. The course concentrates primarily on the use of social science evidence; however, topics include tort litigation involving Bendectin, and the controversy over the use of DNA testing in criminal cases. Other topics include the use of scientific evidence in consumer confusion cases; obscenity cases and the question of community standards; and the number of syndrome evidence cases, including post-traumatic stress disorder, battered woman syndrome, and rape trauma syndrome. Constitutional law cases include coverage of death penalty issues, jury size cases, and school segregation by race and gender (including the controversy over single-sex education, and the ending of school busing mandates by the federal courts). The goal of this course is to increase the proficiency of lawyers to use scientific evidence on behalf of clients and be able to defend against such evidence when presented by the opposing counsel.

**LAWS 4670 Water Law (3 Credits)**

Water Law is an introductory course for students interested in pursuing water law. It covers private property rights in water, and the legal and environmental controls surrounding it. Recommended prerequisite: LAWS 4025.

**LAWS 4672 International Water Law (3 Credits)**

This course presents a global overview of water law, systems, and practice in the modern world. It includes coverage of hydrology, history, national legal systems, and modern international treaties and cases. It has a special emphasis on sustainable development, equitable utilization, pollution control, and ecosystem protection utilized for multi-nation water basins. LAWS 4670 Water Law and LAWS 4320 International Law courses are not a prerequisite, as basics will be covered.

**LAWS 4674 White Collar Crime (3 Credits)**

This course is designed for students with an interest in advanced criminal law practice, particularly the growing legal field of white collar crime. This seminar course will introduce students to the major substantive legal areas that make up the white collar field, including mail and securities fraud, bribery, health care fraud, conspiracy, and money laundering. In addition, students will learn the basics of conducting a corporate internal investigation, dealing with search warrants and subpoenas, criminal pre-trial matters, special considerations for criminal discovery, and common ethical issues. By the end of the course, students will have learned the basic substantive and procedural issues involved in white collar practice. Students will learn from and interact with a variety of practitioners drawn from the private and government sector. Instructor permission is required for enrollment.

**LAWS 4686 Wills Lab (1 Credit)**

This lab is designed to provide students with practical experience with interviewing and drafting for a real client while under the close supervision of a practicing attorney. Clients come primarily from Legal Aid. Each student is individually supervised by a volunteer attorney or by Prof. Marsh. The attorney goes with the student to the first interview with the client to assist the student if any difficulties come up in the interview. Then the student drafts the appropriate documents from scratch, and the attorney helps the student determine what revisions are necessary. When documents are in final form the attorney assists the student in having the documents properly signed. Documents include will, living will, and medical or financial powers of attorney, as appropriate. Letter grades are given by Prof. Marsh. Note that no student is allowed to drop the Wills Lab after the first interview with the client unless there is a severe medical emergency. There will be one introductory meeting scheduled during lunch time. All the rest of the work is scheduled individually by the student, supervising attorney, and client. NOTE: Students will NOT be allowed to drop the course after the first interview with the client. Prerequisite: LAWS 4640 or LAWS 4639.

**LAWS 4700 Special Topics (1-5 Credits)****LAWS 4701 Special Topics (1-5 Credits)****LAWS 4702 Special Topics (1-6 Credits)****LAWS 4703 Special Topics (1-5 Credits)****LAWS 4704 Special Topics (1-5 Credits)****LAWS 4705 Special Topics (1-5 Credits)****LAWS 4706 Special Topics (1-5 Credits)****LAWS 4707 Special Topics (1-5 Credits)****LAWS 4708 Special Topics (1-5 Credits)****LAWS 4709 Special Topics (1-15 Credits)****LAWS 4800 Criminal Defense Clinic (3-6 Credits)**

This clinic offers students the opportunity to defend low-income clients charged with various criminal offenses. These offenses include DUI/DDWAI; domestic violence; assault; theft; disturbance; child abuse and neglect; menacing; etc. Students represent their clients in various municipal and county courts in the area. This course requires numerous court appearances for arraignments, pre-trial motions, and sentencing. Students should be prepared for an intense litigation experience in misdemeanor criminal defense. Corequisite: LAWS 4801. Prerequisite: permission of faculty supervisor.

**LAWS 4801 Criminal Defense Clinic Seminar (3-4 Credits)**

The Criminal Law Clinic Seminar must be taken in conjunction with the Criminal Law Clinic. Class sessions will be devoted to a variety of topics, including classes on lawyering skills, substantive law, issues of lawyering and society, and case review sessions, in which student attorneys will present information about their cases/projects to each other and give and solicit feedback about issues they are confronting in the representation of their clients. The classes include simulation exercises that are critiqued by faculty, and field exercises that involve trips to the Denver jail. Classes are taught by clinical faculty and by guest speakers who include area judges, practitioners, interpreters and other court personnel. Co-requisite: LAWS 4800.

**LAWS 4802 Environmental Law Clinic Seminar (3 Credits)**

THE ELCP clinic seminar must be taken in conjunction with the ELCP Clinic. During class, students will review federal civil procedure through a lecture series entitled "anatomy of a lawsuit," have specific lectures on effective legal writing, and commonly used statutes such as the Freedom of Information Act, and Endangered Species Act. Each student must also prepare a class presentation on their assigned major case, and participate in random, less formal docket meetings. Students must also attend four guest lectures from lawyers and other professionals on environmental law advocacy issues. Students earn 3 in class credits for this course and 3 out of class credits through the corequisite course. Corequisite: LAWS 4206.

**LAWS 4803 Mediation & Arbitration Clinic Seminar (2 Credits)**

The Mediation and Arbitration Clinic Seminar must be taken in conjunction with the Mediation and Arbitration Clinic. The seminar meets once a week for 90 minutes. Students read articles on mediation issues and receive intensive training in the classroom that is reinforced with classroom simulations. Students are also required to critique each other in the simulations. The seminar focuses upon identifying and resolving issues that arise during actual mediations. Students will earn 2 in class credits for this course and 3 out of class credits through the corequisite course. Corequisite: LAWS 4430.

**LAWS 4805 Civil Litigation Clinic (5 Credits)**

The Civil Litigation Clinic students represent low-income clients in a variety of civil disputes. The clinic permits students to participate in the selection of cases and problems they work on. Students have represented clients in areas involving wage and hour claims, housing discrimination, eviction defense and domestic violence protection orders. Additionally, the Civil Litigation Clinic requires some form of community outreach project enabling the student to learn about the client populations they serve. Students will earn 5 out of class for this course and 4 in class credits through the co-requisite course. Corequisite: LAWS 4806.

**LAWS 4806 Civil Litigation Clinic Seminar (4 Credits)**

The Civil Litigation Clinic students represent low-income clients in a variety of civil disputes. The clinic permits students to participate in the selection of cases and problems they work on. Students have represented clients in areas involving wage and hour claims, housing discrimination, eviction defense and domestic violence protection orders. Additionally, the Civil Litigation Clinic requires some form of community outreach project enabling the student to learn about the client populations they serve. Students will earn 4 in-class credits for this course and 5 out-of-class credits through the co-requisite course. Corequisite: LAWS 4805.

**LAWS 4807 Child Advocacy Seminar (2 Credits)**

The Child Advocacy Externship Seminar is a course and taught by the Rocky Mountain Children's Law Center. In the fall semester, the seminar course focuses on the laws surrounding advocacy for children in dependency & neglect, delinquency, civil protection order, and education cases. In the spring, students can enroll in a 2-credit Advanced Child Advocacy seminar to expand on the fall semester with topics such as the overlap of child welfare and family law, immigration advocacy, appellate advocacy for children, trial practice in the child welfare context, ethical issues in the representation of children, and a variety of other hot topic child advocacy issues. Students can choose to also enroll in a corresponding externship for credit. For more information on the field work component, please visit <http://www.law.du.edu/index.php/legal-externship-program/specific-externship-programs/child-advocacy-externship-program>.

**LAWS 4809 Civil Rights Clinic (3-6 Credits)**

The Civil Rights Clinic (CRC) represents individuals and groups in civil and human rights matters. The CRC's current cases address a range of complex constitutional issues litigated before the Federal District Court for the District of Colorado. Some of the claims currently being litigated in the CRC will impact constitutional jurisprudence nationwide. The current CRC docket is focused on the constitutional rights of prisoners. These cases challenge prison conditions and policies pursuant to the First, Fifth, Eighth and Fourteenth Amendments on issues such as: indefinite solitary confinement, failure to provide prisoners with adequate medical or mental health care, long-term denial of outdoor exercise, and the prison's refusal to provide meaningful process to individuals placed in long-term segregation. Co-requisite course LAWS 4812, Civil Rights Clinic Seminar. Pre-requisite or co-requisite course: LAWS 4425, Legal Profession. This course meets the Upper Level Writing requirement (ULW).

**LAWS 4812 Civil Rights and Disability Law Clinic Seminar (3 Credits)**

The Civil Rights Clinic (CRC) represents individuals and groups in civil and human rights matters. The CRC's current cases address a range of complex constitutional issues litigated before the Federal District Court for the District of Colorado. Some of the claims currently being litigated in the CRC will impact constitutional jurisprudence nationwide. The current CRC docket is focused on the constitutional rights of prisoners. These cases challenge prison conditions and policies pursuant to the First, Fifth, Eighth and Fourteenth Amendments on issues such as: indefinite solitary confinement, failure to provide prisoners with adequate medical or mental health care, long-term denial of outdoor exercise, and prison's refusal to provide meaningful process to individuals placed in long-term segregation. Students will earn 3 in class credits for this course and 3 out of class through the corequisite course L4805, Civil Rights Clinic. This course meets the Upper Level Writing requirement (ULW).

**LAWS 4813 Low Income Taxpayer Clinic-JD (1-4 Credits)**

Using a focused series of classes related to issues facing individual low income taxpayers embroiled in conflict with the Internal Revenue Service or in litigation before the United States Tax Court (innocent spouse relief, earned income credit, dependency exemptions, appeals of audits and collection due process issues, tax litigation), this course first prepares tax students to represent taxpayers regarding such issues, then provides the opportunity to practice before the IRS and in the Tax Court. In a clinical setting, students are trained in all facets of practice before the IRS and the Tax Court. Once trained, under the supervision of clinical staff, the students undertake representation of low income taxpayers in tax audits, appeals, collection proceedings, and, if necessary, before the Tax Court. All facets of client representation, including initial client meetings, representation agreements, client advocacy, and ending the representation, are experienced by each clinic participant. Cross listed with TAX 4415.

**LAWS 4825 Immigration Law and Policy Clinic (5 Credits)**

For the fieldwork component of the Immigration Law and Policy Clinic (ILPC), student attorneys appear in immigration court representing indigent, detained clients in bond and/or removal proceedings. Students may also provide consultations with student counsel in the Criminal Defense Clinic on the immigration consequences facing CDC clients. There may be additional opportunities for advocacy in post-conviction and/or federal habeas litigation, and in matters in which the ILPC will provide counsel and legal assistance to non-profit advocacy organizations pursuing policy or legislative reform or other non-litigation (or possibly litigation) matters. Throughout their fieldwork, student attorneys apply knowledge gained through the ILPC seminar by practicing lawyering skills such as interviewing, client counseling, fact investigation, legal research and writing, oral advocacy, negotiation, policy advocacy, and preparation for, and advocacy in, contested hearings. Through the ILPC fieldwork, students will have opportunities to explore systemic problems in the immigration enforcement system—particularly where immigration and criminal enforcement are conflated and entwined—such as racial and economic bias, law enforcement accountability, hyperincarceration, and access to justice. Credit Hours: 5 out-of-class credits (Fall term) / 2 to 7 out-of-class credits (Spring term) ULW: This course does not automatically meet the Upper Level Writing (ULW) requirement. Students who, in the course of their fieldwork, complete written work sufficient to meet the ULW requirement may obtain certification from their instructor.

**LAWS 4826 Immigration Law and Policy Seminar (2-4 Credits)**

The Immigration Law and Policy Clinic (ILPC) seminar provides timely instruction in topics relevant to student attorneys appearing in immigration court representing indigent, detained clients in bond and removal proceedings. In seminar, students will learn lawyering skills such as interviewing, client counseling, fact investigation, legal research and writing, oral advocacy, negotiation, policy advocacy, and preparation for, and advocacy in, contested hearings. Some classes may address issues that have not yet arisen in their clinic cases, with the goal of exposing students to different lawyering methods and advocacy tools. Through the ILPC seminar classes and related fieldwork, students will have opportunities to explore systemic problems in the immigration enforcement system—particularly where immigration and criminal enforcement are conflated and entwined—such as racial and economic bias, law enforcement accountability, hyperincarceration, and access to justice. This course does not meet the Upper Level Writing (ULW) requirement. Credit Hours: 4 in-class credits (Fall) / 2 in-class credits (Spring).

**LAWS 4835 Community Economic Development Clinic (3 Credits)**

The Community Economic Development ("CED") Clinic is a clinical legal education program that provides free transactional (non-litigation) legal services to small businesses, low-wealth entrepreneurs, community-based enterprises, nonprofit organizations, and artists. The Clinic is designed to simultaneously teach student attorneys the fundamentals of transactional practice while providing high-quality and invaluable legal representation to its clients. Through the representation of the Clinic's clients, student attorneys are exposed to the intersection of business law concepts and CED practice. Student attorneys learn that transactional lawyering is preventive lawyering, which involves avoiding conflict, litigation, and other negative outcomes. The Clinic's focus on the legal practice of CED will expose student attorneys to the variety of social systems, government programs, and federal, state, and local government laws that impact their clients. Client work includes drafting corporate formation documents; assisting nonprofit organizations with tax-exempt applications and maintenance of tax-exempt status; drafting and negotiating contracts; and acting as general counsel to both small businesses and non-profit organizations. In addition, students may research issues related to public policies that affect clinic clients and provide community education workshops on substantive law issues pertinent to one of the clinic's practice areas. Co-req: LAWS 4836, co-req/pre-req: LAWS 4425.

**LAWS 4836 Community Economic Development Clinic Seminar (3 Credits)**

The Community Economic Development ("CED") Clinic is a clinical legal education program that provides free transactional (non-litigation) legal services to small businesses, low-wealth entrepreneurs, community-based enterprises, nonprofit organizations, and artists. Clinic students are required to attend this bi-weekly 75 minute seminar while participating in the clinic. The seminar focuses on both substantive corporate law and transactional lawyering skills and is reinforced with complex simulations that students perform and then critique with faculty. Co-req LAWS 4835, pre-req/co-req LAWS 4425-Legal Profession.

**LAWS 4867 Advising the Adviser: Compliance and Enforcement under the Investment Advisers Act (3 Credits)**

This class will focus generally on investment adviser (IA) compliance with the federal securities laws and the Securities and Exchange Commission's (SEC) role with respect to that compliance. We will focus on how to advise an IA with respect to SEC regulations, touching on topics such as an IA's role as a fiduciary and an IA's requirements with respect to marketing, best execution, and principal and cross trading. We will also focus on what's necessary to establish and operate a robust IA compliance program.

**LAWS 4880 DU Law Journal (0-3 Credits)**

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

**LAWS 4884 Int'l Law Journal (0-3 Credits)**

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

**LAWS 4885 Preventive Law Journal (0-6 Credits)**

An enrollment card obtained from the Managing Editor is required.

**LAWS 4888 Transportation Law Journal (0-3 Credits)**

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

**LAWS 4889 Water Law Review (0-3 Credits)**

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

**LAWS 4900 Introduction to Clinical Pedagogy & Scholarship (1-2 Credits)**

The purpose of this yearlong, two-credit (total) seminar is to introduce graduate teaching fellows to fundamental concepts of teaching and scholarship. Upon completion of this course, students understand: theoretical frameworks for supervision of J.D. students in the fieldwork portion of a clinic; the goals of seminar teaching, including the theory of backward design and the use of case rounds and other signature pedagogies; and the key differences between legal writing and academic scholarship, with an emphasis on developing a habit of and timeline for scholarly writing.

**LAWS 4905 Scholarship Seminar I (4 Credits)**

This is a semester-long, four-credit, intensive course taken after completion of the first academic year in which students produce and present drafts of scholarly articles along a timeline set out at the start of the semester.

**LAWS 4910 Co/Shadow Supervision Practicum (1-8 Credits)**

During their first academic year enrolled in the clinical LL.M. program, fellows will "shadow" or "co-supervise" law students with experienced faculty. Throughout the fellowship term, the fellows will receive instruction and feedback about their supervision that will continue to facilitate their development as clinical teachers. Clinical fellows are expected to participate in mid-semester or mid-year evaluation sessions with students and to participate in a traditional grading process.

**LAWS 4920 Supervision Practicum II (1-4 Credits)**

During their first academic year enrolled in the clinical LL.M. program, fellows "shadowed" or "co-supervised" law students with experienced faculty (for which they will receive four credits per semester). In their second year, fellows supervise on their own two students and in their third year, four students. Throughout the fellowship term, the fellows will receive instruction and feedback about their supervision that will continue to facilitate their development as clinical teachers. Clinical fellows are expected to participate in mid-semester or mid-year evaluation sessions with students and to participate in a traditional grading process.

**LAWS 4921 Clinical Pedagogy & Design I (1 Credit)**

The purpose of this yearlong, two-credit course is to explore more deeply the pedagogy and methods for teaching in both student supervision and classroom seminar settings. This series of courses accomplishes two important goals: (1) building a learning community through which a group of faculty come together and increase faculty collaboration around a shared enterprise of teaching; and (2) improving teaching. Graduate fellows will talk about events in their classrooms/supervision sessions, present "problems" to be unpacked and re-conceptualized, solicit ideas about what and how to teach, and share innovative assessment tools. Fellows reflect with supportive colleagues about the relationship between what they have done and their teaching goals and formulate plans with the benefit of the insights of others. The objective of this course is to have discussions that will facilitate the development of both concrete solutions and broader themes in the fellows' teaching.

**LAWS 4925 Scholarship Seminar II (4 Credits)**

This is a semester-long, four-credit, intensive course taken after completion of the second academic year in which students produce and present drafts of scholarly articles along a timeline set out at the start of the semester.

**LAWS 4930 Supervision Practicum III (1-6 Credits)**

The expectations for student supervision increase in the third year. Throughout the fellowship term, the fellows will receive instruction and feedback about their supervision that will continue to facilitate their development as clinical teachers. Clinical fellows are expected to participate in mid-semester or mid-year evaluation sessions with students and to participate in a traditional grading process.

**LAWS 4931 Advanced Clinical Pedagogy & Design (1 Credit)**

The purpose of this yearlong, two-credit course is to explore more deeply the pedagogy and methods for teaching in prior years; hone methods to fellows' unique professional, academic identities; and reflect on these and their experiences teaching in both supervision and classroom settings to articulate and design their own clinics. This course accomplishes two important goals: (1) building a learning community through which a group of faculty come together and increase faculty collaboration around a shared enterprise of teaching; and (2) improving teaching. During rounds, graduate fellows talk about events in their classrooms/supervision sessions, present "problems" to be unpacked and re-conceptualized, solicit ideas about what and how to teach, and share innovative assessment tools. Fellows reflect with supportive colleagues about the relationship between what they have done and their teaching goals and formulate plans with the benefit of the insights of others.

**LAWS 4950 Scholarship (1 Credit)**

The transition from legal advocacy writing to academic legal scholarship is challenging. In addition to learning a new style of writing and new methods of research, fellows must devote substantial time to the academic writing endeavor. Most students (and faculty) reflect in hindsight that writing a law review article for the first time takes substantially longer than they anticipated. Over the course of the fellowship, fellows earn one credit per semester for making progress toward completion of a paper of publishable quality. In this course, fellows apply theories of research and writing to the activities of writing (choosing topics, creating timelines, researching, and drafting sections of their articles).

**LAWS 4991 Corporate Apprenticeship Program (4 Credits)**

The Corporate Apprenticeship Program's purpose is to provide the opportunity for law students to learn about the distinct challenges facing corporate counsel. This program is offered solely in the spring term and consists of four mandatory seminars and 15 hours of work per week (preferably on consecutive days) in the legal department of sponsoring corporations. The interactive seminars are designed to introduce students to the practice environment and operations of an in-house corporate legal department.

**LAWS 4996 Thesis (1-10 Credits)**

The program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and the community. Example placements include public defenders' offices; prosecutors' offices; the Attorney General's office; Legal Service offices; judicial clerkships; and selected private firms. Need special enrollment permission from Internship/Externship Office. A maximum of 10 credit hours may be awarded for this program.

**LAWS 4999 Directed Research (1-5 Credits)**

Directed Research is an opportunity for students to research and write on any area of law approved by a full-time faculty member who agrees to direct the project. The research project must be completed within the semester for which the student is registered. The research is compiled into a paper of publishable quality. A copy is delivered to the supervising faculty member for grading and a second copy is delivered to the associate dean for academic affairs by the last day of exams for that semester. Students may petition for either two or three semester hours. A maximum of five semester hours credit for Directed Research is permitted in satisfaction of the 90-credit degree requirement. A Directed Research application form (available in the registrar's office) signed by both the faculty supervisor and student is required for enrollment. The registrar's office will register the student for his or her directed research once the student's application form has been approved. All directed research projects must conform with the upper level writing requirement, which involves a mandatory rewrite, in addition to any other requirements. This course satisfies the Upper Level Writing requirement (ULW). Permission is required from the faculty supervisor and the Assistant Dean for Student Affairs to increase credit hours to 4 or 5.

**LAWS 5025 Externship (1-10 Credits)**

The program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and community. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; judicial clerkships; and selected private firms. Externship Seminar: In conjunction with the above field placement each student shall meet in a seminar under the supervision of a member of the law faculty to explore common and contrasting areas of professional responsibility, professional tasks and skills, decision making and dispute resolution presented in the various extern settings.

**LAWS 5026 Trial Practice III: National Trial Team (3 Credits)**

The Trial Teams Course is for the new and veteran students who are selected to represent the school on one of the national trial teams. The course meets one night a week during the summer session for five hours each night. The course is split into two sections, one for returning team members, and one for the newly-selected team members. The course is an advanced courtroom-simulation course in which students work intensely with other students and the instructor, delving into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. The veteran section begins the first class with students presenting both sides of a criminal case. The new member section begins with refreshers on case analysis, evidence, and courtroom strategies, and culminates with final trials. There is weekly out-of-class case analysis, drafting, and preparation required. Grading is based on classroom participation, written homework, simulated courtroom presentations, and a final trial.

**LAWS 5027 American Association for Justice Trial Team (3 Credits)**

Sturm's American Association for Justice Trial Team (AAJ) is one of four of the school's advanced courtroom-simulation based "team-courses" in which students find themselves working intensely with five other students and an instructor, delving deeply into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. Students must be invited to be on one of Sturm's National Trial Teams, after tryouts that are held every spring (April). The team-courses meet all three semesters (fall, spring and summer). Being invited onto one of the teams is a two-year commitment. Starting the first week of each semester, and continuing throughout the entire semester, the AAJ team-course meets once a week in a classroom environment, for a total of 2.5 classroom hours per week. The AAJ team-course also meets a second time each week for courtroom simulation performances and video review, for an additional four (4) hours. There is also substantial out-of-class case analysis and examination drafting required. The team competes on the national level in the fall at an "invitational" tournament, and in the spring in the AAJ tournament against other ranked law schools from around the country. Grading is based on classroom participation, written homework, and simulated courtroom presentations. Prerequisite: LAWS 4635.

**LAWS 5028 ABA Trial Team (3 Credits)**

Sturm's ABA/NTC team is one of four of the school's advanced courtroom-simulation based "team-courses" in which students find themselves working intensely with five other students and an instructor, delving deeply into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. Students must be invited to be on one of Sturm's National Trial Teams, after tryouts that are held every spring (April). The team-courses meet all three semesters (fall, spring, and summer). Being invited onto one of the teams is a two-year commitment. Starting the first week of each semester and continuing throughout the entire semester, the ABA/NTC team-course meets twice a week in a classroom environment, for a total of five (5) classroom hours per week. The ABA/NTC team-course also meets a third time each week for courtroom simulation performances and video review, for an additional four (4) hours. There is also substantial out-of-class case analysis and drafting required. The team competes on the national level in the fall at an "invitational" tournament, and in the spring in the ABA/NTC tournament against other ranked law schools from around the country. Grading is based on classroom participation, written homework, and simulated courtroom presentations.

**LAWS 5029 Semester in Practice (1-12 Credits)**

The Semester in Practice program is designed to allow students the opportunity to develop practice skills by working full-time in legal programs of concern to the legal profession and community. This is a capstone experience offered to students in their last year of law school, where students have significant exposure to the substantive law in their externship. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; judicial clerkships; and selected private firms. As this is an externship, credit may vary, up to 12 credits, depending on the student. Externship Seminar: In conjunction with the above field placement, each student shall meet in a three-credit graded seminar under the supervision of a member of the externship faculty to explore common and contrasting areas of professional responsibility, professional tasks and skills, decision making and dispute resolution presented in the various extern settings.

**LAWS 5030 Semester in Practice Seminar (3 Credits)**

This seminar is the classroom component of the Semester in Practice (SIP) course. Through class discussion, we explore a variety of issues that provide students with the opportunity to reflect on the legal profession and how they perceive their role in the profession - currently and prospectively. We focus primarily on professional identity and ethical issues of key importance to the practice of law.

**LAWS 5031 Legal Externship Seminar (1-3 Credits)**

The Legal Externship Program is divided into practice-specific programs. Students enrolled in each of these programs are required to also enroll in an accompanying for-credit seminar that addresses topics specific to each practice area.

**LAWS 5035 Public Service Externship (2-6 Credits)**

The externship program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and community. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; and judicial clerkships. To ensure that the College of Law remains in the forefront of public service, every Juris Doctor student is required to perform a minimum of 50 hours of supervised, uncompensated, law-related public service work during his or her law school career as a prerequisite to graduation. This requirement may be fulfilled by registering for, and passing, an externship for credit at a government agency, judicial chambers, or nonprofit organization via the Legal Externship Office, as long as no financial compensation of any kind whether from the employer or outside source was received for the externship.

**LAWS 5999 Law Consortium Visit (0-18 Credits)**

This is a placeholder course that allows students to remain actively enrolled at Sturm College of Law for purposes of enrollment reporting and financial aid disbursement while students are participating in an approved visit at another ABA approved law school per a consortium agreement. Credits associated for this course are replaced by transfer credit once a final transcript is received by the host institution.

## Legal Administration Courses

### **MSLA 4050 The Impact of Court Governance (1 Credit)**

This course informs students on the policy making process of local court governance and the impact of the process on court operations and public services. Various governance structures are explored to include the benefits of principle based governance. Students gain in-depth insight into the roles and relationships of judges and court administrators as leaders and governing authorities within the judicial system. Course knowledge is applicable to all levels of national and international court jurisdiction.

### **MSLA 4080 Law Firm Information Technology (2 Credits)**

This course is designed to inform the student on the complexities of information technology in a law firm setting. Topics include time and billing, assessing the IT needs of the office, networking abilities, creating a paperless office, security, case management, outsourcing, and knowledge management.

### **MSLA 4090 Court Information Technology (2 Credits)**

This course is designed to introduce students to the intricacies of information technology in a court setting and the importance of an efficient and effective system. Topics include communications technology (internal and external), virtual courthouses, electronic case filing, legal research systems, information and systems security, networking abilities and needs, court reporting/recording and accessibility to the public (website).

### **MSLA 4100 Court Fiscal Management (3 Credits)**

This course focuses on the key aspects of fiscal management in a court setting. Students learn models of public budgeting, internal controls, procurement, outsourcing, RFPs, internal and external auditing, and government funding models. Prerequisite: MSLA 4410.

### **MSLA 4121 Human Res & Performance Mgmt (3 Credits)**

This course will provide a broad overview of the field of human resource and performance management. Students learn what managers and administrators need to know to effectively address Human Resource issues in today's workplace. The course will provide major concepts and techniques of performance management in law and court environments. By employing perspectives of both the employer and employee the class will focus on "best practices" utilized by managers and administrators and emphasize decision-making skills and processes in the context of Human Resources law and policy. Students will learn how to achieve organizational goals via management of a company's most precious resource, their people. This textbook provides an overview of the content upon which the most common HRCI certifications (SPHR, PHR) are based.

### **MSLA 4151 Applied Leadership and Management Theory (3 Credits)**

This course is designed to provide the student with an understanding of the importance of effective leadership and management in the workplace. Students will learn the tools necessary to manage conflict, build strong teams, function as a team, manage performance, create and maintain a positive work environment, and motivate others.

### **MSLA 4180 Court Case Flow and Load Management (2 Credits)**

This course is designed to provide the student with the fundamental principles of managing an effective case management system. Students will learn the importance of an efficient case flow management system, the history of case management, electronic case filing, civil and criminal rules of procedure, case assignment, quality assurance and time standards and major case, records management and reporting systems, strategies necessary to gain judicial support, leadership and cooperation to effectuate effective case flow management practices, and improve judicial performance as it relates to the disposition of actions.

### **MSLA 4181 Inclusiveness in the Legal Profession - The Next Generation of Diversity Efforts (1 Credit)**

Diversity and inclusiveness are hot topics in the legal profession. This highly interactive course will educate students about the state of diversity and inclusiveness within the legal profession, the systemic underpinnings of the lack of diversity, how to create inclusive environments for successful retention and advancement of female and diverse attorneys and staff, as well as the importance of diversity and inclusiveness to the viability of the legal profession. Students will be challenged to draw upon their own life experiences, to consider different perspectives, and provide thoughtful analysis on how they can incorporate diversity and inclusiveness practices with their career path and future legal organizations.

### **MSLA 4200 The Business of Courts (3 Credits)**

This course is designed to provide the student with the fundamental principles and elements of the key functions performed by the courts. These functions include jury management, court based mediation and arbitration programs, court reporting, client expectations, contingency planning, continuity of operations planning, needs and expectations of litigants without lawyers, interpreter services, court and staff performance measurement and management, and the role of the court administrator.

### **MSLA 4201 Law Firm Administration (3 Credits)**

This course informs the student of the fundamental principles, elements and day-to-day operational processes of law office management. Topics covered in this course include law office culture, law firm organization, succession planning, practice areas, client communication flow, collection challenges, and understanding and working with law office timekeeping, accounting, and billing systems.

### **MSLA 4205 Lawyer Recruitment, Development, and Advancement in Law Firms (2 Credits)**

This course will focus on the key aspects of lawyer recruitment, development and advancement in law firms. Students will learn the primary methods for recruiting and hiring lawyers at all experience levels, and the most important elements of lawyer development, including orientation, integration, legal and core skills training, experiential learning, mentoring, performance management, and evaluations. Traditional compensation and advancement models, as well as emerging trends in all of these areas, will also be covered during the course.

**MSLA 4215 Court Space, Facilities and Security (2 Credits)**

This course is designed to inform the students of the fundamentals of managing the court's space, facilities and security. Aspects of this course include: facilities management, operational standards and management, safety and security, assessing courthouse building needs, developing space planning reports, the management of all types of space projects, building and personnel security issues, contingency planning, and disaster recovery.

**MSLA 4300 Introduction to the United States Judicial System (3 Credits)**

This course provides the student with an overview of the United States judicial system. Students learn the fundamentals of our legal system, historical basis of the U.S. judicial system, the foundation, structure, purpose, what it stands for, and the varying levels of the U.S. court system.

**MSLA 4301 Judicial Performance and Evaluation (1 Credit)**

This course informs students on the complexities of judicial performance and evaluation. Students learn the fundamentals of developing a judicial performance program, measuring the effectiveness of performance recommendations, commissions on judicial performance, and the components of the evaluation process.

**MSLA 4310 World Judicial Systems (3 Credits)**

The goal of this course is to compare and contrast the role of the judiciary in various legal systems. Topics include types of courts and court systems (including domestic, supranational, i.e., the European Union, and international courts), judicial independence, separation of powers, and challenges facing the judiciary such as miscarriages of justice. Students also compare court procedures (civil, criminal, appellate review) in different types of legal systems.

**MSLA 4320 Fundamentals of Comparative Law (3 Credits)**

This course introduces the classifications of the world's legal systems: (civil law, common law, Islamic law, customary law, and mixed law systems). Students will learn the general elements of a legal system then compare and contrast these features in different types of legal systems as they are used in various countries or other jurisdictions including the European Union. Students will also explore internet and electronic resources to research and analyze foreign legal systems.

**MSLA 4330 Specialty Courts (2 Credits)**

This course will provide the students with an understanding of the purpose, functionality and effectiveness of specialty courts. Topics will include the types of specialty courts and how to create them, maintaining sustainability, treatment options, demographics, budgeting and measuring specialty court performance.

**MSLA 4380 Communication, Writing, and Research in Legal Business (3 Credits)**

This is a foundation course is designed to provide students with effective, productive, and relevant communication, writing, and research skills used in legal business today. Topics will include writing press releases, social media news/headlines/updates, executive summaries, email strategies based on audience, etc.

**MSLA 4384 Court Comm & Media Relations (2 Credits)**

This course will inform the students how to address communications and manage media relations for the courts. Topics will include views of the court from multiple perspectives, communicating to different constituencies, public relations and customer satisfaction, and educational outreach programs.

**MSLA 4385 Law Firm Communications and Technology (3 Credits)**

This course is designed to build student's foundation knowledge of technology in the legal environment. The competitive landscape<sup>3</sup> in the law firm setting is stronger than it ever has been, and this competitiveness forces law firms to find efficient and innovative ways to conduct business in this new landscape through the use of technology. Topics of this course will include identification of technologies used in law firms and legal departments as well as thoughts about how to leverage those technologies to help gain efficiencies.

**MSLA 4386 Law Firm Client Services and Satisfaction (2 Credits)**

This course is designed to inform the student of the importance of client service and satisfaction and its value to the law firm. Topics covered in this course include external communication, client feedback, partnering with clients, client relationship management, and evaluation and survey design.

**MSLA 4410 Accounting and Financial Management in Legal Business (3 Credits)**

This course will explore the principals and practices of financial accounting including the standards that govern the preparation of financial statements in legal business. Students will gain a comprehensive overview of double entry accounting, a detailed understanding of assets, liability, equity, revenue and expenses and how they affect the income statement, balance sheet, and statement of cash flows. Special attention will be given to the unique attributes of financial reports related to law firms.

**MSLA 4415 Statistics for the Legal Administrator (2 Credits)**

This course will introduce the fundamentals of statistics for the legal administrator. Students will learn how to measure efficiencies and work performance, perform and analyze needs assessment, track productivity; measure cases flows, and assess client needs.

**MSLA 4420 Legal Practice Seminar-Law as a Business (3 Credits)**

This course provides an overview of the business functions of a law practice. Students learn how effective law practice administrators and managers base policy and management decisions on a comprehensive understanding of the law firm as a complex and interdependent equation. MSLA course, open to JD students with approval from Associate Dean.

**MSLA 4640 ADR for the Court and Law Firm Administrators (3 Credits)**

This course has been designed for the Court/Legal Administrator to explore and understand the skills essential when negotiating/mediating conflict and to examine the ADR system designed for court-annexed, Federal/state agency and private sector arbitration/mediation programs. Students will have an opportunity to explore issues related to ADR in the public and private sector by actively participating in weekly online discussions and experience hands-on learning by developing an ADR system to include the process for selecting a panel of ADR specialists, and a process for implementing and managing the program.

**MSLA 4700 Special Topics (1-5 Credits)**

Special topics courses are used for timely offerings of specialized courses not otherwise found in the course catalog. Titles will vary. Please see [law.du.edu/registrar](http://law.du.edu/registrar) for more information.

**MSLA 4901 Law Firm Financial Management (3 Credits)**

This course focuses on the key aspects of financial management in a law firm setting. Students analyze financial reports/data, work flow analysis and assessment, understand trust accounts, client billing and internal controls, to ultimately recognize and understand the financial health of the law firm. Prerequisite: MSLA 4410.

**MSLA 4950 Strategic Planning in Courts (2 Credits)**

This course is designed to prepare the student in creating a strategic plan for the courts. Students learn to think strategically, design surveys, perform an environmental analysis, set goals, develop action plans, and measurement tools.

**MSLA 4954 Project Management (3 Credits)**

This course is designed to provide students with the tools to effectively manage a project regardless of its size. Topics include clarifying the project goals, using objectives to define responsibilities, understanding GANTT and PERT charts, goal setting, prioritization, time management, consensus building, developing creative teams, empower the project team, motivating the team, communications tools, how to handle conflicts, and how to celebrate your success.

**MSLA 4999 Directed Research MSLA (1-3 Credits)**

MSLA Directed Research is an opportunity for students to research and write on any area of legal administration approved by an approved faculty member who agrees to direct the project. The research project must be completed within the semester for which the student is registered. The research is compiled into a paper of publishable quality that is delivered to the supervising faculty member by the last day of exams for that semester. A Directed Research application form (available in the Registrar's Office) signed by both the faculty supervisor and student is required for enrollment.

**MSLA 5010 Capstone: Externship/Project (3 Credits)**

The externship or creative project is designed to complement the student's area of study. The externship enables the student to work in a practical setting and acquire the experience in a legal environment. The creative project option provides students, already working in the legal environment, an opportunity to complete a project or research paper on a topic determined by student and MSLA office. A grade of "pass" is given after the work is completed, and a letter from the supervisor summarizing the student's experience is submitted to the MSLA Office.

## Graduate Tax Program

The Graduate Tax Program was created at the University of Denver in 1975 in response to the demand for trained tax specialists in both the legal and accounting professions. Initially an evening program catering to the needs of practicing attorneys and accountants employed in the Denver area, it has evolved into one of the few such programs to offer a curriculum designed for both the full- and part-time student. The Graduate Tax Program is offered to qualified students who are graduates in law, accounting, or business in both in-person and online formats.

The Graduate Tax Program prepares students for entry into professional tax practice in both the public and private sectors. Through the interdisciplinary nature of the program, the law graduate learns the accounting aspects of tax practice, and the accounting graduate acquires a thorough understanding of the legal process.

## Graduate Tax Program

Office: Sturm College of Law

Mail Code: 2255 E. Evans Ave., Denver, CO 80208

Phone: 303-871-6249

Email: [gradadmissions@law.du.edu](mailto:gradadmissions@law.du.edu)

Web Site: <http://www.du.edu/tax> (<http://www.du.edu/tax/>)

The Graduate Tax Program at the University of Denver has been providing high-quality education for tax professionals for more than 40 years. The demand for our graduates continues to increase, along with the complexity of our nation's tax laws. Our curriculum combines both the law and accounting aspects of tax practice, giving our graduates the ability to provide practical, results-driven advice to their clients.

We offer degree tracks that meet your academic and professional needs and prepare you to continue your career in Tax, including an LLM for lawyers, Master of Taxation for accountants and other graduate students, and a flexible online program for those who cannot be here in person.

Our Graduate Tax Program continues to update its curriculum to reflect the latest changes in the law and offers an in-depth, cutting-edge tax curriculum that meets students' professional needs. Our academic program focuses exclusively on taxation, and includes courses in international taxation, state and local taxation, estate planning, individual taxation, entity taxation and tax controversy.

You also can earn credit by participating in our Low Income Taxpayer Clinic (LITC), which has served the Denver community since 1982. This hands-on, real-world experience provides students the opportunity to handle work papers, participate in research and represent clients before the IRS and Tax Court. Participation in the clinic creates a multidisciplinary network that lasts long after graduation. LITC participation is available for both online and campus students.

## Master of Laws in Taxation

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### LL.M. Requirements

- The JD degree or its equivalent (such as an LLB) from a college of law approved by the American Bar Association (no GMAT or LSAT score submission) is required. Those pursuing a JD at the Sturm College of Law at the University of Denver may apply to pursue a formal dual JD/LLM in Taxation option. Please see the dual degree policy (<http://bulletin.du.edu/graduate/dual-degrees/formal-dual-graduate-degrees/>).

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Graduate Tax Program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

---

## Master of Taxation

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### Standardized Test Scores

The GMAT or GRE is required. Scores must be received directly from the appropriate testing agency by the deadline. The GMAT code number is MZR-GT-68. The GRE code number is 4842. We will consider you waived from the GRE/GMAT if you have one or more of the following:

- You received a bachelor's degree in accounting or a business administration degree with a major in accounting with a cumulative GPA greater than or equal to 3.0.
- You received a bachelor's degree in accounting or a business administration degree with a major in accounting, and you have earned a graduate level degree from an accredited school.
- You have passed all four parts of the CPA Exam. Verification must be sent as an official document from the testing authority to Graduate Legal Studies before you can register for classes.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Graduate Tax Program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

## Master of Laws Program

### Master of Laws in Taxation

#### Degree Requirements

All students must complete 24 semester hours within the approved GTP curriculum. Curriculum is applicable to both online and onsite degree options (with the exception of the Low Income Tax Payer Clinic).

#### Coursework Requirements

Code	Title	Credits
<b>Required Courses</b>		
TAX 4001	Fundamentals of Taxation	4
TAX 4002	Corporate Taxation	3
TAX 4003	Partnership Taxation	3
TAX 4004	Tax Procedure	2
TAX 4005	Taxation Research and Writing	2
TAX 4035	Tax Accounting	2
<b>Elective Courses</b>		<b>8</b>

Students will complete remaining degree requirements by choosing from available TAX electives, in consultation with an advisor. Elective offerings vary.

Minimum Credit hours to graduate: 24

Students must earn and maintain a cumulative GPA of at least a 2.7 to remain in good standing and graduate with the degree.

A full-time student is expected to earn the degree in one year or over two semesters; a part-time student can earn the degree in 2-3 years. Program time limit is 5 years from the time of matriculation.

Dual J.D./LL.M. in Taxation degree available to those pursuing a J.D. at the Sturm College of Law

## Master of Taxation Program

### Master of Taxation

#### Degree Requirements

All students must complete 24 or 30 semester hours (to be selected at the time of matriculation into the program) within the approved GTP curriculum. Curriculum is applicable to both online and onsite degree options (with the exception of the Low Income Tax Payer Clinic).

#### Coursework Requirements

<b>Elective Courses</b>		<b>8 or 14</b>

Students will complete remaining degree requirements by choosing from available TAX electives, in consultation with an advisor. Elective offerings vary.

<b>Total Hours</b>	<b>24 or 30</b>
--------------------	---------------------

Students must earn and maintain a cumulative GPA of at least a 2.7 to remain in good standing and graduate with degree.

A full-time student is expected to earn the degree in one year or over two semesters; a part-time student can earn the degree in 2-3 years. Program time limit is 5 years from the time of matriculation.

**TAX 4001 Fundamentals of Taxation (4 Credits)**

This class will cover fundamental concepts of the federal income tax system, including the definition of income, adjusted gross income, taxable income, exclusions from income, business and personal deductions, tax credits, basis, amount realized, gain and loss, capital gains and losses, depreciation, involuntary conversions, like-kind exchanges.

**TAX 4002 Corporate Taxation (3 Credits)**

This required course covers the taxation of corporations and shareholders, including formation, nonliquidating distributions, the dividends received deduction, stock redemptions, distributions in kind, constructive distributions and liquidating distributions.

**TAX 4003 Partnership Taxation (3 Credits)**

Tax treatment of partnerships and partners; aggregate and entity principles; problems associated with the formation, operation, and dissolution of partnerships; transactions between partnerships and partners; compensation of service partners; sales of partnership interests; withdrawal and retirement of partners; basis adjustments; treatment of unrealized receivables and substantially appreciated inventory.

**TAX 4004 Tax Procedure (1-2 Credits)**

This required course addresses foundational procedural matters that must be addressed in resolving tax controversies with the Internal Revenue Service. Topics covered include filing obligations, statutes of limitation on assessment and collection of taxes and claims for refund, statutory notices, administrative appeals, limitations on injunctions against the assessment and collection of tax, examination procedures and collections procedures. Students are also introduced to ethical obligations of tax advisors.

**TAX 4005 Taxation Research and Writing (1-2 Credits)**

Research sources, techniques, and practice; in-depth research of selected areas. Emphasis on argument and communication of conclusions; evaluation of legislative history and administrative authorities.

**TAX 4015 S Corporations (2 Credits)**

This elective course addresses the federal taxation of S corporations and their shareholders. Topics covered include qualification as an S corporation, elections, the flow through of items to shareholders, basis in S stock and debt, accumulated adjustments account, the built-in gains tax, and passive activity limitations and taxes. Prerequisite: TAX 4002 - Corporation Taxation.

**TAX 4024 Advanced Tax Procedure (2 Credits)**

This class addresses advanced procedural matters arising in tax controversy. Topics covered include innocent spouse relief, jurisdiction of courts to resolve tax matters, petitioning Tax Court, and bringing suit for refund in U.S. district courts and US Court of Federal Claims. Prerequisite: TAX 4004.

**TAX 4025 Estate & Gift Taxation (2 Credits)**

This elective course will cover taxation of gratuitous transfers under the federal estate and gift tax codes, including taxable inter vivos gifts, annual exclusion, gift-splitting, gift tax charitable deduction, gift tax on powers of appointment, estate tax on owned interests, property transferred inter vivos with retained interests and powers, property subject to powers of appointment or transferred in contemplation of death, jointly owned property, life insurance proceeds, annuities and employee death benefits, marital deduction, charitable deduction, estate tax credits, estate tax deductions and valuation problems.

**TAX 4035 Tax Accounting (2 Credits)**

This elective course covers adoption of and change in accounting periods; income recognition and deduction allowance under the cash and accrual methods; prepaid and contested income and expenses; long-term contracts; capitalization and expensing; interest, original issue discount, and the time value of money; deferred payment transactions; income and deduction reversals; accounting method and practice changes.

**TAX 4045 Exempt Organizations (2 Credits)**

The statutory exemption for "charities," social welfare and social clubs, homeowners' associations, fraternal orders, employee benefit organizations, mutual or cooperative companies, business and professional leagues, labor unions, exempt organizations, property title companies, federally organized or chartered organizations, and political organizations' activities, funds, and lobbying activities; prohibited transaction rules; the private foundation; the unrelated business and debt-financed income tax exposures; excise tax exemptions; administrative appeal and declaratory judgment procedures; anti-discrimination considerations; charitable contributions.

**TAX 4050 International Taxation-Inbound (2 Credits)**

This course addresses the U.S. taxation of foreign taxpayers with economic activity connected to or within the United States. Topics covered include jurisdiction to tax, determination of residence, source, categorization of income, and tax treaties.

**TAX 4055 Tax & Financial Planning (2 Credits)**

This course addresses the Federal income taxation of investments and introduces students to the concepts and tools used to advise clients in investing and planning for the taxation of their investments and accumulated wealth.

**TAX 4060 Natural Resources Taxation (2 Credits)**

Tax problems encountered in the acquisition, operation, and disposition of natural resource properties; pre-production expenditures, depletion, depreciation, and ad valorem taxes; emphasis on overall tax planning for natural resource ventures.

**TAX 4065 Taxation of Corporate Reorgs & Divisions (2 Credits)**

This course addresses the taxation of corporate reorganizations and divisions. Students will be introduced to the law governing the taxation of corporate reorganizations and divisions, whether taxable or tax-free, and learn to advise taxpayers on the results.

**TAX 4120 Qualified Pension and Profit Sharing Plans (4 Credits)**

An in-depth study of ERISA, labor department rules, and Internal Revenue Code provisions relating to qualified deferred compensation. The course is geared toward an understanding of all the pension and profit sharing rules required for plan qualification, with emphasis on qualified plan planning for both incorporated and unincorporated forms of business.

**TAX 4121 Taxation of Retirement Plans and Deferred Compensation (2 Credits)**

Taxation of Retirement Plans and Deferred Compensation introduces students to issues related to retirement savings plans available to employers and taxpayers, including vesting requirements, top-heavy plans, and the taxation of plan contributions and distributions. The course also addresses non-qualified deferred compensation governed by § 409A, including, traditional non-qualified deferred compensation plan designs, executive compensation programs (e.g., equity compensation arrangements and types of non-qualified trusts established for the benefit of executives), common § 409A errors and correction, tax and accounting implications, and the "special timing rule" for FICA taxes.

**TAX 4125 Fiduciary Income Taxation (2 Credits)**

This course covers the federal income taxation of estates and trusts. Included is a discussion of the concept of an estate or trust; trust accounting income for a simple and complex trust; calculation of taxable income, including special rules on the calculation of distributable net income, capital gains, personal exemptions, and charitable contributions; the separate share rule and trapping distributions; income in respect of a decedent; the grantor trust rules under sections 671-678; trust ownership rules for subchapter S stock; and the calculation of the alternative minimum tax. Estate & Gift Taxation is highly recommended before taking this course.

**TAX 4150 International Taxation-Outbound (2 Credits)**

This class addresses the U.S. taxation of U.S. taxpayers with economic activity outside of the United States. Topics covered include foreign tax credits, subpart F income, hybrid entities, global intangible low-taxed income and foreign-derived intangible income.

**TAX 4165 Taxation of Startups and Venture Capital (2 Credits)**

This course addresses taxation of startups and venture capital. Topics covered include choice of entity, taxation of intellectual property, carried interests, employee compensation, international expansion, and exit strategies. TAX 4003 Partnership Taxation and Tax 4002 Corporate Taxation are co-requisites or pre-requisites for this course.

**TAX 4220 Fiduciary Income Taxation (4 Credits)**

Federal income taxation of estates and trusts. Included is a discussion of the concept of an estate or trust; trust accounting income for a simple and complex trust; calculation of taxable income, including special rules on the calculation of distributable net income, capital gains, personal exemptions, and charitable contributions; the separate share rule and trapping distributions; income in respect of a decedent; the grantor trust rules under Sections 671-678; and the calculation of the alternative minimum tax.

**TAX 4225 Estate Planning (2 Credits)**

This course is a survey of estate planning issues. We will analyze an estate from the beginning through the end of the process. We will examine fact gathering and the analysis of data; the psychological and ethical aspects of working with families at different phases of the estate plan; the members of the team (the attorney, the CPA, the life underwriter, the trust officer); life insurance and retirement planning in an estate and business planning context; planning with trusts; and the transfer of wealth and a closely held business interest from one generation to the next. We will also study ways to plan for future generations and domestic asset protection planning. Estate and Gift Taxation (TAX 4025) is a pre-requisite for the for this course.

**TAX 4230 Estate Planning (3 Credits)**

Estate analysis, including fact gathering and the analysis of data; the psychological aspects of "role playing" in estate planning; the members of the team (the attorney, the CPA, the life underwriter, the trust officer); life insurance in an estate and business planning context; planning with trusts, including revocable, short-term, and irrevocable; the transfer of a closely held business interest from one generation to the next, including full and partial stock redemptions, cross purchase agreements, private annuity, installment sale, retirement, recapitalization, qualified and nonqualified plans of deferred compensation; special estate planning considerations for the professional corporation, the highly paid executive, and the farmer and rancher; specific cases analyzed. Prerequisite: TAX 4210.

**TAX 4240 Tax and Financial Planning (3 Credits)**

This is an introductory, integrated course focusing on personal financial planning. Topics covered include cash flow projections and budgeting, annual and multiple period income tax planning, an introduction to taxation of investments, an insurance and liability coverage survey, retirement planning, and estate and succession planning.

**TAX 4250 Ethics in Tax Practice (3 Credits)**

An examination of the ethical rules and considerations affecting lawyers and accountants in tax practice, including transactional, compliance and controversy matters.

**TAX 4315 Low Income Taxpayer Clinic (1-4 Credits)****TAX 4325 Tax Planning for Closely Held Businesses (2 Credits)**

This course addresses succession planning for closely held businesses. Topics covered include buy-sell agreements, stock redemptions, intra-family transfers of business entities, compensation arrangements, and family limited partnerships. TAX 4003 Partnership Taxation and TAX 4002 Corporate Taxation are pre-requisite or co-requisites for this course. Estate Planning and Fiduciary Income Taxation are recommended.

**TAX 4386 Graduate Tax Program Externship (2-4 Credits)**

The Graduate Tax Program (GTP) encourages students to gain practical experience and to develop professional skills in the field of taxation. Externships are supervised by faculty and GLS department who interact with the eligible student and the employer or organization that provides the externship. The externship should provide a new learning experience for the student intern and must be related to taxation. Satisfactory completion of the externship will result in a passing grade for the externship. The GTP Director or a full time GTP faculty member may serve as Faculty Supervisor for GTP externs.

**TAX 4410 Taxation-Natural Resources (3 Credits)**

Tax problems encountered in the acquisition, operation, and disposition of natural resource properties; pre-production expenditures, depletion, depreciation, and ad valorem taxes; emphasis on overall tax planning for natural resource ventures.

**TAX 4415 Low Income Taxpayer Clinic (1-8 Credits)**

Using a focused series of classes related to issues facing individual low income taxpayers embroiled in conflict with the Internal Revenue Service or in litigation before the United States Tax Court (innocent spouse relief, earned income credit, dependency exemptions, appeals of audits and collection due process issues, tax litigation), this course first prepares tax students to represent taxpayers regarding such issues, then provides the opportunity to practice before the IRS and in the Tax Court. In a clinical setting, students are trained in all facets of practice before the IRS and the Tax Court. Once trained, under the supervision of clinical staff, the students undertake representation of low income taxpayers in tax audits, appeals, collection proceedings, and, if necessary, before the Tax Court. All facets of client representation, including initial client meetings, representation agreements, client advocacy, and ending the representation, are experienced by each clinic participant.

**TAX 4430 Exempt Organizations (3 Credits)**

An examination of the statutory exemptions for "charities," social welfare organizations, social clubs, homeowners' associations, fraternal orders, employee benefit organizations, mutual or cooperative companies, business and professional leagues, labor unions, property title companies, federally organized or chartered organizations, political organizations, and other exempt organizations; rules on electioneering and lobbying activities; taxation of private foundations; prohibited transaction rules; the tax on unrelated business income, including debt-financed income; excise tax exemptions; administrative appeal and declaratory judgment procedures; anti-discrimination considerations; charitable contributions.

**TAX 4470 Employment Tax (2 Credits)**

Explore existing employment tax risks, recognize employment tax planning opportunities through appropriate compensation and entity structuring techniques, analyze proper worker classification, and highlight preventative techniques to avoid personal liability.

**TAX 4490 State & Local Taxation (3 Credits)**

Taxable incidents, privilege tax, discrimination, and multiple taxation under the Commerce Clause of the United States Constitution; taxation based on class legislation and the Equal Protection Clause; nexus or jurisdictional due process; allocation and apportionment formulas; business versus nonbusiness income; multi-state tax compact; unitary concept; residence definitions; nonresident income sources; tax credits and short period returns for individual income taxpayers; sales of tangible personal property; retail and wholesale sales; taxable and nontaxable leases; contractors rule, exemptions, and resale certificates under sales and use tax statutes; valuation techniques for real personal property; and administrative and judicial appeal of property tax valuations and assessments.

**TAX 4500 Consolidated Returns (3 Credits)**

Methods used by related corporations to report income and losses; affiliation and consolidation; computation of consolidated taxable income; allocation of consolidated tax liability; deferred intercompany transactions; treatment of investments in affiliates; earnings and profits; impact of corporate combination and separation.

**TAX 4550 Consolidated Returns (2 Credits)**

This course covers the rules and requirements for consolidated income tax returns, including qualification for consolidation, determination of consolidated taxable income, allocations of liability, adjustments of E&P and basis, and various loss limitations.

**TAX 4590 State and Local Taxation (2 Credits)**

This course addresses state law approaches to taxation, including variations in state rules, constitutional limitations on states' authority to impose tax, and various approaches to apportionment of taxation. We will also discuss policy considerations underlying these systems.

**TAX 4600 Seminar: Selected Topics (2-4 Credits)**

Recognition of tax problems and opportunities for a broad range of transactions encountered by individuals. Areas include family income splitting and other tax reduction and avoidance techniques; portfolio transactions, including short sales, puts and calls, and commodity futures; structuring agreements in contemplation of marriage or arising out of separation or divorce; personal insurance; charitable contributions; net operating losses; alternative minimum tax; various year-end planning techniques.

**TAX 4620 Accounting for Income Taxes (ASC 740) (2 Credits)**

Examines the financial accounting and reporting of income taxes under Statement of Financial Accounting Standards Codification Topic 740 (FASB ASC 740), formerly known as FAS 109, and related accounting literature. Topics include the calculation of current and deferred income taxes, an overview of book-tax differences, the calculation of interim period tax provisions and the presentation and disclosure of income taxes in financial statements. Students will learn the basics of accounting for income taxes related to advanced topics such as stock compensation expense, foreign operations, state income taxes, accounting for uncertain tax positions (formerly known as FIN 48), business combinations, inter-company transactions and valuation allowances.

**TAX 4625 Accounting for Income Taxes (2 Credits)**

Accounting for Income Taxes examines the financial accounting and reporting of income taxes under Statement of Financial Accounting Standards Codification Topic 740 (FASB ASC 740), formerly known as FAS 109, and related accounting literature.

**TAX 4701 Special Topics in Taxation (1-5 Credits)**

Special topics courses are used for timely offerings of specialized courses not otherwise found in the course catalog. Titles will vary. Please see [law.du.edu/registrar](http://law.du.edu/registrar) for more information.

**TAX 4750 Special Topics in International Taxation (2 Credits)**

This advanced seminar discusses international taxation of economic activity arising in multiple jurisdictions. Topics discussed can include tax treaties, dual residence entities, anti-abuse regimes, approaches to base erosion and profit shifting, taxation of intangible income, and issues related to stateless income. TAX 4150 International – Outbound is a prerequisite for this course.

**TAX 4980 Internship (0 Credits)**

The Graduate Tax Program (GTP) encourages students to gain practical experience and to develop professional skills in the field of taxation. Internships are supervised by faculty who interact with the eligible student and the employer or organization that provides the internship. The internship should provide a new learning experience for the student intern and must be related to taxation. Satisfactory completion of the internship results in a passing grade for the internship. The GTP Director or a full time GTP faculty member may serve as Faculty Supervisor for GTP interns. Students must obtain approval from the GTP Director or a full-time GTP faculty member.

**TAX 4985 Internship (0 Credits)**

The Graduate Tax Program (GTP) encourages students to gain practical experience and to develop professional skills in the field of taxation. Internships are supervised by faculty who interact with the eligible student and the employer or organization that provides the internship. The internship should provide a new learning experience for the student intern and must be related to taxation. Satisfactory completion of the internship results in a passing grade for the internship. The GTP Director or a full time GTP faculty member may serve as Faculty Supervisor for GTP interns. Students must obtain approval from the GTP Program Manager.

**TAX 4991 Independent Study (1-4 Credits)**

Opportunity to study and write in any area agreed upon between the student and a member of the faculty. The student is required to produce a written work of publishable quality to receive a final grade for the course. The 4 quarter-hour maximum may be applied toward graduation requirements with no more than 2 quarter hours in any one quarter. Must obtain pre-approval from the Graduate Tax Program.

**TAX 5025 Tax Externship (1-4 Credits)**

The Graduate Tax Program (GTP) encourages students to gain practical experience and to develop professional skills in the field of taxation. Tax externships are designed to allow students the opportunity to gain monitored work experience in Tax-oriented placements outside of the law school. Example placements include judicial chambers, government agencies, private firms, corporations, and nonprofit organizations. Students should discuss any placement with the Director of the Graduate Tax Program before enrolling in this course. Externships are supervised by faculty who interact with the eligible student and the employer or organization that provides the externships. The externship should provide a new learning experience for the student and must be related to taxation. Satisfactory completion of the externship results in a passing grade for the externship. The GTP Director or a full time GTP faculty member may serve as Faculty Supervisor for students. Students may complete an externship for 1 to 4 credits. Each credit corresponds to 42.5 hours of work and thus students can work from 42.5 hours to 170 hours. This class does not satisfy the upper-level writing requirement.

**TAX 5991 Independent Study (1-3 Credits)**

Opportunity to study and write in any area agreed upon between the student and a member of the faculty. The student is required to produce a written work of publishable quality to receive a final grade for the course. Must obtain pre-approval from the Graduate Tax Program.

**Courses****TAX 4001 Fundamentals of Taxation (4 Credits)**

This class will cover fundamental concepts of the federal income tax system, including the definition of income, adjusted gross income, taxable income, exclusions from income, business and personal deductions, tax credits, basis, amount realized, gain and loss, capital gains and losses, depreciation, involuntary conversions, like-kind exchanges.

**TAX 4002 Corporate Taxation (3 Credits)**

This required course covers the taxation of corporations and shareholders, including formation, nonliquidating distributions, the dividends received deduction, stock redemptions, distributions in kind, constructive distributions and liquidating distributions.

**TAX 4003 Partnership Taxation (3 Credits)**

Tax treatment of partnerships and partners; aggregate and entity principles; problems associated with the formation, operation, and dissolution of partnerships; transactions between partnerships and partners; compensation of service partners; sales of partnership interests; withdrawal and retirement of partners; basis adjustments; treatment of unrealized receivables and substantially appreciated inventory.

**TAX 4004 Tax Procedure (1-2 Credits)**

This required course addresses foundational procedural matters that must be addressed in resolving tax controversies with the Internal Revenue Service. Topics covered include filing obligations, statutes of limitation on assessment and collection of taxes and claims for refund, statutory notices, administrative appeals, limitations on injunctions against the assessment and collection of tax, examination procedures and collections procedures. Students are also introduced to ethical obligations of tax advisors.

**TAX 4005 Taxation Research and Writing (1-2 Credits)**

Research sources, techniques, and practice; in-depth research of selected areas. Emphasis on argument and communication of conclusions; evaluation of legislative history and administrative authorities.

**TAX 4015 S Corporations (2 Credits)**

This elective course addresses the federal taxation of S corporations and their shareholders. Topics covered include qualification as an S corporation, elections, the flow through of items to shareholders, basis in S stock and debt, accumulated adjustments account, the built-in gains tax, and passive activity limitations and taxes. Prerequisite: TAX 4002 - Corporation Taxation.

**TAX 4024 Advanced Tax Procedure (2 Credits)**

This class addresses advanced procedural matters arising in tax controversy. Topics covered include innocent spouse relief, jurisdiction of courts to resolve tax matters, petitioning Tax Court, and bringing suit for refund in U.S. district courts and US Court of Federal Claims. Prerequisite: TAX 4004.

**TAX 4025 Estate & Gift Taxation (2 Credits)**

This elective course will cover taxation of gratuitous transfers under the federal estate and gift tax codes, including taxable inter vivos gifts, annual exclusion, gift-splitting, gift tax charitable deduction, gift tax on powers of appointment, estate tax on owned interests, property transferred inter vivos with retained interests and powers, property subject to powers of appointment or transferred in contemplation of death, jointly owned property, life insurance proceeds, annuities and employee death benefits, marital deduction, charitable deduction, estate tax credits, estate tax deductions and valuation problems.

**TAX 4035 Tax Accounting (2 Credits)**

This elective course covers adoption of and change in accounting periods; income recognition and deduction allowance under the cash and accrual methods; prepaid and contested income and expenses; long-term contracts; capitalization and expensing; interest, original issue discount, and the time value of money; deferred payment transactions; income and deduction reversals; accounting method and practice changes.

**TAX 4045 Exempt Organizations (2 Credits)**

The statutory exemption for "charities," social welfare and social clubs, homeowners' associations, fraternal orders, employee benefit organizations, mutual or cooperative companies, business and professional leagues, labor unions, exempt organizations, property title companies, federally organized or chartered organizations, and political organizations' activities, funds, and lobbying activities; prohibited transaction rules; the private foundation; the unrelated business and debt-financed income tax exposures; excise tax exemptions; administrative appeal and declaratory judgment procedures; anti-discrimination considerations; charitable contributions.

**TAX 4050 International Taxation-Inbound (2 Credits)**

This course addresses the U.S. taxation of foreign taxpayers with economic activity connected to or within the United States. Topics covered include jurisdiction to tax, determination of residence, source, categorization of income, and tax treaties.

**TAX 4055 Tax & Financial Planning (2 Credits)**

This course addresses the Federal income taxation of investments and introduces students to the concepts and tools used to advise clients in investing and planning for the taxation of their investments and accumulated wealth.

**TAX 4060 Natural Resources Taxation (2 Credits)**

Tax problems encountered in the acquisition, operation, and disposition of natural resource properties; pre-production expenditures, depletion, depreciation, and ad valorem taxes; emphasis on overall tax planning for natural resource ventures.

**TAX 4065 Taxation of Corporate Reorgs & Divisions (2 Credits)**

This course addresses the taxation of corporate reorganizations and divisions. Students will be introduced to the law governing the taxation of corporate reorganizations and divisions, whether taxable or tax-free, and learn to advise taxpayers on the results.

**TAX 4121 Taxation of Retirement Plans and Deferred Compensation (2 Credits)**

Taxation of Retirement Plans and Deferred Compensation introduces students to issues related to retirement savings plans available to employers and taxpayers, including vesting requirements, top-heavy plans, and the taxation of plan contributions and distributions. The course also addresses non-qualified deferred compensation governed by § 409A, including, traditional non-qualified deferred compensation plan designs, executive compensation programs (e.g., equity compensation arrangements and types of non-qualified trusts established for the benefit of executives), common § 409A errors and correction, tax and accounting implications, and the "special timing rule" for FICA taxes.

**TAX 4125 Fiduciary Income Taxation (2 Credits)**

This course covers the federal income taxation of estates and trusts. Included is a discussion of the concept of an estate or trust; trust accounting income for a simple and complex trust; calculation of taxable income, including special rules on the calculation of distributable net income, capital gains, personal exemptions, and charitable contributions; the separate share rule and trapping distributions; income in respect of a decedent; the grantor trust rules under sections 671-678; trust ownership rules for subchapter S stock; and the calculation of the alternative minimum tax. Estate & Gift Taxation is highly recommended before taking this course.

**TAX 4150 International Taxation-Outbound (2 Credits)**

This class addresses the U.S. taxation of U.S. taxpayers with economic activity outside of the United States. Topics covered include foreign tax credits, subpart F income, hybrid entities, global intangible low-taxed income and foreign-derived intangible income.

**TAX 4165 Taxation of Startups and Venture Capital (2 Credits)**

This course addresses taxation of startups and venture capital. Topics covered include choice of entity, taxation of intellectual property, carried interests, employee compensation, international expansion, and exit strategies. TAX 4003 Partnership Taxation and Tax 4002 Corporate Taxation are co-requisites or pre-requisites for this course.

**TAX 4225 Estate Planning (2 Credits)**

This course is a survey of estate planning issues. We will analyze an estate from the beginning through the end of the process. We will examine fact gathering and the analysis of data; the psychological and ethical aspects of working with families at different phases of the estate plan; the members of the team (the attorney, the CPA, the life underwriter, the trust officer); life insurance and retirement planning in an estate and business planning context; planning with trusts; and the transfer of wealth and a closely held business interest from one generation to the next. We will also study ways to plan for future generations and domestic asset protection planning. Estate and Gift Taxation (TAX 4025) is a pre-requisite for the for this course.

**TAX 4325 Tax Planning for Closely Held Businesses (2 Credits)**

This course addresses succession planning for closely held businesses. Topics covered include buy-sell agreements, stock redemptions, intra-family transfers of business entities, compensation arrangements, and family limited partnerships. TAX 4003 Partnership Taxation and TAX 4002 Corporate Taxation are pre-requisite or co-requisites for this course. Estate Planning and Fiduciary Income Taxation are recommended.

**TAX 4415 Low Income Taxpayer Clinic (1-8 Credits)**

Using a focused series of classes related to issues facing individual low income taxpayers embroiled in conflict with the Internal Revenue Service or in litigation before the United States Tax Court (innocent spouse relief, earned income credit, dependency exemptions, appeals of audits and collection due process issues, tax litigation), this course first prepares tax students to represent taxpayers regarding such issues, then provides the opportunity to practice before the IRS and in the Tax Court. In a clinical setting, students are trained in all facets of practice before the IRS and the Tax Court. Once trained, under the supervision of clinical staff, the students undertake representation of low income taxpayers in tax audits, appeals, collection proceedings, and, if necessary, before the Tax Court. All facets of client representation, including initial client meetings, representation agreements, client advocacy, and ending the representation, are experienced by each clinic participant.

**TAX 4550 Consolidated Returns (2 Credits)**

This course covers the rules and requirements for consolidated income tax returns, including qualification for consolidation, determination of consolidated taxable income, allocations of liability, adjustments of E&P and basis, and various loss limitations.

**TAX 4590 State and Local Taxation (2 Credits)**

This course addresses state law approaches to taxation, including variations in state rules, constitutional limitations on states' authority to impose tax, and various approaches to apportionment of taxation. We will also discuss policy considerations underlying these systems.

**TAX 4625 Accounting for Income Taxes (2 Credits)**

Accounting for Income Taxes examines the financial accounting and reporting of income taxes under Statement of Financial Accounting Standards Codification Topic 740 (FASB ASC 740), formerly known as FAS 109, and related accounting literature.

**TAX 4701 Special Topics in Taxation (1-5 Credits)**

Special topics courses are used for timely offerings of specialized courses not otherwise found in the course catalog. Titles will vary. Please see [law.du.edu/registrar](http://law.du.edu/registrar) for more information.

**TAX 4750 Special Topics in International Taxation (2 Credits)**

This advanced seminar discusses international taxation of economic activity arising in multiple jurisdictions. Topics discussed can include tax treaties, dual residence entities, anti-abuse regimes, approaches to base erosion and profit shifting, taxation of intangible income, and issues related to stateless income. TAX 4150 International – Outbound is a prerequisite for this course.

**TAX 4985 Internship (0 Credits)**

The Graduate Tax Program (GTP) encourages students to gain practical experience and to develop professional skills in the field of taxation. Internships are supervised by faculty who interact with the eligible student and the employer or organization that provides the internship. The internship should provide a new learning experience for the student intern and must be related to taxation. Satisfactory completion of the internship results in a passing grade for the internship. The GTP Director or a full time GTP faculty member may serve as Faculty Supervisor for GTP interns. Students must obtain approval from the GTP Program Manager.

**TAX 5025 Tax Externship (1-4 Credits)**

The Graduate Tax Program (GTP) encourages students to gain practical experience and to develop professional skills in the field of taxation. Tax externships are designed to allow students the opportunity to gain monitored work experience in Tax-oriented placements outside of the law school. Example placements include judicial chambers, government agencies, private firms, corporations, and nonprofit organizations. Students should discuss any placement with the Director of the Graduate Tax Program before enrolling in this course. Externships are supervised by faculty who interact with the eligible student and the employer or organization that provides the externships. The externship should provide a new learning experience for the student and must be related to taxation. Satisfactory completion of the externship results in a passing grade for the externship. The GTP Director or a full time GTP faculty member may serve as Faculty Supervisor for students. Students may complete an externship for 1 to 4 credits. Each credit corresponds to 42.5 hours of work and thus students can work from 42.5 hours to 170 hours. This class does not satisfy the upper-level writing requirement.

**TAX 5991 Independent Study (1-3 Credits)**

Opportunity to study and write in any area agreed upon between the student and a member of the faculty. The student is required to produce a written work of publishable quality to receive a final grade for the course. Must obtain pre-approval from the Graduate Tax Program.

## University College

As the University of Denver's college of continuing and professional studies, University College (<http://universitycollege.du.edu/answers/why-university-college.cfm>) delivers a personalized education from a top 100 university, as ranked by *U.S. News & World Report*. Delivered entirely

online or evenings on campus, career-focused programs help you envision your future and be a leader in your chosen field. Build your network and your knowledge at University College, where you can earn a master's degree (<http://universitycollege.du.edu/masters-degrees.cfm>) in 18 months, a specialized graduate certificate (<https://universitycollege.du.edu/certificate/>) in six months, or a graduate certificate (<https://universitycollege.du.edu/certificate/>) in less than a year. The top-ranked bachelor's completion program (<https://universitycollege.du.edu/bachelors/>) is also available for those with some college credit who want to finish their degree.

## Arts and Culture Management

Office: University College Student Support Center  
Mail Code: 2211 S. Josephine St., Denver, CO 80208  
Phone: 303-871-2291, 800-347-2042  
Email: [ucol-support@du.edu](mailto:ucol-support@du.edu)  
Web Site: <http://www.universitycollege.du.edu>

The Arts and Culture Management program helps students enhance their ability to support, promote, and lead both public and private sector arts and cultural organizations. The program's larger aim is to prepare students to strengthen their communities through the dissemination of artistic and cultural creations that address and celebrate diverse constituencies, whether based on age, ethnic background, religious/philosophical identity, or political commitments. The program fosters the study of best practices in areas such as advocacy, community outreach, marketing, fundraising, facilities management, organizational development, budgeting, and governance. The program develops critical and creative thought through a combination of academic and applied inquiry to fully understand the needs of communities and organizations and to meet those needs in the most effective ways.

This program prepares students to:

- Develop careers in public and/or private arts and culture organizations
- Implement best practices to support organizational stability and creative vibrancy
- Cultivate strong connections between arts and culture organizations and the communities they serve
- Effectively deliver well-planned programs and events tailored to diverse audiences

### Master of Arts in Arts and Culture Management with a Concentration in Arts and Culture Outreach and Advocacy

Students in the Arts and Culture Outreach and Advocacy concentration learn strategies and methods for creating strong relationships between arts and culture organizations and the communities they serve. Instructors with current expertise in arts and culture outreach and advocacy offer current industry insight and help students develop the practical knowledge they need to advocate for arts and culture in communities of all kinds. By designing engaging events and targeted programs, applying entrepreneurial thinking and skills to issues of community outreach, and developing effective approaches to securing grant support, graduates with this concentration will bring core skills to any organization they join in the arts and culture sector.

This degree prepares students to:

- Design events and programs that cultivate connections between arts and culture organizations and the communities they serve
- Develop winning proposals to secure grant support for outreach and advocacy initiatives
- Evaluate the opportunities to build a strategic marketing plan using various forms of media
- Apply creative, entrepreneurial approaches to help both nonprofit and for-profit organizations develop a strong, productive community presence

### Master of Arts in Arts and Culture Management with a Concentration in Arts and Culture Marketing

In the Arts and Culture Marketing concentration, students learn to plan, sustain, and develop strategic marketing initiatives and campaign assessment methodologies on behalf of arts and culture organizations, both nonprofit and for-profit. Instructors with current expertise in arts and culture marketing provide industry insight and help students develop the practical knowledge they need to work as effective members of arts and culture marketing teams.

This degree prepares students to:

- Design effective marketing strategies to cultivate audiences for arts and culture events
- Identify, develop, and retain key audiences
- Evaluate the opportunities to build strategic marketing plans using various forms of promotion, advertising, digital communications, and social media
- Assess individual campaigns and overarching strategies to improve them over time

## **Master of Arts in Arts and Culture Management with a Concentration in Arts and Culture Fundraising and Development**

Students in the Arts and Culture Fundraising concentration learn the practical steps involved in creating successful fundraising campaigns on behalf of nonprofit arts and culture organizations. From crowdsourcing and kick-starting campaigns to capital fundraising and legacy gifts, nonprofits must cultivate and retain donors from various backgrounds, prospect for new donation sources, and validate the value of their efforts. Students will gain the knowledge and skills needed to navigate changing trends, boost the impact of fundraising programs, and advance their organization's goals. By applying their personal enthusiasm and practical skills, students will learn how to cultivate both human and financial resources to fulfill the mission of any arts and culture organization.

This degree prepares students to:

- Evaluate diverse fundraising strategies to ensure alignment with the mission and capacity of arts and culture nonprofits of various sizes.
- Identify the best fundraising strategies, methods, and tools to meet organizational goals.
- Formulate and structure focused fundraising plans in the arts and culture space.
- Demonstrate financial literacy and awareness of current fundraising tools and practices to meet the development needs of arts and culture organizations.
- Exhibit cultural competence by analyzing and explaining how various fundraising approaches may need to be adjusted to work well in diverse cultural contexts.

## **Master of Arts in Arts and Culture Management with a Concentration in Mission-Driven Operations and Management**

In the Arts and Culture Mission-Driven Operations and Management concentration, students learn how to help program operations and organizational management work together to accomplish a nonprofit arts and culture organization's mission impact. Organizations need to develop effective program design to include staffing, performance measurements, and the human and financial resources to ensure success. In this concentration students will link financial goals to grants management, partnership cultivation and community-based strategies that further the goals of the organization. Together, students will examine the evidence of effective nonprofit programming as grounded in research. Students will identify program evaluation strategies that demonstrate community impact and mission accomplishment. Volunteer and advocacy operations are also examined as programming strategies that accomplish a nonprofit arts and culture organization's mission.

This degree prepares students to:

- Demonstrate planning practices for effectively resourced nonprofit/nongovernmental program development.
- Evaluate existing nonprofit programs' design using critical thinking to determine resource allocation and impact measurement.
- Demonstrate program-evaluation-planning skills to include collective impact, logic models.
- Examine diverse funding structures, including grants cultivation and management, to determine how best to resource program operations.

## **Graduate Certificate in Arts and Culture Management with a Concentration in Arts and Culture Outreach and Advocacy**

Students earning a graduate certificate in the Arts and Culture Outreach and Advocacy learn strategies and methods for creating strong relationships between arts and culture organizations and the communities they serve. Instructors with current expertise in arts and culture outreach and advocacy offer current industry insight and help students begin to develop the practical knowledge they need to advocate for arts and culture in communities of all kinds. By designing engaging events and targeted programs, applying entrepreneurial thinking and skills to issues of community outreach, and developing effective approaches to securing grant support, certificate students will develop core skills that are easily transferable to any organization they join in the arts and culture sector. Students will also learn additional skills and knowledge in arts and culture through elective coursework.

## **Graduate Certificate in Arts and Culture Management with a Concentration in Arts and Culture Marketing**

Students earning a graduate certificate in Arts and Culture Marketing learn to plan, sustain, and develop strategic marketing initiatives and campaign assessment methodologies on behalf of arts and culture organizations, both nonprofit and for-profit. Instructors with current expertise in arts and culture marketing provide industry insight and help students begin to develop the practical knowledge they need to work as effective members of arts and culture marketing teams. Students will also learn additional skills and knowledge in arts and culture through elective coursework.

## **Graduate Certificate in Arts and Culture Management with a Concentration in Arts and Culture Fundraising and Development**

Students earning a graduate certificate in Arts and Culture Fundraising and Development learn the practical steps involved in creating successful fundraising campaigns on behalf of nonprofit arts and culture organizations. From crowdsourcing and kick-starting campaigns to capital fundraising and legacy gifts, nonprofits must cultivate and retain donors from various backgrounds, prospect for new donation sources, and validate the value of their efforts. Students will gain the knowledge and skills needed to navigate changing trends, boost the impact of fundraising programs, and advance their organization's goals. By applying their personal enthusiasm and practical skills, students will learn how to cultivate both human and financial resources to fulfill the mission of any arts and culture organization.

## **Specialized Graduate Certificate in Arts and Culture Marketing**

Students earning a specialized graduate certificate in Arts and Culture Marketing learn to plan, sustain, and develop strategic marketing initiatives and campaign assessment methodologies on behalf of arts and culture organizations, both nonprofit and for-profit. Instructors with current expertise in arts and culture marketing provide industry insight and help students begin to develop the practical knowledge they need to work as effective members of arts and culture marketing teams.

## **Specialized Graduate Certificate in Arts and Culture Outreach and Advocacy**

Students earning a specialized graduate certificate in the Arts and Culture Outreach and Advocacy learn strategies and methods for creating strong relationships between arts and culture organizations and the communities they serve. Instructors with current expertise in arts and culture outreach and advocacy offer current industry insight and help students begin to develop the practical knowledge they need to advocate for arts and culture in communities of all kinds. By designing engaging events and targeted programs, applying entrepreneurial thinking and skills to issues of community outreach, and developing effective approaches to securing grant support, certificate students will develop core skills that are easily transferable to any organization they join in the arts and culture sector.

## **Master's Degree Admission**

### **Degree and GPA Requirements**

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### **English Language Proficiency Test Score Requirements**

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.

---

#### **MALS 4050 World Visual & Performance Art (4 Credits)**

This course draws upon global artistic traditions of visual art and performance in conveying how human beings express ideas, themes, and emotions. Students view and experience artistic forms and movements throughout history and from a variety of traditions across the world, critically analyzing art movements and forms across time. They synthesize ideas across cultures, traditions, and types of creative expression and make connections and distinctions between genres and art forms. A different, rich, artistic theme is the focus each time the course is taught.

#### **MALS 4200 Grant Writing (4 Credits)**

This course gives students the opportunity to develop a thorough understanding of proposal writing. Students will receive practical grant writing advice and support, and they will work to sharpen their writing, program design, budgeting, and evaluation skills. Prospect research, development planning, and grasping the dynamics of the broader philanthropic landscape are important components of a holistic funding strategy that produces a successful fundraising program. Students will explore the place of contributed income in a healthy and diversified funding plan, develop research and planning skills, and learn the best practices that are fundamental to building strong philanthropic relationships.

#### **MALS 4210 Fundraising for Sustainable Arts Organizations (4 Credits)**

Every sustainable arts and culture organization requires a diversified funding base—usually a mix of earned income, contributions from individuals, and grants from foundations and government programs. This survey course allows students to explore the professional skills they will need to respond effectively to a variety of funding scenarios. The course is tailored for creatives — artists, cultural workers, and organizers in need of a user-friendly approach to the critical activity of fundraising.

#### **MALS 4281 Event Planning (4 Credits)**

Events play a large role in connecting community and audiences within the arts and culture sector. Students will learn to develop and manage arts and culture events to achieve an organization's mission, goals, and objectives within the constraints of the event's scope, timing, and budget. Event management systems addressed include strategic planning, event design, marketing and audience development, site management, and partnership development. Students will create a program and plan for an event supporting a particular arts and culture organization.

#### **MALS 4283 Strategic Marketing Planning for Arts and Culture (4 Credits)**

This course provides a strategic approach to attracting audiences through arts marketing. Students learn to build a cohesive strategic marketing plan that aligns with the mission and programming of a real-life arts organization. Students will make a wide range of strategic marketing management decisions, preparing them for decision-making positions in arts marketing.

#### **MALS 4284 Arts and Culture Entrepreneurship (4 Credits)**

In any sector of the Arts and Culture field, whether government, nonprofit, or for profit, it is essential to be able to develop programs and/or organizations from conception through implementation and assessment. This development requires the clear communication of what is needed to develop, implement, and sustain this plan over time. In this course, students take an entrepreneurial approach to develop a program or organization in the arts and culture field. Students will develop and present a comprehensive business plan to define, map, structure, and assess the program/organization in either the nonprofit or for-profit sector.

#### **MALS 4285 Basics of Arts and Culture Marketing (4 Credits)**

This course provides a strategic approach to audiences and markets through an arts and cultural lens. Students will study basic principles of marketing, audience characteristics, and theories of creating commitment to the arts.

#### **MALS 4286 Social Media and Digital Marketing for Arts and Culture (4 Credits)**

Marketing arts and culture in the digital age is an art unto itself. Today's arts marketers are expected to produce visual, audio, and written content that matches the quality of the art, on stage or in the gallery, or the cultural programming presented to the public. This course provides students with a framework for planning, producing, executing, and measuring the impact of digital campaigns that build communities around art and culture.

#### **MALS 4287 Managing Demand and Pricing for Arts and Culture (4 Credits)**

Tomorrow's arts leaders need to be prepared to face the emotional subject of pricing in a way that is responsive to the community yet supports a sustainable business model. This class takes an evidence-based approach to determining the demand for arts and culture programming and setting prices for programs and events offered by arts and culture organizations. Students will explore dynamic pricing strategies, approaches to communicating the relationship between price and value, and how artistic and cultural programming enriches the broader community.

#### **MALS 4340 Arts and Culture Leadership for Social Change (4 Credits)**

Art and culture are powerful tools for the transformation of society and individuals: they sustain communities in resistance, provide powerful social critiques, expose audiences to multiple experiences and points of view and utilize collaboration, co-creation, dialogue, and exchange, to effect social change. In this course, students will learn how cultural institutions can become active agents in the work of social change. We will examine theories of movement building, explore case studies and develop advocacy, outreach, and program planning strategies for successful arts and social justice leadership.

**MALS 4444 Emerging Trends in Visual and Performance Art (4 Credits)**

Whether you're curating visual art for a large regional venue or staging work at a local theater or gallery, understanding current artistic trends can be critical to your success. This course looks into major developments in Contemporary visual and performance art around the world. From new approaches to materials and techniques to expressions of identity and cultural/political critique, students will examine and engage with the latest, most significant artistic trends that are shaping the Contemporary art experience.

**MALS 4470 Arts and Culture: History, Context, and Trends (4 Credits)**

This course examines the significant and growing economic, social, and educational impact of the arts and culture sector on our increasingly diverse communities. Focusing on historical and current trends in the visual, performing, literary, and media arts, students will develop a stronger grasp of the role arts and culture organizations play in enriching our understanding of the world around us.

**MALS 4475 Organizational Vibrancy and Measurement (4 Credits)**

As database and analytics systems for arts organizations grow ever more sophisticated, arts leaders must be literate in basics concepts of statistics, finance, and data analysis. This course will prepare students to examine data critically, explore the stories that data can tell, and determine how to measure success and vibrancy.

**MALS 4480 Arts and Culture: Best Practices and Practical Skills (4 Credits)**

This course will engage students in the management and operations of arts and cultural non-profits through terms, techniques, and applications specifically focusing on analysis of mission/visioning, planning, staffing, volunteerism, board governance, fiduciary actions, fundraising/development, marketing/promotion and assessment. This is in preparation for a variety of experiences students may explore, including new aspects of arts management, either in positions of leadership, employment in the field, or a higher interest in volunteerism.

**MALS 4485 Legal Landscape of Arts and Culture (4 Credits)**

Professionals in arts and culture, whether they are artists, managers, directors, or others working in the private, government, or nonprofit sector, will encounter a variety of legal issues during their careers. Through readings, case studies, assignments, and research, students will be introduced to a complex interdisciplinary system of relevant laws that impact and, in some cases, govern arts and culture organizational activities.

**MALS 4490 Arts and Culture Programs for Social Impact (4 Credits)**

In this course, students explore changing attitudes toward arts participation and cultural philanthropy, focusing especially on the need for new approaches to engaging and working with culturally diverse populations. Students explore the cultivation of effective cross-disciplinary partnerships to create impactful programs that can transform communities. Programs at diverse arts organizations serve as case studies for practical applications. Students use theory-of-change models to develop programs that connect arts and cultural work with social-impact activities beyond the arts and culture sector.

**MALS 4701 Topics in Arts and Culture (4 Credits)**

The content of this course varies each term. The topics may include time-sensitive issues in the area of literature, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**MALS 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**MALS 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**MALS 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**MALS 4905 Graduate Social Research Methods (4 Credits)**

This course provides graduate students with a basic background in the methods of research in the social sciences. In our information-rich society, organizations and institutions have become more aware of the value of research data for informing critical decisions. As leaders in their organizations, graduates should have a knowledge base that allows them to critically examine basic research in the social sciences and to understand the methods involved in generating research results. They should understand the value of research to their organizations, be able to identify opportunities to gather information through research that will benefit those organizations, and participate in the ethical design of basic studies to gather that critical information. Students will develop and write a research proposal around a specific research question informed by a review of the literature.

**MALS 4980 Internship (0-4 Credits)**

The internship is designed to offer students a purposeful experience in a practical, industry-related setting. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

**MALS 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

## Courses

**MALS 4050 World Visual & Performance Art (4 Credits)**

This course draws upon global artistic traditions of visual art and performance in conveying how human beings express ideas, themes, and emotions. Students view and experience artistic forms and movements throughout history and from a variety of traditions across the world, critically analyzing art movements and forms across time. They synthesize ideas across cultures, traditions, and types of creative expression and make connections and distinctions between genres and art forms. A different, rich, artistic theme is the focus each time the course is taught.

**MALS 4200 Grant Writing (4 Credits)**

This course gives students the opportunity to develop a thorough understanding of proposal writing. Students will receive practical grant writing advice and support, and they will work to sharpen their writing, program design, budgeting, and evaluation skills. Prospect research, development planning, and grasping the dynamics of the broader philanthropic landscape are important components of a holistic funding strategy that produces a successful fundraising program. Students will explore the place of contributed income in a healthy and diversified funding plan, develop research and planning skills, and learn the best practices that are fundamental to building strong philanthropic relationships.

**MALS 4210 Fundraising for Sustainable Arts Organizations (4 Credits)**

Every sustainable arts and culture organization requires a diversified funding base—usually a mix of earned income, contributions from individuals, and grants from foundations and government programs. This survey course allows students to explore the professional skills they will need to respond effectively to a variety of funding scenarios. The course is tailored for creatives — artists, cultural workers, and organizers in need of a user-friendly approach to the critical activity of fundraising.

**MALS 4281 Event Planning (4 Credits)**

Events play a large role in connecting community and audiences within the arts and culture sector. Students will learn to develop and manage arts and culture events to achieve an organization's mission, goals, and objectives within the constraints of the event's scope, timing, and budget. Event management systems addressed include strategic planning, event design, marketing and audience development, site management, and partnership development. Students will create a program and plan for an event supporting a particular arts and culture organization.

**MALS 4283 Strategic Marketing Planning for Arts and Culture (4 Credits)**

This course provides a strategic approach to attracting audiences through arts marketing. Students learn to build a cohesive strategic marketing plan that aligns with the mission and programming of a real-life arts organization. Students will make a wide range of strategic marketing management decisions, preparing them for decision-making positions in arts marketing.

**MALS 4284 Arts and Culture Entrepreneurship (4 Credits)**

In any sector of the Arts and Culture field, whether government, nonprofit, or for profit, it is essential to be able to develop programs and/or organizations from conception through implementation and assessment. This development requires the clear communication of what is needed to develop, implement, and sustain this plan over time. In this course, students take an entrepreneurial approach to develop a program or organization in the arts and culture field. Students will develop and present a comprehensive business plan to define, map, structure, and assess the program/organization in either the nonprofit or for-profit sector.

**MALS 4285 Basics of Arts and Culture Marketing (4 Credits)**

This course provides a strategic approach to audiences and markets through an arts and cultural lens. Students will study basic principles of marketing, audience characteristics, and theories of creating commitment to the arts.

**MALS 4286 Social Media and Digital Marketing for Arts and Culture (4 Credits)**

Marketing arts and culture in the digital age is an art unto itself. Today's arts marketers are expected to produce visual, audio, and written content that matches the quality of the art, on stage or in the gallery, or the cultural programming presented to the public. This course provides students with a framework for planning, producing, executing, and measuring the impact of digital campaigns that build communities around art and culture.

**MALS 4287 Managing Demand and Pricing for Arts and Culture (4 Credits)**

Tomorrow's arts leaders need to be prepared to face the emotional subject of pricing in a way that is responsive to the community yet supports a sustainable business model. This class takes an evidence-based approach to determining the demand for arts and culture programming and setting prices for programs and events offered by arts and culture organizations. Students will explore dynamic pricing strategies, approaches to communicating the relationship between price and value, and how artistic and cultural programming enriches the broader community.

**MALS 4340 Arts and Culture Leadership for Social Change (4 Credits)**

Art and culture are powerful tools for the transformation of society and individuals: they sustain communities in resistance, provide powerful social critiques, expose audiences to multiple experiences and points of view and utilize collaboration, co-creation, dialogue, and exchange, to effect social change. In this course, students will learn how cultural institutions can become active agents in the work of social change. We will examine theories of movement building, explore case studies and develop advocacy, outreach, and program planning strategies for successful arts and social justice leadership.

**MALS 4444 Emerging Trends in Visual and Performance Art (4 Credits)**

Whether you're curating visual art for a large regional venue or staging work at a local theater or gallery, understanding current artistic trends can be critical to your success. This course looks into major developments in Contemporary visual and performance art around the world. From new approaches to materials and techniques to expressions of identity and cultural/political critique, students will examine and engage with the latest, most significant artistic trends that are shaping the Contemporary art experience.

**MALS 4470 Arts and Culture: History, Context, and Trends (4 Credits)**

This course examines the significant and growing economic, social, and educational impact of the arts and culture sector on our increasingly diverse communities. Focusing on historical and current trends in the visual, performing, literary, and media arts, students will develop a stronger grasp of the role arts and culture organizations play in enriching our understanding of the world around us.

**MALS 4475 Organizational Vibrancy and Measurement (4 Credits)**

As database and analytics systems for arts organizations grow ever more sophisticated, arts leaders must be literate in basics concepts of statistics, finance, and data analysis. This course will prepare students to examine data critically, explore the stories that data can tell, and determine how to measure success and vibrancy.

**MALS 4480 Arts and Culture: Best Practices and Practical Skills (4 Credits)**

This course will engage students in the management and operations of arts and cultural non-profits through terms, techniques, and applications specifically focusing on analysis of mission/visioning, planning, staffing, volunteerism, board governance, fiduciary actions, fundraising/development, marketing/promotion and assessment. This is in preparation for a variety of experiences students may explore, including new aspects of arts management, either in positions of leadership, employment in the field, or a higher interest in volunteerism.

**MALS 4485 Legal Landscape of Arts and Culture (4 Credits)**

Professionals in arts and culture, whether they are artists, managers, directors, or others working in the private, government, or nonprofit sector, will encounter a variety of legal issues during their careers. Through readings, case studies, assignments, and research, students will be introduced to a complex interdisciplinary system of relevant laws that impact and, in some cases, govern arts and culture organizational activities.

**MALS 4490 Arts and Culture Programs for Social Impact (4 Credits)**

In this course, students explore changing attitudes toward arts participation and cultural philanthropy, focusing especially on the need for new approaches to engaging and working with culturally diverse populations. Students explore the cultivation of effective cross-disciplinary partnerships to create impactful programs that can transform communities. Programs at diverse arts organizations serve as case studies for practical applications. Students use theory-of-change models to develop programs that connect arts and cultural work with social-impact activities beyond the arts and culture sector.

**MALS 4701 Topics in Arts and Culture (4 Credits)**

The content of this course varies each term. The topics may include time-sensitive issues in the area of literature, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**MALS 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**MALS 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**MALS 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**MALS 4905 Graduate Social Research Methods (4 Credits)**

This course provides graduate students with a basic background in the methods of research in the social sciences. In our information-rich society, organizations and institutions have become more aware of the value of research data for informing critical decisions. As leaders in their organizations, graduates should have a knowledge base that allows them to critically examine basic research in the social sciences and to understand the methods involved in generating research results. They should understand the value of research to their organizations, be able to identify opportunities to gather information through research that will benefit those organizations, and participate in the ethical design of basic studies to gather that critical information. Students will develop and write a research proposal around a specific research question informed by a review of the literature.

**MALS 4980 Internship (0-4 Credits)**

The internship is designed to offer students a purposeful experience in a practical, industry-related setting. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

**MALS 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

## Communication Management

Effective communication is crucial for every organization. This fully online master's degree program provides you with the tools to play a central role in developing and implementing effective communication strategies. From the nuance required to handle interpersonal conversations or lead organizational change, to the strategy behind impactful digital communication or training, our curriculum develops your expertise in meaningful, data-driven storytelling.

Our commitment to practical application is evident in our hands-on projects and real-world case studies. These experiences allow you to not only grasp theoretical concepts but also gain practical insights into applying communication strategies. We understand the importance of staying current with industry trends. The program receives direction from an Advisory Board made up of senior industry experts, ensuring that our curriculum stays aligned with the latest industry trends. In addition, our instructors bring extensive industry experience to every course, providing you with valuable perspectives and practical knowledge. Finally, our curriculum integrates the latest technologies and tools used in professional communication, ensuring you graduate with a skill set aligned with industry demands.

Through this comprehensive program, you'll enhance your ability to strategically craft messages, measure their impact, and create desired outcomes. Whether your goal is gaining stakeholder buy-in, gathering participant feedback, engaging target audiences, or building brand awareness, graduates of this program are well-positioned to take their careers to the next level. You will demonstrate advanced critical thinking skills and possess a refined sophistication for applying communication best practices strategically in various contexts. Elevate your career with a master's degree that goes beyond theory, providing you with practical skills and industry connections needed for success in the ever-evolving field of professional communication.

This degree equips students with the skills to:

- Integrate learning by connecting course concepts with personal and professional experiences, allowing for the synthesis and application of knowledge in diverse situations.
- Develop critical thinking skills, encouraging a thorough exploration of issues, ideas, and events before forming opinions or drawing conclusions.
- Demonstrate intercultural communication competence, applying behaviors and skills effectively in various contexts to foster cultural sensitivity and adaptability.
- Exhibit organizational literacy, understanding the role of communication in organizations and its relationship with essential functions such as structures, finance, and strategy.
- Hone effective communication skills to craft strategic plans, campaigns, or interventions tailored to meet organizational or client needs, demonstrating the ability to align communication efforts with overarching goals.

## **Master of Arts in Communication Management with a Concentration in AI Strategy and Application in Communication**

This concentration is designed for communications professionals and leaders seeking to leverage AI effectively and responsibly for application in industry. This program focuses on providing a working knowledge of AI's capabilities, limitations, and ethical considerations, alongside practical skills for developing AI-driven solutions. It aims to prepare leaders and decision-makers to ethically harness AI strategically to meet organizational goals and adapt to the evolving AI landscape.

This concentration prepares students to:

- Apply a working knowledge of AI capabilities, limitations, and practical applications in order to develop strategies and adapt to a changing AI environment.
- Evaluate ethical, policy, and governance considerations in order to influence ethically responsible AI practices.
- Analyze the strategic potential of various AI tools and solutions to accomplish organizational goals.
- Develop communication solutions through the application of AI competencies.

## **Master of Arts in Communication Management with a Concentration in Advancing Diversity, Equity, and Inclusion in Organizations**

Advancing diversity, equity, and inclusion is critical to achieving organizational goals, positioning organizations for success in today's world, and creating environments where everyone has the opportunity to thrive. In this master's degree concentration, you will gain skills that are crucial for advancing equity as an integrated part of organizational strategy while developing solutions that meaningfully leverage diversity to create a culture of belonging. Learn about the historical, cultural, and economic factors that shape identity and apply appropriate tools and techniques to help organizations achieve their vision for change as it relates to diversity, equity, and inclusion practices.

This concentration prepares students to:

- Assess the influence of historical, social, cultural, and economic factors in shaping one's identity and conceptions of diversity, equity, and inclusion practices.
- Integrate an understanding of social and cultural difference, perspective-taking, and empathy to better inform interpersonal communication and problem-solving strategies.
- Develop practices that advance equity as an integrated component of organizational strategy.
- Design solutions that meaningfully leverage diversity to achieve organizational goals and cultivate a culture of belonging across different organizational settings.
- Apply change models, tools and techniques to successfully achieve a vision for change.

## Master of Arts in Communication Management with a Concentration in Learning and Development

Take your ability to effectively facilitate adult learning to the next level. As organizations continue to invest in improving employee performance, this program will prepare you to lead learning and development efforts by leveraging your technology, facilitation, and evaluation skills. From design to implementation, learn to strategically execute entire L&D programs and specialized initiatives from start to finish.

This concentration prepares students to:

- Design and execute projects from needs assessment through design, delivery, implementation, and evaluation
- Elucidate key components of adult learning theories; assess contributions of these theories; articulate challenges to, limits of, and new directions for these theories; and apply them to meet organizational needs
- Identify, analyze, choose, and defend best instructional strategies and techniques to achieve learning objectives
- Develop advanced facilitation and communication skills and demonstrate the ability to respond appropriately to varied audiences with diverse needs and across platforms
- Evaluate and communicate impact of projects using most relevant metrics and analytics

## Master of Arts in Communication Management with a Concentration in Marketing Communication

Discover the power of brands to move an audience while learning how to craft, deploy, and measure campaigns from start to finish. Create integrated marketing plans that are driven by strategic objectives, backed by data-informed decisions, and deliver desired results. Apply your learning from each course as you receive hands-on experience evaluating traditional and digital marketing communication tactics while digging deep into marketing trends.

This concentration prepares students to:

- Design, manage, and measure persuasive, integrated marketing communication campaigns
- Assess the current scope and learn how to anticipate future trends in traditional, social, mobile, email, and search marketing
- Measure marketing communication efforts and create plans to adjust and defend future decisions based on results
- Create strategies to elevate an organization's or client's marketing and branding efforts through the use of appropriate tactics

## Master of Arts in Communication Management with a Concentration in Organizational Communication

Effective communication and advanced problem-solving skills are at the top of every organization's wish list. Are you prepared to meet the demand? Find the key to your next job or your next promotion in the communication field. Learn to harness the potential of your team, manage change initiatives, and meet needs by persuading stakeholders. In this program, you will enhance and deepen your interpersonal, organizational, and managerial abilities.

This concentration prepares students to:

- Articulate and defend various interpersonal and organizational communication techniques to make contextually appropriate decisions
- Evaluate and utilize business communication concepts, tools, and presentation techniques
- Assess and apply theories and best practices of group and team dynamics
- Identify barriers of effective communication and develop plans to ensure productive outcomes
- Create strategies to lead change by applying principles of change, critical change dynamics, and processes for knowledge transfer within organizations

## Master of Arts in Communication Management with a Concentration in Organizational Development

Successful organizations are dynamic entities that are constantly adjusting goals, organizational structures, and strategies in response to varying organizational needs and influences. Sometimes these adjustments are large, but quite often there are a series of small to mid-size changes that affect employees and processes, resulting in the need for an organizational development (OD) intervention. In this concentration, students learn about organizations, organizational culture, and effective intervention strategies. Students also learn the history, challenges, and successes of OD and the different models and techniques to warrant a productive culture in a variety of organizational sizes, sectors, and types. An OD intervention strategy is created by defining the role of the practitioner as an internal or external consultant and constructing a diagnosis plan, synthesizing data from interviews and observations, and effectively communicating the findings in various applicable formats. Finally, a personal philosophy regarding

change is developed and then examined through the context of analyzing organizational values and ethics, culture, and the human impact of change on employees.

This concentration prepares students to:

- Articulate and define organizational development, history of OD, and challenges and possibilities using an intentional OD intervention
- Develop and defend a personal philosophy of organizational change
- Evaluate the impact of organizational culture and core values on OD interventions
- Integrate the contract for a successful OD intervention with the organizational culture and determine the role of an OD practitioner in each stage of an OD intervention, distinguishing between an internal and external consultant
- Assess, compare, and contrast different models of change and describe the impact of each model on an OD process
- Define and organize OD strategies for different types of organizations (sectors, life cycle, size, industry, types of innovation, or other defining characteristics) for maximizing impacts of OD interventions
- Summarize the importance and impact of the different organizational structures and design on OD strategy and interventions
- Construct an organizational diagnosis plan by using interviewing, group facilitation, process observation, synthesis of data, and writing effective reports, while providing effective presentations of the findings
- Analyze the human side of change and build strategies for successful implementation of an OD intervention that honor the loss, resistance and acceptance of changes

### **Master of Arts in Communication Management with a Concentration in Public Relations**

Public relations careers show up in virtually every sector and industry. Gain practical experience using technology to manage how information flows to and from key audiences. You'll learn how to use data to connect with influencers, and leverage social media in a strategic way, all while employing principles of persuasion and quality content creation. From researching and evaluating audiences, to assessing the value of PR campaigns, you will apply critical thinking, precise writing, principles of ethics, and complex reasoning throughout your courses.

This concentration prepares students to:

- Communicate persuasively to targeted audiences to meet specific organizational outcomes
- Create communication plans with measurable results using public relations best practices, tactics, and strategies
- Develop, manage, and analyze effective media relations practices
- Articulate and defend the selection of techniques to measure, monitor, and influence an organization's reputation
- Articulate the primary principles, practices, and ethics of public relations in an increasingly interconnected, global economy

### **Master of Arts in Communication Management with a Concentration in User Experience Strategy**

In our current engagement economy, effectively moving an audience lies at the intersection of communication and technology. Students will learn to think critically and strategically about the user experience in a way that enables greater innovative agility across all communication platforms. Students will gain skills to manage and direct cross-functional teams equipped to defend technology, marketing, and communication decisions using data generated from deep user journey and user experience analysis.

This concentration prepares students to:

- Analyze the components and implications of user experience design across communication channels.
- Use critical analysis to manage the strategy and execution of interactive experiences.
- Analyze user-journey data to measure and inform decisions across digital platforms, communication channels, and marketing programs.
- Create engaging digital content that enhances the user experience through strategic choices with technology, design, and copy.

### **Graduate Certificate in Communication Management with a Concentration in AI Strategy and Application in Communication**

This certificate is designed for communications professionals and leaders seeking to leverage AI effectively and responsibly for application in industry. This program focuses on providing a working knowledge of AI's capabilities, limitations, and ethical considerations, alongside practical skills for developing AI-driven solutions. It aims to prepare leaders and decision-makers to ethically harness AI strategically to meet organizational goals and adapt to the evolving AI landscape.

### **Graduate Certificate in Communication Management with a Concentration in Learning and Development**

Gain insight to the strategies needed to effectively facilitate adult learning. Organizations continue to invest in improving employee performance, and in this program you will learn to lead learning and development efforts by leveraging your technology, facilitation, and evaluation skills. From design

to implementation, learn to strategically execute entire L&D programs and specialized initiatives from start to finish. Students will also gain additional skills and knowledge in communication management through elective coursework.

### **Graduate Certificate in Communication Management with a Concentration in Marketing Communication**

Discover the power of brands to move an audience while learning how to craft, deploy, and measure campaigns from start to finish. Create integrated marketing plans that are driven by strategic objectives, backed by data-informed decisions, and deliver desired results. Apply your learning from each course as you receive hands-on experience evaluating traditional and digital marketing communication tactics and digging deep into marketing trends. Students will also gain additional skills and knowledge in communication management through elective coursework.

### **Graduate Certificate in Communication Management with a Concentration in organizational Communication**

Effective communication and advanced problem-solving skills are at the top of every organization's wish list. Are you prepared to meet the demand? Find the key to your next job or your next promotion in the communication field. Learn to harness the potential of your team, manage change initiatives, and meet needs by persuading stakeholders. In this program, you will enhance and deepen your interpersonal, organizational, and managerial abilities. Students will also gain additional skills and knowledge in communication management through elective coursework.

### **Graduate Certificate in Communication Management with a Concentration in Public Relations**

Public relations careers show up in virtually every sector and industry. Gain practical experience using technology to manage how information flows to and from key audiences. You'll learn how to use data to connect with influencers and leverage social media in a strategic way, all while employing principles of persuasion and quality content creation. From researching and evaluating audiences, to assessing the value of PR campaigns, you will apply critical thinking, precise writing, principles of ethics, and complex reasoning throughout your courses.

### **Graduate Certificate in Communication Management with a Concentration in User Experience Strategy**

In our current engagement economy, effectively moving an audience lies at the intersection of communication and technology. Students will learn to think critically and strategically about the user experience in a way that enables greater innovative agility across all communication platforms. Students will gain skills to manage and direct cross-functional teams equipped to defend technology, marketing, and communication decisions using data generated from deep user journey and user experience analysis.

### **Specialized Graduate Certificate in AI Strategy and Application in Communication**

This specialized certificate is designed for communications professionals and leaders seeking to leverage AI effectively and responsibly for application in industry. This program focuses on providing a working knowledge of AI's capabilities, limitations, and ethical considerations, alongside practical skills for developing AI-driven solutions. It aims to prepare leaders and decision-makers to ethically harness AI strategically to meet organizational goals and adapt to the evolving AI landscape.

### **Specialized Graduate Certificate in Organizational Communication**

Effective communication and advanced problem-solving skills are at the top of every organization's wish list. Are you prepared to meet the demand? Find the key to your next job or your next promotion in the communication field. Learn to harness the potential of your team, manage change initiatives, and meet needs by persuading stakeholders. Students will gain skills to manage and direct cross-functional teams equipped to defend technology, marketing, and communication decisions using data generated from deep user journey and user experience analysis.

## Master's Degree Admission

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.

#### COMM 4001 Portfolio Foundations (0 Credits)

Master's and certificate-seeking students in Communication Management must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

**COMM 4002 Dynamic Presentation and Training Methods (4 Credits)**

The increasing presence of technology in the workplace has changed the way we present information and conduct trainings, both in person and virtually. In this course, students hone their presentation and training skills by assessing their audience, purpose, and desired learning outcomes. Students practice using appropriate and memorable visual aids in order to maximize the audience and/or participant engagement. Students employ communication strategies and training techniques to improve participants' receptivity and retention of information and ideas. Whether presenting or training in person or virtually, students will gain the skills and confidence needed for effective communication across varied delivery methods.

**COMM 4006 Building High-Performing Teams (4 Credits)**

High-performing teams are invaluable to every organization. Ensuring productive and satisfying group and team interactional outcomes in organizational, professional, and personal settings can be difficult. Students focus on theory, application, and the practice of working together to learn the fundamentals of building high-performing teams. Students learn about the development of group dynamics, assessment, and leadership while also gaining knowledge about their strengths and weaknesses in teams, developing new skills, and learning how to enhance productivity while reducing barriers to effective communication.

**COMM 4010 Business Insights for Communicators (4 Credits)**

Communications leaders must speak the language of business to effectively craft strategies, execute deliverables, and measure outcomes that create tangible value and advance their organizations' objectives. Whether in an industry, public sector, or non-profit role, these leaders gain an edge through supplementing strong technical literacy with the ability to assess operational priorities and execute deliverables accordingly. In this class, students will sharpen their understanding of balance sheets and budgets; demystify key aspects of Information Technology infrastructure (intranets, cloud and on-premises computing, databases, security, etc.); delve into various organizational and divisional/departmental models, functions, and political positions; address the benefits and challenges of globalization and cross-cultural communication; and touch on an assortment of other relevant topics, including managing upward and workflow prioritization. Along the way, students will hone their strategic planning competencies and perspectives by putting all elements learned in this course together. Materials and assessments are geared toward application in relevant contexts.

**COMM 4016 Persuasion and Influence (4 Credits)****COMM 4030 Managing Learning in Organizations (4 Credits)**

To support a culture of continuous improvement, Learning and Development (L & D) professionals must quickly and effectively train and develop employees, evaluate results, show a return on investment, and develop new solutions to meet ever-changing business needs. This course prepares students to lead and manage L & D departments, teams, and processes by guiding them to think strategically, generate creative solutions that address root causes, build trusted partnerships with business partners, and manage knowledge assets.

**COMM 4035 Cultural Intelligence through Communication (4 Credits)**

There is a growing need to communicate effectively across cultural differences. Writer James Neuliep defines culture as an accumulated pattern of values, beliefs, and behaviors shared by an identifiable group of people with a common history and verbal and nonverbal code system. Culture pervades every aspect of the communicative process. This course uses a contextual approach to examine the ways culture, communication, context, and power intersect in intercultural communication interactions. Students will identify and analyze obstacles and barriers to effective intercultural communication. Finally, students will examine strategies and skills needed to become a competent and effective intercultural communicator.

**COMM 4045 Applied Critical Thinking in Communication (4 Credits)****COMM 4140 Marketing Strategy and Process (4 Credits)**

Creating and sustaining competitive advantage is driven by strategies that integrate people, process, and systems. In this application-oriented course, students will examine the fundamentals of marketing, develop the insights and skills to formulate and implement sound marketing decisions, and apply ethical marketing strategies which contribute to the overall business (for-profit and non-for-profit) performance. Students will apply strategic concepts through discussion and teamwork. Throughout the quarter, students will examine how information and research is used to inform marketing management decisions to all level of the organization, including external stakeholders. Because marketing communication plays such a critical role in marketing success, integrating different types of communication channels will be an emphasis.

**COMM 4144 Strategic Public Relations (4 Credits)**

In a complex global environment, business, government, nonprofit, and other organizations require professional public relations practitioners who can effectively develop two-way relationships with constituents/audiences to enable strategic and effective communication processes. This course prepares students for this complex environment through the study and practice of essential components of public relations, which include the use of strategy, the value of relationship development, an overview of the range of PR tactics, the evolving role of digital communications and social media to PR, and the importance of ethics and transparency in PR practice.

**COMM 4145 Public Relations Writing and Content Creation (4 Credits)**

Effective and persuasive writing and creative content development are integral parts of today's public relations programs. This course deepens students' knowledge of the range of content available for public relations professionals to build relationships with media while ensuring they become effective, creative, clear, and concise architects and translators of the written word. In this course, students will develop a deep understanding of messaging for target audiences and the wide variety of concepts at their disposal to create effective communication programs. Students will leave the course with the ability to establish key messages using supporting evidence, craft content for target audiences, evaluate the impact of various media relations techniques as a way to achieve earned media coverage. Students will also develop a portfolio of well-written public relations collateral, including long- and short-form materials.

**COMM 4146 Ethics in Public Relations (4 Credits)**

Public relations professionals, regardless of the industry in which they work, are often tasked with “doing the right thing” when communicating with the public. But what do we mean by “the right thing” in this context? The course explores the role and importance of ethics in public relations practice. Students will consider the fundamentals of transparency and ethics, ethics theory, and ethical decision-making models. With this foundation in place, students will then learn to apply ethical theory and methodology in practice in crisis management, advocacy, corporate social responsibility, and social media contexts.

**COMM 4150 Reputation Management & Crisis Communication (4 Credits)**

Reputation management is the process of tracking, maintaining, and defending a consistent message and positive image across all media. It applies to corporations and individuals, to billion-dollar brands and grassroots causes. Today’s reputation management integrates public relations, search engine optimization (SEO), content marketing, and social media management. It requires constant monitoring and participation in the dialogues that comprise modern media as the traditional roles of sender and receiver merge and evolve. As digital presence has become the front lines of reputation management, systems use various predefined criteria for processing complex data to report behavior and activity surrounding a reputation, thereby automating the process of determining positive sentiment, influence, and trustworthiness. While reputation management is an ongoing proactive effort, PR professionals also need to be prepared to react in a crisis. Crisis communication planning and management strategies are an important subset of this field. Through the study of proactive and reactive programs, students will learn how to apply reputation and crisis management principles in times of quiet and chaos all while monitoring, positioning, and measuring a brand’s presence online.

**COMM 4154 Media Channels and Technology (4 Credits)**

This course will focus on the increasing role technology and analytics play in the public relations profession. Data-driven decision-making is now essential to the development of public relations strategy and tactics. This course will expose students to engagement across media channels—including owned, shared, paid, and earned media—as well as techniques and strategies for the effective use of technology for tracking, planning, and engaging audiences. This course will position students to lead strategic, data-driven decision-making in the public relations field. The course will also provide students with the tools necessary to engage new media and technology effectively in public relations.

**COMM 4200 Instructional Design (4 Credits)**

Designing training that maximizes results is a central concern in organizations. Students in this course identify the elements of effective learning design, formally and informally, for organizations and professional arenas. Students will strategize instructional approaches in order to meet organizational needs and objectives. Students will create an instructional design product that can be applied appropriately in professional settings.

**COMM 4203 Adult Learning Strategies and Theories (4 Credits)**

Individuals involved in adult learning design and development benefit from a strong foundation in adult learning theories and strategies to develop effective practices. Adult learners bring unique needs, life experiences, and prior knowledge to learning situations and thrive when inclusive, motivational, and relevant application of knowledge, concepts and skills are utilized. In this course, foundational and emerging theories regarding how adults learn best, along with analysis of key instructional strategies, provide solid grounding for implementing best practice in adult learning.

**COMM 4206 Evaluating Learning and Development Effectiveness (4 Credits)**

Assessment and evaluation enable learning and development professionals to determine if learners acquired the intended content, knowledge, skills and/or attitudes; if the benefits of the training endeavors are worth the costs; whether training has met organizational goals; and if further training is necessary. Through case studies, practice exercises, and the development of an authentic assessment plan, students learn how to design, interpret, and apply different types of learning and development evaluation concepts and methods to their respective or intended work settings.

**COMM 4226 Managing Organizational Conflict (4 Credits)**

Conflict is a part of all businesses, government, and nonprofit organizations. It is a product of human existence and diversity in an interrelated society. Though many people fear conflict as a threat to a productive work environment, it is not conflict itself that jeopardizes harmony but unresolved conflict, and the associated costs are well documented. Organizations increasingly recognize that conflict need not carry costly financial and interpersonal burdens and can, in fact, serve as a productive change agent. Students in this course explore the nature and sources of organizational conflict and facilitate development of practical skills to recognize and manage conflict using case studies, exercises, speakers, and field research. Students are introduced to the concept of various conflict resolution methods, including individual initiative, negotiation, mediation, restorative justice, and arbitration. This course is well suited for leaders and aspiring leaders in any profession who want to increase their interpersonal capability and enhance their value in organizations.

**COMM 4235 Integrating Learning and Development Technologies (4 Credits)**

Organizational learning and talent development are changing rapidly in the face of staggering technological advances. As organizations become increasingly decentralized, teams interact virtually, and collaboration becomes dependent on digital tools. In this context, it is imperative that learning and development professionals harness technology to meet the changing needs of individuals and the places/spaces in which they work. In this course, students explore the latest technological trends in Learning and Development, while also learning how to evaluate technologies for their appropriateness in meeting organizational learning and development goals. In recognition of the rapidly changing nature of this field, students also develop strategies for future learning to keep their work relevant and engaged.

**COMM 4301 Brand Management Strategies (4 Credits)**

Organizations of all types – private, public, and nonprofit – increasingly recognize that a strong brand can ultimately become one of an organization’s greatest assets. Executing on a strategy designed to build long-lasting brand recognition, resonance, and loyalty is a critical marketing responsibility. In today’s dynamic business landscape, brand management requires complex decisions to create meaning and value for consumers. This course covers the essential components of branding with a focus on how to maintain consistent alignment between brand vision and marketing strategies. Students are strongly encouraged to take at least one other marketing concentration course prior to this course.

**COMM 4306 UX Strategies and Methods (4 Credits)**

This course will cover user experience strategies, tactics, and methodologies. Students will learn how to think about UX from a high level, set goals for a product or project, and turn the strategies into concrete steps. Students will learn how to employ research, design thinking, usability testing and analysis to enhance the user experience.

**COMM 4307 Developing Content for User Experience (4 Credits)**

This course will explore how strategically developed content is a cornerstone of the user experience. Students will learn the User Experience Design workflow and how to advocate, research and deliver content for digital experiences. The course will also cover how to measure the business impact of content strategy, as well as how to scale content strategy as a practice within organizations.

**COMM 4308 UX Team Management (4 Credits)**

Building and managing a dynamic UX team is a skillset that goes beyond typical design best practices and team management - the role of design leader today expects company leadership in innovation, creativity and culture. This course will provide the students with the knowledge needed to build, manage, and nurture highly dynamic, fast-paced cross functional teams while also providing experience in the transformational components of design leadership.

**COMM 4309 Service Design (4 Credits)**

Where UX design is specific to the digital experience, service design crosses over from the tangible to intangible experiences within both digital and analog channels. This course takes students through an in-depth exploration of research, mapping, blueprinting, and deep user flow analysis as it relates to interactions and experiences of all types. The impact behind processes for employees and customers across all sectors including public, private, and nonprofit will be covered.

**COMM 4318 Mobile Marketing (4 Credits)**

Mobile is global. We are living in an unprecedented time where people all around the world have access to mobile devices. These devices bring the world to the palm of our hands, and we can do almost anything with them. Often a user's first experience with a product or service will be on a mobile device rather than a desktop computer, so we must shift our mindset to a mobile-first mentality. The fast-paced, ever-changing field of mobile marketing has created exciting opportunities for brands to meet customers where they are and approach them with the right strategy. The focus of this course is to provide an expansive grasp of the tools and tactics used to develop and implement a multi-channel mobile marketing strategy. Through discussion, research, and practical experience, students will learn how to maximize mobile to have the greatest impact within their overall marketing plan.

**COMM 4319 Compelling Content Creation (4 Credits)**

In our digital world, communication is increasingly visual. This course will expose students to the art of turning facts into compelling, strategically-crafted visual narratives that engage an audience. From presentations to interoffice memos, press releases to video content, students will apply course concepts to develop critical business communication skills. The course will also explore on-screen video techniques to maximize impact in a business world that utilizes Zoom and other online tools.

**COMM 4320 Social Media Strategy (4 Credits)**

Social media is a critical communication channel that is constantly evolving. Learn to plan, manage, measure, and anticipate social media efforts that add value to your target audiences through organic and paid options. In this course, students will explore motivations that prompt audiences to engage, identify the tools and technology needed to execute social media campaigns or communication interventions, and devise effective strategy and tactics needed to cut through the noise. Create a stronger online presence, show personality, and build your brand by gaining skills needed to successfully communicate on behalf of any organization or individual using social media. Through online research, case studies, and practical exercises, students will gain first-hand knowledge of social media techniques and how to leverage social media as a communications tool.

**COMM 4321 Integrated Digital Marketing (4 Credits)**

At an ever-increasing rate, consumers use digital media to live, to work, and to play. Digital marketing leverages digital media and technologies allowing brands to promote their products and services to very targeted audiences at key online touchpoints in highly measurable ways. This course takes a deep dive into digital marketing strategies and provides an expansive grasp of digital marketing tactics. Students will analyze the digital marketplace and make strategic decisions about which tactics will have greatest impact, how to integrate them into the marketing mix, and ultimately how to use digital marketing to achieve overarching marketing goals. Required pre-requisites: COMM 4140.

**COMM 4324 Marketing Analytics (4 Credits)**

Marketing analytics leverages business metrics to better understand marketing performance and return on investment (ROI). Through data analysis, attribution modeling, and reporting, marketers are able to measure and optimize their initiatives. This class focuses on developing a performance measurement system for marketing channels, incorporating measuring website traffic, conducting market research, estimating usage patterns, and interpreting website visitor behavior. Key performance indicators are tied to marketing goals and tactical campaigns. Students will conduct a review of online metrics, compare marketing analytics vendors, and develop ways to communicate performance.

**COMM 4325 Search Marketing (4 Credits)**

Search marketing is a communicator's medium and a vital part of any marketing mix. This type of digital marketing specifically focuses on increasing a website's visibility in the search engine results pages (SERPs) through organic Search Engine Optimization (SEO) and pay-per-click (PPC) while also drawing attention to quality website content or well-crafted paid ad messaging. This class will provide deep insight into the tools and tactics of search marketing. Students will learn what makes search marketing demanding and how to overcome the challenges presented by regular search engine algorithm updates, increasing mobile device usage, and the influence of social media. Two key techniques of SEM will be explored: search engine optimization (SEO) to improve results from the natural or organic listings, and paid search marketing, or pay-per-click (PPC), to deliver results from the sponsored listings within search engines. A variety of search practices, including mobile and local, will be explored.

**COMM 4326 Digital Campaign Management (4 Credits)**

A digital marketing campaign is a strategic and creative online effort to promote an organization's goal, reach their target audience in a variety of ways and drive them toward a desired action. Digital campaigns are often more complex and dynamic than traditional marketing methods, requiring constant analysis of data and evaluation of effectiveness. Students will experience this dynamism first hand through a course-long interactive campaign simulation during this course. Students will examine the process and stages engaged when creating a successful digital marketing campaign; investigate how marketing automation can streamline efforts and improve team efficiencies; and evaluate how tracking and measuring campaign data can facilitate optimization and scalability to boost ROI. Recommended Prerequisite: Students are strongly advised to take COMM 4321 prior to this course.

**COMM 4701 Topics in Communication Management (4 Credits)**

The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of communication, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects, such as ethics, human communication theory, or interpersonal communication. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**COMM 4900 Communication Inquiry, Analysis, and Trends (4 Credits)**

In this course, students will actively immerse themselves in their chosen communication field, cultivating essential networking, writing, and analytical skills. Students will establish professional networks for mentorship, industry insight, and understanding field norms. They will enhance their business writing skills, ensuring clarity and authenticity in their communication. Students will explore current and future industry trends, strategizing for adaptation, relevance, and personal growth. Throughout the course, students will engage in reflective exercises, connecting course concepts to their learning and professional goals, fostering a deeper understanding of their communication practice.

**COMM 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**COMM 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**COMM 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**COMM 4905 Storytelling through Research and Measurement (4 Credits)**

Whether conducting a needs assessment, attempting to understand your audience, or developing a new product, communication professionals regularly harness the power of research, measurement, and storytelling. This course explores mixed-methods research design; data collection strategies; strategies for measuring the impact of communication challenges and interventions; and the fundamentals of telling data-driven stories that persuade stakeholders and demonstrate ROI. Together these tools enable confident problem solving, enhance organizational decision making, and influence stakeholder behavior. This course culminates in an individualized project that integrates research design, data collection, data analysis, and storytelling.

**COMM 4920 Portfolio Capstone (4 Credits)**

The Portfolio Capstone course provides students the opportunity to reflect upon the work they have done throughout their graduate studies at University College and synthesize their learning. Students in the seminar produce deliverables that include: (1) a thorough annotation of their portfolio, a process requiring critical and creative thinking about their educational experience, and (2) a pinnacle project that identifies, analyzes, and elaborates significant themes in their program experience, evaluates their accomplishments, connects their coursework to their professional goals, and assesses those goals in the context of their chosen field.

**COMM 4980 Internship (0-4 Credits)**

The Communication Management Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all COMM students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.

**COMM 4985 Industry Innovation Project (1-4 Credits)**

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

**COMM 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. Before registering for the independent study, the student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices. Independent Study is offered only on a for-credit basis.

**Courses****COMM 4001 Portfolio Foundations (0 Credits)**

Master's and certificate-seeking students in Communication Management must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

**COMM 4002 Dynamic Presentation and Training Methods (4 Credits)**

The increasing presence of technology in the workplace has changed the way we present information and conduct trainings, both in person and virtually. In this course, students hone their presentation and training skills by assessing their audience, purpose, and desired learning outcomes. Students practice using appropriate and memorable visual aids in order to maximize the audience and/or participant engagement. Students employ communication strategies and training techniques to improve participants' receptivity and retention of information and ideas. Whether presenting or training in person or virtually, students will gain the skills and confidence needed for effective communication across varied delivery methods.

**COMM 4006 Building High-Performing Teams (4 Credits)**

High-performing teams are invaluable to every organization. Ensuring productive and satisfying group and team interactional outcomes in organizational, professional, and personal settings can be difficult. Students focus on theory, application, and the practice of working together to learn the fundamentals of building high-performing teams. Students learn about the development of group dynamics, assessment, and leadership while also gaining knowledge about their strengths and weaknesses in teams, developing new skills, and learning how to enhance productivity while reducing barriers to effective communication.

**COMM 4010 Business Insights for Communicators (4 Credits)**

Communications leaders must speak the language of business to effectively craft strategies, execute deliverables, and measure outcomes that create tangible value and advance their organizations' objectives. Whether in an industry, public sector, or non-profit role, these leaders gain an edge through supplementing strong technical literacy with the ability to assess operational priorities and execute deliverables accordingly. In this class, students will sharpen their understanding of balance sheets and budgets; demystify key aspects of Information Technology infrastructure (intranets, cloud and on-premises computing, databases, security, etc.); delve into various organizational and divisional/departmental models, functions, and political positions; address the benefits and challenges of globalization and cross-cultural communication; and touch on an assortment of other relevant topics, including managing upward and workflow prioritization. Along the way, students will hone their strategic planning competencies and perspectives by putting all elements learned in this course together. Materials and assessments are geared toward application in relevant contexts.

**COMM 4016 Persuasion and Influence (4 Credits)****COMM 4030 Managing Learning in Organizations (4 Credits)**

To support a culture of continuous improvement, Learning and Development (L & D) professionals must quickly and effectively train and develop employees, evaluate results, show a return on investment, and develop new solutions to meet ever-changing business needs. This course prepares students to lead and manage L & D departments, teams, and processes by guiding them to think strategically, generate creative solutions that address root causes, build trusted partnerships with business partners, and manage knowledge assets.

**COMM 4035 Cultural Intelligence through Communication (4 Credits)**

There is a growing need to communicate effectively across cultural differences. Writer James Neuliep defines culture as an accumulated pattern of values, beliefs, and behaviors shared by an identifiable group of people with a common history and verbal and nonverbal code system. Culture pervades every aspect of the communicative process. This course uses a contextual approach to examine the ways culture, communication, context, and power intersect in intercultural communication interactions. Students will identify and analyze obstacles and barriers to effective intercultural communication. Finally, students will examine strategies and skills needed to become a competent and effective intercultural communicator.

**COMM 4045 Applied Critical Thinking in Communication (4 Credits)****COMM 4140 Marketing Strategy and Process (4 Credits)**

Creating and sustaining competitive advantage is driven by strategies that integrate people, process, and systems. In this application-oriented course, students will examine the fundamentals of marketing, develop the insights and skills to formulate and implement sound marketing decisions, and apply ethical marketing strategies which contribute to the overall business (for-profit and non-for-profit) performance. Students will apply strategic concepts through discussion and teamwork. Throughout the quarter, students will examine how information and research is used to inform marketing management decisions to all level of the organization, including external stakeholders. Because marketing communication plays such a critical role in marketing success, integrating different types of communication channels will be an emphasis.

**COMM 4144 Strategic Public Relations (4 Credits)**

In a complex global environment, business, government, nonprofit, and other organizations require professional public relations practitioners who can effectively develop two-way relationships with constituents/audiences to enable strategic and effective communication processes. This course prepares students for this complex environment through the study and practice of essential components of public relations, which include the use of strategy, the value of relationship development, an overview of the range of PR tactics, the evolving role of digital communications and social media to PR, and the importance of ethics and transparency in PR practice.

**COMM 4145 Public Relations Writing and Content Creation (4 Credits)**

Effective and persuasive writing and creative content development are integral parts of today's public relations programs. This course deepens students' knowledge of the range of content available for public relations professionals to build relationships with media while ensuring they become effective, creative, clear, and concise architects and translators of the written word. In this course, students will develop a deep understanding of messaging for target audiences and the wide variety of concepts at their disposal to create effective communication programs. Students will leave the course with the ability to establish key messages using supporting evidence, craft content for target audiences, evaluate the impact of various media relations techniques as a way to achieve earned media coverage. Students will also develop a portfolio of well-written public relations collateral, including long- and short-form materials.

**COMM 4146 Ethics in Public Relations (4 Credits)**

Public relations professionals, regardless of the industry in which they work, are often tasked with "doing the right thing" when communicating with the public. But what do we mean by "the right thing" in this context? The course explores the role and importance of ethics in public relations practice. Students will consider the fundamentals of transparency and ethics, ethics theory, and ethical decision-making models. With this foundation in place, students will then learn to apply ethical theory and methodology in practice in crisis management, advocacy, corporate social responsibility, and social media contexts.

**COMM 4150 Reputation Management & Crisis Communication (4 Credits)**

Reputation management is the process of tracking, maintaining, and defending a consistent message and positive image across all media. It applies to corporations and individuals, to billion-dollar brands and grassroots causes. Today's reputation management integrates public relations, search engine optimization (SEO), content marketing, and social media management. It requires constant monitoring and participation in the dialogues that comprise modern media as the traditional roles of sender and receiver merge and evolve. As digital presence has become the front lines of reputation management, systems use various predefined criteria for processing complex data to report behavior and activity surrounding a reputation, thereby automating the process of determining positive sentiment, influence, and trustworthiness. While reputation management is an ongoing proactive effort, PR professionals also need to be prepared to react in a crisis. Crisis communication planning and management strategies are an important subset of this field. Through the study of proactive and reactive programs, students will learn how to apply reputation and crisis management principles in times of quiet and chaos all while monitoring, positioning, and measuring a brand's presence online.

**COMM 4154 Media Channels and Technology (4 Credits)**

This course will focus on the increasing role technology and analytics play in the public relations profession. Data-driven decision-making is now essential to the development of public relations strategy and tactics. This course will expose students to engagement across media channels—including owned, shared, paid, and earned media—as well as techniques and strategies for the effective use of technology for tracking, planning, and engaging audiences. This course will position students to lead strategic, data-driven decision-making in the public relations field. The course will also provide students with the tools necessary to engage new media and technology effectively in public relations.

**COMM 4200 Instructional Design (4 Credits)**

Designing training that maximizes results is a central concern in organizations. Students in this course identify the elements of effective learning design, formally and informally, for organizations and professional arenas. Students will strategize instructional approaches in order to meet organizational needs and objectives. Students will create an instructional design product that can be applied appropriately in professional settings.

**COMM 4203 Adult Learning Strategies and Theories (4 Credits)**

Individuals involved in adult learning design and development benefit from a strong foundation in adult learning theories and strategies to develop effective practices. Adult learners bring unique needs, life experiences, and prior knowledge to learning situations and thrive when inclusive, motivational, and relevant application of knowledge, concepts and skills are utilized. In this course, foundational and emerging theories regarding how adults learn best, along with analysis of key instructional strategies, provide solid grounding for implementing best practice in adult learning.

**COMM 4206 Evaluating Learning and Development Effectiveness (4 Credits)**

Assessment and evaluation enable learning and development professionals to determine if learners acquired the intended content, knowledge, skills and/or attitudes; if the benefits of the training endeavors are worth the costs; whether training has met organizational goals; and if further training is necessary. Through case studies, practice exercises, and the development of an authentic assessment plan, students learn how to design, interpret, and apply different types of learning and development evaluation concepts and methods to their respective or intended work settings.

**COMM 4226 Managing Organizational Conflict (4 Credits)**

Conflict is a part of all businesses, government, and nonprofit organizations. It is a product of human existence and diversity in an interrelated society. Though many people fear conflict as a threat to a productive work environment, it is not conflict itself that jeopardizes harmony but unresolved conflict, and the associated costs are well documented. Organizations increasingly recognize that conflict need not carry costly financial and interpersonal burdens and can, in fact, serve as a productive change agent. Students in this course explore the nature and sources of organizational conflict and facilitate development of practical skills to recognize and manage conflict using case studies, exercises, speakers, and field research. Students are introduced to the concept of various conflict resolution methods, including individual initiative, negotiation, mediation, restorative justice, and arbitration. This course is well suited for leaders and aspiring leaders in any profession who want to increase their interpersonal capability and enhance their value in organizations.

**COMM 4235 Integrating Learning and Development Technologies (4 Credits)**

Organizational learning and talent development are changing rapidly in the face of staggering technological advances. As organizations become increasingly decentralized, teams interact virtually, and collaboration becomes dependent on digital tools. In this context, it is imperative that learning and development professionals harness technology to meet the changing needs of individuals and the places/spaces in which they work. In this course, students explore the latest technological trends in Learning and Development, while also learning how to evaluate technologies for their appropriateness in meeting organizational learning and development goals. In recognition of the rapidly changing nature of this field, students also develop strategies for future learning to keep their work relevant and engaged.

**COMM 4301 Brand Management Strategies (4 Credits)**

Organizations of all types – private, public, and nonprofit – increasingly recognize that a strong brand can ultimately become one of an organization's greatest assets. Executing on a strategy designed to build long-lasting brand recognition, resonance, and loyalty is a critical marketing responsibility. In today's dynamic business landscape, brand management requires complex decisions to create meaning and value for consumers. This course covers the essential components of branding with a focus on how to maintain consistent alignment between brand vision and marketing strategies. Students are strongly encouraged to take at least one other marketing concentration course prior to this course.

**COMM 4306 UX Strategies and Methods (4 Credits)**

This course will cover user experience strategies, tactics, and methodologies. Students will learn how to think about UX from a high level, set goals for a product or project, and turn the strategies into concrete steps. Students will learn how to employ research, design thinking, usability testing and analysis to enhance the user experience.

**COMM 4307 Developing Content for User Experience (4 Credits)**

This course will explore how strategically developed content is a cornerstone of the user experience. Students will learn the User Experience Design workflow and how to advocate, research and deliver content for digital experiences. The course will also cover how to measure the business impact of content strategy, as well as how to scale content strategy as a practice within organizations.

**COMM 4308 UX Team Management (4 Credits)**

Building and managing a dynamic UX team is a skillset that goes beyond typical design best practices and team management - the role of design leader today expects company leadership in innovation, creativity and culture. This course will provide the students with the knowledge needed to build, manage, and nurture highly dynamic, fast-paced cross functional teams while also providing experience in the transformational components of design leadership.

**COMM 4309 Service Design (4 Credits)**

Where UX design is specific to the digital experience, service design crosses over from the tangible to intangible experiences within both digital and analog channels. This course takes students through an in-depth exploration of research, mapping, blueprinting, and deep user flow analysis as it relates to interactions and experiences of all types. The impact behind processes for employees and customers across all sectors including public, private, and nonprofit will be covered.

**COMM 4318 Mobile Marketing (4 Credits)**

Mobile is global. We are living in an unprecedented time where people all around the world have access to mobile devices. These devices bring the world to the palm of our hands, and we can do almost anything with them. Often a user's first experience with a product or service will be on a mobile device rather than a desktop computer, so we must shift our mindset to a mobile-first mentality. The fast-paced, ever-changing field of mobile marketing has created exciting opportunities for brands to meet customers where they are and approach them with the right strategy. The focus of this course is to provide an expansive grasp of the tools and tactics used to develop and implement a multi-channel mobile marketing strategy. Through discussion, research, and practical experience, students will learn how to maximize mobile to have the greatest impact within their overall marketing plan.

**COMM 4319 Compelling Content Creation (4 Credits)**

In our digital world, communication is increasingly visual. This course will expose students to the art of turning facts into compelling, strategically-crafted visual narratives that engage an audience. From presentations to interoffice memos, press releases to video content, students will apply course concepts to develop critical business communication skills. The course will also explore on-screen video techniques to maximize impact in a business world that utilizes Zoom and other online tools.

**COMM 4320 Social Media Strategy (4 Credits)**

Social media is a critical communication channel that is constantly evolving. Learn to plan, manage, measure, and anticipate social media efforts that add value to your target audiences through organic and paid options. In this course, students will explore motivations that prompt audiences to engage, identify the tools and technology needed to execute social media campaigns or communication interventions, and devise effective strategy and tactics needed to cut through the noise. Create a stronger online presence, show personality, and build your brand by gaining skills needed to successfully communicate on behalf of any organization or individual using social media. Through online research, case studies, and practical exercises, students will gain first-hand knowledge of social media techniques and how to leverage social media as a communications tool.

**COMM 4321 Integrated Digital Marketing (4 Credits)**

At an ever-increasing rate, consumers use digital media to live, to work, and to play. Digital marketing leverages digital media and technologies allowing brands to promote their products and services to very targeted audiences at key online touchpoints in highly measurable ways. This course takes a deep dive into digital marketing strategies and provides an expansive grasp of digital marketing tactics. Students will analyze the digital marketplace and make strategic decisions about which tactics will have greatest impact, how to integrate them into the marketing mix, and ultimately how to use digital marketing to achieve overarching marketing goals. Required pre-requisites: COMM 4140.

**COMM 4324 Marketing Analytics (4 Credits)**

Marketing analytics leverages business metrics to better understand marketing performance and return on investment (ROI). Through data analysis, attribution modeling, and reporting, marketers are able to measure and optimize their initiatives. This class focuses on developing a performance measurement system for marketing channels, incorporating measuring website traffic, conducting market research, estimating usage patterns, and interpreting website visitor behavior. Key performance indicators are tied to marketing goals and tactical campaigns. Students will conduct a review of online metrics, compare marketing analytics vendors, and develop ways to communicate performance.

**COMM 4325 Search Marketing (4 Credits)**

Search marketing is a communicator's medium and a vital part of any marketing mix. This type of digital marketing specifically focuses on increasing a website's visibility in the search engine results pages (SERPs) through organic Search Engine Optimization (SEO) and pay-per-click (PPC) while also drawing attention to quality website content or well-crafted paid ad messaging. This class will provide deep insight into the tools and tactics of search marketing. Students will learn what makes search marketing demanding and how to overcome the challenges presented by regular search engine algorithm updates, increasing mobile device usage, and the influence of social media. Two key techniques of SEM will be explored: search engine optimization (SEO) to improve results from the natural or organic listings, and paid search marketing, or pay-per-click (PPC), to deliver results from the sponsored listings within search engines. A variety of search practices, including mobile and local, will be explored.

**COMM 4326 Digital Campaign Management (4 Credits)**

A digital marketing campaign is a strategic and creative online effort to promote an organization's goal, reach their target audience in a variety of ways and drive them toward a desired action. Digital campaigns are often more complex and dynamic than traditional marketing methods, requiring constant analysis of data and evaluation of effectiveness. Students will experience this dynamism first hand through a course-long interactive campaign simulation during this course. Students will examine the process and stages engaged when creating a successful digital marketing campaign; investigate how marketing automation can streamline efforts and improve team efficiencies; and evaluate how tracking and measuring campaign data can facilitate optimization and scalability to boost ROI. Recommended Prerequisite: Students are strongly advised to take COMM 4321 prior to this course.

**COMM 4701 Topics in Communication Management (4 Credits)**

The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of communication, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects, such as ethics, human communication theory, or interpersonal communication. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**COMM 4900 Communication Inquiry, Analysis, and Trends (4 Credits)**

In this course, students will actively immerse themselves in their chosen communication field, cultivating essential networking, writing, and analytical skills. Students will establish professional networks for mentorship, industry insight, and understanding field norms. They will enhance their business writing skills, ensuring clarity and authenticity in their communication. Students will explore current and future industry trends, strategizing for adaptation, relevance, and personal growth. Throughout the course, students will engage in reflective exercises, connecting course concepts to their learning and professional goals, fostering a deeper understanding of their communication practice.

**COMM 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**COMM 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**COMM 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**COMM 4905 Storytelling through Research and Measurement (4 Credits)**

Whether conducting a needs assessment, attempting to understand your audience, or developing a new product, communication professionals regularly harness the power of research, measurement, and storytelling. This course explores mixed-methods research design; data collection strategies; strategies for measuring the impact of communication challenges and interventions; and the fundamentals of telling data-driven stories that persuade stakeholders and demonstrate ROI. Together these tools enable confident problem solving, enhance organizational decision making, and influence stakeholder behavior. This course culminates in an individualized project that integrates research design, data collection, data analysis, and storytelling.

**COMM 4920 Portfolio Capstone (4 Credits)**

The Portfolio Capstone course provides students the opportunity to reflect upon the work they have done throughout their graduate studies at University College and synthesize their learning. Students in the seminar produce deliverables that include: (1) a thorough annotation of their portfolio, a process requiring critical and creative thinking about their educational experience, and (2) a pinnacle project that identifies, analyzes, and elaborates significant themes in their program experience, evaluates their accomplishments, connects their coursework to their professional goals, and assesses those goals in the context of their chosen field.

**COMM 4980 Internship (0-4 Credits)**

The Communication Management Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all COMM students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.

### **COMM 4985 Industry Innovation Project (1-4 Credits)**

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

### **COMM 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. Before registering for the independent study, the student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices. Independent Study is offered only on a for-credit basis.

## **Environmental Policy and Management**

Office: University College Student Support Center  
Mail Code: 2211 S. Josephine St., Denver, CO 80208  
Phone: 303-871-2291, 800-347-2042  
Email: [ucol-support@du.edu](mailto:ucol-support@du.edu)  
Web Site: <http://www.universitycollege.du.edu>

### **Master of Science in Environmental Policy and Management**

The Master of Science in Environmental Policy and Management degree may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults.

The Master of Science in Environmental Policy and Management degree prepares students to enter the dynamic industry of Environmental Policy and Management, which is emerging in importance and popularity around the world. Students will receive engaging instruction from professional practitioners who work and teach in fields such as sustainability, climate change, natural resource management, renewable energy, law, environmental finance and economics, among many others. Graduates learn to address and manage complex environmental problems.

This degree prepares students to:

- Apply major environmental laws to current policy and environmental challenges to identify limitations and opportunities to improve environmental governance.
- Recommend sustainable actions to high-level stakeholders fluently using the language of both sustainability and fiscal responsibility.
- Apply appropriate research methods/designs to address a research hypothesis and questions.
- Compose research arguments to validate claims based on a variety of professional and academic sources.
- Resolve an authentic problem that is relevant to a current or aspirational position in the discipline.

### **Master of Science in Environmental Policy and Management with a Concentration in Emergency Planning and Response**

The Emergency Planning and Response master's degree concentration is offered to meet the needs of busy adults and prepares current or aspiring emergency response professionals to effectively strategize and implement emergency plans and responses. Graduates will learn to compare and contrast plans and responses to various events and disasters. Students will learn strategies for effective communication in all phases of emergency management (i.e., mitigation, preparedness, response, and recovery).

Whether an emergency is natural or human caused, emergency preparedness is vital to ensure minimize impacts on the welfare of those affected. The Emergency Planning and Response master's degree concentration covers emergency planning, mitigation of potential hazards, response, and recovery. Professional practitioners who work in the emergency planning and response field teach the Emergency Planning and Response master's degree concentration. Classes focus on the integrated system at every stage of a disaster and define the roles of emergency response teams, government agencies, businesses, and private citizens.

This degree prepares students to:

- Develop emergency response plans to ensure that organizations or communities possess necessary resources (e.g., personnel, equipment, communications, etc.) to respond to emergency incidents;
- Identify the potential hazards within a community or organization that require mitigation to minimize the health, economic, and environmental consequences of potential emergency incidents;

- Develop critical incident management actions that will save lives, protect property and the environment, and meet the basic human needs during a critical incident;
- Construct Recovery Plans to repair damages and restore the health, economy, infrastructure, and environment of the affected community following a large-scale disaster.

## **Master of Science in Environmental Policy and Management with a Concentration in Energy and Sustainability**

The Energy and Sustainability master's degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Students are prepared to enter the dynamic industry of energy and sustainability, which is emerging in importance and popularity around the world. Students will establish a solid foundation in energy and sustainability concepts, and then learn to integrate environmental systems, put policy into practice, and develop effective sustainability plans. Regulatory and policy issues related to energy development, implementation, and use, energy finance, and alternative and renewable energy processes will be examined, along with renewable energy sources, plans for integration, and trends within the field of energy.

Sustainable systems must be considered and developed in the areas of growth, transportation, energy, policy, and business models in order to head off looming environmental, political, and humanitarian problems. This will be accomplished through a comprehensive study of sustainability in the areas of economic development, green building, land use, transportation, and water resources.

This degree prepares students to:

- Demonstrate a solid understanding of how non-renewable and renewable energy sources are developed, used, regulated, and financed;
- Articulate a strong working knowledge of sustainability concepts;
- Show an understanding of trends and issues in areas of traffic management, climate science, water supplies, and green buildings;
- Develop plans for the integration of sustainable practices into products, business and marketing plans, environmental policies, and organizational processes;
- Build finance schemes and marketing strategies for their plans so they can be presented to an organization leader as an executable idea.

## **Master of Science in Environmental Policy and Management with a Concentration in Environmental Analytics and Reporting**

The Environmental Analytics and Reporting master's degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. This certificate and concentration emphasize learning how to utilize the tools and insights of the data analytics revolution to perform sophisticated environmental analyses and reports. Students learn possible uses of data analytics in an era of sustainability and ever-increasing complexity to manage the environmental elements of their organizations more effectively. Constructively reporting these results, trends, and accomplishments is an important avenue of communication in any organization. Environmental professionals will learn to identify and obtain a data set from a publicly traded company, from their own organization, or another public or governmental source suitable to use for carrying out analytics projects. Clear questions will be formulated and framed; analytical algorithms will be run on cloud technologies to reveal relevant insight into environmental issues. Context for these analyses will be provided through study of ISO 14001, fundamental U.S. environmental statutes, and governmental and NGO environmental reporting standards and requirements.

This degree prepares students to:

- Assess the value, function, and application of data analytics to create or enhance organizational value;
- Differentiate the function and limitations of data and analytics methods and tools to inform selection of an optimal approach for a specific need;
- Prepare analyses of environmental data to support preparation of reports for organizations and agencies (e.g., ESG, SEC, SASB, NGO, EPA, OSHA, state and local agencies);
- Conduct analyses of a structured data set to craft the routine environmental reporting elements of organizational reports including sustainability, risk, efficiency, impacts, permit status, routine releases, unplanned events, strategies, operations monitoring, management monitoring, ethics, stakeholder perceptions, innovation, and collaboration;
- Formulate an analytics modeling project and report.

## **Master of Science in Environmental Policy and Management with a Concentration in Environmental, Health and Safety**

The Environmental, Health and Safety master's degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Whether students currently work in environmental health and safety positions for commercial or government operations, or aspire to, the Environmental, Health and Safety master's degree prepares them with the management skills and technical knowledge required to become a health and safety manager or officer. Students will begin with the foundational statutory and regulatory origins of environmental health and safety compliance management and learn how to effectively and efficiently streamline resources to integrate safety and health regulations across sectors and industries.

Critical instruction is given on relevant training, emergency planning, procedural operations, and the management of worker health and safety, in addition to environmental management and reporting systems and business and finance strategy.

This degree prepares students to:

- Evaluate the benefits and barriers to integration of environmental health and safety including the fundamentals of safety management, training requirements, emergency planning, setting goals, objectives, and operating procedures, and how management views environmental health and safety;
- Describe the Occupational Safety and Health Act and other rules governing workplace safety with emphasis on the overlap between safety and environmental laws, OSHA's inspection and enforcement authority, employee and employer rights and record keeping requirements;
- Develop and apply compliance programs including how to reduce losses of direct and indirect costs due to accidents and how to convince management and employees that safety programs are beneficial;
- Investigate workplace safety topics including costs of accidents, investigation programs, practical application of worker's compensation, confined space entry programs, injury/illness records and reporting, programs for new fall protective rules and personal protective equipment programs.

## Master of Science in Environmental Policy and Management with a Concentration in Environmental Management

The Environmental Management master's degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Master's degree students will learn environmental management and leadership essentials, providing them with critical knowledge related to technology, law, and economics as they each relate to the environment. Facilitating environmental innovation, development plans, and integration will be discussed, along with essential permitting and regulatory issues that environmental managers need.

Students in the Environmental Management master's concentration will receive engaging instruction from professional practitioners who work in the fields in which they teach in topics ranging from economics to law, leadership to regulations, as each topic relates to the environment. Designed for students seeking a combination of leadership, policy, and environmental issue education, the concentration prepares graduates to address and manage complex environmental systems.

This degree prepares students to:

- Examine the requirements and implementation strategies of the National Environmental Policy Act and the requirements of various federal agencies which are responsible for National Environmental Policy Act implementation;
- Critique Environmental Impact Statements and Environmental Assessments for regulatory compliance and thoroughness in disclosing environmental effects of proposed actions;
- Investigate the Resource Conservation and Recovery Act's regulations governing performance requirements for treatment, storage and disposal of solid and hazardous waste generation and disposal;
- Explain and summarize developing trends in waste minimization, solid waste management and special waste controls;
- Demonstrate how to use the ISO 14001 framework as a proactive and systematic approach to environmental management and develop a complete program that integrates the ISO 14001 requirements with the existing strategic management methods of an organization;
- Assess personal leadership attributes and construct a personal leadership development plan that integrates leadership principles necessary for advancement including interpersonal communication and leading environmental innovation using the natural world as a model.

## Master of Science in Environmental Policy and Management with a Concentration in Environmental Policy

Supply chains are everywhere, from the local store to a large multinational electronics manufacturer operating halfway across the world. From cradle to grave, it is the supply chain management system that links all of the numerous stakeholders into one strategic plan for us as customers in markets.

These systems link processes such as product design, sourcing, forecasting, planning, manufacturing, distribution, logistics, retailing and material disposal and reuse. In today's fast paced markets driven by globalization and technology, knowledgeable professionals in supply chain management are increasingly important for companies to achieve their business objectives. Some of the most successful manufacturers (e.g., Apple and Samsung) and retailers (e.g., Wal-Mart and Amazon) are winning as a result of their supply chain strategies. Especially as markets change rapidly, supply chain management professionals will be integral to a company's success.

Earned entirely online, in the Supply Chain Management concentration students learn the six pillars of the field, and how to solve problems through the use of Six Sigma principles and the use of data analytics. Through hands-on projects with companies students gain real-world experience on the challenges facing global supply chains in the 21st-century while learning from current leaders in the field.

This degree prepares students to:

- Outline the legal and philosophical underpinnings of the environmental movement, both in the United States and internationally, including the use of international laws and treaties to mitigate, lessen, or eliminate damage to various aspects of the environment;
- Analyze global environmental issues including endangered species, overpopulation, resource depletion, biodiversity, ocean dumping, deforestation, desertification, global warming, and ozone depletion;
- Explain how to encourage sustainability through consumption patterns that ensure a continuing resource supply for future generations and through achieving a balance between environmental protection and economic development;
- Describe the field of public environmental policy including contemporary methods of policy analysis, agenda-setting, models of policy formulation and implementation, and policy evaluation;
- Examine ethical considerations in environmental management and decision making and explore various philosophies of humankind's relationship with the environment;
- Develop and express a personal philosophy addressing one's own role in the regulatory, technical, scientific, and financial management of the environment.

## **Master of Science in Environmental Policy and Management with a Concentration in Natural Resource Management**

The Natural Resource Management master's degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Designed for professionals whose primary interest is the management of natural resources for organizations which plan or regulate the use of natural resources, or commercial operations which extract and use natural resources (e.g., mining or forestry management), the Natural Resource Management concentration prepares students to work in professional roles overseeing natural resource management for commercial or government purposes. Learn historic and contemporary management systems and principles, along with key policies and procedures needed to excel in the public or private sectors related to natural resource management.

Degree-seeking students are exposed to a breadth of knowledge pertaining to natural resources, water management, zoning, forestry management, mining, and land use issues. Focused skills concentrate on technology, management, and communication knowledge that is critical to success in the natural resource management field.

This degree prepares students to:

- Analyze the practical and theoretical basis of recreational land use in the context of ecosystem management and explore the responsibilities of various federal, state and local agencies, environmental and wildlife interest groups, and other organizations involved in wildlife management issues;
- Discuss the statutory and regulatory policies and current issues regarding the management and use of lands in wilderness systems, wild and scenic river corridors, parks, and open spaces;
- Explain historic and contemporary management systems and principles by examining key policies, guidelines, and planning procedures of governmental agencies, resource-based industry and the public;
- Describe how the biological, physical, social, and economic aspects of lands, waters, and natural resources work together to achieve sustainable conditions that encourage preservation and management of natural resources for recreation;
- Investigate the basic principles, trends, challenges, and controversies of the administration of maintaining certain wildlife species including threats from water and air pollution, poaching and other illegal actions;
- Characterize the field of public environmental policy including contemporary methods of policy analysis, agenda-setting, models of policy formulation and implementation, and policy evaluation.

## **Master of Science in Environmental Policy and Management with a Concentration in Supply Chain Management**

The Supply Chain Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students learn tactical innovation and change management using vision, values, and mission as an overall guide. Led by professional practitioners who work in the fields in which they teach, leadership classes provide professionals the skills to manage change, encourage innovation, and develop effective strategic initiatives while fulfilling an organization's mission.

The Supply Chain Management concentration will teach students to apply principles of environmental sustainability as they plan for and manage the end-to-end flow of products, including closed loop supply chains. Students will explore the many links in the supply chain that have significant impact on the environment, from raw material sourcing to energy use to transportation. Students will gain hands-on experience, learn new technologies, and develop skills ranging from logistics to organizational development.

This degree prepares students to:

- Articulate the six pillars of supply chain management to diagram the process to appraise their role in the market system;
- Apply the six pillars of supply chain management to realistic problem scenarios to develop strategies to diagnose and address future supply chain problems;
- Assess supply chains using a multidimensional perspective that includes connections between supply chain processes and fundamental business topics such as financial management and technology;
- Solve supply chain problems using a nonlinear process that addresses connections between supply chain pillars, market trends, and business best practices;
- Apply best practices to address an authentic supply chain problem in a work setting.

## **Graduate Certificate in Environmental Policy and Management with a Concentration in Energy and Sustainability**

The graduate certificate in Energy and Sustainability concentration may be earned online to meet the needs of busy adults. Busy adults who already hold master's degrees, or professionals who work within the field of energy development, will benefit from a graduate certificate in Energy and Sustainability, a dynamic field that is emerging in importance and popularity. Ideal for students seeking further study related to sustainable systems, energy development and use, energy finance, and alternative and renewable energy process, the graduate certificate in Energy and Sustainability may be earned online or on campus in the evenings. Students will develop integration strategies, build finance schemes and marketing plans, articulate a strong working knowledge of sustainability concepts, and learn about energy and sustainability systems. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

Sustainable systems must be considered and developed in the areas of growth, transportation, energy, policy, and business models in order to head off looming environmental, political, and humanitarian problems. This will be accomplished through a comprehensive study of sustainability in the areas of economic development, green building, land use, transportation, and water resources. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

## **Graduate Certificate in Environmental Policy and Management with a Concentration in Environmental Analytics and Reporting**

The Environmental Analytics and Reporting certificate may be earned online to meet the needs of busy adults. This certificate emphasizes learning how to utilize the tools and insights of the data analytics revolution to perform sophisticated environmental analyses and reports. Students learn possible uses of data analytics in an era of sustainability and ever-increasing complexity to manage the environmental elements of their organizations more effectively. Constructively reporting these results, trends, and accomplishments is an important avenue of communication in any organization. Environmental professionals will learn to identify and obtain a data set from a publicly traded company, from their own organization, or another public or governmental source suitable to use for carrying out analytics projects. Clear questions will be formulated and framed; analytical algorithms will be run on cloud technologies to reveal relevant insight into environmental issues. Context for these analyses will be provided through study of ISO 14001, fundamental U.S. environmental statutes, and governmental and NGO environmental reporting standards and requirements. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

## **Graduate Certificate in Environmental Policy and Management with a Concentration in Environmental, Health and Safety**

The graduate certificate in Environmental, Health and Safety concentration may be earned online to meet the needs of busy adults. Designed and delivered for professionals who already holds a master's degree, or for professionals looking to further their environmental career with a new skillset, the graduate certificate in Environmental, Health and Safety concentration may be earned online or on campus in the evenings. Certificate students will explore the foundational statutory and regulatory origins of environmental health and safety compliance management and learn how to effectively and efficiently streamline resources to integrate safety and health regulations across sectors and industries. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

Students pursuing this graduate certificate will acquire environmental management skills and technical knowledge that prepare them to work with health and safety statutes and regulations, management of worker health and safety issues, environmental management and reporting systems, and business and finance. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

## **Graduate Certificate in Environmental Policy and Management with a Concentration in Environmental Management**

The graduate certificate in Environmental Management concentration may be earned online to meet the needs of busy adults. Environmental Management certificate students will develop essential management skills and technical knowledge required to function in a variety of managerial positions within the environmental field. Certificate students learn to facilitate environmental innovation and integrate systems while complying with regulatory and policy matters.

The Environmental Management certificate is designed for busy adults who already hold a master's degree, or for professionals looking to further their environmental career with a new skillset in leadership, policy, and environmental issues. The graduate certificate in Environmental Management concentration provides detailed instruction on statutes and regulations, management and reporting systems, business and finance strategy, and communication and negotiation skills as they each relate to environmental management. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework. Environmental Management graduate certificate students take master's-level

classes but do not complete a capstone project. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

### **Graduate Certificate in Environmental Policy and Management with a Concentration in Environmental Policy**

The graduate certificate in Environmental Policy concentration may be earned online to meet the needs of busy adults. Designed and delivered for professionals who already hold master's degrees or for those looking to further their environmental career with a new skillset, the graduate certificate in Environmental Policy concentration is ideal for adult students seeking an innovative, career relevant graduate certificate. Environmental policy analysis at the public level will be discussed, including contemporary methods for analytical model development, implementation, and evaluation. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

Environmental Management and Policy students who are currently in the field of environmental policy, or for those aspiring to join the field, will develop skills through the online graduate certificate program that will serve them well in a policy making organization, such as values and ethics, communication and negotiation, policy analysis, and environmental laws and regulations. Environmental Policy graduate certificate students take master's level classes, but do not complete a capstone project. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

### **Graduate Certificate in Environmental Policy and Management with a Concentration in Natural Resource Management**

The Natural Resource Management graduate certificate concentration may be earned online to meet the needs of busy adults. Designed for professionals who already hold master's degrees, or for busy adults looking to further their environmental career with a new skillset, the graduate certificate in Natural Resource Management will prepare students to work in natural resource management roles for commercial or government organizations. Certificate students will learn historic and contemporary management systems and principles, in addition to essential policies and procedures needed to thrive in natural resource management in the public or private sectors. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

The graduate certificate is designed for professionals whose primary interest is the management of natural resources for organizations which plan or regulate the use of natural resources, or commercial operations which extract and use natural resources. Graduate certificate students will develop organizational leadership skills and learn environmental statutes and regulations pertaining to natural resource management. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

### **Specialized Graduate Certificate in Environmental Analytics and Reporting**

The Environmental Analytics and Reporting specialized graduate certificate emphasizes learning how to utilize the tools and insights of the data analytics revolution to perform sophisticated environmental analyses and reports. Students learn possible uses of data analytics in an era of sustainability and ever-increasing complexity to manage the environmental elements of their organizations more effectively. Constructively reporting these results, trends, and accomplishments is an important avenue of communication in any organization. Environmental professionals will learn to identify and obtain a data set from a publicly traded company, from their own organization, or another public or governmental source suitable to use for carrying out analytics projects. Clear questions will be formulated and framed; analytical algorithms will be run on cloud technologies to reveal relevant insight into environmental issues. Context for these analyses will be provided through study of fundamental U.S. environmental statutes, and governmental and NGO environmental reporting standards and requirements.

### **Specialized Graduate Certificate in Environmental, Health and Safety**

The specialized graduate certificate in Environmental, Health and Safety may be earned online to meet the needs of busy adults. Students will explore the foundational statutory and regulatory origins of environmental health and safety compliance management and learn how to effectively and efficiently streamline resources to integrate safety and health regulations across sectors and industries.

Students pursuing this certificate, will acquire environmental management skills and technical knowledge that prepare them to work with health and safety statutes and regulations, management of worker health and safety issues, environmental management and reporting systems, and business and finance. Credits earned through the specialized graduate certificate may apply toward a master's degree in Environmental Policy and Management.

### **Specialized Graduate Certificate in Environmental Management**

The specialized graduate certificate in Environmental Management may be earned online to meet the needs of busy adults. The Environmental Management specialized graduate certificate is designed for busy adults who already hold a master's degree, or for professionals looking to further their environmental career with a new skillset in leadership, policy, and environmental issues. The graduate certificate in Environmental Management concentration provides detailed instruction on statutes and regulations, management and reporting systems, business and finance strategy, and communication and negotiation skills as they each relate to environmental management. Students will take master's-level classes but do not complete a capstone project. Credits earned through this certificate may apply toward a master's degree in Environmental Policy and Management.

## **Specialized Graduate Certificate in Environmental Policy**

The specialized graduate certificate in Environmental Policy may be earned online to meet the needs of busy adults. Designed and delivered for professionals who already hold master's degrees or for those looking to further their environmental career with a new skillset. Environmental policy analysis at the public level will be discussed, including contemporary methods for analytical model development, implementation, and evaluation.

Environmental Management and Policy students will develop skills that will serve them well in a policy making organization, such as values and ethics, communication and negotiation, policy analysis, and environmental laws and regulations. Environmental Policy specialized graduate certificate students take master's level classes, but do not complete a capstone project. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

## **Specialized Graduate Certificate in Energy and Sustainability**

The specialized graduate certificate in Energy and Sustainability may be earned online to meet the needs of busy adults. Students will develop integration strategies, build finance schemes and marketing plans, articulate a strong working knowledge of sustainability concepts, and learn about energy and sustainability systems.

Sustainable systems must be considered and developed in the areas of growth, transportation, energy, policy, and business models in order to head off looming environmental, political, and humanitarian problems. This will be accomplished through a comprehensive study of sustainability in the areas of economic development, green building, land use, transportation, and water resources. Credits earned through this certificate may apply toward a master's degree in Environmental Policy and Management.

## **Specialized Graduate Certificate in Natural Resource Management**

The Natural Resource Management specialized graduate certificate may be earned online to meet the needs of busy adults. Students will learn historic and contemporary management systems and principles, in addition to essential policies and procedures needed to thrive in natural resource management in the public or private sectors.

The certificate is designed for professionals whose primary interest is the management of natural resources for organizations which plan or regulate the use of natural resources, or commercial operations which extract and use natural resources. Students will develop organizational leadership skills and learn environmental statutes and regulations pertaining to natural resource management. Credits earned through this certificate may apply toward a master's degree in Environmental Policy and Management.

## **Master's Degree Admission**

### **Degree and GPA Requirements**

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### **English Language Proficiency Test Score Requirements**

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.

## **Certificate Admission**

EPM 4705	Land Use Planning	
EPM 4710	Environmental Project Management	
<b>Electives requirements (select three courses)</b>		<b>12</b>
<b>Total Credits</b>		<b>48</b>

**Minimum number of credits required: 48**

Students will work with their Academic Advisor to determine the best set of courses to choose for their electives.

In University College graduate-level programs, grades of C or greater are considered passing, whereas grades of C- or lower are considered failing. Courses with a grade of C- or below will not count toward meeting degree or certificate requirements. Also, no more than one-fourth of the hours accepted toward the degree be grades of "C". A cumulative and program grade-point average of 3.0 or better must be maintained at all times.

<b>Total Credits</b>		<b>16</b>

**EPM 4001 Environmental Foundations and Principles (4 Credits)**

This course investigates the field's history, current activities and issues, ethics, systems, and economics; and an overview of key necessary knowledge and skills to work and learn within the field. Students will: gain a strong historical understanding of how environmental and natural resource issues have influenced economic development and societal growth throughout the ages; learn about the complexity of environmental issues and the value of interdisciplinary and systems thinking when applied to making decisions about natural resource usage; understand the role that empirical science, policy analysis and advocacy play in how governments and private companies address complex environmental issues; become aware of the stressors that ecosystems around the globe are experiencing and the value of multidisciplinary approaches to addressing these challenges; and understand the diverse organizations and employment opportunities available in the environmental field.

**EPM 4002 Integrated Environmental Systems (4 Credits)**

The earth as a whole is comprised of many systems that affect the environment. Some have large wide ranging reach, while others are restricted to a relatively small area. Included is everything in between. Actions in one area or system may have unintended secondary and tertiary consequences in that system or others. This course uses various tools and materials to study a few environmental systems and determine connections, consequences, impacts, barriers, decision making, life cycle costs, etc.

**EPM 4003 Environmental Finance and Economics (4 Credits)**

The class provides an overview of economics, finance, and sustainability in an environmental and social context. The class examines traditional and alternative performance metrics, such as "Green GDP", and explores the relationship between risk and return, return on investments, including environmental, social, and governance (ESG) investing. The course emphasizes relationships between business management and environmental quality, and provides students with a financial and economic decision-making framework for understanding and analyzing environmental issues. The course utilizes a case-study approach to cover economic and finance concepts in real world scenarios involving natural resource and environmental decisions. Students will leave this course with the ability to confidently converse regarding sustainability in a finance and economics context.

**EPM 4040 Wetland Ecology and Management (4 Credits)**

This course provides a detailed examination of wetlands and deepwater habitats of the United States, with an emphasis on wetlands. The definition, identification, classification, and management requirements of various wetland communities are stressed. Students identify and classify wetlands and analyze wetlands in the context of federal, state, and local regulatory processes. Students evaluate activities with adverse and beneficial effects to wetlands. Students explore concepts related to wetland management in the public, private and non-profit sectors.

**EPM 4108 Impacts of Recreational Use (4 Credits)**

The practical and managerial theoretical basis of recreational use of public and private lands is examined in the context of ecosystem management. #The statutory and regulatory policies and current issues regarding the management and use of lands in wilderness systems, wild and scenic river corridors, parks, and open spaces are discussed in detail. #The impacts of recreational uses on the environment and conflicts with other uses of land and resources are discussed. Land use planning policies and decisions, decisions which respond to recreation, wilderness, wilderness and open space issues will be examined. At the end of this course, students will create a visitor impact use assessment using the Inter-agency Visitor Use Management Framework (IVUMF).

**EPM 4115 Introduction to Ecology (4 Credits)**

This course examines the concepts of the ecosystem, populations, communities, the flows of energy, material cycles, and biotic diversity. Students will analyze ecological concepts including the unity of organisms and inseparable interactions with the physical environment. Class discussions include topics such as the formation, distribution, and organization of ecological communities, plant succession, and nutrient cycling. Students will also evaluate aspects of evolutionary trends within plant and animal communities as they relate to ecological principles. The goals of this class are to transmit the principles, methods, and vocabulary of ecology. Students will critically analyze and discuss issues concerning population ecology, community ecology, and ecosystem ecology. Students will relate concepts of ecology to their personal and professional interests in environmental issues. The ability and necessity of communicating ecological principles within a commercial and/or regulatory environment will be developed. An assignment will provide experience in the collection, interpretation, and analysis of data. The skills learned will be relevant in environmental reporting, discussions, and presentations within a professional environment.

**EPM 4120 Introduction to Natural Resource Management (4 Credits)**

In this course, students gain an understanding of the roles and responsibilities of federal, state, and local agencies, environmental and wildlife interest groups, and other organizations involved in natural resources management. Students will learn the content and purpose of natural resources management plans, then apply this knowledge to assess and develop policies that will improve natural resources management.

**EPM 4140 National Environmental Policy Act (NEPA) (4 Credits)**

This course examines the National Environmental Policy Act (NEPA) and its applications. Students will gain both academic and practical experience in studying the intent and application of NEPA by federal agencies. Students will gain practical application by critically reviewing various NEPA documents and examining the components of NEPA documents. Students will prepare an Environmental Assessment (EA) of their choosing for their final project in this course.

**EPM 4150 Global Environmental Law and Policy (4 Credits)**

International environmental agreements provide a mechanism to address domestic environmental issues caused by foreign countries. However, some agreements have been more successful than others based on various aspects within the agreement and a country's domestic actions taken to enforce the agreement. This course teaches students how international environmental agreements are created, managed, and improved in order to improve environmental issues in different countries and international waters. Students will analyze and comment on existing agreements and create strategies for improving the agreements to strengthen agreements to be more effective in addressing environmental issues. Students learn about the stakeholders involved in creating and improving these agreements. Students will develop marketable analytical skills that help guide organizations toward more robust advocacy strategies designed to make the agreements more enforceable and effective in addressing environmental issues. Prerequisite: Recommended - EPM 4200.

**EPM 4200 Environmental Protection Law (4 Credits)**

This course provides an examination of the fundamental laws which protect our environment and health. Students will analyze the purpose, context, implementation, and implications of the most important laws, regulations, policies, and court cases that affect the environment, human health, and our economy. Coverage includes: National Environmental Policy Act (NEPA), Clean Air Act (CAA), Clean Water Act (CWA), Resource Conservation and Recovery Act (RCRA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Emergency Planning and Community Right-to-Know Act (EPCRA), related toxics laws, and species and habitat protection statutes. It provides an examination of the legal system and the roles of Congress, the President, executive agencies, states, and courts in shaping and implementing environmental laws. The course also asks students to apply this knowledge to current events in environmental policy and litigation.

**EPM 4220 Endangered Species and Wildlife (4 Credits)**

This course provides an examination of the basic principles, trends, challenges, and controversies surrounding the administration of maintaining certain wildlife species, specifically through the administration of the Endangered Species Act. Students gain an understanding of the roles and responsibilities of various federal, state and local agencies, environmental and wildlife interest groups, and other organizations involved in endangered species and wildlife management issues. This course will also apply the principles of human dimensions to understand the complex social systems at work to conserve endangered species.

**EPM 4230 Renewable and Alternative Energies (4 Credits)**

This course provides a well-rounded primer on energy as a resource and its importance in the economy and the world today. Students will examine renewable and alternative energies and alternative transportation fuels. This course analyzes issues surrounding the development, enforcement and application of energy regulatory policies.

**EPM 4232 Sustainability: Policy and Practice (4 Credits)**

This course teaches students how organizations practice sustainability and how they plan for, shape, and react to the emerging environmental policies necessary to limit global warming. The investment community continues its quest to identify strong sustainability organizations, making public reporting more important than ever. NGOs and governments are pushing for higher ambition. Students will learn to make sustainability reports more meaningful to garner support from NGOs and attract investors. Students will develop marketable analytical skills that help guide organizations toward more robust sustainability actions and reporting, or help NGOs evaluate corporate reports for strengths and gaps.

**EPM 4233 Sustainable Transportation (4 Credits)**

21st Century transportation planning on the local and global scale involves consideration of environmental policies and sustainable practices. Development of an efficient system for moving goods and people along highways, airways and public transit networks must coordinate with legal requirements governing automobile source emissions, water pollution, mitigation of congestion, and crisis management. Conflicts occur along political fault lines between public interest groups, environmental justice advocates, the business community, government regulators, and the ordinary commuter. Consideration is given to different fuel sources, including carbon-based, hydrogen, electricity, and biofuels. The course also examines fuel efficiency (CAFE) and trends in emission science and regulation.

**EPM 4234 Climate Change and Science (4 Credits)**

"Global Warming" is a cause celebre, but how much do we really know about the science involved in studying the earth's climate? Moving beyond the social and political opinions espoused in the current debate on climate change, this course delves into the chemical and physical forces at play in the arena. This course covers scientific processes used in measuring climate dynamics, among them ozone chemistry, carbon and oxygen cycles, and heat and water budgets. It explores scales and methods for detecting climate change, including analyzing ice cores, instrumental records, and time series. Some attention will be dedicated to "climate forcing" caused by such things as orbital variations, volcanism, plate tectonics, and solar variability.

**EPM 4235 Green Building (4 Credits)**

Builders, developers and designers increasingly are promoting the use of green construction practices in the pursuit of healthier, smarter buildings. Students in this course examine sustainable building strategies and tools, including LEED (Leadership in Energy and Environmental Design), the nationally-accepted benchmark for the design, construction and operation of high-performance green buildings. LEED promotes a whole-building approach by recognizing performance in five areas: sustainable site development water savings, energy efficiency, materials selection and indoor air quality. What materials are best in the design and operation of green building? How can a designer or building owner make better use of power and water efficiency programs? What are the recent developments, trends and case studies of green buildings and materials?

**EPM 4236 Nuclear, Hydrogen, and Energy Storage Technologies (4 Credits)**

The necessity and urgency of moving away from fossil fuels-based energy production to reduce global warming has been well documented. Renewable energy technologies (solar, wind, and water-based) have been widely embraced as alternative energy solutions. However, like all energy production technologies, renewable energy technologies have shortcomings that prevent them from being standalone energy production solutions. Nuclear and fuel cell energy production technologies address the shortcomings of renewable energy technologies and can be considered symbiotic options in the move away from fossil fuels. Improving energy storage technologies will also be required to complete this symbiosis. This course will examine renewable energy technologies shortcomings and how nuclear, fuel cell, and energy storage technologies may be implemented to further facilitate the move away from fossil fuels-based energy production.

**EPM 4238 Water and Food Sustainability (4 Credits)**

Concurrent food, water, and climate crises amidst widespread hunger and undernutrition have re-focused public attention on the deficiencies and complexities of global food and water systems. This course examines the science and sustainability of our water resources as well as food production with an emphasis on the connections between the two. Increasing water and food system sustainability requires working along multiple disciplines, reconnecting agriculture with ecological systems and ensuring that policies and institutions that impact food and water systems protect social equity and the environment. The course draws from interdisciplinary research and education bridging worldviews and values implicit in different disciplinary and theoretical perspectives. Linking theory and practice is also essential thus the course will incorporate multiple perspectives and case studies from local to global levels. Demand is growing for interdisciplinary scholars and other professionals who are equipped to analyze and address the complex challenges of sustainable water resources, sustainable food production, and water and food security. Students will synthesize information from water, food, and the environment from a systems perspective. They will examine the interactions between science, policy, and ethics and analyze the trade-offs and synergies between different objectives, solutions, and outcomes. Students will devise solutions to problems that incorporate the intricacies and interdependencies of water and food systems.

**EPM 4280 Resource Conservation and Recovery Act (RCRA) (4 Credits)**

The Resource Conservation and Recovery Act (RCRA) course is a detailed review of the Resource Conservation and Recovery Act that was passed in 1976 and has been continuously updated since that time. RCRA is also known as "the cradle to grave law" dealing with hazardous waste generation and disposal. This course not only covers the important parts of the regulation, but students will also learn how to navigate and practically apply the law and regulations.

**EPM 4355 Systems, Standards, and Certifications for Environmental Management (4 Credits)**

Students will analyze and apply common environmental management systems, which can be used to ensure and improve quality during the management of a wide range of environmental operations. They will synthesize this knowledge via a project which establishes portions of an environmental management system. Students will execute the plan-do-check-act cycle to improve quality. They will evaluate options to minimize environmental impacts using root cause analysis and generalize common system components that are necessary for an environmental organization to achieve its objectives (establishing environmental policy, establishing performance objectives, monitoring results, evaluating performance, understanding and managing risks, etc.) Course assignments will allow students to practice systemizing and standardizing environmental management processes to improve performance (common procedures, data management, analytical methods, performance monitoring, etc.) Throughout the course, students will discover that management systems beyond subject matter expertise are necessary to do well in environmental careers.

**EPM 4390 Environmental Policy Analysis (4 Credits)**

This course investigates key issues in environmental policy analysis, including the importance of environmental justice, federalism versus state policy, techniques of environmental assessment, the impacts of politics and case law on environmental policy, and policy decision-making. The class sets a foundation with an overview of the U.S. and international environmental movements. Students look at stakeholder engagement, policy formulation and implementation, and policy evaluation in different institutions. The course emphasizes the important role that the political and judicial process plays in the creation of policy solutions, and assesses the strengths and weaknesses of different techniques of environmental analysis including environmental impact assessments, modeling and simulation, sustainability analysis, and how best to weave environmental justice/equity throughout policy development and implementation.

**EPM 4400 Environmental Values and Ethics (4 Credits)**

Students examine ethical considerations in environmental management and decision making. Discussions cover personal versus organizational attitudes; cultural, economic, and historic values; science versus politics; and international and intergenerational policies. The course also explores various philosophies of humankind's relationship with the environment. Students are encouraged to develop and express a personal philosophy relative to their role in the regulatory, technical, scientific, and financial management of the environment.

**EPM 4465 Environmental Restoration and Waste Management (4 Credits)**

Environmental Restoration is the identification and elimination of hazardous materials from a designated site such that the risks to human health and the environment are reduced to an acceptable level for an intended future land use. This course examines successful environmental restoration activities that were used to reduce and mitigate risk associated with past operations of nuclear and nuclear-related facilities and the significant potential to release harmful contaminants. Environmental restoration effects on the ecological and human health risk assessments and analyses related to the transport, treatment, storage, and disposal of waste from the contaminated site are presented. Remediation processes for radioactive materials and other hazardous wastes and the eventual storage, processing, and disposal and the potential effect on humans and the environment is studied. An overview is given on the development of a radiological protection program for an EIS report. External and internal hazards: control measures and monitoring, and other important limits and measurements are explored.

**EPM 4500 Leadership for Environmental Managers (4 Credits)**

This course provides students with fundamental leadership skills with an emphasis on topics and contexts relevant to environmental professionals. It addresses three main subject areas: leadership principles necessary to positively influence their work environment; how to effectively communicate; and developing a vision and mission for their personal leadership success. Students will assess their own leadership attributes, characteristics, and skills and construct a personal leadership development plan. The class will make use of reading assignments, written assignments, video assignments, situational role-play, and class participation.

**EPM 4510 Environmental, and Health & Safety Management (4 Credits)**

This course presents the intricacies of establishing environmental and health and safety programs in the workplace. The course is divided into specific environmental and health and safety topics that are relevant to environmental and safety management. There are multiple topics that address the benefits and barriers to designing, implementing, and maintaining environmental and health and safety programs.

**EPM 4520 Occupational Safety and Health Act (OSHA) (4 Credits)**

This course provides an in-depth review of the laws and regulations that govern the safety and health of workers. The course is of value to students seeking to expand knowledge of the Occupational Safety and Health Act. Emphasis is on the areas of overlap between safety and environmental laws, OSHA's inspection and enforcement authority, employee and employer rights, record keeping requirements and an outline of labor's interest in OSHA cases. Current topics such as OSHA reform legislation and regulatory agenda are discussed.

**EPM 4525 Workplace Safety Management (4 Credits)**

This course introduces students to core elements in a health and safety management systems approach to identifying and preventing workplace injuries and illnesses. Students examine the five elements of developing an effective occupational health and safety management program. The course also explores the common challenges and obstacles encountered during the development and implementation of these programs. This course includes a general overview of common OSHA regulations, rights, and responsibilities for developing a safety and health program. The format of this class is highly interactive, affording students an opportunity to engage with case studies and their peers, as well as to practice developing health, safety, and environmental programs at their respective establishments.

**EPM 4610 Analytics I (4 Credits)**

Data and analytics are key for any business domain; data tells us about our customers and markets and analytics make information and knowledge out of data. It's now possible to be inundated with data but gain no new knowledge from it. Analytics help companies demonstrate their ESG behavior and its impact. Companies that can prove and display the environmental impact gain a market advantage. Analytics also demonstrate real environmental impact versus greenwashing. This course has a managerial focus rather than a technical one, though students will perform some data analytics in this course. It is designed to provide managers with sufficient background on the potential value of data analytics, the business process change associated with data analytics, and the underlying technologies, to enable them to interface effectively with analysts and data scientists.

**EPM 4615 Analytics II (4 Credits)**

Business professionals including those in environmental health and safety (EHS) management, use statistics every day in making decisions. In this graduate-level course, you will gain an overview of the data analytic process and data mining techniques used for discovery knowledge from datasets. The course is designed to highlight the practical aspects of data mining methods and their applications, rather than theoretical aspects of statistical machine learning or optimization. The course also introduces emerging trends in Data Analytics and their applications in decision making process on environmental issues such as sustainability which includes waste management, water, and energy conservation. In summary, data is now an integral part of our lives and to be successful in today's business landscape, we need to be able to leverage data to make critical business decisions on environmental sustainability. This course will teach students how to use data to make those decisions confidently. Prerequisite: EPM 4610.

**EPM 4620 Environmental Reporting Standards and Models (4 Credits)**

Students learn the reporting requirements of existing and emerging environmental reporting standards, e.g., SEC requirements, EU standards, NGO standards, Global Reporting Initiative environmental performance indicators, and Sustainability Accounting Standards Board recommendations, and how to craft mandatory and optional reports that conform to these standards and requirements.

**EPM 4625 Environmental Analysis and Reporting Project (4 Credits)**

This is the concluding class for the Environment Analytics and Reporting concentration and graduate certificate. The class centers on performing sophisticated investigations of sustainability-related data sets utilizing the tools and insights of the data analytics revolution. The focus of the course is on applying advanced data analytics techniques (e.g., data mining, predictive analytics, and prescriptive analytics) to support innovative approaches for organizational sustainability, business performance, stakeholder relations, and/or environmental policy. Students will engage in readings, develop an analysis project using Watson Analytics, and prepare a report covering conclusions and recommendations. Prerequisites: EPM 4610, 4615, and 4620.

**EPM 4701 Topics in EPM (2-5 Credits)**

The content of this course will vary each time it is offered. The topics may include time-sensitive issues in the field of environmental policy and management, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content will be announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**EPM 4705 Land Use Planning (4 Credits)**

This course provides a comprehensive examination of land use planning efforts by federal, state, and local governments. The legal authorities, responsibilities, and conflicts held by these governmental entities are examined in detail. The course examines the interrelationship between home rule authority, local zoning and planning requirements, and federal/state natural resource plans, as well as public participation in land use plans. Students will learn how to set goals and objectives for specific components of ecosystems, design projects to achieve desired ecologic conditions, and use new technologies in planning.

**EPM 4710 Environmental Project Management (4 Credits)**

In this course, students will learn about project management concepts and gain practical experience applying basic project management skills. As a part of class assignments, students will work on selected projects while covering the entire project management process, from project initiation to close-out. These projects will cover a range of environmental and / or sustainability project management perspectives, including governmental, industry, and advocacy or non-profit organizations. By the end of the course, students should have a strong understanding of project management skills and terminology, and be able to successfully complete some requirements for project manager certification. They will also understand the similarities and differences in project management for environmental professionals. Please note that while this course will provide a foundation in project management, it will not cover all concepts and terminology in depth or provide the required work hours necessary for project manager certification.

**EPM 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**EPM 4902 Capstone Seminar (4 Credits)**

The purpose of the Capstone Seminar is to develop and apply transferable professional skills to persuade decision-makers. The course requires students to identify a Capstone subject matter, develop a premise, and argue for an applied solution. Students will conduct research to create a strong argument that supports their premise by considering purpose, need, and audience and will provide evidence that the premise can be implemented. Tasks include gathering and evaluating appropriate source information, writing a strong solution in support of the premise, and then defending the solution. Students will write a Capstone paper and prepare a presentation suitable for professional exposure through publication and/or presentation.

**EPM 4910 Research Practices and Applications (4 Credits)**

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

**EPM 4980 Internship (0-4 Credits)**

The EPM Internship is designed to offer students a purposeful experience in the field of environmental policy and management. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

**EPM 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed it with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

## Courses

**EPM 4001 Environmental Foundations and Principles (4 Credits)**

This course investigates the field's history, current activities and issues, ethics, systems, and economics; and an overview of key necessary knowledge and skills to work and learn within the field. Students will: gain a strong historical understanding of how environmental and natural resource issues have influenced economic development and societal growth throughout the ages; learn about the complexity of environmental issues and the value of interdisciplinary and systems thinking when applied to making decisions about natural resource usage; understand the role that empirical science, policy analysis and advocacy play in how governments and private companies address complex environmental issues; become aware of the stressors that ecosystems around the globe are experiencing and the value of multidisciplinary approaches to addressing these challenges; and understand the diverse organizations and employment opportunities available in the environmental field.

**EPM 4002 Integrated Environmental Systems (4 Credits)**

The earth as a whole is comprised of many systems that affect the environment. Some have large wide ranging reach, while others are restricted to a relatively small area. Included is everything in between. Actions in one area or system may have unintended secondary and tertiary consequences in that system or others. This course uses various tools and materials to study a few environmental systems and determine connections, consequences, impacts, barriers, decision making, life cycle costs, etc.

**EPM 4003 Environmental Finance and Economics (4 Credits)**

The class provides an overview of economics, finance, and sustainability in an environmental and social context. The class examines traditional and alternative performance metrics, such as "Green GDP", and explores the relationship between risk and return, return on investments, including environmental, social, and governance (ESG) investing. The course emphasizes relationships between business management and environmental quality, and provides students with a financial and economic decision-making framework for understanding and analyzing environmental issues. The course utilizes a case-study approach to cover economic and finance concepts in real world scenarios involving natural resource and environmental decisions. Students will leave this course with the ability to confidently converse regarding sustainability in a finance and economics context.

**EPM 4040 Wetland Ecology and Management (4 Credits)**

This course provides a detailed examination of wetlands and deepwater habitats of the United States, with an emphasis on wetlands. The definition, identification, classification, and management requirements of various wetland communities are stressed. Students identify and classify wetlands and analyze wetlands in the context of federal, state, and local regulatory processes. Students evaluate activities with adverse and beneficial effects to wetlands. Students explore concepts related to wetland management in the public, private and non-profit sectors.

**EPM 4108 Impacts of Recreational Use (4 Credits)**

The practical and managerial theoretical basis of recreational use of public and private lands is examined in the context of ecosystem management. #The statutory and regulatory policies and current issues regarding the management and use of lands in wilderness systems, wild and scenic river corridors, parks, and open spaces are discussed in detail. #The impacts of recreational uses on the environment and conflicts with other uses of land and resources are discussed. Land use planning policies and decisions, decisions which respond to recreation, wilderness, wilderness and open space issues will be examined. At this end of this course, students will create a visitor impact use assessment using the Inter-agency Visitor Use Management Framework (IVUMF).

**EPM 4115 Introduction to Ecology (4 Credits)**

This course examines the concepts of the ecosystem, populations, communities, the flows of energy, material cycles, and biotic diversity. Students will analyze ecological concepts including the unity of organisms and inseparable interactions with the physical environment. Class discussions include topics such as the formation, distribution, and organization of ecological communities, plant succession, and nutrient cycling. Students will also evaluate aspects of evolutionary trends within plant and animal communities as they relate to ecological principles. The goals of this class are to transmit the principles, methods, and vocabulary of ecology. Students will critically analyze and discuss issues concerning population ecology, community ecology, and ecosystem ecology. Students will relate concepts of ecology to their personal and professional interests in environmental issues. The ability and necessity of communicating ecological principles within a commercial and/or regulatory environment will be developed. An assignment will provide experience in the collection, interpretation, and analysis of data. The skills learned will be relevant in environmental reporting, discussions, and presentations within a professional environment.

**EPM 4120 Introduction to Natural Resource Management (4 Credits)**

In this course, students gain an understanding of the roles and responsibilities of federal, state, and local agencies, environmental and wildlife interest groups, and other organizations involved in natural resources management. Students will learn the content and purpose of natural resources management plans, then apply this knowledge to assess and develop policies that will improve natural resources management.

**EPM 4140 National Environmental Policy Act (NEPA) (4 Credits)**

This course examines the National Environmental Policy Act (NEPA) and its applications. Students will gain both academic and practical experience in studying the intent and application of NEPA by federal agencies. Students will gain practical application by critically reviewing various NEPA documents and examining the components of NEPA documents. Students will prepare an Environmental Assessment (EA) of their choosing for their final project in this course.

**EPM 4150 Global Environmental Law and Policy (4 Credits)**

International environmental agreements provide a mechanism to address domestic environmental issues caused by foreign countries. However, some agreements have been more successful than others based on various aspects within the agreement and a country's domestic actions taken to enforce the agreement. This course teaches students how international environmental agreements are created, managed, and improved in order to improve environmental issues in different countries and international waters. Students will analyze and comment on existing agreements and create strategies for improving the agreements to strengthen agreements to be more effective in addressing environmental issues. Students learn about the stakeholders involved in creating and improving these agreements. Students will develop marketable analytical skills that help guide organizations toward more robust advocacy strategies designed to make the agreements more enforceable and effective in addressing environmental issues. Prerequisite: Recommended - EPM 4200.

**EPM 4200 Environmental Protection Law (4 Credits)**

This course provides an examination of the fundamental laws which protect our environment and health. Students will analyze the purpose, context, implementation, and implications of the most important laws, regulations, policies, and court cases that affect the environment, human health, and our economy. Coverage includes: National Environmental Policy Act (NEPA), Clean Air Act (CAA), Clean Water Act (CWA), Resource Conservation and Recovery Act (RCRA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Emergency Planning and Community Right-to-Know Act (EPCRA), related toxics laws, and species and habitat protection statutes. It provides an examination of the legal system and the roles of Congress, the President, executive agencies, states, and courts in shaping and implementing environmental laws. The course also asks students to apply this knowledge to current events in environmental policy and litigation.

**EPM 4220 Endangered Species and Wildlife (4 Credits)**

This course provides an examination of the basic principles, trends, challenges, and controversies surrounding the administration of maintaining certain wildlife species, specifically through the administration of the Endangered Species Act. Students gain an understanding of the roles and responsibilities of various federal, state and local agencies, environmental and wildlife interest groups, and other organizations involved in endangered species and wildlife management issues. This course will also apply the principles of human dimensions to understand the complex social systems at work to conserve endangered species.

**EPM 4230 Renewable and Alternative Energies (4 Credits)**

This course provides a well-rounded primer on energy as a resource and its importance in the economy and the world today. Students will examine renewable and alternative energies and alternative transportation fuels. This course analyzes issues surrounding the development, enforcement and application of energy regulatory policies.

**EPM 4232 Sustainability: Policy and Practice (4 Credits)**

This course teaches students how organizations practice sustainability and how they plan for, shape, and react to the emerging environmental policies necessary to limit global warming. The investment community continues its quest to identify strong sustainability organizations, making public reporting more important than ever. NGOs and governments are pushing for higher ambition. Students will learn to make sustainability reports more meaningful to garner support from NGOs and attract investors. Students will develop marketable analytical skills that help guide organizations toward more robust sustainability actions and reporting, or help NGOs evaluate corporate reports for strengths and gaps.

**EPM 4233 Sustainable Transportation (4 Credits)**

21st Century transportation planning on the local and global scale involves consideration of environmental policies and sustainable practices. Development of an efficient system for moving goods and people along highways, airways and public transit networks must coordinate with legal requirements governing automobile source emissions, water pollution, mitigation of congestion, and crisis management. Conflicts occur along political fault lines between public interest groups, environmental justice advocates, the business community, government regulators, and the ordinary commuter. Consideration is given to different fuel sources, including carbon-based, hydrogen, electricity, and biofuels. The course also examines fuel efficiency (CAFE) and trends in emission science and regulation.

**EPM 4234 Climate Change and Science (4 Credits)**

Global Warming" is a cause celebre, but how much do we really know about the science involved in studying the earth's climate? Moving beyond the social and political opinions espoused in the current debate on climate change, this course delves into the chemical and physical forces at play in the arena. This course covers scientific processes used in measuring climate dynamics, among them ozone chemistry, carbon and oxygen cycles, and heat and water budgets. It explores scales and methods for detecting climate change, including analyzing ice cores, instrumental records, and time series. Some attention will be dedicated to "climate forcing" caused by such things as orbital variations, volcanism, plate tectonics, and solar variability.

**EPM 4235 Green Building (4 Credits)**

Builders, developers and designers increasingly are promoting the use of green construction practices in the pursuit of healthier, smarter buildings. Students in this course examine sustainable building strategies and tools, including LEED (Leadership in Energy and Environmental Design), the nationally-accepted benchmark for the design, construction and operation of high-performance green buildings. LEED promotes a whole-building approach by recognizing performance in five areas: sustainable site development water savings, energy efficiency, materials selection and indoor air quality. What materials are best in the design and operation of green building? How can a designer or building owner make better use of power and water efficiency programs? What are the recent developments, trends and case studies of green buildings and materials?.

**EPM 4236 Nuclear, Hydrogen, and Energy Storage Technologies (4 Credits)**

The necessity and urgency of moving away from fossil fuels-based energy production to reduce global warming has been well documented. Renewable energy technologies (solar, wind, and water-based) have been widely embraced as alternative energy solutions. However, like all energy production technologies, renewable energy technologies have shortcomings that prevent them from being standalone energy production solutions. Nuclear and fuel cell energy production technologies address the shortcomings of renewable energy technologies and can be considered symbiotic options in the move away from fossil fuels. Improving energy storage technologies will also be required to complete this symbiosis. This course will examine renewable energy technologies shortcomings and how nuclear, fuel cell, and energy storage technologies may be implemented to further facilitate the move away from fossil fuels-based energy production.

**EPM 4238 Water and Food Sustainability (4 Credits)**

Concurrent food, water, and climate crises amidst widespread hunger and undernutrition have re-focused public attention on the deficiencies and complexities of global food and water systems. This course examines the science and sustainability of our water resources as well as food production with an emphasis on the connections between the two. Increasing water and food system sustainability requires working along multiple disciplines, reconnecting agriculture with ecological systems and ensuring that policies and institutions that impact food and water systems protect social equity and the environment. The course draws from interdisciplinary research and education bridging worldviews and values implicit in different disciplinary and theoretical perspectives. Linking theory and practice is also essential thus the course will incorporate multiple perspectives and case studies from local to global levels. Demand is growing for interdisciplinary scholars and other professionals who are equipped to analyze and address the complex challenges of sustainable water resources, sustainable food production, and water and food security. Students will synthesize information from water, food, and the environment from a systems perspective. They will examine the interactions between science, policy, and ethics and analyze the trade-offs and synergies between different objectives, solutions, and outcomes. Students will devise solutions to problems that incorporate the intricacies and interdependencies of water and food systems.

**EPM 4280 Resource Conservation and Recovery Act (RCRA) (4 Credits)**

The Resource Conservation and Recovery Act (RCRA) course is a detailed review of the Resource Conservation and Recovery Act that was passed in 1976 and has been continuously updated since that time. RCRA is also known as "the cradle to grave law" dealing with hazardous waste generation and disposal. This course not only covers the important parts of the regulation, but students will also learn how to navigate and practically apply the law and regulations.

**EPM 4355 Systems, Standards, and Certifications for Environmental Management (4 Credits)**

Students will analyze and apply common environmental management systems, which can be used to ensure and improve quality during the management of a wide range of environmental operations. They will synthesize this knowledge via a project which establishes portions of an environmental management system. Students will execute the plan-do-check-act cycle to improve quality. They will evaluate options to minimize environmental impacts using root cause analysis and generalize common system components that are necessary for an environmental organization to achieve its objectives (establishing environmental policy, establishing performance objectives, monitoring results, evaluating performance, understanding and managing risks, etc.) Course assignments will allow students to practice systemizing and standardizing environmental management processes to improve performance (common procedures, data management, analytical methods, performance monitoring, etc.) Throughout the course, students will discover that management systems beyond subject matter expertise are necessary to do well in environmental careers.

**EPM 4390 Environmental Policy Analysis (4 Credits)**

This course investigates key issues in environmental policy analysis, including the importance of environmental justice, federalism versus state policy, techniques of environmental assessment, the impacts of politics and case law on environmental policy, and policy decision-making. The class sets a foundation with an overview of the U.S. and international environmental movements. Students look at stakeholder engagement, policy formulation and implementation, and policy evaluation in different institutions. The course emphasizes the important role that the political and judicial process plays in the creation of policy solutions, and assesses the strengths and weaknesses of different techniques of environmental analysis including environmental impact assessments, modeling and simulation, sustainability analysis, and how best to weave environmental justice/equity throughout policy development and implementation.

**EPM 4400 Environmental Values and Ethics (4 Credits)**

Students examine ethical considerations in environmental management and decision making. Discussions cover personal versus organizational attitudes; cultural, economic, and historic values; science versus politics; and international and intergenerational policies. The course also explores various philosophies of humankind's relationship with the environment. Students are encouraged to develop and express a personal philosophy relative to their role in the regulatory, technical, scientific, and financial management of the environment.

**EPM 4465 Environmental Restoration and Waste Management (4 Credits)**

Environmental Restoration is the identification and elimination of hazardous materials from a designated site such that the risks to human health and the environment are reduced to an acceptable level for an intended future land use. This course examines successful environmental restoration activities that were used to reduce and mitigate risk associated with past operations of nuclear and nuclear-related facilities and the significant potential to release harmful contaminants. Environmental restoration effects on the ecological and human health risk assessments and analyses related to the transport, treatment, storage, and disposal of waste from the contaminated site are presented. Remediation processes for radioactive materials and other hazardous wastes and the eventual storage, processing, and disposal and the potential effect on humans and the environment is studied. An overview is given on the development of a radiological protection program for an EIS report. External and internal hazards: control measures and monitoring, and other important limits and measurements are explored.

**EPM 4500 Leadership for Environmental Managers (4 Credits)**

This course provides students with fundamental leadership skills with an emphasis on topics and contexts relevant to environmental professionals. It addresses three main subject areas: leadership principles necessary to positively influence their work environment; how to effectively communicate; and developing a vision and mission for their personal leadership success. Students will assess their own leadership attributes, characteristics, and skills and construct a personal leadership development plan. The class will make use of reading assignments, written assignments, video assignments, situational role-play, and class participation.

**EPM 4510 Environmental, and Health & Safety Management (4 Credits)**

This course presents the intricacies of establishing environmental and health and safety programs in the workplace. The course is divided into specific environmental and health and safety topics that are relevant to environmental and safety management. There are multiple topics that address the benefits and barriers to designing, implementing, and maintaining environmental and health and safety programs.

**EPM 4520 Occupational Safety and Health Act (OSHA) (4 Credits)**

This course provides an in-depth review of the laws and regulations that govern the safety and health of workers. The course is of value to students seeking to expand knowledge of the Occupational Safety and Health Act. Emphasis is on the areas of overlap between safety and environmental laws, OSHA's inspection and enforcement authority, employee and employer rights, record keeping requirements and an outline of labor's interest in OSHA cases. Current topics such as OSHA reform legislation and regulatory agenda are discussed.

**EPM 4525 Workplace Safety Management (4 Credits)**

This course introduces students to core elements in a health and safety management systems approach to identifying and preventing workplace injuries and illnesses. Students examine the five elements of developing an effective occupational health and safety management program. The course also explores the common challenges and obstacles encountered during the development and implementation of these programs. This course includes a general overview of common OSHA regulations, rights, and responsibilities for developing a safety and health program. The format of this class is highly interactive, affording students an opportunity to engage with case studies and their peers, as well as to practice developing health, safety, and environmental programs at their respective establishments.

**EPM 4610 Analytics I (4 Credits)**

Data and analytics are key for any business domain; data tells us about our customers and markets and analytics make information and knowledge out of data. It's now possible to be inundated with data but gain no new knowledge from it. Analytics help companies demonstrate their ESG behavior and its impact. Companies that can prove and display the environmental impact gain a market advantage. Analytics also demonstrate real environmental impact versus greenwashing. This course has a managerial focus rather than a technical one, though students will perform some data analytics in this course. It is designed to provide managers with sufficient background on the potential value of data analytics, the business process change associated with data analytics, and the underlying technologies, to enable them to interface effectively with analysts and data scientists.

**EPM 4615 Analytics II (4 Credits)**

Business professionals including those in environmental health and safety (EHS) management, use statistics every day in making decisions. In this graduate-level course, you will gain an overview of the data analytic process and data mining techniques used for discovery knowledge from datasets. The course is designed to highlight the practical aspects of data mining methods and their applications, rather than theoretical aspects of statistical machine learning or optimization. The course also introduces emerging trends in Data Analytics and their applications in decision making process on environmental issues such as sustainability which includes waste management, water, and energy conservation. In summary, data is now an integral part of our lives and to be successful in today's business landscape, we need to be able to leverage data to make critical business decisions on environmental sustainability. This course will teach students how to use data to make those decisions confidently. Prerequisite: EPM 4610.

**EPM 4620 Environmental Reporting Standards and Models (4 Credits)**

Students learn the reporting requirements of existing and emerging environmental reporting standards, e.g., SEC requirements, EU standards, NGO standards, Global Reporting Initiative environmental performance indicators, and Sustainability Accounting Standards Board recommendations, and how to craft mandatory and optional reports that conform to these standards and requirements.

**EPM 4625 Environmental Analysis and Reporting Project (4 Credits)**

This is the concluding class for the Environment Analytics and Reporting concentration and graduate certificate. The class centers on performing sophisticated investigations of sustainability-related data sets utilizing the tools and insights of the data analytics revolution. The focus of the course is on applying advanced data analytics techniques (e.g., data mining, predictive analytics, and prescriptive analytics) to support innovative approaches for organizational sustainability, business performance, stakeholder relations, and/or environmental policy. Students will engage in readings, develop an analysis project using Watson Analytics, and prepare a report covering conclusions and recommendations. Prerequisites: EPM 4610, 4615, and 4620.

**EPM 4701 Topics in EPM (2-5 Credits)**

The content of this course will vary each time it is offered. The topics may include time-sensitive issues in the field of environmental policy and management, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content will be announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**EPM 4705 Land Use Planning (4 Credits)**

This course provides a comprehensive examination of land use planning efforts by federal, state, and local governments. The legal authorities, responsibilities, and conflicts held by these governmental entities are examined in detail. The course examines the interrelationship between home rule authority, local zoning and planning requirements, and federal/state natural resource plans, as well as public participation in land use plans. Students will learn how to set goals and objectives for specific components of ecosystems, design projects to achieve desired ecologic conditions, and use new technologies in planning.

**EPM 4710 Environmental Project Management (4 Credits)**

In this course, students will learn about project management concepts and gain practical experience applying basic project management skills. As a part of class assignments, students will work on selected projects while covering the entire project management process, from project initiation to close-out. These projects will cover a range of environmental and / or sustainability project management perspectives, including governmental, industry, and advocacy or non-profit organizations. By the end of the course, students should have a strong understanding of project management skills and terminology, and be able to successfully complete some requirements for project manager certification. They will also understand the similarities and differences in project management for environmental professionals. Please note that while this course will provide a foundation in project management, it will not cover all concepts and terminology in depth or provide the required work hours necessary for project manager certification.

**EPM 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**EPM 4902 Capstone Seminar (4 Credits)**

The purpose of the Capstone Seminar is to develop and apply transferable professional skills to persuade decision-makers. The course requires students to identify a Capstone subject matter, develop a premise, and argue for an applied solution. Students will conduct research to create a strong argument that supports their premise by considering purpose, need, and audience and will provide evidence that the premise can be implemented. Tasks include gathering and evaluating appropriate source information, writing a strong solution in support of the premise, and then defending the solution. Students will write a Capstone paper and prepare a presentation suitable for professional exposure through publication and/or presentation.

**EPM 4910 Research Practices and Applications (4 Credits)**

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

**EPM 4980 Internship (0-4 Credits)**

The EPM Internship is designed to offer students a purposeful experience in the field of environmental policy and management. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

**EPM 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed it with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

## Geographic Information Systems

Office: University College Student Support Center  
 Mail Code: 2211 S. Josephine St., Denver, CO 80208  
 Phone: 303-871-2291, 800-347-2042

 Web Site: <http://www.universitycollege.du.edu>

### Graduate Certificate in Geographic Information Systems

The certificate in Geographic Information Systems is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. University College offers the region's first complete graduate certificate program in Geographic Information Systems. Designed and delivered for busy adults, the Geographic Information Systems graduate certificate helps professionals add to their skillset with technology skills that help solve real-world spatial problems.

Certificate students receive applied instruction from professional practitioners who work in the fields in which they teach, as they learn to create, implement, and execute a project using GIS, GPS (Global Positioning Systems), remote sensing, internet mapping, or digital image processing. The GIS certificate allows students to explore training fundamentals at a very hands-on, applied level necessary to succeed in the field.

Students gain a contextual background in GIS, from the management of natural resources to public utility management, public works engineering, environmental impact assessment, and even market research. In a burgeoning integrative world, it is vital to grasp the diverse fundamentals of each topic within the Geographic Information Systems industry and gain an insider's perspective to specific fields as they each relate to GIS training. Credits earned through this graduate certificate may apply toward a master's degree in Geographic Information Science offered in the Department of Geography and the Environment at the University of Denver or a master's degree in Information and Communications Technology offered through University College at the University of Denver.

This program prepares students to do the following:

- Analyze the nature of, uses for, and implementation processes for geographic data.
- Select appropriate applications of GIS technology to solve spatial problems based on organizational/client needs.
- Solve real-world problems through analysis and selection of appropriate GIS tools and processes to address the issues.

### Specialized Graduate Certificate in GIS and Unmanned Aircraft Systems

This specialized graduate certificate prepares students for the rapidly expanding UAS (Unmanned Aircraft Systems) application to GIS and mapping. Students will take four courses: GPS for GIS and then three focused courses; one on the use of UAS (Unmanned Aircraft Systems) in the GIS industry, a ground school where students will learn to fly, and photogrammetry where students will learn the science of preparing aerial photography products collected from drone platforms for GIS mapping and analysis.

**After completing this certificate, students will**

- Establish working knowledge for the safe and efficient use of UAS.
- Prove their ability to perform several aircraft maneuvers in a safe and efficient manner.
- Execute an aerial mapping exercise for use in GIS.

## Specialized Graduate Certificate in Geographic Information Systems in the Environment

The environmental movement decades ago gave rise to GIS as we know it today. In this specialized graduate certificate, students focus on GIS applications in the environment. Environmental assessment and natural resource management, conservation and preservation take center stage, and look at natural hazard risk assessment and planning.

### After completing this certificate, students will

- Evaluate the application of GIS technology, analytical techniques and data presentation methods that support facility site selection, environmental impact analyses, resource management, and characterization of environmental hazards.
- Participate in environmental assessment projects with introductory preparation for practice as GIS professionals in public agencies or in the private sector.
- Analyze applications that support hazard risk and assessment, mitigation, and emergency response planning.

## Certificate Admission

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production.

English Conditional Admission: No, this program does not offer English Conditional Admission.

## Graduate Certificate Program

### Graduate Certificate in Geographic Information Systems with a Concentration in Geographic Information Systems

Code	Title	Credits
<b>Core coursework requirements</b>		<b>8</b>
Complete the following two courses:		
GIS 4101	Introduction to Geographic Information Systems	
GIS 4504	Cartography and Geovisualization	
<b>AND select 4 courses:</b>		<b>16</b>
GIS 4007	Creative Problem Solving and Programming Concepts	
GIS 4085	Python Programming II	
GIS 4110	Geographic Statistics	
GIS 4200	Geospatial Intelligence	
GIS 4510	GIS in Business	
GIS 4520	GIS in Telecommunications	
GIS 4530	Crime Mapping	
GIS 4540	Conservation GIS	
GIS 4570	Geographic Information Systems in Public Health	
GIS 4610	Open Source GIS	

GIS 4620	Geodatabase Application
GIS 4630	Public Domain Data for GIS
GIS 4650	Demographic Analysis Using GIS
GIS 4655	Community Intel
GIS 4660	GIS in Municipal Government
GIS 4670	GIS and the Law
GIS 4680	Environmental Applications
GIS 4683	GIS for Disaster Management
GIS 4685	GIS and Natural Hazards
GIS 4687	Hydrologic Modeling in GIS
GIS 4690	GPS for GIS
GIS 4700	Remote Sensing I
GIS 4701	Topics in Geographic Information Systems
GIS 4740	Remote Sensing II
GIS 4750	UAS for GIS
GIS 4760	UAS Photogrammetry
GIS 4770	UAS Ground School Practical
GIS 4860	Web GIS
GIS 4980	Internship
<b>Total Credits</b>	<b>24</b>

Minimum number of credits required for certificate: **24 credits**

## Specialized Graduate Certificate Programs

### Specialized Graduate Certificate in GIS and Unmanned Aircraft Systems

Code	Title	Credits
GIS 4750	UAS for GIS	4
GIS 4760	UAS Photogrammetry	4
GIS 4770	UAS Ground School Practical	4
GIS 4690	GPS for GIS	4
<b>Total Credits</b>		<b>16</b>

Before registering for a four-course certificate course, students must have GIS software experience obtained via an introductory GIS course taken at the University of Denver or another institution and have earned a C- or better, or experience gained in the workplace. Please work with the academic advisor to verify your eligibility.

---

### Specialized Graduate Certificate in GIS in the Environment

Code	Title	Credits
GIS 4540	Conservation GIS	4
GIS 4680	Environmental Applications	4
GIS 4685	GIS and Natural Hazards	4
GIS 4687	Hydrologic Modeling in GIS	4
<b>Total Credits</b>		<b>16</b>

Individuals enrolling in this certificate must have GIS software experience obtained via an introductory GIS course taken at the University of Denver or another institution and have earned a C- or better, or experience gained in the workplace. Please work with the academic advisor to verify your eligibility.

**GIS 4007 Creative Problem Solving and Programming Concepts (4 Credits)**

In this course students will develop, or improve upon, their problem-solving skills to analyze problems and create solutions. Students will document their solutions and translate them into running programs written in the enormously popular Python programming language. Students will learn programming concepts including the use of variables, program input and output, flow control, conditionals, interpreter- and code-file-based approaches, and error testing. Students will learn how to set up Integrated Development Environments (IDE) such as Visual Studio Code on their personal computers and/or utilize a Cloud IDE in which they will write programs.

**GIS 4080 Python Programming in GIS (4 Credits)**

This course introduces Python concepts and the Python scripting environment in a GIS environment. Python is a free, open-source scripting language that has been integrated with GIS. Python is a dynamic, interpreted language that can be used to automate redundant tasks and workflows in GIS. Students learn tools and techniques and proper Python syntax, script flow, and error handling. Students learn to write scripts that allow them to automate redundant tasks and workflows in GIS. Students learn to write scripts that allow them to automate geoprocessing processes and GIS work more efficiently. This course teaches fundamental concepts needed to create Python scripts in ArcGIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4085 Python Programming II (4 Credits)**

GIS 4085 builds on GIS Python fundamentals from GIS 4080, covering advanced applications of Python for developing and customizing GIS software, designing user interfaces, and solving complex geoprocessing tasks. Participants will engage with peers in weekly discussions and code reviews. Weekly exercises and assignments provide practical application of concepts. Prerequisites: GIS 4080.

**GIS 4100 Geospatial Technologies (4 Credits)**

This course is designed to familiarize students with the tools and technology needed to access, manipulate, and display geographic information. Students will also learn how to think spatially in order to help students know when to apply these tools. This course is a combined introduction to geographic information systems (GIS), remote sensing (RS), global positioning systems (GPS), and cartography (the science and art of mapmaking). Students will also learn about ethical issues regarding the use of geospatial technologies, as well as trends in the practical applications of these important tools.

**GIS 4101 Introduction to Geographic Information Systems (4 Credits)**

This introductory course is designed to provide a general overview of geographic information systems (GIS) including background, development, trends, and prospects in this rapidly evolving technological field. Basic components and functions of GIS as well as fundamental spatial and geographic concepts are explored through lecture notes, assigned readings, videos, discussions, and applied practical experience using GIS software.

**GIS 4110 Geographic Statistics (4 Credits)**

This course offers an overview of spatial statistics using GIS and publicly available data. This course provides information on the following: spatial statistics, methods, and interpretation; spatial data, collection methods, and resources; and GIS techniques to map and analyze spatial data. Using a popular PC-based desktop mapping software program and statistical package, students learn how to navigate through spatial data, identify data issues, statistically analyze spatial data, map the data, and interpret results from these analyses. Topics include descriptive spatial statistics, hypothesis testing, interpolation, clustering, and spatial regression. Several application areas, such as demographic analysis and facility planning, are used in sample exercises and ethical considerations, such as masking, are discussed. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4200 Geospatial Intelligence (4 Credits)**

Geospatial intelligence (GEOINT) is pivotal in linking geography to events and helping us gain insight into what is happening, where it's happening, and why it's happening. GEOINT is derived from the exploitation and analysis of imagery and geospatial information about features and events, with reference to space and time. This course serves as an introduction to the fundamentals of the geospatial intelligence community, core GEOINT technologies and operations, and the role of GEOINT in national, regional and local security affairs. This course is built on a framework of data, technology, and analysis in support of the GEOINT community, which may include natural disasters, first responders, military personnel, homeland defense, and law enforcement. Prerequisite: GIS-4101 Introduction to GIS.

**GIS 4504 Cartography and Geovisualization (4 Credits)**

The theory and art of map making developed over several thousand years and has been revolutionized by computer technology. This course is designed to expose students to the use of computer techniques in assessing technical design issues in the compilation of accurate and meaningful automated geographic mapping products. GIS software will be used in a series of hands-on lab exercises to produce typical GIS mapping products.

**GIS 4510 GIS in Business (4 Credits)**

Businesses continue to embrace GIS as an effective alternative to traditional manual mapping analysis methods. GIS has emerged as an affordable solution for performing essential revenue producing and expense reducing functions. Many years ago, successful GIS implementation required huge capital investment and a large staff of GIS experts; however, with the introduction of more powerful inexpensive computers and easier to use software, companies of all sizes are unleashing the business potential of GIS on the marketplace. This course exposes students to various business applications and uses of GIS as well as the underlying theories and technology behind the applications. This course emphasizes various business disciplines including Marketing, Real Estate, Transportation, and Oil & Gas using GIS in practical, hands-on exercises that demonstrate the theories and concepts discussed in the lectures. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4520 GIS in Telecommunications (4 Credits)**

Telecommunications is a thriving technology and business, accounting for a significant percentage of technical advances and revenue around the globe. GIS has emerged as a crucial tool in the telecommunications field for maintaining existing entities, planning for additional ones, and for gaining an advantage in this very competitive marketplace. The use of GIS in the telecom industry continues to grow because GIS technology accommodates the many CAD programs and drawings representing plant and transmission towers/coverage as well as the geographic representations of those items. Only a few years ago, introducing GIS into a telecom business required significant cash outlay, but through less expensive hardware and more user-friendly software, now even a modest CLEC can implement an effective GIS. This course exposes students to the various applications and uses for GIS in the telecom arena by breaking down the miscellaneous telecom requirements into GIS components and technological solutions. This course emphasizes specific telecom technology application requirements and allows students, through hands-on-lab work, to discover the power of GIS in delivering superior telecom solutions. This course also focuses on OSP/ISP applications and solutions, network connectivity issues as well as the exploding future of wireless technology. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4530 Crime Mapping (4 Credits)**

Municipal police departments, county sheriff departments, and other state and federal law enforcement agencies use GIS technology as a tool to analyze crime statistics and patterns. This course examines how GIS technology is used in law enforcement to provide strategic, tactical, and administrative crime analysis.

**GIS 4540 Conservation GIS (4 Credits)**

This course is designed to provide students with an introduction to the use of geographic information systems (GIS) in conservation. Students receive an introduction to the use of GIS in various types of conservation studies and preservation. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support planning and management of land, species, and habitats. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4570 Geographic Information Systems in Public Health (4 Credits)**

GIS offers many applications and functionality that are tremendously beneficial to the Public Health industry. The ability to visualize cases in space (geographically) and time is invaluable in analyzing spatial clusters of health related events. Further the ability to model the spread of a potential epidemic can literally be a life saver. GIS is a natural choice for solving many Public Health issues including: analyzing the location of diseases; the spread of contagious diseases (both vector borne as well as the spread through human contact); the cause and effect of environmental factors; as well as the availability of Health facilities. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4610 Open Source GIS (4 Credits)**

This applied course guides students in their investigation and research of special topics and current events through Open Source geographic information systems (GIS). It builds upon geospatial skills previously acquired and is designed for participants to learn how geospatial work can be done when presented with a proposal or problem but given little to no data, budget, or access to commercial, off-the-shelf software, or other resources. In this course, students will choose their own topic and learn to navigate it by planning, implementing, and disseminating the outcomes of a geospatial project. Prerequisite: GIS 4101 Intro to GIS and additional coursework or experience with GIS Projects. Prerequisite: GIS 4101.

**GIS 4620 Geodatabase Application (4 Credits)**

This course in Geodatabase Application is logically broken into two separate component parts; the first section deals with Geodatabase concepts and provides a general overview of the Geodatabase structure and implementation including; background, object classes, feature classes, relationship classes, domains, validation rules, and Geodatabase topology. The second portion of the course focuses on Geodatabase Application introducing advanced features of Geodatabase, providing a solid foundation for the application of the Geodatabase to model and address complex real world issues. Geodatabase Linear Referencing, Geodatabase Surface Modeling, and Geocoding Services in the Geodatabase, are explored. This course incorporates a hands-on lab component. Computer lab exercises are designed to introduce the student to concepts and Geodatabase application. Strong emphasis is placed on Geodatabase design. Design objectives, design guidelines and functional requirements of the resulting Geodatabase model are addressed. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4630 Public Domain Data for GIS (4 Credits)**

Geospatial data are the foundation upon which GIS and spatial analysis rests. As GIS has matured, the challenge has evolved from generating data to managing the enormous volume of data from government agencies, nonprofit organizations, and industry, and increasingly, from ordinary citizens through citizen science and volunteered geographic information efforts. Key to working with this volume of data are essential issues such as privacy, copyright, public domain, cost recovery, metadata standards, and data quality that GIS professionals must grapple with to be effective in the 21st Century. This class discusses and applies these issues and works with a rich array of data sources to enable effective decision-making in a Geographic Information System. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4650 Demographic Analysis Using GIS (4 Credits)**

This course offers an overview of demographic analysis using GIS and U.S. Census data. This course provides pertinent information on the following: demographic concepts and methods; U.S. Census data, collection methods, and reports; and GIS and spatial statistical methods to analyze demographic data. Using a popular PC-based desktop GIS software program, students learn how to navigate through census files and create a variety of thematic maps. Several application areas, such as demographic analysis and facility planning, are used in sample exercises. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4655 Community Intel (4 Credits)**

Community Intelligence is about using geospatial data to gain insights and to make informed decisions regarding community demographics, opportunities, risks, and an overall deeper understanding of communities. Whether one is a small business owner, the CEO of fortune 500 companies, an Emergency Manager, or running a non-profit environmental organization, having insights into local and regional communities, and understanding how to engage in this public provides an incredible advantage while maximizing effort, time, and resources. In this course, you will learn how to capture and discover key insights often hidden in complex datasets, and how to strategize and communicate with these data for maximum organizational impact. Course Pre-requisites: GIS-4101 Introduction to GIS. Prerequisites: GIS 4101.

**GIS 4660 GIS in Municipal Government (4 Credits)**

There are many areas of government where desktop mapping can be extremely helpful in solving problems that are spatial in nature. This course explores the many types of data collected by city and county government agencies from crime and election data to building, assessment, and zoning data and how it can be displayed in map form. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4670 GIS and the Law (4 Credits)**

This course explores the legal and technical ramifications created by Geographic Information Systems (GIS), Mobility and the Law, including the legal and policy issues related to the science of GIS, the sharing of geographic information, the data generated by mobile devices, the intellectual property issues, security and privacy issues, business and contractual issues related to GIS, and the standards of care and liability related to GIS. This course also examines the types of issues and concerns that exist in the U.S. and the world created by geographic information science and the mobile device. The evolution of GIS and the mobile device directly impacts governments, companies, and individuals on a daily basis. In today's world, more than three billion people have smart phones in their hands constantly. This creates issues about how to handle data, security and privacy, civil and criminal laws, rules and regulations, contractual agreements, and service-level agreements between parties on many levels from service providers in different states, countries and parts of the world. All of these issues need to be balanced by the differing cultural standards and mores from all over the world and legal (and sometimes not so legal) methods of protecting governments and companies in this ever-changing "always-connected" world created by GIS and the mobile device. Prerequisite: GIS 4101 - Intro to GIS, and GIS 4700 - Remote Sensing I and/or similar GIS course and/or work experience.

**GIS 4680 Environmental Applications (4 Credits)**

This class provides students with an introduction to practical applications of computerized Geographic Information Systems (GIS) in environmental assessment and natural resource management. Emphasis is placed on automated analytical techniques and data presentation methods that support facility site selection, environmental impact analyses, resource management, and characterization of environmental hazards. This course is designed to provide students who participate in environmental assessment projects with introductory preparation for practice as GIS professionals in public agencies or in the private sector. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4683 GIS for Disaster Management (4 Credits)**

This course serves as an introduction to Geographic Information Systems and their application in Emergency Operations. The basic concepts of geography, cartography and Global Positioning Systems will be covered, along with the basic components and capabilities of a geographic information system. Students will learn about the fundamental types of GIS analysis and applications, focusing on those used in Emergency Operations. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4685 GIS and Natural Hazards (4 Credits)**

This course is designed to provide students with an introduction to the use of GIS in natural hazard assessment. Students receive an introduction to the use of geographical information systems (GIS) in various types of natural disasters and response management. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support hazard risk and assessment, mitigation, and emergency response planning. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4687 Hydrologic Modeling in GIS (4 Credits)**

Hydrology is concerned with movement of the earth's waters through the hydrologic cycle, and the transport of constituents carried in its flow. In GIS, the landscape is represented by means of geographically referenced data describing the character and shape of relief features. A spatial hydrology model simulates the water flow and transport in a specific locale using GIS data structures. Hydrologic modeling in GIS allows us to automatically delineate a drainage system and quantify the characteristics of the system. It focuses on the movement of water across a land surface. This course looks at the basic inputs to hydrological modeling in GIS, walks students through established modeling procedures, and has students work on projects that are real and relevant as model applications. Instruction is largely hands-on, project-oriented. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4690 GPS for GIS (4 Credits)**

This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Control and Quality Assurance issues for data collection programs. Lab exercises include planning a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, and data integration into a GIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4700 Remote Sensing I (4 Credits)**

This course provides a survey of remote sensing technologies, applications, and the industry. This course is designed for GIS, Geography and Geoscience students who seek to broaden their understanding of remote sensing in support of Geographic Information Systems. Introductions to the electromagnetic spectrum, energy sources, radiation principles, aerial cameras, and electronic imaging provide the student with the initial building blocks to a thorough understanding of remote sensing. This course provides an overview of the various high altitude and space-based collection systems and their characteristics, with a view toward future systems and capabilities. In addition, this course exposes students to the techniques of extracting relevant information from both hard copy and digital imagery. Pre-requisite: This course is a pre-requisite for GIS 4740 – Remote Sensing II.

**GIS 4701 Topics in Geographic Information Systems (2-5 Credits)**

The content of this course varies each time it is offered, depending on the interests and needs of the students. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**GIS 4740 Remote Sensing II (4 Credits)**

The curriculum is a rigorous presentation of digital imaging processing theory with emphasis on its application to airborne and space borne imagery. The course includes computer laboratory exercises and workshops, where the students apply theory to satellite and air photo data. Interpretation of the digitally processed data is also included in the class exercises. Examples of vector and raster data integration are shown as well. Prerequisite: GIS 4700.

**GIS 4750 UAS for GIS (4 Credits)**

The purpose of this course is to introduce GIS students to the emerging world of using Unmanned Aircraft Systems (UAS) in the GIS workplace for data collection, reconnaissance, and research. UASs are in the news every day, highlighting their use in a military context. The Federal Aviation Administration (FAA) has released new rules and regulations governing the use of UASs in the civilian sector. This course will prepare students to be conversant in the world of UASs, basic aviation, safety, flying, mission planning, and general data gathering techniques for use in GIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4760 UAS Photogrammetry (4 Credits)**

Surveying, photogrammetric mapping, GPS, and remote sensing are critical components to working in the UAV and GIS domain. The second course in this two-course sequence will expand on the data collection process highlighted in the first class and deliver the foundations required by GIS professionals working with UAVs. Prerequisite: GIS 4101 or similar GIS course and/or work experience and GIS 4750-UAVS and GIS.

**GIS 4770 UAS Ground School Practical (4 Credits)**

The purpose of this course is to provide skills and abilities to become a remote pilot in command (RPIC) within the United States. The class content will focus on 14 CFR 107, the rules and regulations that allow RPICs to operate Unmanned Aircraft Systems (UASs) safely and legally. In addition, students will be given hands-on training in the best practices for flying UASs. Course Overview/Purpose: The release of 14 CFR 107 by the FAA has set a legal framework for commercial UAS operations in the United States. The purpose of this course is to help students become well versed in 107 and gain hands-on experience operating UASs. Students will become proficient with UAS aeronautical operation standards, discover the rules and regulations of airspace that all RPICs must comply with, and evaluate the effects that weather has on UASs as well as sources of weather information. Students will also assess the performance abilities and limitations of UASs and explore standard UAS operations as outlined in the 107 regulations. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4860 Web GIS (4 Credits)**

Creating web-based maps allows government entities, businesses, and other organizations to publish, discover, and share geospatial information. This course examines web and mobile GIS software applications, where students will learn the framework for creating web apps. Students publish comprehensive projects resulting in the creation of a fully-developed web GIS.

**GIS 4980 Internship (0-4 Credits)**

GIS students may fulfill up to four quarter hours of electives by enrolling in a GIS internship with a GIS company or an agency actively engaged in GIS activities. Students incorporating professional work experience must work with an approved mentor, who evaluates the student's performance and learning. The internship is designed to provide practical experience to students without prior professional experience in the field. Students who are employed on a full-time basis in the GIS industry may not use paid work experience as part of the academic program.

**GIS 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

**Courses****GIS 4007 Creative Problem Solving and Programming Concepts (4 Credits)**

In this course students will develop, or improve upon, their problem-solving skills to analyze problems and create solutions. Students will document their solutions and translate them into running programs written in the enormously popular Python programming language. Students will learn programming concepts including the use of variables, program input and output, flow control, conditionals, interpreter- and code-file-based approaches, and error testing. Students will learn how to set up Integrated Development Environments (IDE) such as Visual Studio Code on their personal computers and/or utilize a Cloud IDE in which they will write programs.

**GIS 4080 Python Programming in GIS (4 Credits)**

This course introduces Python concepts and the Python scripting environment in a GIS environment. Python is a free, open-source scripting language that has been integrated with GIS. Python is a dynamic, interpreted language that can be used to automate redundant tasks and workflows in GIS. Students learn tools and techniques and proper Python syntax, script flow, and error handling. Students learn to write scripts that allow them to automate redundant tasks and workflows in GIS. Students learn to write scripts that allow them to automate geoprocessing processes and GIS work more efficiently. This course teaches fundamental concepts needed to create Python scripts in ArcGIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4085 Python Programming II (4 Credits)**

GIS 4085 builds on GIS Python fundamentals from GIS 4080, covering advanced applications of Python for developing and customizing GIS software, designing user interfaces, and solving complex geoprocessing tasks. Participants will engage with peers in weekly discussions and code reviews. Weekly exercises and assignments provide practical application of concepts. Prerequisites: GIS 4080.

**GIS 4100 Geospatial Technologies (4 Credits)**

This course is designed to familiarize students with the tools and technology needed to access, manipulate, and display geographic information. Students will also learn how to think spatially in order to help students know when to apply these tools. This course is a combined introduction to geographic information systems (GIS), remote sensing (RS), global positioning systems (GPS), and cartography (the science and art of mapmaking). Students will also learn about ethical issues regarding the use of geospatial technologies, as well as trends in the practical applications of these important tools.

**GIS 4101 Introduction to Geographic Information Systems (4 Credits)**

This introductory course is designed to provide a general overview of geographic information systems (GIS) including background, development, trends, and prospects in this rapidly evolving technological field. Basic components and functions of GIS as well as fundamental spatial and geographic concepts are explored through lecture notes, assigned readings, videos, discussions, and applied practical experience using GIS software.

**GIS 4110 Geographic Statistics (4 Credits)**

This course offers an overview of spatial statistics using GIS and publicly available data. This course provides information on the following: spatial statistics, methods, and interpretation; spatial data, collection methods, and resources; and GIS techniques to map and analyze spatial data. Using a popular PC-based desktop mapping software program and statistical package, students learn how to navigate through spatial data, identify data issues, statistically analyze spatial data, map the data, and interpret results from these analyses. Topics include descriptive spatial statistics, hypothesis testing, interpolation, clustering, and spatial regression. Several application areas, such as demographic analysis and facility planning, are used in sample exercises and ethical considerations, such as masking, are discussed. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4200 Geospatial Intelligence (4 Credits)**

Geospatial intelligence (GEOINT) is pivotal in linking geography to events and helping us gain insight into what is happening, where it's happening, and why it's happening. GEOINT is derived from the exploitation and analysis of imagery and geospatial information about features and events, with reference to space and time. This course serves as an introduction to the fundamentals of the geospatial intelligence community, core GEOINT technologies and operations, and the role of GEOINT in national, regional and local security affairs. This course is built on a framework of data, technology, and analysis in support of the GEOINT community, which may include natural disasters, first responders, military personnel, homeland defense, and law enforcement. Prerequisite: GIS-4101 Introduction to GIS.

**GIS 4504 Cartography and Geovisualization (4 Credits)**

The theory and art of map making developed over several thousand years and has been revolutionized by computer technology. This course is designed to expose students to the use of computer techniques in assessing technical design issues in the compilation of accurate and meaningful automated geographic mapping products. GIS software will be used in a series of hands-on lab exercises to produce typical GIS mapping products.

**GIS 4510 GIS in Business (4 Credits)**

Businesses continue to embrace GIS as an effective alternative to traditional manual mapping analysis methods. GIS has emerged as an affordable solution for performing essential revenue producing and expense reducing functions. Many years ago, successful GIS implementation required huge capital investment and a large staff of GIS experts; however, with the introduction of more powerful inexpensive computers and easier to use software, companies of all sizes are unleashing the business potential of GIS on the marketplace. This course exposes students to various business applications and uses of GIS as well as the underlying theories and technology behind the applications. This course emphasizes various business disciplines including Marketing, Real Estate, Transportation, and Oil & Gas using GIS in practical, hands-on exercises that demonstrate the theories and concepts discussed in the lectures. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4520 GIS in Telecommunications (4 Credits)**

Telecommunications is a thriving technology and business, accounting for a significant percentage of technical advances and revenue around the globe. GIS has emerged as a crucial tool in the telecommunications field for maintaining existing entities, planning for additional ones, and for gaining an advantage in this very competitive marketplace. The use of GIS in the telecom industry continues to grow because GIS technology accommodates the many CAD programs and drawings representing plant and transmission towers/coverage as well as the geographic representations of those items. Only a few years ago, introducing GIS into a telecom business required significant cash outlay, but through less expensive hardware and more user-friendly software, now even a modest CLEC can implement an effective GIS. This course exposes students to the various applications and uses for GIS in the telecom arena by breaking down the miscellaneous telecom requirements into GIS components and technological solutions. This course emphasizes specific telecom technology application requirements and allows students, through hands-on-lab work, to discover the power of GIS in delivering superior telecom solutions. This course also focuses on OSP/ISP applications and solutions, network connectivity issues as well as the exploding future of wireless technology. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4530 Crime Mapping (4 Credits)**

Municipal police departments, county sheriff departments, and other state and federal law enforcement agencies use GIS technology as a tool to analyze crime statistics and patterns. This course examines how GIS technology is used in law enforcement to provide strategic, tactical, and administrative crime analysis.

**GIS 4540 Conservation GIS (4 Credits)**

This course is designed to provide students with an introduction to the use of geographic information systems (GIS) in conservation. Students receive an introduction to the use of GIS in various types of conservation studies and preservation. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support planning and management of land, species, and habitats. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4570 Geographic Information Systems in Public Health (4 Credits)**

GIS offers many applications and functionality that are tremendously beneficial to the Public Health industry. The ability to visualize cases in space (geographically) and time is invaluable in analyzing spatial clusters of health related events. Further the ability to model the spread of a potential epidemic can literally be a life saver. GIS is a natural choice for solving many Public Health issues including: analyzing the location of diseases; the spread of contagious diseases (both vector borne as well as the spread through human contact); the cause and effect of environmental factors; as well as the availability of Health facilities. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4610 Open Source GIS (4 Credits)**

This applied course guides students in their investigation and research of special topics and current events through Open Source geographic information systems (GIS). It builds upon geospatial skills previously acquired and is designed for participants to learn how geospatial work can be done when presented with a proposal or problem but given little to no data, budget, or access to commercial, off-the-shelf software, or other resources. In this course, students will choose their own topic and learn to navigate it by planning, implementing, and disseminating the outcomes of a geospatial project. Prerequisite: GIS 4101 Intro to GIS and additional coursework or experience with GIS Projects. Prerequisite: GIS 4101.

**GIS 4620 Geodatabase Application (4 Credits)**

This course in Geodatabase Application is logically broken into two separate component parts; the first section deals with Geodatabase concepts and provides a general overview of the Geodatabase structure and implementation including; background, object classes, feature classes, relationship classes, domains, validation rules, and Geodatabase topology. The second portion of the course focuses on Geodatabase Application introducing advanced features of Geodatabase, providing a solid foundation for the application of the Geodatabase to model and address complex real world issues. Geodatabase Linear Referencing, Geodatabase Surface Modeling, and Geocoding Services in the Geodatabase, are explored. This course incorporates a hands-on lab component. Computer lab exercises are designed to introduce the student to concepts and Geodatabase application. Strong emphasis is placed on Geodatabase design. Design objectives, design guidelines and functional requirements of the resulting Geodatabase model are addressed. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4630 Public Domain Data for GIS (4 Credits)**

Geospatial data are the foundation upon which GIS and spatial analysis rests. As GIS has matured, the challenge has evolved from generating data to managing the enormous volume of data from government agencies, nonprofit organizations, and industry, and increasingly, from ordinary citizens through citizen science and volunteered geographic information efforts. Key to working with this volume of data are essential issues such as privacy, copyright, public domain, cost recovery, metadata standards, and data quality that GIS professionals must grapple with to be effective in the 21st Century. This class discusses and applies these issues and works with a rich array of data sources to enable effective decision-making in a Geographic Information System. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4650 Demographic Analysis Using GIS (4 Credits)**

This course offers an overview of demographic analysis using GIS and U.S. Census data. This course provides pertinent information on the following: demographic concepts and methods; U.S. Census data, collection methods, and reports; and GIS and spatial statistical methods to analyze demographic data. Using a popular PC-based desktop GIS software program, students learn how to navigate through census files and create a variety of thematic maps. Several application areas, such as demographic analysis and facility planning, are used in sample exercises. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4655 Community Intel (4 Credits)**

Community Intelligence is about using geospatial data to gain insights and to make informed decisions regarding community demographics, opportunities, risks, and an overall deeper understanding of communities. Whether one is a small business owner, the CEO of fortune 500 companies, an Emergency Manager, or running a non-profit environmental organization, having insights into local and regional communities, and understanding how to engage in this public provides an incredible advantage while maximizing effort, time, and resources. In this course, you will learn how to capture and discover key insights often hidden in complex datasets, and how to strategize and communicate with these data for maximum organizational impact. Course Pre-requisites: GIS-4101 Introduction to GIS. Prerequisites: GIS 4101.

**GIS 4660 GIS in Municipal Government (4 Credits)**

There are many areas of government where desktop mapping can be extremely helpful in solving problems that are spatial in nature. This course explores the many types of data collected by city and county government agencies from crime and election data to building, assessment, and zoning data and how it can be displayed in map form. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4670 GIS and the Law (4 Credits)**

This course explores the legal and technical ramifications created by Geographic Information Systems (GIS), Mobility and the Law, including the legal and policy issues related to the science of GIS, the sharing of geographic information, the data generated by mobile devices, the intellectual property issues, security and privacy issues, business and contractual issues related to GIS, and the standards of care and liability related to GIS. This course also examines the types of issues and concerns that exist in the U.S. and the world created by geographic information science and the mobile device. The evolution of GIS and the mobile device directly impacts governments, companies, and individuals on a daily basis. In today's world, more than three billion people have smart phones in their hands constantly. This creates issues about how to handle data, security and privacy, civil and criminal laws, rules and regulations, contractual agreements, and service-level agreements between parties on many levels from service providers in different states, countries and parts of the world. All of these issues need to be balanced by the differing cultural standards and mores from all over the world and legal (and sometimes not so legal) methods of protecting governments and companies in this ever-changing "always-connected" world created by GIS and the mobile device. Prerequisite: GIS 4101 - Intro to GIS, and GIS 4700 - Remote Sensing I and/or similar GIS course and/or work experience.

**GIS 4680 Environmental Applications (4 Credits)**

This class provides students with an introduction to practical applications of computerized Geographic Information Systems (GIS) in environmental assessment and natural resource management. Emphasis is placed on automated analytical techniques and data presentation methods that support facility site selection, environmental impact analyses, resource management, and characterization of environmental hazards. This course is designed to provide students who participate in environmental assessment projects with introductory preparation for practice as GIS professionals in public agencies or in the private sector. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4683 GIS for Disaster Management (4 Credits)**

This course serves as an introduction to Geographic Information Systems and their application in Emergency Operations. The basic concepts of geography, cartography and Global Positioning Systems will be covered, along with the basic components and capabilities of a geographic information system. Students will learn about the fundamental types of GIS analysis and applications, focusing on those used in Emergency Operations. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4685 GIS and Natural Hazards (4 Credits)**

This course is designed to provide students with an introduction to the use of GIS in natural hazard assessment. Students receive an introduction to the use of geographical information systems (GIS) in various types of natural disasters and response management. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support hazard risk and assessment, mitigation, and emergency response planning. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4687 Hydrologic Modeling in GIS (4 Credits)**

Hydrology is concerned with movement of the earth's waters through the hydrologic cycle, and the transport of constituents carried in its flow. In GIS, the landscape is represented by means of geographically referenced data describing the character and shape of relief features. A spatial hydrology model simulates the water flow and transport in a specific locale using GIS data structures. Hydrologic modeling in GIS allows us to automatically delineate a drainage system and quantify the characteristics of the system. It focuses on the movement of water across a land surface. This course looks at the basic inputs to hydrological modeling in GIS, walks students through established modeling procedures, and has students work on projects that are real and relevant as model applications. Instruction is largely hands-on, project-oriented. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4690 GPS for GIS (4 Credits)**

This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Control and Quality Assurance issues for data collection programs. Lab exercises include planning a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, and data integration into a GIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4700 Remote Sensing I (4 Credits)**

This course provides a survey of remote sensing technologies, applications, and the industry. This course is designed for GIS, Geography and Geoscience students who seek to broaden their understanding of remote sensing in support of Geographic Information Systems. Introductions to the electromagnetic spectrum, energy sources, radiation principles, aerial cameras, and electronic imaging provide the student with the initial building blocks to a thorough understanding of remote sensing. This course provides an overview of the various high altitude and space-based collection systems and their characteristics, with a view toward future systems and capabilities. In addition, this course exposes students to the techniques of extracting relevant information from both hard copy and digital imagery. Pre-requisite: This course is a pre-requisite for GIS 4740 – Remote Sensing II.

**GIS 4701 Topics in Geographic Information Systems (2-5 Credits)**

The content of this course varies each time it is offered, depending on the interests and needs of the students. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**GIS 4740 Remote Sensing II (4 Credits)**

The curriculum is a rigorous presentation of digital imaging processing theory with emphasis on its application to airborne and space borne imagery. The course includes computer laboratory exercises and workshops, where the students apply theory to satellite and air photo data. Interpretation of the digitally processed data is also included in the class exercises. Examples of vector and raster data integration are shown as well. Prerequisite: GIS 4700.

**GIS 4750 UAS for GIS (4 Credits)**

The purpose of this course is to introduce GIS students to the emerging world of using Unmanned Aircraft Systems (UAS) in the GIS workplace for data collection, reconnaissance, and research. UASs are in the news every day, highlighting their use in a military context. The Federal Aviation Administration (FAA) has released new rules and regulations governing the use of UASs in the civilian sector. This course will prepare students to be conversant in the world of UASs, basic aviation, safety, flying, mission planning, and general data gathering techniques for use in GIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4760 UAS Photogrammetry (4 Credits)**

Surveying, photogrammetric mapping, GPS, and remote sensing are critical components to working in the UAV and GIS domain. The second course in this two-course sequence will expand on the data collection process highlighted in the first class and deliver the foundations required by GIS professionals working with UAVs. Prerequisite: GIS 4101 or similar GIS course and/or work experience and GIS 4750-UAS and GIS.

**GIS 4770 UAS Ground School Practical (4 Credits)**

The purpose of this course is to provide skills and abilities to become a remote pilot in command (RPIC) within the United States. The class content will focus on 14 CFR 107, the rules and regulations that allow RPICs to operate Unmanned Aircraft Systems (UASs) safely and legally. In addition, students will be given hands-on training in the best practices for flying UASs. Course Overview/Purpose: The release of 14 CFR 107 by the FAA has set a legal framework for commercial UAS operations in the United States. The purpose of this course is to help students become well versed in 107 and gain hands-on experience operating UASs. Students will become proficient with UAS aeronautical operation standards, discover the rules and regulations of airspace that all RPICs must comply with, and evaluate the effects that weather has on UASs as well as sources of weather information. Students will also assess the performance abilities and limitations of UASs and explore standard UAS operations as outlined in the 107 regulations. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

**GIS 4860 Web GIS (4 Credits)**

Creating web-based maps allows government entities, businesses, and other organizations to publish, discover, and share geospatial information. This course examines web and mobile GIS software applications, where students will learn the framework for creating web apps. Students publish comprehensive projects resulting in the creation of a fully-developed web GIS.

**GIS 4980 Internship (0-4 Credits)**

GIS students may fulfill up to four quarter hours of electives by enrolling in a GIS internship with a GIS company or an agency actively engaged in GIS activities. Students incorporating professional work experience must work with an approved mentor, who evaluates the student's performance and learning. The internship is designed to provide practical experience to students without prior professional experience in the field. Students who are employed on a full-time basis in the GIS industry may not use paid work experience as part of the academic program.

**GIS 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

## Global Community Engagement

Office: University College Student Support Center

Mail Code: 2211 S. Josephine St., Denver, CO 80208

Phone: 303-871-2291, 800-347-2042

Email: [ucol-support@du.edu](mailto:ucol-support@du.edu)

Web Site: [www.universitycollege.du.edu](http://www.universitycollege.du.edu) (<http://www.universitycollege.du.edu>)

## Master of Arts in Global Community Engagement

Professional success in an increasingly globalized world requires a nuanced understanding of how events, actors, and processes worldwide impact work at the local level. It requires the ability to interact effectively with people from diverse cultural, national, and linguistic backgrounds, in addition to adapting industry-specific policies and practices to the ever-changing demands of multinational and multicultural environments. This program provides working professionals with the knowledge and skills necessary to effectively navigate the complexities of their profession in an increasingly diverse 21<sup>st</sup> century workplace. Hands-on opportunities enable students to apply knowledge gained through the program to their own professional lives. Students acquire the tools necessary to thrive in diverse environments and to achieve organizational goals while developing a greater understanding of their own roles as citizens of the greater global community.

This degree prepares students to:

- Optimize organizational effectiveness by taking into account the impact of diversity and shifting global perspectives
- Interact effectively with people whose ideas are rooted in cultural backgrounds other than one's own
- Apply global cultural awareness to the structures and process of specific professions and industries
- Engage effectively with communities impacted by timely global struggles
- Leverage global and cultural practices of organizations and/or communities to effect change at home or abroad

## Master of Arts in Global Community Engagement with a Concentration in Advancing Diversity, Equity, and Inclusion in Organizations

Advancing diversity, equity, and inclusion is critical to achieving organizational goals, positioning organizations for success in today's world, and creating environments where everyone has the opportunity to thrive. In this master's degree concentration, you will gain skills that are crucial for advancing equity as an integrated part of organizational strategy while developing solutions that meaningfully leverage diversity to create a culture of belonging. Learn about the historical, cultural, and economic factors that shape identity and apply appropriate tools and techniques to help organizations achieve their vision for change as it relates to diversity, equity, and inclusion practices.

This degree prepares students to:

- Assess the influence of historical, social, cultural, and economic factors in shaping one's identity and conceptions of diversity, equity, and inclusion practices.
- Integrate an understanding of social and cultural difference, perspective-taking, and empathy to better inform interpersonal communication and problem-solving strategies.
- Develop practices that advance equity as an integrated component of organizational strategy.
- Design solutions that meaningfully leverage diversity to achieve organizational goals and cultivate a culture of belonging across different organizational settings.
- Apply change models, tools and techniques to successfully achieve a vision for change.

## Master of Arts in Global Community Engagement with a Concentration in Social Enterprise, Innovation and Entrepreneurship

Are you ready to be a social entrepreneur? Innovate the change needed to move the needle on a social problem? The Social Innovation for Global Impact concentration will develop your knowledge and skills in the innovation needed to tackle global, and local, social problems. You will sharpen the social value proposition and mission-driven strategy to address global social problems, or the ones in your community. Courses will develop the why and how of taking an idea and launching it as a social enterprise. Students learn the language and financial insight needed to cultivate funding, initiate prototyping, consider scaling, as well as marketing and measuring impact of global social innovations. Practical experience with a global, national, or local nonprofit, for-profit, healthcare, or other organization enables students to apply theory, strategy and metrics that solve real problems and drive mission impact.

This degree prepares students to:

- Examine existing global, national, and local social enterprises to determine the strengths and challenges in developing an impactful social enterprise.
- Utilize innovation tools, design thinking, and other processes to examine a social enterprise idea's social value, scaling potential, and market possibilities.
- Apply social innovation frameworks and tools to assess a social enterprise's business and financial structure in global, national, and local contexts.

## Graduate Certificate in Global Community Engagement with a Concentration in Advancing Diversity, Equity, and Inclusion in Organizations

Advancing diversity, equity, and inclusion is critical to achieving organizational goals, positioning organizations for success in today's world, and creating environments where everyone has the opportunity to thrive. In this graduate certificate, you will gain skills that are crucial for advancing equity as an integrated part of organizational strategy while developing solutions that meaningfully leverage diversity to create a culture of belonging. Learn about the historical, cultural, and economic factors that shape identity and apply appropriate tools and techniques to help organizations achieve their vision for change as it relates to diversity, equity, and inclusion practices.

## Graduate Certificate in Global Community Engagement with a Concentration in Global Issues

The graduate certificate in Global Issues offered at University College focuses on the impact of global events, actors, and processes worldwide on students' work and experiences at the local level. Students will assess the effects of global issues on domestic organizations, structures, and procedures in addition to relating their own roles as citizens in a globalizing world. Credits earned through this certificate may be applied toward a master's degree in Global Affairs.

## Specialized Graduate Certificate in Advancing Diversity, Equity, and Inclusion in Organizations

Advancing diversity, equity, and inclusion is critical to achieving organizational goals, positioning organizations for success in today's world, and creating environments where everyone has the opportunity to thrive. In this graduate certificate, you will gain skills that are crucial for advancing equity as an integrated part of organizational strategy while developing solutions that meaningfully leverage diversity to create a culture of belonging. Learn about the historical, cultural, and economic factors that shape identity and apply appropriate tools and techniques to help organizations achieve their vision for change as it relates to diversity, equity, and inclusion practices.

## Master's Degree Admission

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.

## Certificate Admission

#### GS 4010 Global Society: Structures and Stakeholders (4 Credits)

This course provides students with an introduction to the major actors, structures, and issues in contemporary global society. Moving beyond a state-centric view of the global landscape, the course considers the values, interests, and ideas of a variety of stakeholders—including businesses, corporations, institutions, governmental and non-governmental organizations, and grass-roots initiatives—in order to assess some of the ways in which these actors both compete and cooperate for opportunities and resources. Students will apply relevant concepts to their own personal and professional experiences so as to gain a better understanding of how global issues and actors at a variety of levels impact their work and how their work constitutes an important part of global society.

#### GS 4020 Culture, Identity, and Power (4 Credits)

In a rapidly globalizing world, culture and identity are increasingly recognized as having profound implications for professional success across a range of industries and practices. An understanding and appreciation of difference are central to effective professional interactions and progress. This course presents approaches for thinking about intersecting dynamics of culture, identity, and power in professional environments, and for mitigating cultural and identity-based conflict in the workplace and beyond.

#### GS 4030 Working Internationally (4 Credits)

Working Internationally is designed for those looking to broaden their personal and professional pursuits in global settings, whether at-home or abroad. This course covers both qualitative and practical considerations. Students will explore the benefits and challenges of working internationally with a focus on cross-cultural communication and management. Through a combination of lectures, case studies, assignments, and group discussions students will develop skills and strategies for building successful relationships with people from different cultural backgrounds. Additionally, the logistical nuances of working abroad will be addressed. Upon completion of the course, students will have a better understanding of how to navigate cultural differences, explore international opportunities, and work effectively in a global environment.

#### GS 4040 Managing Across Cultures (4 Credits)

This course addresses the impact of culture on management and organizational processes as well as provides students with approaches to engaging effectively in globalized organizational and multicultural contexts. Additionally, the course enables students to distinguish between differences in diversity and culture. They will analyze the impact of global issues and events on the management process in different times and places and evaluate managerial practices in different cultures and institutional environments. The impact of cultural intelligence in organizational citizenship and performance is also addressed. The course will aim to provide opportunities for the practical implementation of the concepts covered.

#### GS 4050 Diversity and Organizational Structure (4 Credits)

A company is only as good as its culture. It is not only the responsibility of the Diversity, Equity, and Inclusion (DEI) leader to create an inclusive and diverse culture. People managers and employees play a vital role in DEI's success. This course helps students understand ways to make their organizations more engaging and dynamic by discussing the different processes that impact thought and interaction between people. Students will also consider how to bring advocates of DEI together in their organizations. They will analyze and apply best DEI practices from a variety of perspectives by learning the essential pillars of a strong DEI plan. They will also learn critical definitions, apply interventions that override errors in judgment and decision making, dissect inclusion and belonging among work groups and think through the change management and communication aspects of DEI.

**GS 4060 Cultural Memory: Perspectives, Voices, and Implications (4 Credits)**

Increasingly, the ability to engage effectively with stakeholders from a variety of socio-economic, generational, gender, ethnic, religious, and cultural backgrounds is a prerequisite skill for succeeding in the workplace today. This requires an understanding of the diverse memories, experiences, and perspectives of everyone involved. The culturally infused meanings attached to impactful historical events profoundly influence how people imagine the world and their role in it. This course focuses on the impact of cultural memory on identity and how our perceptions of the past and the caricatures it creates profoundly impact how we see the world today. In this course, students will gain an understanding of how history is constructed, contested, and incorporated into our everyday interactions. They will learn to identify their own biases and better understand the perspectives of others to strategize for increased personal and organizational success.

**GS 4130 Gender and Social Justice: Sex and Power in Global Perspective (4 Credits)**

This course provides students with a critical understanding of gender and sexuality in relation to social and institutional processes, particularly as they impact professional interactions and conduct. Issues such as inequalities in the labor force, low wage work and poverty, work/family conflict, and domestic work will be addressed. The course will take an intersectional approach to analyzing gender and sexuality in the workplace and beyond.

**GS 4140 Contemporary Racial and Ethnic Relations (4 Credits)**

This course provides students with ways of assessing the effects of race and ethnicity in professional settings. Topics addressed will include forms of prejudice and discrimination, manifestations of privilege and inequality, and the intersection of race and ethnicity with other markers of identity. Students will analyze social and institutional practices that foster inclusivity and the implications of such practices on workplace equity and social justice.

**GS 4150 Global Trade: The Intersection of Main Street and the World (4 Credits)**

Trade is often characterized in terms of economic flows—the exchange of goods and services across borders and the electronic transfer of funds worldwide, as well as associated taxes, tariffs, labor, and production costs in different parts of the world. Yet trade also involves the exchange of ideas, cultures, languages, and people, all of which have profound implications for doing business worldwide. This course addresses trade in its different manifestations and explores the impact of trade on work in a variety of contexts. Students will approach trade from a holistic perspective to analyze its connections to globalization and their own work environments.

**GS 4160 Politics and Social Media (4 Credits)**

As social media becomes an increasingly prevalent means of distributing information, advertising products and services, and communicating with stakeholders, questions arise regarding the politics and ethics that inform its use. What are the potential consequences of using platforms such as Twitter to disseminate political ideologies? How has the use of LinkedIn affected workplace politics and changed the ways in which professionals network? Does professional success require the use of social media, or does its presence in certain contexts do more harm than good? This course will address these questions and others while providing students with lenses through which to view the intersection of social media and politics in the workplace and beyond.

**GS 4200 Globalization and Global Citizenship (4 Credits)**

Over the past century the world has witnessed unprecedented developments in communication, technology, and mobility. These have enabled the rapid exchange of money, people, materials, ideas, and cultures across national borders. With these changes have come questions about the roles and responsibilities of individuals, companies, and organizations within this increasingly complex and interconnected global society. Globalization is often used as a buzzword for this ever-evolving context, although its meaning is sometimes unclear. This course clarifies the nature of globalization by introducing students to fundamental concepts of global citizenship, focusing in particular on relationships between the local and the global, and on the necessity of developing a cosmopolitan perspective in order to be more successful in an increasingly globalizing workplace.

**GS 4210 The Force of Faith: Religion in the Global Workplace (4 Credits)**

This course examines the role of religion in the global workplace, addressing issues involved in working with clients, stakeholders, and employees from diverse religious backgrounds with the aim of increasing students' awareness of their own attitudes toward religious beliefs and professional responsibilities. Students will develop an understanding of the ways in which different religious beliefs impact conceptions of professional communication and conduct, in addition to exploring relationships between religious faiths and business ethics.

**GS 4303 Community Engaged Learning in Practice (4 Credits)**

This community engaged learning course provides students with an opportunity to apply knowledge and skills gained through their Global Community Engagement coursework to a real-world issue or problem. Students will learn best practices for engaging with communities both global and local, and will develop skills necessary to work effectively in diverse contexts. Equipped with an academic foundation, students will have significant latitude to sketch out a project of their choosing, with the professor's approval.

**GS 4701 Topics in Global Community Engagement (4 Credits)**

The content of this course varies each time it is offered. Specific course content is detailed on quarterly schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**GS 4800 The Puerto Rican Paradox: Challenges and Opportunities in Uncertain Times (4 Credits)**

The Commonwealth of Puerto Rico is a tropical paradise boasting vibrant communities, rich cultures, and abundant natural resources. Once coined a "natural jewelry box" by the BBC, Puerto Rico offers sparkling turquoise waters, bioluminescent bays, lush mountainous terrain, and colorful colonial architecture. It is also plagued by a debilitating debt crisis, political corruption, and a crumbling infrastructure, which, particularly in the aftermath of hurricanes Irma and Maria, have caused many residents to flee the island in search of better opportunities and more stable living conditions. In this course, students will examine the paradox that is Puerto Rico. Drawing from literature on culture, history, power, and politics, students will research a topic of their choosing, with the professor's approval. They will then work with local communities in Puerto Rico on a project of mutual interest and importance, culminating in an approach or proposal for addressing the issue(s) at hand. Students will be required to spend 5 days on-site in Puerto Rico, plus any necessary travel time. This course will give students broad exposure to the history and culture of Puerto Rico, in addition to a nuanced understanding of a specific industry, issue, or problem. It will additionally highlight the power, privilege, and oppression that exists in our own backyards on this U.S. Commonwealth island.

**GS 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**GS 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**GS 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**GS 4905 Graduate Social Research Methods (4 Credits)**

This course provides graduate students with a basic background in the methods of research in the social sciences. In our information-rich society, organizations and institutions have become more aware of the value of research data for informing critical decisions. As leaders in their organizations, graduates should have a knowledge base that allows them to critically examine basic research in the social sciences and to understand the methods involved in generating research results. They should understand the value of research to their organizations, be able to identify opportunities to gather information through research that will benefit those organizations, and participate in the ethical design of basic studies to gather that critical information. Students will develop and write a research proposal around a specific research question informed by a review of the literature.

**GS 4980 Internship (0-4 Credits)**

The internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

**GS 4991 Independent Study (1-5 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

## Courses

### **GS 4010 Global Society: Structures and Stakeholders (4 Credits)**

This course provides students with an introduction to the major actors, structures, and issues in contemporary global society. Moving beyond a state-centric view of the global landscape, the course considers the values, interests, and ideas of a variety of stakeholders—including businesses, corporations, institutions, governmental and non-governmental organizations, and grass-roots initiatives—in order to assess some of the ways in which these actors both compete and cooperate for opportunities and resources. Students will apply relevant concepts to their own personal and professional experiences so as to gain a better understanding of how global issues and actors at a variety of levels impact their work and how their work constitutes an important part of global society.

### **GS 4020 Culture, Identity, and Power (4 Credits)**

In a rapidly globalizing world, culture and identity are increasingly recognized as having profound implications for professional success across a range of industries and practices. An understanding and appreciation of difference are central to effective professional interactions and progress. This course presents approaches for thinking about intersecting dynamics of culture, identity, and power in professional environments, and for mitigating cultural and identity-based conflict in the workplace and beyond.

### **GS 4030 Working Internationally (4 Credits)**

Working Internationally is designed for those looking to broaden their personal and professional pursuits in global settings, whether at-home or abroad. This course covers both qualitative and practical considerations. Students will explore the benefits and challenges of working internationally with a focus on cross-cultural communication and management. Through a combination of lectures, case studies, assignments, and group discussions students will develop skills and strategies for building successful relationships with people from different cultural backgrounds. Additionally, the logistical nuances of working abroad will be addressed. Upon completion of the course, students will have a better understanding of how to navigate cultural differences, explore international opportunities, and work effectively in a global environment.

### **GS 4040 Managing Across Cultures (4 Credits)**

This course addresses the impact of culture on management and organizational processes as well as provides students with approaches to engaging effectively in globalized organizational and multicultural contexts. Additionally, the course enables students to distinguish between differences in diversity and culture. They will analyze the impact of global issues and events on the management process in different times and places and evaluate managerial practices in different cultures and institutional environments. The impact of cultural intelligence in organizational citizenship and performance is also addressed. The course will aim to provide opportunities for the practical implementation of the concepts covered.

### **GS 4050 Diversity and Organizational Structure (4 Credits)**

A company is only as good as its culture. It is not only the responsibility of the Diversity, Equity, and Inclusion (DEI) leader to create an inclusive and diverse culture. People managers and employees play a vital role in DEI's success. This course helps students understand ways to make their organizations more engaging and dynamic by discussing the different processes that impact thought and interaction between people. Students will also consider how to bring advocates of DEI together in their organizations. They will analyze and apply best DEI practices from a variety of perspectives by learning the essential pillars of a strong DEI plan. They will also learn critical definitions, apply interventions that override errors in judgment and decision making, dissect inclusion and belonging among work groups and think through the change management and communication aspects of DEI.

### **GS 4060 Cultural Memory: Perspectives, Voices, and Implications (4 Credits)**

Increasingly, the ability to engage effectively with stakeholders from a variety of socio-economic, generational, gender, ethnic, religious, and cultural backgrounds is a prerequisite skill for succeeding in the workplace today. This requires an understanding of the diverse memories, experiences, and perspectives of everyone involved. The culturally infused meanings attached to impactful historical events profoundly influence how people imagine the world and their role in it. This course focuses on the impact of cultural memory on identity and how our perceptions of the past and the caricatures it creates profoundly impact how we see the world today. In this course, students will gain an understanding of how history is constructed, contested, and incorporated into our everyday interactions. They will learn to identify their own biases and better understand the perspectives of others to strategize for increased personal and organizational success.

### **GS 4130 Gender and Social Justice: Sex and Power in Global Perspective (4 Credits)**

This course provides students with a critical understanding of gender and sexuality in relation to social and institutional processes, particularly as they impact professional interactions and conduct. Issues such as inequalities in the labor force, low wage work and poverty, work/family conflict, and domestic work will be addressed. The course will take an intersectional approach to analyzing gender and sexuality in the workplace and beyond.

### **GS 4140 Contemporary Racial and Ethnic Relations (4 Credits)**

This course provides students with ways of assessing the effects of race and ethnicity in professional settings. Topics addressed will include forms of prejudice and discrimination, manifestations of privilege and inequality, and the intersection of race and ethnicity with other markers of identity. Students will analyze social and institutional practices that foster inclusivity and the implications of such practices on workplace equity and social justice.

### **GS 4150 Global Trade: The Intersection of Main Street and the World (4 Credits)**

Trade is often characterized in terms of economic flows—the exchange of goods and services across borders and the electronic transfer of funds worldwide, as well as associated taxes, tariffs, labor, and production costs in different parts of the world. Yet trade also involves the exchange of ideas, cultures, languages, and people, all of which have profound implications for doing business worldwide. This course addresses trade in its different manifestations and explores the impact of trade on work in a variety of contexts. Students will approach trade from a holistic perspective to analyze its connections to globalization and their own work environments.

**GS 4160 Politics and Social Media (4 Credits)**

As social media becomes an increasingly prevalent means of distributing information, advertising products and services, and communicating with stakeholders, questions arise regarding the politics and ethics that inform its use. What are the potential consequences of using platforms such as Twitter to disseminate political ideologies? How has the use of LinkedIn affected workplace politics and changed the ways in which professionals network? Does professional success require the use of social media, or does its presence in certain contexts do more harm than good? This course will address these questions and others while providing students with lenses through which to view the intersection of social media and politics in the workplace and beyond.

**GS 4200 Globalization and Global Citizenship (4 Credits)**

Over the past century the world has witnessed unprecedented developments in communication, technology, and mobility. These have enabled the rapid exchange of money, people, materials, ideas, and cultures across national borders. With these changes have come questions about the roles and responsibilities of individuals, companies, and organizations within this increasingly complex and interconnected global society. Globalization is often used as a buzzword for this ever-evolving context, although its meaning is sometimes unclear. This course clarifies the nature of globalization by introducing students to fundamental concepts of global citizenship, focusing in particular on relationships between the local and the global, and on the necessity of developing a cosmopolitan perspective in order to be more successful in an increasingly globalizing workplace.

**GS 4210 The Force of Faith: Religion in the Global Workplace (4 Credits)**

This course examines the role of religion in the global workplace, addressing issues involved in working with clients, stakeholders, and employees from diverse religious backgrounds with the aim of increasing students' awareness of their own attitudes toward religious beliefs and professional responsibilities. Students will develop an understanding of the ways in which different religious beliefs impact conceptions of professional communication and conduct, in addition to exploring relationships between religious faiths and business ethics.

**GS 4303 Community Engaged Learning in Practice (4 Credits)**

This community engaged learning course provides students with an opportunity to apply knowledge and skills gained through their Global Community Engagement coursework to a real-world issue or problem. Students will learn best practices for engaging with communities both global and local, and will develop skills necessary to work effectively in diverse contexts. Equipped with an academic foundation, students will have significant latitude to sketch out a project of their choosing, with the professor's approval.

**GS 4701 Topics in Global Community Engagement (4 Credits)**

The content of this course varies each time it is offered. Specific course content is detailed on quarterly schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**GS 4800 The Puerto Rican Paradox: Challenges and Opportunities in Uncertain Times (4 Credits)**

The Commonwealth of Puerto Rico is a tropical paradise boasting vibrant communities, rich cultures, and abundant natural resources. Once coined a "natural jewelry box" by the BBC, Puerto Rico offers sparkling turquoise waters, bioluminescent bays, lush mountainous terrain, and colorful colonial architecture. It is also plagued by a debilitating debt crisis, political corruption, and a crumbling infrastructure, which, particularly in the aftermath of hurricanes Irma and Maria, have caused many residents to flee the island in search of better opportunities and more stable living conditions. In this course, students will examine the paradox that is Puerto Rico. Drawing from literature on culture, history, power, and politics, students will research a topic of their choosing, with the professor's approval. They will then work with local communities in Puerto Rico on a project of mutual interest and importance, culminating in an approach or proposal for addressing the issue(s) at hand. Students will be required to spend 5 days on-site in Puerto Rico, plus any necessary travel time. This course will give students broad exposure to the history and culture of Puerto Rico, in addition to a nuanced understanding of a specific industry, issue, or problem. It will additionally highlight the power, privilege, and oppression that exists in our own backyards on this U.S. Commonwealth island.

**GS 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**GS 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**GS 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**GS 4905 Graduate Social Research Methods (4 Credits)**

This course provides graduate students with a basic background in the methods of research in the social sciences. In our information-rich society, organizations and institutions have become more aware of the value of research data for informing critical decisions. As leaders in their organizations, graduates should have a knowledge base that allows them to critically examine basic research in the social sciences and to understand the methods involved in generating research results. They should understand the value of research to their organizations, be able to identify opportunities to gather information through research that will benefit those organizations, and participate in the ethical design of basic studies to gather that critical information. Students will develop and write a research proposal around a specific research question informed by a review of the literature.

**GS 4980 Internship (0-4 Credits)**

The internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

**GS 4991 Independent Study (1-5 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

## Health Informatics

Office: University College Student Support Center

Mail Code: 2211 S. Josephine St., Denver, CO 80208

Phone: 303-871-2291, 800-347-2042

Email: [ucol-support@du.edu](mailto:ucol-support@du.edu)

Web Site: <http://www.universitycollege.du.edu> (<http://www.universitycollege.du.edu/>)

Students in Master of Science in Health Informatics will be at the forefront of the health industry, equipped with the technical, communication, and leadership skills needed to thrive in the fastest growing field: informatics. In this master's degree program accredited by HIMSS, students will learn to leverage health data tools and applications to achieve business and research outcomes within the health sector. Students will work on hands-on informatics projects using real-world data from a curated health data repository built with industry partners. Students will learn to optimize data to support evidence- and value-based results and enhance their knowledge in digital health, informatics, analytics data science, and artificial intelligence to solve the health challenges of our time.

**This degree prepares students to:**

- Employ quantitative and qualitative methods to achieve business and research outcomes for health informatics projects
- Utilize project management skills to operationalize health informatics goals
- Apply effective communication techniques to create collaborative teams focused on successful implementation of data-driven solutions
- Identify and solve real-world challenges in the health industry using workflow tools and gap analyses
- Design sustainable, data-driven business practices to support evidence- and value-based results

### Master of Science in Health Informatics with a Concentration in Health Data Informatics and Analytics

The Health Data Informatics and Analytics master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership and is accredited by HIMS. The concentration prepares students for the evolving environment in the health industry focused on healthcare system informatics and analytics. In addition, this concentration presents many opportunities to bridge the divide between field-level and director-level positions related to informatics and analytics within the healthcare delivery system. The program incorporates lessons learned from across the training spectrum and produces graduates with the necessary skills to create and populate the new mid- and higher-level management positions.

This concentration focuses on three areas of development. First, students develop a solid base of knowledge about healthcare delivery in the

U.S. within the framework of the "4 Ps": Patients/People, Providers, Payors, and Population. This framework allows students to understand both informatics and analytics related to the process of transforming data into information, knowledge, and then insight (DIKI) along the broad scope that exists in the health industry and U.S. healthcare today. Second, students will compare and contrast the similarities and differences between asking and answering research and business questions, as well as demonstrate competencies in this area. Third, students will learn how to collaborate, organize projects, and formulate real-life solutions to existing healthcare industry issues.

**This degree prepares students to:**

- Compare how healthcare data is generated, routed, and analyzed within the U.S. healthcare delivery system and the health industry from the perspectives of patients/people, providers, payors, and populations and how these processes affect interoperability
- Distinguish major, as well as innovative, health information systems as they relate to the perspectives of patients/people, providers, payors, and populations - utilizing both active and passive informatics
- Appraise healthcare and health industry informatics tools as they relate to the past, present, and future directions of healthcare reform - as well as how these differ from other industries
- Articulate the ways in which HIPAA regulations and biostatistics principles influence data informatics and analytics
- Evaluate the impact of data governance challenges, ethical implications, and security issues on stakeholders in healthcare data research, business workflows, and compliance
- Recommend study and project designs for healthcare informatics and analytics-based case studies incorporating frameworks such as database architecture, data warehousing, natural language processing, and epidemiology
- Defend the fundamental process of transforming data to information, knowledge, then insight (DIKI) through integrating disparate public data sets and modeling predictive analytics to create solutions, complete with data visualizations, to healthcare and health industry challenges
- Develop a professional, actionable implementation, change management, and assessment plan for bringing IT, clinical, engineering, and business individuals together to solve a healthcare industry challenge

## **Master of Science in Health Informatics with a Concentration in Digital Health**

The Digital Health master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing digital health in both the health industry and healthcare delivery systems. This program is accredited by HIMSS and for CAHIIM's Digital Health Leader program. Special focus is provided on workflow and gap analysis, finance, and communication and leadership skills required to implement digital health initiatives. The innovative classes in the concentration cover how to reduce costs and improve access to quality healthcare through technologies that comprise the framework of modern interconnected healthcare.

In this master's degree concentration, students stay at the cutting-edge of emerging health technology, including telehealth, digital health, and virtual health by learning how technology affects and improves diagnosis, treatment, training, patient records, and financial transactions. Students will gain high-level knowledge of the interoperability of healthcare information systems, the benefits and barriers associated with consumer digital health products, and the evolving use of distance medicine.

**This degree prepares students to:**

- Assess how technology affects diagnosis, treatment, training, record keeping, financial transactions and data outcome analysis.
- Compare and contrast emerging trends in medical and digital health technology including electronic health records, telehealth, and virtual health
- Analyze how technology can help improve quality of consumer/patient care and reduce costs as healthcare moves from a volume-based to value-based system
- Recommend different ways to facilitate discussion and communication between clinical providers and their counterparts

## **Master of Science in Health Informatics with a Concentration in Health Data Science**

In this master's program accredited by HIMSS, students will learn to leverage health data science tools and applications to achieve business and research outcomes within the health sector. Students will work with real hands-on data science projects using deidentified data from a curated health data repository built with industry partners. Students will learn to optimize data to support evidence- and value-based results and enhance their knowledge in analytics, data science, machine learning and artificial intelligence. In addition, virtual reality will be a main method of instructional support throughout this curriculum. Main areas of study will be integrating data platforms in the health and healthcare industries, data mining, machine learning, and reporting.

**This degree prepares students to:**

- Assimilate data platforms in the health or healthcare industries to solve health informatics challenges
- Illustrate health data mining skills to strengthen clinical partnerships and benefit stakeholders
- Execute healthcare statistical dynamics of machine learning as they relate to health informatics
- Compose health data science reporting for relevant health informatics audiences

## Master of Science in Health Informatics with a Concentration in Health Data Utilization and Analysis

The master's degree concentration in Health Data Utilization and Analysis integrates health informatics and workflows with introductory-level Python and SQL programming to elevate your experience with data from exposure to data analysis. By engaging with this program, you will gain insights into problem solving using Python and SQL, learn data design and protect techniques, and explore considerations for ethical data use.

### This degree prepares students to:

- Transform data to information, knowledge, then insight (DIKI) through data integration, predictive analytics, and data visualizations to create healthcare solutions.
- Apply health data mining techniques to make decisions that strengthen clinical partnerships and benefit stakeholders.
- Develop data queries and structured coding to solve health-related data challenges.
- Evaluate the safeguards required to protect data being utilized and analyzed.

## Master of Science in Health Informatics with a Concentration in Project Management

The Project Management master's degree concentration is accredited by HIMSS and offered online or on-campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Healthcare technology and data advancements require leaders that can oversee and manage projects. Gain practical experience in project management in healthcare by using the tools and techniques leveraged for large-scale and smaller projects. Healthcare organizations rely on project management to ensure timeline, scope, and budget goals are met while delivering exception patient care, so be prepared with skills needed to deliver. The curriculum aligns with the PMI® Project Management Body of Knowledge.

### This degree prepares students to:

- Apply the basic principles of project management to become proficient in the use of project management software
- Demonstrate the use of agile concepts and techniques to deliver complex projects
- Design a comprehensive risk management plan for a project
- Create strategies to manage the complexity inherent in large-scale projects
- Relate project scope to cost, time, and resource requirements
- Develop procurement plans and assess project contracts

## Master of Science in Health Informatics with a Concentration in Telehealth and Virtual Care

Advance your leadership and capabilities within the emerging areas of telehealth and virtual care. In this concentration, you will learn how to assess the business and healthcare environments to properly plan, implement, and sustain programs to support care in a virtual environment. Gain a deeper understanding of the social determinants of health (SDOH) that impact patients and staff virtually, technology for telehealth and virtual care, the business strategy and policy behind telehealth and virtual care, and systems planning and development for telehealth and virtual care programs.

### This degree prepares students to:

- Analyze systems and processes necessary to deliver telehealth and virtual care services
- Design strategic plans for successful telehealth and virtual care systems
- Investigate the opportunities and barriers to the 4Ps (patient, provider, payor, and populations) with regard to telehealth and virtual care
- Create models for the success of telehealth and virtual care teams
- Analyze risks, impact, and benefit analysis for implementing virtual care

## Graduate Certificate in Health Informatics with a Concentration in Health Data Informatics and Analytics

The Health Data Informatics and Analytics certificate is offered online or on-campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate is designed for three principal types of students. This certificate is appropriate for individuals in the health data informatics or analytics field who are currently working beyond their skillset capacity. This certificate seeks to match their skills to the competencies they would like to acquire. These students will benefit from instruction on theory and validation of their on-the-job experiences. Students will also gain additional skills and knowledge in healthcare management through elective coursework. Alternatively, this certificate is appropriate for those who are ready to move to a managerial position and may need a new skillset to make this conversion. Additionally, this certificate is appropriate for individuals with solid business skills looking to transition from another industry into the health industry or healthcare but need support for the move. This certificate will aid in the transition to a health data informatics and analytics position within the healthcare or health industry. To this end, the certificate curriculum is aligned with AHIMA, CAHIIM and HIMSS certification specific core objectives and is accredited by HIMSS. This certificate focuses on three concentrated areas of development. First, students develop a solid base of knowledge about the healthcare delivery in the U.S. within the framework of the "4 Ps": Patients/People, Providers, Payors, and Population. This framework allows students to understand both informatics and analytics related to the process of transforming data into information, knowledge, and then insight (DIKI) along the broad scope that exists in health industry and U.S. healthcare today. Second, students will compare and contrast the similarities and differences between asking and answering research and business questions. Third, students will learn how to collaborate, organize projects, and formulate real-life solutions to existing healthcare industry issues.

## Graduate Certificate in Health Informatics with a Concentration in Digital Health

The Digital Health graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate has a set of courses addressing digital health in both the health industry and healthcare delivery systems. The certificate is accredited for CAHIIM Digital Health Leader competencies and is accredited by HIMSS. The innovative classes in the concentration cover how to reduce costs and improve access to quality healthcare through technologies that comprise the framework of modern interconnected healthcare. Students stay at the cutting edge of emerging health technology, telehealth, digital, and virtual health with this certificate by learning how technology affects and improves diagnosis, treatment, training, patient records, and financial transactions. You'll gain high-level knowledge of the interoperability of healthcare information systems, the benefits and barriers associated with consumer digital health products, and the evolving use of distance medicine.

## Graduate Certificate in Health Informatics with a Concentration in Health Data Science

The Health Data Science graduate certificate is offered completely online to meet the needs of busy adults. In this certificate program accredited by HIMSS, students will learn to leverage health data science tools and applications to achieve business and research outcomes within the health sector. Students will work with real hands-on data science projects using deidentified data from a curated health data repository built with industry partners. Students will learn to optimize data to support evidence- and value-based results and enhance their knowledge in analytics, data science, and machine learning.

## Graduate Certificate in Health Informatics with a Concentration in Health Data Utilization and Analysis

The graduate certificate in Health Data Utilization and Analysis integrates health informatics and workflows with introductory-level Python and SQL programming to elevate your experience with data from exposure to data analysis. By engaging with this program, you will gain insights into problem solving using Python and SQL, learn data design and protect techniques, and explore considerations for ethical data use.

## Specialized Graduate Certificate in Health Data Informatics and Analytics

The Health Data Informatics and Analytics specialized graduate certificate is offered online or on-campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate is designed for three principal types of students. This certificate is appropriate for individuals in the health data informatics or analytics field who are currently working beyond their skillset capacity. This certificate seeks to match their skills to the competencies they would like to acquire and is accredited by HIMSS.

These students will benefit from instruction on theory and validation of their on-the-job experiences. Alternatively, this certificate is appropriate for those who are ready to move to a managerial position and may need a new skillset to make this conversion. Additionally, this certificate is appropriate for individuals with solid business skills looking to transition from another industry into the health industry or healthcare but need support for the move. This certificate will aid in the transition to a health data informatics and analytics position within the healthcare or health industry. To this end, the certificate curriculum is aligned with AHIMA and HIMSS certification specific core objectives. This certificate focuses on three concentrated areas of development. First, students develop a solid base of knowledge about the healthcare delivery in the U.S. within the framework of the "4 Ps": Patients/People, Providers, Payors, and Population. This framework allows students to understand both informatics and analytics related to the process of transforming data into information, knowledge, and then insight (DIKI) along the broad scope that exists in health industry and U.S. healthcare today. Second, students will compare and contrast the similarities and differences between asking and answering research and business questions. Third, students will learn how to collaborate, organize projects, and formulate real-life solutions to existing healthcare industry issues.

## Specialized Graduate Certificate in Digital Health

The Digital Health specialized graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The certificate is accredited for CAHIIM Digital Health Leader competencies and is accredited by HIMSS. Special focus is provided on the finance, communication, and leadership skills required to implement digital health initiatives. The innovative classes in the concentration cover how to reduce costs and improve access to quality healthcare through technologies that comprise the framework of modern interconnected healthcare. Students stay at the cutting edge of emerging health technology, telehealth, digital, and virtual health with this certificate by learning how technology affects and improves diagnosis, treatment, training, patient records, and financial transactions. You'll gain high-level knowledge of the interoperability of healthcare information systems, the benefits and barriers associated with consumer digital health products, and the evolving use of distance medicine. Credits earned through this certificate may be applied toward a master's degree in Healthcare Management.

## Specialized Graduate Certificate in Health Data Science

The Health Data Science specialized graduate certificate is offered completely online to meet the needs of busy adults. In this specialized certificate program accredited by HIMSS, students will learn to leverage health data science tools and applications to achieve business and research outcomes within the health sector. Students will work with real, hands-on data science projects using deidentified data from a curated health data repository built with industry partners.

## Master's Degree Admission

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.

## Master's Degree Programs

### Master of Science in Health Informatics with a Concentration in Digital Health

Code	Title	Credits
<b>Core coursework requirements</b>		
HINF 4010	Health Informatics Communication	4
HINF 4020	Healthcare Workflow and Gap Analysis	4
HINF 4030	Healthcare Finance	4
HINF 4650	Healthcare Project Management and Professionalism	4
HINF 4900	Experiential Learning in Health Informatics	4
HINF 4901 or HINF 4902	Capstone Project Capstone Seminar	4
<b>Concentration requirements</b>		
HINF 4301	Foundations of Digital Health	4
HINF 4310	Healthcare Information Systems	4
HINF 4315	Digital and Virtual Health	4
HINF 4325	Values and Outcomes in Digital Health	4
HINF 4335	Healthcare Cybersecurity	4
<b>Elective requirements (Choose one course)</b>		<b>4</b>
<b>Total Credits</b>		<b>48</b>

**Minimum number of credits required: 48**

Students will work with their Academic Advisor to determine the best set of courses to choose for their electives.

Individuals enrolling in this program are encouraged to have experience with programming languages such as Python. This includes a fundamental understanding of programming terminology and concepts, reading and writing code, and designing algorithms for problem-solving.

**HINF 4010 Health Informatics Communication (4 Credits)**

This course will provide students with a foundational background in organizational communication strategies, develop knowledge and understanding of healthcare communication standards and policies and equip students with practical knowledge of current health informatics communication tools and trends. The student will contextualize the role of Informatics and Health Informatics/IT professionals through the development of course projects. Students will evaluate current industry communication modalities, construct plans to assess and improve communication, and advise stakeholders on how to successfully implement communication plans to achieve success in Health Informatics/IT projects. Through this process, students learn to bridge gaps between Health Informatics/IT professionals, clinicians, and health leaders.

**HINF 4020 Healthcare Workflow and Gap Analysis (4 Credits)**

The alignment between the steps of a business or patient care transaction in an information system and how that work is done significantly impacts the performance of that organization. It can also impact the quality of data gathered using information system resources in a healthcare organization. This course will provide the learner with a critical view of the interaction between operational processes in a healthcare organization and the information technology used to carry out those processes. The course will begin with an introduction to the System Development Life Cycle ("SDLC") and how work processes interact with technology. Students will review the skills needed to critically assess processes and identify technology needs. The course will wrap up with a review of operational process analysis with the design of health information systems resources.

**HINF 4030 Healthcare Finance (4 Credits)**

This course gives students a skills-based grounding in the financial management in healthcare organizations operating in the United States. Students will gain a broad overview of the business of healthcare in the U.S., including interpretation of financial statements, budgeting, operational analysis, expense management issues, revenues, and payment systems used in the current U.S. healthcare system. The course will use a case-based approach where students will demonstrate mastery of financial management skills through application of knowledge to real-life scenarios from the industry.

**HINF 4210 Data Platforms in Healthcare (4 Credits)**

Data Platforms in Healthcare focuses on widely used data platforms in data collection, storage retrieval, and use in healthcare and healthy-industry settings. Students will learn the flow of data from data entry to data storage, and they will learn to query, process, and present healthcare data for actionable use. Students will also learn common pitfalls of healthcare data solutions and the legal restrictions involved with personal healthcare information. Recommended prerequisite: ICT 4007 (if student has no prior programming experience).

**HINF 4220 Health Data Mining (4 Credits)**

Focusing on creating problem statements and research questions, this course allows you to hone skills related to accurate health data mining. Learn to create clinical partnerships with key stakeholders concerning data in Health Informatics/IT projects while gleaning valuable insight from large health data repositories.

**HINF 4230 Healthcare Statistical Dynamics of Machine Learning (4 Credits)**

HINF 4230 focuses on data cleaning, statistical analysis, and machine learning using healthcare data. Students will use Python to clean, prepare, and interpret a large dataset and then train and evaluate a machine learning model. Finally, students will debug their models and iterate to make improvements.

**HINF 4240 Health Data Science Reporting (4 Credits)**

This course will focus on best practices for health data science reporting to improve healthcare into the future. The learner will explore various ways to develop effective reports, inform healthcare leaders, and make appropriate recommendations. Upon completion of this course, students will understand the difference between data and how information provides key insights that allow healthcare leaders to draw conclusions, make decisions, and improve clinical and business outcomes. Preferred prerequisite: HINF 4210.

**HINF 4301 Foundations of Digital Health (4 Credits)**

This foundational course provides a working knowledge of key HIT definitions, concepts, and relevant advancing forms of technology. It encourages students to review the changes to HIT and evaluate the growth of these systems into the current and future forms of digital health tools. While this course is not designed to turn students into network administrators or software developers; it will equip students to become an active and valuable participant – or even a team leader – in the evaluation, selection, implementation, and ongoing operation of health information systems.

**HINF 4310 Healthcare Information Systems (4 Credits)**

Electronic health records systems (electronic medical records (EMRs), electronic health records (EHRs), personal health records (PHRs), and health information exchanges (HIEs)) are all the buzz these days, yet for the past 30 years the healthcare sector has clung to paper records, file folders, and clipboards. This course will explore the technical and controversial aspects of healthcare information technology in general, and the specific factors involving evaluation and adoption of EMR systems. The course also covers the fundamental components of modern electronic records systems and reviews their impact on both business and clinical functions. Key areas of interoperability, interfaces, and standards will be introduced. The course will be practical and thought-provoking as it emphasizes critical thinking and the synthesis of ideas from multiple sources and perspectives. Participants will be challenged to develop their own viewpoints and opinions, substantiated by the published work of those who are thought leaders in the field of HIT, as well as the participants' own experiences.

**HINF 4315 Digital and Virtual Health (4 Credits)**

With the widespread availability of health-oriented digital and virtual devices and software (apps), healthcare organizations are shifting their approaches to recognize how patients wish to communicate, manage their health, and share their health information. The shift in digital and virtual health is designed to improve healthcare access and quality—particularly in underserved populations, geographies, and specialties. This course will present the current and emerging digital and virtual health services, as well as the benefits and drawbacks of these technologies. This course will address various forms of telehealth, apps, portable devices, and remote monitoring strategies, as well as the role of artificial and augmented intelligence in enhancing digital and virtual experiences. After a broad review of the digital and virtual health field, this course will focus on evaluating, sustaining, and leading a digital or virtual program. Each lecture will discuss regulatory issues such as privacy, security, FDA review/approval, and when digital and virtual health services can be reimbursed. In addition to these regulatory issues, the course will instruct how to conduct a needs assessment, evaluate digital and virtual health products, implement different business models, and evaluate best practices for implementation and adoption. Preferred Prerequisite: HINF 4301.

**HINF 4325 Values and Outcomes in Digital Health (4 Credits)**

This course covers the major healthcare information technologies and topics other than electronic health records systems. Electronic health records systems represent a large focus in healthcare technology; however, many other important systems form the complete framework of modern connected healthcare. These include electronic practice management (EPM/PMS) systems, scheduling, billing, diagnostics/labs, reporting, payment interfaces, and business intelligence in healthcare. This course focuses on the fundamentals of how to be an analyst of health IT technology. Preferred prerequisite: HINF 4301.

**HINF 4335 Healthcare Cybersecurity (4 Credits)**

This course will introduce students to information security risks facing the healthcare industry. Students will learn how to protect healthcare organizations and their patients' data better. Students will learn about recent security breaches, the impact of those breaches on healthcare organizations, and all of the key players involved. This course also covers the evolution of healthcare IT and the continuously evolving risk and regulatory landscape. Students will explore regulations of HIPAA, NIST/ONC, HITECH, and Meaningful Use and how they relate to day-to-day operations in healthcare organizations. Additionally, this course will prepare students to support information security initiatives in order to protect the organization while furthering the advancement of healthcare IT capabilities. This is not a technical course; however, the course covers how security is impacted by technology and what one must do across technology to secure healthcare systems, organizations and patients. Preferred prerequisite: HINF 4301.

**HINF 4600 Healthcare Data and Delivery by Perspective (4 Credits)**

This course evaluates the environment of the U.S. healthcare delivery system and introduces the 4P (patient, provider, payer, population) perspective framework. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, towards the payer, and evolving into population health. Students will learn about the associated data that is generated from the patient as a consumer, from the provider through clinical operations, from the payer perspective, and finally how all of these contribute toward population health data. This course will cover the basics of U.S. healthcare research and clinical intervention, and students will have the ability to model the conceptual as well as practical application of health informatics.

**HINF 4610 Healthcare Ethics and Biostatistics (4 Credits)**

This course discusses research investigator training and outlines the progression of the Institutional Review Board (IRB) process. In addition, this IRB process will be compared with the business process improvement cycle. Health Insurance Portability and Accountability Act (HIPAA) as well as data governance issues are surveyed from the patient, provider, payer, and population perspectives. The connections between these topics and ethics are explored, and the principles of biostatistics are discussed. Common statistical packages used within healthcare research and business applications are covered, and this course concludes with an analysis of resulting ethical implications of short- and long-term healthcare data. Preferred prerequisite: HINF 4600.

**HINF 4620 Healthcare Methods and Programming (4 Credits)**

This course presents the basic study designs of epidemiology and illustrates the field's benefit to the healthcare industry. Randomized control trials (RCT) through correlation studies are explained through case studies as well as practical application. Informatics tools such as machine learning, clinical decision support, and natural language processing (NLP) are categorized with respect to their relative positions in the 4P (patient, provider, payer, population) perspective framework. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. This course concludes with the many benefits of auditing as a check and balance for healthcare methods and programming. Preferred prerequisite: HINF 4600.

**HINF 4630 Healthcare Data Mining, Integration and Interpretation (4 Credits)**

This course explores available public healthcare data sets and the data mining process. In addition, this course articulates the value of mapping relationships between data points and workflows. This process determines the level of integration of disparate data sources and is explored through the 4P (patient, provider, payer, population) perspectives. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. Once the data sources are integrated, the focus becomes how to turn this data into information, knowledge, and insight. This course wraps up by exploring both business and research options for interpreting data through visualizations and predictive analytics. Preferred prerequisite: HINF 4600.

**HINF 4640 Healthcare Database Applications (4 Credits)**

This course covers the growing functions of security in healthcare data and specifically elaborates on the vulnerabilities and emerging solutions for dealing with data once it is stored. Database architecture is surveyed, which transitions into an exploration of terminologies and standards and how these impact interoperability of data in warehouses. A significant portion of this course focuses on the specifics of medical coding and how coding is affected by the 4P perspectives. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. The course wraps up with a compilation of Structured Query Language (SQL) capabilities and a study of the influence of their practical application. Prerequisite: recommended HINF 4600.

**HINF 4650 Healthcare Project Management and Professionalism (4 Credits)**

The course is designed to simultaneously teach project management concepts while preparing a student to operationalize a healthcare project. Students will analyze business problems healthcare organizations are facing to properly scope and plan a project. Students will also work on stakeholder engagement and project documentation development.

**HINF 4701 Topics in Health Informatics (1-4 Credits)**

This is an advanced special topics seminar course. The focus is on specialized areas of interest. Topics courses may be used as electives within the Health Informatics degree and certificates, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate programs.

**HINF 4810 Survey of Health Industry Artificial Intelligence (4 Credits)**

Artificial Intelligence (AI) is "the capability of a machine to imitate intelligent human behavior." AI is fast becoming a major player in the health and healthcare industries. In addition to having positive impacts in traditional medical areas such as radiology, pathology, EHR systems, oncology, and cardiology, AI is increasingly being used in the health industry to bridge gaps in the healthcare delivery systems. This course will provide students with the tools to understand how Artificial Intelligence platforms sort and learn from the immense amount of data available in the healthcare field. Students will engage in virtual learning as well as project-based learning offering the next generation of health industry professionals the skills to leverage massive amounts of data into meaningful knowledge.

**HINF 4825 Technology and Applications for Telehealth and Virtual Care Success (4 Credits)**

This course investigates the technology required for virtual care and technological concepts to advance virtual care models. This will include virtual care applications, telemonitoring systems, and technology concepts to include artificial intelligence, machine learning, informational robotics/ applications.

**HINF 4835 Design and Implementation of Telehealth and Virtual Care Systems (4 Credits)**

Leaders in telehealth and virtual care settings must learn the steps to implementation when designing telehealth and virtual care systems. Students will explore the factors that impact the success of telehealth and virtual care programming, including barriers to care, the social determinants of health (SDOH), and conducting risk and benefit analysis. Students will develop the skills needed to create a telehealth and virtual care plan that builds on the development of a business case to support the needs of the community it serves.

**HINF 4900 Experiential Learning in Health Informatics (4 Credits)**

This course is an opportunity to participate in experiential learning by connecting academic research with a real-world healthcare management or health informatics problem. Students may take this class either early in their degree program as an introduction to healthcare or health informatics, or later in the program as a prerequisite for their upcoming Capstone experience. First, students will conduct informational interviews with healthcare management and health informatics instructors to learn more about a chosen problem. Those taking this course as an introduction will learn key skills necessary to identify an independent research project topic, formulate a research question with a business, healthcare or health industry application, investigate research methodologies, explore the requirements for human subjects research through the Institutional Review Board (IRB), and draft a project proposal. Students preparing for their Capstone experience (all health informatics students and some healthcare management students) will prepare a Capstone project proposal according to approvable structure and deliverable guidelines. They will choose and schedule a meeting with their Capstone Advisor, select a research topic, formulate a research question with an industry application, develop a thesis statement, choose appropriate project methodologies, and draft a project proposal that will meet appropriate ethics and compliance requirements for human subjects research, and submit their proposal to the IRB for approval.

**HINF 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**HINF 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**HINF 4980 Internship (0-4 Credits)**

The Health Informatics Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all Healthcare students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences.

**HINF 4991 Independent Study (1-4 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

**Courses****HINF 4010 Health Informatics Communication (4 Credits)**

This course will provide students with a foundational background in organizational communication strategies, develop knowledge and understanding of healthcare communication standards and policies and equip students with practical knowledge of current health informatics communication tools and trends. The student will contextualize the role of Informatics and Health Informatics/IT professionals through the development of course projects. Students will evaluate current industry communication modalities, construct plans to assess and improve communication, and advise stakeholders on how to successfully implement communication plans to achieve success in Health Informatics/IT projects. Through this process, students learn to bridge gaps between Health Informatics/IT professionals, clinicians, and health leaders.

**HINF 4020 Healthcare Workflow and Gap Analysis (4 Credits)**

The alignment between the steps of a business or patient care transaction in an information system and how that work is done significantly impacts the performance of that organization. It can also impact the quality of data gathered using information system resources in a healthcare organization. This course will provide the learner with a critical view of the interaction between operational processes in a healthcare organization and the information technology used to carry out those processes. The course will begin with an introduction to the System Development Life Cycle ("SDLC") and how work processes interact with technology. Students will review the skills needed to critically assess processes and identify technology needs. The course will wrap up with a review of operational process analysis with the design of health information systems resources.

**HINF 4030 Healthcare Finance (4 Credits)**

This course gives students a skills-based grounding in the financial management in healthcare organizations operating in the United States. Students will gain a broad overview of the business of healthcare in the U.S., including interpretation of financial statements, budgeting, operational analysis, expense management issues, revenues, and payment systems used in the current U.S. healthcare system. The course will use a case-based approach where students will demonstrate mastery of financial management skills through application of knowledge to real-life scenarios from the industry.

**HINF 4210 Data Platforms in Healthcare (4 Credits)**

Data Platforms in Healthcare focuses on widely used data platforms in data collection, storage retrieval, and use in healthcare and healthy-industry settings. Students will learn the flow of data from data entry to data storage, and they will learn to query, process, and present healthcare data for actionable use. Students will also learn common pitfalls of healthcare data solutions and the legal restrictions involved with personal healthcare information. Recommended prerequisite: ICT 4007 (if student has no prior programming experience).

**HINF 4220 Health Data Mining (4 Credits)**

Focusing on creating problem statements and research questions, this course allows you to hone skills related to accurate health data mining. Learn to create clinical partnerships with key stakeholders concerning data in Health Informatics/IT projects while gleaning valuable insight from large health data repositories.

**HINF 4230 Healthcare Statistical Dynamics of Machine Learning (4 Credits)**

HINF 4230 focuses on data cleaning, statistical analysis, and machine learning using healthcare data. Students will use Python to clean, prepare, and interpret a large dataset and then train and evaluate a machine learning model. Finally, students will debug their models and iterate to make improvements.

**HINF 4240 Health Data Science Reporting (4 Credits)**

This course will focus on best practices for health data science reporting to improve healthcare into the future. The learner will explore various ways to develop effective reports, inform healthcare leaders, and make appropriate recommendations. Upon completion of this course, students will understand the difference between data and how information provides key insights that allow healthcare leaders to draw conclusions, make decisions, and improve clinical and business outcomes. Preferred prerequisite: HINF 4210.

**HINF 4301 Foundations of Digital Health (4 Credits)**

This foundational course provides a working knowledge of key HIT definitions, concepts, and relevant advancing forms of technology. It encourages students to review the changes to HIT and evaluate the growth of these systems into the current and future forms of digital health tools. While this course is not designed to turn students into network administrators or software developers; it will equip students to become an active and valuable participant – or even a team leader – in the evaluation, selection, implementation, and ongoing operation of health information systems.

**HINF 4310 Healthcare Information Systems (4 Credits)**

Electronic health records systems (electronic medical records (EMRs), electronic health records (EHRs), personal health records (PHRs), and health information exchanges (HIEs)) are all the buzz these days, yet for the past 30 years the healthcare sector has clung to paper records, file folders, and clipboards. This course will explore the technical and controversial aspects of healthcare information technology in general, and the specific factors involving evaluation and adoption of EMR systems. The course also covers the fundamental components of modern electronic records systems and reviews their impact on both business and clinical functions. Key areas of interoperability, interfaces, and standards will be introduced. The course will be practical and thought-provoking as it emphasizes critical thinking and the synthesis of ideas from multiple sources and perspectives. Participants will be challenged to develop their own viewpoints and opinions, substantiated by the published work of those who are thought leaders in the field of HIT, as well as the participants' own experiences.

**HINF 4315 Digital and Virtual Health (4 Credits)**

With the widespread availability of health-oriented digital and virtual devices and software (apps), healthcare organizations are shifting their approaches to recognize how patients wish to communicate, manage their health, and share their health information. The shift in digital and virtual health is designed to improve healthcare access and quality—particularly in underserved populations, geographies, and specialties. This course will present the current and emerging digital and virtual health services, as well as the benefits and drawbacks of these technologies. This course will address various forms of telehealth, apps, portable devices, and remote monitoring strategies, as well as the role of artificial and augmented intelligence in enhancing digital and virtual experiences. After a broad review of the digital and virtual health field, this course will focus on evaluating, sustaining, and leading a digital or virtual program. Each lecture will discuss regulatory issues such as privacy, security, FDA review/approval, and when digital and virtual health services can be reimbursed. In addition to these regulatory issues, the course will instruct how to conduct a needs assessment, evaluate digital and virtual health products, implement different business models, and evaluate best practices for implementation and adoption. Preferred Prerequisite: HINF 4301.

**HINF 4325 Values and Outcomes in Digital Health (4 Credits)**

This course covers the major healthcare information technologies and topics other than electronic health records systems. Electronic health records systems represent a large focus in healthcare technology; however, many other important systems form the complete framework of modern connected healthcare. These include electronic practice management (EPM/PMS) systems, scheduling, billing, diagnostics/labs, reporting, payment interfaces, and business intelligence in healthcare. This course focuses on the fundamentals of how to be an analyst of health IT technology. Preferred prerequisite: HINF 4301.

**HINF 4335 Healthcare Cybersecurity (4 Credits)**

This course will introduce students to information security risks facing the healthcare industry. Students will learn how to protect healthcare organizations and their patients' data better. Students will learn about recent security breaches, the impact of those breaches on healthcare organizations, and all of the key players involved. This course also covers the evolution of healthcare IT and the continuously evolving risk and regulatory landscape. Students will explore regulations of HIPAA, NIST/ONC, HITECH, and Meaningful Use and how they relate to day-to-day operations in healthcare organizations. Additionally, this course will prepare students to support information security initiatives in order to protect the organization while furthering the advancement of healthcare IT capabilities. This is not a technical course; however, the course covers how security is impacted by technology and what one must do across technology to secure healthcare systems, organizations and patients. Preferred prerequisite: HINF 4301.

**HINF 4600 Healthcare Data and Delivery by Perspective (4 Credits)**

This course evaluates the environment of the U.S. healthcare delivery system and introduces the 4P (patient, provider, payer, population) perspective framework. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, towards the payer, and evolving into population health. Students will learn about the associated data that is generated from the patient as a consumer, from the provider through clinical operations, from the payer perspective, and finally how all of these contribute toward population health data. This course will cover the basics of U.S. healthcare research and clinical intervention, and students will have the ability to model the conceptual as well as practical application of health informatics.

**HINF 4610 Healthcare Ethics and Biostatistics (4 Credits)**

This course discusses research investigator training and outlines the progression of the Institutional Review Board (IRB) process. In addition, this IRB process will be compared with the business process improvement cycle. Health Insurance Portability and Accountability Act (HIPAA) as well as data governance issues are surveyed from the patient, provider, payer, and population perspectives. The connections between these topics and ethics are explored, and the principles of biostatistics are discussed. Common statistical packages used within healthcare research and business applications are covered, and this course concludes with an analysis of resulting ethical implications of short- and long-term healthcare data. Preferred prerequisite: HINF 4600.

**HINF 4620 Healthcare Methods and Programming (4 Credits)**

This course presents the basic study designs of epidemiology and illustrates the field's benefit to the healthcare industry. Randomized control trials (RCT) through correlation studies are explained through case studies as well as practical application. Informatics tools such as machine learning, clinical decision support, and natural language processing (NLP) are categorized with respect to their relative positions in the 4P (patient, provider, payer, population) perspective framework. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. This course concludes with the many benefits of auditing as a check and balance for healthcare methods and programming. Preferred prerequisite: HINF 4600.

**HINF 4630 Healthcare Data Mining, Integration and Interpretation (4 Credits)**

This course explores available public healthcare data sets and the data mining process. In addition, this course articulates the value of mapping relationships between data points and workflows. This process determines the level of integration of disparate data sources and is explored through the 4P (patient, provider, payer, population) perspectives. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. Once the data sources are integrated, the focus becomes how to turn this data into information, knowledge, and insight. This course wraps up by exploring both business and research options for interpreting data through visualizations and predictive analytics. Preferred prerequisite: HINF 4600.

**HINF 4640 Healthcare Database Applications (4 Credits)**

This course covers the growing functions of security in healthcare data and specifically elaborates on the vulnerabilities and emerging solutions for dealing with data once it is stored. Database architecture is surveyed, which transitions into an exploration of terminologies and standards and how these impact interoperability of data in warehouses. A significant portion of this course focuses on the specifics of medical coding and how coding is affected by the 4P perspectives. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. The course wraps up with a compilation of Structured Query Language (SQL) capabilities and a study of the influence of their practical application. Prerequisite: recommended HINF 4600.

**HINF 4650 Healthcare Project Management and Professionalism (4 Credits)**

The course is designed to simultaneously teach project management concepts while preparing a student to operationalize a healthcare project. Students will analyze business problems healthcare organizations are facing to properly scope and plan a project. Students will also work on stakeholder engagement and project documentation development.

**HINF 4701 Topics in Health Informatics (1-4 Credits)**

This is an advanced special topics seminar course. The focus is on specialized areas of interest. Topics courses may be used as electives within the Health Informatics degree and certificates, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate programs.

**HINF 4810 Survey of Health Industry Artificial Intelligence (4 Credits)**

Artificial Intelligence (AI) is "the capability of a machine to imitate intelligent human behavior." AI is fast becoming a major player in the health and healthcare industries. In addition to having positive impacts in traditional medical areas such as radiology, pathology, EHR systems, oncology, and cardiology, AI is increasingly being used in the health industry to bridge gaps in the healthcare delivery systems. This course will provide students with the tools to understand how Artificial Intelligence platforms sort and learn from the immense amount of data available in the healthcare field. Students will engage in virtual learning as well as project-based learning offering the next generation of health industry professionals the skills to leverage massive amounts of data into meaningful knowledge.

**HINF 4825 Technology and Applications for Telehealth and Virtual Care Success (4 Credits)**

This course investigates the technology required for virtual care and technological concepts to advance virtual care models. This will include virtual care applications, telemonitoring systems, and technology concepts to include artificial intelligence, machine learning, informational robotics/ applications.

**HINF 4835 Design and Implementation of Telehealth and Virtual Care Systems (4 Credits)**

Leaders in telehealth and virtual care settings must learn the steps to implementation when designing telehealth and virtual care systems. Students will explore the factors that impact the success of telehealth and virtual care programming, including barriers to care, the social determinants of health (SDOH), and conducting risk and benefit analysis. Students will develop the skills needed to create a telehealth and virtual care plan that builds on the development of a business case to support the needs of the community it serves.

**HINF 4900 Experiential Learning in Health Informatics (4 Credits)**

This course is an opportunity to participate in experiential learning by connecting academic research with a real-world healthcare management or health informatics problem. Students may take this class either early in their degree program as an introduction to healthcare or health informatics, or later in the program as a prerequisite for their upcoming Capstone experience. First, students will conduct informational interviews with healthcare management and health informatics instructors to learn more about a chosen problem. Those taking this course as an introduction will learn key skills necessary to identify an independent research project topic, formulate a research question with a business, healthcare or health industry application, investigate research methodologies, explore the requirements for human subjects research through the Institutional Review Board (IRB), and draft a project proposal. Students preparing for their Capstone experience (all health informatics students and some healthcare management students) will prepare a Capstone project proposal according to approvable structure and deliverable guidelines. They will choose and schedule a meeting with their Capstone Advisor, select a research topic, formulate a research question with an industry application, develop a thesis statement, choose appropriate project methodologies, and draft a project proposal that will meet appropriate ethics and compliance requirements for human subjects research, and submit their proposal to the IRB for approval.

**HINF 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**HINF 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**HINF 4980 Internship (0-4 Credits)**

The Health Informatics Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all Healthcare students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences.

**HINF 4991 Independent Study (1-4 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

## Healthcare Management

Office: University College Student Support Center  
 Mail Code: 2211 S. Josephine St., Denver, CO 80208  
 Phone: 303-871-2291, 800-347-2042  
 Email: ucolsupport@du.edu  
 Web Site: <http://www.universitycollege.du.edu>

Students in the Master of Science in Healthcare Management program will be at the forefront of a rapidly evolving healthcare market, equipped with the leadership, management, and communication skills necessary to bring strategic vision and innovation to the workplace. Students will learn how to transform the industry and better serve the patient, provider, payer, and population perspectives locally, nationally, and globally. Students will learn to thrive in a value-driven system by leveraging collaborative and integrative techniques that support high-quality, cost-effective healthcare delivery.

**This degree prepares students to:**

- Demonstrate effective communication techniques appropriate to the audience including healthcare and health industry professionals, patients, and the public
- Apply relevant program theory and research to formulate innovative solutions to vexing healthcare and health industry challenges
- Connect management strategies to action among healthcare and health industry teams across a variety of settings within an ethical framework
- Formulate visionary solutions to address current issues facing local, national, and global health and healthcare organizations
- Evaluate healthcare reform efforts and proposals to contextualize governmental regulation and oversight as they relate to healthcare delivery and health industry operations

### Master of Science in Healthcare Management with a Concentration in Advancing Diversity, Equity, and Inclusion in Organizations

Advancing diversity, equity, and inclusion is critical to achieving organizational goals, positioning organizations for success in today's world, and creating environments where everyone has the opportunity to thrive. In this master's degree concentration, you will gain skills that are crucial for advancing equity as an integrated part of organizational strategy while developing solutions that meaningfully leverage diversity to create a culture of belonging. Learn about the historical, cultural, and economic factors that shape identity and apply appropriate tools and techniques to help organizations achieve their vision for change as it relates to diversity, equity, and inclusion practices.

**This degree prepares students to:**

- Assess the influence of historical, social, cultural, and economic factors in shaping one's identity and conceptions of diversity, equity, and inclusion practices.
- Integrate an understanding of social and cultural difference, perspective-taking, and empathy to better inform interpersonal communication and problem-solving strategies.
- Develop practices that advance equity as an integrated component of organizational strategy.
- Design solutions that meaningfully leverage diversity to achieve organizational goals and cultivate a culture of belonging across different organizational settings.
- Apply change models, tools and techniques to successfully achieve a vision for change.

**Master of Science in Healthcare Management with a Concentration in Telehealth and Virtual Care**

Advance your leadership and capabilities within the emerging areas of telehealth and virtual care. In this concentration, you will learn how to assess the business and healthcare environments to properly plan, implement, and sustain programs to support care in a virtual environment. Gain a deeper understanding of the social determinants of health (SDOH) that impact patients and staff virtually, technology for telehealth and virtual care, the business strategy and policy behind telehealth and virtual care, and systems planning and development for telehealth and virtual care programs.

**This degree prepares students to:**

- Analyze systems and processes necessary to deliver telehealth and virtual care services
- Design strategic plans for successful telehealth and virtual care systems
- Investigate the opportunities and barriers to the 4Ps (patient, provider, payor, and populations) with regard to telehealth and virtual care
- Create models for the success of telehealth and virtual care teams
- Analyze risks, impact, and benefit analysis for implementing virtual care

**Master of Science in Healthcare Management with a Concentration in Healthcare Policy and Regulatory Leadership**

The Healthcare Policy and Regulatory Leadership master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership. The career-relevant courses within the concentration provide students with the knowledge and tools to help them gain leadership and management skills with a pulse on the dynamism in healthcare and continuing emergence of reform leading to changes in healthcare policy.

Students acquire the essential tools necessary to become leaders and managers who help shape, interpret, and implement policies and regulations that impact a value-driven healthcare system. Students improve their understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare regulatory systems and public policy. Students examine the relationship between public policy, the patient as the consumer, and the impact of culture on the formation of policy and practice within a transitioning healthcare environment.

**This degree prepares students to:**

- Compare variations in healthcare delivery domestically and internationally
- Examine the legislative process involved in the creation of healthcare public policy
- Assess how change leads to resistance and what measures must be adopted to incorporate change
- Correlate how professional standards and accreditation relate to quality assurance in various areas of healthcare
- Analyze the processes involved in the implementation of healthcare public policy and healthcare reform

**Master of Science in Healthcare Management with a Concentration in Strategic Leadership in Healthcare Organizations**

The Strategic Leadership in Healthcare Organizations master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership. The concentration prepares students to develop and administer strategic plans for various types of healthcare systems.

Students acquire the skills needed to successfully and strategically lead within healthcare organizations through the integrative process of a changing healthcare industry. Through analysis of the interrelationships of value, quality, and price, students examine the financial state of healthcare at the macro level, allowing them to better understand budgetary restraints while striving to realize an organization's vision and goals. Using case-based study techniques, students explore practice and system management, strategic planning, and change leadership.

**This degree prepares students to:**

- Compare leadership and administration characteristics that contribute to success in the provision of healthcare
- Evaluate basic components of a strategic plan and change management, relating them to financial planning and patient value within the healthcare system
- Analyze issues that support and detract from a harmonious workplace environment, and how these issues affect patient services, and provide solutions in effectively dealing with these issues
- Compare the strategic management functions required to lead and administer various types of healthcare systems
- Demonstrate expertise in the complex history and process of healthcare economics

## **Master of Science in Healthcare Management with a Concentration in Social Enterprise, Innovation and Entrepreneurship**

Are you ready to be a social entrepreneur? Innovate the change needed to move the needle on a social problem? The Social Innovation for Global Impact concentration will develop your knowledge and skills in the innovation needed to tackle global, and local, social problems. You will sharpen the social value proposition and mission-driven strategy to address global social problems, or the ones in your community. Courses will develop the why and how of taking an idea and launching it as a social enterprise. Students learn the language and financial insight needed to cultivate funding, initiate prototyping, consider scaling, as well as marketing and measuring impact of global social innovations. Practical experience with a global, national, or local nonprofit, for-profit, healthcare, or other organization enables students to apply theory, strategy and metrics that solve real problems and drive mission impact.

### **This degree prepares students to:**

- Examine existing global, national, and local social enterprises to determine the strengths and challenges in developing an impactful social enterprise
- Utilize innovation tools, design thinking, and other processes to examine a social enterprise idea's social value, scaling potential, and market possibilities
- Apply social innovation frameworks and tools to assess a social enterprise's business and financial structure in global, national, and local contexts

## **Master of Science in Healthcare Management with a Concentration in Supply Chain Management**

Supply chains are everywhere, from the local store to a large multinational electronics manufacturer operating halfway across the world. From cradle to grave, it is the supply chain management system that links all of the numerous stakeholders into one strategic plan for us as customers in markets.

These systems link processes such as product design, sourcing, forecasting, planning, manufacturing, distribution, logistics, retailing and material disposal and reuse. In today's fast paced markets driven by globalization and technology, knowledgeable professionals in supply chain management are increasingly important for companies to achieve their business objectives. Some of the most successful manufacturers (e.g., Apple and Samsung) and retailers (e.g., Wal-Mart and Amazon) are winning as a result of their supply chain strategies. Especially as markets change rapidly, supply chain management professionals will be integral to a company's success.

Earned entirely online, in the Supply Chain Management concentration students learn the six pillars of the field, and how to solve problems through the use of Six Sigma principles and the use of data analytics. Through hands-on projects with companies students gain real-world experience on the challenges facing global supply chains in the 21st-century while learning from current leaders in the field.

### **This degree prepares students to:**

- Articulate the six pillars of supply chain management to diagram the process to appraise their role in the market system.
- Apply the six pillars of supply chain management to realistic problem scenarios to develop strategies to diagnose and address future supply chain problems.
- Assess supply chains using a multidimensional perspective that includes connections between supply chain processes and fundamental business topics such as financial management and technology.
- Solve supply chain problems using a nonlinear process that addresses connections between supply chain pillars, market trends, and business best practices.
- Apply best practices to address an authentic supply chain problem in a work setting.

## **Graduate Certificate in Healthcare Management with a Concentration in Telehealth and Virtual Care**

Advance your leadership and capabilities within the emerging areas of telehealth and virtual care. In this graduate certificate, you will learn how to assess the business and healthcare environments to properly plan, implement, and sustain programs to support care in a virtual environment. Gain a deeper understanding of the social determinants of health (SDOH) that impact patients and staff virtually, technology for telehealth and virtual care, the business strategy and policy behind telehealth and virtual care, and systems planning and development for telehealth and virtual care programs.

## **Graduate Certificate in Healthcare Management with a Concentration in Healthcare Policy and Regulatory Leadership**

The graduate certificate in Healthcare Policy and Regulatory Leadership concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will add new skills to their portfolio, including knowledge of how to help shape, interpret, and implement policies and regulations that impact a value-driven healthcare system. The Healthcare Policy and Regulatory Leadership concentration will provide an improved understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare-related public policy and healthcare law. Career-relevant courses provide students with the knowledge and tools to help them achieve leadership and management with a pulse on the dynamism in healthcare and continuing emergence of reform leading to changes in healthcare policy. Improve your understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare regulatory systems and public policy by earning a certificate. You'll examine the relationship between public policy, the patient as the consumer, and the impact of culture on the formation of policy and practice within a transitioning healthcare environment. Students will also gain additional skills and knowledge in healthcare management through elective coursework. Credits earned through this certificate may apply toward a master's degree in Healthcare Management.

## **Graduate Certificate in Healthcare Management with a Concentration in Strategic Leadership in Healthcare Organizations**

The Strategic Leadership in Healthcare Organizations graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate prepares students to develop and administer strategic plans for various types of healthcare systems.

Certificate students will acquire the skills needed to successfully and strategically lead within healthcare organizations through the integrative process of a changing healthcare industry. Through analysis of the inter-relationships of value, quality, and price, students examine the financial state of healthcare at the macro level, allowing them to better understand budgetary restraints while striving to realize an organization's vision and goals. Using case-based study techniques, students explore practice and system management, strategic planning, and change leadership. Students will also gain additional skills and knowledge in healthcare management through elective coursework. Credits earned in the graduate certificate may apply toward a master's degree in Healthcare Management.

## **Specialized Graduate Certificate in Telehealth and Virtual Care**

Advance your leadership and capabilities within the emerging areas of telehealth and virtual care. In this specialized certificate, you will learn how to assess the business and healthcare environments to properly plan, implement, and sustain programs to support care in a virtual environment. Gain a deeper understanding of the social determinants of health (SDOH) that impact patients and staff virtually, technology for telehealth and virtual care, the business strategy and policy behind telehealth and virtual care, and systems planning and development for telehealth and virtual care programs.

## **Specialized Graduate Certificate in Healthcare Policy and Regulatory Leadership**

The specialized graduate certificate in Healthcare Policy and Regulatory Leadership concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will add new skills to their portfolio, including knowledge of how to help shape, interpret, and implement policies and regulations that impact a value-driven healthcare system. The Healthcare Policy and Regulatory Leadership concentration will provide an improved understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare-related public policy and healthcare law. Career-relevant courses provide students with the knowledge and tools to help them achieve leadership and management with a pulse on the dynamism in healthcare and continuing emergence of reform leading to changes in healthcare policy. Improve your understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare regulatory systems and public policy by earning a certificate. You'll examine the relationship between public policy, the patient as the consumer, and the impact of culture on the formation of policy and practice within a transitioning healthcare environment. Credits earned through this certificate may be applied toward a master's degree in Healthcare Management.

## **Specialized Graduate Certificate in Strategic Leadership in Healthcare Organizations**

The Strategic Leadership in Healthcare Organizations specialized graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate prepares students to develop and administer strategic plans for various types of healthcare systems.

Students will acquire the skills needed to successfully and strategically lead within healthcare organizations through the integrative process of a changing healthcare industry. Through analysis of the interrelationships of value, quality, and price, students examine the financial state of healthcare at the macro level, allowing them to better understand budgetary restraints while striving to realize an organization's vision and goals. Using case-based study techniques, students explore practice and system management, strategic planning, and change leadership. Credits earned in the certificate may be applied toward a master's degree in Healthcare Management.

## **Master's Degree Admission**

### **Degree and GPA Requirements**

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the

baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.

## Certificate Admission

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production.

English Conditional Admission: No, this program does not offer English Conditional Admission.

#### HC 4000 Healthcare Systems and Regulatory Environments (4 Credits)

This course opens with a comprehensive overview of the functions of various types of healthcare organizations: providers, insurance companies, government agencies, and professional associations. Alternative payment and provider models are reviewed, regulatory bodies and issues are explored, and healthcare reform efforts and proposals are discussed. Supply and demand projections for personnel are examined. The work of key federal agencies (NIH, National Center for Disease Control, and Food and Drug Administration) is reviewed as well as the activity of national and international non-governmental organizations. Major national and global public health challenges are introduced.

**HC 4005 Healthcare Macroeconomics (4 Credits)**

This course focuses on macro analysis of the current financial state of healthcare in the United States. The relationships of value, quality, and price are analyzed. Transparency related to price and quality is considered. Fundamental items such as balance sheets/income statements, accounting vs. financial reporting, equity, cash flows, and debt financing are covered in detail. Payment and incentive models are considered in connection with employer-furnished benefits, private health insurance plans, Medicare and Medicaid. Current issues, such as pay for performance, shared savings, cost shifting, and healthcare for the aging, under and uninsured are discussed. Students will discuss variations in health policy related to payment and coverage systems.

**HC 4010 Healthcare Communication and Leadership (4 Credits)**

This course focuses on the welfare of patient, family, and community in the context of medical team communication and leadership. Models for communicating highly technical medical information with patients and others involved in their care are examined. Students weigh and assess differences in personal and organizational cultures to optimize patient-centered outcomes. Students acquire a sound body of knowledge and terminology to facilitate communication and leadership across a multitude of disciplines essential in the delivery of healthcare. NOTE: This course is strongly recommended within the first 3 terms of study.

**HC 4015 Healthcare Finance (4 Credits)**

This course gives students a skills-based grounding in the financial management in healthcare organizations operating in the United States. Students will gain a broad overview of the business of healthcare in the U.S., including interpretation of financial statements, budgeting, operational analysis, expense management issues, revenues, and payment systems used in the current U.S. healthcare system. The course will use a case-based approach where students will demonstrate mastery of financial management skills through application of knowledge to real-life scenarios from the industry.

**HC 4100 Management and Leadership in Healthcare (4 Credits)**

Healthcare systems are complex, dynamic, and multilayered. They require constant situational awareness to maintain safety, efficiency, compliance, relevance, and fiscal responsibility while supporting an increasingly diverse workforce. Managers and administrators must be able to create and lead effective teams to address constant change. In this course, students explore the functions required to lead and support healthcare systems, organizations, and practices. Students will simulate the role of healthcare managers and leaders by gaining an understanding of leadership approaches, analyzing the performance of a business unit and identifying opportunities for improvement, building teams, identifying and tracking key metrics, and creating solutions that contribute to an effective, efficient, and equitable work environment.

**HC 4110 Healthcare: Innovative Strategies and Change Management (4 Credits)**

Effective healthcare takes continual innovation to meet the ever-changing needs of the population. Through an examination of disruptions that create a catalyst for change, this course focuses on teaching students how innovative strategies can enable quality care and sustainability both within the healthcare delivery system and the health industry. Further, the drivers of innovation are explored from their use in grassroots efforts through regulatory reform through the lens of supply and demand. Finally, strategic planning for maximum use of financial resources to meet stakeholder expectations is ventured into in this course.

**HC 4130 Organizational Behavior in Healthcare (4 Credits)**

Customer and employee satisfaction elements of healthcare management are often a result of how well the entire healthcare system functions. Students examine successful and less successful examples of cooperation, compatibility, and dedication within the workplace and explore what contributes to a harmonious and effective healthcare environment. Interpersonal skills are discussed, as are ethical guidelines and laws that define acceptable workplace behavior.

**HC 4200 Comparative Healthcare Systems (4 Credits)**

This course describes variations in healthcare delivery systems locally, nationally, and globally as they relate to policy, structure, and finance. Comparisons of systems are made relative to expenditure of resources and outcomes. Students learn about healthcare coverage, access to care, healthcare rationing, provider manpower distribution, and seeking healthcare in foreign countries (medical tourism). The discrepancy between the desirable and the practical is explored, and students are asked to outline and defend a system that they believe is both desirable and practical.

**HC 4210 Quality Improvement for HC Leaders (4 Credits)**

This course provides an analysis of successful healthcare quality programs. Students will review the essential elements of a quality program and the national, state, and local laws and regulations that impact a quality program. The course explores the types of data and scientific methods that can be used to ensure the effectiveness and efficiency of a quality program. Students will get the opportunity to design a healthcare quality program for a healthcare setting of their choice. Course content is beneficial to all types of individuals who work in healthcare, from entry level to high-level manager, administrators, and clinicians.

**HC 4220 Ethical Considerations in Healthcare (4 Credits)**

This course provides a survey of important ethical considerations encountered in U.S. and global healthcare, past and present. It covers issues on which consensus has generally been reached, and some on which debate is currently active. Clinical, professional, and organizational scenarios will be examined, with an occasional glance toward public policy. Students will practice recognizing the elements of ethical problems and applying a "toolbox" of principles, theories, and concepts to understand them. Through readings, class discussions, and assignments, students will review noteworthy cases and policies. They will evaluate the merits of ethical arguments taking different forms. They will compare different frameworks for making ethical judgments and solving dilemmas that arise from competing value perspectives. This background is an essential foundation for practitioners and leaders in every role in a healthcare environment.

**HC 4225 Healthcare Public Policy and the Legislative Process (4 Credits)**

This course provides students an opportunity to transform a healthcare policy-related idea or problem into policy and legislation reform, change, or development. Students examine political and legislative procedures; the functions of government agencies; the influences of lobbyists, public hearings and testimonies; and advocacy efforts on these processes. Students objectively evaluate how policy changes occur at the federal and state levels and subsequently affect citizens from differing backgrounds and professionals in a variety of settings. As such, students explore the importance of developing relationships, communicating, and creating advocacy strategies with elected officials and various stakeholder groups that interact with the federal and state legislative processes.

**HC 4230 Implementation and Evaluation of Healthcare Public Policy (4 Credits)**

This course examines strategies for implementation and evaluation of healthcare public policy. Students develop skills in analyzing issues, considering and weighing pros and cons of proposed policy, and defending strategies for bringing about change. Beginning with the passage of a new law, policy, or regulation, students track the process to implement and evaluate new policy. Topics related to implementation of a new policy include funding the implementation, effect on constituents and the overall national economy, sustainability, and short- and long-term evaluation of the policy. At the conclusion of this course, students will prepare an implementation plan for selected recently passed state legislation. Students are strongly encouraged to complete HC 4000 prior to registering for this course.

**HC 4300 Health Equity and Justice (4 Credits)**

In this course, definitions and historical perspectives of health equity, health disparity, and social justice will be introduced. Students will learn to recognize the geographic, cultural, and social contexts, where health inequities occur. Through reflection and journaling, students will explore the concept of implicit bias. From this critical reflection, students will gain an understanding of the impact of bias on patient care and population health in the U.S. healthcare system. Issues of, racial, ethnic, and gender status and their relationships to health disparities and inequities will be analyzed. Through course assignments, students will conceptualize interventions and design improvement projects aimed at making substantive positive changes toward health equity and justice.

**HC 4305 Healthy Aging: A Healthcare Imperative (4 Credits)**

As technology advances, the ability to healthcare to keep people alive increases, but not always in ways conducive to improving quality of life. It is the hope of healthcare providers that quality of life improves as well. However, there are many factors this piece of the puzzle challenging. In this course, the older adult population is examined both for the challenges they face and the effects of an increasing elder population on the healthcare delivery system. The course will focus on specific assessment of the impact of unhealthy lifestyles that create the co-morbidities, health disparities commonly seen in aging populations, and the improvements that can be made in health and technological illiteracy/accessibility on older adults. Extending this assessment, students create a cultural care model for end of life care. These explorations of older adulthood culminating in evaluating the underlying cultural issues that need to be addressed to improve population health and resiliency in meeting the challenges during the end of the life spectrum.

**HC 4400 Legal Dynamics of Healthcare Leadership (4 Credits)**

This course is a primer on the legal and compliance considerations associated with organization, payment, and administration of facilities and provider groups. Topics will include the corporate and contract law, Stark and anti-kickback law, licensure and credentialing, professional liability, professional review and patient safety, HIPAA and patient privacy, and other laws affecting healthcare providers and organizations.

**HC 4410 Legal Frameworks of the Healthcare Industry (4 Credits)**

This course reviews the recent history of healthcare reform in the United States beginning with the 2010 Affordable Care Act (ACA) and moving to health reform since the ACA. Students examine the influences and functions of Medicare and Medicaid as well as the Department of Health and Human Services' (HHS) role in shaping benefit coverage throughout the healthcare industry. Students will explore the importance of, and examine legal issues related to, public health and healthcare provided by entities within the Federal Government such as the Department of Veterans Affairs (VA), Department of Defense (DoD), and Indian Health Service (IHS). Students will objectively evaluate the legalities and ethical issues associated with clinical research as well as the Food and Drug Administration (FDA)'s involvement in the development of pharmaceutical agents and medical devices. The course concludes with students analyzing the future landscape of health reform and public sector influence in healthcare.

**HC 4420 Legal Fundamentals of Revenue in Healthcare (4 Credits)**

This course provides an understanding of the legal complexities of creating and managing delivery and payment models for healthcare services. Course content revolves around the current challenges of evolving from volume-based to value-based payment principles. Topics will include fraud and abuse and compliance, legal foundations of private and public payment systems, fee for service, managed care, value-based systems, and a review of current healthcare payment reform efforts. The course wraps up with the role of clinical health information and related data systems in healthcare delivery and payment.

**HC 4430 Significant Healthcare Policy and Law (4 Credits)**

This course provides a foundational overview of healthcare law and the sources of law, as well as the distinction between healthcare law and policy. Throughout the course, learners will examine major federal healthcare laws and policies and understand their relationship with stakeholders such as patients, providers, payers, lobbyists, and public health, all through a health equity lens. Learners will examine the intersection of traditional areas of law and healthcare, including torts, antitrust, contracts, and intellectual property. They will then delve deeper into understanding major healthcare policies, such as Medicare Part D and the Affordable Care Act (ACA), to include the Supreme Court's landmark decision regarding the ACA. This is a robust course with significant independent work/research on the part of learners and should be taken after introductory and concentration courses.

**HC 4500 Operational Challenges in Global Health Management (4 Credits)**

This course presents challenges in operations that are unique to healthcare services and products being delivered in the international market. Topics include international marketing of services and healthcare products, negotiation styles, ethical considerations, organizational structure, transporting of medical goods and personnel, individual travel health and medical tourism as a business model. Cultural and religious considerations in healthcare delivery are discussed. Grants and research management for global health are compared with domestic procedures.

**HC 4510 Legal and Employment Issues in Global Health Management (4 Credits)**

This course presents legal considerations involved in conducting global programs and business related to healthcare services and products. Employment and labor law are discussed in relationship to employment across international lines and within foreign countries. Intellectual property, patent and copyright of healthcare products, curriculum, and programs are examined. Customs laws, foreign trade, and other regulations such as healthcare licensing and credentialing of personnel are developed. Human resource challenges such as remote team management are discussed.

**HC 4520 Global Health NGO Management (4 Credits)**

Students will examine factors that impact organizational performance in the global nonprofit health sector. Students explore current challenges associated with Non-Government Organizations (NGOs) that operate in low-income and middle-income countries. Examples include Doctors Without Borders, Shoulder to Shoulder, and others. Students are empowered to research and compare different NGOs and analyze factors that impact organizational effectiveness. Key challenges facing NGO leaders are analyzed and students provide recommendations to improve organizational performance. Course topics include assessment of NGO strategies, organizational resources and financing, and stakeholder relations. Other topics include analysis of countries' demographics, culture, healthcare delivery, policies, and external environment. It is recommended that students in the Global Health Program Management concentration or certificate complete HC4500 and HC4510 prior to registering for this course. Students in other concentrations or programs may take this course at any time as an elective.

**HC 4530 Regulatory Affairs in Global Health Management (4 Credits)**

This course discusses the various regulatory requirements of conducting healthcare related business from the perspective of research, development, and marketing of medical devices and pharmaceuticals. Both domestic and international requirements will be examined. Students will develop a template of skills for investigating healthcare related compliance issues that can be adapted to specific markets as needed.

**HC 4701 Topics in Healthcare Management (1-10 Credits)**

This is an advanced special topics seminar course. The focus is on specialized areas of interest. Topics courses may be used as electives within the Healthcare Leadership degree and certificates, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate programs.

**HC 4805 Virtual Care: Opportunities and Barriers for Health Systems (4 Credits)**

Leaders in telehealth and virtual care settings must learn to balance the needs of the individual with the needs of populations. Students will explore the factors that impact the success of telehealth and virtual care programming including barriers to care, the social determinants of health (SDOH), and the concerns of special populations. Students will develop the skills needed to create a telehealth and virtual care plan that takes into account health policy and regulatory compliance, best practices in population health, and the social context of the healthcare system.

**HC 4815 Analysis of Healthcare Environments for Virtual Care (4 Credits)**

This course will provide an in-depth exploration of virtual care and its impact on healthcare delivery. Students will learn about the various technologies and platforms used in virtual care, along with key issues and challenges involved in implementing and integrating virtual care into healthcare systems. They will assess different healthcare environments, legal and regulatory issues, impact on patients, and financial considerations surrounding virtual care, as well as the need for a virtual care solution. The course will cover topics such as telemedicine, remote patient monitoring, virtual reality, augmented reality, artificial intelligence, and data analytics.

**HC 4900 Experiential Learning in Healthcare (4 Credits)**

This course is for students who want to do independent research by completing an industry project and serves as a connector between research methods and a student's Capstone Project. The course will connect an academic research question with an experiential learning opportunity in healthcare for students as they prepare for their Capstone Project experience. Students will choose a Capstone Advisor, choose a topic, develop a thesis statement, explore project methodologies, write a proposal, and complete the necessary Institutional Review Board (IRB) requirements. Students will also agree to the structure and deliverables of their projects. There is an expectation for face to face (virtual is acceptable) meetings between students and their prospective Capstone Advisor during this course. This course is a prerequisite for any students planning to complete the Capstone Project (HC 4901) as it is the beginning of the Capstone Project process. Prerequisites: approval by Academic Director, acceptance as a degree candidate, and completion of between 30-40 quarter-hours. This course meets an elective option.

**HC 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**HC 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**HC 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**HC 4910 Research Practices and Applications (4 Credits)**

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

**HC 4915 Experiential Learning in Business (4 Credits)**

This course is for learners who want to increase their range of business skills and industry experience. As learners navigate ten modules, they will walk through reflection on specific activities related to professional business skills. These skills include items such as building a personal brand, creating value add, informational interviewing, negotiating, and system evaluation. This course will use virtual reality to ensure an equitable experience for remote students. At the culmination of this course, learners will have a basic set of professional business skills they can use throughout their careers.

**HC 4980 Internship (0-4 Credits)**

The Healthcare Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all Healthcare students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences.

**HC 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

**Courses****HC 4000 Healthcare Systems and Regulatory Environments (4 Credits)**

This course opens with a comprehensive overview of the functions of various types of healthcare organizations: providers, insurance companies, government agencies, and professional associations. Alternative payment and provider models are reviewed, regulatory bodies and issues are explored, and healthcare reform efforts and proposals are discussed. Supply and demand projections for personnel are examined. The work of key federal agencies (NIH, National Center for Disease Control, and Food and Drug Administration) is reviewed as well as the activity of national and international non-governmental organizations. Major national and global public health challenges are introduced.

**HC 4005 Healthcare Macroeconomics (4 Credits)**

This course focuses on macro analysis of the current financial state of healthcare in the United States. The relationships of value, quality, and price are analyzed. Transparency related to price and quality is considered. Fundamental items such as balance sheets/income statements, accounting vs. financial reporting, equity, cash flows, and debt financing are covered in detail. Payment and incentive models are considered in connection with employer-furnished benefits, private health insurance plans, Medicare and Medicaid. Current issues, such as pay for performance, shared savings, cost shifting, and healthcare for the aging, under and uninsured are discussed. Students will discuss variations in health policy related to payment and coverage systems.

**HC 4010 Healthcare Communication and Leadership (4 Credits)**

This course focuses on the welfare of patient, family, and community in the context of medical team communication and leadership. Models for communicating highly technical medical information with patients and others involved in their care are examined. Students weigh and assess differences in personal and organizational cultures to optimize patient-centered outcomes. Students acquire a sound body of knowledge and terminology to facilitate communication and leadership across a multitude of disciplines essential in the delivery of healthcare. NOTE: This course is strongly recommended within the first 3 terms of study.

**HC 4015 Healthcare Finance (4 Credits)**

This course gives students a skills-based grounding in the financial management in healthcare organizations operating in the United States. Students will gain a broad overview of the business of healthcare in the U.S., including interpretation of financial statements, budgeting, operational analysis, expense management issues, revenues, and payment systems used in the current U.S. healthcare system. The course will use a case-based approach where students will demonstrate mastery of financial management skills through application of knowledge to real-life scenarios from the industry.

**HC 4100 Management and Leadership in Healthcare (4 Credits)**

Healthcare systems are complex, dynamic, and multilayered. They require constant situational awareness to maintain safety, efficiency, compliance, relevance, and fiscal responsibility while supporting an increasingly diverse workforce. Managers and administrators must be able to create and lead effective teams to address constant change. In this course, students explore the functions required to lead and support healthcare systems, organizations, and practices. Students will simulate the role of healthcare managers and leaders by gaining an understanding of leadership approaches, analyzing the performance of a business unit and identifying opportunities for improvement, building teams, identifying and tracking key metrics, and creating solutions that contribute to an effective, efficient, and equitable work environment.

**HC 4110 Healthcare: Innovative Strategies and Change Management (4 Credits)**

Effective healthcare takes continual innovation to meet the ever-changing needs of the population. Through an examination of disruptions that create a catalyst for change, this course focuses on teaching students how innovative strategies can enable quality care and sustainability both within the healthcare delivery system and the health industry. Further, the drivers of innovation are explored from their use in grassroots efforts through regulatory reform through the lens of supply and demand. Finally, strategic planning for maximum use of financial resources to meet stakeholder expectations is ventured into in this course.

**HC 4130 Organizational Behavior in Healthcare (4 Credits)**

Customer and employee satisfaction elements of healthcare management are often a result of how well the entire healthcare system functions. Students examine successful and less successful examples of cooperation, compatibility, and dedication within the workplace and explore what contributes to a harmonious and effective healthcare environment. Interpersonal skills are discussed, as are ethical guidelines and laws that define acceptable workplace behavior.

**HC 4200 Comparative Healthcare Systems (4 Credits)**

This course describes variations in healthcare delivery systems locally, nationally, and globally as they relate to policy, structure, and finance. Comparisons of systems are made relative to expenditure of resources and outcomes. Students learn about healthcare coverage, access to care, healthcare rationing, provider manpower distribution, and seeking healthcare in foreign countries (medical tourism). The discrepancy between the desirable and the practical is explored, and students are asked to outline and defend a system that they believe is both desirable and practical.

**HC 4210 Quality Improvement for HC Leaders (4 Credits)**

This course provides an analysis of successful healthcare quality programs. Students will review the essential elements of a quality program and the national, state, and local laws and regulations that impact a quality program. The course explores the types of data and scientific methods that can be used to ensure the effectiveness and efficiency of a quality program. Students will get the opportunity to design a healthcare quality program for a healthcare setting of their choice. Course content is beneficial to all types of individuals who work in healthcare, from entry level to high-level manager, administrators, and clinicians.

**HC 4220 Ethical Considerations in Healthcare (4 Credits)**

This course provides a survey of important ethical considerations encountered in U.S. and global healthcare, past and present. It covers issues on which consensus has generally been reached, and some on which debate is currently active. Clinical, professional, and organizational scenarios will be examined, with an occasional glance toward public policy. Students will practice recognizing the elements of ethical problems and applying a "toolbox" of principles, theories, and concepts to understand them. Through readings, class discussions, and assignments, students will review noteworthy cases and policies. They will evaluate the merits of ethical arguments taking different forms. They will compare different frameworks for making ethical judgments and solving dilemmas that arise from competing value perspectives. This background is an essential foundation for practitioners and leaders in every role in a healthcare environment.

**HC 4225 Healthcare Public Policy and the Legislative Process (4 Credits)**

This course provides students an opportunity to transform a healthcare policy-related idea or problem into policy and legislation reform, change, or development. Students examine political and legislative procedures; the functions of government agencies; the influences of lobbyists, public hearings and testimonies; and advocacy efforts on these processes. Students objectively evaluate how policy changes occur at the federal and state levels and subsequently affect citizens from differing backgrounds and professionals in a variety of settings. As such, students explore the importance of developing relationships, communicating, and creating advocacy strategies with elected officials and various stakeholder groups that interact with the federal and state legislative processes.

**HC 4230 Implementation and Evaluation of Healthcare Public Policy (4 Credits)**

This course examines strategies for implementation and evaluation of healthcare public policy. Students develop skills in analyzing issues, considering and weighing pros and cons of proposed policy, and defending strategies for bringing about change. Beginning with the passage of a new law, policy, or regulation, students track the process to implement and evaluate new policy. Topics related to implementation of a new policy include funding the implementation, effect on constituents and the overall national economy, sustainability, and short- and long-term evaluation of the policy. At the conclusion of this course, students will prepare an implementation plan for selected recently passed state legislation. Students are strongly encouraged to complete HC 4000 prior to registering for this course.

**HC 4300 Health Equity and Justice (4 Credits)**

In this course, definitions and historical perspectives of health equity, health disparity, and social justice will be introduced. Students will learn to recognize the geographic, cultural, and social contexts, where health inequities occur. Through reflection and journaling, students will explore the concept of implicit bias. From this critical reflection, students will gain an understanding of the impact of bias on patient care and population health in the U.S. healthcare system. Issues of racial, ethnic, and gender status and their relationships to health disparities and inequities will be analyzed. Through course assignments, students will conceptualize interventions and design improvement projects aimed at making substantive positive changes toward health equity and justice.

**HC 4305 Healthy Aging: A Healthcare Imperative (4 Credits)**

As technology advances, the ability to healthcare to keep people alive increases, but not always in ways conducive to improving quality of life. It is the hope of healthcare providers that quality of life improves as well. However, there are many factors this piece of the puzzle challenging. In this course, the older adult population is examined both for the challenges they face and the effects of an increasing elder population on the healthcare delivery system. The course will focus on specific assessment of the impact of unhealthy lifestyles that create the co-morbidities, health disparities commonly seen in aging populations, and the improvements that can be made in health and technological illiteracy/accessibility on older adults. Extending this assessment, students create a cultural care model for end of life care. These explorations of older adulthood culminating in evaluating the underlying cultural issues that need to be addressed to improve population health and resiliency in meeting the challenges during the end of the life spectrum.

**HC 4400 Legal Dynamics of Healthcare Leadership (4 Credits)**

This course is a primer on the legal and compliance considerations associated with organization, payment, and administration of facilities and provider groups. Topics will include the corporate and contract law, Stark and anti-kickback law, licensure and credentialing, professional liability, professional review and patient safety, HIPAA and patient privacy, and other laws affecting healthcare providers and organizations.

**HC 4410 Legal Frameworks of the Healthcare Industry (4 Credits)**

This course reviews the recent history of healthcare reform in the United States beginning with the 2010 Affordable Care Act (ACA) and moving to health reform since the ACA. Students examine the influences and functions of Medicare and Medicaid as well as the Department of Health and Human Services' (HHS) role in shaping benefit coverage throughout the healthcare industry. Students will explore the importance of, and examine legal issues related to, public health and healthcare provided by entities within the Federal Government such as the Department of Veterans Affairs (VA), Department of Defense (DoD), and Indian Health Service (IHS). Students will objectively evaluate the legalities and ethical issues associated with clinical research as well as the Food and Drug Administration (FDA)'s involvement in the development of pharmaceutical agents and medical devices. The course concludes with students analyzing the future landscape of health reform and public sector influence in healthcare.

**HC 4420 Legal Fundamentals of Revenue in Healthcare (4 Credits)**

This course provides an understanding of the legal complexities of creating and managing delivery and payment models for healthcare services. Course content revolves around the current challenges of evolving from volume-based to value-based payment principles. Topics will include fraud and abuse and compliance, legal foundations of private and public payment systems, fee for service, managed care, value-based systems, and a review of current healthcare payment reform efforts. The course wraps up with the role of clinical health information and related data systems in healthcare delivery and payment.

**HC 4430 Significant Healthcare Policy and Law (4 Credits)**

This course provides a foundational overview of healthcare law and the sources of law, as well as the distinction between healthcare law and policy. Throughout the course, learners will examine major federal healthcare laws and policies and understand their relationship with stakeholders such as patients, providers, payers, lobbyists, and public health, all through a health equity lens. Learners will examine the intersection of traditional areas of law and healthcare, including torts, antitrust, contracts, and intellectual property. They will then delve deeper into understanding major healthcare policies, such as Medicare Part D and the Affordable Care Act (ACA), to include the Supreme Court's landmark decision regarding the ACA. This is a robust course with significant independent work/research on the part of learners and should be taken after introductory and concentration courses.

**HC 4500 Operational Challenges in Global Health Management (4 Credits)**

This course presents challenges in operations that are unique to healthcare services and products being delivered in the international market. Topics include international marketing of services and healthcare products, negotiation styles, ethical considerations, organizational structure, transporting of medical goods and personnel, individual travel health and medical tourism as a business model. Cultural and religious considerations in healthcare delivery are discussed. Grants and research management for global health are compared with domestic procedures.

**HC 4510 Legal and Employment Issues in Global Health Management (4 Credits)**

This course presents legal considerations involved in conducting global programs and business related to healthcare services and products. Employment and labor law are discussed in relationship to employment across international lines and within foreign countries. Intellectual property, patent and copyright of healthcare products, curriculum, and programs are examined. Customs laws, foreign trade, and other regulations such as healthcare licensing and credentialing of personnel are developed. Human resource challenges such as remote team management are discussed.

**HC 4520 Global Health NGO Management (4 Credits)**

Students will examine factors that impact organizational performance in the global nonprofit health sector. Students explore current challenges associated with Non-Government Organizations (NGOs) that operate in low-income and middle-income countries. Examples include Doctors Without Borders, Shoulder to Shoulder, and others. Students are empowered to research and compare different NGOs and analyze factors that impact organizational effectiveness. Key challenges facing NGO leaders are analyzed and students provide recommendations to improve organizational performance. Course topics include assessment of NGO strategies, organizational resources and financing, and stakeholder relations. Other topics include analysis of countries' demographics, culture, healthcare delivery, policies, and external environment. It is recommended that students in the Global Health Program Management concentration or certificate complete HC4500 and HC4510 prior to registering for this course. Students in other concentrations or programs may take this course at any time as an elective.

**HC 4530 Regulatory Affairs in Global Health Management (4 Credits)**

This course discusses the various regulatory requirements of conducting healthcare related business from the perspective of research, development, and marketing of medical devices and pharmaceuticals. Both domestic and international requirements will be examined. Students will develop a template of skills for investigating healthcare related compliance issues that can be adapted to specific markets as needed.

**HC 4701 Topics in Healthcare Management (1-10 Credits)**

This is an advanced special topics seminar course. The focus is on specialized areas of interest. Topics courses may be used as electives within the Healthcare Leadership degree and certificates, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate programs.

**HC 4805 Virtual Care: Opportunities and Barriers for Health Systems (4 Credits)**

Leaders in telehealth and virtual care settings must learn to balance the needs of the individual with the needs of populations. Students will explore the factors that impact the success of telehealth and virtual care programming including barriers to care, the social determinants of health (SDOH), and the concerns of special populations. Students will develop the skills needed to create a telehealth and virtual care plan that takes into account health policy and regulatory compliance, best practices in population health, and the social context of the healthcare system.

**HC 4815 Analysis of Healthcare Environments for Virtual Care (4 Credits)**

This course will provide an in-depth exploration of virtual care and its impact on healthcare delivery. Students will learn about the various technologies and platforms used in virtual care, along with key issues and challenges involved in implementing and integrating virtual care into healthcare systems. They will assess different healthcare environments, legal and regulatory issues, impact on patients, and financial considerations surrounding virtual care, as well as the need for a virtual care solution. The course will cover topics such as telemedicine, remote patient monitoring, virtual reality, augmented reality, artificial intelligence, and data analytics.

**HC 4900 Experiential Learning in Healthcare (4 Credits)**

This course is for students who want to do independent research by completing an industry project and serves as a connector between research methods and a student's Capstone Project. The course will connect an academic research question with an experiential learning opportunity in healthcare for students as they prepare for their Capstone Project experience. Students will choose a Capstone Advisor, choose a topic, develop a thesis statement, explore project methodologies, write a proposal, and complete the necessary Institutional Review Board (IRB) requirements. Students will also agree to the structure and deliverables of their projects. There is an expectation for face to face (virtual is acceptable) meetings between students and their prospective Capstone Advisor during this course. This course is a prerequisite for any students planning to complete the Capstone Project (HC 4901) as it is the beginning of the Capstone Project process. Prerequisites: approval by Academic Director, acceptance as a degree candidate, and completion of between 30-40 quarter-hours. This course meets an elective option.

**HC 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**HC 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**HC 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**HC 4910 Research Practices and Applications (4 Credits)**

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

**HC 4915 Experiential Learning in Business (4 Credits)**

This course is for learners who want to increase their range of business skills and industry experience. As learners navigate ten modules, they will walk through reflection on specific activities related to professional business skills. These skills include items such as building a personal brand, creating value add, informational interviewing, negotiating, and system evaluation. This course will use virtual reality to ensure an equitable experience for remote students. At the culmination of this course, learners will have a basic set of professional business skills they can use throughout their careers.

**HC 4980 Internship (0-4 Credits)**

The Healthcare Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all Healthcare students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences.

**HC 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

## Information Technology

Office: University College Student Support Center

Mail Code: 2211 S. Josephine St., Denver, CO 80208

Phone: 303-871-2291, 800-347-2042

Email: [ucol-support@du.edu](mailto:ucol-support@du.edu)

Web Site: [www.universitycollege.du.edu](http://www.universitycollege.du.edu) (<http://www.universitycollege.du.edu>)

A successful career in the Information Technology (IT) industry requires more than just technical expertise; it also requires an integrated understanding of the industry as a whole and its practices, technologies, challenges, and trends. Additionally, given the industry's dynamic nature, successful IT professionals must be flexible and committed to continuous learning. The combination of continuous learning, flexibility, and knowledge and skills are traits employers seek when making hiring decisions in the IT industry. The IT program is designed to give the student a broad understanding of the IT industry and help develop the knowledge and skills needed across the industry, including "professional skills" such as communication, organization, critical thinking, problem solving, leadership and teamwork. The IT program also provides in-depth knowledge in concentration areas including AI Strategy and Application in IT, Cybersecurity Management, Database Design and Administration, Geographic Information Systems, Information Systems Security, Project Management, Software Design and Programming, Technology Management, and Web Design and Development.

This program prepares students to:

- Demonstrate effective oral, written, and non-verbal communication techniques appropriate to the context and audience in order to effect change
- Apply relevant program theory and principles to formulate clear, evidence-based arguments
- Collaborate appropriately with stakeholders regarding the selection, development, and management of technical solutions to meet business requirements
- Assess the key socioeconomic drivers, technical trends, and ethical concerns that shape global innovation, markets, and competition for technical resources to recommend appropriate strategies aligned with organizational goals
- Employ best practices in the evaluation, definition, architecture, design, development, implementation, and management of technical systems, projects, and solutions to meet industry demands

- Synthesize knowledge of diverse areas of technology that form an interrelated system of infrastructure, applications, data, and management practices to influence the future of information technology

## **Master of Science in Information Technology with a Concentration in AI Strategy and Application in IT**

This master's degree concentration is designed for IT professionals and leaders seeking to leverage AI effectively and responsibly for application in industry. This program focuses on providing a working knowledge of AI's capabilities, limitations, and ethical considerations, alongside practical skills for developing AI-driven solutions. It aims to prepare leaders and decision-makers to ethically harness AI strategically to meet organizational goals and adapt to the evolving AI landscape.

This program prepares students to:

- Apply a working knowledge of AI capabilities, limitations, and practical applications in order to develop strategies and adapt to a changing AI environment.
- Evaluate ethical, policy, and governance considerations in order to influence ethically responsible AI practices.
- Analyze the strategic potential of various AI tools and solutions to accomplish organizational goals.
- Develop technical solutions through the application of AI competencies.

## **Master of Science in Information Technology with a Concentration in Cybersecurity Management**

The Cybersecurity Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A master's degree concentration Cybersecurity Management from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Information Technology (IT) security.

The Cybersecurity Management concentration is designed to equip students with knowledge of industry best practices and management skills demanded by private and public sector employers in today's rapidly evolving cybersecurity industry. Through hands-on interaction with a set of relevant industry case studies, students will gain knowledge of management tools and principles needed to define, establish, and grow effective and mature cybersecurity management programs for a wide range of organizations. Through experiential learning activities, students will gain an understanding of governance, compliance, regulatory, and business operations domains. These experiences will be enhanced with knowledge of policy and risk management frameworks most relevant to the cybersecurity management profession. The curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)<sup>2</sup> and supports the National Initiative for Cybersecurity Education (NICE) framework.

Students will be prepared to serve in a range of cybersecurity management and leadership roles to continuously strengthen security postures in a fluid environment of constantly changing human, machine, and state actor threats.

This degree prepares students to:

- Analyze methods to develop and implement cybersecurity management policies and procedures to meet organizational needs based on best practices
- Evaluate methods for the development and delivery of cybersecurity training and education at the institutional level
- Plan cybersecurity management oversight and governance through development of strategic cybersecurity policies and plans
- Examine best practices for communicating cybersecurity management issues with Boards of Director and other management leadership teams
- Evaluate methods for performing cybersecurity audits and documenting audit responses

## **Master of Science in Information Technology with a Concentration in Database Design and Administration**

The Database Design and Administration master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults who are current or aspiring database designers and administrators. Students will learn how to design, administer, fine-tune, and maintain databases with a database administration degree, plus develop business acumen that will help them excel in the Information Technology (IT) field. Master's degree students learn from expert instructors who work in the fields in which they teach, providing cutting-edge insight to what is needed to work efficiently and effectively in this sector of IT.

The combination of required and elective courses in the master's degree program covers common database management systems (DBMS) such as SQL Server and Oracle. The program encompasses key database technologies such as PL/SQL, Transact-SQL, and NoSQL databases. This comprehensive content delivered in a hands-on manner provides both the knowledge and the specific skills needed to put the student on the path to earn key industry certifications for vendor database platforms.

This degree prepares students to:

- Analyze, design, develop, test, deploy, administer and maintain database applications and database security based on industry best practices and end-user requirements
- Apply data modeling, data warehousing, performance tuning, programming and maintenance through technologies such as SQL Server, Oracle, PL/SQL Transact-SQL, and NoSQL

- Create plans to solve organizational issues using business management strategies directly related to database administration theories and applications
- Formulate plans for database installation and configuration, maintenance, and backup and recovery

## Master of Science in Information Technology with a Concentration in Geographic Information Systems

The Geographic Information Systems (GIS) master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. GIS training prepares students to apply geographic information systems technology to solve real-world problems, whether determining the best location for a new store, analyzing environmental damage, or detecting crime patterns in a city. GIS solutions provide the capability to store, retrieve, and analyze spatial information by combining layers of data to yield valuable understanding of a locale.

As a current or aspiring GIS professional, you will receive applied instruction from professional practitioners who work in the fields in which they teach as you learn to plan, implement, and execute a GIS project through remote sensing, internet mapping, or digital image processing. Also, you will develop a valuable business background with creative, solution-oriented techniques through this versatile program, which emphasizes applied education that will propel your GIS career forward. Students will explore GIS fundamentals at a very hands-on, practical level necessary to succeed in the field of GIS.

This degree prepares students to:

- Analyze the nature of, uses for, and implementation processes for geographic data
- Select appropriate applications of GIS technology to solve spatial problems based on organizational/client needs
- Solve real-world problems through analysis and selection of appropriate GIS tools and processes to address the issues

## Master of Science in Information Technology with a Concentration in Information Systems Security

The Information Systems Security master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A master's degree concentration in Information Systems Security from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Information Technology (IT) security.

Master's degree students receive applied instruction as they learn to navigate real-world security challenges, such as setting up a secure network, securing servers, and problem-solving hypothetical security situations. Students also garner career-relevant knowledge on related IT subjects to better relate the challenges of the rapidly evolving world of information security and cyber threats to other key trends in the IT industry. To ensure up-to-the-minute knowledge and skills, the curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)<sup>2</sup>. In addition, the program was developed in collaboration with the Colorado Springs and Denver chapters of the Information Security Systems Association (ISSA), and the courses have been mapped to the Committee on National Security Systems (CNSS) standards. The University of Denver has been designated by NSA/DHS as a National Center of Academic Excellence in Cyber Defense Education.

This degree prepares students to:

- Develop and implement technical information security tools, policies and procedures to meet organizational needs based on best practices
- Analyze security scenarios to design secure network solutions and applications
- Create strategies to establish secure operations, access control methods, and system security to meet organizational/client requirements
- Evaluate encryption standards and solutions
- Conduct computer forensics analysis

## Master of Science in Information Technology with a Concentration in Project Management

The Project Management master's degree specialty through the Information Technology (IT) program is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will combine information and communication technology skills with a project management and business background and become a proficient leader within the IT field.

Students will receive hands-on, practical instruction from professional practitioners, who work in the fields in which they teach, on the tools and techniques of effective project management. Students will learn how to develop a clear plan that places a project in the context of an organization's strategic plan, while considering the implications information and communication technologies present in any given project.

Graduates of the Project Management program will gain a firm grasp on converging information and communication technologies and learn to understand the fundamentals of each sector. Recognizing how each IT subject connects to one another, from information security systems to geographic information systems, will give students the competitive edge needed in this dynamic industry. The content for this concentration has been developed to align with the current edition of the Project Management Institute's (PMI)<sup>®</sup> A Guide to the Project Management Body of Knowledge, (PMBOK<sup>®</sup> Guide), Project Management Institute, Inc. The unique curriculum equips students with the information and skills needed for the PMI<sup>®</sup> Project Management Professional (PMP)<sup>®</sup> Certification Exam.

This degree prepares students to:

- Apply the basic principles of project management to become proficient in the use of project management software
- Demonstrate the use of agile concepts and techniques to deliver complex projects
- Design a comprehensive risk management plan for a project
- Create strategies to manage the complexity inherent in large-scale projects
- Relate project scope to cost, time, and resource requirements
- Develop procurement plans and assess project contracts

## **Master of Science in Information Technology with a Concentration in Software Design and Programming**

The Software Design and Programming master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will expand their knowledge of software design and programming principles while developing the in-depth skills needed to succeed in the field with a Software Design and Programming master's degree. Current or aspiring programmers will practice both structured and object-oriented methodologies focusing on industry best practices. Students are able to select from a variety of elective courses that best meet their specific Information Technology (IT) career goals.

Students learn how to develop software programs and applications using modern programming languages, current development frameworks, and Software Quality Assurance (SQA) practices. Students learn to select software solution design methodologies that meet requirements such as scalability, reliability, and implementation. With guidance from expert instructors, students learn and apply problem-solving skills while designing and programming software solutions.

This degree prepares students to:

- Design software solutions using best practices in security, Software Quality Assurance (SQA), and current development frameworks
- Apply both structured and object-oriented design methodologies to create robust, reusable software using modern programming languages
- Assess the role of frameworks in software design and development to lay the groundwork for full-stack development
- Examine distributed computing concepts relating to cloud computing—such as scalability, reliability, virtualization, implementation, and deployment—in order to make informed software development decisions

## **Master of Science in Information Technology with a Concentration in Technology Management**

The Technology Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The Technology Management degree concentration represents the convergence of business and technology and emphasizes the impact technology can have on strategic and operational objectives when applied through sound business management practices. With the right technical skills, combined with a strategic perspective regarding critical business needs, students will be prepared to meet current industry demands, and positioned to meet the demands of tomorrow.

Graduates with a Technology Management master's degree concentration or graduate certificate become proficient in creating, managing, and using technology to accomplish strategic organizational goals as they expand and strengthen their knowledge and skills in creative thinking, strategic and tactical decision making, and global awareness. In addition to the practical education received online or on campus, Technology Management master's degree students will also receive a broader understanding of how related IT sectors impact their technology management roles.

This degree prepares students to:

- Formulate plans to manage technologies for strategic advantage
- Develop and evaluate business cases based on organizational and client requirements
- Assess the role of strategic alliances within an organization
- Summarize project management principles and processes in relation to technology management strategies
- Create and defend IT service assurance plans
- Analyze cloud and internet law across various IT scenarios
- Evaluate strategies and utilize best practices in technology forecasting and innovation

## **Master of Science in Information Technology with a Concentration in Web Design and Development**

The Web Design and Development master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The program provides an in-depth knowledge of web design and web development through hands-on instruction. Students will move beyond the development of first-generation HTML-based Web pages and learn to create interactive, state-of-the-art, web-based applications. Using a variety of essential software tools students will develop projects that support the demands of contemporary business models. The real-world development scenarios, coupled with the hands-on learning experience provided by professional practitioners who work in the fields in which they teach, result in a highly career-relevant, innovative degree in web design and development. In addition to IT fundamentals, students will also develop essential business and problem-solving skills that will help them thrive in any organization.

In an increasingly technological world, it is vital to understand the fundamentals of other areas of the Information Technology (IT) field, and how each converges with web design and web development.

This degree prepares students to:

- Create interactive web-based applications for e-business processes and consumer demands using tools such as cascading style sheets, web graphics construction, interface design and usability, web scripting, and databases
- Create requirements for user experience design by applying UX principles such as user personas, information design, wireframing, and prototyping
- Analyze enterprise goals to apply information architecture and web-design foundational principles for the development of client-server and cloud-based solutions
- Develop solutions for web, app, and mobile scenarios using the latest versions of JavaScript, HTML, CSS, XML, PHP, and Python
- Assess how web design and development converges within the context of security, software, database design, and telecommunications

### **Graduate Certificate in Information Technology with a Concentration in AI Strategy and Application in IT**

This certificate is designed for IT professionals and leaders seeking to leverage AI effectively and responsibly for application in industry. This program focuses on providing a working knowledge of AI's capabilities, limitations, and ethical considerations, alongside practical skills for developing AI-driven solutions. It aims to prepare leaders and decision-makers to ethically harness AI strategically to meet organizational goals and adapt to the evolving AI landscape.

### **Graduate Certificate in Information Technology with a Concentration in Cybersecurity Management**

The graduate certificate in Cybersecurity Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A graduate certificate in Cybersecurity Management from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Cybersecurity Management.

Certificate classes at University College are designed to equip students with knowledge of industry best practices and management skills demanded by private and public sector employers in today's rapidly evolving cybersecurity industry. Through hands-on interaction with a set of relevant industry case studies, students will gain knowledge of management tools and principles needed to define, establish, and grow effective and mature cybersecurity management programs for a wide range of organizations. Through experiential learning activities, students will gain an understanding of governance, compliance, regulatory, and business operations domains. These experiences will be enhanced with knowledge of policy and risk management frameworks most relevant to the cybersecurity management profession. The curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)<sup>2</sup> and supports the National Initiative for Cybersecurity Education (NICE) framework.

### **Graduate Certificate in Information Technology with a Concentration in Database Design and Administration**

The graduate certificate in Database Design and Administration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults who are current or aspiring database designers and administrators. Certificate students will expand their skillsets to include designing, administering, fine-tuning, and maintaining databases with a graduate certificate in database design and administration concentration. Expert instructors who work in the fields in which they teach provide excellent insight to what is needed to work efficiently and effectively in this sector of IT.

This certificate prepares students to become leaders in database design, development, and administration while expanding their skillsets to include data modeling, data warehousing, performance tuning, programming, and building and maintaining client-server databases. The combination of required and elective courses in the master's degree program covers common database management systems (DBMS) such as SQL Server and Oracle. The program encompasses key database technologies such as PL/SQL, Transact-SQL programming, and NoSQL databases. This comprehensive content delivered in a hands-on manner provides both the knowledge and the specific skills needed to put the student on the path to earn key industry certifications for vendor database platforms.

Students will also gain additional skills and knowledge in database design and administration through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in Information Technology.

### **Graduate Certificate in Information Technology with a Concentration in Information Systems Security**

The graduate certificate in Information Systems Security is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A graduate certificate in Information Systems Security from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Information Technology (IT) security.

Certificate classes at University College use innovative lab experiences to provide hands-on expertise with industry-current security tools. Students also garner career-relevant knowledge on related IT subjects to better relate the challenges of the rapidly evolving world of cyber security and cyber threats to other key trends in the IT industry. To ensure up-to-the-minute knowledge and skills, the curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)<sup>2</sup>. In addition, the program was developed in collaboration with the Colorado Springs and Denver chapters of the Information Security Systems Association (ISSA),

and the courses have been mapped to the Committee on National Security Systems (CNSS) standards. The University of Denver has been designated by NSA/DHS as a National Center of Academic Excellence in Cyber Defense Education. Credits earned through this graduate certificate may apply toward a master's degree in Information Technology.

### **Graduate Certificate in Information Technology with a Concentration in Project Management**

The graduate certificate in Project Management through the Information Technology program is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will learn to combine information technology skills with a project management and business background and become a proficient leader within the Information Technology (IT) field. Students will receive hands-on, practical instruction from professional practitioners who work in the fields in which they teach on the tools and techniques of effective project management. Additionally, students will learn how to develop a clear plan that places a project in the context of an organization's strategic plan, while considering the implications information and communication technologies present in any given project. Students will also gain additional skills and knowledge in project management through elective coursework.

Project Management concentration students will learn about converging information and communication technologies and the fundamentals of each sector. Recognizing how each IT subject connects to one another, from information security systems to geographic information systems, will give students the competitive edge needed in this dynamic industry. The content for this graduate certificate has been developed to align with the current edition of the Project Management Institute's (PMI)® A Guide to the Project Management Body of Knowledge, (PMBOK® Guide), Project Management Institute, Inc. The unique curriculum equips students with the information and skills needed for the PMI® Project Management Professional (PMP)® Certification Exam. Credits earned through this graduate certificate may apply toward a master's degree in the Information Technology program.

### **Graduate Certificate in Information Technology with a Concentration in Software Design and Programming**

The Software Design and Programming graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will expand their knowledge of software design and programming principles while developing the in-depth skills needed to succeed in the field with a Software Design and Programming certificate. Current or aspiring programmers will practice both structured and object-oriented methodologies focusing on industry best practices. Students are able to select from a variety of elective courses that best meet their specific Information Technology (IT) career goals.

Certificate students learn how to develop software programs and applications using modern programming languages, current development frameworks, and Software Quality Assurance (SQA) practices. Students learn to select software solution design methodologies that meet requirements such as scalability, reliability, and implementation. With guidance from expert instructors, students learn and apply problem-solving skills while designing and programming software solutions.

### **Graduate Certificate in Information Technology with a Concentration in Technology Management**

The graduate certificate in Technology Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will learn how the convergence of business and technology impacts the strategic and operational objectives. Students will gain the right technical skills, combined with a strategic perspective regarding critical business needs, as they are prepared to meet current industry demands, and positioned to meet the demands of tomorrow.

The Technology Management concentration allows students to become proficient in creating, managing, and using technology to accomplish strategic organizational goals as they expand and strengthen their knowledge and skills in creative thinking, strategic and tactical decision making, and global awareness. This applied Technology Management certificate offers professionals an opportunity to receive applied instruction from professional practitioners who bring deep expertise in business management strategies and their technological implications. Students will also gain additional skills and knowledge in technology management through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in the Information Technology program.

### **Graduate Certificate in Information Technology with a Concentration in Web Design and Development**

The Web Design and Development graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The certificate program provides an in-depth knowledge of web design and web development through hands-on instruction. Students will move beyond the development of first-generation HTML-based Web pages and learn to create interactive, state-of-the-art, web-based applications. Using a variety of essential software tools students will develop projects that support the demands of contemporary business models. The real-world development scenarios, coupled with the hands-on learning experience provided by professional practitioners who work in the fields in which they teach, result in a highly career-relevant, innovative graduate certificate in web design and development. In addition to IT fundamentals, students will also develop essential business and problem-solving skills that will help them thrive in any organization. In an increasingly technological world, it is vital to understand the fundamentals of other areas of the Information Technology (IT) field, and how each converges with web design and web development.

Credits earned through this graduate certificate may apply toward a master's degree in the Information Technology program.

### **Specialized Graduate Certificate in AI Strategy and Application in IT**

This specialized graduate certificate is designed for IT professionals and leaders seeking to leverage AI effectively and responsibly for application in industry. This program focuses on providing a working knowledge of AI's capabilities, limitations, and ethical considerations, alongside practical skills

for developing AI-driven solutions. It aims to prepare leaders and decision-makers to ethically harness AI strategically to meet organizational goals and adapt to the evolving AI landscape.

### **Specialized Graduate Certificate in Cybersecurity Management**

A specialized graduate certificate in Cybersecurity Management from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Cybersecurity Management.

Certificate classes at University College are designed to equip students with knowledge of industry best practices and management skills demanded by private and public sector employers in today's rapidly evolving cybersecurity industry. Through hands-on interaction with a set of relevant industry case studies, students will gain knowledge of management tools and principles needed to define, establish, and grow effective and mature cybersecurity management programs for a wide range of organizations. Through experiential learning activities, students will gain an understanding of governance, compliance, regulatory, and business operations domains. These experiences will be enhanced with knowledge of policy and risk management frameworks most relevant to the cybersecurity management profession. The curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)<sup>2</sup> and supports the National Initiative for Cybersecurity Education (NICE) framework.

### **Specialized Graduate Certificate in Database Design and Administration**

Students in this specialized graduate certificate will expand their skillsets to include designing, administering, fine-tuning, and maintaining databases with a graduate certificate in database design and administration concentration. Expert instructors who work in the fields in which they teach provide excellent insight to what is needed to work efficiently and effectively in this sector of IT.

This certificate prepares students to become leaders in database design, development, and administration while expanding their skillsets to include data modeling, data warehousing, performance tuning, programming, and building and maintaining client-server databases. The combination of required and elective courses covers key database system (DBS) technologies such as SQL Server, Oracle PL/SQL, Transact-SQL programming, and NoSQL databases. This extensive content delivered in a hands-on manner provides both the knowledge and the specific skills needed to put the student on the path to earn key industry certifications for vendor database platforms. Credits earned through this certificate may apply toward a master's degree in Information Technology.

### **Specialized Graduate Certificate in Information Systems Security**

A specialized graduate certificate in Information Systems Security from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in IT security.

Certificate classes at University College use innovative lab experiences to provide hands-on expertise with industry-current security tools. Students also garner career-relevant knowledge on related IT subjects to better relate the challenges of the rapidly evolving world of cyber security and cyber threats to other key trends in the IT industry. To ensure up-to-the-minute knowledge and skills, the curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)<sup>2</sup>. In addition, the program was developed in collaboration with the Colorado Springs and Denver chapters of the Information Security Systems Association (ISSA), and the courses have been mapped to the Committee on National Security Systems (CNSS) standards. The University of Denver has been designated by NSA/DHS as a National Center of Academic Excellence in Cyber Defense Education. Credits earned through this certificate may apply toward a master's degree in Information Technology.

### **Specialized Graduate Certificate in Project Management**

Students in the specialized graduate certificate in Project Management will learn to combine information and communication technology skills with a project management and business background and become a proficient leader within the Information Technology (IT) field. Students will receive hands-on, practical instruction from professional practitioners who work in the fields in which they teach on the tools and techniques of effective project management. Additionally, students will learn how to develop a clear plan that places a project in the context of an organization's strategic plan, while considering the implications information and communication technologies present in any given project.

Students will learn about converging information and communication technologies and the fundamentals of each sector. Recognizing how each IT subject connects to one another, from information security systems to geographic information systems, will give students the competitive edge needed in this dynamic industry. The content for this graduate certificate has been developed to align with the current edition of the Project Management Institute's (PMI)<sup>®</sup> A Guide to the Project Management Body of Knowledge, (PMBOK<sup>®</sup> Guide), Project Management Institute, Inc. The unique curriculum equips students with the information and skills needed for the PMI<sup>®</sup> Project Management Professional (PMP)<sup>®</sup> Certification Exam. Credits earned through this certificate may apply toward a master's degree in the Information Technology program.

### **Specialized Graduate Certificate in Software Design and Programming**

Students in the Software Design and Programming specialized graduate certificate will expand their knowledge of software design and programming principles while developing the in-depth skills needed to succeed in the field with a Software Design and Programming certificate. Current or aspiring programmers will practice both structured and object-oriented methodologies focusing on industry best practices. Students are able to select from a variety of elective courses that best meet their specific Information Technology (IT) career goals.

Certificate students learn how to develop software programs and applications using modern programming languages, Software Development Life Cycle (SDLC) frameworks, and Software Quality Assurance (SQA) practices. Students learn to select software solution design methodologies that meet requirements such as scalability, reliability, and implementation. With guidance from expert instructors, students learn and apply problem-solving skills while designing and programming software solutions.

## Specialized Graduate Certificate in Technology Management

Students in the specialized graduate certificate in Technology Management will learn how the convergence of business and technology impacts the strategic and operational objectives. Students will gain the right technical skills, combined with a strategic perspective regarding critical business needs, as they are prepared to meet current industry demands, and positioned to meet the demands of tomorrow.

The Technology Management certificate allows students to become proficient in creating, managing, and using technology to accomplish strategic organizational goals as they expand and strengthen their knowledge and skills in creative thinking, strategic and tactical decision making, and global awareness. This applied Technology Management certificate offers professionals an opportunity to receive applied instruction from professional practitioners who bring deep expertise in business management strategies and their technological implications. Credits earned through this certificate may apply toward a master's degree in the Information Technology program.

## Specialized Graduate Certificate in Web Design and Development

Students in the Web Design and Development specialized graduate certificate gain in-depth knowledge of web design and web development through hands-on instruction. Students will move beyond the development of first-generation HTML-based Web pages and learn to create interactive, state-of-the-art, web-based applications. Using a variety of essential software tools students will develop projects that support the demands of contemporary business models. The real-world development scenarios, coupled with the hands-on learning experience provided by professional practitioners who work in the fields in which they teach, result in a highly career-relevant, innovative certificate in web design and development. In addition to IT fundamentals, students will also develop essential business and problem-solving skills that will help them thrive in any organization. In an increasingly technological world, it is vital to understand the fundamentals of other areas of the Information Technology (IT) field, and how each converges with web design and web development.

Credits earned through this graduate certificate may apply toward a master's degree in the Information Technology program.

## Master's Degree Admission

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.

---

#### ICT 4000 Business Essentials for Technology Leaders (4 Credits)

In this course, students will explore the essential attributes of business research and analysis in the Information Technology (IT) field to make appropriate business decisions. Students will individually and in teams explore the economic principles that drive the IT industry. This course sets the foundation for research, analysis, and critical thinking that will be encountered and required throughout the program. As such, a major component of this course is writing research papers on various topics including economic and technical drivers and challenges, IT economic principles, and the regulatory framework. Additionally, students will participate in collaborative teams as they consider industry trends and customer/user needs during the development process to create a product or service proposal and business case. Lastly, students will have the opportunity to evaluate and utilize management and process tools which will guide class discussions as well as critical thinking and analyses in a structured format. The applicability of these tools extends beyond this course and into the operation and management of an IT organization.

**ICT 4001 Technology Leadership (4 Credits)**

This course is designed to give technology students a broader perspective on technology in organizations. The content will focus on bringing students a new set of skills that will enable them to evaluate what it means to be a technology leader. Students will explore how an IT organization establishes a technology vision and strategy and will develop skills such as communicating effectively, building and managing technology teams, managing risk, and technology budgeting. At the end of the ten weeks, students will demonstrate their technology leadership abilities in an executive presentation.

**ICT 4005 Technical Essentials (4 Credits)**

In this course, students will examine the essential technologies that comprise the field of Information Technology (IT). Students will explore each technical discipline as groundwork for pursuing a specialized discipline while also gaining an understanding of how the disciplines work together. A major component of this course is conducting research and writing analyses of the various technical topics that drive the IT industry. This course sets the foundation for technical research, analysis, and critical thinking that will be encountered and required throughout the IT program.

**ICT 4007 Creative Problem Solving and Programming Concepts (4 Credits)**

In this course students will develop, or improve upon, their problem-solving skills to analyze problems and create solutions. Students will document their solutions and translate them into running programs written in the enormously popular Python programming language. Students will learn programming concepts including the use of variables, program input and output, flow control, conditionals, interpreter- and code-file-based approaches, and error testing. Students will learn how to set up Integrated Development Environments (IDE) such as Visual Studio Code on their personal computers and/or utilize a Cloud IDE in which they will write programs.

**ICT 4010 Enterprise Architecture (4 Credits)**

In this course, students will learn how to integrate IT to effectively support business goals. The course examines how enterprise architecture (EA) informs business and technology strategy. The course will explore the basics of EA, such as reference architectures, architecture patterns, and a comparison of EA and other architecture types. Students will also examine the opportunities and limitations of various EA frameworks and will apply the methods and tools of one of those frameworks, TOGAF, to design and document an EA initiative. Additionally, the EA implications of IT related topics such as cloud computing, global regulatory compliance, data protection, artificial intelligence, and IT ecosystems will be explored. Prerequisite: Recommended ICT 4000, ICT 4005.

**ICT 4015 Managing Technology for Strategic Value (4 Credits)**

Technology's impact on business organizations is tremendous, and will likely only intensify in the future. While some businesses still view technology as an expense to the bottom line, other organizations use technology to gain a competitive advantage. Considering the impact of technology on smaller or startup companies as well as large corporations, this course will explore concepts, tools and frameworks to understand how technology can be used to inform business strategy. Students will apply current methodologies to case studies and projects to gain insight into business and digital transformation. Topics include digital future, business organization framework, technology financial management, data proliferation, technology risk management, disruptive innovations, and performance measurement. Prerequisite: Recommended ICT 4000.

**ICT 4020 Business Forecasting and Planning (4 Credits)**

This course includes a wide diversity of skills required in one's professional career. Topics include the importance of accurate planning and scheduling for successful projects, risk/opportunity analysis, resource planning and allocation, building budgets, revenue forecasting, profit and loss statements, balance sheet analysis, the importance of managing customer perceptions and expectations, and the impact of economic issues on project success. Students will develop business analyses, including budgets and business plans, for several increasingly difficult scenarios addressing a range of technology applications and services. The final case study will culminate in a presentation to be given to potential investors, banks, or venture capitalists to secure a commitment for funding for a simulated telecom project. Recommended prerequisite: ICT 4000.

**ICT 4025 Managing the Innovation Process (4 Credits)**

Students will experience innovation management by developing a new product from ideation to adoption. Students will craft compelling product visions, create innovative cultures, and align teams to their innovation strategy. They will develop a product roadmap and a team that can not only deliver the product, but support its ongoing operations in the market. Students will practice setting strategic objectives for the new product, and explore regulatory, licensing, and pricing concepts – and then bring that information together in a product forecast that helps an enterprise understand product performance from awareness to adoption. All of these elements come together as the project's new product introduction plan, delivered in the final presentation. Required Prerequisite: ICT 4000.

**ICT 4100 Principles of Project Management (4 Credits)**

This course will provide students with practical knowledge, tools, and techniques to become an effective project manager and work successfully within a project team. Students will learn real-world application of foundational concepts and develop skills such as stakeholder management, balancing competing constraints, delivery of value, navigating risks and ambiguity, building and running a high-performance project team, defining scope, managing change, and productive communication strategies. Students will practice classroom concepts through hands-on exercises individually and in teams.

**ICT 4105 Project Contracts and Procurement (4 Credits)**

This course is designed to provide students with leadership and practical skills in project contracts and procurement. The course covers current trends in the procurement marketplace, including digital transformation, supplier relationship management, sustainability, cyber security and agile processes. Students will gain knowledge of the various elements of the contract and procurement process, including procurement plans, requests for proposal (RFP), Statements of Work (SOW), and various types of contracts. Students will learn project management and negotiating skills, and gain hands-on experience developing a procurement plan, supplier selection criteria, an RFP or other appropriate RFx, and contract terms. Recommended prerequisite: ICT 4100.

**ICT 4110 Project Risk and Quality Management (4 Credits)**

This course introduces students to project risk and quality management and develops advanced skills in applying the project management tools and techniques learned in ICT 4100. A focused examination of scheduling, cost, quality, and risk management processes using advanced tools and techniques is included. Emphasis is placed on the project planning, execution, and monitoring and controlling processes. This course is on the Project Management Institute's (PMI) certification track. Recommended prerequisite: ICT 4100.

**ICT 4115 Project Management Dynamics (4 Credits)**

This is an advanced course that applies project management knowledge and skills to identify and analyze a complex project dynamics. Case studies will be used to explore the PMI project domains and project management dynamics. Learning is based on reading case material, the PMBOK Standard, completing project management simulations and the practical application of project management tools and techniques. Students receive hands-on simulation experiences in planning and running projects, and working in learning teams to practice project management roles. Students develop a workable project change management system, exercise project integration and communication skills, and demonstrate the ability to keep an overall project on track. They also demonstrate decision-making skills, with emphasis on making trade-offs based on solid business rationale.

**ICT 4155 Strategic Alliances in the Technology Sector (4 Credits)**

Strategic alliances are one of the key drivers in today's global economy and they have gradually replaced vertical integration as the chief method of corporate expansion. Business-to-Business alliances provide organizations with a variety of benefits including enhancing the capability of organizations and helping to extract maximum value from available resources. While applicable to any industry, strategic alliances are particularly important in the technology sector. This course defines and discusses the roles of various types of strategic alliances in the technology sector, including informal alliances, partnerships, joint ventures, and outsourcing arrangements. Students will use case studies to explore strategies for managing profitability and leveraging these external business relationships. Students will analyze successful and unsuccessful alliances from the perspective of each alliance participant, 3rd party vendors, customers, and a variety of other stakeholders.

**ICT 4170 Agile Techniques and Practices in Project Management (4 Credits)**

Agile principles and practices are used across many project domains, each with its own unique characteristics and challenges. As the term implies, Agile techniques for the successful use of Agile project management processes are not static; they are dynamic and continuously evolving. The Agile debate is now turning from the tactical to the strategic. Realizing the full benefits of Agile (e.g., faster time to market, improved responsiveness to customers, higher quality, and greater efficiency), means more than improving project execution. It requires understanding the right place for Agile versus traditional methods within a modern enterprise comprised of multiple teams or groups of teams. This course examines both the Agile processes and practices for delivering projects, how to choose when Agile is appropriate versus Predictive methods, and the cultural challenges encountered when transforming into strategic Agile teams. Recommended prerequisite: ICT 4100.

**ICT 4200 Cybersecurity Foundations (4 Credits)**

This course will provide students with an understanding of cybersecurity and the importance of implementing sound cybersecurity policies, procedures, and systems. The course is for students who are new to cybersecurity (e.g., newly appointed managers with little cybersecurity experience) or those who need a refresher of cybersecurity fundamentals prior to taking additional courses in the concentration.

**ICT 4205 Cybersecurity Management (4 Credits)**

This course places students in cybersecurity manager roles to expose them to multiple security viewpoints. Students will interact with the full breadth of cybersecurity dimensions, including people, internal and external organizations, systems, and networks. They will learn how organizations strive to control all possible outcomes and occurrences within defined risk contexts as defined by company Directors. Students walk through the management discipline of cybersecurity, starting with the determination of needs and goals and the application of best practices before moving to the continual maintenance and improvement of an organization's cybersecurity stance. The course will provide students with an understanding of management roles and responsibilities including policy and process oversight, adherence to laws and regulations, cybersecurity program management, and understanding the types of reports created and reviewed by cybersecurity managers (such as reports for a Board of Directors). Prerequisite: Recommended ICT 4200 or practical experience in Information Security Principles and Practices.

**ICT 4210 Cybersecurity Policy (4 Credits)**

This course will help students understand critical events that shaped the U.S. cybersecurity landscape. Students will explore the impact of international cybersecurity policy such as the European General Data Protection Regulation (GDPR) on U.S. businesses. Students will learn how to analyze new cybersecurity policies and regulations to determine their impact on organizations.

**ICT 4215 Cybersecurity Risk Management and Incident Response (4 Credits)**

This course covers how to manage cybersecurity risk including mitigating risk, responding to incidents, and incident reporting (in particular when governmental and regulatory agencies need to be notified). This course will also address working with a public relations team and the Board of Directors to create press statements regarding cybersecurity incidents or breaches.

**ICT 4220 Cybersecurity Leadership and Strategic Planning (4 Credits)**

This course covers senior and strategic cybersecurity leadership roles and responsibilities, including the skills required for supervising and managing employees performing cybersecurity-related work. The course will provide students with an understanding of the tools and techniques required for analyzing technology, management, and leadership issues related to organizational processes and problem-solving. Students will learn how to develop new policies and advocate for changes to existing policies that align with organizational goals and cyberspace initiatives, including compliance with various laws and regulatory requirements. The course will also cover cybersecurity risk management concepts and practices. Recommended prerequisite: ICT 4200 or practical experience in information systems security principles and practices.

**ICT 4225 Cybersecurity Audits (4 Credits)**

Cybersecurity audits play a key role in addressing today's rapidly changing cyber threat landscape. Executives, including members of the Board of Directors may be required to certify that they have taken reasonable steps to protect information assets. Cybersecurity audits are a primary way to verify that information system and process controls effectively address cybersecurity risks. This course will cover cybersecurity audits, providing aspiring audit professionals with the information needed to manage a comprehensive audit of cybersecurity controls. Recommended prerequisite: ICT 4210.

**ICT 4300 Web Enabled Information Systems (4 Credits)**

This course is an introduction to the development of modern software systems from the desktop to the cloud. The course examines best practices for software development and introduces the three tiers of software development from the web frontend to the database backend using available tools and software. It covers security issues and best practices related to developing web and cloud applications. This course lays the groundwork for a common understanding of full stack development. This should be the first course taken in: Software Design and Programming and Web.

**ICT 4305 Object-Oriented Methods and Programming I (4 Credits)**

This is the first of two courses that will present Object-Oriented methodologies and programming concepts using the Java programming language. Students will apply Agile tools and techniques, as well as the Unified Modeling Language (UML) within the software development process. The course examines Object-Oriented concepts such as abstraction, encapsulation, generalization, and polymorphism. Students will exercise these concepts with hands-on programming practice and define testing procedures. Additionally, students will use Integrated Development Tools and determine the role of software design frameworks. Students without any Java experience are recommended to take ICT 4361 Java Programming before taking this class. Recommended prerequisite: ICT 4300.

**ICT 4310 Distributed Computing (4 Credits)**

This course provides a practical, hands-on introduction to distributed applications and the use of cloud technologies. The course develops students' understanding of application scalability, reliability and virtualization through the design, implementation, and deployment of cloud applications and services. Students will evaluate, recommend, and justify distributed technology solutions based on complexity, reliability and cost. Recommended prerequisites: ICT 4300, ICT 4315.

**ICT 4315 Object-Oriented Methods and Programming II (4 Credits)**

This is the second of two courses that will present object-oriented methodologies and programming concepts using the Java programming language. Students will apply Agile tools and techniques, as well as the Unified Modeling Language (UML) within the software development process. The course builds on the material from ICT-4305 to create code based on models written using the UML while applying industry standard object-oriented design patterns. Students will learn critical skills in designing inheritance hierarchies, working with object persistence and serialization frameworks and multi-threaded code. Additionally, the course will cover critical topics in privacy and security, including recent legislation such as the GDPR. Prerequisite: ICT 4305.

**ICT 4351 .NET Programming with C# (4 Credits)**

Students will explore the fundamentals of C# and object-oriented programming by using Visual Studio to develop desktop and web applications, test and debug applications, perform object-relational mapping using Entity Framework, and connect with XML and SQL data sources. Students will identify and describe various .NET components, design issues, development solutions, and package managers, while gaining familiarity with the core .NET languages and CLR execution. Recommended prerequisite: ICT 4305.

**ICT 4361 Java Programming (4 Credits)**

This course introduces students to the fundamentals of procedural and object-oriented programming, using the Java language. It teaches how to write, run, and debug basic programs before moving to a study of discrete, manageable building blocks that can be composed together to form software of any complexity. It will show how to use Java's built-in tools to load, store, and discover information, both in transient memory and persisted files. Students will interpret and modify sample code, with the help of various online learning aids, and gradually build up the confidence needed to write novel programs based on provided specifications.

**ICT 4370 Python Programming (4 Credits)**

This course starts with an introduction to Python programming covering basic programming concepts and Python syntax. It then continues to deepen students' knowledge of Python by teaching how to access data (text files, databases and other data storage technologies), and process and manipulate that data. Basics of creating front-end interfaces with Python are covered in order to allow students to produce more intuitive interaction with application users. Beyond core Python libraries, other commonly used Python libraries will also be utilized in the course. The course will focus on good programming practices and solving problems effectively. At the successful completion of the class, students will be able to create a number of different types of projects and execute them in Python, as well as continue learning and applying Python skills to data analytics, GIS and other areas of focus. Recommended prerequisite: ICT 4007 (if student has no prior programming experience).

**ICT 4375 Blockchain, Cryptocurrency, and Web3 Foundations (4 Credits)**

Novel protocols, tools, and techniques are restructuring the web itself into a more distributed, trusted, and self-managing network than ever before. Welcome to Web3. This course will help students master foundational blockchain concepts and explore Web3-enabling technologies. Students will gain the ability to confidently apply decentralized technologies like blockchains, cryptocurrencies, tokens, peer-to-peer apps, and more. Furthermore, students will understand how these technologies are being applied in industries around the world and why. Students will gain the ability to critically assess when Web3 technology is advantageous over other solutions both from a technical and financial perspective. Knowledge of basic programming principles is recommended.

**ICT 4390 iOS Application Development (4 Credits)**

This course is designed to help students build a solid foundation in programming fundamentals utilizing the Swift programming language. Students will gain practical experience with the tools, techniques, and concepts required to build an iOS app both on their own and as a part of a team. Students will also learn the fundamental user interface design principles that are necessary for creating a meaningful user experience. Prior programming experience is not required for this course, but students must have a Mac/Apple computer.

**ICT 4395 Android Application Development (4 Credits)**

In the Information and Communications Technology Capstone Seminar, students will apply their cumulative knowledge and skills to create a culminating work that critically addresses a problem in their degree field of study. Students make iterative progress on a capstone project throughout the course that presents a position on a relevant problem, supports the position with academic and professional literature, analyzes the proposed solution, and synthesizes scholarly findings. Primary research will not be conducted. The seminar is structured around collegial discussion and continuous feedback from peers and the instructor. At the end of the course, students will present their capstone project with professional and academic audiences in mind. Prerequisite: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**ICT 4400 Database Administration (4 Credits)**

This course introduces the roles and responsibilities, as well as the critical knowledge and skills, needed to function as a database administrator. The course focuses on Oracle and Microsoft SQL Server RDBMSs and the Oracle NoSQL databases. Database administration covers a range of topics which are covered in this course; installation, configuration, performance tuning, maintenance, and database security. Special focus will be paid to the architecture of the RDBMS and NoSQL systems, using it as the basis of much of the work throughout the course. There will be weekly hands-on lab work that afford students opportunities to gain valuable practical experience in managing databases. This course will function as an introduction to other courses in the Database Design and Administration concentration, which will give students the occasion to study these topics in greater depth. The course will conclude with an examination of the future of the database field, discussing quantum computing, cloud computing and block-chain technology.

**ICT 4405 Database Design and Implementation (4 Credits)**

In this course, students will focus on database design from a holistic view of a database from inception to implementation. Students will start by exploring the history and evolution of database systems and models and then proceed to hands-on application of database design theory. The course concentrates on the relational database model and the conceptual, logical, and physical phases of database design and development. Entity-relationship modeling, data normalization, and Structured Query Language application are core components of the class. Students will gain hands-on experience with database design concepts and have the opportunity to build a relational database using the foundational principles of database design within the framework of the database life cycle (DBLC).

**ICT 4410 Data Warehousing Design (4 Credits)**

Data warehouses are one of the most valuable assets an organization can possess to remain competitive in a quickly evolving global marketplace. This course provides students an introduction to the role of data warehouses in effective decision-making based on data for strategic and operational objectives and supporting decision support systems. This course will provide students foundational knowledge and skills around data warehouse design and broad coverage of data warehouse concepts, architecture, data modeling, security, implementation and trends underlying current and future development. Prerequisite: Recommended ICT 4400.

**ICT 4415 Database Backup and Recovery with Lab (4 Credits)**

This course explores database backup and recovery strategies and tactics using both Oracle and SQL Server database systems. The course will include weekly lab work that will give students an opportunity to gain experience with Oracle and SQL Server databases. Topics include preparing backup, recovery and disaster plans, as well as performing complete and incomplete database recoveries using the Oracle Export/Import utility. Students also work with a SQL Server database, utilizing the SQL Server Management Studio. Students will be assigned a Linux Virtual environment that will be used for all Oracle administration, and they will install a SQL Server database locally that will be used for all SQL Server administration. Prerequisite: ICT 4400.

**ICT 4430 Database Security (4 Credits)**

As the world has become increasingly data-driven, IT professionals have been forced to dramatically rethink how to protect their most valuable corporate asset, data. This course strives to provide a perspective that intersects several technology disciplines: database administration, web-based application development, and technology management. Taking a defense-in-layers view, Database Security will provide students with an opportunity to gain an understanding of how data is protected from several perspectives. A wide range of database security concepts will be explored, including those specific to the Oracle, MySQL, and Microsoft SQL Server RDBMSs. Students will gain an understanding of the different types of threats and vulnerabilities present in a data-centric world and will develop strategies to protect an enterprise's data footprint.

**ICT 4451 Database Programming: Oracle PL/SQL (4 Credits)**

This course builds on skills learned in ICT 4405 Database Design and Programming. Students will transform a database schema design into a database application using Oracle's PL/SQL programming language. Topics include advanced SQL DDL, DML, and scripting, PL/SQL constructs, stored procedures, modular design and development (packages), software development processes, views, sequences, cursors, dynamic SQL, and error handling. Using weekly assignments, students will practice different aspects of design and development of database applications. Prerequisite: ICT 4405 or SQL experience.

**ICT 4462 SQL Server and T-SQL Lab (4 Credits)**

This course provides a comprehensive introduction to Microsoft SQL Server, utilizing the SQL Management Studio for administrative and development tasks. This course offers a solid foundation of the Transact-SQL (T-SQL) constructs that will enable students to build, query, maintain, and finetune SQL Server databases. The course focuses on basic to advanced queries including joins, functions, data types, stored procedures, declaration and execution, cursors, temp tables, triggers, error handling, transaction management, and security. This course also offers an introduction to common administrative and maintenance tasks, SQL Integration Services, SQL Analysis Services, and SQL Reporting Services are covered. Working in Microsoft SQL Server, students experience hands-on learning in weekly labs to prepare them for real-world situations. Prerequisite: Recommended ICT 4400.

**ICT 4485 NoSQL Databases for Big Data (4 Credits)**

Structured Query Language (SQL) based database management systems (DBMS), commonly referred to as relational databases, have been dominant in the market for over forty years and remain so today. However, the emergence of real-time streaming data from technologies such as the Internet of Things (IoT) and relationship-based dynamic datasets from e-commerce and social networks gave rise to big data. Big data is characterized by volume (petabytes), velocity (data rate), and variety (structured and unstructured). Relational databases are not suitable for big data. The requirements of big data have created the need for alternate databases. NoSQL databases were developed to address the requirements of big data. The requirements of big data cannot be satisfied by a single NoSQL database model because real-time streaming data is structured very differently from relationship-based dynamic data. Many large, well-known companies use different types of NoSQL databases to solve problems in their domain. In this course we will examine four NoSQL database models: key-value, document, column, and graph. Students will learn about advantages and disadvantages of each type of NoSQL database model. The course will include hands-on experience with a relational database and each type of NoSQL database. Students will also learn to analyze the structure of data and select the appropriate NoSQL database model to store and manipulate big data.

**ICT 4505 Website Design and Management (4 Credits)**

This course extends your web design and development skills and includes advanced HTML techniques and enhanced page design capabilities using CSS. The key to great web design is rooted in a solid foundation, which requires a plan or a "blueprint." We will explore best practices in information architecture (IA) and how to incorporate user-centered design (UCD) techniques as a standard practice in web design. Students will also develop an understanding and working knowledge of Cascading Style Sheets. Through the use of readings, examples, hands-on projects, and discussions, the class will build an understanding of the foundations and applications of user-centered design to plan, build, and manage a website. Through participation in a project and regular discussions, class members will experience working as active and contributing members of the class and knowledge-building community.

**ICT 4510 Advanced Website Design and Management (4 Credits)**

Web development has become an integral part of the tech industry and has created a multitude of career options for job seekers. This course will enhance the knowledge gained in ICT-4505 by delving into HTML5 JavaScript APIs and Responsive design using a common CSS framework. Students will be introduced to beginner, intermediate and advanced JavaScript concepts. Finally, the foundational web languages HTML5, CSS and JavaScript will be used to build a fully functional client-side application. Prerequisite: ICT 4505.

**ICT 4515 Usability Design for Websites (4 Credits)**

This course expands on the basic knowledge of website design and development by providing an in-depth understanding of how to design a website with the user in mind. Students will gain knowledge about how the fields of human factors engineering and psychology (e.g., visual perception, attention, cognition, learning and memory, information processing) relate to the basis of usability design as well as how usability assessments are conducted. Usability guidelines for common functions such as web navigation, search, menus, scrolling, links, text, page layout, visual organization, etc. will be explored. Students will have the opportunity to develop a website that demonstrates appropriate use of important usability guidelines and conduct usability assessments with real users. Prerequisite: ICT 4505.

**ICT 4540 Data in Web Application Development (4 Credits)**

XML is an open, text-based markup language (Extensible Markup Language) that provides structural and semantic information to data. XML was designed to store and send data, and it can also be used by software and web-based applications for display. This course explores several common industry-leading approaches, models, and techniques for XML in business applications. Hands-on experience with the XML formats and manipulation, which includes syntax, structure, context, and programmatic uses of XML, form the weekly assignments, culminating in a summary project. Other related standards, such as JSON, are discussed, as well as use of CSS for display of XML data. Some JavaScript is introduced to illustrate the document object model and techniques for integration of data. Prerequisites: Students should have familiarity with constructing HTML web pages and data concepts. Familiarity with data manipulation, APIs, or a programming language will be helpful but not required.

**ICT 4560 Web Graphics Production (4 Credits)**

This course introduces the fundamental concepts and techniques of digital graphics creation and image processing for both online publication and website interface design using industry-leading tools as well as topics around use policy and considerations of image manipulation in the digital age. Students learn the basics of manipulating, correcting and modifying images, bitmap painting tools, vector drawing tools, typography, masking, web production techniques, and advanced image compositing in hands-on exercises and assignments. Basic integration of images and generated code into a website layout employing CSS is also covered. Experience with tools like Adobe Photoshop is useful but not required.

**ICT 4570 Web Scripting with JavaScript (4 Credits)**

This course presents students with the principles necessary to design and develop client-side and server-side scripts used to build dynamic websites and applications. JavaScript concepts such as data types, control structures, functions and objects are discussed. Students learn how to write beginner and intermediate scripts. Students will be introduced to frameworks and libraries such as Node.js and Arrow Functions that are used to create interactive and dynamic client-side and server-side applications. Real world examples will be included. Technologies covered in the course include JavaScript/ECMAScript, JSON (a JavaScript-friendly data format), XML (Extensible Markup Language) JavaScript as the J in AJAX, and JavaScript in HTML5 form interaction and validation. Prerequisite: Recommended ICT 4505, ICT 4510.

**ICT 4580 Cross-Platform Mobile Application Development (4 Credits)**

The mobile device market has grown tremendously over the past few years. Self-contained apps that are focused on one concept account for a large percentage of this growth. This course teaches the basic concepts of developing a mobile application using a framework so that the application runs on different devices. Students will synthesize the basic knowledge of the framework to create building blocks of various tools. They will follow best practices in the development lifecycle of building a mobile application. Students will compare and contrast various frameworks for mobile application projects. They will construct their mobile application that could be deployed across many platforms that use native device APIs and hardware. Prior programming experience recommended.

**ICT 4605 Principles of Information Security (4 Credits)**

This is a comprehensive Information Systems Security management course covering the eight basic principles of Information Assurance and Information Systems Security. The course follows the Common Body of Knowledge (CBK) convention established by the International Information System Security Certification Consortium, Inc. (ISC)2. In this course, students learn about information security risk management, asset security, security architecture and engineering, communication and network security, identity and access management, security assessment and testing, security operations, and software development security. The course applies a systems approach to security issues to analyze and develop security solutions. The information covered includes contemporary issues of cybercrime and how to mitigate cybersecurity risks. All topics are discussed in the context of a total enterprise-wide framework.

**ICT 4610 TCP/IP Networks (4 Credits)**

This course explores the design, architecture, capabilities, and security of the TCP/IP protocol stack by looking at its history, development, and current applications. The course also explores how TCP/IP has supported the growth of the Internet, Internet of Things (IoT), and next-generation wireless networks and services. The TCP/IP model, standards, and key architectural principles that support data flow are examined through familiarization with the full TCP/IP v4 and v6 protocol suites. Students explore TCP/IP capabilities, addressing/subnetting, performance, and cybersecurity issues. The course also covers security-specific protocols to support secure network communications, user identity protection, and the security aspects of all other protocols. Students will examine secure VPN services and mechanisms for personal and business Internet connectivity. The course concludes with a survey of modern topics including Real-Time Communications and IPv6.

**ICT 4615 Identity and Access Management (4 Credits)**

Identity is the new security perimeter. Access can be determined based on a persona, a role, or a user type. Identity and Access Management (IAM), then, is the foundation for access to any secured computer resource and must be handled and managed carefully and deliberately. This course will provide students with the skills they will need to succeed at designing and implementing access control mechanisms on networked systems. The course covers the principles and mechanisms that compose an overall IAM system and is based on modern technology that supports Zero Trust, Federated Identity, Role-based Access Controls (RBAC), and Attribute-based Access Controls (ABAC).

**ICT 4670 Disaster Recovery and Business Continuity Planning (4 Credits)**

This course is an introduction to Disaster Recovery and Business Continuity (DR/BC) Planning. The course examines the steps required to identify mission-critical continuity needs of an organization, analyzes the legal & regulatory requirements for data security, and evaluates the various risks management approaches to identify and quantify business risk associated with business continuity. The course provides students the opportunity to create a Disaster Recover/Business Continuity (DR/BC) plan that incorporates business resumption planning, emergency response & communication, and data/system recovery techniques.

**ICT 4680 Principles of Cryptography (4 Credits)**

E-commerce has made cryptography a cornerstone of modern information systems security. Cryptology is a core component of all recognized information security certifications; however, it may be the least understood of the information security disciplines. This course focuses on the terminology and concepts needed to understand how cryptographic techniques are used to protect sensitive information. Topics include different types of ciphers (substitution, transposition, block and stream), Digital Signatures and Message Authentication Codes, public key infrastructure (PKI), secure sockets layer (SSL), and network protocols for encryption, among others. Lecture and reading materials are reinforced by hands-on experimentation in a virtual lab environment focused on real-world uses of cryptography. Internet resources are used to tie the course material to current technology trends. No programming experience or advanced mathematical skills are required for this course. Recommended prerequisite: ICT 4605.

**ICT 4685 Cloud and Internet Law (4 Credits)**

This course explores the legal and technical ramifications and implications created by cloud computing and Internet Law. This course also examines the types of issues and concerns that exist in the US and the world by the dynamic change in software, computer networking, and cloud infrastructure. This rapid change in computer networking, data, information, Internet, and cloud architecture directly impacts governments, companies, and individuals. Issues include how to handle data, information, security, privacy, civil and criminal laws, rules and regulations, contractual agreements, and service-level agreements between parties on many levels from service providers in different states, countries, and parts of the world. It is important that all of these issues are balanced by differing cultural standards and mores from all 50 States, all over our country and all around the world, including the legal (and sometimes not so legal) methods of protecting governments and companies in this ever-changing, "always-connected" world.

**ICT 4690 Computer Forensics with Lab (4 Credits)**

This course will introduce students to current methods and techniques in computer forensics with a focus on the appropriate procedures for evidence collection and processing. As electronic information increases in its importance and use in the court of law, future investigators need to be able to collect and analyze forensics data from computer systems in support of incident investigations, including e-Discovery, forensic analysis and reporting, evidence acquisition, Internet browser forensics and tracing user and application activities on computing systems. The course is supplemented by hands-on exercises, case studies, and a final culminating assignment. Prerequisites: Required ICT 4605 (unless prior ISS experience), Recommended ICT 4610.

**ICT 4695 Application Security (4 Credits)**

In this course, students explore the security concepts, principles, training needs, and practices that are used to secure the modern software development lifecycle (SDLC). Topics include enhancing Agile/Scrum development processes with secure design models and application risk analysis, application lifecycle management, defensive programming, secure DevOps, and AppSec (application security) issues with new technology and new consumer devices. Recommended prerequisite: ICT 4605.

**ICT 4700 AI Concepts, Capabilities, and Tools (4 Credits)**

This graduate-level course provides a comprehensive exploration of evolving artificial intelligence (AI) concepts, tools, and their applications in organizational settings. The course is tailored for all learners seeking to gain a foundational understanding of AI concepts. Students will gain a deep understanding of the benefits, limitations, and tradeoffs associated with designing and engaging with AI tools. The course aims to empower students to champion appropriate AI use within organizations, identify business or organizational problems suitable for AI solutions, and navigate the dynamic landscape of AI in their respective industries.

**ICT 4701 Topics in Information Technology (4 Credits)**

This is an advanced special topics seminar course that may be offered to address a developing concept, an industry trend, or a new technology. The focus is on specialized areas of interest. Topics courses may be used as electives within the Information Technology degree and certificate programs, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate program.

**ICT 4800 Network Communications and the Internet (4 Credits)**

This course focuses on the fundamental concepts and technologies of communications networks and the Internet, including Network Communications theory through the TCP/IP stack, which is the foundation of modern communication systems. The course also emphasizes application of these concepts to the analysis and design of network solutions for various Enterprise and Service Providers requirements. Topics include in-depth analysis of the layered structure of networking protocols, network media, communications standards, LAN and WAN network architectures, in-depth IP routing, and current trends in networking via the Internet. Students will analyze the purpose of network routing protocols, their respective algorithms, and IP addressing. Students will apply critical thinking via discussions of current and future trends in network technology, expanding to IP Services, Network Virtualization, and their role in networking evolution. Prerequisite: Recommended ICT 4005.

**ICT 4820 Advanced Network Technologies (4 Credits)**

Technological advancements in networking within the last few years are revolutionizing networking concepts for both enterprises and service providers. This course demystifies those latest advancements in network technologies. Topics include in-depth coverage of modern networking elements, network requirements, and network virtualization technologies, including Software Defined Networks (SDN) and Network Function Virtualization (NFV). The course will also explore the latest network technologies' requirements, such as elastic traffic, mobility, ultra-low latency, on-demand bandwidth, and more. Further, students will discuss the motivations behind network softwarization, SDN and NFV components, architecture, protocols, and use cases. The course emphasizes deep understanding, analyses, and evaluation of modern network architectures. Prerequisite: Required ICT 4800.

**ICT 4830 Broadband Wireless Networks (4 Credits)**

This course examines how Broadband radio technologies are changing to meet the growing demands for autonomous vehicles, smart cities/smart homes using smart IoT devices, cellular communications that deliver consumer entertainment/relevant and specific information content, support remote workers, and online learning. Wireless telecommunications networks are studied with an emphasis on the challenges and the approaches to meet the demands of continually increasing data traffic from devices such as mobile smartphones, tablets, hotspots, smart IoT devices, new emerging technologies like cellular-vehicle-to-everything (C-V2x), as well as broadband services like VOIP and mobile video. Current and dominant wireless telecom technologies and protocols are presented, including 3G, 4G LTE, OFDM, MIMO, Mobile IP, WIMAX, and Wi-Fi. The new 5G NR technology standards and services (eMBB, URLLC, mMTC) will be presented. The wireless telecom industry is studied from standards, carrier, and technology perspectives, with an emphasis on radio networks designed to support key use cases. Prerequisite: Recommended ICT 4835.

**ICT 4840 Next Generation Wireless Networks and Services (4 Credits)**

The rapid innovation in wireless networks that is at the center of today's IT industry takes place in the four areas of broadband radio, core and edge networks, wireless services, as well as smart objects. This course focuses on the key next generation technologies at the core network, service, and object layers. First, the role of the Internet Protocol Multimedia Subsystem (IMS) in the core network is examined, which is at the heart of many service provider deployments. At the service layer, this course emphasizes wireless service architecture, including popular applications such as mobile real-time messaging, video, and mobile web services. The production of networks and services through cloud technologies is highlighted. The course also explores The Internet of Things (IoT), which plays a prominent role in modern wireless networks. A case study approach is taken to highlight core use cases from key industries including Smart Cities, the Smart Grid, and Industry 4.0. Finally, wireless product development and operations are examined in the critical context of the conflict between over-the-top (OTT) and network operator ecosystems. Prerequisite: Required ICT 4800.

**ICT 4845 Information Systems Attacks and Defenses (4 Credits)**

This course will provide students with the knowledge and skills necessary to conduct effective penetration testing and develop defensive techniques that prevent the attack(s) or reduce the effectiveness or impact of those attacks, should they succeed. Students will focus on real-world examples of both perimeter network security and desktop security across almost any computing environment. Students can work with a range of network security toolboxes in a hands-on, robust software lab environment. Students will also learn how to use the MITRE ATT&CK framework to identify and analyze various attack techniques, tactics, and procedures (TTPs) used by adversaries and will understand how to apply Cyber Kill-chain strategies, followed by using the MITRE D3FEND framework to implement effective defensive measures to mitigate and prevent these and future attacks. Recommended Prerequisite: ICT 4605.

**ICT 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and who can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**ICT 4902 Capstone Seminar (4 Credits)**

In the Information Technology Capstone Seminar, students will apply their cumulative knowledge and skills to create a culminating work that critically addresses a problem in their degree field of study. Students make iterative progress on a capstone project throughout the course that presents a position on a relevant problem, supports the position with academic and professional literature, analyzes the proposed solution, and synthesizes scholarly findings. Primary research will not be conducted. The seminar is structured around collegial discussion and continuous feedback from peers and the instructor. At the end of the course, students will present their capstone project with professional and academic audiences in mind. Prerequisite: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**ICT 4980 Internship (0-4 Credits)**

The IT internship is designed to offer students a practical educational experience in an industry related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the IT master's degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all IT students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the IT degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.

**ICT 4985 Industry Innovation Project (1-4 Credits)**

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

**ICT 4991 Independent Study (1-4 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

## Courses

**ICT 4000 Business Essentials for Technology Leaders (4 Credits)**

In this course, students will explore the essential attributes of business research and analysis in the Information Technology (IT) field to make appropriate business decisions. Students will individually and in teams explore the economic principles that drive the IT industry. This course sets the foundation for research, analysis, and critical thinking that will be encountered and required throughout the program. As such, a major component of this course is writing research papers on various topics including economic and technical drivers and challenges, IT economic principles, and the regulatory framework. Additionally, students will participate in collaborative teams as they consider industry trends and customer/user needs during the development process to create a product or service proposal and business case. Lastly, students will have the opportunity to evaluate and utilize management and process tools which will guide class discussions as well as critical thinking and analyses in a structured format. The applicability of these tools extends beyond this course and into the operation and management of an IT organization.

**ICT 4001 Technology Leadership (4 Credits)**

This course is designed to give technology students a broader perspective on technology in organizations. The content will focus on bringing students a new set of skills that will enable them to evaluate what it means to be a technology leader. Students will explore how an IT organization establishes a technology vision and strategy and will develop skills such as communicating effectively, building and managing technology teams, managing risk, and technology budgeting. At the end of the ten weeks, students will demonstrate their technology leadership abilities in an executive presentation.

**ICT 4005 Technical Essentials (4 Credits)**

In this course, students will examine the essential technologies that comprise the field of Information Technology (IT). Students will explore each technical discipline as groundwork for pursuing a specialized discipline while also gaining an understanding of how the disciplines work together. A major component of this course is conducting research and writing analyses of the various technical topics that drive the IT industry. This course sets the foundation for technical research, analysis, and critical thinking that will be encountered and required throughout the IT program.

**ICT 4007 Creative Problem Solving and Programming Concepts (4 Credits)**

In this course students will develop, or improve upon, their problem-solving skills to analyze problems and create solutions. Students will document their solutions and translate them into running programs written in the enormously popular Python programming language. Students will learn programming concepts including the use of variables, program input and output, flow control, conditionals, interpreter- and code-file-based approaches, and error testing. Students will learn how to set up Integrated Development Environments (IDE) such as Visual Studio Code on their personal computers and/or utilize a Cloud IDE in which they will write programs.

**ICT 4010 Enterprise Architecture (4 Credits)**

In this course, students will learn how to integrate IT to effectively support business goals. The course examines how enterprise architecture (EA) informs business and technology strategy. The course will explore the basics of EA, such as reference architectures, architecture patterns, and a comparison of EA and other architecture types. Students will also examine the opportunities and limitations of various EA frameworks and will apply the methods and tools of one of those frameworks, TOGAF, to design and document an EA initiative. Additionally, the EA implications of IT related topics such as cloud computing, global regulatory compliance, data protection, artificial intelligence, and IT ecosystems will be explored. Prerequisite: Recommended ICT 4000, ICT 4005.

**ICT 4015 Managing Technology for Strategic Value (4 Credits)**

Technology's impact on business organizations is tremendous, and will likely only intensify in the future. While some businesses still view technology as an expense to the bottom line, other organizations use technology to gain a competitive advantage. Considering the impact of technology on smaller or startup companies as well as large corporations, this course will explore concepts, tools and frameworks to understand how technology can be used to inform business strategy. Students will apply current methodologies to case studies and projects to gain insight into business and digital transformation. Topics include digital future, business organization framework, technology financial management, data proliferation, technology risk management, disruptive innovations, and performance measurement. Prerequisite: Recommended ICT 4000.

**ICT 4020 Business Forecasting and Planning (4 Credits)**

This course includes a wide diversity of skills required in one's professional career. Topics include the importance of accurate planning and scheduling for successful projects, risk/opportunity analysis, resource planning and allocation, building budgets, revenue forecasting, profit and loss statements, balance sheet analysis, the importance of managing customer perceptions and expectations, and the impact of economic issues on project success. Students will develop business analyses, including budgets and business plans, for several increasingly difficult scenarios addressing a range of technology applications and services. The final case study will culminate in a presentation to be given to potential investors, banks, or venture capitalists to secure a commitment for funding for a simulated telecom project. Recommended prerequisite: ICT 4000.

**ICT 4025 Managing the Innovation Process (4 Credits)**

Students will experience innovation management by developing a new product from ideation to adoption. Students will craft compelling product visions, create innovative cultures, and align teams to their innovation strategy. They will develop a product roadmap and a team that can not only deliver the product, but support its ongoing operations in the market. Students will practice setting strategic objectives for the new product, and explore regulatory, licensing, and pricing concepts – and then bring that information together in a product forecast that helps an enterprise understand product performance from awareness to adoption. All of these elements come together as the project's new product introduction plan, delivered in the final presentation. Required Prerequisite: ICT 4000.

**ICT 4100 Principles of Project Management (4 Credits)**

This course will provide students with practical knowledge, tools, and techniques to become an effective project manager and work successfully within a project team. Students will learn real-world application of foundational concepts and develop skills such as stakeholder management, balancing competing constraints, delivery of value, navigating risks and ambiguity, building and running a high-performance project team, defining scope, managing change, and productive communication strategies. Students will practice classroom concepts through hands-on exercises individually and in teams.

**ICT 4105 Project Contracts and Procurement (4 Credits)**

This course is designed to provide students with leadership and practical skills in project contracts and procurement. The course covers current trends in the procurement marketplace, including digital transformation, supplier relationship management, sustainability, cyber security and agile processes. Students will gain knowledge of the various elements of the contract and procurement process, including procurement plans, requests for proposal (RFP), Statements of Work (SOW), and various types of contracts. Students will learn project management and negotiating skills, and gain hands-on experience developing a procurement plan, supplier selection criteria, an RFP or other appropriate RFx, and contract terms. Recommended prerequisite: ICT 4100.

**ICT 4110 Project Risk and Quality Management (4 Credits)**

This course introduces students to project risk and quality management and develops advanced skills in applying the project management tools and techniques learned in ICT 4100. A focused examination of scheduling, cost, quality, and risk management processes using advanced tools and techniques is included. Emphasis is placed on the project planning, execution, and monitoring and controlling processes. This course is on the Project Management Institute's (PMI) certification track. Recommended prerequisite: ICT 4100.

**ICT 4115 Project Management Dynamics (4 Credits)**

This is an advanced course that applies project management knowledge and skills to identify and analyze a complex project dynamics. Case studies will be used to explore the PMI project domains and project management dynamics. Learning is based on reading case material, the PMBOK Standard, completing project management simulations and the practical application of project management tools and techniques. Students receive hands-on simulation experiences in planning and running projects, and working in learning teams to practice project management roles. Students develop a workable project change management system, exercise project integration and communication skills, and demonstrate the ability to keep an overall project on track. They also demonstrate decision-making skills, with emphasis on making trade-offs based on solid business rationale.

**ICT 4155 Strategic Alliances in the Technology Sector (4 Credits)**

Strategic alliances are one of the key drivers in today's global economy and they have gradually replaced vertical integration as the chief method of corporate expansion. Business-to-Business alliances provide organizations with a variety of benefits including enhancing the capability of organizations and helping to extract maximum value from available resources. While applicable to any industry, strategic alliances are particularly important in the technology sector. This course defines and discusses the roles of various types of strategic alliances in the technology sector, including informal alliances, partnerships, joint ventures, and outsourcing arrangements. Students will use case studies to explore strategies for managing profitability and leveraging these external business relationships. Students will analyze successful and unsuccessful alliances from the perspective of each alliance participant, 3rd party vendors, customers, and a variety of other stakeholders.

**ICT 4170 Agile Techniques and Practices in Project Management (4 Credits)**

Agile principles and practices are used across many project domains, each with its own unique characteristics and challenges. As the term implies, Agile techniques for the successful use of Agile project management processes are not static; they are dynamic and continuously evolving. The Agile debate is now turning from the tactical to the strategic. Realizing the full benefits of Agile (e.g., faster time to market, improved responsiveness to customers, higher quality, and greater efficiency), means more than improving project execution. It requires understanding the right place for Agile versus traditional methods within a modern enterprise comprised of multiple teams or groups of teams. This course examines both the Agile processes and practices for delivering projects, how to choose when Agile is appropriate versus Predictive methods, and the cultural challenges encountered when transforming into strategic Agile teams. Recommended prerequisite: ICT 4100.

**ICT 4200 Cybersecurity Foundations (4 Credits)**

This course will provide students with an understanding of cybersecurity and the importance of implementing sound cybersecurity policies, procedures, and systems. The course is for students who are new to cybersecurity (e.g., newly appointed managers with little cybersecurity experience) or those who need a refresher of cybersecurity fundamentals prior to taking additional courses in the concentration.

**ICT 4205 Cybersecurity Management (4 Credits)**

This course places students in cybersecurity manager roles to expose them to multiple security viewpoints. Students will interact with the full breadth of cybersecurity dimensions, including people, internal and external organizations, systems, and networks. They will learn how organizations strive to control all possible outcomes and occurrences within defined risk contexts as defined by company Directors. Students walk through the management discipline of cybersecurity, starting with the determination of needs and goals and the application of best practices before moving to the continual maintenance and improvement of an organization's cybersecurity stance. The course will provide students with an understanding of management roles and responsibilities including policy and process oversight, adherence to laws and regulations, cybersecurity program management, and understanding the types of reports created and reviewed by cybersecurity managers (such as reports for a Board of Directors). Prerequisite: Recommended ICT 4200 or practical experience in Information Security Principles and Practices.

**ICT 4210 Cybersecurity Policy (4 Credits)**

This course will help students understand critical events that shaped the U.S. cybersecurity landscape. Students will explore the impact of international cybersecurity policy such as the European General Data Protection Regulation (GDPR) on U.S. businesses. Students will learn how to analyze new cybersecurity policies and regulations to determine their impact on organizations.

**ICT 4215 Cybersecurity Risk Management and Incident Response (4 Credits)**

This course covers how to manage cybersecurity risk including mitigating risk, responding to incidents, and incident reporting (in particular when governmental and regulatory agencies need to be notified). This course will also address working with a public relations team and the Board of Directors to create press statements regarding cybersecurity incidents or breaches.

**ICT 4220 Cybersecurity Leadership and Strategic Planning (4 Credits)**

This course covers senior and strategic cybersecurity leadership roles and responsibilities, including the skills required for supervising and managing employees performing cybersecurity-related work. The course will provide students with an understanding of the tools and techniques required for analyzing technology, management, and leadership issues related to organizational processes and problem-solving. Students will learn how to develop new policies and advocate for changes to existing policies that align with organizational goals and cyberspace initiatives, including compliance with various laws and regulatory requirements. The course will also cover cybersecurity risk management concepts and practices. Recommended prerequisite: ICT 4200 or practical experience in information systems security principles and practices.

**ICT 4225 Cybersecurity Audits (4 Credits)**

Cybersecurity audits play a key role in addressing today's rapidly changing cyber threat landscape. Executives, including members of the Board of Directors may be required to certify that they have taken reasonable steps to protect information assets. Cybersecurity audits are a primary way to verify that information system and process controls effectively address cybersecurity risks. This course will cover cybersecurity audits, providing aspiring audit professionals with the information needed to manage a comprehensive audit of cybersecurity controls. Recommended prerequisite: ICT 4210.

**ICT 4300 Web Enabled Information Systems (4 Credits)**

This course is an introduction to the development of modern software systems from the desktop to the cloud. The course examines best practices for software development and introduces the three tiers of software development from the web frontend to the database backend using available tools and software. It covers security issues and best practices related to developing web and cloud applications. This course lays the groundwork for a common understanding of full stack development. This should be the first course taken in: Software Design and Programming and Web.

**ICT 4305 Object-Oriented Methods and Programming I (4 Credits)**

This is the first of two courses that will present Object-Oriented methodologies and programming concepts using the Java programming language. Students will apply Agile tools and techniques, as well as the Unified Modeling Language (UML) within the software development process. The course examines Object-Oriented concepts such as abstraction, encapsulation, generalization, and polymorphism. Students will exercise these concepts with hands-on programming practice and define testing procedures. Additionally, students will use Integrated Development Tools and determine the role of software design frameworks. Students without any Java experience are recommended to take ICT 4361 Java Programming before taking this class. Recommended prerequisite: ICT 4300.

**ICT 4310 Distributed Computing (4 Credits)**

This course provides a practical, hands-on introduction to distributed applications and the use of cloud technologies. The course develops students' understanding of application scalability, reliability and virtualization through the design, implementation, and deployment of cloud applications and services. Students will evaluate, recommend, and justify distributed technology solutions based on complexity, reliability and cost. Recommended prerequisites: ICT 4300, ICT 4315.

**ICT 4315 Object-Oriented Methods and Programming II (4 Credits)**

This is the second of two courses that will present object-oriented methodologies and programming concepts using the Java programming language. Students will apply Agile tools and techniques, as well as the Unified Modeling Language (UML) within the software development process. The course builds on the material from ICT-4305 to create code based on models written using the UML while applying industry standard object-oriented design patterns. Students will learn critical skills in designing inheritance hierarchies, working with object persistence and serialization frameworks and multi-threaded code. Additionally, the course will cover critical topics in privacy and security, including recent legislation such as the GDPR. Prerequisite: ICT 4305.

**ICT 4351 .NET Programming with C# (4 Credits)**

Students will explore the fundamentals of C# and object-oriented programming by using Visual Studio to develop desktop and web applications, test and debug applications, perform object-relational mapping using Entity Framework, and connect with XML and SQL data sources. Students will identify and describe various .NET components, design issues, development solutions, and package managers, while gaining familiarity with the core .NET languages and CLR execution. Recommended prerequisite: ICT 4305.

**ICT 4361 Java Programming (4 Credits)**

This course introduces students to the fundamentals of procedural and object-oriented programming, using the Java language. It teaches how to write, run, and debug basic programs before moving to a study of discrete, manageable building blocks that can be composed together to form software of any complexity. It will show how to use Java's built-in tools to load, store, and discover information, both in transient memory and persisted files. Students will interpret and modify sample code, with the help of various online learning aids, and gradually build up the confidence needed to write novel programs based on provided specifications.

**ICT 4370 Python Programming (4 Credits)**

This course starts with an introduction to Python programming covering basic programming concepts and Python syntax. It then continues to deepen students' knowledge of Python by teaching how to access data (text files, databases and other data storage technologies), and process and manipulate that data. Basics of creating front-end interfaces with Python are covered in order to allow students to produce more intuitive interaction with application users. Beyond core Python libraries, other commonly used Python libraries will also be utilized in the course. The course will focus on good programming practices and solving problems effectively. At the successful completion of the class, students will be able to create a number of different types of projects and execute them in Python, as well as continue learning and applying Python skills to data analytics, GIS and other areas of focus. Recommended prerequisite: ICT 4007 (if student has no prior programming experience).

**ICT 4375 Blockchain, Cryptocurrency, and Web3 Foundations (4 Credits)**

Novel protocols, tools, and techniques are restructuring the web itself into a more distributed, trusted, and self-managing network than ever before. Welcome to Web3. This course will help students master foundational blockchain concepts and explore Web3-enabling technologies. Students will gain the ability to confidently apply decentralized technologies like blockchains, cryptocurrencies, tokens, peer-to-peer apps, and more. Furthermore, students will understand how these technologies are being applied in industries around the world and why. Students will gain the ability to critically assess when Web3 technology is advantageous over other solutions both from a technical and financial perspective. Knowledge of basic programming principles is recommended.

**ICT 4390 iOS Application Development (4 Credits)**

This course is designed to help students build a solid foundation in programming fundamentals utilizing the Swift programming language. Students will gain practical experience with the tools, techniques, and concepts required to build an iOS app both on their own and as a part of a team. Students will also learn the fundamental user interface design principles that are necessary for creating a meaningful user experience. Prior programming experience is not required for this course, but students must have a Mac/Apple computer.

**ICT 4395 Android Application Development (4 Credits)**

In the Information and Communications Technology Capstone Seminar, students will apply their cumulative knowledge and skills to create a culminating work that critically addresses a problem in their degree field of study. Students make iterative progress on a capstone project throughout the course that presents a position on a relevant problem, supports the position with academic and professional literature, analyzes the proposed solution, and synthesizes scholarly findings. Primary research will not be conducted. The seminar is structured around collegial discussion and continuous feedback from peers and the instructor. At the end of the course, students will present their capstone project with professional and academic audiences in mind. Prerequisite: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**ICT 4400 Database Administration (4 Credits)**

This course introduces the roles and responsibilities, as well as the critical knowledge and skills, needed to function as a database administrator. The course focuses on Oracle and Microsoft SQL Server RDBMSs and the Oracle NoSQL databases. Database administration covers a range of topics which are covered in this course; installation, configuration, performance tuning, maintenance, and database security. Special focus will be paid to the architecture of the RDBMS and NoSQL systems, using it as the basis of much of the work throughout the course. There will be weekly hands-on lab work that afford students opportunities to gain valuable practical experience in managing databases. This course will function as an introduction to other courses in the Database Design and Administration concentration, which will give students the occasion to study these topics in greater depth. The course will conclude with an examination of the future of the database field, discussing quantum computing, cloud computing and block-chain technology.

**ICT 4405 Database Design and Implementation (4 Credits)**

In this course, students will focus on database design from a holistic view of a database from inception to implementation. Students will start by exploring the history and evolution of database systems and models and then proceed to hands-on application of database design theory. The course concentrates on the relational database model and the conceptual, logical, and physical phases of database design and development. Entity-relationship modeling, data normalization, and Structured Query Language application are core components of the class. Students will gain hands-on experience with database design concepts and have the opportunity to build a relational database using the foundational principles of database design within the framework of the database life cycle (DBLC).

**ICT 4410 Data Warehousing Design (4 Credits)**

Data warehouses are one of the most valuable assets an organization can possess to remain competitive in a quickly evolving global marketplace. This course provides students an introduction to the role of data warehouses in effective decision-making based on data for strategic and operational objectives and supporting decision support systems. This course will provide students foundational knowledge and skills around data warehouse design and broad coverage of data warehouse concepts, architecture, data modeling, security, implementation and trends underlying current and future development. Prerequisite: Recommended ICT 4400.

**ICT 4415 Database Backup and Recovery with Lab (4 Credits)**

This course explores database backup and recovery strategies and tactics using both Oracle and SQL Server database systems. The course will include weekly lab work that will give students an opportunity to gain experience with Oracle and SQL Server databases. Topics include preparing backup, recovery and disaster plans, as well as performing complete and incomplete database recoveries using the Oracle Export/Import utility. Students also work with a SQL Server database, utilizing the SQL Server Management Studio. Students will be assigned a Linux Virtual environment that will be used for all Oracle administration, and they will install a SQL Server database locally that will be used for all SQL Server administration. Prerequisite: ICT 4400.

**ICT 4430 Database Security (4 Credits)**

As the world has become increasingly data-driven, IT professionals have been forced to dramatically rethink how to protect their most valuable corporate asset, data. This course strives to provide a perspective that intersects several technology disciplines: database administration, web-based application development, and technology management. Taking a defense-in-layers view, Database Security will provide students with an opportunity to gain an understanding of how data is protected from several perspectives. A wide range of database security concepts will be explored, including those specific to the Oracle, MySQL, and Microsoft SQL Server RDBMSs. Students will gain an understanding of the different types of threats and vulnerabilities present in a data-centric world and will develop strategies to protect an enterprise's data footprint.

**ICT 4451 Database Programming: Oracle PL/SQL (4 Credits)**

This course builds on skills learned in ICT 4405 Database Design and Programming. Students will transform a database schema design into a database application using Oracle's PL/SQL programming language. Topics include advanced SQL DDL, DML, and scripting, PL/SQL constructs, stored procedures, modular design and development (packages), software development processes, views, sequences, cursors, dynamic SQL, and error handling. Using weekly assignments, students will practice different aspects of design and development of database applications. Prerequisite: ICT 4405 or SQL experience.

**ICT 4462 SQL Server and T-SQL Lab (4 Credits)**

This course provides a comprehensive introduction to Microsoft SQL Server, utilizing the SQL Management Studio for administrative and development tasks. This course offers a solid foundation of the Transact-SQL (T-SQL) constructs that will enable students to build, query, maintain, and finetune SQL Server databases. The course focuses on basic to advanced queries including joins, functions, data types, stored procedures, declaration and execution, cursors, temp tables, triggers, error handling, transaction management, and security. This course also offers an introduction to common administrative and maintenance tasks, SQL Integration Services, SQL Analysis Services, and SQL Reporting Services are covered. Working in Microsoft SQL Server, students experience hands-on learning in weekly labs to prepare them for real-world situations. Prerequisite: Recommended ICT 4400.

**ICT 4485 NoSQL Databases for Big Data (4 Credits)**

Structured Query Language (SQL) based database management systems (DBMS), commonly referred to as relational databases, have been dominant in the market for over forty years and remain so today. However, the emergence of real-time streaming data from technologies such as the Internet of Things (IoT) and relationship-based dynamic datasets from e-commerce and social networks gave rise to big data. Big data is characterized by volume (petabytes), velocity (data rate), and variety (structured and unstructured). Relational databases are not suitable for big data. The requirements of big data have created the need for alternate databases. NoSQL databases were developed to address the requirements of big data. The requirements of big data cannot be satisfied by a single NoSQL database model because real-time streaming data is structured very differently from relationship-based dynamic data. Many large, well-known companies use different types of NoSQL databases to solve problems in their domain. In this course we will examine four NoSQL database models: key-value, document, column, and graph. Students will learn about advantages and disadvantages of each type of NoSQL database model. The course will include hands-on experience with a relational database and each type of NoSQL database. Students will also learn to analyze the structure of data and select the appropriate NoSQL database model to store and manipulate big data.

**ICT 4505 Website Design and Management (4 Credits)**

This course extends your web design and development skills and includes advanced HTML techniques and enhanced page design capabilities using CSS. The key to great web design is rooted in a solid foundation, which requires a plan or a "blueprint." We will explore best practices in information architecture (IA) and how to incorporate user-centered design (UCD) techniques as a standard practice in web design. Students will also develop an understanding and working knowledge of Cascading Style Sheets. Through the use of readings, examples, hands-on projects, and discussions, the class will build an understanding of the foundations and applications of user-centered design to plan, build, and manage a website. Through participation in a project and regular discussions, class members will experience working as active and contributing members of the class and knowledge-building community.

**ICT 4510 Advanced Website Design and Management (4 Credits)**

Web development has become an integral part of the tech industry and has created a multitude of career options for job seekers. This course will enhance the knowledge gained in ICT-4505 by delving into HTML5 JavaScript APIs and Responsive design using a common CSS framework. Students will be introduced to beginner, intermediate and advanced JavaScript concepts. Finally, the foundational web languages HTML5, CSS and JavaScript will be used to build a fully functional client-side application. Prerequisite: ICT 4505.

**ICT 4515 Usability Design for Websites (4 Credits)**

This course expands on the basic knowledge of website design and development by providing an in-depth understanding of how to design a website with the user in mind. Students will gain knowledge about how the fields of human factors engineering and psychology (e.g., visual perception, attention, cognition, learning and memory, information processing) relate to the basis of usability design as well as how usability assessments are conducted. Usability guidelines for common functions such as web navigation, search, menus, scrolling, links, text, page layout, visual organization, etc. will be explored. Students will have the opportunity to develop a website that demonstrates appropriate use of important usability guidelines and conduct usability assessments with real users. Prerequisite: ICT 4505.

**ICT 4540 Data in Web Application Development (4 Credits)**

XML is an open, text-based markup language (Extensible Markup Language) that provides structural and semantic information to data. XML was designed to store and send data, and it can also be used by software and web-based applications for display. This course explores several common industry-leading approaches, models, and techniques for XML in business applications. Hands-on experience with the XML formats and manipulation, which includes syntax, structure, context, and programmatic uses of XML, form the weekly assignments, culminating in a summary project. Other related standards, such as JSON, are discussed, as well as use of CSS for display of XML data. Some JavaScript is introduced to illustrate the document object model and techniques for integration of data. Prerequisites: Students should have familiarity with constructing HTML web pages and data concepts. Familiarity with data manipulation, APIs, or a programming language will be helpful but not required.

**ICT 4560 Web Graphics Production (4 Credits)**

This course introduces the fundamental concepts and techniques of digital graphics creation and image processing for both online publication and website interface design using industry-leading tools as well as topics around use policy and considerations of image manipulation in the digital age. Students learn the basics of manipulating, correcting and modifying images, bitmap painting tools, vector drawing tools, typography, masking, web production techniques, and advanced image compositing in hands-on exercises and assignments. Basic integration of images and generated code into a website layout employing CSS is also covered. Experience with tools like Adobe Photoshop is useful but not required.

**ICT 4570 Web Scripting with JavaScript (4 Credits)**

This course presents students with the principles necessary to design and develop client-side and server-side scripts used to build dynamic websites and applications. JavaScript concepts such as data types, control structures, functions and objects are discussed. Students learn how to write beginner and intermediate scripts. Students will be introduced to frameworks and libraries such as Node.js and Arrow Functions that are used to create interactive and dynamic client-side and server-side applications. Real world examples will be included. Technologies covered in the course include JavaScript/ECMAScript, JSON (a JavaScript-friendly data format), XML (Extensible Markup Language) JavaScript as the J in AJAX, and JavaScript in HTML5 form interaction and validation. Prerequisite: Recommended ICT 4505, ICT 4510.

**ICT 4580 Cross-Platform Mobile Application Development (4 Credits)**

The mobile device market has grown tremendously over the past few years. Self-contained apps that are focused on one concept account for a large percentage of this growth. This course teaches the basic concepts of developing a mobile application using a framework so that the application runs on different devices. Students will synthesize the basic knowledge of the framework to create building blocks of various tools. They will follow best practices in the development lifecycle of building a mobile application. Students will compare and contrast various frameworks for mobile application projects. They will construct their mobile application that could be deployed across many platforms that use native device APIs and hardware. Prior programming experience recommended.

**ICT 4605 Principles of Information Security (4 Credits)**

This is a comprehensive Information Systems Security management course covering the eight basic principles of Information Assurance and Information Systems Security. The course follows the Common Body of Knowledge (CBK) convention established by the International Information System Security Certification Consortium, Inc. (ISC)<sup>2</sup>. In this course, students learn about information security risk management, asset security, security architecture and engineering, communication and network security, identity and access management, security assessment and testing, security operations, and software development security. The course applies a systems approach to security issues to analyze and develop security solutions. The information covered includes contemporary issues of cybercrime and how to mitigate cybersecurity risks. All topics are discussed in the context of a total enterprise-wide framework.

**ICT 4610 TCP/IP Networks (4 Credits)**

This course explores the design, architecture, capabilities, and security of the TCP/IP protocol stack by looking at its history, development, and current applications. The course also explores how TCP/IP has supported the growth of the Internet, Internet of Things (IoT), and next-generation wireless networks and services. The TCP/IP model, standards, and key architectural principles that support data flow are examined through familiarization with the full TCP/IP v4 and v6 protocol suites. Students explore TCP/IP capabilities, addressing/subnetting, performance, and cybersecurity issues. The course also covers security-specific protocols to support secure network communications, user identity protection, and the security aspects of all other protocols. Students will examine secure VPN services and mechanisms for personal and business Internet connectivity. The course concludes with a survey of modern topics including Real-Time Communications and IPv6.

**ICT 4615 Identity and Access Management (4 Credits)**

Identity is the new security perimeter. Access can be determined based on a persona, a role, or a user type. Identity and Access Management (IAM), then, is the foundation for access to any secured computer resource and must be handled and managed carefully and deliberately. This course will provide students with the skills they will need to succeed at designing and implementing access control mechanisms on networked systems. The course covers the principles and mechanisms that compose an overall IAM system and is based on modern technology that supports Zero Trust, Federated Identity, Role-based Access Controls (RBAC), and Attribute-based Access Controls (ABAC).

**ICT 4670 Disaster Recovery and Business Continuity Planning (4 Credits)**

This course is an introduction to Disaster Recovery and Business Continuity (DR/BC) Planning. The course examines the steps required to identify mission-critical continuity needs of an organization, analyzes the legal & regulatory requirements for data security, and evaluates the various risks management approaches to identify and quantify business risk associated with business continuity. The course provides students the opportunity to create a Disaster Recover/Business Continuity (DR/BC) plan that incorporates business resumption planning, emergency response & communication, and data/system recovery techniques.

**ICT 4680 Principles of Cryptography (4 Credits)**

E-commerce has made cryptography a cornerstone of modern information systems security. Cryptology is a core component of all recognized information security certifications; however, it may be the least understood of the information security disciplines. This course focuses on the terminology and concepts needed to understand how cryptographic techniques are used to protect sensitive information. Topics include different types of ciphers (substitution, transposition, block and stream), Digital Signatures and Message Authentication Codes, public key infrastructure (PKI), secure sockets layer (SSL), and network protocols for encryption, among others. Lecture and reading materials are reinforced by hands-on experimentation in a virtual lab environment focused on real-world uses of cryptography. Internet resources are used to tie the course material to current technology trends. No programming experience or advanced mathematical skills are required for this course. Recommended prerequisite: ICT 4605.

**ICT 4685 Cloud and Internet Law (4 Credits)**

This course explores the legal and technical ramifications and implications created by cloud computing and Internet Law. This course also examines the types of issues and concerns that exist in the US and the world by the dynamic change in software, computer networking, and cloud infrastructure. This rapid change in computer networking, data, information, Internet, and cloud architecture directly impacts governments, companies, and individuals. Issues include how to handle data, information, security, privacy, civil and criminal laws, rules and regulations, contractual agreements, and service-level agreements between parties on many levels from service providers in different states, countries, and parts of the world. It is important that all of these issues are balanced by differing cultural standards and mores from all 50 States, all over our country and all around the world, including the legal (and sometimes not so legal) methods of protecting governments and companies in this ever-changing, "always-connected" world.

**ICT 4690 Computer Forensics with Lab (4 Credits)**

This course will introduce students to current methods and techniques in computer forensics with a focus on the appropriate procedures for evidence collection and processing. As electronic information increases in its importance and use in the court of law, future investigators need to be able to collect and analyze forensics data from computer systems in support of incident investigations, including e-Discovery, forensic analysis and reporting, evidence acquisition, Internet browser forensics and tracing user and application activities on computing systems. The course is supplemented by hands-on exercises, case studies, and a final culminating assignment. Prerequisites: Required ICT 4605 (unless prior ISS experience), Recommended ICT 4610.

**ICT 4695 Application Security (4 Credits)**

In this course, students explore the security concepts, principles, training needs, and practices that are used to secure the modern software development lifecycle (SDLC). Topics include enhancing Agile/Scrum development processes with secure design models and application risk analysis, application lifecycle management, defensive programming, secure DevOps, and AppSec (application security) issues with new technology and new consumer devices. Recommended prerequisite: ICT 4605.

**ICT 4700 AI Concepts, Capabilities, and Tools (4 Credits)**

This graduate-level course provides a comprehensive exploration of evolving artificial intelligence (AI) concepts, tools, and their applications in organizational settings. The course is tailored for all learners seeking to gain a foundational understanding of AI concepts. Students will gain a deep understanding of the benefits, limitations, and tradeoffs associated with designing and engaging with AI tools. The course aims to empower students to champion appropriate AI use within organizations, identify business or organizational problems suitable for AI solutions, and navigate the dynamic landscape of AI in their respective industries.

**ICT 4701 Topics in Information Technology (4 Credits)**

This is an advanced special topics seminar course that may be offered to address a developing concept, an industry trend, or a new technology. The focus is on specialized areas of interest. Topics courses may be used as electives within the Information Technology degree and certificate programs, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate program.

**ICT 4800 Network Communications and the Internet (4 Credits)**

This course focuses on the fundamental concepts and technologies of communications networks and the Internet, including Network Communications theory through the TCP/IP stack, which is the foundation of modern communication systems. The course also emphasizes application of these concepts to the analysis and design of network solutions for various Enterprise and Service Providers requirements. Topics include in-depth analysis of the layered structure of networking protocols, network media, communications standards, LAN and WAN network architectures, in-depth IP routing, and current trends in networking via the Internet. Students will analyze the purpose of network routing protocols, their respective algorithms, and IP addressing. Students will apply critical thinking via discussions of current and future trends in network technology, expanding to IP Services, Network Virtualization, and their role in networking evolution. Prerequisite: Recommended ICT 4005.

**ICT 4820 Advanced Network Technologies (4 Credits)**

Technological advancements in networking within the last few years are revolutionizing networking concepts for both enterprises and service providers. This course demystifies those latest advancements in network technologies. Topics include in-depth coverage of modern networking elements, network requirements, and network virtualization technologies, including Software Defined Networks (SDN) and Network Function Virtualization (NFV). The course will also explore the latest network technologies' requirements, such as elastic traffic, mobility, ultra-low latency, on-demand bandwidth, and more. Further, students will discuss the motivations behind network softwarization, SDN and NFV components, architecture, protocols, and use cases. The course emphasizes deep understanding, analyses, and evaluation of modern network architectures. Prerequisite: Required ICT 4800.

**ICT 4830 Broadband Wireless Networks (4 Credits)**

This course examines how Broadband radio technologies are changing to meet the growing demands for autonomous vehicles, smart cities/smart homes using smart IoT devices, cellular communications that deliver consumer entertainment/relevant and specific information content, support remote workers, and online learning. Wireless telecommunications networks are studied with an emphasis on the challenges and the approaches to meet the demands of continually increasing data traffic from devices such as mobile smartphones, tablets, hotspots, smart IoT devices, new emerging technologies like cellular-vehicle-to-everything (C-V2x), as well as broadband services like VOIP and mobile video. Current and dominant wireless telecom technologies and protocols are presented, including 3G, 4G LTE, OFDM, MIMO, Mobile IP, WIMAX, and Wi-Fi. The new 5G NR technology standards and services (eMBB, URLLC, mMTC) will be presented. The wireless telecom industry is studied from standards, carrier, and technology perspectives, with an emphasis on radio networks designed to support key use cases. Prerequisite: Recommended ICT 4835.

**ICT 4840 Next Generation Wireless Networks and Services (4 Credits)**

The rapid innovation in wireless networks that is at the center of today's IT industry takes place in the four areas of broadband radio, core and edge networks, wireless services, as well as smart objects. This course focuses on the key next generation technologies at the core network, service, and object layers. First, the role of the Internet Protocol Multimedia Subsystem (IMS) in the core network is examined, which is at the heart of many service provider deployments. At the service layer, this course emphasizes wireless service architecture, including popular applications such as mobile real-time messaging, video, and mobile web services. The production of networks and services through cloud technologies is highlighted. The course also explores The Internet of Things (IoT), which plays a prominent role in modern wireless networks. A case study approach is taken to highlight core use cases from key industries including Smart Cities, the Smart Grid, and Industry 4.0. Finally, wireless product development and operations are examined in the critical context of the conflict between over-the-top (OTT) and network operator ecosystems. Prerequisite: Required ICT 4800.

**ICT 4845 Information Systems Attacks and Defenses (4 Credits)**

This course will provide students with the knowledge and skills necessary to conduct effective penetration testing and develop defensive techniques that prevent the attack(s) or reduce the effectiveness or impact of those attacks, should they succeed. Students will focus on real-world examples of both perimeter network security and desktop security across almost any computing environment. Students can work with a range of network security toolboxes in a hands-on, robust software lab environment. Students will also learn how to use the MITRE ATT&CK framework to identify and analyze various attack techniques, tactics, and procedures (TTPs) used by adversaries and will understand how to apply Cyber Kill-chain strategies, followed by using the MITRE D3FEND framework to implement effective defensive measures to mitigate and prevent these and future attacks. Recommended Prerequisite: ICT 4605.

**ICT 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and who can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**ICT 4902 Capstone Seminar (4 Credits)**

In the Information Technology Capstone Seminar, students will apply their cumulative knowledge and skills to create a culminating work that critically addresses a problem in their degree field of study. Students make iterative progress on a capstone project throughout the course that presents a position on a relevant problem, supports the position with academic and professional literature, analyzes the proposed solution, and synthesizes scholarly findings. Primary research will not be conducted. The seminar is structured around collegial discussion and continuous feedback from peers and the instructor. At the end of the course, students will present their capstone project with professional and academic audiences in mind. Prerequisite: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**ICT 4980 Internship (0-4 Credits)**

The IT internship is designed to offer students a practical educational experience in an industry related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the IT master's degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all IT students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the IT degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.

**ICT 4985 Industry Innovation Project (1-4 Credits)**

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

**ICT 4991 Independent Study (1-4 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

## Instructional Design and Technology

Office: University College Student Support Center

Mail Code: 2211 S. Josephine St., Denver, CO 80208

Phone: 303-871-2291, 800-347-2042

Email: [ucol-support@du.edu](mailto:ucol-support@du.edu)

Web Site: [www.universitycollege.du.edu](http://www.universitycollege.du.edu) (<http://www.universitycollege.du.edu/>)

From curriculum development to technology integration, planning and analysis to implementation and evaluation, the instructional design strategies and skills learned in this program will fully equip you to meet the diverse needs of adult learners. You'll build critical competencies in instructional design while cultivating an inclusive mindset and design approach. This graduate program is ideal for aspiring or current instructional design professionals working in higher education, corporations, and government or non-profit organizations who want to advance careers and foster best practices centered on equity.

This program prepares students to:

- Apply contemporary adult learning theories, models, and principles to learning situations using effective instructional design strategies.
- Create inclusive learning experiences by applying research-based practices in creating assessments, content, and learning activities to align with diverse learner needs and instructional goals.
- Plan for the use of technology-supported learning design by evaluating the course outcomes and modalities, technology availability, support systems, and instructor expertise.

- Evaluate the implementation of instructional designs to assess effectiveness and determine potential interventions.
- Apply skills in theory, research, data collection, and critical thinking to employ effective instructional design practices.

## Master of Arts in Instructional Design and Technology with a Concentration in Adult Learning and Inclusive Design

Forge innovative paths to best engage adult learners through inclusive design in the digital age with this master's degree concentration offered entirely online. As you develop critical competencies within instructional design, you'll also cultivate an inclusive mindset and best practices related to instructional strategies, assessment, and interventions. Whether leading instructional design within higher education, government, or corporations, you'll gain hands-on practice in andragogy, learner-centered design, and research to ensure the diverse needs of adult learners of all types are met.

This degree prepares students to do the following:

- Analyze the impact of adult learning theories on instructional strategies.
- Determine measurable learning outcomes based on identified learning needs.
- Develop inclusive learning materials, activities, and assessments with available resources and considering the diverse needs of learners.
- Create technology modules to meet organizational goals and user needs.
- Develop strategies for examining assessment data and other measures of the student learning experience to refine design practices.

## Graduate Certificate in Instructional Design and Technology with a Concentration in Adult Learning and Inclusive Design

Uncover innovative paths to effectively engage adult learners with a graduate certificate in Adult Learning and Inclusive Design offered entirely online. In this certificate program, you'll gain hands-on experience in instructional design, from creating engaging multi-media content to providing evaluations. With a curriculum centered on equity, the program helps you develop an inclusive mindset to best serve diverse adult learners. Gain insight into adult learning theories, instructional strategies, and inclusive assessment through learner-centered design.

## Specialized Graduate Certificate in Adult Learning and Inclusive Design

Uncover innovative paths to effectively engage adult learners with a certificate in Adult Learning and Inclusive Design offered entirely online. In this certificate program, you'll gain hands-on experience in instructional design, from creating engaging multi-media content to providing evaluations. With a curriculum centered on equity, the program helps you develop an inclusive mindset to best serve diverse adult learners. Gain insight into adult learning theories, instructional strategies, and inclusive assessment through learner-centered design.

## Master's Degree Admission

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.

## Certificate Admission

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. #### IDT 4000 Strategic Planning for Accessible Learning Design (4 Credits)

This course will help students develop expertise in accessibility principles, institutional processes, and legal considerations. The course explores federal accessibility regulations, common practices for implementing accessibility, and solutions to common challenges of accessibility implementation.

#### IDT 4001 Portfolio Foundations (0 Credits)

Master's and certificate-seeking students in Instructional Design and Technology program must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

#### IDT 4010 Curricular Development and Program Assessment for Adult Learning (4 Credits)

This course will provide students with the skills to develop and maintain program-level or department-wide training curricula for adult learning environments. By taking a holistic continuous-improvement perspective, this course will explore how learner needs assessments lead to the development of measurable learning outcomes, teaching practices, and then to a curricular plan. The course will examine inclusive practices that assist departments in creating equitable, authentic assessments.

#### IDT 4100 E-Learning: Course Design, Models, and Practice (4 Credits)

This course introduces instructional design theories, models, processes, and strategies for adult e-learning. We focus on instructional design principles that inform the methodology, skills, and techniques necessary for designing e-learning experiences for adult learners. Students will practice designing and selecting e-learning materials and analyzing the types of activities that best serve online learners.

#### IDT 4120 E-Learning: Multimedia Application (4 Credits)

This course will take a deep dive into the development of key media assets such as video, interactives, and other course design elements incorporating inclusive best practices. The course will explore both the technical aspects of creating media for learning purposes, as well as the pedagogical and UX considerations in media design. Prerequisite: IDT 4100.

#### IDT 4130 Equity, Justice, and Inclusivity with Learning Design (4 Credits)

This theory-to-practice course will explore a theoretical and a practical understanding of justice, equity, and inclusivity (JEI) in learning design. Students will be encouraged to connect their experiences to the foundational concepts in this course and develop an understanding of the impact of equity, inclusion, and justice in course design. Students will leave this course with practical tools for advocating for justice, equity, and inclusion in educational contexts.

#### IDT 4140 Universal Design for Learning (4 Credits)

#### IDT 4150 Project Management and Stakeholder Communication (4 Credits)

Whether in a corporate, higher ed, or government setting, instructional design projects require meticulous management from start to finish. This course will cover strategies and tools to equip instructional designers with the skills necessary to assess project needs, plan design iterations, and meet stakeholder expectations all while meeting project timelines.

#### IDT 4203 Adult Learning Strategies and Theories (4 Credits)

Individuals involved in adult learning design and development benefit from a strong foundation in adult learning theories and strategies to develop effective practices. Adult learners bring unique needs, life experiences, and prior knowledge to learning situations and thrive when inclusive, motivational, and relevant application of knowledge, concepts and skills are utilized. In this course, foundational and emerging theories regarding how adults learn best, along with analysis of key instructional strategies, provide solid grounding for implementing best practice in adult learning.

#### IDT 4701 Topics in Instructional Design and Technology (4 Credits)

#### IDT 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**IDT 4910 Research Practices and Applications (4 Credits)**

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

**IDT 4920 Portfolio Capstone (4 Credits)**

The Portfolio Capstone course provides students the opportunity to reflect upon the work they have done throughout their graduate studies at University College and synthesize their learning. Students in the course produce deliverables that include: (1) a thorough annotation of their portfolio, a process requiring critical and creative thinking about their educational experience, and (2) a pinnacle project that identifies, analyzes, and elaborates significant themes in their program experience, evaluates their accomplishments, connects their coursework to their professional goals, and assesses those goals in the context of their chosen field.

**IDT 4980 Internship (0-4 Credits)**

Instructional Design and Technology Internship is designed to offer students a purposeful experience in a practical, industry-related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notifications to all IDT students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.

**IDT 4991 Independent Study (1-4 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. Before registering for the independent study, the student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices. Independent Study is offered only on a for-credit basis.

## Nonprofit Leadership

The Nonprofit Leadership program prepares graduates to think critically, act ethically, and inclusively lead the changes needed to solve the pressing issues in society and nonprofit/nongovernmental organizations. Courses engage students in legal, financial, ethical, equitable and scalable considerations of program and organizational leadership and management. Coursework spans the four concentrations of: Executive Leadership and Governance; Philanthropy and Resource Development; Social Enterprise, Innovation and Entrepreneurship; and Mission-Driven Operations and Management. Core courses engage students in healthy nonprofit indicators, sector history, graduate research and writing, and leadership development. Faculty are experienced in development and fundraising, social innovation, governance, program management, and evaluation. They are leadership experts who examine sector trends, historical context, and current nonprofit theory and practices with practical and real world experience. Students will develop practical knowledge to better serve the public good and develop critical thinking and innovation skills needed to craft fundraising strategy, impactful program operations, and social enterprises that address societal problems through healthy organizations. Graduates will increase their community and world impact with practical tools to implement needed changes.

The Nonprofit Leadership Program prepares students to:

- Evaluate knowledge, skills, and attributes developed that impact nonprofit organizational health, governance, performance, and/or community engagement.
- Demonstrate critical thinking that integrates leadership, history, financial knowledge, fundraising strategy, program design, organizational governance, and strategy to heighten their organization's impact.
- Apply analytic methods to examining problems and designing solutions to nonprofit organization or societal issues.
- Develop inclusive leadership knowledge and skills that prepare them to effectively lead and guide change across the world.

### Master of Science in Nonprofit Leadership with a Concentration in Executive Leadership and Governance

Leading a nonprofit/nongovernmental organization of any size requires examining individual and organizational practices and behaviors. Nonprofit staff need to develop a broad spectrum of leadership, change management, and diversity, equity, and inclusion tools increases a leader's successful navigation of organizational change and challenges. Leaders must also navigate organizational culture to ensure high performance, stability and an impactful mission. Students will build their knowledge of board and senior team leadership, value-centered leadership, strategic direction and planning, program evaluation, and organization culture development.

This degree prepares students to:

- Assess leadership strengths, skills, and behaviors to craft leadership development plans
- Evaluate effective leadership behaviors, skills and characteristics that positively impact nonprofit organizational health, governance, performance, and community impact
- Demonstrate critical thinking skills to evaluate different leadership views and arguments that influence decision making

- Evaluate organizational capacity, operations, governance and program implementation to determine organizational health and opportunities for change
- Demonstrate financial and organizational-planning knowledge and skills that ensure an organization's impact and health

### **Master of Science in Nonprofit Leadership with a Concentration in Mission-Driven Operations and Management**

Program operations and organizational management work together to accomplish a nonprofit organization's mission, vision, and impact.

Organizations need effective structures to manage programs that include staffing, performance evaluation, impact measurement, and human and financial resources to ensure success. Examining an organization's financial and operational goals allows students to assess operational needs and to consider partnerships and community-based strategies that further the organization's impact. Students examine strategic and operational planning and program evaluation strategies from a diversity, equity and inclusion lens that demonstrate community impact and mission accomplishment. Students also study managing staff and volunteer operations that accomplish a nonprofit's mission.

This degree prepares students to:

- Demonstrate planning practices for effectively resourced nonprofit/nongovernmental program development through a diversity, equity and inclusion lens
- Evaluate existing nonprofit programs' design using critical thinking to determine resource allocation and impact measurement
- Demonstrate evaluation and planning skills that ensure mission accomplishment and operational alignment
- Examine diverse organizational funding structures including grants and other funding structures to determine how best to resource program operations

### **Master of Science in Nonprofit Leadership with a Concentration in Philanthropy and Resource Development**

Change is continual in the philanthropy, resource development, and fundraising areas of the nonprofit and nongovernmental sectors. Technology continues to evolve fundraising approaches to expand giving opportunities, inform campaigns, and programs through data and dashboards, and provide networks to better understand donors and giving trends. Through their studies, students will learn key relationship-building practices that include individual giving and major gift cultivation and their philanthropic philosophy to better cultivate diverse communities. They will craft plans and community-centric strategies to increase their fundraising impact. Engaging both their passion and pragmatism, students will learn about the scale and planning needed to develop the financial resources to carry out their nonprofit's mission and vision.

This degree prepares students to:

- Assess diverse development approaches for appropriateness according to the scale, size, and mission for nonprofit/nongovernmental organizations
- Evaluate the transformative effects of emerging technologies on the development and execution of effective fundraising strategies
- Craft practical and relevant development/fundraising plans that employ effective community and donor strategies for nonprofit organization's programming and mission fulfillment.
- Apply nonprofit funding approaches, tools, and technology for successful financial resource deployment in a nonprofit organization

### **Master of Science in Nonprofit Leadership with a Concentration in Social Enterprise, Innovation and Entrepreneurship**

Are you a social entrepreneur or aspiring to become one? Will a social innovation move the needle on a social problem or challenge about which you are passionate? Is your organization considering a social enterprise? A focus on social enterprise, innovation, and entrepreneurship will sharpen the social value proposition and mission-driven strategy to address key social problems in your community or the world. Courses in this concentration will develop your understanding, knowledge and skills in taking an idea and launching it as a social enterprise. Students will develop the language and

financial insights into funding, prototyping, scaling, marketing, and measuring impact of social enterprises and innovations. Students gain practical experience with a nonprofit or for-profit organization to apply theory, strategy, and metrics that solve real problems and drive mission impact.

This degree prepares students to:

- Examine successful social enterprise ventures to determine the strengths and challenges in developing a successful and impactful social enterprise.
- Cultivate innovation, design thinking and other processes to examine a social enterprise idea's social value and market possibilities
- Apply social innovation frameworks and tools to test a social enterprise's business and financial structure

### **Graduate Certificate in Nonprofit Leadership with a Concentration in Executive Leadership and Governance**

The graduate certificate in Executive Leadership and Governance is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials. Leading a nonprofit/nongovernmental organization of any size requires examining individual and organizational practices and behaviors. Developing a broad spectrum of leadership, change management, and diversity, equity and inclusion tools increases a leader's successful navigation of organizational change and challenges. Leaders must also navigate organizational culture to ensure high performance, stability and an

impactful mission. Students build their knowledge of board and senior team leadership, value centered leadership, strategic direction and planning, program evaluation, and organization culture development.

### **Graduate Certificate in Nonprofit Leadership with a Concentration in Mission-Driven Operations and Management**

The graduate certificate in Mission-Driven Operations and Management is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials. Program operations and organizational management work together to accomplish a nonprofit organization's mission, vision, and impact. Organizations need effective structures to manage programs that include staffing, performance evaluation, impact measurement, and human and financial resources to ensure success. Examining an organization's financial and operational goals allows students to assess operational needs and to consider partnerships and community-based strategies that further the organization's impact. Students examine program evaluation strategies from a diversity, equity and inclusion lens that demonstrate community impact and mission accomplishment. Students also study managing staff and volunteer operations that accomplish a nonprofit's mission.

### **Graduate Certificate in Nonprofit Leadership with a Concentration in Philanthropy and Resource Development**

The graduate certificate in Philanthropy and Resource Development is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials.

Change is continual in the philanthropy, resource development, and fundraising areas of the nonprofit and nongovernmental sectors. Technology continues to evolve fundraising approaches to expand giving opportunities, inform campaigns, and programs through data and dashboards, and provide networks to better understand donors and giving trends. Through their studies, students will learn key relationship-building practices that include individual giving and major gift cultivation and their philanthropic philosophy to better cultivate diverse communities. Practical experience with a nonprofit or for-profit organization will enable students to apply theory, strategy and metrics that solve real problems and drive mission impact.

### Master's Degree Admission

#### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

#### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.

---

#### NFP 4001 Nonprofit Leadership Portfolio Foundations (0 Credits)

Master's and certificate-seeking students in Nonprofit Leadership must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

#### NFP 4010 Leading Nonprofit/Nongovernmental Organizations (4 Credits)

Developing effective and successful leadership competencies is a lifelong endeavor that begins with the self and evolves throughout the role changes we make within organizations. This course will examine and develop core self-competency with a focus on leading in an organization. Students will identify core behaviors and practices along with effective communication skills and problem-solving tools to effectively move operational and program missions forward. By identifying organizational structure, markers of healthy culture, and leadership for financial and fund-raising functions students will identify the leadership approach needed to accomplish their organization's mission.

#### NFP 4011 Leadership Development in Action (4 Credits)

Developing effective and successful leadership competencies is a lifelong endeavor that begins with the self and evolves throughout our career journey. In this course, inclusive leaders will be examined, including core leadership competencies and practices that may vary due to the organizational culture and structure. Students will identify core behaviors and practices along with effective communication skills and problem-solving tools to effectively move an organization forward. Students will assess their own leadership competencies and areas for growth to construct a personal leadership development plan.

#### NFP 4015 Healthy Nonprofit/Nongovernmental Organizations (4 Credits)

Healthy nonprofit/nongovernmental organizations have effective leaders to ensure that their organization attains and maintains high standards of operational excellence. Best practices in executive leadership, strategic management, accountability, legal compliance, strategic planning, outcome measurement, finance, and funding models are key components that assist in assessing an organization's overall health. Students will analyze an actual nonprofit/nongovernmental organization and interview a senior executive to determine the quality and presence of these best practices. A final health assessment assignment will help students synthesize key organizational components.

#### NFP 4020 Legacy and Trends of Nonprofit Organizations and Civil Society (4 Credits)

A diverse historical legacy and philanthropic philosophy have laid the foundation of charity, volunteering, and community impact in the US and across the world. In a rapidly changing and technology-oriented world, philanthropy philosophy, donor motivations, and ways of giving have radically changed. Changing demographics, government policies, and wealth stratification are influencing trends in philanthropy. This course links history and future as it explores the genesis of American wealth creation, giving and voluntarism, as well as the diverse global philosophy and approaches to philanthropy. Nonprofits' collective impact, the rise of social enterprises and nonprofit innovation, and economic trends are examined to enable and inform how students, as developing leaders, will design their organizations' approach to meeting community needs and resource development.

**NFP 4100 Philanthropy Principles and Roles in Nonprofit Organizations (4 Credits)**

Great fundraisers are not born, they are made. These fundraisers, or development professionals, must learn principles and guidelines that inform their roles in organizations of different sizes. Students will differentiate philanthropy, development, and fundraising as well as donor cultivation basics, which is at the heart of all fundraising methods. This is the connection to a giver's passions and the nonprofit mission. Students will analyze and contrast a nonprofit's core fundraising approaches including finding prospects, using donor management technology, making the ask, and building a strong and flourishing fundraising network.

**NFP 4105 Applied Fundraising and Donor Relations (4 Credits)**

Nonprofit development encompasses all the practices of fundraising and structuring this important function within nonprofit/nongovernmental organizations. Students will learn about the development and financial strategy needed to balance diverse fundraising approaches. Considerations such as an organization's business model, strategic plan and growth, as well as strategic initiatives and future planning are central to organizing for development activities. Students will examine, using the four pillars of donor relations, different fundraising approaches such as individual solicitation, foundation and government grants, online donations, and future giving strategies to better understand their applications, scale, results potential and impact. Linking development to the financial functions of nonprofits is essential for every development director and staff.

**NFP 4110 Advanced Fundraising Strategies and Planned Giving (4 Credits)**

Established nonprofit/nongovernmental organizations develop a long-term mission-driven strategy that guides donor cultivation, stewardship efforts, and underpins financial success. Planning for success begins with legacy planning as a growth strategy to include long-term and planned giving fundraising tools. Cultivating donors means investing time, money and resources that an organization will need to weigh together to make good decisions for its future. Students will evaluate planning strategies that include prospecting for donors, offering events, cultivating bequests and endowments, accessing donor advised funds, or buying real estate as sustainable approaches. Additionally, students will evaluate grant cultivation and major gift-solicitation tactics that may help nonprofits strengthen their development portfolios.

**NFP 4115 Leading Nonprofit Financial Health (4 Credits)**

Nonprofit finance is a cornerstone to organizational health and sustainability. In this course students will learn the differences between nonprofit and for-profit accounting, as well as basic finance concepts including balance sheets, income statements, cash flow statements, and key accounting principles. Students will examine different budget models, conduct staff and salary planning and decision making for resource allocation. Students will identify Internal Revenue Service issues as well as current issues impacting the tax environment in the U.S.

**NFP 4120 Technology Strategy for Fundraising (4 Credits)**

Nonprofit development depends on technology. Developing a clear technology strategy allows a nonprofit/non-governmental organization to invest in the most appropriate tools to achieve fundraising success. The course addresses the application of technology categories such as Customer Relationship Management (CRM) products, communication tools, gift processing, social networking, and crowdfunding. Students learn to assess a nonprofit/non-governmental organization's technology needs for fundraising, develop criteria for technology selection, and develop a technology implementation plan. Students examine issues around donor privacy, data security, fundraising ethics related to technology, and legal and tax implications. Students critically think through applying assessment and decision-making principles discussed in this course to current and future technologies.

**NFP 4200 Executive and Board Roles, Responsibilities, and Leadership (4 Credits)**

This course will analyze the interdependent roles, responsibilities, and relationships of nonprofit/nongovernment executives and board of directors, and explore the exercise of leadership required in these differentiated roles. The critical distinctions between the management and governance functions within the nonprofit/nongovernmental sector will be examined. Students will also conduct focused reviews of governance models and best practices that optimize organizational performance and the mission-driven partnership between the executive and board.

**NFP 4205 Leading Strategically (4 Credits)**

Executive nonprofit/nongovernmental leaders must be strategic and insightful as they guide their organizations' direction and ensure community impact. Leaders must be skilled in strategic and systems thinking as they guide the organization's vision, communicate performance expectations, drive performance, align the organization's systems, cultivate partnerships, develop organizational culture, catalyze change and foster innovation. In this course students practice these skills and examine decision making tools and employee coaching practices.

**NFP 4210 Leading Policy and Advocacy (4 Credits)**

Nonprofit/nongovernmental organizations play an important role in the development and implementation of public policy and influence corporations and other private organizations. Advocacy encompasses a wide range of activities that influence decision makers who craft policies and laws that may impact nonprofit/nongovernmental organizations, communities, constituents, and stakeholders. Students will differentiate advocacy and lobbying, examine federal, state and local legislative structures, craft advocacy messages and design campaigns to develop advocacy strategy. Students will also assess the resources needed for an advocacy campaign and its impact.

**NFP 4230 Participatory Evaluation for Program and Community Impact (4 Credits)**

Evaluating the impact and progress of nonprofit programs is essential to confronting disparities and advancing equity. This course reviews qualitative, quantitative and participatory methods to recognize the value and constraints of various approaches to data collection and analysis. By contextualizing evaluation methods, students will learn to engage people most impacted by nonprofit programs in order to identify relevant indicators of change and measure program performance. Students examine relationships between people, groups and institutions to help explain collective impact. Students practice and compare methodologies to assess program effectiveness and community impact with an emphasis on racial equity.

**NFP 4300 Operational Strategy and Structures (4 Credits)**

Passionate people create nonprofit/nongovernmental organizations that lead with vision and drive. These leaders must build the systems, strategic activities, and supportive environments that enable the organizational mission to thrive. This course focuses on developing leaders and managers who build and grow an organizational plan that includes business planning, data-driven decision making, program evaluation, service enterprise, strategic planning and internal innovation to lead a thriving organizational culture of learning to guide the organization's evolution and relevance.

**NFP 4305 Nonprofit Program and People Management (4 Credits)**

Nonprofit/nongovernmental organizations of different sizes must develop effective human resource and program management systems to be well-managed and deliver mission impact. These foundational systems include relevant professional development for managers, staff and board members that support continuous improvement, engagement and cultivate a positive organizational culture. This course will examine effective program management practices including performance monitoring and improvement, relationship management, remote work, cross-generational work, minimizing churn, feedback systems, workflow analysis, appropriate resource allocation, and closure. Course content will tie together the program and people management systems and practices needed in diverse organizations to ensure leaders and managers have the tools to deliver mission impact.

**NFP 4310 Community Organizing, Voice and Empowerment (4 Credits)**

Leading meaningful community change to address social problems involves effective organization strategies and communication that include storytelling, social media, and community engagement. Students will examine power, privilege, and oppression in personal and community contexts to develop strategies that honor and engage community members. Developing impactful messages and crafting different delivery methods are key components to effective community organization and empowerment. Nonprofit/nongovernmental organization leaders need to develop their voice and empowerment strategies to meet community members in community contexts and to engage them through diverse strategies. Evaluating outreach efforts and community impact are also examined.

**NFP 4320 Leading Volunteer Programs with a DEI Lens (4 Credits)**

Change initiatives and improved services and programs designed to meet critical community needs have historically relied on the service of volunteers; comprehensive volunteer programming; and ethical, culturally responsive leadership. Nonprofit/nongovernmental leaders who develop and maintain diversity, equity, and inclusion lens are capable of attracting, engaging, partnering, and maintaining relationships with a much greater segment of the population that is culturally and economically diverse. Strategies volunteer program leaders employ to outreach, message, recruit, onboard, screen, place, supervise, award, recognize, develop and advance volunteers will all be analyzed for their level of inclusivity, cultural responsiveness, and ability to interrupt and remedy historic inequities and harmful narratives. Students will deepen their knowledge about the impact of volunteering in a global context and expand their toolbox of inclusive practices as they apply to volunteer programming.

**NFP 4400 Principles and Practices in Social Enterprise, Innovation and Entrepreneurship (4 Credits)**

To address increasingly complex developmental challenges with meaningful solutions, nonprofit leaders seek to foster innovation, strengthen strategy, and build agile organizations in the social sector to create a more sustainable and scalable impact. In this course, students explore the why, what, and how of social enterprise in the nonprofit and NGO sectors. Additionally, the course provides an overview of the shared characteristics of social enterprises and the frameworks and tools that help build and make them effective. All course content is examined through a global lens with insights into the benefits and risks of using social enterprise strategies for social impact in diverse organizations.

**NFP 4405 Social Enterprise Strategies (4 Credits)**

This course prepares students for social enterprise global leadership by guiding them through the process of designing, launching, or scaling a social enterprise adapted to region-specific global conditions. Students apply specific strategies and tools to select a social impact goal and design a viable business model that creates and delivers value for targeted beneficiaries and customers. The business model assignment can be for a new social enterprise or a growth strategy for an existing one. In either case, the model is designed to achieve measurable social impact with financial stability provided by sustainable sources of earned income. Students will also learn how to select and apply organizational strategies best aligned with relevant global conditions, ESG goals (environmental, social, and governance), and the United Nations Sustainable Development Goals (SDG).

**NFP 4410 Social Enterprise Experiential Learning (4 Credits)****NFP 4500 Social Innovation in Education (4 Credits)**

This course prepares leaders to build and lead social innovation in the changing education marketplace. Education-oriented social entrepreneurs must navigate the education sector and a funding landscape that involves private and public capital, philanthropic and foundation giving, and a growing nonprofit and education technology industry. Students will explore social innovation and enterprises in P-16 education, and how these innovations can support school- and sector-level change and impact for youth and families. Students will examine entrepreneurial principles, business models, performance metrics, customer experience, public-private partnerships, and building organizations to scale. Students will develop the philosophy and strategies of operating in an emergent education ecosystem.

**NFP 4701 Topics in Nonprofit Leadership (1-4 Credits)**

The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of communication, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects, such as ethics, human communication theory, or interpersonal communication. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**NFP 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**NFP 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**NFP 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**NFP 4905 Graduate Social Research Methods (4 Credits)****NFP 4920 Portfolio Capstone (4 Credits)**

The Portfolio Capstone course provides students the opportunity to reflect on graduate studies work at University College, synthesize their learning, and focus on the future. Students in the Portfolio Capstone course produce deliverables which may include: (1) an annotation of the program's portfolio signature assignments with reflective, critical, and creative thinking about the educational experience, (2) an examination of competencies developed, and (3) a pinnacle project that identifies, analyzes, and elaborates a significant theme(s) in the program experience. Students will reflect on and evaluate accomplishments, connect coursework to professional goals, and assesses those goals in the context of the concentration or nonprofit focus. The capstone is an applied project that is a relevant contribution to the student's future and the nonprofit industry.

**NFP 4980 Internship (0-4 Credits)**

The Nonprofit Leadership Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all NFP students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.

**NFP 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. Before registering for the independent study, the student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices. Independent Study is offered only on a for-credit basis.

## Courses

**NFP 4001 Nonprofit Leadership Portfolio Foundations (0 Credits)**

Master's and certificate-seeking students in Nonprofit Leadership must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

**NFP 4010 Leading Nonprofit/Nongovernmental Organizations (4 Credits)**

Developing effective and successful leadership competencies is a lifelong endeavor that begins with the self and evolves throughout the role changes we make within organizations. This course will examine and develop core self-competency with a focus on leading in an organization. Students will identify core behaviors and practices along with effective communication skills and problem-solving tools to effectively move operational and program missions forward. By identifying organizational structure, markers of healthy culture, and leadership for financial and fund-raising functions students will identify the leadership approach needed to accomplish their organization's mission.

**NFP 4011 Leadership Development in Action (4 Credits)**

Developing effective and successful leadership competencies is a lifelong endeavor that begins with the self and evolves throughout our career journey. In this course, inclusive leaders will be examined, including core leadership competencies and practices that may vary due to the organizational culture and structure. Students will identify core behaviors and practices along with effective communication skills and problem-solving tools to effectively move an organization forward. Students will assess their own leadership competencies and areas for growth to construct a personal leadership development plan.

**NFP 4015 Healthy Nonprofit/Nongovernmental Organizations (4 Credits)**

Healthy nonprofit/nongovernmental organizations have effective leaders to ensure that their organization attains and maintains high standards of operational excellence. Best practices in executive leadership, strategic management, accountability, legal compliance, strategic planning, outcome measurement, finance, and funding models are key components that assist in assessing an organization's overall health. Students will analyze an actual nonprofit/nongovernmental organization and interview a senior executive to determine the quality and presence of these best practices. A final health assessment assignment will help students synthesize key organizational components.

**NFP 4020 Legacy and Trends of Nonprofit Organizations and Civil Society (4 Credits)**

A diverse historical legacy and philanthropic philosophy have laid the foundation of charity, volunteering, and community impact in the US and across the world. In a rapidly changing and technology-oriented world, philanthropy philosophy, donor motivations, and ways of giving have radically changed. Changing demographics, government policies, and wealth stratification are influencing trends in philanthropy. This course links history and future as it explores the genesis of American wealth creation, giving and voluntarism, as well as the diverse global philosophy and approaches to philanthropy. Nonprofits' collective impact, the rise of social enterprises and nonprofit innovation, and economic trends are examined to enable and inform how students, as developing leaders, will design their organizations' approach to meeting community needs and resource development.

**NFP 4100 Philanthropy Principles and Roles in Nonprofit Organizations (4 Credits)**

Great fundraisers are not born, they are made. These fundraisers, or development professionals, must learn principles and guidelines that inform their roles in organizations of different sizes. Students will differentiate philanthropy, development, and fundraising as well as donor cultivation basics, which is at the heart of all fundraising methods. This is the connection to a giver's passions and the nonprofit mission. Students will analyze and contrast a nonprofit's core fundraising approaches including finding prospects, using donor management technology, making the ask, and building a strong and flourishing fundraising network.

**NFP 4105 Applied Fundraising and Donor Relations (4 Credits)**

Nonprofit development encompasses all the practices of fundraising and structuring this important function within nonprofit/nongovernmental organizations. Students will learn about the development and financial strategy needed to balance diverse fundraising approaches. Considerations such as an organization's business model, strategic plan and growth, as well as strategic initiatives and future planning are central to organizing for development activities. Students will examine, using the four pillars of donor relations, different fundraising approaches such as individual solicitation, foundation and government grants, online donations, and future giving strategies to better understand their applications, scale, results potential and impact. Linking development to the financial functions of nonprofits is essential for every development director and staff.

**NFP 4110 Advanced Fundraising Strategies and Planned Giving (4 Credits)**

Established nonprofit/nongovernmental organizations develop a long-term mission-driven strategy that guides donor cultivation, stewardship efforts, and underpins financial success. Planning for success begins with legacy planning as a growth strategy to include long-term and planned giving fundraising tools. Cultivating donors means investing time, money and resources that an organization will need to weigh together to make good decisions for its future. Students will evaluate planning strategies that include prospecting for donors, offering events, cultivating bequests and endowments, accessing donor advised funds, or buying real estate as sustainable approaches. Additionally, students will evaluate grant cultivation and major gift-solicitation tactics that may help nonprofits strengthen their development portfolios.

**NFP 4115 Leading Nonprofit Financial Health (4 Credits)**

Nonprofit finance is a cornerstone to organizational health and sustainability. In this course students will learn the differences between nonprofit and for-profit accounting, as well as basic finance concepts including balance sheets, income statements, cash flow statements, and key accounting principles. Students will examine different budget models, conduct staff and salary planning and decision making for resource allocation. Students will identify Internal Revenue Service issues as well as current issues impacting the tax environment in the U.S.

**NFP 4120 Technology Strategy for Fundraising (4 Credits)**

Nonprofit development depends on technology. Developing a clear technology strategy allows a nonprofit/non-governmental organization to invest in the most appropriate tools to achieve fundraising success. The course addresses the application of technology categories such as Customer Relationship Management (CRM) products, communication tools, gift processing, social networking, and crowdfunding. Students learn to assess a nonprofit/non-governmental organization's technology needs for fundraising, develop criteria for technology selection, and develop a technology implementation plan. Students examine issues around donor privacy, data security, fundraising ethics related to technology, and legal and tax implications. Students critically think through applying assessment and decision-making principles discussed in this course to current and future technologies.

**NFP 4200 Executive and Board Roles, Responsibilities, and Leadership (4 Credits)**

This course will analyze the interdependent roles, responsibilities, and relationships of nonprofit/nongovernment executives and board of directors, and explore the exercise of leadership required in these differentiated roles. The critical distinctions between the management and governance functions within the nonprofit/nongovernmental sector will be examined. Students will also conduct focused reviews of governance models and best practices that optimize organizational performance and the mission-driven partnership between the executive and board.

**NFP 4205 Leading Strategically (4 Credits)**

Executive nonprofit/nongovernmental leaders must be strategic and insightful as they guide their organizations' direction and ensure community impact. Leaders must be skilled in strategic and systems thinking as they guide the organization's vision, communicate performance expectations, drive performance, align the organization's systems, cultivate partnerships, develop organizational culture, catalyze change and foster innovation. In this course students practice these skills and examine decision making tools and employee coaching practices.

**NFP 4210 Leading Policy and Advocacy (4 Credits)**

Nonprofit/nongovernmental organizations play an important role in the development and implementation of public policy and influence corporations and other private organizations. Advocacy encompasses a wide range of activities that influence decision makers who craft policies and laws that may impact nonprofit/nongovernmental organizations, communities, constituents, and stakeholders. Students will differentiate advocacy and lobbying, examine federal, state and local legislative structures, craft advocacy messages and design campaigns to develop advocacy strategy. Students will also assess the resources needed for an advocacy campaign and its impact.

**NFP 4230 Participatory Evaluation for Program and Community Impact (4 Credits)**

Evaluating the impact and progress of nonprofit programs is essential to confronting disparities and advancing equity. This course reviews qualitative, quantitative and participatory methods to recognize the value and constraints of various approaches to data collection and analysis. By contextualizing evaluation methods, students will learn to engage people most impacted by nonprofit programs in order to identify relevant indicators of change and measure program performance. Students examine relationships between people, groups and institutions to help explain collective impact. Students practice and compare methodologies to assess program effectiveness and community impact with an emphasis on racial equity.

**NFP 4300 Operational Strategy and Structures (4 Credits)**

Passionate people create nonprofit/nongovernmental organizations that lead with vision and drive. These leaders must build the systems, strategic activities, and supportive environments that enable the organizational mission to thrive. This course focuses on developing leaders and managers who build and grow an organizational plan that includes business planning, data-driven decision making, program evaluation, service enterprise, strategic planning and internal innovation to lead a thriving organizational culture of learning to guide the organization's evolution and relevance.

**NFP 4305 Nonprofit Program and People Management (4 Credits)**

Nonprofit/nongovernmental organizations of different sizes must develop effective human resource and program management systems to be well-managed and deliver mission impact. These foundational systems include relevant professional development for managers, staff and board members that support continuous improvement, engagement and cultivate a positive organizational culture. This course will examine effective program management practices including performance monitoring and improvement, relationship management, remote work, cross-generational work, minimizing churn, feedback systems, workflow analysis, appropriate resource allocation, and closure. Course content will tie together the program and people management systems and practices needed in diverse organizations to ensure leaders and managers have the tools to deliver mission impact.

**NFP 4310 Community Organizing, Voice and Empowerment (4 Credits)**

Leading meaningful community change to address social problems involves effective organization strategies and communication that include storytelling, social media, and community engagement. Students will examine power, privilege, and oppression in personal and community contexts to develop strategies that honor and engage community members. Developing impactful messages and crafting different delivery methods are key components to effective community organization and empowerment. Nonprofit/nongovernmental organization leaders need to develop their voice and empowerment strategies to meet community members in community contexts and to engage them through diverse strategies. Evaluating outreach efforts and community impact are also examined.

**NFP 4320 Leading Volunteer Programs with a DEI Lens (4 Credits)**

Change initiatives and improved services and programs designed to meet critical community needs have historically relied on the service of volunteers; comprehensive volunteer programming; and ethical, culturally responsive leadership. Nonprofit/nongovernmental leaders who develop and maintain diversity, equity, and inclusion lens are capable of attracting, engaging, partnering, and maintaining relationships with a much greater segment of the population that is culturally and economically diverse. Strategies volunteer program leaders employ to outreach, message, recruit, onboard, screen, place, supervise, award, recognize, develop and advance volunteers will all be analyzed for their level of inclusivity, cultural responsiveness, and ability to interrupt and remedy historic inequities and harmful narratives. Students will deepen their knowledge about the impact of volunteering in a global context and expand their toolbox of inclusive practices as they apply to volunteer programming.

**NFP 4400 Principles and Practices in Social Enterprise, Innovation and Entrepreneurship (4 Credits)**

To address increasingly complex developmental challenges with meaningful solutions, nonprofit leaders seek to foster innovation, strengthen strategy, and build agile organizations in the social sector to create a more sustainable and scalable impact. In this course, students explore the why, what, and how of social enterprise in the nonprofit and NGO sectors. Additionally, the course provides an overview of the shared characteristics of social enterprises and the frameworks and tools that help build and make them effective. All course content is examined through a global lens with insights into the benefits and risks of using social enterprise strategies for social impact in diverse organizations.

**NFP 4405 Social Enterprise Strategies (4 Credits)**

This course prepares students for social enterprise global leadership by guiding them through the process of designing, launching, or scaling a social enterprise adapted to region-specific global conditions. Students apply specific strategies and tools to select a social impact goal and design a viable business model that creates and delivers value for targeted beneficiaries and customers. The business model assignment can be for a new social enterprise or a growth strategy for an existing one. In either case, the model is designed to achieve measurable social impact with financial stability provided by sustainable sources of earned income. Students will also learn how to select and apply organizational strategies best aligned with relevant global conditions, ESG goals (environmental, social, and governance), and the United Nations Sustainable Development Goals (SDG).

**NFP 4410 Social Enterprise Experiential Learning (4 Credits)****NFP 4500 Social Innovation in Education (4 Credits)**

This course prepares leaders to build and lead social innovation in the changing education marketplace. Education-oriented social entrepreneurs must navigate the education sector and a funding landscape that involves private and public capital, philanthropic and foundation giving, and a growing nonprofit and education technology industry. Students will explore social innovation and enterprises in P-16 education, and how these innovations can support school- and sector-level change and impact for youth and families. Students will examine entrepreneurial principles, business models, performance metrics, customer experience, public-private partnerships, and building organizations to scale. Students will develop the philosophy and strategies of operating in an emergent education ecosystem.

**NFP 4701 Topics in Nonprofit Leadership (1-4 Credits)**

The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of communication, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects, such as ethics, human communication theory, or interpersonal communication. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**NFP 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**NFP 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**NFP 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**NFP 4905 Graduate Social Research Methods (4 Credits)****NFP 4920 Portfolio Capstone (4 Credits)**

The Portfolio Capstone course provides students the opportunity to reflect on graduate studies work at University College, synthesize their learning, and focus on the future. Students in the Portfolio Capstone course produce deliverables which may include: (1) an annotation of the program's portfolio signature assignments with reflective, critical, and creative thinking about the educational experience, (2) an examination of competencies developed, and (3) a pinnacle project that identifies, analyzes, and elaborates a significant theme(s) in the program experience. Students will reflect on and evaluate accomplishments, connect coursework to professional goals, and assesses those goals in the context of the concentration or nonprofit focus. The capstone is an applied project that is a relevant contribution to the student's future and the nonprofit industry.

**NFP 4980 Internship (0-4 Credits)**

The Nonprofit Leadership Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all NFP students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.

**NFP 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. Before registering for the independent study, the student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices. Independent Study is offered only on a for-credit basis.

## Organizational Leadership

Office: University College Student Support Center

Mail Code: 2211 S. Josephine St., Denver, CO 80208

Phone: 303-871-2291, 800-347-2042

Email: [ucol-support@du.edu](mailto:ucol-support@du.edu)

Web Site: [www.universitycollege.du.edu](http://www.universitycollege.du.edu) (<http://www.universitycollege.du.edu>)

The Organizational Leadership Program exists to help students achieve their full potential as leaders as they learn to effectively manage change, people, and processes within dynamic environments across sectors. As students progress in their own leadership development, they will explore how to connect mission to values within organizations; investigate how organizational culture impacts ethics and conflict; learn how to integrate strategy and innovation to drive organizational effectiveness; and hone the skills required to transform organizations, industries, and the world.

The Organization Leadership program prepares students to:

- Analyze evidence of oral, written, and nonverbal communication techniques that display clear purpose and directly reflect principles of effective leadership.
- Apply relevant program theory and principles in order to formulate arguments that clearly and directly reflect the leadership principles upon which they are based.
- Articulate a vision for themselves as leaders by identifying gaps in current knowledge and practice.
- Generate a plan to align mission, vision, people, resources, and goals to maximize success and value over time for an organization.
- Justify appropriate change management and communication strategies to transition organizations, processes, and/or employment tasks from one stage to another using employee empowerment while minimizing disruption to business functions, organizational goals, and employee morale.
- Evaluate the characteristics of successful organizational partnerships among private, public, not-for-profit, and governmental organizations to determine how to implement them.
- Design strategies and implementation plan for successfully traversing key internal and external issues—such as new product offerings, organizational development, restructuring, and financial decisions—facing contemporary organizations, while meeting organizational scope and mission.

### Master of Science in Organizational Leadership with a Concentration in Advancing Diversity, Equity, and Inclusion in Organizations

Advancing diversity, equity, and inclusion is critical to achieving organizational goals, positioning organizations for success in today's world, and creating environments where everyone has the opportunity to thrive. In this master's degree concentration, you will gain skills that are crucial for advancing equity as an integrated part of organizational strategy while developing solutions that meaningfully leverage diversity to create a culture of belonging. Learn about the historical, cultural, and economic factors that shape identity and apply appropriate tools and techniques to help organizations achieve their vision for change as it relates to diversity, equity, and inclusion practices.

This degree prepares students to:

- Assess the influence of historical, social, cultural, and economic factors in shaping one's identity and conceptions of diversity, equity, and inclusion practices.
- Integrate an understanding of social and cultural difference, perspective-taking, and empathy to better inform interpersonal communication and problem-solving strategies.
- Develop practices that advance equity as an integrated component of organizational strategy.
- Design solutions that meaningfully leverage diversity to achieve organizational goals and cultivate a culture of belonging across different organizational settings.
- Apply change models, tools and techniques to successfully achieve a vision for change.

## Master of Science in Organizational Leadership with a Concentration in Human Capital in Organizations

The Human Capital in Organizations master's degree concentration is offered entirely online to meet the needs of busy adults.

The concentration in Human Capital in Organizations prepares students to ethically develop and maintain human capital while learning the best practices to do so. Students will learn to determine, cultivate, and maintain the symbiotic relationship between individuals and the organizations in which they work and lead. Strategic human capital can be a key element of a successful organization. Students will learn to innovate, maximize organizational and individual success, and master the process of developing and retaining employees to engage and achieve objectives.

Led by instructors who work in the fields in which they teach, classes introduce students to innovative and creative approaches to structuring and sustaining the development of human capital. Students explore knowledge and information management, communication tactics, vertical and horizontal partnerships, and organizational learning to promote the successful development of capital. Students will define the attributes, challenges, and advantages of human capital and strategies for leveraging each while integrating personal and organizational achievement.

This degree prepares students to:

- Analyze organizational partnerships both vertically and horizontally
- Create a strategy for leveraging the attributes, challenges, and advantages of human capital
- Critique the theories and processes used for integrating knowledge management and organizational learning as a concept for enhancing personal and organizational success
- Evaluate the opportunities, challenges and options to have employees participate in decision making through the use of various techniques
- Assess best practices in ethically developing and maintaining human capital

## Master of Science in Organizational Leadership with a Concentration in Organizational Development

The Organizational Development master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults.

Successful organizations are dynamic entities that are constantly adjusting goals, organizational structures, and strategies in response to varying organizational needs and influences. Sometimes these adjustments are large, but quite often there are a series of small to mid-size changes that affect employees and processes, resulting in the need for an organizational development (OD) intervention. In this concentration, students learn about organizations, organizational culture, and effective intervention strategies. Students also learn the history, challenges, and successes of OD and the different models and techniques to warrant a productive culture in a variety of organizational sizes, sectors, and types. An OD intervention strategy is created by defining the role of the practitioner as an internal or external consultant and constructing a diagnosis plan, synthesizing data from interviews and observations, and effectively communicating the findings in various applicable formats. Finally, a personal philosophy regarding change is developed and then examined through the context of analyzing organizational values and ethics, culture, and the human impact of change on employees.

This degree prepares students to:

- Articulate and define organizational development, history of OD, and challenges and possibilities using an intentional OD intervention.
- Develop and defend a personal philosophy of organizational change.
- Evaluate the impact of organizational culture and core values on OD interventions.
- Integrate the contract for a successful OD intervention with the organizational culture and determine the role of an OD practitioner in each stage of an OD intervention, distinguishing between an internal and external consultant.
- Assess, compare, and contrast different models of change and describe the impact of each model on an OD process.
- Define and organize OD strategies for different types of organizations (sectors, life cycle, size, industry, types of innovation, or other defining characteristics) for maximizing impacts of OD interventions.
- Summarize the importance and impact of the different organizational structures and design on OD strategy and interventions.
- Construct an organizational diagnosis plan by using interviewing, group facilitation, process observation, synthesis of data, and writing effective reports, with providing effective presentations of the findings.
- Analyze the human side of change and build strategies for successful implementation of an OD intervention that honor the loss, resistance and acceptance of changes.

## Master of Science in Organizational Leadership with a Concentration in Project Management

The Project Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults.

Students will receive hands-on, practical instruction from professional practitioners, who work in the fields in which they teach, on the tools and techniques of effective project management. Students will learn how to develop a clear plan that places a project in the context of an organization's strategic plan, while considering budgetary, scheduling, and human capital implications in any given project.

The content for this concentration has been developed to align with the current edition of the Project Management Institute's (PMI)® A Guide to the Project Management Body of Knowledge, (PMBOK® Guide), Project Management Institute, Inc. The unique curriculum equips students with the information and skills needed for the PMI® Project Management Professional (PMP)® Certification Exam.

This degree prepares students to:

- Apply the basic principles of project management to become proficient in the use of project management software
- Demonstrate the use of agile concepts and techniques to deliver complex projects
- Design a comprehensive risk management plan for a project
- Create strategies to manage the complexity inherent in large-scale projects
- Relate project scope to cost, time, and resource requirements
- Develop procurement plans and assess project contracts

### **Master of Science in Organizational Leadership with a Concentration in Strategic Innovation and Change**

The Strategic Innovation and Change master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults.

Students learn tactical innovation and change management using vision, values, and mission as an overall guide. Led by professional practitioners who work in the fields in which they teach, classes provide professionals the skills to manage change, encourage innovation, manage projects, and develop effective strategic initiatives while fulfilling an organization's mission.

Students can expect to develop strategic planning skills to help them identify and evaluate external factors that affect an organization on a micro or macro level and prepare them to be solution-oriented leaders. While learning to take advantage of current realities and seize opportunities for an organization through strategy, degree-seekers explore principles of project management, as well as the change theories and concepts required for effective and ethical change leadership.

This degree prepares students to:

- Analyze the roles of mission, vision, values, and goals as a start of strategic planning.
- Summarize the advantages and limitations of the strategic planning process
- Create strategies to address organizational challenges when implementing innovation and change and assess how this plan relates to customers, competitors, suppliers, and technology.
- Evaluate the change theories, concepts, and skills required for effective and ethical change leadership and how the relationships within an organization are affected.
- Align financial management strategies and budget and planning requirements with the vision, values, and goals of an organization.
- Justify the use of various processes, tools, techniques, and personnel to produce project management deliverables across a variety of organizational contexts.

### **Master of Science in Organizational Leadership with a Concentration in Supply Chain Management**

The Supply Chain Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults.

Students learn tactical innovation and change management using vision, values, and mission as an overall guide. Led by professional practitioners who work in the fields in which they teach, leadership classes provide professionals the skills to manage change, encourage innovation, and develop effective strategic initiatives while fulfilling an organization's mission.

In the Supply Chain Management concentration, students learn the six pillars of the field, and how to solve problems through the use of Six Sigma principles and the use of data analytics. Through hands-on projects with companies students gain real-world experience on the challenges facing global supply chains in the 21st-century while learning from current leaders in the field.

This degree prepares students to do the following:

- Articulate the six pillars of supply chain management to diagram the process to appraise their role in the market system.
- Apply the six pillars of supply chain management to realistic problem scenarios to develop strategies to diagnose and address future supply chain problems.
- Assess supply chains using a multidimensional perspective that includes connections between supply chain processes and fundamental business topics such as financial management and technology.
- Solve supply chain problems using a nonlinear process that addresses connections between supply chain pillars, market trends, and business best practices.

- Apply best practices to address an authentic supply chain problem in a work setting.

## **Graduate Certificate in Organizational Leadership with a Concentration in Human Capital in Organizations**

The graduate certificate in Human Capital in Organizations is offered entirely online to meet the needs of busy adults.

The certificate in Human Capital in Organizations prepares students to ethically develop and maintain human capital while learning the best practices to do so. Students will learn to determine, cultivate, and maintain the symbiotic relationship between individuals and the organizations in which they work and lead. Strategic human capital can be a key element of a successful organization. Students will learn to innovate, maximize organizational and individual success, and master the process of developing and retaining employees to engage and achieve objectives.

Led by instructors who work in the fields in which they teach, classes introduce students to innovative and creative approaches to structuring and sustaining the development of human capital. Students explore knowledge and information management, communication tactics, vertical and horizontal partnerships, and organizational learning to promote the successful development of capital. Students will define the attributes, challenges, and advantages of human capital and strategies for leveraging each while integrating personal and organizational achievement.

Students will also gain additional knowledge in organizational leadership through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in Organizational Leadership.

## Master's Degree Admission

### Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.

#### ORL 4000 High Impact Leadership (4 Credits)

Leveraging learners' professional experience, this course delivers applied concepts and skills for professionals to effectively lead and manage individuals and teams. Course content is structured around three sequential themes. Early in this course, learners will focus on understanding and growing oneself as a leader including establishing an inclusive leadership mindset and forming effective communication and self-organization techniques. Next, learners will explore and apply effective techniques to develop individuals and high-performing teams, including approaches for feedback, accountability, coaching and motivation, and leading and managing change. Finally, learners will examine how to navigate organizational dynamics, including managing up and across the organization, and will cultivate their personal leadership and career growth using career design principles. Students use a leadership assessment tool to reflect on their leadership practice and inform the development of a personal leadership action plan. To further support learners in their leadership development, personalized, one-on-one leadership coaching is integrated throughout the course.

#### ORL 4110 Fundamentals of Organization Development (4 Credits)

This course explores the history of organizational development (OD), definitions, models, approaches, and how OD is and can be used in organizations today. An organizational development professional requires a multitude of skills to be effective. Students will assess their own skills and develop a plan to develop or increase required skills.

**ORL 4112 Organization Development Interventions (4 Credits)**

This course will equip students with a solid foundation in Organization Development interventions, enabling them to contribute effectively to organizational change efforts and improve organizational effectiveness for individuals, teams, and whole systems. Through critical analysis, practical application, and discussion of ethical considerations, students will gain the knowledge and skills necessary to navigate the complex landscape of contemporary organizations and drive positive change through OD interventions. In this course, students will explore how to set up interventions for success and examine a variety of intervention types in each of these categories that serve to support activities that change individuals, teams, and systems. Pre-requisites: ORL 4110 strongly recommended, or significant Organization Development experience.

**ORL 4115 Organizational Culture and Organizational Development Impacts (4 Credits)**

Organizational culture encompasses the organization's vision, mission, values, systems, symbols, structures, language, beliefs, and norms. This course proposes organizational development strategies that match, support, or are synergetic with organizational cultures.

**ORL 4120 Team Effectiveness and Interventions (4 Credits)**

To be successful, organizations of all types depend on teams of people who work together to complete tasks, achieve goals, and to help accomplish organizational change and strategy. As a result, focusing on the effectiveness of teams is a key value in organizational development. In this course, students learn how teams work and what makes them effective. Students investigate the tools and methods needed to conduct team assessments, diagnose the symptoms, and prescribe and evaluate targeted interventions that help teams achieve goals that impact organizational outcomes.

**ORL 4125 Evaluate and Sustain Change (4 Credits)**

This course explores organization impacts and change processes that are inherent in organizational development. Students will analyze various change models and assess how they explain the impact of change on organizations and their stakeholders. Students will also evaluate leadership and managerial practices that play a role in sustaining organizational change.

**ORL 4130 Individual Interventions (4 Credits)**

This course explores the theory and practice of an individual intervention as part of an organizational development process. Specifically, students will examine the roles of leadership and how it affects individual development strategy and interventions. A successful internal or external consultant needs to be well-versed in the intervention process and theory that supports it, as well as the different types of individual interventions. In this course, students will learn about the wide array of intervention tools, skills, and resources to successfully facilitate an individual intervention.

**ORL 4135 Large Scale Interventions (4 Credits)**

This course explores the theory and practice of a large-scale or organization-wide organizational development process—including entering the organization, assessing a strategy for a unique organizational culture, and presenting results—while understanding the human side of change. There are many organizational development strategies that can be used based on unique organizational considerations. This course examines the roles of organizational structure, type of organization, and the depth and breadth of the organizational change affecting organizational development strategy and large-scale interventions.

**ORL 4160 Integrating Personal and Organizational Success (4 Credits)**

This course explores the dynamic and ever-evolving relationship between individual and organizational success. Students will examine the profound impact of their mindset and the "interior condition" from which they lead on organizational performance and goals. They will also investigate how the application of awareness-based methodologies in systems thinking, innovation, and change management build organizational capacity and elevate performance. Additionally, students will build their own Personal Operating System and explore how it aligns with and contributes to organizational success, thereby strengthening their ability to achieve holistic success in their personal and professional lives.

**ORL 4170 Developing Human Capital in Organizations (4 Credits)**

Human capital represents the knowledge, skills, and abilities necessary to implement the strategy of any organization – public, private or nonprofit. Unlike other forms of capital such as financial and equipment, human capital resides within the individual. This course is designed to provide students with an understanding of the strategic role and typical responsibilities that organization leadership, along with human resources, play in unleashing the potential of employees. Developing Human Capital examines current challenges and trends in developing talent as new core competencies and ways to work emerge, technology enables collaboration, and demographics shift employee expectations. The Developing Human Capital in Organizations course provides a talent management and human capital development framework that demonstrates and supports integrated processes and systems that position and enhance employee and leadership development. Students explore the role of leaders and HR in unleashing talent, an organization's most important source of competitive advantage. Students will assess, analyze and apply concrete strategies that ensure talent development is strategic, relevant, culturally sustainable, and competency-driven.

**ORL 4190 Values-Driven Decision Making (4 Credits)**

This course explores both objective and subjective decision making models. Emphasis is placed on decision making for organizational effectiveness. The rational approach will be taught via maximization of expected outcomes and decision tree analysis. The course will also explore managers' preferred decision making styles. The irrational side of decision-making will be covered through demonstrations and discussion of decision bias and judgment heuristics. Decision making is a complex and challenging process. The need for an effective and efficient methodology that is simple, systematic, and logical is more important today than ever. This course is an answer to that problem by using examples from our text and up-to-date articles on decision making from experts in the field.

**ORL 4400 Leading Strategic Planning in Organizations (4 Credits)**

How does an organization translate its mission into specific activities? In this course, students will explore a variety of established frameworks and tools related to organizational strategy that drive long-term success. This course will provide students with the general skills necessary to understand and perform a strategic analysis of an organization. Students will learn techniques related to organizational development, project management, and strategy and will conclude this course by using those tools and techniques to conduct a strategic evaluation of an organization.

**ORL 4410 Principles of Environmental Scanning (4 Credits)**

Environmental scanning is the process of identifying and evaluating environments, both internal and external, that may affect an organization's ability to create and sustain competitive advantage in the pursuit of organizational effectiveness. Knowledge of environmental scanning models are critical to the role of leadership and management teams in organizations. This course provides students the opportunity to develop a process for making strategic decisions using environmental scanning models and tools.

**ORL 4420 Leading Change for Transformation (4 Credits)**

In the 21st Century, change is a constant in organizations that want to remain competitive. At the heart of organizational change are the people of the organization who must continuously adapt their ways of thinking/doing to help the organization adapt and transform. This course prepares students to become leaders of change in their organizations through an exploration of change theory as well as the tools, models, and techniques for facilitating organizational change. Students will also learn how to enable and inspire other individuals in organizations to create change.

**ORL 4500 Leadership Development (4 Credits)**

This course explores leadership as a dynamic relationship with the organizational environment, stakeholders, and followers. Leadership in context is an essential concept, as well as the research-based core leadership competencies that effective leaders exemplify. Leaders from the public, private, and non-profit sectors will be studied in an inclusive context to assess their core leadership competencies and those practices that may vary due to the organizational structure. Relevant contemporary leadership topics will be examined to gain a broad perspective on leadership and considering the diversity of human interrelationships. The importance of ethical, strategic, and system wide decision-making is examined from the standpoint that leadership opportunities exist at all levels of organizations, in the community as well as the workplace. Strategies used to influence culture, promote learning, and implement change to move organizations forward are addressed. Students will assess their own leadership competencies and areas for growth to construct a personal leadership development plan.

**ORL 4501 Leadership Development in Action (4 Credits)**

Developing effective and successful leadership competencies is a lifelong endeavor that begins with the self and evolves throughout our career journey. In this course, inclusive leaders will be examined, including core leadership competencies and practices that may vary due to the organizational culture and structure. Students will identify core behaviors and practices along with effective communication skills and problem-solving tools to effectively move an organization forward. Students will assess their own leadership competencies and areas for growth to construct a personal leadership development plan.

**ORL 4510 Building the 21st-Century Organization (4 Credits)**

This course examines organizations in various sectors, and assesses the impact of internal and external factors on their designs and structures. Students will analyze group and individual behavior and organizational culture to understand their impact on organizational design, while also taking into account contemporary issues such as diversity and inclusion, unanticipated environmental events, and the role of stakeholders. Students will evaluate the appropriateness of current organizational designs, and provide recommendations for innovation and improvement.

**ORL 4520 Principles of Financing for Organizations (4 Credits)**

This course introduces basic financial concepts that lay the foundation for financial literacy. These financial concepts have varying relevance and different applications among public, private, and non-profit organizations. To understand these varying relationships, the course will focus on comparing and contrasting the use, non-use, and relevant application of financial concepts across sectors. Students will begin developing a skillset for applying these concepts appropriately to varying organizational types and structures. Additionally, the assessment of financial conditions will be combined with other indicators, such as an organization's strategy, to learn how to diagnose an organization's overall health.

**ORL 4530 Leading a Culture of Organizational Innovation (4 Credits)**

This course examines a proven process of innovation and how it applies to private, public, and non-profit organizations. Students will explore how leadership and organizational culture can impact innovation. They will develop skills to determine the most appropriate strategies and structures to encourage effective innovation within organizations. In particular, students will describe how to implement management systems to assess ongoing innovation, use metrics throughout the process, and determine how to incentivize innovation in work teams. Students will also assess an organization's current degree of innovation and propose an action plan for integrating innovation moving forward.

**ORL 4550 Strategic Organizational Partnerships (4 Credits)**

Partnerships extend the capability of the organization; public, private or nonprofit; and help to leverage available resources. Strategic partnerships also provide an alternative to vertical integration and a way to complement the organization's core competencies. This course defines and discusses the roles of various types of organizational partnerships, including internal and external, strategic partnerships, and joint ventures, and explores strategies for ethically managing these external and internal organizational relationships.

**ORL 4701 Topics in Organizational Leadership (4 Credits)**

The content of this course varies each time it is offered. The topics may include time-sensitive issues, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**ORL 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**ORL 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**ORL 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**ORL 4905 Graduate Social Research Methods (4 Credits)**

This course provides graduate students with a basic background in the methods of research in the social sciences. In our information-rich society, organizations and institutions have become more aware of the value of research data for informing critical decisions. As leaders in their organizations, graduates should have a knowledge base that allows them to critically examine basic research in the social sciences and to understand the methods involved in generating research results. They should understand the value of research to their organizations, be able to identify opportunities to gather information through research that will benefit those organizations, and participate in the ethical design of basic studies to gather that critical information. Students will develop and write a research proposal around a specific research question informed by a review of the literature.

**ORL 4910 Research Practices and Applications (4 Credits)**

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

**ORL 4980 Internship (0-4 Credits)**

The ORL internship is designed to offer students a practical educational experience in an industry related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the ORL master's degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College sends notification to all ORL students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the ORL degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.

**ORL 4985 Industry Innovation Project (1-4 Credits)**

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

**ORL 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted into a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent study is offered only on a for-credit basis.

**Courses****ORL 4000 High Impact Leadership (4 Credits)**

Leveraging learners' professional experience, this course delivers applied concepts and skills for professionals to effectively lead and manage individuals and teams. Course content is structured around three sequential themes. Early in this course, learners will focus on understanding and growing oneself as a leader including establishing an inclusive leadership mindset and forming effective communication and self-organization techniques. Next, learners will explore and apply effective techniques to develop individuals and high-performing teams, including approaches for feedback, accountability, coaching and motivation, and leading and managing change. Finally, learners will examine how to navigate organizational dynamics, including managing up and across the organization, and will cultivate their personal leadership and career growth using career design principles. Students use a leadership assessment tool to reflect on their leadership practice and inform the development of a personal leadership action plan. To further support learners in their leadership development, personalized, one-on-one leadership coaching is integrated throughout the course.

**ORL 4110 Fundamentals of Organization Development (4 Credits)**

This course explores the history of organizational development (OD), definitions, models, approaches, and how OD is and can be used in organizations today. An organizational development professional requires a multitude of skills to be effective. Students will assess their own skills and develop a plan to develop or increase required skills.

**ORL 4112 Organization Development Interventions (4 Credits)**

This course will equip students with a solid foundation in Organization Development interventions, enabling them to contribute effectively to organizational change efforts and improve organizational effectiveness for individuals, teams, and whole systems. Through critical analysis, practical application, and discussion of ethical considerations, students will gain the knowledge and skills necessary to navigate the complex landscape of contemporary organizations and drive positive change through OD interventions. In this course, students will explore how to set up interventions for success and examine a variety of intervention types in each of these categories that serve to support activities that change individuals, teams, and systems. Pre-requisites: ORL 4110 strongly recommended, or significant Organization Development experience.

**ORL 4115 Organizational Culture and Organizational Development Impacts (4 Credits)**

Organizational culture encompasses the organization's vision, mission, values, systems, symbols, structures, language, beliefs, and norms. This course proposes organizational development strategies that match, support, or are synergetic with organizational cultures.

**ORL 4120 Team Effectiveness and Interventions (4 Credits)**

To be successful, organizations of all types depend on teams of people who work together to complete tasks, achieve goals, and to help accomplish organizational change and strategy. As a result, focusing on the effectiveness of teams is a key value in organizational development. In this course, students learn how teams work and what makes them effective. Students investigate the tools and methods needed to conduct team assessments, diagnose the symptoms, and prescribe and evaluate targeted interventions that help teams achieve goals that impact organizational outcomes.

**ORL 4125 Evaluate and Sustain Change (4 Credits)**

This course explores organization impacts and change processes that are inherent in organizational development. Students will analyze various change models and assess how they explain the impact of change on organizations and their stakeholders. Students will also evaluate leadership and managerial practices that play a role in sustaining organizational change.

**ORL 4130 Individual Interventions (4 Credits)**

This course explores the theory and practice of an individual intervention as part of an organizational development process. Specifically, students will examine the roles of leadership and how it affects individual development strategy and interventions. A successful internal or external consultant needs to be well-versed in the intervention process and theory that supports it, as well as the different types of individual interventions. In this course, students will learn about the wide array of intervention tools, skills, and resources to successfully facilitate an individual intervention.

**ORL 4135 Large Scale Interventions (4 Credits)**

This course explores the theory and practice of a large-scale or organization-wide organizational development process—including entering the organization, assessing a strategy for a unique organizational culture, and presenting results—while understanding the human side of change. There are many organizational development strategies that can be used based on unique organizational considerations. This course examines the roles of organizational structure, type of organization, and the depth and breadth of the organizational change affecting organizational development strategy and large-scale interventions.

**ORL 4160 Integrating Personal and Organizational Success (4 Credits)**

This course explores the dynamic and ever-evolving relationship between individual and organizational success. Students will examine the profound impact of their mindset and the "interior condition" from which they lead on organizational performance and goals. They will also investigate how the application of awareness-based methodologies in systems thinking, innovation, and change management build organizational capacity and elevate performance. Additionally, students will build their own Personal Operating System and explore how it aligns with and contributes to organizational success, thereby strengthening their ability to achieve holistic success in their personal and professional lives.

**ORL 4170 Developing Human Capital in Organizations (4 Credits)**

Human capital represents the knowledge, skills, and abilities necessary to implement the strategy of any organization – public, private or nonprofit. Unlike other forms of capital such as financial and equipment, human capital resides within the individual. This course is designed to provide students with an understanding of the strategic role and typical responsibilities that organization leadership, along with human resources, play in unleashing the potential of employees. Developing Human Capital examines current challenges and trends in developing talent as new core competencies and ways to work emerge, technology enables collaboration, and demographics shift employee expectations. The Developing Human Capital in Organizations course provides a talent management and human capital development framework that demonstrates and supports integrated processes and systems that position and enhance employee and leadership development. Students explore the role of leaders and HR in unleashing talent, an organization's most important source of competitive advantage. Students will assess, analyze and apply concrete strategies that ensure talent development is strategic, relevant, culturally sustainable, and competency-driven.

**ORL 4190 Values-Driven Decision Making (4 Credits)**

This course explores both objective and subjective decision making models. Emphasis is placed on decision making for organizational effectiveness. The rational approach will be taught via maximization of expected outcomes and decision tree analysis. The course will also explore managers' preferred decision making styles. The irrational side of decision-making will be covered through demonstrations and discussion of decision bias and judgment heuristics. Decision making is a complex and challenging process. The need for an effective and efficient methodology that is simple, systematic, and logical is more important today than ever. This course is an answer to that problem by using examples from our text and up-to-date articles on decision making from experts in the field.

**ORL 4400 Leading Strategic Planning in Organizations (4 Credits)**

How does an organization translate its mission into specific activities? In this course, students will explore a variety of established frameworks and tools related to organizational strategy that drive long-term success. This course will provide students with the general skills necessary to understand and perform a strategic analysis of an organization. Students will learn techniques related to organizational development, project management, and strategy and will conclude this course by using those tools and techniques to conduct a strategic evaluation of an organization.

**ORL 4410 Principles of Environmental Scanning (4 Credits)**

Environmental scanning is the process of identifying and evaluating environments, both internal and external, that may affect an organization's ability to create and sustain competitive advantage in the pursuit of organizational effectiveness. Knowledge of environmental scanning models are critical to the role of leadership and management teams in organizations. This course provides students the opportunity to develop a process for making strategic decisions using environmental scanning models and tools.

**ORL 4420 Leading Change for Transformation (4 Credits)**

In the 21st Century, change is a constant in organizations that want to remain competitive. At the heart of organizational change are the people of the organization who must continuously adapt their ways of thinking/doing to help the organization adapt and transform. This course prepares students to become leaders of change in their organizations through an exploration of change theory as well as the tools, models, and techniques for facilitating organizational change. Students will also learn how to enable and inspire other individuals in organizations to create change.

**ORL 4500 Leadership Development (4 Credits)**

This course explores leadership as a dynamic relationship with the organizational environment, stakeholders, and followers. Leadership in context is an essential concept, as well as the research-based core leadership competencies that effective leaders exemplify. Leaders from the public, private, and non-profit sectors will be studied in an inclusive context to assess their core leadership competencies and those practices that may vary due to the organizational structure. Relevant contemporary leadership topics will be examined to gain a broad perspective on leadership and considering the diversity of human interrelationships. The importance of ethical, strategic, and system wide decision-making is examined from the standpoint that leadership opportunities exist at all levels of organizations, in the community as well as the workplace. Strategies used to influence culture, promote learning, and implement change to move organizations forward are addressed. Students will assess their own leadership competencies and areas for growth to construct a personal leadership development plan.

**ORL 4501 Leadership Development in Action (4 Credits)**

Developing effective and successful leadership competencies is a lifelong endeavor that begins with the self and evolves throughout our career journey. In this course, inclusive leaders will be examined, including core leadership competencies and practices that may vary due to the organizational culture and structure. Students will identify core behaviors and practices along with effective communication skills and problem-solving tools to effectively move an organization forward. Students will assess their own leadership competencies and areas for growth to construct a personal leadership development plan.

**ORL 4510 Building the 21st-Century Organization (4 Credits)**

This course examines organizations in various sectors, and assesses the impact of internal and external factors on their designs and structures. Students will analyze group and individual behavior and organizational culture to understand their impact on organizational design, while also taking into account contemporary issues such as diversity and inclusion, unanticipated environmental events, and the role of stakeholders. Students will evaluate the appropriateness of current organizational designs, and provide recommendations for innovation and improvement.

**ORL 4520 Principles of Financing for Organizations (4 Credits)**

This course introduces basic financial concepts that lay the foundation for financial literacy. These financial concepts have varying relevance and different applications among public, private, and non-profit organizations. To understand these varying relationships, the course will focus on comparing and contrasting the use, non-use, and relevant application of financial concepts across sectors. Students will begin developing a skillset for applying these concepts appropriately to varying organizational types and structures. Additionally, the assessment of financial conditions will be combined with other indicators, such as an organization's strategy, to learn how to diagnose an organization's overall health.

**ORL 4530 Leading a Culture of Organizational Innovation (4 Credits)**

This course examines a proven process of innovation and how it applies to private, public, and non-profit organizations. Students will explore how leadership and organizational culture can impact innovation. They will develop skills to determine the most appropriate strategies and structures to encourage effective innovation within organizations. In particular, students will describe how to implement management systems to assess ongoing innovation, use metrics throughout the process, and determine how to incentivize innovation in work teams. Students will also assess an organization's current degree of innovation and propose an action plan for integrating innovation moving forward.

**ORL 4550 Strategic Organizational Partnerships (4 Credits)**

Partnerships extend the capability of the organization; public, private or nonprofit; and help to leverage available resources. Strategic partnerships also provide an alternative to vertical integration and a way to complement the organization's core competencies. This course defines and discusses the roles of various types of organizational partnerships, including internal and external, strategic partnerships, and joint ventures, and explores strategies for ethically managing these external and internal organizational relationships.

**ORL 4701 Topics in Organizational Leadership (4 Credits)**

The content of this course varies each time it is offered. The topics may include time-sensitive issues, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

**ORL 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**ORL 4902 Capstone Seminar (4 Credits)**

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**ORL 4904 Interdisciplinary Capstone Seminar (4 Credits)**

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

**ORL 4905 Graduate Social Research Methods (4 Credits)**

This course provides graduate students with a basic background in the methods of research in the social sciences. In our information-rich society, organizations and institutions have become more aware of the value of research data for informing critical decisions. As leaders in their organizations, graduates should have a knowledge base that allows them to critically examine basic research in the social sciences and to understand the methods involved in generating research results. They should understand the value of research to their organizations, be able to identify opportunities to gather information through research that will benefit those organizations, and participate in the ethical design of basic studies to gather that critical information. Students will develop and write a research proposal around a specific research question informed by a review of the literature.

**ORL 4910 Research Practices and Applications (4 Credits)**

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

**ORL 4980 Internship (0-4 Credits)**

The ORL internship is designed to offer students a practical educational experience in an industry related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the ORL master's degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College sends notification to all ORL students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the ORL degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.

**ORL 4985 Industry Innovation Project (1-4 Credits)**

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

**ORL 4991 Independent Study (1-8 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted into a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent study is offered only on a for-credit basis.

## Professional Creative Writing

Office: University College Student Support Center

Web Site: <http://www.universitycollege.du.edu>

This program empowers aspiring writers to become published authors and, through their work, influence our ongoing cultural conversation. We encourage students to read widely and with professional attention to mastering the craft of their chosen genre. While developing a clear understanding of the literary marketplace, students learn to cultivate their individual identities as writers, create personal brands that forcefully present their writing to the public, and establish connections with the broader community of working writers. Since imaginative writing testifies to truths that would otherwise pass through the world unnoticed or misunderstood, the authors who produce it expand awareness in their readers, and through those readers, enhance the awareness of countless other people. We find this process inspiring, and through this program seek to share that inspiration with all our students.

This program prepares students to:

- Craft writing with a keen awareness of the limits and opportunities of the writing's genre
- Cultivate writing routines and habits that support creative productivity
- Develop a sophisticated knowledge of literary structures and reader expectations
- Apply professional editing standards to evaluate both published writing and writing for their peers
- Assess their own writing and learn how to enhance its strengths and eliminate its weaknesses
- Define their audiences and write in ways that move and entertain them

### Master of Arts in Professional Creative Writing with a Concentration in Professional Creative Nonfiction Writing

The Professional Creative Nonfiction Writing Concentration is designed for aspiring writers whose ambition is to become published authors of memoirs, personal essays, travel writing, and other forms of creative nonfiction. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

This degree prepares students to:

- Identify and analyze the basic elements of creative nonfiction as found in the works of master creative nonfiction writers
- Apply their knowledge of creative nonfiction fundamentals and genres to their own creative work

- Discover and cultivate personal habits of thought and behavior that sustain their creative efforts
- Create strategies for developing a professional writing presence designed to cultivate an audience for their work

### **Master of Arts in Professional Creative Writing with a Concentration in Professional Dramatic Writing**

The Professional Dramatic Writing Concentration is designed for aspiring playwrights, screenwriters, and spoken word artists whose ambition is to become published authors of plays, films, and other individual and collaborative forms of professional performance. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

This degree prepares students to:

- Identify and analyze the basic elements of drama as found in the works of master playwrights, screenwriters, and spoken word artists
- Apply their knowledge of drama's fundamentals and genres to their own creative work
- Discover and cultivate personal habits of thought and behavior that sustain their creative efforts
- Create strategies for developing a professional writing presence designed to cultivate an audience for their dramatic works

### **Master of Arts in Professional Creative Writing with a Concentration in Professional Fiction Writing**

The Professional Fiction Writing Concentration is designed for aspiring writers whose ambition is to become published authors of short stories, novels, and collaborative works in particular genres. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

This degree prepares students to:

- Identify and analyze the basic elements of fiction as found in the works of master fiction writers
- Apply their knowledge of fiction fundamentals and genres to their own creative work
- Discover and cultivate personal habits of thought and behavior that sustain their creative efforts
- Create strategies for developing a professional writing presence designed to cultivate an audience for their work

### **Master of Arts in Professional Creative Writing with a Concentration in Professional Poetry Writing**

The Professional Poetry Writing Concentration is designed for aspiring poets whose ambition is to become published authors of individual poems and collections of poetry. The coursework helps poets progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

This degree prepares students to:

- Identify and analyze the basic elements of poetry as found in the works of master poets
- Apply their knowledge of poetry fundamentals and genres to their own creative work
- Discover and cultivate personal habits of thought and behavior that sustain their creative efforts
- Create strategies for developing a professional writing presence designed to cultivate an audience for their poetry

### **Graduate Certificate in Professional Creative Writing with a Concentration in Literary Genres in Book Publishing**

This graduate certificate concentrates on fiction and nonfiction—the core genres driving the U.S. publishing industry, valued at over \$20 billion. Designed for aspiring publishing professionals, this program combines two unique experiences at the University of Denver (DU) to equip students with comprehensive industry knowledge and skills.

First, students complete the Denver Publishing Institute's (DPI) four-week graduate-level coursework dedicated to helping book lovers launch their publishing careers anywhere in the country. Students are introduced to the process of book publishing—from editing, marketing, and production to the bigger picture of publishing in a constantly changing world. Students engage with leading figures across the publishing spectrum, including small independent trade houses and large global media companies. Students gain a market-focused understanding of publishing and learn to navigate potential internal biases in editorial, marketing, or sales roles.

Second, through DU's University College students explore the Professional Creative Writing (PWRI) program's graduate-level coursework. This component enriches students' understanding of literary genres by examining compelling works through a creative writing lens and enhancing the skills needed to excel in the publishing field of their choice.

### **Graduate Certificate in Professional Creative Writing with a Concentration in Professional Creative Nonfiction Writing**

The Professional Creative Nonfiction Writing Certificate is designed for aspiring writers whose ambition is to become published authors of memoirs, personal essays, travel writing, and other forms of creative nonfiction. The coursework helps writers progress toward mastering the fundamentals of

their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work. Students will also gain additional skills and knowledge in professional creative writing through elective coursework.

### **Graduate Certificate in Professional Creative Writing with a Concentration in Professional Dramatic Writing**

The Professional Dramatic Writing Certificate is designed for aspiring playwrights, screenwriters, and spoken word artists whose ambition is to become published authors of plays, films, and other individual and collaborative forms of professional performance. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work. Students will also gain additional skills and knowledge in professional creative writing through elective coursework.

### **Graduate Certificate in Professional Creative Writing with a Concentration in Professional Fiction Writing**

The Professional Fiction Writing Certificate is designed for aspiring writers whose ambition is to become published authors of short stories, novels, and collaborative works in particular genres. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work. Students will also gain additional skills and knowledge in professional creative writing through elective coursework.

### **Graduate Certificate in Professional Creative Writing with a Concentration in Professional Poetry Writing**

The Professional Poetry Writing Certificate is designed for aspiring poets whose ambition is to become published authors of individual poems and collections of poetry. The coursework helps poets progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work. Students will also gain additional skills and knowledge in professional creative writing through elective coursework.

### **Specialized Graduate Certificate in Professional Creative Nonfiction Writing**

The specialized graduate certificate in Professional Creative Nonfiction Writing is designed for aspiring writers whose ambition is to become published authors of memoirs, personal essays, travel writing, and other forms of creative nonfiction. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

### **Specialized Graduate Certificate in Professional Dramatic Writing**

The specialized graduate certificate in Professional Dramatic Writing is designed for aspiring playwrights, screenwriters, and spoken word artists whose ambition is to become published authors of plays, films, and other individual and collaborative forms of professional performance. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

### **Specialized Graduate Certificate in Professional Fiction Writing**

The specialized graduate certificate in Professional Fiction Writing is designed for aspiring writers whose ambition is to become published authors of short stories, novels, and collaborative works in particular genres. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

### **Specialized Graduate Certificate in Professional Poetry Writing**

The specialized graduate certificate in Professional Poetry Writing is designed for aspiring poets whose ambition is to become published authors of individual poems and collections of poetry. The coursework helps poets progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

## **Master's Degree Admission**

### **Degree and GPA Requirements**

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.

#### PWRI 4000 Masterworks: Fiction (4 Credits)

A "masterwork" of fiction is a literary text that has achieved both broad recognition for artistic excellence and an extraordinary level of influence within and beyond its culture of origin. In this course, students will engage such works from an aspiring writer's point of view, drawing on them to develop a deeper understanding of the way structure, style, character, theme, and cultural values work together in the most powerful fiction works of modern times. Discussions and writing assignments will focus on how exposure to the fiction of different countries can help us see our own literary and cultural assumptions with fresh eyes.

#### PWRI 4001 Portfolio Foundations (0 Credits)

Master's and certificate-seeking students in Professional Creative Writing must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

#### PWRI 4010 Writing Fiction: Foundational Concepts, Skills, and Practice (4 Credits)

This is a workshop-based course on the fundamentals of writing fiction. It touches on popular subgenres such as literary fiction, science fiction, fantasy, suspense, mystery, historical fiction, satire, romance, and more. Students will read, discuss, and create presentations on works by established fiction writers; experiment with craft concepts in their own stories; provide and receive constructive feedback in a supportive workshop environment; and maintain a consistent writing practice throughout the course.

#### PWRI 4020 Writing the Short Story (4 Credits)

The dramatic elements of the short story are distinct from any other form of fiction. This workshop is for writers who plan to seriously study the form of the contemporary short story, and to apply their learning to their own projects. Students focus equally on reading published works and writing/ revising an original short story, as well as discussing aspects of publishing. Weekly writing exercises, readings, and workshops of student stories will be combined to provide the most direct, effective training in this dynamic form. (It is strongly encouraged that students take PWRI 4010 Writing Fiction: Foundational Concepts, Skills, and Practice prior to this course.)

#### PWRI 4030 Writing the Novella (4 Credits)

This course concentrates on the craft of writing a form of fiction that combines the intense thematic focus of short stories and the complex character development typical of the novel. The novella offers writers the opportunity to create an extended story without juggling the complexities of multiple points of view, intricate plot lines, and difficult-to-manage back stories. Typically concerned with a character's emotional and personal development rather than the interaction of many characters in a complicated social context, the novella usually takes place in one location or in a larger but well-defined setting. Novellas are common in genres such as mystery and science fiction, and because of their strong focus and relative brevity, they are widely considered the perfect form for adaptation to the stage, film, and television.

**PWRI 4100 Masterworks: Creative Nonfiction (4 Credits)**

A “masterwork” of creative nonfiction is a literary text that has achieved both broad recognition for artistic excellence and an extraordinary level of influence within and beyond its culture of origin. In this course, students will engage such works from an aspiring writer’s point of view, drawing on them to develop a deeper understanding of the way structure, style, character, theme, and cultural values work together in the most powerful works of modern creative nonfiction. Includes popular sub-genres such as narrative nonfiction, memoir, the personal essay, travel writing, humor, criticism, nature and science writing, literary journalism, and experimental forms. The primary focus will be fundamentals and techniques of creative nonfiction to be used in virtually every sub-genre. Discussions and writing assignments will focus on how exposure to the creative nonfiction of different countries can help us see our own literary and cultural assumptions with fresh eyes.

**PWRI 4110 Writing Creative Nonfiction: Foundational Concepts, Skills, and Practice (4 Credits)**

This course concentrates on the craft of writing nonfiction, which includes popular subgenres such as narrative nonfiction, memoir, the personal essay, travel writing, humor, criticism, nature and science writing, literary journalism, and experimental forms. The primary focus will be fundamentals and techniques of creative nonfiction to be used in virtually every sub-genre. Students will later apply these classic skills in courses devoted to various nonfiction sub-genres, such as memoir. Class discussions will emphasize essential writing skills and professional approaches to research, taking advantage of a supportive workshop format. Students will express their ideas about both craft and content and workshop their writing with a view toward professional publication.

**PWRI 4120 Writing the Personal Essay (4 Credits)**

The author Dinty Moore describes the personal essay as being for writers who want to capture a bit of life, producing a written record of their better thoughts. Like the short story in fiction, the personal essay is one of the original forms of creative nonfiction. It is a lively form that has tracked through the ages—from ancient archetypes to the school of Enlightenment essayists, 19th-century realists and romantics to robust 20th-century conventionalists, and on to Digital Age innovators where it deeply informs blogs, social media posts, and other contemporary writings. Conventions of the craft are covered in this course, but students will not be expected to embrace creativity-stifling rules. The work will be hands-on, with workshoping that pushed students to pursue new pathways and fresh approaches in their personal essay writing.

**PWRI 4130 Writing the Memoir (4 Credits)**

The memoir is as popular as ever – tales of persistence and overcoming odds grip us like no other. Students in this course will concentrate on the craft of writing the memoir, a work of creative nonfiction rooted in and focused on the writer’s memories. Unlike personal essays, memoirs foreground the writer’s past to illuminate the complex development of understanding that past. This aim results in works that are typically book-length, in which the writer applies the techniques of creative nonfiction to describe and make observations and draw conclusions from personal experience. Class discussions emphasize essential writing skills, techniques for exploring and recording memories, and professional approaches to the research required to make the past come to life for the reader. Taking advantage of a supportive workshop format, students will share their ideas about craft and content with a view toward book publication.

**PWRI 4140 Natural Science and Literature (4 Credits)**

This class will explore the practice – and art – of nonfiction writing about science and nature. Students will begin with an examination of influential historical works and move into contemporary writing on science and nature. The class will be a sort of journey, from ruminative essays on the individual in nature to impassioned (and science-heavy) explorations of ecosystem destruction to exuberant studies of love and sex in the animal kingdom. Students will seek to understand the narrative and linguistic machinery that make these pieces of writing “tick” through discussions, short writing exercises, brief reviews, and workshop participation. This course will also address the development of students’ own writing. Specifically, students will seek understanding of the writing techniques that can be used to make the complex fields of science and nature accessible subjects of writing intended for mainstream or literary publications. The key challenge will be to find a topic, a format (memoir, essay, narrative journalism), a structure, and a voice suitable for creating a single, sustained piece of writing that each student will devise, draft, workshop, and polish throughout the course.

**PWRI 4200 Masterworks: Poetry (4 Credits)**

Poetry is the most ancient of the written arts, so there are thousands of poetry masterworks—far too many to be usefully studied in a single course. That’s why this course focuses on the one resource that every poet must develop in order to write well: a personal “poetic lineage.” Students will learn how to explore the work of other poets and identify significant parts of their poetic lineages. They will also learn how to use that exploration to develop, expand, and refine their own poetic lineage, which will shape and nourish their poetry over a lifetime.

**PWRI 4210 Writing Poetry: Foundational Concepts, Skills, and Practice (4 Credits)**

This course is a combination of readings in poetry and poetics, brief lectures, and open discussions focused on the interplay of image, metaphor, rhythm, emotions and ideas in the expressive form of writing called poetry. Students will learn to tap the imaginative sources that all creative writing springs from and flow those energies into poetic form. The instructor will provide examples to illustrate successful uses of key poetic concepts and help students explore, through a range of open-ended exercises, various approaches to expressing themselves fully and clearly. Students will also develop practical critiquing skills with the aim of helping themselves and their classmates write with greater subtlety and power.

**PWRI 4220 Writing Traditional Verse and Contemporary Song Lyrics (4 Credits)**

This course focuses on the shared building blocks of traditional formal poetry and contemporary song lyrics: meter and rhyme, repetition, and verse/stanza structure. Beginning with simple constructions like limericks and nursery rhymes, and moving swiftly into more sophisticated verse organizations like the sonnet, the villanelle, the ballad, and the popular song, students will explore a variety of existing examples, then produce their own pieces that follow (or break) the established rules of each form. The course will take a workshop format, in which students will generate, share, and receive feedback on their formal experiments; the focus will be on developing a more finely tuned ear for form, and on deploying “traditional” poetic techniques in relevant, radical, and inventive ways. (NOTE: The ability to sing or play an instrument is NOT required for this course; when discussing and writing songs, students will focus on the texts only, not the harmonic/melodic elements of songwriting craft.)

**PWRI 4230 Writing Improvisational Verse and Prose Poetry (4 Credits)**

This course focuses on the writing of improvisational verse and prose poems, certainly the most popular forms of poetry today both in America and around the world. The course will explore a wide variety of approaches to non-metrical verse and examine how poetry sounds when it appears in prose form. Using a workshop format, students will generate, share, and receive feedback on their poetic experiments, with an emphasis on developing a more finely tuned ear for cadence and phrasing. Robert Frost famously wrote that writing what he called “free verse” was like “playing tennis with the net down.” This course aims to demonstrate why Frost was wrong.

**PWRI 4300 Masterworks: Drama (4 Credits)**

A “masterwork” of drama is a play or screenplay that has achieved both broad recognition for artistic excellence and an extraordinary level of influence within and beyond its culture of origin. In this course, students will engage such works from an aspiring writer’s point of view, drawing on them to develop a deeper understanding of the way structure, style, character, imagery, theme, and cultural values work together in some of the most powerful dramatic works of modern times. The course will also explore the impact of stagecraft, the needs of actors, and vision of directors on the way a play is developed. Discussions and writing assignments will focus on how exposure to the drama of different countries can help us see our own literary and cultural assumptions with fresh eyes.

**PWRI 4310 Playwriting: Foundational Concepts, Skills, and Practice (4 Credits)**

In this course, students analyze short and full-length plays, compose experimental exercises, write drafts of short plays, evaluate each other’s writing, and revise a short play to develop the skills required to write for the stage. Students learn key theatrical skills and terms as they analyze varied plot structures, create vivid characters, and write realistic and stylized dialogue. Students examine theatre’s collaborative process, and model possible relationships between environment, stagecraft, and the ways playwrights shape their texts. Scripts read for class discussions illustrate uses of key dramatic techniques while suggesting various approaches to theme, genre, character, and structure. Students develop practical critiquing skills while incorporating colleagues’ feedback into script revision, with the aim of crafting compelling plays that appeal to both theater professionals and theatrical audiences.

**PWRI 4320 Writing the Screenplay (4 Credits)**

This course provides a comprehensive overview of the industry standard elements of screenwriting. Through readings, film viewings, written analyses, online discussions, and creative exercises, students will learn how to write original stories for a visual medium, use prescriptive filmic story structure (“screenplay formatting”), and identify key elements that make a script successful. With these tools in hand, students will create the first act of an original feature-length screenplay, develop an outline (“script treatment”) for the entire film, and finish the course prepared to complete the project and present it to the film-making industry.

**PWRI 4330 Writing for Personal Performance (4 Credits)**

This course focuses on writing texts that the authors aim to perform themselves, including spoken word poetry, storytelling, one-person plays, presentations in TED Talk and other formats, and even standup comedy. Using a variety of readings and recorded performances, brief lectures, and writing assignments, the course helps writers develop the skills required to shape their work for public performance. Students learn to distinguish between their “page voice” and their “performance voice” so that they can produce more effective texts for performance. Using a supportive workshop format and class discussions, students will apply practical critiquing skills with the aim of helping themselves and their classmates create compelling performance pieces that appeal to audiences of all kinds.

**PWRI 4340 Writing the Adapted Screenplay (4 Credits)**

Much of Hollywood’s source material in recent decades was not written originally for the big screen – it was first created and popularized in another medium, like a book, memoir, an article, a video game, or even an album. Clearly, the marketplace has a proven demand for adaptations. In this course, we examine the adaptation of literary and nonfiction works and the film interpretations of each work. This class will explore the principal development questions involved in a successful adaptation, look at the legalities of securing the rights to a property, and dive into the specifics behind pitching an adaptation. Students will study the main developmental issues of adaptation and write a range of short adaptations across multiple mediums, plus create a pitch and a first act for a feature project. The course also aims to enhance the critical skill of students as well as their craft abilities.

**PWRI 4410 Writing and Healing (4 Credits)**

In this course, students evaluate theoretical and practical aspects of written expression as it relates to healing. Students analyze foundational concepts of healing through the lens of contemporary creative literature. Students apply these concepts to their writing practice through journaling processes, written therapeutic strategies, and poetic techniques aimed at cultivating self-awareness and personal growth. Through a course-long inquiry into the concept of “healing,” students will learn to articulate how their writing processes enhance their writerly identities and develop a practical set of therapeutic, expressive techniques for everyday use.

**PWRI 4420 Writing as Translation (4 Credits)**

In its literary sense, translation is the closest reading possible, and learning its processes enables a deeper reading of our own work. Effective translation—of our own writing or that of others—depends on intimate attention to the many elements of literary writing. This course examines common translation practices and examples with emphasis on elements such as syntax, word choice, pacing, setting, and imagery, with the goal of enhancing the student’s knowledge of and skill with those elements. Once acquainted with translation processes, students apply them to their own work. Assignments are completed in English and no second language is required.

**PWRI 4430 Writing for Television (4 Credits)**

This course provides an overview of two important television writing skills: the creation of a pilot for an original series and the writing of a “spec,” which is writing an original idea for a television show that currently exists (a requirement in the pursuit of employment as a TV writer). Students will intensively study the structure, character build, template, theme, and franchise involved in the development of TV shows (both half hour and hour long), as well as learn about the current business of TV. Since this is an intensive writing and workshoping course, students will be required to submit their work to and to give constructive criticism to their fellow writers. Prerequisite: PWRI 4320 Writing the Screenplay.

**PWRI 4500 The Writing Life: Concepts, Practices, and Professionalism (4 Credits)**

This course aims to provide aspiring writers a basic knowledge of the creative and professional tools they will need to succeed, whatever their individual goals or life situation. This course tackles questions and challenges common to all writers at one time or another. Primary considerations include: What exactly does it mean to be a writer? What are my motivations for wanting to write? How can I identify and prioritize writing projects? How do I move my writing projects forward from concept to completion? These primary challenges require writers to narrow their creative focus and to cultivate habits of thought and behavior that sustain creative efforts in a world full of distractions, obligations, and competing claims on their time.

**PWRI 4510 Literary Genres for Writers (4 Credits)****PWRI 4520 The Writers Workshop (4 Credits)**

A writer writes” is the universal mantra of the writing life, but one of the critical steps in developing a work in progress is getting constructive feedback. Unfortunately, all too often, a writer ends up disappointed because the feedback received is superficial, too polite, or little more than proofreading. This course teaches students to workshop in a meaningful way, responding to content, focus, coherence, and organizational issues. Students learn to elicit more feedback from their workshop colleagues, demonstrating the relationship between reader and writer. The class will explore a variety of genres, and each student produces short exercises and longer projects that demonstrate a grasp of various aspects of the writing craft.

**PWRI 4540 Children's Literature: From Picture Books to Books for Young Adults (4 Credits)**

This course offers an introductory study of children's literature, from toddler board books and easy readers to chapter books and books for young adults. It is designed primarily for students interested in writing for children and those planning to teach children's literature, though new and soon-to-be parents would find it illuminating as well. Touching on all the major categories/levels and subgenres of children's literature, students will learn to identify the unique characteristics of each and apply definable quality standards to assess a wide range of particular texts from both creative and analytical points of view. Note that, though students may do some creative writing, this is not a course in writing children's literature.

**PWRI 4560 Writing Books for Children (4 Credits)**

This course concentrates on the craft of writing three distinct categories of children's fiction: the picture book, the early/easy/transitional reader and novels for older readers (chapter book, middle grade and young adult novel). Within each category, students have a unique opportunity to explore storytelling for a specific young audience whose members vary in age, reading interest and reading ability. Note that this course covers narrative fiction only; nonfiction, though a valuable genre of children's literature, is beyond the scope of this course. Prerequisite: PWRI 4540 Children's Literature.

**PWRI 4600 Breaking the Chains of Genre: An Exploration of Hybrid Literatures (4 Credits)**

Hybrid genre, cross-genre, multi-genre, or mixed genre literature is literature that combines writing from different genres to create one text. The text created might be fragmentary or unified; it might be coherent or disjointed. Cross-genre literature is not new, but contemporary authors are more frequently pushing on the boundaries between genres in their creative and scholarly writing to produce rich, open, polyphonic texts as a result. How has cross-genre literature been deployed in different literary and cultural traditions? What advantages does cross-genre literature provide for the writer and for the reader? This course will explore the ways in which authors have experimented with mixing genres in different cultural traditions and writing disciplines as well as how this genre-bending has enabled them to accomplish various creative, narrative, and rhetorical purposes. Required Prerequisite: PWRI 4510.

**PWRI 4701 Topics in Literature (4 Credits)**

This course is designed to provide a deep dive into advanced topics of special interest to creative writers. Topics may range from close studies of established masterworks to examining the latest trends in developing genres or wrestling with several works by living masters.

**PWRI 4702 Topics in Writing (4 Credits)**

This course is designed to provide a deep dive into advanced topics of special interest to creative writers. Topics may range from close studies of compositional techniques used in established masterworks to examining the development of new genre forms or wrestling with texts whose approaches are drawn from multiple genres.

**PWRI 4901 Professional Creative Writing Capstone Project (4 Credits)**

The Creative Capstone Project provides students the opportunity to apply the knowledge and skills gained through the degree program to create a culminating project consisting of three major parts: a creative core (fiction, creative nonfiction, poetry, or some other kind of creative writing); a researched analysis essay exploring an idea, issue, or problem that is closely related to the creative core (however, the essay is not about the creative core); and a reflection essay placing the creative core and the analysis essay in the context of the student's coursework at University College and his or her writing goals for the future. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the project. Please see the Creative Capstone Project Guidelines for additional details. Note: For the creative core, students should not attempt a genre they have not written in at least one of their University College courses. Prerequisites: a Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, and completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**PWRI 4917 Market Research for Writers (4 Credits)**

All writers of every medium considering a professional career path must not only learn their craft but learn to navigate the publishing and production worlds. This course discusses the relationships between agents, editors of books, journals and magazines, literary managers, artistic directors, publishing houses (both big and boutique), and booksellers, as well as production companies. Additionally, students determine ways to cultivate relationships with those industry professionals and find opportunities (such as contests and fellowships) with the goal of submission and acquisition. This course also covers the research required for target-rich submission campaigns, the process of manuscript submission and acquisition, as well as learning copyright and contractual basics. Students will learn how to generate marketing materials that aid in the submission process, across all mediums, and how to develop an author platform, using branding and social media opportunities, that cultivates a professional, public persona critical to connecting with their audience. Ultimately, students consider how to build a writing community that will provide the foundation for support, education, and networking, which is vital for success. Required Prerequisites: PWRI 4500, 4510, and 4520. Note that this course must be completed before enrolling in either the PWRI Portfolio Capstone or Creative Capstone Project.

**PWRI 4920 Portfolio Capstone (4 Credits)**

The Portfolio Capstone course provides students the opportunity to reflect upon the work they have done throughout their graduate studies at University College and synthesize their learning. Students in the Portfolio Capstone produce deliverables that include: (1) a thorough annotation of their portfolio, a process requiring critical and creative thinking about their educational experience, and (2) a pinnacle project that identifies, analyzes, and elaborates significant themes in their program experience, evaluates their accomplishments, connects their coursework to their professional goals, and assesses those goals in the context of their chosen field.

**PWRI 4980 Internship (0-4 Credits)**

The PWRI internship is designed to offer students a practical educational experience in an industry-related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the PWRI master's degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College sends notification to all PWRI students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the PWRI degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.

**PWRI 4991 Independent Study (1-4 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, have obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

**Courses****PWRI 4000 Masterworks: Fiction (4 Credits)**

A "masterwork" of fiction is a literary text that has achieved both broad recognition for artistic excellence and an extraordinary level of influence within and beyond its culture of origin. In this course, students will engage such works from an aspiring writer's point of view, drawing on them to develop a deeper understanding of the way structure, style, character, theme, and cultural values work together in the most powerful fiction works of modern times. Discussions and writing assignments will focus on how exposure to the fiction of different countries can help us see our own literary and cultural assumptions with fresh eyes.

**PWRI 4001 Portfolio Foundations (0 Credits)**

Master's and certificate-seeking students in Professional Creative Writing must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

**PWRI 4010 Writing Fiction: Foundational Concepts, Skills, and Practice (4 Credits)**

This is a workshop-based course on the fundamentals of writing fiction. It touches on popular subgenres such as literary fiction, science fiction, fantasy, suspense, mystery, historical fiction, satire, romance, and more. Students will read, discuss, and create presentations on works by established fiction writers; experiment with craft concepts in their own stories; provide and receive constructive feedback in a supportive workshop environment; and maintain a consistent writing practice throughout the course.

**PWRI 4020 Writing the Short Story (4 Credits)**

The dramatic elements of the short story are distinct from any other form of fiction. This workshop is for writers who plan to seriously study the form of the contemporary short story, and to apply their learning to their own projects. Students focus equally on reading published works and writing/revising an original short story, as well as discussing aspects of publishing. Weekly writing exercises, readings, and workshops of student stories will be combined to provide the most direct, effective training in this dynamic form. (It is strongly encouraged that students take PWRI 4010 Writing Fiction: Foundational Concepts, Skills, and Practice prior to this course.).

**PWRI 4030 Writing the Novella (4 Credits)**

This course concentrates on the craft of writing a form of fiction that combines the intense thematic focus of short stories and the complex character development typical of the novel. The novella offers writers the opportunity to create an extended story without juggling the complexities of multiple points of view, intricate plot lines, and difficult-to-manage back stories. Typically concerned with a character's emotional and personal development rather than the interaction of many characters in a complicated social context, the novella usually takes place in one location or in a larger but well-defined setting. Novellas are common in genres such as mystery and science fiction, and because of their strong focus and relative brevity, they are widely considered the perfect form for adaptation to the stage, film, and television.

**PWRI 4100 Masterworks: Creative Nonfiction (4 Credits)**

A "masterwork" of creative nonfiction is a literary text that has achieved both broad recognition for artistic excellence and an extraordinary level of influence within and beyond its culture of origin. In this course, students will engage such works from an aspiring writer's point of view, drawing on them to develop a deeper understanding of the way structure, style, character, theme, and cultural values work together in the most powerful works of modern creative nonfiction. Includes popular sub-genres such as narrative nonfiction, memoir, the personal essay, travel writing, humor, criticism, nature and science writing, literary journalism, and experimental forms. The primary focus will be fundamentals and techniques of creative nonfiction to be used in virtually every sub-genre. Discussions and writing assignments will focus on how exposure to the creative nonfiction of different countries can help us see our own literary and cultural assumptions with fresh eyes.

**PWRI 4110 Writing Creative Nonfiction: Foundational Concepts, Skills, and Practice (4 Credits)**

This course concentrates on the craft of writing nonfiction, which includes popular subgenres such as narrative nonfiction, memoir, the personal essay, travel writing, humor, criticism, nature and science writing, literary journalism, and experimental forms. The primary focus will be fundamentals and techniques of creative nonfiction to be used in virtually every sub-genre. Students will later apply these classic skills in courses devoted to various nonfiction sub-genres, such as memoir. Class discussions will emphasize essential writing skills and professional approaches to research, taking advantage of a supportive workshop format. Students will express their ideas about both craft and content and workshop their writing with a view toward professional publication.

**PWRI 4120 Writing the Personal Essay (4 Credits)**

The author Dinty Moore describes the personal essay as being for writers who want to capture a bit of life, producing a written record of their better thoughts. Like the short story in fiction, the personal essay is one of the original forms of creative nonfiction. It is a lively form that has tracked through the ages—from ancient archetypes to the school of Enlightenment essayists, 19th-century realists and romantics to robust 20th-century conventionalists, and on to Digital Age innovators where it deeply informs blogs, social media posts, and other contemporary writings. Conventions of the craft are covered in this course, but students will not be expected to embrace creativity-stifling rules. The work will be hands-on, with workshopping that pushed students to pursue new pathways and fresh approaches in their personal essay writing.

**PWRI 4130 Writing the Memoir (4 Credits)**

The memoir is as popular as ever – tales of persistence and overcoming odds grip us like no other. Students in this course will concentrate on the craft of writing the memoir, a work of creative nonfiction rooted in and focused on the writer's memories. Unlike personal essays, memoirs foreground the writer's past to illuminate the complex development of understanding that past. This aim results in works that are typically book-length, in which the writer applies the techniques of creative nonfiction to describe and make observations and draw conclusions from personal experience. Class discussions emphasize essential writing skills, techniques for exploring and recording memories, and professional approaches to the research required to make the past come to life for the reader. Taking advantage of a supportive workshop format, students will share their ideas about craft and content with a view toward book publication.

**PWRI 4140 Natural Science and Literature (4 Credits)**

This class will explore the practice – and art – of nonfiction writing about science and nature. Students will begin with an examination of influential historical works and move into contemporary writing on science and nature. The class will be a sort of journey, from ruminative essays on the individual in nature to impassioned (and science-heavy) explorations of ecosystem destruction to exuberant studies of love and sex in the animal kingdom. Students will seek to understand the narrative and linguistic machinery that make these pieces of writing "tick" through discussions, short writing exercises, brief reviews, and workshop participation. This course will also address the development of students' own writing. Specifically, students will seek understanding of the writing techniques that can be used to make the complex fields of science and nature accessible subjects of writing intended for mainstream or literary publications. The key challenge will be to find a topic, a format (memoir, essay, narrative journalism), a structure, and a voice suitable for creating a single, sustained piece of writing that each student will devise, draft, workshop, and polish throughout the course.

**PWRI 4200 Masterworks: Poetry (4 Credits)**

Poetry is the most ancient of the written arts, so there are thousands of poetry masterworks—far too many to be usefully studied in a single course. That's why this course focuses on the one resource that every poet must develop in order to write well: a personal "poetic lineage." Students will learn how to explore the work of other poets and identify significant parts of their poetic lineages. They will also learn how to use that exploration to develop, expand, and refine their own poetic lineage, which will shape and nourish their poetry over a lifetime.

**PWRI 4210 Writing Poetry: Foundational Concepts, Skills, and Practice (4 Credits)**

This course is a combination of readings in poetry and poetics, brief lectures, and open discussions focused on the interplay of image, metaphor, rhythm, emotions and ideas in the expressive form of writing called poetry. Students will learn to tap the imaginative sources that all creative writing springs from and flow those energies into poetic form. The instructor will provide examples to illustrate successful uses of key poetic concepts and help students explore, through a range of open-ended exercises, various approaches to expressing themselves fully and clearly. Students will also develop practical critiquing skills with the aim of helping themselves and their classmates write with greater subtlety and power.

**PWRI 4220 Writing Traditional Verse and Contemporary Song Lyrics (4 Credits)**

This course focuses on the shared building blocks of traditional formal poetry and contemporary song lyrics: meter and rhyme, repetition, and verse/stanza structure. Beginning with simple constructions like limericks and nursery rhymes, and moving swiftly into more sophisticated verse organizations like the sonnet, the villanelle, the ballad, and the popular song, students will explore a variety of existing examples, then produce their own pieces that follow (or break) the established rules of each form. The course will take a workshop format, in which students will generate, share, and receive feedback on their formal experiments; the focus will be on developing a more finely tuned ear for form, and on deploying "traditional" poetic techniques in relevant, radical, and inventive ways. (NOTE: The ability to sing or play an instrument is NOT required for this course; when discussing and writing songs, students will focus on the texts only, not the harmonic/melodic elements of songwriting craft.)

**PWRI 4230 Writing Improvisational Verse and Prose Poetry (4 Credits)**

This course focuses on the writing of improvisational verse and prose poems, certainly the most popular forms of poetry today both in America and around the world. The course will explore a wide variety of approaches to non-metrical verse and examine how poetry sounds when it appears in prose form. Using a workshop format, students will generate, share, and receive feedback on their poetic experiments, with an emphasis on developing a more finely tuned ear for cadence and phrasing. Robert Frost famously wrote that writing what he called "free verse" was like "playing tennis with the net down." This course aims to demonstrate why Frost was wrong.

**PWRI 4300 Masterworks: Drama (4 Credits)**

A "masterwork" of drama is a play or screenplay that has achieved both broad recognition for artistic excellence and an extraordinary level of influence within and beyond its culture of origin. In this course, students will engage such works from an aspiring writer's point of view, drawing on them to develop a deeper understanding of the way structure, style, character, imagery, theme, and cultural values work together in some of the most powerful dramatic works of modern times. The course will also explore the impact of stagecraft, the needs of actors, and vision of directors on the way a play is developed. Discussions and writing assignments will focus on how exposure to the drama of different countries can help us see our own literary and cultural assumptions with fresh eyes.

**PWRI 4310 Playwriting: Foundational Concepts, Skills, and Practice (4 Credits)**

In this course, students analyze short and full-length plays, compose experimental exercises, write drafts of short plays, evaluate each other's writing, and revise a short play to develop the skills required to write for the stage. Students learn key theatrical skills and terms as they analyze varied plot structures, create vivid characters, and write realistic and stylized dialogue. Students examine theatre's collaborative process, and model possible relationships between environment, stagecraft, and the ways playwrights shape their texts. Scripts read for class discussions illustrate uses of key dramatic techniques while suggesting various approaches to theme, genre, character, and structure. Students develop practical critiquing skills while incorporating colleagues' feedback into script revision, with the aim of crafting compelling plays that appeal to both theater professionals and theatrical audiences.

**PWRI 4320 Writing the Screenplay (4 Credits)**

This course provides a comprehensive overview of the industry standard elements of screenwriting. Through readings, film viewings, written analyses, online discussions, and creative exercises, students will learn how to write original stories for a visual medium, use prescriptive filmic story structure ("screenplay formatting"), and identify key elements that make a script successful. With these tools in hand, students will create the first act of an original feature-length screenplay, develop an outline ("script treatment") for the entire film, and finish the course prepared to complete the project and present it to the film-making industry.

**PWRI 4330 Writing for Personal Performance (4 Credits)**

This course focuses on writing texts that the authors aim to perform themselves, including spoken word poetry, storytelling, one-person plays, presentations in TED Talk and other formats, and even standup comedy. Using a variety of readings and recorded performances, brief lectures, and writing assignments, the course helps writers develop the skills required to shape their work for public performance. Students learn to distinguish between their "page voice" and their "performance voice" so that they can produce more effective texts for performance. Using a supportive workshop format and class discussions, students will apply practical critiquing skills with the aim of helping themselves and their classmates create compelling performance pieces that appeal to audiences of all kinds.

**PWRI 4340 Writing the Adapted Screenplay (4 Credits)**

Much of Hollywood's source material in recent decades was not written originally for the big screen – it was first created and popularized in another medium, like a book, memoir, an article, a video game, or even an album. Clearly, the marketplace has a proven demand for adaptations. In this course, we examine the adaptation of literary and nonfiction works and the film interpretations of each work. This class will explore the principal development questions involved in a successful adaptation, look at the legalities of securing the rights to a property, and dive into the specifics behind pitching an adaptation. Students will study the main developmental issues of adaptation and write a range of short adaptations across multiple mediums, plus create a pitch and a first act for a feature project. The course also aims to enhance the critical skill of students as well as their craft abilities.

**PWRI 4410 Writing and Healing (4 Credits)**

In this course, students evaluate theoretical and practical aspects of written expression as it relates to healing. Students analyze foundational concepts of healing through the lens of contemporary creative literature. Students apply these concepts to their writing practice through journaling processes, written therapeutic strategies, and poetic techniques aimed at cultivating self-awareness and personal growth. Through a course-long inquiry into the concept of "healing," students will learn to articulate how their writing processes enhance their writerly identities and develop a practical set of therapeutic, expressive techniques for everyday use.

**PWRI 4420 Writing as Translation (4 Credits)**

In its literary sense, translation is the closest reading possible, and learning its processes enables a deeper reading of our own work. Effective translation—of our own writing or that of others—depends on intimate attention to the many elements of literary writing. This course examines common translation practices and examples with emphasis on elements such as syntax, word choice, pacing, setting, and imagery, with the goal of enhancing the student's knowledge of and skill with those elements. Once acquainted with translation processes, students apply them to their own work. Assignments are completed in English and no second language is required.

**PWRI 4430 Writing for Television (4 Credits)**

This course provides an overview of two important television writing skills: the creation of a pilot for an original series and the writing of a "spec," which is writing an original idea for a television show that currently exists (a requirement in the pursuit of employment as a TV writer). Students will intensively study the structure, character build, template, theme, and franchise involved in the development of TV shows (both half hour and hour long), as well as learn about the current business of TV. Since this is an intensive writing and workshoping course, students will be required to submit their work to and to give constructive criticism to their fellow writers. Prerequisite: PWRI 4320 Writing the Screenplay.

**PWRI 4500 The Writing Life: Concepts, Practices, and Professionalism (4 Credits)**

This course aims to provide aspiring writers a basic knowledge of the creative and professional tools they will need to succeed, whatever their individual goals or life situation. This course tackles questions and challenges common to all writers at one time or another. Primary considerations include: What exactly does it mean to be a writer? What are my motivations for wanting to write? How can I identify and prioritize writing projects? How do I move my writing projects forward from concept to completion? These primary challenges require writers to narrow their creative focus and to cultivate habits of thought and behavior that sustain creative efforts in a world full of distractions, obligations, and competing claims on their time.

**PWRI 4510 Literary Genres for Writers (4 Credits)****PWRI 4520 The Writers Workshop (4 Credits)**

"A writer writes" is the universal mantra of the writing life, but one of the critical steps in developing a work in progress is getting constructive feedback. Unfortunately, all too often, a writer ends up disappointed because the feedback received is superficial, too polite, or little more than proofreading. This course teaches students to workshop in a meaningful way, responding to content, focus, coherence, and organizational issues. Students learn to elicit more feedback from their workshop colleagues, demonstrating the relationship between reader and writer. The class will explore a variety of genres, and each student produces short exercises and longer projects that demonstrate a grasp of various aspects of the writing craft.

**PWRI 4540 Children's Literature: From Picture Books to Books for Young Adults (4 Credits)**

This course offers an introductory study of children's literature, from toddler board books and easy readers to chapter books and books for young adults. It is designed primarily for students interested in writing for children and those planning to teach children's literature, though new and soon-to-be parents would find it illuminating as well. Touching on all the major categories/levels and subgenres of children's literature, students will learn to identify the unique characteristics of each and apply definable quality standards to assess a wide range of particular texts from both creative and analytical points of view. Note that, though students may do some creative writing, this is not a course in writing children's literature.

**PWRI 4560 Writing Books for Children (4 Credits)**

This course concentrates on the craft of writing three distinct categories of children's fiction: the picture book, the early/easy/transitional reader and novels for older readers (chapter book, middle grade and young adult novel). Within each category, students have a unique opportunity to explore storytelling for a specific young audience whose members vary in age, reading interest and reading ability. Note that this course covers narrative fiction only; nonfiction, though a valuable genre of children's literature, is beyond the scope of this course. Prerequisite: PWRI 4540 Children's Literature.

**PWRI 4600 Breaking the Chains of Genre: An Exploration of Hybrid Literatures (4 Credits)**

Hybrid genre, cross-genre, multi-genre, or mixed genre literature is literature that combines writing from different genres to create one text. The text created might be fragmentary or unified; it might be coherent or disjointed. Cross-genre literature is not new, but contemporary authors are more frequently pushing on the boundaries between genres in their creative and scholarly writing to produce rich, open, polyphonic texts as a result. How has cross-genre literature been deployed in different literary and cultural traditions? What advantages does cross-genre literature provide for the writer and for the reader? This course will explore the ways in which authors have experimented with mixing genres in different cultural traditions and writing disciplines as well as how this genre-bending has enabled them to accomplish various creative, narrative, and rhetorical purposes. Required Prerequisite: PWRI 4510.

**PWRI 4701 Topics in Literature (4 Credits)**

This course is designed to provide a deep dive into advanced topics of special interest to creative writers. Topics may range from close studies of established masterworks to examining the latest trends in developing genres or wrestling with several works by living masters.

**PWRI 4702 Topics in Writing (4 Credits)**

This course is designed to provide a deep dive into advanced topics of special interest to creative writers. Topics may range from close studies of compositional techniques used in established masterworks to examining the development of new genre forms or wrestling with texts whose approaches are drawn from multiple genres.

**PWRI 4901 Professional Creative Writing Capstone Project (4 Credits)**

The Creative Capstone Project provides students the opportunity to apply the knowledge and skills gained through the degree program to create a culminating project consisting of three major parts: a creative core (fiction, creative nonfiction, poetry, or some other kind of creative writing); a researched analysis essay exploring an idea, issue, or problem that is closely related to the creative core (however, the essay is not about the creative core); and a reflection essay placing the creative core and the analysis essay in the context of the student's coursework at University College and his or her writing goals for the future. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the project. Please see the Creative Capstone Project Guidelines for additional details. Note: For the creative core, students should not attempt a genre they have not written in at least one of their University College courses. Prerequisites: a Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, and completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

**PWRI 4917 Market Research for Writers (4 Credits)**

All writers of every medium considering a professional career path must not only learn their craft but learn to navigate the publishing and production worlds. This course discusses the relationships between agents, editors of books, journals and magazines, literary managers, artistic directors, publishing houses (both big and boutique), and booksellers, as well as production companies. Additionally, students determine ways to cultivate relationships with those industry professionals and find opportunities (such as contests and fellowships) with the goal of submission and acquisition. This course also covers the research required for target-rich submission campaigns, the process of manuscript submission and acquisition, as well as learning copyright and contractual basics. Students will learn how to generate marketing materials that aid in the submission process, across all mediums, and how to develop an author platform, using branding and social media opportunities, that cultivates a professional, public persona critical to connecting with their audience. Ultimately, students consider how to build a writing community that will provide the foundation for support, education, and networking, which is vital for success. Required Prerequisites: PWRI 4500, 4510, and 4520. Note that this course must be completed before enrolling in either the PWRI Portfolio Capstone or Creative Capstone Project.

**PWRI 4920 Portfolio Capstone (4 Credits)**

The Portfolio Capstone course provides students the opportunity to reflect upon the work they have done throughout their graduate studies at University College and synthesize their learning. Students in the Portfolio Capstone produce deliverables that include: (1) a thorough annotation of their portfolio, a process requiring critical and creative thinking about their educational experience, and (2) a pinnacle project that identifies, analyzes, and elaborates significant themes in their program experience, evaluates their accomplishments, connects their coursework to their professional goals, and assesses those goals in the context of their chosen field.

**PWRI 4980 Internship (0-4 Credits)**

The PWRI internship is designed to offer students a practical educational experience in an industry-related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the PWRI master's degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College sends notification to all PWRI students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the PWRI degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.

**PWRI 4991 Independent Study (1-4 Credits)**

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, have obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

## Security Management

Office: University College Student Support Center

### Master of Science in Security Management with a Concentration in Emergency Planning and Response

The Emergency Planning and Response master's degree concentration is offered to meet the needs of busy adults and prepares current or aspiring emergency response professionals to effectively strategize and implement emergency plans and responses. Graduates will learn to compare and contrast plans and responses to various events and disasters. Students will learn strategies for effective communication in all phases of emergency management (i.e., mitigation, preparedness, response, and recovery).

Whether an emergency is natural or human caused, emergency preparedness is vital to ensure minimize impacts on the welfare of those affected. The Emergency Planning and Response master's degree concentration covers emergency planning, mitigation of potential hazards, response, and recovery. Professional practitioners who work in the emergency planning and response field teach the Emergency Planning and Response master's

degree concentration. Classes focus on the integrated system at every stage of a disaster and define the roles of emergency response teams, government agencies, businesses, and private citizens.

This degree prepares students to:

- Develop emergency response plans to ensure that organizations or communities possess necessary resources (e.g., personnel, equipment, communications, etc.) to respond to emergency incidents;
- Identify the potential hazards within a community or organization that require mitigation to minimize the health, economic, and environmental consequences of potential emergency incidents;
- Develop critical incident management actions that will save lives, protect property and the environment, and meet the basic human needs during a critical incident;
- Construct Recovery Plans to repair damages and restore the health, economy, infrastructure, and environment of the affected community following a large-scale disaster.

## **Master of Science in Security Management with a Concentration in Information Security**

The Information Security master's degree concentration is offered entirely online at the University of Denver to meet the needs of busy adults. Pursue an Information Security master's degree concentration from University College and be prepared to analyze security needs, provide effective solutions, and fill a critical niche in organizations. Students will examine practical issues such as setting up a secure network, securing servers, and handling information security incidents. The practical labs give Information Security master's degree students the hands-on experience they need using industry-current security tools, effectively training students to apply lessons to real-world challenges.

Graduates are prepared for the security challenges presented across a variety of sectors as they undergo rigorous instruction from professional practitioners who work in information security. Degree-seekers will learn to design secure applications, implement access controls, establish secure operations, and control physical security, all while using encryption, secure networks, and maintain business continuity. Become an indispensable expert in determining Return on Security Investment (ROSI) and develop security policies and procedures that protect your organization from internal and external threats.

This degree prepares students to:

- Design an information security plan for the strategic, planning, and management efforts of private and public sector organizations;
- Evaluate and analyze emerging information security issues, regulations, and threats;
- Analyze financial implications of information security programs and options;
- Protect vital information assets such as people, physical structures and equipment, intellectual property, and information, and maintain post-incident continuity of operations.

## **Master of Science in Security Management with a Concentration in Organizational Security**

Earned entirely online, the Organizational Security master's degree concentration examines emerging security issues, regulations, and threats. Current and aspiring security management professionals will benefit from the Organizational Security master's degree concentration offered by University College, as students learn the key strategic, planning, and management skills needed to thrive in the security management industry through an examination of emerging security issues, regulations, and threats.

Classes are led by instructors who work in the fields in which they teach, offering security management degree-seekers valuable insight to the industry. Students will learn to implement strategies to protect vital assets such as people, physical structures and equipment, intellectual property, and information, as well as analyze financial implications of security programs and options. Organizational security professionals are fundamental cogs in the business world, as well as in the government, as they may function as a chief security officer, director of loss prevention, director of security, security consultant, investigator, firefighter, or police officer.

This degree prepares students to:

- Lead the strategic, planning, and management efforts of private and public sector organizations;
- Evaluate and analyze emerging security issues, regulations, threats, and innovations;
- Analyze financial implications of security programs and options;
- Protect vital assets such as people, physical structures and equipment, intellectual property, and information, and maintain post-incident continuity of operations.

## **Graduate Certificate in Security Management with a Concentration in Emergency Planning and Response**

The Emergency Planning and Response certificate is offered online to meet the needs of busy adults and prepares current or aspiring emergency response professionals to effectively strategize and implement emergency plans and responses. Certificate students will learn to compare and

contrast plans and responses to various events and disasters. Students will learn strategies for effective communication in all phases of emergency management (i.e., mitigation, preparedness, response, and recovery).

Whether an emergency is natural or human caused, emergency preparedness is vital to ensure minimize impacts on the welfare of those affected. The Emergency Planning and Response certificate covers emergency planning, mitigation of potential hazards, response, and recovery. Professional practitioners who work in the emergency planning and response field teach the Emergency Planning and Response certificate courses. Classes focus on the integrated system at every stage of a disaster and define the roles of emergency response teams, government agencies, businesses, and private citizens. Credits earned through this graduate certificate may be applied towards a master's degree in Security Management.

### **Graduate Certificate in Security Management with a Concentration in Information Security**

The certificate in Information Security is offered entirely online to meet the needs of busy adults seeking to expand their current skillset in information security. An Information Security certificate prepares students to analyze security needs, provide effective solutions, and fill a critical niche in organizations. Certificate students will examine practical issues such as setting up a secure network, securing servers, and handling information security incidents. The practical labs give Information Security graduate certificate students the hands-on experience they need using industry-current tools geared for security. Students will also gain additional skills and knowledge in security management through elective coursework.

Certificate students will be prepared for real-world security challenges with a rigorous education from professional practitioners who work in information security. Certificate students will learn to design secure applications, implement access controls, establish secure operations, and control physical security, all while they use encryption, secure networks, and maintain business continuity. Become an indispensable expert in determining Return on Security Investment (ROSI) and develop security policies and procedures that protect your organization from internal and external threats. Credits earned through this graduate certificate may apply toward a master's degree in Security Management.

### **Graduate Certificate in Security Management with a Concentration in Organizational Security**

The certificate in Organizational Security is offered online at the University of Denver to meet the needs of busy adults. Current and aspiring security management professionals will benefit from the certificate in Security Management with a concentration in Organizational Security offered by University College, as students learn the key strategic, planning, and management skills needed to succeed in security management. The certificate program is designed for busy adults seeking to advance their skills in organizational-level security.

The certificate program is ideal for security professionals who currently work in the field, or aspire to, as they will examine emerging security issues, regulations, and threats in classes led by instructors who work in the fields in which they teach, offering security management students valuable insight to the security. Certificate graduates will learn to implement strategies to protect vital assets such as people, physical structures and equipment, intellectual property, and information, as well as analyze financial implications of security programs and options. Students will also gain additional skills and knowledge in security management through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in Security Management.

### **Specialized Graduate Certificate in Organizational Security**

The specialized certificate in Organizational Security is offered online at the University of Denver to meet the needs of busy adults. Current and aspiring security management professionals will benefit from the certificate in Security Management with a concentration in Organizational Security offered by University College, as students learn the key strategic, planning, and management skills needed to succeed in security management. The certificate program is designed for busy adults seeking to advance their skills in organizational-level security.

### **Specialized Graduate Certificate in Information Security**

The specialized certificate in Information Security is offered entirely online to meet the needs of busy adults seeking to expand their current skillset in information security. An Information Security certificate prepares students to analyze security needs, provide effective solutions, and fill a critical niche in organizations. Certificate students will examine practical issues such as setting up a secure network, securing servers, and handling information security incidents. The practical labs give Information Security graduate certificate students the hands-on experience they need using industry-current tools geared for security.

### **Specialized Graduate Certificate in Emergency Planning and Response**

The specialized certificate in Emergency Planning and Response is offered online at the University of Denver to meet the needs of busy adults and prepares current or aspiring emergency response professionals to effectively strategize and implement emergency plans and responses. Graduates will learn to compare and contrast plans and responses to various events and disasters, as well as analyze leadership competence as plans are executed. As communication is key to effective emergency preparedness, graduate certificate students will take away strategies for effective communication in all phases of emergency management (i.e., mitigation, preparedness, recovery, and emergency response).

## **Master's Degree Admission**

### **Degree and GPA Requirements**

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the

baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

### English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115 with individual subscore minimum of 105 for Literacy, Comprehension, and Conversation and minimum subscore of 95 for Production

English Conditional Admission: No, this program does not offer English Conditional Admission.
