GS 4307 Translation Project Management (4 Credits)

This course gives students the opportunity to address both translation and non-translation related issues associated with planning, executing, controlling, and delivering a final translation for a client (either direct or as an agency). Particular focus is given to hands-on practice of the various communications between the parties. The course outlines an effective project management methodology that can be applied to large or small translation/localization projects. Language generic. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4311 The Language Services Business for Translators & Interpreters (4 Credits)

Translation and interpretation are professions that typically require their practitioners to set up businesses on their own. This course addresses the key issues involved in being an independent contractor in the language industry, including how to acquire clients, how to price professional language services, how to estimate different types of service, and how to manage different client relationships, from government entities to private individuals. The course also analyzes the differences between working directly for clients and working with translation agencies or as a staff translator or interpreter, where it is crucial to know how to work on a team with other language professionals and content experts. The course also covers basic standard business practices in the language industry and business codes of ethics.

GS 4312 Research for Translation & Interpretation (4 Credits)

Not so long ago, the only way for translators to conduct research for their assignments was to consult the reference works they happened to own, or (if they lived near a good library), go to the library and hope what they needed was available there. The Internet changed all that, revolutionizing the translation and interpretation professions. Now translators and interpreters have at their disposal a seemingly bottomless well of information. At the same time, the research skills needed for translation and interpretation also have changed. This course teaches students how to conduct research using a variety of online tools, how to distinguish between reliable and unreliable sources of information, how to take advantage of the research tools made available by libraries, and in particular how to leverage the various types of resources offered by different types of libraries. Language-generic.

GS 4313 Translation for the Publishing Industry (4 Credits)

Most professional translators work outside the publishing industry: they work as freelancers or staff translators in business, technical, medical, legal translation—or in some other translation specialization. But when people outside our industry think of translators, it is likely they think of book translators, i.e., translators who work for the publishing industry. Working as a translator for the publishing industry may be rewarding, but in many respects it is different from the kind of work most translators are accustomed to. This course will explore such themes as the difference between working on book-length projects and shorter projects, and the difference between translations performed as "work done for hire" and copyrighted translations. It will look at publishing contracts, and at the difference between translating non-fiction and fiction works. It will also survey the most prominent theories of translation, past and present, to see how they apply to the translation of literature. Language-specific.

GS 4314 Translation & Interpretation for Law Enforcement (4 Credits)

This course explores the scope and nature of translating and interpreting in a law enforcement context, including the kinds of documents a translator is likely to encounter and how an interpreter interacts with both law enforcement professionals and members of the public who lack fluency in English. Language-specific.

GS 4315 Interpreting for Health Care (4 Credits)

In this course, students analyze and learn to apply the correct interpreting mode for different healthcare situations. They develop personalized introductions for use in interpreted sessions to provide a framework for interpretation that is clear to both providers and patients. Students learn to apply the medical code of ethics to different interpreting situations. Selecting from a list of various medical specialties, students create interpreting role plays with classmates that include appropriate introductions, interpreting modes, and terminology in both Spanish and English to simulate real-life interpretation situations. This course cultivates many of the skills needed to pass medical interpreter examinations and helps to prepare students for work as professional healthcare interpreters.

GS 4701 Topics in Global Community Engagement (4 Credits)

The content of this course varies each time it is offered. Specific course content is detailed on quarterly schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

GS 4800 The Puerto Rican Paradox: Challenges and Opportunities in Uncertain Times (4 Credits)

The Commonwealth of Puerto Rico is a tropical paradise boasting vibrant communities, rich cultures, and abundant natural resources. Once coined a “natural jewelry box” by the BBC, Puerto Rico offers sparkling turquoise waters, bioluminescent bays, lush mountainous terrain, and colorful colonial architecture. It is also plagued by a debilitating debt crisis, political corruption, and a crumbling infrastructure, which, particularly in the aftermath of hurricanes Irma and Maria, have caused many residents to flee the island in search of better opportunities and more stable living conditions. In this course, students will examine the paradox that is Puerto Rico. Drawing from literature on culture, history, power, and politics, students will research a topic of their choosing, with the professor’s approval. They will then work with local communities in Puerto Rico on a project of mutual interest and importance, culminating in an approach or proposal for addressing the issue(s) at hand. Students will be required to spend 5 days on-site in Puerto Rico, plus any necessary travel time. This course will give students broad exposure to the history and culture of Puerto Rico, in addition to a nuanced understanding of a specific industry, issue, or problem. It will additionally highlight the power, privilege, and oppression that exists in our own backyards on this U.S. Commonwealth island.

GS 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

GS 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students’ research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

GS 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

GS 4905 Graduate Social Research Methods (4 Credits)

This course provides graduate students with a basic background in the methods of research in the social sciences. In our information-rich society, organizations and institutions have become more aware of the value of research data for informing critical decisions. As leaders in their organizations, graduates should have a knowledge base that allows them to critically examine basic research in the social sciences and to understand the methods involved in generating research results. They should understand the value of research to their organizations, be able to identify opportunities to gather information through research that will benefit those organizations, and participate in the ethical design of basic studies to gather that critical information. Students will develop and write a research proposal around a specific research question informed by a review of the literature.

GS 4980 Internship (0-4 Credits)

The internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master’s programs.

GS 4991 Independent Study (1-5 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

Health Informatics

Office: University College Student Support Center

Mail Code: 2211 S. Josephine St., Denver, CO 80208
 Phone: 303-871-2291, 800-347-2042
 Email: ucolsupport@du.edu
 Web Site: <http://www.universitycollege.du.edu> (<http://www.universitycollege.du.edu/>)

Students in Master of Science in Health Informatics will be at the forefront of the health industry, equipped with the technical, communication, and leadership skills needed to thrive in the fastest growing field: informatics. In this master's degree program accredited by HIMSS, students will learn to leverage health data tools and applications to achieve business and research outcomes within the health sector. Students will work on hands-on informatics projects using real-world data from a curated health data repository built with industry partners. Students will learn to optimize data to support evidence- and value-based results and enhance their knowledge in digital health, informatics, analytics data science, and artificial intelligence to solve the health challenges of our time.

This degree prepares students to:

- Employ quantitative and qualitative methods to achieve business and research outcomes for health informatics projects
- Utilize project management skills to operationalize health informatics goals
- Apply effective communication techniques to create collaborative teams focused on successful implementation of data-driven solutions
- Identify and solve real-world challenges in the health industry using workflow tools and gap analyses
- Design sustainable, data-driven business practices to support evidence- and value-based results

Master of Science in Health Informatics with a Concentration in Health Data Informatics and Analytics

The Health Data Informatics and Analytics master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership and is accredited by HIMS. The concentration prepares students for the evolving environment in the health industry focused on healthcare system informatics and analytics. In addition, this concentration presents many opportunities to bridge the divide between field-level and director-level positions related to informatics and analytics within the healthcare delivery system. The program incorporates lessons learned from across the training spectrum and produces graduates with the necessary skills to create and populate the new mid- and higher-level management positions.

This concentration focuses on three areas of development. First, students develop a solid base of knowledge about healthcare delivery in the

U.S. within the framework of the "4 Ps": Patients/People, Providers, Payors, and Population. This framework allows students to understand both informatics and analytics related to the process of transforming data into information, knowledge, and then insight (DIKI) along the broad scope that exists in the health industry and U.S. healthcare today. Second, students will compare and contrast the similarities and differences between asking and answering research and business questions, as well as demonstrate competencies in this area. Third, students will learn how to collaborate, organize projects, and formulate real-life solutions to existing healthcare industry issues.

This degree prepares students to:

- Compare how healthcare data is generated, routed, and analyzed within the U.S. healthcare delivery system and the health industry from the perspectives of patients/people, providers, payors, and populations and how these processes affect interoperability
- Distinguish major, as well as innovative, health information systems as they relate to the perspectives of patients/people, providers, payors, and populations - utilizing both active and passive informatics
- Appraise healthcare and health industry informatics tools as they relate to the past, present, and future directions of healthcare reform - as well as how these differ from other industries
- Articulate the ways in which HIPAA regulations and biostatistics principles influence data informatics and analytics
- Evaluate the impact of data governance challenges, ethical implications, and security issues on stakeholders in healthcare data research, business workflows, and compliance
- Recommend study and project designs for healthcare informatics and analytics-based case studies incorporating frameworks such as database architecture, data warehousing, natural language processing, and epidemiology
- Defend the fundamental process of transforming data to information, knowledge, then insight (DIKI) through integrating disparate public data sets and modeling predictive analytics to create solutions, complete with data visualizations, to healthcare and health industry challenges
- Develop a professional, actionable implementation, change management, and assessment plan for bringing IT, clinical, engineering, and business individuals together to solve a healthcare industry challenge

Master of Science in Health Informatics with a Concentration in Digital Health

The Digital Health master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing digital health in both the health industry and healthcare delivery systems. This program is accredited by HIMSS and aligns to CAHIIM core objectives. Special focus is provided on workflow and gap analysis,

finance, and communication and leadership skills required to implement digital health initiatives. The innovative classes in the concentration cover how to reduce costs and improve access to quality healthcare through technologies that comprise the framework of modern interconnected healthcare.

In this master's degree concentration, students stay at the cutting-edge of emerging health technology, including telehealth, digital health, and virtual health by learning how technology affects and improves diagnosis, treatment, training, patient records, and financial transactions. Students will gain high-level knowledge of the interoperability of healthcare information systems, the benefits and barriers associated with consumer digital health products, and the evolving use of distance medicine.

This degree prepares students to:

- Assess how technology affects diagnosis, treatment, training, record keeping, financial transactions and data outcome analysis.
- Compare and contrast emerging trends in medical and digital health technology including electronic health records, telehealth, and virtual health
- Analyze how technology can help improve quality of consumer/patient care and reduce costs as healthcare moves from a volume-based to value-based system
- Recommend different ways to facilitate discussion and communication between clinical providers and their counterparts

Master of Science in Health Informatics with a Concentration in Health Data Science

In this master's program accredited by HIMSS, students will learn to leverage health data science tools and applications to achieve business and research outcomes within the health sector. Students will work with real hands-on data science projects using deidentified data from a curated health data repository built

with industry partners. Students will learn to optimize data to support evidence- and value-based results and enhance their knowledge in analytics, data science, machine learning and artificial intelligence. In addition, virtual reality will be a main method of instructional support throughout this curriculum. Main areas of study will be integrating data platforms in the health and healthcare industries, data mining, machine learning, and reporting.

This degree prepares students to:

- Assimilate data platforms in the health or healthcare industries to solve health informatics challenges
- Illustrate health data mining skills to strengthen clinical partnerships and benefit stakeholders
- Execute healthcare statistical dynamics of machine learning as they relate to health informatics
- Compose health data science reporting for relevant health informatics audiences

Master of Science in Health Informatics with a Concentration in Project Management

Healthcare technology and data advancements require leaders that can oversee and manage projects. Gain practical experience in project management in healthcare by using the tools and techniques leveraged for large-scale and smaller projects. Healthcare organizations rely on project management to ensure timeline, scope, and budget goals are met while delivering exception patient care, so be prepared with skills needed to deliver. The curriculum aligns with the PMI® Project Management Body of Knowledge.

This degree prepares students to:

- Apply the basic principles of project management to become proficient in the use of project management software
- Demonstrate the use of agile concepts and techniques to deliver complex projects
- Design a comprehensive risk management plan for a project
- Create strategies to manage the complexity inherent in large-scale projects
- Relate project scope to cost, time, and resource requirements
- Develop procurement plans and assess project contracts

Certificate in Health Informatics with a Concentration in Health Data Informatics and Analytics

The Health Data Informatics and Analytics certificate is offered completely online to meet the needs of busy adults. This certificate is designed for three principal types of students. This certificate is appropriate for individuals in the health data informatics or analytics field who are currently working beyond their skillset capacity. This certificate seeks to match their skills to the competencies they would like to acquire. These students will benefit from instruction on theory and validation of their on-the-job experiences. Students will also gain additional skills and knowledge in healthcare management through elective coursework. Alternatively, this certificate is appropriate for those who are ready to move to a managerial position and may need a new skillset to make this conversion. Additionally, this certificate is appropriate for individuals with solid business skills looking to transition from another industry into the health industry or healthcare but need support for the move. This certificate will aid in the transition to a health data informatics and analytics position within the healthcare or health industry. To this end, the certificate curriculum is aligned with AHIMA, CAHIIM and HIMSS certification specific core objectives and is accredited by HIMSS. This certificate focuses on three concentrated areas of

development. First, students develop a solid base of knowledge about the healthcare delivery in the U.S. within the framework of the "4 Ps": Patients/People, Providers, Payors, and Population. This framework allows students to understand both informatics and analytics related to the process of transforming data into information, knowledge, and then insight (DIKI) along the broad scope that exists in health industry and U.S. healthcare today. Second, students will compare and contrast the similarities and differences between asking and answering research and business questions. Third, students will learn how to collaborate, organize projects, and formulate real-life solutions to existing healthcare industry issues.

Certificate in Health Informatics with a Concentration in Digital Health

The Digital Health graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate has a set of courses addressing digital health in both the health industry and healthcare delivery systems. The certificate is aligned to CAHIIM core competencies and is accredited by HIMSS. The innovative classes in the concentration cover how to reduce costs and improve access to quality healthcare through technologies that comprise the framework of modern interconnected healthcare. Students stay at the cutting edge of emerging health technology, telehealth, digital, and virtual health with this certificate by learning how technology affects and improves diagnosis, treatment, training, patient records, and financial transactions. You'll gain high-level knowledge of the interoperability of healthcare information systems, the benefits and barriers associated with consumer digital health products, and the evolving use of distance medicine.

Certificate in Health Informatics with a Concentration in Health Data Science

In this certificate program accredited by HIMSS, students will learn to leverage health data science tools and applications to achieve business and research outcomes within the health sector. Students will work with real hands-on data science projects using deidentified data from a curated health data repository built with industry partners. Students will learn to optimize data to support evidence- and value-based results and enhance their knowledge in analytics, data science, and machine learning.

Specialized Graduate Certificate in Health Data Informatics and Analytics

The Health Data Informatics and Analytics specialized graduate certificate is offered completely online to meet the needs of busy adults. This certificate is designed for three principal types of students. This certificate is appropriate for individuals in the health data informatics or analytics field who are currently working beyond their skillset capacity. This certificate seeks to match their skills to the competencies they would like to acquire and is accredited by HIMS.

These students will benefit from instruction on theory and validation of their on-the-job experiences. Alternatively, this certificate is appropriate for those who are ready to move to a managerial position and may need a new skillset to make this conversion. Additionally, this certificate is appropriate for individuals with solid business skills looking to transition from another industry into the health industry or healthcare but need support for the move. This certificate will aid in the transition to a health data informatics and analytics position within the healthcare or health industry. To this end, the certificate curriculum is aligned with AHIMA and HIMSS certification specific core objectives. This certificate focuses on three concentrated areas of development. First, students develop a solid base of knowledge about the healthcare delivery in the U.S. within the framework of the "4 Ps": Patients/People, Providers, Payors, and Population. This framework allows students to understand both informatics and analytics related to the process of transforming data into information, knowledge, and then insight (DIKI) along the broad scope that exists in health industry and U.S. healthcare today. Second, students will compare and contrast the similarities and differences between asking and answering research and business questions. Third, students will learn how to collaborate, organize projects, and formulate real-life solutions to existing healthcare industry issues.

Specialized Graduate Certificate in Digital Health

The Digital Health specialized graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate courses address digital health in both the health industry and healthcare delivery systems, aligned to both CAHIIM and HIMSS competencies. Special focus is provided on the finance, communication, and leadership skills required to implement digital health initiatives. The innovative classes in the concentration cover how to reduce costs and improve access to quality healthcare through technologies that comprise the framework of modern interconnected healthcare. Students stay at the cutting edge of emerging health technology, telehealth, digital, and virtual health with this certificate by learning how technology affects and improves diagnosis, treatment, training, patient records, and financial transactions. You'll gain high-level knowledge of the interoperability of healthcare information systems, the benefits and barriers associated with consumer digital health products, and the evolving use of distance medicine. Credits earned through this certificate may be applied toward a master's degree in Healthcare Management.

Specialized graduate certificate in health data science

In this specialized certificate program accredited by HIMSS, students will learn to leverage health data science tools and applications to achieve business and research outcomes within the health sector. Students will work with real, hands-on data science projects using deidentified data from a curated health data repository built with industry partners.

Master's Degree Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

MASTER OF SCIENCE IN HEALTH INFORMATICS WITH A CONCENTRATION IN Project management

| Code | Title | Credits |
|--------------------------------|---|-----------|
| Core coursework requirements | | |
| HINF 4010 | Health Informatics Communication | 4 |
| HINF 4020 | Healthcare Workflow and Gap Analysis | 4 |
| HINF 4030 | Healthcare Finance | 4 |

Courses

HINF 4010 Health Informatics Communication (4 Credits)

This course focuses on the core skills of healthcare informatics communication such as knowing your audience and how this relates to health informatics specifically. The student will contextualize the role of informatics and Health Informatics/IT in healthcare and the health industry through course projects. Students learn to use communication tools to design communication strategies for informatics, IT, and clinical professionals to achieve success in Health Informatics/IT projects. Through this process, students learn to bridge gaps between Health Informatics/IT professionals, clinicians, and health leaders.

HINF 4020 Healthcare Workflow and Gap Analysis (4 Credits)

The alignment between the steps of a business or patient care transaction in an information system and how that work is done significantly impacts the performance of that organization. It can also impact the quality of data gathered using information system resources in a healthcare organization. This course will provide the learner with a critical view of the interaction between operational processes in a healthcare organization and the information technology used to carry out those processes. The course will begin with an introduction to the System Development Life Cycle ("SDLC") and how work processes interact with technology. Students will review the skills needed to critically assess processes and identify technology needs. The course will wrap up with a review of operational process analysis with the design of health information systems resources.

HINF 4030 Healthcare Finance (4 Credits)

This course presents an overview of financial management in healthcare organizations operating in the United States. Students will gain a broad overview of the business of healthcare in the United States, including interpretation of financial statements, budgeting, variance analysis, operational analysis, capital investment analysis, expense management issues, revenues, and payment systems used in the current United States healthcare system. The course will use a case-based approach where students will demonstrate mastery of financial management skills through application of knowledge to real-life scenarios from the industry.

HINF 4210 Data Platforms in Healthcare (4 Credits)

Data Platforms in Healthcare focuses on widely used data platforms in data collection, storage retrieval, and use in healthcare and healthy-industry settings. Students will learn the flow of data from data entry to data storage, and they will learn to query, process, and present healthcare data for actionable use. Students will also learn common pitfalls of healthcare data solutions and the legal restrictions involved with personal healthcare information.

HINF 4220 Health Data Mining (4 Credits)

Focusing on creating problem statements and research questions, this course allows you to hone skills related to accurate health data mining. Learn to create clinical partnerships with key stakeholders concerning data in Health Informatics/IT projects while gleaning valuable insight from large health data repositories.

HINF 4230 Healthcare Statistical Dynamics of Machine Learning (4 Credits)

HINF 4230 focuses on data cleaning, statistical analysis, and machine learning using healthcare data. Students will use Python to clean, prepare, and interpret a large dataset and then train and evaluate a machine learning model. Finally, students will debug their models and iterate to make improvements.

HINF 4240 Health Data Science Reporting (4 Credits)

This course will focus on best practices for health data science reporting to improve healthcare into the future. The learner will explore various ways to develop effective reports, inform healthcare leaders, and make appropriate recommendations. Upon completion of this course, students will understand the difference between data and how information provides key insights that allow healthcare leaders to draw conclusions, make decisions, and improve clinical and business outcomes. Preferred prerequisite: HINF 4210.

HINF 4301 Foundations of Digital Health (4 Credits)

This foundational course provides a working knowledge of key HIT definitions, concepts, and relevant advancing forms of technology. It encourages students to review the changes to HIT and evaluate the growth of these systems into the current and future forms of digital health tools. While this course is not designed to turn students into network administrators or software developers; it will equip students to become an active and valuable participant – or even a team leader – in the evaluation, selection, implementation, and ongoing operation of health information systems.

HINF 4310 Healthcare Information Systems (4 Credits)

Electronic health records systems (electronic medical records (EMRs), electronic health records (EHRs), personal health records (PHRs), and health information exchanges (HIEs)) are all the buzz these days, yet for the past 30 years the healthcare sector has clung to paper records, file folders, and clipboards. This course will explore the technical and controversial aspects of healthcare information technology in general, and the specific factors involving evaluation and adoption of EMR systems. The course also covers the fundamental components of modern electronic records systems and reviews their impact on both business and clinical functions. Key areas of interoperability, interfaces, and standards will be introduced. The course will be practical and thought-provoking as it emphasizes critical thinking and the synthesis of ideas from multiple sources and perspectives. Participants will be challenged to develop their own viewpoints and opinions, substantiated by the published work of those who are thought leaders in the field of HIT, as well as the participants' own experiences.

HINF 4315 Digital and Virtual Health (4 Credits)

With the widespread availability of health-oriented digital and virtual devices and software (apps), healthcare organizations are shifting their approaches to recognize how patients wish to communicate, manage their health, and share their health information. The shift in digital and virtual health is designed to improve healthcare access and quality—particularly in underserved populations, geographies, and specialties. This course will present the current and emerging digital and virtual health services, as well as the benefits and drawbacks of these technologies. This course will address various forms of telehealth, apps, portable devices, and remote monitoring strategies, as well as the role of artificial and augmented intelligence in enhancing digital and virtual experiences. After a broad review of the digital and virtual health field, this course will focus on evaluating, sustaining, and leading a digital or virtual program. Each lecture will discuss regulatory issues such as privacy, security, FDA review/approval, and when digital and virtual health services can be reimbursed. In addition to these regulatory issues, the course will instruct how to conduct a needs assessment, evaluate digital and virtual health products, implement different business models, and evaluate best practices for implementation and adoption. Preferred Prerequisite: HINF 4301.

HINF 4325 Values and Outcomes in Digital Health (4 Credits)

This course covers the major healthcare information technologies and topics other than electronic health records systems. Electronic health records systems represent a large focus in healthcare technology; however, many other important systems form the complete framework of modern connected healthcare. These include electronic practice management (EPM/PMS) systems, scheduling, billing, diagnostics/labs, reporting, payment interfaces, and business intelligence in healthcare. This course focuses on the fundamentals of how to be an analyst of health IT technology. Preferred prerequisite: HINF 4301.

HINF 4335 Healthcare Cybersecurity (4 Credits)

This course will introduce students to information security risks facing the healthcare industry. Students will learn how to protect healthcare organizations and their patients' data better. Students will learn about recent security breaches, the impact of those breaches on healthcare organizations, and all of the key players involved. This course also covers the evolution of healthcare IT and the continuously evolving risk and regulatory landscape. Students will explore regulations of HIPAA, NIST/ONC, HITECH, and Meaningful Use and how they relate to day-to-day operations in healthcare organizations. Additionally, this course will prepare students to support information security initiatives in order to protect the organization while furthering the advancement of healthcare IT capabilities. This is not a technical course; however, the course covers how security is impacted by technology and what one must do across technology to secure healthcare systems, organizations and patients. Preferred prerequisite: HINF 4301.

HINF 4600 Healthcare Data and Delivery by Perspective (4 Credits)

This course evaluates the environment of the U.S. healthcare delivery system and introduces the 4P (patient, provider, payer, population) perspective framework. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, towards the payer, and evolving into population health. Students will learn about the associated data that is generated from the patient as a consumer, from the provider through clinical operations, from the payer perspective, and finally how all of these contribute toward population health data. This course will cover the basics of U.S. healthcare research and clinical intervention, and students will have the ability to model the conceptual as well as practical application of health informatics.

HINF 4610 Healthcare Ethics and Biostatistics (4 Credits)

This course discusses research investigator training and outlines the progression of the Institutional Review Board (IRB) process. In addition, this IRB process will be compared with the business process improvement cycle. Health Insurance Portability and Accountability Act (HIPAA) as well as data governance issues are surveyed from the patient, provider, payer, and population perspectives. The connections between these topics and ethics are explored, and the principles of biostatistics are discussed. Common statistical packages used within healthcare research and business applications are covered, and this course concludes with an analysis of resulting ethical implications of short- and long-term healthcare data.

Preferred prerequisite: HINF 4600.

HINF 4620 Healthcare Methods and Programming (4 Credits)

This course presents the basic study designs of epidemiology and illustrates the field's benefit to the healthcare industry. Randomized control trials (RCT) through correlation studies are explained through case studies as well as practical application. Informatics tools such as machine learning, clinical decision support, and natural language processing (NLP) are categorized with respect to their relative positions in the 4P (patient, provider, payer, population) perspective framework. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. This course concludes with the many benefits of auditing as a check and balance for healthcare methods and programming. Preferred prerequisite: HINF 4600.

HINF 4630 Healthcare Data Mining, Integration and Interpretation (4 Credits)

This course explores available public healthcare data sets and the data mining process. In addition, this course articulates the value of mapping relationships between data points and workflows. This process determines the level of integration of disparate data sources and is explored through the 4P (patient, provider, payer, population) perspectives. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. Once the data sources are integrated, the focus becomes how to turn this data into information, knowledge, and insight. This course wraps up by exploring both business and research options for interpreting data through visualizations and predictive analytics. Preferred prerequisite: HINF 4600.

HINF 4640 Healthcare Database Applications (4 Credits)

This course covers the growing functions of security in healthcare data and specifically elaborates on the vulnerabilities and emerging solutions for dealing with data once it is stored. Database architecture is surveyed, which transitions into an exploration of terminologies and standards and how these impact interoperability of data in warehouses. A significant portion of this course focuses on the specifics of medical coding and how coding is affected by the 4P perspectives. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. The course wraps up with a compilation of Structured Query Language (SQL) capabilities and a study of the influence of their practical application. Prerequisite: recommended HINF 4600.

HINF 4650 Healthcare Project Management and Professionalism (4 Credits)

The course is designed to simultaneously teach project management concepts while preparing a student to operationalize a healthcare project. Students will analyze business problems healthcare organizations are facing to properly scope and plan a project. Students will also work on stakeholder engagement and project documentation development.

HINF 4701 Topics in Health Informatics (1-4 Credits)

This is an advanced special topics seminar course. The focus is on specialized areas of interest. Topics courses may be used as electives within the Health Informatics degree and certificates, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate programs.

HINF 4810 Survey of Health Industry Artificial Intelligence (4 Credits)

Artificial Intelligence (AI) is "the capability of a machine to imitate intelligent human behavior." AI is fast becoming a major player in the health and healthcare industries. In addition to having positive impacts in traditional medical areas such as radiology, pathology, EHR systems, oncology, and cardiology, AI is increasingly being used in the health industry to bridge gaps in the healthcare delivery systems. This course will provide students with the tools to understand how Artificial Intelligence platforms sort and learn from the immense amount of data available in the healthcare field. Students will engage in virtual learning as well as project-based learning offering the next generation of health industry professionals the skills to leverage massive amounts of data into meaningful knowledge.

HINF 4825 Technology and Applications for Telehealth and Virtual Care Success (4 Credits)

This course investigates the technology required for virtual care and technological concepts to advance virtual care models. This will include virtual care applications, telemonitoring systems, and technology concepts to include artificial intelligence, machine learning, informational robotics/ applications.

HINF 4900 Experiential Learning in Health Informatics (4 Credits)

This course is an opportunity to participate in experiential learning by connecting academic research with a real-world healthcare management or health informatics problem. Students may take this class either early in their degree program as an introduction to healthcare or health informatics, or later in the program as a prerequisite for their upcoming Capstone experience. First, students will conduct informational interviews with healthcare management and health informatics instructors to learn more about a chosen problem. Those taking this course as an introduction will learn key skills necessary to identify an independent research project topic, formulate a research question with a business, healthcare or health industry application, investigate research methodologies, explore the requirements for human subjects research through the Institutional Review Board (IRB), and draft a project proposal. Students preparing for their Capstone experience (all health informatics students and some healthcare management students) will prepare a Capstone project proposal according to approvable structure and deliverable guidelines. They will choose and schedule a meeting with their Capstone Advisor, select a research topic, formulate a research question with an industry application, develop a thesis statement, choose appropriate project methodologies, and draft a project proposal that will meet appropriate ethics and compliance requirements for human subjects research, and submit their proposal to the IRB for approval.

HINF 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

HINF 4980 Internship (0-4 Credits)

The Health Informatics Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all Healthcare students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences.

HINF 4991 Independent Study (1-4 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

Healthcare Management

Office: University College Student Support Center
Mail Code: 2211 S. Josephine St., Denver, CO 80208
Phone: 303-871-2291, 800-347-2042
Email: ucolupport@du.edu
Web Site: <http://www.universitycollege.du.edu>

Students in the Master of Science in Healthcare Management program will be at the forefront of a rapidly evolving healthcare market, equipped with the leadership, management, and communication skills necessary to bring strategic vision and innovation to the workplace. Students will learn how to transform the industry and better serve the patient, provider, payer, and population perspectives locally, nationally, and globally. Students will learn to thrive in a value-driven system by leveraging collaborative and integrative techniques that support high-quality, cost-effective healthcare delivery.

This degree prepares students to:

- Demonstrate effective communication techniques appropriate to the audience including healthcare and health industry professionals, patients, and the public
- Apply relevant program theory and research to formulate innovative solutions to vexing healthcare and health industry challenges
- Connect management strategies to action among healthcare and health industry teams across a variety of settings within an ethical framework
- Formulate visionary solutions to address current issues facing local, national, and global health and healthcare organizations
- Evaluate healthcare reform efforts and proposals to contextualize governmental regulation and oversight as they relate to healthcare delivery and health industry operations

MASTER OF SCIENCE IN HEALTHCARE MANAGEMENT WITH A CONCENTRATION IN Advancing Diversity, Equity, and Inclusion in Organizations

Advancing diversity, equity, and inclusion is critical to achieving organizational goals, positioning organizations for success in today's world, and creating environments where everyone has the opportunity to thrive. In this master's degree concentration, you will gain skills that are crucial for advancing equity as an integrated part of organizational strategy while developing solutions that meaningfully leverage diversity to create a culture

of belonging. Learn about the historical, cultural, and economic factors that shape identity and apply appropriate tools and techniques to help organizations achieve their vision for change as it relates to diversity, equity, and inclusion practices.

This degree prepares students to:

- Assess the influence of historical, social, cultural, and economic factors in shaping one's identity and conceptions of diversity, equity, and inclusion practices.
- Integrate an understanding of social and cultural difference, perspective-taking, and empathy to better inform interpersonal communication and problem-solving strategies.
- Develop practices that advance equity as an integrated component of organizational strategy.
- Design solutions that meaningfully leverage diversity to achieve organizational goals and cultivate a culture of belonging across different organizational settings.
- Apply change models, tools and techniques to successfully achieve a vision for change.

Master of Science in Healthcare Management with a Concentration in Global Health Program Management

The Healthcare Management master's degree concentration in Global Health Program Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership. The concentration focuses on the delivery and support of the global health industry, which has increasingly emerged as a multinational, multi-organizational endeavor, pulling together individuals and groups from multiple locations and backgrounds to provide services. Individuals, organizations and corporations routinely come together, providing a range of services from public health to emergency and long-term medical services. Individuals and groups engaged in management of direct and indirect health industry service programs, as well as those responsible for the development and marketing of medical devices, products, and services to support the health industry, require specialized skill when operating in the international market. This concentration builds on general knowledge of leadership and management in the health industry with a focus on global application.

Students will gain transferable skills across functions, assisting them in managing services and projects related to the health industry within international settings. Knowledge gained through this concentration will also be of assistance to those writing grants for global healthcare programming, services and product development. Curriculum includes topics such as working with remote teams, regional governance, employment and labor law, independent cross-functional decision making, customs and importation laws, regulatory compliance and other management and legal concerns. Building on desirable areas of expertise identified by those hiring in these fields, this course of study is designed to create a portfolio of skills applicable to various aspects of global health management that can be applied in a multitude of settings throughout the world.

This degree prepares students to:

- Analyze the legal, governmental, and cultural issues in research, development, and marketing of health products in the international market.
- Appraise legal and regulatory recommendations for world-wide delivery of healthcare through government agencies and non-government organizations (NGOs) to determine their impact at the organizational level.
- Evaluate global health projects and programs for successful development, implementation, and sustainability.
- Create communication plans and decision-making strategies that are culturally competent and inclusive.
- Develop management and teambuilding skills across geographic, cultural, and organizational settings.

Master of Science in Healthcare Management with a Concentration in Healthcare Policy and Regulatory Leadership

The Healthcare Policy and Regulatory Leadership master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership. The career-relevant courses within the concentration provide students with the knowledge and tools to help them gain leadership and management skills with a pulse on the dynamism in healthcare and continuing emergence of reform leading to changes in healthcare policy.

Students acquire the essential tools necessary to become leaders and managers who help shape, interpret, and implement policies and regulations that impact a value-driven healthcare system. Students improve their understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare regulatory systems and public policy. Students examine the relationship between public policy, the patient as the consumer, and the impact of culture on the formation of policy and practice within a transitioning healthcare environment.

This degree prepares students to:

- Compare variations in healthcare delivery domestically and internationally
- Examine the legislative process involved in the creation of healthcare public policy

- Assess how change leads to resistance and what measures must be adopted to incorporate change
- Correlate how professional standards and accreditation relate to quality assurance in various areas of healthcare
- Analyze the processes involved in the implementation of healthcare public policy and healthcare reform

Master of Science in Healthcare Management with a Concentration in Strategic Leadership in Healthcare Organizations

The Strategic Leadership in Healthcare Organizations master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This degree has a set of core courses addressing healthcare systems and regulatory environments, finance, and communication and leadership. The concentration prepares students to develop and administer strategic plans for various types of healthcare systems.

Students acquire the skills needed to successfully and strategically lead within healthcare organizations through the integrative process of a changing healthcare industry. Through analysis of the interrelationships of value, quality, and price, students examine the financial state of healthcare at the macro level, allowing them to better understand budgetary restraints while striving to realize an organization's vision and goals. Using case-based study techniques, students explore practice and system management, strategic planning, and change leadership.

This degree prepares students to:

- Compare leadership and administration characteristics that contribute to success in the provision of healthcare
- Evaluate basic components of a strategic plan and change management, relating them to financial planning and patient value within the healthcare system
- Analyze issues that support and detract from a harmonious workplace environment, and how these issues affect patient services, and provide solutions in effectively dealing with these issues
- Compare the strategic management functions required to lead and administer various types of healthcare systems
- Demonstrate expertise in the complex history and process of healthcare economics

Master of Science in Healthcare Management with a Concentration in Supply Chain Management

Supply chains are everywhere, from the local store to a large multinational electronics manufacturer operating halfway across the world. From cradle to grave, it is the supply chain management system that links all of the numerous stakeholders into one strategic plan for us as customers in markets.

These systems link processes such as product design, sourcing, forecasting, planning, manufacturing, distribution, logistics, retailing and material disposal and reuse. In today's fast paced markets driven by globalization and technology, knowledgeable professionals in supply chain management are increasingly important for companies to achieve their business objectives. Some of the most successful manufacturers (e.g., Apple and Samsung) and retailers (e.g., Wal-Mart and Amazon) are winning as a result of their supply chain strategies. Especially as markets change rapidly, supply chain management professionals will be integral to a company's success.

Earned entirely online, in the Supply Chain Management concentration students learn the six pillars of the field, and how to solve problems through the use of Six Sigma principles and the use of data analytics. Through hands-on projects with companies students gain real-world experience on the challenges facing global supply chains in the 21st-century while learning from current leaders in the field.

This degree prepares students to do the following:

- Articulate the six pillars of supply chain management to diagram the process to appraise their role in the market system.
- Apply the six pillars of supply chain management to realistic problem scenarios to develop strategies to diagnose and address future supply chain problems.
- Assess supply chains using a multidimensional perspective that includes connections between supply chain processes and fundamental business topics such as financial management and technology.
- Solve supply chain problems using a nonlinear process that addresses connections between supply chain pillars, market trends, and business best practices.
- Apply best practices to address an authentic supply chain problem in a work setting.

Certificate in Healthcare Management with a Concentration in Global Health Program Management

The Healthcare Management certificate in Global Health Program Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Delivery and support of healthcare in the global health industry has increasingly emerged as a multinational, multi-organizational endeavor, pulling together individuals and groups from multiple locations and backgrounds to provide services. Individuals, organizations and corporations routinely come together, a range of services from public health to

emergency and long-term medical services. Individuals and groups engaged in management of direct and indirect health industry service programs, as well as those responsible for the development and marketing of medical devices and products and services to support the health industry, require specialized skill when operating in the international market. Students will gain transferable skills across functions, assisting them in managing services and projects related to the health industry within international settings. Knowledge gained through this concentration will also be of assistance to those writing grants for global healthcare programming, services and product development. Curriculum includes topics such as working with remote teams, regional governance, employment and labor law, independent cross-functional decision making, customs and importation laws, regulatory compliance and other management and legal concerns. Building on desirable areas of expertise identified by those hiring in these fields, this course of study is designed to create a portfolio of skills applicable to various aspects of global health management that can be applied in a multitude of settings throughout the world. Students will also gain additional skills and knowledge in healthcare management through elective coursework.

Certificate in Healthcare Management with a Concentration in Healthcare Policy and Regulatory Leadership

The graduate certificate in Healthcare Policy and Regulatory Leadership concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will add new skills to their portfolio, including knowledge of how to help shape, interpret, and implement policies and regulations that impact a value-driven healthcare system. The Healthcare Policy and Regulatory Leadership concentration will provide an improved understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare-related public policy and healthcare law. Career-relevant courses provide students with the knowledge and tools to help them achieve leadership and management with a pulse on the dynamism in healthcare and continuing emergence of reform leading to changes in healthcare policy. Improve your understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare regulatory systems and public policy by earning a certificate. You'll examine the relationship between public policy, the patient as the consumer, and the impact of culture on the formation of policy and practice within a transitioning healthcare environment. Students will also gain additional skills and knowledge in healthcare management through elective coursework. Credits earned through this certificate may apply toward a master's degree in Healthcare Management.

Certificate in Healthcare Management with a Concentration in Strategic Leadership in Healthcare Organizations

The Strategic Leadership in Healthcare Organizations graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate prepares students to develop and administer strategic plans for various types of healthcare systems.

Certificate students will acquire the skills needed to successfully and strategically lead within healthcare organizations through the integrative process of a changing healthcare industry. Through analysis of the inter-relationships of value, quality, and price, students examine the financial state of healthcare at the macro level, allowing them to better understand budgetary restraints while striving to realize an organization's vision and goals. Using case-based study techniques, students explore practice and system management, strategic planning, and change leadership. Students will also gain additional skills and knowledge in healthcare management through elective coursework. Credits earned in the graduate certificate may apply toward a master's degree in Healthcare Management.

SPECIALIZED GRADUATE CERTIFICATE IN GLOBAL HEALTH PROGRAM MANAGEMENT

The specialized graduate certificate in Global Health Program Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Delivery and support of healthcare in the global health industry has increasingly emerged as a multinational, multi-organizational endeavor, pulling together individuals and groups from multiple locations and backgrounds to provide services. Individuals, organizations and corporations routinely come together, a range of services from public health to emergency and long-term medical services. Individuals and groups engaged in management of direct and indirect health industry service programs, as well as those responsible for the development and marketing of medical devices and products and services to support the health industry, require specialized skill when operating in the international market. Students will gain transferable skills across functions, assisting them in managing services and projects related to the health industry within international settings. Knowledge gained through this concentration will also be of assistance to those writing grants for global healthcare programming, services and product development. Curriculum includes topics such as working with remote teams, regional governance, employment and labor law, independent cross-functional decision making, customs and importation laws, regulatory compliance and other management and legal concerns. Building on desirable areas of expertise identified by those hiring in these fields, this course of study is designed to create a portfolio of skills applicable to various aspects of global health management that can be applied in a multitude of settings throughout the world.

SPECIALIZED GRADUATE CERTIFICATE IN HEALTHCARE POLICY AND REGULATORY LEADERSHIP

The specialized graduate certificate in Healthcare Policy and Regulatory Leadership concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will add new skills to their portfolio, including knowledge of how to help shape, interpret, and implement policies and regulations that impact a value-driven healthcare system. The Healthcare Policy and Regulatory Leadership concentration will provide an improved understanding of healthcare systems, legislative procedures, and

trends as they relate to healthcare-related public policy and healthcare law. Career-relevant courses provide students with the knowledge and tools to help them achieve leadership and management with a pulse on the dynamism in healthcare and continuing emergence of reform leading to changes in healthcare policy. Improve your understanding of healthcare systems, legislative procedures, and trends as they relate to healthcare regulatory systems and public policy by earning a certificate. You'll examine the relationship between public policy, the patient as the consumer, and the impact of culture on the formation of policy and practice within a transitioning healthcare environment. Credits earned through this certificate may be applied toward a master's degree in Healthcare Management.

SPECIALIZED GRADUATE CERTIFICATE IN STRATEGIC LEADERSHIP IN HEALTHCARE ORGANIZATIONS

The Strategic Leadership in Healthcare Organizations specialized graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. This certificate prepares students to develop and administer strategic plans for various types of healthcare systems.

Students will acquire the skills needed to successfully and strategically lead within healthcare organizations through the integrative process of a changing healthcare industry. Through analysis of the interrelationships of value, quality, and price, students examine the financial state of healthcare at the macro level, allowing them to better understand budgetary restraints while striving to realize an organization's vision and goals. Using case-based study techniques, students explore practice and system management, strategic planning, and change leadership. Credits earned in the certificate may be applied toward a master's degree in Healthcare Management.

Master's Degree Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Certificate Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score

- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

MASTER OF SCIENCE IN HEALTHCARE MANAGEMENT WITH A CONCENTRATION IN ADVANCING DIVERSITY, EQUITY, AND INCLUSION IN ORGANIZATIONS

| Code | Title | Credits |
|---|--|-----------|
| Core coursework requirement | | |
| HC 4000 | Healthcare Systems and Regulatory Environments | 4 |
| HC 4010 | Healthcare Communication and Leadership | 4 |
| HC 4015 | Healthcare Finance | 4 |
| HC 4910 | Research Practices and Applications | 4 |
| HC 4901 | Capstone Project | 4 |
| or HC 4902 | Capstone Seminar | |
| or HC 4904 | Interdisciplinary Capstone Seminar | |
| Concentration requirement | | |
| GS 4020 | Culture, Identity, and Power | 4 |
| GS 4050 | Diversity and Organizational Structure | 4 |
| HRA 4170 | The Inclusive Organization | 4 |
| ORL 4420 | Leading Change for Transformation | 4 |
| Elective requirement (Choose three courses) | | 12 |
| Total Credits | | 48 |

Minimum number of credits required: 48

Students will work with their Academic Advisor to determine the best set of courses to choose for their electives.

In University College graduate-level programs, grades of C or greater are considered passing, whereas grades of C- or lower are considered failing. Courses with a grade of C- or below will not count toward meeting degree or certificate requirements. Also, no more than one-fourth of the hours accepted toward the degree be grades of "C". A cumulative and program grade-point average of 3.0 or better must be maintained at all times.

Master of Science in Healthcare Management with a concentration in Healthcare Policy and Regulatory Leadership

Courses

HC 4000 Healthcare Systems and Regulatory Environments (4 Credits)

This course opens with a comprehensive overview of the functions of various types of healthcare organizations: providers, insurance companies, government agencies, and professional associations. Alternative payment and provider models are reviewed, regulatory bodies and issues are explored, and healthcare reform efforts and proposals are discussed. Supply and demand projections for personnel are examined. The work of key federal agencies (NIH, National Center for Disease Control, and Food and Drug Administration) is reviewed as well as the activity of national and international non-governmental organizations. Major national and global public health challenges are introduced.

HC 4005 Healthcare Macroeconomics (4 Credits)

This course focuses on macro analysis of the current financial state of healthcare in the United States. The relationships of value, quality, and price are analyzed. Transparency related to price and quality is considered. Fundamental items such as balance sheets/income statements, accounting vs. financial reporting, equity, cash flows, and debt financing are covered in detail. Payment and incentive models are considered in connection with employer-furnished benefits, private health insurance plans, Medicare and Medicaid. Current issues, such as pay for performance, shared savings, cost shifting, and healthcare for the aging, under and uninsured are discussed. Students will discuss variations in health policy related to payment and coverage systems.

HC 4010 Healthcare Communication and Leadership (4 Credits)

This course focuses on the welfare of patient, family, and community in the context of medical team communication and leadership. Models for communicating highly technical medical information with patients and others involved in their care are examined. Students weigh and assess differences in personal and organizational cultures to optimize patient-centered outcomes. Students acquire a sound body of knowledge and terminology to facilitate communication and leadership across a multitude of disciplines essential in the delivery of healthcare. NOTE: This course is strongly recommended within the first 3 terms of study.

HC 4015 Healthcare Finance (4 Credits)

This course presents an overview of financial management in healthcare organizations operating in the United States. Students will gain a broad overview of the business of healthcare in the United States, including interpretation of financial statements, budgeting, variance analysis, operational analysis, capital investment analysis, expense management issues, revenues, and payment systems used in the current United States healthcare system. The course will use a case-based approach where students will demonstrate mastery of financial management skills through application of knowledge to real-life scenarios from the industry.

HC 4100 Management Principles in Healthcare Systems (4 Credits)

Healthcare systems are complex, dynamic, multilayered and unpredictable. They require constant situational awareness to maintain safety, efficiency, compliance, relevance and fiscal responsibility. Management and leadership need to have the vision to respond to changes and unexpected events. In this course, students encounter and explore the management functions required to lead and administer various types of healthcare systems. Students will engage in activities such as analyzing a healthcare system or organization's current level of performance or culture to inform ways to lead that organization toward excellence.

HC 4110 Healthcare: Innovative Strategies and Change Management (4 Credits)

Effective healthcare takes continual innovation to meet the ever-changing needs of the population. Through an examination of disruptions that create a catalyst for change, this course focuses on teaching students how innovative strategies can enable quality care and sustainability both within the healthcare delivery system and the health industry. Further, the drivers of innovation are explored from their use in grassroots efforts through regulatory reform through the lens of supply and demand. Finally, strategic planning for maximum use of financial resources to meet stakeholder expectations is ventured into in this course.

HC 4130 Organizational Behavior in Healthcare (4 Credits)

Customer and employee satisfaction elements of healthcare management are often a result of how well the entire healthcare system functions. Students examine successful and less successful examples of cooperation, compatibility, and dedication within the workplace and explore what contributes to a harmonious and effective healthcare environment. Interpersonal skills are discussed, as are ethical guidelines and laws that define acceptable workplace behavior.

HC 4200 Comparative Healthcare Systems (4 Credits)

This course describes variations in healthcare delivery systems locally, nationally, and globally as they relate to policy, structure, and finance. Comparisons of systems are made relative to expenditure of resources and outcomes. Students learn about healthcare coverage, access to care, healthcare rationing, provider manpower distribution, and seeking healthcare in foreign countries (medical tourism). The discrepancy between the desirable and the practical is explored, and students are asked to outline and defend a system that they believe is both desirable and practical.

HC 4210 Quality Improvement for HC Leaders (4 Credits)

This course is designed to review the body of knowledge and core competencies needed to function at the level of Certified Professional in Healthcare Quality (CPHQ) in a healthcare organization. Skills gained are applicable to managers and administrators of hospitals, practices, and clinics. Course content is beneficial to clinicians and others interested in quality and patient safety. This course facilitates the successful pursuit of the CPHQ certification exam. Core competencies, aligned with the CPHQ certification exam, to be explored in detail include: Leadership and Management; Quality and Performance Improvement; Healthcare Safety; Information Management and Regulation, Accreditation and Continuous Readiness. Students are strongly encouraged to complete HC4000 and HC4220 prior to registering for the course.

HC 4220 Ethical Considerations in Healthcare (4 Credits)

This course provides a survey of important ethical considerations encountered in U.S. and global healthcare, past and present. It covers issues on which consensus has generally been reached, and some on which debate is currently active. Clinical, professional, and organizational scenarios will be examined, with an occasional glance toward public policy. Students will practice recognizing the elements of ethical problems and applying a "toolbox" of principles, theories, and concepts to understand them. Through readings, class discussions, and assignments, students will review noteworthy cases and policies. They will evaluate the merits of ethical arguments taking different forms. They will compare different frameworks for making ethical judgments and solving dilemmas that arise from competing value perspectives. This background is an essential foundation for practitioners and leaders in every role in a healthcare environment.

HC 4225 Healthcare Public Policy and the Legislative Process (4 Credits)

This class provides students with an understanding of the political and legislative procedures that lead to healthcare policy change and reform. Students examine the influences and functions of government agencies, legislative processes and procedures and executive branch rule-making. Students objectively evaluate how policy changes occur at the federal and state levels and subsequently affect the functioning as a citizen and a professional. Class lecture focuses on the legislative path of federal law and then follows it through to the outcomes at the state level. Students explore the importance of developing relationships, communication and advocacy strategies with elected officials and various stakeholder groups that interact with the federal and state legislative processes.

HC 4230 Implementation and Evaluation of Healthcare Public Policy (4 Credits)

This course examines strategies for implementation and evaluation of healthcare public policy. Students develop skills in analyzing issues, considering and weighing pros and cons of proposed policy, and defending strategies for bringing about change. Beginning with the passage of a new law, policy, or regulation, students track the process to implement and evaluate new policy. Topics related to implementation of a new policy include funding the implementation, effect on constituents and the overall national economy, sustainability, and short- and long-term evaluation of the policy. At the conclusion of this course, students will prepare an implementation plan for selected recently passed state legislation. Students are strongly encouraged to complete HC 4000 prior to registering for this course.

HC 4300 Health Equity and Justice (4 Credits)

In this course, definitions and historical perspectives of health equity, health disparity, and social justice will be introduced. Students will learn to recognize the geographic, cultural, and social contexts, where health inequities occur. Through reflection and journaling, students will explore the concept of implicit bias. From this critical reflection, students will gain an understanding of the impact of bias on patient care and population health in the U.S. healthcare system. Issues of, racial, ethnic, and gender status and their relationships to health disparities and inequities will be analyzed. Through course assignments, students will conceptualize interventions and design improvement projects aimed at making substantive positive changes toward health equity and justice.

HC 4305 Healthy Aging: A Healthcare Imperative (4 Credits)

As technology advances, the ability to healthcare to keep people alive increases, but not always in ways conducive to improving quality of life. It is the hope of healthcare providers that quality of life improves as well. However, there are many factors this piece of the puzzle challenging. In this course, the older adult population is examined both for the challenges they face and the effects of an increasing elder population on the healthcare delivery system. The course will focus on specific assessment of the impact of unhealthy lifestyles that create the co-morbidities, health disparities commonly seen in aging populations, and the improvements that can be made in health and technological illiteracy/accessibility on older adults. Extending this assessment, students create a cultural care model for end of life care. These explorations of older adulthood culminating in evaluating the underlying cultural issues that need to be addressed to improve population health and resiliency in meeting the challenges during the end of the life spectrum.

HC 4400 Legal Dynamics of Healthcare Leadership (4 Credits)

This course is a primer on the legal and compliance considerations associated with organization, payment, and administration of facilities and provider groups. Topics will include the corporate and contract law, Stark and anti-kickback law, licensure and credentialing, professional liability, professional review and patient safety, HIPAA and patient privacy, and other laws affecting healthcare providers and organizations.

HC 4410 Legal Frameworks of the Healthcare Industry (4 Credits)

This course reviews the recent history of healthcare reform in the United States beginning with the 2010 Affordable Care Act (ACA) and moving to health reform since the ACA. Students examine the influences and functions of Medicare and Medicaid as well as the Department of Health and Human Services' (HHS) role in shaping benefit coverage throughout the healthcare industry. Students will explore the importance of, and examine legal issues related to, public health and healthcare provided by entities within the Federal Government such as the Department of Veterans Affairs (VA), Department of Defense (DoD), and Indian Health Service (IHS). Students will objectively evaluate the legalities and ethical issues associated with clinical research as well as the Food and Drug Administration (FDA)'s involvement in the development of pharmaceutical agents and medical devices. The course concludes with students analyzing the future landscape of health reform and public sector influence in healthcare.

HC 4420 Legal Fundamentals of Revenue in Healthcare (4 Credits)

This course provides an understanding of the legal complexities of creating and managing delivery and payment models for healthcare services. Course content revolves around the current challenges of evolving from volume-based to value-based payment principles. Topics will include fraud and abuse and compliance, legal foundations of private and public payment systems, fee for service, managed care, value-based systems, and a review of current healthcare payment reform efforts. The course wraps up with the role of clinical health information and related data systems in healthcare delivery and payment.

HC 4430 Significant Healthcare Law (4 Credits)

As a foundation, students begin with an overview of healthcare law and an analysis of the sources of law to include the Constitution, statutes, regulations, and case law. Throughout the course, students will objectively analyze constitutional issues and major federal healthcare laws and will further delve into regulations implementing statutes as well as cases interpreting them. Students will examine the intersection of traditional areas of law and healthcare to include torts, antitrust, contracts, and intellectual property. They will explore the contemporary and emerging areas of information and innovation in healthcare law as well as the Affordable Care Act, to include the Supreme Court's landmark decision. The course concludes with a consideration of the pervasive problem of fraud, waste, and abuse. This course is delivered in a seminar style with significant independent work/research on the part of students and should be taken after introductory and concentration courses.

HC 4500 Operational Challenges in Global Health Management (4 Credits)

This course presents challenges in operations that are unique to healthcare services and products being delivered in the international market. Topics include international marketing of services and healthcare products, negotiation styles, ethical considerations, organizational structure, transporting of medical goods and personnel, individual travel health and medical tourism as a business model. Cultural and religious considerations in healthcare delivery are discussed. Grants and research management for global health are compared with domestic procedures.

HC 4510 Legal and Employment Issues in Global Health Management (4 Credits)

This course presents legal considerations involved in conducting global programs and business related to healthcare services and products. Employment and labor law are discussed in relationship to employment across international lines and within foreign countries. Intellectual property, patent and copyright of healthcare products, curriculum, and programs are examined. Customs laws, foreign trade, and other regulations such as healthcare licensing and credentialing of personnel are developed. Human resource challenges such as remote team management are discussed.

HC 4520 Global Health NGO Management (4 Credits)

Students will examine factors that impact organizational performance in the global nonprofit health sector. Students explore current challenges associated with Non-Government Organizations (NGOs) that operate in low-income and middle-income countries. Examples include Doctors Without Borders, Shoulder to Shoulder, and others. Students are empowered to research and compare different NGOs and analyze factors that impact organizational effectiveness. Key challenges facing NGO leaders are analyzed and students provide recommendations to improve organizational performance. Course topics include assessment of NGO strategies, organizational resources and financing, and stakeholder relations. Other topics include analysis of countries' demographics, culture, healthcare delivery, policies, and external environment. It is recommended that students in the Global Health Program Management concentration or certificate complete HC4500 and HC4510 prior to registering for this course. Students in other concentrations or programs may take this course at any time as an elective.

HC 4530 Regulatory Affairs in Global Health Management (4 Credits)

This course discusses the various regulatory requirements of conducting healthcare related business from the perspective of research, development, and marketing of medical devices and pharmaceuticals. Both domestic and international requirements will be examined. Students will develop a template of skills for investigating healthcare related compliance issues that can be adapted to specific markets as needed.

HC 4701 Topics in Healthcare Management (1-10 Credits)

This is an advanced special topics seminar course. The focus is on specialized areas of interest. Topics courses may be used as electives within the Healthcare Leadership degree and certificates, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate programs.

HC 4805 Virtual Care: Opportunities and Barriers for Health Systems (4 Credits)

Leaders in telehealth and virtual care settings must learn to balance the needs of the individual with the needs of populations. Students will explore the factors that impact the success of telehealth and virtual care programming including barriers to care, the social determinants of health (SDOH), and the concerns of special populations. Students will develop the skills needed to create a telehealth and virtual care plan that takes into account health policy and regulatory compliance, best practices in population health, and the social context of the healthcare system.

HC 4900 Experiential Learning in Healthcare (4 Credits)

This course is for students who want to do independent research by completing an industry project and serves as a connector between research methods and a student's Capstone Project. The course will connect an academic research question with an experiential learning opportunity in healthcare for students as they prepare for their Capstone Project experience. Students will choose a Capstone Advisor, choose a topic, develop a thesis statement, explore project methodologies, write a proposal, and complete the necessary Institutional Review Board (IRB) requirements. Students will also agree to the structure and deliverables of their projects. There is an expectation for face to face (virtual is acceptable) meetings between students and their prospective Capstone Advisor during this course. This course is a prerequisite for any students planning to complete the Capstone Project (HC 4901) as it is the beginning of the Capstone Project process. Prerequisites: approval by Academic Director, acceptance as a degree candidate, and completion of between 30-40 quarter-hours. This course meets an elective option.

HC 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

HC 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HC 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HC 4910 Research Practices and Applications (4 Credits)

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

HC 4915 Experiential Learning in Business (4 Credits)

This course is for learners who want to increase their range of business skills and industry experience. As learners navigate ten modules, they will walk through reflection on specific activities related to professional business skills. These skills include items such as building a personal brand, creating value add, informational interviewing, negotiating, and system evaluation. This course will use virtual reality to ensure an equitable experience for remote students. At the culmination of this course, learners will have a basic set of professional business skills they can use throughout their careers.

HC 4980 Internship (0-10 Credits)

The Healthcare Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all Healthcare students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences.

HC 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

Information and Communications Technology

Office: University College Student Support Center

Mail Code: 2211 S. Josephine St., Denver, CO 80208

Phone: 303-871-2291, 800-347-2042

Email: ucol-support@du.edu

Web Site: www.universitycollege.du.edu (<http://www.universitycollege.du.edu>)

A successful career in the Information and Communications Technology (ICT) industry requires more than just technical expertise; it also requires an integrated understanding of the industry as a whole and its practices, technologies, challenges, and trends. Additionally, given the industry's dynamic nature, successful ICT professionals must be flexible and committed to continuous learning. The combination of continuous learning, flexibility, and knowledge and skills are traits employers seek when making hiring decisions in the ICT industry. The ICT program is designed to give the student a broad understanding of the ICT industry and help develop the knowledge and skills needed across the industry, including "soft skills" such as communication, organization, critical thinking, problem solving, leadership and teamwork. The ICT program also provides in-depth knowledge in concentration areas including Cybersecurity Management, Database Design and Administration, Geographic Information Systems, Information Systems Security, Project Management, Software Design and Programming, Technology Management, Telecommunications Technology, and Web Design and Development.

This program prepares students to:

- Demonstrate effective oral, written, and non-verbal communication techniques appropriate to the context and audience in order to effect change
- Apply relevant program theory and principles to formulate clear, evidence-based arguments
- Collaborate appropriately with stakeholders regarding the selection, development, and management of technical solutions to meet business requirements
- Assess the key socioeconomic drivers, technical trends, and ethical concerns that shape global innovation, markets, and competition for technical resources to recommend appropriate strategies aligned with organizational goals
- Employ best practices in the evaluation, definition, architecture, design, development, implementation, and management of technical systems, projects, and solutions to meet industry demands
- Synthesize knowledge of diverse areas of technology that form an interrelated system of infrastructure, applications, data, and management practices to influence the future of information and communications technology

Master of Science in Information and Communications Technology with a Concentration in Database Design and Administration

The Database Design and Administration master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults who are current or aspiring database designers and administrators. Students will learn how to design, administer, fine-tune, and maintain databases with a database administration degree, plus develop business acumen that will help them excel in the Information and Communications Technology (ICT) field. Master's degree students learn from expert instructors who work in the fields in which they teach, providing cutting-edge insight to what is needed to work efficiently and effectively in this sector of ICT.

The combination of required and elective courses in the master's degree program covers common database management systems (DBMS) such as SQL Server and Oracle. The program encompasses key database technologies such as PL/SQL, Transact-SQL, and NoSQL databases. This comprehensive content delivered in a hands-on manner provides both the knowledge and the specific skills needed to put the student on the path to earn key industry certifications for vendor database platforms.

This degree prepares students to do the following:

- Analyze, design, develop, test, deploy, administer and maintain database applications and database security based on industry best practices and end-user requirements
- Apply data modeling, data warehousing, performance tuning, programming and maintenance through technologies such as SQL Server, Oracle, PL/SQL Transact-SQL, and NoSQL

- Create plans to solve organizational issues using business management strategies directly related to database administration theories and applications
- Formulate plans for database installation and configuration, maintenance, and backup and recovery

Master of Science in Information and Communications Technology with a Concentration in Geographic Information Systems

The Geographic Information Systems (GIS) master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. GIS training prepares students to apply geographic information systems technology to solve real-world problems, whether determining the best location for a new store, analyzing environmental damage, or detecting crime patterns in a city. GIS solutions provide the capability to store, retrieve, and analyze spatial information by combining layers of data to yield valuable understanding of a locale.

As a current or aspiring GIS professional, you will receive applied instruction from professional practitioners who work in the fields in which they teach as you learn to plan, implement, and execute a GIS project through remote sensing, internet mapping, or digital image processing. Also, you will develop a valuable business background with creative, solution-oriented techniques through this versatile program, which emphasizes applied education that will propel your GIS career forward. Students will explore GIS fundamentals at a very hands-on, practical level necessary to succeed in the field of GIS.

This degree prepares students to do the following:

- Analyze the nature of, uses for, and implementation processes for geographic data
- Select appropriate applications of GIS technology to solve spatial problems based on organizational/client needs
- Solve real-world problems through analysis and selection of appropriate GIS tools and processes to address the issues

Master of Science in Information and Communications Technology with a Concentration in Information Systems Security

The Information Systems Security master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A master's degree concentration in Information Systems Security from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Information and Communications Technology (ICT) security.

Master's degree students receive applied instruction as they learn to navigate real-world security challenges, such as setting up a secure network, securing servers, and problem-solving hypothetical security situations. Students also garner career-relevant knowledge on related ICT subjects to better relate the challenges of the rapidly evolving world of information security and cyber threats to other key trends in the ICT industry. To ensure up-to-the-minute knowledge and skills, the curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)². In addition, the program was developed in collaboration with the Colorado Springs and Denver chapters of the Information Security Systems Association (ISSA), and the courses have been mapped to the Committee on National Security Systems (CNSS) standards. The University of Denver has been designated by NSA/DHS as a National Center of Academic Excellence in Cyber Defense Education.

This degree prepares students to do the following:

- Develop and implement technical information security tools, policies and procedures to meet organizational needs based on best practices
- Analyze security scenarios to design secure network solutions and applications
- Create strategies to establish secure operations, access control methods, and system security to meet organizational/client requirements
- Evaluate encryption standards and solutions
- Conduct computer forensics analysis

Master of Science in Information and Communications Technology with a Concentration in Project Management

The Project Management master's degree specialty through the Information and Communications Technology (ICT) program is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will combine information and communication technology skills with a project management and business background and become a proficient leader within the IT field.

Students will receive hands-on, practical instruction from professional practitioners, who work in the fields in which they teach, on the tools and techniques of effective project management. Students will learn how to develop a clear plan that places a project in the context of an organization's strategic plan, while considering the implications information and communication technologies present in any given project.

Graduates of the Project Management program will gain a firm grasp on converging information and communication technologies and learn to understand the fundamentals of each sector. Recognizing how each ICT subject connects to one another, from information security systems

to geographic information systems, will give students the competitive edge needed in this dynamic industry. The content for this concentration has been developed to align with the current edition of the Project Management Institute's (PMI)® A Guide to the Project Management Body of Knowledge, (PMBOK® Guide), Project Management Institute, Inc. The unique curriculum equips students with the information and skills needed for the PMI® Project Management Professional (PMP)® Certification Exam.

This degree prepares students to do the following:

- Apply the basic principles of project management to become proficient in the use of project management software
- Demonstrate the use of agile concepts and techniques to deliver complex projects
- Design a comprehensive risk management plan for a project
- Create strategies to manage the complexity inherent in large-scale projects
- Relate project scope to cost, time, and resource requirements
- Develop procurement plans and assess project contracts

Master of Science in Information and Communications Technology with a Concentration in Software Design and Programming

The Software Design and Programming master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will expand their knowledge of software design and programming principles while developing the in-depth skills needed to succeed in the field with a Software Design and Programming master's degree. Current or aspiring programmers will practice both structured and object-oriented methodologies focusing on industry best practices. Students are able to select from a variety of elective courses that best meet their specific Information and Communications Technology (ICT) career goals. Students learn how to develop software programs and applications using modern programming languages, current development frameworks, and Software Quality Assurance (SQA) practices. Students learn to select software solution design methodologies that meet requirements such as scalability, reliability, and implementation. With guidance from expert instructors, students learn and apply problem-solving skills while designing and programming software solutions.

This degree prepares students to do the following:

- Design software solutions using best practices in security, Software Quality Assurance (SQA), and current development frameworks
- Apply both structured and object-oriented design methodologies to create robust, reusable software using modern programming languages
- Assess the role of frameworks in software design and development to lay the groundwork for full-stack development
- Examine distributed computing concepts relating to cloud computing—such as scalability, reliability, virtualization, implementation, and deployment—in order to make informed software development decisions

Master of Science in Information and Communications Technology with a Concentration in Technology Management

The Technology Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The Technology Management degree concentration represents the convergence of business and technology and emphasizes the impact technology can have on strategic and operational objectives when applied through sound business management practices. With the right technical skills, combined with a strategic perspective regarding critical business needs, students will be prepared to meet current industry demands, and positioned to meet the demands of tomorrow.

Graduates with a Technology Management master's degree concentration or graduate certificate become proficient in creating, managing, and using technology to accomplish strategic organizational goals as they expand and strengthen their knowledge and skills in creative thinking, strategic and tactical decision making, and global awareness. In addition to the practical education received online or on campus, Technology Management master's degree students will also receive a broader understanding of how related IT sectors impact their technology management roles.

This degree prepares students to do the following:

- Formulate plans to manage technologies for strategic advantage
- Develop and evaluate business cases based on organizational and client requirements
- Assess the role of strategic alliances within an organization
- Summarize project management principles and processes in relation to technology management strategies
- Create and defend IT service assurance plans
- Analyze cloud and internet law across various IT scenarios
- Evaluate strategies and utilize best practices in technology forecasting and innovation

Master of Science in Information and Communications Technology with a Concentration in Telecommunications Technology

The Telecommunications Technology master's degree concentration is offered online or on campus to meet the needs of busy adults. This degree prepares students to become proficient, technical leaders within the Information and Communications Technology (ICT) industry. The program emphasizes the challenges and approaches of managing the explosion of wireless data traffic due to the rapid increase of devices such as the iPhone, iPad, Android smartphones, connected laptops and the Internet of Things (IoT), as well as broadband services and the move to 5G networks. Students will learn how to evaluate emerging telecommunications technologies, wireless networks and services, and the convergence of voice, data, and multimedia services on global IP networks.

This degree prepares students to do the following:

- Analyze and design network solutions
- Analyze current and emerging technologies in the telecommunications industry
- Evaluate and apply best practices in network security
- Create plans to manage global telecommunications projects
- Evaluate next generation wireless networks and services such as 5G networks

Master of Science in Information and Communications Technology with a Concentration in Web Design and Development

The Web Design and Development master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The program provides an in-depth knowledge of web design and web development through hands-on instruction. Students will move beyond the development of first-generation HTML-based Web pages and learn to create interactive, state-of-the-art, web-based applications. Using a variety of essential software tools students will develop projects that support the demands of contemporary business models. The real-world development scenarios, coupled with the hands-on learning experience provided by professional practitioners who work in the fields in which they teach, result in a highly career-relevant, innovative degree in web design and development. In addition to IT fundamentals, students will also develop essential business and problem-solving skills that will help them thrive in any organization. In an increasingly technological world, it is vital to understand the fundamentals of other areas of the Information and Communications Technology (ICT) field, and how each converges with web design and web development.

This degree prepares students to do the following:

- Create interactive web-based applications for e-business processes and consumer demands using tools such as cascading style sheets, web graphics construction, interface design and usability, web scripting, and databases
- Create requirements for user experience design by applying UX principles such as user personas, information design, wireframing, and prototyping
- Analyze enterprise goals to apply information architecture and web-design foundational principles for the development of client-server and cloud-based solutions
- Develop solutions for web, app, and mobile scenarios using the latest versions of JavaScript, HTML, CSS, XML, PHP, and Python
- Assess how web design and development converges within the context of security, software, database design, and telecommunications

MASTER OF SCIENCE IN INFORMATION AND COMMUNICATIONS TECHNOLOGY WITH A CONCENTRATION IN Cybersecurity Management

The Cybersecurity Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A master's degree concentration Cybersecurity Management from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Information and Communications Technology (ICT) security.

The Cybersecurity Management concentration is designed to equip students with knowledge of industry best practices and management skills demanded by private and public sector employers in today's rapidly evolving cybersecurity industry. Through hands-on interaction with a set of relevant industry case studies, students will gain knowledge of management tools and principles needed to define, establish, and grow effective and mature cybersecurity management programs for a wide range of organizations. Through experiential learning activities, students will gain an understanding of governance, compliance, regulatory, and business operations domains. These experiences will be enhanced with knowledge of policy and risk management frameworks most relevant to the cybersecurity management profession. The curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)² and supports the National Initiative for Cybersecurity Education (NICE) framework.

Students will be prepared to serve in a range of cybersecurity management and leadership roles to continuously strengthen security postures in a fluid environment of constantly changing human, machine, and state actor threats.

This degree prepares students to do the following:

- Analyze methods to develop and implement cybersecurity management policies and procedures to meet organizational needs based on best practices
- Evaluate methods for the development and delivery of cybersecurity training and education at the institutional level
- Plan cybersecurity management oversight and governance through development of strategic cybersecurity policies and plans
- Examine best practices for communicating cybersecurity management issues with Boards of Director and other management leadership teams
- Evaluate methods for performing cybersecurity audits and documenting audit responses

Certificate in Information and Communications Technology with a Concentration in Database Design and Administration

The graduate certificate in Database Design and Administration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults who are current or aspiring database designers and administrators. Certificate students will expand their skillsets to include designing, administering, fine-tuning, and maintaining databases with a graduate certificate in database design and administration concentration. Expert instructors who work in the fields in which they teach provide excellent insight to what is needed to work efficiently and effectively in this sector of IT.

This certificate prepares students to become leaders in database design, development, and administration while expanding their skillsets to include data modeling, data warehousing, performance tuning, programming, and building and maintaining client-server databases. The combination of required and elective courses in the master's degree program covers common database management systems (DBMS) such as SQL Server and Oracle. The program encompasses key database technologies such as PL/SQL, Transact-SQL programming, and NoSQL databases. This comprehensive content delivered in a hands-on manner provides both the knowledge and the specific skills needed to put the student on the path to earn key industry certifications for vendor database platforms.

Students will also gain additional skills and knowledge in database design and administration through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in Information and Communications Technology.

Certificate in Information and Communications Technology with a Concentration in Information Systems Security

The graduate certificate Information Systems Security offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A graduate certificate in Information Systems Security from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Information and Communications Technology (ICT) security.

Certificate classes at University College use innovative lab experiences to provide hands-on expertise with industry-current security tools. Students also garner career-relevant knowledge on related IT subjects to better relate the challenges of the rapidly evolving world of cyber security and cyber threats to other key trends in the ICT industry. To ensure up-to-the-minute knowledge and skills, the curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)². In addition, the program was developed in collaboration with the Colorado Springs and Denver chapters of the Information Security Systems Association (ISSA), and the courses have been mapped to the Committee on National Security Systems (CNSS) standards. The University of Denver has been designated by NSA/DHS as a National Center of Academic Excellence in Cyber Defense Education. Credits earned through this graduate certificate may apply toward a master's degree in Information and Communications Technology.

Certificate in Information and Communications Technology with a Concentration in Project Management

The graduate certificate in Project Management through the Information and Communications Technology program is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will learn to combine information and communication technology skills with a project management and business background and become a proficient leader within the Information and Communications Technology (ICT) field. Students will receive hands-on, practical instruction from professional practitioners who work in the fields in which they teach on the tools and techniques of effective project management. Additionally, students will learn how to develop a clear plan that places a project in the context of an organization's strategic plan, while considering the implications information and communication technologies present in any given project. Students will also gain additional skills and knowledge in project management through elective coursework.

Project Management concentration students will learn about converging information and communication technologies and the fundamentals of each sector. Recognizing how each ICT subject connects to one another, from information security systems to geographic information systems, will give students the competitive edge needed in this dynamic industry. The content for this graduate certificate has been developed to align with the current edition of the Project Management Institute's (PMI)[®] A Guide to the Project Management Body of Knowledge, (PMBOK[®] Guide), Project Management Institute, Inc. The unique curriculum equips students with the information and skills needed for the PMI[®] Project Management Professional (PMP)[®]

Certification Exam. Credits earned through this graduate certificate may apply toward a master's degree in the Information and Communications Technology program.

Certificate in Information and Communications Technology with a Concentration in Software Design and Programming

The Software Design and Programming graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students will expand their knowledge of software design and programming principles while developing the in-depth skills needed to succeed in the field with a Software Design and Programming certificate. Current or aspiring programmers will practice both structured and object-oriented methodologies focusing on industry best practices. Students are able to select from a variety of elective courses that best meet their specific Information and Communications Technology (ICT) career goals.

Certificate students learn how to develop software programs and applications using modern programming languages, current development frameworks, and Software Quality Assurance (SQA) practices. Students learn to select software solution design methodologies that meet requirements such as scalability, reliability, and implementation. With guidance from expert instructors, students learn and apply problem-solving skills while designing and programming software solutions.

Certificate in Information and Communications Technology with a Concentration in Technology Management

The graduate certificate in Technology Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Certificate students will learn how the convergence of business and technology impacts the strategic and operational objectives. Students will gain the right technical skills, combined with a strategic perspective regarding critical business needs, as they are prepared to meet current industry demands, and positioned to meet the demands of tomorrow.

The Technology Management concentration allows students to become proficient in creating, managing, and using technology to accomplish strategic organizational goals as they expand and strengthen their knowledge and skills in creative thinking, strategic and tactical decision making, and global awareness. This applied Technology Management certificate offers professionals an opportunity to receive applied instruction from professional practitioners who bring deep expertise in business management strategies and their technological implications. Students will also gain additional skills and knowledge in technology management through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in the Information and Communications Technology program.

Certificate in Information and Communications Technology with a Concentration in Telecommunications Technology

The graduate certificate in Telecommunications Technology is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The Telecommunications Technology concentration provides practical telecommunications instruction, including evaluating emerging telecommunications technologies, wireless networks and services, and the convergence of voice, data, and multimedia services on the global IP network. The program emphasizes the challenges and approaches of managing the explosion of wireless data traffic due to the rapid increase of devices such as the iPhone, iPad, Android smartphones, connected laptops and the Internet of Things (IoT), as well as broadband services and the move to 5G networks.

In addition to ICT fundamentals, students will also develop essential strategic business and problem-solving skills that will help them thrive in any organization by creating effective alliances throughout the technology sector. Students will also gain additional skills and knowledge in telecommunication technology through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in the Information and Communications Technology program.

Certificate in Information and Communications Technology with a Concentration in Web Design and Development

The Web Design and Development graduate certificate is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. The certificate program provides an in-depth knowledge of web design and web development through hands-on instruction. Students will move beyond the development of first-generation HTML-based Web pages and learn to create interactive, state-of-the-art, web-based applications. Using a variety of essential software tools students will develop projects that support the demands of contemporary business models. The real-world development scenarios, coupled with the hands-on learning experience provided by professional practitioners who work in the fields in which they teach, result in a highly career-relevant, innovative graduate certificate in web design and development. In addition to IT fundamentals, students will also develop essential business and problem-solving skills that will help them thrive in any organization. In an increasingly technological world, it is vital to understand the fundamentals of other areas of the Information and Communications Technology (ICT) field, and how each converges with web design and web development.

Credits earned through this graduate certificate may apply toward a master's degree in the Information and Communications Technology program.

CERTIFICATE IN INFORMATION AND COMMUNICATIONS TECHNOLOGY WITH A CONCENTRATION IN cybersecurity management

The graduate certificate in Cybersecurity Management is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. A graduate certificate in Cybersecurity Management from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Cybersecurity Management.

Certificate classes at University College are designed to equip students with knowledge of industry best practices and management skills demanded by private and public sector employers in today's rapidly evolving cybersecurity industry. Through hands-on interaction with a set of relevant industry case studies, students will gain knowledge of management tools and principles needed to define, establish, and grow effective and mature cybersecurity management programs for a wide range of organizations. Through experiential learning activities, students will gain an understanding of governance, compliance, regulatory, and business operations domains. These experiences will be enhanced with knowledge of policy and risk management frameworks most relevant to the cybersecurity management profession. The curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)² and supports the National Initiative for Cybersecurity Education (NICE) framework.

specialized graduate CERTIFICATE IN DATABASE DESIGN AND ADMINISTRATION

Students in this specialized graduate certificate will expand their skillsets to include designing, administering, fine-tuning, and maintaining databases with a graduate certificate in database design and administration concentration. Expert instructors who work in the fields in which they teach provide excellent insight to what is needed to work efficiently and effectively in this sector of IT.

This certificate prepares students to become leaders in database design, development, and administration while expanding their skillsets to include data modeling, data warehousing, performance tuning, programming, and building and maintaining client-server databases. The combination of required and elective courses covers key database system (DBS) technologies such as SQL Server, Oracle PL/SQL, Transact-SQL programming, and NoSQL databases. This extensive content delivered in a hands-on manner provides both the knowledge and the specific skills needed to put the student on the path to earn key industry certifications for vendor database platforms. Credits earned through this certificate may apply toward a master's degree in Information and Communications Technology.

specialized graduate CERTIFICATE IN INFORMATION SYSTEMS SECURITY

A specialized graduate certificate in Information Systems Security from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in IT security.

Certificate classes at University College use innovative lab experiences to provide hands-on expertise with industry-current security tools. Students also garner career-relevant knowledge on related IT subjects to better relate the challenges of the rapidly evolving world of cyber security and cyber threats to other key trends in the ICT industry. To ensure up-to-the-minute knowledge and skills, the curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)². In addition, the program was developed in collaboration with the Colorado Springs and Denver chapters of the Information Security Systems Association (ISSA), and the courses have been mapped to the Committee on National Security Systems (CNSS) standards. The University of Denver has been designated by NSA/DHS as a National Center of Academic Excellence in Cyber Defense Education. Credits earned through this certificate may apply toward a master's degree in Information and Communications Technology.

specialized graduate CERTIFICATE IN PROJECT MANAGEMENT

Students in the specialized graduate certificate in Project Management will learn to combine information and communication technology skills with a project management and business background and become a proficient leader within the Information and Communications Technology (ICT) field. Students will receive hands-on, practical instruction from professional practitioners who work in the fields in which they teach on the tools and techniques of effective project management. Additionally, students will learn how to develop a clear plan that places a project in the context of an organization's strategic plan, while considering the implications information and communication technologies present in any given project.

Students will learn about converging information and communication technologies and the fundamentals of each sector. Recognizing how each ICT subject connects to one another, from information security systems to geographic information systems, will give students the competitive edge needed in this dynamic industry. The content for this graduate certificate has been developed to align with the current edition of the Project Management Institute's (PMI)[®] A Guide to the Project Management Body of Knowledge, (PMBOK[®] Guide), Project Management Institute, Inc. The unique curriculum equips students with the information and skills needed for the PMI[®] Project Management Professional (PMP)[®] Certification Exam. Credits earned through this certificate may apply toward a master's degree in the Information and Communications Technology program.

specialized graduate CERTIFICATE IN SOFTWARE DESIGN AND PROGRAMMING

Students in the Software Design and Programming specialized graduate certificate will expand their knowledge of software design and programming principles while developing the in-depth skills needed to succeed in the field with a Software Design and Programming certificate. Current or aspiring

programmers will practice both structured and object-oriented methodologies focusing on industry best practices. Students are able to select from a variety of elective courses that best meet their specific Information and Communications Technology (ICT) career goals. Certificate students learn how to develop software programs and applications using modern programming languages, Software Development Life Cycle (SDLC) frameworks, and Software Quality Assurance (SQA) practices. Students learn to select software solution design methodologies that meet requirements such as scalability, reliability, and implementation. With guidance from expert instructors, students learn and apply problem-solving skills while designing and programming software solutions.

specialized graduate CERTIFICATE IN TECHNOLOGY MANAGEMENT

Students in the specialized graduate certificate in Technology Management will learn how the convergence of business and technology impacts the strategic and operational objectives. Students will gain the right technical skills, combined with a strategic perspective regarding critical business needs, as they are prepared to meet current industry demands, and positioned to meet the demands of tomorrow.

The Technology Management certificate allows students to become proficient in creating, managing, and using technology to accomplish strategic organizational goals as they expand and strengthen their knowledge and skills in creative thinking, strategic and tactical decision making, and global awareness. This applied Technology Management certificate offers professionals an opportunity to receive applied instruction from professional practitioners who bring deep expertise in business management strategies and their technological implications. Credits earned through this certificate may apply toward a master's degree in the Information and Communications Technology program.

specialized graduate CERTIFICATE IN TELECOMMUNICATIONS TECHNOLOGY

The Telecommunications Technology specialized graduate certificate provides practical telecommunications instruction, including evaluating emerging telecommunications technologies, wireless networks and services, and the convergence of voice, data, and multimedia services on the global IP network. Certificate students will learn how to assess and analyze telecommunications technologies, plus gain vital skills necessary to design, develop, and implement telecommunications systems such as wireless networks. The dominant wireless telecom technologies and protocols are presented, including OFDM, MIMO, mobile IP, WIMAX, LTE, and WPANs.

In addition to ICT fundamentals, students will also develop essential strategic business and problem-solving skills that will help them thrive in any organization by creating effective alliances throughout the technology sector. Credits earned through this certificate may apply toward a master's degree in the Information and Communications Technology program.

specialized graduate CERTIFICATE IN WEB DESIGN AND DEVELOPMENT

Students in the Web Design and Development specialized graduate certificate gain in-depth knowledge of web design and web development through hands-on instruction. Students will move beyond the development of first-generation HTML-based Web pages and learn to create interactive, state-of-the-art, web-based applications. Using a variety of essential software tools students will develop projects that support the demands of contemporary business models. The real-world development scenarios, coupled with the hands-on learning experience provided by professional practitioners who work in the fields in which they teach, result in a highly career-relevant, innovative certificate in web design and development. In addition to IT fundamentals, students will also develop essential business and problem-solving skills that will help them thrive in any organization. In an increasingly technological world, it is vital to understand the fundamentals of other areas of the Information and Communications Technology (ICT) field, and how each converges with web design and web development.

Credits earned through this graduate certificate may apply toward a master's degree in the Information and Communications Technology program.

specialized graduate CERTIFICATE IN CYBERSECURITY MANAGEMENT

A specialized graduate certificate in Cybersecurity Management from University College—a designated National Center of Academic Excellence in Cyber Defense Education—combines technology, management, and business skills to prepare graduates for an exciting, high-demand career in Cybersecurity Management.

Certificate classes at University College are designed to equip students with knowledge of industry best practices and management skills demanded by private and public sector employers in today's rapidly evolving cybersecurity industry. Through hands-on interaction with a set of relevant industry case studies, students will gain knowledge of management tools and principles needed to define, establish, and grow effective and mature cybersecurity management programs for a wide range of organizations. Through experiential learning activities, students will gain an understanding of governance, compliance, regulatory, and business operations domains. These experiences will be enhanced with knowledge of policy and risk management frameworks most relevant to the cybersecurity management profession. The curriculum was designed around the Common Body of Knowledge for CISSP certification developed by the International Information Systems Security Certifications Consortium (ISC)² and supports the National Initiative for Cybersecurity Education (NICE) framework.

Master's Degree Admission Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Certificate Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. - Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Science in Information and Communications Technology with a Concentration in Database Design and Administration

Degree Requirements

| Code | Title | Credits |
|--|--|-----------|
| Core course requirements | | |
| ICT 4000 | ICT Business Essentials for Technology Leaders | 4 |
| ICT 4001 | Technology Leadership | 4 |
| ICT 4005 | ICT Technical Essentials | 4 |
| ICT 4901 or ICT 4902 | Capstone Project Capstone Seminar | 4 |
| Concentration requirements | | |
| ICT 4400 | Database Administration | 4 |
| ICT 4405 | Database Design and Implementation | 4 |
| ICT 4410 | Data Warehousing Design | 4 |
| ICT 4415 | Database Backup and Recovery with Lab | 4 |
| Elective requirements (Choose four courses) | | 16 |
| Total Credits | | 48 |

Minimum number of credits required: 48

Students will work with their Academic Advisor to determine the best set of courses to choose for their electives.

In University College graduate-level programs, grades of C or greater are considered passing, whereas grades of C- or lower are considered failing. Courses with a grade of C- or below will not count toward meeting degree or certificate requirements. Also, no more than one-fourth of the hours accepted toward the degree be grades of "C". A cumulative and program grade-point average of 3.0 or better must be maintained at all times.

Master of Science in Information and Communications Technology with a Concentration in Geographic Information Systems

Degree Requirements

| Code | Title | Credits |
|--|--|-----------|
| Core coursework requirements | | |
| ICT 4000 | ICT Business Essentials for Technology Leaders | 4 |
| ICT 4001 | Technology Leadership | 4 |
| ICT 4005 | ICT Technical Essentials | 4 |
| ICT 4901 or ICT 4902 | Capstone Project Capstone Seminar | 4 |
| Concentration requirements | | |
| GIS 4101 | Introduction to Geographic Information Systems | 4 |
| GIS 4620 | Geodatabase Application | 4 |
| GIS 4700 | Remote Sensing I | 4 |
| GIS 4860 | Web GIS | 4 |
| Elective requirements (Choose four courses) | | 16 |
| Total Credits | | 48 |

Minimum number of credits required: 48

Students will work with their Academic Advisor to determine the best set of courses to choose for their electives.

In University College graduate-level programs, grades of C or greater are considered passing, whereas grades of C- or lower are considered failing. Courses with a grade of C- or below will not count toward meeting degree or certificate requirements. Also, no more than one-fourth of the hours accepted toward the degree be grades of "C". A cumulative and program grade-point average of 3.0 or better must be maintained at all times.

| Total Credits | | 16 |

Courses

ICT 4000 ICT Business Essentials for Technology Leaders (4 Credits)

In this course, students will explore the essential attributes of business research and analysis in the Information and Communications Technology (ICT) field to make appropriate business decisions. Students will individually and in teams explore the economic principles that drive the ICT industry. This course sets the foundation for research, analysis, and critical thinking that will be encountered and required throughout the ICT program. As such, a major component of this course is writing research papers on various ICT topics including economic and technical drivers and challenges, ICT economic principles, and the ICT regulator framework. Additionally, students will participate in collaborative teams as they consider industry trends and customer/user needs during the development process to create a product or service proposal and business case. Lastly, students will have the opportunity to evaluate and utilize management and process tools which will guide class discussions as well as critical thinking and analyses in a structured format. The applicability of these tools extends beyond this course and into the operation and management of an ICT organization.

ICT 4001 Technology Leadership (4 Credits)

This course is designed to give technology students a broader perspective on technology in organizations. The content will focus on bringing students a new set of skills that will enable them to evaluate what it means to be a technology leader. Students will explore how an IT organization establishes a technology vision and strategy and will develop skills such as communicating effectively, building and managing technology teams, managing risk, and technology budgeting. At the end of the ten weeks, students will demonstrate their technology leadership abilities in an executive presentation.

ICT 4005 ICT Technical Essentials (4 Credits)

This course comprehensively reviews the technological foundations of today's ICT industry. The course will provide students with a technical foundation needed for the ICT program. No technology experience is needed prior to taking the course. Topics include knowledge management, big data, artificial intelligence, information security, cloud computing, and other emerging technologies such as Blockchain. The application development process is also briefly reviewed. The course will provide students with an overview of technologies used to translate data into knowledge. The security requirements associated with a variety of information types are introduced, along with the current best practices used in information security.

ICT 4007 Creative Problem Solving and Programming Concepts (4 Credits)

In this course students will develop, or improve upon, their problem-solving skills to analyze problems and create solutions. Students will document their solutions and translate them into running programs written in the enormously popular Python programming language. Students will learn programming concepts including the use of variables, program input and output, flow control, conditionals, interpreter- and code-file-based approaches, and error testing. Students will learn how to set up Integrated Development Environments (IDE) such as Visual Studio Code on their personal computers and/or utilize a Cloud IDE in which they will write programs.

ICT 4010 Enterprise Architecture (4 Credits)

In this course, students will learn how to integrate IT to effectively support business goals. The course examines how enterprise architecture (EA) informs business and technology strategy. The course will explore the basics of EA, such as reference architectures, architecture patterns, and a comparison of EA and other architecture types. Students will also examine the opportunities and limitations of various EA frameworks and will apply the methods and tools of one of those frameworks, TOGAF, to design and document an EA initiative. Additionally, the EA implications of recent ICT trends such as cloud computing, global regulatory compliance, data protection, artificial intelligence, and ICT ecosystems will be explored. Prerequisite: Recommended ICT 4000, ICT 4005.

ICT 4015 Managing Technology for Strategic Value (4 Credits)

Technology's impact on business organizations is tremendous, and will likely only intensify in the future. While some businesses still view technology as an expense to the bottom line, other organizations use technology to gain a competitive advantage. Considering the impact of technology on smaller or startup companies as well as large corporations, this course will explore concepts, tools and frameworks to understand how technology can be used to inform business strategy. Students will apply current methodologies to case studies and projects to gain insight into business and digital transformation. Topics include digital future, business organization framework, technology financial management, data proliferation, technology risk management, disruptive innovations, and performance measurement. Prerequisite: Recommended ICT 4000.

ICT 4020 Business Forecasting and Planning (4 Credits)

This course includes a wide diversity of skills required in one's professional career. Topics include the importance of accurate planning and scheduling for successful projects, risk/opportunity analysis, resource planning and allocation, building budgets, revenue forecasting, profit and loss statements, balance sheet analysis, the importance of managing customer perceptions and expectations, and the impact of economic issues on project success. Students will develop business analyses, including budgets and business plans, for several increasingly difficult scenarios addressing a range of technology applications and services. The final case study will culminate in a presentation to be given to potential investors, banks, or venture capitalists to secure a commitment for funding for a simulated telecom project. Recommended prerequisite: ICT 4000.

ICT 4025 Technology and Innovation Management (4 Credits)

Leaders of innovative firms build commitment to new directions, re-design structures to support new missions, and transform cultures. This course concentrates on the implementation of business strategy through effective structures and systems. Students will apply key aspects of strategic deployment, including organizational structure, product development, business models, and change management. Those aspects of strategic deployment are combined into a business plan. Students will learn how to effectively communicate business plans to decision-makers and stakeholders. Prerequisite: Required ICT 4000.

ICT 4100 Principles of Project Management (4 Credits)

This course will provide students with practical knowledge, tools, and techniques to become an effective project manager and work successfully within a project team. Students will learn real-world application of foundational concepts and develop skills such as stakeholder management, balancing competing constraints, delivery of value, navigating risks and ambiguity, building and running a high-performance project team, defining scope, managing change, and productive communication strategies. Students will practice classroom concepts through hands-on exercises individually and in teams.

ICT 4105 Project Contracts and Procurement (4 Credits)

This course is designed to provide students with leadership and practical skills in project contracts and procurement. The course covers current trends in the procurement marketplace, including digital transformation, supplier relationship management, sustainability, cyber security and agile processes. Students will gain knowledge of the various elements of the contract and procurement process, including procurement plans, requests for proposal (RFP), Statements of Work (SOW), and various types of contracts. Students will learn project management and negotiating skills, and gain hands-on experience developing a procurement plan, supplier selection criteria, an RFP or other appropriate RFX, and contract terms. Recommended prerequisite: ICT 4100.

ICT 4110 Project Risk and Quality Management (4 Credits)

This course introduces students to project risk and quality management and develops advanced skills in applying the project management tools and techniques learned in ICT 4100. A focused examination of scheduling, cost, quality, and risk management processes using advanced tools and techniques is included. Emphasis is placed on the project planning, execution, and monitoring and controlling processes. This course is on the Project Management Institute's (PMI) certification track. Recommended prerequisite: ICT 4100.

ICT 4115 Project Management Dynamics (4 Credits)

This is an advanced course that applies project management knowledge and skills to identify and analyze a complex project dynamics. Case studies will be used to explore the PMI project domains and project management dynamics. Learning is based on reading case material, the PMBOK Standard, completing project management simulations and the practical application of project management tools and techniques. Students receive hands-on simulation experiences in planning and running projects, and working in learning teams to practice project management roles. Students develop a workable project change management system, exercise project integration and communication skills, and demonstrate the ability to keep an overall project on track. They also demonstrate decision-making skills, with emphasis on making trade-offs based on solid business rationale.

ICT 4155 Strategic Alliances in the Technology Sector (4 Credits)

Strategic alliances are one of the key drivers in today's global economy and they have gradually replaced vertical integration as the chief method of corporate expansion. Business-to-Business alliances provide organizations with a variety of benefits including enhancing the capability of organizations and helping to extract maximum value from available resources. While applicable to any industry, strategic alliances are particularly important in the technology sector. This course defines and discusses the roles of various types of strategic alliances in the technology sector, including informal alliances, partnerships, joint ventures, and outsourcing arrangements. Students will use case studies to explore strategies for managing profitability and leveraging these external business relationships. Students will analyze successful and unsuccessful alliances from the perspective of each alliance participant, 3rd party vendors, customers, and a variety of other stakeholders.

ICT 4170 Agile Techniques and Practices in Project Management (4 Credits)

Agile principles and practices are used across many project domains, each with its own unique characteristics and challenges. As the term implies, Agile techniques for the successful use of Agile project management processes are not static; they are dynamic and continuously evolving. The Agile debate is now turning from the tactical to the strategic. Realizing the full benefits of Agile (e.g., faster time to market, improved responsiveness to customers, higher quality, and greater efficiency), means more than improving project execution. It requires understanding the right place for Agile versus traditional methods within a modern enterprise comprised of multiple teams or groups of teams. This course examines both the Agile processes and practices for delivering projects, how to choose when Agile is appropriate versus Predictive methods, and the cultural challenges encountered when transforming into strategic Agile teams. Recommended prerequisite: ICT 4100.

ICT 4200 Cybersecurity Foundations (4 Credits)

This course will provide students with an understanding of cybersecurity and the importance of implementing sound cybersecurity policies, procedures, and systems. The course is for students who are new to cybersecurity (e.g., newly appointed managers with little cybersecurity experience) or those who need a refresher of cybersecurity fundamentals prior to taking additional courses in the concentration.

ICT 4205 Cybersecurity Management (4 Credits)

This course places students in cybersecurity manager roles to expose them to multiple security viewpoints. Students will interact with the full breadth of cybersecurity dimensions, including people, internal and external organizations, systems, and networks. They will learn how organizations strive to control all possible outcomes and occurrences within defined risk contexts as defined by company Directors. Students walk through the management discipline of cybersecurity, starting with the determination of needs and goals and the application of best practices before moving to the continual maintenance and improvement of an organization's cybersecurity stance. The course will provide students with an understanding of management roles and responsibilities including policy and process oversight, adherence to laws and regulations, cybersecurity program management, and understanding the types of reports created and reviewed by cybersecurity managers (such as reports for a Board of Directors). Prerequisite: Recommended ICT 4200 or practical experience in Information Security Principles and Practices.

ICT 4210 Cybersecurity Policy (4 Credits)

This course will help students understand critical events that shaped the U.S. cybersecurity landscape. Students will explore the impact of international cybersecurity policy such as the European General Data Protection Regulation (GDPR) on U.S. businesses. Students will learn how to analyze new cybersecurity policies and regulations to determine their impact on organizations.

ICT 4215 Cybersecurity Risk Management and Incident Response (4 Credits)

This course covers how to manage cybersecurity risk including mitigating risk, responding to incidents, and incident reporting (in particular when governmental and regulatory agencies need to be notified). This course will also address working with a public relations team and the Board of Directors to create press statements regarding cybersecurity incidents or breaches.

ICT 4220 Cybersecurity Leadership and Strategic Planning (4 Credits)

This course covers senior and strategic cybersecurity management roles and responsibilities, including the supervision and management of workers performing cyber-related and cyber operations work. The course also covers developing policies and plans and advocating for policy changes that support organizational cyberspace initiatives or required changes and enhancements.

ICT 4225 Cybersecurity Audits (4 Credits)

Cybersecurity audits play a key role in addressing today's rapidly changing cyber threat landscape. Executives, including members of the Board of Directors may be required to certify that they have taken reasonable steps to protect information assets. Cybersecurity audits are a primary way to verify that information system and process controls effectively address cybersecurity risks. This course will cover cybersecurity audits, providing aspiring audit professionals with the information needed to manage a comprehensive audit of cybersecurity controls. Recommended prerequisite: ICT 4210.

ICT 4300 Web Enabled Information Systems (4 Credits)

This course is an introduction to the development of modern software systems from the desktop to the cloud. The course examines best practices for software development and introduces the three tiers of software development from the web frontend to the database backend using available tools and software. It covers security issues and best practices related to developing web and cloud applications. This course lays the groundwork for a common understanding of full stack development. This should be the first course taken in: Software Design and Programming and Web.

ICT 4305 Object-Oriented Methods and Programming I (4 Credits)

This is the first of two courses that will present Object-Oriented methodologies and programming concepts using the Java programming language. Students will apply Agile tools and techniques, as well as the Unified Modeling Language (UML) within the software development process. The course examines Object-Oriented concepts such as abstraction, encapsulation, generalization, and polymorphism. Students will exercise these concepts with hands-on programming practice and define testing procedures. Additionally, students will use Integrated Development Tools and determine the role of software design frameworks. Students without any Java experience are recommended to take ICT 4361 Java Programming before taking this class. Recommended prerequisite: ICT 4300.

ICT 4310 Distributed Computing (4 Credits)

This course provides a practical, hands-on introduction to distributed applications and the use of cloud technologies. The course develops students' understanding of application scalability, reliability and virtualization through the design, implementation, and deployment of cloud applications and services. Students will evaluate, recommend, and justify distributed technology solutions based on complexity, reliability and cost. Recommended prerequisites: ICT 4300, ICT 4315.

ICT 4315 Object-Oriented Methods and Programming II (4 Credits)

This is the second of two courses that will present object-oriented methodologies and programming concepts using the Java programming language. Students will apply Agile tools and techniques, as well as the Unified Modeling Language (UML) within the software development process. The course builds on the material from ICT-4305 to create code based on models written using the UML while applying industry standard object-oriented design patterns. Students will learn critical skills in designing inheritance hierarchies, working with object persistence and serialization frameworks and multi-threaded code. Additionally, the course will cover critical topics in privacy and security, including recent legislation such as the GDPR. Prerequisite: ICT 4305.

ICT 4351 .NET Programming with C# (4 Credits)

Students will explore the fundamentals of C# and object-oriented programming by using Visual Studio to develop desktop and web applications, test and debug applications, perform object-relational mapping using Entity Framework, and connect with XML and SQL data sources. Students will identify and describe various .NET components, design issues, development solutions, and package managers, while gaining familiarity with the core .NET languages and CLR execution. Recommended prerequisite: ICT 4305.

ICT 4361 Java Programming (4 Credits)

This course introduces students to the fundamentals of procedural and object-oriented programming, using the Java language. It teaches how to write, run, and debug basic programs before moving to a study of discrete, manageable building blocks that can be composed together to form software of any complexity. It will show how to use Java's built-in tools to load, store, and discover information, both in transient memory and persisted files. Students will interpret and modify sample code, with the help of various online learning aids, and gradually build up the confidence needed to write novel programs based on provided specifications.

ICT 4370 Python Programming (4 Credits)

This course starts with an introduction to Python programming covering basic programming concepts and Python syntax. It then continues to deepen students' knowledge of Python by teaching how to access data (text files, databases and other data storage technologies), and process and manipulate that data. Basics of creating front-end interfaces with Python are covered in order to allow students to produce more intuitive interaction with application users. Beyond core Python libraries, other commonly used Python libraries will also be utilized in the course. The course will focus on good programming practices and solving problems effectively. At the successful completion of the class, students will be able to create a number of different types of projects and execute them in Python, as well as continue learning and applying Python skills to data analytics, GIS and other areas of focus. Recommended prerequisite: ICT 4007 (if student has no prior programming experience).

ICT 4375 Blockchain, Cryptocurrency, and Web3 Foundations (4 Credits)

Novel protocols, tools, and techniques are restructuring the web itself into a more distributed, trusted, and self-managing network than ever before. Welcome to Web3. This course will help students master foundational blockchain concepts and explore Web3 enabling technologies. Students will gain the ability to confidently use decentralized technologies like blockchains, cryptocurrencies, peer-to-peer apps, and more. Furthermore, students will understand how these technologies are being applied in industries around the world and why. Students will gain the ability to critically assess when Web3 technology is advantageous over other solutions both from a technical and economical perspective.

ICT 4390 iOS Application Development (4 Credits)

This course is designed to help students build a solid foundation in programming fundamentals utilizing the Swift programming language. Students will gain practical experience with the tools, techniques, and concepts required to build an iOS app both on their own and as a part of a team. Students will also learn the fundamental user interface design principles that are necessary for creating a meaningful user experience. Prior programming experience is not required for this course, but students must have a Mac/Apple computer.

ICT 4395 Android Application Development (4 Credits)

In the Information and Communications Technology Capstone Seminar, students will apply their cumulative knowledge and skills to create a culminating work that critically addresses a problem in their degree field of study. Students make iterative progress on a capstone project throughout the course that presents a position on a relevant problem, supports the position with academic and professional literature, analyzes the proposed solution, and synthesizes scholarly findings. Primary research will not be conducted. The seminar is structured around collegial discussion and continuous feedback from peers and the instructor. At the end of the course, students will present their capstone project with professional and academic audiences in mind. Prerequisite: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. A final grade of B- or better is required in this course to meet degree requirements. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

ICT 4400 Database Administration (4 Credits)

This course introduces the roles and responsibilities, as well as the critical knowledge and skills, needed to function as a database administrator. The course focuses on Oracle and Microsoft SQL Server RDBMSs and the Oracle NoSQL databases. Database administration covers a range of topics which are covered in this course; installation, configuration, performance tuning, maintenance, and database security. Special focus will be paid to the architecture of the RDBMS and NoSQL systems, using it as the basis of much of the work throughout the course. There will be weekly hands-on lab work that afford students opportunities to gain valuable practical experience in managing databases. This course will function as an introduction to other courses in the Database Design and Administration concentration, which will give students the occasion to study these topics in greater depth. The course will conclude with an examination of the future of the database field, discussing quantum computing, cloud computing and block-chain technology.

ICT 4405 Database Design and Implementation (4 Credits)

In this course, students will focus on database design from a holistic view of a database from inception to implementation. Students will start by exploring the history and evolution of database systems and models and then proceed to hands-on application of database design theory. The course concentrates on the relational database model and the conceptual, logical, and physical phases of database design and development. Entity-relationship modeling, data normalization, and Structured Query Language application are core components of the class. Students will gain hands-on experience with database design concepts and have the opportunity to build a relational database using the foundational principles of database design within the framework of the database life cycle (DBLC).

ICT 4410 Data Warehousing Design (4 Credits)

Data warehouses are one of the most valuable assets an organization can possess to remain competitive in a quickly evolving global marketplace. This course provides students an introduction to the role of data warehouses in effective decision-making based on data for strategic and operational objectives and supporting decision support systems. This course will provide students foundational knowledge and skills around data warehouse design and broad coverage of data warehouse concepts, architecture, data modeling, security, implementation and trends underlying current and future development. Prerequisite: Recommended ICT 4400.

ICT 4415 Database Backup and Recovery with Lab (4 Credits)

This course explores database backup and recovery strategies and tactics using both Oracle and SQL Server database systems. The course will include weekly lab work that will give students an opportunity to gain experience with Oracle and SQL Server databases. Topics include preparing backup, recovery and disaster plans, as well as performing complete and incomplete database recoveries using the Oracle Export/Import utility. Students also work with a SQL Server database, utilizing the SQL Server Management Studio. Students will be assigned a Linux Virtual environment that will be used for all Oracle administration, and they will install a SQL Server database locally that will be used for all SQL Server administration. Prerequisite: ICT 4400.

ICT 4430 Database Security (4 Credits)

As the world has become increasingly data-driven, IT professionals have been forced to dramatically rethink how to protect their most valuable corporate asset, data. This course strives to provide a perspective that intersects several technology disciplines: database administration, web-based application development, and technology management. Taking a defense-in-layers view, Database Security will provide students with an opportunity to gain an understanding of how data is protected from several perspectives. A wide range of database security concepts will be explored, including those specific to the Oracle, MySQL, and Microsoft SQL Server RDBMSs. Students will gain an understanding of the different types of threats and vulnerabilities present in a data-centric world and will develop strategies to protect an enterprise's data footprint.

ICT 4451 Database Programming: Oracle PL/SQL (4 Credits)

This course builds on skills learned in ICT 4405 Database Design and Programming. Students will transform a database schema design into a database application using Oracle's PL/SQL programming language. Topics include advanced SQL DDL, DML, and scripting, PL/SQL constructs, stored procedures, modular design and development (packages), software development processes, views, sequences, cursors, dynamic SQL, and error handling. Using weekly assignments, students will practice different aspects of design and development of database applications. Prerequisite: ICT 4405 or SQL experience.

ICT 4462 SQL Server and T-SQL Lab (4 Credits)

This course provides a comprehensive introduction to Microsoft SQL Server, utilizing the SQL Management Studio for administrative and development tasks. This course offers a solid foundation of the Transact-SQL (T-SQL) constructs that will enable students to build, query, maintain, and finetune SQL Server databases. The course focuses on basic to advanced queries including joins, functions, data types, stored procedures, declaration and execution, cursors, temp tables, triggers, error handling, transaction management, and security. This course also offers an introduction to common administrative and maintenance tasks, SQL Integration Services, SQL Analysis Services, and SQL Reporting Services are covered. Working in Microsoft SQL Server, students experience hands-on learning in weekly labs to prepare them for real-world situations. Prerequisite: Recommended ICT 4400.

ICT 4485 NoSQL Databases for Big Data (4 Credits)

Structured Query Language (SQL) based database management systems (DBMS), commonly referred to as relational databases, have been dominant in the market for over forty years and remain so today. However, the emergence of real-time streaming data from technologies such as the Internet of Things (IoT) and relationship-based dynamic datasets from e-commerce and social networks gave rise to big data. Big data is characterized by volume (petabytes), velocity (data rate), and variety (structured and unstructured). Relational databases are not suitable for big data. The requirements of big data have created the need for alternate databases. NoSQL databases were developed to address the requirements of big data. The requirements of big data cannot be satisfied by a single NoSQL database model because real-time streaming data is structured very differently from relationship-based dynamic data. Many large, well-known companies use different types of NoSQL databases to solve problems in their domain. In this course we will examine four NoSQL database models: key-value, document, column, and graph. Students will learn about advantages and disadvantages of each type of NoSQL database model. The course will include hands-on experience with a relational database and each type of NoSQL database. Students will also learn to analyze the structure of data and select the appropriate NoSQL database model to store and manipulate big data.

ICT 4505 Website Design and Management (4 Credits)

This course extends your web design and development skills and includes advanced HTML techniques and enhanced page design capabilities using CSS. The key to great web design is rooted in a solid foundation, which requires a plan or a "blueprint." We will explore best practices in information architecture (IA) and how to incorporate user-centered design (UCD) techniques as a standard practice in web design. Students will also develop an understanding and working knowledge of Cascading Style Sheets. Through the use of readings, examples, hands-on projects, and discussions, the class will build an understanding of the foundations and applications of user-centered design to plan, build, and manage a website. Through participation in a project and regular discussions, class members will experience working as active and contributing members of the class and knowledge-building community. Recommended prerequisite: ICT 4300.

ICT 4510 Advanced Website Design and Management (4 Credits)

Web development has become an integral part of the tech industry and has created a multitude of career options for job seekers. This course will enhance the knowledge gained in ICT-4505 by delving into HTML5 JavaScript APIs and Responsive design using a common CSS framework. Students will be introduced to beginner, intermediate and advanced JavaScript concepts. Finally, the foundational web languages HTML5, CSS and JavaScript will be used to build a fully functional client-side application. Prerequisite: ICT 4505.

ICT 4515 Usability Design for Websites (4 Credits)

This course expands on the basic knowledge of website design and development by providing an in-depth understanding of how to design a website with the user in mind. Students will gain knowledge about how the fields of human factors engineering and psychology (e.g., visual perception, attention, cognition, learning and memory, information processing) relate to the basis of usability design as well as how usability assessments are conducted. Usability guidelines for common functions such as web navigation, search, menus, scrolling, links, text, page layout, visual organization, etc. will be explored. Students will have the opportunity to develop a website that demonstrates appropriate use of important usability guidelines and conduct usability assessments with real users. Prerequisite: ICT 4505.

ICT 4540 Data in Web Application Development (4 Credits)

XML is an open, text-based markup language (Extensible Markup Language) that provides structural and semantic information to data. XML was designed to store and send data, and it can also be used by software and web-based applications for display. This course explores several common industry-leading approaches, models, and techniques for XML in business applications. Hands-on experience with the XML formats and manipulation, which includes syntax, structure, context, and programmatic uses of XML, form the weekly assignments, culminating in a summary project. Other related standards, such as JSON, are discussed, as well as use of CSS for display of XML data. Some JavaScript is introduced to illustrate the document object model and techniques for integration of data. Prerequisites: Students should have familiarity with constructing HTML web pages and data concepts. Familiarity with data manipulation, APIs, or a programming language will be helpful but not required.

ICT 4560 Web Graphics Production (4 Credits)

This course introduces the fundamental concepts and techniques of digital graphics creation and image processing for both online publication and website interface design using industry-leading tools as well as topics around use policy and considerations of image manipulation in the digital age. Students learn the basics of manipulating, correcting and modifying images, bitmap painting tools, vector drawing tools, typography, masking, web production techniques, and advanced image compositing in hands-on exercises and assignments. Basic integration of images and generated code into a website layout employing CSS is also covered. Experience with tools like Adobe Photoshop is useful but not required.

ICT 4570 Web Scripting with JavaScript (4 Credits)

This course presents students with the principles necessary to design and develop client-side and server-side scripts used to build dynamic websites and applications. JavaScript concepts such as data types, control structures, functions and objects are discussed. Students learn how to write beginner and intermediate scripts. Students will be introduced to frameworks and libraries such as Node.js and Arrow Functions that are used to create interactive and dynamic client-side and server-side applications. Real world examples will be included. Technologies covered in the course include JavaScript/ECMAScript, JSON (a JavaScript-friendly data format), XML (Extensible Markup Language) JavaScript as the J in AJAX, and JavaScript in HTML5 form interaction and validation. Prerequisite: Recommended ICT 4505, ICT 4510.

ICT 4580 Cross-Platform Mobile Application Development (4 Credits)

The mobile device market has grown tremendously over the past few years. Self-contained apps that are focused on one concept account for a large percentage of this growth. This course teaches the basic concepts of developing a mobile application using a framework so that the application runs on different devices. Students will synthesize the basic knowledge of the framework to create building blocks of various tools. They will follow best practices in the development lifecycle of building a mobile application. Students will compare and contrast various frameworks for mobile application projects. They will construct their mobile application that could be deployed across many platforms that use native device APIs and hardware. Prior programming experience recommended.

ICT 4605 Principles of Information Security (4 Credits)

This is a comprehensive Information Systems Security management course covering the eight basic principles of Information Assurance and Information Systems Security. The course follows the Common Body of Knowledge (CBK) convention established by the International Information System Security Certification Consortium, Inc. (ISC)². This course serves as an introduction to the eight domains of information systems security with the emphasis on management issues. It provides the foundation of information systems security and the methodologies that organizations apply to analyze and achieve their security goals. Students learn about significant computer security laws and regulations, system security engineering, the development of effective security policies, system access controls, network security, encryption and security models. The course also covers specific security measures to include, but not limited to, physical security controls, network security, cloud security, telecommunications, and cryptography. Information covered includes contemporary issues of cybercrime, and business continuity and disaster recovery planning. The course applies a systems approach to security issues to analyze and develop security solutions. All topics are discussed in the context of a total enterprise-wide framework.

ICT 4610 TCP/IP Networks (4 Credits)

This course explores the design, architecture, capabilities, and security of the TCP/IP protocol stack by looking at its history, development, and current applications. The course also explores how TCP/IP has supported the growth of the Internet, Internet of Things (IoT), and next-generation wireless networks and services. The TCP/IP model, standards, and key architectural principles that support data flow are examined through familiarization with the full TCP/IP v4 and v6 protocol suites. Students explore TCP/IP capabilities, addressing/subnetting, performance, and cybersecurity issues. The course also covers security-specific protocols to support secure network communications, user identity protection, and the security aspects of all other protocols. Students will examine secure VPN services and mechanisms for personal and business Internet connectivity. The course concludes with a survey of modern topics including Real-Time Communications and IPv6.

ICT 4615 Identity and Access Management (4 Credits)

Identity is the new security perimeter. Access can be determined based on a persona, a role, or a user type. Identity and Access Management (IAM), then, is the foundation for access to any secured computer resource and must be handled and managed carefully and deliberately. This course will provide students with the skills they will need to succeed at designing and implementing access control mechanisms on networked systems. The course covers the principles and mechanisms that compose an overall IAM system and is based on modern technology that supports Zero Trust, Federated Identity, Role-based Access Controls (RBAC), and Attribute-based Access Controls (ABAC).

ICT 4670 Disaster Recovery and Business Continuity Planning (4 Credits)

This course is an introduction to Disaster Recovery and Business Continuity (DR/BC) Planning. The course examines the steps required to identify mission-critical continuity needs of an organization, analyzes the legal & regulatory requirements for data security, and evaluates the various risks management approaches to identify and quantify business risk associated with business continuity. The course provides students the opportunity to create a Disaster Recover/Business Continuity (DR/BC) plan that incorporates business resumption planning, emergency response & communication, and data/system recovery techniques.

ICT 4680 Principles of Cryptography (4 Credits)

E-commerce has made cryptography a cornerstone of modern information systems security. Cryptology is a core component of all recognized information security certifications; however, it may be the least understood of the information security disciplines. This course focuses on the terminology and concepts needed to understand how cryptographic techniques are used to protect sensitive information. Topics include different types of ciphers (substitution, transposition, block and stream), Digital Signatures and Message Authentication Codes, public key infrastructure (PKI), secure sockets layer (SSL), and network protocols for encryption, among others. Lecture and reading materials are reinforced by hands-on experimentation in a virtual lab environment focused on real-world uses of cryptography. Internet resources are used to tie the course material to current technology trends. No programming experience or advanced mathematical skills are required for this course. Recommended prerequisite: ICT 4605.

ICT 4685 Cloud and Internet Law (4 Credits)

This course explores the legal and technical ramifications and implications created by cloud computing and Internet Law. This course also examines the types of issues and concerns that exist in the US and the world by the dynamic change in software, computer networking, and cloud infrastructure. This rapid change in computer networking, data, information, Internet, and cloud architecture directly impacts governments, companies, and individuals. Issues include how to handle data, information, security, privacy, civil and criminal laws, rules and regulations, contractual agreements, and service-level agreements between parties on many levels from service providers in different states, countries, and parts of the world. It is important that all of these issues are balanced by differing cultural standards and mores from all 50 States, all over our country and all around the world, including the legal (and sometimes not so legal) methods of protecting governments and companies in this ever-changing, "always-connected" world.

ICT 4690 Computer Forensics with Lab (4 Credits)

This course will introduce students to current methods and techniques in computer forensics with a focus on the appropriate procedures for evidence collection and processing. As electronic information increases in its importance and use in the court of law, future investigators need to be able to collect and analyze forensics data from computer systems in support of incident investigations, including e-Discovery, forensic analysis and reporting, evidence acquisition, Internet browser forensics and tracing user and application activities on computing systems. The course is supplemented by hands-on exercises, case studies, and a final culminating assignment. Prerequisites: Required ICT 4605 (unless prior ISS experience), Recommended ICT 4610.

ICT 4695 Application Security (4 Credits)

In this course, students explore the security concepts, principles, and practices that are used to secure software applications throughout the modern software development lifecycle (SDLC). Topics include enhancing the agile/scrum development processes with secure design models and application risk analysis, application lifecycle management, defensive programming, secure DevOps, and AppSec issues with new technology and new consumer devices. Recommended prerequisite: ICT 4605.

ICT 4701 Topics in Information and Communication Technology (4 Credits)

This is an advanced special topics seminar course that may be offered to address a developing concept, an industry trend, or a new technology. The focus is on specialized areas of interest. Topics courses may be used as electives within the Information and Communications Technology degree and certificate programs, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate program.

ICT 4800 Network Communications and the Internet (4 Credits)

This course focuses on the fundamental concepts and technologies of communications networks and the Internet, including Network Communications theory through the TCP/IP stack, which is the foundation of modern communication systems. The course also emphasizes application of these concepts to the analysis and design of network solutions for various Enterprise and Service Providers requirements. Topics include in-depth analysis of the layered structure of networking protocols, network media, communications standards, LAN and WAN network architectures, in-depth IP routing, and current trends in networking via the Internet. Students will analyze the purpose of network routing protocols, their respective algorithms, and IP addressing. Students will apply critical thinking via discussions of current and future trends in network technology, expanding to IP Services, Network Virtualization, and their role in networking evolution. Prerequisite: Recommended ICT 4005.

ICT 4820 Advanced Network Technologies (4 Credits)

Technological advancements in networking within the last few years are revolutionizing networking concepts for both enterprises and service providers. This course demystifies those latest advancements in network technologies. Topics include in-depth coverage of modern networking elements, network requirements, and network virtualization technologies, including Software Defined Networks (SDN) and Network Function Virtualization (NFV). The course will also explore the latest network technologies' requirements, such as elastic traffic, mobility, ultra-low latency, on-demand bandwidth, and more. Further, students will discuss the motivations behind network softwarization, SDN and NFV components, architecture, protocols, and use cases. The course emphasizes deep understanding, analyses, and evaluation of modern network architectures. Prerequisite: Required ICT 4800.

ICT 4830 Broadband Wireless Networks (4 Credits)

This course examines how Broadband radio technologies are changing to meet the growing demands for autonomous vehicles, smart cities/smart homes using smart IoT devices, cellular communications that deliver consumer entertainment/relevant and specific information content, support remote workers, and online learning. Wireless telecommunications networks are studied with an emphasis on the challenges and the approaches to meet the demands of continually increasing data traffic from devices such as mobile smartphones, tablets, hotspots, smart IoT devices, new emerging technologies like cellular-vehicle-to-everything (C-V2x), as well as broadband services like VOIP and mobile video. Current and dominant wireless telecom technologies and protocols are presented, including 3G, 4G LTE, OFDM, MIMO, Mobile IP, WIMAX, and Wi-Fi. The new 5G NR technology standards and services (eMBB, URLLC, mMTC) will be presented. The wireless telecom industry is studied from standards, carrier, and technology perspectives, with an emphasis on radio networks designed to support key use cases. Prerequisite: Recommended ICT 4835.

ICT 4840 Next Generation Wireless Networks and Services (4 Credits)

The rapid innovation in wireless networks that is at the center of today's ICT industry takes place in the four areas of broadband radio, core and edge networks, wireless services, as well as smart objects. This course focuses on the key next generation technologies at the core network, service, and object layers. First, the role of the Internet Protocol Multimedia Subsystem (IMS) in the core network is examined, which is at the heart of many service provider deployments. At the service layer, this course emphasizes wireless service architecture, including popular applications such as mobile real-time messaging, video, and mobile web services. The production of networks and services through cloud technologies is highlighted. The course also explores The Internet of Things (IoT), which plays a prominent role in modern wireless networks. A case study approach is taken to highlight core use cases from key industries including Smart Cities, the Smart Grid, and Industry 4.0. Finally, wireless product development and operations are examined in the critical context of the conflict between over-the-top (OTT) and network operator ecosystems. Prerequisite: Required ICT 4800.

ICT 4845 Information Systems Security with Lab (4 Credits)

In this course, students are introduced to security concepts that align with the Certified Information Systems Security Professional (CISSP) Common Body of Knowledge (CBK). They are instructed to be critical thinkers in their navigation through the network security landscape. Students focus on real-world examples of both perimeter network security and desktop security, which can be used in any environment, simple or complex. Students have the opportunity to work with a range of network security toolboxes in a hands-on software lab environment. Recommended prerequisites: ICT 4800, ICT 4605.

ICT 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and who can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

ICT 4902 Capstone Seminar (4 Credits)

In the Information and Communications Technology Capstone Seminar, students will apply their cumulative knowledge and skills to create a culminating work that critically addresses a problem in their degree field of study. Students make iterative progress on a capstone project throughout the course that presents a position on a relevant problem, supports the position with academic and professional literature, analyzes the proposed solution, and synthesizes scholarly findings. Primary research will not be conducted. The seminar is structured around collegial discussion and continuous feedback from peers and the instructor. At the end of the course, students will present their capstone project with professional and academic audiences in mind. Prerequisite: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

ICT 4980 Internship (0-4 Credits)

The ICT internship is designed to offer students a practical educational experience in an industry related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the ICT master's degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all ICT students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the ICT degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.

ICT 4985 Industry Innovation Project (1-4 Credits)

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

ICT 4991 Independent Study (1-4 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

Instructional Design and Technology

Office: University College Student Support Center

Mail Code: 2211 S. Josephine St., Denver, CO 80208

Phone: 303-871-2291, 800-347-2042

Email: ucolssupport@du.edu

Web Site: www.universitycollege.du.edu (<http://www.universitycollege.du.edu/>)

From curriculum development to technology integration, planning and analysis to implementation and evaluation, the instructional design strategies and skills learned in this program will fully equip you to meet the diverse needs of adult learners. You'll build critical competencies in instructional design while cultivating an inclusive mindset and design approach. This graduate program is ideal for aspiring or current instructional design professionals working in higher education, corporations, and government or non-profit organizations who want to advance careers and foster best practices centered on equity.

This program prepares students to:

- Apply contemporary adult learning theories, models, and principles to learning situations using effective instructional design strategies.
- Create inclusive learning experiences by applying research-based practices in creating assessments, content, and learning activities to align with diverse learner needs and instructional goals.
- Plan for the use of technology-supported learning design by evaluating the course outcomes and modalities, technology availability, support systems, and instructor expertise.
- Evaluate the implementation of instructional designs to assess effectiveness and determine potential interventions.
- Apply skills in theory, research, data collection, and critical thinking to employ effective instructional design practices.

MASTER OF ARTS IN INSTRUCTIONAL DESIGN AND TECHNOLOGY WITH A CONCENTRATION IN ADULT LEARNING AND INCLUSIVE DESIGN

Forge innovative paths to best engage adult learners through inclusive design in the digital age with this master's degree concentration offered entirely online. As you develop critical competencies within instructional design, you'll also cultivate an inclusive mindset and best practices related to instructional strategies, assessment, and interventions. Whether leading instructional design within higher education, government, or corporations, you'll gain hands-on practice in andragogy, learner-centered design, and research to ensure the diverse needs of adult learners of all types are met.

This degree prepares students to do the following:

- Analyze the impact of adult learning theories on instructional strategies.
- Determine measurable learning outcomes based on identified learning needs.
- Develop inclusive learning materials, activities, and assessments with available resources and considering the diverse needs of learners.
- Create technology modules to meet organizational goals and user needs.
- Develop strategies for examining assessment data and other measures of the student learning experience to refine design practices.

GRADUATE CERTIFICATE IN INSTRUCTIONAL DESIGN AND TECHNOLOGY WITH A CONCENTRATION IN ADULT LEARNING AND INCLUSIVE DESIGN

Uncover innovative paths to effectively engage adult learners with a graduate certificate in Adult Learning and Inclusive Design offered entirely online. In this certificate program, you'll gain hands-on experience in instructional design, from creating engaging multi-media content to providing evaluations. With a curriculum centered on equity, the program helps you develop an inclusive mindset to best serve diverse adult learners. Gain insight into adult learning theories, instructional strategies, and inclusive assessment through learner-centered design.

SPECIALIZED GRADUATE CERTIFICATE IN ADULT LEARNING AND INCLUSIVE DESIGN

Master's Degree Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

IDT 4000 Strategic Planning for Accessible Learning Design (4 Credits)

This course will help students develop expertise in accessibility principles, institutional processes, and legal considerations. The course explores federal accessibility regulations, common practices for implementing accessibility, and solutions to common challenges of accessibility implementation.

IDT 4001 Portfolio Foundations (0 Credits)

Master's and certificate-seeking students in Instructional Design and Technology program must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

IDT 4010 Curricular Development and Program Assessment for Adult Learning (4 Credits)

This course will provide students with the skills to develop and maintain program-level or department-wide training curricula for adult learning environments. By taking a holistic continuous-improvement perspective, this course will explore how learner needs assessments lead to the development of measurable learning outcomes, teaching practices, and then to a curricular plan. The course will examine inclusive practices that assist departments in creating equitable, authentic assessments.

IDT 4100 E-Learning: Course Design, Models, and Practice (4 Credits)

This course introduces instructional design theories, models, processes, and strategies for adult e-learning. We focus on instructional design principles that inform the methodology, skills, and techniques necessary for designing e-learning experiences for adult learners. Students will practice designing and selecting e-learning materials and analyzing the types of activities that best serve online learners.

IDT 4120 E-Learning: Multimedia Application (4 Credits)

This course will take a deep dive into the development of key media assets such as video, interactives, and other course design elements incorporating inclusive best practices. The course will explore both the technical aspects of creating media for learning purposes, as well as the pedagogical and UX considerations in media design. Prerequisite: IDT 4100.

IDT 4130 Equity, Justice, and Inclusivity with Learning Design (4 Credits)

This theory-to-practice course will explore a theoretical and a practical understanding of justice, equity, and inclusivity (JEI) in learning design. Students will be encouraged to connect their experiences to the foundational concepts in this course and develop an understanding of the impact of equity, inclusion, and justice in course design. Students will leave this course with practical tools for advocating for justice, equity, and inclusion in educational contexts.

IDT 4140 Universal Design for Learning (4 Credits)

IDT 4150 Project Management and Stakeholder Communication (4 Credits)

Whether in a corporate, higher ed, or government setting, instructional design projects require meticulous management from start to finish. This course will cover strategies and tools to equip instructional designers with the skills necessary to assess project needs, plan design iterations, and meet stakeholder expectations all while meeting project timelines.

IDT 4203 Adult Learning Strategies and Theories (4 Credits)

Individuals involved in adult learning design and development benefit from a strong foundation in adult learning theories and strategies to develop effective practices. Adult learners bring unique needs, life experiences, and prior knowledge to learning situations and thrive when inclusive, motivational, and relevant application of knowledge, concepts and skills are utilized. In this course, foundational and emerging theories regarding how adults learn best, along with analysis of key instructional strategies, provide solid grounding for implementing best practice in adult learning.

IDT 4701 Topics in Instructional Design and Technology (4 Credits)**IDT 4901 Capstone Project (4 Credits)**

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

IDT 4910 Research Practices and Applications (4 Credits)

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

IDT 4920 Portfolio Capstone (4 Credits)

The Portfolio Capstone course provides students the opportunity to reflect upon the work they have done throughout their graduate studies at University College and synthesize their learning. Students in the course produce deliverables that include: (1) a thorough annotation of their portfolio, a process requiring critical and creative thinking about their educational experience, and (2) a pinnacle project that identifies, analyzes, and elaborates significant themes in their program experience, evaluates their accomplishments, connects their coursework to their professional goals, and assesses those goals in the context of their chosen field.

IDT 4980 Internship (0-4 Credits)

Instructional Design and Technology Internship is designed to offer students a purposeful experience in a practical, industry-related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notifications to all IDT students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.

IDT 4991 Independent Study (1-4 Credits)

This is an advanced course for students wishing to pursue an independent course of study. Before registering for the independent study, the student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices. Independent Study is offered only on a for-credit basis.

Nonprofit Leadership

The Nonprofit Leadership program prepares graduates to think critically, act ethically, and inclusively lead the changes needed to solve the pressing issues in society and nonprofit/nongovernmental organizations. Courses engage students in legal, financial, ethical, equitable and scalable considerations of program and organizational leadership and management. Coursework spans the four concentrations of: Executive Leadership and Governance; Philanthropy and Resource Development; Social Enterprise, Innovation and Entrepreneurship; and Mission-Driven Operations and Management. Core courses engage students in healthy nonprofit indicators, sector history, graduate research and writing, and leadership development. Faculty are experienced in development and fundraising, social innovation, governance, program management, and evaluation. They are leadership experts who examine sector trends, historical context, and current nonprofit theory and practices with practical and real world experience. Students will develop practical knowledge to better serve the public good and develop critical thinking and innovation skills needed to craft fundraising strategy, impactful program operations, and social enterprises that address societal problems through healthy organizations. Graduates will increase their community and world impact with practical tools to implement needed changes.

The Nonprofit Leadership Program prepares students to:

- Evaluate knowledge, skills, and attributes developed that impact nonprofit organizational health, governance, performance, and/or community engagement.
- Demonstrate critical thinking that integrates leadership, history, financial knowledge, fundraising strategy, program design, organizational governance, and strategy to heighten their organization's impact.
- Apply analytic methods to examining problems and designing solutions to nonprofit organization or societal issues.
- Develop inclusive leadership knowledge and skills that prepare them to effectively lead and guide change across the world.

Master of Science in Nonprofit Leadership with a concentration in philanthropy and resource development

Changes in philanthropy, resource development, and fundraising are shaping the giving environment that influences how nonprofit/nongovernmental organizations plan their funding strategies. From crowdsourcing campaigns to capital fundraising and legacy giving, nonprofits must lean into

strategies that retain donors from diverse contexts, devise new fundraising and technological approaches, and demonstrate impact. Philanthropy and Resource Development students will build the knowledge and skills to navigate these changing trends to increase their impact and achieve their nonprofit's mission through diverse fundraising approaches. Students will apply their passion and pragmatism as they learn about the scale and planning needed to develop the financial resources to carry out their nonprofit's mission and vision.

This degree prepares students to:

- Assess different development approaches to determine the scale and mission appropriateness for nonprofit/nongovernmental organizations of different sizes
- Synthesize knowledge about different fundraising approaches and technologies
- Apply diverse development strategies to conduct and prepare nonprofit/nongovernmental development plans
- Demonstrate financial literacy needed to develop successful nonprofit organizations that employ structured fundraising tools and techniques.
- Demonstrate cultural competence and understanding of how fundraising strategies may work across diverse global contexts

Master of Science in Nonprofit Leadership with a Concentration in Social Enterprise, Innovation and Entrepreneurship

Are you a social entrepreneur or aspiring to become one? Will a social innovation move the needle on a social problem or challenge about which you are passionate? Is your organization considering a social enterprise? A focus on social enterprise, innovation, and entrepreneurship will sharpen the social value proposition and mission-driven strategy to address key social problems in your community or the world. Courses in this concentration will develop your understanding, knowledge and skills in taking an idea and launching it as a social enterprise. Students will develop the language and

financial insights into funding, prototyping, scaling, marketing, and measuring impact of social enterprises and innovations. Students gain practical experience with a nonprofit or for-profit organization to apply theory, strategy, and metrics that solve real problems and drive mission impact.

This degree prepares students to:

- Examine successful social enterprise ventures to determine the strengths and challenges in developing a successful and impactful social enterprise.
- Cultivate innovation, design thinking and other processes to examine a social enterprise idea's social value and market possibilities
- Apply social innovation frameworks and tools to test a social enterprise's business and financial structure

Master of Science in Nonprofit Leadership with a Concentration in Executive Leadership and Governance

Leading a nonprofit/nongovernmental organization of any size requires examining individual and organizational practices and behaviors. Nonprofit staff need to develop a broad spectrum of leadership, change management, and diversity, equity, and inclusion tools increases a leader's successful navigation of organizational change and challenges. Leaders must also navigate organizational culture to ensure high performance, stability and an impactful mission. Students will build their knowledge of board and senior team leadership, value-centered leadership, strategic direction and planning, program evaluation, and organization culture development.

This degree prepares students to:

- Assess leadership strengths, skills, and behaviors to craft leadership development plans
- Evaluate effective leadership behaviors, skills and characteristics that positively impact nonprofit organizational health, governance, performance, and community impact
- Demonstrate critical thinking skills to evaluate different leadership views and arguments that influence decision making
- Evaluate organizational capacity, operations, governance and program implementation to determine organizational health and opportunities for change
- Demonstrate financial and organizational-planning knowledge and skills that ensure an organization's impact and health

Master of Science in Nonprofit Leadership with a Concentration in Mission-Driven Operations and Management

Program operations and organizational management work together to accomplish a nonprofit organization's mission, vision, and impact. Organizations need effective structures to manage programs that include staffing, performance evaluation, impact measurement, and human and financial resources to ensure success. Examining an organization's financial and operational goals allows students to assess operational needs and to consider partnerships and community-based strategies that further the organization's impact. Students examine strategic and operational planning and program evaluation strategies from a diversity, equity and inclusion lens that demonstrate community impact and mission accomplishment. Students also study managing staff and volunteer operations that accomplish a nonprofit's mission.

This degree prepares students to:

- Demonstrate planning practices for effectively resourced nonprofit/nongovernmental program development through a diversity, equity and inclusion lens
- Evaluate existing nonprofit programs' design using critical thinking to determine resource allocation and impact measurement
- Demonstrate evaluation and planning skills that ensure mission accomplishment and operational alignment
- Examine diverse organizational funding structures including grants and other funding structures to determine how best to resource program operations

Certificate in Nonprofit Leadership with a Concentration in Philanthropy and Resource Development

The graduate certificate in Philanthropy and Resource Development is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials. Changes in philanthropy, resource development, and fundraising tools are shaping the giving environment that influences how nonprofit/nongovernmental organizations plan their funding strategies. From technological fundraising tools to capital fundraising and legacy giving, nonprofits must cultivate and retain donors from diverse contexts, devise new fundraising strategies, and demonstrate impact. Philanthropy and Resource Development students will build their knowledge and skills to navigate these changing trends to increase their impact and achieve their nonprofit's mission through diverse fundraising approaches. Students will apply their passion and pragmatism as they learn about the scale and planning needed to develop the financial resources to carry out their nonprofit's mission and vision.

Certificate in Nonprofit Leadership with a Concentration in Social Enterprise, Innovation and Entrepreneurship

The graduate certificate in Social Enterprise, Innovation and Entrepreneurship is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials. Are you a social entrepreneur or aspiring to become one? Will a social innovation move the needle on a social problem or challenge about which you are passionate? Is your organization considering a social enterprise? A focus on social enterprise, innovation and entrepreneurship will sharpen the social value proposition and mission-driven strategy to address key social problems in your community or the world. Courses in this concentration will develop your understanding, knowledge and skills in taking an idea and launching it as a social enterprise. Students will develop the language and financial insights into funding, prototyping, scaling, marketing and measuring impact of social enterprises and innovations. Students gain practical experience with a nonprofit or for-profit organization to apply theory, strategy and metrics that solve real problems and drive mission impact.

Certificate in Non-Profit Leadership with a Concentration in Executive Leadership and Governance

The graduate certificate in Executive Leadership and Governance is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials. Leading a nonprofit/nongovernmental organization of any size requires examining individual and organizational practices and behaviors. Developing a broad spectrum of leadership, change management, and diversity, equity and inclusion tools increases a leader's successful navigation of organizational change and challenges. Leaders must also navigate organizational culture to ensure high performance, stability and an impactful mission. Students build their knowledge of board and senior team leadership, value centered leadership, strategic direction and planning, program evaluation, and organization culture development.

CERTIFICATE IN NONPROFIT LEADERSHIP WITH A CONCENTRATION IN MISSION-DRIVEN OPERATIONS AND MANAGEMENT

The graduate certificate in Mission-Driven Operations and Management is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials. Program operations and organizational management work together to accomplish a nonprofit organization's mission, vision, and impact. Organizations need effective structures to manage programs that include staffing, performance evaluation, impact measurement, and human and financial resources to ensure success. Examining an organization's financial and operational goals allows students to assess operational needs and to consider partnerships and community-based strategies that further the organization's impact. Students examine program evaluation strategies from a diversity, equity and inclusion lens that demonstrate community impact and mission accomplishment. Students also study managing staff and volunteer operations that accomplish a nonprofit's mission.

SPECIALIZED GRADUATE CERTIFICATE IN PHILANTHROPY AND RESOURCE DEVELOPMENT

The specialized graduate certificate in Philanthropy and Resource Development is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials. Changes in philanthropy, resource development, and fundraising are shaping the giving environment that influences how nonprofit/nongovernmental organizations plan their funding strategies. From technological fundraising tools to capital fundraising and legacy giving, nonprofits must cultivate and retain donors from diverse contexts, devise new fundraising strategies, and demonstrate impact.

Philanthropy and Resource Development students will build their knowledge and skills to navigate these changing trends to increase their impact and achieve their nonprofit's mission through diverse fundraising approaches. Students will apply their passion and pragmatism as they learn about the scale and planning needed to develop the financial resources to carry out their nonprofit's mission and vision.

SPECIALIZED GRADUATE CERTIFICATE IN EXECUTIVE LEADERSHIP AND GOVERNANCE

The specialized graduate certificate in Executive Leadership and Governance is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials. Leading a nonprofit/nongovernmental organization of any size requires examining individual and organizational practices and behaviors. Developing a broad spectrum of leadership, change management, and diversity, equity and inclusion tools increases a leader's successful navigation of organizational change and challenges. Leaders must also navigate organizational culture to ensure high performance, stability and an impactful mission. Students will build their knowledge of board and senior team leadership, value centered leadership, strategic direction and planning, program evaluation, and organization culture development.

SPECIALIZED GRADUATE CERTIFICATE IN MISSION-DRIVEN OPERATIONS AND MANAGEMENT

The specialized graduate certificate in Mission-Driven Operations and Management is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials. Program operations and organizational management work together to accomplish a nonprofit organization's mission, vision, and impact. Organizations need effective structures to manage programs that include staffing, performance evaluation, impact measurement, and human and financial resources to ensure success. Examining an organization's financial and operational goals allows students to assess operational needs and to consider partnerships and community-based strategies that further the organization's impact. Students examine program evaluation strategies from a diversity, equity and inclusion lens that demonstrate community impact and mission accomplishment. Students also study managing staff and volunteer operations that accomplish a nonprofit's mission.

SPECIALIZED GRADUATE CERTIFICATE IN SOCIAL ENTERPRISE, INNOVATION AND ENTREPRENEURSHIP

The specialized graduate certificate in Social Enterprise, Innovation and Entrepreneurship is offered entirely online to meet the needs of busy adults seeking to expand their skillset or credentials. Are you a social entrepreneur or aspiring to become one? Will a social innovation move the needle on a social problem or challenge about which you are passionate? Is your organization considering a social enterprise? A focus on social enterprise, innovation and entrepreneurship will sharpen the social value proposition and mission-driven strategy to address key social problems in your community or the world. Students will develop your understanding, knowledge and skills in taking an idea and launching it as a social enterprise. Students will develop the language and financial insights into funding, prototyping, scaling, marketing and measuring impact of social enterprises and innovations. Practical experience with a nonprofit or for-profit organization will enable students to apply theory, strategy and metrics that solve real problems and drive mission impact.

Master's Degree Admission Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Certificate Admission

Degree and GPA Requirements

Minimum number of credits required: 48

Students will work with their Academic Advisor to determine the best set of courses to choose for their electives.

In University College graduate-level programs, grades of C or greater are considered passing, whereas grades of C- or lower are considered failing. Courses with a grade of C- or below will not count toward meeting degree or certificate requirements. Also, no more than one-fourth of the hours accepted toward the degree be grades of "C". A cumulative and program grade-point average of 3.0 or better must be maintained at all times.

Courses

NFP 4001 Nonprofit Leadership Portfolio Foundations (0 Credits)

Master's and certificate-seeking students in Nonprofit Leadership must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

NFP 4010 Leading Nonprofit/Nongovernmental Organizations (4 Credits)

Developing effective and successful leadership competencies is a lifelong endeavor that begins with the self and evolves throughout the role changes we make within organizations. This course will examine and develop core self-competency with a focus on leading in an organization. Students will identify core behaviors and practices along with effective communication skills and problem-solving tools to effectively move operational and program missions forward. By identifying organizational structure, markers of healthy culture, and leadership for financial and fund-raising functions students will identify the leadership approach needed to accomplish their organization's mission.

NFP 4011 Leadership Development in Action (4 Credits)

Developing effective and successful leadership competencies is a lifelong endeavor that begins with the self and evolves throughout our career journey. In this course, inclusive leaders will be examined, including core leadership competencies and practices that may vary due to the organizational culture and structure. Students will identify core behaviors and practices along with effective communication skills and problem-solving tools to effectively move an organization forward. Students will assess their own leadership competencies and areas for growth to construct a personal leadership development plan.

NFP 4015 Healthy Nonprofit/Nongovernmental Organizations (4 Credits)

Healthy nonprofit/nongovernmental organizations have effective leaders to ensure that their organization attains and maintains high standards of operational excellence. Best practices in executive leadership, strategic management, accountability, legal compliance, strategic planning, outcome measurement, finance, and funding models are key components that assist in assessing an organization's overall health. Students will analyze an actual nonprofit/nongovernmental organization and interview a senior executive to determine the quality and presence of these best practices. A final health assessment assignment will help students synthesize key organizational components.

NFP 4020 Legacy and Trends of Nonprofit Organizations and Civil Society (4 Credits)

A diverse historical legacy and philanthropic philosophy have laid the foundation of charity, volunteering, and community impact in the US and across the world. In a rapidly changing and technology-oriented world, philanthropy philosophy, donor motivations, and ways of giving have radically changed. Changing demographics, government policies, and wealth stratification are influencing trends in philanthropy. This course links history and future as it explores the genesis of American wealth creation, giving and voluntarism, as well as the diverse global philosophy and approaches to philanthropy. Nonprofits' collective impact, the rise of social enterprises and nonprofit innovation, and economic trends are examined to enable and inform how students, as developing leaders, will design their organizations' approach to meeting community needs and resource development.

NFP 4100 Philanthropy Principles and Roles in Nonprofit Organizations (4 Credits)

Great fundraisers are not born, they are made. These fundraisers, or development professionals, must learn principles and guidelines that inform their roles in organizations of different sizes. Students will differentiate philanthropy, development, and fundraising as well as donor cultivation basics, which is at the heart of all fundraising methods. This is the connection to a giver's passions and the nonprofit mission. Students will analyze and contrast a nonprofit's core fundraising approaches including finding prospects, using donor management technology, making the ask, and building a strong and flourishing fundraising network.

NFP 4105 Applied Fundraising and Donor Relations (4 Credits)

Nonprofit development encompasses all the practices of fundraising and structuring this important function within nonprofit/nongovernmental organizations. Students will learn about the development and financial strategy needed to balance diverse fundraising approaches. Considerations such as an organization's business model, strategic plan and growth, as well as strategic initiatives and future planning are central to organizing for development activities. Students will examine, using the four pillars of donor relations, different fundraising approaches such as individual solicitation, foundation and government grants, online donations, and future giving strategies to better understand their applications, scale, results potential and impact. Linking development to the financial functions of nonprofits is essential for every development director and staff.

NFP 4110 Advanced Fundraising Strategies and Planned Giving (4 Credits)

Established nonprofit/nongovernmental organizations develop a long-term mission-driven strategy that guides donor cultivation, stewardship efforts, and underpins financial success. Planning for success begins with legacy planning as a growth strategy to include long-term and planned giving fundraising tools. Cultivating donors means investing time, money and resources that an organization will need to weigh together to make good decisions for its future. Students will evaluate planning strategies that include prospecting for donors, offering events, cultivating bequests and endowments, accessing donor advised funds, or buying real estate as sustainable approaches. Additionally, students will evaluate grant cultivation and major gift-solicitation tactics that may help nonprofits strengthen their development portfolios.

NFP 4115 Leading Nonprofit Financial Health (4 Credits)

Nonprofit finance is a cornerstone to organizational health and sustainability. In this course students will learn the differences between nonprofit and for-profit accounting, as well as basic finance concepts including balance sheets, income statements, cash flow statements, and key accounting principles. Students will examine different budget models, conduct staff and salary planning and decision making for resource allocation. Students will identify Internal Revenue Service issues as well as current issues impacting the tax environment in the U.S.

NFP 4120 Technology Strategy for Fundraising (4 Credits)

Nonprofit development depends on technology. Developing a clear technology strategy allows a nonprofit/non-governmental organization to invest in the most appropriate tools to achieve fundraising success. The course addresses the application of technology categories such as Customer Relationship Management (CRM) products, communication tools, gift processing, social networking, and crowdfunding. Students learn to assess a nonprofit/non-governmental organization's technology needs for fundraising, develop criteria for technology selection, and develop a technology implementation plan. Students examine issues around donor privacy, data security, fundraising ethics related to technology, and legal and tax implications. Students critically think through applying assessment and decision-making principles discussed in this course to current and future technologies.

NFP 4200 Executive and Board Roles, Responsibilities and Leadership (4 Credits)

This course will analyze the interdependent roles, responsibilities, and relationships of nonprofit/nongovernment executives and board of directors, and explore the exercise of leadership required in these differentiated roles. The critical distinctions between the management and governance functions within the nonprofit/nongovernmental sector will be examined via case studies. Students will also conduct focused reviews of governance models and best practices that optimize organizational performance and the mission-driven partnership between the executive and board.

NFP 4205 Leading Strategically (4 Credits)

Executive nonprofit/nongovernmental leaders must be strategic and insightful as they guide their organizations' direction and ensure community impact. Leaders must be skilled in strategic and systems thinking as they guide the organization's vision, communicate performance expectations, drive performance, align the organization's systems, cultivate partnerships, develop organizational culture, catalyze change and foster innovation. In this course students practice these skills and examine decision making tools and employee coaching practices.

NFP 4210 Leading Policy and Advocacy (4 Credits)

Nonprofit/nongovernmental organizations play an important role in the development and implementation of public policy and influence corporations and other private organizations. Advocacy encompasses a wide range of activities that influence decision makers who craft policies and laws that may impact nonprofit/nongovernmental organizations, communities, constituents, and stakeholders. Students will differentiate advocacy and lobbying, examine federal, state and local legislative structures, craft advocacy messages and design campaigns to develop advocacy strategy. Students will also assess the resources needed for an advocacy campaign and its impact.

NFP 4230 Participatory Evaluation for Program and Community Impact (4 Credits)

Evaluating the impact and progress of nonprofit programs is essential to confronting disparities and advancing equity. This course reviews qualitative, quantitative and participatory methods to recognize the value and constraints of various approaches to data collection and analysis. By contextualizing evaluation methods, students will learn to engage people most impacted by nonprofit programs in order to identify relevant indicators of change and measure program performance. Students examine relationships between people, groups and institutions to help explain collective impact. Students practice and compare methodologies to assess program effectiveness and community impact with an emphasis on racial equity.

NFP 4300 Operational Strategy and Structures (4 Credits)

Passionate people create nonprofit/nongovernmental organizations that lead with vision and drive. These leaders must build the systems, strategic activities, and supportive environments that enable the organizational mission to thrive. This course focuses on developing leaders and managers who build and grow an organizational plan that includes business planning, data-driven decision making, program evaluation, service enterprise, strategic planning and internal innovation to lead a thriving organizational culture of learning to guide the organization's evolution and relevance.

NFP 4305 Nonprofit Program and People Management (4 Credits)

Nonprofit/nongovernmental organizations of different sizes must develop effective human resource and program management systems to be well-managed and deliver mission impact. These foundational systems include relevant professional development for managers, staff and board members that support continuous improvement, engagement and cultivate a positive organizational culture. This course will examine effective program management practices including performance monitoring and improvement, relationship management, feedback systems, work flow analysis, appropriate resource allocation, and closure. Course content will tie together the program and people management systems and practices needed in diverse organizations to ensure leaders and managers have the tools to deliver mission impact.

NFP 4310 Community Organizing, Voice and Empowerment (4 Credits)

Leading meaningful community change to address social problems involves effective organization strategies and communication that include storytelling, social media, and community engagement. Students will examine power, privilege, and oppression in personal and community contexts to develop strategies that honor and engage community members. Developing impactful messages and crafting different delivery methods are key components to effective community organization and empowerment. Nonprofit/nongovernmental organization leaders need to develop their voice and empowerment strategies to meet community members in community contexts and to engage them through diverse strategies. Evaluating outreach efforts and community impact are also examined.

NFP 4320 Leading Volunteer Programs with a DEI Lens (4 Credits)

Change initiatives and improved services and programs designed to meet critical community needs have historically relied on the service of volunteers; comprehensive volunteer programming; and ethical, culturally responsive leadership. Nonprofit/nongovernmental leaders who develop and maintain diversity, equity, and inclusion lens are capable of attracting, engaging, partnering, and maintaining relationships with a much greater segment of the population that is culturally and economically diverse. Strategies volunteer program leaders employ to outreach, message, recruit, onboard, screen, place, supervise, award, recognize, develop and advance volunteers will all be analyzed for their level of inclusivity, cultural responsiveness, and ability to interrupt and remedy historic inequities and harmful narratives. Students will deepen their knowledge about the impact of volunteering in a global context and expand their toolbox of inclusive practices as they apply to volunteer programming.

NFP 4400 Principles and Practices in Social Enterprise, Innovation and Entrepreneurship (4 Credits)

The quest to address intractable social problems, innovate in the social sector, create impact, and develop new revenue streams for nonprofits to cultivate resources has led to blurred lines between government, for-profit and nonprofit sectors. In this course students explore the why, what, and how of social enterprises, including developing a theory of change, and application of design thinking tools that can support market- or sector-level impact. Students will explore the shared characteristics of effective social enterprises such as business models, performance metrics, strong leadership and partnerships. All course content is examined through a nonprofit lens with insights into benefits and risks of social enterprise strategies and tools applicable to diverse organizations.

NFP 4405 Social Enterprise Strategies (4 Credits)

Nonprofit/nongovernmental social enterprises apply business strategies to achieve measurable social impact and strengthen their financial stability through earned income. In this course, students will apply specific strategy and tools in design thinking and lean startup to social sector challenges as they identify target customers, market conditions, potential partners, capital type, and the goals of specific social enterprises. Students will examine social enterprise development and growth and identify approaches to managing and measuring financial and social performance to inform strategy and improve outcomes.

NFP 4410 Social Enterprise Experiential Learning (4 Credits)**NFP 4500 Social Innovation in Education (4 Credits)**

This course prepares leaders to build and lead social innovation in the changing education marketplace. Education-oriented social entrepreneurs must navigate the education sector and a funding landscape that involves private and public capital, philanthropic and foundation giving, and a growing nonprofit and education technology industry. Students will explore social innovation and enterprises in P-16 education, and how these innovations can support school- and sector-level change and impact for youth and families. Students will examine entrepreneurial principles, business models, performance metrics, customer experience, public-private partnerships, and building organizations to scale. Students will develop the philosophy and strategies of operating in an emergent education ecosystem.

NFP 4701 Topics in Nonprofit Leadership (1-4 Credits)

The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of communication, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects, such as ethics, human communication theory, or interpersonal communication. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

NFP 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, unconditional acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

NFP 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

NFP 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

NFP 4905 Graduate Social Research Methods (4 Credits)**NFP 4920 Portfolio Capstone (4 Credits)**

The Portfolio Capstone course provides students the opportunity to reflect on graduate studies work at University College, synthesize their learning, and focus on the future. Students in the Portfolio Capstone course produce deliverables which may include: (1) an annotation of the program's portfolio signature assignments with reflective, critical, and creative thinking about the educational experience, (2) an examination of competencies developed, and (3) a pinnacle project that identifies, analyzes, and elaborates a significant theme(s) in the program experience. Students will reflect on and evaluate accomplishments, connect coursework to professional goals, and assesses those goals in the context of the concentration or nonprofit focus. The capstone is an applied project that is a relevant contribution to the student's future and the nonprofit industry.

NFP 4980 Internship (0-4 Credits)

The Nonprofit Leadership Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all NFP students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.

NFP 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. Before registering for the independent study, the student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices. Independent Study is offered only on a for-credit basis.

Organizational Leadership

Office: University College Student Support Center
Mail Code: 2211 S. Josephine St., Denver, CO 80208
Phone: 303-871-2291, 800-347-2042
Email: ucolsupport@du.edu
Web Site: www.universitycollege.du.edu (<http://www.universitycollege.du.edu>)

The Organizational Leadership Program exists to help students achieve their full potential as leaders as they learn to effectively manage change, people, and processes within dynamic environments across sectors. As students progress in their own leadership development, they will explore how to connect mission to values within organizations; investigate how organizational culture impacts ethics and conflict; learn how to integrate strategy and innovation to drive organizational effectiveness; and hone the skills required to transform organizations, industries, and the world.

The Organization Leadership program prepares students to:

- Analyze evidence of oral, written, and nonverbal communication techniques that display clear purpose and directly reflect principles of effective leadership.

- Apply relevant program theory and principles in order to formulate arguments that clearly and directly reflect the leadership principles upon which they are based.
- Articulate a vision for themselves as leaders by identifying gaps in current knowledge and practice.
- Generate a plan to align mission, vision, people, resources, and goals to maximize success and value over time for an organization.
- Justify appropriate change management and communication strategies to transition organizations, processes, and/or employment tasks from one stage to another using employee empowerment while minimizing disruption to business functions, organizational goals, and employee morale.
- Evaluate the characteristics of successful organizational partnerships among private, public, not-for-profit, and governmental organizations to determine how to implement them.
- Design strategies and implementation plan for successfully traversing key internal and external issues—such as new product offerings, organizational development, restructuring, and financial decisions—facing contemporary organizations, while meeting organizational scope and mission.

MASTER OF SCIENCE IN ORGANIZATIONAL LEADERSHIP WITH A CONCENTRATION IN Advancing Diversity, Equity, and Inclusion in Organizations

Advancing diversity, equity, and inclusion is critical to achieving organizational goals, positioning organizations for success in today's world, and creating environments where everyone has the opportunity to thrive. In this master's degree concentration, you will gain skills that are crucial for advancing equity as an integrated part of organizational strategy while developing solutions that meaningfully leverage diversity to create a culture of belonging. Learn about the historical, cultural, and economic factors that shape identity and apply appropriate tools and techniques to help organizations achieve their vision for change as it relates to diversity, equity, and inclusion practices.

This degree prepares students to:

- Assess the influence of historical, social, cultural, and economic factors in shaping one's identity and conceptions of diversity, equity, and inclusion practices.
- Integrate an understanding of social and cultural difference, perspective-taking, and empathy to better inform interpersonal communication and problem-solving strategies.
- Develop practices that advance equity as an integrated component of organizational strategy.
- Design solutions that meaningfully leverage diversity to achieve organizational goals and cultivate a culture of belonging across different organizational settings.
- Apply change models, tools and techniques to successfully achieve a vision for change.

Master of Science in Organizational Leadership with a Concentration in Human Capital in Organizations

The Human Capital in Organizations master's degree concentration is offered entirely online to meet the needs of busy adults.

The concentration in Human Capital in Organizations prepares students to ethically develop and maintain human capital while learning the best practices to do so. Students will learn to determine, cultivate, and maintain the symbiotic relationship between individuals and the organizations in which they work and lead. Strategic human capital can be a key element of a successful organization. Students will learn to innovate, maximize organizational and individual success, and master the process of developing and retaining employees to engage and achieve objectives.

Led by instructors who work in the fields in which they teach, classes introduce students to innovative and creative approaches to structuring and sustaining the development of human capital. Students explore knowledge and information management, communication tactics, vertical and horizontal partnerships, and organizational learning to promote the successful development of capital. Students will define the attributes, challenges, and advantages of human capital and strategies for leveraging each while integrating personal and organizational achievement.

This degree prepares students to do the following:

- Analyze organizational partnerships both vertically and horizontally
- Create a strategy for leveraging the attributes, challenges, and advantages of human capital
- Critique the theories and processes used for integrating knowledge management and organizational learning as a concept for enhancing personal and organizational success
- Evaluate the opportunities, challenges and options to have employees participate in decision making through the use of various techniques
- Assess best practices in ethically developing and maintaining human capital

Master of Science in Organizational Leadership with a Concentration in Organizational Development

The Organizational Development master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults.

Successful organizations are dynamic entities that are constantly adjusting goals, organizational structures, and strategies in response to varying organizational needs and influences. Sometimes these adjustments are large, but quite often there are a series of small to mid-size changes that affect employees and processes, resulting in the need for an organizational development (OD) intervention. In this concentration, students learn about organizations, organizational culture, and effective intervention strategies. Students also learn the history, challenges, and successes of OD and the different models and techniques to warrant a productive culture in a variety of organizational sizes, sectors, and types. An OD intervention strategy is created by defining the role of the practitioner as an internal or external consultant and constructing a diagnosis plan, synthesizing data from interviews and observations, and effectively communicating the findings in various applicable formats. Finally, a personal philosophy regarding change is developed and then examined through the context of analyzing organizational values and ethics, culture, and the human impact of change on employees.

This degree prepares students to do the following:

- Articulate and define organizational development, history of OD, and challenges and possibilities using an intentional OD intervention.
- Develop and defend a personal philosophy of organizational change.
- Evaluate the impact of organizational culture and core values on OD interventions.
- Integrate the contract for a successful OD intervention with the organizational culture and determine the role of an OD practitioner in each stage of an OD intervention, distinguishing between an internal and external consultant.
- Assess, compare, and contrast different models of change and describe the impact of each model on an OD process.
- Define and organize OD strategies for different types of organizations (sectors, life cycle, size, industry, types of innovation, or other defining characteristics) for maximizing impacts of OD interventions.
- Summarize the importance and impact of the different organizational structures and design on OD strategy and interventions.
- Construct an organizational diagnosis plan by using interviewing, group facilitation, process observation, synthesis of data, and writing effective reports, with providing effective presentations of the findings.
- Analyze the human side of change and build strategies for successful implementation of an OD intervention that honor the loss, resistance and acceptance of changes.

Master of Science in Organizational Leadership with a Concentration in Project Management

The Project Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults.

Students will receive hands-on, practical instruction from professional practitioners, who work in the fields in which they teach, on the tools and techniques of effective project management. Students will learn how to develop a clear plan that places a project in the context of an organization's strategic plan, while considering budgetary, scheduling, and human capital implications in any given project.

The content for this concentration has been developed to align with the current edition of the Project Management Institute's (PMI)® A Guide to the Project Management Body of Knowledge, (PMBOK® Guide), Project Management Institute, Inc. The unique curriculum equips students with the information and skills needed for the PMI® Project Management Professional (PMP)® Certification Exam.

This degree prepares students to do the following:

- Apply the basic principles of project management to become proficient in the use of project management software
- Demonstrate the use of agile concepts and techniques to deliver complex projects
- Design a comprehensive risk management plan for a project
- Create strategies to manage the complexity inherent in large-scale projects
- Relate project scope to cost, time, and resource requirements
- Develop procurement plans and assess project contracts

Master of Science in Organizational Leadership with a Concentration in Strategic Innovation AND Change

The Strategic Innovation and Change master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults.

Students learn tactical innovation and change management using vision, values, and mission as an overall guide. Led by professional practitioners who work in the fields in which they teach, classes provide professionals the skills to manage change, encourage innovation, and develop effective strategic initiatives while fulfilling an organization's mission.

Students can expect to develop environmental scanning skills to identify and evaluate external factors that affect an organization on a micro or macro level and prepare them to be solution-oriented leaders. While learning to take advantage of current realities and seize opportunities for an organization through strategy, degree-seekers explore the change theories and concepts required for effective and ethical change leadership while understanding how the relationships within an organization are affected.

This degree prepares students to do the following:

- Analyze the roles of mission, vision, values, and goals as a start of strategic planning
- Summarize the advantages and limitations of the strategic planning process
- Create strategies to address organizational challenges when implementing innovation and change and assess how this plan relates to customers, competitors, suppliers, and technology
- Evaluate the change theories, concepts, and skills required for effective and ethical change leadership and how the relationships within an organization are affected
- Align financial management strategies and budget and planning requirements with the vision, values, and goals of an organization

master of science in organizational leadership with a concentration in supply chain management

The Supply Chain Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults.

Students learn tactical innovation and change management using vision, values, and mission as an overall guide. Led by professional practitioners who work in the fields in which they teach, leadership classes provide professionals the skills to manage change, encourage innovation, and develop effective strategic initiatives while fulfilling an organization's mission.

In the Supply Chain Management concentration, students learn the six pillars of the field, and how to solve problems through the use of Six Sigma principles and the use of data analytics. Through hands-on projects with companies students gain real-world experience on the challenges facing global supply chains in the 21st-century while learning from current leaders in the field.

This degree prepares students to do the following:

- Articulate the six pillars of supply chain management to diagram the process to appraise their role in the market system.
- Apply the six pillars of supply chain management to realistic problem scenarios to develop strategies to diagnose and address future supply chain problems.
- Assess supply chains using a multidimensional perspective that includes connections between supply chain processes and fundamental business topics such as financial management and technology.
- Solve supply chain problems using a nonlinear process that addresses connections between supply chain pillars, market trends, and business best practices.
- Apply best practices to address an authentic supply chain problem in a work setting.

Certificate in Organizational Leadership with a Concentration in Human Capital in Organizations

The graduate certificate in Human Capital in Organizations is offered entirely online to meet the needs of busy adults.

The certificate in Human Capital in Organizations prepares students to ethically develop and maintain human capital while learning the best practices to do so. Students will learn to determine, cultivate, and maintain the symbiotic relationship between individuals and the organizations in which they work and lead. Strategic human capital can be a key element of a successful organization. Students will learn to innovate, maximize organizational and individual success, and master the process of developing and retaining employees to engage and achieve objectives.

Led by instructors who work in the fields in which they teach, classes introduce students to innovative and creative approaches to structuring and sustaining the development of human capital. Students explore knowledge and information management, communication tactics, vertical and horizontal partnerships, and organizational learning to promote the successful development of capital. Students will define the attributes, challenges, and advantages of human capital and strategies for leveraging each while integrating personal and organizational achievement.

Students will also gain additional knowledge in organizational leadership through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in Organizational Leadership.

Certificate in Organizational Leadership with a Concentration in Organizational Development

The graduate certificate in Organizational Development is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults.

Successful organizations are dynamic entities that are constantly adjusting goals, organizational structures, and strategies in response to varying organizational needs and influences. Sometimes these adjustments are large, but quite often there are a series of small to mid-size changes that affect employees and processes, resulting in the need for an organizational development (OD) intervention. In this concentration, students learn about organizations, organizational culture, and effective intervention strategies. Students also learn the history, challenges, and successes of OD and the different models and techniques

to warrant a productive culture in a variety of organizational sizes, sectors, and types. An OD intervention strategy is created by defining the role of the practitioner as an internal or external consultant and constructing a diagnosis plan, synthesizing data from interviews and observations, and effectively communicating the findings in various applicable formats. Finally, a personal philosophy regarding change is developed and then examined through the context of analyzing organizational values and ethics, culture, and the human impact of change on employees.

Students will also gain additional knowledge in organizational leadership through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in Organizational Leadership.

Certificate in Organizational Leadership with a Concentration in Strategic Innovation AND Change

Master's Degree Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Courses

ORL 4110 Fundamentals of Organization Development (4 Credits)

This course explores the history of organizational development (OD), definitions, models, approaches, and how OD is and can be used in organizations today. An organizational development professional requires a multitude of skills to be effective. Students will assess their own skills and develop a plan to develop or increase required skills.

ORL 4115 Organizational Culture and Organizational Development Impacts (4 Credits)

Organizational culture encompasses the organization's vision, mission, values, systems, symbols, structures, language, beliefs, and norms. This course proposes organizational development strategies that match, support, or are synergetic with organizational cultures.

ORL 4120 Team Effectiveness and Interventions (4 Credits)

To be successful, organizations of all types depend on teams of people who work together to complete tasks, achieve goals, and to help accomplish organizational change and strategy. As a result, focusing on the effectiveness of teams is a key value in organizational development. In this course, students learn how teams work and what makes them effective. Students investigate the tools and methods needed to conduct team assessments, diagnose the symptoms, and prescribe and evaluate targeted interventions that help teams achieve goals that impact organizational outcomes.

ORL 4125 Evaluate and Sustain Change (4 Credits)

This course explores organization impacts and change processes that are inherent in organizational development. Students will analyze various change models and assess how they explain the impact of change on organizations and their stakeholders. Students will also evaluate leadership and managerial practices that play a role in sustaining organizational change.

ORL 4130 Individual Interventions (4 Credits)

This course explores the theory and practice of an individual intervention as part of an organizational development process. Specifically, students will examine the roles of leadership and how it affects individual development strategy and interventions. A successful internal or external consultant needs to be well-versed in the intervention process and theory that supports it, as well as the different types of individual interventions. In this course, students will learn about the wide array of intervention tools, skills, and resources to successfully facilitate an individual intervention.

ORL 4135 Large Scale Interventions (4 Credits)

This course explores the theory and practice of a large-scale or organization-wide organizational development process—including entering the organization, assessing a strategy for a unique organizational culture, and presenting results—while understanding the human side of change. There are many organizational development strategies that can be used based on unique organizational considerations. This course examines the roles of organizational structure, type of organization, and the depth and breadth of the organizational change affecting organizational development strategy and large-scale interventions.

ORL 4160 Integrating Personal and Organizational Success (4 Credits)

This class explores the dynamics that help organizations, teams and individuals become more successful together. An empowering cycle develops when everyone is successful, but how does that happen? This course explores concepts such as systems thinking, learning organizations, the Theory U process for individual and group transformation, and appreciative inquiry. Students will discover how to develop self-awareness and other critical competencies that support innovative learning organizations. Students will also have the opportunity to build a personal model for success that will be useful at all levels of formal and informal leadership in any organization.

ORL 4170 Developing Human Capital in Organizations (4 Credits)

Human capital represents the knowledge, skills, and abilities necessary to implement the strategy of any organization – public, private or nonprofit. Unlike other forms of capital such as financial and equipment, human capital resides within the individual. This course is designed to provide students with an understanding of the strategic role and typical responsibilities that organization leadership, along with human resources, play in unleashing the potential of employees. Developing Human Capital examines current challenges and trends in developing talent as new core competencies and ways to work emerge, technology enables collaboration, and demographics shift employee expectations. The Developing Human Capital in Organizations course provides a talent management and human capital development framework that demonstrates and supports integrated processes and systems that position and enhance employee and leadership development. Students explore the role of leaders and HR in unleashing talent, an organization's most important source of competitive advantage. Students will assess, analyze and apply concrete strategies that ensure talent development is strategic, relevant, culturally sustainable, and competency-driven.

ORL 4190 Values-Driven Decision Making (4 Credits)

This course explores both objective and subjective decision making models. Emphasis is placed on decision making for organizational effectiveness. The rational approach will be taught via maximization of expected outcomes and decision tree analysis. The course will also explore managers' preferred decision making styles. The irrational side of decision-making will be covered through demonstrations and discussion of decision bias and judgment heuristics. Decision making is a complex and challenging process. The need for an effective and efficient methodology that is simple, systematic, and logical is more important today than ever. This course is an answer to that problem by using examples from our text and up-to-date articles on decision making from experts in the field.

ORL 4400 Leading Strategic Planning in Organizations (4 Credits)

Beginning with a clear mission, strategic planning is an iterative, dynamic process of translating the mission into a series of goals and outcomes in public, private, and non-profit organizations. The organization's vision, values, mission, and goals are the core of the process; strategic planning involves a series of options, understanding opportunities, evaluating risks, developing the plan and building in ethics, communication, implementation, and evaluation. The strengths and limitations of rational planning processes are explored and strategies for coping with unintended consequences are developed. The role of the leader in the process is also discussed.

ORL 4410 Principles of Environmental Scanning (4 Credits)

Environmental scanning is the process of identifying and evaluating environments, both internal and external, that may affect an organization's ability to create and sustain competitive advantage in the pursuit of organizational effectiveness. Knowledge of environmental scanning models are critical to the role of leadership and management teams in organizations. This course provides students the opportunity to develop a process for making strategic decisions using environmental scanning models and tools.

ORL 4420 Leading Change for Transformation (4 Credits)

In the 21st Century, change is a constant in organizations that want to remain competitive. At the heart of organizational change are the people of the organization who must continuously adapt their ways of thinking/doing to help the organization adapt and transform. This course prepares students to become leaders of change in their organizations through an exploration of change theory as well as the tools, models, and techniques for facilitating organizational change. Students will also learn how to enable and inspire other individuals in organizations to create change.

ORL 4500 Leadership Development (4 Credits)

This course explores leadership as a dynamic relationship with the organizational environment, stakeholders, and followers. Leadership in context is an essential concept, as well as the research-based core leadership competencies that effective leaders exemplify. Leaders from the public, private, and non-profit sectors will be studied in an inclusive context to assess their core leadership competencies and those practices that may vary due to the organizational structure. Relevant contemporary leadership topics will be examined to gain a broad perspective on leadership and considering the diversity of human interrelationships. The importance of ethical, strategic, and system wide decision-making is examined from the standpoint that leadership opportunities exist at all levels of organizations, in the community as well as the workplace. Strategies used to influence culture, promote learning, and implement change to move organizations forward are addressed. Students will assess their own leadership competencies and areas for growth to construct a personal leadership development plan.

ORL 4501 Leadership Development in Action (4 Credits)

Developing effective and successful leadership competencies is a lifelong endeavor that begins with the self and evolves throughout our career journey. In this course, inclusive leaders will be examined, including core leadership competencies and practices that may vary due to the organizational culture and structure. Students will identify core behaviors and practices along with effective communication skills and problem-solving tools to effectively move an organization forward. Students will assess their own leadership competencies and areas for growth to construct a personal leadership development plan.

ORL 4510 Building the 21st-Century Organization (4 Credits)

This course examines organizations in various sectors, and assesses the impact of internal and external factors on their designs and structures. Students will analyze group and individual behavior and organizational culture to understand their impact on organizational design, while also taking into account contemporary issues such as diversity and inclusion, unanticipated environmental events, and the role of stakeholders. Students will evaluate the appropriateness of current organizational designs, and provide recommendations for innovation and improvement.

ORL 4520 Principles of Financing for Organizations (4 Credits)

This course introduces basic financial concepts that lay the foundation for financial literacy. These financial concepts have varying relevance and different applications among public, private, and non-profit organizations. To understand these varying relationships, the course will focus on comparing and contrasting the use, non-use, and relevant application of financial concepts across sectors. Students will begin developing a skillset for applying these concepts appropriately to varying organizational types and structures. Additionally, the assessment of financial conditions will be combined with other indicators, such as an organization's strategy, to learn how to diagnose an organization's overall health.

ORL 4530 Leading a Culture of Organizational Innovation (4 Credits)

This course examines a proven process of innovation and how it applies to private, public and non-profit organizations; leading to entrepreneurship. The course identifies how organizational culture can have a positive or negative effect on innovation. The role of the leader is also discussed. Determining the right strategy for effective innovation and how to structure organizations to innovate best is explored. Students describe how to implement management systems to assess ongoing innovation, using metrics throughout the process, and determine how to incentivize innovation in work teams. Using the seven rules of innovation, students assess a selected organization on its degree of innovation and propose a plan for integrating innovation.

ORL 4550 Strategic Organizational Partnerships (4 Credits)

Partnerships extend the capability of the organization; public, private or nonprofit; and help to leverage available resources. Strategic partnerships also provide an alternative to vertical integration and a way to complement the organization's core competencies. This course defines and discusses the roles of various types of organizational partnerships, including internal and external, strategic partnerships, and joint ventures, and explores strategies for ethically managing these external and internal organizational relationships.

ORL 4701 Topics in Organizational Leadership (4 Credits)

The content of this course varies each time it is offered. The topics may include time-sensitive issues, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

ORL 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

ORL 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

ORL 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

ORL 4905 Graduate Social Research Methods (4 Credits)

This course provides graduate students with a basic background in the methods of research in the social sciences. In our information-rich society, organizations and institutions have become more aware of the value of research data for informing critical decisions. As leaders in their organizations, graduates should have a knowledge base that allows them to critically examine basic research in the social sciences and to understand the methods involved in generating research results. They should understand the value of research to their organizations, be able to identify opportunities to gather information through research that will benefit those organizations, and participate in the ethical design of basic studies to gather that critical information. Students will develop and write a research proposal around a specific research question informed by a review of the literature.

ORL 4910 Research Practices and Applications (4 Credits)

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

ORL 4980 Internship (0-4 Credits)

The ORL internship is designed to offer students a practical educational experience in an industry related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the ORL master's degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College sends notification to all ORL students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the ORL degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.

ORL 4985 Industry Innovation Project (1-4 Credits)

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

ORL 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted into a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent study is offered only on a for-credit basis.

Professional Creative Writing

 Web Site: <http://www.universitycollege.du.edu>

This program empowers aspiring writers to become published authors and, through their work, influence our ongoing cultural conversation. We encourage students to read widely and with professional attention to mastering the craft of their chosen genre. While developing a clear understanding of the literary marketplace, students learn to cultivate their individual identities as writers, create personal brands that forcefully present their writing to the public, and establish connections with the broader community of working writers. Since imaginative writing testifies to truths that would otherwise pass through the world unnoticed or misunderstood, the authors who produce it expand awareness in their readers, and through those readers, enhance the awareness of countless other people. We find this process inspiring, and through this program seek to share that inspiration with all our students.

Program Outcomes

This program prepares students to:

- Craft writing with a keen awareness of the limits and opportunities of the writing's genre
- Cultivate writing routines and habits that support creative productivity
- Develop a sophisticated knowledge of literary structures and reader expectations
- Apply professional editing standards to evaluate both published writing and writing for their peers

- Assess their own writing and learn how to enhance its strengths and eliminate its weaknesses
- Define their audiences and write in ways that move and entertain them

Master of Arts in Professional Creative Writing with a Concentration in Professional Creative Nonfiction Writing

The Professional Creative Nonfiction Writing Concentration is designed for aspiring writers whose ambition is to become published authors of memoirs, personal essays, travel writing, and other forms of creative nonfiction. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

This degree prepares students to:

- Identify and analyze the basic elements of creative nonfiction as found in the works of master creative nonfiction writers
- Apply their knowledge of creative nonfiction fundamentals and genres to their own creative work
- Discover and cultivate personal habits of thought and behavior that sustain their creative efforts
- Create strategies for developing a professional writing presence designed to cultivate an audience for their work

Master of Arts in Professional Creative Writing with a Concentration in Professional Dramatic Writing

The Professional Dramatic Writing Concentration is designed for aspiring playwrights, screenwriters, and spoken word artists whose ambition is to become published authors of plays, films, and other individual and collaborative forms of professional performance. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

This degree prepares students to:

- Identify and analyze the basic elements of drama as found in the works of master playwrights, screenwriters, and spoken word artists
- Apply their knowledge of drama's fundamentals and genres to their own creative work
- Discover and cultivate personal habits of thought and behavior that sustain their creative efforts
- Create strategies for developing a professional writing presence designed to cultivate an audience for their dramatic works

Master of Arts in Professional Creative Writing with a Concentration in Professional Fiction Writing

The Professional Fiction Writing Concentration is designed for aspiring writers whose ambition is to become published authors of short stories, novels, and collaborative works in particular genres. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

This degree prepares students to:

- Identify and analyze the basic elements of fiction as found in the works of master fiction writers
- Apply their knowledge of fiction fundamentals and genres to their own creative work
- Discover and cultivate personal habits of thought and behavior that sustain their creative efforts
- Create strategies for developing a professional writing presence designed to cultivate an audience for their work

Master of Arts in Professional Creative Writing with a Concentration in Professional Poetry Writing

The Professional Poetry Writing Concentration is designed for aspiring poets whose ambition is to become published authors of individual poems and collections of poetry. The coursework helps poets progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

This degree prepares students to:

- Identify and analyze the basic elements of poetry as found in the works of master poets
- Apply their knowledge of poetry fundamentals and genres to their own creative work

- Discover and cultivate personal habits of thought and behavior that sustain their creative efforts
- Create strategies for developing a professional writing presence designed to cultivate an audience for their poetry

Certificate in Professional Creative Writing with a Concentration in Professional Creative Nonfiction Writing

The Professional Creative Nonfiction Writing Certificate is designed for aspiring writers whose ambition is to become published authors of memoirs, personal essays, travel writing, and other forms of creative nonfiction. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work. Students will also gain additional skills and knowledge in professional creative writing through elective coursework.

Certificate in Professional Creative Writing with a Concentration in Professional Dramatic Writing

The Professional Dramatic Writing Certificate is designed for aspiring playwrights, screenwriters, and spoken word artists whose ambition is to become published authors of plays, films, and other individual and collaborative forms of professional performance. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work. Students will also gain additional skills and knowledge in professional creative writing through elective coursework.

Certificate in Professional Creative Writing with a Concentration in Professional Fiction Writing

The Professional Fiction Writing Certificate is designed for aspiring writers whose ambition is to become published authors of short stories, novels, and collaborative works in particular genres. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work. Certificate in Professional Creative Writing with a Concentration in Professional Poetry Writing

The Professional Poetry Writing Certificate is designed for aspiring poets whose ambition is to become published authors of individual poems and collections of poetry. The coursework helps poets progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work. Students will also gain additional skills and knowledge in professional creative writing through elective coursework.

SPECIALIZED GRADUATE CERTIFICATE IN PROFESSIONAL FICTION WRITING

The specialized graduate certificate in Professional Fiction Writing is designed for aspiring writers whose ambition is to become published authors of short stories, novels, and collaborative works in particular genres. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

SPECIALIZED GRADUATE CERTIFICATE IN PROFESSIONAL CREATIVE NONFICTION writing

The specialized graduate certificate in Professional Creative Nonfiction Writing is designed for aspiring writers whose ambition is to become published authors of memoirs, personal essays, travel writing, and other forms of creative nonfiction. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

SPECIALIZED GRADUATE CERTIFICATE IN PROFESSIONAL POETRY WRITING

The specialized graduate certificate in Professional Poetry Writing is designed for aspiring poets whose ambition is to become published authors of individual poems and collections of poetry. The coursework helps poets progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

SPECIALIZED GRADUATE CERTIFICATE IN PROFESSIONAL DRAMATIC WRITING

The specialized graduate certificate in Professional Dramatic Writing is designed for aspiring playwrights, screenwriters, and spoken word artists whose ambition is to become published authors of plays, films, and other individual and collaborative forms of professional performance. The coursework helps writers progress toward mastering the fundamentals of their craft, understanding the rich tradition of genres and individual masterworks in which that craft is rooted, and creating a personal presence in the creative marketplace to support the largest possible audience for their work.

Master's Degree Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Courses

PWRI 4000 Masterworks: Fiction (4 Credits)

A "masterwork" of fiction is a literary text that has achieved both broad recognition for artistic excellence and an extraordinary level of influence within and beyond its culture of origin. In this course, students will engage such works from an aspiring writer's point of view, drawing on them to develop a deeper understanding of the way structure, style, character, theme, and cultural values work together in the most powerful fiction works of modern times. Discussions and writing assignments will focus on how exposure to the fiction of different countries can help us see our own literary and cultural assumptions with fresh eyes.

PWRI 4001 Portfolio Foundations (0 Credits)

Master's and certificate-seeking students in Professional Creative Writing must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

PWRI 4010 Writing Fiction: Foundational Concepts, Skills, and Practice (4 Credits)

This is a workshop-based course on the fundamentals of writing fiction. It touches on popular subgenres such as literary fiction, science fiction, fantasy, suspense, mystery, historical fiction, satire, romance, and more. Students will read, discuss, and create presentations on works by established fiction writers; experiment with craft concepts in their own stories; provide and receive constructive feedback in a supportive workshop environment; and maintain a consistent writing practice throughout the course.

PWRI 4020 Writing the Short Story (4 Credits)

The dramatic elements of the short story are distinct from any other form of fiction. This workshop is for writers who plan to seriously study the form of the contemporary short story, and to apply their learning to their own projects. Students focus equally on reading published works and writing/ revising an original short story, as well as discussing aspects of publishing. Weekly writing exercises, readings, and workshops of student stories will be combined to provide the most direct, effective training in this dynamic form. (It is strongly encouraged that students take PWRI 4010 Writing Fiction: Foundational Concepts, Skills, and Practice prior to this course.).

PWRI 4030 Writing the Novella (4 Credits)

This course concentrates on the craft of writing a form of fiction that combines the intense thematic focus of short stories and the complex character development typical of the novel. The novella offers writers the opportunity to create an extended story without juggling the complexities of multiple points of view, intricate plot lines, and difficult-to-manage back stories. Typically concerned with a character's emotional and personal development rather than the interaction of many characters in a complicated social context, the novella usually takes place in one location or in a larger but well-defined setting. Novellas are common in genres such as mystery and science fiction, and because of their strong focus and relative brevity, they are widely considered the perfect form for adaptation to the stage, film, and television.

PWRI 4100 Masterworks: Creative Nonfiction (4 Credits)

A “masterwork” of creative nonfiction is a literary text that has achieved both broad recognition for artistic excellence and an extraordinary level of influence within and beyond its culture of origin. In this course, students will engage such works from an aspiring writer’s point of view, drawing on them to develop a deeper understanding of the way structure, style, character, theme, and cultural values work together in the most powerful works of modern creative nonfiction. Includes popular sub-genres such as narrative nonfiction, memoir, the personal essay, travel writing, humor, criticism, nature and science writing, literary journalism, and experimental forms. The primary focus will be fundamentals and techniques of creative nonfiction to be used in virtually every sub-genre. Discussions and writing assignments will focus on how exposure to the creative nonfiction of different countries can help us see our own literary and cultural assumptions with fresh eyes.

PWRI 4110 Writing Creative Nonfiction: Foundational Concepts, Skills, and Practice (4 Credits)

This course concentrates on the craft of writing nonfiction, which includes popular subgenres such as narrative nonfiction, memoir, the personal essay, travel writing, humor, criticism, nature and science writing, literary journalism, and experimental forms. The primary focus will be fundamentals and techniques of creative nonfiction to be used in virtually every sub-genre. Students will later apply these classic skills in courses devoted to various nonfiction sub-genres, such as memoir. Class discussions will emphasize essential writing skills and professional approaches to research, taking advantage of a supportive workshop format. Students will express their ideas about both craft and content and workshop their writing with a view toward professional publication.

PWRI 4120 Writing the Personal Essay (4 Credits)

The author Dinty Moore describes the personal essay as being for writers who want to capture a bit of life, producing a written record of their better thoughts. Like the short story in fiction, the personal essay is one of the original forms of creative nonfiction. It is a lively form that has tracked through the ages—from ancient archetypes to the school of Enlightenment essayists, 19th-century realists and romantics to robust 20th-century conventionalists, and on to Digital Age innovators where it deeply informs blogs, social media posts, and other contemporary writings. Conventions of the craft are covered in this course, but students will not be expected to embrace creativity-stifling rules. The work will be hands-on, with workshoping that pushed students to pursue new pathways and fresh approaches in their personal essay writing.

PWRI 4130 Writing the Memoir (4 Credits)

The memoir is as popular as ever – tales of persistence and overcoming odds grip us like no other. Students in this course will concentrate on the craft of writing the memoir, a work of creative nonfiction rooted in and focused on the writer’s memories. Unlike personal essays, memoirs foreground the writer’s past to illuminate the complex development of understanding that past. This aim results in works that are typically book-length, in which the writer applies the techniques of creative nonfiction to describe and make observations and draw conclusions from personal experience. Class discussions emphasize essential writing skills, techniques for exploring and recording memories, and professional approaches to the research required to make the past come to life for the reader. Taking advantage of a supportive workshop format, students will share their ideas about craft and content with a view toward book publication.

PWRI 4140 Natural Science and Literature (4 Credits)

This class will explore the practice – and art – of nonfiction writing about science and nature. Students will begin with an examination of influential historical works and move into contemporary writing on science and nature. The class will be a sort of journey, from ruminative essays on the individual in nature to impassioned (and science-heavy) explorations of ecosystem destruction to exuberant studies of love and sex in the animal kingdom. Students will seek to understand the narrative and linguistic machinery that make these pieces of writing “tick” through discussions, short writing exercises, brief reviews, and workshop participation. This course will also address the development of students’ own writing. Specifically, students will seek understanding of the writing techniques that can be used to make the complex fields of science and nature accessible subjects of writing intended for mainstream or literary publications. The key challenge will be to find a topic, a format (memoir, essay, narrative journalism), a structure, and a voice suitable for creating a single, sustained piece of writing that each student will devise, draft, workshop, and polish throughout the course.

PWRI 4200 Masterworks: Poetry (4 Credits)

Poetry is the most ancient of the written arts, so there are thousands of poetry masterworks—far too many to be usefully studied in a single course. That’s why this course focuses on the one resource that every poet must develop in order to write well: a personal “poetic lineage.” Students will learn how to explore the work of other poets and identify significant parts of their poetic lineages. They will also learn how to use that exploration to develop, expand, and refine their own poetic lineage, which will shape and nourish their poetry over a lifetime.

PWRI 4210 Writing Poetry: Foundational Concepts, Skills, and Practice (4 Credits)

This course is a combination of readings in poetry and poetics, brief lectures, and open discussions focused on the interplay of image, metaphor, rhythm, emotions and ideas in the expressive form of writing called poetry. Students will learn to tap the imaginative sources that all creative writing springs from and flow those energies into poetic form. The instructor will provide examples to illustrate successful uses of key poetic concepts and help students explore, through a range of open-ended exercises, various approaches to expressing themselves fully and clearly. Students will also develop practical critiquing skills with the aim of helping themselves and their classmates write with greater subtlety and power.

PWRI 4220 Writing Traditional Verse and Contemporary Song Lyrics (4 Credits)

This course focuses on the shared building blocks of traditional formal poetry and contemporary song lyrics: meter and rhyme, repetition, and verse/stanza structure. Beginning with simple constructions like limericks and nursery rhymes, and moving swiftly into more sophisticated verse organizations like the sonnet, the villanelle, the ballad, and the popular song, students will explore a variety of existing examples, then produce their own pieces that follow (or break) the established rules of each form. The course will take a workshop format, in which students will generate, share, and receive feedback on their formal experiments; the focus will be on developing a more finely tuned ear for form, and on deploying “traditional” poetic techniques in relevant, radical, and inventive ways. (NOTE: The ability to sing or play an instrument is NOT required for this course; when discussing and writing songs, students will focus on the texts only, not the harmonic/melodic elements of songwriting craft.)

PWRI 4230 Writing Improvisational Verse and Prose Poetry (4 Credits)

This course focuses on the writing of improvisational verse and prose poems, certainly the most popular forms of poetry today both in America and around the world. The course will explore a wide variety of approaches to non-metrical verse and examine how poetry sounds when it appears in prose form. Using a workshop format, students will generate, share, and receive feedback on their poetic experiments, with an emphasis on developing a more finely tuned ear for cadence and phrasing. Robert Frost famously wrote that writing what he called “free verse” was like “playing tennis with the net down.” This course aims to demonstrate why Frost was wrong.

PWRI 4300 Masterworks: Drama (4 Credits)

A “masterwork” of drama is a play or screenplay that has achieved both broad recognition for artistic excellence and an extraordinary level of influence within and beyond its culture of origin. In this course, students will engage such works from an aspiring writer’s point of view, drawing on them to develop a deeper understanding of the way structure, style, character, imagery, theme, and cultural values work together in some of the most powerful dramatic works of modern times. The course will also explore the impact of stagecraft, the needs of actors, and vision of directors on the way a play is developed. Discussions and writing assignments will focus on how exposure to the drama of different countries can help us see our own literary and cultural assumptions with fresh eyes.

PWRI 4310 Writing Drama: Foundational Concepts, Skills, and Practice (4 Credits)

This course uses readings of dramatic texts, brief lectures, writing assignments, and the performance of those writings to develop the skills required to write for the stage. Students learn the essentials of drama, including the design of effective plots, the creation of vivid characters, and the writing of performable dialogue. Students also explore the effects of drama’s necessarily collaborative process and varieties of stagecraft on the way playwrights shape their texts. Examples illustrate successful uses of key dramatic techniques and help students explore various approaches to expressing themselves fully and clearly through a range of open-ended exercises. Students also develop practical critiquing skills with the aim of helping themselves and their classmates create compelling plays that appeal to both theater professionals and theatrical audiences.

PWRI 4320 Writing the Screenplay (4 Credits)

This course provides a comprehensive overview of the industry standard elements of screenwriting. Through readings, film viewings, written analyses, online discussions, and creative exercises, students will learn how to write original stories for a visual medium, use prescriptive filmic story structure (“screenplay formatting”), and identify key elements that make a script successful. With these tools in hand, students will create the first act of an original feature-length screenplay, develop an outline (“script treatment”) for the entire film, and finish the course prepared to complete the project and present it to the film-making industry.

PWRI 4330 Writing for Personal Performance (4 Credits)

This course focuses on writing texts that the authors aim to perform themselves, including spoken word poetry, storytelling, one-person plays, presentations in TED Talk and other formats, and even standup comedy. Using a variety of readings and recorded performances, brief lectures, and writing assignments, the course helps writers develop the skills required to shape their work for public performance. Students learn to distinguish between their “page voice” and their “performance voice” so that they can produce more effective texts for performance. Using a supportive workshop format and class discussions, students will apply practical critiquing skills with the aim of helping themselves and their classmates create compelling performance pieces that appeal to audiences of all kinds.

PWRI 4340 Literature to Film (4 Credits)

In this course, students will examine the adaptation of literary works into films. Through close study of modern literary works and the film interpretations of each, the course will focus on the challenging process of transitioning from one narrative form to another. The course aims at enhancing the critical skill of students as readers and viewers of film as well as their creative abilities as writers. This is accomplished through a combination of close reading, study of the visual vocabulary of film, and scripting workshops designed to highlight the considerations that go into the crafting of film scripts based on previously published works.

PWRI 4410 Writing and Healing (4 Credits)

In this course, students evaluate theoretical and practical aspects of written expression as it relates to healing. Students analyze foundational concepts of healing through the lens of contemporary creative literature. Students apply these concepts to their writing practice through journaling processes, written therapeutic strategies, and poetic techniques aimed at cultivating self-awareness and personal growth. Through a course-long inquiry into the concept of “healing,” students will learn to articulate how their writing processes enhance their writerly identities and develop a practical set of therapeutic, expressive techniques for everyday use.

PWRI 4420 Writing as Translation (4 Credits)

In its literary sense, translation is the closest reading possible, and learning its processes enables a deeper reading of our own work. Effective translation—of our own writing or that of others—depends on intimate attention to the many elements of literary writing. This course examines common translation practices and examples with emphasis on elements such as syntax, word choice, pacing, setting, and imagery, with the goal of enhancing the student’s knowledge of and skill with those elements. Once acquainted with translation processes, students apply them to their own work. Assignments are completed in English and no second language is required.

PWRI 4430 Writing for Television (4 Credits)

This course provides an overview of two important television writing skills: the creation of a pilot for an original series and the writing of a “spec,” which is writing an original idea for a television show that currently exists (a requirement in the pursuit of employment as a TV writer). Students will intensively study the structure, character build, template, theme, and franchise involved in the development of TV shows (both half hour and hour long), as well as learn about the current business of TV. Since this is an intensive writing and workshoping course, students will be required to submit their work to and to give constructive criticism to their fellow writers. Prerequisite: PWRI 4320 Writing the Screenplay.

PWRI 4500 The Writing Life: Concepts, Practices, and Professionalism (4 Credits)

This course aims to provide aspiring writers a basic knowledge of the creative and professional tools they will need to succeed, whatever their individual goals or life situation. This course tackles questions and challenges common to all writers at one time or another. Primary considerations include: What exactly does it mean to be a writer? What are my motivations for wanting to write? How can I identify and prioritize writing projects? How do I move my writing projects forward from concept to completion? These primary challenges require writers to narrow their creative focus and to cultivate habits of thought and behavior that sustain creative efforts in a world full of distractions, obligations, and competing claims on their time.

PWRI 4510 Literary Genres for Writers (4 Credits)**PWRI 4520 The Writers Workshop (4 Credits)**

A writer writes" is the universal mantra of the writing life, but one of the critical steps in developing a work in progress is getting constructive feedback. Unfortunately, all too often, a writer ends up disappointed because the feedback received is superficial, too polite, or little more than proofreading. This course teaches students to workshop in a meaningful way, responding to content, focus, coherence, and organizational issues. Students learn to elicit more feedback from their workshop colleagues, demonstrating the relationship between reader and writer. The class will explore a variety of genres, and each student produces short exercises and longer projects that demonstrate a grasp of various aspects of the writing craft.

PWRI 4540 Children's Literature: From Picture Books to Books for Young Adults (4 Credits)

This course offers an introductory study of children's literature, from toddler board books and easy readers to chapter books and books for young adults. It is designed primarily for students interested in writing for children and those planning to teach children's literature, though new and soon-to-be parents would find it illuminating as well. Touching on all the major categories/levels and subgenres of children's literature, students will learn to identify the unique characteristics of each and apply definable quality standards to assess a wide range of particular texts from both creative and analytical points of view. Note that, though students may do some creative writing, this is not a course in writing children's literature.

PWRI 4560 Writing Books for Children (4 Credits)

This course concentrates on the craft of writing three distinct categories of children's fiction: the picture book, the early/easy/transitional reader and novels for older readers (chapter book, middle grade and young adult novel). Within each category, students have a unique opportunity to explore storytelling for a specific young audience whose members vary in age, reading interest and reading ability. Note that this course covers narrative fiction only; nonfiction, though a valuable genre of children's literature, is beyond the scope of this course. Prerequisite: PWRI 4540 Children's Literature.

PWRI 4600 Breaking the Chains of Genre: An Exploration of Hybrid Literatures (4 Credits)

Hybrid genre, cross-genre, multi-genre, or mixed genre literature is literature that combines writing from different genres to create one text. The text created might be fragmentary or unified; it might be coherent or disjointed. Cross-genre literature is not new, but contemporary authors are more frequently pushing on the boundaries between genres in their creative and scholarly writing to produce rich, open, polyphonic texts as a result. How has cross-genre literature been deployed in different literary and cultural traditions? What advantages does cross-genre literature provide for the writer and for the reader? This course will explore the ways in which authors have experimented with mixing genres in different cultural traditions and writing disciplines as well as how this genre-bending has enabled them to accomplish various creative, narrative, and rhetorical purposes. Required Prerequisite: PWRI 4510.

PWRI 4701 Topics in Literature (4 Credits)

This course is designed to provide a deep dive into advanced topics of special interest to creative writers. Topics may range from close studies of established masterworks to examining the latest trends in developing genres or wrestling with several works by living masters.

PWRI 4702 Topics in Writing (4 Credits)

This course is designed to provide a deep dive into advanced topics of special interest to creative writers. Topics may range from close studies of compositional techniques used in established masterworks to examining the development of new genre forms or wrestling with texts whose approaches are drawn from multiple genres.

PWRI 4901 Professional Creative Writing Capstone Project (4 Credits)

The Creative Capstone Project provides students the opportunity to apply the knowledge and skills gained through the degree program to create a culminating project consisting of three major parts: a creative core (fiction, creative nonfiction, poetry, or some other kind of creative writing); a researched analysis essay exploring an idea, issue, or problem that is closely related to the creative core (however, the essay is not about the creative core); and a reflection essay placing the creative core and the analysis essay in the context of the student's coursework at University College and his or her writing goals for the future. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the project. Please see the Creative Capstone Project Guidelines for additional details. Note: For the creative core, students should not attempt a genre they have not written in at least one of their University College courses. Prerequisites: a Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, and completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

PWRI 4917 Market Research for Writers (4 Credits)

All writers considering a professional career path must not only learn their craft, but they must also learn to navigate the landscape of the publishing world, researching the industry's history and its future. A professional writer, including those interested in self-publishing, must understand the relationships between agents, editors, publishing houses, and booksellers. They must understand the process of manuscript submission and acquisition, learning copyright and contractual basics. A career writer must also develop an author platform, cultivating that professional, public persona critical to success. Important Note: This course provides students with critical information they need to understand the publishing industry and thrive within it as professional writers. While it does not deal directly with content-oriented research related to project development, the analytical and synthesizing skills it teaches can help to enhance that kind of research as well.

PWRI 4920 Portfolio Capstone (4 Credits)

The Portfolio Capstone course provides students the opportunity to reflect upon the work they have done throughout their graduate studies at University College and synthesize their learning. Students in the Portfolio Capstone produce deliverables that include: (1) a thorough annotation of their portfolio, a process requiring critical and creative thinking about their educational experience, and (2) a pinnacle project that identifies, analyzes, and elaborates significant themes in their program experience, evaluates their accomplishments, connects their coursework to their professional goals, and assesses those goals in the context of their chosen field.

PWRI 4980 Internship (0-4 Credits)

The PWRI internship is designed to offer students a practical educational experience in an industry-related setting. The internship is an individualized learning experience that is directly related to the knowledge and skills covered in the PWRI master's degree program. Students are responsible for finding their own internship site and proposing their internship ideas. University College sends notification to all PWRI students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences. The objectives, activities, responsibilities, and deliverables for the internship are defined in a training plan that is developed by the student jointly with the internship supervisor at the sponsoring organization. The training plan is approved by the academic director. Prerequisites: The student must be unconditionally accepted in the PWRI degree program, have completed a minimum of 28 hours of graduate coursework, including at least two core courses, and have earned a GPA of 3.0 or better. Enrollment must be approved by the academic director.

PWRI 4991 Independent Study (1-4 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, have obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

Master of Science in Security Management with a concentration in Emergency Planning and Response

The Emergency Planning and Response master's degree concentration is offered to meet the needs of busy adults and prepares current or aspiring emergency response professionals to effectively strategize and implement emergency plans and responses. Graduates will learn to compare and contrast plans and responses to various events and disasters. Students will learn strategies for effective communication in all phases of emergency management (i.e., mitigation, preparedness, response, and recovery).

Whether an emergency is natural or human caused, emergency preparedness is vital to ensure minimize impacts on the welfare of those affected. The Emergency Planning and Response master's degree concentration covers emergency planning, mitigation of potential hazards, response, and recovery. Professional practitioners who work in the emergency planning and response field teach the Emergency Planning and Response master's degree concentration. Classes focus on the integrated system at every stage of a disaster and define the roles of emergency response teams, government agencies, businesses, and private citizens.

This degree prepares students to do the following:

- Develop emergency response plans to ensure that organizations or communities possess necessary resources (e.g., personnel, equipment, communications, etc.) to respond to emergency incidents;
- Identify the potential hazards within a community or organization that require mitigation to minimize the health, economic, and environmental consequences of potential emergency incidents;
- Develop critical incident management actions that will save lives, protect property and the environment, and meet the basic human needs during a critical incident;
- Construct Recovery Plans to repair damages and restore the health, economy, infrastructure, and environment of the affected community following a large-scale disaster.

Master of Science in Security Management with a concentration in Information Security

The Information Security master's degree concentration is offered entirely online at the University of Denver to meet the needs of busy adults. Pursue an Information Security master's degree concentration from University College and be prepared to analyze security needs, provide effective solutions, and fill a critical niche in organizations. Students will examine practical issues such as setting up a secure network, securing servers, and handling

information security incidents. The practical labs give Information Security master's degree students the hands-on experience they need using industry-current security tools, effectively training students to apply lessons to real-world challenges.

Graduates are prepared for the security challenges presented across a variety of sectors as they undergo rigorous instruction from professional practitioners who work in information security. Degree-seekers will learn to design secure applications, implement access controls, establish secure operations, and control physical security, all while using encryption, secure networks, and maintain business continuity. Become an indispensable expert in determining Return on Security Investment (ROSI) and develop security policies and procedures that protect your organization from internal and external threats.

This degree prepares students to do the following:

- Design an information security plan for the strategic, planning, and management efforts of private and public sector organizations;
- Evaluate and analyze emerging information security issues, regulations, and threats;
- Analyze financial implications of information security programs and options;
- Protect vital information assets such as people, physical structures and equipment, intellectual property, and information, and maintain post-incident continuity of operations.

Master of Science in Security Management with a concentration in Organizational Security

Earned entirely online, the Organizational Security master's degree concentration examines emerging security issues, regulations, and threats. Current and aspiring security management professionals will benefit from the Organizational Security master's degree concentration offered by University College, as students learn the key strategic, planning, and management skills needed to thrive in the security management industry through an examination of emerging security issues, regulations, and threats.

Classes are led by instructors who work in the fields in which they teach, offering security management degree-seekers valuable insight to the industry. Students will learn to implement strategies to protect vital assets such as people, physical structures and equipment, intellectual property, and information, as well as analyze financial implications of security programs and options. Organizational security professionals are fundamental cogs in the business world, as well as in the government, as they may function as a chief security officer, director of loss prevention, director of security, security consultant, investigator, firefighter, or police officer.

This degree prepares students to do the following:

- Lead the strategic, planning, and management efforts of private and public sector organizations;
- Evaluate and analyze emerging security issues, regulations, threats, and innovations;
- Analyze financial implications of security programs and options;
- Protect vital assets such as people, physical structures and equipment, intellectual property, and information, and maintain post-incident continuity of operations.

Certificate in Security Management with a concentration in Emergency Planning and Response

The Emergency Planning and Response certificate is offered online to meet the needs of busy adults and prepares current or aspiring emergency response professionals to effectively strategize and implement emergency plans and responses. Certificate students will learn to compare and contrast plans and responses to various events and disasters. Students will learn strategies for effective communication in all phases of emergency management (i.e., mitigation, preparedness, response, and recovery).

Whether an emergency is natural or human caused, emergency preparedness is vital to ensure minimize impacts on the welfare of those affected. The Emergency Planning and Response certificate covers emergency planning, mitigation of potential hazards, response, and recovery. Professional practitioners who work in the emergency planning and response field teach the Emergency Planning and Response certificate courses. Classes focus on the integrated system at every stage of a disaster and define the roles of emergency response teams, government agencies, businesses, and private citizens. Credits earned through this graduate certificate may be applied towards a master's degree in Security Management.

Certificate in Security Management with a concentration in Information Security

The certificate in Information Security is offered entirely online to meet the needs of busy adults seeking to expand their current skillset in information security. An Information Security certificate prepares students to analyze security needs, provide effective solutions, and fill a critical niche in organizations. Certificate students will examine practical issues such as setting up a secure network, securing servers, and handling information security incidents. The practical labs give Information Security graduate certificate students the hands-on experience they need using industry-current tools geared for security. Students will also gain additional skills and knowledge in security management through elective coursework.

Certificate students will be prepared for real-world security challenges with a rigorous education from professional practitioners who work in information security. Certificate students will learn to design secure applications, implement access controls, establish secure operations, and control physical security, all while they use encryption, secure networks, and maintain business continuity. Become an indispensable expert in determining Return on Security Investment (ROSI) and develop security policies and procedures that protect your organization from internal and external threats. Credits earned through this graduate certificate may apply toward a master's degree in Security Management.

Certificate in Security Management with a concentration in Organizational Security

The certificate in Organizational Security is offered online at the University of Denver to meet the needs of busy adults. Current and aspiring security management professionals will benefit from the certificate in Security Management with a concentration in Organizational Security offered by University College, as students learn the key strategic, planning, and management skills needed to succeed in security management. The certificate program is designed for busy adults seeking to advance their skills in organizational-level security.

The certificate program is ideal for security professionals who currently work in the field, or aspire to, as they will examine emerging security issues, regulations, and threats in classes led by instructors who work in the fields in which they teach, offering security management students valuable insight to the security. Certificate graduates will learn to implement strategies to protect vital assets such as people, physical structures and equipment, intellectual property, and information, as well as analyze financial implications of security programs and options. Students will also gain additional skills and knowledge in security management through elective coursework. Credits earned through this graduate certificate may apply toward a master's degree in Security Management.

SPECIALIZED GRADUATE CERTIFICATE IN ORGANIZATIONAL SECURITY

The specialized certificate in Organizational Security is offered online at the University of Denver to meet the needs of busy adults. Current and aspiring security management professionals will benefit from the certificate in Security Management with a concentration in Organizational Security offered by University College, as students learn the key strategic, planning, and management skills needed to succeed in security management. The certificate program is designed for busy adults seeking to advance their skills in organizational-level security.

SPECIALIZED GRADUATE CERTIFICATE IN INFORMATION SECURITY

The specialized certificate in Information Security is offered entirely online to meet the needs of busy adults seeking to expand their current skillset in information security. An Information Security certificate prepares students to analyze security needs, provide effective solutions, and fill a critical niche in organizations. Certificate students will examine practical issues such as setting up a secure network, securing servers, and handling information security incidents. The practical labs give Information Security graduate certificate students the hands-on experience they need using industry-current tools geared for security.

SPECIALIZED GRADUATE CERTIFICATE IN EMERGENCY PLANNING AND RESPONSE

The specialized certificate in Emergency Planning and Response is offered online at the University of Denver to meet the needs of busy adults and prepares current or aspiring emergency response professionals to effectively strategize and implement emergency plans and responses. Graduates will learn to compare and contrast plans and responses to various events and disasters, as well as analyze leadership competence as plans are executed. As communication is key to effective emergency preparedness, graduate certificate students will take away strategies for effective communication in all phases of emergency management (i.e., mitigation, preparedness, recovery, and emergency response).

Master's Degree Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Certificate Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Science in Security Management with a Concentration in Emergency Planning and Response

Degree Requirements

| Code | Title | Credits |
|---|--------------------------------------|-----------|
| Core coursework requirements | | |
| SMGT 4050 | Security Concepts Overview | 4 |
| SMGT 4100 | Business Function of Security | 4 |
| SMGT 4350 | Business Assets Protection | 4 |
| SMGT 4910 | Research Practices and Applications | 4 |
| SMGT 4901 or SMGT 4902 | Capstone Project Capstone Seminar | 4 |
| Concentration requirements | | |
| SMGT 4210 | Critical Incident Management | 4 |
| SMGT 4230 | Mitigation for Emergency Managers | 4 |
| SMGT 4240 | Emergency Incident Recovery | 4 |
| SMGT 4400 | Emergency Planning | 4 |
| Elective requirements (Choose three courses) | | 12 |
| Total Credits | | 48 |

Minimum number of credits required: 48

Students will work with their Academic Advisor to determine the best set of courses to choose for their electives.

In University College graduate-level programs, grades of C or greater are considered passing, whereas grades of C- or lower are considered failing. Courses with a grade of C- or below will not count toward meeting degree or certificate requirements. Also, no more than one-fourth of the hours accepted toward the degree be grades of "C". A cumulative and program grade-point average of 3.0 or better must be maintained at all times.

Courses

SMGT 4050 Security Concepts Overview (4 Credits)

This course provides an introduction to the main principles and issues in business and organizational security management. Topics include protection of, and assessing the loss potential of, personnel, facilities, and information, and continuity of operations. The course makes extensive use of case studies and analyses, field exercises and research.

SMGT 4100 Business Function of Security (4 Credits)

This course covers the role of security in an organization or business setting. The course will focus on how the security functions support the overall mission of the organization, and the relationship of security to other essential business functions. Topics include budgets, contracts, and presenting costs and benefits of security elements. Students will also learn how to justify the risks, benefits and expenses of security systems and security operations to high-level executives.

SMGT 4150 Risk Management (4 Credits)

This course will examine the concept of enterprise risk management as it applies to the corporate security setting by analyzing and assessing multiple area of corporate and public sector risk. Students will address real-world risks through a variety of case studies.

SMGT 4200 Integrated Security Systems (4 Credits)

This course covers the integration of physical, personnel, and information security, including the use of information technology to enhance physical and personnel security. Students will learn the essential elements of system design, development of procedures, testing and maintenance of integrated security systems. This will be accomplished through case studies and practical exercises.

SMGT 4210 Critical Incident Management (4 Credits)

This course will discuss the management concepts of a critical incident, whether it is the government response to a hurricane like Katrina or a corporate response to an internal emergency. The course follows the basic accepted tenets and structures of emergency response that connect all government agencies as well as private business. This course diverges from other Critical Incident Management courses in that it not only introduces the fundamentals of critical incident management but also challenges the student to look beyond accepted protocols and develop specific alternatives for their organization.

SMGT 4220 Hazardous and Radiological Material Preparedness (4 Credits)

This course introduces the student to the hazards and dangers of Hazardous and Radiological substances. The course is designed to introduce the hazards and the techniques of planning for emergency incidents involving these substances. This course follows the accepted emergency response guidelines and principles of FEMA. Students will learn the use of software and how to develop a hazardous materials operations plan.

SMGT 4230 Mitigation for Emergency Managers (4 Credits)

This course prepares students to meet the growing demand for emergency and disaster management planning through the mitigation phase of Emergency Management. Current practices are the result of a growing recognition that all levels of government, service organizations, and the private sector must become involved in collaborative mitigation of existing hazards in order to lessen the impacts of a full range of natural and human-caused disasters and their consequences. In this course, students will analyze the key factors that shape the planning environment and process. They will apply current policies, laws, and guidance to the development of a mitigation plan for a community, organization, or business. Although the development of a completed emergency/disaster plan requires the involvement of many stakeholders and is beyond the scope of this course, the draft mitigation document students will develop will provide students with the skills needed to effectively lead a disaster planning team.

SMGT 4240 Emergency Incident Recovery (4 Credits)

Assuring resiliency for any community or organization is of equal importance to the other phases of emergency management. This course addresses the final phase of emergency management: recovery. The course will address the many planning aspects of establishing a recovery plan. Students will formulate policies to aid in returning operations and life to normal following a disaster.

SMGT 4250 Threats in Information Security (4 Credits)

This course investigates emerging protection concepts for the information age. Students identify threats to security systems, discover vulnerabilities, and suggest and design protection systems. Topics include management of information security and data processing facilities, data theft, misuses of information technologies, computer viruses, hacking, and network protection. The course also covers information technology laws, privacy issues, and information security planning.

SMGT 4300 Security Administration (4 Credits)

This course will provide the theory and practical application of the administration of the security function within a business. Students will examine and recommend strategies for managing the security staff, communicating security related information to different audiences, building and maintaining a security team, identifying business risks, developing key performance indicators including budget, and evaluating the need for security-related hardware and software. This class examines a broad range of topics from organizational design to HR issues. Students will learn that not only must they ask the right questions, but they must ask them in the way that is appropriate for the subject matter and the circumstances.

SMGT 4350 Business Assets Protection (4 Credits)

Students examine the application of security knowledge and techniques to the protection of business assets. The security planning process is examined by the study of risk analysis, security surveys, and financial planning and decision making for development of security programs and countermeasures.

SMGT 4400 Emergency Planning (4 Credits)

The process of Emergency Management contains four very distinct phases with overlapping intricacies within each of the four. Emergency Planning is the first process that must be addressed by any organization when protecting life, property, or business continuity in response to an emergency or disaster. This course addresses the Planning phase of Emergency Management through the establishment of planning teams, threat assessments, hazard identification, and implementation of an overall Emergency Operations Plan.

SMGT 4450 Legal & Ethical Issues in Security Management (4 Credits)

This course examines ethical challenges and legal issues which security professionals in business and organizational security face in our global environment. Students will examine critical issues such as ethical principles, organizational values, ethics law, how to maintain the integrity of internal investigations, ethical and legal compliance; training programs, and examine aspects of legal responsibility, accountability, and liability related to security professionals and their organizations.

SMGT 4500 Human Factors in Security (4 Credits)

This course examines the challenges security professionals face in dealing with human factors in the course of protecting people, organizations, and information in our global environment. Students will examine and discuss critical contemporary issues such as effective leadership characteristics, workplace violence, insider threat, fraud, stalking, terrorism and other relevant topics as well as how to perform a risk analysis and conduct a workplace violence assessment audit.

SMGT 4550 Workplace Investigations (4 Credits)

Too often the Security Department is called upon to conduct an independent investigation for another business unit within the organization. This can include Compliance, HR, Employee Relations, Audit, IT, and others. While many of these investigations will be allegations of misconduct against individuals, they can also be business process reviews to determine root causes of business process failures. The Security Team is often tapped for these assignments because they are not only viewed as independent, but also as the most experienced in conducting interviews, writing investigative reports, and dealing with evidence. This class examines investigative techniques, documentation, and common pitfalls.

SMGT 4701 Topics in Security Management (1-6 Credits)

The content of this course varies each time it is offered. The topics may include time-sensitive issues from the film industry, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

SMGT 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

SMGT 4902 Capstone Seminar (4 Credits)

The purpose of the Capstone Seminar is to develop and apply transferable professional skills to persuade decision-makers. The course requires students to identify a question, problem, or issue in their field of study or profession to research in order to create a report that argues for an applied solution. Over the duration of the quarter, students will focus on the following: developing an argument in both written and oral format to support their solution through consideration of purpose, audience, and evidence; gathering and evaluating sources in their field or industry; the connection between discipline, style, and format; and their individual writing process.

SMGT 4910 Research Practices and Applications (4 Credits)

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

SMGT 4980 Internship (0-4 Credits)

The internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

SMGT 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent study is offered only on a for-credit basis.

Strategic Human Resources

Office: University College Student Support Center

Mail Code: 2211 S. Josephine St., Denver, CO 80208

Phone: 303-871-2291, 800-347-2042

Email: ucol-support@du.edu

Web Site: www.universitycollege.du.edu (<http://www.universitycollege.du.edu>)

Students in the Strategic Human Resources Program develop skills in operations and employment relations to align the aspirations and talents of employees with the needs of the organization. The program positions HR management in the context of organizational strategy and policy and defines the core competencies of HR professionals including recruitment, selection and placement; compensation and total rewards; talent management; supervision; crisis management; and employment law. Students will explore various theories and issues in the HR field and learn how HR practitioners function as change agents and strategic partners during the various stages of an organization's life cycle.

The Strategic Human Resources program prepares students to:

- Evaluate the roles and responsibilities of HR professionals to meet organizational needs during various stages of an organization's life cycle.
- Analyze the financial and budget implications of the HR function within organizations to position HR professionals as strategic organizational partners.
- Create strategies in which HR policies, procedures, and communication align with strategic organizational priorities to equip HR professionals to function as effective change agents.
- Evaluate HR policies and practices based on current legal and ethical issues in HR and the organization's domestic and global goals.

Master of Science in Strategic Human Resources with a Concentration in Human Resources Employment Relations

The Human Resource Employment Relations master's degree concentration is offered on campus at the University of Denver in the evenings, online, or in a combination of both, to meet the needs of busy adults.

Human Resources plays an important role in encouraging respectful employee-employer relationships, which lead to organizational success. Human Resources can also improve employee retention with ethical treatment of employees in terms of compensation, total benefits, achievement of organizational goals, and realistic expectations of performance. All of these functions must operate under laws and regulations that are interpreted and applied appropriately to both employee and organization.

The Strategic Human Resources program provides strategic skills in development, operations, and employment relations, and the integral skills needed to succeed in a 21st-century HR marketplace. Human resources professionals have a unique role and responsibility in organizations to align aspirations and talents of employees with the needs of the organization, in the important contexts of the organizational business strategy, organizational culture, and within the life cycle of the organization. This program provides courses that provide the students tools for this alignment while including human resources practices, ethical consideration, and global implications. Last, this program is designed to teach the students how to learn; HR professionals are required to be lifelong learners due to the constantly changing nature of HR. The Strategic Human Resources master's degree program provides a comprehensive analysis of the HR profession and positions students for career advancement.

This degree prepares students to do the following:

- Analyze the typical phases of an employee experience while employed by an organization.
- Evaluate the compensation considerations for employees based on productivity, current legal and ethical issues in HR and the organization's domestic and global strategic goals.

- Analyze total benefits as a function of organizational goals, employee performance and retention, and budgeting.
- Identify, locate, and interpret laws and regulations relevant to the organization and the situation.

Master of Science in Strategic Human Resources with a Concentration in Human Resources Management and Development

The Human Resource Management and Development master's degree concentration is offered on campus at the University of Denver in the evenings, online, or in a combination of both, to meet the needs of busy adults.

Organizations experience various challenges related to overseeing employees, dealing with change, and reacting to various organizational needs. In the Management and Development concentration, students will explore strategies and create plans that examine HR roles and responsibilities at different stages of change. Students will also learn to manage the interventions, compensation, and benefits issues that accompany that change. Throughout the HR change process, consulting methods can be used to ensure organizational objectives are met. Additionally, students learn to apply business strategy through the development of talent management programs.

The Strategic Human Resources program provides strategic skills in development, operations, and employment relations, and the integral skills needed to succeed in a 21st century HR marketplace. Human resources professionals have a unique role and responsibility in organizations to align aspirations and talents of employees with the needs of the organization, in the important contexts of the organizational business strategy, organizational culture, and within the life cycle of the organization. This program provides courses that provide the students tools for this alignment while including human resources practices, ethical consideration, and global implications. Last, this program is designed teach the students how to learn; HR professionals are required to be lifelong learners due to the constantly changing nature of HR. The Strategic Human Resources master's degree program provides a comprehensive analysis of the HR profession and positions students for career advancement.

This degree prepares students to do the following:

- Create an organizational change plan that encompasses HR strategies including leadership, teams, managing change and communication.
- Analyze consulting methods used by human resource departments to influence achievement of organizational objectives.
- Examine the business life cycle phases and provide analysis on interventions, compensation, and benefits within an organization.
- Compare and contrast stages of change in an organization to provide HR strategies for managing each of these stages.
- Differentiate strategies comparing HR-led initiatives to organization-led initiatives that include HR as a key team member.

Master of Science in Strategic Human Resources with a Concentration in Human Resources Operations

The Human Resources Operations master's degree concentration is offered on campus at the University of Denver in the evenings, online, or in a combination of both, to meet the needs of busy adults.

Organizations operate differently depending on size, scope, mission, and sector. One common denominator, however, is the need for an organization to recruit, develop, utilize, and retain talented employees. The Human Resources Operations master's degree concentration explores the impact of HR Analytics as they relate to effective HR strategy. Students use a variety of models and tools including descriptive and predictive analysis, hiring needs, and compensation structures to inform human capital investments and organizational strategies. Local, national, and global implications and ethics are considered when determining the measures to develop employees with respect to diversity, inclusiveness, and accessibility for training and education.

The Strategic Human Resources program provides strategic skills in development, operations, and employment relations, and the integral skills needed to succeed in a 21st-century HR marketplace. Human resources professionals have a unique role and responsibility in organizations to align aspirations and talents of employees with the needs of the organization, in the important contexts of the organizational business strategy, organizational culture, and within the life cycle of the organization. This program provides courses that provide the students tools for this alignment while including human resources practices, ethical consideration, and global implications. Last, this program is designed teach the students how to learn; HR professionals are required to be lifelong learners due to the constantly changing nature of HR. The Strategic Human Resources master's degree program provides a comprehensive analysis of the HR profession and positions students for career advancement.

This degree prepares students to do the following:

- Evaluate the essential principles for developing, utilizing and retaining human resources.
- Analyze the ethical, diversity, and global implications for how information is selected, vetted and presented.
- Evaluate various organizational functions using descriptive and predictive analysis including risk analysis, compensation evaluations and cost, employee turnover and hiring needs.
- Compare and contrast organizational types and provide options supporting a variety of human capital investments to enhance the organization.

Master of Science in Strategic Human Resources with a Concentration in Learning and Development

The Human Resource Learning and Development master's degree concentration is offered entirely online to meet the needs of busy adults.

The Learning and Development concentration is designed for early and mid-career learning and development professionals looking to excel as internal or external consultants in a variety of organizational settings and across platforms. This program prepares students in three complementary areas: 1) a strong foundation in the distinct ways adults learn; 2) exposure to and utilization of diverse instructional technologies and strategies; and, 3) advanced facilitation and communication skills. Students acquire advanced knowledge of how adults process information and the specific skills required to meet adult learning needs. Blending traditional training strategies with the latest multi media technologies and guided by practitioner-faculty, students learn through application by designing and executing projects from start to finish, including needs assessment, design, delivery, implementation, and evaluation. Additionally, students develop advanced communication skills to work with individuals and teams in increasingly global workplaces using multiple modalities.

The Strategic Human Resources program provides strategic skills in development, operations, and employment relations, and the integral skills needed to succeed in a 21st-century HR marketplace. Human resources professionals have a unique role and responsibility in organizations to align aspirations and talents of employees with the needs of the organization, in the important contexts of the organizational business strategy, organizational culture, and within the life cycle of the organization. This program provides courses that provide the students tools for this alignment while including human resources practices, ethical consideration, and global implications. Last, this program is designed to teach the students how to learn; HR professionals are required to be lifelong learners due to the constantly changing nature of HR. The Strategic Human Resources master's degree program provides a comprehensive analysis of the HR profession and positions students for career advancement.

This degree prepares students to do the following:

- Design and execute projects from needs assessment through design, delivery, implementation, and evaluation.
- Analyze adult learning theories, including their key components, contributions, challenges, limits, and new directions in order to assess how to meet organizational needs.
- Identify, analyze, choose, and defend best instructional strategies and techniques to achieve learning objectives.
- Develop advanced facilitation and communication skills to demonstrate the ability to respond appropriately to varied audiences with diverse needs and across platforms.
- Evaluate and communicate impact of projects using most relevant metrics and analytics.

Master of Science in Strategic Human Resources with a Concentration in Human Capital in Organizations

The Human Capital in Organizations master's degree concentration is offered entirely online to meet the needs of busy adults.

The concentration in Human Capital in Organizations prepares students to ethically develop and maintain human capital while learning the best practices to do so. Students will learn to determine, cultivate, and maintain the symbiotic relationship between individuals and the organizations in which they work and lead. Strategic human capital can be a key element of a successful organization. Students will learn to innovate, maximize organizational and individual success, and master the process of developing and retaining employees to engage and achieve objectives.

Led by instructors who work in the fields in which they teach, classes introduce students to innovative and creative approaches to structuring and sustaining the development of human capital. Students explore knowledge and information management, communication tactics, vertical and horizontal partnerships, and organizational learning to promote the successful development of capital. Students will define the attributes, challenges, and advantages of human capital and strategies for leveraging each while integrating personal and organizational achievement.

This degree prepares students to do the following:

- Analyze organizational partnerships both vertically and horizontally.
- Create a strategy for leveraging the attributes, challenges, and advantages of human capital.
- Critique the theories and processes used for integrating knowledge management and organizational learning as a concept for enhancing personal and organizational success.
- Evaluate the opportunities, challenges and options to have employees participate in decision making through the use of various techniques.
- Assess best practices in ethically developing and maintaining human capital.

Master of Science in Strategic Human Resources with a Concentration in Advancing Diversity, Equity, and Inclusion in Organizations

The Advancing Diversity, Equity and Inclusion in Organizations master's degree concentration is offered on campus at the University of Denver in the evenings, online, or in a combination of both, to meet the needs of busy adults.

Advancing diversity, equity, and inclusion is critical to achieving organizational goals, positioning organizations for success in today's world, and creating environments where everyone has the opportunity to thrive. In this master's degree concentration, you will gain skills that are crucial for advancing equity as an integrated part of organizational strategy while developing solutions that meaningfully leverage diversity to create a culture of belonging. Learn about the historical, cultural, and economic factors that shape identity and apply appropriate tools and techniques to help organizations achieve their vision for change as it relates to diversity, equity, and inclusion practices.

The Strategic Human Resources program provides strategic skills in development, operations, and employment relations, and the integral skills needed to succeed in a 21st-century HR marketplace. Human resources professionals have a unique role and responsibility in organizations to align aspirations and talents of employees with the needs of the organization, in the important contexts of the organizational business strategy, organizational culture, and within the life cycle of the organization. This program provides courses that provide the students tools for this alignment while including human resources practices, ethical consideration, and global implications. Last, this program is designed to teach the students how to learn; HR professionals are required to be lifelong learners due to the constantly changing nature of HR. The Strategic Human Resources master's degree program provides a comprehensive analysis of the HR profession and positions students for career advancement.

This degree prepares students to:

- Assess the influence of historical, social, cultural, and economic factors in shaping one's identity and conceptions of diversity, equity, and inclusion practices.
- Integrate an understanding of social and cultural difference, perspective-taking, and empathy to better inform interpersonal communication and problem-solving strategies.
- Develop practices that advance equity as an integrated component of organizational strategy.
- Design solutions that meaningfully leverage diversity to achieve organizational goals and cultivate a culture of belonging across different organizational settings.
- Apply change models, tools and techniques to successfully achieve a vision for change.

Certificate in Strategic Human Resources with a Concentration in Human Resources Employment Relations

The graduate certificate in Human Resource Employment Relations is offered on campus at the University of Denver in the evenings, online, or in a combination of both, to meet the needs of busy adults.

Human Resources plays an important role in encouraging respectful employee-employer relationships, which lead to organizational success. Human resources can also improve employee retention with ethical treatment of employees in terms of compensation, total benefits, achievement of organizational goals, and realistic expectations of performance. All of these functions must operate under laws and regulations that are interpreted and applied appropriately to both employee and organization. The Certificate in Strategic Human Resources with a concentration in Human Resources Employment Relations will help HR professionals expand their skill set and provide transferable knowledge they can apply today. Students will also gain additional knowledge in strategic human resources through elective coursework.

The Strategic Human Resources program offers innovative, career relevant graduate certificate courses from compensation to information systems, decision-making to ethics as they each relate to HR. Certificate students can expect a challenging program of study, as they learn to implement strategy for organizational success.

Credits earned through this graduate certificate may apply toward a master's degree in Strategic Human Resources.

Certificate in Strategic Human Resources with a Concentration in Human Resource Management and Development

The graduate certificate in Human Resource Management and Development is offered on campus at the University of Denver in the evenings, online, or in a combination of both, to meet the needs of busy adults and will help HR professionals expand their skill set and provide transferable knowledge they can apply today. Certificate students learn to apply business strategy through the development of talent management programs, in addition to how to evaluate, diagnose, and solve organizational change and issues in HR. Students will also gain additional knowledge in strategic human resources through elective coursework.

Organizations experience various challenges related to overseeing employees, dealing with change, and reacting to various organizational needs. In the Management and Development certificate, students will explore strategies and create plans that examine HR roles and responsibilities at different stages of change. Students will also learn to manage the interventions, compensation, and benefits issues that accompany that change. Throughout the HR change process, consulting methods can be used to ensure organizational objectives are met. Additionally, students learn to apply business strategy through the development of talent management programs. This certificate will help HR professionals expand their skill set and learn to how to evaluate, diagnose, and solve organizational change and issues in HR. Students will also gain additional knowledge in strategic human resources through elective coursework.

Credits earned through this graduate certificate may apply toward a master's degree in Strategic Human Resources.

Certificate in Strategic Human Resources with a Concentration in Human Resources Operations

The graduate certificate in Human Resources Operations is offered on campus at the University of Denver in the evenings, online, or in a combination of both, to meet the needs of busy adults.

Organizations operate differently depending on size, scope, mission, and sector. One common denominator, however, is the need for an organization to recruit, develop, utilize, and retain talented employees. The Human Resources Operations certificate explores the impact of HR Analytics as they relate to effective HR strategy. Students use a variety of models and tools including descriptive and predictive analysis, hiring needs, and compensation structures to inform human capital investments and organizational strategies. Local, national, and global implications and ethics are considered when determining the measures to develop employees with respect to diversity, inclusiveness, and accessibility for training and education. Students will also gain additional knowledge in strategic human resources through elective coursework.

Certificate students are effectively prepared to face the advanced challenges of human resources with implementing descriptive and predictive analytics, while at the global level from a strategic, competent perspective with each election, world event, and restructuring. Human resources professionals with several years of experience who are looking to challenge themselves and become more marketable by learning about the international marketplace will benefit from this graduate certificate. Human resources analytics and the ability to assess return on investment of new programs is emerging in importance, and certificate students will learn about how all these relate to organizational and HR strategy.

Credits earned through this graduate certificate may apply toward a master's degree in Strategic Human Resources.

SPECIALIZED GRADUATE CERTIFICATE IN HUMAN RESOURCES EMPLOYMENT RELATIONS

The specialized graduate certificate in Human Resource Employment Relations is offered on campus at the University of Denver in the evenings, online, or in a combination of both, to meet the needs of busy adults.

Human Resources plays an important role in encouraging respectful employee-employer relationships, which lead to organizational success. Human resources can also improve employee retention with ethical treatment of employees in terms of compensation, total benefits, achievement of organizational goals, and realistic expectations of performance. All of these functions must operate under laws and regulations that are interpreted and applied appropriately to both employee and organization. This specialized graduate certificate in Human Resources Employment Relations will help HR professionals learn to create a respectful, productive and lawful work environment, expand their skill set, and provide transferable knowledge they can apply today.

SPECIALIZED GRADUATE CERTIFICATE IN HUMAN RESOURCE MANAGEMENT AND DEVELOPMENT

The specialized graduate certificate in Human Resource Management and Development is offered on campus at the University of Denver in the evenings, online, or in a combination of both, to meet the needs of busy adults.

Organizations experience various challenges related to overseeing employees, dealing with change, and reacting to various organizational needs. In the Management and Development specialized graduate certificate, students will explore strategies and create plans that examine HR roles and responsibilities at different stages of change. Students will also learn to manage the interventions, compensation, and benefits issues that accompany that change. Throughout the HR change process, consulting methods can be used to ensure organizational objectives are met. Additionally, students learn to apply business strategy through the development of talent management programs. This certificate will help HR professionals expand their skill set and learn how to evaluate, diagnose, and solve organizational change and issues in HR.

SPECIALIZED GRADUATE CERTIFICATE IN HUMAN RESOURCES OPERATIONS

The specialized graduate certificate in Human Resources Operations is offered on campus at the University of Denver in the evenings, online, or in a combination of both, to meet the needs of busy adults.

Organizations operate differently depending on size, scope, mission, and sector. One common denominator, however, is the need for an organization to recruit, develop, utilize, and retain talented employees. In the Human Resources Operations specialized graduate certificate, students will explore the impact of HR Analytics as they relate to effective HR strategy. Students use a variety of models and tools including descriptive and predictive analysis, hiring needs, and compensation structures to inform human capital investments and organizational strategies. Local, national, and global implications and ethics are considered when determining the measures to develop employees with respect to diversity, inclusiveness, and accessibility for training and education.

Certificate students are effectively prepared to face the advanced challenges of human resources with implementing descriptive and predictive analytics, while at the global level from a strategic, competent perspective with each election, world event, and restructuring. Human resources professionals with several years of experience who are looking to challenge themselves and become more marketable by learning about the

international marketplace will benefit from this graduate certificate. Human resources analytics and the ability to assess return on investment of new programs is emerging in importance, and certificate students will learn about how all these relate to organizational and HR strategy.

Master's Degree Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

HRA 4130 Finance for HR Professionals (4 Credits)

It is essential for Human Resource professionals to have business acumen as a competency in order to be perceived as valuable business partners.

This course addresses financial oversight and budget skills and aims to increase students' knowledge of financial statements, cash flow, operating budget, cost-benefit analysis, and capital budgeting. The course will address financial reports, financial ratios, analysis and measurement tools, and ethical situations as a means to increase the student's business acumen. In addition, the course focuses on understanding how those financial reports influence human capital decisions.

HRA 4140 Principles and Practice of Human Resources (4 Credits)

This course offers an introduction to HR as a professional field of study, and discusses how HR fits into the workplace. The course presents theories and issues in the HR field, and it defines the HR practitioner as a change agent. The course places HR management in the context of organizational strategy and policy. And it defines the core competencies of HR professionals including recruitment, selection, and placement; job classifications and wage and benefits; employee relations, supervision, counseling, discipline, and employment law.

HRA 4150 Human Resources Across Organizations (4 Credits)

This course prepares HR professionals to work in a number of organizational settings and sectors during their careers. Students will explore how organizations may differ in legal structures, HR models, governmental oversight, records access, type and size, compensation processes, and benefits. Students will also assess how HR practices integrate with organizational strategy and mission to ensure a clear linkage to stated goals and objectives.

HRA 4160 Human Resources in a Global Economy (4 Credits)

In this course, students will explore the proprietorships, partnerships, corporations, nonprofits, multinational corporations, strategic alliances, regulatory agencies, and public organizations that cross sector and national boundaries from an HR impact perspective.

HRA 4170 The Inclusive Organization (4 Credits)

Employees are coming into organizations with differences in race, ethnicity, gender, age, religion, sexual orientation, ability, and other aspects of diversity. How can employees, regardless of level or function, contribute to a more inclusive environment that creates space and psychological safety for everyone? In this class, students will come to a nuanced and comprehensive understanding of what inclusion is, what inclusive practices look like, and what it takes to implement them at the personal, group, and organizational levels.

HRA 4180 Organizational Politics and the HR Professional (4 Credits)

Description: Organizational politics may impact programs developed by HR professionals when decisions are made to further individual interest over the interests of others. Despite the inclusion of best practices in recommendations from HR, political reasons, agendas, or actions may drive decision-making, rather than the benefit of employees. This course examines why and how politics may enter HR decision-making, assesses the merits of strategies to navigate organizational politics, and identifies links between motivation and leadership.

HRA 4230 Consulting and Human Resource Applications (4 Credits)

HR professionals often serve in a consulting role, both as internal and external consultants. This course includes models, tools, and concepts to build effective relationships with key stakeholders; identify, analyze, and diagnose organizational issues; develop and implement value-added solutions; effectively manage the change process; and measure/monitor outcomes. Students utilize a consulting model approach to turn strategy into action.

HRA 4240 Human Resources Technology Solutions (4 Credits)

Technological advances have had a major impact on the use of information for managing human resource functions within both large and small organizations. The collection, storage, and analysis of human resources data is an important element of all human resources systems. Students will examine how information is utilized in the functional areas of human resources. Students will also explore the fundamentals of a human resources information system (HRIS) and best practices for implementation of HRIS. Finally, students will apply needs analysis to recommend an HRIS to an organization.

HRA 4250 Integrated Talent Management (4 Credits)

Organizational value depends on developing, utilizing, and retaining human resources. This course examines the importance of demonstrating that value along with what is needed to acquire, hire, and retain talented human resources. This includes workforce planning and forecasting, competency modeling, talent acquisition, onboarding and career development, succession planning, and developing models. Students will examine how political, economic, and social systems can lead to new policies and practices that affect talent management strategies, along with ethical considerations and inclusivity.

HRA 4260 HR Analytics and Research (4 Credits)

This course reviews HR metrics, quantitative techniques, and analysis. Students will examine HR research and consider a process to develop practical questions for HR use. Quantitative skills for modeling, spreadsheet analysis, process mapping, and workforce management reporting are developed. Human resource information systems (HRIS) and their role in supporting strategic decision making are examined and evaluated. #Preferred prerequisite: HRA 4240.

HRA 4270 Value and Impact of HR Interventions (4 Credits)

In this course, students will determine the long-term and short-term impact of interventions, especially looking at a cost-benefit analysis. The object is to have a practical strategy to provide decision makers the data for human capital investments support.

HRA 4500 Organizational Leadership, Team Effectiveness, and Communications (4 Credits)

In the 21st Century, HR professionals are organizational leaders who are often tasked with building teams, leading change and ensuring strong internal communications. This survey course explores a variety of topics including how to champion organizational change, manage organizational crisis, build effective teams, and develop strategic communications. A critical tool also introduced in this course, supporting the role of HR as a strategic partner, is the balanced scorecard. This enables HR leaders to align deliverables in finance, internal processes, customer and learning and growth measures. This broad overview prepares HR professionals to actively engage in the business dialogue.

HRA 4510 Organizational Lifecycles and HR Implications (4 Credits)

This course examines the role of HR at various phases of an organization's lifecycle taking into account mission, vision, and values. Moving from start-up to mature organizations, the course addresses HR responses to compensation, benefits, and HR structure, and addresses how HR can support and facilitate transitions from one lifecycle phase to the next. Students will explore short and long-term strategies that match HR structures and programs to needs of organizations in transition, including change management, crisis management, talent management, total rewards, and organizational communication strategies.

HRA 4520 HR Change Management (4 Credits)

Human Resources play an essential role in planning, implementing, and sustaining organizational change. This course examines the role of HR professionals in leading and advising on organizational change, including how to apply HR management practices to change management plans, and aligning total compensation and performance management practices to support the goals of change initiatives.

HRA 4600 Human Relations in Organizations (4 Credits)

The goal of this course is to examine how human relations are integral to creating systems and communication channels that support healthy employee relations and create positive workplace cultures. This course will equip human resources professionals to integrate positive human relations as a foundational element of human resources management responsibilities such as recruitment and staffing, legal and ethical considerations, onboarding, training, professional development, compensation and benefits, employee well-being, and employee relations. This course also examines the integration of and differences between human resources management, organizational development, and human relations.

HRA 4610 Employee Compensation (4 Credits)

This course explores how to develop and manage employee compensation systems with emphasis on motivational theory, individual and group performance, key elements of compensation-system design, external competitiveness, internal equity, compliance, and innovative reward strategies. Students will explore the practical and strategic purpose of compensation systems from a historical perspective as well as in the context of the social and business issues of today's world economy.

HRA 4620 Employment Total Benefits (4 Credits)

This course develops historical context for employee benefits and the motivational implications. It reviews the wide range of potential benefits and discusses "total rewards" options. The course examines pension plans, social security, ERISA, major benefits legislation, health insurance, flex spending, and budget implications.

HRA 4630 Employment Law (4 Credits)

This course explores current legal issues that affect the HR function in organizations. These include EEO, sexual harassment, managing risk, discrimination, wage and hour, at-will employment, and current Supreme Court decisions. These legal issues will be examined from both the employee and the employer viewpoint. The course will also address issues related to global expansion and international employment laws.

HRA 4701 Topics in Human Resources (4 Credits)

The content of this course varies each time it is offered. The topics may include time-sensitive issues in the field of strategic human resource management, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

HRA 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

HRA 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HRA 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HRA 4910 Research Practices and Applications (4 Credits)

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

HRA 4980 Internship (0-4 Credits)

The Strategic Human Resource Management Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all SHRM students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences.

HRA 4985 Industry Innovation Project (1-4 Credits)

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

HRA 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only may be used by degree candidates. Prerequisite: Admitted degree candidate.

Courses

HRA 4130 Finance for HR Professionals (4 Credits)

It is essential for Human Resource professionals to have business acumen as a competency in order to be perceived as valuable business partners. This course addresses financial oversight and budget skills and aims to increase students' knowledge of financial statements, cash flow, operating budget, cost-benefit analysis, and capital budgeting. The course will address financial reports, financial ratios, analysis and measurement tools, and ethical situations as a means to increase the student's business acumen. In addition, the course focuses on understanding how those financial reports influence human capital decisions.

HRA 4140 Principles and Practice of Human Resources (4 Credits)

This course offers an introduction to HR as a professional field of study, and discusses how HR fits into the workplace. The course presents theories and issues in the HR field, and it defines the HR practitioner as a change agent. The course places HR management in the context of organizational strategy and policy. And it defines the core competencies of HR professionals including recruitment, selection, and placement; job classifications and wage and benefits; employee relations, supervision, counseling, discipline, and employment law.

HRA 4150 Human Resources Across Organizations (4 Credits)

This course prepares HR professionals to work in a number of organizational settings and sectors during their careers. Students will explore how organizations may differ in legal structures, HR models, governmental oversight, records access, type and size, compensation processes, and benefits. Students will also assess how HR practices integrate with organizational strategy and mission to ensure a clear linkage to stated goals and objectives.

HRA 4160 Human Resources in a Global Economy (4 Credits)

In this course, students will explore the proprietorships, partnerships, corporations, nonprofits, multinational corporations, strategic alliances, regulatory agencies, and public organizations that cross sector and national boundaries from an HR impact perspective.

HRA 4170 The Inclusive Organization (4 Credits)

Employees are coming into organizations with differences in race, ethnicity, gender, age, religion, sexual orientation, ability, and other aspects of diversity. How can employees, regardless of level or function, contribute to a more inclusive environment that creates space and psychological safety for everyone? In this class, students will come to a nuanced and comprehensive understanding of what inclusion is, what inclusive practices look like, and what it takes to implement them at the personal, group, and organizational levels.

HRA 4180 Organizational Politics and the HR Professional (4 Credits)

Description: Organizational politics may impact programs developed by HR professionals when decisions are made to further individual interest over the interests of others. Despite the inclusion of best practices in recommendations from HR, political reasons, agendas, or actions may drive decision-making, rather than the benefit of employees. This course examines why and how politics may enter HR decision-making, assesses the merits of strategies to navigate organizational politics, and identifies links between motivation and leadership.

HRA 4230 Consulting and Human Resource Applications (4 Credits)

HR professionals often serve in a consulting role, both as internal and external consultants. This course includes models, tools, and concepts to build effective relationships with key stakeholders; identify, analyze, and diagnose organizational issues; develop and implement value-added solutions; effectively manage the change process; and measure/monitor outcomes. Students utilize a consulting model approach to turn strategy into action.

HRA 4240 Human Resources Technology Solutions (4 Credits)

Technological advances have had a major impact on the use of information for managing human resource functions within both large and small organizations. The collection, storage, and analysis of human resources data is an important element of all human resources systems. Students will examine how information is utilized in the functional areas of human resources. Students will also explore the fundamentals of a human resources information system (HRIS) and best practices for implementation of HRIS. Finally, students will apply needs analysis to recommend an HRIS to an organization.

HRA 4250 Integrated Talent Management (4 Credits)

Organizational value depends on developing, utilizing, and retaining human resources. This course examines the importance of demonstrating that value along with what is needed to acquire, hire, and retain talented human resources. This includes workforce planning and forecasting, competency modeling, talent acquisition, onboarding and career development, succession planning, and developing models. Students will examine how political, economic, and social systems can lead to new policies and practices that affect talent management strategies, along with ethical considerations and inclusivity.

HRA 4260 HR Analytics and Research (4 Credits)

This course reviews HR metrics, quantitative techniques, and analysis. Students will examine HR research and consider a process to develop practical questions for HR use. Quantitative skills for modeling, spreadsheet analysis, process mapping, and workforce management reporting are developed. Human resource information systems (HRIS) and their role in supporting strategic decision making are examined and evaluated. #Preferred prerequisite: HRA 4240.

HRA 4270 Value and Impact of HR Interventions (4 Credits)

In this course, students will determine the long-term and short-term impact of interventions, especially looking at a cost-benefit analysis. The object is to have a practical strategy to provide decision makers the data for human capital investments support.

HRA 4500 Organizational Leadership, Team Effectiveness, and Communications (4 Credits)

In the 21st Century, HR professionals are organizational leaders who are often tasked with building teams, leading change and ensuring strong internal communications. This survey course explores a variety of topics including how to champion organizational change, manage organizational crisis, build effective teams, and develop strategic communications. A critical tool also introduced in this course, supporting the role of HR as a strategic partner, is the balanced scorecard. This enables HR leaders to align deliverables in finance, internal processes, customer and learning and growth measures. This broad overview prepares HR professionals to actively engage in the business dialogue.

HRA 4510 Organizational Lifecycles and HR Implications (4 Credits)

This course examines the role of HR at various phases of an organization's lifecycle taking into account mission, vision, and values. Moving from start-up to mature organizations, the course addresses HR responses to compensation, benefits, and HR structure, and addresses how HR can support and facilitate transitions from one lifecycle phase to the next. Students will explore short and long-term strategies that match HR structures and programs to needs of organizations in transition, including change management, crisis management, talent management, total rewards, and organizational communication strategies.

HRA 4520 HR Change Management (4 Credits)

Human Resources play an essential role in planning, implementing, and sustaining organizational change. This course examines the role of HR professionals in leading and advising on organizational change, including how to apply HR management practices to change management plans, and aligning total compensation and performance management practices to support the goals of change initiatives.

HRA 4600 Human Relations in Organizations (4 Credits)

The goal of this course is to examine how human relations are integral to creating systems and communication channels that support healthy employee relations and create positive workplace cultures. This course will equip human resources professionals to integrate positive human relations as a foundational element of human resources management responsibilities such as recruitment and staffing, legal and ethical considerations, onboarding, training, professional development, compensation and benefits, employee well-being, and employee relations. This course also examines the integration of and differences between human resources management, organizational development, and human relations.

HRA 4610 Employee Compensation (4 Credits)

This course explores how to develop and manage employee compensation systems with emphasis on motivational theory, individual and group performance, key elements of compensation-system design, external competitiveness, internal equity, compliance, and innovative reward strategies. Students will explore the practical and strategic purpose of compensation systems from a historical perspective as well as in the context of the social and business issues of today's world economy.

HRA 4620 Employment Total Benefits (4 Credits)

This course develops historical context for employee benefits and the motivational implications. It reviews the wide range of potential benefits and discusses "total rewards" options. The course examines pension plans, social security, ERISA, major benefits legislation, health insurance, flex spending, and budget implications.

HRA 4630 Employment Law (4 Credits)

This course explores current legal issues that affect the HR function in organizations. These include EEO, sexual harassment, managing risk, discrimination, wage and hour, at-will employment, and current Supreme Court decisions. These legal issues will be examined from both the employee and the employer viewpoint. The course will also address issues related to global expansion and international employment laws.

HRA 4701 Topics in Human Resources (4 Credits)

The content of this course varies each time it is offered. The topics may include time-sensitive issues in the field of strategic human resource management, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

HRA 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

HRA 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HRA 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HRA 4910 Research Practices and Applications (4 Credits)

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

HRA 4980 Internship (0-4 Credits)

The Strategic Human Resource Management Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all SHRM students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences.

HRA 4985 Industry Innovation Project (1-4 Credits)

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

HRA 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only may be used by degree candidates. Prerequisite: Admitted degree candidate.

Supply Chain Management

Office: University College Student Support Center

Master of Science in supply chain management

Supply chains are everywhere, from the local store to a large multinational electronics manufacturer operating halfway across the world. From cradle to grave, it is the supply chain management system that links all of the numerous stakeholders into one strategic plan for us as customers in markets.

Supply Chains are more than trucks and warehouses, but also includes product design, sourcing, forecasting, planning, manufacturing, distribution, logistics, retailing, and material disposal and reuse. Demand for supply chain professionals is growing at the highest levels of corporations across the

world due to their role as a problem solver for consumer and business products and services. The most successful manufacturers (e.g., Apple and Samsung) and retailers (e.g., Wal-Mart and Amazon) are winning in markets as a result of their supply chain strategies. Especially as markets change rapidly, supply chain management professionals will be most important to a company's success to solve problems and create opportunities.

The Master of Science in Supply Chain Management at the University of Denver is based on principles of industrial engineering, structured problem-solving techniques and analytics tools that are the skills that today's employers are seeking in various types of supply chain management, management consulting, international business and other occupational categories at the mid to senior levels of an organization. The Master's Program is a 48-credit-hour program that focuses on a foundation of industrial engineering, supply chain analytics, and general business skills to create professionals to succeed in a global operating environment. Upon completion of the degree, students will have these skills needed for the 21st century and will have worked on live projects within industry that will take the concepts to practice. Students in supply chain management also develop strong structured problem-solving skills that are essential in any occupational setting.

This degree prepares students to do the following:

- Appraise their role in the market system through articulating the six pillars of supply chain management and diagramming the fundamental processes of Supply Chain Management.
- Apply the six pillars of supply chain management to realistic problem scenarios to develop strategies to diagnose and address future supply chain problems.
- Analyze supply chains using a multi-dimensional perspective of people, processes and technology, including the use of cutting edge analytics tools.
- Solve supply chain problems using nonlinear processes that addresses connections among supply chain pillars, market trends, and business best practices.
- Apply best and emerging 21st century practices to address an authentic supply chain problem in a work setting.
- Exhibit a managerial/executive level combination of abilities in critical thinking, quantitative and qualitative, innovation and structured problem solving, and emotional intelligence and international culture knowledge.
- Achieve differentiation in balance between functional/technical and leadership/entrepreneurship skills as a leader.

GRADUATE CERTIFICATE IN SUPPLY CHAIN MANAGEMENT

The graduate certificate in Supply Chain Management was developed in partnership with the Transportation Institute at the University of Denver and Daniels College of Business. The purpose of a Supply Chain Management certificate is to provide a student with a baseline of knowledge, skills, and abilities to succeed in various types of supply chain management roles at the entry levels of an organization. It is designed as a four-course program, starting with the basics of an end-to-end supply chain system, and then diving deeper into the planning and execution aspects of a supply chain, with a practicum to focus on specific area relating to a student's interest. Students will also gain additional skills and knowledge in supply chain management through elective coursework.

This degree prepares students to do the following:

- Articulate the six pillars of supply chain management to diagram the process to appraise their role in the market system.
- Apply the six pillars of supply chain management to realistic problem scenarios to develop strategies to diagnose and address future supply chain problems.
- Assess supply chains using a multidimensional perspective that includes connections between supply chain processes and fundamental business topics such as financial management and technology.
- Solve supply chain problems using a nonlinear process that addresses connections between supply chain pillars, market trends, and business best practices.
- Apply best practices to address an authentic supply chain problem in a work setting.

SPECIALIZED GRADUATE CERTIFICATE IN SUPPLY CHAIN MANAGEMENT

The specialized graduate certificate in Supply Chain Management provides a student with a baseline of knowledge, skills, and abilities to succeed in various types of supply chain management roles at the entry levels of an organization. The certificate is designed as a four-course program, starting with the basics of an end-to-end supply chain system, and then diving deeper into the planning and execution aspects of a supply chain, with a practicum to focus on a specific area relating to a student's interest. At the end, the student will be able to successfully move forward in his/her career in a chosen field based on theoretical, strategic, and practical knowledge, and applied research.

MASTER OF SCIENCE IN SUPPLY CHAIN MANAGEMENT

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each subscore
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Certificate Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Minimum number of credits required: 48

Students will work with their Academic Advisor to determine the best set of courses to choose for their electives.

In University College graduate-level programs, grades of C or greater are considered passing, whereas grades of C- or lower are considered failing. Courses with a grade of C- or below will not count toward meeting degree or certificate requirements. Also, no more than one-fourth of the hours accepted toward the degree be grades of "C". A cumulative and program grade-point average of 3.0 or better must be maintained at all times.

|-------------------------|---|-----------|
| Required Courses | | |
| TRAN 4100 | Fundamentals of Supply Chain Management | 4 |
| TRAN 4110 | Fundamentals of Supply Chain Planning | 4 |
| TRAN 4120 | Fundamentals of Supply Chain Execution | 4 |
| TRAN 4130 | Structured Problem Solving in Supply Chain Management | 4 |
| TRAN 4140 | Supply Chain Technology and Systems | 4 |
| TRAN 4150 | Supply Chain Cost Management | 4 |
| Total Credits | | 24 |

TRAN 4100 Fundamentals of Supply Chain Management (4 Credits)

This course will provide an overview of the basic principles of supply chain management, giving students an understanding of supply chain processes from sourcing to finished goods and customers to suppliers, identifying the six core supply chain processes and examining the role that transportation and logistics play in the supply chain. Students will learn the key operating and financial measures of supply chain management that impact the users and providers of services. Additionally, current trends in the technology of supply-chain management, including applicable global trends will be covered.

TRAN 4110 Fundamentals of Supply Chain Planning (4 Credits)

According to the Six Pillars of Supply Chain program design at the University of Denver, the system can only succeed if it acts as an integrated system. This course focuses on the first three pillars of the supply chain management system, design, source, and schedule, the steps that are taken before a product is made. Supply Chain Planning is focused on how agents in the front end of the supply chain system are centered on how to create, procure, and plan/forecast within the overall process within and across companies. Students are exposed to concepts and practical examples of how front-end activities are achieved within the overall supply chain model. The course introduces concepts and tactics in product and supply chain design, strategic sourcing, forecasting, demand planning, and supplier management. Prerequisite: TRAN 4100.

TRAN 4120 Fundamentals of Supply Chain Execution (4 Credits)

This course focuses on the last three pillars of the supply chain management system: make, deliver, and sustain. Make, or manufacturing, is the production process of the product based on the planning steps in the supply chain. Distribution focuses on what happens between the product being made, and purchased by the consumer. Sustain, the last step, is focused on how these materials can be reused in the supply chain rather than wasted. In this course, students will be able to build upon their knowledge of the front-end of the supply chain to evaluate what makes supply chain strategies successful in the marketplace. Real-life examples will be applied related to global supply chains and the changing nature of retailing, including the impact of e-commerce, to demonstrate how successful execution must follow supply chain strategies and plans for success. Prerequisite: TRAN 4100.

TRAN 4130 Structured Problem Solving in Supply Chain Management (4 Credits)

This course provides opportunities for students to apply concepts covered in the first three courses of the program to an individual project through the completion of a structured problem-solving exercise in an area of study related to the student's specific area of interest. Potential topics will either relate to one of the six pillars in the SCM model, or a specific area of interest as a special topic, such as sustainable supply chains, supply chain structure, supply chain risk management, etc. Upon completion of this course, the student will possess a deeper understanding in an area of focus related to application of the student's future interests. The student will be introduced to how this topic area can be applied in a company in a real market setting. Prerequisites: TRAN 4100, TRAN 4110, TRAN 4120.

TRAN 4140 Supply Chain Technology and Systems (4 Credits)

This course provides a fundamental definition of the role of technology and systems in supply chain management, demonstrating how "people and processes" intersect with these increasingly important tools. Students will learn how system and technology strategy can become key differentiators in the field across the six pillars of the supply chain and are required to integrate disparate suppliers and partners. Specific current and future trends will be explored, including the implications across local, national, and global systems. The focus will be related to the strategic, operational, and tactical design and execution of technology and systems related to how supply chains operate. TRAN 4100, 4110, 4120, 4130.

TRAN 4150 Supply Chain Cost Management (4 Credits)

A successful supply chain strategy must be effective not just in its material flow within the six pillars and the information flow from its systems, but its financial flow as well. Companies and their corresponding supply chains can achieve improved cost management that leads to greater top line revenue growth through improvements in financial flows achieved waste reduction, inventory carrying cost, capital investment and management and terms with suppliers and customers, to name a few. How the financial flow of the company and its supply chain is dependent on the entity's material and information flows, and vice versa. This course will provide an understanding of how these flows work in conjunction with one another, and how supply chain professionals must understand the role of financial management fundamentals in the process. Prerequisite: TRAN 4130.

TRAN 4160 Analytic Methods for Supply Chain Management (4 Credits)

Because Supply Chain Management is built off of structured problem-solving techniques across suppliers and partners requiring rapid and precise decision making, analytical methods are a requirement for success. In this course, the student will be presented with advanced techniques in quantitative analytics that are critical for today's largest companies and innovators. Upon completion of the course, the student will be familiar with how to apply these techniques under various situations across the supply chain and within the firm. Prerequisite: TRAN 4130.

TRAN 4170 Industrial Engineering and Operations Management (4 Credits)

Industrial Engineering and Operations Management is the application of engineering, logistics, finance and analytics, and structured problem-solving techniques to achieve the goals of today's global supply chains. In this course, the student will be introduced to the concept of Industrial Engineering, including critical methodologies such as Six Sigma, Lean, and the Toyota Production System. Upon completion of the course, the student will be able to apply these structured problem-solving techniques to an advanced level across the six pillars of supply chain management. Prerequisite: TRAN 4100 & Advisor approval.

TRAN 4180 Sustainability and Supply Chain Management (4 Credits)

Sustainability in Supply Chain Management is founded upon the principles of Six Sigma and Lean to not only reduce waste within the system, but also to solve some of the world's greatest challenges in relation to the environment. Through an understanding of the supply chain across the six pillars and through the use of finance, industrial engineering, logistics, and analytics, the student will be capable of defining, measuring, analyzing and solving the balance required between industry and the environment. Prerequisite: TRAN 4100 or MKTG 4380.

TRAN 4190 Import/Export Supply Chain Management (4 Credits)

Today's supply chain is global, and this means that companies must understand how to buy and sell goods across national boundaries. In this course, the strategic, operational, and tactical requirements of importing and exporting will be presented to the student in order to understand how the global supply chain operates. A specific focus will be on freight forwarding and customs requirements into and out of the U.S. territory through various ports and entry and egress. Prerequisites: TRAN 4130.

TRAN 4330 Principles of Supply Chain: Management and Technologies (4 Credits)

This course will assist students in gaining awareness, knowledge, and understanding of the distribution patterns and relationships that play a key role in determining company success. We will view perspectives within the context of the global marketplace and across both freight and passenger transportation. We will address external value chains and internal value chains; stakeholder relationship management; the supply chain and the demand chain complexities; strategies of E-business; the strategic use of IT; strategic planning to gain a competitive advantage; end-to-end supply chain visibility and the strategic use of technologies in the enterprise-wide system.

TRAN 4400 Excellence in Leadership for Transportation (2 Credits)

This course will provide an integrated exploration of current topics most important for leadership success within the transportation industry. Current best leadership practices will be reviewed, and common leadership challenges within transportation will be analyzed for successful resolution.

TRAN 4410 Executive Management Practices in Organizations (1 Credit)

This course will provide a comprehensive view of best practices for executive management in transportation workplaces. Organizational situations will be assessed from a variety of viewpoints and policies analyzed for optimal execution of strategy.

TRAN 4420 Leading with Integrity (1 Credit)

This course will explore ethical decision making and values-based leadership. Values, ethics and organizational philosophies will be assessed for best application in various corporate settings within the transportation industry.

TRAN 4430 Applied Micro Economics & Pricing (4 Credits)

The course will involve fieldwork and U.S. site visits observing and discussing the physical elements underlying the long-term and marginal economics of the firm and its pricing strategies and policies. In addition, the course will discuss basic microeconomic concepts used in the analysis of business services, including the concepts of market size; marginal, average, short-run, and long-run costs; and production levels as they relate to revenue and contribution with a focus on pricing for the firm relative to its fixed and variable costs, market share framework, and competitive issues both within the mode and between modes.

TRAN 4440 Marketing, Sales, Procurement & Customer Management Strategies (4 Credits)

Within the context of Transportation and Supply Chain, this course will explore the strategies related to the Sales and Marketing process and strategies from the seller perspective and the related perspective of Procurement from the buyer perspective. Additionally, the strategies and measures used for Customer Management will be explored including customer setup, advancing customer excellence practices, customer valuation and segmentation, and other related concepts. Further, the concepts of establishing, building, and maintaining trust will be explored as a key strategy and practice, which appears throughout each of the four main components of the course.

TRAN 4450 Legal Studies: Contracts & Regulation (2 Credits)

This course will focus on the fundamentals of creating and implementing effective contracts, whether with customers, suppliers, or labor. The contract discussion will be framed by regulatory and policy realities both in domestic and international contexts, including an understanding of federal and international laws, liability, regulations, policies, programs, and agencies impacting contracts.

TRAN 4460 Financial & Managerial Accounting (2 Credits)

This course will cover the basic theory, principles and practice of financial accounting and examine accounting statements including income and cash flow statements and balance sheets. Discussions include managerial use of accounting data useful in making investment and cost decisions, assessing cash flows, and the use of the organization resources to produce profit. Additional topics will include reading and understanding the 10-K, basic accounting standards and practices, and assessing the quality of financial information found in the accounting reports.

TRAN 4470 Financial Analysis & Capital Structures (2 Credits)

Complementing 4460, this course will use ratio analysis to determine relative performance of companies and the industry to enable management to assess operating efficiency, profitability and effective use of capital. Capital structure concepts, fixed and variable cost considerations, the use of operating and financial leverage and the concepts of business and financial risk will be discussed. The course also includes a basic review of the principle of time value of money.

TRAN 4480 Capital Decision Making and Capital Markets (2 Credits)

This course will examine the management decision process for making capital expenditures that enhance the value of the firm, cash flow estimation for capital budgeting purposes, decision models for capital budgeting, weighted average cost of capital, decisions in capital constrained situations, sensitivity analysis, and a review of the capital markets.

TRAN 4490 Global Trade & Economics (4 Credits)

This course will examine the World Trade F15 Organization and the regional trade agreements, such as NAFTA, EU, and ASEAN, with regard to their impact on North American transportation, trade, and economy overall including their relationship to account deficits and their N20; and their impact on disputes and how trade disputes are settled. In addition, the course will address the global economy and economics and its drivers, comparing and contrasting North America, China/Asia, the European Union and selected emerging economies to include impacts on global trade, such as trading patterns, outsourcing, and changing production areas.

TRAN 4701 Topics in Supply Chain (1-4 Credits)

The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of Supply Chain Management, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

TRAN 4702 Topics in Transportation Management (4 Credits)

The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of Transportation Management, new courses being piloted, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

TRAN 4710 Transportation Finance (4 Credits)

This finance course focuses on the transportation managers ability to understand and analyze financial statements. Topics covered will be the basics of major accounting statements, income and balance sheets, use of operating leverage, ratio analysis to determine relative performance of companies and the industry individual modes and across modes. An emphasis will be placed on time value of money and capital expenditure analysis and decision models for capital budgeting. Exploring markets and the sources of financial capital, securities, public and private financing will be discussed.

TRAN 4800 Advanced Concepts of Transportation & Supply Chain (2 Credits)

This course is a program-wide survey course in which each of the primary learning outcomes of the Executive Masters' program are reviewed: Leadership, Economics & Finance, Technology & Optimization, Supply Chain, Trade & Legal concerns, and more, are all explored within the context of current trends in Transportation and Supply Chain space.

TRAN 4810 Driving Innovation with Technology (4 Credits)

Innovation and change are abound in the transportation industry. This course exposes students to an array of technology trends and innovative ideas for boosting competitive advantage, predicting disruptions, and preparing for new forces emerging from GIS, the Internet of Things, machine learning, and cloud-based products. The advantages and security issues related to big data and analytics are investigated as they relate to compliance and decision making for managers and leaders. Understanding analytics helps managers and leaders identify and implement new technology in real-world applications. Students will explore what it means to have an innovation mindset and how it is applied while making decisions that maximize asset utilization and control wastage and/or redundancy.

TRAN 4820 Principles of Supply Chain Management (4 Credits)

This course will provide an overview of the basic principles of supply chain management, as well as current trends in supply chain technology and global value chains. Students will learn the six core pillars of supply chain processes and how suppliers, customers and other stakeholders are linked in these processes. The course will examine the role that transportation and logistics play in the supply chain. Students will learn the key operating and financial measures of supply chain management, apply the problem solving framework known as DMAIC (Define, Measure, Assess, Innovate, Control) to a real-world supply chain problem.

TRAN 4830 Advanced Supply Chain Management (4 Credits)

Building on foundation of Supply Chain Management from TRANS 4820, this course enables the business leader to gain a customer centric system view of supply chain management that is achieved by today's top companies. A more advanced view of the six pillars of supply chain management will be studied as it relates to a stakeholder model of both customers and suppliers. In this course, the goal is to understand how a stakeholder's (customer, supplier, partner, etc.) supply chain operates across three flows (physical, logical/system, and financial) related to a transportation provider. The goal of this course is to provide the student a process and functional understanding of supply chain management in order to achieve success from a process, financial and strategic standpoint. The course will offer particular emphasis on industrial engineering skills related to supply chain operations.

TRAN 4840 Policy and Regulatory Effects in Transportation & Supply Chain (4 Credits)

The purpose of this course is to explore how public policy and regulation manifest in transportation and supply chain systems and how companies can effectively navigate that process. Students will learn about the history of transportation and supply chain regulation and how it has changed over time. They will review how infrastructure and systems are planned, operated, and financed and what roles the public and private sectors play. Additionally, the course explores safety, security, and trade concerns, Environmental Social & Governance (ESG), and how to develop strategies for their companies to engage in the policymaking process in ways that maximize value for their enterprises.

TRAN 4850 Transportation & Supply Chain Strategies for the 21st Century (4 Credits)

Today's supply chain and transportation markets are rapidly evolving across localities and the definition of what global means. In the 21st century, supply chains will become exponentially more fluid, and transportation providers will need to understand and incorporate these changes. In this course, the 21st century supply chain expectations will be discussed from a people, process, and technology standpoint. Students will determine how transportation providers will need to respond to these changes, and how emerging technologies will be incorporated in emerging supply chain strategies and supplier/provider processes. Supply chains will become more local and global concurrently - and this course will evaluate what is required to respond successfully to these trends.

TRAN 4860 Senior Management: Executives & Issues Seminar (4 Credits)

Through the use of transportation executives in the classroom, this course will explore in-depth some of the key concepts covered during the course of the degree program, to include topics such as applied transportation finance, merger and acquisition issues, shipper transportation metrics/requirements, global freight flows to/from North America, and government/military transportation. In addition, in case studies, students will propose options for real-world challenges using knowledge and data from current events, degree program courses, case material, and guest executive presentations.

TRAN 4870 Individual Leadership Development Project (4 Credits)

This course will guide students through the process of developing and executing individualized leadership development projects to enhance specific leadership skills and goals within their current management structure or an assigned organization. Through work over the six quarters of the program, the leadership projects will provide a unique opportunity for each student to hone critical aspects of her/his leadership, which, in turn, benefits the students, their organizations, and the larger transportation, logistics, and supply chain community.

TRAN 4880 Business Planning Thesis (4 Credits)

This course will guide students through the creation of a comprehensive business development and/or productivity improvement-oriented business plan, with a preferred focus on the transportation industry, to develop a new revenue growth or new service opportunity for their organization or an assigned organization. Through work over the six quarters of the program, this project provides each student with important business planning and development skills to create an implementable business plan, which may provide tangible benefits to their sponsoring organization as well.

TRAN 4890 Global Transportation & Supply Chain Seminar (2 Credits)

This international travel seminar will build from learning objectives of the first three courses (4810, 4830, and 4850). Students will create an integrated supply chain strategy developed from principles learned in the first three courses in preparation for the international trip. Students will then relate their designed supply chain to observed operations on the trip and assess practical adjustments needed to make a real-world operation successful. Students will examine the management and operation of transportation and supply chain operations in other countries, and be able to compare and contrast them to US based operations. Students will meet with executives, government leaders and local managers of these systems to learn directly about the challenges of serving the global economy, and will learn how to recognize and navigate international cultural differences in a business setting.

TRAN 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

TRAN 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon the quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentations. Students must have acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

TRAN 4980 Internship (0-4 Credits)

The Supply Chain Management Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all SCM students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.

TRAN 4991 Independent Study (1-10 Credits)

Transportation and Supply Chain Institute

Office: Transportation and Supply Chain Institute at the University of Denver

Mail Code: University Hall, 2197 S. University Blvd. Suite 359, Denver, CO 80208

Phone: 303-871-7449

Email: du-dti@du.edu (du-iti@du.edu)

Web Site: <http://www.du.edu/transportation/> (<http://www.du.edu/transportation/>)

Master of Science in Transportation Management

The University of Denver's Transportation and Supply Chain Institute offers an MS in Transportation Management designed to prepare transportation professionals for leadership roles in the transportation, supply chain, and logistics industries, which are becoming an increasingly complicated world.

This professionally oriented degree combines a rigorous academic program one might find in an Executive MBA program, delivered by highly qualified industry practitioners and faculty with insight from a board of directors composed of transportation and supply chain industry leaders, thereby ensuring that course content remains relevant and current. Throughout the program, students learn to effectively address the wide-ranging management and business challenges facing the global transportation industry while gaining an understanding of the broad range of transportation modes, supply chain, and leadership competencies needed to meet these challenges.

The program's unique format—a week-long residency held each quarter for six consecutive quarters and a week-long domestic or international trip—allows students to continue working full-time while earning their graduate degree. It also affords students professional networking opportunities that offer significant professional advantages for the future. Upon earning a Master of Science in Transportation Management from the Transportation Institute at the University of Denver, program participants join a group of distinguished alumni who have gone on to play pivotal roles in the transportation industries.

This degree prepares students to do the following:

- Develop strategies to enhance professional and personal management skills in classroom and career settings
- Compare transportation, operational, and managerial processes in North America and internationally to make informed process-related decisions

- Solve real-world problems by applying principles from core management disciplines in transportation contexts; analyzing, evaluating, and responding to transportation challenges within and between modes; and measuring, theorizing, and assessing financial and operational management problems using quantitative methods
- Create strategies to build and actively contribute to professional networks consisting of executive cohort members, board, and alumni.

Master of Science in Transportation Management with a Concentration in Supply Chain Operations

The Transportation and Supply Chain Institute (TSCI) concentration in Supply Chain Operations prepares leaders in the Logistics and Supply Chain industries with advanced-graduate-level knowledge in Supply Chain to supplement the topics offered in the Transportation Management degree. The concentration highlights graduates' advanced knowledge in critical Supply Chain topics such as supply chain management analysis through national and international lenses.

This degree prepares students to do the following:

- Administer principles of supply chain management and solidify the ability to construct models to address supply chain challenges.
- Analyze the impact of various concepts related to modes of supply chain to both shape and respond to supply chain trends.
- Appraise the complexities of current international supply chain issues that influence the global economy and that may impact their own organizations.

Master of Science in Transportation Management Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each subscore
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Science in Transportation Management Degree Requirements

Students must complete 60 quarter hours of coursework credit.

Courses

TRAN 4100 Fundamentals of Supply Chain Management (4 Credits)

This course will provide an overview of the basic principles of supply chain management, giving students an understanding of supply chain processes from sourcing to finished goods and customers to suppliers, identifying the six core supply chain processes and examining the role that transportation and logistics play in the supply chain. Students will learn the key operating and financial measures of supply chain management that impact the users and providers of services. Additionally, current trends in the technology of supply-chain management, including applicable global trends will be covered.

TRAN 4110 Fundamentals of Supply Chain Planning (4 Credits)

According to the Six Pillars of Supply Chain program design at the University of Denver, the system can only succeed if it acts as an integrated system. This course focuses on the first three pillars of the supply chain management system, design, source, and schedule, the steps that are taken before a product is made. Supply Chain Planning is focused on how agents in the front end of the supply chain system are centered on how to create, procure, and plan/forecast within the overall process within and across companies. Students are exposed to concepts and practical examples of how front-end activities are achieved within the overall supply chain model. The course introduces concepts and tactics in product and supply chain design, strategic sourcing, forecasting, demand planning, and supplier management. Prerequisite: TRAN 4100.

TRAN 4120 Fundamentals of Supply Chain Execution (4 Credits)

This course focuses on the last three pillars of the supply chain management system: make, deliver, and sustain. Make, or manufacturing, is the production process of the product based on the planning steps in the supply chain. Distribution focuses on what happens between the product being made, and purchased by the consumer. Sustain, the last step, is focused on how these materials can be reused in the supply chain rather than wasted. In this course, students will be able to build upon their knowledge of the front-end of the supply chain to evaluate what makes supply chain strategies successful in the marketplace. Real-life examples will be applied related to global supply chains and the changing nature of retailing, including the impact of e-commerce, to demonstrate how successful execution must follow supply chain strategies and plans for success. Prerequisite: TRAN 4100.

TRAN 4130 Structured Problem Solving in Supply Chain Management (4 Credits)

This course provides opportunities for students to apply concepts covered in the first three courses of the program to an individual project through the completion of a structured problem-solving exercise in an area of study related to the student's specific area of interest. Potential topics will either relate to one of the six pillars in the SCM model, or a specific area of interest as a special topic, such as sustainable supply chains, supply chain structure, supply chain risk management, etc. Upon completion of this course, the student will possess a deeper understanding in an area of focus related to application of the student's future interests. The student will be introduced to how this topic area can be applied in a company in a real market setting. Prerequisites: TRAN 4100, TRAN 4110, TRAN 4120.

TRAN 4140 Supply Chain Technology and Systems (4 Credits)

This course provides a fundamental definition of the role of technology and systems in supply chain management, demonstrating how "people and processes" intersect with these increasingly important tools. Students will learn how system and technology strategy can become key differentiators in the field across the six pillars of the supply chain and are required to integrate disparate suppliers and partners. Specific current and future trends will be explored, including the implications across local, national, and global systems. The focus will be related to the strategic, operational, and tactical design and execution of technology and systems related to how supply chains operate. TRAN 4100, 4110, 4120, 4130.

TRAN 4150 Supply Chain Cost Management (4 Credits)

A successful supply chain strategy must be effective not just in its material flow within the six pillars and the information flow from its systems, but its financial flow as well. Companies and their corresponding supply chains can achieve improved cost management that leads to greater top line revenue growth through improvements in financial flows achieved waste reduction, inventory carrying cost, capital investment and management and terms with suppliers and customers, to name a few. How the financial flow of the company and its supply chain is dependent on the entity's material and information flows, and vice versa. This course will provide an understanding of how these flows work in conjunction with one another, and how supply chain professionals must understand the role of financial management fundamentals in the process. Prerequisite: TRAN 4130.

TRAN 4160 Analytic Methods for Supply Chain Management (4 Credits)

Because Supply Chain Management is built off of structured problem-solving techniques across suppliers and partners requiring rapid and precise decision making, analytical methods are a requirement for success. In this course, the student will be presented with advanced techniques in quantitative analytics that are critical for today's largest companies and innovators. Upon completion of the course, the student will be familiar with how to apply these techniques under various situations across the supply chain and within the firm. Prerequisite: TRAN 4130.

TRAN 4170 Industrial Engineering and Operations Management (4 Credits)

Industrial Engineering and Operations Management is the application of engineering, logistics, finance and analytics, and structured problem-solving techniques to achieve the goals of today's global supply chains. In this course, the student will be introduced to the concept of Industrial Engineering, including critical methodologies such as Six Sigma, Lean, and the Toyota Production System. Upon completion of the course, the student will be able to apply these structured problem-solving techniques to an advanced level across the six pillars of supply chain management. Prerequisite: TRAN 4100 & Advisor approval.

TRAN 4180 Sustainability and Supply Chain Management (4 Credits)

Sustainability in Supply Chain Management is founded upon the principles of Six Sigma and Lean to not only reduce waste within the system, but also to solve some of the world's greatest challenges in relation to the environment. Through an understanding of the supply chain across the six pillars and through the use of finance, industrial engineering, logistics, and analytics, the student will be capable of defining, measuring, analyzing and solving the balance required between industry and the environment. Prerequisite: TRAN 4100 or MKTG 4380.

TRAN 4190 Import/Export Supply Chain Management (4 Credits)

Today's supply chain is global, and this means that companies must understand how to buy and sell goods across national boundaries. In this course, the strategic, operational, and tactical requirements of importing and exporting will be presented to the student in order to understand how the global supply chain operates. A specific focus will be on freight forwarding and customs requirements into and out of the U.S. territory through various ports and entry and egress. Prerequisites: TRAN 4130.

TRAN 4330 Principles of Supply Chain: Management and Technologies (4 Credits)

This course will assist students in gaining awareness, knowledge, and understanding of the distribution patterns and relationships that play a key role in determining company success. We will view perspectives within the context of the global marketplace and across both freight and passenger transportation. We will address external value chains and internal value chains; stakeholder relationship management; the supply chain and the demand chain complexities; strategies of E-business; the strategic use of IT; strategic planning to gain a competitive advantage; end-to-end supply chain visibility and the strategic use of technologies in the enterprise-wide system.

TRAN 4400 Excellence in Leadership for Transportation (2 Credits)

This course will provide an integrated exploration of current topics most important for leadership success within the transportation industry. Current best leadership practices will be reviewed, and common leadership challenges within transportation will be analyzed for successful resolution.

TRAN 4410 Executive Management Practices in Organizations (1 Credit)

This course will provide a comprehensive view of best practices for executive management in transportation workplaces. Organizational situations will be assessed from a variety of viewpoints and policies analyzed for optimal execution of strategy.

TRAN 4420 Leading with Integrity (1 Credit)

This course will explore ethical decision making and values-based leadership. Values, ethics and organizational philosophies will be assessed for best application in various corporate settings within the transportation industry.

TRAN 4430 Applied Micro Economics & Pricing (4 Credits)

The course will involve fieldwork and U.S. site visits observing and discussing the physical elements underlying the long-term and marginal economics of the firm and its pricing strategies and policies. In addition, the course will discuss basic microeconomic concepts used in the analysis of business services, including the concepts of market size; marginal, average, short-run, and long-run costs; and production levels as they relate to revenue and contribution with a focus on pricing for the firm relative to its fixed and variable costs, market share framework, and competitive issues both within the mode and between modes.

TRAN 4440 Marketing, Sales, Procurement & Customer Management Strategies (4 Credits)

Within the context of Transportation and Supply Chain, this course will explore the strategies related to the Sales and Marketing process and strategies from the seller perspective and the related perspective of Procurement from the buyer perspective. Additionally, the strategies and measures used for Customer Management will be explored including customer setup, advancing customer excellence practices, customer valuation and segmentation, and other related concepts. Further, the concepts of establishing, building, and maintaining trust will be explored as a key strategy and practice, which appears throughout each of the four main components of the course.

TRAN 4450 Legal Studies: Contracts & Regulation (2 Credits)

This course will focus on the fundamentals of creating and implementing effective contracts, whether with customers, suppliers, or labor. The contract discussion will be framed by regulatory and policy realities both in domestic and international contexts, including an understanding of federal and international laws, liability, regulations, policies, programs, and agencies impacting contracts.

TRAN 4460 Financial & Managerial Accounting (2 Credits)

This course will cover the basic theory, principles and practice of financial accounting and examine accounting statements including income and cash flow statements and balance sheets. Discussions include managerial use of accounting data useful in making investment and cost decisions, assessing cash flows, and the use of the organization resources to produce profit. Additional topics will include reading and understanding the 10-K, basic accounting standards and practices, and assessing the quality of financial information found in the accounting reports.

TRAN 4470 Financial Analysis & Capital Structures (2 Credits)

Complementing 4460, this course will use ratio analysis to determine relative performance of companies and the industry to enable management to assess operating efficiency, profitability and effective use of capital. Capital structure concepts, fixed and variable cost considerations, the use of operating and financial leverage and the concepts of business and financial risk will be discussed. The course also includes a basic review of the principle of time value of money.

TRAN 4480 Capital Decision Making and Capital Markets (2 Credits)

This course will examine the management decision process for making capital expenditures that enhance the value of the firm, cash flow estimation for capital budgeting purposes, decision models for capital budgeting, weighted average cost of capital, decisions in capital constrained situations, sensitivity analysis, and a review of the capital markets.

TRAN 4490 Global Trade & Economics (4 Credits)

This course will examine the World Trade F15 Organization and the regional trade agreements, such as NAFTA, EU, and ASEAN, with regard to their impact on North American transportation, trade, and economy overall including their relationship to account deficits and their N20; and their impact on disputes and how trade disputes are settled. In addition, the course will address the global economy and economics and its drivers, comparing and contrasting North America, China/Asia, the European Union and selected emerging economies to include impacts on global trade, such as trading patterns, outsourcing, and changing production areas.

TRAN 4701 Topics in Supply Chain (1-4 Credits)

The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of Supply Chain Management, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

TRAN 4702 Topics in Transportation Management (4 Credits)

The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of Transportation Management, new courses being piloted, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

TRAN 4710 Transportation Finance (4 Credits)

This finance course focuses on the transportation managers ability to understand and analyze financial statements. Topics covered will be the basics of major accounting statements, income and balance sheets, use of operating leverage, ratio analysis to determine relative performance of companies and the industry individual modes and across modes. An emphasis will be placed on time value of money and capital expenditure analysis and decision models for capital budgeting. Exploring markets and the sources of financial capital, securities, public and private financing will be discussed.

TRAN 4800 Advanced Concepts of Transportation & Supply Chain (2 Credits)

This course is a program-wide survey course in which each of the primary learning outcomes of the Executive Masters' program are reviewed: Leadership, Economics & Finance, Technology & Optimization, Supply Chain, Trade & Legal concerns, and more, are all explored within the context of current trends in Transportation and Supply Chain space.

TRAN 4810 Driving Innovation with Technology (4 Credits)

Innovation and change are abound in the transportation industry. This course exposes students to an array of technology trends and innovative ideas for boosting competitive advantage, predicting disruptions, and preparing for new forces emerging from GIS, the Internet of Things, machine learning, and cloud-based products. The advantages and security issues related to big data and analytics are investigated as they relate to compliance and decision making for managers and leaders. Understanding analytics helps managers and leaders identify and implement new technology in real-world applications. Students will explore what it means to have an innovation mindset and how it is applied while making decisions that maximize asset utilization and control wastage and/or redundancy.

TRAN 4820 Principles of Supply Chain Management (4 Credits)

This course will provide an overview of the basic principles of supply chain management, as well as current trends in supply chain technology and global value chains. Students will learn the six core pillars of supply chain processes and how suppliers, customers and other stakeholders are linked in these processes. The course will examine the role that transportation and logistics play in the supply chain. Students will learn the key operating and financial measures of supply chain management, apply the problem solving framework known as DMAIC (Define, Measure, Assess, Innovate, Control) to a real-world supply chain problem.

TRAN 4830 Advanced Supply Chain Management (4 Credits)

Building on foundation of Supply Chain Management from TRANS 4820, this course enables the business leader to gain a customer centric system view of supply chain management that is achieved by today's top companies. A more advanced view of the six pillars of supply chain management will be studied as it relates to a stakeholder model of both customers and suppliers. In this course, the goal is to understand how a stakeholder's (customer, supplier, partner, etc.) supply chain operates across three flows (physical, logical/system, and financial) related to a transportation provider. The goal of this course is to provide the student a process and functional understanding of supply chain management in order to achieve success from a process, financial and strategic standpoint. The course will offer particular emphasis on industrial engineering skills related to supply chain operations.

TRAN 4840 Policy and Regulatory Effects in Transportation & Supply Chain (4 Credits)

The purpose of this course is to explore how public policy and regulation manifest in transportation and supply chain systems and how companies can effectively navigate that process. Students will learn about the history of transportation and supply chain regulation and how it has changed over time. They will review how infrastructure and systems are planned, operated, and financed and what roles the public and private sectors play. Additionally, the course explores safety, security, and trade concerns, Environmental Social & Governance (ESG), and how to develop strategies for their companies to engage in the policymaking process in ways that maximize value for their enterprises.

TRAN 4850 Transportation & Supply Chain Strategies for the 21st Century (4 Credits)

Today's supply chain and transportation markets are rapidly evolving across localities and the definition of what global means. In the 21st century, supply chains will become exponentially more fluid, and transportation providers will need to understand and incorporate these changes. In this course, the 21st century supply chain expectations will be discussed from a people, process, and technology standpoint. Students will determine how transportation providers will need to respond to these changes, and how emerging technologies will be incorporated in emerging supply chain strategies and supplier/provider processes. Supply chains will become more local and global concurrently - and this course will evaluate what is required to respond successfully to these trends.

TRAN 4860 Senior Management: Executives & Issues Seminar (4 Credits)

Through the use of transportation executives in the classroom, this course will explore in-depth some of the key concepts covered during the course of the degree program, to include topics such as applied transportation finance, merger and acquisition issues, shipper transportation metrics/requirements, global freight flows to/from North America, and government/military transportation. In addition, in case studies, students will propose options for real-world challenges using knowledge and data from current events, degree program courses, case material, and guest executive presentations.

TRAN 4870 Individual Leadership Development Project (4 Credits)

This course will guide students through the process of developing and executing individualized leadership development projects to enhance specific leadership skills and goals within their current management structure or an assigned organization. Through work over the six quarters of the program, the leadership projects will provide a unique opportunity for each student to hone critical aspects of her/his leadership, which, in turn, benefits the students, their organizations, and the larger transportation, logistics, and supply chain community.

TRAN 4880 Business Planning Thesis (4 Credits)

This course will guide students through the creation of a comprehensive business development and/or productivity improvement-oriented business plan, with a preferred focus on the transportation industry, to develop a new revenue growth or new service opportunity for their organization or an assigned organization. Through work over the six quarters of the program, this project provides each student with important business planning and development skills to create an implementable business plan, which may provide tangible benefits to their sponsoring organization as well.

TRAN 4890 Global Transportation & Supply Chain Seminar (2 Credits)

This international travel seminar will build from learning objectives of the first three courses (4810, 4830, and 4850). Students will create an integrated supply chain strategy developed from principles learned in the first three courses in preparation for the international trip. Students will then relate their designed supply chain to observed operations on the trip and assess practical adjustments needed to make a real-world operation successful. Students will examine the management and operation of transportation and supply chain operations in other countries, and be able to compare and contrast them to US based operations. Students will meet with executives, government leaders and local managers of these systems to learn directly about the challenges of serving the global economy, and will learn how to recognize and navigate international cultural differences in a business setting.

TRAN 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

TRAN 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon the quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentations. Students must have acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

TRAN 4980 Internship (0-4 Credits)

The Supply Chain Management Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all SCM students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.

TRAN 4991 Independent Study (1-10 Credits)

General Information

Calendar and Term Definitions (p. 986)

Critical Notification System (p. 986)

Graduate Policy Scope, Adherence and Modifications (p. 986)

Graduate Program Definitions (p. 987)

University Grading System (p. 992)

Calendar and Term Definitions

Quarter Calendar

The academic calendar is divided into fall, winter and spring quarters and a summer session. Each quarter is approximately ten weeks long and summer session is nine weeks. There are four interterm sessions. Students may complete degree requirements through continuous enrollment, including summers, or may arrange the normal work of a three-quarter academic year in any desirable sequence of quarters and summer session.

Semester Calendar

The Sturm College of Law academic calendar is divided into autumn, spring and summer session. Each semester is approximately 15 weeks long. Students may complete requirements including summers, or may arrange the normal work of a two-semester academic year in any desirable sequence of semesters.

University College Calendar

University College considers summer to be part of the academic year. The summer quarter is ten weeks long.

Summer Session

Summer session is an avenue for graduate students to accelerate their programs or complete necessary coursework. Elective and required courses are offered in a variety of time frames. Travel and other unique courses, including short, intensive workshops, are part of the summer program.

Visiting students, professionals and individuals from the community are admitted under an open enrollment policy.

Note: *University College considers summer to be part of the academic year. The Summer Quarter is ten weeks long.*

Interterm

Interterm is the time period prior to each academic quarter, during which short, on-campus and travel courses are offered. Hours completed in interterm are applied as credit toward graduation requirements. Students register for interterm classes through the Special Community Programs office.

Note: *Some units may have specific requirements about the maximum number of interterm hours which may be applied toward the degree. Contact the unit for details.*

Critical Notification System

Registration Instructions

The University can send voice or text messages to students in the event of an urgent situation. The system will call every contact number provided and leave a voicemail if the call is unanswered. Text messages are optional and sent to only one number. The owner assumes any costs associated with receiving text messages.

You may designate one number to receive text messages. If you have elected to receive a text message, you will receive a text message from the CINS vendor to confirm that you wish to opt in to receive future emergency text messages. You will be responsible for any costs associated with your text messages. Remember this is how we reach you in an emergency.

Students must provide valid contact information in order to receive a text message or voice mail alert. To update contact information, log into MyDU (<https://my.du.edu/dashboard/>) and navigate to Student Tools, Records and Requests, Update your notification preferences.

Emergency Contacts

You may provide the University with contact information for individuals you wish us to contact in the event of an emergency. You may update emergency contact information in Personal Information, which is found in myWeb in the MyDU (<https://my.du.edu/>) portal.

Graduate Policy Scope, Adherence and Modifications

The policy development mission of the Office of Graduate Education (OGE) is to provide an authoritative, accessible and current repository for University and campus policies that impact the members of the University community across all graduate schools and programs. University policies have broad application throughout the University to help ensure coordinated compliance with applicable laws and regulations, promote operational

efficiency, or reduce institutional risk. Individual schools and departments reserve the right to maintain policies particular to their units. However, unit-specific policies do not override university-wide policies. Policies duplicated on other websites or in print may not be the most current version. OGE recommends that graduate programs share content from the Graduate Bulletin rather than creating their own pages with University policies. This will help ensure that everyone is referencing the most current versions of University policies.

- Student Responsibility for Bulletin Information (p. 987)
- Modifications to the Policy in the Bulletin (p. 987)
- Graduate Academic Unit-level Adherence to and Implementation of University Policy (p. 987)

Student Responsibility for Bulletin Information

Student Responsibility for Bulletin Information

Applicants to the University of Denver as well as admitted and enrolled students are held to the standards and procedures set forth in the University bulletin. Students are responsible for staying informed of the University's policies and procedures.

Modifications to the Policy in the Bulletin

The University of Denver reserves the right to make changes in the regulations, rules, fees or other aspects of this University bulletin without advance notice.

Changes within academic units, the University, or applicable law (or other factors) may require modifications to this Graduate Policies and Procedures. Additionally, any unit or member of the Graduate Council may propose a change in policy by submitting a petition to the Vice Provost for Research and Graduate Education.

Graduate Academic Unit-level Adherence to and Implementation of University Policy

Each graduate unit must examine the Graduate Policies and Procedures and identify unit-specific policies or practices that conflict with the University policies and procedures. Units shall adjust their practices to conform to University policy. If a unit believes it is necessary to maintain policies or practices that diverge from University policy, it shall petition the Senior Vice Provost for Research and Graduate Education for an exception to policy.

Graduate Program Definitions

The University of Denver offers a range of graduate degree and certificate programs:

- Graduate Degree Program (p. 987)
- Formal Dual Degree Programs (p. 987)
- Flexible Dual Degree Programs (p. 988)
- Dual Undergraduate-Graduate Degree Programs (p. 989)
- DU-Iliff Joint PhD Program (p. 990)
- Certificate Programs (p. 990)
- Concurrent Candidacies (p. 991)

Graduate Degree Program

A graduate degree program is a combination of courses and related activities organized under the authority of a dean, the Senior Vice Provost for Research and Graduate Education, Graduate Council, the Provost and the Board of Trustees for the attainment of broad educational objectives leading toward a post-baccalaureate degree.

In general, with the exception of students in the dual undergraduate-graduate program, graduate students must have earned a bachelor's degree from a regionally accredited college or university before matriculation in a graduate program. However, with approval from the Senior Vice Provost for Research and Graduate Education, students who have already earned a master's degree, but not a bachelor's degree, may in rare cases, matriculate without a bachelor's degree.

Formal Dual Degree Program

Formal Dual Degree Programs

A formal dual degree program links two master's degrees or a master's program with a JD program and leads to two degrees. The Graduate Council and the Senior Vice Provost for Research and Graduate Education must approve all proposals for formal dual degree programs.

There are two types of formal dual degree programs. Type one incorporates two distinct disciplines where students complete two separate sets of core courses and reduce electives. Type two incorporates two areas of study within one discipline where students can cross-count a common set of core courses and take separate sets of electives.

Dual degrees must be pursued concurrently, not consecutively. In order to meet this requirement, students interested in pursuing a dual degree must be matriculated in both programs for one full academic year (three quarters or two semesters). Students in a one year program must matriculate into the second program no later than the first admission term following fifty percent (50%) coursework completion of the first program.

Students are required to complete both degree programs within five years of matriculation in to the first program. Students must apply for graduation for both programs and both degrees will be awarded at the same time.

With fully developed and approved curricula, these programs are available to graduate students who are admitted to both schools and submit the Graduate Formal Dual Degree Verification Form (found on the Office of Graduate Education's website (<https://www.du.edu/graduate-education/current-student-resources/academic-resources/>)) during the program's first term. For program details, please contact the school, college or department.

Non-Course Requirements

All non-course requirements must be fulfilled for both programs. If one of the non-course requirements of both intended programs is the writing and defense of a thesis, then (with prior approval from both departments) a combined thesis may be written as long as both departments are equally represented (from original proposal to completion) and so long as the most rigorous requirements are adhered to for completion and oral defense.

Students who decide to only complete one degree must inform the units, program advisors and the Office of Graduate Education in writing of their intention to nullify the formal dual degree. Students must complete all the original requirements for the remaining degree in order to graduate.

Flexible Dual Degree Program

Flexible Dual Degree Programs

Students may propose a flexible dual degree program that links two master's degrees or a master's degree and a JD degree.

Students must submit the proposal for the flexible dual degree no later than one term prior to matriculation into the second degree.

Dual degrees must be pursued concurrently, not consecutively. In order to meet this requirement, students interested in pursuing a dual degree must be matriculated in both programs for one full academic year (three quarters or two semesters). Students in a one year program must matriculate into the second program no later than the first admission term following fifty percent (50%) coursework completion of the first program.

Students are required to complete both degree programs within five years of matriculation in to the first program. Students must apply for graduation for both programs and both degrees will be awarded at the same time.

Any significant changes to the approved program require the student to resubmit a revised proposal packet to the deans/chairs/directors and advisors of both programs and the Office of Graduate Education.

Proposing a Flexible Dual Degree

To propose a flexible dual degree, the student must first apply to and be admitted by both programs, pay application fees and admissions deposits for both programs, and seek the counsel of an advisor in each program. Admission into each program does not take the place of filing a Flexible Dual Degree proposal (found on the Office of Graduate Education's website (<https://www.du.edu/graduate-education/current-student-resources/academic-resources/>)) nor guarantee approval of the proposal.

The dean, chair, or director of each degree program and both program advisors must carefully compare the requirements for each program and approve the proposed curriculum. The student must then submit a copy of the original requirements for each degree (printout from the unit website or copy from the student handbook is acceptable), a detailed course plan showing all proposed courses, the credit hours, and non-coursework requirements; a one to two- page statement of the educational/career objectives stating the reasons for the specific course selection and which courses most clearly serve the educational and career goals of the student; and current official/unofficial transcript(s) showing any work already completed towards the proposed program and degrees.

The student then submits the documents listed above to the Office of Graduate Education, which reviews and decides on the proposals. Proposals with errors or course/program inconsistencies will be returned for revision.

Once the proposal is approved, the student will be entered into the University computer system as a flexible dual degree student.

Curriculum Structure

Students may propose any flexible dual degree program that seems reasonable to them and their advisors for academic and career objectives. Only elective courses may be counted among the hours used for reduction.

All the core requirements of each program must be preserved and cannot be overlapped or waived. Credit reduction of elective courses will be limited to the following for each program as determined by the original number of credit hours required for each degree.

Required credit hours for degrees and flexible dual degree reduction allowed:

- 45-60 quarter hour degree program: Reduce a maximum of 10 quarter hours for the one degree without outside transfer credit. The traditional maximum outside transfer credit allowed in this case would be 11-15 quarter hours. A reduction of 15 quarter hours from the original degree will be the maximum allowed when combining outside transfer hours and the reduction of degree hours.
- 61-75 quarter hour degree program: Reduce a maximum of 12 quarter hours for the one degree without outside transfer credit. The traditional maximum outside transfer credit allowed in this case would be 15-19 quarter hours. A reduction of 25 quarter hours from the original degree will be the maximum allowed when combining outside transfer hours and the reduction of degree hours.
- 76-90 quarter hour degree program: Reduce or cross-count a maximum of 15 quarter hours for the one degree without outside transfer credit. The traditional maximum outside transfer credit allowed in this case would be 19-22.5 quarter hours. A reduction of 35 quarter hours will be the maximum allowed from the original degree when combining outside transfer hours and the reduction of degree hours.

Note: Credits at the Sturm College of Law for a JD degree are calculated using semester hours: 1 semester hour equals 1.5 quarter hours. A 90 semester hour JD degree may only be reduced by a maximum of 10 semester hours for a total of 80 semester hours completed for the JD (10 semester hours equals 15 quarter hours).

Non-Course Requirements

All non-course requirements must be fulfilled for both programs. If one of the non-course requirements of both intended programs is the writing and defense of a thesis, then (with prior approval from both departments) a combined thesis may be written as long as both departments are equally represented (from original proposal to completion) and so long as the most rigorous requirements are adhered to for completion and oral defense.

Students who decide to only complete one degree must inform the units, program advisors and the Office of Graduate Education in writing of their intention to nullify the flexible dual degree proposal. Students must complete all the original requirements for the remaining degree in order to graduate.

Dual Undergraduate-Graduate Degree Program

Dual Undergraduate-Graduate Degree Programs

A Dual Undergraduate-Graduate Degree Program is an institutionally approved program in which a DU undergraduate student begins taking classes toward a graduate degree program prior to earning a baccalaureate degree. Both degrees must be earned within five years of matriculation into the undergraduate degree program. Students pursuing a dual degree with a Juris Doctorate must earn both degrees within six years.

The programs may reduce a limited number of both undergraduate and graduate credit hours toward both degrees.

The amount of the credit hour reduction is variable across programs. To be admitted, a student's academic progress must demonstrate that the requirements of the program can be completed within the set time-frame.

Undergraduates still need to meet all normal core, major, minor and total credit hour requirements of their respective majors and minors before receiving the undergraduate degree. Graduate coursework is usually taken during the undergraduate "senior" year. Students should be admitted to the dual undergraduate-graduate program *before* taking graduate courses since undergraduate students generally may not take graduate courses. Usually, no more than 30 hours of electives may be used in the senior year to begin the graduate/professional program. Only graduate credit may be counted for the graduate degree. The total number of credit hours required varies by department. All requirements of the graduate or professional program need to be completed before receiving the advanced degree.

- For students enrolled in a dual degree program, the University will award the undergraduate degree at the time it is earned.
- A student who chooses not to continue on for the graduate degree may count the graduate courses, if approved as relevant by the advisor, toward the undergraduate degree (Students should visit the appropriate college or school for opt-out options and requirements).
- Students enrolled in the dual undergraduate-graduate program who have been awarded the BA/BS degree, completed all required coursework and are working on a thesis may be eligible to enroll in graduate continuous enrollment.

Dual Undergraduate-Graduate Financial Aid

Eligibility for financial aid differs for undergraduate and graduate students and it differs for institutional aid and federal aid. Students enrolled in dual degree programs are considered graduate students for federal financial aid purposes after attaining 198 credit hours even if the student has not met the undergraduate degree requirements. Federal regulations do not allow students in dual degree programs who have completed four academic years (defined as 198 credit hours) to continue to receive undergraduate aid. Students in the law school dual degree program are aided as graduate students after three undergraduate academic years (149 hours for federal aid purposes). While undergraduate merit or need-based institutional grant

aid are not available for fifth-year dual-degree students, each graduate department may offer graduate students grant or scholarship funds at their discretion. Students should contact their graduate program for details on available funding for the fifth year.

Institutional Aid Eligibility Differs From Federal Aid Eligibility

Institutional Aid

The Financial Aid office expects first-time, first-year undergraduate students to be eligible for consideration for institutional merit or need-based undergraduate financial aid for a maximum of four academic years from the point of initial enrollment (excluding summer and interterm periods), or until the student earns the bachelor's degree, whichever comes first. For institutional aid eligibility for dual degree students the university defines four academic years as up to 12 quarters of fall, winter, spring enrollment. Students who receive any amount of credit in a quarter are considered to be enrolled. If a student is not receiving aid in one or more of those enrolled quarters, the timeline for 12 quarters of aid eligibility continues. For example, a student may not continue to receive undergraduate aid into a 13th quarter of enrollment due to not receiving aid or not accepting aid in one or more of the prior 12 quarters of enrollment. It is not the intent of this policy to cut off students from twelve quarters of fall, winter, spring institutional aid consideration, but it also is not the intent to allow students who are enrolled in dual degree programs to continue into their fifth year of enrollment as undergraduate students. Any student who has taken the undergraduate degree is no longer eligible for undergraduate institutional aid regardless of the number of quarters of aid already received.

Federal Aid

For federal aid purposes dual degree students automatically become graduate students in the next enrollment period after attaining 198 hours of earned or accepted credit. Any dual degree student who has completed their undergraduate degree requirements is considered a graduate student regardless of the number of quarters of prior enrollment. For example, a student who has accelerated their program with outside credits or additional credits during prior academic years (overload enrollment, interterms, summer, AP or IB) and completes their baccalaureate degree or reaches the credit threshold stated above is automatically treated as a graduate student for federal aid purposes regardless of the number of quarters of prior enrollment or prior aid consideration.

Dual Undergraduate-Graduate Admission and Records Procedures

The following must be followed consistently and accurately:

- Students are admitted to dual undergraduate-graduate degree programs by the graduate admission unit. The graduate unit follows all normal admission procedures and the student must meet all admission criteria for the graduate program other than receipt of the baccalaureate degree. Students should be admitted to the dual undergraduate-graduate program as early as practical for financial aid and other reasons. They must be admitted to the dual undergraduate-graduate program by the start of the first term that the student reaches senior standing (135 earned credits).
- The effective term for admission should be the term in which the student is permitted to take graduate courses. For example, if the student's senior year begins in the fall and the student meets admission criteria and may begin taking graduate courses in the subsequent spring term, the admission term should be that spring.
- Graduate units are responsible for assuring that the student information is accurate.

Note: A student who receives a bachelor's degree and was not previously enrolled in a dual undergraduate-graduate program is **not** eligible to return and enroll in a graduate program and reduce the number of credit hours for the graduate degree.

DU-Iliff Joint PhD Program

The University of Denver (Colorado Seminary) and the Iliff School of Theology jointly administer a program leading to the doctor of philosophy in the study of religion.

Joint PhD students maintain student status and have access to resources in both co-sponsoring institutions. Students in the Joint PhD program should be referred to as "DU/Iliff Joint PhD Students" and not primarily as either Iliff or DU students.

Students in the Joint PhD program are expected to know the specific policies, procedures, and requirements for both the University of Denver and the Iliff School of Theology.

Certificate Program

A certificate program provides a set of learning experiences concentrated in a specific set of educational goals. Academic credit earned in certificate programs may be awarded at the graduate or undergraduate levels. Such programs may include certificates, diplomas or other non-degree awards. Certificate programs may grant academic credit, continuing education units (CEUs), or they may include non-credit offerings..

Certificates of completion/participation (non-credit) may be awarded for completion of workshops, short courses and shorter sequences of credit courses. The certificate issued at the completion of the program does not indicate certification of attainment of any specific level of knowledge or competence. Admission requirements vary by program. Certificates of completion/participation do not indicate credit completion. Certificates of participation do not appear on transcripts. Certificates of participation may be produced by individual units and should not bear the University seal.

Certificates of completion/participation are approved through departmental curriculum approval procedures with no further institutional review. Examples include the Publishing Institute Certificate

Specialized Certificates (academic credit) may be awarded for completion of shorter sequences of credit courses (12-23 quarter hours or 8-15 semester hours). Specialized certificates issued at the completion of the program indicate certification of attainment specific skills, knowledge, or competencies in a well-defined area of study. While admission requirements and standards vary by program, applicants must meet minimum requirements for admission to the University. Specialized Certificates appear on transcripts and are approved through the institutional curriculum approval procedures. Credits applied to specialized certificates may be applied to Academic Certificates or degrees at the same level (i.e., graduate or undergraduate). Credits may not be applied to multiple specialized certificates. Transfer credit toward a certificate is limited to 25% of the minimum number of credits required for the certificate. Course substitutions and/or waivers are not accepted for a Specialized Graduate Certificate. Institutional time limits for completion apply. Digital and paper certificates are produced institutionally.

Certificates of specialization/concentrations (academic credit) provide substantial education in an academic discipline and represent the achievement of competence in a well-defined area of study and are embedded within the major and degree programs. The number of credits in the specialization/concentration may vary by unit. Units are encouraged to use "concentrations" to officially denote a specialization within a student's primary area of study. Admission requires acceptance and enrollment into the degree program. Certificates of specialization appear on transcripts associated with an awarded degree. Certificates of participation may be produced by individual units and should not bear the University seal. They are approved through the institutional curriculum approval procedures.

Academic certificate programs provide substantial education in a specific academic discipline or in interdisciplinary areas, but center on a coherent and specific body of knowledge. Academic certificate programs represent the achievement of competence in a well-defined area of study. Academic certificates require a minimum of 24 quarter hours or 16 semester hours of credit. While admission requirements and standards vary by program, applicants must meet minimum requirements for admission to the University. Academic certificates appear on transcripts and are approved through the institutional curriculum approval procedures. Credits applied to shorter certificate programs (e.g., specialized certificates) may be applied to academic certificates, but may not be applied to multiple academic certificates. Credits applied to Academic certificates may be applied to degrees at the same level (i.e., graduate or undergraduate). Transfer credit toward a certificate is limited to 25% of the minimum number of credits required for the certificate. Institutional time limits for completion apply. Digital and paper certificates are produced institutionally.

Noncredit Certificates

Continuing Education Unit (CEU) certificates (non-credit) may be awarded for education programs. A CEU is a standard unit for measuring continuing education and training activities. CEUs generally are calculated based on contact hours. 1 CEU = 10 contact hours. Continuing education units should be awarded based on standards developed by the International Association for Continuing Education and Training (IACET) or other recognized organization governing professional continuing education. Admission requirements vary by program. CEU courses appear on a distinct institutional CEU transcript. CEUs are not equivalent to academic credits and do not count toward academic degrees. CEU certificates may be produced by individual units but should be distinct in appearance from that of any academic certificate or institutional diploma.

Micro-credentials and badges. A micro-credential may be awarded for completion of a shorter class, workshop, or program to gain specified skills or competencies. A digital badge is the visual representation of having earned a micro-credential and can be shared on various online platforms as evidence of the earner's achievement. Micro-credentials are approved through the institutional curriculum approval procedures.

Time Limit for Completion of the Program

Certificate program candidates are expected to complete program requirements within three years of beginning their programs, as measured by the matriculation into the degree program.

Failure to complete the program within the established time limits will result in termination unless the student successfully petitions for an extension to the Vice Provost for Research and Graduate Education. The college, school, or department and the student's advisor must recommend this extension. If it is not approved, the student will be terminated from the program. Students may petition for an extension of time for a minimum of one quarter and up to a maximum of one year per request. For more information, see Exceptions (p. 1046) regarding extensions of time.

Concurrent Candidacies

Concurrent candidacies occur when students are enrolled in two programs concurrently.

Admission and program requirements must be fulfilled for each program. There will be no reduction in the number of credit hours required for either degree.

At the time of admission, the student submits written approval from each unit allowing enrollment in two programs simultaneously.

University Grading System

University Grading System

Instructors are required to assign a final grade for each student registered in a course. The following grades are used to report the quality of a student's work at the University of Denver:

| Grade Symbols | Grade Points | Interpretation |
|---------------|--------------|-----------------|
| A | 4 | excellent |
| A- | 3.7 | |
| B+ | 3.3 | |
| B | 3 | good |
| B- | 2.7 | |
| C+ | 2.3 | |
| C | 2 | satisfactory |
| C- | 1.7 | |
| D+ | 1.3 | |
| D | 1.0 | |
| D- | 0.7 | minimum passing |
| F | 0 | failure |

If a student ceases attending classes or submitting assignments (and has not earned a passing grade) and if the student has not made arrangements for an incomplete (I), a failing (F) grade must be assigned.

Failing ("F") grades may also be assigned under the following circumstances:

- A student drops a course without permission and/or official notice to the Office of the Registrar.
- A student's academic work is judged failing as a result of a finding of academic dishonesty.

If a student registers for a class but never attends any sessions, then a grade of Never-Attend ("NA") should be assigned instead of a failing (F) grade. A never-attend (NA) grade is treated like a failing (F) grade and will show up as an NA on the student's transcript.

An incomplete ("I") is a temporary grade that may be given to a student at the instructor's discretion when illness, necessary absence or other reasons beyond the control of the student prevent completion of course requirements by the end of the academic term. Incomplete grades may only be given in the following circumstances:

- The student's work to date is passing.
- Attendance has been satisfactory through at least 60 percent of the term.
- An illness or other extenuating circumstance legitimately prevents completion of required work by the due date.
- Required work may reasonably be completed in an agreed upon time frame.
- The incomplete is not given as a substitute for a failing grade.
- The incomplete is not based solely on a student's failure to complete work or as a means of raising his or her grade by doing additional work after the grade report time.
- The student initiates the request for an incomplete grade before the end of the academic term.

Appropriate grades must be assigned in other circumstances. A failing grade and last date of attendance should be recorded for students who cease attending class without authorization. Students who are unable to complete a course and who do not meet these circumstances should consider dropping the course.

The following provisions for incomplete grades apply:

- Instructors are to record the incomplete initially in MyDU under the Grade Entry page. When the student's work has been completed, the instructor then submits the final grade using the Change of Grade Process through M (<https://my.du.edu/dashboard/>)yDU (<https://my.du.edu/dashboard/>). Steps for this process can be found at <http://www.du.edu/registrar/records/changinggrades.html>.
- It is in the student's best interest that incomplete grades be made up by the end of the following academic term. Incomplete grades must be made up and final grades submitted within one calendar year from the date the incomplete was recorded.
- The course work may be completed while the student is not enrolled.
- Incomplete grades appear on the transcript for one year. Incomplete grades do not affect the grade point average. After one year, or at the time of graduation, incomplete grades will change to "F" and affect GPA. This policy affects incomplete grades given in fall 1995 and thereafter. Prior

to 1995, unchanged incompletes remained on the permanent record as part of hours attempted and were calculated as a failing (“F”) grade in the GPA.

- An incomplete grade may not be considered passing for purposes of determining academic standing, federal financial aid eligibility, athletic eligibility or other purposes.
- Notation of the original incomplete status of the grade remains on the student’s transcript along with the final grade.
- An incomplete should not be assigned when it is necessary for the student to attend additional class meetings to complete the course requirements. Students who receive an incomplete grade in a course must not register again for the course in order to remove the “I.”
- An incomplete is not to be assigned where the normal practice requires extension of course requirements beyond the close of a term (e.g., thesis or project type courses).

NC: registered for no credit

W: a notation that the course is withdrawn without prejudice; zero grade points per quarter hour; no hours credited

Use of intermediate grades (plus and minus) is at the discretion of the instructor.

See Grade Appeals (<http://bulletin.du.edu/undergraduate/academicpoliciesandprocedures/procedureforgradeappeals/>) for more information.

Grade Point Average (GPA)

The GPA is determined by multiplying the credit points (for example, “B+” = 3.3) by the number of credit hours for each course. Total the credit hours attempted, total the credit points and divide the latter by the former. Grades of NC, I, P+, P, NP and W are not included in the GPA. Incompletes that are not completed within one year are calculated as an “F” in the GPA. All grades for repeated courses are included in determining GPA. Undergraduate, graduate and specific program GPAs may be calculated separately.

Pass/Fail

In general, undergraduates may not take a course for pass/fail credit.

Change of Grade

Grades submitted by instructors at the end of the quarter are final and not subject to change by reason of revision of judgment on the part of the instructor. Grades cannot be changed on the basis of second trial, such as a new examination or additional work undertaken or completed after the grade report has been submitted to the Office of the Registrar. Grades may only be changed due to one of the following:

1. Correction of Error in Grading
2. Grade Appeal
3. Completion of an Incomplete Grade

An instructor of a course is the only individual who can change a grade. In the event of error, the faculty member should initiate the Change of Grade Process through M (<https://my.du.edu/dashboard/>)yDU (<https://my.du.edu/dashboard/>). Steps for this process can be found at <https://www.du.edu/registrar/faculty-staff-resources/grading-guide>. Any correction or appeal of a grade must take place in the quarter following the one in which the grade was given.

Reporting Grades (p. 994)

Never Attended (p. 994)

Failing Grades (p. 994)

Withdrawal (W) (p. 994)

IP, NR and Incomplete Marks (p. 994)

Last Date of Attendance (p. 994)

Non-Passing Grades (p. 994)

Grade Reports (p. 994)

Incomplete Grades (p. 995)

Reporting Grades

Grades must be reported for all registered students by the grade submission deadline. For federal financial aid purposes, non-reported grades may be considered as failing. This can result in financial obligations for the student.

Never Attended

A Never Attended (NA) grade should be assigned to students who registered for a class (and appear on the roster) but never attended the class. While the grade of NA is counted as an F, it is a means of marking the course so that any possible registration problems can be reconciled for the student.

Failing Grades

If a student ceases attending class or submitting assignments (and has not earned a passing grade) and has not made arrangements for an incomplete (I), a failing (F) grade must be assigned.

Withdrawal (W)

For colleges, schools, and departments on the quarter system, official withdrawal during the second to sixth weeks of the term will automatically result in the recording of grades of Withdrawal (W) for all courses. In weeks six through eight W's will be given with the instructor's permission. If a student fails to complete a course and does not withdraw, a grade of (F) will be recorded on the transcript.

Non-Final Grades

Any non-final grade (i.e., incomplete or non-reported grade) must be changed to a final grade prior to graduation.

Last Date of Attendance

Federal financial aid rules require institutions to record a student's last date of attendance if the student ceases attending a class.

Last date of attendance appears on web and paper grade rosters. It is very important the university know that a student received a failing (F) grade because the student ceased attending class. In cases where faculty do not have an exact date, an estimate should be provided (e.g., last assignment date).

Non-Passing Grades

Students who receive non-passing grades often have all non-passing grades for a term. By federal financial aid rules, the University must consider those students to have withdrawn from the University. If DU does not have accurate records, the University and the student may face financial obligations for federal financial aid.

Grade Reports

Students may view their final official grades for courses on MyDU (<https://my.du.edu/dashboard/>). Grades are available on the web as soon as they are rolled and validated by the Office of the Registrar. Privacy regulations prohibit the University from releasing grades or GPA information over the telephone. It is the student's responsibility to check their transcript to ensure that grades are recorded appropriately for completed courses.

Please note that grades posted in a supplementary academic support program, such as Canvas or Blackboard, do not necessarily represent the final grade as reported to the Office of the Registrar, and only the grade reported to the Office of the Registrar will be present on the student's official record.

It is the instructor's responsibility to ensure that any grades posted to a separate program match with those being reported to the Office of the Registrar. If a student finds a discrepancy, the student should reach out to the instructor.

For most programs at the University of Denver, grade reports are mailed upon request only. *Grade Report Mailer* forms are available in the Office of the Registrar.

Notes: *Some units may have more specific grading guidelines and grade reporting procedures. Contact the unit for details.*

Graduate School of Social Work and Graduate School of Professional Psychology do not award grades of D+, D, or D-.

Sturm College of Law: Faculty have 30 days after the date an exam is given to turn their grades in to the Sturm College of Law Registrar's office. Once grades are turned in, they must be processed. Required courses must fit into the mandated mean and median, which may require several adjustments by the faculty member. After the faculty member finalizes the grades, it takes 24 to 48 hours to post the grades to the web.

Incomplete Grades

An Incomplete (I) is a temporary grade which may be given at the instructor's discretion to a student when illness, necessary absence, or other reasons beyond the control of the student prevent completion of course requirements by the end of the academic term.

Incomplete grades may be given only in the following circumstances:

- The student's work to date is passing; and
- attendance has been satisfactory through at least 60% of the term; and
- an illness or other extenuating circumstance legitimately prevents completion of required work by the due date; and
- required work may reasonably be completed in an agreed-upon time frame; and
- the Incomplete is not given as a substitute for a failing grade; and
- the Incomplete is not based solely on a student's failure to complete work or as a means of raising the student's grade by doing additional work after the grade report time; and
- the student initiates the request for an Incomplete grade before the end of the academic term

Appropriate grades must be assigned in other circumstances. A failing grade and last date of attendance should be recorded for students who cease attending class without authorization. Students who are unable to complete a course and who do not meet these circumstances should consider dropping the course.

The instructor will place an Incomplete (I) grade into PioneerWeb along with the rest of their end-of-term grades. It is recommended that the student and instructor lay out the terms of the Incomplete – what work is to be completed, what the time-frame is, etc. – in writing, either in an email or in a written document. There is no required documentation that must be submitted to the Registrar's Office.

Once the coursework is completed and graded, the instructor must submit the grade using the University's grade change process. It is in the student's best interest that incomplete grades are made up by the end of the following academic term. Incomplete grades must be made up and final grades submitted within one calendar year. Only under the most extenuating circumstances may an Incomplete be made up more than one calendar year from the date it is recorded and only with approval of the dean of the unit in which the course was taken. The coursework may be completed while the student is not enrolled.

Incomplete grades will expire on the date selected by the professor when the grade of incomplete is entered. This date will be no more than one academic year from the last day of classes of the quarter in which the incomplete was incurred. If no specific date is entered by the instructor, the date will default to the end of the same term of the next academic year (eg: an Incomplete grade assigned in Winter Quarter of 2022 will have an expiry date of the end of Winter Quarter 2023). Incomplete grades that are not updated by the expiration date will automatically turn into an F. Instructors may still use the PioneerWeb grade change system to change an expired Incomplete grade, but the change will require the approval of the Dean of the academic unit.

Incomplete grades appear on the transcript for up to one year and they do not affect the grade point average. Students must resolve all Incomplete grades by graduation, either by having the grade changed by the instructor or by requesting that an F be taken for the class. (This policy affects incomplete grades given in fall 1995 and thereafter. Prior to 1995, unchanged incomplete grades remain on the permanent record as part of hours attempted and are calculated as a failing (F) grade in the GPA.) Notation of the original incomplete status of the grade remains on the student's transcript along with the final grade.

An Incomplete grade may not be considered passing for purposes of determining academic standing, federal financial aid eligibility, athletic eligibility, or other purposes.

An Incomplete should not be assigned when it is necessary for the student to attend additional class meetings to complete the course requirements. Students who receive an incomplete grade in a course must not re-register for the course in order to remove the (I). An Incomplete should not be assigned where the normal practice requires extension of course requirements beyond the close of a term, e.g., thesis or project type courses.

Note: Some graduate units may have more restrictive policies.

Markers of Withdrawal, Incomplete or Failing grades on a student's transcript may impact their satisfactory academic progress for determining federal aid eligibility. Contact the Financial Aid office for further information.

Admission and Enrollment Policies

Program-specific admission requirements are set by individual academic units and published annually. Once published, the admission requirements are in effect for the annual admission cycle and may not be altered until the next admission cycle. Applicants must meet all published admission requirements.

Admission Process and Standards for All Applicants (p. 997)

Additional Standards for International Applicants (p. 1000)

Additional Standards for Non-Native English Speakers (p. 1001)

Admission Status

A student may be admitted to graduate study in one of the following classifications:

- Regular Degree Student (p. 996)
- Provisional Admission (p. 996)
- Certificate Student (p. 996)
- Non-Degree Student (p. 996)
- English Conditional Admission (ECA) (p. 997)
- Lifelong Learner (p. 997)
- Visiting Scholar (p. 997)

Regular Degree Student

Students enrolled in a graduate degree or certificate program who have satisfied document or academic provisions (if applicable) have regular student status. Regular status is required for advancement to degree candidacy and graduation.

Provisional Admission

Document Provisions

Students are admitted with a document provision when required official documents (e.g., final transcripts, degree certificates, certified English translations, test scores, etc.) were not received before an offer of admission. All required official documents must be received by the start of the first term of enrollment. If documents are not received by this time, a hold will be placed prohibiting future registration. Students admitted with provisions will be changed to regular status when all required official documents have been received.

Please review the graduate policy for Transcripts and Proof of Degree (<http://bulletin.du.edu/graduate/admission-and-enrollment-policies/admission-process-and-standards-for-all-applicants/transcripts-and-proof-of-degree/>) for more information on required credential documents.

Academic Provisions

Students may be admitted with an academic provision when the program stipulates additional academic requirements (e.g., student must receive a B or better in the first 8 credit hours of coursework by the end of the second term of enrollment). Academic provisional admission is reviewed on a case-by-case basis and the requirements may be specific to each individual student. These requirements and the timeline for meeting them will be outlined in the admission letter. Students admitted with provisions will be changed to regular status when the conditions of the provision have been met. Students who fail to meet the academic provision as outlined in their admission letter may be dismissed from their academic program.

**Applicants who request a Form I-20 for F-1 student status who are admitted with an academic provision will be issued a Form I-20 for non-degree status. If the student later meets the academic provision, a Form I-20 for a change of level to degree status will be issued. SEVP guidance prohibits the issuance of a degree-based Form I-20 for an applicant admitted with academic provisions. For more information, see SEVP Policy Guidance S13.1 (<https://www.ice.gov/sites/default/files/documents/Document/2016/sevp-PGS131.pdf>).*

**Applicants who request a Form DS-2019 for J-1 Exchange Visitor status who are admitted with an academic provision will be issued a Form DS-2019 in the student non-degree category. If the student later meets the academic provision, a Form DS-2019 in a degree category will be issued, but the student will have to leave the US and reenter for the change of category. The U.S. Department of State does not allow a change from student non-degree to student degree in the U.S.*

Certificate Student

A certificate student is one who is engaged in a program of study leading to a certificate. Only academic certificates will appear on the student's transcript. Students must be admitted to a certificate program to be awarded the certificate.

Non-Degree Student

Non-degree coursework is suited for individuals interested in taking coursework at the University of Denver for any of the following reasons: (1) explore a program or strengthen academic history before applying for admission to a graduate degree or certificate program, (2) complete a course for professional development or for another graduate program outside of DU, or (3) take courses for personal growth.

Admission as a non-degree student does not guarantee admission to a University of Denver graduate degree or certificate program. In the event that the student subsequently wishes to undertake a graduate degree or certificate program at the University of Denver, the regular application procedures must be followed, including the submission of the required application fee. No more than three courses earned as a non-degree student may be applied to the graduate degree or certificate program. All non-degree coursework must be approved by the academic unit for transfer into a degree or certificate program.

All non-degree applicants must have earned a bachelor's degree in order to enroll in graduate level courses. Additionally, non-native English speakers must follow standard graduate admission requirements to demonstrate proof of English language proficiency (<http://bulletin.du.edu/graduate/admission-and-enrollment-policies/additional-standards-for-non-native-english-speakers/english-language-proficiency-ielts-toefl/>).

Non-degree students must apply each term.

International non-degree students should contact the University of Denver's International Student and Scholar Services for information on visa eligibility.

Notes

- Non-degree students interested in taking Iliff School of Theology courses must register at Iliff. The classes will be counted as non-degree credits, not transfer credits, towards the DU-Iliff Joint PhD program with advisor approval upon acceptance into the Joint PhD program.
- DU@2U Distance Program courses may not be eligible for non-degree registration.
- Not all academic units permit non-degree students to register for their courses.

English Conditional Admission (ECA)

Some graduate programs may offer English Conditional Admission (ECA) to academically qualified non-native English speakers who do not meet the University's minimum English language proficiency requirements. To apply for a program in an academic department that offers ECA, applicants must indicate on their application to the degree program that they wish to be considered for ECA.

ECA students cannot enroll in any regular degree courses prior to meeting the University's English requirement. In order to be granted regular status in their graduate degree program and become eligible to take academic classes, ECA students must present a departmental qualifying minimum TOEFL, IELTS, C1 Advanced or Duolingo English Test score before the start of their program.

Lifelong Learners

University College offers courses to non-degree seeking students and non-certificate seeking students. These students are designated as Lifelong Learners. Neither entrance examinations nor a baccalaureate degree are required in order to register for courses as a Lifelong Learner. Students must declare their status as Lifelong Learners during their first quarter of enrollment.

Lifelong Learners may take University College courses for non-credit (NC) or credit. The courses cannot be counted toward a degree or certificate.

Visiting Scholars

Faculty members of other institutions may pursue postdoctoral study for no credit as guests of the University, without paying tuition. Visiting faculty members should apply to the department in which they plan to study. If graduate credit is desired, they must register as non-degree students (<http://bulletin.du.edu/graduate/admission-and-enrollment-policies/admission-status/special-status-student/>) and pay the regular tuition rates.

Admission Process and Standards for All Applicants

All applications for graduate education at the University of Denver require the submission of specific materials as stated by the University or academic unit. These materials must be received in the Office of Graduate Education or appropriate admission unit by the program's published deadline. All documents submitted become property of the University of Denver and cannot be copied or returned to the applicant/student or any other person(s). The information given on the application must be true and complete without evasion or misrepresentation. Applicants who willfully omit, falsify, or provide incomplete statements may be denied admission or dismissed.

University Admission Criteria

The University of Denver offers admission to graduate applicants who demonstrate the highest potential for successful graduate study. Applicants are evaluated by the individual programs to which they apply on the basis of their prior performance and professional promise as evidenced by academic records, letters of recommendation, standardized test scores, and other supplemental materials. Academic program admission requirements may be higher than University minimum standards. To be admitted as a regular degree student (<http://bulletin.du.edu/graduate/admission-and-enrollment-policies/admission-status/regular-degree-student/>) or a certificate student (<http://bulletin.du.edu/graduate/admission-and-enrollment-policies/admission-status/certificate-student/>), an applicant must meet the following requirements:

- **Baccalaureate Degree:** Applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- The minimum baccalaureate GPA for graduate admission consideration at the University of Denver is a cumulative 2.5 on a 4.0 scale, or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work). An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. Applicants with graduate coursework who have not earned a master's degree or higher may use the GPA from the graduate work to meet the requirement. The minimum GPA for all graduate coursework undertaken is a cumulative 3.0 on a 4.0 scale.
- **Standardized Test Scores:** The University of Denver does not require graduate entrance examinations for admission. However, some graduate programs do require standardized exams, such as the Law School Admission Test (LSAT), the Graduate Record Examination (GRE) General Test, or the Graduate Management Admission Test (GMAT), for admission. Some departments may require applicants to take the GRE Subject Test in a specific discipline as well. Please see the published admission requirements (<https://www.du.edu/academics/graduate-programs/>) for specific academic program admission requirements.

Note: *The minimum GPA requirement for the JD in the Sturm College of Law is set according to the standards of the American Bar Association.*

Application

Applications for graduate education at the University of Denver must be submitted online by the program's published deadline.

Application Fee

A non-refundable application fee is required for each application.

The non-refundable application fee (payable by bank draft, cash, credit card, money order, personal check, or wire transfer) covers the cost of processing application materials. A credit card payment is accepted during online application submission only. Applications will not be processed until the application fee is paid.

Application fee waivers are granted to Fulbright Scholars and McNair Scholars. Proof of participation must be included with the application. Academic units may offer additional fee waivers. Contact the academic unit for more details.

International Degree Evaluation Fee

Transcripts and proof of degree documents for postsecondary degrees earned from institutions outside of the United States will be released to a third-party international credential evaluator to assess U.S. education system equivalencies. Beginning July 2023, a non-refundable fee for this service will be required before the application is processed.

Transcripts and Proof of Degree

Students are required to submit one official transcript from each post-secondary institution they have attended or are presently attending, where two quarter hours (or one semester hour) or more were completed, including study abroad and college coursework completed in high school. Proof of a bachelor's, and if applicable, a master's degree is required from a regionally accredited college or university. Note that during the admission process, unofficial transcripts are accepted. Upon acceptance of an admission offer, official transcripts must be received by the start of the first term of enrollment, or a hold will be placed on the student's account prohibiting future registration.

The applicant is responsible for obtaining all transcripts. University of Denver students and alumni do not need to provide University of Denver transcripts.

Applicants who have earned a degree outside the United States must submit proof of graduation, typically through a degree certificate or diploma. Official study abroad transcripts are required unless the course titles, grades and credits earned abroad appear on another transcript. Applicants educated outside the U.S. are encouraged to contact the Office of Graduate Education or the appropriate admission office for assistance regarding transcript-related materials.

Official transcripts must include the name and date of degree earned, if applicable. Official degree certificates or diplomas must include the name and date of degree earned.

The University of Denver will consider paper transcripts official when delivered to the University of Denver in a sealed envelope from the issuing institution provided the following criteria are met:

- The transcripts must have the original signature of the registrar and/or the seal of the issuing institution.
- The transcripts must be enclosed in an envelope with the stamp or signature of the registrar across the sealed flap.

The University of Denver will consider electronic transcripts official from a domestic institution provided the following criteria are met:

- The transcript is certified as official from the college or university using a third-party agency for the certification process. Approved agencies include Joint Services Transcript (JST), National Student Clearinghouse, Parchment, and Royall and Company. The University of Denver reserves the right to rescind approval of the above-mentioned agencies based on changes in technology utilized by the agency. Upon request, the Office of the Registrar will take into consideration a third-party vendor other than the aforementioned agencies.
- The transcript must be received from the third-party agency by a University official.
- The transcript must be a certified PDF document with no evidence of tampering. The transcript must be retrieved from a secure server. Emailed transcripts will not be accepted.

Certified English translations must accompany all transcripts except for those provided by institutions that issue documents in English. Errors or omissions in English translations may be grounds for refusal or dismissal. Please consult the Office of Graduate Education for specific details.

The University of Denver reserves the right to reject transcripts or request additional information if there is any question about the authenticity of the document. Transcripts with course work in progress will not be considered final and admission will be granted provisionally.

Supplemental Documents

Graduate units may require additional materials such as letters of recommendation, essays, personal statements, resumes, or other supplemental application documents. Applicants should review the published admission requirements (<https://www.du.edu/academics/graduate-programs/>) for specific guidelines.

Reuse of Supplemental Documents

Supplemental documents for non-matriculated applicants remain on file for two years from the date of application. Non-matriculated applicants may request to reuse supplemental documents for up to one year from the original application term. Otherwise, new documents will be required.

Admissions Examinations

Some programs require standardized test scores such as the Graduate Record Examination (GRE). The University of Denver's ETS Institution Code is 4842. Individual graduate programs reserve the right to set test score requirements.

If an exam is required for admission, it must be taken prior to acceptance. The official test scores issued directly from the appropriate testing agency must be received no later than the start of the first term of enrollment, or a hold will be placed prohibiting registration.

Test score validation deadlines are set by the testing agency. It is the applicant's responsibility to ensure official test scores can be reported directly to the University.

Note: Contact the graduate unit for details on required admission examinations.

Admission Offer

An admission offer from the University of Denver must be officially accepted or declined by the stated deposit deadline in the admission letter. If the offer is declined, the applicant will not be eligible to enroll in a future term without reapplying to the program.

The University of Denver is a signatory on the Council of Graduate Schools (<https://cgsnet.org/>) (CGS) Resolution Regarding Graduate Scholars, Fellows, Trainees, and Assistants.

Admission Deposit

A non-refundable deposit is required of all applicants newly admitted to each graduate program. The admission deposit must be submitted by the stated deposit deadline in the admission letter.

The deposit confirms the applicant's intent to attend the University. Only those who have confirmed their attendance in the program by sending the proper deposit will receive course registration information. Deposit fees vary by program. The deposit is applied to the first term of tuition. However, fully funded graduate assistants and employees using a tuition waiver may request a refund of the deposit from the Bursar's Office upon matriculation.

Reactivation of Application

An applicant may submit a one-time request to reactivate their incomplete application (submitted application that is missing required materials or the application fee) or completed application that was withdrawn prior to receiving an admission decision to the same program, regardless of delivery mode. The start term for the reactivated application must be within one year of the academic term to which they originally applied (e.g., fall 2017 to fall 2018, or winter 2016 to spring 2016). Additionally, the program must still be accepting applications.

If an applicant wishes to seek admission to a different program, then submission of a new application, supporting materials and payment of the application fee are required.

If more than one year from the start date of the academic term of the original application has elapsed, then submission of a new application, supporting materials and payment of the application fee are required.

Deferrals and Term Changes

Prior to an admission decision:

- After submitting an application but prior to receiving an admission decision, applicants may request a one-time change to the term to which they originally applied. Formal requests can be made to either the Office of Graduate Education or to the College/School to which they applied.

Admitted Students:

- If an applicant wishes to defer their term of entry after receiving an offer of admission, they must first pay the enrollment deposit. Deposited students may submit a formal request prior to the start of term to the College/School in which they were accepted or to the Office of Graduate Education to defer their enrollment for up to one year. If the program does not require a deposit, the applicant must first confirm acceptance of the admission offer prior to submitting a formal request to defer their enrollment for up to one year. Students may request to enroll in an earlier or later start term, but only one deferral will be granted per application.
- A deposited (or confirmed, if the program does not require a deposit) student must request a deferral by the last day for 100% refund for dropped classes of the admission term; otherwise the student's admission will be withdrawn. A student that misses this deadline can make a one-time request to the College/School in which they were accepted to defer their admission into the program. Though previously admitted, there is no guarantee admission to a new term will be granted. If approved, admission will be deferred to the next available term but no later than one year from the original admission term.
- Funding awarded with the original admission offer is not guaranteed for the new start term. It is the student's responsibility to consult with a representative from the College/School of admission regarding funding options.
- At the discretion of the College/School of admission, submission of a new application, supporting application materials, and payment of another application fee may be required.

Change of Graduate Degree Program

An applicant or student wishing to change a major, concentration, location, or delivery mode (i.e., on-campus, online) or wishing to change to a lesser or equal degree program (e.g., doctoral to master's level) within the same College/School has the following options:

Applicant:

- After submitting an application and prior to receiving an admission decision, applicants may request a one-time change to an academic program within the same College/School to which they originally applied. Formal requests can be made to either the Office of Graduate Education or to the College/School to which they applied.
- After an admission decision has been rendered and before the first day of class, a student can request a one-time change to their academic program within the same College/School with approval by the department. A new application, additional supporting materials, and/or a new application fee may be required at the department's discretion. Formal requests can be made to either the Office of Graduate Education or to the College/School to which they applied.
- If an applicant wishes to change to a program outside of the College/School to which they originally applied or change to a higher-level degree program, then submission of a new application, supporting application materials, and payment of a new application fee are required.

Current Student:

- A matriculated student can submit a completed Change of Graduate Program form to the Office of Graduate Education. The College/School reserves the right to request that the student submit a full application for admission, including the application fee.
- A student wishing to change to a degree program outside of the current College/School, or wishing to change to a higher degree program (master's level to doctoral), must submit a full application for admission, including the application fee and supporting application materials. A graduate student who wishes to change to another degree program must be withdrawn/terminated from the program of original admittance and accepted into the new degree program.

Additional Standards for International Applicants

Applicants will be considered international for admission purposes if one of the following statements applies to them:

- The applicant is not a United States national, permanent resident, or citizen.
- The applicant does not hold dual citizenship with the United States and another country.

- The applicant is currently in the United States on an F-1 or J-1 student visa.
- The applicant resides in the United States and holds a non-immigrant visa.

To maintain legal immigration status, international students at the University of Denver must hold an immigration status granted by the U.S. federal government which allows study in the United States. Most students enroll at the University of Denver in F-1 or J-1 immigration status, although other statuses may also permit students to study in the United States.

When an international applicant who requires an F or J visa has been admitted to the University of Denver, for an I-20 or DS-2019 to be issued, the student must submit some combination of the documents listed below, as outlined on their Application Status Page. Students admitted to 100% online programs are not eligible for I-20 or DS-2019 issuance.

- Copy of biographical page of passport
- If applicable, copy of dependent(s) biographical page of passport
- DU Financial Verification form (<https://internationalization.du.edu/sites/default/files/2022-07/FV%20Form.pdf>)
- Bank statement or Certificate of Deposit with sufficient funds for the estimated cost of attendance (<http://www.du.edu/financialaid/graduate/cost/>) for one academic year (unless program is shorter) as listed by the Office of Financial Aid
- If applicable, student financial guarantee (FGL) letter from the sponsoring agency/government office

Photocopies or scans of the above documents are accepted. These requirements do not apply to U.S. permanent residents or students not in F-1 or J-1 immigration status. International Student & Scholar Services (ISSS) reviews all documents submitted and determines if an admitted student qualifies for an I-20 or DS-2019.

It is the responsibility of an admitted student who has been issued an I-20 or DS-2019 to apply for a visa at a United States embassy and enter the U.S., transfer their F-1 SEVIS record to DU or apply for a change of status to F-1 with United States Citizenship and Immigration Services. For more information or to schedule an appointment with an international student advisor, visit <https://www.du.edu/iss/>. Questions can be directed to iss@du.edu.

Additional Standards for Non-Native English Speakers

English Language Proficiency (p. 1001)

Required Tests for GTA Eligibility (p. 1002)

English Language Proficiency

TOEFL/IELTS/C1 Advanced/DUOLINGO ENGLISH TEST

Official scores from the Test of English as a Foreign Language (TOEFL), International English Language Testing System (IELTS), C1 Advanced or Duolingo English Test are required of all graduate applicants, regardless of citizenship status, whose native language is not English or who have been educated in countries where English is not the native language. Applications will not be processed until the required TOEFL, IELTS, C1 Advanced or Duolingo English Test score is received. The TOEFL, IELTS, C1 Advanced and Duolingo English Test scores are valid for two years from the test date and are considered official only when received directly from the testing agency.

TOEFL

The minimum TOEFL score accepted by the University is 80 (iBT). The institution code for the University of Denver is 4842.

IELTS

The minimum IELTS score accepted by the University is 6.5.

C1 Advanced

The minimum C1 Advanced score accepted by the University is 176.

Duolingo English Test

The minimum Duolingo English Test score accepted by the University is 115.

Notes: Individual graduate programs reserve the right to set higher English language proficiency test score requirements. Graduate Teaching Assistants must meet the Required Tests for GTA Eligibility (<http://bulletin.du.edu/graduate/admission-and-enrollment-policies/additional-standards-for-non-native-english-speakers/required-tests-for-gta-eligibility/>) policy

English Language Exemption

Students are generally exempt from the English proficiency test requirement if they have any of the following:

- Secondary/high school diploma from a school where the language of instruction is English.
- Earned a baccalaureate degree or higher from a formally-recognized/accredited university where the institution's sole language of instruction and examination is English.
- Last 30 semester credits (45 quarter credits) of coursework were successfully completed (cumulative 3.0 GPA or higher) from a formally-recognized/accredited university where English is the sole language of instruction and examination.

English Conditional Admission

Some graduate programs may offer English Conditional Admission (ECA) to academically qualified non-native English speakers who do not meet the University's minimum English language proficiency requirements. To apply for a program in an academic department that offers ECA, applicants must indicate on their application to the degree program that they wish to be considered for ECA.

ECA students cannot enroll in any regular degree courses prior to meeting the University's English requirement. In order to be granted regular status in their graduate degree program and become eligible to take academic classes, ECA students must meet present a departmental qualifying minimum TOEFL, IELTS, C1 Advanced or Duolingo English Test score before the start of their program.

Students who are admitted under the ECA option are not eligible for Graduate Teaching Assistantships until they have met the minimum ECA requirements, have been changed to regular status students, and have met minimum GTA eligibility requirements.

Required Tests for GTA Eligibility

TOEFL/IELTS/C1 Advanced

Any graduate applicant whose native language is not English or is from a country where English is not the native language, who wishes to be considered for a Graduate Teaching Assistantship (GTA) during any year of study in any graduate department at the University of Denver, must demonstrate fluency in spoken English by scoring a minimum of 26 on the Internet Based TOEFL (iBT) exam speaking section, a minimum of 8 on the IELTS exam speaking section, or a minimum of 200 on the C1 Advanced exam speaking section.

GTA English Language Exemption

Prospective GTAs may be exempted from submitting TOEFL/IELTS/C1 Advanced scores if they:

- have earned a baccalaureate degree or higher from a formally-recognized/accredited university where the institution's sole language of instruction and examination is English, AND
- have an additional four or more consecutive years of work/instructional experience in countries with an official native language of English and the language of employment/instruction is English.

Note: GTA awards may be revoked or restricted to non-teaching assistantship responsibilities at the discretion of the division if the GTA does not demonstrate sufficient English fluency in the classroom.

Tuition, Fees and Financial Aid Policies and Procedures

Financial Aid (p. 1002)

Tuition and Fees (p. 1010)

Financial Aid

Financial aid for graduate students is in large part provided by individual departments based on the mission and goals of the unit. The Office of Financial Aid does not award scholarships, grants, fellowships, or GTA/GRA waivers for graduate students. The student should contact the academic unit in which the student is enrolled or plans to enroll. The Office of Financial Aid offers Federal Work-Study and Federal Direct Loans and provides information on additional financing options, including Federal Direct Graduate PLUS loans and alternative (private) loans.

DU graduate students are eligible for two types of aid:

- Federal and state aid (available to U.S. citizens and permanent residents), which includes the Colorado Graduate Grant, Federal TEACH Grant, Federal Work-Study, and Federal Direct Loans, and
- Merit-based aid, which includes divisional/departmental scholarships, graduate assistantships, fellowships, and other merit-based aid awarded or initiated by the student's academic program of study.

To apply for federal aid and certain types of institutional need-based aid, a student must complete the Free Application for Federal Student Aid (<https://studentaid.gov/h/apply-for-aid/fafsa/>) (FAFSA). Only U.S. citizens, permanent residents, and eligible non-citizens can submit a FAFSA. International students are not eligible.

The FAFSA (<https://studentaid.gov/h/apply-for-aid/fafsa/>) is typically available on October 1st of each year. The University of Denver's school code is 001371. Applicants and students are encouraged to submit the FAFSA by the March 15th priority deadline every year. Approximately 30% of financial aid applications are selected by the U.S. Department of Education for review. This process of review is known as verification. If a student is selected for verification, Financial Aid will send an email to the student requesting additional documentation.

Federal Direct Loans

To qualify for Federal Direct Loans, graduate students must be enrolled at least half-time in an eligible degree or certificate program (four credit hours or more per quarter/semester). To receive loans, a student must also make Satisfactory Academic Progress (SAP) (<https://www.du.edu/admission-aid/financial-aid-scholarships/graduate-financial-aid/policies-maintaining-aid/sap/>) in the program of study, not be in default on an educational loan, be taking courses that count toward their degree program, and submit all required financial aid forms. Federal Direct Loans are the most common type of aid for graduate students. Eligibility is determined by information provided on the FAFSA.

Federal Direct Unsubsidized Loan Information

Lender:

U.S. Department of Education

Eligibility Requirements:

Available to students who have submitted a FAFSA, regardless of financial need. If eligible, this loan will be included in your financial aid offer.

Maximum Loan Amount:

\$20,500 per academic year.

Interest Rate:

This loan has a fixed interest rate (<https://studentaid.gov/understand-aid/types/loans/subsidized-unsubsidized/#what-are-the-current-interest-rates>), and interest accrues while you are in school and during both the grace period and repayment. Interest can be paid as it accrues; if not paid, it will be capitalized at repayment. New fixed interest rates are set each July 1st for the upcoming academic year.

Fees:

An origination fee (<https://studentaid.gov/understand-aid/types/loans/subsidized-unsubsidized/#other-than-interest-is-there-a-charge-for-this-loan>) is deducted at the disbursement of each installment of the loan, which means the amount you actually receive will be slightly less than the amount borrowed.

Disbursement Requirements:

To receive funds, you must accept the loan(s) through MyDU, complete both a Master Promissory Note and Entrance Counseling online at www.StudentAid.gov (<https://studentaid.gov/>), and be enrolled in at least 4 credits (half time) that count toward your degree program.

Repayment Terms:

Repayment begins once the 6-month grace period ends after you graduate or after you are no longer enrolled at least half time. Payments are made to your Direct Loan servicer.

Repayment Options:

The standard repayment period is 10 years but can be as long as 30 years depending on total borrowing and chosen repayment plan. Loans may be consolidated with other federal loans.

Federal Direct Graduate PLUS Loan Information

Lender:

U.S. Department of Education

Eligibility Requirements:

Available to students who have submitted a FAFSA, regardless of financial need. This loan is not automatically included in most financial aid offers; a separate application is required on www.StudentAid.gov (<https://studentaid.gov/>).

Maximum Loan Amount:

Up to the total cost of attendance, less all other financial aid.

Interest Rate:

This loan has a fixed interest rate (<https://studentaid.gov/understand-aid/types/loans/subsidized-unsubsidized/#what-are-the-current-interest-rates>), and interest accrues while you are in school and during both the grace period and repayment. Interest can be paid as it accrues; if not paid, it will be capitalized at repayment. New fixed interest rates are set each July 1st for the upcoming academic year.

Fees:

An origination fee (<https://studentaid.gov/understand-aid/types/loans/subsidized-unsubsidized/#other-than-interest-is-there-a-charge-for-this-loan>) is deducted at the disbursement of each installment of the loan, which means the amount you actually receive will be slightly less than the amount borrowed.

Disbursement Requirements:

To receive funds, you must accept the loan(s) through MyDU, complete both a Master Promissory Note and Entrance Counseling online at www.StudentAid.gov (<https://studentaid.gov/>), and be enrolled in at least 4 credits (half time) that count toward your degree program.

Repayment Terms:

Repayment begins once the 6-month grace period ends after you graduate or after you are no longer enrolled at least half time. Payments are made to your Direct Loan servicer.

Repayment Options:

The standard repayment period is 10 years but can be as long as 30 years depending on total borrowing and chosen repayment plan. Loans may be consolidated with other federal loans.

Federal Work-Study/Student Employment Program

This work program, funded by the federal government, provides part-time employment at an hourly wage, which is determined by the demands of the job and the skill and experience of the student employee. The program encourages community service and work related to each student's career goals.

What is work-study?

Work-study is a need-based type of financial aid that allows students to work on campus (or with an approved off-campus employer) to earn money to help pay for educational expenses. It's not a grant (because you must work to earn it), and it's not a loan (because you don't have to repay it).

Eligibility:

Because work-study funding is limited, it's not included in all students' aid offers. Priority is given to those who applied for financial aid by the priority deadline, and if eligible, it will be included on their financial aid offer. If you have been offered work-study, you must accept it in MyDU by **July 1st** and secure a position by **November 1st** or it will be canceled.

You can only apply for work-study positions if you have this award as a part of your financial aid offer, and you must be enrolled in at least 4 credits (half time) that count toward your degree program to use it.

Getting Paid:

The amount shown on your aid offer is the maximum amount you can earn over the academic year (typically **\$5,000**). Actual earnings will depend on your work schedule and hourly rate. Since there is no pre-set pay rate, the amount earned will depend on your position. You'll be paid every two weeks for the hours worked, and your paycheck will be sent directly to you (not applied to your tuition bill).

Other Part-Time Positions:

There are other work opportunities available! Student Employment maintains an online job board of part-time on- and off-campus positions. These positions are available to all students, regardless of financial need or work-study eligibility. Access the job board listings through Pioneer Careers (<http://du.edu/pioneercareers/>).

For more information about employment opportunities, contact stuemp@du.edu.

Graduate Assistantships

Departments assign graduate assistantship positions to eligible students according to the guidelines below. Regardless of terminology a unit or department may use to describe these positions (GXA, GSA, GA, GTI, RSA, etc.) the University recognizes only three official assistantship types: Graduate Teaching Assistantship (GTA), Graduate Service Assistantship (GSA) and Graduate Research Assistantship (GRA). Assistantships can be in support of teaching assignments, general administrative duties, or research. These policies and guidelines apply to GTAs, GSAs and GRAs except where specified and must be adhered to by all graduate colleges, schools, departments and recipients.

Assistantship Types

Following are descriptions of each type of assistantship:

- **Graduate Teaching Assistant (GTA)**

Graduate teaching assistants may support faculty by performing instruction-related duties such as teaching lower-level undergraduate courses and labs, developing teaching materials, leading class discussions, tutoring, preparing and giving examinations, and grading examinations or papers. GTAs are funded by the University budget. GTAs must demonstrate fluency in spoken English to be eligible to receive the GTA award. For more information, see the Required Tests for GTA Eligibility (p. 1002) policy.

- **Graduate Service Assistant (GSA)**

Graduate service assistants may perform administrative and support functions or discipline-specific projects for an academic department or business unit. Responsibilities may include administrative support, lab monitoring, equipment management, web site development and

maintenance, editorial work for scholarly journals, or routine support for publications or social media. To support professional development, the graduate service assistant should be given the opportunity to apply his/her academic skills to the assigned tasks and develop new administrative skills. GSAs are funded by the University budget.

- **Graduate Research Assistant (GRA)**

Graduate research assistants may perform research assignments under the direct supervision of a faculty member who generally is the principal investigator on an external grant or contract. The research must be directly relevant to the student's academic program of study, should relate directly to the student's degree requirements, and should be reasonably expected to contribute to the student's dissertation, thesis, or capstone project. The label "GRA" only applies to graduate assistants who receive stipend and waiver from external awards (e.g. grants or contracts).

Assistantship Eligibility

An assistantship recipient must be enrolled in an academic program during the terms in which they receive the award, stipend and tuition waiver hours. Departments may stipulate that recipients must be enrolled full-time.

Assistantship Academic Requirements

Students must be in good academic standing in order to maintain eligibility for an assistantship position. Students on academic probation or suspension are not eligible for an assistantship position until that status is resolved. After two consecutive terms below 3.0 GPA, a student is not eligible for an assistantship position until the GPA is raised to a 3.0 or better.

Graduate Teaching Assistantship (GTA) Exams, Credentials and Experience

Any graduate applicant whose native language is not English or is from a country where English is not the native language, who wishes to be considered for any Graduate Teaching Assistantship during any year of study in any graduate department at the University of Denver, must demonstrate fluency in spoken English by scoring a minimum of 26 on the Internet Based TOEFL (iBT) exam speaking score, an IELTS score of 8 on the speaking section or a minimum score of 200 on the CAE speaking section.

To serve as instructor of record for an undergraduate course, graduate teaching assistants must be qualified by appropriate credential or tested experience as defined by the Higher Learning Commission:

- Completed program of study in the discipline, with substantial coursework at least one level above that of the courses being taught or developed.
- Earned degree at least one level above that of the program in which they are teaching, typically a master's degree, with substantial graduate coursework in the discipline of those courses.

or

- Industry certification and years of experience successfully working in the field.
- Documented recognition of excellence in teaching.
- Expertise, ability, and talent validated through publication or wide critical and public acclaim.

GTA English Language Exemption

Prospective GTAs may be exempted from submitting TOEFL/IELTS/CAE scores if they:

- have earned a baccalaureate degree or higher from a formally-recognized/accredited university where the institution's sole language of instruction and examination is English, and
- have an additional four or more consecutive years of work/instructional experience in countries with an official native language of English and the language of employment/instruction is English.

English Language Proficiency

Prospective or current students who are awarded a GTA position based on the TOEFL/IELTS/CAE minimum scores required for GTAs or granted an exemption must demonstrate sufficient English fluency in the classroom. If a GTA is later found to have insufficient English fluency for instruction-related duties, the award must be revoked and may be converted to a GSA award with non-teaching assistantship responsibilities at the discretion of the division.

Assistantship Hiring

Assistantship appointments are made on a full-, half-, one-third, or quarter-time basis. Assistantship awards can be made for any one quarter or all four academic quarters.

In general, full-time graduate assistants are expected to devote 20 hours per week to their assignments, half-time graduate assistants devote 10 hours and quarter-time graduate assistants devote 5 hours. However, some academic areas may require different hours.

The majority of graduate assistant positions are awarded by particular graduate programs at the time of admission as part of recruitment packages and are reserved for students in those programs. A general job posting can be found on Pioneer Careers Online (PCO), but students must contact individual programs for internal processes they use to award assistantships.

Assistantship Employment Restrictions

Students who are admitted with provisions must satisfy the provisions in the time frame specified in the admission letter in order to remain eligible for a graduate assistantship.

If a graduate assistant should wish to change his/her major field of study to another college, school or department, the award is not transferable to the new department.

Graduate assistantships should be awarded to eligible students in the same or closely related field as their degree program.

A graduate student cannot hold more than the equivalent of one full-time assistantship (GTA, GSA and/or GRA). Full-time is normally defined as 20 hours per week (1.0 FTE).

Students cannot simultaneously hold both an assistantship position and a work-study funded position. However students may hold an assistantship and a work-study funded position in separate academic terms.

Students cannot simultaneously hold both a full-time benefitted staff position and an assistantship position, or any combination of the two exceeding 40 hours per week.

Students cannot serve as a graduate assistant in a course in which they are currently enrolled.

Assistantship Hiring Paperwork

Background Check and I-9

- All DU employees must complete a background check through HireRight and be cleared for hire by Human Resources prior to officially being offered an assistantship. As long as a graduate assistant is re-hired within one year of their last day worked, then no additional background check is required. All inquiries regarding background checks should be made with Human Resources.
- As mandated by the Immigration Reform and Control Act of November 6, 1986, and House Bill 1017, the University is required to verify the identity and work authorization of all employees. Upon completion and passing of a background check, employees will receive an I-9 Verification Request email where they can complete Section 1 of their form. Instructions for completing Section 2, and presenting the required documentation, will be provided upon completion of their form. If an international student's visa status changes after the student has been hired, a new I-9 must be submitted.

Other Hiring Paperwork

- All newly hired University of Denver faculty and staff members, including student employees, must complete the required new hire action items (<https://www.du.edu/human-resources/new-employees/action-items/>) either prior to or on their first day of work. Most of these action items, including the W-4 Withholding Allowance Form, can be completed online via MyDU (<https://my.du.edu/>).

Assistantship Termination

If a graduate assistant is proven incapable of performing the responsibilities of the position, the unit has the right to terminate the award prior to the end of the award period. Units should work with Human Resources when pursuing the termination of a graduate assistant.

If the appointment of a graduate assistant is terminated by means other than death or disablement before the end of an academic term, the award recipient is responsible for repayment of the "unearned" share of the award, including waiver hours "borrowed" from the future (GTA and GSA only). Repayment may occur through deductions from the final paycheck or by other means.

With permission from the appropriate business officer, the program may hire a replacement graduate assistant and reallocate the unused portion of any remaining stipend or waiver award to the new assistant.

Assistantship Stipend and Waiver Awards

Assistantship offers must include both a tuition waiver and monthly stipend unless the student has completed all coursework and is registered for Continuous Enrollment. In that case, the student may be offered a stipend without a tuition waiver.

Awards are made through the graduate college, school, or department. Assistantship awards can be made for any one or multiple academic quarters.

Assistantship awards will be full-, half-, one-third, or quarter-time. Graduate Assistants who are less than full-time receive stipend and waivers proportional to their appointment.

Assistantship Stipends

Stipends are paid through payroll and are taxable income.

Assistantship Waivers

Tuition waivers are considered merit-based scholarships and are not taxable income.

Graduate assistants will not receive tuition waivers during any term they are not receiving a stipend.

Students must inform their program of their plan for waiver hour use.

The combination of all tuition waivers cannot exceed tuition charges (prior to any assessed fees) and waivers cannot be awarded in cash.

Normally, full-time graduate assistants receive 8-10 hours of waiver for each academic term. Awards in specific colleges, schools, or departments may vary.

There is no tuition-waiver benefit for spouses, dependents, or non-dependents of graduate assistants.

When assistantship recipients have both scholarship and waiver hours available in any given term, scholarship hours will be drawn upon first to pay tuition bills. When assistantship recipients are also employees and have a combination of employee waiver, scholarship and/or assistantship waiver hours available in any given term, the employee waiver will be drawn upon first, then the scholarship hours and finally the assistantship waiver hours will be drawn upon to pay tuition bills.

Because the fiscal year ends before the summer term closes, waivers cannot be carried forward from the spring to the summer term.

Waiver hours cannot be used for interterm courses, noncredit courses, or any other fees or fines, including continuous enrollment fees.

If the student drops courses after or during the refund period for which waiver hours have been used, the waiver will not be re-awarded for future use.

Graduate assistant positions awarded late or after the fall term may affect other financial aid that a student is receiving.

GTA/GSA Award Duration and Use

When GTA and GSA appointments are made for multiple terms during an aid year (for instance, fall through spring), tuition waiver awards (“waivers”) will be divided equally among the terms. “Appointment” means that the student is working as a graduate assistant and earning a stipend. In the case of single term or term-by-term appointments, waivers will be available for use during the term of appointment only (i.e., cannot be borrowed from the future or carried over to the next term).

Tuition waivers cannot be awarded prior to the term of appointment (e.g., waivers cannot be awarded for summer if the student will not be working until fall term).

GRA Award Duration and Use

GRA awards are for one-quarter duration and GRA waivers cannot carry forward. There is no borrowing from the future and no carry-over from one term to the next, and GRA waivers cannot be made available until the term they are earned. GRA awards are subject to these policies for the life of the research grant.

Neither the stipend nor the waiver portion of a GRA award can cover any period outside of the grant or contract period. For example, if a grant or contract begins or ends at the halfway point of a term, no more than one-half of a full award (stipend and waiver) can be paid during that term.

Health Insurance Scholarship

The Graduate Assistantship Health Insurance Scholarship (“Health Insurance Scholarship”) covers the cost of the DU Student Health Insurance Plan (SHIP) and the Health and Counseling Fee (HCF).

Health Insurance Scholarship Eligibility

To be eligible for the Health Insurance Scholarship, graduate assistants are required to meet the following criteria for the entire academic year (fall, winter and spring quarters):

- hold a full-time assistantship appointment (GTA, GRA, GSA or combination)
- successfully fulfill the requirements of their assistantship appointment
- have a tuition waiver offer of a minimum of 24 total credit hours
- register for and complete a minimum of 24 total credit hours of graded coursework (e.g., not Continuous Enrollment)
- must not register for Continuous Enrollment alone in any of the three academic quarters

Health Insurance Scholarship Requirements

Students who wish to receive the Health Insurance Scholarship must accept the terms and conditions of

the scholarship and the award in MyDU (https://login.du.edu/_layouts/PG/login.aspx?ReturnUrl=%2Fso

https://login.du.edu/_layouts/PG/login.aspx?ReturnUrl=%2Fso

https://login.du.edu/_layouts/PG/login.aspx?ReturnUrl=%2Fso

https://login.du.edu/_layouts/PG/login.aspx?ReturnUrl=%2Fso

https://login.du.edu/_layouts/PG/login.aspx?ReturnUrl=%2Fso

%252FKTOtaP88MUAuT2BoHcZS%252Bufw0ZsC7ofNNsXC00Uw3LTUSw8PAkTJ7Sn1Jfl0%252Bq%252F0UbUAUNweNERbqPFz67VkbHp4TmL%252B7MtSb18aemvRP8VfX6Q3bxd35%252BPoPKv4A%26RelayState%3Dhttps%253A%252F%252Fapi.my.du.edu%252Fcore%252Fsaml_sso).

After receiving the Health Insurance Scholarship, failure to comply with any of the terms and conditions may result in a hold being placed on the student's account. The hold will not be removed until the student has re-paid the health insurance charges.

The award payment will be automatically applied to the student's account 10 days before the start of every term if they have maintained eligibility, have registered for classes, have been assessed the DU Health Insurance Plan (SHIP) and/or the Health and Counseling Fee (HCF) and have not waived the SHIP and/or HCF charges.

Students registered for fewer than six credit hours of graded coursework will not be assessed the SHIP or HCF fees automatically and must complete the enrollment forms available through the Health and Counseling Center for all applicable terms in order to receive the Health Insurance Scholarship.

On-Campus Employment Authorization for International Students

Federal immigration regulations permit F-1 and J-1 students in lawful immigration status to work on campus at the school or program that holds their SEVIS record. On-campus employment may include graduate teaching assistantships, graduate research assistantships and student worker positions; international students are not eligible for federal work-study positions due to U.S. citizenship or permanent residency requirements. F-1 students may work on campus without special authorization as a benefit of their immigration status. J-1 students must receive written authorization from a responsible officer or alternate responsible officer from either International Student & Scholar Services (ISSS) or their non-DU program sponsor prior to beginning on-campus employment. J-1 employment authorizations may be approved for on-campus employment for up to 12 months. Unauthorized on-campus employment, or employment in excess of the maximum numbers of hours permitted per week, is a violation of the student's immigration status. International students in other immigration statuses may generally not work on campus without an Employment Authorization Document issued by U.S. Citizenship and Immigration Services (USCIS).

Questions regarding the interpretation and application of immigration regulations governing the on-campus employment benefit of F-1 and J-1 students should be directed to International Student and Scholar Services (<https://internationalization.du.edu/issss/>).

Maximum Number of Hours per Week

F-1 and J-1 students may work up to 20 hours per week (part-time) during quarters of required enrollment and more than 20 hours per week (full-time) during their annual vacation quarter and during official University breaks. These limits apply to the total number of hours worked in a single calendar week (Monday-Sunday) among all on-campus positions.

Definition of Employment

For immigration purposes, employment—whether on or off campus—is defined as the exchange of services for compensation, monetary or otherwise. International students must have the appropriate authorization from ISSS, the program sponsor, or USCIS prior to beginning any form of employment in the United States.

Definition of On-Campus Employment

Federal immigration regulations define on-campus employment for F-1 and J-1 students as follows:

- Employment for the host school or program on the institution's premises; or
- Employment for a commercial firm that operates on the premises of the host school or program and that provides direct services to the student population, such as a campus bookstore or cafeteria; or
- Employment at an off-site location that has an established educationally affiliated relationship with the host school or program, generally evidenced by a Memorandum of Understanding.

Start of Employment Authorization

F-1 students can start on-campus employment no more than 30 days before the beginning of the first term of enrollment in the US in F-1 status. Students transferring from another school or program may begin on-campus employment after the release of their SEVIS record to the University and reporting to ISSS. J-1 students can start on-campus employment no earlier than the start date listed on their form DS-2019.

F-1 or J-1 students beginning a new program at DU after completing another program may continue working on campus in the interim provided a change of level or program has been authorized by ISSS and there is no break in the student's F-1 or J-1 status.

Curricular Practical Training

F-1 students may request Curricular Practical Training (CPT) authorization from ISSS to participate in a paid internship, practicum experience, or other form of practical training that is an integral or required part of the student's program of study. More information regarding CPT can be found on the ISSS website (<https://internationalization.du.edu/issss/current-students/employment/curricular/>).

Academic Training

J-1 students may request Academic Training authorization from ISSS or their program sponsor to participate in a paid internship, practicum experience, or other form of practical training that is an integral or required part of the student's J-1 program. More information regarding Academic Training can be found on the ISSS website (<https://internationalization.du.edu/iss/current-students/employment/academic/>).

Required Documentation to Hire International Students

Departments should refer to the University's I-9 process for verifying employment eligibility when hiring international students. Please note that a SSN is not required for an F-1 or J-1 student to begin working on campus.

English Proficiency Requirements

F-1 and J-1 immigration regulations do not require students to have a defined level of English proficiency prior to beginning on-campus employment. However, University policy requires a specific level of achievement in English proficiency for graduate teaching assistantships (p. 1002).

Financial Aid Policies

aid-eligible coursework

The U.S. Department of Education requires institutions to ensure that federal financial aid funds are only used to pay for courses that apply to a student's degree program. Beginning with the 2023 fall term, courses that do not count toward a student's degree program may be ineligible for federal or state financial aid.

Types of Aid Affected

All types of federal and state financial aid are impacted by this policy. For graduate and law students, this includes Direct Unsubsidized and Grad PLUS loans (<https://www.du.edu/admission-aid/financial-aid-scholarships/graduate-financial-aid/types-aid/loans/>), work-study (<https://www.du.edu/admission-aid/financial-aid-scholarships/graduate-financial-aid/types-aid/work-study/>), the TEACH Grant (<https://www.du.edu/admission-aid/financial-aid-scholarships/graduate-financial-aid/types-aid/grants-scholarships/#federal>), and the Colorado Graduate Grant (<https://www.du.edu/admission-aid/financial-aid-scholarships/graduate-financial-aid/types-aid/grants-scholarships/#federal>).

Institutional aid (including scholarships, assistantships and fellowships) is not impacted by the aid-eligible coursework policy.

Determining Courses in Degree Program

A student's degree program is defined by the course and credit requirements listed in the bulletin (<http://bulletin.du.edu/graduate/>). You can use the degree audit tool (<https://www.du.edu/registrar/academic-programs/degree-evaluation/>) to view the courses you must complete for your degree and monitor your academic progress toward graduation. Please contact your academic advisor with any questions about program requirements.

Courses Eligible for Federal & State Aid

Your financial aid enrollment status may be different from your actual enrollment status. To be eligible for all types of federal and state aid, graduate and law students need to be enrolled in **at least 4 credits** that count toward their degree. So, even if you're enrolled in a class that doesn't count toward your degree, you may still be eligible for federal and state aid.

Notifications and Adjustments

Students whose aid eligibility is impacted by the aid-eligible coursework policy will be notified after class registration via their DU student email. If you're no longer eligible for federal or state aid, your financial aid will be adjusted prior to disbursement (<https://www.du.edu/admission-aid/financial-aid-scholarships/graduate-financial-aid/managing-your-aid/your-bill-receiving-your-aid/>) for that term.

Visit the financial aid website (<https://www.du.edu/admission-aid/financial-aid-scholarships/graduate-financial-aid/policies-maintaining-aid-eligibility/aid-eligible-coursework/>) for much more information.

Satisfactory Academic Progress

In order to continue receiving financial aid, you must maintain Satisfactory Academic Progress (SAP).

Federal regulations require us to monitor the academic progress of *all* graduate students—including Ph.D. students—receiving financial aid toward the completion of their degree. (**Please note: this policy pertains only to financial aid and is separate from other academic policies published by the institution.**) SAP is monitored on a yearly basis—usually in mid-to-late summer—and is effective the following fall term. Certificate program students are an exception; their SAP is monitored at the end of every term. As a financial aid recipient, you must maintain the following minimum standards to continue receiving financial aid:

- **You must maintain a Cumulative Grade Point Average (CGPA) of 3.00.**
- **JD law students must maintain a CGPA of 2.3** (2.70 for all other law students, including master's, certificate, LLM, and graduate tax).
- **You must complete and pass a minimum of 66.6% of all courses attempted.** This is known as your Cumulative Completion Rate (CCR).
- **You must complete your degree within 150% of the minimum credits required to graduate.** This is known as the Maximum Time Frame (MTF) limit.

Visit the financial aid website (<https://www.du.edu/admission-aid/financial-aid-scholarships/graduate-financial-aid/policies-maintaining-aid/sap/>) for more information.

Withdrawal and Financial Aid

Any student who begins classes at DU, applies for financial aid, completes all of the requirements to obtain aid, and then withdraws from classes may have their financial aid adjusted according to federal, state, and institutional regulations. Students must contact the Office of the Registrar to withdraw officially from the University and must contact Academic Advising after withdrawing to complete leave of absence information. Leave of absence affects financial aid status upon return to the University; it does not affect withdrawing from the University.

Students who withdraw during the 100 percent refund period (drop/add) for any term may have all of their aid for that term canceled and returned depending on the type of withdrawal. Students who drop below the number of hours reflected in their financial aid budget during the drop/add period will have their budget adjusted to reflect the new hours and aid will be adjusted accordingly.

Return of Title IV (R2T4) Funds Policy

Title IV (Federal) funds are awarded to you under the assumption that you will attend school for the entire period for which the assistance is awarded. When you withdraw from all courses, for any reason including medical withdrawals, you may no longer be eligible for the full amount of Title IV funds you were originally scheduled to receive.

If you withdraw from all courses prior to completing at least 60% of the term, you may be required to repay a portion of the federal financial aid you received for that term. A pro-rata schedule is used to determine the amount of federal student aid funds you will have earned at the time of withdrawal.

The return of funds is based upon the concept that students earn their financial aid in proportion to the amount of time in which they are enrolled. Under this reasoning, a student who withdraws in the second week of classes has earned less of his/her financial aid than a student who withdraws in the seventh week. Once 60% of the term is completed, you are considered to have earned all of your financial aid and will not be required to return any funds. If you withdraw during the 100% refund (add/drop) period for any term, all of your aid for that term will be canceled and returned.

Visit the [financial aid website \(https://www.du.edu/admission-aid/financial-aid-scholarships/graduate-financial-aid/policies-maintaining-aid/withdrawal/\)](https://www.du.edu/admission-aid/financial-aid-scholarships/graduate-financial-aid/policies-maintaining-aid/withdrawal/) for more information.

Tuition and Fees

Tuition Charges (p. 1010)

Student Fees (p. 1010)

Late Charges (p. 1011)

Student Financial Liability (p. 1011)

Refund Information (p. 1011)

Tuition Refund Appeals (p. 1011)

Tuition Charges

Students who began their graduate program prior to the fall of 2020 are eligible for flat-rate billing through the summer of 2025. If you are registered for 12-18 credits, you will only be charged for 12 credits. If you register for more than 18 credits, you'll be charged for 12 credits plus the per-hour rate for each credit above 18.

Students who began their graduate program in the fall of 2020 term or later are billed per credit for every registered credit.

Tuition charges for residents or non-residents of Colorado are the same. The University reserves the right to make changes in tuition charges or refund policies without advance notice.

Other academic programs, such as Sturm College of Law, Daniels College of Business, University College and some distance education programs, may have a different tuition rate and students in those programs may not be eligible for the flat rate. Tuition charges for residents or non-residents of Colorado are the same. The University reserves the right to make changes in tuition charges or refund policies without advance notice.

Student Fees

In order to enhance opportunities for students' use of technology in and out of the classroom and to provide multiple modalities of student learning, a student technology fee is charged each quarter to all students. This fee is charged per credit hour taken. The student activity fee is assessed of all registered graduate and professional students (both part- and full-time).

Late Charges

Registration beginning on the first day of the quarter is considered late registration. All students (continuing, new, returning leaves of absences, and readmitted) who do not register before the first day of the quarter are assessed a late registration service charge that cannot be waived. Once registered, students may drop and add courses freely through the seventh day of the quarter without financial penalty.

Late Registration Service Charge

A service charge of \$25 is assessed the first day of the quarter for all students who have not enrolled in at least one course prior to the first day of the quarter. A \$50 service charge is assessed from the second through the fifth days of the quarter (business days, Monday–Friday). If registration is available over the weekend during or immediately following the first five business days, the \$50 service charge is applied to first-time weekend enrollees (Saturday or Sunday). A \$100 service charge is assessed beginning the sixth business day and continuing through the remainder of the quarter. Days are calculated based on the term's academic calendar and not on the class meeting days of specific courses. Tuition, fees and any other charges are due as specified on the billing statement. The service charge is not assessed for adding classes to an existing schedule. The maximum fee assessed for late registration in a given term is \$100.

Late Payment Fee

Registered students for a given term who have not paid, or made arrangements to pay, their tuition by the appropriate University deadlines may be assessed a late payment fee. Late fees are assessed every month until a balance is paid in full or payment arrangements are set up.

Student Financial Liability

It is the student's responsibility to abide by the University's payment and refund policies.

If, after completing the registration process, the student does not withdraw from registration by the last day for 100% refund for dropped classes date published on the Academic Calendar (<http://www.du.edu/registrar/calendar/>) on the Office of the Registrar's website, the student agrees to pay the total amount of tuition and other charges set forth. The student understands that if any payment is not made when due, or if the student withdraws, or is required to withdraw, from the University for any reason, then all remaining tuition and other charges are immediately due and payable. All amounts not paid when due may begin to accrue monthly late fees. In addition, the student agrees to pay all collection costs and amounts. If the student has any overdue charges outstanding, the University may recover those overdue amounts by reducing any payments owed by the University to the student.

Students are not removed from classes based only upon non-payment. Students who do not officially withdraw from classes and do not attend have "F" grades assigned and may owe tuition and charges as specified above.

Students with a past due balance for a given term are not allowed to enroll in classes for any subsequent term. Grades and other attendance certifications are withheld and a financial hold placed on the account until payment is received.

Refund Information

The date of withdrawal from a class at the University is the date that the Registrar's Office receives a written notification of withdrawal or the date the student drops the class online.

In order for tuition charges to be reversed at 100% for complete withdrawals, programs on the quarter system (except University College) should refer to the Academic Calendar (<http://www.du.edu/registrar/calendar/>) on the Office of the Registrar's website, for specific refund dates. Refunds are first applied to any obligations owed to the University, including charges with future dates.

Note: Some units may have different policies regarding tuition, fees and payments. Contact the unit for details.

Tuition Refund Appeals

A student may appeal for an exception to the University refund policy if unusual circumstances exist that are beyond the student's control. A student must officially withdraw from the course prior to beginning the appeals process. The statute of limitations for an appeal is 90 days from the end of the term in which the course for which the tuition being appealed was offered.

Informal Appeal/Automatic Refund

If a student drops all classes for a given term, an informal appeal for a full refund may be made to the Office of the Registrar. An informal appeal requires that the withdrawal is completed and a request for a tuition refund is made prior to the end of the sixth week of the term (defined by the deadline for an automatic "W"). To be eligible for an automatic refund, the condition for withdrawal must meet one or more of the following criteria and must be accompanied by appropriate documentation as specified.

The death of a student (sixth-week deadline for informal appeal waived) prevents the student from completing the course(s). Documentation required: a memorial service folder, notice in the paper or copy of the death certificate.

The serious illness or death of an immediate family member prevents the student from completing the course(s). Documentation required: for serious illness, a letter on letterhead from a physician, psychiatrist or other licensed mental health professional; for death, a memorial service folder, notice in the paper or copy of the death certificate.

A job relocation or loss of employer reimbursement eligibility due to involuntary job loss prevents the student from completing the course(s). Documentation required: a letter on letterhead from the immediate supervisor or human resources administrator.

An unexpected increase in job responsibilities, required change in work schedule or required travel prevents completion of the course(s). Documentation required: a letter on letterhead from the immediate supervisor or human resources administrator that specifies dates of increased workload or travel. The documentation requirements, as listed above, must be submitted to the Office of the Registrar prior to the end of the sixth week of the term. If the documentation is adequate and establishes a condition that prevents the student from completing the course(s), appropriate adjustments are made to the student's account. If conditions do not merit an automatic refund, the student may make a formal appeal. Registrar's or Bursar's Office staff reserve the right to request a formal appeal if, in their judgment, conditions and/or documentation are inappropriate or dubious.

Formal Appeal

In cases where circumstances do not fit the criteria for an informal appeal, the end of sixth week (automatic "W") deadline has passed, or an informal appeal is not accepted, a formal appeal for full or partial refund may be filed. To submit a Formal Tuition Appeal, log into MyDU (<https://my.du.edu/>), search for Request for Tuition Appeal, under the Requests and Other Actions, click Request a Tuition Appeal link. Please contact the Bursar's Office (<https://www.du.edu/bursar/>) directly, if you have any questions regarding how to appeal.

The Tuition Appeals Committee, which meets monthly, will review your petitions and deliver its decision to you via letter. This decision is final.

Notes: *In accordance with federal, state and institutional regulations, approval of an appeal may require forfeiture of any financial aid proceeds received, which may result in an outstanding balance being owed to the University.*

Suspension (p. 1015)

Dismissal and (p. 1015) Termination (p. 1015)

Administrative Withdrawal (p. 1016)

Grade Point Average

The grade point average (GPA) is determined by multiplying the credit points (for example, B+ = 3.3) by the number of credit hours for each course. Next, add up the total credit hours attempted, total the credit points, and divide the number of points by the number of hours. GPA is calculated and truncated to two decimal places (hundredths). GPA is not rounded.

Grades of I, IP, NC, NR, W, P+, P, or NP are not included in the grade point average. 'NA' (Never-Attend) grades are treated like 'F' grades and should be counted as such. Incomplete grades that are not completed within one calendar year from the quarter the original course was taken are converted to grades of 'F' in the GPA. All grades for repeated courses are included in determining the GPA.

Good Academic Standing

Graduate students must maintain a cumulative GPA of 3.0 or higher to be in good academic standing. Master's students in the Sturm College of Law must maintain a cumulative GPA of 2.7. JD students in the Sturm College of Law must maintain a cumulative GPA of 2.3.

Below 3.0 Grade Point Average

Any student whose overall grade point average falls below a 3.0 (2.7 for Law Master's, 2.3 for Law JD) is no longer in good academic standing and may be warned, put on probation, suspended or dismissed, depending upon the grade point deficiency. Each quarter on probation, the student must contact the advisor to develop a plan to remedy the academic deficit.

If it is numerically impossible for the student to raise the GPA to 3.0 (2.7 for Law Master's, 2.3 for Law JD), or if in the opinion of the student's advisor, department chair and/or dean, the student is not making academic progress to finish the requirements of the degree, the student will be dismissed from the program.

Students whose GPA falls below a 3.0 may not be eligible for some types of financial aid. For more information, see Satisfactory Academic Progress (SAP) (p. 1009), or contact the Office of Financial Aid for details. The student is ineligible to represent the University in intercollegiate activities.

Graded Work Accepted for the Degree

In no case may more than one-fourth of the hours accepted toward the degree be grades of "C." A grade lower than "C-" renders the credit unacceptable for meeting University degree requirements. Grades of "C-" or better qualify for graduate credit but may not count towards the degree. Students should consult with their program to understand unit-specific minimum grade requirements.

Students cannot take more than eight-quarter hours beyond the degree requirements in order to make up grade deficiencies. These additional credit hours should be relevant for the degree and approved by the student's advisor. Students whose grades are still deficient after taking the additional eight hours are terminated from the degree program.

Note: Satisfactory grades for the Sturm College of Law may be different. Consult the unit for details.

Grade Replacement

GPA Replacement Policy

The University of Denver allows degree-seeking undergraduate and graduate students to repeat most courses in order to meet the minimum grade requirement for a required course, subject to limits imposed by individual schools and colleges. When a student repeats a course, grades from all attempts appear on the student transcript, and all grades are used in computing cumulative and major grade point averages, total credits, and academic standing. This policy adds the option of GPA replacement to the option of repeating a course.

Additional Details:

In order to invoke GPA replacement policy for a course, a student must have received an eligible grade in a prior attempt of the course. Grades of **C-, D+, D, D- or F** are eligible for repeat/replace for **undergraduate** students, and grades of **B-, C+, C, C-, D+, D, D- or F** are eligible for repeat/replace for **graduate** students. Once a student invokes the GPA replacement policy for a course, that decision is irrevocable.

When GPA replacement is invoked, the grade from the latest attempt of a course replaces the grade from the most recent prior attempt of the same course in the cumulative GPA.

Grades from all attempts of a course appear on a student's transcript, with those attempts that have been replaced appropriately indicated. The replaced grade is excluded from cumulative grade point average and credit totals in the official academic record; the grade from the latest attempt is included, even if the grade earned in the latest attempt is lower than the replaced grade.

Students should consider whether this is the best way to improve their GPA. Most students will find that when they repeat a course, there is only a small impact on their overall GPA. Another way to increase GPA is to take additional courses and do well in them. Finally, if a student is repeating a course to increase their GPA for their graduate or professional school applications, it is useful to know that these schools may calculate a student's GPA differently.

A student may wish or need to strengthen their knowledge of a particular topic in order to prepare for future classes. This can be a good reason for repeating a course. Undergraduate majors and minors require students to achieve a minimum grade of "C-" in order to count toward graduation requirements. In some programs, Graduate students are required in to receive a B- or better in their coursework.

A course will not necessarily be easier the second time around. If a student chooses to repeat a course, they should maximize their chances for success by utilizing available resources and practicing good study habits.

Eligibility:

- This policy may be invoked only by currently enrolled, degree-seeking University of Denver undergraduate or graduate students. Sturm College of Law students may not invoke this policy and are subject to the academic and grading policies of the Law School.
- Students who have graduated are not eligible for GPA replacement for courses taken prior to earning their degree.
- The policy applies only to undergraduate or graduate courses taken and repeated at DU. Classes ineligible for grade replacement are FSEM, special topics courses and courses designated in the catalog as repeatable for credit (e.g. independent study/research, internship, field experience, thesis/dissertation hours, directed research/study, performance).
- **Undergraduate** students may request grade replacement for up to **4 classes**.
- **Graduate** students may request grade replacement for up to **2 classes**.
- If a student receives a low grade in a class due to academic dishonesty, that grade is not eligible for GPA replacement via this policy.
- Once a student invokes the GPA replacement policy for a course, that decision is irrevocable.
- Courses taken for GPA replacement must be taken for a letter grade.
- Students may request grade repeat/replace only if the particular course is offered again. There is no guarantee that all courses are offered on a schedule that would permit repeat for every student.
- No retroactive adjustments or transactions for prior terms will be performed as a result of repeating a course, including changes to academic standing, or eligibility for honors, athletics, or financial aid.
- Some academic units may limit the number of times a student can enroll in a given course. Such limits must be observed when invoking this policy.
- Grades of incomplete are not eligible for repeat with GPA replacement.
- Requests to invoke the GPA replacement policy must be completed by the **last date for course withdrawal**.
- A request to invoke the policy will be approved as long as the exact same course (subject code, course number) is selected, and the student has enough grade repetition credits left to cover the course. Once the grade repeat/replace credits are fully used, then there will be further no GPA replacement and all subsequent grades will be calculated into the cumulative GPA.
- If a student invokes the grade repeat/replacement policy but drops or withdraws from the course before the end of the term, this attempt does not count against the number of credits a student is allowed to repeat, and the grade from the most recent prior attempt stands.
- All occurrences of the course along with associated grades will remain on the student's academic record as well as on the official transcript. Only the replacement grade will be calculated into the cumulative GPA.
- Tuition is charged for all course attempts. There may be federal financial aid implications for the number of times a specific course is repeated. Students are responsible for checking with the Office of Financial Aid regarding course repeats and aid eligibility.

Repeating Courses

Unless it is specifically designated as repeatable, a course in which the student has received a qualifying grade may not be repeated for credit.

If a non-repeatable course is taken again, the regular tuition rate is charged, and the course is counted as part of the total credit load. All grades are counted in GPA calculations. The highest grade received in the repeated course fulfills the degree requirements, but hours earned toward degree requirements are counted only once.

All repeated courses appear on student transcripts. Automated advising tools (e.g. the Degree Audit) may show only first grade for the course.

Candidate Status and Completion of Coursework

Advanced degrees are not awarded automatically on completion of the required number of courses or hours of credit, and the candidate's status is subject to review at any time.

Grade Changes

Grades submitted by instructors at the end of the term are final and are not subject to change by reason of revision of judgment on the part of the instructor. Grades cannot be changed on the basis of a second trial, such as a new examination or additional work undertaken or completed after the grade report has been recorded, or by retaking the course.

In the event of a grade error, the faculty member should change the grade using the University's grade change process. Any appeal of a grade must take place within 45 calendar days from which the grade was assigned. Grade changes require the approval of the Chair of the Department and relevant Dean before being approved. Changing an Incomplete grade does not require any outside approval, unless the Incomplete has expired, in which case the Dean must approve the change.

Note: Some graduate units may have more restrictive policies. Contact the academic unit for details.

Probation

Any student whose overall grade point average falls below a 3.0 will be placed on probation. Requirements for probationary status for Sturm College of Law is 2.7 for master's students and 2.3 for JD students.

Each quarter on probation, the student must contact the advisor to develop a plan to remedy the academic deficit.

If it is numerically impossible for the student to raise the GPA to 3.0 (2.7 for Law Master's, 2.3 for Law JD), or if in the opinion of the student's advisor, department chair and/or dean, the student is not making academic progress to finish the requirements of the degree, the student will be dismissed from the program.

Suspension

Students may be suspended from the University for academic or behavioral misconduct and may not be permitted to enroll for a period specified as part of the terms of their suspension.

The University will not accept courses completed at another institution while the student is under suspension.

A suspended student who wishes to re-enroll must apply for readmission through his/her program's admission office and must also apply to the Director of Student Rights & Responsibilities who will determine whether any and all requirements for readmission have been satisfactorily completed.

Dismissal and Termination

Academic Dismissal

A student will be recommended for dismissal from their graduate program for the following reasons:

- the student maintains a GPA lower than 3.0 (2.7 for Law Master's, 2.3 for Law JD) for three consecutive quarters (two semesters)
- if it is numerically impossible for the student to raise the GPA to 3.0 (2.7 for Law Master's, 2.3 for Law JD), or if in the opinion of the student's advisor, department chair and/or dean, the student is not making academic progress to finish the requirements of the degree
- the time limit for completing provisions has expired
- severe academic or behavioral misconduct
- violation of the Honor Code

Students who have been dismissed from the academic program are not normally readmitted

Termination

A student will be recommended for termination from their graduate program for the following reasons:

- the time limit for completion for the degree has expired
- the request for an extension of time has been denied
- the student wishes to change to another degree program outside of the college, school, or department in which the student is currently enrolled

Students who have been terminated from their program due to an expired time limit for degree who wish to be readmitted must meet the following criteria outlined in the Readmission for Terminated Students policy (<http://bulletin.du.edu/graduate/academic-requirements-policies-and-procedures/readmission/>)

- Submit a new application to the program and meet the current admissions criteria.
- If admission is granted, the most current program bulletin must be followed, including all curriculum and program requirements.
- All previous coursework older than five years must be reviewed by the department to determine if it is still relevant for current term of admittance.

Final approval for admission, consideration of coursework from a program in which a student was previously terminated, and timeline for degree completion must be approved by the Vice Provost for Research and Graduate Education.

Notes: *Some programs may have more stringent policies. Contact the unit for details.*

Requirements and procedures for termination for Sturm College of Law students may be different. Students should consult the unit for appropriate procedures.

Administrative Withdrawal

Students are administratively withdrawn from courses that are canceled by the University.

Canceled courses are deleted from the student's record and tuition charges reversed, if appropriate. Students are notified of the cancellation by the college, school or department responsible for offering, and subsequently canceling, the course.

Change of Graduate Program

An applicant or student wishing to change a major, concentration, location, or delivery mode (i.e., on-campus, online) or wishing to change to a lesser or equal certificate or degree (e.g., doctoral to master's level) within the same College/School has the following options:

Applicant:

- After submitting an application and prior to receiving an admissions decision, applicants may request a one-time change to an academic program within the same College/School to which they originally applied. Formal requests can be made to either the Office of Graduate Education or to the College/School to which they applied.
- After an admissions decision has been rendered and before the first day of class, a student can request a one-time change to their academic program within the same College/School with approval by the department. A new application, additional supporting materials and/or a new application fee may be required at the department's discretion. Formal requests can be made to either the Office of Graduate Education or to the College/School to which they applied.

**If an applicant wishes to change to a program outside of the College/School to which they originally applied or change to a higher-level degree program, then submission of a new application, supporting application materials, and payment of another application fee are required.*

Current Student:

- Starting the first day of class, a student can submit a completed change of graduate program form (found on the OGE website (<https://www.du.edu/graduate-education/current-student-resources/academic-resources/>)) to the Office of Graduate Education. The College/School reserves the right to request that the student submit a full application for admission, including the application fee.
- A student wishing to change to a graduate program outside of the current College/School, or wishing to change to a certificate or higher degree (master's level to doctoral), must submit a full application for admission, including the application fee and supporting application materials. A graduate student who wishes to change to another graduate program must be withdrawn/terminated from the program of original admittance and accepted into the new graduate program.

Note: *Students in University College and JD students in the Sturm College of Law do not submit the change of graduate program form to the Office of Graduate Education. Contact the unit for details on this process.*

Class Attendance

Students must officially enroll for the courses they attend. A student cannot receive credit or a grade for a course without being enrolled in it.

Instructors have the right and responsibility to establish attendance policies for their courses.

Students are responsible for informing instructors about their absence from class and for completing assignments given during their absence.

Religious Accommodations and Class Attendance

The University of Denver has an enduring commitment to diversity and inclusive excellence, including religious diversity. The University honors and respects students' rights to observe sincerely held religious beliefs or practices and provides an educational environment in which all students are free from harassment and discrimination based on religion consistent with the requirements of federal, state and local law. As part of this commitment, the University provides reasonable accommodations for students' sincerely held religious beliefs or practices unless the University determines that such an accommodation would fundamentally alter the curriculum or academic program.

RELIGIOUS ACCOMMODATION STATEMENT

The University of Denver has an enduring commitment to diversity and inclusive excellence, including religious diversity. The University honors and respects students' rights to observe sincerely held religious beliefs or practices and provides an educational environment in which all students are free from harassment and discrimination based on religion consistent with the requirements of federal, state, and local law. As part of this commitment, the University provides reasonable accommodations for students' sincerely held religious beliefs or practices unless the University determines that such an accommodation would fundamentally alter the curriculum or academic program.

Religious Accommodation Procedures

Students should follow these procedures in requesting a religious accommodation for *academic* requirements:

- *By the end of the second week of a course*, students are expected to examine the course syllabus for potential conflicts with religious beliefs or practices and email their instructor to seek any requested absence(s). In the case of exams or assignments that are added to the syllabus or otherwise announced after the first two weeks of the course, students should email their instructors as soon as possible and in advance of the requested absence(s).
- *For courses that are shorter than the traditional quarter or semester*, within the first week of the course, students are expected to examine the course syllabus for potential conflicts with religious beliefs or practices and email their instructors to seek any requested absence(s). In the case of exams or assignments that are added to the syllabus or otherwise announced after the first week of the course, students should email their instructors as soon as possible and in advance of the requested absence(s).
- Students who have *conflicts with the overall course pedagogy or delivery method*, such as the time and date the class is offered or the modality, are encouraged to find an alternative section for the class.
- Requests for *absences from an internship, externship, field placement, or other practical learning experience outside the classroom* will be assessed on an individual, case-by-case basis in consultation with the University placement supervisor and the field placement supervisor. Students should understand that if an accommodation is granted, missing time from an internship, externship, field placement, or other practical learning experience may require the student to make up the missed time or work. Students who have conflicts with the overall schedule for an internship, externship, field placement, or other practical learning experience are encouraged to consider scheduling the internship, externship, field placement, or other practical learning experience at another time. The student should consult with the University placement supervisor for the program regarding such scheduling needs.

After receiving a request for religious accommodation (webform above automatically emails student-provided instructors), **instructors** must consider the request and determine whether the accommodation is reasonable and does not fundamentally alter the curriculum or academic program. The instructor should evaluate the request on a case-by-case basis, taking into account relevant factors including, but not limited to:

- the fundamental requirements of the applicable academic program and/or related technical standards;
- the requirements of the course;
- the requirements of the department or major;
- the potential effects of the accommodation on the individual and fellow students;
- the duration of the accommodation request; and
- the availability of alternative accommodations.

Prior to denying a request for religious accommodation or offering an alternative accommodation, if an instructor has concerns regarding whether a request for religious accommodation fundamentally alters the curriculum or academic program, the instructor should consult with the The Associate Vice Chancellor of Equal Opportunity and Title IX (via contact information at right).

The University is not required to accept the student's requested, preferred accommodation if there is more than one alternative that eliminates the religious conflict. When there is more than one alternative, the University may select any of the accommodations, provided that the accommodation will effectively eliminate the religious conflict.

Students are responsible for fulfilling the course requirements, including obtaining the materials and information provided during any missed class(es), and for working with course instructors in advance on an appropriate timeline to submit any missed assignments, take any exams, or complete organized activities.

Once a religious accommodation request is granted, the instructor will provide the student the opportunity to make-up the missed assignments, take any exams, or complete organized activities. In providing this opportunity, the instructor should provide alternatives that are substantially equivalent to the original assignment, exam, or activity.

Appeals for Denial of Religious Accommodation for Academic Requirements

Students may appeal an instructor's decision denying a request for religious accommodation by submitting a written appeal to the chair of the department, or to the program director if there is no chair, within five (5) business days of the instructor's decision. The chair of the department or program director, as applicable, must consult with the Associate Vice Chancellor for Equal Opportunity and Title IX and/or the Vice Chancellor of Student Affairs or their designee issue a decision in writing within five (5) business days of receiving the appeal and shall include the reasons for the decision.

The student may appeal the decision of the chair of the department or program director denying the appeal to the dean of the appropriate academic unit, or the dean's designee, within five (5) business days of receiving the decision. The dean, or dean's designee, must consult with the Associate Vice Chancellor for Equal Opportunity and Title IX and issue a decision within five (5) business days of receiving the appeal. The decision of the dean, or dean's designee, is final.

[Click to Request Religious Accommodations](#)

Concerns of Harassments of Discrimination

Students who believe that they have been harassed or discriminated against based on religion may contact the Office of Equal Opportunity & Title IX:

- www.du.edu/equalopportunity
- Phone 303-871-7016
- Email at equalopportunity@du.edu,
- In person at the Driscoll Commons, 2050 E. Evans. Suite 30.

Information for Faculty and Staff can be found in the Employee Handbook.

Final Exams

Any final exam for a course must be scheduled during the final exam period. Students must attend all final exams as scheduled by faculty. The final exam schedule has been created to avoid conflicting exams; however, time conflicts are possible. Students should check their final exam schedules early in the term to identify possible conflicts. Students are expected to let their instructors know when they have more than one exam being held at the same time. The Office of the Registrar will attempt to resolve conflicts whenever possible. Final exams are not rescheduled if a student has multiple exams on the same day. It is at the discretion of individual instructors to accommodate student requests for moving an exam in the event that a student has multiple exams on the same day. Final exams are not changed to accommodate student travel plans, and students should only plan travel after the official end date of the term.

The Office of the Registrar schedules final exams for classes held during standard meeting times in fall, winter and spring quarters. Final exams are also scheduled for certain classes meeting one day per week. Since summer quarter is a truncated term, we do not schedule any final exams for that quarter.

Campus Weather Closures

Sometimes severe storms may create such a hazard that the University makes a decision to close and cancel operations for a period of time. Students can receive information about campus weather closures via email, telephone or text message by registering for the Emergency Notification System (<https://www.du.edu/emergency/notification/>).

Certificate Requirements

Course substitutions and Waivers

All required coursework must be completed for Specialized Graduate Certificates. Course substitutions and waivers are not accepted for the Specialized Graduate Certificates.

Time Limit for Completion of the Certificate

Postbaccalaureate certificates should be completed within three years of beginning the certificate program with the exception of Certificates of Specialization/concentrations, which are earned at the time the master's degree is completed.

Final Procedures for Earning the Certificate

The student must assume full responsibility for meeting all basic requirements for the certificate as well as the specific requirements outlined by the college, school or department.

Except for students who are completing a Specialized Graduate Certificate, all other students completing an academic certificate must apply for graduation by the deadline. Failure to complete the certificate during the expected graduation term may require a new graduation application and payment of a fee for additional evaluation and services.

Doctoral Degree Requirements and Standards

The doctorate is the highest degree offered by the University. It is conferred on students who successfully complete those requirements that the faculty of the college, school or department have prescribed as the criteria for determining the general proficiency and specialized competence of the candidate in the candidate's chosen field. Total achievement, within the framework of certain accepted standards and uniform course requirements, constitutes the major consideration in awarding the doctorate. Each candidate's program is planned and carried out under the supervision of the program advisor and committee in accordance with requirements approved by departments, and with regard for the individual nature of the student's objectives.

Requirements (p. 1019)

The Doctoral Dissertation (p. 1020)

Doctoral Dissertation Oral Defense (p. 1022)

Completing the Degree (p. 1022)

Requirements

Credit Requirements

The approved range of graduate credit for the doctoral degree is 90-142 quarter credit hours beyond the bachelor's degree. However, some colleges, schools and departments may have different requirements; consult the specific graduate program for details.

Students enrolled in a graduate program should not take courses towards another degree program unless the student has been accepted into the second program, and no more than three courses may be earned at the University of Denver and applied towards a degree program before acceptance into that degree program. Graduate coursework and credit hours already applied toward a degree received from the University of Denver cannot be applied towards another graduate degree of the same level or less.

Advanced degrees are not awarded automatically on completion of the required number of courses or hours of credit.

Residency Requirements

Enrollment in at least six quarters (four semesters), minimally 45 credit hours, including at least two consecutive quarters (one semester) of full-time attendance is required for graduation.

Advising

Responsibility for securing approval of a proposed program of study rests with the student. Consultation with the advisor at regular intervals is essential to satisfactory planning and progress toward a degree. The requirements outlined in the college, school, or departmental summaries serve as a guide to program planning and are subject to specific determination in consultation with program advisors, and the student must assume full responsibility for meeting basic requirements and deadlines, as well as the specific requirements outlined by the program advisor.

Research Tool Requirements

Candidates may be required to demonstrate proficiency in the required tools for research and advanced study.

Where required, tool requirements are determined by the candidate's advisor and committee, and may include one or more languages, statistical methods, laboratory or other research skills. Consult the college, school or department for requirement details.

Advancement to Preliminary AND FINAL Candidacy

The minimum requirements for advancement to preliminary candidacy include formulation and approval of candidate's general plan of study, achievement of regular status, a minimum grade point average of 3.0 in all work completed to that point, posting of any transfer credit to the candidate's record and planning of tool requirements.

After the first full quarter of doctoral study (normally the first post-Master's quarter), students should arrange with their college, school, or department for an evaluation of status so they may be recommended for advancement to preliminary candidacy.

Students must also be advanced to final degree candidacy by their academic unit.

Note: *Advancement to preliminary candidacy may also require satisfactory completion of entrance qualifying examination, if required by the program. Consult the college, school or department for more details.*

Comprehensive/Competency Examination

This examination is either a written or an oral test designed to evaluate the student's work in the major and related fields. The examination is scheduled at least three quarters (two semesters) prior to graduation. A candidate who fails one or all parts of the examination may petition the college, school or department for re-examination. If granted, a re-examination may not be scheduled until the following quarter.

It is generally expected that students will complete the comprehensive exam prior to defending the dissertation proposal. Students should consult with their unit regarding the timing of the comprehensive exams and the proposal defense.

The Doctoral Dissertation

The dissertation represents the culminating research experience for doctorate of philosophy students through which degree candidates are expected to complete quality original scholarship that contributes to the theoretical/research knowledge base of the candidate's field of study. The college, school or department determines the amount of credit allowed for research and work on the dissertation. Students should consult the Office of Graduate Education website (<https://www.du.edu/graduate-education/current-student-resources/dissertation-thesis-information/>) for instructions regarding how to prepare and format the dissertation.

The Graduate School of Professional Psychology requires their doctorate of psychology candidates to complete a doctoral paper instead of a dissertation and should consult with their program regarding requirements for the doctoral paper.

The Morgridge College of Education requires their doctorate of education candidates to complete a dissertation in practice instead of a dissertation and should consult with their program regarding requirements for the dissertation in practice.

Program-Level Dissertation Proposal Committee

All candidates for the doctorate of philosophy degree must have a dissertation director who is in the student's graduate program. Programs may require that dissertation proposals be approved by or defended before a committee within the department. Programs reserve the right to determine the composition of the dissertation proposal committee. However, only those who meet the following University requirements may serve as voting members of the oral defense committee.

Doctoral Dissertation Oral Defense Committee

The doctoral candidate's dissertation oral defense committee will be submitted to the Office of Graduate Education for approval by the Vice Provost for Research and Graduate Education. OGE staff will review the committee to ensure that it meets University policies and the Vice Provost will work with the department/program chair to resolve any concerns that the proposed committee may not adhere to University policies.

Prior to coming to OGE the department/program chair is responsible for confirming the committee membership is appropriate for the dissertation subject matter and for supporting the student's academic needs. If rejected by the chair or the Vice Provost, the dean or designee can review an appeal of committee membership.

The *Thesis/Dissertation Oral Defense Committee Recommendation* form (found on the OGE website (<https://www.du.edu/graduate-education/current-student-resources/dissertation-thesis-information/>)) should be returned to the Office of Graduate Education as soon as the dissertation proposal has been approved or 30 days following IRB submission but no later than the first day of the quarter in which the student expects to complete the degree.

Composition

Dissertation Director

The dissertation director is ordinarily a tenure-line or research faculty member of the candidate's graduate program. Under some circumstances, faculty with other designations (e.g., clinical) can serve as the dissertation director with approval of the department/program chair and dean/designee. The process for approval is the same as for other committee members (see below).

It is the dissertation director's responsibility to ensure that the student's research meets appropriate academic standards for the discipline in which the degree is being conferred. The dissertation director is a voting member of the committee.

Committee Members

The committee is composed of a minimum of three and a maximum of six voting members, including the dissertation director. This includes the dissertation director but does not include the Oral Defense Committee Chair, who is a non-voting committee member. Tenure-line and research faculty

from DU (or approved Iliff faculty for students in the DU-Iliff Joint PhD program), including those outside the student's program, are automatically eligible to serve on dissertation committees if the dissertation subject is appropriate to their field of expertise.

Faculty with other designations (e.g., clinical, teaching, professor of the practice) are eligible to serve as voting members of the committee if they have been actively^[1] (p.) involved in research and scholarship in a relevant field and meet the following requirements:

- a. Possession of the research doctorate, terminal degree in the field, or equivalent record of research, scholarship, or achievement appropriate for the program; and
- b. Professional productivity as evidenced by achievement such as:
 - Publication of a book or books recognized in the field as scholarly work;
 - Publication of articles in recognized, peer-reviewed scholarly journals;
 - Publication of articles in conference proceedings;
 - Current award or completion of an externally-funded project (e.g. grant recipient or program manager);
 - Possess national eminence in the topic field;
 - Juried performances, exhibitions, or creative works that have received significant regional, national, or international recognition.

Department/Program chairs should submit the CV of an individual to the dean or designee for approval. Once approved, the Office of Graduate Education will maintain these approved lists for individual programs for three years without additional review.

Individuals from other institutions may serve as voting members (not director) of the committee. If in a tenure-track or research faculty position in a relevant field at a university or research position in a National Laboratory, they are automatically eligible. If not, individuals must submit a current CV through the department chair for approval by the dean/designee. Once approved, the Office of Graduate Education will maintain these approved lists for individual programs. No more than one committee member can come from outside DU, with the exception of the DU-Iliff joint PhD program, in which case multiple members may come from Iliff.

[1] (p.) Actively is defined as contributing to research in the last three to five years

Oral Defense Committee Chair

The role of the oral defense committee chair is to ensure a fair examination process that adheres to the policies outlined in the Graduate Bulletin. The chair should provide a non-specialist's perspective on the quality of the dissertation. The chair must be familiar with the standards for doctoral research and should have some general knowledge of the topic of the student's dissertation. The chair is expected to have read the dissertation prior to the defense and to participate in the defense as their academic expertise permits, but the chair is not a voting member.

The committee chair must be a tenured member of the DU faculty and must be from a department, school, or college other than that of the candidate^[1] (p.). There will be no exceptions to this element of the policy. When a doctoral degree is interdisciplinary, the defense committee chair should whenever possible be from a discipline not represented in the degree. Exceptions to this policy can be approved by the dean or designee when accompanied by a conflict of interest disclosure. Those faculty holding only courtesy appointments in a program are not considered "within" the program.

It is the responsibility of the student and dissertation director to find an appropriate oral defense committee chair who meets these requirements and agrees to serve. In case of difficulty reaching agreement, the chair of the department/program will make a decision. This decision is not appealable.

[1] (p.) Students in the DU-Iliff Joint PhD program may have an outside chair from the Iliff School of Theology, but that faculty member must be outside of the field of specialization represented by the student's dissertation.

Appeal of Defense Committee Composition

If the department/program chair rejects the composition of the dissertation committee, the student can appeal to the dean or designee. The appeal should include CVs of each proposed committee member, along with a statement explaining why the student believes the composition of the committee is appropriate for the project. The appeal must be signed by the dissertation director to confirm their agreement with the student's proposed committee.

The dean or designee will review the appeal and respond in writing to approve or reject the committee within 10 business days. The decision is final and not subject to appeal.

Unit-Specific Requirements

Schools and departments reserve the right to establish additional requirements that exceed the University standards. It is the student's responsibility to determine whether or not the unit has requirements in addition to University policy and the unit's responsibility to ensure that those requirements have been met before submitting the Oral Defense Committee Recommendation form to the Office of Graduate Education.

Doctoral Dissertation Oral Defense

An oral defense of the dissertation is required and is conducted by the candidate's oral defense committee. The defense is concerned primarily with the dissertation or research project but also may include other information in the major field as the committee deems pertinent. The defense must be held at least three weeks before the end of the quarter in which the degree is to be granted. All members of the defense committee must receive a copy of the candidate's dissertation at least two weeks prior to the scheduled defense.

The defense is expected to be held with the student and committee members being present in person. However, if circumstances make it impossible for the student and/or committee members to be physically present, a defense with the student and/or faculty participating by conference call, webcast or other medium is allowed if agreed upon by the student, the dissertation director and committee members. If a disagreement arises with the format of the defense, the Senior Vice Provost or their designee will work with student, chair and committee members to resolve the matter.

Scheduling of the Oral Defense

Prior to scheduling the defense, the student and dissertation director must have established the candidate's oral defense committee in compliance with the associated policies and have submitted the Thesis/Dissertation Oral Defense Committee Recommendation form (found on the OGE website (<https://www.du.edu/graduate-education/current-student-resources/dissertation-thesis-information/>)) to the Office of Graduate Education for review.

The student must make arrangements for the date and time of the oral defense with the dissertation director, committee and oral defense committee chair. Students must submit a completed Schedule of Oral Defense form (found on the OGE website (<https://www.du.edu/graduate-education/current-student-resources/dissertation-thesis-information/>)) to their academic program and the Office of Graduate Education no later than four weeks prior to the date of the defense.

Conducting the Defense

The Oral Defense Committee Chair will preside over and manage the defense process. The chair is responsible for making certain that the defense is conducted in a professional manner and that the student has a fair opportunity to defend the dissertation. The chair is expected to provide opportunities for each voting member of the oral defense committee to participate in the defense and to ensure that the defense is of high quality while remaining within proper limits of inquiry. Interested faculty members, and in accordance with departmental policy, currently enrolled graduate students also may attend the oral defense. After the oral defense committee has conducted the essential examination of the candidate, questions may be asked by others present if pertinent and appropriate, as determined by the Oral Defense Committee Chair and common practice in the discipline.

When the defense is completed, the chair will request that the candidate and all other persons not on the defense committee leave the room and will call for a motion to pass or fail the candidate. A recommendation to pass can have no more than one negative vote from members of the committee. If the motion is a recommendation to pass, the committee must then agree on the conditions of the recommendation as follows:

- **Pass with no revisions** means that only grammatical, labeling or numbering changes are required. Only a limited number of sentence additions or deletions should be necessary.
- **Pass with minor revisions** indicates that the candidate will be required to reorganize portions of the manuscript and change some of the content.
- **Pass with major revisions** means that a complete chapter or chapters must be rewritten, additional tables are required and interpreted, or the general format must be changed. Responsibility for seeing that needed revisions are made rests with the dissertation director, but committee members also may require their approval before final submission.
- **Fail** indicates that the dissertation content is not of acceptable quality or that the candidate cannot defend the research. In most cases, failing the defense results in the rejection of the student's dissertation and a new or related study usually will need to be undertaken.

A candidate who fails the oral defense may petition the department/program chair for a maximum of one re-examination. The petition should include the reason for the request and committee composition. The Chair of the program will solicit input from the committee before rendering a decision. In the case the Chair is a member of the committee the petition goes to the Dean or their designee. If granted, the re-defense must be scheduled through the Office of Graduate Education and must occur within normal timelines.

The *Result of Oral Defense* form must be signed by all committee members and returned immediately to the Office of Graduate Education. The form cannot be submitted by the student.

Completing the Degree

Time Limit for Completion of the Degree

The candidate for the doctorate who holds a master's degree on entering the doctoral program is expected to complete all requirements for the degree no later than seven years after beginning the program, as measured by matriculation into the degree program. Candidates who hold only a bachelor's

degree on entering the doctoral program are expected to meet all degree requirements no later than eight years after doctoral studies begin. Failure to complete the degree within the established time limits will result in termination unless the student successfully petitions for an extension to the Senior Vice Provost for Research and Graduate Education. The college, school, or department chair and advisor must recommend this extension in writing. If it is not approved, the student will be dismissed from the program. Students may petition for an extension of time for a minimum of one quarter up to a maximum of one year per request. For more information, see Exceptions (p. 1046) regarding extensions of time.

Final Procedures for Earning the Doctoral Degree

The student must assume full responsibility for meeting all basic requirements for the degree as well as the specific requirements outlined by the college, school or department.

Before becoming a candidate for graduation, the student must complete the following:

- The candidate must apply for graduation by the deadline. The deadline to apply for graduation is the eighth day of the quarter prior to the quarter that the student plans to graduate. For example, students planning to graduate in the spring quarter should apply to graduate by the eighth day of the winter quarter. Students apply to graduate on PioneerWeb (instructions found on the Office of the Registrar's webpage (<https://www.du.edu/registrar/other-student-services/graduation/>)). Failure to do so will automatically delay graduation to a subsequent quarter. Failure to complete the degree during the expected quarter will require a new application and payment of a fee for additional evaluation and services.
- Satisfactorily complete all coursework and non-coursework requirements for the degree.
- All doctoral students must be advanced to final degree candidacy by their academic unit.
- If the graduate program requires a dissertation, arrange for an oral defense of the dissertation.
 - The Office of Graduate Education should review the oral defense committee as soon as the dissertation proposal has been approved or defended but no later than the first day of the quarter in which the student expects to complete their degree. Formal notification of the oral defense should be filed in the Office of Graduate Education no later than four weeks before the defense date and in accordance with the University schedule of deadlines when graduation candidacy is in the same quarter as the defense.
 - Submit the dissertation to the oral defense committee at least two weeks before the date of the defense.
 - Satisfactorily complete the oral defense at least three weeks before the end of the quarter in which the degree is to be awarded.
 - Submit an electronic copy of the dissertation to ETD/ProQuest and the dissertation director or advisor must submit the final approval of the dissertation to the Office of Graduate Education two weeks prior to the end of the quarter. The student should contact the Office of Graduate Education for the schedule of deadlines and obtain specific instructions for the preparation of the dissertation format.
 - If revisions are such that the dissertation in its final form cannot be filed at least two weeks before the end of the quarter, the awarding of degrees will be postponed.
- Students completing a major doctoral research paper or dissertation in practice should consult with their academic units regarding requirements.
- All Incomplete grades must be removed.
- All in-progress courses must have grades entered.

Electronic Thesis and Dissertation

As of spring quarter 2008, all theses and dissertations must be submitted electronically to ProQuest (UMI) unless an exemption is granted using the "opt out" procedure. ProQuest/UMI is widely known and respected as the main searchable database for scholarly work; the University of Denver requires students to submit their dissertations and theses to ProQuest.

If the student and the dissertation/thesis chair believe submitting the work to ProQuest will create serious ethical, publishing or other issues, the student should request an exception to this process by submitting an academic exception to the Senior Vice Provost for Research and Graduate Education that explains the concerns.

The electronic submission instructions and deadlines can be found on the Office of Graduate Education's website (<https://www.du.edu/graduate-education/current-student-resources/dissertation-thesis-information/>).

Faculty should review the instructions before advising a student about submitting the thesis or dissertation.

EdD students in the Morgridge College of Education may opt into submitting their dissertation in practice to ProQuest but it is not required. If submitting to ProQuest, EdD students must follow the published submission instructions and deadlines.

Criteria for a Master's Thesis or Doctoral Dissertation

- Requires an approved oral defense committee chair and committee members that meets DU's requirements.
- Successful oral defense of the thesis/dissertation.
- The scheduling of the oral defense and formatting of the thesis/dissertation must be coordinated through the Office of Graduate Education (<https://www.du.edu/graduate-education/current-student-resources/dissertation-thesis-information/>) in accordance with the University schedule of deadlines, graduate policy and formatting requirements.

- All copyright issues must be cleared before the thesis or dissertation is submitted. The student is responsible for obtaining proper permissions for all material used within the work. Evidence of copyright permission may be required with the student's submission to ProQuest (UMI) (<http://www.proquest.com/products-services/dissertations/>). For additional information about copyright permission and the copyright process, visit ProQuest (<http://www.proquest.com/products-services/dissertations/>).
- Electronic submission of "publishable" quality scholarly work.

Thesis and Dissertation Publication Options

Embargoes and Restrictions on Accessing Theses and Dissertations

Students should be advised that a thesis or dissertation may be considered to be "previously published" by some publishers if it is put into a searchable digital/electronic repository (e.g. ProQuest). However, it should be noted that the student, not ProQuest (UMI), retains the copyright.

Students should discuss their future thesis/dissertation publication goals with their advisor. Students planning to publish from their thesis or dissertation should consider requesting an embargo of their work.

The student will submit a petition for an academic exception (<http://bulletin.du.edu/graduate/academic-and-student-support-services-policies-and-procedures/academic-exceptions-complaints-grievances-and-appeals/exceptions/>) explaining the reasons for the embargo. The thesis or dissertation chair director will also submit a supporting statement to the Senior Vice Provost for Research and Graduate Education at academicexceptions@du.edu explaining the issue and stating that access to the work needs to be restricted. The Senior Vice Provost must approve the final decision for permission to embargo the work.

During an embargo, ProQuest will completely restrict access to the document for a specified time period. The thesis or dissertation will be held in the ProQuest repository with **no access** until the embargo expires.

Reasons for Embargo

- The student is interested in pursuing the option of an academic or commercial press acquiring the rights to publish the dissertation or thesis as a book.
- The student is interested in submitting work from the thesis/dissertation to a peer-reviewed journal.
- There are patentable rights in the work for which disclosure may be detrimental to the rights or interests of the author.
- There is an ethical need to prevent disclosure of sensitive or classified information about persons, institutions, technologies, etc. for a time-limited period.

If a student believes that they will need to restrict access for a limited time period, the student can request a six month, one year, or two year embargo.

When an embargo expires, the thesis or dissertation will be automatically made available electronically by ProQuest.

Renewing an Embargo

If a student wishes to continue to restrict access for a limited time period, the student can request a six month, one year, or two year renewal on the embargo. The student and the thesis or dissertation chair director will submit an academic exception to the Senior Vice Provost for Research and Graduate Education (academicexceptions@du.edu) explaining the issue and stating that access to the work stills needs to be temporarily restricted. The Vice Provost must approve the final decision for permission to renewal embargo. A student may only request two embargo renewals, for a maximum of a six year embargo period. Students with extenuating circumstances should consult with the Senior Vice Provost for Research and Graduate Education.

If the embargo extension is approved, the student should contact ProQuest directly at 1-800-521-0600 x77020 or via email at disspub@proquest.com.

University Libraries

ProQuest makes the thesis/dissertation available electronically to the University Libraries. The level of access to the student's work through the University Libraries depends upon embargo choices as described below.

- If the student does not embargo the work, the library will make the work available through the library's online catalog, with links to both ProQuest and the library's digital repository.

If the student embargoes the work for one of the following two reasons, University Libraries will make the work available only to the DU Community and through Inter-Library Loan in a PDF format. The work will not be made available outside the DU Community or over the internet:

- The student is interested in pursuing the option of an academic or commercial press acquiring the rights to publish the dissertation or thesis as a book.
- The student is interested in submitting work from the thesis/dissertation to a peer-reviewed journal.

If the student embargoes the work for one of the following two reasons, University Libraries will restrict access to the work until such time that they are notified by ProQuest that the embargo has been released, or when the author provides written permission directly to University Libraries:

- There are patentable rights in the work or other issues in which disclosure may be detrimental to the rights or interests of the author.
- There is an ethical need to prevent disclosure of sensitive or classified information about persons, institutions, technologies, etc. for a time-limited period.

After the embargo period, the work will be made available through University Libraries online catalog with links to ProQuest and the library's digital repository.

Opt Out Procedure

In some instances a student may wish to use only University Libraries as the repository of their work. In such cases the student work will be submitted digitally to University Libraries, and it will be made available only to the DU Community and through Inter-Library Loan in a PDF format.

The student will submit a petition for an academic exception (<http://bulletin.du.edu/graduate/academic-and-student-support-services-policies-and-procedures/academic-exceptions-complaints-grievances-and-appeals/exceptions/>) explaining the reasons why access to the work needs to be restricted. The thesis or dissertation chair director will also submit a supporting statement to the Senior Vice Provost for Research and Graduate Education at academicexceptions@du.edu explaining the issue and stating that access to the work needs to be restricted. The Senior Vice Provost must approve the final decision for permission to restrict access to the work.

Permanently Suppress

In rare cases, where the work includes proprietary information such as company data and records or confidential information that should never be made public, such as client records or interviews or some other serious condition that justifies such an action, it may be appropriate for a student to permanently suppress work. In such cases, the student work will be submitted electronically to University Libraries. The work will be retained by the library and listed in catalog system, but it will not be accessible without permission from the author.

The student will submit a petition for an academic exception (<http://bulletin.du.edu/graduate/academic-and-student-support-services-policies-and-procedures/academic-exceptions-complaints-grievances-and-appeals/exceptions/>) explaining the reasons why access to the work needs to be restricted. The thesis or dissertation chair director will also submit a supporting statement to the Senior Vice Provost for Research and Graduate Education at academicexceptions@du.edu explaining the issue and stating that access to the work needs to be restricted. The Senior Vice Provost must approve the final decision for permission to restrict access to the work.

Enrollment in Overlapping Quarters/Semesters

Background

The University of Denver administers federal financial aid under standard term rules. Programs that are eligible for federal student aid must follow the federal rules. Under this guidance standard terms may not overlap with one another. Student enrollment in a semester and quarter at the same time can create federal compliance issues with the standard term rules. This policy provides guidance to the university community for the purposes of advising, program development and registration approval. This policy also serves to maintain federal compliance.

Policy

The degree program is the determining factor for assigning a student to a quarter program or a semester program. The Office of Financial Aid may process aid for students pursuing two official graduate programs in both semesters and quarters (the law school and another school) based on a student's primary enrollment pattern during their program. The charts below represent the options of simultaneous enrollment. Students enrolled in two separate degree programs that include semesters and quarters must follow the enrollment rules strictly as defined in the charts to avoid overlapping terms.

The student's enrollment pattern (quarters or semesters) is determined by the program, not the selection of courses. Students solely in a program based on quarter terms may not enroll in semester courses. Students solely in a program based on semester terms (Law) may enroll in some quarters that fit as modules within a semester based on the chart below. Enrollment in courses outside of the student's quarter or semester program must follow the rules for overlapping terms.

Possible quarter enrollment options for students enrolled in law semester programs

- Fall Semester/Autumn Quarter: Yes
- Fall Semester/Summer Quarter: No
- Spring Semester/Winter Quarter: No
- Spring Semester/Spring Interterm: Yes
- Spring Semester/Spring Quarter: No
- Summer Semester/Spring Quarter: No

Recognized programs that include semesters and quarters generally establish a degree progress plan whereby students spend most of the academic year in either the quarter or the semester program. As noted above for students in semester programs, enrollment in some quarters is possible while in the semester program.

Registration Approval

Students are not allowed to register simultaneously in quarters and semesters outside of the parameters established in this policy. Students should consult with the proper program chair or delegate who will need to ensure that compliance to the above registration practices are followed.

Consequences of enrolling in overlapping terms

The overlapping term rules apply to all students regardless of financial aid status. Should a student successfully enroll in violation of the practices defined in these rules, the University will notify the advisor and the student that a review and adjustment of course registration is required to maintain compliance. The Office of Financial Aid will not authorize the release of the financial aid for the overlapping terms.

Program Design

Interdisciplinary programs are a hallmark of the University of Denver's long-term vision of supporting students. Several excellent examples for programs that comply with these policies have already been developed (e.g. JD/MBA, Tax/JD, MSW/JD, MSIS/JD). These models use a cohort experience to ensure that the students achieve their degree success with transparency.

Enrollment Status

Regular Enrollment (p. 1026)

Concurrent Enrollment (p. 1026)

Consecutive Term Enrollment (p. 1026)

Continuous Enrollment (p. 1026)

Regular Enrollment

The University's definition of full-time graduate study is eight credit hours or more of coursework or research credit per quarter. Half-time students are enrolled in four to seven credit hours. Less than half-time students are enrolled in one to three credit hours.

Some graduate programs and fellowship awards may require more than eight credit hours of enrollment per quarter to be considered full-time. Contact the individual graduate unit regarding specific enrollment requirements.

Concurrent Enrollment

Concurrent enrollment, defined as taking courses for credit at the University of Denver and, at the same time, at another institution, is generally not permitted. In order to be concurrently enrolled at another institution, students must successfully petition the Office of Graduate Education and include their reasoning for pursuing concurrent enrollment.

Consecutive Term Enrollment

All graduate degree-seeking students must be in active status and enrolled for consecutive terms fall through spring.

Enrollment may consist of registration for courses, thesis or dissertation credits, or Continuous Enrollment registration. The minimum thesis or dissertation credit requirements are determined by the individual graduate programs which may require students to register for additional thesis or dissertation credits to maintain degree candidacy. A graduate student who is not in active status and not consecutively enrolled must apply for readmission and pay any continuous enrollment fees owed for previous quarters, if applicable.

Unless a student is on an official leave of absence, a student's status is rendered inactive after one quarter of non-enrollment. The student will not be able to register for courses and will need to submit a *Readmission* form to the program.

Students not planning to be consecutively enrolled must apply for a leave of absence from the university.

Note: *Academic units and programs may have additional registration and/or enrollment requirements. Contact the unit for more information.*

Continuous Enrollment

Registration for Continuous Enrollment (CE) is limited to students who have completed all required coursework (with the exception of independent research hours 4995/5995/5993) and are pursuing academic work/research necessary to complete a degree. CE is designed primarily for students who are working on a thesis, dissertation, or research paper/capstone.

Students who have completed all of their coursework and are working on non-thesis research papers, capstones, performances, or other creative work enroll for four credit hours. Students who have completed all their coursework and are working full time on a thesis, dissertation, or major doctoral

research paper enroll for eight credit hours. Doctoral students who have completed all coursework are eligible for continuous enrollment during the preparation of the doctoral comprehensive examinations. CE hours will not appear on student transcripts.

Students enrolled in the dual undergraduate-graduate program who have earned the baccalaureate degree, completed all required graduate coursework, and are working on a thesis are eligible for graduate CE.

CE is not to be used for students who are only engaged in required internships and practicums. Students should register for internship and practicum courses through their department.

Students should be enrolled in CE by the end of the 100% reimbursement/drop-add period to be eligible for the university health insurance and health fee, plus loan deferment. Students who do not enroll prior to the first day of classes of a given quarter will be charged late registration fees as determined by the Office of the Registrar.

CE enables students to maintain active status with the University and access to university resources including library, email, lab access, participation in the DU Student Health Insurance Plan and Health & Counseling fee services, and part-time student rates at the Coors Fitness Center. Students who are appointed DU employees must pay the Coors Fitness Center faculty/staff rate.

CE is not to be used for enrollment purposes while making up an incomplete grade. An exception is if all other coursework is completed and the student is working on their thesis, dissertation or research paper/capstone while completing the work required for no more than one incomplete grade. It is the responsibility of the student and graduate college, school, or department to make this determination prior to approving eligibility for CE credit.

Registration in Continuous Enrollment

CE requires annual approval by the student's faculty advisor, the Dean and/or the Senior Vice Provost. Students are responsible for registering themselves in CE each quarter by the appropriate registration deadlines.

The *Continuous Enrollment Approval* form (found on the OGE website (<https://www.du.edu/graduate-education/current-student-resources/academic-resources/>)) must be returned to the Office of Graduate Education.

Approval by the Senior Vice Provost for Research and Graduate Education is required for all divisions, schools, and colleges.

Permission to enroll in CE is granted for up to one academic year beginning in the fall quarter. Students requiring CE after fall quarter registration must complete and submit the form prior to the beginning of the subsequent quarter (winter, spring and summer) in order to be enrolled in CE. To avoid late fees, the student must submit a new form for fall quarter of the following academic year.

After permission to enroll is granted, students are responsible for registering themselves online for CE each quarter. Registration for CE must follow the Registrar's deadlines. To avoid late registration charges, students must register for CE prior to the first day of classes. To be eligible for health insurance and loan deferment, students must be registered by the end of the 100% refund period. Hours added after that time will not count towards financial aid eligibility.

There are five course codes for CE. Students register for the appropriate type of CE depending on their thesis/dissertation requirements and financial eligibility status.

- CENR 4500 Non-Thesis (4 credits): Master's level students working on non-thesis research papers, capstones, performances, or other creative work.
- CENR 4600 Thesis (8 credits): Master's level students working on a thesis.
- CENR 5600 Doctoral (8 credits): Doctoral level students working on a dissertation or major doctoral research paper.
- CENR 4500, CENR 4600, and CENR 5600 registrations will confer loan eligibility or loan deferment if the student is eligible to receive financial aid.

Students with an approved time extension for completion of their degree program, but who are no longer eligible for financial aid because they are past the aid eligibility time limit (seven years master's level, six years for MSW, or ten years doctoral) register for

- CENR 4700 Master's Level, Non-Financial Aid Eligible (0 credits).¹
- CENR 5700 Doctoral Level, Non-Financial Aid Eligible (0 credits).¹

¹ These courses do not confer loan eligibility or loan deferment.

Notes: Students in University College, the Sturm College of Law, and the Daniels College of Business master's programs are not eligible for continuous enrollment.

Peace Corps students are NOT to be put on continuous enrollment for the duration of their Peace Corps assignments. These students must follow the Peace Corps' procedures for maintaining appropriate loan deferment status.

Morgridge College of Education doctoral students and students in the DU-Iliff Joint PhD program are required to register for dissertation hours in addition to continuous enrollment. Contact the unit for details.

Some units may have more stringent policies. Contact the unit for details.

Fees and Readmission

Students must register and pay for CE on a quarter-by-quarter basis. In addition to the standard CE fee, technology fees will be assessed based on part/full-time status (four/eight quarter hours).

Students who have finished their coursework but who have become inactive because they were not registered for CE or on an approved leave of absence from the program must complete the *Continuous Enrollment Application for Re-Admission*. The student must submit transcripts from any institution(s) they may have attended during their absence from DU.

The student will owe CE and technology fees for the quarters they were not enrolled from the winter quarter 2005 forward. In addition, a late fee may be assessed at the time of readmission. Paying fees for previous quarters will not make the student eligible for retroactive enrollment, financial aid, or retroactive loan deferment.

International Students

Federal immigration regulations require F-1 and J-1 students to enroll full-time for at least three quarters each calendar year (or fall and spring semesters for law students) in order to maintain their immigration status. Exceptions to this requirement may only be authorized by an international student advisor or the program sponsor under very limited criteria.

Federal immigration regulations permit the host institution to define full-time enrollment for F-1 and J-1 students studying at the graduate level. The University defines full-time enrollment for graduate students as eight or more credit hours. To comply with the full-time enrollment requirement, F-1 and J-1 students must enroll in continuous enrollment after all coursework is completed or during the final quarter of coursework, if registered for less than eight credits, while working on the thesis or dissertation, or major doctoral research paper.

CE is not to be used for enrollment purposes in place of registering for required coursework. International students should work closely with their academic programs to ensure that they are able to maintain full-time enrollment in coursework for at least three quarters of each academic year until all coursework is complete (or students are in their final quarter of completing coursework).

F-1 and J-1 students must maintain acceptable levels of health insurance coverage during their academic program, as required of all students by the University. The U.S. Department of State also requires J-1 students to maintain health insurance coverage throughout their exchange program in order to maintain their J-1 immigration status.

F-1 and J-1 students must receive authorization from an international student advisor or their program sponsor prior to dropping below full-time status in an academic quarter when enrollment is required. Failure to receive prior authorization to drop below full-time status is a violation of the student's immigration status and will result in the loss of the student's authorization to lawfully study in the United States.

F-1 and J-1 students should enroll in continuous enrollment (CENR 4600 or CENR 5600) in order to comply with the full-time enrollment requirement while working on the thesis or dissertation, or major doctoral research paper, even if they have reached the maximum limits for their degree programs. Registration in continuous enrollment courses does not confer loan eligibility or loan deferment benefits on a student.

Financial Aid Loan Eligibility and Loan Deferment

United States citizens and permanent residents participating in CE may be eligible for student loans and loan deferment as long as they are within the maximum time frame allotted for their program.

Students enrolled in CE are eligible for Federal Direct Loans and Federal Work-Study only. The maximum work-study award may be awarded in the amount of \$1500, without the option to increase the award.

Students registered in CE are not eligible for waivers, scholarships, or some forms of financial aid that requires the student to be enrolled on a full-time basis (eight credit hours or more). These include the Graduate Education Doctoral Fellowship and the Graduate Education Doctoral Fellowship for Inclusive Engagement.

However, students on CE may receive a graduate assistantship (GTA, GSA or GRA) as long as they are not required to be enrolled on a full-time basis (eight credit hours or more) according to departmental guidelines.

Registration in CE does not guarantee eligibility for financial aid.

Students must follow the loan procedures established by the Office of Financial Aid (<http://www.du.edu/financialaid/>) and must contact the Office of Financial Aid for details on eligibility for loans and loan deferment. Satisfactory progress towards the degree must be verified.

Eligibility for loans and *in school* loan deferment ends after seven years in a master's program, and after ten years in a doctoral program. Time away from the program (e.g. Leave of Absence, Medical Leave of Absence, or other non-enrollment periods) will count against the loan and loan deferment eligibility time limit. There are alternatives to the *in school* loan repayment deferment that may be applicable. To find out more information about a

forbearance or *economic hardship* deferment, please contact the Office of Financial Aid or your lender. Students are responsible for submitting lender-required loan deferment forms to the Office of the Registrar (<http://www.du.edu/registrar/>).

Health Insurance and Continuous Enrollment

Students who are on CE are *not* automatically assessed the Student Health Insurance Plan (SHIP) or health and counseling fee each quarter. SHIP enrollment is available twice a year, in the fall and spring. The Health & Counseling Fee enrollment is available every quarter. Please contact the Health and Counseling Center to discuss enrollment deadlines and payment options, 303-871-2205.

Graduation Requirements

Student Responsibility for Graduation Requirements

Students may not receive a University of Denver degree or certificate without completing all requirements. Students must be in good academic standing and may not receive a degree or certificate with fewer than the published number of credits or with a cumulative program GPA below the minimum required for each program they are pursuing (2.3 for JD students in Sturm College of Law, 2.7 for master's students in the Sturm College of Law, 3.0 for all other graduate programs).

Application for Graduation

All graduate students completing an academic certificate or degree should submit the graduation application two quarters in advance of the intended graduation date. Applications are accepted up to the eighth calendar day of that term. For example, to graduate in the spring quarter (June), the graduation application is due by the eighth calendar day of winter quarter (January). Law students planning on graduating spring or summer semester may apply as of November 1st of that academic year. For those planning on graduating fall semester, the application will be available the first day of that semester. Failure to complete the degree or certificate during the expected graduate term may require a new graduation application and payment of a fee for additional evaluation and services.

Prior to applying to graduate, students need to verify that their curriculum records are accurate and up-to-date. Students who did not apply for graduation by the deadline should review the Graduate Request to Participate in Commencement Ceremony for Students Not Graduating (p. 1029) policy. All requests for walking in commencement and late petitions for graduation must be approved by the Vice Provost for Research and Graduate Education or the Vice Provost's designee.

Note: Students completing a Specialized Graduate Certificate do not need to submit a graduation application and may work with their program directly to ensure they have met all requirements for the Specialized Graduate Certificate.

Commencement Ceremonies

Formal Commencement ceremonies are held at the University of Denver at the end of the spring and summer terms.

Participating in commencement does not constitute official graduation. It is a celebration that signifies the completion of the appropriate degree requirements and has no academic or legal implications.

Commencement Program

The Commencement program lists the names of all graduation candidates who applied at the appropriate time to receive degrees at that specific commencement ceremony. The appearance of a name in the program does not guarantee a student's graduation at that time unless all degree requirements have been completed.

Spring Commencement

Spring Semester

The Sturm College of Law's Spring Commencement occurs at the end of the spring semester, normally in mid-May. Students who have completed all graduation requirements during autumn or spring semester of the current academic year are invited to participate in the ceremony.

Spring Quarter

Commencement occurs at the end of the spring quarter, normally in early June. Students who have completed all graduation requirements during autumn, winter, or spring quarters of the current academic year are invited to participate in the ceremony.

Note: Students who have only completed a certificate program are not included in the commencement program or ceremony.

Summer Commencement

Summer Commencement occurs at the end of summer session, normally in mid-August. Students who have completed all graduation requirements during summer session are invited to participate in the ceremony.

Note: Students who have only completed a certificate program are not included in the commencement program or ceremony.

Request to Participate in Commencement Ceremony for Students not Graduating

Students who have not completed their degrees may request to participate in the Graduate Commencement Ceremony only if the following parameters have been met for each eligible term:

Requirements for Walking in Spring Ceremony

- Submit the Graduate Request to Participate in Commencement Ceremony for Students Not Graduating form (found on this Office of Graduate Education webpage (<https://www.du.edu/graduate-education/current-student-resources/academic-resources/>)) to the Vice Provost or the Vice Provost's designee no later than two weeks prior to the graduation date.
- File for graduation within the required time frame.
- Eligibility as a candidate for graduation for the subsequent summer quarter.
- Candidate is within five-credit hours of degree completion, including resolving any incomplete grades.
- Registration for final program requirements in the summer interterm or in summer quarter.
- Complete all non-course degree requirements (e.g., comprehensive examination, practicum, major research paper) two weeks prior to the end of spring quarter. Please note that when a student is registered for an internship course, the internship is considered to be a course-related degree requirement, and the candidate must be within five-credit hours of degree completion.
- If a thesis or dissertation is required for the degree, complete the defense within the first six weeks of the subsequent summer quarter. The defense date must be on file with the Office of Graduate Studies.

Requirements for Walking in Summer Ceremony

- Submit the Graduate Request to Participate in Commencement Ceremony for Students Not Graduating form (found on this Office of Graduate Education webpage (<https://www.du.edu/graduate-education/current-student-resources/academic-resources/>)) to the Vice Provost or the Vice Provost's designee no later than two weeks prior to the graduation date.
- File for graduation within the required time frame.
- Eligibility as a candidate for graduation for the subsequent fall quarter.
- Candidate is within five-credit hours of completing the degree, including resolving any incomplete grades.
- Registration for final requirements in or before the subsequent fall quarter.
- Complete all non-course degree requirements (e.g., comprehensive examination, practicum, major research paper) two weeks prior to the end of summer quarter. Please note that when a student is registered for an internship course, the internship is considered to be a course-related degree requirement, and the candidate must be within five-credit hours of degree completion.
- If a thesis or dissertation is required for the degree, the defense must be complete within the first six weeks of the subsequent fall quarter. The defense date must be on file with the Office of Graduate Education.

Forms requesting to walk in either the Spring or Summer commencement ceremonies should be returned to the appropriate student services office for approval from the unit and the Vice Provost for Research and Graduate Education. Students may be approved to walk in commencement up until two weeks before of the end of the term, but a student's name may not appear in the commencement program if requests are received only one month prior to the commencement ceremony.

Diplomas

Diplomas are issued eight to ten weeks after the conclusion of the term in which the student graduates.

Diploma Name Policy

The student name listed on a diploma or certificate must match the official name on file at the University (first name, middle name, last name), with the following exceptions:

- option of first name or initial;
- option of diminutive or alternate form for the first name;
- option of a first name which conforms with the graduate's genuine expression of gender identity;
- omission of the first name when the middle name is used as a salutary name;
- option of middle name or initial;
- omission of the middle name;
- inclusion of former or maiden name(s);
- inclusion of proper capitalization and accentuation of name; and,
- inclusion of Hispanic maternal surnames.

Neither titles nor degrees previously earned will be included as part of a graduate's name on a diploma.

Internships After Completion of Coursework

Some students are required to do an internship as part of the degree requirements, but do not receive course credit while on internship status. These students, who have completed all other coursework, must register for internship credits.

Students should consult the Office of Financial Aid (<http://www.du.edu/financialaid/graduate/>) to see if they are eligible for loans and loan deferment. Students who are not required to participate in an internship are not eligible.

Note: *There are internship programs available to DU students for credit. General regulations governing loans and loan deferments apply. Contact the Office of Financial Aid (<http://www.du.edu/financialaid/graduate/>) for further information.*

Master's Degree Requirements

Requirements (p. 1031)

Master's Thesis (p. 1032)

Master's Thesis Oral Defense (p. 1033)

Completing the Degree (p. 1034)

Requirements

Credit Requirements

The range of approved graduate credits required for a master's degree is 45-92 quarter hours. A minimum of 34 hours of graduate credit must be earned at the University of Denver but vary by unit depending on the number of transferred credits allowed per the transfer of credit policy (<http://bulletin.du.edu/graduate/academic-requirements-policies-and-procedures/transfer-of-credit/>).

Advanced degrees are not awarded automatically upon completion of the required number of courses or hours of credit.

Students enrolled in a graduate program should not take courses towards another degree program unless they have been accepted into the second program, and no more than three courses may be earned at the University of Denver and applied towards a degree program before acceptance into that degree program. Graduate coursework and credit hours already applied toward a degree received from the University of Denver cannot be applied towards another graduate degree of the same level or less.

Residency Requirements

Enrollment as a graduate student at the University of Denver for at least three quarters (two semesters) is required for graduation.

Tool Requirements

Candidates may be required to demonstrate proficiency in the required tools for research and advanced study.

Where required, tool requirements are determined by the candidate's advisor and program and may include one or more languages, statistical methods, laboratory or other research skills. Consult the college, school or department for requirement details.

Advancement to Candidacy

A review of a candidate's plan of study and progress must be conducted as soon as all the minimum requirements have been met and no later than the first day of the term in which the student expects to complete the degree.

Minimum requirements for the review include completion of any provisional admission requirements, an approved plan of study that will lead to meeting the degree requirements, posting of any transfer work to the student's record, completion of tool (if required) and a grade point average of "B" or better in all work completed to that point. Successful completion of the review and approval by the appropriate student services office constitutes Advancement to Candidacy.

Note: *Some units may require satisfactory completion of a qualifying examination for Advancement to Candidacy. Consult the academic unit for information regarding requirements.*

Final Examination

The requirement of a final examination for the master's degree is in accordance with the requirements of the candidate's college, school or department. Where required, the examination may be oral, written, or both. The examination may focus on overall course content or it may be the final step in the defense of a thesis.

Additional Master's Degree Requirements

In addition to coursework, most master's degree programs require a creative project, internship or practicum, oral comprehensive examination and/or major paper or thesis. Typically such projects are managed within the unit or program.

Master's Thesis

The master's thesis represents the culminating research of the master's degree program. It is a scholarly presentation of original research that is defended as partial fulfillment of requirements for the master's degree. The college, school or department determines the amount of credit allowed for research and work on the thesis. Students should contact the Office of Graduate Education on instructions regarding how to prepare and format the thesis (instructions found on the OGE website (<https://www.du.edu/graduate-education/current-student-resources/dissertation-thesis-information/>)).

Program-Level Thesis Proposal Committee

All candidates for the master's degree must have a thesis director who is a faculty member in the student's graduate program. Programs may require that thesis proposals be approved by or defended before a committee within the department or program. Programs reserve the right to determine the composition of the thesis proposal committee. However, only those faculty who meet the following University requirements may serve as voting members of the oral defense committee.

Master's Thesis Oral Defense Committee

The masters candidate's thesis oral defense committee will be submitted to the Office of Graduate Education for approval by the Senior Vice Provost for Research and Graduate Education. OGE staff will review the committee to ensure that it meets University policies and the Senior Vice Provost will work with the department/program chair to resolve any concerns that the proposed committee may not adhere to University policies.

Prior to coming to OGE the department/program chair is responsible for confirming the committee membership is appropriate for the thesis subject matter and for supporting the student's academic needs. If rejected by the chair or the Senior Vice Provost, the dean or designee can review an appeal of committee membership. The Thesis/Dissertation Oral Defense Committee Recommendation form (found on the OGE website (<https://www.du.edu/graduate-education/current-student-resources/dissertation-thesis-information/>)) should be returned to the Office of Graduate Education as soon as the thesis proposal has been approved or 30 days following IRB submission but no later than the first day of the quarter in which the student expects to complete the degree.

Composition

Thesis Director

The thesis director is ordinarily a tenure-line or research faculty member of the candidate's graduate program. Under some circumstances, faculty with other designations (e.g., clinical) can serve as the thesis director with approval of the department/program chair and dean/designee. The process for approval is the same as for other committee members (see below).

It is the thesis director's responsibility to ensure that the student's research meets appropriate academic standards for the discipline in which the degree is being conferred. The thesis director is a voting member of the committee.

Committee Members

The committee is composed of a minimum of two and a maximum of five voting members, including the thesis director. This includes the thesis director but does not include the Oral Defense Committee Chair, who is a non-voting committee member. Tenure-line and research faculty from DU, including those outside the student's program, are automatically eligible to serve on thesis committees if the thesis subject is appropriate to their field of expertise.

Faculty with other designations (e.g., clinical, teaching, professor of the practice) are eligible to serve as voting members of the committee if they have been actively^[1] (p.) involved in research and scholarship in a relevant field and meet the following requirements:

- a. Possession of the research doctorate, terminal degree in the field, or equivalent record of research, scholarship, or achievement appropriate for the program; and
- b. Professional productivity as evidenced by achievement such as:
 - Publication of a book or books recognized in the field as scholarly work;
 - Publication of articles in recognized, peer-reviewed scholarly journals;
 - Publication of articles in conference proceedings;
 - Current award or completion of an externally-funded project (e.g. grant recipient or program manager);
 - Possess national eminence in the topic field;
 - Juried performances, exhibitions, or creative works that have received significant regional, national, or international recognition.

Department/Program chairs should submit the CV of an individual to the dean or designee for approval. Once approved, the Office of Graduate Education will maintain these approved lists for individual programs for three years without additional review.

Individuals from other institutions may serve as voting members (not director) of the committee. If in a tenure-track or research faculty position in a relevant field at a university or research position in a National Laboratory, they are automatically eligible. If not, individuals must submit a current CV through the department chair for approval by the dean/designee. Once approved, the Office of Graduate Education will maintain these approved lists for individual programs. No more than one committee member can come from outside DU

[1] (p.) Actively is defined as contributing to research in the last three to five years

Oral Defense Committee Chair

The role of the oral defense committee chair is to ensure a fair examination process that adheres to the policies outlined in the Graduate Bulletin. The chair should provide a non-specialist's perspective on the quality of the thesis. The chair must be familiar with the standards for master's thesis research and should have some general knowledge of the topic of the student's thesis. The chair is expected to have read the thesis prior to the defense and to participate in the defense as their academic expertise permits, but the chair is not a voting member.

The committee chair must be a tenured member of the DU faculty and must be from a department, school, or college other than that of the candidate. There will be no exceptions to this element of the policy. When a master's degree is interdisciplinary, the defense committee chair should whenever possible be from a discipline not represented in the degree. Exceptions to this policy can be approved by the dean or designee when accompanied by a conflict of interest disclosure. Those faculty holding only courtesy appointments in a program are not considered "within" the program.

It is the responsibility of the student and thesis director to find an appropriate oral defense committee chair who meets these requirements and agrees to serve. In case of difficulty reaching agreement, the chair of the department/program will make a decision. This decision is not appealable.

Appeal of Defense Committee Composition

If the department/program chair rejects the composition of the thesis committee, the student can appeal to the dean or designee. The appeal should include CVs of each proposed committee member, along with a statement explaining why the student believes the composition of the committee is appropriate for the project. The appeal must be signed by the thesis director to confirm their agreement with the student's proposed committee.

The dean or designee will review the appeal and respond in writing to approve or reject the committee within 10 business days. The decision is final and not subject to appeal.

Unit-specific Requirements

Schools and departments reserve the right to establish requirements that exceed University standards. It is the student's responsibility to determine whether or not the unit has requirements in addition to University policy and the unit's responsibility to ensure that those requirements have been met before submitting the Oral Defense Committee Recommendation form to the Office of Graduate Education.

Master's Thesis Oral Defense

The candidate's oral defense committee conducts the oral defense of the master's thesis. The defense must be held at least three weeks before the end of the quarter in which the degree is to be granted.

All members of the defense committee must receive a copy of the candidate's thesis at least two weeks prior to the scheduled defense.

The defense is expected to be held with the student and committee members being present in person. However, if circumstances make it impossible for the student and/or committee members to be physically present, a defense with the student and/or faculty participating by conference call, webcast or other medium is allowed if agreed upon by the student, the thesis director and committee members. If a disagreement arises with the format of the defense, the Senior Vice Provost or their designee will work with student, chair and committee members to resolve the matter.

Scheduling of the Oral Defense

Prior to scheduling the defense, the student and thesis director must have established the candidate's oral defense committee in compliance with the associated policies and have submitted the Thesis/Dissertation Oral Defense Committee Recommendation form (found on the OGE website (<https://www.du.edu/graduate-education/current-student-resources/dissertation-thesis-information/>)) to the Office of Graduate Education for review.

The student must make arrangements for the date and time of the oral defense with the thesis director, committee, and oral defense committee chair.

Students must submit a completed Schedule of Oral Defense form (found on the OGE website (<https://www.du.edu/graduate-education/current-student-resources/dissertation-thesis-information/>)) to the Office of Graduate Education and their academic program no later than four weeks prior to the date of the defense.

Conducting the Defense

The oral defense committee chair will preside over and manage the defense process. The chair is responsible for making certain that the defense is conducted in a professional manner and that the student has a fair opportunity to defend the thesis. The chair is expected to provide opportunities for each voting member of the oral defense committee to participate in the defense and to ensure that the examination is of high quality while remaining within proper limits of inquiry. Interested faculty members, and in accordance with departmental policy, currently enrolled graduate students also may attend the oral defense. Before or after the oral defense committee has conducted the essential examination of the candidate, questions may be asked by others present if pertinent and appropriate as determined by the Oral Defense Committee Chair and common practice in the discipline.

When the defense is completed, the chair will request that the candidate and all other persons not on the defense committee leave the room and will call for a motion to pass or fail the candidate. A recommendation to pass can have no more than one negative vote from members of the committee. If the motion is a recommendation to pass, the committee must then agree on the conditions of the recommendation as follows:

- **Pass with no revisions** means that only grammatical, labeling or numbering changes are required. Only a limited number of sentence additions or deletions should be necessary.
- **Pass with minor revisions** indicates that the candidate will be required to reorganize portions of the manuscript and change some of the content.
- **Pass with major revisions** means that a complete chapter or chapters must be rewritten, additional tables are required and interpreted, or the general format must be changed. Responsibility for seeing that needed revisions are made rests with the thesis director, but committee members also may require their approval before final submission.
- **Fail** indicates that the thesis content is not of acceptable quality or that the candidate cannot defend the research. In most cases, failing the defense results in the rejection of the student's thesis and a new or related study usually will need to be undertaken.

A candidate who fails the oral defense may petition the department/program chair for a maximum of one re-defense. The petition should include the reason for the request and committee composition. The Chair of the program will solicit input from the committee before rendering a decision. In the case the Chair is a member of the committee the petition goes to the Dean or their designee. If granted, the re-defense must be scheduled through the Office of Graduate Education and must occur within normal timelines.

The *Result of Oral Defense* form must be signed by all committee members and returned immediately to the Office of Graduate Education. The form cannot be submitted by the [student](#).

Completing the Degree

Time Limit for Completion of the Degree

Master's degree candidates are expected to complete degree requirements within five years of beginning their programs, as measured by the matriculation into the degree program.

Failure to complete the degree within the established time limits will result in termination unless the student successfully petitions for an extension to the Senior Vice Provost for Research and Graduate Education. The college, school, or department and the student's advisor must recommend this extension. If it is not approved, the student will be terminated from the program. Students may petition for an extension of time for a minimum of one quarter and up to a maximum of one year per request. For more information, see Exceptions (p. 1046) regarding extensions of time.

MCE: The Ed.S. must be completed in six years.

Final Procedures for Earning the Master's Degree

The student must assume full responsibility for meeting all basic requirements for the degree as well as the specific requirements outlined by the college, school or department. The student must complete the following:

- Apply for graduation by the deadline. Failure to complete the degree during the expected graduation term may require a new application and payment of a fee for additional evaluation and services.
- Satisfactorily complete all coursework and non-coursework requirements for the degree.
- Arrange for an oral defense of the thesis, if the graduate program requires one. The Office of Graduate Education should review and approve the oral defense committee as soon as the thesis proposal has been approved or defended but no later than the first day of the quarter in which the student expects to complete the degree. Formal notification of the oral defense should be filed in the Office of Graduate Education no later than four weeks before the defense date and in accordance with the University schedule of deadlines when graduation candidacy is in the same quarter as the defense.
- Complete any required final defense, oral, written or both, at least three weeks before the end of the quarter in which the degree is awarded.
- All Incomplete grades must be removed at least three weeks before the end of the term in which the degree is to be awarded.
- All in-progress courses must have a grade entered.
- Submit an electronic copy of the thesis to ETD/ProQuest and have the thesis director or advisor submit the final approval to the Office of Graduate Education two weeks prior to the end of the quarter. The student should contact the Office of Graduate Education for the schedule of deadlines and obtain specific instructions for the preparation of the thesis format.

- If revisions are such that the thesis in its final form cannot be filed at least two weeks before the end of the quarter, the awarding of degrees will be postponed.

Notes: Students in Dual or Flexible Dual Degree programs must file an application for graduation for both degree programs.

Individual academic units may have more stringent policies. Contact the unit for details.

Readmission

Readmission for Inactive Students

Students who are within their time limits for completion of their degrees, but have interrupted their graduate programs by not registering for one or more consecutive terms (excluding summer) without properly withdrawing by requesting a leave of absence, must submit a readmission form to the program.

Students who still have coursework to complete must submit an application for readmission and indicate the last term attended and the expected term of re-entry. The department must approve the request for readmission and the student must submit transcripts from any institution(s) attended during their absence from DU. Once readmission is complete, students may register during the regular registration period, including priority registration, according to the Registrar's deadlines.

Students who have permanently withdrawn from the university and would like to return must meet the following criteria:

- Date of withdrawal cannot be more than five years
- The student must still be within their time to degree completion per the quarter of matriculation

If a student does not meet this criteria, they will be required to follow the Readmission for Terminated Students policy (<http://bulletin.du.edu/graduate/academic-requirements-policies-and-procedures/readmission/>). Graduate units reserve the right to request that the student submit a full application for admission (which includes the application fee) to the appropriate admissions office.

Readmission for Terminated students

Students who have been dismissed from a program or have an expired time limit for degree that wish to be readmitted need to complete the following:

- a. Submit a new application to the program and meet the current admissions criteria.
- b. If admission is granted, the most current program bulletin must be followed, including all curriculum and program requirements.
- c. All previous coursework older than five years must be reviewed by the department to determine if it is still relevant for the current term of admittance.

Final approval for admission, consideration of coursework from a program in which a student was previously terminated, and timeline for degree completion must be approved by the Senior Vice Provost for Research and Graduate Education.

Note: Per "Section 484C of the Higher Education Act (HEA) provides that an institution of higher education may not deny readmission to a service member of the uniformed services for reasons relating to that service."

Please visit the U.S. Department of Education (<http://www2.ed.gov/policy/highered/guid/readmission.html>) website for full text version of policy and requirements.

Registration

Student Responsibility for Registration Procedures (p. 1035)

Registration Offices (p. 1036)

Course Registration (p. 1036)

Course Information (p. 1038)

Student Responsibility for Registration Procedures

Students must register by the appropriate deadlines for all courses they wish to attend.

Students may register for courses through M (<https://PioneerWeb.du.edu>)yDU (<https://my.du.edu/dashboard/>), in the registration office located in the Office of the Registrar (<http://www.du.edu/registrar/>), or as designated by the college or school the student is attending. Courses requiring special permissions or forms, such as independent study, restricted enrollment, those with unmet prerequisites, or those resulting in a credit-hour

overload may require students to register in the Office of the Registrar. Students are expected to check with academic advisors and/or the program requirements in the academic bulletin to identify prerequisites and course restrictions prior to attempting to register for courses.

After priority registration, students may drop or add courses without approval or penalty (except for the late registration fee) through the first seven days of a quarter (summer session excluded) through M (<https://PioneerWeb.du.edu>)yDU (<https://my.du.edu/dashboard/>) or during regular office hours in the registration office. All students in the following categories who do not register before the first day of the quarter are assessed a late registration service charge: continuing students, new students, students returning from leave of absence and readmitted students. The late registration service charge cannot be waived. Registrations are not processed after the designated registration period of the quarter.

Students may drop or add courses without approval or penalty (except for the late registration fee) through the first seven days of a quarter (summer session excluded) through M (<https://PioneerWeb.du.edu>)yDU (<https://my.du.edu/dashboard/>) or during regular office hours in the registration office.

Please refer to the *Important Dates Calendar* for more information regarding registration deadlines.

Registration Offices

Registration is overseen by different offices depending upon the student's program. Questions about registration dates, deadlines or procedures should be directed toward the appropriate registration office.

Graduate students, other than University College, Law, and Social Work, may contact the Office of the Registrar (<http://www.du.edu/registrar/>) at 303-871-4095.

The University College S (<http://www.universitycollege.du.edu>)tudent Services (<http://universitycollege.du.edu/>) can be reached at 303-871-2291.

The Sturm College of Law (<http://www.law.du.edu>) can be reached at 303-871-6132.

The Graduate School of Social Work (<http://www.du.edu/socialwork/>) can be reached at 303-871-3463.

Course Registration

Section Changes

Students may change from one section of a course to another with the instructor's approval for the section being added. The section being dropped is deleted from the student's record.

Adding Courses

Generally, courses may be added from the second to eighth week of a ten-week quarter with an instructor's signature. Courses may not be added after the eighth week of the quarter. Deadlines for adding courses may differ for semester, interterm periods, and non-conforming terms that are not the standard ten weeks.

Waitlists

Contact the individual academic units for their policies on waitlisted courses.

Credit Load

A full-time graduate student may enroll for 8 to 18 credit hours each quarter.

A credit-hour load of more than 18 hours requires instructor and advisor approval and the signature of the dean of the unit. Each credit hour taken in excess of 18 hours is charged at the current hourly tuition rate.

Note: *The total study load includes all courses taken at the University of Denver and at other institutions concurrently. Courses taken for no-credit (NC) are also applied toward the total study load. The maximum enrollment for any quarter is 20 credit hours.*

Dropping Courses

Notification by Student of Intent to Withdraw

You may also submit a withdraw request via your M (<https://pioneerweb.du.edu/>)yDU (<https://my.du.edu/dashboard/>). Navigate to Student Tools, followed by Records and Requests, and finally Withdraw from DU. We record your official date of withdrawal as the date you notify the Office of the Registrar or the registration office associated with your specific program, of your intent to withdraw. If the request to withdraw is received by another unit with registration authority, the effective date is the date that office is notified. During the automatic withdrawal period classes will be dropped effective the date of notification.

When a student ceases to attend a course, the student remains enrolled in the course unless the course is officially dropped through the appropriate registration office. A course may be dropped without instructor's approval through the published date for automatic withdrawal (generally the end of the sixth week of a standard ten week quarter). A student cannot drop a course after the automatic withdrawal (W) deadline without the instructor's

signature and advisor's signature. All required signatures must be submitted to the appropriate registration office. The student is liable for payment of all tuition and charges related to the course.

Students may not withdraw from courses after the eighth week of the quarter (or after the fourth week of a five- or six-week course).

In cases where the grade report indicates the student never attended, the Registrar may process the withdrawal request without referral to the Vice Provost's office or the Graduate Academic Concerns Committee. Section and level corrections are also delegated to the Registrar's Office.

In some cases, the student may need to submit a formal petition for an exception to academic policy to withdraw from a course.

Notes: *Some programs may have more stringent policies regarding withdrawal from courses. Contact the unit for details.*

Contact the Sturm College of Law for semester system withdrawal procedures.

International students who are considering withdrawing from the University should also contact the Office of International Student and Scholar Services (ISSS) in addition to following the Office of Graduate Education procedures.

Official Drop Periods

Courses dropped through the first seven days of a ten week quarter (Monday–Sunday, summer session excluded) are deleted from the student's record. Tuition will be reversed through this time period (first 10 percent of the term), if applicable.

A notation designating a withdrawal ("W") is assigned for courses officially dropped after the first week of the quarter. The course appears on the student's record with a withdrawal ("W") grade notation. Credit hours for the withdrawn course are not earned and the "W" grade notation is not calculated in the GPA. A course may be dropped without instructor approval through the published date for automatic withdrawal (generally the end of the sixth week of a quarter, 60 percent of the term). Withdrawal deadlines and tuition refund schedules are available at www.du.edu/registrar (<http://www.du.edu/registrar/>).

Academic Dishonesty

A student can be prevented from dropping a course in cases of suspected academic dishonesty, even during the automatic withdrawal (W) period.

In cases of suspected academic dishonesty, the Office of the Registrar (<http://www.du.edu/registrar/>) can reinstate a course that has been dropped without notification to the student. Once the case is heard by the Office of Student Conduct (<http://www.du.edu/studentlife/studentconduct/>) or reviewed by the unit in which the case originated, and if academic dishonesty is determined, an instructor may assign a student a failing (F) grade for the course. A withdrawal (W) for the course is not honored. If the accused student is found innocent of academic dishonesty and there has been an attempt to drop during the automatic withdrawal period, the drop is processed and a notation of withdrawn (W) assigned.

Requesting Drop when Student is Failing

An instructor may refuse to give permission to drop a course to a student who is failing the course.

Drops with Approval

After the sixth week of a ten-week quarter the instructor's signature are required to drop a course.

Drop Deadlines

Withdrawals during the two weeks (ten class days, Monday through Friday) prior to the scheduled final examination period are not allowed.

The Office of the Registrar (<http://www.du.edu/registrar/>) will maintain these and other important registration activity deadlines.

Notes: *Some units may have different policies regarding registration processes, deadlines and procedures for adding/dropping of courses and academic dishonesty. Contact the Office of the Registrar for more details.*

Registration deadlines may differ for interterm periods and courses that do not conform to the standard ten week term.

University College, Graduate Tax and the Sturm College of Law may have different policies regarding registration processes, deadlines and procedures for adding/dropping of courses. Contact their registration offices for more details.

Repeating Courses

Repeatable courses include independent research, independent study, topics courses and music performance courses. Unless it is specifically designated as repeatable, a course in which the student has received a qualifying grade may not be repeated for credit.

If a non-repeatable course is taken again, the regular tuition rate is paid and the course is counted as part of the total credit load. All grades are counted in GPA calculations. The highest grade received in the repeated course fulfills the degree requirements, but hours earned toward degree requirements are counted only once.

All repeated courses appear on student transcripts. Automated advising tools (e.g. the Degree Audit) may show only first grade for the course.

Course Information

Course Number Designation

Graduate credit cannot be earned in courses numbered below 3000.

Not all 3000-level courses may be offered for graduate credit. Students should consult the course description in their unit, program, and course schedule prior to enrolling in any 3000-level course to verify it is listed at the graduate level and may count as credit for the graduate degree. 3000-level courses that are not designated as graduate level are not approved to count toward graduate degrees.

The course number consists of a three or four letter subject code that identifies the academic unit offering the course, followed by four numbers that indicate the level of the course.

| | |
|--|--------------|
| Pre-collegiate, Remedial, or Continuing Education Unit Courses | 0001-0999 |
| Undergraduate Courses (Lower Division) | 1000-1999 |
| Advanced Undergraduate Courses (Upper Division) | 2000-2999 |
| Advanced Undergraduate and Graduate Courses (Combined) | 3000-3999 |
| Graduate Courses | 4000 or Over |

Schedule Type

Independent Study

Independent study provides opportunities for the capable student to do special work under individual supervision in areas not covered by class offerings.

Projects must be undertaken within the academic term in which they are registered. Independent study may not be taken instead of, or to modify, a regular course offered by a department. In addition, independent study cannot be used to account for study taken at another university or at the undergraduate level. The study must be conducted with DU faculty at the graduate level.

The department may limit the maximum number of Independent Study credit hours a student may apply towards their degree.

The students should demonstrate qualities necessary for interested and intensive inquiry. The student, with the approval of the instructor and department concerned, must agree upon the topic and outline.

Graduate students must obtain applications for independent study projects from the Office of the Registrar (<http://www.du.edu/registrar/>). Partial applications will not be processed and registration after published registration dates is not permitted. To be eligible for independent study, the student must be in academic good standing (i.e., 3.0 GPA for graduate students). Independent studies must be at least one credit hour and generally not to exceed five hours. Independent study projects appear on the student's transcript with the specific topic as the course title and academic grades (A-F) are assigned.

The responsibilities of the instructor of record are to establish specific requirements for the course of study, see that the grades are submitted, approve the credentials of other faculty involved and agree to assume responsibility if problems arise.

Independent Research

Independent research opportunities are available to students primarily for thesis and dissertation research or other independent research. The department may limit the maximum number of Independent Research credit hours a student may apply towards the degree.

Projects must be undertaken within the academic term in which they are registered and registration after published registration dates is not permitted.

Students obtain applications from their academic department. Incomplete or partial applications will not be processed. Upon successful completion of the project or on its termination by request of the department, the research advisor will record a final grade. The department may use the A-F grading system in evaluating the research or record "P" (pass) or "F" (fail) for the course.

The responsibilities of the instructor of record are to establish specific requirements for the course of study, see that the grades are submitted, approve the credentials of other faculty involved and agree to assume responsibility if problems arise.

Directed Study

A directed study course is a permanent catalog course delivered on an individual basis when the course is not offered that term. Directed studies are approved under extenuating circumstances to provide an opportunity to complete a required course.

Directed studies use the same forms and processes as independent studies. Partial applications will not be processed. Directed study courses appear on the student's transcript with the specific course title and must be approved by the instructor and department concerned. There can be no change in the basic content of the course. In particular, this means the level, subject code, description, title, grading policy (A-F, P/NP), credits and course

content cannot differ from the permanent course. Projects must be undertaken within the academic term in which they are registered. Registration after published registration dates is not permitted.

The responsibilities of the instructor of record are to establish specific requirements for the course of study, see that the grades are submitted, approve the credentials of other faculty involved, and agree to assume responsibility if problems arise.

Experiential Learning/Internship Credit

Experiential learning courses consist of supervised experience in an area of specialization that may be conducted either on or off campus with the student making periodic reports to the instructor. These include clinical, practicum, internship, student teaching, and cooperative work experience. They do not include graduate teaching or research assistantships at DU.

Courses for no credit

A student may register for no credit (NC) in any course with approval of the course instructor and only where space is available. A no credit registration cannot be changed to a credit registration after the deadline for registration has passed. Furthermore, a student enrolled for credit cannot change to no credit after the end of the sixth week of the quarter. Such courses count as full credit value in determining the total study load allowed. Courses taken on a no credit basis do not apply as part of the minimum credit-hour requirements for any graduate degree. The tuition charge for no credit courses is the same as for credit courses.

If adding the no-credit course creates a course overload, it requires approval from the instructor, advisor and dean of the unit.

No credit courses are listed on the student's permanent record with a grade of No Credit (NC). Students receiving any type of financial aid, scholarship, grants or tuition waiver should check with the Office of Financial Aid (<http://www.du.edu/registrar/>) before registering for NC as financial aid or waiver may not cover courses taken for no credit.

Note: Some units may have more stringent policies regarding no credit courses. Students should consult their registration office for information.

Audit Registration

Fulltime DU students may register to audit courses on a space-available basis. Audit registration permits students to participate in courses, but grades are not recorded and credit is not awarded. Permission from the instructor is required and some programs may require additional approvals. Course restrictions such as prerequisites apply to course auditors. The following course types may not be audited: online, lab, clinical, practicum, performance (except for ensemble), internship/externship, independent or directed study or studio. Course auditors do not submit assignments or participate in exams. Audited courses do not appear on a student's transcript and do not count for fulltime status, loan deferments, financial aid, etc.

Audit registration may not be changed to credit registration after the deadline for registration has passed. Credit registration may not be changed to audit registration after the deadline to drop classes. Students may audit only one course per term.

Enrolled, degree-seeking DU students may audit certain courses on a space available basis. Tuition is not charged, but relevant course fees are charged.

Permission for Undergraduates to Register for Graduate Courses

Undergraduates may request to enroll in graduate courses that are well suited to their programs of study. This opportunity is available to seniors whose academic achievement makes graduate-level work appropriate. This policy applies to graduate courses with course numbers of 4000 and above. Some 3000-level courses are approved for either undergraduate or graduate credit. Undergraduate courses may not be taken for graduate credit.

Graduate courses for undergraduate credit

Students must be classified as a senior and have an overall cumulative GPA of at least 3.0. The student must obtain approval of the course instructor; chair or program director of the graduate program; Office of Graduate Education; and the student's major advisor. Graduate courses taken for undergraduate credit may not be subsequently used to satisfy graduate requirements unless the student is in an approved dual undergraduate/graduate degree program.

Graduate courses for graduate credit

Students who have been admitted to a DU graduate program do not require permission to register for a graduate course for graduate credit. Otherwise, undergraduate students must be classified as a senior and have an overall cumulative GPA of at least 3.0. The student must obtain approval of the course instructor; chair or program director of the graduate program; and Office of Graduate Education. Courses taken for graduate credit may not be used to satisfy undergraduate requirements unless the student is in an approved dual undergraduate/graduate degree program.

Student Responsibility for Policies and Procedures

Students may have questions on a range of topics from academic standards to graduation requirements. To successfully navigate the policies and practices of the institution, we invite you to take some time to read the Graduate Policies and Procedures (p. 9).

Individual schools and departments may have additional policies particular to their graduate programs. Please make sure you understand both; however, it is important to know that unit-specific policies do not override university-wide policies. Please consider contacting the Office of Graduate Education for questions about the university's policies and procedures.

Student Withdrawal from the University

Things to Consider Prior to Withdrawing (p. 1040)

Withdrawing (Temporary or Permanent) (p. 1041)

Personal Leave of Absence (p. 1041)

Medical Leave of Absence (p. 1042)

Mandatory Withdrawal Policy (p. 1042)

Things to Consider Prior to Withdrawing

Students who wish to drop all courses in a term and take a leave of absence or withdraw permanently from their programs are advised to consider the impact on the following items:

Timeline for Degree Completion, Cohort Placement and Degree Requirements

While on an approved leave of absence, students are guaranteed a place in their current program when they return to the University, provided all deadlines and rules are observed. Some units may have more restrictive guidelines for a leave of absence. Students should consult with their unit and program for more information before deciding to take leave. Students returning from leave have the same registration priority as continuing students. It is important to note that students are still held to the original timeline for completion of the degree, unless a student is on an approved medical leave of absence. Non-degree students or students who are beyond the time limit to complete their degrees are not eligible for a leave of absence.

Students who have permanently withdrawn from the university and would like to return must meet the following criteria:

- Date of withdrawal cannot be more than five years
- The student must still be within their time to degree completion per the quarter of matriculation

If a student does not meet this criteria, they will be required to follow the Readmission for Terminated Students policy (<http://bulletin.du.edu/graduate/academic-requirements-policies-and-procedures/readmission/>). Graduate Units reserve the right to request that the student submit a full application for admission (which includes the application fee) to the appropriate admissions office.

Tuition and Fee Payment and Refund Schedule

Outstanding debts must be cleared with the Bursar's Office. A student's leave application will be accepted even if they owe money to the University. However, students will not be allowed to register for future terms if they have any outstanding debts to the University. In the case of extenuating circumstances that are beyond the student's control, a student may appeal for an exception to the University's refund policy.

Withdrawal Deadlines

Enrolled students should review the academic calendar (<http://www.du.edu/registrar/calendar/>), and be aware of the important dates and term-specific withdrawal deadlines.

Health Insurance Coverage

University of Denver Health Insurance coverage may be interrupted or discontinued. To learn more about the coverage, students should consult with the staff in the Health and Counseling Center (<http://www.du.edu/health-and-counseling-center/>) at 303-871-2205.

Financial Aid, Scholarships, Work-Study, GTA/GRA and Loan Repayment Terms

Students should be clear about the impact of withdrawal on loan repayment requirements as well as scholarships, teaching assistantships and other forms of University aid. While on a leave of absence, students are not eligible to receive financial aid, including work-study. Some forms of University aid (i.e. GRA, GSA and GTA positions and other scholarships or fellowships) are not guaranteed to be reinstated if a student takes a leave of absence. In addition, student loan repayment terms may be impacted and in some cases repayment may begin when a student goes on leave. It is the students' responsibility to notify their lender they are taking a leave of absence and will not be enrolled at the University.

Students should apply for financial aid well in advance of the term they expect to return to school so their disbursement is available at the beginning of the term. Contact the Office of Financial Aid (<http://www.du.edu/financialaid/>) for additional information.

F-1 or J-1 Visa Immigration Status for International students

International students who are interested in withdrawing should be aware of certain restrictions in the immigration laws. Non-immigrant students may not remain in the United States in F-1 or J-1 immigration status if they are not enrolled full-time in school unless they meet certain criteria and have

approval from International Student and Scholar Services (ISSS). In order to take a leave, international students may need to either leave the United States while out of school or change to another non-immigrant status. Before withdrawing and applying for a leave, international students should consult with an advisor in the ISSS office.

University Housing Contract

Housing contracts are for the entire academic year; please see housing policy to understand approved reasons for checking out during the academic year. Students must check out of the apartment within 24 to 48 hours of withdrawing.

Benefits for Veterans

For students receiving veterans' benefits, the Coordinator of Military Programs in the Office of the Registrar should be notified of withdrawal plans.

Parking Permits and Unpaid Citations

Unpaid citations must be cleared with Parking Services, and parking permits should be returned to avoid additional costs.

University Libraries Books and Overdue Book Fines

All library books should be returned, and overdue book fines should be paid prior to withdrawing.

Contact Information

It is university policy that students maintain a preferred off-campus address and email account. It is each student's responsibility to keep both a current mailing address and email address updated while on leave. If a student's address changes while on leave, the address should be updated through myDU.

Withdrawing (Temporary or Permanent)

Students considering time away from graduate study must communicate with the University prior to taking time off from the graduate program and fill out the appropriate paperwork. There are two types of withdrawals: temporary and permanent. Regardless of withdrawal type, the first step for students enrolled in courses is to officially drop courses.

Temporary Withdrawal

Students planning to resume studies at the University of Denver may qualify for a temporary withdrawal. This type of withdrawal includes personal and medical leaves. A graduate student who wants to take time off from the University must fill out the withdrawal form in MyDU (<https://my.du.edu/dashboard/>) by the Registrar's published deadline to drop classes. Students may indicate their intent to return by applying for a personal leave of absence during the withdrawal process.

Permanent Withdrawal

Students wishing to discontinue graduate study must communicate the decision to permanently withdraw from the graduate program in writing to their department and the Office of the Registrar.

Note: *Students in University College and the Sturm College of Law work directly with their department to go on a Personal Leave of Absence. Consult the unit for details.*

Personal Leave of Absence

A graduate student may withdraw from the University temporarily or permanently for non-medical reasons. For medical circumstances, see *medical leave of absence*. Students who wish to withdraw permanently from their programs should notify their departments as well as the Office of the Registrar in writing. A graduate student who wants to take time off from the University must fill out the withdrawal form in MyDU (<https://my.du.edu/dashboard/>) by the Registrar's published deadline to drop classes. Students may indicate their intent to return by applying for a personal leave of absence during the withdrawal process. Students who fail to withdraw will be liable for full tuition and fee charges, and a failing grade may be recorded for every course for which the student is registered.

In general, leaves of absence are for students who want to take a period of time away from the University (excluding summer) with the intent to return. The maximum period of time for a single leave of absence is three consecutive quarters, excluding summers. Students who need an additional leave of absence should complete a new withdrawal form in MyDU (<https://my.du.edu/dashboard/>). While on an approved leave of absence, students are guaranteed a place in their current program when they return to the University, provided all deadlines and rules are observed. Some units may have more restrictive guidelines for a leave of absence. Students should consult with their unit and program for more information before making a decision about whether to take a leave. Returning students have the same registration priority as continuing students. It is important to note that students are still held to the original timeline for completion of the degree.

Students who are called to active military duty while enrolled should apply for a leave of absence. Active Peace Corps volunteers may apply for a leave of absence for the term of their Peace Corps service.

Students on a formal internship, cooperative education, or clinical placement program as part of an academic program at DU should not apply for a leave of absence as they may need to be enrolled for internship or practicum credits. Instead, students should work with their graduate unit to be sure they are in compliance with program requirements.

Students who have outstanding judicial sanctions or actions due to violations of the Honor Code will not be considered in good standing with the University of Denver and must first be cleared by Student Conduct before they may be readmitted to DU. Please contact Student Conduct (<http://www.du.edu/studentlife/studentconduct/>) with any questions before applying for a leave of absence.

Prior to returning to the University, students should contact their advisors for information on choosing courses appropriate for each academic program. Please contact the appropriate student services office with questions about returning to the university and registering for courses. International students must contact ISSS (<http://www.du.edu/intl/issss/about.html>) to obtain proper immigration documents before returning.

Note: *Students in University College and the Sturm College of Law work directly with their department to go on a Personal Leave of Absence. Consult the unit for details.*

Medical Leave of Absence

Medical Leaves and Reentries

A student with a mental health and/or physical health condition may elect to apply for a Medical Leave of Absence from the University. The Medical Leave of Absence and Medical Reentry Policies describe the circumstances under which a student may request a Medical Leave of Absence and the student is responsible for both the documentation for the Medical Leave of Absence and the Medical Reentry process. The procedures the student must follow are outlined in the policy. Any questions about the process can be directed to Student Outreach and Support (SOS) at sos@du.edu.

The full policy can be found here: <https://www.du.edu/studentlife/studentsupport/media/documents/du-medical-leave-of-absence-and-reentry.pdf>

Mandatory Withdrawal Policy

Mandatory Withdrawal Policy

In extraordinary circumstances, a student may be subject to a mandatory withdrawal if the C.A.R.E. team determines the student exhibits behaviors that substantially impede the student's academic success and/or significantly disrupts the learning environment of others.

Please see the full policy here: [Mandatory Withdrawal Policy](#)

Students Called for Military Duty

Introduction

The University of Denver supports students called to active duty in the armed services by providing academic support, tuition relief or refunds, and reinstatement of students whose documented service has required their sudden withdrawal or prolonged absence from their enrollment at the institution. Service is defined by voluntary or involuntary active duty in the Armed Forces, including such service by a member of the National Guard or Reserve. When a University of Denver student is under a call or ordered to active duty, the following provisions will apply.

Purpose

This guideline offers suggestions for ways in which academic and administrative units and faculty may assist students who are called to active military duty.

Student Responsibility

A student who receives orders to report for active military duty should submit a copy of those orders to the Lead Academic Certifying Specialist in the Office of the Registrar. The Lead Academic Certifying Specialist will provide a copy of the orders and an official leave of absence request (if applicable) to the Office of Graduate Education or the Office of Undergraduate Academic Resources, as well as the Office of Financial Aid (if applicable), and notify the student's instructors. The Specialist may also assist with the arrangement of course completion options, but it is generally the student's responsibility to work directly with instructors to determine appropriate course completion options.

If, due to the urgency of their military assignments, students are unable to submit the orders before reporting, they may submit them either while on duty or upon returning to school. DU can only consider requests for changes to grades or tuition charges after official orders have been submitted.

Course Completion Options

Instructors are urged to work with students called for military duty to enable the completion of coursework whenever it is reasonably feasible. If the majority of course's class sessions must be missed, however, the course should usually be dropped. When military orders are received late in the term, instructors may offer the option of an incomplete, if academically appropriate.

If, after arranging a course completion strategy, the nature of a student's military service prevents completion of the coursework, the instructor and the Lead Academic Certifying Specialist should be notified. They will assist the student in determining and implementing an appropriate course of action.

Other Academic Matters

- Students who have suspended enrollment due to service requirements are allowed to re-enter their programs, provided satisfactory academic progress had been made prior to suspension. Existing policies for re-entry or readmission to the University will apply.
- Time spent away from the University by graduate students on military deployments will not count toward time limits set for degree completion.

Administrative Matters

- A student who is forced by virtue of military orders to drop selected courses or withdraw from a term should receive a 100% refund of any tuition the student has paid for the courses dropped or withdrawn. Refunds of tuition and fees paid by financial aid or other third parties will be handled by the Bursar and the Office of Financial Aid so as not to disadvantage the student but in accordance with applicable regulations.
- A student on financial aid who is forced by virtue of military orders to drop selected courses or withdraw from a term should not be penalized in terms of financial aid eligibility, making academic progress, or other financial aid criteria.
- If a student has arranged an attempt to complete a course and finds that the nature of the military service prevents the student from completing the course work, the student should notify the faculty member and the Lead Academic Certifying Specialist and request their assistance in determining and implementing an appropriate course of action (e.g., requesting an incomplete, dropping the course, and written official leave of absence if needed).
- Room and board charges will be pro-rated based on the student's official check-out date.
- For new students, an enrollment deposit is required to confirm their acceptance of the offer of admission. If a student is deployed to active duty military service before the beginning of the planned term of enrollment, the deposit will be refunded.
- Students may appeal any administrative decisions related to their military participation by requesting the procedures for doing so from the Lead Academic Certifying Specialist.

Transfer of Credit

Criteria

- Credits earned at the University of Denver are not considered transfer credit. Students who would like to apply previously earned DU credits (<http://bulletin.du.edu/graduate/admission-and-enrollment-policies/admission-status/special-status-student/>) towards a degree or certificate should refer to the degree requirements and policies within their unit.
- The student is responsible for seeing that the transfer of credit is posted on the DU transcript and that the appropriate approval has been received.
- Graduate coursework and credit hours already applied toward a degree received from another institution cannot be accepted as transfer credit towards another graduate degree or certificate of the same level or less. Graduate credit earned and not applied towards a degree or certificate may be eligible for transfer of credit to a University of Denver degree.
- An official transcript must be on file in the Office of the Registrar.
- The transfer credit must have been earned as graduate credit in a field similar for which the student is currently seeking a degree at an institution accredited by a Department of Higher Education recognized agency. Transfer credit is approved on a course-by-course basis, unless it is a blanket transfer of credit hours for a doctoral program from a previously earned master's degree.
- The credit must have been earned within a five-year period preceding the request for transfer of individual courses. Exceptions to this regulation may be made only by petition with specific justification by the college, school, or department to the Senior Vice Provost for Research and Graduate Education.
- Coursework with a "B-" grade may be requested to be transferred, providing the average of all graduate transfer coursework is "B" or better. If only one course is to be transferred, the grade must be "B" or better (a grade of "B-" or lower is unacceptable).
- Courses taken on a pass/fail basis are not acceptable for transfer, unless the instructor provides a class syllabus and the student provides proof from the institution that a "Pass" is equivalent to a "B" or better.
- Transfer credit is not included in the computation of the grade point average for the current degree.

Coursework Taken Prior to Enrollment at the University of Denver

Credits earned prior to enrollment in a degree program at the University of Denver may be transferred to meet degree requirements at the University of Denver in accordance with the transfer of credit policy and for students entering the University without a previous graduate degree or students entering a University of Denver doctoral program with a master's degree. The request for the transfer should be made prior to or during the first quarter of attendance as a University of Denver degree-seeking student and no later than the term preceding that in which the student wishes to graduate.

Coursework Taken After Enrollment at the University of Denver

If the credit to be transferred is earned while the student is already enrolled in a degree program at the University of Denver, the student may transfer graduate credit earned from a regionally accredited institution to meet degree requirements at the University of Denver in accordance with the transfer of credit policy.

- The student must initiate in writing a request for approval of outside coursework prior to enrolling in the course. The written request, which is submitted to the college, school or department, should include the name of the institution where the course will be taken, the course title, number of credit hours, course description, and the student's reasons for requesting outside credit.
- The student is responsible for seeing that the Office of Graduate Education has given preliminary approval for the request prior to enrollment. A final review and approval may be granted upon the receipt of the student's final, official transcript from the transfer institution and/or study abroad institution in the returning quarter and no later than the term preceding that in which the student wishes to graduate. Retroactive transfer credit requests may not be approved.

Transfer of Credit for Certificate Programs

Transfer credit toward a certificate is limited to 25% of the minimum number of credits required for the certificate. Note that course substitutions and/or waivers are not accepted for a Specialized Graduate Certificate. Some programs may have more restrictive limits. Contact the unit for details.

Transfer of Credit for Masters Programs

Transfer credit toward a master's degree is limited to 25% of the minimum number of credits required for the degree. Some programs may have more restrictive limits. Contact the unit for details.

Transfer of Credit for Doctoral Programs

With approval from the student's advisor and the chairperson of the department, doctoral students may reduce the required hours for a doctoral degree by up to 45 hours with an earned master's degree from a regionally accredited university.

The student must initiate in writing the request for posting the master's degree through the program of study. The student is responsible for seeing that the department, appropriate student services office of the college, school, or department and the Office of Graduate Education have approved the request.

An official transcript must be on file in the Office of the Registrar and must demonstrate that the student earned a "B" average or better in the master's degree program.

The student's University of Denver academic department must fill out the *Transfer of Credit Request form* (found on the Office of Graduate Education website (<https://www.du.edu/graduate-education/current-student-resources/academic-resources/>)) and provide a statement stating that the student's master's degree is appropriate and that the student possesses an adequate background for the doctoral degree being sought.

Fifteen additional quarter hours may be allowed to be transferred provided the credits have been earned after the master's degree was awarded, and it does not conflict with the doctoral residency requirement that requires enrollment at the University of Denver in at least six quarters (four semesters), including at least two consecutive quarters (one semester) of full-time attendance.

Note: Some graduate programs may have more stringent policies regarding transfer credit. Contact the unit for details.

Exceptions:

- *Morgridge College of Education: Students must complete 90-quarter hours in addition to a master's degree for the PhD program, excluding the PhD in Counseling Psychology and the PhD in School Psychology.*
- *English: Students must complete 90-quarter hours in addition to a master's degree for the doctoral program.*
- *GSSW: An MSW (or equivalent) plus 75 credits are required for completion of the PhD program in Social Work. The MSSW and MSSA are equivalent to the MSW.*
- *DU/Iliff Joint PhD: Students must complete 90-quarter hours in addition to a master's degree for the PhD program.*
- *Sturm College of Law: In some circumstances, Graduate Legal Studies students may transfer up to 8 semester credits. Please contact the Office of Graduate Legal Studies for details.*
- *University College: Students should submit transfer of credit requests to University College.*

Grade Replacement

GPA Replacement Policy

The University of Denver allows degree-seeking undergraduate and graduate students to repeat most courses in order to meet the minimum grade requirement for a required course, subject to limits imposed by individual schools and colleges. When a student repeats a course, grades from all attempts appear on the student transcript, and all grades are used in computing cumulative and major grade point averages, total credits, and academic standing. This policy adds the option of GPA replacement to the option of repeating a course.

Additional Details:

In order to invoke GPA replacement policy for a course, a student must have received an eligible grade in a prior attempt of the course. Grades of **C-, D+, D, D- or F** are eligible for repeat/replace for **undergraduate** students, and grades of **B-, C+, C, C-, D+, D, D- or F** are eligible for repeat/replace for **graduate** students. Once a student invokes the GPA replacement policy for a course, that decision is irrevocable.

When GPA replacement is invoked, the grade from the latest attempt of a course replaces the grade from the most recent prior attempt of the same course in the cumulative GPA.

Grades from all attempts of a course appear on a student's transcript, with those attempts that have been replaced appropriately indicated. The replaced grade is excluded from cumulative grade point average and credit totals in the official academic record; the grade from the latest attempt is included, even if the grade earned in the latest attempt is lower than the replaced grade.

Students should consider whether this is the best way to improve their GPA. Most students will find that when they repeat a course, there is only a small impact on their overall GPA. Another way to increase GPA is to take additional courses and do well in them. Finally, if a student is repeating a course to increase their GPA for their graduate or professional school applications, it is useful to know that these schools may calculate a student's GPA differently.

A student may wish or need to strengthen their knowledge of a particular topic in order to prepare for future classes. This can be a good reason for repeating a course. Undergraduate majors and minors require students to achieve a minimum grade of "C-" in order to count toward graduation requirements. In some programs, Graduate students are required in to receive a B- or better in their coursework.

A course will not necessarily be easier the second time around. If a student chooses to repeat a course, they should maximize their chances for success by utilizing available resources and practicing good study habits.

Eligibility:

- This policy may be invoked only by currently enrolled, degree-seeking University of Denver undergraduate or graduate students. Sturm College of Law students may not invoke this policy and are subject to the academic and grading policies of the Law School.
- Students who have graduated are not eligible for GPA replacement for courses taken prior to earning their degree.
- The policy applies only to undergraduate or graduate courses taken and repeated at DU. Classes ineligible for grade replacement are FSEM, special topics courses and courses designated in the catalog as repeatable for credit (e.g. independent study/research, internship, field experience, thesis/dissertation hours, directed research/study, performance).
- **Undergraduate** students may request grade replacement for up to **4 classes**.
- **Graduate** students may request grade replacement for up to **2 classes**.
- If a student receives a low grade in a class due to academic dishonesty, that grade is not eligible for GPA replacement via this policy.
- Once a student invokes the GPA replacement policy for a course, that decision is irrevocable.
- Courses taken for GPA replacement must be taken for a letter grade.
- Students may request grade repeat/replace only if the particular course is offered again. There is no guarantee that all courses are offered on a schedule that would permit repeat for every student.
- No retroactive adjustments or transactions for prior terms will be performed as a result of repeating a course, including changes to academic standing, or eligibility for honors, athletics, or financial aid.
- Some academic units may limit the number of times a student can enroll in a given course. Such limits must be observed when invoking this policy.
- Grades of incomplete are not eligible for repeat with GPA replacement.
- Requests to invoke the GPA replacement policy must be completed by the **last date for course withdrawal**.
- A request to invoke the policy will be approved as long as the exact same course (subject code, course number) is selected, and the student has enough grade repetition credits left to cover the course. Once the grade repeat/replace credits are fully used, then there will be further no GPA replacement and all subsequent grades will be calculated into the cumulative GPA.
- If a student invokes the grade repeat/replacement policy but drops or withdraws from the course before the end of the term, this attempt does not count against the number of credits a student is allowed to repeat, and the grade from the most recent prior attempt stands.
- All occurrences of the course along with associated grades will remain on the student's academic record as well as on the official transcript. Only the replacement grade will be calculated into the cumulative GPA.
- Tuition is charged for all course attempts. There may be federal financial aid implications for the number of times a specific course is repeated. Students are responsible for checking with the Office of Financial Aid regarding course repeats and aid eligibility.

Academic and Student Support Services, Policies and Procedures

Academic Exceptions, Complaints, Grievances and Appeals (p. 1046)

Disability Services Program (p. 1051)

Complaints for External Agencies (p. 1047)

Procedures for Academic Grievances and Appeals (p. 1048)

Procedures for Grade Appeals (p. 1049)

Exceptions

Academic Exceptions Policy

Academic policies define institutional standards and ensure equitable treatment of all students. All students are expected to observe the academic policies and practices of the University set forth in the University Bulletin. However, in instances of documented extraordinary circumstances, a student may request an exception to a policy or practice.

The Academic Exceptions Committee is a standing subcommittee of the Undergraduate & Graduate Councils which represents the Councils' interests as advisory to the Vice Provost for Academic Affairs. As chair of the Committee, the Vice Provost appoints its members and ensures that the Committee is representative of appropriate academic and administrative units. Decisions of the Committee are final.

Purview

The Academic Exceptions Committee considers requests for exceptions to University-wide academic policies affecting students. This is an academic committee that cannot take considerations of convenience, financial cost, or academic standing into the decision.

Exceptions should be submitted within one calendar year after the completion of the quarter in question and prior to a student's degree being certified and posted to the transcript. Any exceptions that do not meet this expectation should include a rationale for why the request was not made within the appropriate timeframe.

Required Documentation

A valid petition includes, at minimum, the official online request submission through [M \(https://my.du.edu/dashboard/\)](https://my.du.edu/dashboard/) [yDU \(https://my.du.edu/dashboard/\)](https://my.du.edu/dashboard/), written documentation from the student and supporting documentation, as appropriate for the petition type. Additional documentation may be required. Documentation may be emailed to academicexceptions@du.edu or faxed to 303-871-4566. It is the responsibility of the student to ensure that all documents are submitted in a timely fashion.

The Vice Provost for Academic Affairs or designee has final determination as to whether the documentation the student has submitted is sufficient.

Petition Review and Status

- It is the responsibility of the students to check the status of their petitions and respond to requests by the Committee representative.
- The student will be notified (via MyDU (<https://my.du.edu/dashboard/>)) of the decision within one week of when the request was reviewed.
- A student has 45 days from the initial submission to complete the petition. If, at the end of 45 days there are still outstanding documents, the petition will be cancelled, and the student will need to resubmit a new petition.
- A student may re-petition if there is new documentation that was not reasonably available at the time of the initial decision.

Discrimination or Harassment Complaint Procedures

The University is committed to creating and maintaining a community in which people are treated with dignity, decency, and respect. The environment of the University should be characterized by mutual trust, freedom of inquiry and expression, and the absence of intimidation, oppression, and exploitation. People in this community should be able to work and learn in a safe atmosphere. The accomplishment of this goal is essential to the academic mission of the University. Consistent with this commitment, the University will not tolerate any unlawful discrimination, harassment, or

gender-based violence of any kind. When the University becomes aware that a member of the University community may have been subjected to or affected by discrimination, harassment, gender-based violence, the University will take prompt, appropriate action to enforce University policy.

We do this by facilitating compliance with Title VI, Title VII, Title IX, Affirmative Action, Equal Pay, Age Discrimination in Employment, ADA and Section 504, VEVRRA, USERRA, GINA, as well as other applicable federal, state, and local non-discrimination laws.

The University's Office of Equal Opportunity & Title IX (EOIX) is responsible for enforcing the University's Discrimination and Harassment Policy pursuant to the published University's procedures located on the Office of Equal Opportunity & Title IX's website (<https://www.du.edu/equalopportunity/policies-procedures/>), which offer options for supportive measures, informal, and formal resolution. The policy and procedures are intended to comply with the prohibitions of all applicable federal, state, and local non-discrimination laws.

Office of Equal Opportunity & Title IX policies and procedures (https://www.du.edu/equalopportunity/policies_procedures/)

Complaints for External Agencies

Several external agencies are available to students who have exhausted all other opportunities for resolution within the University.

Colorado Department of Higher Education

The Colorado Department of Higher Education regulates Colorado institutions of higher education. Their complaint policy may be found on the Colorado Department of Higher Education (<https://highered.colorado.gov/students/how-do-i/file-a-student-complaint/>) website.

U.S. State Education Regulatory Agencies

Through distance learning and other programs, the University of Denver provides instruction throughout the world. Students may direct concerns or complaints to regulatory agencies in their state. A list of U.S. state education regulatory agencies can be found on the State Contacts (<https://www.du.edu/site-utilities/statecontact/>) page.

Higher Learning Commission

Complaints regarding the institution's ongoing ability to meet the criteria of institutional accreditation may be directed to the Higher Learning Commission. Individuals interested in bringing an appropriate complaint to the attention of the Commission should take some time to compile a complete submission, as outlined below. The official complaint must be submitted through the on-line form (<https://www.hlcommission.org/Student-Resources/complaints.html>).

- a. Write a letter directed to the Commission containing a brief narrative of the facts of the complaint. In most cases, such a narrative need be no longer than a few pages.
- b. Indicate in your complaint why you believe the issues raised in your complaint are accrediting issues. If possible, please review the Commission's Criteria for Accreditation (<https://www.hlcommission.org/Policies/criteria-and-core-components.html>) on the Commission's (<https://www.hlcommission.org/>) website prior to writing this section.
You should also indicate how you believe the Commission can assist you with this matter. Remember that the Commission cannot assist you in understanding your tuition bill, arranging for a refund of tuition, obtaining a higher grade for a course, seeking reinstatement to an academic program, etc.
- c. Attach documentation to support your narrative wherever possible. (For example, if you make reference in your complaint to an institutional policy, include a copy of the policy with your complaint.) Helpful documentation might include relevant portions of the catalog, letters or email exchanged between you and the institution, learning agreements, etc.
- d. A few reminders:
 - Please do not use abbreviations or nicknames (e.g., NMS or USC or U of N).
 - Include contact information for future correspondence.
 - If you are writing on behalf of someone else (son/daughter or client), be sure to provide that person's consent in writing to allow you to communicate with the Commission on the student's behalf.

Please note that the Commission will not consider those complaints that are not in writing and do not contain the elements noted here. The Commission's complaint policy precludes it from considering matters more than 5 years old.

The Commission will acknowledge your complaint within thirty days of receiving it and let you know whether your complaint is complete and whether it raises issues that are related to accrediting requirements or whether it is an individual dispute outside the jurisdiction of the Commission's complaint policy.

Email questions to complaints@hlcommission.org

Procedures for Academic Grievances and Appeals

Active students may appeal academic and student status related decisions and/or seek resolution of complaints or grievances through the Academic Grievance and Appeal Procedure during their enrollment at the University of Denver.

Graduate units may have additional requirements specific to their accreditation or professional standards. It is the responsibility of the student to determine whether the graduate unit has specific requirements and the responsibility of the unit to ensure that those requirements are addressed prior to advancing the grievance to the Office of the Provost. In the event of conflict between any grievance process published in unit manuals or websites, the formal grievance process (p.) will govern.

Eligible and Ineligible Concerns

Eligible Concerns

These procedures may be used only by active students with the following concerns:

- A grievance or appeal regarding academic standing during their enrollment at DU.
- An academic decision made by a faculty or staff member, administrator or committee of the University of Denver that directly and adversely affects the student—e.g., program termination or dismissal, academic suspension, removal from a course, termination of GTA or GRA appointment.
- The grievance or appeal must be based on problems of process or concerns of bias, retaliation, or other impropriety and not on differences in judgment or opinion concerning academic performance.

Note: *Students who wish to appeal a termination or dismissal from a program must do so within 45 calendar days of the term following their last term as an active student. For concerns of bias and retaliation based upon a protected class, the grievance will be referred to the Equal Opportunity Office, which may alter the timeline and process.*

Ineligible Concerns

These procedures may not be used to resolve the following concerns:

- appeals related to disciplinary actions taken by the Conduct Review Board
- grade appeals
- admission decisions
- appeals or grievances submitted beyond the published timeline

Formal Grievance and Appeal Process

First Level: Informal Resolution

Students are expected to attempt to resolve complaints informally with the faculty or staff member, administrator or committee responsible for the academic decision. This attempt must include discussion of the complaint with the involved party or parties. *If all reasonable informal efforts to resolve a complaint fail, the student may file a formal grievance or appeal.*

If the complaint involves a charge of unlawful discrimination, the student may report the situation to the Office of Equal Opportunity or an appropriate supervisor who must immediately notify the Office of Equal Opportunity.

Second Level: Submission of the Formal Grievance or Appeal to Program Director/Chair

If a student elects to file a formal grievance or appeal, it must be filed within 45 calendar days into the next quarter after the contested decision or grade was officially recorded and during which the student is enrolled at DU. All grievances and appeals must be filed in writing, signed and dated by the student and include supporting documentation at the time it is filed. The grievant/appellant must minimally provide the following:

- a clear description of the decision being grieved or appealed,
- the basis or bases for challenging the decision,
- the identity of the party or parties who made the decision,
- the specific remedy or remedies requested, and
- a description of all informal resolution attempted.

The decision of the program director or department chair must be issued in writing within 30 calendar days of receiving the grievance and shall include all of the following:

- a copy of the student's formal grievance,
- relevant findings of fact,
- decision and the reasons for the decision reached, and
- the remedy which is either granted or denied and/or any alternative remedies suggested.

Third Level: Submission of the Formal Grievance or Appeal to Dean

The party who finds the resolution unsatisfactory may appeal the decision in writing to the dean of the academic unit within five business days of receiving the program director or department chair's written decision.

The dean may render a decision on the matter or may refer the grievance or appeal to a standing grievance/appeal committee or establish an ad hoc committee to hear the matter. When an ad hoc committee is established, the student who lodges the appeal may designate one of the faculty members who will serve on this committee. This member must be tenured or tenure-track faculty from the University of Denver. Members of the unit involved in the grievance may not serve on the ad hoc committee and must recuse themselves if they are members of the standing committee.

The committee may, at its discretion, receive from the student, relevant faculty or staff members or other individuals, any additional evidence or argument that it deems necessary to resolve the grievance or appeal.

The appeals committee will begin deliberations as soon as possible and provide the dean a written recommendation no later than 30 calendar days after the date that the dean's office received the written, dated request for appeal at this level. The dean will make a final decision and distribute it to all affected parties within five business days after receiving the committee's recommendation.

Fourth Level: Submission of the Formal Grievance or Appeal to Provost

The party who finds the resolution unsatisfactory may appeal the decision to the Provost within five business days of receiving the dean's decision. The Provost will hear only those grievances and appeals based on problems of process or concerns of bias, retaliation, or other improprieties unrelated to protected class status and not on differences in judgment or opinion concerning academic performance. Within five business days after receiving the appeal, the Provost may refer grievances or appeals to appropriate bodies or personnel. If the issue is referred to the Graduate Council, its chair will appoint three members of the Council as a Grievance Committee to hear the case and shall designate one of the committee members to serve as chair.

Anyone called upon by the Provost or the Provost's designee shall submit a written recommendation within 30 calendar days of receiving the case. The Provost is the final authority in the matter and will report the disposition of the case to all involved parties within 30 calendar days of receiving a recommendation from the designee.

Scope of Review

Any University agent charged with reviewing a formal grievance or appeal may gather additional relevant facts if necessary and/or meet with involved parties. The reviewer will base a decision on documented evidence.

Deviation from Procedures

These guidelines provide basic steps for resolving appeals and grievances. The steps may vary based upon the structure of the academic unit or the particularities of the situation. The Provost or the Provost's designee may choose to approve or may direct a deviation from these procedures, for example, postponement of a time limit or elimination or addition of a step in the process, in order to ensure an effective and timely resolution.

Grievance or Appeal Record

Documentation in support of a grievance or appeal will be held by the person responsible for considering the grievance or appeal at that stage and passed along to the person responsible for the next step, if any. A record of meetings or interviews must be made and kept as part of the grievance or appeal record as well. The complete grievance or appeal record will consist of the original grievance or appeal, all documentary evidence and all formal decisions made at each step of the process.

Failure to Meet Deadlines

If after a formal grievance or appeal is filed, the University agent charged with review of the grievance or appeal fails to meet any deadline at any stage of the process, the grievant/appellant may proceed directly to appeal to the next higher University administrator in the manner prescribed by these Procedures, subject to the relevant time limitation calculated from the date of the missed deadline. The failure of any University administrator to meet any deadline shall not entitle the grievant/appellant to any relief requested, nor shall such a failure be construed as tantamount to a decision in the grievant/appellant's favor. Any grievant who fails to meet the deadlines imposed by these Procedures will be bound by the decisions previously made.

** The Provost may refer grievance appeals to appropriate bodies or personnel.*

Procedures for Grade Appeals

Procedure for Grade Appeals

Guidelines for Interpretation and Implementation

Scope of Review

Grade appeals must be based on problems of process and not on differences in judgment or opinion concerning academic performance. The burden of proof rests on the student to demonstrate that one or more of the following occurred:

- The grading decision was made on some basis other than academic performance and other than as a penalty for academic misconduct.
- The grading decision was based upon standards unreasonably different from those which were applied to other students in the same course and section.
- The grading decision was based on an unreasonable departure from previously articulated standards, such as standards defined in the course syllabus.

The chairperson, grade appeal committee, or dean may recommend grade changes but shall have the power to alter grades only in cases of clearly established procedural error or substantial capriciousness or arbitrariness in evaluation.

Timeline

The formal procedure must be started within 45 calendar days after the contested decision or grade was officially recorded. The grade appeal process officially begins on the date the "Academic Appeal" document is received by the faculty member.

Appeal Record

Any appeal must be in writing, dated and headed with the words "Academic Appeal." Once a formal appeal is presented to a faculty member, it must be presented in its original form at all later levels of appeal, although new statements may be added at any time.

Any evidence and all direct and supporting statements once made become part of the permanent record of the appeal and must be produced at each level of appeal.

At each level of appeal, a written, dated decision and written reasons for the decision must be provided to the affected party or parties—the student, the faculty member, and any person who has rendered a decision at an earlier level of appeal.

Students are permitted to submit evidence in writing. At the discretion of the University, students may be invited to present their appeal in person.

Grade Appeal Process

First Level: Appeal to the Faculty Member

A student will, where possible, attempt to resolve the issue informally with the professor before filing a written grievance. Should attempts at informal resolution fail, the student may wish to file a formal grade appeal. After receiving a formal appeal, the faculty member shall assure that a written decision with express reasons is available or delivered to the student within 30 calendar days. Should the student fail to take further action within seven calendar days after receiving the faculty member's decision, that decision shall stand. If the student is dissatisfied with the decision or does not receive a response from the faculty member within 30 calendar days, he or she may proceed to the second level of appeal.

Second Level: Appeal to the Department Chair/Program Director

If the student elects to continue the appeal, he or she may appeal to the chair of the department or program director if there is no chair. The chair or director shall assure that a written decision or recommendation about the appeal is available or delivered with express reasons within 30 calendar days after receiving the appeal.

If the student is dissatisfied with the decision or does not receive a response from the chair or director within 30 calendar days, he or she may proceed to the third level of appeal. Should the student or faculty member fail to take action on the chair's decision or recommendation within seven calendar days following its receipt, the accepted recommendation of the faculty member or new decision by the department chair shall be final.

Third level: Appeals Committee

If the student elects to continue the appeal after the chair's decision or recommendation has been received, he or she may take the matter to the dean of the appropriate academic unit (or the dean's designee) within seven calendar days.

The dean shall ascertain within 30 calendar days whether the appeal procedures at the first and second levels have been duly followed; if they have not, he or she will require that they be followed before taking further action.

The appeals committee shall consist of three faculty members chosen by the dean or the dean's designee. The dean or designee shall serve on the appeals committee as chairperson without vote. All deliberations of the committee will be closed and confidential.

Faculty from the same department as the faculty member involved in the case may not serve on the appeals committee.

The appeals committee should meet as soon as possible, but no later than 30 calendar days after a written, dated request for appeal at this level has been received and the Dean has ascertained that appeal procedures at the first and second levels have been duly followed. The presence of all eligible committee members (the three faculty members and the dean or designee) shall constitute the quorum.

A written recommendation shall be furnished by the appeals committee and transmitted through the office of the dean to all affected parties within seven calendar days after the conclusion of the committee's deliberations.

The decision of the appeals committee is final.

Note: There is a separate appeal procedure for courses taught in the College of Law. Students with grievances in College of Law (<http://www.law.du.edu/>) courses should consult the specific guidelines for academic grievance procedures for that unit.

Disability Services Program

Disability Services Program (DSP)

The DSP is dedicated to giving students with disabilities an equal opportunity to participate in the University's programs, courses and activities. DSP provides reasonable accommodations, at no cost, to any student who has a documented disability as required by the Americans with Disabilities Act and Section 504 of the Rehabilitation Act, as well as other applicable legislation. The DSP works with the student to design accommodations intended to mitigate the impact of a student's disability and to afford equal opportunity and full participation in University programs for undergraduate, graduate and non-degree seeking students.

Students who need accommodations for a disability in order to fully participate in University programs, courses and activities should contact the DSP. This contact should be made as far in advance as possible. It is the joint responsibility of the student, DSP and other DU faculty and staff to work together to meet students' needs. Students should familiarize themselves with the Handbook for Students with Disabilities, Medical and Mental Health Conditions available at <https://www.du.edu/studentlife/disability-services/index.html> (<https://www.du.edu/studentlife/disability-services/>) or can be requested in alternative formats by contacting the DSP office.

The DSP requires current supporting documentation of a student's disability in order to establish protections under the ADA/Section 504 and determine appropriate and reasonable accommodations and/or academic adjustments. A student's documentation is kept separate and private and is not shared as part of the student's DU Transcript. Students can choose to sign a Release of Information form so that DSP staff members are able to speak with others, including but not limited to; the students' family members, healthcare and/or mental healthcare professional(s), and/or DU faculty and staff on the student's behalf.

For more information, please visit the DSP website (<https://www.du.edu/studentlife/disability-services/>), or stop by our office in Driscoll South, Suite 13 or call us at 303-871-3241. DSP hours are 8 a.m.–4:30 p.m., Monday–Friday.

Immunizations and Health Requirements

IMMUNIZATION REQUIREMENTS

STATE OF COLORADO AND UNIVERSITY OF DENVER IMMUNIZATION REQUIREMENTS

Colorado State Law and University of Denver policy requires all students to receive two (2) doses of vaccine against measles, mumps, and rubella (MMR) and a review of information regarding Meningococcal disease (meningitis) prior to registration. Additionally, all first year undergraduates and students living in DU Housing must show proof the Meningococcal ACWY vaccination given within the past five (5) years.

If proof of immunity and acknowledgement of meningitis information (or proof of vaccination for incoming class) is not submitted to the University of Denver Health & Counseling Center, you will not be registered for classes. **Immunization record information must be submitted to the DU Health and Counseling Center by your program's registration date.**

(Colorado Revised Statutes §25-4-901 to 909)

Students will NOT be able to register for Fall Term classes without providing this information.

In the event of an MMR or meningitis outbreak on campus, those students for whom an exemption has been submitted will be withdrawn from classes by the CDPHE (Colorado Department of Public Health and Environment) until the outbreak is contained (this can take six to eight weeks). Those students who have exempted out of the requirements will not be entitled to a refund of tuition or a tuition credit for any missed time.

Diversity, Equity and Inclusion Note

The HCC/DU recognizes that mandatory vaccination requirements may place undue burden on communities of color and those with trauma related to historical and contemporary experiences with medical care. We are relying on your compliance as we work to keep our communities safe. We have made efforts to remove barriers to care such as cost and access and follow the most rigorous scientific evidence available when providing and recommending healthcare to students. The premium is included on the tuition bill and is split into two coverage periods, fall and spring when students are enrolled in one (1) or more credit hours per quarter or semester.

<https://www.du.edu/health-and-counseling-center/medical/immunization.html>

Note: University College students are exempt from this requirement.

HEALTH INSURANCE REQUIREMENTS

Student Health Insurance is a mandatory requirement at the University of Denver. If a student is covered by other insurance that complies with the Affordable Care Act requirement, in that can be waived. Refer to the Adequate Health Insurance Coverage (<https://www.du.edu/health-and-counseling-center/coveragecosts/waiver.html>) information.

While the Health & Counseling Center (HCC) is open to all students, the HCC is not a Medicaid/Medicare provider. We encourage students to purchase the Health & Counseling Fee (HCF) in order to receive discounted services but the student is responsible for the remaining amounts as we do not bill insurance companies which includes Medicaid/Medicare. If a student is covered by Medicaid/Medicare, it is the patient's responsibility to seek a Medicaid/Medicare provider to ensure coverage for services.

Please consider the many benefits of participating before waiving, especially if the student plans on enrolling in the Health and Counseling Fee. HCC Coverage Options (<https://www.du.edu/health-and-counseling-center/coveragecosts/>)

The Student Health Insurance Premium is assessed to students registered in most academic units on campus (excluding University College and programs including the Graduate Tax, Executive MBA and Continuous Enrollment for all programs). *The premium is included on the tuition bill and is split into two coverage periods, fall and spring when students are enrolled in one (1) or more credit hours per quarter or semester.*

*DU students enrolled in a completely online program are not eligible for HCC services or to enroll in the DU Student Health Insurance Plan.

Please note: The DU HCC is the primary care provider for the DU SHIP.

Professional and Academic Conduct

Honor Code (p. 1052)

Academic Misconduct (p. 1052)

Honor Code

All members of the University of Denver are expected to uphold the values of integrity, respect and responsibility. These values embody the Honor Code for students, faculty, staff and administrators as members of the University community. Our values are defined in the following ways:

- *Integrity:* acting in an honest and ethical manner;
- *Respect:* honoring differences in people, ideas and opinions;
- *Responsibility:* accepting ownership for one's own conduct.

The complete text of the Honor Code and Honor Code violation procedures relating to students is maintained by Student Rights & Responsibilities (<http://www.du.edu/studentlife/studentconduct/>).

Note: *Some units may have additional or more stringent ethical guidelines. Students should contact the department for details.*

Academic Misconduct

Academic Integrity

The University of Denver creates an academic learning environment grounded in Academic Integrity. Students are expected to engage honestly and demonstrate responsibility in research and academic assignments. Therefore, all work and grades should result from the Student's own understanding of the materials and their effort.

When evidence/information indicates that a Student may have violated an Academic Integrity Policy, Academic Actions, Educational Outcomes, and Status Outcomes are possibilities. Academic Actions include, but are not limited to required re-do of an assignment, grade reduction, failure of an assignment, failure of a course, and/or termination from a graduate program. Status Outcomes include written warning, probation, elevated probation, suspension, or dismissal. Students may appeal these decisions.

A student can be prevented from dropping a course when it is alleged they have engaged in academic dishonesty. A course can be reinstated if the student has dropped the course during the automatic withdrawal ("W") period. In cases of suspected academic dishonesty, the Office of the Registrar can reinstate a previously dropped course. The Office of the Registrar is not required to notify the student of reinstatement. Once the case is heard by the Office of Student Rights & Responsibilities and academic dishonesty is determined, an instructor may assign a failing ("F") grade for the course in question. A withdrawal notation ("W") for the course, even if processed during the automatic withdrawal period, is not honored. If the Student is found not responsible for violating an academic integrity policy, and there has been an attempt to drop during the automatic withdrawal period, the drop is processed and a notation of withdrawn ("W") assigned. Refer to www.du.edu/studentlife/studentconduct/ (<http://www.du.edu/studentlife/studentconduct/>) for policies and procedures concerning academic integrity and the University of Denver Honor Code.

Student Records

Disclosure of Student Information (p. 1053)

Maintaining Contact Information (p. 1055)

Preferred Name Usage (p. 1056)

Transcripts (p. 1056)

Disclosure of Student Information

The Family Educational Rights and Privacy Act (FERPA) affords eligible students certain rights with respect to their education records. (An “eligible student” under FERPA is a student who is 18 years of age or older or who attends a postsecondary institution.) These rights include:

- a. The right to inspect and review the student’s education records within 45 days after the day the University receives a request for access. A student should submit to the Registrar a written request that identifies the record(s) the student wishes to inspect. Request forms are available from the Registrar. The registrar will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the registrar, the registrar shall advise the student of the correct official to whom the request should be addressed.
- b. The right to request the amendment of the student’s education records that the student believes is inaccurate, misleading or otherwise in violation of the student’s privacy rights under FERPA. A student who wishes to ask the University to amend a record should write the University official responsible for the record, clearly identify the part of the record the student wants changed, and specify why it should be changed. If the University decides not to amend the record as requested, the University will notify the student in writing of the decision and the student’s right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.
- c. The right to provide written consent before the University discloses personally identifiable information (PII) from the student’s education records, except to the extent that FERPA authorizes disclosure without consent. The University discloses education records without a student’s prior written consent under the FERPA exception for disclosure to University officials with legitimate educational interests. A University official is a person employed by the University in an administrative, supervisory, academic, research or staff position (including law enforcement unit personnel and health staff); a person serving on the board of trustees; or a student, volunteer or employee of a partner organization serving on an official committee, such as an admission, disciplinary or grievance committee, or assisting another University official in performing his or her tasks. A University official also may include a contractor outside of the University who performs an institutional service or function for which the University would otherwise use its own employees and who is under the direct control of the University with respect to the use and maintenance of PII from education records, such as an attorney, auditor or collection agent or a student volunteering to assist another University official in performing his or her tasks. A University official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her institutional duties for the university.
- d. The right to file a complaint with the U.S. Department of Education concerning alleged failures by the University to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:

Student Privacy Policy Office
U.S. Department of Education
400 Maryland Avenue, SW
Washington, DC 20202-4605

Directory Information

The law provides that “directory information” may be released without the consent of the student. The University of Denver designates the following student information as “directory information:”

The student’s name (including prefix/honorific and personal pronouns), addresses, telephone numbers, electronic mail and webpage addresses, employer, job title, photographic and video images, date and place of birth, field of study, full-time or part-time status, class (e.g., graduate, sophomore, junior), participation in officially recognized activities and sports, weight and height of members of athletic teams, dates of attendance, anticipated date of graduation, degrees and awards received, thesis and dissertation titles, the most recent previous educational agency or institution attended by the student.

Students may prevent the University from disclosing directory information by submitting a “Request to Prevent Disclosure of Directory Information” form (available online and from the Office of the Registrar) to the Office of the Registrar, University Hall, G33.

Disclosure

Students may authorize the University to share information from education records with third parties such as parents. Authorizations may be completed online or by completing an authorization form available in the Office of the Registrar.

FERPA permits the disclosure of PII from students' education records, without consent of the student, if the disclosure meets certain conditions found in §99.31 of the FERPA regulations. Except for disclosures to University officials, disclosures related to some judicial orders or lawfully issued subpoenas, disclosures of directory information and disclosures to the student, §99.32 of FERPA regulations requires the institution to record the disclosure. Eligible students have a right to inspect and review the record of disclosures. A postsecondary institution may disclose PII from the education records without obtaining prior written consent of the student –

- To University officials, including faculty, within the University whom the University has determined to have legitimate educational interests. This includes contractors, consultants, volunteers or other parties to whom the University has outsourced institutional services or functions, provided that the conditions listed in §99.31(a)(1)(i)(B)(1)-(a)(1)(i)(B)(2) are met. (§99.31(a)(1))
- To officials of another school where the student seeks or intends to enroll, or where the student is already enrolled if the disclosure is for purposes related to the student's enrollment or transfer, subject to the requirements of §99.34. (§99.31(a)(2)).
- To authorized representatives of the U. S. Comptroller General, the U. S. Attorney General, the U.S. Secretary of Education or State and local educational authorities, such as a State postsecondary authority that is responsible for supervising the University's State-supported education programs. Disclosures under this provision may be made, subject to the requirements of §99.35, in connection with an audit or evaluation of Federal- or State-supported education programs or for the enforcement of or compliance with Federal legal requirements that relate to those programs. These entities may make further disclosures of PII to outside entities that are designated by them as their authorized representatives to conduct any audit, evaluation or enforcement or compliance activity on their behalf. (§§99.31(a)(3) and 99.35)
- In connection with financial aid for which the student has applied or which the student has received, if the information is necessary to determine eligibility for the aid, determine the amount of the aid, determine the conditions of the aid or enforce the terms and conditions of the aid. (§99.31(a)(4))
- To organizations conducting studies for, or on behalf of, the University, in order to (a) develop, validate or administer predictive tests; (b) administer student aid programs; or (c) improve instruction. (§99.31(a)(6))
- To accrediting organizations to carry out their accrediting functions. (§99.31(a)(7))
- To parents of an eligible student if the student is a dependent for IRS tax purposes. (§99.31(a)(8))
- To comply with a judicial order or lawfully issued subpoena. (§99.31(a)(9))
- To appropriate officials in connection with a health or safety emergency, subject to §99.36. (§99.31(a)(10))
- Information the University has designated as "directory information" under §99.37. (§99.31(a)(11))
- To a victim of an alleged perpetrator of a crime of violence or a non-forcible sex offense, subject to the requirements of §99.39. The disclosure may only include the final results of the disciplinary proceeding with respect to that alleged crime or offense, regardless of the finding. (§99.31(a)(13))
- To the general public, the final results of a disciplinary proceeding, subject to the requirements of §99.39, if the University determines the student is an alleged perpetrator of a crime of violence or non-forcible sex offense and the student has committed a violation of the University's rules or policies with respect to the allegation made against him or her. (§99.31(a)(14))
- To parents of a student regarding the student's violation of any Federal, State or local law, or of any rule or policy of the University, governing the use or possession of alcohol or a controlled substance if the University determines the student committed a disciplinary violation and the student is under the age of 21. (§99.31(a)(15))

As of January 3, 2012, the U.S. Department of Education's FERPA regulations expand the circumstances under which a student's education records and PII contained in such records—including Social Security Number, grades, or other private information—may be accessed without the student's consent. First, the U.S. Comptroller General, the U.S. Attorney General, the U.S. Secretary of Education or state and local education authorities ("Federal and State authorities") may allow access to student records and PII without consent to any third party designated by a Federal or State authority to evaluate a federal- or state-supported education program. The evaluation may relate to any program that is "principally engaged in the provision of education," such as early childhood education and job training, as well as any program that is administered by an education agency or institution. Second, Federal and State Authorities may allow access to a student's education records and PII without the student's consent to researchers performing certain types of studies, in certain cases even when the University objects to or does not request such research. Federal and State Authorities must obtain certain use-restriction and data security promises from the entities that they authorize to receive PII, but the Authorities need not maintain direct control over such entities. In addition, in connection with Statewide Longitudinal Data Systems, State authorities may collect, compile, permanently retain and share without the student's consent PII from education records, and they may track participation in education and other programs by linking such PII to other personal information about the student that they obtain from other Federal or State data sources, including workforce development, unemployment insurance, child welfare, juvenile justice, military service, and migrant student records systems.

Additional Information

Questions about these policies and procedures may be directed to the Office of the Registrar at 303.871.3897. Request forms and additional information are available on the web at www.du.edu/registrar (<http://www.du.edu/registrar/>) or in the Office of the Registrar at 2197 South University Blvd., Room G33, Denver, Colorado 80208.

Maintaining Contact Information

E-Mail

You will receive an @du.edu email address to use while enrolled at the University of Denver. All emails sent to you by the University will be delivered to your @du.edu email address. Information on accessing your @du.edu email address can be found at <http://go.du.edu/office365> (https://univofdenver.service-now.com/techservices/sub_content.do?sysparm_article=KB0011276). Upon graduation, you will have the option to move your email account to an @alumni.du.edu address.

The UTS Computer HelpDesk can assist with logging into MyDU (<https://my.du.edu/dashboard/>) and answer questions on a variety of other technical topics. To contact the HelpDesk call 303-871-4700, send email to support@du.edu or access support through the UTS website (<http://www.du.edu/uts/helpdesk/>).

The University sends much of its correspondence solely through email. This includes policy announcements, emergency notices, meeting and event notifications, course syllabi and requirements, and correspondence between faculty, staff, and students. The University is not responsible if payment of tuition and fees is not made because a student did not receive a billing notice. Students may be assessed a late fee if payment is not received by the due date printed on the bill. Such correspondence is mailed only to the official university email address. Faculty, staff, and students are expected to check their email on a frequent and consistent basis in order to stay current with University-related communications. Faculty, staff, and students have the responsibility to recognize that certain communications may be time-critical. This policy applies to all members of the University of Denver community; faculty, staff, and students.

Address Information

Student Location and Addresses Policy

Accurate address and student location information is imperative for many reasons. Safety and emergency notification processes require accurate student location information. Certain educational benefits are based on student location; regulations for international students require the University to maintain accurate address information. Federal regulations (34 CFR § 668.43) require that for programs leading to licensure, the university must determine the location of the student enrolled in the program and must notify students if professional licensure or certification requirements in the state in which they are located are not met by the curriculum of the program, or if DU has not determined whether the curriculum meets the requirements in the state where they are located. Other federal regulations (34 CFR § 600.9) also require DU to obtain authorization to operate in any state where a student is located.

DU will determine all students' location (state):

- a. At the time of the student's initial application to an educational program; and
- b. Upon receipt from the student of information about a change in the student's location or address;
- c. DU will solicit student location and address information at least two times per year and maintain and publish processes for students to provide address and location information;
- d. If a student does not provide a physical location, and the student is enrolled in at least one on-campus course, then the student's physical location is determined to be Colorado.
- e. If a student does not provide a physical location, and the student is not enrolled in at least one on-campus course, then the student's physical location is determined to be the state provided in the student's address.

Students unable to make address changes online can pursue the following options:

- Visit the registrar's office on the garden level of University Hall or download the Address/Phone/Email Change Request form from <http://www.du.edu/registrar> (<http://www.du.edu/registrar/>).
- Send an email to registrar@du.edu; include student number and indicate which address or addresses are to be changed. (See following address types.)
- Call 303-871-4095. (For security reasons, students are asked to give identifying information.)
- Send a fax to 303-871-4300. (Include student number, month and date of birth, and indicate which address types are to be changed.)

Types of Addresses

- **Mailing:** This is the default address used by DU. All constituents should have a correct mailing address.
- **Billing:** Used to send the tuition bill to a different address from the mailing address.
- **Business:** Your place of work. For DU employees, this will be your office address.
- **Grades:** Used to send grades to a different address than the mailing address.
- **Home:** Used to distinguish a permanent (family) address for students from out of the area, or a home address for alumni. International students and employees (visa classes F, M and J) must maintain a valid foreign address in this field.
- **On--Campus:** Used only for University housing addresses. It is populated automatically each term.

- **Parents:** DU can maintain up to two addresses for parents.
- **Seasonal:** Used to override your permanent mailing address for certain times each year—e.g., a summer house.
- **Temporary:** Used to override your permanent mailing address for a single specified period.

Telephone Numbers

Students can enter several different types of telephone numbers in their student account: permanent home, business, cell, fax and local (if different from permanent home). Indicate the type and whether the number should be added or deleted on the front of the form. If checked as “unlisted,” the telephone number will only be released to University officials.

Notification preferences

Students may opt to receive emergency notifications and other official University notifications via text message. Notification preferences may be updated in MyDU (<https://my.du.edu/dashboard/>) by navigating to Student Tools, Records and Requests, Update your notification preferences.

Preferred Name Usage

Preferred First Names and Chosen/Lived/Professional Names

The University of Denver recognizes that many of its constituents routinely use a first name or full name other than their legal name. As part of being a welcoming and inclusive campus, the University of Denver uses preferred first names and chosen/professional names widely in the course of DU business and education.

What is a “Preferred First Name” and what is a “Chosen/Lived/Professional Name?”

Beyond legal name, DU maintains two options for names which substitute in place of all or part of the legal name in University systems.

Preferred First Name:

A first name by which an individual wishes to be identified that is other than the individual's legal name is a “preferred first name.” This is analogous to a nickname. Students and employees can submit a preferred first name online. The preferred first name will be displayed in addition to legal name rather than replace it, for example: Shaquille Rashaun O’Neal (Shaq).

Chosen/Lived/Professional Name:

A chosen/lived/professional name is used in place of a legal name and replaces the legal name in most cases. This name option can include a first, middle and/or last name. For example, chosen/lived/professional name of Cardi B would replace the legal name of Belcalis Marlenis Almanzar.

Limitations on Use of Chosen/Lived/Professional Names

Because use of legal name is necessary in certain records and communications, both the legal name and chosen/lived/professional name are stored in DU's information systems. When a student or employee contacts a DU office in person or by phone, the staff in that office may only have electronic access to the legal name.

While DU will use of the chosen/lived/professional name in most instances, students and employees should be aware that the use of the legal name will continue to be necessary in certain communications and processes due to DU business or legal requirements and/or system limitations.

More Information on Name Options

Reasons for using Preferred First Names or Chosen/Lived/Professional Names

Many members of the DU community use a first name or full name that differs from their legal name. These may include individuals who prefer to use:

- a middle name instead of a first name;
- a nickname;
- an anglicized name;
- names with special characters: e.g., Renée, François, Zoë, Sørina, Peña
- a name to which the individual is in the process of legally changing;
- a name that better represents the individual's gender identity;
- a name that reflects professional activities, publications, etc.

How to request a preferred first name be entered in DU information systems

Members of the DU community can submit a preferred first name online through MyDU (<http://my.du.edu/>). Type “profile” in the search, select My Person Profile. Preferred first names can be removed by clicking Update with nothing in the field.

How to request a chosen/lived/professional name be entered in DU information systems

To request your chosen/lived/professional name, you can complete and submit your request using our online form (<https://na4.docusign.net/Member/PowerFormSigning.aspx?PowerFormId=371b95bf-9b4f-4b2c-a89a-dcfb608e8167&env=na4&acct=b24a216b-183e-4eeb-93f6->

edfd6712ee1b&v=2) or our paper Name Change Request Form (<https://www.du.edu/sites/default/files/2022-11/namechangerequestform.pdf>). Please submit the form to the office indicated in the instructions. Chosen/professional names may be removed using the same form.

Use of Names within DU Systems

DU displays preferred first names and chosen/lived/professional names in most public-facing uses. This includes written communications, web displays and internal reports and processes. Not all University departments will have access to preferred first names while interacting with students.

Use of Legal Name

Use of legal name is necessary for certain data exchanges such as those to government agencies that verify the identity of a student by using the student's legal name. These include (but are not limited to) transcripts, payroll, tax, insurance, banking, financial aid and federal or state reporting.

Name Designation Request Policy

Individuals may designate a preferred first name or chosen/lived/professional name with which they identify and by which they prefer to be known. DU reserves the right to deny a request to include a preferred name in its information systems if the request is fraudulent, carries connotations offensive to good taste and decency, or violates University Regulations and/or Student Code of Conduct.

Pioneer Cards and

The ID printing system will automatically pull your first and last name from the DU information platform. You can request for your "preferred first name" to be used instead; simply let the ID office know prior to printing. In order to use a preferred name, you must have added that name into the DU system and wait about 24 hours for the systems to fully update.

Email Addresses

DU will provide a new DU email address, upon request, for students or employees who have requested a chosen/lived/professional name. For further information, contact the IT Computer Help Center: <https://www.du.edu/uts/helpdesk/>.

Diploma Name

Students may also specify a 'diploma name' to use on DU diplomas.

Gender Designation & Personal Pronouns

We've added fields to your information systems that allow members of our community to self-identify by gender identity and pronouns. DU already asks affiliates to self-identify by current legal sex (often coded as "gender"), race/ethnicity, veteran status and disability. By expanding our optional self-identification categories related to gender identity, we're able to understand and acknowledge our constituents more accurately and inclusively.

How Do I Update My Information?

Prospective students and employees are asked some basic demographics questions when applying, while current community members can update their personal information through MyDU (<https://my.du.edu/>).

The expanded fields are optional but encouraged, and a "prefer not to respond" option is available. Unless you indicate something different, your legal name and sex will remain the default in all systems; other fields will note "not available" or be blank.

We recognize that even these expanded options do not represent all the categories that DU affiliates use to describe themselves. We are using the additional fields and these expanded options to gauge constituent interest and institutional utility. We plan to follow up with various campus constituencies to assess how we might improve descriptors, and potentially offer more and better options in the future.

| Identity | Options Offered | Explanation |
|--------------------|---|--|
| Legal Sex | • Male | For DU's required reporting, and to avoid even the appearance of identity fraud, this must match current government designation. |
| | • Female | |
| | • I elect not to self-identify at this time | |
| Gender Designation | • Man | Consistent, lived identity. Unlike legal sex or anatomical descriptors, this is the level at which most people interact with others. |
| | • Woman | |
| | • Non-binary | |
| | • I elect not to self-identify at this time | |
| | • Option not listed | |

| | | |
|-------------------|---|---|
| Personal Pronouns | <ul style="list-style-type: none"> • he/him/his | Term used as stand-in for name in conversation and correspondence. |
| | <ul style="list-style-type: none"> • she/her/hers | |
| | <ul style="list-style-type: none"> • they/them/theirs | |
| | <ul style="list-style-type: none"> • I elect not to self-identify at this time | |
| | <ul style="list-style-type: none"> • Option not listed | |
| Prefix/Honorific | <ul style="list-style-type: none"> • Mr. | Example optional titles or honorifics used in formal greeting or correspondence. Some are traditionally based on gender, age and/or marital status. |
| | <ul style="list-style-type: none"> • Mrs. | |
| | <ul style="list-style-type: none"> • Ms. | |
| | <ul style="list-style-type: none"> • Mx. | |
| | <ul style="list-style-type: none"> • Dr. | |
| | <ul style="list-style-type: none"> • Hon. | |
| | <ul style="list-style-type: none"> • Prof. | |
| | <ul style="list-style-type: none"> • Rev. | |

How Will This Information Be Used?

Most immediately, the University will use aggregate information to understand campus demographics better, and to improve our acknowledgment of and services to our diverse communities. This can include more robust support resources, enhanced training for service providers, more accurate reports and potential advocacy to external reporting agencies for improving their systems.

With this additional information, we are working to better connect various campus software systems so that your preferred name, pronouns and salutations are available from the central database, and are used consistently, accurately and respectfully by all affiliates. Ideally, every University interaction would be informed by the appropriate info: employees having phone and in-person conversations, auto-generated messages and online records would all use preferred names and pronouns. However, please note that we cannot yet guarantee every communication will use these selections.

Who Will Have Access to This Information?

With the exception of student directory information, access to all affiliate information is restricted by law and policy to University officials and those granted access by individual students.

Like most other personal information, an affiliate's legal sex and gender designation are not considered directory information and are not released, accessed or used without permission. However, students who sign FERPA releases for their parents/guardians/others should understand that this identifier information can be requested/disclosed.

As part of a student's name, prefix/honorific titles are considered directory information and will be used publicly.

All affiliates should be aware that providing this information to DU does make it available within the restrictions outlined above, so it should be provided thoughtfully and intentionally.

Transcripts

A transcript is an official copy of a student's academic record showing the student's academic status at the time it is issued. The official transcript includes the complete academic record of courses taken at the University of Denver. Transcripts may be ordered online, by mail or fax, or in person at University Hall, garden level in the main hall. Transcripts require one to two working days of processing time. To order official transcripts online, log in to MyDU (<https://my.du.edu/dashboard/>) and type Transcripts in the search. A credit card is needed to complete online orders. To order transcripts by mail or fax, a signed Transcript Order Form (<http://www.du.edu/registrar/media/documents/transcript.pdf>) is required along with payment in the form of cash, check or money order. An email request is NOT accepted.

Send written transcript requests to

University of Denver

Office of the Registrar
2197 S. University Blvd.
Denver, CO 80208-9405
Attn: Transcripts

Official transcripts are NOT ISSUED until ALL OUTSTANDING ACCOUNTS with the University are paid. Students may check for current holds at M (<https://PioneerWeb.du.edu>)yDU (<https://my.du.edu/dashboard/>). The registrar does not hold transcripts pending change of grade. "Issued to Student" is stamped on official transcripts sent to or picked up by students.

Unofficial transcripts or transcripts from Colorado Women's College/Temple Buell are also available through this method.

Contact Information

For transcript information and status inquiries, call 303-871-4095 or email transcripts@du.edu.

Support Services and Resources

Bereavement Policy (p. 1059)

Crisis Assessment Risk Evaluation (CARE) Behavioral Intervention Team (p. 1059)

Pioneers CARE (p. 1060)

Student Death Response and Notification Guidelines (p. 1060)

Bereavement

The Office of Student Outreach & Support (SOS) supports students in the event of a death in the student's immediate family or household. The student bereavement policy allows students a certain number of excused absences. Students can request activation of the excused absences for bereavement by completing the Bereavement Notification Request Form. Student Outreach & Support staff will then notify the student's instructors of the verified absences.

Crisis Assessment Risk Evaluation (CARE) Behavioral Intervention Team

Crisis Assessment Risk Evaluation (C.A.R.E.) Behavioral Intervention Team

Dear Campus Community,

As part of our culture of care and support, the University of Denver is committed to providing care and access to resources to create a safe and secure environment for our campus community to maintain our safety, health, and well-being. The C.A.R.E. team is comprised of staff and administrators across campus who are dedicated to crisis support and behavioral intervention in the best interest of the individual student and the campus community. The C.A.R.E. team takes a proactive, objective, supportive, and collaborative approach to the prevention, identification, assessment, intervention, management of, and coordinated response to situations and behaviors that may be disruptive or pose a risk of harm. As we care for both the individual student and the campus community, the following policies outline the ways in which the C.A.R.E. team intervene, identify behavioral expectations and other support strategies to help the student remain in good standing with the University. While the C.A.R.E. team leads this effort of behavioral intervention, every member of the community has a shared responsibility and shared ownership in the culture of care and support. In gratitude of our partnership,

The C.A.R.E. team

Overarching Policy

The C.A.R.E. team is dedicated to a proactive, objective, supportive, and collaborative approach to the prevention, identification, assessment, intervention, management of, and coordinated response to student situations and behaviors that may be disruptive or pose a risk of harm to the safety, health, and well-being of individuals and the campus community.

Please see full policy here: **Overarching Policy** (https://www.du.edu/studentlife/studentsupport/media/documents/care_behavioral-intervention-policy.pdf)

Individualized Assessment Policy

If a student is displaying behavior that appears to present a significant disruption or risk of harm to the individual and/or community an Individual Assessment may be enacted.

Please see full policy here: **Individualized Assessment Policy** (https://www.du.edu/studentlife/studentsupport/media/documents/care_individual-assessment-policy.pdf)

Mandatory Withdrawal Policy

In extraordinary circumstances, a student may be subject to a mandatory withdrawal if the C.A.R.E. team determines the student exhibits behaviors that substantially impede the student's academic success and/or significantly disrupts the learning environment of others.

Please see full policy here: **Mandatory Withdrawal Policy** (https://www.du.edu/studentlife/studentsupport/media/documents/care_mandatory-withdrawal-policy.pdf)

Student Outreach & Support (SOS) Referral System

Student Outreach & Support (SOS) Referral Process

The Student Outreach & Support (SOS) referral is a process to submit information about a student who may be experiencing a challenging situation and needs help to connect to the appropriate resources. Each referral is reviewed and then assigned to a Case Manager to outreach to the student and develop a support plan. This referral activates the appropriate University protocol to support both the individual and the campus community in maintaining their safety, health, and well-being.

Please refer to our page on how to recognize and support student in distress for examples of indicators of concerning behavior. Please also always error on the side of submitting a referral. It is important for our students and campus community that we receive this information in a timely manner.

Additional signs include:

- Difficulties with family/home environment
- Difficulties with food security and housing
- Difficulties adjusting to the college experience
- Financial Concerns
- Relationship Concerns
- Student being unresponsive to multiple outreaches

- Witness to an accident

If you know of a student who is experiencing a challenging time, we encourage you to submit a SOS referral through the online referral system.

A note about privacy:

As a part of this process, we work very hard to maintain privacy for students so they trust the work we're doing. As a result, if you submit a referral, we do not generally report back or communicate with you about the details of how we'll be working with individual students.

A SOS referral is not for emergencies. If there is an immediate threat to a student (either through self-harm or interpersonal violence) or the community, please call Campus Safety at 303-871-3000, or if dialing from a campus phone, 1-3000.

If you have a concern about our referral process, please email sos@du.edu

Student Death Response and Notification Guidelines

Life Threatening Injury or Death of a Community Member Student and Employee Guidelines for Non-Emergency Situations

The life threatening injury or death of a student or employee is a tragedy not only for family members and friends but also for the University community. The University of Denver strives to ensure that our responses are thoughtful, caring, professional, coordinated, and consistent. The notification of a tragic event sets in motion a range of protocols by Campus Safety, administrators, medical and mental health professionals, Student Life personnel, faculty, students, and others, depending on the circumstances. **In case of an immediate or continuing threat, call 911 and Campus Safety at 303-871-3000.**

Notification

Any member of the university community who receives information regarding a life threatening injury or death of a DU community member should notify Campus Safety at 303-871-2334.

Accounting (ACTG)

ACTG 4130 RPA in the Business and Accounting Environment (4 Credits)

Robotic Process Automation (RPA) is an emerging technology that is changing the way businesses process data. RPA allows many business processes to be automated and remove the human from performing repetitive tasks. This course will teach the basics of the technology using one of the most popular RPA software programs, UiPath. Students will learn the theory, design an application of RPA through small projects.

ACTG 4155 Accounting Data Skills and Concepts (4 Credits)

This course is designed to give students an understanding of the technology underlying accounting information systems and help students develop more advanced data analysis skills. We will use the programming language Python to develop an understanding of the digital business logic that supports the operations of modern firms. We will learn to use Business Process Modeling Notation (BPMN) to graphically document operations and their underlying business logic. We will discuss and analyze a set of studies that use survey data from a global sample of executives and analysts to develop an understanding of the levels of technological sophistication in modern firms. We will also discuss and analyze distributed databases, information security, and eXtensible Business Reporting Language. Prerequisites: none.

ACTG 4176 Accounting Data Analytics (4 Credits)

In this course, students explore overarching trends in big data and the impact to accounting and auditing fields while also gaining hands on experience working with business data sets. In today's information world, accountants must be well equipped to understand and utilize the vast and varying data systems that feed a company's decision making process. This course allows students to develop big data skills by learning the SQL language to query data from mock clients. Students execute Computer Assisted Auditing Techniques (CAATs) using both the SQL language as well as the audit data mining tool, IDEA. Students simulate the process to request client data files, load complex data sets, design and execute query procedures and summarize results for management. Prerequisite: ACTG 4610.

ACTG 4201 Financial Accounting for Management (2 Credits)

This course introduces the student to the fundamentals of financial accounting and reporting with an emphasis on the needs of the user, both internal and external. The goal is to enable the student to become a knowledgeable reader and user of financial statements.

ACTG 4220 Financial Actg & Analysis (4 Credits)

Cross-listed with ACTG 3230.

ACTG 4222 Understanding Financial Statements (4 Credits)

At the conclusion of this course the student should understand: (1) management decisions that impact published financial statements, (2) the fundamentals of interpretation and analysis of financial statements, (3) economic and ethical issues relating to financial reporting, and (4) management attempts to enhance reported operating results. The course addresses the needs of managers and analysts, hence does not cover promulgated financial reporting rules in depth. The financial reporting topics expand on material presented in introductory Accounting and Finance courses. The focus is on the substance of the reported information. This course is not an approved elective for the MACC degree. Cross listed with ACTG 3220.

ACTG 4240 Topics & Cases in Financial Accounting (4 Credits)

This course develops a greater awareness of contemporary accounting issues, focusing on financial reporting. The course is designed to enhance each student's ability to identify, discuss, and resolve open-ended problems (i.e., those having no single "correct" answer) faced by accounting professionals. Each student must commit to being an active participant in the class discussions. Through the use of numerous cases involving all aspects of financial reporting, students identify issues, conduct authoritative research, then present and defend their conclusions using both oral and written presentation formats. Students also write an original research paper on a topic of their choice.

ACTG 4281 Intermediate Financial Accounting I (4 Credits)

The focus of this course is the foundation and content of published financial statements. Specifically it covers the following broad topics: (1) Conceptual Framework of Financial Reporting; (2) Financial Statements and Related Disclosures; (3) Assets: Recognition and Measurement; and (4) Liabilities: Recognition and Measurement. Common to each of the topics is an emphasis on reading GAAP and applying GAAP guidance to fact patterns. At the conclusion of the course, students should be aware of the proper accounting treatment for many common situations; moreover, students should be fully comfortable interpreting GAAP literature to address scenarios involving assets, liabilities, and income that were not specifically covered in the class.

ACTG 4282 Intermediate Financial Accounting II (4 Credits)

This course is a continuation of Intermediate Financial Accounting. The focus of this course is the application of Generally Accepted Accounting Principles to complex business transactions. In this final course of the sequence, we finish our examination of the balance sheet by exploring the issues involved with stockholders' equity, followed by in-depth study of some of the most complex accounting issues, including revenue recognition, accounting for income taxes, pensions and post-employment benefits, leases, and accounting changes and errors.

ACTG 4284 Consolidated Financial Statements (2 Credits)

This course introduces the student to the preparation of financial statements in compliance with GAAP when the reporting entity has investments in other entities that are other than passive investments. This module explores the financial reporting issues relating to partial or full ownership of one business entity by another. It includes use of the equity method as well as issues involved in reporting the financial results of consolidated entities, both at and subsequent to acquisition or formation.

ACTG 4285 Accounting for Foreign Operations (2 Credits)

Topics covered in this course include the financial statement impact of doing business in a foreign currency, having foreign subsidiaries or operations, and certain hedging activities.

ACTG 4290 Financial Accounting Theory (4 Credits)

This course introduces financial accounting theory with a focus on the application of accounting information as a tool for decision makers for firm valuation, contracting, executive compensation, enhancing corporate governance, and assessing earnings quality. The course draws from basic theories in economics, finance, and psychology to understand and predict accounting choices of firm managers and reactions of investors, lenders, auditors, and regulators to accounting information. The main objective is to foster conceptual, critical, and creative thinking about implications of accounting in the marketplace. Prerequisite: ACTG 4281.

ACTG 4340 Topics & Cases in Managerial Accounting (4 Credits)

Topics & Cases in Managerial Accounting focuses upon contemporary methodologies used by managerial accountants. Such methodologies are examined through classroom discussions of case studies and related articles. The course is designed to develop and enhance skills that are essential for the long-term success of career in accounting and finance.

ACTG 4354 Cost Accounting (4 Credits)

Accounting information in manufacturing enterprises, standard costs, and budgets. Open to students not having ACTG 3354 or equivalent.

Prerequisite: MBA 4110, MBA 4111, or equivalent.

ACTG 4400 Taxation for Business and Investment Planning (4 Credits)

This is an introductory tax course that emphasizes a conceptual approach to learning the income tax framework applicable to common business and investment transactions. It is designed to sensitize students to the tax implications of business decisions and to cultivate the student's ability to ask good tax questions. This course will illustrate that effective business planning depends on an accurate assessment of relevant tax factors.

ACTG 4410 Federal Income Taxation (4 Credits)

The course is designed for graduate accounting students that wish to study federal income taxation. This is the first course in taxation, which introduces the federal taxation system, the importance of tax authorities, the concepts of gross income and tax deductions and the tax implications of common property transactions. The course generally focuses on property transactions, but the taxation of individuals is emphasized with an objective of students being able to properly prepare complex individual tax returns.

ACTG 4462 Corporate and Partnership Taxation (4 Credits)

The course is designed for graduate accounting, finance or other business students in their study of advanced topics in federal income taxation. This is the second course in taxation which concentrates on taxation of corporations, limited liability corporations, S corporations and partnerships. Prerequisites: ACTG 3440 or ACTG 3036 or ACTG 4400 or ACTG 4410 or ACTG 3461.

ACTG 4520 Forensic Accounting and Auditing (4 Credits)

Students will have an opportunity to learn, study, and discuss practical aspects of accounting as it is used to detect and prosecute fraud. Students will be exposed to improprieties, common fraud schemes, illegalities, and harassments. Prerequisites: ACTG 3551 or ACTG 4551 (Concurrent enrollment allowed).

ACTG 4530 Business Advisory and Internal Audit (4 Credits)

In today's business environment, a given company's "internal audit" function is asked to not only help keep the business out of trouble (control risks), but also help make the business better (leverage risk management to make better business decisions). In this course, we will "reimagine" internal audit with a heavy focus on the business advisory aspects of audit. Topics specifically covered in this course include risk appetite and tolerance, risk culture and an array of cutting-edge audit and advisory topics (cybersecurity, data privacy, social media, to name a few). Students experience "real life" examples and case studies to truly experience the role of an auditor as business advisor. Prerequisite: ACTG 3551 or ACTG 4551.

ACTG 4551 Auditing (4 Credits)

This course is designed to provide you with a thorough understanding of auditing and related attest services. This includes gaining requisite knowledge about AICPA (U.S. GAAS) and PCAOB auditing standards and how they are applied in conducting a financial statement audit. Application of these standards applies to planning an audit, the risk assessment process including gaining an understanding of internal control, gathering and evaluating evidence, sampling, and issuing an audit report.

ACTG 4552 Advanced Auditing (4 Credits)

This course is designed to build on the foundation of auditing knowledge developed in ACTG 4551 and apply that knowledge to specific accounts and assertions in a financial statement audit. Students also examine selected SEC enforcement actions and discuss what audit procedures may have been beneficial to prevent the misstatement. Prerequisite: ACTG 4551 or ACTG 3551.

ACTG 4557 Fair Value Auditing (4 Credits)

The purpose of this course is to expose students to the accounting, economic and valuation concepts and challenges that are relevant to auditing fair value measurements and disclosures in financial statements. The role of the FASB, PCAOB, SEC and other standards setters on fair value accounting and measurements are explored. Prerequisite: ACTG 4551 or ACTG 3551.

ACTG 4575 Accounting Information System Risk, Control and Audit (4 Credits)

An auditor cannot just "audit the numbers" without strong consideration to the IT systems that generate those numbers. Today's accounting professionals must possess a strong understanding of accounting information system risks and controls. Topics specifically covered in this course include IT security controls, datacenter controls, data backup and disaster recovery planning, SDLC and change control processes. Students perform hands on simulated audit exercises and case studies to truly experience the role of an IT auditor. Prerequisites: ACTG 3551 or ACTG 4551 or test score AC51=1.

ACTG 4610 Financial Accounting and Reporting (4 Credits)

In this course, students will gain a strong understanding of corporate financial statements that are consumed by parties such as managers, shareholders, creditors and financial analysts. The course covers the fundamentals of accounting from recording individual business transactions through the preparation of a company's summarized financial statements. The course closely examines how economic events and business decisions impact the three main financial statements – Income Statement, Balance Sheet and Statement of Cash Flows. Students gain significant experience analyzing Form 10-K annual reports of publicly traded companies.

ACTG 4620 Accounting Ethics (4 Credits)

This course focuses on the idea of community and the ethical and social relationships of accounting leaders and business organizations in their communities. The course focus is on the role of the accounting professional and the unique and special responsibilities associated with that role. This is examined by analyzing a variety of issues that students will face during their careers. The goal is to provide students with generalized understanding and skills that can be employed in dealing with other issues that emerge directly relate to the state Code of Professional Conduct applicable to CPAs, the Code provisions are discussed and analyzed. Prerequisites: None.

ACTG 4660 Strategic Cost Management (4 Credits)

Course description: Strategic Cost Management (SCM) will teach students how to use accounting information to make correct decisions within their firms. These decisions will include costing, pricing, strategy, and performance management. SCM articulates how to use accounting information in order to properly price goods and/or services, how to decide between alternative strategies, and how perform relative performance evaluation among employees and/or departments within the firm. The focus is on interpreting accounting information and making business decisions. Topics in the course include cost behavior, activity-based costing, cost-volume-profit analysis, short-term decision-making, balanced scorecard, and management control. The course will enable students to apply strategic thinking to management planning, decision-making, and management reporting. Prerequisite: ACTG 4610.

ACTG 4661 Strategic Accounting for Managers (4 Credits)

Management accounting is in transition, moving from a quantitative procedural focus to include a qualitative strategic focus that uses accounting to facilitate the organization's success. Changes include a renewed focus on the customer, aggressive cost reduction, and increased use of information technologies, among others. Motivation for the changes in management accounting are driven by evolving business processes in response to increased competition, both global and domestic. The management accountant is no longer a reporter and analyzer of financial facts only, but a business partner – developing the financial and non-financial information the organization needs to be successful. The concepts of management accounting are used in manufacturing and service organizations and are increasingly applied to government and not-for-profit organizations to help them succeed in their service missions and to be responsible to the citizens and funding agencies. In this course, students will learn how the management accountant plays a strategic role in the organization, developing and presenting the information that is critical for the organization's success. Students will use higher order thinking to apply accounting information to the types of strategic decisions organizations make for long-term sustainability. Prerequisites: ACTG 4610.

ACTG 4700 Graduate Seminar in Accounting (1-17 Credits)**ACTG 4701 Special Topics in Accounting (1-5 Credits)****ACTG 4702 Special Topics in Accounting (1-5 Credits)****ACTG 4703 Special Topics in Accounting (1-5 Credits)****ACTG 4704 Special Topics in Accounting (1-5 Credits)****ACTG 4705 Topics in Accounting (1-4 Credits)****ACTG 4710 Managing the Family Business (4 Credits)**

Family enterprises have a tremendous impact on our local, national and global economies. Today, the definition of the family enterprise extends beyond just the business entity. It includes family offices, family "banks," family councils, trusts, and family foundations, just to name a few. Further, what happens in, and how decisions are made by, family enterprise affects not only the active family members but other key stakeholders such as inactive family members, in-laws, non-family managers and employees, professional advisors, customers, suppliers and competitors. This course gives students insight into the universe of possibilities that families, enterprises and their advisors face when engaged in systemic transition planning. This highly interdisciplinary course is appropriate for anyone who intends to work in or with family enterprises. This includes family members, accountants, attorneys, estate planners, financial or wealth managers, family office professionals, insurance consultants, business advisors, management consultants, organizational and leadership development experts, international business professionals, psychologists, social workers, and family therapists.

ACTG 4730 International Accounting - London (4 Credits)

This course is designed for students to study international accounting from both academic and practical perspectives. The main objective of this course is to develop a greater awareness of contemporary accounting issues faced in the international marketplace. This course will consist of two components: pre-departure classes designed to provide the student with knowledge of issues experienced in a global economy; a ten-day international travel experience which includes experiential learning exercises, group discussions and presentations, and seven visits to international companies and CPA firms. Prerequisite: Instructor Permission.

ACTG 4735 Accounting for ESG -- Eastern Europe (4 Credits)

This course is designed to give students an introduction to ESG accounting measurement and reporting issues from the perspective of multiple players in this arena (companies, accounting firms, standard setters, regulators etc.). This course juxtaposes US ESG accounting standard setting, measurement issues and best practices with Eastern European viewpoints on the same issues. With that in mind, this course will provide participants with the ability to be able to research, obtain and interpret current information on ESG accounting rules and standard setting.

ACTG 4740 Valuation and Modeling (4 Credits)

The ultimate purpose of the course is to improve professional decision-making skills. Professional decisions are made using a combination of judgment and analysis. Even skilled professionals (in any field) will make incorrect decisions when working with incorrect or insufficient information. Thus, one key to improving decision-making is improving analytical insights and skills. This course emphasizes the definition, construction, uses and limitations of popular financial models and instruments. Further, the class focuses on how the instruments are used, why they are used and how decisions to use such instruments and tools/techniques to value them are made. Prerequisite ACTG 4610 or test code AC10 >=1.

ACTG 4750 Valuing a Business (4 Credits)

This course explores all major aspects of business valuation. Students not only study valuation theory, they appraise an actual business and draft a valuation report in compliance with the American Institute of Certified Public Accountants Statement on Standards for Valuation Services (SSVS) and Reporting Standards of the National Association of Certified Valuation Analysts (NACVA). Prerequisite: ACTG 4740.

ACTG 4760 CEOs and Corporate Governance (4 Credits)

This course examines the current and pressing issue of corporate governance, in its ethical, legal, and social dimensions. Students read the latest views of scholars and experts and gain the perspectives of corporate CEOs and other organization leaders. Topics explored include the history of various governance models, public policy on corporate governance, corporate board functions and responsibilities, the dynamics between CEOs and boards, ethical leadership and corporate culture, ethics and compliance programs, executive liability, nonprofit corporate governance, board and audit committee responsibilities, restructuring and governance, executive compensation problems and solutions, shareholder activism, and corporate governance reforms. Cross-listed with LGST 4760.

ACTG 4795 Graduate Research Sem-Actg (1-17 Credits)**ACTG 4880 Internship - Graduate (0-4 Credits)**

Hours and times arranged by student.

ACTG 4991 Independent Study (1-10 Credits)

Hours and times arranged by student.

ACTG 6300 Behavioral Research in Accounting Seminar (4 Credits)

This seminar will provide students with the tools needed for educated consumption of behavioral research in accounting. We will focus on the theoretical and methodological issues faced by those who conduct this research, as well as the practical implications of the research for business leaders. Students should leave the course with a basic knowledge of behavioral research in accounting and be better able to create, analyze and critique such research.

Anthropology (ANTH)

ANTH 3001 Race, Sex and Evolution (4 Credits)

The course examines the paleoanthropology of race and sex. Our focus is on the nature and evolution of human racial differences, sexual anatomy, reproductive strategies, and gender roles. We will consider the history of thinking about race and sex in anthropology and related disciplines, and the uses to which particular conceptions have been put in our culture. We will discuss and evaluate alternative models for explaining the evolution of alleged biological and behavioral differences between racial groups and between men and women. Evaluation will proceed in light of evolutionary theory, comparative primate anatomy and behavior, the human fossil record, and general anthropological knowledge. Our aim is to examine myth and reality in popular and scientific understandings of these aspects of the human condition and, in the end, the social and political (i.e., policy) consequences of this knowledge. Enforced Prerequisites and Restrictions: ANTH 2105.

ANTH 3020 Native Religions (4 Credits)

A cross-cultural survey of concepts used to understand and talk about "religion," "the supernatural," and associated behavior among Native peoples of Turtle Island. Topics include healing and techniques of controlling and channeling supernatural power; sacred places and their significance; myths and symbols in their cultural contexts; initiation rites; conceptualizations of male and female deities; and responses of indigenous people to attempted missionization.

ANTH 3030 Digital Anthropology (4 Credits)

Digital Anthropology introduces students to computer technology used in anthropological research. Students study and then produce a number of digital products useful in the analysis and interpretation of museum collections, for archaeological mapping and research, and for the dissemination of anthropological knowledge online. This process covers the use of Geographic Information Systems (GIS) for spatial analysis, three-dimensional imaging programs ranging in scale from broad landscape mapping to detailed digital artifact analysis. In addition, the use of geophysical methods for imaging what is below the surface allows students to produce images of what lies below the ground in archaeological contexts.

ANTH 3040 Anthropologies of Place (4 Credits)

This class is an exploration of the relationship between people and places from an anthropological viewpoint. We concern ourselves with a variety of ideas about place, emphasizing not just how places are used, but how they infuse themselves into the lives, histories and ethics of those who interact with them. The course readings include book-length anthropological case studies interspersed with interdisciplinary readings about place and landscape. The course includes seminar-style discussions of readings, workshops and observations in the field. On several occasions, we take our class on the road, working together to think about how people and place interact. By the end of the class, each student creates his or her own anthropology of a place. Must be junior standing or above.

ANTH 3060 Cultural Narratives (4 Credits)

Human beings are natural storytellers. Whether reciting oral traditions or recounting personal experience, people everywhere use narratives as a way to express and to understand themselves. This course approaches cultural narratives from two angles. First, it explores the ways that anthropologists, usually trained in the social sciences, make use of and study narratives, whether through ethnographic observation, conducting an interview, gathering folklore or archaeological interpretation. Second, the class investigates narratives that, although produced by non-anthropologists, engage with anthropological issues such as kinship, gender, work, tradition and identity. The narratives range broadly from fiction, to poetry, to film. These two approaches are framed by theoretically informed readings about narrativity, both from the social sciences and the humanities. The class involves intensive reading and writing, as it makes use of both discussion and workshop formats. Each student in the course completes a research and writing project culminating in his or her own cultural narrative. Must be junior standing or above.

ANTH 3070 Folklore and Cultural Heritage (4 Credits)

Folklore and Cultural Heritage is the study of the expressive behaviors and practices that constitute the ordinary, everyday life of communities. Folklore includes the intangible cultural heritages of all peoples, for example, the artistic expression reflected in stories and storytelling, music, dance, legends, oral history, proverbs, jokes, popular beliefs, customs, dialects and ways of speaking. Everyone has folklore and participates in the "folklore process." Prerequisite: introductory social science course. Cross-listed with ANTH 4070.

ANTH 3080 Memory and Memorialization (4 Credits)

The course focuses on how social groups represent, experience and commemorate the remembered past; it explores issues of construction of memory, particularly how representations of the past- and its materialization through monuments, ruins, and landscapes- are connected with issues of institutionalized perceptions of national, ethnic, racial and religious identity. Furthermore, it discusses concepts such as "authenticity," "tradition," and "modernity" in the interpretation of cultural heritage and how the interpretation of the past and of culture depend on context (political and historical), experience and point of view. The course aims to develop an interdisciplinary approach to memory and to methodologies and empirical research.

ANTH 3090 God and Giving? Religion and Philanthropy in America (4 Credits)

This course is cross-listed with JUST 3090 and RLGS 3090. The United States is notable for its high levels of religious participation and for its well-established and rapidly expanding nonprofit sector. In this course, we will explore these phenomena from a variety of disciplinary perspectives including anthropology, history, and religious studies in order to understand the intersections of religion and philanthropy. By looking at religious ideologies, social theory, and legal and economic contexts, we will consider how religion, government, and philanthropy shape and are shaped by one another. We will examine a number of case studies including faith responses to Hurricane Katrina, the history of philanthropy in Denver, and U.S.-based religious global giving. We will explore key questions regarding community and social responsibility and ask which actors get to define key societal problems and who is ultimately responsible for responding to these problems.

ANTH 3130 The Archaeology of Gender (4 Credits)

This course examines the ways archaeology can contribute to the study of gender through investigations of the deep through recent past. The class will include readings on gender theory, the uses of archaeological data and specific case studies of engendered lives in the past. Cross listed with GWST 3130.

ANTH 3135 Feasting, Fasting and Food: The Anthropology of Food (4 Credits)

Feasting, Fasting and Food focuses on foodways and food culture. Food and its acquisition and preparation are tied to the historical, social and cultural lives of all peoples. By drawing on historical sources, ethnography and a number of anthropological perspectives, we look at foodways as symbols of identity, culinary tourism, food work as trade or profession, the study of food as art and theater, and food and memory. Prerequisite: ANTH 2010.

ANTH 3155 Native American Resistance in the Digital Age (4 Credits)

Since Europeans first made contact with the Americas five centuries ago, depictions of indigenous peoples have largely been created by and for the colonizers. Only recently have native activists begun to take back control of their image. The course begins with the premise that indigenous peoples have been active producers of their own cultural heritage both before and after European expansion into the Americas. A postcolonial approach will be used to evaluate resistance from a historical standpoint, starting with the colonial period and into the twenty-first century. Primary attention will be placed on the late twentieth century and twenty-first century to better understand how indigenous filmmakers, curators, scientists, healers, artists, and scholars use indigenous knowledge systems to contest Western conceptions of authority. Specific topics include indigenous film and media; indigenous feminisms; the use of indigenous perspectives in natural resource management; indigenous voices in the decolonization of museums; and the role indigenous communities play in educating the public of long-lived environmental contamination of water and other natural resources. The course will be designed to explore the voice and agency of indigenous peoples in each of the aforementioned fields, and to teach the validity of indigenous perspectives. While students will be introduced to indigenous case studies from around the world, primary attention will be given to Native American tribal groups in the United States. Prerequisite: Any ANTH 1000-level course.

ANTH 3170 Applied Heritage Management (4 Credits)

Considers the role of archaeology in preservation and the management of cultural resources in terms of legislation, ethics and practical application, with emphasis of the utility, necessity and reality of doing archaeology today in the public sector. Site report writing, governmental regulations and the business side of archaeology are stressed. Archaeological information from site reports and artifact analysis are compiled and presented in a digital format. Prerequisite: ANTH 2310.

ANTH 3200 Human Origins and Evolution (4 Credits)

Examines the fossil record for human evolution from 6 million years ago to the origin of modern Homo sapiens, including current theories, evidence and controversies. Considers the historical and sociological contexts of human evolutionary studies, popular myths and misconceptions, and alternative scenarios for the future evolution of the human species.

ANTH 3225 Human Rights in Latin America (4 Credits)

This course aims to provide students with an overview of human rights issues and how they have evolved in recent Latin American history, from the military dictatorships of the authoritarian period to contemporary challenges faced in the region's democracies. It also aims to place human rights concerns in a broader sociopolitical context. Many of today's human rights issues are rooted in the past, but others respond to new and emerging challenges. In this class, we will explore the roots and contemporary realities of human rights movements in Latin America. The examination of these topics should allow us to pose broader questions about the meaning of human rights in a globalized world, the efficacy of international instruments for rights enforcement, and the complex challenges that linger in the aftermath of authoritarianism and state-sponsored terror.

ANTH 3255 Ancient North America (4 Credits)

This course examines the history of American Indian cultures from their earliest archaeological traces on this continent up to and including contact with European explorers and colonists.

ANTH 3290 Art and Anthropology (4 Credits)

Study of the concept of art and its multiple roles in society from a cross-cultural and historical perspective. Commodification of culture through tourism and the global art market; arts of resistance and survival; and cultural expression and community development.

ANTH 3310 Indigenous Environment (4 Credits)

The purpose of this course is to introduce students to particular environmental issues that affect indigenous peoples, including subsistence and economic issues; sacred lands; cultural property dilemmas; and the impact that use of traditional cultural properties by others—including nation-state governments, corporations and tourists—have on indigenous peoples' cultural and social integrity. Particular focus is on one of these issues—travel and particularly "ecotravel" and "ecotourism."

ANTH 3320 Medical Anthropology (4 Credits)

This course is an introduction to medical anthropology. As a professional and academic field, medical anthropology provides conceptual and analytical tools for a comprehensive understanding of health, illness and healing. It is concerned with the ways in which individual experience is inserted in social and historical contexts and it explores ideas and behaviors related to health in different societies and social groups, as well as the ways in which different groups organize their resources to face health-related needs in the context of their social and economic realities.

ANTH 3330 Human Rights of Indg Peoples (4 Credits)

This course introduces students to the concept and definition of "indigenous peoples." It covers the history of resistance, revitalization, and assertion of sovereignty by Indigenous peoples, and why the United Nations felt it necessary to adopt a "Declaration on the Rights of Indigenous Peoples" in 2007. It covers how indigenous identities and indigenous rights issues do or do not "fit" with internationally accepted definitions of human rights. The course will concentrate on the intersection of indigenous autonomy with globalization, neo-liberal ideologies, and nation-state policies. Case studies focus on Iroquois, Crees, Mayans, Mapuche, Zapatistas, Maoris, and Sami.

ANTH 3350 Latin American Archaeology (4 Credits)

Covers the prehistory of the Western Hemisphere south of the Mexico-U.S. border, from initial colonization of the hemisphere by Paleo-Indian people, to the origins of agriculture and the rise of civilization. Olmec, Mayan, Aztec, Chavin, Moche and Inca cultures are covered in detail.

ANTH 3370 Sex, Class and Race in Latin America (4 Credits)

This course uses an intersectional approach to the study of sex, class and race in Latin America. Intersectionality aims at understanding the interlocking relation between sex, class, race and other aspects, and how these are rooted in historical and social structures, and are reproduced and resisted through individual and collective experience. In this course we will aim at understanding such history, culture and peoples with a special emphasis on examining their heterogeneity, and aiming at understanding how such heterogeneity is also related with social inequality. We will also examine some contemporary issues such as women's rights, indigenous movements, human rights, migrations, and economy with an emphasis on their manifestations at the intersections of sex, class, and race.

ANTH 3390 Geoarchaeology (4 Credits)

Use of geological methods to interpret archaeological sites, ancient landscape reconstruction, study of environmental change and habitation.

ANTH 3470 Applied Anthropology (4 Credits)

The practical application of cross-cultural knowledge and awareness to the solution of social and cultural problems. Ethnographic methodologies, a review of the history of applied anthropology and a consideration of the ideological and ethical components of applied anthropology are covered.

ANTH 3500 Culture and The City (4 Credits)

Examines the past and future of the city as a human built environment that reflects and reproduces social, political, economic, and cultural forces and ideals. Begins with the origin of cities in antiquity and ends with contemporary urban landscapes. Analysis is sensitive to both the technologies and aesthetics of urban form. Emphasis is on the possibilities for urban redesign to meet the problems of 21st century city life.

ANTH 3510 The Ancient City (4 Credits)

The archaeological study of ancient cities around the world is a booming and controversial area of research. This course investigates what we know about the nature of the earliest cities in the great original cradles of civilization: Mesopotamia, Asia, Africa, and the Americas. Our focus is on how the first cities were planned, built, and experienced by citizens.

ANTH 3540 The Nature of Language (4 Credits)

Language as social, psychological, cultural phenomenon; relationship between cultures, semantics; language as medium of cultural unification; relationship between dialects, social structure.

ANTH 3620 Ethnoarchaeology (4 Credits)

Ethnography has often been used as an illustrative device to animate archaeological remains, or to develop models of human behavior, regardless of the geographic and chronological distance between the ethnographic and the archaeological data. This course addresses different perspectives and theories concerning the use of ethnoarchaeology to complement archaeological information. It aims to define the role of ethnoarchaeology in the study of human past; to establish an agenda of issues to which their use is relevant; and to provide a critical overview of major approaches to the use of ethnographic analogies and historical information in archaeology.

ANTH 3630 Archaeological Method and Theory (4 Credits)

This class presents methods for gathering archaeological data in the laboratory and then using a variety of theoretical approaches in its interpretation. Students gather archaeological data using museum collections from a variety of sites. Those artifacts include stone tools and ceramics as well as other environmental data and architectural information in a variety of environmental and landscape contexts. For each site studied students are presented with a body of theoretical literature from which to interpret these data. A variety of interpretative methods can potentially be chosen for each site, and in most cases there is no right answer, only answers that can be supported by the data collected and interpreted using the theoretical constructs read. All students are required to write up complete site reports for each project including all raw data collected in the analysis and theoretical approaches used in interpretation.

ANTH 3640 Race and Human Evolution (4 Credits)

Examines the history of thought about the nature and evolution of human racial differences and sexual characteristics, from the mid-19th century to the present day. Considers scientific and popular models for explaining the evolution of racial differences, male-female reproductive behavior and gender roles. These models are examined in light of comparative primate data, ethnographic data and the material record of human evolution. Prerequisite: ANTH 2010.

ANTH 3655 Indigenous Feminisms (4 Credits)

This course examines a wide array of Indigenous feminisms. Rather than think of Indigenous feminisms as one static thing, we will inspect the field from multiple viewpoints and perspectives. We will draw from various thematic and transnational contexts across the Americas and Native Pacific in order to analyze the scope and significance of such knowledges, particularly as they relate to broader theories and practices of decolonization. We will begin by examining the foundational inquiries and methods of Indigenous feminist scholarship. Is gender a useful category of analysis? How have Indigenous women thought of gender? How have Indigenous women thought about, and responded to, feminism? With an emphasis on Indigenous scholars and feminists, we will cover a range of topics including (but not limited to) how Indigenous feminism fits into the feminist project, the connection between colonization and violence against Native women, the reclamation of women's initiations, gender and sovereignty, queer indigeneity, Indigenous feminist allies, and decolonial love. We will draw from readings across feminist movements, and as feminist Kanaka Maoli Professor Lani Teves says, we will attempt to "make links between Indigenous feminisms and Latinx feminisms, Black feminisms, and transnational feminisms. Rather than shy away from the tensions that emerge between multiple feminisms, instead we will attempt to cultivate nodes of alliance and solidarity to diversify our feminist tactics."

ANTH 3660 Anthropological Theory and Context (4 Credits)

History and development of particular schools of thought, paradigms, methods and methodologies that characterize contemporary anthropology. Intellectual, artistic developments, world-wide sociopolitical and economic processes that shaped much of anthropological thinking of the times. Research methods in reconstruction of human history and qualitative ethnographical research.

ANTH 3661 Museums and their Visitors (4 Credits)

This course is designed to be a comprehensive introduction to museums and their approaches to serving visitors, primarily through exhibitions and education. It examines current research and museum practice as it relates to the museum as an environment for meaningful visitor experiences and learning. The course is organized around the following core issues: (1) What do visitor experiences look like in a museum context? (2) How do museums design for different audience types? (3) What do we learn from assessing visitors' experiences? (4) How do objects, ideas and spaces affect visitor learning and experiences? Cross listed with ARTH 3661.

ANTH 3680 Quantitative Methods-Anthropology (4 Credits)

The use of statistics in all branches of anthropology; data screening; parametric and nonparametric statistics. Prerequisite: any course in basic statistics.

ANTH 3701 Topics in Anthropology (4 Credits)

Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit.

ANTH 3702 Topics in Anthropology (4 Credits)

Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit. Prerequisite: ANTH 1010.

ANTH 3703 Topics in Anthropology (4 Credits)

Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit. Prerequisite: ANTH 1010.

ANTH 3742 Museum Exhibit Development (4 Credits)

Introduces general principles of planning, development, production and evaluation of museum exhibits. Explores design elements and methods of evaluation. Students have the opportunity to do exhibit mockups and exhibit evaluation.

ANTH 3743 Managing Collections (4 Credits)

Principles and methods regarding acquisition, documentation, conservation and accessibility of collections. Law, registration methods, computerization, policy, development, ethics and preventive conservation are also discussed.

ANTH 3750 Ethnographic Methods (4 Credits)

In this course, students study the art and science of ethnographic research methods, conduct quarter-long field research projects, and write practice ethnographies. The course requires students to apply the American Anthropological Association's Code of Ethics in their research and to write Institutional Review Board applications for their projects. Course readings include texts on ethnographic methods as well as controversial and exemplary ethnographic publications for student dissection and debate.

ANTH 3790 Field Methods in Archaeology (4 Credits)

The purpose of this class is to introduce students to archaeological field methods through a combination of readings, lecture, discussion, and hands-on experience. Training begins with issues of archaeological ethics, legal mandates, and research designs. Students then transition to learning skills and methods both in the classroom and in the field. Methods you will learn will include the basics of site survey and mapping, testing, excavation, artifact recovery and field processing, and data recording in the field. Cross-listed with ANTH 1790. Prerequisite: ANTH 2310.

ANTH 3791 Critical Perspectives in Museum Studies (4 Credits)

This course critically explores museums and heritage complexes as sites of cultural production and consumption at different historical moments and in diverse cultural and national settings. Special attention is given to contemporary issues, debates, and approaches in the context of museum anthropology and heritage studies. The term museum is used to include a wide range of heritage projects that do not rely only on the traditional institution established to collect, conserve and exhibit material culture, but includes intangible heritage, historic built environment and event natural environment that was used and marked by human action.

ANTH 3850 We are Family: Anthropological Perspectives on Kinship and Relations (4 Credits)

Anthropologists have long been fascinated with defining who is related to whom. In the first half of this course, we will read works by leading historical anthropologists in order to gain an understanding of the various ways kinship has been defined in anthropology and defined in a diversity of cultures. These works will help us understand various kinship systems throughout the world and explore how anthropologists have worked with the concept of relatedness. This course will then turn to contemporary issues and we will devote our time to investigating current kinship studies of relatedness and how this applies to new reproductive technologies (like surrogate mothers, IVF, etc), and adoption.

ANTH 3875 Research Methods in Anthropology (4 Credits)

This course offers an in-depth introduction to anthropological research methods with the aim of providing students with the tools necessary to design a coherent research proposal. Starting with the notion that anthropological research is a scientific endeavor, the course offers knowledge and skills that allow for a systematic application of qualitative and quantitative methods to respond to research questions. Students will learn when and how to use one method, as well as the implications of doing it. Students will also learn how to critically read research reports that use qualitative, quantitative, or mixed methods. The course is organized in two portions. The qualitative portion will focus on a detailed exploration of the continuum that goes from posing a research question, choosing a methodology, carrying it on, and reporting the results. The quantitative portion is concentrated on collecting numerical data, methods of which are often based on a qualitative understanding of people. Quantitative analysis will present tools used to take readings, acquire data, observations, and other information necessary to test hypotheses about people, cultures and how we can understand them from their material remains. The purpose of the quantitative part of the class is to determine what is statistically significant and what ideas about people are supportable using the scientific method. This course is required for all anthropology graduate students, and suggested for advanced undergraduates who are working on senior theses, and have an interest in anthropological research. The course is also open to non-anthropology students interested in anthropological research.

ANTH 3880 Culture, Ecology, Adaptation (4 Credits)

This course is organized around these concepts: "ecology," "adaptation," "landscape," "technology," "artifact," and "architecture." The course focuses on defining and examining adaptation and the role of culture and technology in achieving adaptations, or in not achieving them. This focus will be especially pursued with respect to the concept of landscape—that is, culturally defined physical space—and the cultural artifacts that interpret and modify it in the course of human adaptation to its ecological components.

ANTH 3890 Context of Material Culture (4 Credits)

Examines how material culture both reflects and actively structures political, economic and cultural life. Considers the relationship between people and their material culture (portable objects, non-portable objects, buildings, socially-created landscapes) in Western, non-Western, ancient, and contemporary cultural contexts. Reading materials draw from the fields of ethnology, archaeology, folklore, geography, history, art and architecture.

ANTH 3981 Museum Internship (1-6 Credits)**ANTH 3990 Summer Field School-Archaeology (4-6 Credits)**

Archaeological excavation, survey and recordings; analysis and conservation of artifacts in the field.

ANTH 3991 Independent Study (1-15 Credits)**ANTH 3995 Independent Research (1-10 Credits)****ANTH 4000 Advanced Anthropology (4 Credits)****ANTH 4040 Historical Archaeology: Theory and Method (4 Credits)**

Because it is the archaeology of periods for which there is also written history, historical archaeology is a dynamic and interdisciplinary field. It also has a distinct set of concerns and methods that builds upon, but does not replicate, those of prehistoric archaeology. This course is designed to engage students in the practice of historical archaeology through readings, discussions, and the hands-on analysis of archaeological materials. The first class of each week is a discussion of readings in historical archaeology. The readings introduce students to theoretical and methodological issues in the discipline, as well as important case studies. Many of the readings have a North American focus, but address international practice. The second class of each week has a hands-on focus. Backed by readings on historic materials analysis, we discuss and practice the types of research historical archaeologists perform on actual materials, focusing on different material types each week. Students in the course each process and analyze a set of materials excavated from a historic site. Cross-listed with ANTH 2040.

ANTH 4070 Folklore and Cultural Heritage (4 Credits)

Folklore and Cultural Heritage is the study of the expressive behaviors and practices that constitute the ordinary, everyday life of communities. Folklore includes the intangible cultural heritages of all peoples, for example, the artistic expression reflected in stories and storytelling, music, dance, legends, oral history, proverbs, jokes, popular beliefs, customs, dialects and ways of speaking. Everyone has folklore and participates in the "folklore process." Cross-listed with ANTH 3070.

ANTH 4200 Native North America (4 Credits)

Native American cultures north of Mexico. Cross-listed with ANTH 2200.

ANTH 4220 Human Rights in Latin America (4 Credits)

This course aims to provide students with an overview of human rights issues and how they have evolved in recent Latin American history, from the military dictatorships of the authoritarian period to contemporary challenges faced in the region's democracies. It also aims to place human rights concerns in a broader sociopolitical context. Many of today's human rights issues are rooted in the past, but others respond to new and emerging challenges. In this class, we explore the roots and contemporary realities of human rights movements in Latin America. The examination of these topics should allow us to pose broader questions about the meaning of human rights in a globalized world, the efficacy of international instruments for rights enforcement, and the complex challenges that linger in the aftermath of authoritarianism and state-sponsored terror.

ANTH 4290 Art and Anthropology (4 Credits)

This class introduces students to anthropological approaches to the study of art and visual culture. The first part of the course covers foundational work in the field, introducing key concepts as well as methods for viewing and understanding art from a cross-cultural/comparative and interdisciplinary perspective. We examine the relationships among art, technology and the environment, as well as the importance of form, function, style, meaning, and aesthetics in the study of art. The second part addresses issues of contemporary concern in art and anthropology, such as the influence of market forces and tourism on artistic traditions and cultural expressions; the intersection of art and identity; the politics of cultural representation. The course also explores the ethnographic turn in some forms of contemporary art as well as doing ethnography as art.

ANTH 4320 Medical Anthropology (4 Credits)

This course is an introduction to medical anthropology. As a professional and academic field, medical anthropology provides conceptual and analytical tools for a comprehensive understanding of health, illness and healing. It is concerned with the ways in which individual experience is inserted in social and historical contexts and it explores ideas and behaviors related to health in different societies and social groups, as well as the ways in which different groups organize their resources to face health-related needs in the context of their social and economic realities.

ANTH 4360 Cross-Cultural Perspectives of Women (4 Credits)

Cross-listed with ANTH 3360.

ANTH 4370 Sex, Class and Race in Latin America (4 Credits)

This course uses an intersectional approach to the study of sex, class and race in Latin America. Intersectionality aims at understanding the interlocking relation between sex, class, race and other aspects, and how these are rooted in historical and social structures, and are reproduced and resisted through individual and collective experience. In this course we will aim at understanding such history, culture and peoples with a special emphasis on examining their heterogeneity, and aiming at understanding how such heterogeneity is also related with social inequality. We will also examine some contemporary issues such as women's rights, indigenous movements, human rights, migrations, and economy with an emphasis on their manifestations at the intersections of sex, class, and race.

ANTH 4660 Anthropological Theory and Context (4 Credits)

History and development of particular schools of thought, paradigms, methods and methodologies that characterize contemporary anthropology. Intellectual, artistic developments, world-wide sociopolitical and economic processes that shaped much of anthropological thinking of the times. Research methods in reconstruction of human history and qualitative ethnographic research.

ANTH 4700 Readings in Anthropology (1-5 Credits)

Directed readings in anthropology under faculty supervision. May be repeated for credit.

ANTH 4701 Special Topics in Anthropology (1-5 Credits)**ANTH 4702 Special Topics in Anthropology (1-5 Credits)****ANTH 4703 Special Topics in Anthropology (1-5 Credits)****ANTH 4704 Special Topics in Anthropology (1-5 Credits)****ANTH 4740 Perspectives-Museum Studies (4 Credits)****ANTH 4744 Museum Anthropology (4 Credits)**

This course introduces students to museum anthropology and the ethnography of museums as well as the theoretical and practical sides of museum studies. The course is based on the following premises: Museum anthropology is a form of applied anthropology in which museums are a venue for making anthropological insights and knowledge accessible and relevant to the public; Museums, as institutions of public culture, are a forum for exploring contemporary social issues and concerns; The role of museums in society and civic engagement is at the core of contemporary museum anthropology and Museology.

ANTH 4745 Museum Practicum (2 Credits)

Individually designed practicum in student's area of interest.

ANTH 4981 Museum Internship (1-6 Credits)**ANTH 4991 Independent Study (1-17 Credits)****ANTH 4995 Independent Research (1-17 Credits)**

Art - Studio (ARTS)

ARTS 3055 Advanced Drawing (4 Credits)

Working with a variety of materials and techniques, students hone their drawing skill and at the same time create finished drawings defined by content. Problems posed encourage independent thinking, experimentation and the development of a personal technical base. Lab Fee. Prerequisite: ARTS 2045 or ARTS 3065 or permission of instructor.

ARTS 3065 Life Drawing (4 Credits)

An intensive course in drawing the human figure, clothed and unclothed, to explore the human form in terms of proportion, movement, light and shadow, composition, color and personal expression. Students experiment with a range of materials. Lab Fee. Prerequisite: ARTS 1250 or permission of instructor.

ARTS 3125 Figure Painting (4 Credits)

An intensive course in painting the human body--the most timeless subject of art. Students work mainly in oils and experiment with a variety of surfaces and techniques. Students also investigate line, proportion, light and shadow, composition and color. Final project: life-size painting of two figures. Lab fee. Prerequisite: ARTS 2115 or ARTS 3065 or permission of instructor.

ARTS 3145 Painting Workshop (4 Credits)

Concentration on selected techniques and approaches to painting. Topics change. Course may be repeated to a maximum of 12 credits. Lab Fee.

ARTS 3452 Photography and Society (4 Credits)

This course celebrates the enduring tradition of social documentary photography and visual storytelling. Participants will practice basic principles of photography, such as; camera, lighting and composition. Basics of Adobe Photoshop and Lightroom will be presented as post-production editing tools. Contemporary Social Documentary Photography practice will be positioned within the context of the history of photography. Emphasis will be on the production of socially engaged photography projects, from conception to print. Creation of a final portfolio will be required, either as an edited selection of prints, or published online. Creation of a personal website will be required. Community engaged collaboration will be a component of this course. Collaboration with another DU class may also be a component. No prerequisites. This course may satisfy one requirement for a Photography and Society Certificate. "Photography and Society." Students must have a digital camera with manual metering capability; contact the professor if you cannot meet this requirement.

ARTS 3555 Ceramic Workshop (4 Credits)

Concentration on selected techniques and experimental approaches to ceramics. Topics change. Course may be repeated to a maximum of 12 credits. Lab fee. Prerequisite: ARTS 2515 or approval of instructor.

ARTS 3655 Sculpture Workshop (4 Credits)

Concentration on selected techniques and experimental approaches to sculpture. Topics change. Course may be repeated to a maximum of 12 credits. Lab fee.

ARTS 3701 Topics in Studio Art (4 Credits)

Selected topics in advanced studio art research. Course may be repeated to a maximum of 12 credits. Lab fee. Prerequisite: instructor's permission.

ARTS 3966 Studio Art Travel (1-4 Credits)

A travel course to selected locations to visit galleries, museums and artists' studios. Location and content of course change. Variable credit. May be repeated to a maximum of 12 credits. Lab fee.

ARTS 3980 Studio Art Internship (1-4 Credits)

The student is responsible for locating the internship and gaining approval for it, using the internship guidelines and contract form in the art office. Typical internships have been located in commercial galleries, fine art printmaking houses, professional artists' studios and non-profit arts organizations.

ARTS 3991 Independent Study (1-6 Credits)

Supervised studies not addressed in this catalog of classes. Advanced projects must be faculty approved. Permission/registration form is available from the Office of the Registrar.

ARTS 4991 Graduate Independent Study (1-12 Credits)

This course is for MFA candidates who wish to pursue graduate-level independent work under the guidance of a studio art faculty member. Permission of the student's graduate advisor and the studio art instructor must be obtained before enrolling. May be repeated to a maximum of 12 credits.

Art History (ARTH)

ARTH 3656 Curatorial Practicum (4 Credits)

Students will work in curatorial teams to plan and execute an effective exhibition of contemporary art. This process may include choosing a theme and selecting works of art, researching artists and themes, budgets, scheduling, developing an exhibition checklist, modeling the gallery, visual exhibition design, conservation and collections management factors, shipping, installation, educational outreach to the public, publicity and other issues related to exhibition planning.

ARTH 3661 Learning in Museums (4 Credits)

Comprehensive introduction to museum education. Examines informal education, learning theories, interactive education, exhibits and programs. Cross-listed with ANTH 3661.

ARTH 3701 Topics in Art History (1-4 Credits)

Selected themes and topics from the history of art. Content changes and course may be repeated to a maximum of 12 credits.

ARTH 3702 Topics in Contemporary Art (4 Credits)

This course offers an in-depth exploration of contemporary art and critical theory from a cross-disciplinary, global perspective beginning in the 1960s. We couple intensive reading and writing assignments to meetings with guest creatives and thinkers, visits to local art spaces, and roundtable discussions about new research. The particular art historical topic varies from year to year.

ARTH 3813 Arts of the American West (4 Credits)

This class covers a wide range of art objects and styles from the 17th century to the present in the West of the United States, from buffalo robe paintings and baskets to cowboy art and contemporary abstract landscapes. Particular attention is paid to the diversity of art traditions—Native American, Spanish and Mexican, European, Asian and Latin American—as they converge in this geographic space.

ARTH 3815 Puritan, Shaker, Hindu: Material Religion in North America (4 Credits)

The diversity of religious experience and spirituality is emphasized in this historical examination of image and artifact in North America. Beginning with sacred indigenous arts and including Puritans, Shakers, Judaism, Mormons, Ghost Dance religion, Buddhists, Hindus, and others, this class considers the ways in which different spiritual worldviews are expressed through and shaped by the art and objects people create and the environments they build. It looks at the encounters between cultures in colonial and post-colonial contexts that result in ever changing material forms of religion. Students learn through slide-lecture-discussions, reading, small group discussions, research papers or presentations, and field trips.

ARTH 3817 Gothic Art (4 Credits)

This course examines the art of the Late Middle Ages in Europe, from roughly 1140 to 1400. Gothic architecture, sculpture, painting, stained glass and the sumptuous arts (metal, textiles) are examined within their broader social, political and religious contexts. Particular attention is paid to the Gothic Cathedral - that quintessential window into the medieval world—its beliefs, aspirations, social and political realities.

ARTH 3818 Art of Renaissance Europe (4 Credits)

This course provides an examination of the artistic cultures in Europe during the Renaissance (15th and 16th centuries). Depending upon the quarter, this course will be a general survey of European art during the Renaissance or a more focused exploration of a sub-period, such as painting in fifteenth-century Italy. Chronological and geographic factors determine the overall theme and structure of the course. Students gain both a sound knowledge of key artistic monuments of the period, as well as a conceptual framework according to which they may organize their knowledge. This class may be repeated for a maximum of 8 credits.

ARTH 3822 Northern Renaissance Art (4 Credits)

This course explores the dramatic developments in the arts (particularly panel painting, manuscript illumination and sculpture) in Northern Europe from around 1350 to 1550. From lavishly decorated Books of Hours and the development of stunningly naturalistic oil paintings on panel in the early 15th century through the development of printing and the rise of self-portraiture, genre and landscape depictions, this class traces the important role played by Dutch, Flemish, German and French artists in the transition from late medieval to early modern artistic forms and practices. The role of art in shaping and expressing religious, civic, political and economic concepts are explored, as well as the rise of the social and intellectual standing of the artist. Among the artists examined include Jan van Eyck, Rogier van der Weyden, Albrecht Dürer, Hieronymus Bosch and Pieter Bruegel the Elder.

ARTH 3823 17th-Century European Art (4 Credits)

This course considers European arts of the 17th century. Depending upon the quarter it may be a general survey of European art during the seventeenth century or a more focused exploration of a sub-period, such as Italian Baroque or the Old Dutch Masters: Rembrandt, Vermeer and Frans Hals. This class may be repeated for a maximum of 8 credits.

ARTH 3825 Abstract Expressionism (4 Credits)

In the years immediately following World War II, American art flourished through a generation of artists whose work successfully moved beyond (and at its best, matched) the substantial innovations of modern artists working in Europe around the time of World War I. From richly varied backgrounds and equipped with a deep understanding of art history, these artists forged careers during the Depression and, though fiercely independent, united in the late 1940s with the goal of establishing a new American modern art. Their monumental, highly singular, expressive abstractions (and near-abstractions) gave rise to the movement called Abstract Expressionism, which dominated American painting in the 1950s and beyond.

ARTH 3832 19th-Century Art (4 Credits)

This course surveys the major art movements in Europe from the late 18th century to the end of the 19th century. Major painters, sculptors, printmakers and architects of the following movements will be presented: Neo-classicism, Romanticism, Academic Painting, Realism, the Pre-Raphaelites, Impressionism, Post-Impressionism, Symbolism and Art Nouveau. Their works will be studied in light of the social, political and cultural milieu in which they appeared. Special attention will be paid to representations of race, class, gender and colonialism.

ARTH 3834 Global Contemporary Art (4 Credits)

This class explores contemporary art, including but not limited to painting, sculpture, performance art, installations, and new media, through the lenses of identity, the body, time, place, language, and spirituality. These narratives provide threads of continuity across time and place, but we will also focus on individual artistic interpretations as we delve deeper into cultural specificities and audience reception around the world. We will identify and analyze connections between recent art theoretical perspectives and the emergence of various art trends. This course considers the role of the international art market, global art fairs, artist retrospectives, and recent museum and gallery exhibitions as participatory elements in the construction and discussion of contemporary art.

ARTH 3838 Connoisseurship (4 Credits)

In this class the historical roots, theoretical and philosophical underpinnings, and actual practice of connoisseurship are studied using objects from the museum's collection.

ARTH 3839 Topics in Modern Art (4 Credits)

Selected themes and topics from the 18th century to the present. Topics change, and the course may be repeated to a maximum of 12 credits.

ARTH 3840 Sacred Arts of Asia (4 Credits)

This course explores the sacred art and architecture of Asia, including but not limited to India, China, and Japan. Major religious traditions, including Buddhism, Hinduism, and Islam, are viewed through the lens of artistic development; indigenous religious traditions and philosophical constructs, including Shintoism, Daoism, Confucianism, and Bon are also explored for their influence in art, architecture, and visual culture more broadly in and between Asian regions.

ARTH 3862 Olmec to Aztec: Mesoamerica (4 Credits)

This course is an introduction to the art and archaeology of the indigenous peoples of Mesoamerica from about 2000 BC to AD 1521. The course explores the early royal art of the Olmec, the colossal pyramids of Teotihuacan, the manuscripts of the Mixtec, and the imperial power of the Aztecs. This class presents a timeline of Mesoamerica and investigates how the various civilizations of Mesoamerica shared aspects of world-view, cosmology and daily life. Students will be able to identify and discuss how these elements manifested in the art and architecture of Mesoamerican cultures. Furthermore, the course investigates issues of shamanism, kingship and power, warfare, gender, and human sacrifice.

ARTH 3863 Kings and Cosmology: Maya Art (4 Credits)

This course is an introduction to the art and archaeology of the Maya from about 300 BCE to 1200 CE, although the beliefs and traditions of the living Maya will inform this study of the past. The Maya are perhaps the most famous of the several cultures comprising what is known as Mesoamerica. A highly advanced culture, they built soaring temples, carved elaborate portraits of their kings and developed a complex writing system including a calendar. The course explores these things with a constant eye to understanding the Maya worldview, cosmology and daily life. By the conclusion of the class, students should be able to read their intricate pictures, discuss the strategies of powerful Maya rulers and understand how Maya art and architecture reflect their concepts of time and the cosmos.

ARTH 3864 Buddhism(s) and Arts (4 Credits)

This survey examines the history, practices, ritual contexts, aesthetics and artistic traditions of Buddhism including architecture, calligraphy, sculpture and painting, in terms of its social and historical context, political and religious functions, as well as issues including artistic production, changing techniques and symbols, and the market/audience. The primary goal is to understand Buddhism as reflected in art and culture.

ARTH 3867 The Circle and the Four Corners: Native North American Art (4 Credits)

This course is designed as an introduction to the art and architecture of the native peoples of North America from the earliest signs of humans in North America to the present. Cultures covered include those from the Southwest, the Northwest, the Southeast Ceremonial Complex, the Plains and contemporary Native American artists. By the conclusion of the class, students will understand the cultural sequence and geographic dispersion of native North America. Students will also understand how the various civilizations of North America shared aspects of world-view, cosmology and daily life, and be able to identify and discuss how these elements manifested in the art and architecture of native North American cultures.

ARTH 3868 Art of the Andes (4 Credits)

This course is designed as an introduction to the art and architecture of the native Pre-Columbian peoples of the Andes. Cultures covered include Chavin, Nasca, Wari and the Inca.

ARTH 3871 Women in Art (4 Credits)

This course considers the roles of women in art and explores the impact of race, class and gender on art produced from the Middle Ages to the present with discussions of women artists, women patrons and images of women. Cross listed with GWST 3871.

ARTH 3872 Introduction to Conservation (4 Credits)

This lecture course familiarizes the student with the concepts and challenges of conservation, its role in museums and the care of collections. Specific emphasis is given to the materials, structure, deterioration and preservation of material culture. Field trips to various museums and/or workshops to make appropriate display mounts and storage containers enhance the understanding gained from readings and lectures.

ARTH 3875 History of Collections (4 Credits)

This course traces the history of collections from the Renaissance to the present, addressing the interconnections between artists, patrons, dealers, art markets, provenance, connoisseurship and the historical development of museums and private collections. Each week's readings of journal articles and chapters focus on different types of collections or themes, including royal and imperial collections, cabinets of curiosities, excavating and transporting antiquities, British country estates and the Grand Tour, the establishment of national museums, the relationship between American collectors and dealers, ethnographic objects in Western collections, Nazi looting, restorers and forgers, and artists' collections, to name a few.

ARTH 3880 Mosques and Aniconism: Islamic Art and Architecture 650-1250 (4 Credits)

What is 'Islamic' in Islamic art? An introduction to art and architecture in the Islamic lands from the days of the Prophet Muhammad in the 7th century until the Mongol conquest of the Middle East in the mid-13th century. The course surveys mosques, palaces, madrasas, and tombs, and also calligraphy, sculpture, ceramics, and painting in historical and literary contexts. It covers a vast geographical area, from Spain in the west to Iran and Central Asia in the east, and discusses both common and unique characteristics of architecture and figurative representations in these regions. Emphasis will be given to the early Islamic period in Greater Syria and to artists' response to Byzantine and Sassanid (pre-Islamic Persian) art and architecture.

ARTH 3881 Dragons and Sultans: Islamic Art and Architecture 1250-1600 (4 Credits)

Art and architecture in the Islamic lands from Genghis Khan in the 13th century to the Ottoman Sultan Suleyman the Magnificent in the 16th century. The course consists of three parts. First, it examines the changes that occurred in Islamic art as a result of artists' acquaintance with East Asian art and culture (14th century). Second, it discusses art and architecture in Central Asia and Afghanistan under Timurid rule (late 14th-15th century), followed by an overview of the artistic achievements in the Early Modern Islamic lands under the Ottomans, Safavids, and Mughals (16th century). The course explores works of art in historical, cultural, and literary contexts, and points to the unique characteristics of each geographical region, as well as to pan-Islamic form and content. Among the topics that will be discussed: the architect Sinan and his legacy, the response of Islamic painting to European art, and representations of royal and religious concepts.

ARTH 3910 Art History Travel (4 Credits)

A travel course to selected locations to study major monuments and collections of art and architecture. Location and content change. This class may be repeated for a maximum of 8 credits. Prerequisite: instructor's permission.

ARTH 3991 Independent Study (1-10 Credits)

This class should be used for individual study of a special topic that is not offered in the art history curriculum described in this catalog. Permission/registration form is available from the Office of the Registrar.

ARTH 4301 Seminar in Art History Methods (4 Credits)

This seminar considers the history of art history and the development of various methods that art historians use to interpret and understand art. Required of all MA candidates in art history.

ARTH 4302 Research Practicum (4 Credits)

The goal in this course is to learn professional methods and resources for original research in areas of American art where little or no published research exists. Students learn through short exercises in biographical, object-oriented, internet, and archival research; by tackling a 10-week research project of their choice within the topic for the quarter; and by networking with each other to share resources and progress. Required of all MA candidates in art history.

ARTH 4312 Seminar: Indigenous American Art (4 Credits)

Selected topics in Indigenous American Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4313 Seminar in Islamic Art (4 Credits)

Selected topics in Islamic Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4314 Seminar in Medieval Art (4 Credits)

Selected topics in Medieval Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4321 Seminar in Renaissance Art (4 Credits)

Selected topics in Renaissance Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4333 Seminar in 20th Century Art (4 Credits)

Selected topics in 20th century Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4334 Selected Topics in Contemporary Art (4 Credits)

Selected topics in contemporary art. Advanced research papers and presentations. Content changes. May be repeated for a maximum of 8 credits.

ARTH 4336 Seminar in American Art (4 Credits)

Selected topics in American Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4651 Museum Methods and Principles (4 Credits)

This class surveys the major activities, goals, and organization of the art museum within today's world. Students meet with a variety of museum professionals to discuss the changing dynamics within art museums, as well as ethical and practical issues of museum work. The class reads both classic and current literature on museum issues and practice, and participates in research, collection, and exhibition projects. Required of all M.A. art history students pursuing the Museum Studies option.

ARTH 4652 Museum Internship (0-10 Credits)

Arranged internship in student's area of specialization. Students should take ARTH 4651 Museum Methods and Principles first. Prerequisite: instructor's permission.

ARTH 4801 World Art I for Graduates (0 Credits)

Survey of World Art Prehistory-1000 for graduate students who are required to take this course due to performance on the art history Qualifying Exam.

ARTH 4802 World Art II for Graduates (0 Credits)

Survey of World Art 1000-1700 for graduate students who are required to take this course due to performance on the art history Qualifying Exam.

ARTH 4803 World Art III for Graduates (0 Credits)

Survey of World Art 1700-present for graduate students who are required to take this course due to performance on the art history Qualifying Exam.

ARTH 4991 Independent Study (1-10 Credits)

This class should be used for individual study of a special topic that is not offered in the art history curriculum described in this catalog. Permission/registration form is available from the Office of the Registrar.

ARTH 4995 Independent Research (4 Credits)

Students should see their advisor for guidelines regarding the Master's Research Paper class.

Biology (BIOL)

BIOL 3005 Science Communication (4 Credits)

Science communication has shaped, and continues to shape, the world in which we live (e.g., why you wash your hands, why we don't feed bears in U.S. national parks anymore, and why some students imagine themselves becoming scientists or not). Sharing how science is conducted and how new knowledge is generated through the scientific method also plays a critical role in our future: creating engaged citizens, shaping the next generation of scientists, increasing diversity and diverse perspectives in the sciences, informing policy-makers and lawyers, combatting misconceptions, increasing trust of scientists, and guiding our own individual behaviors. But, like any other complex skillset, science communication takes practice. This course provides students with a range of resources and skills for effective, ethical, and evidence-based communication of complex socio-scientific issues. It provides a supportive environment in which students will practice and refine their science communication through peer feedback and engagement with real audiences. The focus is on cultivating practical communication skills, with emphasis on effective speaking, writing and exhibition of scientific topics with the variety of audiences students will encounter in their future careers. Course readings, activities, and final projects also examine how identity shapes both the science we do and the lenses we and other stakeholders bring to communication tasks. The course is hybrid, highly interactive, and writing-intensive. This course is restricted to Junior or Senior Standing UG majoring in the College of Natural Sciences and Mathematics.

BIOL 3035 Invasive Species Ecology (4 Credits)

This course investigates those plants and animal species that have dramatically expanded their ranges and cause ecological harm. Topics covered include the mechanisms of ecological impacts across the globe, how invasive species are used to test basic ecological theory, the application of this research for managing real species, and related issues such as the debate within the scientific community about the term "invasive." We use a case-study approach, and students have the opportunity to go into the field as a class to observe the real invasions and learn sampling methods.

BIOL 3044 Coral Reef Ecology (3 Credits)

Ecology of coral reefs; organization and distribution of reefs; review of reef organisms and their interactions with each other and their physical environment; threats to coral reef conservation. This course counts as a category elective for Ecology and Biodiversity majors. Prerequisite: (BIOL 2010 or BIOL 2050) OR (GEOG 1201, GEOG 1202, and GEOG 1203).

BIOL 3045 Coral Reef Ecology Lab (1 Credit)

Ecology of coral reefs laboratory to supplement lecture material; travel to the Caribbean over spring break to observe coral reefs firsthand; introduction to research methods. SCUBA certification and permission of instructor required. A travel and dive fee is associated with this course.

BIOL 3055 Ecology of the Rockies (4 Credits)

A week in residence at the Mt. Evans Field Station prior to the start of fall quarter includes field projects dealing with ecology and environmental issues. On campus classes involve data analysis and interpretation and formal scientific communication. Themes include terrestrial and aquatic ecosystems, taxonomic groups ranging from conifer stands to aquatic insects and mountain goats. Lab fee associated with this course. Prerequisite: BIOL 2010 or permission of instructor.

BIOL 3070 Ecological Field Methods (4 Credits)

Series of field exercises for students to learn principles and procedures of field methodology, data analysis and technical writing in ecology; problems drawn from population, community and ecosystem ecology. Lab fee associated with this course. Prerequisite: BIOL 2010.

BIOL 3085 Insect Ecology (4 Credits)

A general introduction to insect biology and the science of entomology. Arthropods are the most diverse group of animals on Earth and insects account for more than half of all known living organisms. This course explores the biodiversity of insects on Earth, insect morphology and physiology. The evolutionary history and taxonomy of key orders of insects is emphasized as well as the importance of insects to our everyday lives. This course counts as a category elective for Ecology and Biodiversity majors. Prerequisites: BIOL 1010, BIOL 1011, and BIOL 2010.

BIOL 3090 Microbial Ecology (4 Credits)

Interactions among microorganisms and their environment. Impact of ecological principles on microbial diseases, pollutant degradation, nutrient cycles and global change. Prerequisites: BIOL 1010, BIOL 1020, AND BIOL 2510.

BIOL 3095 Global Change Ecology (4 Credits)

Over the past century, the mean surface temperature of our planet has increased slightly less than 1°C. While this may seem like a small increment, this change is already profoundly affecting Earth's organisms and ecological communities, and predictions for the impacts of continued change range from severe to catastrophic. Humans are also changing the environment through alteration of nutrient and water regimes. Topics include cause of climate change, comparison to past climatic change, human contribution to change and effect on organisms, communities and ecosystems. Prerequisites: BIOL 1010, BIOL 1011, AND BIOL 2010. RECOMMENDED PREREQUISITES/COREQUISITES: BIOL 2090.

BIOL 3110 Special Topics: Biology (1-5 Credits)

Topics of special interest to teaching/research faculty of department presented as needed to complement and expand existing curriculum. May be repeated for credit. PREREQUISITES: BIOL 1010.

BIOL 3120 General Microbiology (4 Credits)

Fundamental principles of microorganisms in the world and in disease; role of bacteria in biological phenomena. Includes laboratory. Lab fee associated with this course. Counts as a category elective for Ecology and Biodiversity majors. Prerequisite: BIOL 2120.

BIOL 3145 Cellular and Molecular Biology of Cancer (4 Credits)

This course examines the mechanisms that underlie the development and progression of cancer. The cellular and molecular events that drive uncontrolled cell proliferation and eventual metastasis of tumors are discussed. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

BIOL 3150 Intracellular Dynamics (4 Credits)

Focuses on spatial and temporal control of intracellular processes with an emphasis on neuronal and endocrine cells. Topics include vesicular traffic, protein targeting, dynamics and spatial organization of signaling complexes. Emphasis on modern techniques of cell and molecular biology with examples from primary literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

BIOL 3160 Biophysics: Ion Channels & Disease (4 Credits)

Examines ion channel structure and function and the ways in which this information provides insight into human disease. The focus is on the use of biophysical techniques in combination with molecular and genetic analysis of channel genes. General Physics recommended. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

BIOL 3230 Nutrition (3 Credits)

Investigation of metabolism, all nutrients and various applications of nutrition to sports and healthy living. Prerequisite: BIOL 3250.

BIOL 3241 Anatomy and Physiology of the Skeletal, Nervous and Muscular systems (5 Credits)

This course is designed to introduce students to the fundamental concepts, content and scientific bases of Skeletal, Muscular, and Nervous system anatomy and physiology at both macroscopic and microscopic levels. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. The course will utilize diverse resources, exercises, and activities to engage you in the learning process, including, text, video, animations, models, dissections, inquiry-based learning, and a variety of assessments. Please note that the lab portion of this course does require dissection. Prerequisites: BIOL 2120.

BIOL 3242 Human Anatomy and Physiology - Systems of homeostasis (5 Credits)

This course is designed to introduce students to the fundamental concepts, content and scientific bases of Cardiovascular, Respiratory, Urinary, Digestive, Immune and Reproductive system anatomy and physiology at both macroscopic and microscopic levels. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. The course will utilize diverse resources, exercises, and activities to engage you in the learning process, including, text, video, animations, models, dissections, inquiry-based learning, and a variety of assessments. Please note that the lab portion of this course does require dissection. Prerequisites: BIOL 2120.

BIOL 3245 Human Anatomy (5 Credits)

This course is designed to introduce you to the fundamental concepts, content and scientific bases of human anatomy. Specific content covered in the course includes: the Language of Anatomy, Body Organization, Histology, and Integument, Skeletal, Muscular, Nervous, Cardiovascular, Respiratory, Urinary, Digestive and Reproductive anatomy at both macroscopic and microscopic levels. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. The course will utilize diverse resources, exercises, and activities to engage you in the learning process, including, text, video, animations, models, dissections, inquiry-based learning, and a variety of assessments. Please note that the lab portion of this course does require dissection. Prerequisite: BIOL 2120 Cell Structure and Function.

BIOL 3250 Human Physiology (5 Credits)

Functional relationships of human organ systems with coordinated laboratory activities and experiments that demonstrate and test physiological principles. Lab fee associated with this course. Prerequisites: BIOL 1010.

BIOL 3251 Exercise Physiology (4 Credits)

This course will cover exercise physiology topics included but not limited to: energy systems, physiological response to exercise/training, and exercise programming. A strong background in human physiology is recommended. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 1010.

BIOL 3252 High Altitude Physiology (4 Credits)

This course is an advanced course in physiology for those interested in both the impacts of altitude exposure on health and athletic performance. We live at altitude in Denver, and in fact there are many factors affecting our bodies (which we may or may not realize) that impact our daily lives. This course aims to provide insight on the acute and chronic physiological responses of altitude as well as to provide a deeper understanding into the use of hypoxic environments for improving health and benefiting athletic performance. We will explore the physiological mechanisms related to these reduced oxygen environments as well as develop projects that contribute to the understanding of using this environment as a stimulus. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 3242.

BIOL 3253 Environmental Physiology of Animals (4 Credits)

By studying species across the animal kingdom, we will learn about the vast array of physiological strategies that have evolved to help animals maintain homeostasis in the face of varied environmental challenges. We will cover foundational principals of animal physiological ecology and evolution, as well as new and exciting discoveries through weekly discussions of primary literature. We will focus primary literature discussions on "extreme environments," as Earth's harshest landscapes provide exciting and powerful examples of adaptations of physiological systems. This course will be delivered through a combination of lectures, active learning assignments, readings from the scientific literature, and group discussions. By the end of this course, you will develop a new perspective on the ecological and evolutionary factors that shape physiological similarities and differences among the animals of our planet (including humans). This course counts as a category elective for the Ecology and Biodiversity major and Physiology in Health and Disease major. Prerequisites: BIOL 1010 and BIOL 1011.

BIOL 3256 Advanced Human Anatomy & Physiology (5 Credits)

This one quarter course is intended for advanced biology and physiology majors with an interest in the anatomical structure and physiological functioning of body systems. This course builds upon the Human Anatomy and Human Physiology courses that are prerequisites. This advanced course will explore in greater depth understanding mechanisms of action of major body systems and elaborate on the relationship between structure and function. In addition to didactic content, students will complete evaluation of primary literature and design laboratory experiments to test hypotheses of interest. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, models, dissections, inquiry-based learning, experimentation and a variety of assessments. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. Please note that the lab portion of this course requires dissection. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisites: BIOL 3241 and BIOL 3242.

BIOL 3260 Nutritional Physiology (4 Credits)

This course is designed to introduce the fundamental concepts, content and scientific bases of nutritional physiology at the levels. This course will examine the scientific structure and properties of carbohydrates, proteins and lipids as the major macronutrients required for human health. In addition, it includes exploration of the digestion, absorption and metabolism of both macronutrients and micronutrients. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, inquiry-based learning, experimentation and a variety of assessments. Prerequisite: BIOL 2120.

BIOL 3280 Intro to Pathophysiology (4 Credits)

This course is designed as an introduction of the mechanisms and consequences of disease based on physiological dysfunction in the major organ systems. The course will focus on the fundamental concepts and processes of human pathophysiology through exploration of the unique physiological roles of several body systems, how these systems have important integrative relationships that underlie the overall physiological functioning of healthy humans, and how system function is altered in disease and the clinical manifestations of these changes. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 2120. A course in human physiology is recommended.

BIOL 3410 Animal Behavior (4 Credits)

This class examines animal behavior from an evolutionary and ecological perspective. The course provides the background needed to understand behavioral evolution, including a focus on the inheritance of behavior, natural selection, sexual selection, and kin selection. This class studies the evolution of a variety of behaviors, including communication and displays, mate choice, parental care, cooperation, mating systems, social behavior, habitat selection, foraging, and anti-predator behavior. The emphasis is on theoretical principles, design of experiments, and interpretation of data. This course counts as a category elective for the Ecology and Biodiversity major. Prerequisites: BIOL 1010 and BIOL 1011, and BIOL 2010. Recommended Prerequisite: BIOL 2090.

BIOL 3560 Molecular Biology Laboratory (4 Credits)

Laboratory based course that covers techniques in gene excision, cloning and reinsertion and gene sequencing. Lab fee associated with this course. Prerequisite: BIOL 2510, or permission of instructor.

BIOL 3570 Proteins in Biological Systems (4 Credits)

Proteins considered in their biological setting; protein synthesis and degradation; survey of protein functions in vivo; introduction to protein biotechnology. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120.

BIOL 3610 Developmental Biology (4 Credits)

Processes and mechanisms of development, exemplified by higher animal embryogenesis, with consideration of microbial model systems. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120 and 2510.

BIOL 3615 Blood Vessel Development and Disease (4 Credits)

This course details the underlying biological programs during blood vessel development and mechanisms that lead to vascular pathologies. The class will incorporate aspects embryology, signaling transduction, and genetics as well as current techniques in developmental biology to comprehensively cover how blood vessels are formed embryonically. Additionally, we will discuss in detail how defects in blood vessel-related signaling programs later manifest into disease. Prerequisite for this course is Cell Structure and Function (BIOL2120/2121).

BIOL 3630 Cell Biology of Development (4 Credits)

Every organism has a stereotypical shape, but how does this shape arise? This course examines the cellular and molecular mechanisms that direct the forming of body and tissue shape. This course counts a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

BIOL 3640 Introductory Neurobiology (4 Credits)

Organization and function of vertebrate central nervous system; nature of action potential, biochemistry of neurotransmitters, neuropeptides, functional anatomy of nervous system, phylogeny of nervous system. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

BIOL 3641 Systems Neuroscience (4 Credits)

Structure and function of the brain and spinal cord, emphasis on functional systems including sensory perception, motor control and consciousness. This course counts as a category elective for the Cognitive Neuroscience concentration. Prerequisite: BIOL 3640.

BIOL 3642 Neuropharmacology (4 Credits)

How psychoactive drugs exert their effects on the nervous system; drugs of abuse and drugs used in the treatment of psychotic and neurodegenerative disorders. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120. Recommended prerequisites: BIOL 3640.

BIOL 3644 Neuromuscular Pathophysiology (4 Credits)

Cellular and molecular basis for normal nerve and muscle functions and the alteration of these functions by toxins, trauma and diseases of the brain, nerves and muscles; how specific insults produce clinical symptoms and pathology. Prerequisite: BIOL 2120.

BIOL 3646 Seminar: Cognitive Neuroscience (2 Credits)

This seminar is the capstone course for the neuroscience portion of the cognitive neuroscience program. Seminar topics include but are not limited to neurological disorders, model systems in neuroscience and sensory systems.

BIOL 3647 Neuroscience of Movement (4 Credits)

Producing the vast array of movements that humans (and many animals) use everyday represents one of the body's greatest challenges and greatest successes. These various movements require that the nervous, muscular, and skeletal systems work in concert to achieve a common goal. This course will explore the scientific basis of movement production, with particular emphasis on the neuroscience of motor control. We will explore how the nervous system drives the development of movement strategies at an early age, modifies movement strategies to adapt to changing demands throughout life, and how injury, dysfunction, and/or aging can lead to movement challenges. This course counts as a category elective for the Physiology in Health and Disease major and Cognitive Neuroscience concentration. Required prerequisite: Cell Structure & Function (BIOL 2120); Recommended prerequisite (1 or more of the following): Introduction to Neuroscience (BIOL 3640) or permission of instructor.

BIOL 3648 Molecular Mechanisms of Neurological Disease (4 Credits)

This course will be an in-depth study into some of the key molecular mechanisms involved in the pathogenesis of human neurological disease. A particular emphasis will be placed on the role of RNA regulation and metabolism. The primary focus will be on five devastating diseases: 1. Spinal Muscular Atrophy (SMA) 2. Fragile X Syndrome (FXS) and Fragile X Tremor Ataxia Syndrome (FXTAS) 3. Myotonic Dystrophy type 1 and 2 (DM1 and DM2) 4. Spinocerebellar Ataxia type 2 (SCA2) 5. Amyotrophic Lateral Sclerosis (ALS) and Frontotemporal Dementia (FTD) This course will cover a variety of topics including disease pathophysiology and pathogenesis. However, readings will be assigned from the recent primary literature discussing cellular and molecular mechanisms. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2510 Genetics.

BIOL 3649 Neurodegeneration and Neurotrauma: Mechanisms and Therapeutics (4 Credits)

Neurodegeneration and Neurotrauma: Mechanisms and Therapeutics covers the following disorders: Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, Huntington's disease, spinocerebellar ataxia, Creutzfeldt-Jakob disease, multiple sclerosis, traumatic brain injury and spinal cord injury. Course literature includes primary journal articles and review papers describing the etiology and pathophysiological mechanisms of these disorders. Potential therapeutic approaches to treatment are also investigated. The course format typically includes a lecture reviewing the basic biology, symptoms, and current treatments for each disorder, followed by a thorough analysis of primary research papers focused on novel molecular mechanisms and new targets for therapeutic development. Grading is based on 3 exams throughout the academic quarter and participation in discussing journal articles in class. This course counts as a category elective for the Cognitive Neuroscience concentration. Prerequisite: BIOL 2120 Cell Structure and Function. Recommended: BIOL 3640 Introductory Neurobiology. For Graduate Students: an additional term paper is required with the exact topic to be agreed upon by the student and instructor.

BIOL 3650 Endocrinology (4 Credits)

Mechanisms of hormone action, evolution of vertebrate endocrine systems, analysis of function integration of hormonal responses in maintenance of homeostasis. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

BIOL 3656 Cellular Aspects of Diabetes and Obesity (4 Credits)

This course focuses on specific cellular and molecular events key to the understanding of the pathological conditions of diabetes and obesity. Topics include the endocrine pancreas, adipose tissue and neuroendocrine control energy expenditure and feeding behavior. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

BIOL 3670 Molecular Immunology (4 Credits)

The ability to distinguish self from non-self is crucial to all organisms. In humans Organs, cells and other higher animals, this task fall to the immune system. Suppression of this system is key to numerous pathogenic viruses including Ebola and human immunodeficiency virus. The failure to adequately regulate immune response underlies allergic reactions, arthritis and diabetes. This course will introduce students to the organs, cells and molecules that underlie mammalian immune response; immunogenetics and the fundamental mechanisms of cell mediated and humoral immune response; and the relationship of immune system to human disease. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510.

BIOL 3675 Virology (4 Credits)

Viruses are the ultimate cell biologists. They usurp essential cellular components to create new virus progeny leading to pathological cellular physiology. This course will delve into the genetic and cellular principles that govern virus entry, replication, and assembly and cover a broad range of DNA and RNA-based virus families. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120 and BIOL 2510.

BIOL 3700 Topics in Ecology (1-4 Credits)

Topics vary; may include plant, animal, biochemical, alpine or aquatic; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: one quarter of undergraduate ecology and/or instructor's permission.

BIOL 3701 Topics in Genetics (1-4 Credits)

Topics vary; may include genetic methods, molecular genetics, human genetics, chromosomes or population genetics; one topic per quarter. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510 and/or instructor's permission.

BIOL 3702 Advanced Topics in Regulatory Biology (1-4 Credits)

Topics vary; may include endocrinology, physiology or immunology; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: varies with topic and instructor; instructor's permission usually required.

BIOL 3703 Advanced Topics in Developmental Biology (1-4 Credits)

Topics vary; may include gene expression in development, developmental immunogenetics, developmental biochemistry or aging; one topic per quarter. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: instructor's permission.

BIOL 3704 Advanced Topics in Cell Biology (1-4 Credits)

Topics vary; may include supramolecular structure, microscopy, membranes and techniques. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120.

BIOL 3705 Advanced Topics in Molecular Biology (1-4 Credits)

Topics vary, but may include biochemistry, supramolecular structure and function, molecular genetics, membrane biology. May be taken more than once for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: varies with course and instructor; instructor's permission usually required.

BIOL 3706 Topics in Evolution (1-4 Credits)

Topics vary, but may include molecular evolution, plant evolution and animal evolution. Prerequisite: BIOL 2120 and BIOL 2510.

BIOL 3707 Advanced Topics in Conservation Biology (1-4 Credits)**BIOL 3708 Topics in Integrative Physiology (2-4 Credits)**

Topics for this course include, but are not limited to, human physiology and disease, integrative physiology, environmental or social impacts on human physiology and health, and comparative physiology. Students will gain knowledge of a specific topic in physiology and/or pathophysiology through discussion of current literature and research. May be repeated for credit. Prerequisite: BIOL 2120.

BIOL 3800 Human Molecular Biology (4 Credits)

Medical Genetics is the 24th member of the American Board of Medical Specialties. This course will introduce students to the fundamentals of molecular biology with an emphasis on understanding of how the field is applied in the context of medical diagnostics, personalized/precision medicine and other commercial applications. Students will be introduced to published research reports and provided with opportunities to critically examine the application of molecular biology to central questions in such areas as oncology, inherited diseases and genetically engineered organisms. Prerequisite: BIOL 2510.

BIOL 3850 Genetic Engineering (4 Credits)

This course will cover principles in gene manipulation and its application in research, medicine and industry. More specifically, this course will explain emerging technologies in genetic engineering and its practical and ethical implications. Topics will incorporate historical and emerging aspects of developmental biology, chemistry, and genetics as well as current techniques in genetic manipulation that are related to genomic editing. Additionally, students will be trained to interface with genomic databases and employ DNA sequence editing software to manipulate DNA sequences to achieve novel cloned products. This course counts as a category elective for the Molecular Biology major. Prerequisite for this course is Genetics BIOL 2510.

BIOL 3855 Genetic Model Organisms in Health & Disease (4 Credits)

This course is focused on how basic science studies using genetic model organisms have had a major impact on human health and disease in addition to helping us understand fundamental aspects of biology. We will cover clinically relevant recent advances from bacterial studies (i.e. CRISPR/Cas9-mediated genome editing) to how studies in fruit flies revealed insights into immune disease. Students will gain a better appreciation for why researchers using model organisms were awarded Nobel prizes as well as why major medical funding organizations like the National Institutes of Health, American Cancer Society, and American Heart Association support research using non-human systems. This course will prepare students to understand health-relevant research from varied model systems. Students will learn practical aspects for determining which model systems are best suited to answer which types of questions. They will also practice designing experiments and defending their importance in grant abstract-style essays. Prerequisites: BIOL 2120 and BIOL 2510.

BIOL 3910 Viruses & Infectious Human Diseases (4 Credits)

From sexually transmitted viruses to bacterial pneumonia, infectious pathogens are the number one threat to human health. This course will introduce students to prions, viruses and bacterial pathogens with an emphasis on those commonly encountered in clinical medical practice. Through the use of technical/scientific research journals students will be encouraged to investigate the etiology, pathogenesis and treatment of human infectious disease with an emphasis on the clinical, molecular diagnostic and therapeutic aspects of the disease. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510. Recommended prerequisite: BIOL 3800.

BIOL 3950 Undergraduate Research (1-10 Credits)

Participation in faculty research programs by agreement between student and faculty member. Maximum of 5 quarter hours of BIOL 3950 and/or BIOL 3991 may be applied to the 45-quarter-hour requirement for a major in biological sciences.

BIOL 3991 Independent Study (1-10 Credits)

Topic in biology studied under faculty supervision. Student's responsibility to identify faculty supervisor before registering for class. Maximum of 5 quarter hours of BIOL 3991 and/or BIOL 3950 may be applied toward the 45-quarter-hour requirement for a major in biological sciences.

BIOL 3995 Independent Research (1-10 Credits)**BIOL 4050 Topics in Plant Biology (2 Credits)**

Varying topics; areas of plant-animal interactions, co-evolution, plant ecology, plant biochemistry/physiology.

BIOL 4085 Accelerated Biostatistics (2 Credits)

This is an accelerated online statistics course for graduate students in Biology. Basic probability and hypothesis testing is the foundation of teaching applied statistics, including simple statistics (t-tests, F-tests, and chi square) and more advanced procedures (regression, correlation, analysis of variance). In addition, students learn more complex tools (multiple regression, multi-classification ANOVA, Student-Newman-Keuls tests), including non-parametric Tests (Mann-Whitney U, Sign test, Wilcoxon Rank Sum).

BIOL 4090 Biostatistics (4 Credits)

Statistic on biological research; emphasis on procedures, applications of regression, correlation, analysis of variance, and nonparametric tests. Include instruction on computer aided (Mac and PC) statistical analysis and presentation of results. Cross listed with BIOL 2090.

BIOL 4095 Research Methods and Analysis (4 Credits)

The purpose of this course is to introduce you to topics of applying statistical knowledge to real data, including specific tests/models as well as issues related to project design such as adequate sample size, avoiding confounding variables, unexplained error, and other common challenges. It is geared toward both field and lab-based projects, but the topics covered are relevant to research generally. Each week we will discuss the reading for that week with the objective of clarifying points and where possible, applying the concepts to real data from our own work. Prerequisites: BIOL 4090 or permission of instructor. Prerequisites: BIOL 4090.

BIOL 4150 Special Topics in Adv Biology (1-4 Credits)

Topics of special interests to teaching and research faculty presented as needed to complement and expand existing curriculum. May be taken more than once for credit.

BIOL 4155 Leadership in Science (1 Credit)

This course addresses the basic leadership skills necessary to succeed in the dynamic professional environment of the biomedical sciences.

Topics covered include leadership strategies and professional negotiation, conflict resolution, and team-building. Students will determine leadership strengths and weaknesses and use case studies to strengthen their leadership practices.

BIOL 4211 Advanced Cell Biology (3 Credits)

Students study the subcellular structure and organization of the cell. Organelle structure and function are examined in detail as well as biogenesis and degradation (turnover) of these subcellular structures. Cytoskeletal dynamics are also a major focus. Specific topics covered include cell division, macromolecular synthesis, membrane transport, cell-matrix and cell-cell communication, cell migration, cell differentiation, and mechanisms of cell death. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students. Cross listed with BIOP 4150.

BIOL 4212 Advanced Molecular Biology (3 Credits)

This course focuses on a detailed analysis of regulated gene expression. The topics include lectures and readings of relevant literature in areas covering gene regulation at multiple steps, including transcription, RNA processing, and translation. In particular, the logic of experimental design and data analysis are emphasized.

BIOL 4213 Advanced Cell Signaling (3 Credits)

Students in this course investigate a large array of cellular signal transduction cascades. Specific signaling pathways to be covered include growth factor receptors, cytokine receptors, steroid receptors, integrin-extracellular matrix, heterotrimeric G-protein coupled receptors, monomeric G-proteins, transcription factors, lipids, cytoskeleton, cell cycle, and apoptosis. Each of these topics is examined in the context of normal cell physiology as well as their roles in specific disease processes. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students.

BIOL 4220 Grad Sem: Ecology & Evolution (2 Credits)

A series of student presentations focusing on varied topics involving ecology and evolution. May be taken more than once for credit.

BIOL 4231 Responsible Conduct in Rsrch (1 Credit)

This course covers several topics regarding guidelines for ethical practices in research. Topics include: data ownership, conflict of interest and commitments, human subjects, animal welfare, research misconduct, authorship, mentoring, peer review, and collaboration. The course includes an online training component and meets one hour each week to discuss these topics.

BIOL 4310 Foundations in Literature: Cell and Molecular Biology (2 Credits)

Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Cell and Molecular Biology.

BIOL 4330 Foundations in Literature: Ecology (2 Credits)

Students participate in a weekly discuss group that focuses on recent papers from the primary literature in Ecology.

BIOL 4331 Foundations in Literature: Evolution (2 Credits)

Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Evolution.

BIOL 4500 Clinical Exercise Physiology (5 Credits)

This graduate course in clinical physiology will provide an understanding of fundamental practices and assessments within clinical settings. We will combine knowledge from various backgrounds in physiology and tie theoretical and practical concepts together for assessing body function and developing methods for improving health and performance. We will connect the physiological concepts related to the cardiovascular, respiratory, and muscle systems as well as develop projects that require combining knowledge of the assessment skills and evaluation for clear communication and exercise prescription to special populations.

BIOL 4510 Exercise Testing & Prescription (4 Credits)

The purpose of this graduate course is to develop knowledge combined with hands-on skills for integration of exercise testing and prescription concepts. Material in this course will be applicable for performance as well as clinical considerations. This is an active course which will require your participation as both the subject and technician, giving perspective and understanding of methods and protocols along with their justification for various purposes. Prerequisite: BIOL 4500.

BIOL 4515 Research Techniques in Exercise Physiology (4 Credits)

This graduate level course is designed to provide exposure to several methods of research within the area of exercise physiology. This is a hands-on course that combines theory and literature with practical research experiences in physiology. In this course, students will perform data collection and analysis of differing topics. These may include the following topics: pulse and tissue oxygenation, signaling (heart rate variability, oxygen kinetics), respiratory loops, Doppler ultrasound (blood flow and tissue structure), etc. Our aims will focus on understanding how and why the method works, how to collect data, as well as the analysis and reporting of variables for proper interpretation.

BIOL 4520 Advanced Nutrition and Exercise (4 Credits)

This is a one quarter course intended for graduate students and advanced biology and physiology majors. This course builds upon the prerequisite introductory nutrition course. The course will focus on understanding, evaluating and implementing the fundamental principles and evidence based best practices of nutrition related to exercise, physical activity and health. Starting with a review of nutritional biochemistry and exercise, major macromolecule and micronutrient metabolism will be addressed in depth. Applications of nutritional science to various types of exercise (endurance, power, speed) will be explored, as well as nutrition and exercise specific to age and sex across the lifespan. In addition to didactic content, students will complete evaluation of primary literature and propose a nutritional program for a specific population of interest. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, inquiry-based learning, experimentation and a variety of assessments. Prerequisite: BIOL 3260 Nutrition or the equivalent.

BIOL 4530 Advanced Cardiovascular and Pulmonary Physiology (4 Credits)

This course is developed to provide a deeper level of physiological knowledge of the cardiac, vascular, circulatory, and pulmonary systems and their functions. With both lecture materials as well as in-class discussion of concepts and research articles, we will go deep into the basic levels of composition and function and facilitate the understanding of mechanisms that limit disease populations, elderly, etc. How can we adapt our lifestyles to improve our cardiovascular health? Prerequisite: BIOL 3250.

BIOL 4540 Electrocardiogram Interpretation (2 Credits)

This course is an advanced course in cardiac physiology for those interested in understanding principles associated with cardiac function, electrical physiology of the heart, and interpretation of the electrocardiogram. As the functions related to our heart drive our cardiovascular system, we will find ways to relate our experiences of daily life to the concepts and principles learned throughout this course to deepen our knowledge and retain this information. We will explore the physiological mechanisms related to the cardiac system as well as develop projects that require combining knowledge of the electrical pathways and of use of electrocardiography for proper interpretation.

BIOL 4550 Cardiopulmonary Rehabilitation (2 Credits)

This course focuses specifically on cardiopulmonary rehabilitation. Students will gain an understanding of (1) the impact of lung and heart disease on daily physical activity levels, (2) common mechanisms limiting exercise tolerance, and (3) risks and benefits of exercise for patients with lung and heart disease. Students will learn guidelines for exercise prescription and rehabilitation programs for patients with cardiovascular and pulmonary diseases. Practical application of knowledge and skills gained in BIOL 4530 will be emphasized. Prerequisite: BIOL 4530 Advanced Cardiovascular & Pulmonary Physiology.

BIOL 4570 Advanced Human Pharmacology (2 Credits)

This class will focus on how drugs and other therapeutics can be used to treat and prevent diseases. Students will develop a deep understanding of pharmacokinetics/ pharmacodynamics, the major classes of drugs, how and why they are used, drug side effects, and drug interactions. Specific emphasis will relate to effects of drugs utilized for disease prevention or treatment on physical activity and exercise.

BIOL 4580 Physical Activity for Management of Chronic Diseases (3 Credits)

This one quarter course is intended for graduate students in the clinical exercise physiology program or other related programs. This course builds upon previous coursework in clinical exercise physiology. It will focus on understanding, evaluating and implementing the fundamental principles and evidence based best practices of exercise management for persons with chronic diseases and disabilities. Starting with an overview of the concept of "exercise as medicine," the principles of safe exercise as a method for improving health outcomes will be applied to individuals with chronic diseases. Various chronic disease states and their associated medical challenges will be explored, and the recommendations for modified exercise activities, durations and outcomes to support healthy and safe outcomes will be addressed. In addition to didactic content, students will complete evaluation of primary literature in the field. Prerequisite BIOL 4500/4510 Clinical Exercise Physiology I and II.

BIOL 4870 Medical Ethics (4 Credits)

This course presents knowledge and discussion of ethical issues that arise from advances in the biomedical sciences and medicine. Several specific ethical issues and policies related to methodologies and procedures, emerging medical technologies, treatment decisions, doctor-patient relationship, informed consent, medical experimentation/clinical research, and health care reform.

BIOL 4880 Capstone in Biomedical Sciences (4 Credits)

This is the capstone course for students enrolled in the Professional Science Master's program. In this course, students integrate advanced knowledge in science and math along with courses taken outside traditional science and math courses as their electives. This course incorporates lectures, guest speakers, and class discussions focusing on current issues or concerns in the chosen concentration. PSM students only. Requires instructor approval.

BIOL 4980 Internship in Biomedical Sciences (1-4 Credits)

The internship course provides individualized opportunities to gain experience and professional skills. This course includes a structured practical and productive internship experience that allows for the integration and application of disciplinary knowledge in a professional setting. The internship can be administrative, clinical, programmatic, or research focused. Students will work with a professional from healthcare, pharmaceutical and biotech companies, or private and public health services to identify the student's specific project focus.

BIOL 4991 Independent Study (1-17 Credits)**BIOL 4995 Independent Research (1-8 Credits)****BIOL 5991 Independent Study (1-17 Credits)****BIOL 5995 Independent Research (1-8 Credits)**

Biophysics (BIOP)

BIOP 4100 Foundations in Biophysics (3 Credits)

Focus of the course is on application of basic physics principles to the study of cells and macromolecules. Topics include diffusion, random processes, thermodynamics, reaction equilibria and kinetics, computer modeling. Must be admitted to the MCB PhD program or related graduate program with instructor approval. Cross listed with PHYS 4100.

BIOP 4150 Cellular Biophysics (3 Credits)

Biophysical approaches to understanding cell function. We emphasize the various experimental approaches that biophysicists use to study basic cellular processes, including a variety of fluorescence images, optical and electrophysiological techniques. Cross listed with BIOL 4211.

BIOP 4210 Current Topics in Biophysics (2 Credits)

This is a seminar course that focuses on current primary literature in the fields of molecular and cellular biophysics. This is the first of a three course, year-long sequence.

BIOP 4993 Lab Rotation (2-9 Credits)

Lab rotation in Molecular and Cellular Biophysics before students pass the first phase of their qualifying exam.

BIOP 4995 Independent Research (1-9 Credits)

Independent research in Molecular and Cellular Biophysics before students pass the first phase of their qualifying exam.

BIOP 5991 Independent Study (1-10 Credits)**BIOP 5995 Independent Research (2-9 Credits)****BIOP 6991 Independent Study (1-10 Credits)****BIOP 6995 Independent Research (1-10 Credits)**

Business Core (BUS)

BUS 4105 Masters in Digital Leadership Capstone Course (4 Credits)

What makes a good Digital Leader. It's the ability to lead organizations using emerging technologies and possessing a data-driven mindset in efforts to digitally transform organizations and industries. This course gives the student an opportunity to apply the knowledge and skills learned in this program to a real-world problem that affect them and their organizations. Students take a business problem from problem definition to digital transformation. This isn't a course where students write about a problem, but rather work with mentor to create value for themselves and their organization. Prerequisites: All other Digital Leadership courses.

BUS 4132 Mobile Technology (1 Credit)

You've probably heard about the 5th Generation of mobile technology (5G), but have you heard about the 6th (6G)? Consumers are increasingly becoming more mobile and are demanding more data be delivered to them more quickly. It seems now that the value of mobile technology is centered around increasing demand. This puts an enormous strain on organizations as they begin to digitally transform their organizations. Conversely, for the informed digital leader, this pattern of rapid mobile technology is an opportunity to provide newer and better value for their stakeholders. This class will explore these challenges and opportunities and will provide learners with an insight into the emerging ethical challenges that are related to the use of mobile technology.

BUS 4133 Analytics (4 Credits)

Businesses make decisions and improve processes using their own and external data with a variety of data-driven and analytic techniques. This course introduces students to the business data landscape, data management in commercial organizations, and the data-driven decision-making process. Students explore the fundamental concepts behind how data and analytics can improve business performance, using their individual roles and companies as subject matter. Principal Content Elements: 1. Data-driven decision-making and performance improvement. 2. Data management in organizations. 3. Organizational transformation based on data-driven insights.

BUS 4134 Customer Experience (2 Credits)

As the rate of technology increases and more products and services transition to the virtual realm, organizations need to ensure that both their internal and external customers are included. This course helps digital leaders understand, use, and apply the customer experience construct. It will help them create an experience for customers that goes beyond customer service for external customers and actively involves internal customers in the co-creation of value that supports their business's digital transformation.

BUS 4135 Agile Development (2 Credits)

It is estimated that 70% of all projects fail. This course will help project owners and team members increase their chances of success by introducing and reinforcing the agile development process method. Students will learn what it means to lead these types of projects and how they might be used for the benefit of their organizations.

BUS 4136 Robotic Process Automation (1 Credit)

Robotic Process Automation (RPA) is an emerging technology that is changing the way businesses process data. RPA allows many business processes to be automated and remove the human from performing repetitive tasks. This course will teach the basics of the technology using one of the most popular RPA software programs.

BUS 4137 Intrapreneurship and Leading Change (4 Credits)

As businesses begin to transition from the physical to the digital realm, their ability to strategically manage this change is directly tied to their future success. The challenges facing leaders of these organizations include how to empower employees to be innovative how to gain stakeholder buy-in, and ultimately how to manage the process of change. This course will help leaders become better change agents within their organizations by helping them understand the sources of change, designing a plan for it, and ultimately, leading the change process. Change is constant in a business and the better-prepared organizations are to deal with it, the more likely they will be able to continuously create value for their company's stakeholders.

BUS 4138 Artificial Intelligence (2 Credits)

Hollywood has taught us that artificial intelligence (AI) involves robots that want to take over the world in some fashion. While this notion is both terrifying and fascinating to watch, it fails to portray how AI is being used successfully by businesses to create value for stakeholders. This course will help inform your perspective on how AI is helping businesses by giving you insight into how its currently being used by businesses. Included in this is developing your understanding of how organizations develop their AI capabilities, a look at various AI techniques including machine learning, and a discussion on the ethical challenges raised by using AI in business. The ability to understand and use AI in business could transform the way business is done by equipping organizations with the ability to reimagine what is possible and simultaneously deliver it.

BUS 4139 Augmented/Virtual Reality (1 Credit)

What is reality? Is it what we experience through our five senses and then process through our understanding, or is it putting on a virtual reality headset and interacting with others in another world? With the growing popularity and applications around augmented and virtual reality, the line between real and virtual reality is becoming blurred. This course operates from the blurred space and starts by helping students understand what extended reality is how its application can be used in business. Students will explore the emerging capabilities of organizations that are using virtual reality and will be empowered to make recommendations of their own as to how this technology may further transform other organizations. As this course operates in the space between realities, numerous ethical issues have arisen surrounding extended reality and students will be given insights into what they are and how to navigate them.

BUS 4141 Cybersecurity (1 Credit)

You are under attack! Cyberattacks are on the rise and they can be catastrophic to a business resulting in downtime, lost profits, and growing distrust from stakeholders. While there isn't a perfect solution to stopping cyberattacks, this course is designed to help leaders become better equipped to mitigate these threats by improving their understanding of the current state of cybersecurity, how it's being used by businesses, and what they can do to better protect themselves from cyberattacks. In addition to learning the application and outcomes of cybersecurity, learners will be exposed to the growing ethical debates surrounding cybersecurity in efforts to be better prepared to make security recommendations for their organizations.

BUS 4142 Business Model Innovation (2 Credits)

If companies don't innovate, they evaporate. This is especially true as an organization begins the digital transformation process. In this class, students will be taught how to evaluate an organization's business model to facilitate its transition to the digital realm. The idea is to transition a business model into something that creates value by way of leveraging emerging technologies, analytics, and digital leadership for all stakeholders.

BUS 4143 Digital Ethics & Privacy (2 Credits)

Do individuals have a right to digital privacy and what are the ethical ramifications that support our virtual existence? In this class, you will explore the idea of digital privacy and how businesses are balancing the need to make a profit while simultaneously safeguarding their stakeholder's data. In addition to digital privacy, students will develop the ability to evaluate emerging technologies through varying ethical lenses and begin to explore the future directions of digital ethics.

BUS 4144 Blockchain (2 Credits)

In this course, students will understand how blockchains operate as decentralized ledgers and how businesses can begin to leverage the opportunities these types of technologies afford to them. With an understanding of blockchain, the course will transition to cryptocurrency and discuss the emerging values proposition these new types of currencies provide to businesses. From digital currencies, the course will instruct students on the emerging concept of non-fungible tokens (think digital art) and will conclude with an investigation into the ethical challenges related to blockchain technology.

BUS 4145 Cloud/Edge Computing (2 Credits)

Is it more accurate to say the digital cloud is above us, or all around us? In this class, students will learn to distinguish between cloud and edge computing and will be able to articulate the value of each to their organization. Students will also become familiar with the major cloud providers (e.g., Google, AWS, and Azure). Equipped with knowledge students will be able to create a cloud transformation plan that highlights their organization's cloud journey and transformational process to the cloud.

BUS 4146 Internet of Things (1 Credit)

Can you see the value of a drone being connected via the internet to a warehouse, or your car connected to your refrigerator? The Internet of Things (or IoT) is the emerging technology of connection. It's the ability to connect virtually everything via the internet. In this course, students will be given the opportunity to explore the value this type of technology provides to their organization. It will also enable them to create strategic recommendations using IoT for their business and ways it can ethically be used to satisfy its stakeholder's needs and wants.

BUS 4147 The Foundations of Digital Transformation (1 Credit)

What does it mean for a business to digitally transform? Even as more businesses say they are "digitally transforming", it is still largely unclear what this process means, and perhaps more importantly, how it can be successfully achieved. This course is designed to provide students with clarity around these topics by first examining the foundations of digital transformation (emerging technology, leadership, and data) and analyzing their impact on the business. After developing this foundation, students will then work to diagnose a firm's ability to transform by evaluating its digital capabilities to produce stakeholder value. Once students have gained insights into the context and capabilities of digital transformation, they will explore the potential ethical challenges and issues raised by moving their organization to the digital realm.

BUS 4310 Business Communication for Accounting Professionals (4 Credits)

This course emphasizes critical communications skills for future accounting, tax, auditing and consulting professionals. The course develops written communication skills including but not limited to technical writing, reporting the results of research and explaining complex issues. Oral communication assignments include formal presentations, development of debate skills and boardroom presence. Assignments incorporate business etiquette and teambuilding.

BUS 4350 Overview of Outdoor Recreation Industry (1 Credit)

This course is a survey of the outdoor recreation industry, providing an overview of the size, growth, sectors and economic impacts of the industry. This course will lay the foundation for the LORI Program, as the remaining courses will dive deeper into the topics. This course will also begin to examine external drivers for the industry, including the connection between policy and outcomes, the inherent tension between access and conservation, as well as economic trends driving the industry. Students will also set up an exploration of the industry's role and relationship with challenges such as climate change, globalization, and technology as well as the critical role of Environmental, Social and Governance (ESG) issues within the industry. We will also spend time discussing the role of diversity, equity and inclusion in the outdoor recreation industry and examine what our role can be to change.

BUS 4360 Leading Self: Leadership in Outdoor Recreation Industry (1 Credit)

The purpose of this course is to provide insight into why and how sustainable desired change occurs at the level of individual/social interaction. This course will provide students the critical skills to "lead the self" towards personal/professional goals in the outdoor industry. The premise of the course is that leading others first requires a keen sense of self leadership. Students will revisit assumptions about themselves as they develop intentional approaches to identify learning and career opportunities in their selected fields and lead themselves towards the accomplishment of professional objectives. As part of this process, students will learn necessary skills for leading others and working effectively in teams.

BUS 4400 MBA@Denver Capstone (4 Credits)

The MBA@Denver Capstone Course enables the practical application of key management and leadership competencies, skills and knowledge and is designed to integrate core course learning outcomes. You will integrate what you have learned in the MBA@Denver program to analyze a client problem and provide appropriate recommendations and conclusions prepared for and presented to the client. You are strongly encouraged to work with a small business or not-for-profit organization, completing a social capital project with that enterprise. You will gain an in-depth exposure, perspective and understanding of strategic business processes, opportunities and challenges within an organization. You will work in teams and will select an organization of your choice to work with as the client. The project will end with an oral presentation and written proposal that is delivered to the client organization and the instructor on an assigned date. Project assignments will emphasize the integration of knowledge from multiple academic disciplines and functional business activities. You are required to identify linkages between an organization's external and internal organization environments in the context of its organizational strengths, weaknesses, opportunities and threats (SWOT). Projects may include new product or technology development, restructuring, relocation, expansion, downsizing, acquisitions, mergers and acquisitions or joint ventures, and/or other relevant operational performance issues. The goal is to increase the organization's ability to sustain and thrive. The final plan/proposal should include an implementation timeline for the proposed solutions as appropriate. Enforced Prerequisites and Restrictions: MBA@Denver student must be within one quarter of graduation or have the Director's permission to take the class. This course is open only to MBA@Denver students (MBA-DEN).

BUS 4435 Digital Transformation: Design and Execution (4 Credits)

As a business, it is better to be the disruptor than to do be disrupted. Since 2020, this fact is easy to see as businesses have rapidly accelerated their plans to digitally transform. The success of these transitions has been largely underwhelming as organizations have failed to leverage the right technologies to create better processes that support customer's current and future needs. This course is designed to help students increase their ability to drive digital transformation by focusing on both the design and execution of digital transformation. After taking this course, students will be able to assess current digital transformation design practices that will strategically fit their business and create a plan to increase success in executing it.

BUS 4444 Global Bus, Governance & CSR (4 Credits)

In an increasingly globalized world, civil society, states and businesses are trying to discern how to govern business conduct across the borders of nation-states. Many of the issues our society faces today—global financial crises, environmental degradation, and corruption, to name a few—are impossible to tackle within a given country. Instead, these issues require collaboration and coordination across a variety of actors spread around the globe. Within this framework, businesses are aware of increased pressure to behave responsibly and adopt a corporate social responsibility (CSR) approach to their conduct. Yet, businesses are unsure how to integrate these goals into their business strategy and engage meaningfully with stakeholders. Likewise, governments recognize the importance of having business at the table, but do not have a clear understanding of how to best engage with the private sector. The response to this conundrum is a focus on global governance, which refers broadly to the way in which global affairs are managed. After a brief overview of economic trends and trajectories around the globe, the course will focus on global governance as a mechanism for change. The class will first explore the opportunities and shortcomings of global governance efforts. The class will build on this scholarship by discussing the role business plays in global governance mechanisms. As society has become aware of, and is acutely concerned with, business conduct, the role of the manager and business strategy in these realms has also changed. Students will analyze these trends and study their implications for government, business, or civil society strategy and practice. The final portion of the course will focus on specific issue areas, including: human rights, labor standards, the natural environment, corruption, and microfinance.

BUS 4445 International Business: Strategy and Practice (4 Credits)

This course focuses on applied issues in international business. Students will learn to think strategically about international business issues, and will in turn be able to apply that thinking to best practices. The following subject areas will be covered: country selection, entry mode theory, exporting, born-global businesses, organizational structures internationally, negotiation, consumption, culture and demand. Other potential topics include global supply chain management/sourcing, country of origin effects, etc. This course focuses on applied issues in international business. Students will learn to think strategically about international business issues, and will in turn be able to apply that thinking to best practices. The following subject areas will be covered: country selection, entry mode theory, exporting, born-global businesses, organizational structures internationally, negotiation, consumption, culture and demand. Other potential topics include global supply chain management/sourcing, country of origin effects, etc.

BUS 4450 Developing an Entrepreneurial Mindset (4 Credits)

Have you ever heard the quote, "Find a job you enjoy doing, and you will never have to work a day in your life?" This course is designed to help you align your purpose in life with your organization's purpose (your own organization or an organization for which you work). There are multiple parts to bringing this alignment about, which will comprise the foundation for this course: (1) (re)evaluating your purpose in life, building on what you have learned about your leadership style, ethical orientation, values and beliefs, and so forth from your earlier courses; (2) developing an entrepreneurial mindset, useful for starting your own organization or a new venture within the organization in which you already work; (3) exploring the Triple Bottom Line perspective of business in society; and (4) applying the core concepts of systems thinking to identify potential business ideas that align with your purpose. The course will culminate with the creation of a business idea and business model canvas that aligns your purpose in life with a compelling business purpose. The business idea may involve creating your own business/organization or proposing the idea within your current organization.

BUS 4600 Professional MBA Capstone Project (4 Credits)

The Capstone Project enables the practical application of key management and leadership competencies, skills and knowledge designed to integrate core course learning outcomes. You will integrate what you have learned in the PMBA program to analyze a client problem and provide appropriate recommendations and conclusions prepared for and presented to the client. The course integrates Daniels' multi-disciplined learning outcomes and experiences to achieve this goal. The course is a combination of site-based practicum, field project and classroom experiential learning. Through these activities, you will gain an in-depth exposure, perspective and understanding of strategic business processes, opportunities and challenges within a non-profit organization. You will work in teams (4-5 individuals) and will select a non-profit organization of your choice to work with as your client. The project will end with an oral presentation and written proposal delivered to the client and to the instructor on an assigned date. Project assignments will emphasize the integration of knowledge from multiple academic disciplines and functional business activities. Students are required to identify linkages between an organization's external and internal organization environments in the context of its organizational strengths, weaknesses, opportunities and threats (SWOT). Projects may include new product or technology development, restructuring, relocation, expansion, downsizing, acquisitions, mergers and acquisitions or joint ventures, and/or other relevant operational performance issues. The goal is to increase the organization's ability to sustain and thrive. The final plan/proposal should include an implementation timeline for the proposed solutions as appropriate.

BUS 4610 Business Ethics for the Public Good (2 Credits)

A fundamental purpose is to engage students in ongoing reflection and dialogue about their responsibilities as managers and leaders. Of particular emphasis are the ethical, professional, social and legal responsibilities of managers and leaders, especially as it relates to numerous stakeholders and communities. This course focuses on the idea of "community" and the ethical and social relationships of business leaders and business organizations in their communities. A particular focus will be the role of the business manager and executive as a professional with unique and special responsibilities. These roles will be examined by analyzing a variety of issues and situations that students will likely face during their careers. The goal is to provide students with perspectives, intellectual frameworks, and skills that will be useful in their business careers. The Daniels PMBA "core" not only strengthens foundational business and management skills, but also provides a broader orientation, purpose and direction for exercising and executing foundational skills to achieve enterprise and personal success. Personal and organizational success is a function of technical "know-how," leadership intelligence, and competence in execution. The assumption of this course is that all of these competencies must be grounded in a solid ethical and social commitment to community values and principles. This course will explore these values and principles in various business contexts, using the shared personal experiences of business professionals who will present their own stories for us to examine.

BUS 4611 Experiential Outdoor Leadership (2 Credits)

The purpose of this course is to provide insight into why and how sustainable desired change occurs at the level of individual/social interaction. This course will orient the student towards gaining the most out of their education by focusing on learning as the cornerstone of development. It will provide students the critical skills to "lead the self" towards personal/professional goals as the context for studying intentional change. The premise of the course is that leading others first requires a keen sense of self leadership. Students will revisit assumptions about themselves as they develop intentional approaches to identify learning and career opportunities in their selected fields and lead themselves towards the accomplishment of professional objectives. As part of this process, students will learn necessary skills for leading others and working effectively in teams. Lecture / Off-site will include a required intensive three-day exercise in self-awareness, outdoor leadership, team-building, problem solving, and critical thinking. This outdoor experiential includes an intellectually rigorous component, which is designed to enhance the classwork in which you engage, and is intended to enhance the experience students have in their life outside of the academic environment. The outdoor experiential will be leverage in the on-campus course which provides insight into why and how sustainable desired change occurs at the level of individual human/social interaction. This course will focus on providing students the critical skills to "lead the self" towards personal/professional goals as the context for studying intentional change. The premise of the course is that leading others first requires a keen sense of self leadership. Students will revisit assumptions about themselves as they develop intentional approaches to identify learning and career opportunities in their selected fields and lead themselves towards the accomplishment of professional objectives. Online/Distance and Combined/Hybrid Methodologies will include an optional outdoor immersion that involves an intensive three-day exercise in self-awareness, outdoor leadership, team-building, problem solving, and critical thinking as outlined above.

BUS 4612 Business Domestic Immersion (0 Credits)

MBA@Denver students are required to take two immersion experiences. BUS 4620-X includes domestic experiences, held in a U.S. city, generally including visits with business leaders on various topics, experiential experiences, and/or specific topic discussions led by qualified faculty. Students may not take the immersion course at the same destination more than once.

BUS 4614 Business International Immersion (0 Credits)

MBA@Denver online students are required to take two immersion experiences. BUS 4614-X includes international experiences, held in a non-U.S. city, generally including visits with business leaders on various topics, experiential experiences, and/or specific topic discussions led by qualified faculty. Students may not take the same section number (X) more than once, though they may take the course more than once.

BUS 4620 Ethics for the 21st Century Professional (4 Credits)

A fundamental purpose is to engage students in ongoing reflection and dialogue about their responsibilities as managers and leaders. Of particular emphasis are the ethical, professional and social responsibilities of managers and leaders, especially as it relates to numerous stakeholders and communities. This course focuses on the idea of "community" and the social relationships of managers and business organizations in their communities. Roles and responsibilities of managers and business firms are examined by analyzing a variety of issues that managers will face during their careers. These specific issues will be examined in terms of their legal, public policy, and ethical dimensions. The goal is to provide students with generalized understanding and skills that can be employed in dealing with other issues that may emerge in their business careers. Cross-listed with ACTG 4620.

BUS 4650 Health & Well-being in the Workplace (4 Credits)

Why is there so much talk about wellness and well-being? What is the practical use of wellness as it relates to the corporate world? In this course, we will define and dive into evidence-based wellness and how it relates to the workplace as well as the individual. We will explore practical and accessible strategies to enhance personal wellness as well as identify effective corporate wellness strategies and programs. Topics include health and wellness as it relates to productivity, corporate culture, resilience, creativity, work-life balance, leadership and return on investment. We will identify barriers to wellness and how to address those barriers.

BUS 4660 Healthcare in the U.S.: Systems and Populations (4 Credits)

Everyone engages with health care at some point during their lives; birth, death and many of the stages in between take place within the framework of the health care delivery system. Despite our familiarity with the services of health care, the organizational structure of US healthcare is increasingly complex and tangled. The spectrum of healthcare services is broad and includes preventive, primary, acute and chronic care. The current state involves a dynamic interplay between the major institutions of higher education, government, suppliers, insurers, and payers. In this course, students will unravel the web of healthcare systems in the US, gain a practical understanding of the organizations, functions, and delivery of health care. This knowledge can then be applied to multiple sectors of business, both in and outside of healthcare and be used to forecast and understand the inevitable changes that our healthcare system will undergo in the future.

BUS 4670 Global Health (4 Credits)

Over 60% percent of Haiti's population lacks access to basic health services. African countries account for 60% of cases HIV/AIDS cases and 90% cases of malaria worldwide. In developing countries like these, health problems are best solved by an interdisciplinary group of specialists in medicine, public health and policy, business and economics, sociology, law and beyond. As a business person, you can be part of solving global health issues through creative, innovative, and new business models. In this course you will gain a foundational understanding of global health by exploring the practical and contextual issues that may affect health, with a goal of improving health for all.

BUS 4675 Talent Management (2 Credits)

In 2020, the concept of talent management changed dramatically. Since that time, employees have begun transitioning away from the office, the great resignation has occurred, and managers are now dealing with the emerging phenomenon of quiet quitting. This course will prepare students for this new era of talent management that focuses on the employee and works to empower them in the emerging digital age. Students will learn how to reinforce the company's culture by working with employees to create change, invest in culture, and work in becoming future leaders of the organization.

BUS 4680 Health Innovation and Technology (4 Credits)

Health innovation and technology is a rapidly growing area that bridges the fields of business and health. Successful outcomes in business and health care depend on a core understanding of the principles that inter-connect these fields. In this course, we will explore the landscape and future of health related technology as well as the relationship between development, marketing, implementation, branding and customer/patient impact. We will work with case studies of established health tech companies as well as start-ups. Topics include virtual health care, tele-health, digital health, medical devices, health gadgets, home and workplace health technology, emerging technologies, health innovation and more. The purpose of this course is to provide students with the knowledge and ability to identify challenges and opportunities related to health related technology as well as to understand the relationship between the health and medical fields with the business of health technology, including development, implementation and delivery of technology.

BUS 4690 Leading Digital Teams (2 Credits)

Nearly 90% of businesses have reported that they are pursuing some sort of digital transformation project that will partially or fully change their business. With this much emphasis being placed on organizational change, leaders of organization will need to be acutely aware of how to manage the process and especially the employees who are at its core. In this course students will understand what effective leadership is and what it means for the strategy of the firm. They will examine the importance of leading digital teams through a top-down and bottom-up approach that applies a global and culturally sensitive paradigm to each. Students will leave with the skills able to lead a diverse digital team as they work to transform and create new value for their organizations.

BUS 4700 Special Topics in Business (0-8 Credits)**BUS 4701 Special Topics in Business (1-6 Credits)****BUS 4704 Topics in Business (1-6 Credits)****BUS 4705 Topics in Business (1-6 Credits)****BUS 4810 The Head and Heart of Leadership: Neuroscience and Emotion Regulation (4 Credits)**

Neuroscience may be the next great frontier of leadership learning. Admired and respected leaders understand both the "heart" of leadership, the harnessing and leveraging of emotions to inspire others, as well as the "head" of leadership, how the workings of our brains impact our ability to lead. This course incorporates content from the latest research in the fast-moving fields of neuroscience, emotional intelligence and mindfulness. Students will develop highly-relevant leadership skills, strategies and tactics that will make an immediate impact on your ability to successfully lead others.

BUS 4820 Leading and Developing Others for Success (4 Credits)

Successful leadership does not occur without successful followers. This exciting course explores the elements of how great leaders enable the success of others. We begin by exploring several well-known theories of leadership, including servant, authentic, and values-based leadership, as a means for students to formulate their own personalized framework of what great leadership look like to you. We will learn how to hire, understand, inspire, coach, mentor and sponsor a diverse and inclusive team. We will also explore storytelling, one of the hottest topics in leadership. Students will create a personal development plan that ensure the ability to incorporate the elements of this course into successful leadership.

BUS 4830 Leading Change and Building an Agile Culture (4 Credits)

The capacity to lead highly change-capable, agile organization is critical in today's VUCA world – volatile, uncertain, complex and ambiguous. Foundational to leadership success at every level within an organization is the capacity to build a change-ready, agile culture and successfully execute sustainable change. By exploring and evaluating the latest thinking on leadership and change, this course arms leaders with the strategies and tactics necessary to; 1) create teams and organization with high levels of change-capability and agility; 2) motivate followers and overcome resistance to change; and 3) successfully achieve both incremental and transformative change.

BUS 4840 The CEO Toolbox (4 Credits)

Strategy is integral to a successful organization. But without strong execution, even a well-defined strategy can fall apart. Executive teams/leaders that combine actionable strategy with operational depth are the ones most likely to stay the course and deliver long-standing results. They understand the need to align strategy and operations to deliver on their objectives. After taking courses on Strategic Management, Leadership, Leading Change, Culture, etc., you too understand the need for aligning strategy and operations, yet, in practice it's often more difficult to do. Through this course, students will hone their skills by developing and using practical tools to deal with shifts and changes along their strategic journeys. This course will allow you to put theory into action.

BUS 4980 Internship (0-10 Credits)

Faculty supervised Internship.

BUS 4991 Independent Study (1-10 Credits)**BUS 4995 Independent Research (6 Credits)****BUS 6000 Research Methods in Business (4 Credits)**

Business Research Methods introduces students to the nature, scope, and significance of research and research methodologies. Additionally, the course studies primary and secondary research methods with applications to specific problems, using qualitative and quantitative designs for individual investigation on current problems within a student's area of interest. Topics covered include research design, sampling strategy, data types and collections, measurement approach, testing procedures, ethics in data collection and interpreting findings, and the Institutional Review Board (IRB) process.

BUS 6001 Qualitative Research Methods (4 Credits)

Qualitative methods are important for exploring complex social phenomena and developing theories for understanding dynamic relationships and change. This course is designed to help students develop an understanding of the methods and process for conducting qualitative research in general, and case study research in particular. Students will learn to use qualitative methods to develop theories and managerial solutions for current and future business problems.

BUS 6002 Quantitative Methods I- Making Discoveries with Data (4 Credits)

As a PhD student you will do original research ... making discoveries that nobody else has made before. Data analysis is a key tool that facilitates that. Data analysis tools help you unlock the hidden treasures within your data set. These treasures are knowledge and information that is waiting to be discovered and utilized for your benefit. Specifically, you will become familiar with several of the internationally utilized statistical software packages and with the array of statistical analysis techniques. You will understand which statistical analysis technique to use in which situation, and how to interpret the output from your statistical software packages. These skills support managers for better decision making. Managers in business and industry have the resources to accumulate data, and this course develops the techniques to discover the information that your data provides. You will also gain skills in understanding how data collection and analysis will benefit your research.

BUS 6003 Quantitative Methods II - Making Discoveries with Data (4 Credits)

As a PhD student you will do original research ... making discoveries that nobody else has made before. Data analysis is a key tool that facilitates that. Data analysis tools help you unlock the hidden treasures within your data set. These treasures are knowledge and information that is waiting to be discovered and utilized for your benefit. These skills support managers for better decision making. Managers in business and industry have the resources to accumulate data, and this course develops the techniques to discover the information that your data provides. In this course you will learn how these data analysis tools are used for research, and you will plan how you will use your data analysis skills to perform your own research for your doctoral degree.

BUS 6004 Data Analytics (4 Credits)

The main objective of this course is to provide students with a well-grounded understanding and appreciation of the contemporary methods, tools and techniques used to make evidence-based managerial decisions. As managers and practitioners in business, industry and government, you have made substantial investments in putting in place the means to collect and store data, but may not have the basic technical or analytical understanding necessary to chart a road map to discover the full potential of your data. This course intends to provide you with such an understanding and hence help you become a better manager/decision maker.

BUS 6005 Behavioral Research Design and Execution (4 Credits)

The first purpose of this course is to prepare doctoral students with the ability to design, implement, and test the results from an experiment or survey. This includes operationalizing independent and dependent variables, rooted in definitions of terms and theory, in a manner that allows for quality statistical testing. Students will also learn manipulation of independent variables, including manipulation checks, and the basics of survey design. Lastly, analysis of existing data sets will round out the learning. This course builds on the previous research and statistics coursework in the program with a focus on practice and application. Multiple actual studies will be replicated as part of the course with the final project being a replication of a study of the student's choosing.

BUS 6300 Seminar in Cross Disciplinary Decision Making Research (4 Credits)

Leaders are often faced with difficult decisions and the result of these decisions determines their future success. It is important for leaders to understand the cognitive processes which underlie the decision-making process. For example, what factors cause a leader to choose the wrong investment, hire the wrong employee, or select the unethical alternative? This course will provide students with a foundation of seminal theories rooted in Economics, Psychology and Sociology and a comprehensive perspective of organizational decision-making.

BUS 6301 Research Seminar in Innovation and Creativity (4 Credits)

This course is intended to be a multi-disciplinary doctoral seminar investigating the broad questions of innovation and creativity and its application to entrepreneurship. The course will start with an industry-level view of innovation and how technologies evolve and then move from the micro-individual level of creativity to the organizational level while considering the individual, dyadic and group levels.

BUS 6302 Seminar in Verbal and Non-Verbal Research (4 Credits)

This course is designed to provide you with knowledge on how to leverage verbal and nonverbal behavior to identify psychological states and traits, to predict social evaluations and organizational outcomes. Together we will review theory, methods, and findings pertaining to verbal and nonverbal behavior in the psychological literature. We will learn how to develop research questions and hypotheses, design research to test those predictions, develop behavioral coding schemes, and identify appropriate statistical analyses. We will also discuss the strengths and weaknesses of extant research to determine what can and cannot be concluded from the results. Overall, this course will provide you with techniques to quantify human behavior, identify ways to leverage these techniques to answer novel questions of organizational importance, and to appreciate the limits of behavioral analysis.

BUS 6303 Launch your Doctoral Journey: Be Impactful (4 Credits)

The seminar aims at providing Executive PhD students in Business a capstone experience, to build on the research knowledge and experience they have gained over the first two years of coursework, and to formulate and sharpen their vision for their chosen careers in academia, business or consulting. Specifically, the course attempts to provide an integrative framework to help them to emerge as an impactful scholar. Students systematically walk through different research designs, theoretical, qualitative, and quantitative frameworks. They learn to critically evaluate the designs, and apply the learning to their own research. The seminar culminates with a presentation of their vision statement for their scholarly journey ahead. Prerequisite: MGMT 6301.

BUS 6400 Academic Skills for Doctoral Students in Business (2 Credits)

The first purpose of this course is to prepare doctoral students with skills and knowledge that are not commonly part of the course requirements but are imperative for a successful navigation of the job market and a successful publication career. This includes managing the peer review process, navigating a conference to extract the most value, and managing co-author relationships. The second purpose of the course is to provide students with just-in-time data-analysis skills based on their identified path of research interest. Archival research in business requires a significantly different skill-set than behavioral research. Students will complete one of two tracks, archival or behavioral, in the form of an intensive two-day workshop where they utilize actual data to replicate a published research study.

BUS 6500 Applied Research Practicum Series: I (4 Credits)

ARP I will introduce students to their ARP Instructor's research area. As such students will work closely with their ARP instructor to begin to understand his/her research area and focus. This serves as the introduction for the three-part sequence of ARPs resulting in a completed research project. By the end of ARP I, students will complete a systematic review paper of a research area and a set of research questions of interest.

BUS 6501 Applied Research Practicum Series: II (4 Credits)

Students will work closely with their instructor to create a theoretically supported and actionable research proposal that uniquely contributes to our understanding of the larger business field. Proposals can be focused on qualitative and quantitative (or mixed) methods. This part of the ARP series will help students develop research questions into carefully crafted predictions grounded in theory while considering execution of the study.

BUS 6502 Applied Research Practicum Series: III (4 Credits)

Students will design an appropriate scientific method (e.g., survey, experiment or interview) including a data collection and analysis plan per the final proposal submitted in ARP II. Once appropriately designed, under the direction of their ARP professor, students will collect data appropriate to test the study's hypotheses. Institutional Review Board (IRB) approval must be received prior to data collection which should be of publishable quality (broadly defined).

BUS 6503 Applied Research Practicum IV (4 Credits)

Students, along with oversight and assistance from their respective ARP professor, will analyze data consistent with his/her research proposal (ARP II) and analysis strategy (ARP III). The students will then complete an entire research paper that is ready for presentation and/or publication at appropriate outlets.

BUS 6900 Dissertation Research in Business (2-28 Credits)

Dissertation Proposal Defense Following successful completion of the comprehensive exam, each student will prepare a dissertation proposal and defend the proposal to the dissertation committee. A successful dissertation defense qualifies the student to Ph.D. candidacy. The dissertation proposal should be prepared in close consultation with the student's advisor and should be available to all committee members at least two weeks prior to the exam. It should reflect an extensive critical literature survey, and contain an accurate assessment of the state-of-the-art in the area of research, a precise statement of the research question, motivation for pursuing the research, and the research method design that will be used to answer the research question. The dissertation proposal must be successfully defended within four quarters of passing the comprehensive exam. Successful defense of the dissertation results in agreement between the student and the committee as to what will constitute successful completion of the dissertation research. The composition of the dissertation proposal committee must comply with the standards specified by the University of Denver Doctoral Degree Requirements and Standards. The dissertation proposal defense is an oral closed exam. If a student successfully defends the dissertation proposal but subsequently switches advisor and hence topic, the dissertation defense must be repeated within one year to ensure capability of the student and feasibility of the project. Dissertation Defense After the dissertation has been completed, the student must defend it in a final oral exam, as specified by the University of Denver Doctoral Degree Requirements and Standards.

Business Ethics & Legal Studies (LGST)

LGST 3030 The Supreme Court & Your Life (2 Credits)

This course evaluates the most critical ways in which the United States Supreme Court interacts with and affects an individual's life, career, education, freedom, and future. Over ten weeks, we analyze how: (1) each major section of the Constitution and how it makes its way to the Court, (2) is ultimately interpreted by each of the nine current Justices, and (3) the subsequent repercussions of the opinion. The primary vehicles used for this task are actual Supreme Court cases, federal circuit court opinions, and legal briefs filed by the parties and interest groups on both sides of each dispute. Each of these documents is part of the public record and easy to locate. Because many students are likely to hear, believe, and/or resonate with only one side of each politically-charged divisive case heard by the Court (perhaps because they listen to only one news source or affiliate primarily with people of the same ideological bent), this class will emphasize the importance of seeing both sides of important public policy, legal, and ethical issues before taking a position. This is a valuable skill that is often neglected in college courses but will take a student far in life.

LGST 3400 White Collar & Corporate Crime (4 Credits)

This course offers an essential overview of corporate and "white collar" crime. Through the use of real-world case studies, legal and ethical analysis, criminological research and cultural reference materials such as iconic films and books, this course offers insight into the types, causes, and effects of crimes committed by businesses, corporate officers and directors, professionals and public officials. It will foster critical analysis of contemporary efforts to address recurring problems of corruption, bribery, fraud, insider trading, money laundering, collusion and more through the enactment of criminal statutes, international treaties, regulatory disclosure requirements, investigative methods, and litigation. Prerequisite: Undergraduates registering for this cross-listed course must complete LGST 2000. Graduate students are strongly advised to have successfully completed a course in business law.

LGST 3440 The Supreme Court & Your Life: Constitutional Law, Ethics & Policy for the 21st Century (2 Credits)

This course evaluates the most critical ways in which the United States Supreme Court interacts with and affects an individual's life, career, education, freedom, and future. Over ten weeks, we analyze how: (1) each major section of the Constitution and how it makes its way to the Court, (2) is ultimately interpreted by each of the nine current Justices, and (3) the subsequent repercussions of the opinion. The primary vehicles used for this task are actual Supreme Court cases, federal circuit court opinions, and legal briefs filed by the parties and interest groups on both sides of each dispute. Each of these documents is part of the public record and easy to locate. Because many students are likely to hear, believe, and/or resonate with only one side of each politically-charged divisive case heard by the Court (perhaps because they listen to only one news source or affiliate primarily with people of the same ideological bent), this class will emphasize the importance of seeing both sides of important public policy, legal, and ethical issues before taking a position. This is a valuable skill that is often neglected in college courses but will take a student far in life.

LGST 3450 Impact of Driverless Mobility: Business, Legal & Ethical Implications (4 Credits)

Smartphones and personal computers have changed the world and how we live in it. Now, Driverless Vehicles are poised to profoundly reshape our transportation systems, real estate development, access to goods and services, and our collective ecological footprint. In our "Impact of Driverless Mobility" course, we will consider many of the broad implications of this disruptive technology, including, but not limited to, the many legal, ethical and business considerations. Prerequisite: LGST 2000.

LGST 4198 E-Commerce Law and Ethics (4 Credits)

The changes in technology and business over the past 20 years have been dramatic and far-reaching. Navigating the even more astonishing changes in the future requires some perspective on the developments of the recent past. How did we get to where we are? What technological, economic and political forces have generated the current state of e-commerce? How are these forces likely to change into the future? What are the basic features of e-commerce as it exists today?.

LGST 4550 Business Law for Accountants (4 Credits)

This course provides students with a detailed review of the legal considerations in forming, operating, and dissolving the most common forms of business entities: partnerships, limited liability companies, and corporations. The rights, duties and liabilities of the managers, owners and accountants (internal and external) of these entities are extensively examined. The course also provides an overview of federal securities laws impacting these organizations. Prerequisite: ACTG 4620 or BUS 4620 or LGST 2000 (concurrent registration OK).

LGST 4700 International Law (4 Credits)

Offers both an introduction to public international law (the rights and duties of states and intergovernmental organizations [IGOs]) and to private international law (the rights and duties of individuals, businesses, and non-governmental organizations [NGOs] in their international affairs). Majority of course devoted to key international issues of business law and public policy such as alternative dispute resolution (ADR), privatization, intellectual property, international sales, the Foreign Corrupt Practices Act, trade (GATT and WTO), and the international facilities that deal with the adjudication and resolution of legal issues related to business.

LGST 4701 Topics in Ethics & Legal Study (1-5 Credits)

This course examines complexities, paradoxes, and dangers of leadership. The platform for the course is a Core Leadership Model (and logical deviations from it) which can result in Great Leadership. At the heart of Great Leadership one finds a values base. Through in-depth analysis of the key dimensions of the Core Model and its accompanying deviations, participants gain a deep understanding of - and practical experience with - Values Based Leadership in today's world.

LGST 4730 Values Based Leadership in Practice (4 Credits)

The course examines the complexities, paradoxes, and dangers of leadership. The platform for the course is a Core Leadership Model (and logical deviations from it) which can result in Great Leadership. Through in-depth analysis of the key dimensions of the Core Model and its accompanying deviations, participants will gain a deep understanding of - and practical experience with - Values-Based Leadership in today's world.

LGST 4740 Science & Mgmt. of Org. Ethics (4 Credits)

This course examines our knowledge regarding ethical decision making and behavior in organizational contexts. The course also explores the implications of such knowledge for effectively creating and managing ethical organizations. The course will be conducted as a graduate seminar with students playing a central role in identifying topics, researching content areas, and deciding on course outcomes. We will examine conceptual and theoretical models of ethical behavior in organizations, research empirical studies, and develop managerial implications. The overarching goal is to increase knowledge and understanding so as to strengthen capacities to be ethical leaders and managers. Prerequisite: BUS 4100. Non-business students may take the course with permission.

LGST 4760 CEOs and Corporate Governance (4 Credits)

In the wake of the Sarbanes-Oxley and Dodd-Frank laws, corporate governance has become a compelling issue for business students and executives. Corporate board members and leaders of institutional investors share their insights concerning corporate governance from strategic, financial and legal perspectives. CEO/board dynamics are explored, along with leadership development and executive succession policies. The roles of major board committees, such as the audit, compensation, nominating, and legal compliance committees are given special emphasis. Board responsibilities in corporate crises and re-structuring are examined, along with the legal liabilities of executives, board members, and the corporation. Public policy pressures on corporate governance, including the roles played by the Securities and Exchange Commission and other regulatory bodies are discussed, along with the responses by business organizations, political interest groups, and self-regulatory bodies. Shareholder activism and litigation, along with pressures from other corporate stakeholders are also emphasized in the course. Examples of topics include corporate scandals, executive compensation, global corporate governance systems, and governance reforms. Students engage in a number of case analyses over the course of the quarter, produce a four-part case study, and discuss actual real world solutions with business leaders who have been involved in the issues. Cross-listed with ACTG 4760.

LGST 4780 Leadership, Teams & Values (4 Credits)

This course is designed for Daniel Scholars (who have completed the first quarter of their MBA program including Value Based Leadership) to provide both challenging intellectual discussion and physical engagement around the fundamental ethical dilemma of competition and/or cooperation. The venue for the course is Harbor Island, San Diego, California, and the adjacent waters of San Diego Bay and the Pacific Ocean. Both traditional classrooms and the untraditional learning environment of the off-shore sail boat provide the context of dynamic learning about values, teams and self. Prerequisite: BUS 4100.

LGST 4790 Entrepreneur & Family Business-Organization, Governance Ethics & Leadership (4 Credits)

This course covers the most current legal and ethical issues involving the creation of value, strengthening and growing family businesses through the process of best practices in business governance, coupled with ethical conduct and values based leadership, and legal compliance. Cross listed with LGST 3790. Prerequisite: BUS 4100.

LGST 4980 Internship (1-5 Credits)**LGST 4991 Independent Study (1-10 Credits)****LGST 4995 Independent Research (1-10 Credits)****Faculty**

Corey Ciocchetti, Professor, JD, Duke University

Paula Anne Holt, Teaching Professor, JD, University of Denver

Bruce William Klaw, Associate Professor and Department Chair, JD, Harvard University

Libbi Levine Segev, Teaching Associate Professor, JD, University of Denver

Donald O. Mayer, Professor of the Practice, JD, Duke University

Tricia D. Olsen, Professor and Associate Dean, PhD, University of Wisconsin-Madison

Kevin O. O'Brien, Associate Professor, JD, University of Denver

John Holcomb, Professor, Emeritus, JD, Georgetown University

R. Hutton, Professor, Emeritus, PhD, University of Florida

Buie Seawell, Professor, Emeritus, JD, University of Denver

Business Information&Analytics (INFO)**INFO 4000 Foundations of Business (4 Credits)**

The Introduction to Business course is an introduction to provides an overview of the business arena, how a business operates, and the supporting functions that are needed in any business enterprise. Students will identify forms of ownership and the processes used in operations, marketing, accounting, finance, personnel, information technology and general management. Moreover, students will learn about social responsibility and business ethics in concurrence with the Daniels College legacy.

INFO 4100 Survey of Business Analytics (4 Credits)

This course provides an overview of business analytics: how business data are collected, processed, and analyzed to support decision making. It will address both how to assess and use data that is readily available as well as how to start with corporate strategy and determine what data is needed, how to generate and process it. The course will also explore how corporate culture, ethics, and globalization can affect data management and analytic decision-making.

INFO 4120 Python Programming (4 Credits)

Python is a popular general purpose programming language which is well suited to a wide range of problems. With the right set of add-ons, it is comparable to domain-specific languages such as R and MATLAB. Python is a scripting language. The following topics will be covered: Importing data, Reading and writing files, Cleaning and Managing Data, Merging and joining DataFrame objects, Plotting and Visualization, Statistical Analysis, Fitting data to probability distributions and Linear models. Packages: Pandas, NumPy, matplotlib, statsmodels, Scikit-learn, and IPython. Principal Content Elements: 1. Introduction to Programming Logic and Design Using Python 2. Data Management 3. Statistical Analysis 4. Advanced Data Management and Statistical Analysis Prerequisites: STAT 4610.

INFO 4140 Business Databases (4 Credits)

This is an introductory database course which covers enterprise database design, modeling and implementation.

INFO 4200 Business Analytics Capstone Planning (2 Credits)

This course prepares the student for the Capstone course by identifying a faculty advisor, company, data, and a business issue to be addressed in the Capstone course in the final quarter. (Must be taken two quarters prior to INFO4400, with the exception of off-cycle students, who will take it the quarter prior to INFO4400.) This course may be taken by MSBA students only.

INFO 4240 Data Warehousing (4 Credits)

This course introduces students to the main components of a data warehouse for business intelligence applications. Students will learn how a data warehouse fits into the overall strategy of a complex enterprise, how to develop data models useful for business intelligence, and how to combine data from disparate sources into a single database that comprises the core of a data warehouse. Students will also explore how to define and specify useful management reports from warehouse data. Prerequisites: INFO 4100, INFO 4140.

INFO 4250 Business Data and Analytics (4 Credits)

Businesses make decisions and improve processes using their own and external data with a variety of data-driven and analytic techniques. This course introduces students to the business data landscape, data management in commercial organizations, and the data-driven decision-making process. Students explore the fundamental concepts behind how data and analytics can improve business performance, using their individual roles and companies as subject matter. Principal Content Elements: 1. Data-driven decision making and performance improvement. 2. Data management in organizations. 3. Hands-on experience creating visualizations for data-driven insights. INFO 4250 requires a Windows Operating System. MAC users will have to virtualize their machines, or have access to a PC for async, live session and graded assignments. The software used in this course is Power BI and Visio Pro, which are Windows-only applications. Power BI is free, and the Department of Business Information and Analytics will provide a license for Visio Pro.

INFO 4260 Data Management Platforms (4 Credits)

This course introduces students to the variety of data management platforms being used across the business landscape, and develops skills in using those platforms to manage data and perform analytics. These include Hadoop distributed file systems, Amazon Web Services, Microsoft Azure, and/or other locally-hosted and cloud-based services. Other topics, such as Apache Spark and High-Performance Computing may be introduced using University and College resources. Learning Outcomes: 1. Students will create portals to data management systems and will run instances of these systems from their local environments. 2. Students will create file systems and load data onto local and cloud-based systems, and will query and manage data within these systems. 3. Students will leverage existing software packages (system-sourced and user-installed) in order to perform analytic modeling on the data in these environments. 4. Students will articulate the advantages and disadvantages of the various data management systems, and assess their utility for a variety of business applications.

INFO 4281 Project Management (2 Credits)

"Cheaper, better, faster" is the mantra of modern business. Innovation, providing new products and services or using improved business processes, has become a prerequisite for businesses to thrive and flourish. Project Management is a discipline which supports innovation by examining how to facilitate one time events such as constructing a building, installing a software system, taking a product to market, reengineering a marketing process, or merging an acquired company. In this course, we examine the science, practice the art, and discuss the folklore of project management to enable students to contribute to and manage projects as well as to judge when to apply this discipline. Prerequisite: INFO 4100. Co-requisite: INFO 4200.

INFO 4300 Predictive Analytics (4 Credits)

This course is designed to prepare students for managerial data analysis and data mining, predictive modeling, model assessment and implementation using large data sets. The course addresses the how, when, why and where of data mining. The emphasis is on understanding the application of a wide range of modern techniques to specific decision-making situations, rather than on mastering the theoretical underpinnings of the techniques. The course covers methods that are aimed at prediction, forecasting, classification, clustering and association. Students gain hands-on experience in using computer software to mine business data sets. Prerequisite: STAT 4610.

INFO 4340 Data Mining and Visualization (4 Credits)

In this course, students create business intelligence tools such as balanced scorecards, data visualization and dashboards to inform business decisions. The course will focus on the identification of metrics, measures, and key performance indicators for a variety of business operations, and will introduce numerous analytic methodologies to support the decisions made with regard to these metrics. The focus will be on the advantages and disadvantages of various modeling methodologies and implementations moving towards performance improvement and business understanding. Prerequisite: STAT 4610.

INFO 4360 Complex Data Analytics (4 Credits)

This course addresses the rapidly-growing demands on businesses created by the prevalence of big and unstructured data. These include management of big data, big-data analytics, analysis of unstructured data (to include text mining), and management and analysis of real-time (streaming) data. The focus will be on enhancing business decision-making in the presence of big data, and on how to create the greatest ROI with large data sets.

INFO 4381 Decision Processes (2 Credits)

The competency we want to begin to develop in this course is the ability to make sound business decisions. A quick Google search can reassure you that there is no lack of information about how to make good decisions. And much of that information is confusing, if not downright contradictory. Since you will be making the decisions which impact your business and your career, you will need to decide what constitutes a good decision as well as a good decision process. In this course, we will explore some of the voluminous material available, use it to make decisions, practice with useful tools, identify traps and pitfalls, assess results, and extract guidelines for a decision process. Then we will iterate to update and refine the process.

INFO 4390 Advanced Predictive Modeling with R (4 Credits)

This course serves as an introduction to advanced predictive modeling and statistical learning using the R statistical software. Specific topics include linear, non-linear, and logistic regression, classification, resampling methods, and non-linear regression, tree-based methods, and support vector machines. The students will learn how to communicate their results (business reports, dashboards, etc.) of the various modeling exercises and projects using RStudio and the RMarkdown suite of tools. Enforced Prerequisites and Restrictions: INFO 4100 and INFO 4300.

INFO 4400 Business Analytics Capstone (4 Credits)

This course gives students an opportunity to apply the knowledge and skills learned in this program to a real-world problem submitted by a partner business. Students take a business problem from model construction and data collection through an analysis and presentation of results to recommendations for specific business decisions. Prerequisite: INFO 4200.

INFO 4401 Business Analytics Fundamentals (4 Credits)

Business Analytics is a broad term that describes the process of using data to make business decisions. Data driven business decisions are both critical in modern business and hard to produce with reliable outcomes. This course introduces students to decision-making using probability and other statistical techniques to support and validate the chosen decision. Students will practice hands on business analytics skills for making data driven business decisions.

INFO 4590 Optimization (4 Credits)

This course introduces students to the basic optimization modeling techniques and tools as practiced by business analysts to help their enterprises make better-informed decisions. Applications will include mix, selection, assignment, distribution, transportation, financial management, planning, scheduling, and management implementations in a variety of business settings. The course will focus on problem definitions, problem configuration, spreadsheet solutions, LP Software (LINGO) solutions, and interpreting and implementing results.

INFO 4610 Business Statistics and Analytics (4 Credits)

Making high quality business decisions is hard. Using data to make business decisions makes the process better. This course introduces students to a variety of techniques in analytics and statistics that facilitate data driven business decisions. Time will be spend identifying appropriate techniques to apply in various scenarios, applying in detail some of the quantitative techniques, and using analytic outputs to inform business decisions. Both technical skills and clear communication of results and decisions will be covered. Choosing proper techniques, technical work using Microsoft Excel, proper interpretation of results, and decision making are skills practiced in this course.

INFO 4700 Topics in Business Analytics (0-10 Credits)

Exploration of current trends and topics in business analytics. Prerequisite: INFO 4100.

INFO 4830 Executive Education – Data Analytics for Decision Making (2 Credits)

In this Executive Education workshop, students will explore how companies organize around data and analytics and how leaders use data to make decisions. Every organization has data, but not every organization knows how to leverage it. This course focuses on the process of analyzing data so that you can discover what problems data can solve and what successes data can make possible. The course will also provide a focus on analytic modeling, using regression analysis and optimization to develop familiarity and skills in the analytic process, and will culminate with an opportunity to explore the challenges that participants' organizations are facing around their data-driven decision processes. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

INFO 4855 Executive Education – Data Visualization Using Power BI (2 Credits)

A picture is worth a thousand words—or a thousand spreadsheets. In today's complex business world, where the amount of data is overwhelming, being able to create and communicate through compelling data visualizations is a must-have skill for all business professionals. For too long data has been trapped behind scripts, wizards and code. That can change! This Executive Education workshop is a deep dive into the world of data and data visualization. You will learn how to create, analyze and evaluate large data sets that will enable you to turn mountains of raw data into meaningful stories that inform decisions and drive change. This is a software-heavy class where you will have the opportunity to practice technical skills in Microsoft Power BI, a free software application that lets users visualize data. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

INFO 4875 Executive Education – Strategic Advantage Using Data Analytics (2 Credits)

In today's business world, labor, capital, raw materials, and data are all essential to an organization's strategy. Many leaders have well-developed strategies for the first three, but they lack the understanding and direction to tackle the fourth: data. This Executive Education workshop focuses on how to build and implement a data strategy to improve organizational performance. Data and analytics programs offer great potential value, and to be effective they must align strategically across the business to deliver a positive return on investment. By understanding and integrating the five main components of a data strategy – Program, People, Process, Platform and Data – you will be able to grow your business and accelerate progress toward your organization's goals. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

INFO 4991 Independent Study (1-10 Credits)

Chemistry (CHEM)

CHEM 3110 Chemical Systems I (3 Credits)

Advanced discussion of modern concepts of organic chemistry; bonding, stereochemistry, reaction mechanisms. Prerequisites: CHEM 2453 and equivalent of one year of physical chemistry.

CHEM 3120 Chemical Systems II (3 Credits)

Interpretation of trends in the chemistry of the elements in terms of orbital interactions. Most examples will be taken from the third row transition metals and the boron and carbon groups. Prerequisites: CHEM 2131, CHEM 3310 and CHEM 3110.

CHEM 3130 Chemical Systems III (3 Credits)

Advanced-level physical biochemistry course intended for advanced-level undergraduates and graduate students. Focuses on kinetic, thermodynamic and dynamic aspects of biopolymers; delineates the relationship of these properties to the mechanism and function of biological macromolecules. Prerequisites: CHEM 3811, CHEM 3812, CHEM 3813, CHEM 3610 or the equivalent.

CHEM 3220 Advanced Analytical Chemistry (3 Credits)

Principles of chemical instrumentation applied to analytical measurements; principles, instrumentation and applications of spectrometric and chromatographic measurements. Prerequisites: CHEM 3210 and CHEM 3621, or the equivalent.

CHEM 3310 Structure and Energetics I (3 Credits)

Fundamentals of quantum chemistry, and introduction to symmetry and molecular structure of small and large systems. Prerequisite: one year of physical chemistry.

CHEM 3320 Structure and Energetics II (3 Credits)

Computational methods in chemistry. Prerequisites: CHEM 3310, one year of physical chemistry.

CHEM 3410 Atmospheric Chemistry (3 Credits)

The concepts of equilibrium thermodynamics, kinetics, and photochemistry will be applied to understanding atmospheric processes. Covers urban air pollution in detail with focus on primary pollutants. Also covers stratospheric chemistry with focus on ozone chemistry and the chemistry of climate change. Prerequisites: (CHEM 2270 and CHEM 2453) OR CHEM 2240.

CHEM 3411 Aquatic Chemistry (3 Credits)

The circulation of the oceans and their chemical make-up. 'Classical water pollution problems' like biological oxygen demand and turbidity are discussed. Also presented: aquifer structure and flow, ground water chemistry, pollutant partitioning between stationary and mobile phases, heterogeneous surface chemistry, and the detection of trace contaminants. Prerequisites: (CHEM 2270 and CHEM 2453) or CHEM 2240.

CHEM 3412 Environmental Chemistry & Toxicology (3 Credits)

A survey of environmental toxicology concepts: animal testing, dose-response data, epidemiology, risk assessment. The course includes ecotoxicology, focusing on the alteration of biological and chemical systems beyond the simple response of an individual to an environmental chemical. Prerequisites: (CHEM 2270 or CHEM 2011) and CHEM 2453.

CHEM 3610 Physical Chemistry I (3 Credits)

Fundamentals of thermodynamics, including phase and reaction equilibria, properties of solutions, and electrochemistry needed for advanced study in life sciences and for Physical Chemistry II and III. May be taken for graduate credit by nonchemistry majors. Prerequisites: CHEM 2453, calculus and physics.

CHEM 3620 Physical Chemistry II (3 Credits)

Fundamentals of quantum chemistry, including theories of atomic and molecular structure and spectroscopy. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3610.

CHEM 3621 Physical Chemistry III (3 Credits)

Fundamentals of kinetic theory and statistical mechanics. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3620.

CHEM 3703 Topics in Organic Chemistry (3 Credits)

May include organic photochemistry, organic synthesis, organic electrochemistry or natural products. May be repeated for credit. Prerequisites: CHEM 3110 or equivalent and others depending on topic.

CHEM 3705 Topics in Biochemistry (3,4 Credits)

May include physical techniques for exploring biological structure, biological catalysis, and selected fields within biochemistry taught from original literature. May be repeated for credit. Prerequisites: CHEM 3831 and 3813.

CHEM 3811 Biochemistry-Proteins (3 Credits)

Protein structure and function, starting with the building blocks and forces that drive the formation of protein structure and the basic concepts of protein structure, and continuing with enzyme catalysis, kinetics, and regulation. Prerequisites: CHEM 2453 or instructor permission.

CHEM 3812 Biochemistry-Membranes/Metabolism (3 Credits)

Membranes and membrane mediated cellular processes, energy and signal transduction, and metabolic/biosynthetic pathways. Prerequisite: CHEM 3811 or CHEM 3831.

CHEM 3813 Biochemistry-Nucleic Acids (3 Credits)

Molecular processes underlying heredity, gene expression and gene regulation in prokaryotes and eukaryotes. Prerequisites: CHEM 2453 and CHEM 3811.

CHEM 3831 Advanced Protein Biochemistry (3 Credits)

This course provides fundamental insights into the chemistry and physics of proteins. It investigates how amino acids form proteins with highly complex three-dimensional structures and how these structures mediate function. We examine key research articles and their contribution to our current understanding of proteins. Topics range from protein folding to enzyme kinetics and emphasize basic principles. Prerequisites: CHEM 2453 and instructor permission.

CHEM 3991 Independent Study (1-10 Credits)

May be repeated for credit.

CHEM 3995 Independent Research (1-10 Credits)

Research project conducted under guidance of a faculty member. Credit hours and projects arranged on an individual basis. May be repeated for credit.

CHEM 4900 Chemistry Seminar (0 Credits)

A weekly presentations of research in progress and of current literature by outside speakers. faculty and graduate students.

CHEM 4991 Independent Study (1-10 Credits)

CHEM 4995 Independent Research (1-10 Credits)

CHEM 5991 Independent Study (1-10 Credits)

CHEM 5995 Independent Research (1-10 Credits)

Child, Family & School Psych (CFSP)

CFSP 3991 Independent Study (1-10 Credits)

CFSP 4301 Professional, Legal and Ethical Issues in School Psychology (4 Credits)

This course examines professional, legal, and ethical issues pertinent to working with birth to age 21 populations in school and community settings. Attention is focused on federal and state education legislation, special and regular education case law, and psychological practice case law.

Professional issues and contemporary service models are reviewed, including an introduction to ethical issues, federal mandates, professional training, and roles and responsibilities. Students engage in casework discussion regarding delivery of assessment, intervention, and consultation services. Special emphasis is given to current mental health and education regulations and reforms. Differential issues facing school psychology professionals in urban and rural settings are discussed, and students become acquainted with a variety of legal and ethical issues affecting practice in public schools, private settings, and higher education. Students learn about ethical standards, reasoning processes, and conduct in applied settings. Prerequisites: None.

CFSP 4302 Special Education & Gifted Education Legal Issues (3 Credits)

This course is designed to provide students with foundational knowledge regarding the legal issues affecting special education and gifted education in early childhood and K-12 educational settings. Attention is focused on federal and state education legislation, special education case law and gifted statutes specific to Colorado. Consideration also is given to the interaction of ethical standards of practice as they relate to legal mandates and court decisions to meet the educational and psychological needs of all students, especially those with disabilities and twice exceptionalities. Students will be exposed to legal issues affecting practice in the public schools community agencies and early childhood environments. Prerequisites: None.

CFSP 4303 Psychopathology: Prevention, Diagnosis, Treatment (4 Credits)

This course is designed to provide students with knowledge of mental health disorders, the diagnostic criteria as well as culturally-relevant prevention and intervention strategies. Participants obtain practical information regarding the assessment, identification, amelioration, facilitative responses, and intervention in school and community settings. Using a strengths-based approach, prevention principles, curriculum, and policy agendas are discussed. Additionally, this course explores implications for school psychologists and other school-based practitioners working with those at risk for or suffering from mental health disorders. Prerequisites: CFSP 4322, 4323, 4324, 4340, 4343.

CFSP 4304 Diversity in School and Community Settings (3 Credits)

This course explores diversity in children and families, and the impact of culture on personal and family development. Emphasis is placed on the intersection of school and community settings' cultures and those of children and families, and how this affects learning and development for individuals and groups of children. Attention is given to students' cultures and cultural experiences, and how these affect the work they do with children and families in school and community settings. Prerequisites: None.

CFSP 4305 Exceptionalities in Education: High Incidence in Disabilities (3 Credits)

This course provides a broad survey of the field of exceptionality and special education. Included are discussions of current issues and controversies in the field, characteristics, classification, diagnosis, and educational interventions for early childhood and school-aged children with high-incidence and low-incidence disabilities who have exceptional educational needs. Biomedical and psychosocial etiologies are reviewed. Implications for child and family interventions and supports also are addressed. Prerequisites: CFSP 4310, 4311, 4312.

CFSP 4306 Exceptionalities in Special Ed (3 Credits)

This course provides a broad survey of the field of exceptionality and special education. Included are discussions of current issues and controversies in the field, characteristics, classification, diagnosis, and educational interventions for early childhood and school-aged children with disabilities who have exceptional educational needs. Biomedical and psychosocial etiologies are reviewed. Implications for child and family interventions and supports are also addressed.

CFSP 4308 Early Academic Competencies and Interventions (3 Credits)

This course provides an overview of early language and literacy development across diverse settings and stakeholders, such as families, teachers/providers, programs, and communities. A comparative analysis of evidence-based early literacy strategies, environments, curriculum, and a review of current evaluation and instructional language and literacy practices for working with teachers, families, and young children are undertaken. Play-based and other informal methods of assessment and intervention are covered, including the integration of technology and strategies to promote early language and literacy with infants, toddlers and preschoolers in natural environments. Prerequisite: CFSP 4310; None for ECSE CERT Students.

CFSP 4310 Early Childhood Development (3 Credits)

This course focuses on early childhood development during, from the prenatal period to approximately five years of age. Major theories of early childhood development and research methods for studying infant and early childhood behavior will be discussed. Emphasis will be on the physical, cognitive, communicative, social, and emotional aspects of development, for children who are typically developing, at risk or with special needs. All-inclusive issues, as well as health, risk and protective factors will be addressed. The importance of investing in early childhood programs, fostering nurturing relationships during the early years, and addressing the diverse needs of families will be emphasized. Prerequisites: None.

CFSP 4311 Child and Adolescent Development (3 Credits)

This course provides an overview of growth and development from age five through 21 years of age. We will explore theories and research in developmental psychology to provide a context for typical child development. Attention will be given to the social, emotional, cognitive, and biological development of the child, with a particular focus on attachment as a framework for healthy development in these domains. Case studies will allow for the application and integration of child development theory and counseling practice. Prerequisites: None.

CFSP 4312 Learning Theories & Behavioral Analysis (3 Credits)

This course examines learning theories and applied behavioral principles. Students learn to apply theories to case studies and fieldwork relating to children along the developmental spectrum and across cultural contexts. Students work to investigate and analyze concepts relating to learning and behavior at home and school, and to develop positive behavioral support and effective learning plans. Prerequisites: None.

CFSP 4315 Professional, Leadership and Ethical Issues in Special Education: Birth to 21 (3 Credits)

This course provides students with an understanding of the roles & responsibilities of an Early Childhood Special Education Specialist and Special Education Generalist. This course serves as the foundation for students who are interested in pursuing a profession in special education and working with children with disabilities from birth to 21 years. This course includes the ethical and professional practice standards and understanding of the multiple roles and complex situations across wide age and developmental ranges. This course also briefly covers the historical laws and legal issues associated with the profession. The course also highlights why special educators engage in professional activities and learning communities that benefit individuals with developmental disabilities and their families, colleagues, and their own professional growth. This course promotes the idea that special educators are lifelong learners and regularly reflect on and adjust their practice. Prerequisites: None.

CFSP 4316 Infant through Adolescent Development (3 Credits)

This course focuses on early childhood development from the prenatal period to approximately five years of age. Major theories of early childhood development and research methods for studying infant and early childhood behavior will be discussed. Emphasis will be on the physical, cognitive, communicative, social, and emotional aspects of development, for children who are typically developing, at risk or with special needs. All-inclusive issues, as well as health, risk and protective factors will be addressed. The importance of investing in early childhood programs, fostering nurturing relationships during the early years, and addressing the diverse needs of families will be emphasized.

CFSP 4317 Topics in Special Education: Learning Differences (1-3 Credits)

This course reviews the challenges that arise in special education settings related to children who exhibit academic and behavioral differences and delays. Academic and behavioral interventions and differentiation strategies will be addressed. Additionally, the course will cover the approaches for addressing children who require additional academic and behavioral support in the classroom. Prerequisites: None.

CFSP 4318 Pharmacology of Addictive Behaviors I & II - Applications for schools (3 Credits)

This class provides a solid base of knowledge about the drugs of abuse including what occurs physiologically with drug use and other addictive behaviors with a focus on adolescent development. Additionally, this course explores neuroscience and genetic research on addiction to better understand the changes in the brain that underlie drug use and addictive behaviors with an emphasis on adolescent development.

CFSP 4319 Counseling Adolescent Addictive Behaviors (3 Credits)

Introduction to assessment, treatment and outcome evaluation of chemical and non-chemical addictive behaviors in adolescents. Gain familiarity with major addiction treatment models and their underlying assumptions in order to generate comparative critiques. Examination of the major treatment approaches to substance abuse and their accompanying theories of etiology with a focus on adolescence. Explore meaning of addiction and abuse in relation to related non-substance use compulsive behaviors. Develop basic assessment skills to identify and differentiate substance abuse from other clinical disorders within the school environment. Develop an understanding of the interpersonal function of substance abuse and related addictive behaviors as well as an understanding of the skills and attitudes that underlie effective addiction treatment in adolescents.

CFSP 4320 Early Childhood Assessment: Formal & Standardized (3 Credits)

This course is designed to teach students how to assess young children (birth to 5 years) using a variety of formal and standardized methods. Assessment will focus on normed-referenced, standardized measures of cognitive, communication, emotional, social, sensory and physical motor development. Students will gain experience in administering assessments to young children, interpreting assessment results, writing assessment reports, and reporting the results to families and professionals. A variety of assessment tools will be studied for their appropriate use with young children and their families. Prerequisite: CFSP 4310.

CFSP 4321 Psycho-educational Assessment I (4 Credits)

This course is designed for graduate students in school psychology to advance their knowledge of, skills in, and attitudes toward the assessment of cognitive functioning in children and adolescents. This course will include (a) review of historical and current theories of intelligence, (b) review of psychometric constructs relevant to the measurement of cognitive functioning, (c) practice in the administration and scoring of widely used measures of cognitive functioning, (d) practice in the interpretation of test scores, (e) practice in the preparation of written reports summarizing test results, (f) exploration of multicultural issues related to assessment, and (g) review of the clinical application of psychological testing in school and clinical settings. The course is a combination of lecture and lab intended to provide broad and specific instruction on the procedures and techniques for administering, scoring, and interpreting cognitive measures with children, adolescents, and adults. Student knowledge, skills, and attitudes will be formally assessed through performance on mock examinations, administration of psychological assessments, written reports, and group presentations. Students will find that a large amount of time outside of class is required to successfully complete this course. Learning to administer and interpret cognitive assessments takes many hours of practice. Students should be aware of this and budget their time accordingly.

CFSP 4322 Psycho-Educational Assessment II (4 Credits)

This course is designed for graduate students in school psychology to advance their knowledge of, skills in, and attitudes toward the assessment of academic functioning in children and adolescents. The course is designed to train students in identification and assessment for academic difficulties. Recent paradigm shifts in general and special education, fueled by federal and state law, are calling for school personnel, particularly school psychologists, who have the knowledge, skills, and leadership competencies necessary to promote better academic assessment and intervention practices for all students. The role of school psychologists is expanding and diversifying. In an era that emphasizes universal prevention and swift early intervention at the first sign of difficulty (i.e., MTSS), school psychologists may be among the best educational professionals for preventing and intervening when children experience academic difficulties. The course is a combination of lecture and lab intended to provide broad and specific instruction on the procedures and techniques for administering, scoring, and interpreting achievement measures with children, adolescents, and adults. Student knowledge, skills, and attitudes will be formally assessed through performance on mock examinations, administration of psychological assessments, written reports, and group presentations. Students will find that a large amount of time outside of class is required to successfully complete this course. The readings and the practical work assignments required to master the techniques covered in this course are time-consuming and demanding. Students will be expected to learn the formal scoring systems used for each instrument and the theory underlying the use of these techniques. Learning to administer and interpret academic assessments takes many hours of practice. Students should budget their time accordingly.

CFSP 4323 Psycho-Educational Assessment III (4 Credits)

This course is the second of two required courses designed to provide students in School Psychology with expertise in individual intelligence and achievement test administration, scoring, interpretation, and report writing. Each student has an opportunity to administer various cognitive and achievement measures, with particular emphasis on the Woodcock Johnson Scales. Nontraditional forms of assessment, as well as adaptive behavior measures, are also covered. Integrating results of assessments with other data to provide effective educational recommendations continues to be an emphasis. The focus of the class is on the assessment of school-aged children. Lab fee required. Prerequisites: CFSP 4312, 4322.

CFSP 4324 Psycho-educational Assessment IV (3 Credits)

This course is designed to provide students with knowledge of the major approaches to assess a school-aged student's social and emotional status. Instruction includes underlying theories, use and interpretation of interviewing techniques, observation methods, objective behavior ratings, self-report measures, sociometric procedures and selected projective measures. Emphasis is placed on the integration and interpretation of multimethod, multisource and multisetting data to improve diagnostic accuracy, and the use of assessment results in developing effective intervention strategies. Students learn to incorporate such assessment information using case studies. In addition, students develop skills in writing case reports and in making effective presentations of social-emotional assessment results. Consideration is given to contemporary issues in the assessment of children's social emotional functioning. Lab fee required. Prerequisites: CFSP 4310, 4311, 4322, 4323.

CFSP 4326 Early Childhood Assessment: Informal & Play-Based (3 Credits)

This course is designed for students to learn informal and play-based assessment processes for young children (birth-6 years) using a variety of non-standardized, informal and play-based assessment methods. The entire assessment process, including screening, evaluation, interpreting results, writing an integrated report, and providing feedback to families and professionals, will be the focus. Assessment measures will be examined with consideration for when and why specific instruments should be used, in addition to the benefits and disadvantages of the instruments. Students will be trained in-depth in the administration and interpretation of a variety of instruments for assessment of the whole child including the cognitive, language, social-emotional, and sensorimotor developmental domains. Prerequisite: CFSP 4310.

CFSP 4330 Family-School Partnering and Consultation (3 Credits)

This course is designed to familiarize educational, mental health, and early childhood service providers with essential attitudes, approaches, and actions necessary to form successful family-school-community partnerships that can foster development and learning, especially for children with disabilities. Ecological, family systems, and family-centered theory and principles serve as the foundation for working collaboratively with families from diverse cultural and social backgrounds within school and community settings. Students gain skills in family interviewing; consultation to identify family strengths, needs, and resources; collaborative problem-solving; and multi-systemic learning. Evidence-based family involvement, education, and intervention strategies contribute to positive family-school partnering relationships are reviewed within a multi-tiered, school-based service delivery framework. Prerequisite: CFSP 4332; None for ECSE Students.

CFSP 4331 School and Organizational Consultation I (3 Credits)

This course is designed to acquaint students with current directions in school and organizational consultation. Key principles of successful system-wide prevention, intervention and evaluation are covered. The importance of maintaining an ecological perspective in organization consultation activities is stressed.

CFSP 4332 School and Organizational Consultation II (3 Credits)

This course builds on content covered in School and Organizational Consultation I. It is designed to acquaint students with current directions in classroom management and school-based consultation. Covered are issues related to consultant and consultee characteristics, consultation practices and processes, models and stages of consultation, facilitating desired outcomes in consultation, and evaluation of consultation outcomes. Special emphasis is also given to problems of classroom management and collaboration with parents, teachers and other educational and community personnel. Case analysis and practice are required.

CFSP 4335 Infant & Family Interventions (3 Credits)

This course will describe various models for intervention with infants and toddlers with disabilities, emphasizing intervention within natural environments. Working with children and families in home, childcare, and other community settings will be emphasized and contrasted with intervention in more clinical settings. Students learn how to consult with parents and community professionals in providing coordinated transdisciplinary services when working with children in home and community settings. All areas of development will be addressed. Field experiences with children and families are expected to practice the skills addressed in class. Families will be asked to share their experiences to enable students to gain the "human" side of theory and practice. Prerequisites: None.

CFSP 4336 Preschool Interventions (3 Credits)

This course covers early childhood interventions applicable within community, preschool and home environments. A hierarchy of intervention strategies is addressed including universal, targeted, and intensive approaches. There is a focus on building supportive networks, routine-based intervention strategies, and collaboration to enhance family resources. Students review empirically validated early interventions and curriculum for young children exhibiting both normal and delayed development. Prerequisite: CFSP 4310, 4312; None for ECSE CERT Students.

CFSP 4337 School Age Academic Competencies and Interventions (3 Credits)

The purpose of this course is to review current theories of learning disability and practices that can support the diverse learning needs of school-aged students with and without disabilities. An integrated response to intervention model will be reviewed to identify difficulties, delays, and disabilities in the domains of literacy (oral, writing, speaking, listening), mathematics, and self-regulation. Students will learn to: a) evaluate differentiated instructional environments and adaptations that can support learning; b) employ focused assessments to identify academic strengths and weaknesses; c) formulate instructional hypotheses and learning goals; and d) link assessment results to evidence-based intervention approaches or instructional strategies designed to address phonemic awareness, decoding/phonics, reading fluency, listening/reading comprehension, spelling, written expression, vocabulary, mathematical calculation, mathematical problem-solving, and study/organization/test-taking skills. Effective practices will be reviewed to reduce learning barriers and increase learning supports across school, home, and community settings. Students will collaborate on the development of instructional hypotheses and learning goals that respect cultural diversity and language differences and will develop plans to monitor instructional fidelity and students' progress over time. These goals are accomplished through critical readings, classroom discussion, homework assignments, demonstrations, modeling, video analysis, and practice with hypothetical and authentic cases referred for learning and academic issues. Prerequisite: CFSP 4312.

CFSP 4338 Exceptionalities in Education: Low Incidence Disabilities (3 Credits)

This course reviews a wide range of neurodevelopmental disorders and low incidence disabilities such as blindness/visual impairment, deafness/hearing impairment, deaf blindness, traumatic brain injury, Fragile X syndrome, Fetal Alcohol Syndrome, traumatic brain injury, and syndromes associated with chromosomal deletions. Implications for assessment and intervention will be outlined including diagnostic criteria, prevalence and treatment. Research on identification and treatment including state of the art interventions and assistive technology will be addressed. Community experts on specific disabilities will be used as guest lecturers. Prerequisite: None.

CFSP 4339 Introduction to Play Therapy (3 Credits)

This course examines the history and theoretical bases of major theories of play to enhance children's social-emotional and adaptive functioning. Child-centered, interpretive, and structured play therapy models are reviewed. Information is covered regarding preparation, selection of materials and toys, playroom characteristics, facilitative responses, and how to adapt play therapy in school, home and clinical settings. The play therapy process is illustrated from the initial referral and contact through termination, including observing and responding during sessions, facilitation and interpretation, therapeutic limit setting, and group play therapy strategies. Case studies, role play, video and script analysis are incorporated as is brief play therapy and applications with special populations. Efficacy, evaluation and future areas for professional development are reviewed. This course is designed as an introductory experience to prepare students for further supervised practica in play therapy. Prerequisite: CFSP 4310.

CFSP 4340 School Mental Health Counseling I (3 Credits)

School Mental Health Counseling I is designed as a foundational introduction to major theories behind contemporary, evidence-based school mental health counseling approaches for children and adolescents. Students will learn developmentally informed and empirically driven individual and group counseling theory. Ethical guidelines are reviewed. This course and its contents are a prerequisite to prepare students for School Mental Health Counseling II, a theoretical class that incorporates in-depth analysis of counseling theories to individual and group cases and an integrative approach to bridge the research to practice gap.

CFSP 4341 School Mental Health Counseling II (4 Credits)

School Mental Health Counseling II is designed as an introduction to discrete techniques behind contemporary, evidence-based school mental health counseling approaches for children and adolescents. Students will learn research-based counseling techniques and practical skills within a multi-tiered system of support. Consideration is given to integrative counseling approaches and differences between individual and group processes. These goals are accomplished through instruction and experiences that include examination of research, analysis and transcription of case studies, demonstrations, modeling, in-vivo practice, self-reflection and evaluative feedback. This course and its contents are a prerequisite to prepare students for School Mental Health Counseling III, an advanced class that incorporates in-depth analysis of applying counseling theories to individual and group cases, as well as supervised counseling experience.

CFSP 4342 Crisis Intervention and Prevention (3 Credits)

This course provides knowledge about crisis prevention and intervention theory and effective strategies for use in direct and indirect services for children and staff in schools and in practice with children. Emphasis is on application to child-centered and school-based crises such as bullying, child abuse, death, loss and grief, trauma, community and school-based violence, threats, and suicide. The course provides students with basic knowledge and skills for crisis intervention in school settings. Prerequisites: CFSP 4301, 4304, 4310, 4311, 4340, 4343.

CFSP 4343 School Mental Health Counseling III (2 Credits)

School Mental Health Counseling III is designed as an advanced counseling application class that incorporates supervised counseling experiences to improve interpersonal, emotional, and social functioning in young children to adolescents. Students learn to design, deliver, and evaluate evidence-based prevention and intervention approaches and consultative mental health services. By working alongside a field site supervisor, students engage in case review, analysis, and delivery of counseling services designed to mirror expectations placed on mental health professionals in school and community settings. Self-reflection, transcript analysis, and peer, instructor, and supervisor feedback are employed to develop professional and personal individual and group counseling skills within a multi-tiered system of support.

CFSP 4349 School Psychology Practicum I (2 Credits)

Taken during the first year of entry, the Practica is a supervised initial year field experience designed to expose students to a variety of home-, community- and school-based settings that serve families with children who have developmental and special needs, and in the CFSP Clinic. Each week for up to four hours, students are expected to attend, observe, and participate in a range of site-specific team meetings and services offered to families and children. For the MA in Educational Psychology degree, students, during the fall or winter quarter, identify, develop and initiate a research project with input from the faculty. The MA project culminates during the fourth quarter (summer) and serves as the final project in lieu of a comprehensive exam. Prerequisites: CFSP 4301, 4304, 4349 - Must pass all prior quarters as listed in the handbook.

CFSP 4351 School Psychology Practicum: Clinic Assignment (1-3 Credits)

CFSP Clinic is a supervised field experience in the Morgridge College of Education's Counseling and Educational Services Clinic. Through all experiences, Clinic students will work with students and families within the zero to college age range. Casework may include: interview, assessment, data analysis, report writing for different audiences, diagnostics, data presentation, intervention, and consultation for a variety of psychoeducational and developmental concerns of children and families. Prerequisites: All prior first year courses as listed in the handbook, CFSP 4351 - prior quarters.

CFSP 4353 School Psychology Practicum II (2 Credits)

This is a 500 hour supervised field experience taken after the successful completion of core courses and Practica I experience. Practica is considered a critical professional transition year to help consolidate learning and professional competencies in preparation for a subsequent Internship. Students work throughout the year with Clinic Faculty and a licensed Field Supervisor within the University of Denver psycho-educational clinic and infant, preschool, elementary, middle or high school settings and also attend weekly Practicum seminars or individual supervision sessions with a University Faculty member. Supervision is designed to provide ongoing professional feedback, case analysis, peer consultation, continued professional development pertinent to the successful practice of School Psychology in urban and rural settings. Prerequisites: All prior first year courses as listed in the handbook, CFSP 4353 - prior quarters.

CFSP 4354 School Psychology Advanced Practicum (2 Credits)

This is a supervised field placement in public and/or private school, clinical, or community mental health settings or related child agency for the purpose of psychoeducational evaluation and concomitant consultation with service components in the area of school psychology. Advanced Practicum may extend beyond one term. (Repeatable). Prerequisite: PhD students only; Pass first year courses and CFSP 4353.

CFSP 4355 School Psychology Internship - EdS (1 Credit)

This course is designed to provide the student with their final supervised experience prior to graduation. The student will complete 1200 clock hours of supervised field experience across an academic year. The student will be closely supervised by a licensed school psychologist in the field based setting. The student will participate in all aspects of the role of a school psychologist including assessment of cognitive, social-emotional, academic, and behavioral traits of a student in need; consultation with teachers on interventions to meet student needs; presentation of information at case conferences; consultation with parents regarding ways to assist their children's learning; developing programs to address school-wide needs, including crisis intervention; and sharing of new ideas with educational staff. Prerequisite: Must have passed all other courses in degree plan.

CFSP 4356 School Psychology Pre-Doctoral Internship (4-8 Credits)

Meets 12-month internship requirement in school psychology. Prerequisites: completion of comprehensive examination and dissertation proposal.

CFSP 4357 Early Childhood Practicum (1-4 Credits)

This course provides students with a field experience in an Early Childhood environment for students who are interested in pursuing a profession in Early Childhood Special Education. Field Practicum in Early Childhood Special Education is an off-campus, 600-hour minimum supervised experience taken throughout your coursework. Field Practicum is designed to broaden one's professional skills and is considered a critical transition of substantial growth. Each student is required to successfully complete 3 practica; an infant/toddler, (Birth to 3 years) a preschool (3-5 years) and an early elementary focused (Kindergarten through 3rd grade). Practicum seminar is designed to facilitate case analysis, ongoing self-reflection, and to provide peer consultation and professional feedback relevant to best practice. The field practicum is considered a critical professional transition to help consolidate learning and professional competencies in preparation for employment. All students work with a licensed Field Supervisor. Students will be placed in infant, preschool, elementary school settings. During practicum, students provide direct and indirect services that support children and/or families in a variety of settings. All students attend weekly practicum seminars facilitated by a University Supervisor. Supervision is designed to provide ongoing professional feedback, case analysis, peer consultation, and continued professional development and experiences pertinent to successful practice. This course promotes the idea that special educators are lifelong learners and regularly reflect on and adjust their practice. Restricted to ECSE students only.

CFSP 4359 School Psychology Pre-Doctoral Internship (1 Credit)

This course is designed to provide the student with their final supervised experience prior to graduation. The student will complete 1200 clock hours of supervised field experience across an academic year. The student will be closely supervised by a licensed school psychologist in the field based setting. The student will participate in all aspects of the role of a school psychologist including assessment of cognitive, social-emotional, academic, and behavioral traits of a student in need; consultation with teachers on interventions to meet student needs; presentation of information at case conferences; consultation with parents regarding ways to assist their children's learning; developing programs to address school-wide needs, including crisis intervention; and sharing of new ideas with educational staff. Prerequisite: Must have passed all other courses in degree plan.

CFSP 4360 Doctoral Seminar in School Psychology (3 Credits)

Current topics and/or controversies in the profession of Child, Family and School Psychology are addressed in an advanced seminar format. Topics vary by instructor and year and may address current issues in research, theory, policy development, and/or clinical practice.

CFSP 4361 Supervision in School Psychology (2 Credits)

This is a supervised field placement in public and/or private school, clinical, or community mental health settings or related child agency for the purpose of psychoeducational evaluation and concomitant consultation with service components in the area of school psychology. Advanced Practicum may extend beyond one term. (Repeatable). Prerequisites: PhD Students only; CFSP 4351, 4353.

CFSP 4363 School Psychology Program Development and Evaluation (3 Credits)

This course focuses on theory and practice of program development and evaluation in school and community agency settings. Both qualitative and quantitative methods of program evaluation are discussed. Students have the opportunity to collaborate on a comprehensive evaluation of a specific educational, health, or mental health program. Prerequisites: RMS 4910, CFSP 4332.

CFSP 4365 School Psychology Terminal Internship - EdS (1-8 Credits)

Meets 9-24 month internship requirement in school psychology. Prerequisites: Completion of all Practica and Program Permission. Students can only enroll in this course if they're also enrolled in CFSP 4355.

CFSP 4369 School Psychology Pre-Doctoral Terminal Internship (1-8 Credits)

This course is designed to provide the student with their final supervised experience prior to graduation. The student will complete 2000 clock hours of supervised field experience across an academic year in public and/or private school, clinical, or community mental health settings or related child agency for the purpose of psychoeducational evaluation and concomitant consultation with service components in the area of school psychology. The student will be closely supervised by a licensed psychologist in the field based setting. The student will participate in all aspects of the role of a school psychologist including assessment of cognitive, social-emotional, academic, and behavioral traits of a student in need; consultation with teachers on interventions to meet student needs; presentation of information at case conferences; consultation with parents regarding ways to assist their children's learning; developing programs to address school-wide needs, including crisis intervention; and sharing of new ideas with educational staff. Prerequisites and Restrictions: Students must be enrolled in the CFSP doctoral program. They must have successfully completed Practicum I, Practicum II and Advanced Practicum. Additionally, they must have successfully passed comprehensive exams and dissertation proposal. All other students must obtain instructor permission. Corequisite: CFSP 4359.

CFSP 4991 MA Independent Study (1-10 Credits)

This course allows MA or EdS Child, Family, and School Psychology students to study a specific topic area in detail in conjunction with a cooperating faculty member.

CFSP 4995 Independent Research (1-10 Credits)

This course is for students whose program requires completion of a masters level thesis.

CFSP 4999 Advanced Seminar in School Psychology (1-3 Credits)

This course is designed as an advanced topical seminar in which students will focus on the professional literature and research relevant to important topics in the field of School Psychology. There will be analysis and discussion of these advanced topics with consideration of the implications for research and practice in School Psychology. Required meeting time and assignments would be commensurate with number of credits (Repeatable). Prerequisite: Instructor Permission.

CFSP 5991 PhD Independent Study (1-10 Credits)

This course allows PhD Child, Family, and School Psychology students to study a specific topic area in detail in conjunction with a cooperating faculty member.

CFSP 5995 Independent Research (1-20 Credits)

This course is for PhD Child, Family, and School Psychology students engaged in completing their doctoral dissertation. Advisor permission required.

Clinical Psychology (CPSY)

CPSY 4000 Issues in Forensic Psychology I (2 Credits)

This course is designed to incubate a new professional identity as an early career graduate student in forensic psychology. From the development of an expanded professional network to the careful cultivation of a professional persona, this class supports the transition from armchair psychologist to graduate student. Our guests will cover factual information about the structure and function of the American legal and legislative systems, assessment technologies including polygraph testing and investigations and related content including substance misuse, human trafficking, victim rights, media representations and more.

CPSY 4010 Introduction to Statistics (3 Credits)

General statistical principles and techniques and their application to psychological and psycho-legal issues. Students will develop computer analytic skills to assist in answering professionally relevant questions.

CPSY 4020 Psychopathology and Diagnosis (3 Credits)

An overview of major DSM diagnostic categories, as well as an introduction to ICD and noncategorical classification.

CPSY 4021 Intro to Clinical Interviewing, Psychopathology & Diagnosis, and Applied Case Conceptualization (5 Credits)

The practice of therapy is at once an art, and a science. The process of becoming a therapist is both a process of learning and of experiencing. This course provides an overview of foundational interviewing, case conceptualization, and psychotherapy theory and practice, along with a thorough grounding in psychopathology and diagnosis. Categorical classification will be explored using the DSM and ICD frameworks, with a focus on major diagnostic categories. Students will recognize the strengths and limitations of formal diagnosis as a tool in clinical practice, as well as the importance of dimensional case conceptualization and seeing the person behind the label. Emphasis will be placed on understanding mental wellbeing in context, taking into account cultural relevancy and the evolution of diagnoses over time. In this hybrid course format, students will be challenged to integrate diagnosis, case conceptualization, treatment planning, and intervention through didactic learning as well as experiential exercises within the classroom and through quarter-long, small group projects.

CPSY 4030 Clinical Interviewing and Theories of Psychotherapy (3 Credits)

Theoretical and practical issues related to clinical interviewing within forensic and non-forensic settings; exploration of the process of psychotherapy from various theoretical perspectives.

CPSY 4031 Supervision & Consultation (1 Credit)

This course is designed as an introduction to theory and practice of clinical supervision and consultation within forensic contexts. Fundamental issues will be examined, including: models of supervision and consultation roles, the supervision relationship, basics of consultation, the impact of personal factors on supervision and consultation, supervision and consultation techniques and practices, evaluation, and legal/ethical issues in supervision and consultation. Students will begin to develop competence to support their roles in future supervisory and consulting relationships.

CPSY 4040 Issues in Forensic Psychology II: Human Sexuality & Gender-Based Violence (3 Credits)

This course takes a historical and contemporary psychological view on a wide variety of sexual behaviors; examines theory and research on biological, developmental, cultural, and psychological aspects of human sexuality and sexual behaviors; reviews political and social issues involved in current sexual norms and practices; and covers current topics related to gender-based violence and sexual offending.

CPSY 4050 Research Methods (3 Credits)

Examination of the research process, including the formulation of questions and utilization of various methodologies to answer hypotheses.

CPSY 4060 Biological Bases of Criminal Behavior: Adult Psychopathology (3 Credits)

In this course, students will develop an understanding of the biopsychosocial vulnerabilities to crime. This course will emphasize biological models but also the psychological, social, and environmental causes and correlates of violent and criminal behavior. Violence and criminal behavior will be viewed as an evolving construct that may begin in childhood and endure through adolescence and into adulthood. Contemporary issues including terrorism, racial profiling, and gender debates will also be highlighted. Students will be provided with the tools necessary to determine future directions for policy, prevention, and treatment to address the causes and outcomes of crime and violence.

CPSY 4070 Trauma & Crisis Intervention (3 Credits)

This course is designed to provide students with an overview of the key issues associated with trauma and crisis intervention, including how to conceptualize trauma and different approaches to treatment. Additionally, the course will address forensic and other special issues associated with the field of trauma.

CPSY 4080 Issues in Forensic Psychology III (3 Credits)

The intersection of criminal justice and mental health usually occurs at a variety of publicly-funded systems: police, jail, state mental health, probation, and others. How do these systems and agencies work, and how effectively do they handle persons with both criminogenic and mental health needs? This course will survey each component of the public forensic mental health system, paying particular attention to innovative programs that work and to potential employment settings for our graduates.

CPSY 4081 Overview of Personality & Self-Report Assessment (2 Credits)

The purpose of this course is to provide a foundation for approaching objective personality assessment in forensic practice. It will cover the underpinnings of objective assessment. It will also provide a broad survey of self-report measures, including the Minnesota Multiphasic Personality Inventory (MMPI#2), the most widely used personality inventory in the United States, the MMPI#A (adolescent version), the MMPI#2#RF, and other commonly-used instruments. Emphasis will be placed on understanding evidence-based, effective, and ethical objective personality assessment across various forensic contexts and populations.

CPSY 4090 Issues in Measurement (3 Credits)

Critical assessment of various psychological tests, with an emphasis on validity, reliability and issues of standardization.

CPSY 4100 Mental Health Law (3 Credits)

The goal of this introductory Mental Health Law course is to provide students with a general understanding of the laws impacting the field of mental health, including those involving professional responsibility and ethics; competency issues; court-ordered evaluations and testimony; family law issues; the rights of differently-abled and historically marginalized persons; and defenses based on mental state. Course Objectives include assisting students in locating and understanding how relevant statutes and cases may apply to the mental health practitioner; recognizing potential legal and ethical dilemmas and when to seek consultation; and applying the principles of mental health law to offer the highest standard of care in their clinical practices.

CPSY 4105 Psychology, Public Policy, and Advocacy (2 Credits)

This course is designed to provide students in clinical training with an overview of the political advocacy process in the United States, its potential impact on the practice of mental health, current issues in mental health policy, and opportunities for involvement in public policy, advocacy, and social justice discourse.

CPSY 4106 Introduction to Animal Abuse Evaluation and Intervention (2 Credits)

This graduate-level course will introduce the student to the concepts of animal abuse at the individual, clinical, and societal levels. The course covers animal welfare and cruelty issues; the assessment of abused animals; the populations (individuals and groups of all ages) and settings where animal abuse is most prevalent; the evaluation, sentencing, and treatment of perpetrators of violence toward animals; and the link between cruelty to animals and humans. Students will have the opportunity to tailor some assignments to their specific interest areas. The instructor will invite guest lecturers, such as judges and probation officers, with expertise in topics such as sentencing, misdemeanors vs. felonies related to animal abuse, etc.

CPSY 4108 Special Topics in Forensic Psychology (1-2 Credits)

This course is designed to address specialized topics in forensic psychology that are not adequately covered in existing required and elective courses. Topics are likely to center on professional development, such as professional identity, presentation, and communication. Topics may also be more specialized, depending on the expertise and availability of potential instructors or special topics of interest within MAFP. In the past, courses have been offered on police psychology and violence risk assessment, as well as the application of forensic investigative principles to cold case review. Additional topics might include psychology and race, immigration and refugee populations, neuropsychology in corrections, juvenile justice issues, outpatient competency restoration, and other topics at the discretion of MAFP faculty.

CPSY 4110 Family Systems and Therapy (3 Credits)

This course examines various approaches to family systems, including an overview of systems theory. Students will have an overview of historical and contemporary approaches to family therapy, including Bowenian, Structural, Strategic, Experiential, Psychoanalytic, and Multicultural. Students will practice rethinking interpersonal conflicts and they will develop increased awareness of their own families and their roles in them. Students will also apply systemic ideas to their own required therapies.

CPSY 4112 Neuropsychological Screening (2 Credits)

This course is designed for students who are interested in adding cognitive screening or brief neuropsychological screening tests to their practice. The course will briefly review the incidence of traumatic brain injury in criminal justice and the differences between comprehensive neuropsychological assessment batteries, brief neuropsychological screening batteries, and cognitive screening tests. The indications and the benefits of each test will be covered and students will learn test interpretation and report writing for a brief neuropsychological screening battery.

CPSY 4113 Program Evaluation and Grant Writing (3 Credits)

Those working with the criminal justice system, like other professionals in human services fields, need to provide effective programs and services that are suited to clients and their context. This course introduces students to evaluation and provides an overview of how forensic psychologists can use this discipline to benefit their clients, practice, and programs. The course will explore evaluation's relationship to research, evaluation theories and typologies, and the many evaluation approaches that have evolved, with a focus on evaluation in human service organizations. We also will discuss recommendations for finding applicable grants, crafting a successful grant application using evaluation results and tools such as logic models, fulfilling grant-mandated requirements, and using evaluation results to complete grant reports and improve programs.

CPSY 4120 Psychology of Performing Arts (3 Credits)

Students gain an understanding of the psychological factors involved in the performing arts, including theatre, acting, dancing, music, and circus arts. Students learn about appropriate psychological interventions for these populations to enhance performance. The course format includes lecture, discussion, guest speakers, case studies, and role plays.

CPSY 4130 Organizational Leadership: Center for Performance Excellence (3 Credits)

This course is designed to familiarize CPEX Officers with approaches to effective leadership while engaging in leadership roles within the Center for Performance Excellence (CPEX). Students are exposed to successful leadership strategies from the business world and have the opportunity to implement these strategies into their roles as leaders within CPEX. This course is intended for CPEX Officers only.

CPSY 4140 Exercise Psychology (3 Credits)

In this course, students explore the theory, research, and practice related to psychological aspects of exercise behavior. Students explore research and intervention models in exercise psychology and be able to integrate this knowledge in their practice. Major topics include health behavior change, the impact of exercise on mental health, and exercise motivation and adherence.

CPSY 4150 Psychology of Performance in Business (3 Credits)

Students gain an understanding of the psychological factors involved in the business world. Factors are examined at the individual, team, and organizational level. Students learn about appropriate psychological interventions for these populations to enhance performance. The course format includes lecture, discussion, guest speakers, case studies, and role plays.

CPSY 4160 Psychology of High Risk Occupations (3 Credits)

In this course, students gain an understanding of the psychological factors involved in high risk occupations. High risk occupations include individuals whose profession directly involves saving lives or placing their own life at risk. Students learn about appropriate psychological interventions for these populations to enhance performance and resilience in the high stress situations required by their jobs. The course format includes lecture, discussion, guest speakers, case studies, and role plays.

CPSY 4200 Practicum I: Professional Orientation (2 Credits)

In this first quarter, of a three quarter practicum series, we will discuss issues that have bearing on your work with forensic populations, the central features of which include adapting to the culture of professional psychology by exploring relationships and by engaging in conflict resolution. By the end of the quarter, you will be well versed in the ethical guidelines, standards, and dilemmas facing you as forensic trainees. Also, you will be knowledgeable about issues related to stress and burnout in this field, including topics such as suicide and physical assault risks, and working within a system. Importantly, you will develop the skills needed to best utilize feedback and provide constructive feedback to others.

CPSY 4210 Practicum II: Introduction to Multicultural Issues (1-6 Credits)

In this quarter, we will continue our discussion of the interface between psychology and the law. Emphasis will be on cultural/diversity issues that impact our clinical and forensic practice. By the end of this quarter you should be familiar with terms such as cultural competency, cultural humility, and diversity and be able to integrate these into your theoretical framework as well as apply the concepts to your forensic work.

CPSY 4220 Practicum III: Lifestyle Development (3 Credits)

This course examines professional development through the lens of the foundational and functional competencies of the MAFP program. Students will explore their professional and clinical growth through self-reflective practice, as well as considering their own present and future professional identity. The course will continue discussion of the interface between psychology and the law and career paths within forensic psychology. Students will continue to focus on increasing clinical skills, with a particular focus on consultation skills, case conceptualization, and report-writing skills through vignettes and discussing issues related to their field placement sites. Didactic emphasis will be on forensic assessment, such that by the end of the quarter students will have been exposed to a variety of forensic assessment techniques and instruments and have an increased understanding of the role of psychological assessment in forensic contexts.

CPSY 4230 Practicum IV: Theories of Personality Diagnosis (3 Credits)

This class explores diagnosis beyond organizing external symptoms to a consideration of internal processes, where the internal processes are themselves framed by clinical theories of personality. These include systems theory, performance theory, behaviorism, cognitive-behavior theory, and psychoanalysis. The class also covers the currently dominant research-based theory, the five-factor model, emphasizing its relevance to diagnosis.

CPSY 4240 Practicum V: Theories of Counseling and Behavioral Health Approaches (2 Credits)

The majority of class will be spent discussing real cases from your current practicum sites. Discussions will be rooted in psychological theory and orientations, covering both theory and specific therapeutic techniques. Case discussion will be positive, constructive, and ethical. Also, the course will explore specific topics related to clinical work or life after MAFP, including a focused exercise on examining your thoughts and feelings regarding life as an early career professional.

CPSY 4250 Practicum VI: Professional Identity and Career Development (3 Credits)

This course is designed to be the capstone experience of the forensic training program, allowing students an opportunity to reflect on and synthesize their developmental path toward early career professional. Course goals include enhancing understanding of theory and practice in the field of psychology and, specifically, the forensic arena; applying knowledge gained throughout the course of the program to practical clinical situations, ethical dilemmas, and "real world" dynamics; understanding the importance of professionalism, collaboration, and integrity in the pursuit of a career in this field; and integrating clinical and didactic experiences during the course of training.

CPSY 4260 Psychophysiology and Biofeedback Lab (2 Credits)

This course is designed to be both an introduction to psychophysiology and biofeedback and to its applications, particularly to sport and performance. The principles of psychophysiology, the biofeedback instruments used, the areas of application, the techniques commonly used in conjunction with biofeedback, the diverse field of biofeedback and applied psychophysiology, and the latest uses for optimal self-regulation are covered. The course involves use of biofeedback instrumentation as well as classroom participation and readings and a self-regulation project.

CPSY 4300 Evaluation and Treatment of Juveniles (3 Credits)

This course examines the history and philosophy of the American juvenile justice system and the impact of present interventions and societal reforms on the juvenile system. The course provides an overview of the legal framework in which the juvenile justice system operates will highlight the differences in adult and juvenile law.

CPSY 4310 Ethical and Legal Issues (3 Credits)

Grounded in the American Psychological Association (APA) Ethical Standards, the American Counseling Association (ACA) Ethics Code, and the APA Specialty Guidelines for Forensic Psychology, this course is designed to examine the ethical principles of psychology and the ethical dilemmas faced by mental health professionals in forensic practice. This course will help provide a solid foundation for learning how to categorize ethical problems, understanding the principles and standards that apply to various situations/ethical problems, and developing a decision-making structure for handling ethical dilemmas.

CPSY 4320 Cognitive Assessment (3 Credits)

Students learn to administer, score, and interpret the WAIS. There is some exposure to other intelligence tests as well. Students understand diagnostic validity (Bayes' Theorem), how to identify interpretive material, and how to think ideographically about nomothetic data. Through discussions of legal cases, students learn numerous forensic issues to which cognitive assessment is applicable, including for example testamentary capacity, competence to waive Miranda rights, and ability to enter a contract.

CPSY 4321 Assessment Independent Study (1 Credit)**CPSY 4323 Issues in Measurement & Cognitive Assessment (3 Credits)**

In this course, students will apply their critical thinking and analytical skills to psychological and forensic assessment, with an emphasis on validity, reliability and issues of standardization. Lectures will cover the historical bases of assessment and measure design and will also highlight contemporary approaches to testing. The course will provide exposure to recent social criticisms and ethical concerns surrounding psychological testing. Students will also learn to administer, score, and interpret the WAIS. Students will have exposure to other assessment measures (WISC, WIAT, WRAT) and approaches to diagnosis cognitive and learning disabilities. Students will understand diagnostic validity, how to identify interpretive material, and how to think ideographically about nomothetic data. Through discussions of legal cases, students learn numerous forensic issues to which cognitive assessment is applicable, including competence to waive Miranda rights, and ability to enter a contract. Corequisite: CPSY 4323.

CPSY 4324 Issues in Measurement & Cognitive Assessment Lab Independent Study (1 Credit)

This is a 1-credit course for students in the MAFP program to learn about the administration of and issues related to intelligence testing. Students learn to administer, score, and interpret the WAIS and have exposure to other intelligence and achievement test instruments. The course is required, in conjunction with Issues in Measurement & Cognitive Assessment CPSY 4323, and will primarily consist of weekly lab meetings.

CPSY 4330 Cognitive Behavioral Theory and Interventions (3 Credits)

Considered the "gold standard" of treatment in many forensic contexts, Cognitive Behavioral Therapy (CBT) covers a broad skill set applicable in a variety of treatment settings. This course addresses the principal theories, techniques, and research relating to CBT, focusing on assessment, case conceptualization and intervention approaches within a forensic setting. An emphasis in understanding CBT theory, applying the theory to cases, and utilizing the techniques with a variety of problems-in-living.

CPSY 4335 Introduction to Trial Consulting (3 Credits)

The art of trial consulting is the skill to meld multiple theories, methodologies, and concepts into a working and research-based strategy. This skill is very reminiscent to the art and practice of therapy. As with any practice, be it law, psychology or trial consulting, a solid base is necessary. This course is an introduction into the theory and application of trial consulting techniques in the criminal and civil arena. This overview addresses the key elements in the trial consulting including and introduction into the psycho-legal perspective, the application of research methodologies utilized by trial consultants, and specific interdisciplinary topics within trial consulting. These specific topics include concepts like the theory of persuasion, jury selection, expert testimony, and neuropsychology.

CPSY 4340 Psychopathology, Evaluation & Treatment of the Adult Offender (3 Credits)

Psychological theories related to etiology, development and prediction of crime and criminogenic potential. We will review foundational models of criminology, focusing on both risk-need-responsivity as well as strengths-based models. The course is a service learning course in which active practice with assessment tools, motivational interviewing, and feedback is expected.

CPSY 4350 Sociocultural Issues in Forensic Psychology (3 Credits)

To the practice of forensic psychology, each of us brings our individual experiences, beliefs, and views on life. We bring our highest selves: our passion, our hard work, our integrity, and our most noble dreams. We also, invariably, bring our worst selves: our "blind spots," anxieties, misconceptions, and prejudice. As practitioners in a field trusted to explore the limits of human potential and human frailty, we recognize that the costs of ignorance in the arena of cultural awareness are unacceptably high. Rarely, however, do we have the opportunity to take a step back and explore the dynamics of privilege and oppression within society, within our profession, and within ourselves. The goal of this course is to begin the process of reflection and grow in our ability to tolerate ambiguity around issues of profound importance to our clinical practices and personal lives; to question preexisting understandings about how life "is" or "is not"; and to consider with humility, respect, and an open mind perspectives different from our own.

CPSY 4360 Personality Assessment: Self-Report (3 Credits)

Administration and interpretation of objective personality instruments and discussion of their utilization within a forensic setting; use of the MMPI-2 and MCMI.

CPSY 4370 Substance Abuse (3 Credits)

The objectives of this course are to provide an introduction to the assessment, diagnosis, and treatment of substance abuse and related disorders; to become familiar with the dynamics and etiology of substance abuse; to identify psychometric tools used in the evaluation of substance abuse; to develop working knowledge of the resultant psychological and physiological effects of different substances; and to review evidence-based treatment methods and their application to populations. This course is framed in terms of exploring the different models and therapeutic approaches for understanding substance abuse and misuse.

CPSY 4380 Group Interventions (3 Credits)

Interpersonal dynamics of small groups and larger organizational settings; understanding of group processes (such as group formulations and development, group conflict, and group resistance); skills enabling positive group intervention.

CPSY 4400 Projective Assessment and Report Writing (2 Credits)

This class covers idiographic (versus nomothetic) assessment techniques that understand responses in functional relation to their occasioning environments, emphasizing clinical interviewing, early memories, and the Thematic Apperception Test. These are integrated with nomothetic test results to understand referral questions. The class also covers assessment report writing.

CPSY 4410 Criminal Evaluations (2 Credits)

This course will provide an overview of criminal assessment topics, with an emphasis on the literature, theory, procedure, and tools, including legal competencies, criminal responsibility, violence risk, and malingering.

CPSY 4420 Research in Forensic Psychology: Independent Study (1 Credit)

This is a 1-credit course for students in the MAFP program to complete research either by joining faculty research projects or pursuing their own research project. The course is an independent study and will primarily consist of weekly mentorship by a research advisor.

CPSY 4430 Career Counseling (3 Credits)

This course is designed to teach the theoretical framework of career counseling, and introduce the basic counseling tools used in the career counseling process. The course presents major theories of career development, introduce sources of occupational information, and introduce principles of assessment in career counseling. The impact of diversity and difference on career development and choices, as well as the career counseling process, is also explored. Topics include: the role of interests, skills, values and personality in the career development process; social, cultural and family influences on the career development process; and career development across the lifespan.

CPSY 4500 Foundations: Trauma and Global Psychology (2 Credits)

This course is designed to introduce students to core concepts in the fields of trauma psychology & global mental health including: mental health and psychosocial consequences of disaster, cultural considerations in diagnosis and treatment, best practice intervention frameworks and associated guidelines, and basic principles and ethical issues in the delivery of mental health related humanitarian assistance. Through integration of perspectives from various disciplines (e.g. clinical and social psychology, public health, medical anthropology, humanitarian studies), and with a focus on current challenges and opportunities in the relatively new field of Trauma Psychology & Global Mental Health, students will become familiar with mental health and psychosocial issues in international complex emergencies, including possible international career paths for MA psychology graduates.

CPSY 4501 Psychotherapeutic Models of Intervention (3 Credits)

Major psychological models of intervention are the focus of this course. The major theoretical models of personality development, psychopathology and theories of intervention are explored including psychodynamic, family systems, behaviorism, cognitive-behavioral approaches and others.

CPSY 4502 Psychotherapy with Children and Families (3 Credits)

This course provides an understanding of various psychotherapeutic approaches to children and families. The perspectives and techniques of play therapy, behavioral interventions, cognitive-behavioral therapy and integrative work with parents and families are explored.

CPSY 4503 Clinical Interviewing (3 Credits)

Theoretical and practical issues related to clinical interviewing in international and national disaster settings.

CPSY 4505 Multiculturalism and Diversity (3 Credits)

This course continues introducing students to the central concepts of multicultural counseling competencies and multicultural consciousness. The three aspects of cultural competency are addressed in this course: awareness, knowledge, and skills (Sue & Sue, 2016). Additionally, we will examine a range of diverse populations by race, ethnicity, gender, sexual orientation, and physical differences is included in order to examine the cultural context of accurate assessment and appropriate interventions in counseling diverse clients. Students will examine the role, function, and effects of oppression in society as it relates to social, economic, and environmental justice. Assumptions underlying theory and research methodologies from which basic constructs of human behavior are drawn will be examined to understand how power and other dynamics manage and sustain oppression at the individual and institutional levels. Students will learn about the importance of examining power and privilege in the counseling space and/or creating space for each other to explore their own cultures and the biases and internalized messages about those who are different from themselves.

CPSY 4509 Global Mental Health Systems (3 Credits)

This course will focus on the dynamics of mental health systems in developing countries.

CPSY 4510 Intercultural Practice and Development (2 Credits)

This course is designed to prepare students for work with a variety of vulnerable populations in cross-cultural settings. Specifically, this course will prepare students for an 8-week international mental health/psychosocial summer internship in countries with a history of acute, chronic, and/or cyclical human-made and natural disasters (although most are now in a stabilization, reconstruction, and/or development phase). Through a blended composition of instruction, self-reflective exercises, case studies, course readings, lectures, and guest speakers, and integrating perspectives from social psychology, cross-cultural psychology, and medical anthropology, students are expected to identify and reflect on personal expectations heading into internship. In addition, this course is designed to provide students with the skills necessary to anticipate and problem-solve cross-cultural challenges, including potential value conflicts and miscommunication that may arise while in the field.

CPSY 4512 Disaster Mental Health (3 Credits)

This course will explore disaster response systems and their mental health components.

CPSY 4515 Ethics (3 Credits)

The course is designed to educate students about the ethical guidelines in psychology applicable to the field of IDP. Students will learn the APA Ethics Code as well as other more specialized ethics guidelines applicable to the field of IDP. Students will be expected to identify, address and resolve potential ethical conflicts. Potential future trends in the development of ethics in the area of IDP will be addressed.

CPSY 4530 Program Evaluation (3 Credits)

Theory and techniques for developing management information and assessment systems for human service programs. Organization evaluation of international organizations will be discussed. Psychosocial interventions will be highlighted.

CPSY 4535 Practicum: Professional Identity and Practice (2 Credits)

This academic and practicum course in professional identity and practice focuses on introducing students to professional practice of psychology. The focus of this seminar is on developing a professional identity as a clinician and understanding the use of supervision. Various topics will be emphasized in this course that include professional issues, career development and ethical and legal issues. Self-reflective practice will be emphasized and encouraged.

CPSY 4536 Practicum: Working With Diverse Populations (2 Credits)

The academic and practicum course focuses on working with diverse populations globally. Students will reflect on the aspects of their identities and those of their client and how they influence psychotherapy. Cultural considerations will be considered in the areas of interviewing, case conceptualization, development of treatment goals and clinical practice generally. Topics related to cultural humility, intersectionality and identity, stigma and oppression, use of interpretation and various transnational populations will be emphasized.

CPSY 4537 Practicum: Interview, Assessment and Diagnosis (2 Credits)

The focus of this course is academic and practicum experiences related to interviewing, assessment, and diagnosis in practice. Guest speakers, readings, and panels will focus on special considerations for clinical interviewing and assessment with immigrant, refugee, and marginalized populations in the United States.

CPSY 4538 Practicum: Life-span Considerations in Practice (2 Credits)

This academic and practicum course in Life-span Considerations in Practice considers various life-span issues of importance when working with individuals and their families in practice. Important experiences of childhood, adolescence, early adulthood, adulthood and late adulthood and their relevance to and presentation in psychotherapy are considered.

CPSY 4539 Practicum: Evidenced Based Practices in Psychology and Counseling (2 Credits)

The purpose of this practicum is to provide opportunities for didactic and experiential learning in evidence-based practice in psychology, and integrated mental health (IMH). This practicum will also serve as group supervision of clinical work being conducted in the TDRC. Practicum is a quarterly required course in the MAIDP program. It is on a two-year cycle focusing on developing therapeutic clinical skills. Practicum work in field-placement sites in the Denver community as well as supervision of cases in the Trauma and Disaster Recovery Clinic occur in this practicum.

CPSY 4540 Practicum: Biopsychosocial Systems in Practice (2 Credits)

This academic and practicum course in Biopsychosocial Systems in Practice considers ways in which cultural, political, environmental, social, physical and developmental factors influence human experience including mental health. The practicum explores how these multi-systemic and interacting factors come to bear on clients' experiences and presentations and how this informs our work.

CPSY 4542 Psychophysiology (3 Credits)

This course is designed to expose students to the field of physiology and highlight it's reciprocal relationship with behavior. We will cover topics including the structure and function of the nervous system and areas of research relevant to clinical psychology (e.g. substance abuse, mental illness, and biological rhythms).

CPSY 4544 Psychological Assessment in Multicultural Contexts (3 Credits)

This course focuses on the building blocks of psychological assessment and interviewing across cultural contexts, with a focus on identifying culturally valid and therapeutically useful assessment techniques. This course focuses on assessment techniques useful for rapport building, case formulation and treatment planning, risk assessment, and diagnostic evaluation. Methods for summarizing and communicating assessment results with allied professionals and providing assessment feedback to clients and families will also be reviewed. Special emphasis will be placed on developing skills necessary for immigration evaluations, such as asylum, hardship, VAWA, and U-Visa evaluations. Throughout the course, principles of multicultural assessment will be combined with key lessons from therapeutic assessment so that students develop a keen understanding of how assessment can be empowering to clients and families on an individual level, and can further principles of social justice on an ideological level.

CPSY 4545 Lifespan Development and the Cultural Context (3 Credits)

This course is designed to examine the various stages of human development, with a special focus on the influence of culture. Students will become familiar with normative developmental processes, methods of studying development, and various theoretical foundations of developmental science. Through the use of lecture, readings, class discussion, and observation, students will be challenged to consider their own development and think critically about the development of others. Students will apply basic information about development to current issues in the field and consider the influence of cultural context on relevant areas of development across the lifespan.

CPSY 4550 Seminar: Therapeutic Interventions (3 Credits)

Small group seminar is a small group class designed to provide students a discussion forum to share and integrate their experiences in the IDP Master's Program. Students are expected to address and share their field placement experiences with other students in their seminar. The seminar will also provide instruction on the implementation of theory in IDP to practice in multiple settings. Faculty will provide supervision for the students' field placements.

CPSY 4555 Trauma & Child Development (3 Credits)

The course reviews the literature regarding childhood trauma and its implications for child and adult development. Models for the conceptualization of trauma and for treatment of childhood trauma are discussed. Cross-cultural theories of childhood development and trauma are emphasized.

CPSY 4556 Trauma Interventions from Cross-cultural Perspectives (3 Credits)

This course, taught by a different visiting professor each year, will take an in-depth look at trauma and the development of mental health systems and interventions internationally.

CPSY 4557 Global Public Health (3 Credits)

This course will provide an overview to the many issues concerning international public health today. Topics include basic epidemiology, malaria, tuberculosis, HIV/AIDS, diarrheal diseases, injury prevention, and environmental health. Specific attention will be given to examining the intersection between disease prevention and disaster mitigation.

CPSY 4560 Humanitarian Law of Armed Conf (3,5 Credits)

This course is a theoretical and practical introduction to international humanitarian law (IHL). IHL is known by many other names such as "humanitarian law," "law of conflict," and "laws of war." All these terms refer to the rules regarding the treatment of civilians and non-combatants. These "rules" are especially important to know if you eventually work for an IO or NGO that finds itself in areas of armed conflict. Cross listed with INTS 4935.

CPSY 4562 Public Policy and Advocacy (2 Credits)

This course focuses on mental health policy and advocacy in the United States and in countries around the world. Students will learn about the World Health Organization policies on mental health and substance abuse and issues of mental-health stigma globally.

CPSY 4563 Family Therapy (3 Credits)

This course examines various approaches to family systems, including an overview of systems theory, plus ideas that have been labelled structural, strategic, and Bowenian. Goffman's performance theory will also be emphasized, especially as it applies to clinical work. Students will practice rethinking interpersonal conflicts, and they will develop increased awareness of their own families and their roles in them. Students will also apply systemic ideas to their own required therapies.

CPSY 4564 Advanced Spanish Language for Clinical Practice (2 Credits)

The purpose of this course is to help students with intermediate to advanced competency in Spanish to develop their clinical linguistic skills in order to better meet the mental health needs of the Latinx population in the United States, and, in the case of those doing international work, in Latin America. Students will be required to take a Spanish proficiency exam, prior to taking the course. The course will focus on developing Spanish abilities in the following areas: 1) building rapport and demonstrating basic helping skills, 2) explaining the purpose and process of therapy/evaluation, 3) conducting diagnostic interviews and intakes, 4) providing psychoeducation about different diagnoses and mental health problems, 5) conducting crisis assessments, and 6) providing skills-based treatments.

CPSY 4565 Group Dynamics of Organizations (3 Credits)

A comprehensive review of the literature regarding the understanding of systems and organizational structure and dynamics. Methods of assessment and interventions in organizational structure will be presented. Cross-cultural implications will also be addressed.

CPSY 4566 From Triage to Justpeace (3 Credits)

This course examines the inter-disciplinary continuum of integrated work that responds initially to natural and human-made disaster, but then leads to coordinated relief and development projects, and eventually seeks longer-term justpeace. Students learn how normative "regimes" or changed behavior are built and sustained by societal, state, and global actors. Students apply critical interview skills among professionals of diverse disciplines, and in particular, meet the range of development organizations headquartered in Colorado.

CPSY 4567 Culture Lab: Cultural Humility & Global Mental Health Internship Preparation (1 Credit)

This course is designed to prepare IDP students for work with a variety of organizations and vulnerable populations in cross-cultural settings, both in-person and virtually. Specifically, this course will prepare students for an 8-week international mental health/psychosocial summer internship in countries with a history of acute, chronic, and/or cyclical human-made and natural disasters (although most are now in a stabilization, reconstruction, and/or development phase). Through a blended composition of instruction, self-reflective exercises, case studies, course readings, lectures, and guest speakers, and integrating perspectives from social psychology, cross-cultural psychology, and medical anthropology, students are expected to identify and reflect on personal expectations heading into internship. In addition, this course is designed to provide students with the skills necessary to anticipate and problem-solve cross-cultural challenges, including potential value conflicts and miscommunication that may arise while in the field.

CPSY 4569 Integrative Psychotherapy with Children, Adolescents and Parents in Crisis (2 Credits)

This course will explore theoretical and practical approaches to working with children, adolescents and their parents. Integrative frameworks will be discussed that view culture, family system and individual functioning as inter-related. Family, parent and child-specific interventions will be explored. Group, family, parent and individual play interventions will be explored. Family and individual therapy approaches to family crises (such as parental divorce conflict, exposure to family violence, parental deployment, parental death) as well as interventions following disasters will be studied. Finally, the problems and solutions to vicarious traumatization of therapists working with traumatized families will be explored.

CPSY 4570 Crisis Intervention & Suicide Prevention (3 Credits)

Mental Health professionals are frequently called upon to intervene in various crisis situations, either at the point of crisis event or in the aftermath. The course includes an emphasis on both domestic and global frameworks and is designed to provide a stimulating environment in which students critically examine theoretical models, recent research, good practice standards, and contemporary debates regarding crisis and suicide intervention strategies. This course teaches a model and techniques for assessment, initial intervention and follow-up with individuals in high stress situations requiring immediate crisis intervention (both domestically and globally). Additional topics include: assessment and intervention in cases of risk of harm to self, non-suicidal self-injury (NSSI) violence in the schools, severe and persistent mental illness (SPMI), working with chronically suicidal clients, the emerging field of Critical Suicidology, M-1 Holds, suicide terrorism and other forensic issues and public health and prevention models. The class will explore ethical issues surrounding intervening in crisis situations. We will also attend to how issues of marginalization and oppression, as well as strengths and resiliency factors, affect crisis intervention with people of color, LGBTQIA+ individuals, indigenous communities, women and others who experience social, economic and political disenfranchisement. Designed to assist students in developing critical thinking skills, necessary for crisis intervention related assessment, program design, implementation, and evaluation this class features case studies and mock risk assessments so that students feel ready to conduct these skills in the real world. At the end of this course students should have knowledge of how to intervene in various types of crises based on empirically supported frameworks and recent developments in the field.

CPSY 4580 Psychodynamic Theory (3 Credits)

Traditional and modern theories of psychodynamic concepts will be presented. Students are instructed on the use of such theories as a tool to structure interventions in their field work.

CPSY 4585 Family Systems (3 Credits)

A comprehensive review of family therapy concepts and treatment theories. A review of the applicable literature of family therapy is provided with an emphasis on cross-cultural models and interventions.

CPSY 4590 Psychology of Loss and Grief (2 Credits)

A review of the theory of loss and grief. The course reviews cultural understandings of loss and grief as seen following disaster and conflict. Treatment modalities of loss and grief are also presented.

CPSY 4591 Supervision Group - IDP (1 Credit)

This class is an opportunity for students in field-placements to receive additional supervision for their field-placement work. Students present and receive supervisory consultation about their work in these settings.

CPSY 4595 Global Mental Health Internship (6 Credits)

Students will spend one quarter in various international locations working in full time internships with international nonprofit organizations applying the principles and knowledge obtained during their study in the IDP program. Students will work under faculty and professional supervision.

CPSY 4600 Community Psychology in an International Setting: South Africa (5 Credits)

Community Psychology in an International Setting: South Africa combines pre-departure academic study at the University of Denver (DU) with service learning field placements in the Republic of South Africa (RSA). The course requires attendance at four classroom sessions prior to departure, full participation in a field placement while in RSA, and a re-entry meeting upon our return. Overall, the fundamental focus will be on community psychology in RSA - salient issues, challenges, resources, and success in post-Apartheid South Africa. Community psychology both shapes and reflects change. Students will learn about how various historical and current policies in RSA have shaped (and disenfranchised) various communities throughout the country. Field placements will prioritize community psychology issues inherent in the organizations, people, and settings of historically disadvantaged black communities in South Africa. Secondly, academic topics will include the history of RSA (emphasizing pre- and post-Apartheid time periods), current challenges in RSA (ethnicity, immigration, HIV/AIDS, increased crime rate), and cultural aspects of RSA. Pre-departure classes will also focus on the pragmatics of the trip, team-building, and exploring the goals of international service learning.

CPSY 4601 Psychology and Race in an International Setting: South Africa (5 Credits)

Psychology and Race in an International Setting: South Africa combines pre-departure academic study at the University of Denver (DU) with service learning field placements in the Republic of South Africa (RSA). The course requires attendance at four classroom sessions prior to departure, full participation in a field placement while in RSA, and a re-entry meeting upon our return. Overall, the fundamental focus will be on race and psychology in RSA – salient issues, challenges, resources, and successes in post-Apartheid South Africa. Race both shapes and reflects change. Students will learn about how various racially-based historical and current policies in RSA have shaped (and disenfranchised) various communities throughout the country. Field placements will prioritize community psychology issues inherent in the organizations, people, and settings of historically disadvantaged black communities in South Africa. Secondly, academic topics will include the history of RSA (emphasizing pre- and post-Apartheid time periods), current challenges in RSA (ethnicity, immigration, HIV/AIDS, increased crime rate), and cultural aspects of RSA. Pre-departure classes will also focus on the pragmatics of the trip, team-building, and exploring the goals of international service learning.

CPSY 4605 Psychotherapy Interventions (3 Credits)

This course will survey different theoretical models of psychotherapy with an emphasis on specific intervention approaches.

CPSY 4606 Sexuality and Gender-based Violence (3 Credits)

This course will explore human sexuality across the life span as well as gender-based violence (GBV) in both domestic and international settings. Through engagement with historical artifacts, academic research, case studies, documentary films, and interviews with survivors, students will gain an in depth understanding of the dynamics of violence as it relates to gender identity and expression, sexual orientation, race, class, religion, and culture through the interconnectedness of oppression and critical cultural considerations. We will examine the socioecological and psychological impact of violence, including gender socialization, societal/cultural messages and norms about violence, and the pervasive impact of trauma for survivors of identity-based violence. Students will work collaboratively to interrogate barriers to change, identify effective prevention and response strategies, and develop skills to respond compassionately and intervene in culturally appropriate ways.

CPSY 4610 Exercise Physiology (2 Credits)

This course offers an advanced study of selected areas in physiology of sport and exercise. The applied perspective emphasizes understanding the principles in designing effective conditioning programs for performance, fitness, and health. Empirically valid principles of training for muscular fitness (e.g., strength, power, speed) and energy fitness (i.e., aerobic and anaerobic) are explored. Additionally, environmental influences (e.g., altitude), lifestyle choices (e.g., nutrition), and selected developmental considerations (e.g., as related to gender differences) are discussed. Applications to sport and performance psychology consulting in sport, performing arts, and high-risk professions complement the course content.

CPSY 4615 The Elite Athlete Brain (3 Credits)

The primary goal of this course is to provide students with an understanding of the expert's brain from sport and performance literature. The course will review landmark and recent publications examining expert-novice contrasts, and those of athlete-non athlete comparisons. Students will review literature on training interventions to accelerate the development of expertise and learn to evaluate the validity of scientific claims of related consumer products. Students will gain a basic understanding of where state of science in understanding sport related concussions, including diagnostic tools, recovery, and prevention.

CPSY 4620 Kinesiology (2 Credits)

This course is an in-depth exploration of selected areas of kinesiology as a discipline and a profession focusing on human movement. Based on interdisciplinary theoretical and empirical perspectives, the explored areas include: (a) functional anatomy as related to adaptations to training; (b) biomechanics; (c) neurophysiological processes involved in motor learning and motor control; and (d) other relevant biophysical processes (as related to talent selection and development, physiological adaptations to training, etc.). In addition, this course surveys career opportunities in academic study and clinical practice in various areas of sport, fitness, exercise, and physical education.

CPSY 4630 Adept, Professional, Supervisor and Leader (2 Credits)

This course addresses the multiple roles of sport and performance psychology (SPP) consultants from a developmental perspective (i.e., education and training, early years in the profession, and full professional maturity). In-depth examinations of the consultant as an expert, person, performer, and self-regulator are grounded in the SPP literature and theoretical accomplishments in related fields (e.g., counseling psychology). Additionally, the acquisition of fundamental knowledge, skills, and abilities involved in supervision (mentorship) and further socialization to the field of SPP with an emphasis on positive leadership for local, national, and global progress complement the course content.

CPSY 4635 Athletic and Performance Nutrition (2 Credits)

Graduate level course educating student-coaches and administrators and performance specialists to use research and best practices in performance nutrition to achieve athletic and performance enhancement, and general wellbeing. The course will help facilitate students' ability to influence sporting and general environments to use nutrition as a means to enhance performance, with a secondary examination of preparing students to understand and manage individual differences, needs, and motivations for food choices. Course content will include modeling nutrition, encouraging a sense of family at team meals, leveraging media to internalize nutrition behaviors, and impacting availability of positive nutrition choices.

CPSY 4650 Sport Psychology (3 Credits)

A comprehensive view of the field of sport psychology will be covered. Through participation in this course, students will develop a better understanding of the field of sport and exercise psychology and develop skills that will assist in enhancing their career opportunities. Varied psychology topics (e.g., individual differences/personality, motivational orientations and strategies, applied psychological skills, social influence and group dynamics) with an emphasis on understanding major theories and research and applying those theories and research findings to diverse sport, exercise, and performance settings. Additionally, the psychological effect that participation in a sport or a physical activity has on a performer including anxiety reduction, aggressive behavior, and personality development will be explored.

CPSY 4652 Theoretical Aspects of Sport and Performance Psychology (3 Credits)

This course is an in-depth exploration of selected aspects of the theories of sport psychology along with applications of these theories to other performance domains. An advanced understanding of the field of sport and performance psychology is pursued in relation to psychosocial aspects involved in both the preparation and performance processes among adults, youth, and children who represent all skill levels. The explored areas include: (a) motivation, confidence, and anxiety in sport and performance, (b) selected topics in social psychology and psychobiology, (c) psychological skills training, and (d) special topics (e.g., personality, flow, injuries, burnout).

CPSY 4653 Sport in American Society (4 Credits)

This course examines sport as a social construct within American society. Both aspects of this relationship will be explored: (1) The influence of social context on sport, and (2) The influence of sport on society. The course will emphasize sport as an agent for social change. Topics for exploration will include the intersection of sport and: gender, race/ethnicity/culture, socioeconomic status, media, violence, deviance, religion, and politics.

CPSY 4654 Coaching & Leadership (3 Credits)

This course is a survey of the intersection of coaching, leadership, organizational behavior, organization dynamics, and change management. It examines the definitions, history, theories, and research in the sport and management leadership literature. Students will gain an understanding of how planning, motivation, team building, and leadership impact a team's or organization's effectiveness. Students are expected to learn and personally develop the analytical and leadership skills that affect individual and group performance.

CPSY 4655 Social Psychology of Sport (3 Credits)

This course will address the relationship between sport and cultural dynamics, sociological factors underlying competitive physical activity, and behavioral responses of sport participants and supporters to various socio-cultural motivations. This course will be a serious study of organized professional, amateur, and youth sports in North America. Emphasis will be placed on social forces that both impinge on and enhance athletic activities and organizations, and the influence sport has on society.

CPSY 4656 Psychology of Injury (3 Credits)

In this course, students will explore psychological theory, research, and practice in relation to the prevention, occurrence, and rehabilitation of sport injuries. Major topics will include: psychological risk factors for injury, psychological responses to injury, and psychological interventions to prevent sport injuries and enhance sport injury rehabilitation.

CPSY 4657 Motivational Interviewing (2 Credits)

This is an advanced course reviewing the theories and research findings related to motivational interviewing with the goal to apply them to performance (athletic, non-athletic) and exercise contexts. Topics include motivation for behavior change, transtheoretical model of behavior change, self-determination theory as applied to behavior modification, and the relationship between and the influences of emotion and motivation on counseling and sport and performance consultation. This course will place an emphasis on relating current leading theories and research evidence to consulting work. Equally in importance, there will be in-class hands-on activities (e.g., role playing), experiences (e.g., self-reflective tasks) and assignments (e.g., role playing tasks) that will add to the student competence in motivational interviewing.

CPSY 4660 Sport Psychology Interventions and Techniques (3 Credits)

Students will acquire knowledge and increase their comprehension of cognitive-behavioral intervention strategies (e.g., mental skills training) and how they can be applied to achieve optimal performance of athletes and others. The complex interaction between the sport psychology consultant and performer will be explored.

CPSY 4662 Foundation of Counseling Theories (3 Credits)

This course will review major contemporary counseling models, theories, procedures, and the helping relationship. Advanced study of techniques and research findings. Survey of principles underlying individual, family systems, and multicultural approaches to counseling.

CPSY 4663 Applied Motor Learning (2 Credits)

This course is an advanced examination of applied motor behavior theories and research. Emphasis is given to understanding of the processes involved in controlling skilled movement and the principles of skill acquisition to guide designing effective learning environments, practice schedules, and practice units. The examined areas include: (a) the field of study of motor control and learning; (b) performance and learning variables as impacting retention and transfer; (c) information processing model; (d) sensory and central contributions to motor control; (e) individual differences; and (g) instruction, demonstration, and feedback across different stages in motor learning.

CPSY 4664 Practicum in Sport and Performance Psychology III: Business Principles (3 Credits)

This is the third course in a year long, three-part sequence. This course serves the purpose of (a) providing an opportunity for students to learn about sport and performance psychology through observation and experiential opportunities; (b) providing an intimate forum for discussing the practice of sport and performance psychology; and (c) providing information on professional development and conduct. The course requires didactic and experiential activities. Business, consultation, and professional development issues in sport and performance psychology will be addressed. Prerequisite: CPSY 4673.

CPSY 4665 Beh Kinesiology & Physiology (3 Credits)

A study of human movement. Topics will include but are not limited to structural anatomy, biomechanics, and neurophysiology. the biomechanical etiology of various injuries will be studied.

CPSY 4666 Movement Principles for Performance (3 Credits)

This course is an exploration of selected areas of the exercise and sport sciences. The explored areas include: functional anatomy, biomechanics, and exercise physiology.

CPSY 4668 Psychology of Excellence (3 Credits)

The purpose of this course is to examine the theories, research, and intervention strategies related to the pursuit of excellence. This course explores the deliberate interventions necessary to support the development of excellence and expertise. Students will learn the nature of expertise development, the necessary steps to achieve excellence, and common roadblocks. The concept of excellence will be investigated in many contexts, such as sport and performance, intrapersonal, relationships, and life in general. Topics to be explored include: happiness, contentment, life satisfaction, values, character strengths, emotional intelligence, optimism, hope, flow, and resiliency.

CPSY 4669 Consulting Methods & Practices (3 Credits)

This course is an advanced exploration of theories, research findings, and skills related to the practice of consultation in performance settings. Specific topics include: (a) the consultant roles; (b) the major theoretical approaches to consultation (e.g., mental health, systemic); (c) the processes and stages of consultation (e.g., developing interpersonal relationships; design, implementation, and evaluation of service delivery); (d) ethical and multicultural issues; and (e) students' personal strengths and concerns in the role of a consultant (e.g., values interpersonal style, and consultant variables that impact the effectiveness of their role as an agent of behavior change).

CPSY 4670 Psych of Coaching & Leadership (3 Credits)

Examination of psychological components of coaching and talent development. Explores coaching development, coaching models, as well as strategies for dealing with athletes and different coaching contexts. Discussion of talent development theories including influence of genetic and environmental factors.

CPSY 4671 Theories of Performance Excellence (3 Credits)

This course is designed to familiarize students with theories of performance excellence developed by leading practitioners. Each week, students are exposed to a different practitioner's approach, which often includes an opportunity to observe the practitioner's style through video. Emphasis is placed on the role of theory in practice, theory-based conceptualizations utilizing a case study format, and comparing and contrasting the different theories.

CPSY 4672 Counseling Methods & Practices (3 Credits)

This course is an introduction to counseling microskills and techniques needed in helping relationships, with attention to building the therapeutic alliance. Emphasis placed on learning skills in small group format. Laboratory experience in demonstrating skills and the ability to form an effective counseling relationship is required. Pre-practicum experience to prepare students to work with clients.

CPSY 4673 Practicum in Sport and Performance Psychology 2 (3 Credits)

This is the second course in a year long, three-part sequence. This course serves the purpose of (a) providing an opportunity for students to learn about sport & performance psychology through observation and experiential opportunities; (b) providing an intimate forum for discussing the practice of sport and performance psychology; and (c) providing information on professional development and conduct. The course requires didactic and experiential activities. Psychological consultation, best practices, and professional development issues in sport and performance psychology will be addressed. Prerequisite: Practicum in Sport and Performance Psychology I.

CPSY 4674 Clinical Issues: Interviewing and Diagnosis (3 Credits)

This course examines adult psychopathology as classified in the DSM. Special emphasis will be placed on the intersection of performance with more traditional psychopathology. Students learn about etiology, symptomology, epidemiology, and treatment issues. Possible causes and contributory factors are examined, as well as theoretical and multicultural considerations. Prerequisites: Theoretical Aspects of SPP, Applied SPP, and Ethical Issues in SPP.

CPSY 4676 Assessment and Measurement (3 Credits)

This course covers the selection, use, and proper interpretation of common sport and performance psychology assessments. Basic principles of educational and psychological measurement, including test construction, validity, and reliability are addressed. The assessments taught include those used for individual assessment, individual selection, and organizational assessment (360 degree feedback, surveys, etc.). Prerequisites: CPSY 4652, CPSY 4690, and CPSY 4682.

CPSY 4677 Motivation, Emotion & Learning (3 Credits)

This is an in-depth course reviewing the theories and research related to motivation, emotion, and learning in performance contexts. Topics include the relationships between motivation, emotion, and learning; and the influences of emotion and motivation on counseling and consultation. The course provides basic information about the human cognitive system. Students are taught the basic principles of learning, with a focus on the principles of learning which are most applicable in sport and performance settings. This course places an emphasis on relating current research to practice.

CPSY 4678 Scholarly Writing Methods and Practices (1-3 Credits)

The primary goal of this course is to familiarize students with the methods and practices of scholarly writing. The course focuses on writing a scholarly review of literature, methodology, results, and conclusions according to APA style. Within the course, students are also asked to review one another's work while developing editing skills and methodological complexity.

CPSY 4679 Field Placement Practicum in Sport and Performance Psychology (3 Credits)

Supervised practice sport & performance psychology in an approved sport or performance setting under licensed practitioners.

CPSY 4680 Sport and Performance Psychology Practicum (3 Credits)

This course will familiarize students with professional issues relevant to the practice of sport and performance psychology. Students will be presenting and analyzing their current applied experiences as coaches and leaders in sport and performance settings in the community. This is a participation-intensive course and the students will receive feedback and suggestions from both the instructor and peers in a group supervision format. Importantly, the ongoing feedback and readings will provide an opportunity for students to understand and apply theories and practice systems of behavior change in sport and performance psychology in the context of their own clients/cases. Students will learn the roles and responsibilities inherent in professional and ethical consultation, with a special emphasis given to the dilemmas of serving as an embedded consultant.

CPSY 4681 Multicultural Issues (3 Credits)

This course covers the research and theories of counseling the culturally different client. Students are expected to develop multicultural skills, including culturally-based conceptualization, assessment, and selection of culturally appropriate intervention strategies. This course will examine these issues in general, with a special emphasis on those in sport and performance cultures. This is both an experimental and seminar-based course, aimed at developing student's personal awareness, knowledge, and skills.

CPSY 4682 Ethical and Legal Issues (3 Credits)

This course introduces the students to the ethical principles, codes, and standards related to the profession of sport and performance psychology. This includes an overview of the regulation of the practice of psychology, the relationships between ethical codes and legal statutes, and the development of a personal model for ethical decision-making.

CPSY 4683 Group Interventions (3 Credits)

This course is a survey of group counseling methods and techniques from a theoretical and applied perspective. The course will include practical application of group counseling interventions. Prerequisites: demonstrated knowledge of ethical principles and departmental consent.

CPSY 4684 Team and Organizational Dynamics (3 Credits)

This course examines the principles, theories, and research of human functioning in performance related teams and organizations. It explores the social and psychological factors influencing behavior in organizations, along with individual differences, dyadic relations and small group behavior. Students learn about the dynamics of team and organizational diagnosis, feedback and learning, intervention, and planned change.

CPSY 4685 Human Growth & Development (3 Credits)

This course is a comprehensive analysis of theories and research relating to human psychological development and learning across the lifespan. It explores the cognitive, affective, academic, physiological, moral, and social/cultural/racial domains. An emphasis is placed on a) the theoretical models underlying character and moral development, and b) adolescent and college student development theories.

CPSY 4686 Practicum in Sport and Performance Psychology: Professional Practice (3 Credits)

This course provides an examination of the critical components of successful and ethical professional practice and career building in sport and performance psychology in conjunction with intensive provision of sport and performance psychology services. The entire body of sport and performance psychology theoretical and applied knowledge as well as the skills that the students have acquired will be utilized. Additionally, rigorous self-reflective activities and ethical decision-making will increase the student professional and personal growth as directly related to effectiveness in the sport and performance psychology practice. Emphasis will be placed on diversifying and integrating theoretical knowledge and applied strategies and skills while simultaneously engaging in supervised independent work in real life sport and performance settings.

CPSY 4687 Psychology of Injury (3 Credits)

This course examines the psychological factors involved in injury, rehabilitation, and return to performance. The effects upon social, personal, and performance adjustment are addressed. The course covers how relevant theory and research can be used to inform practical applications to help the injured performer's rehabilitation and return. It presents the major medical aspects of injury and the rehabilitation process.

CPSY 4688 Seminar in Sport and Performance Psychology (3 Credits)

Advanced seminars offered by sport and performance psychology faculty on topics relevant to the practice and science of sport and performance psychology area.

CPSY 4689 Psychophysiology and Biofeedback (2 Credits)

This course explores the underlying mechanisms and psychophysical determinants of behavior in sport and performance settings. Students learn the use of biofeedback in achieving voluntary self-regulation and control of stress related behaviors.

CPSY 4690 Sport and Performance Psychology Interventions (3 Credits)

This course is designed to familiarize students with the application of sport and performance psychology interventions. Students experience the building of a sport and performance psychology program. This program includes the cardinal skills of relaxation, concentration, imagery, self-talk, and mental routine; followed by broader topics such as goal setting, motivation, confidence, cohesion, engagement, and mastery. The instructor briefly reviews relevant theory and research followed by demonstrations of techniques and strategies, after which students learn by doing. Specific attention is given to blending the science of peak performance with the art of applying science.

CPSY 4691 Practice Development in Sport and Performance Psychology (3 Credits)

The primary goal is to acquaint students with the skills needed to develop and implement a private practice in the profession of sport or performance psychology. The course takes students through the process of business development by using the traditional business plan model, from the necessary startup expenses to the executive summary. Throughout the course students learn the What, When, Where, and How of starting their own consulting practice, while learning the basic components of branding, marketing, and operations. Prerequisite: Must be enrolled in the MASPP program or instructor approval.

CPSY 4692 Entrepreneurship in Sport and Performance Psychology (3 Credits)

The primary goal of this course is to provide students with an overview of skills necessary to succeed in the entrepreneurial profession of sport and performance psychology. The course is flexibly designed to accommodate the students' desired career paths. Topics covered may include: sales and marketing, developing a practice, job search and interviewing skills, and understanding the job market.

CPSY 4700 Organization and Administration of Sport (4 Credits)

Graduate level course to educate students on the organization and administration of sport and sport coaching. Course content includes emergency action planning, facility management, human resource management, evaluation and development, legal responsibilities, record keeping, finance, and public relations. Students will learn how to lead organizations and coaching staffs to develop fair and safe participation.

CPSY 4705 Sociocultural Aspects of Sport Coaching (4 Credits)

Graduate level course to educate students on the sociocultural and social-psychological aspects of sport coaching and athletic performance. Students will understand how to analyze and apply social, sociological and social-psychological theory to sport coaching and athletic performance. Consideration will be given to developing a critical understanding of sport coaches' knowledge development, and how to implement multiple, effective and ethical strategies to enhance coach and athletic performance.

CPSY 4710 Motor Learning and Sport Pedagogy (4 Credits)

Graduate level course to educate students on the science and practice of how athletes learn motor skills and how coaches can facilitate skill acquisition. Course content includes the scientific and theoretical frameworks of motor learning, with a secondary examination of motor control and development. Applied course content will focus on how coaches can use learning strategies such as demonstration, instruction, feedback, and practice planning to improve athletic performance.

CPSY 4712 Tactical Strength and Conditioning Coaching (2 Credits)

The purpose of this course is to educate students on the scientific, theoretical and practical aspects of tactical strength and conditioning. Students will learn how to design tactical strength and conditioning programs to enhance performance and reduce and lessen the severity of injury. This course is also intended to help students begin to prepare to pass the National Strength and Conditioning Association's (NSCA) Tactical Strength and Conditioning Facilitator (TSAC-F) certification, and related professional development opportunities.

CPSY 4715 Strength, Conditioning, and Injury Prevention Program Design (4 Credits)

Graduate level course to educate students on the scientific, theoretical and practical foundations of strength, conditioning and injury prevention. Students will learn how to design strength and conditioning programs to enhance athletic performance and reduce and lessen the severity of injury. This course is also intended to help students become familiar with the National Strength and Conditioning Association's (NSCA) Certified Strength and Conditioning Specialist (CSCS) exam, and position statements from several national governing bodies on athlete safety and physical performance.

CPSY 4720 Psychology of Athletic Performance (4 Credits)

Graduate level course to educate students on the psychological aspects of athletic performance, and secondarily coach performance. Course content includes the theoretical and practical application of established mental skills (e.g., motivation, efficacy, arousal, anxiety, focus, self-awareness, goal-setting, imagery, team cohesion). Concepts will be applied to the evaluation and creation of practice and training plans to enhance athletic performance.

CPSY 4722 Social-Psychology of the Body, Health, and Performance (2 Credits)

The purpose of this course is to understand the ways in which people in society understand the body in sport, physical activity and health and wellness. Or in more simple terms, answer the question: why society thinks about the sporting, healthy and physically active body in the ways that it does? In order to acquire this understanding we will explore the complex and powerful historical, social and cultural forces that have shaped the assumptions underpinning the sporting, physically active and healthy body. No prerequisites exist for this course.

CPSY 4723 Applied Sports Technology for Coaches (2 Credits)

This elective graduate level course is designed to educate students on the uses, effects, and ethics of technologies on athletic performance. Students will learn about the breadth of research and uses of technologies in attempts to enhance athletic performance. Course content includes surveying the sports technology field, technology ethics, positive and negative effects of technology, evaluating knowledge claims (i.e., reliability, validity, measurement issues), and common uses of technology to enhance performance (e.g., team communication, athlete monitoring and tracking, instruction and feedback, apps).

CPSY 4725 Philosophy and Ethics of Sport Coaching (4 Credits)

Graduate level course to educate students on the philosophical, social, and ethical foundations of sport and sport coaching. Course content includes the history and formation of sport and sport coaching, social issues (e.g., race, class, gender, inclusivity, etc.), how sport is used for (un)desirable ends and the public good, the coach's role in demonstrating and encouraging ethical behavior, and promoting a healthy and safe environment for numerous stakeholders. Leadership theory (e.g., transformational and servant leadership, emotional intelligence, athlete-centered coaching) is also touched upon and discussed in relation to the ethics and norms of sport, and the relationship between educational institutions and sport/athletics. There are no prerequisites for this course.

CPSY 4730 Biomechanics of Athletic Performance (4 Credits)

Graduate level course to educate students on the biomechanics of athletic performance. Students will learn quantitative and qualitative methods of biomechanics to analyze and enhance athletic performance and prevent injury. Course content includes knowledge of the musculoskeletal system, force development and how additional factors such as body composition and joint structures influence athletic performance and injuries.

CPSY 4735 Understanding Sport Research (4 Credits)

Graduate level course to educate students on understanding and doing sport research. The primary focus of this course is on facilitating student's understanding of research methods commonly used in sport research. Secondly, the course will examine how research is actually done, including reviewing the literature and writing and referencing scholarly work. Course content will cover topics such as paradigms and philosophy of science, epistemology and the creation of knowledge, and numerous research designs, methodologies and methods. Content will also include understanding statistics and qualitative methods.

CPSY 4736 Practicum in Strength and Conditioning and Fitness Coaching (1 Credit)

The purpose of the Practicum in Strength, Conditioning, and Fitness Coaching course is to help students gain the knowledge, skills and attitudes to become a quality coach and a reflective practitioner through experiential learning. Students will be provided with a variety of strategies and methods to solve real-world strength, conditioning, and fitness coaching problems in real life settings. Students will draw upon other coursework, research, and practical insights to exercise professional judgement. Students must complete at least 50 hours of coaching throughout the quarter.

CPSY 4740 Practicum 1 in Sport Coaching (1 Credit)

Practicum 1 in Sport Coaching helps students to gain the knowledge, skills and attitudes to become a quality coach and reflective practitioner through experiential learning. Students will draw upon MASC course content and their coaching experiences to reflect upon the complexities of sport coaching to integrate their knowledge and skills to identify and solve problems. Students must complete at least 50 hours of coaching for every one hour of credit enrolled. This course provides basic to intermediate level content and prepares students for Practicum 2. Prerequisites: Passed background check, submitted current CPR/First Aid certificate at level in which student is coaching and valid for the full quarter while enrolled. Student must be enrolled in the MASC program.

CPSY 4745 Practicum 2 in Sport Coaching (1 Credit)

Practicum 2 in Sport Coaching helps students to gain an advanced understanding of the knowledge, skills and attitudes to become a quality coach and reflective practitioner through experiential learning. Students will draw upon MASC course content and their coaching experiences to reflect upon the complexities of coaching to solve vital problems. Students must complete at least 50 hours of coaching for every one hour of credit enrolled. Prerequisites—one earned credit of Practicum 1, passed background check, submitted current CPR/First Aid certificate at level in which student is coaching and valid for the full quarter while enrolled. Student must be enrolled in the MASC program.

CPSY 4750 Sport Coaching Capstone (1-4 Credits)

Capstone literally means "a finishing stone or a structure." Similarly, students will complete a project that demonstrates the student's initiative and excellence. To help explore the student's interest and refine a suitable topic, students are encouraged to discuss the capstone project with course instructors early and throughout their time in the MASC program. Students may build off a previous course activity or assignment, but the Capstone Project must reflect new and substantive work appropriate to the number of hours enrolled. While students have the autonomy to negotiate new project ideas, sample projects could include: thesis or original research, review of literature paper, presentation at conference, leading a service-learning event, writing a book chapter, authoring a novel or other creative writing, or a webinar. Prerequisites: Students must have completed at least 16 credit hours towards the MASC degree and have completed or being enrolled concurrently in Understanding Sport Research.

CPSY 4751 Applied Sport Coaching 1: Intro to Reflective Practice & Applied Research (1 Credit)

Applied Sport Coaching 1 introduces students to reflective practice and how to become a reflective practitioner. Students will draw upon a variety of discourses and practices to understand the significance of framing and naming problems and implementing potential solutions within their own context. To help become a skilled scholar-coach, students must complete at least 50 hours of coaching or coaching related duties throughout the quarter. The course culminates with an introduction to action research, and other forms of applied research, and shifts the student from their own reflective practice to a wider, rigorous social research approach to addressing sport or coaching problems.

CPSY 4752 Applied Sport Coaching 2: Theory, Literature, and Planning Applied Research (1 Credit)

Applied Sport Coaching 2 introduces students to key issues and challenges of the action research process and additional forms of applied research. Students consider the meaning and social construction of science, research, and enduring concerns such as ethics, power, and benefit and harm. Students consider the role theory takes in action and applied research, identify a focus of the research, review relevant literature, and develop relationships with key stakeholders. Students may also submit institutional review board approval and develop additional materials or tools for their research.

CPSY 4753 Applied Sport Coaching 3: Data Collection and Analysis (1 Credit)

Applied Sport Coaching 3 exposes students to issues and methods pertaining to data collection and analysis. Also, students reconcile issues related to the research process and make decisions that focus the scope of the research. Students further their relationships with key stakeholders and, if not already, obtain institutional review board approval prior to data collection. With stakeholders, students solidify the framing of the problem to be addressed and use data collection and analysis methods to understand the problem.

CPSY 4754 Applied Sport Coaching 4: Implementing Action Plans (1 Credit)

In Applied Sport Coaching 4, students plan, implement, and reflect on their action, or applied, research. Students' time is "in the field" working through the messy complexities of practice in relation to theory and method. Students learn to manage obstacles that arise and deepen their understanding of what is going on in practice and why. As needed, students revisit theory, literature and method to develop new insights on the path of implementing a rigorous sustainable solution to their identified research problem.

CPSY 4755 Applied Sport Coaching 5: Writing and Communicating Research (1 Credit)

Writing up research, as well as creating other ways to communicate the action research to stakeholders and partners, is a significant challenge. In Applied Sport Research 5, students learn issues related to journal style guidelines, including key issues such as audience, tone, writing style, and submission guidelines and instructions for authors. Also, students learn how to communicate in a variety of ways to lay audiences and community partners and stakeholders, which is essential to providing benefit to partners.

CPSY 4756 Applied Sport Coaching 6: Knowledge Dissemination and Reflection (1 Credit)

Applied Sport Coaching 6 is the culmination of two key milestones. First, this course facilitates students' dissemination of their action, or applied, research studies. Students finish their written manuscript and submit it for publication. Students also reflect on the entirety of the research process and reflective practice. Through the submission process, students develop an understanding of what it takes to become a scholar-coach, they contribute to the advancement of science in sport, and they have their work challenged by the peer review process. Second, this course is the culminating experience for students in the Masters of Arts in Sport Coaching degree program. Students reflect on their growth while in the program and consider next steps on the journey as lifelong learners and scholar-coaches.

CPSY 4801 Evidence-Informed Strength and Conditioning and Fitness Coaching 1 (1 Credit)

The purpose of this course is to expose students to the scientific literature in strength, conditioning, and fitness. Course content will cover historical, pioneering, and contemporary research trends in the field. Students will come to appreciate how scientific knowledge is created, disseminated, and influences human behavior and society. Research topics for this course focus on applied aspects of biology, genetics, physiology, and nutrition in relation to strength, conditioning, and fitness.

CPSY 4802 Evidence-Informed Strength and Conditioning and Fitness Coaching 2 (1 Credit)

The purpose of this course is to expose students to the scientific literature in strength, conditioning, and fitness. Course content will cover historical, pioneering, and contemporary research trends in the field. Students will come to appreciate how scientific knowledge is created, disseminated, and influences human behavior and society. Research topics for this course focus on applied aspects of bio-mechanics, anatomy, kinesiology, and motor development in relation to strength, conditioning, and fitness.

CPSY 4803 Evidence-Informed Strength and Conditioning and Fitness Coaching 3 (1 Credit)

The purpose of this course is to expose students to the scientific literature in strength, conditioning, and fitness. Course content will cover historical, pioneering, and contemporary research trends in the field. Students will come to appreciate how scientific knowledge is created, disseminated, and influences human behavior and society. Research topics for this course focus on applied aspects of the psychology of strength, conditioning, and fitness.

CPSY 4804 Evidence-Informed Strength and Conditioning and Fitness Coaching 4 (1 Credit)

The purpose of this course is to expose students to the scientific literature in strength, conditioning, and fitness. Course content will cover historical, pioneering, and contemporary research trends in the field. Students will come to appreciate how scientific knowledge is created, disseminated, and influences human behavior and society. Research topics for this course focus on applied sociocultural aspects of strength, conditioning, and fitness.

CPSY 4991 Independent Study (1-17 Credits)

CPSY 4995 Independent Research (1-17 Credits)

CPSY 5000 Rad Behav/Func Contextl Models (3 Credits)

CPSY 4000 is designed to provide a historical, philosophical and conceptual background to better understand and appreciate Behaviorist views of "being-in-the world". The course lays the foundation for the sophisticated application of a science of behavior-its theories and methods-to the assessment of clinical problems and the art of doing psychotherapy. The course will invite a little discomfort, disturb some preconceptions, and compel students to address some difficult questions and thorny issues. Among the goals of this course are to see students commit to being more than a psychologist technician, to encourage them to develop a guiding philosophical core in their practice as a psychologist; to assist them in clarifying or deepening whatever philosophical worldview they may hold; and that they will have achieved an informed understanding of radical behaviorism/functional contextualism - whether or not they choose to further pursue these models.

CPSY 5010 Cognitive & Affective Models (3 Credits)

This is the first in a three part sequence that includes Psychophysiology and Clinical Neuropsychology and is designed to introduce students to the current research in cognitive neuroscience and consciousness. This first course focuses on sensation/perception, learning, memory, emotion, language and other higher cognitive functions. Lectures will emphasize current technologies and historical inquiry and the unique contributions made by psychosocial and cultural variables.

CPSY 5020 Psychoanalytic Models (3 Credits)

Psychoanalytic theories, including Freud's topographic and structural theories, ego psychology, object relations theory and modern relational theories, including self-psychology and intersubjectivity.

CPSY 5030 Systems Models (3 Credits)

Basic concepts of general systems theory and their applications in psychology, focusing on family systems, groups and organizations.

CPSY 5040 History and Systems in Psych (2 Credits)

Basic psychological concepts surveyed from a historical point of view, tracing development of psychological bases of professional practice.

CPSY 5050 Advanced Statistics (3 Credits)

This course is designed to increase students understanding of advanced analytical techniques in statistics, particularly as they pertain to psychology. We will take an applied approach, i.e., the course material will emphasize the feasibility, application, and utilization of these analyses rather than the theories upon which they are based.

CPSY 5051 Statistics I Lab (1 Credit)**CPSY 5070 Research Methods (2 Credits)**

Sequential course that cover fundamentals of structuring, analyzing and critiquing research reports and proposals; strategies to guide and facilitate the writing process; attitude and thinking skills necessary for function as a local clinical scientist; research design tools, methods and strategies for answering different types of questions.

CPSY 5071 Research Methods II (2 Credits)

Sequential courses that cover fundamentals of structuring, analyzing and critiquing research reports and proposals; strategies to guide and facilitate the writing process; attitudinal and thinking skills necessary for function as a local clinical scientists; research design tools, methods and strategies for answering different types of questions.

CPSY 5073 Qualitative Research Methods (2 Credits)

Qualitative research involves obtaining in-depth information about the behaviors and beliefs of people in naturally occurring social settings. This course introduces students to the philosophical underpinnings, history, and key elements of five qualitative approaches: narrative research, phenomenology, grounded theory, ethnography, and case study. We compare theoretical frameworks and methodologies, experience the use of data, and discuss writing strategies. In addition, we read articles that are exemplars of each approach.

CPSY 5075 Program Evaluation Technique (3 Credits)

Theory and techniques for developing management information and assessment systems for human service programs.

CPSY 5080 Diagnosis and Classification (2 Credits)

An overview of major DSM diagnostic categories, as well as an introduction to ICD and noncategorical classification.

CPSY 5108 Introduction to Acceptance and Commitment Therapy (ACT) (2 Credits)

Acceptance and Commitment Therapy (ACT) belongs to the movement in clinical psychological science that sees acceptance and openness to experience as an essential addition to change-focused psychotherapeutic treatment strategies. Although consciously based on behavior-analytic thinking, ACT is a hybrid in terms of approach and technique, bringing together aspects of Zen Buddhism, Gestalt therapy, and humanist-existential thought. The paradox upon which ACT is founded is that only radical acceptance of what cannot be changed empowers people to recognize and change the things that they can. The ACT approach is about embracing necessary suffering in order to make more committed, life-affirming choices and live in accordance with personal values. ACT emphasizes that in a very deep sense all human beings are in the same boat. The technical and theoretical bases of ACT are through normal didactics, but the heart and art of the approach occurs through experiential exercises, group process, and from observation and modeling. Prerequisite: CPSY 5000.

CPSY 5120 Introduction to Animal-Assisted Interventions (3 Credits)

This course serves as an introduction to animal-assisted interventions (AAI) as they are commonly used by mental health care professionals. It is designed to provide students with an overview of the foundations of AAI, the variety of ways in which this modality is used, international perspectives on AAI, various perspectives on ethics and animal welfare, and researchers' current understanding of the role of the human-animal bond in facilitating AAI treatment efficacy. General topics to be addressed include the characteristics of the species used in AAI, the basic principles of AAI, the use of AAI with a variety of populations, and animal abuse issues. A number of guest lecturers will share their knowledge and experiences with students throughout the quarter.

CPSY 5130 Issues in Measurement (3 Credits)

Validity, reliability and standardization issues in psychological testing; statistical properties of commonly used tests.

CPSY 5131 Issues in Measurement Lab (1 Credit)

Optional. Focused assistance with basic math skills; review and clarification of class topics.

CPSY 5170 Life Cycle: Inf to Mid Childhd (3 Credits)

Understanding normal development of children (0-12 years), integrating theory, research and a phenomenological perspective.

CPSY 5180 Life Cycle: Adolescent - Adult (2 Credits)

Understanding normal adolescent development (13-18 years), integrating theory, research and a phenomenological perspective. Major theories, life events, crisis and the adult life phases. There will be an emphasis on the diversity of adult experiences.

CPSY 5200 Life Cycle: Late Adulthood (3 Credits)

Theories of aging; social, psychological and biological changes; assessment and intervention methods, emphasizing issues impacting older adults. (65 years and above).

CPSY 5230 Group Dynamics & Interventions (3 Credits)

Provides psychologists in training with multiple learning experiences highlighting that groups and organizations are intensely psychological environments in which most psychologists function professionally and personally and have the potential to impact positively.

CPSY 5231 Social Psychology (3 Credits)

This course explores how social psychologists approach psychology, concentrating on key concepts, research findings, and critical thinking strategies that students can integrate into their own clinical work.

CPSY 5250 Existential and Humanistic Theory and Therapy (2 Credits)

Historical roots and basic assumption of existential and humanistic views. Students encouraged to integrate materials with their personal values and assumptions about human nature and their interaction with clients.

CPSY 5270 Physiological Psychology I (3 Credits)

Terminology and principles of and research in physiological psychology. Where possible, application made to content and practice of clinical psychology.

CPSY 5271 Physiological Lab I (1 Credit)

Optional. Assistance with material covered in CPSY 4170.

CPSY 5273 Physiological Lab II (1 Credit)

CPSY 5290 Clinical Neuropsychology (3 Credits)

Historical, conceptual and clinical foundation for, as well as current developments related to, the field of clinical neuropsychology. Includes exposure to: developmental neuropsychology and neuroanatomy; higher cognitive functions; neuropsychologically informed interviews and standard neuropsychological test batteries; neuropsychological profiles associated with a variety of acquired disorders (both classical neuropsychological and psychological in nature); ethnic, cultural, age and gender considerations; and current status of a variety of professional/ethical issues. Prerequisite: CPSY 5270.

CPSY 5310 Ethical Issues in Psychology (3 Credits)

In-depth consideration of ethical standards applicable to the science and practice of psychology; pertinent laws and legal standards governing the practice of psychology; areas in which legal and ethical standards suggests contradictory actions on the part of the clinical psychologist.

CPSY 5320 Professional Issues in Psych (2 Credits)

Issues, concerns and controversies impacting current practice of professional psychology at the state and national levels; preparation for future alternative systems of service delivery. Emphasis is on professional life after the PsyD. Required for first year students.

CPSY 5340 Social Psychology of Racism and Oppression (3 Credits)

Theoretical and experimental nature of racism and oppression, primarily in the United States, definition of such terms as stereotypes, prejudice, racism, white supremacy and privilege; exploration of various theories regarding these terms and how they manifest themselves historically and contemporarily.

CPSY 5360 Racial/Ethnic Identity Dvlpmnt (3 Credits)

This course will explicate the concept of ethnic identification, and the process by which this central aspect of a person's overall identity develops. Accordingly, the two central questions that this course will address are: a. who are they? and b. how did they get that way? These questions will be examined utilizing a Descriptive Psychology perspective.

CPSY 5370 Lesbian, Gay, Bisexual and Transgender Issues (3 Credits)

Various aspects of gay, lesbian life explored cross-culturally; nature of homosexuality, including the controversy of heredity vs. choice. Issues of oppression and discrimination will also be explored. The role of psychology and the politics of homosexuality will be studied. Students will also be asked to explore their personal awareness regarding homosexuality in their everyday lives and in a therapeutic context.

CPSY 5380 Culturally Competent Psychotx (3 Credits)

As the final class in the year-long multicultural course sequence, this class will integrate the theoretical content of the preceding classes and focus on their psychotherapeutic implications. This course will address psychotherapy with the following groups - African Americans, Asian Americans, Latinos, Native Americans, and the GLBT community.

CPSY 5385 First-Year Seminar (2 Credits)

This is a clinical and didactic seminar on beginning psychotherapy. The focus will be on case formulation and developing a therapeutic relationship with the client. Content covered will include foundations of evidence-based practice, common factors, documentation standards, standards of practice, emergency/crisis policies and procedures, and foundational applied ethics.

CPSY 5386 Professional Seminar: Treatment of Children and Adolescents (2 Credits)

This seminar involves the evaluation and treatment of children and adolescents (i.e., ages 6 through 18) in the Professional Psychology Center. Supervision is provided from an integrative and relationship-based perspective, and topics relevant child and adolescent treatment are discussed.

CPSY 5388 Professional Seminar: Psychological Assessment (2 Credits)

This seminar will focus on clinical material related to aspects of psychological assessment. It demands more of a time commitment than most other seminars because assessment requires longer sessions with clients to administer tests, time to score and interpret tests, and report writing. Students should not sign up for this seminar if the main reason is to fulfill the GSPP four assessment cases requirement. Students should only rank this seminar if they are passionate about assessment. There will be opportunities to complete ADHD evaluations, learning disability assessments, personality batteries and collaborative therapeutic assessments for children and adults. Students are required to complete a minimum of 4 cases during the course of the year (one per quarter). We will not be providing forensic testing or neuropsychological testing services, although we will discuss some neuropsychological issues as they arise. Students will have the chance to present their cases and consult with the seminar. Requirements for enrollment in the seminar include: prior completion of Cognitive Assessment and Self-Report Assessment, as well as completion of or at least concurrent enrollment in the Introduction to Rorschach class. The seminar co-leaders provide supervision and enrich the experience. Supervision of assigned small subgroups typically takes place either before or after seminar or on Fridays.

CPSY 5389 Professional Seminar: Behavior Therapy (2 Credits)

This advanced professional seminar draws upon pragmatic philosophy and contextualistic worldview as it informs and guides contemporary behavior analytic theory and practice. Students gain experiences using functional analysis as a method for describing and integrating clinical observations and learn to implement a variety of evidence based, acceptance inspired interventions designed to facilitate psychological flexibility and values-congruent living in clients from diverse backgrounds. Therapeutic work is conducted in an atmosphere of care, respect, compassion, and commitment, and challenges the client (and therapist) to be more open, aware, vulnerable, and present in their lives.

CPSY 5390 Professional Seminar: Forensic Issues (2 Credits)

This seminar will introduce students to the various areas and ways in which psychology interacts with the legal and criminal justice systems. Students will develop their capacity to perform evaluations relating to psychological questions, dilemmas, and disputes that are most frequently requested of forensic psychologists. Focus of the seminar will be on assisting students in clarifying their role as an evaluator and consultant to attorneys, judges, and criminal justice personnel; exploring the ethical responsibilities therein; learning to compose reports for a legal rather than a clinical audience; and preparing to testify as an expert witness. Students will formulate and deliver case presentations, participate in a "mock" testimony experience, and submit reports. Students in past seminars have conducted child custody evaluations, mental status at time of offense evaluations, Social Security disability evaluations, asylum, T-visa, and U-visa evaluations, animal abuse, competency and juvenile placement evaluations; these evaluations allow students the opportunity to conduct full battery psychological assessments, and learn how to apply findings to a legal context. In addition, we have been getting more court mandated therapy clients. Thus, students will get assessment experience as well as individual therapy experience with adults and children. Assessment experience required. If you have not completed all assessment courses, please speak to Lavita. Students are required to complete a combination of 4 assessments/therapy clients during the course of the year. Please note that the forensic seminar requires a substantial time commitment because assessments requires longer sessions with clients to administer tests, time to score and interpret tests, and report writing.

CPSY 5391 Professional Seminar: Psychodynamic Therapy (2 Credits)

This seminar focuses on psychodynamic psychotherapy - that is, individual adult psychotherapy with the aim of bringing about meaningful and lasting psychological concepts as they apply to your patients, with a practical, "hands on" focus - for example, what to do and say when your patient shuts down, threatens suicide, act out, comes on to you, misses appointments, gets worse, throws up in your office, and all the other troubling and fascinating things people do from time to time in psychotherapy. Prior or current personal psychotherapy is highly desirable and strongly recommended. Students should be prepared to discuss their clinical work candidly - and help foster an environment of mutual trust, compassion, and respect, in which candid discussion can take place.

CPSY 5392 Professional Seminar: Couple and Family (2 Credits)

This seminar allows students more in-depth training in working with systems including couples and families. Students should take Couples Therapy and Family Therapy either before or concurrent with the seminar. Special topics covered include divorce, step families parenting, sex therapy, multicultural issues, and ethics, as well as more general couple and family therapy work.

CPSY 5393 Professional Seminar: Acceptance and Commitment Therapy (2 Credits)

Acceptance and Commitment Therapy (ACT) is a pragmatically based, relatively new and highly experiential form of therapy whose overarching goals are to a) assist clients (and therapists) in accepting what cannot be changed (i.e., the form or frequency of certain private events), while b) helping them fully commit to behaving in accordance with idiosyncratic values. Although consciously based on behavior-analytic thinking, ACT is a hybrid therapy in terms of approach and technique, bringing together aspects of Zen Buddhism, Gestalt therapy, and humanist-existential thought. In the seminar, students will learn the technical and theoretical bases of ACT through group process, individual and small group supervision, as well as from observation and modeling. Prerequisite: Behavioral Models course.

CPSY 5394 Professional Seminar: Cognitive-Behavior Relational Therapy (2 Credits)

This is a year-long seminar on integrating cognitive-behavior (CBT) and relational therapy. Trainees learn the theory and practice of CBT and relational therapy through readings, didactic presentations, discussion, and especially case presentations of their clients and themselves. Small-group supervision is also required.

CPSY 5396 Professional Seminar: Advanced Psychotherapy (2 Credits)

Seminar will focus on the individual therapy treatment of adult cases. Particular emphasis will be placed on conceptualizing cases from a developmental perspective with no particular emphasis on object relations and the psychology of self. We will evaluate culture, role of trauma, issues of sexual orientation, and developmental history. Students will be encouraged to look at their own and other's responses in a supportive environment that will foster discussion on counter-transference responses. An in depth exploration of client's needs will be assessed and model the treatment to those needs, rather than applying the same treatment model to all patients. Previous exposure and readings on the psychology of self and object relations is helpful. Readings to deepen our understanding of the above will be assigned. Must have taken or be currently enrolled in Adult Psychopathology sequence. Prerequisite: Psychoanalytic Models course.

CPSY 5399 Professional Seminar: Gender Issues (2 Credits)

This seminar will focus on gender issues from developmental and psychodynamic perspectives. Topics will include issues relevant to women, men, and transgendered/intersexed individuals. Clients may include adolescents and adults with a variety of presenting concerns including relationship problems, identity issues, eating disorders, pregnancy and postpartum work, parenthood, mood and anxiety disorders, and aging.

CPSY 5404 Professional Seminar: Integrative Therapy (2 Credits)

This advanced seminar examines various integrative models of psychotherapy, and students will have the opportunity to develop their own therapeutic "voice" by integrating the major theories already learned at the GSPP. While the seminar will be theoretical in nature, one goal is to help students prepare for practice in the real world by exploring the common factors of therapy, and how to work collaboratively in a client-directed fashion. Clients may include adults, adolescents, and children with a wide variety of presenting concerns, in individual, couples, family, or group therapy. Students will be expected to present their work regularly on DVD and (in Dr Cornish's supervision), occasionally behind the two-way mirror. Competency areas covered include: professionalism, reflective practice, scientific knowledge and methods, relationships, individual and cultural diversity, ethical/legal standard and policy, assessment, and intervention. In addition to supervision on psychotherapy, there may be an option for students to be supervised on their supervision of a first year student in the PPC.

CPSY 5405 Professional Seminar: Advanced Relational Psychodynamic (2 Credits)

This seminar focuses on relational psychotherapy from the perspectives of self-psychology and intersubjective systems theory in working with adults. We examine the co-creation of the therapeutic relationship, the making of meaning, emphatic listening, attuning to the other's affective experience and putting the other's subjective experience into words. We develop treatment plans and case formulations that are consistent with this perspective.

CPSY 5406 Professional Seminar: Health Psychology (2 Credits)

This advanced seminar focuses on the ways that clients' physical health concerns affect psychosocial and emotional well-being. We focus on the relationship between the mind and the body and take a holistic and contextual approach to understanding work with clients, keeping in mind relational and cultural variables throughout the seminar. Clients in the PPC that have been in this seminar have had cancer, multiple sclerosis, diabetes, heart failure, chronic pain, autoimmune diseases, etc. As relevant to our work with clients, we discuss pain management, mindfulness, differential diagnosis of depression and anxiety, sleep hygiene, psychosocial oncology, grief and loss, and other empirically supported treatments for issues that clients present. The overarching theoretical framework of the course is relationship-focused, client-centered, and strengths-based. We draw on rehabilitation psychology and medical psychology, and explore diversity issues in a variety of ways, including examining disability as a multicultural issue. We use readings from interpersonal psychotherapy, feminist and multicultural therapy, positive-psychology, meaning-centered psychotherapy, humanistic/existential therapy, client-centered therapy and post-traumatic growth to guide discussions. Particular attention is paid to helping clients enhance their strengths and find meaning in their lives during times of transition. Since many health settings are focused on a short-term model of treatment, students in seminar have the option of taking on shorter-term cases and we explore the use of time-limited psychotherapy in a health setting. It is expected that most students take on new cases in this seminar.

CPSY 5407 Professional Seminar: Caregiver and Child Relationships From Pregnancy Through Early Childhood (2 Credits)

This seminar involves the evaluation and treatment of infants, young children, and their caregivers in the Professional Psychology Center. Supervision is provided from an integrative and relationship-based perspective, and topics relevant to perinatal, infant, and early childhood assessment and treatment are discussed. Prerequisite: CPSY 5385.

CPSY 5408 Professional Seminar: Military Psychology (2 Credits)

This clinical seminar teaches military cultural competency, which is infused throughout topics during the year. There is also a focus on learning the evidence-based treatments taught and utilized within the Department of Defense and the Department of Veteran Affairs as the purpose of this field placement and seminar is to prepare students to serve this population and to work within these large systems of care for their predoctoral internships, postdoctoral fellowships and beyond. A specific focus on the prevention of vicarious trauma, compassion fatigue and burnout is infused throughout the year-long seminar. Throughout case presentations, students are encouraged to discuss how various intersecting aspects of culture and identity contribute to the case and their own interventions as therapists.

CPSY 5420 Behav-Analytic Prin 1 (2 Credits)

This course covers philosophical foundations, assumptions, and principles underlying major systems and models of behaviorism. Emphasis is given to the philosophy of science called radical behaviorism and its behavior-analytic functional-contextualistic tradition. Course I specifically targets contingency-shaping selection processes based upon Pavlovian and operant conditioning paradigms. Recommended prerequisite: CPSY 5000.

CPSY 5421 Behavioral Analysis Princ La (1 Credit)**CPSY 5422 Behav-Analytic Prin 2 (2 Credits)**

This course covers philosophical foundations, assumptions, and principles relevant to cultural-linguistic practices. Emphasis is given to the philosophy of science called radical behaviorism and its behavior-analytic functional-contextualistic traditions. Course 2 specifically addresses verbal relational contingency selection processes based upon cultural and its verbal community. Prerequisite: CPSY 5420.

CPSY 5423 Behav-Analytic Assess/Case Frm (2 Credits)

This course covers the philosophical foundations, assumptions, and principles relevant to behavioral assessment and case formulation tactics. Emphasis is given to the philosophy of science called radical behaviorism and its behavior-analytic functional-contextualistic traditions. This course specifically targets an empirical data-driven approach to idiographic assessment for purposes of developing conceptual analyses from the contextual-functional analytic perspective. Prerequisites: CPSY 5420, CPSY 5422.

CPSY 5424 Behavior-Analytic Intervention (2 Credits)

This course provides an overview of issues, principles and methods basic to clinical practice and intervention. Emphasis is given to the philosophy of science called radical behaviorism and its behavior-analytic functional-contextualistic traditions. This course specifically targets a range of commonly used methods of intervention (e.g., counter-conditioning and exposure-based treatments, guided action strategies, acceptance-commitment approaches, Eastern interventions). Issues relevant to the structuring of therapy sessions, the therapeutic relationship, behavioral nonadherence, empirical research, and other topics of therapeutic interest will be reviewed. This course will incorporate the use of experiential exercises, modeled demonstration, and behavior rehearsal methods for training purposes. Prerequisites: CPSY 5420, CPSY 5422, CPSY 5423.

CPSY 5466 Health Psychology (2 Credits)

This course is designed to provide students with a broad overview of the salient empirical and theoretical aspects of health psychology and behavioral medicine. The course will emphasize the role that psychological variables play in the development, exacerbation, treatment and prognosis of both acute and chronic illness. We will also highlight sociopolitical and cultural discourse surrounding end-of-life decision making, healthcare accessibility and the phenomenology of a disabled population.

CPSY 5467 Health Psychology Service Learning Seminar (1 Credit)

The Health Psychology Service Learning Seminar provides the opportunity for students to gain clinical experience with the underserved/underrepresented populations covered in the Health Psychology course (CPSY 5466). Students who enroll in the Seminar must agree to complete 20 hours of supervised clinical service with an agency and supervisor of their choice.

CPSY 5468 Sport and Performance Psychology Practicum in Collegiate Athletics I (2 Credits)

This is the first course in a year long, three-part sequence. This course serves the purpose of providing: a) practice in sport and performance psychology in a NCAA Collegiate Athletic Department under the supervision of licensed practitioners; b) an opportunity for students to learn about sport and performance psychology through observation and experiential opportunities; and c) information on professional development and conduct. The course requires didactic and experiential activities. The didactic component covers the practice of sport and performance consulting, focusing on gaining entry and building working relationships. Current research is integrated with theory, emphasizing empirically validated approaches to best practice.

CPSY 5469 Sport and Performance Psychology Practicum in Collegiate Athletics II (1 Credit)

This is the second course in a year long, three-part sequence. This course serves the purpose of providing: a) practice in sport and performance psychology in a NCAA Collegiate Athletic Department under the supervision of licensed practitioners; b) an opportunity for students to learn about sport and performance psychology through observation and experiential opportunities; and c) information on professional development and conduct. The course requires didactic and experiential activities. Psychological consultation, best practices, and professional development issues in sport and performance psychology are addressed.

CPSY 5470 Sport and Performance Psychology Practicum in Collegiate Athletics III (2 Credits)

This is the third course in a year long, three-part sequence. This course serves the purpose of providing: a) practice in sport and performance psychology in a NCAA Collegiate Athletic Department under the supervision of licensed practitioners; b) an opportunity for students to learn about sport and performance psychology through observation and experiential opportunities; and c) information on professional development and conduct. The course requires didactic and experiential activities. Psychological consultation, best practices, and professional development issues in sport and performance psychology are addressed.

CPSY 5480 Integrated Primary Care (2 Credits)

This course is designed to provide an introduction to the field of Integrated Primary Care (IPC). Primary health care physicians currently serve as the de-facto mental health care providers for approximately 50-80% of the patients they serve. Psychologists are desperately needed to support primary care, yet traditional clinical training does not adequately prepare them to work in this field. Students in this course can expect to acquire a solid knowledge in IPC that will enable them to function effectively in the primary care culture. A clinical exposure component are required so students can experience the pace and problem range seen in the primary care office. Class size is limited. Students not enrolled in the PsyD program must petition the instructor for approval to register.

CPSY 5482 Health Psychology Service-Learning: Clinical Practice in Integrated Primary Care (1 Credit)

This course will be a clinical and didactic seminar for students who are involved in service-learning projects in integrated primary care clinics in the community. Students will participate in service-learning, clinical rotations, and administrative and consultation duties outside of the course time. The course format will include time for clinical supervision of community cases, didactic training on topics of relevance to integrated primary care settings, and lectures from interprofessional community preceptors from the clinics. Prerequisite: Health Psychology CPSY 5466 or permission or the instruction.

CPSY 5500 Diagnosis & Treatment of Children (2 Credits)

The focus of this course will be on the evaluation and treatment of children. Considerations concerning the particulars of the evaluation process will be discussed. An integrative approach to child treatment will be presented with a "child-in-family" approach. Play therapy approaches and techniques will be described and contrasted. Behavioral approaches will be discussed. Work with populations common in child work will be discussed, such as children in high-conflict divorce families, learning disabilities, ADHD, mood disorders and situations of physical/sexual abuse.

CPSY 5505 Diagnosis & Treatment of Adolescents (2 Credits)

This course focuses on counseling and psychotherapy with adolescents from a variety of approaches, including developmental, integrative, psychodynamic, person-centered, reality, rational emotive, cognitive behavioral and systemic. Topics will include the ethical and legal issues involved in psychological interventions, culturally responsive counseling, and orchestrating productive family sessions with challenging adolescents.

CPSY 5550 Couples Therapy (2 Credits)

Theory, techniques and research relating to couples therapy, including theoretical perspectives: behavioral couples therapy, emotionally-focused couples therapy and object relations couples therapy. The course also addresses specific problem areas, including domestic violence, infidelity, depression, anxiety, substance abuse and personality disorders. Prerequisite: CPSY 5030.

CPSY 5560 Family Therapy (2 Credits)

Theory, techniques and research relating to family therapy, including several theoretical perspectives: behavioral, experiential, psychodynamic, multigenerational approaches. Special topics covered include working with community resources, addressing developmental issues of children, working with medical and school systems, utilizing cultural factors in planning programs and interventions and adults in family therapy. Prerequisite: CPSY 5030.

CPSY 5562 Psychological Consultation (2 Credits)

This course provides an overview of the practice of psychological consultation. Theories and models of consultation in various settings including businesses, organizations, health care, and schools are covered. The process and stages of consultation from entry to termination are analyzed. This class differentiates consultation from other types of psychological interventions. Important legal, ethical and multicultural issues in consultation are addressed throughout the course. Students develop their own model for conducting consultation and refine that model through work with local organizations. Students increase their awareness of their strengths and weaknesses in the practice of consultation. Methods of instruction include lecture, discussion, experiential exercises, and interactions with local organizations and professional consultants.

CPSY 5590 Adult Psychopathology I (2 Credits)

Theoretical understanding and treatment of adults within a developmental, ego analytic framework. First quarter-differences between the neuroses, borderline, and psychoses. Prerequisite: CPSY 5020.

CPSY 5591 Psychodynamic Psychotherapy (2 Credits)

Theoretical understanding and treatment of adults within a developmental, ego analytic framework. Second quarter - the neuroses. Prerequisite: CPSY 5020.

CPSY 5592 Adult Psychopathology III (2 Credits)

This course is a continuation of Adult Psychopathology I and II with an emphasis on complex trauma and the psychotic disorders. Diagnostic understanding, differential diagnosis, and treatment implications are emphasized within a psychoanalytic orientation. Prerequisites: CPSY 5590 and CPSY 5591 or instructor approval.

CPSY 5620 Intersubjective Systems Theory (2 Credits)

This course focuses on psychotherapy from the perspectives of intersubjective systems theory in working with adults. We examine the co-creation of the therapeutic relationship, the making of meaning, empathic listening, attuning to the other's affective experience and putting the other's subjective experience into words. We develop treatment plans and case formulations that are consistent with this perspective.

CPSY 5680 Cognitive Assessment (4 Credits)

Theoretical, professional and clinical issues involving intelligence and its measurement; assessment of cognitive functioning and clinical interpretation of test results, focusing on the WAIS-III (and child equivalents). Prerequisite: CPSY 5130.

CPSY 5685 Introduction to Pediatric Neuropsychological Assessment (2 Credits)

Pediatric neuropsychology integrates many basic sciences including behavioral Neurology, developmental psychology, neuroanatomy, psychopathology, and psychological assessment. The role of pediatric neuropsychologist is to provide comprehensive assessment, consultation, and intervention in the context of a developing child. The course will review important concepts, theories, and empirical research in the field of pediatric neuropsychology. Students will learn the basic rationale in conducting a pediatric neuropsychological evaluation, including a brief review of many common pediatric assessment measures. In addition, many common pediatric disorders will be reviewed from a neuropsychological perspective including: Dyslexia, Attention Deficit hyperactivity Disorder, Pervasive Development Disorders, Traumatic Brain Injury, Seizure Disorders, and Mental Retardation. Upon completion of the course the student will have a greater appreciation of a neuropsychological conceptual framework and have a better understanding of specific pediatric disorders.

CPSY 5686 Suicide Prevention, Intervention and Postvention (2 Credits)

Suicide is a serious public health issue and challenge for the nation, Colorado, and our local communities. In 2009, suicide claimed the lives of almost 34,000 people in the United States and is the second leading cause of death for college students and men ages 25-34. In Colorado, there are many more suicides than motor vehicle deaths. While most clinicians are focused on the assessment and treatment of people at high risk for suicide, a more comprehensive approach is needed to prevent people from becoming suicidal in the first place. This course covers best practices in suicide prevention, intervention and "postvention" (suicide crisis response) and will explore the particular issues of several vulnerable populations.

CPSY 5687 Contemporary Issues in Geropsychology (2 Credits)

This course addresses issues in aging. Topics include healthy aging, aging issues in diverse populations, contemporary options for care, challenges in service delivery, the interplay of medical and mental health needs, mental health treatment approaches and issues, and end-of-life issues.

CPSY 5690 Introduction to the Rorschach (4 Credits)

Exner's Comprehensive System for administering, scoring and development hypotheses with the Rorschach Test. Prerequisite: CPSY 5130.

CPSY 5692 Advanced Rorschach Analysis (2 Credits)

This course is an exploration of advanced topics in Rorschach interpretation. Topics will include: conceptual understanding of the Comprehensive System; content and sequence analysis; differential diagnosis; integrating alternative systems of interpretation with the Comprehensive System; development and use of special scales; appropriate use of computerized interpretation; and integration of Rorschach analysis with personality theory. Prerequisites include course work in Rorschach administration, scoring and basic interpretation; and in personality theory. Students will be expected to score, analyze, and present Rorschach protocols.

CPSY 5700 Advanced Personality Assessment (3 Credits)

This class is for students who wish to learn the skills necessary to conduct comprehensive psychological assessments in a competent, ethical, antiracist and culturally informed manner. This course will focus on learning how to integrate multiple personality measures into a cohesive understanding of one's personality. Students will be taught how to write a traditional integrated personality report and several weeks will be spent on Collaborative/Therapeutic Assessment (C/TA). Students will be exposed to several personality tests including the Minnesota Multiphasic Personality Inventory – 3 (MMPI-3), Rorschach Performance Assessment System (R-PAS), Early Memories Procedure, Wartegg Drawing Completion Test (Crisi Wartegg System), Thematic Apperception Test (TAT), Trauma Symptom Inventory – 2 (TSI-2) and the Thurston Cradock Test of Shame (TCTS), among others. Prerequisites: CPSY 5130, CPSY 5680, CPSY 5690, & CPSY 5705.

CPSY 5705 Self Report Assessment (3 Credits)

Construction and application of objective instruments, emphasizing the MMPI and MCMI. Students are required to submit test reposts. Prerequisite: CPSY 5130.

CPSY 5706 Self Report Assessment Lab (1 Credit)

Optional. For students anticipating a need for extra help with repost writing.

CPSY 5710 Intro to the Crisi Wartegg System for the WDCT: Administration, Scoring, and Basic Interpretation (2 Credits)

This course introduces the Crisi Wartegg System (CWS), a new methodology for the clinical use of the Wartegg Drawing Completion Test (WDCT). The WDCT is a projective drawing technique that can be completed in 5-10 minutes and is appropriate for children, adolescents, and adults. It is easy to administer and not overwhelming for clients to complete. The WDCT is not well known in the United States; however, a recent meta-analysis (Gronnerod & Gronnerod, 2011) attests to its validity in assessing personality and psychopathology. The course will review the history and theory of the WDCT, teach its administration, introduce the major features of the scoring system, and discuss basic interpretation. Prerequisites: CPSY 5680 Cognitive Assessment, CPSY 5705 Self Report Assessment, and CPSY 5690 Introduction to Rorschach.

CPSY 5711 Introduction to the Crisi Wartegg System for the WDCT: Lab (1 Credit)

This lab accompanies the Crisi Wartegg System course (CWS). It supplements material presented in the class and provides an experiential component to training in the CWS. It will include applied practice of administration, scoring and calculations, as well as basic clinical case interpretation. Concurrent enrollment in the Crisi Wartegg System course is required. Prerequisites: CPSY 5680 Cognitive Assessment, CPSY 5705 Self Report Assessment, and CPSY 5690 Introduction to Rorschach.

CPSY 5740 Integrative Personality Assessment (2 Credits)

This course is the culmination of the assessment sequence, and integrates techniques, approaches and concepts covered in issues in Measurement, Cognitive Assessment, Objective Personality Assessment, and Rorschach. Aspects of the other core courses in the curriculum will also be brought to bear on the question of how to obtain and how to interpret information within various theoretical models for the purposes of answering referral questions and planning interventions. Projective testing will be introduced as a source of behavior samples for which the occasioning environment is known to the psychologist. There will be focus on distinguishing interpretable from irrelevant information, and on integrating interpretable information into meaningful patterns. The goal of using assessment to answer referral question and plan treatments will generate a special focus on report writing.

CPSY 5741 Therapeutic Assessment (3 Credits)

This course will explore Collaborative/Therapeutic Assessment, which is an approach to psychological assessment that can have extraordinary therapeutic effects with clients. We will focus on the Therapeutic Assessment model developed by Stephen Finn. We will read broadly in the area: from the genesis of collaborative assessment fueled by Fischer to the empirical foundations and structure of Therapeutic Assessment provided by Finn to novel applications of the approach highlighted by Handler, Tharinger, and others. This important paradigm shift in assessment is applicable to personality, cognitive, and neuropsychological assessment as well as any professional endeavor that aims to help clients understand themselves in life-changing ways. The course is designed for those with a solid foundation in assessment who wish to develop greater facility in helping their clients. Prerequisites: CPSY 5130, CPSY 5680, CPSY 5690, & CPSY 5705.

CPSY 5745 Human Sexuality (2 Credits)

The psychology of human sexuality is a survey of historical and contemporary psychological views on a wide variety of sexual behaviors; theory and research bearing on the relationship between life span, psychological development, psychological functioning, interpersonal processes, and sexual behaviors; political and social issues involved in current sexual norms and practices. Specific implications for clinical psychology will be discussed.

CPSY 5750 Supervision (2 Credits)

This course is designed to familiarize students with theories of supervision; provide practical, guided experience in peer supervision/consultation; help students understand and critically discuss the supervisory process; aid in gaining awareness of how multicultural issues may affect supervision; and familiarize students with ethical and legal issues in supervision.

CPSY 5755 Supervision Practicum I (1 Credit)

This is a four quarter sequence, 1 quarter credit hour/ quarter, in which advanced students will have the opportunity to supervise on beginning student under the overall supervision of a faculty member. Each quarter practicum will include appropriate level readings, group discussions and report writing. Admission to the course with instructor's approval.

CPSY 5756 Supervision Practicum II (1 Credit)

This is a four quarter sequence, 1 quarter credit hour/ quarter, in which advanced students will have the opportunity to supervise one beginning student under the overall supervision of a faculty member. Each quarter practicum will include appropriate level readings, group discussions and report writing. Admission to the course with instructor's approval.

CPSY 5757 Supervision Practicum III (1 Credit)

This is a four quarter sequence, 1 quarter credit hour/ quarter, in which advanced students will have the opportunity to supervise one beginning student under the overall supervision on a faculty member. Each quarter practicum will include appropriate level readings, group discussions and report writing. Admission to the course with instructor's approval.

CPSY 5758 Supervision Practicum IV (1 Credit)

This is a four quarter sequence, 1 quarter credit hour/ quarter, in which advanced students will have the opportunity to supervise one beginning student under the overall supervision of a faculty member. Each quarter practicum will include appropriate level readings, group discussions and report writing. Admission to the course with instructor's approval.

CPSY 5760 Professional Issues II (2 Credits)

This class provides an organized and comprehensive approach to pre-doctoral psychology internship selection, emphasizing an understanding of "fit." Topics covered include choosing sites; writing cover letters, CVs, and AAPI essays; preparing application materials; interviewing techniques; rank ordering sites; and dealing with emotions related to the process. The course syllabus includes important readings from the current literature. Lectures are balanced with guest appearances by DU Writing Center staff and others. Opportunities are given for role play among the students.

CPSY 5765 Cognitive Behavioral Therapy (2 Credits)

This course focuses on clinical applications of cognitive-behavioral theory. Major theorists in the area are reviewed, including Ellis, Beck, Lazarus, and Meichenbaum. Research utilizing cognitive-behavioral therapy as an evidence-based practice are reviewed. In addition, key cognitive behavioral techniques are demonstrated and practiced.

CPSY 5775 Clinical Psychology Internsh (8 Credits)**CPSY 5825 Introduction to Latinx Psychology and the Latinx Experience (2 Credits)**

This course will highlight the current psycho-social research and literature relevant to the mental health of Latinx populations including influences of culture, acculturation, immigration, and language on utilization of psychological services. The course will explore the variables that can affect how different Latinx groups respond in a unique way to the various services offered in the community. This course will familiarize the student with the personal, social, cultural and institutional forces that affect the psychology of Latinx groups, to include history, religion, gender roles, emotional processing, violence, bilingualism, and stigmatization and oppression.

CPSY 5826 Latinx & Underserved Populations Advanced Practicum I-Aiming to Reduce Mental Health Disparities (3 Credits)

According to the American Psychological Association, only 5.5 percent of psychologists who identify as Latinx or another race/ethnicity report that they are able to use Spanish to provide clinical services (Smith, 2018). Given the increasingly large percentage of Latinx in the U.S. and of individuals who speak another language other than English, the probability that present and future psychologists and mental health providers will provide services to Latinx and other underserved populations, is extremely high. Future and present providers will need training on how to provide culturally and linguistically appropriate services whether they are bilingual or monolingual English speakers. Moreover, there are mental health and health disparities that are shared among many underserved populations that can be partly addressed through developing a work force armed with knowledge and expertise in reducing cultural, linguistic and regional barriers to mental health. This course is designed to provide training to graduate students on how to provide culturally and linguistically appropriate services to Latinx and other underserved populations including communities of color, speakers of other languages than English, Immigrant and Refugee populations and rural communities. While there is growing attention and interest in health and behavioral health to address underserved populations, students in the health profession also voice an interest in receiving mentorship and networking to find jobs in these areas (Edwards-Johnson, Phillips, & Wendling, 2020). This class will also aim to provide information about the job market in U.S. and Denver that provide services to Latinx and underserved populations and will host presenters from the community who currently work in Denver in these settings.

CPSY 5827 Psychological Assessment with Latinx Populations (3 Credits)

As the third course in GSPP's Latinx Psychology sequence, the Psychological Assessment with Latinx Populations addresses the cultural considerations needed for interviewing and conducting psychological evaluations of Latinx groups. Clinical interviewing techniques and measures across all psychological assessment domains, including diagnosis, personality, and cognition, as well as more specialty-focused areas such as neuropsychological assessment, forensic assessment, and school-based assessment will be covered. The class will explore the strengths and limitations of each assessment measure with a particular focus on language, research and norming issues, and administration.

CPSY 5828 Latinx & Underserved Populations II-Advanced Practicum-Spanish Intensive (2 Credits)

According to the American Psychological Association, only 5.5 percent of psychologists who identify as Latinx or another race/ethnicity report that they are able to use Spanish to provide clinical services (Smith, 2018). Given the increasingly large percentage of Latinx in the U.S. and of individuals who speak another language other than English, the probability that present and future psychologists and mental health providers will provide services to Latinx and other underserved populations, is extremely high. Future and present providers will need training on how to provide culturally and linguistically appropriate service. This is especially true for bilingual providers and trainees who because of their bilingual skills at times are placed in mental health settings to provide bilingual services, without the proper training and/or supervision or administrative support, which can lead to poor quality service delivery and/or burn out for the provider/trainee. This in turn compounds the already existing problem of limited access to mental health services for Latinx and underserved populations. In addition, there are mental health and health disparities that are shared among many underserved populations that can be partly addressed through developing a work force armed with knowledge and expertise in reducing cultural, linguistic and regional barriers to mental health. This course, largely in Spanish, is designed to sharpen student's clinical skills by examining current cases and analyzing appropriate intervention and assessment techniques as a class. Students will formally present cases from their current caseload, in traditional case presentation format. We will base our following discussions in Latinx psychological theory and orientations. Case discussions will be led by students and will be positive, constructive, and ethical. It will be important for students to remain open to feedback, new approaches, constructive criticism, and exploring their strengths and weaknesses as early clinicians among their peers and professor. This training is also meant to bring awareness to the students on mental health and health disparities that exists among underserved populations including racial, economic, regional (i.e. rural), cultural and language barriers. This course is designed to assist the student in the management of their Latinx caseload and seek advisement from the class on professional issues encountered as a psychologist and mental health providers in service of the Latinx population and underserved populations, in order to maintain both an ethical and realistic professional perspective. The class will be made up of class reading discussions, student presentations, community provider presentations, class activities, and class discussions. Grades will consist of professional-level class participation, two case presentations, and class activities/exercises. Lastly, while there is growing attention and interest in health and behavioral health to address underserved populations, students in the health profession also voice an interest in receiving mentorship and networking to find jobs in these areas (Edwards-Johnson, Phillips, & Wendling, 2020) This class will also aim to provide information about the job market in U.S. and Denver that provide services to Latinx and underserved populations and will host presenters from the community who currently work in Denver in these settings.

CPSY 5829 Spanish Clinical Language Lab: Reinforcing the Therapeutic Alliance with Latinx Clients (1 Credit)

This course will be offered as a lab for students in the Latinx Practicum CPSY 5828 class. It is developed to enhance students' linguistic and cultural clinical competence in Spanish. The lab will focus on learning and using mental health terminology, cultural and linguistic metaphors, practicing clinical interviewing skills in Spanish and how to work with interpreters/translators. The lab will be delivered in Spanish and will be divided into 2 sections of Spanish Proficiency Levels. The lab aims to provide students with hands on clinical skills in Spanish to reinforce the therapeutic alliance with Latinx clients. Students will be required to take a Spanish Language Proficiency Exam.

CPSY 5831 Theory and Foundations of IECMH: Infant and Early Childhood Mental Health (2 Credits)

This course will provide an in-depth historical, theoretical, and empirical foundation for students interested in engaging in ongoing research and practice in Infant Early Childhood Mental Health (IECMH). Formative readings from the IECMH literature, including groundbreaking articles and textbooks will be reviewed and discussed. We will examine methods of applied IECMH work, including promotion of well-being and the spectrum of prevention, early intervention, assessment, and treatment with young children and their caregivers. The multidisciplinary nature of IECMH will be explored, along with a focus on how psychologists and infant mental health specialists fit into these teams in various contexts. We will also examine different "ports of entry" or means into treating caregivers, young children, and their relationships from an IECMH framework. Empirical studies establishing the efficacy, effectiveness, and cultural sensitivity (or lack thereof) of various assessments, therapeutic approaches, and practices in the IECMH field will be examined. We will spend the most time examining critical theories of social development including attachment and temperament and will consider their applicability to IECMH work, cultural responsive across several cultures, strengths, and limitations. Throughout the course, will explore the IECMH Diversity tenets created by leaders in the field and will apply the tenets in discussions and coursework.

CPSY 5832 Caregiver-Child Assessment in IECMH: The Process of Assessment, Diagnosis, Report Writing, & Feedback (2 Credits)

Intensive training will be offered in the process of assessing a caregiver and child relationship in a manner designed to inform dyadic treatment planning. All students will be trained in conducting a multi-modal, relationship-based assessment with a caregiver and child under the age of six. Assessment tools used will include the Infant Toddler Mental Status Exam (ITMSE), the Crowell Procedure and the Working Model of the Child Interview (WMCi). Students will also be introduced to the Interpersonal Inventory and paper and pencil means of assessing the individuals and their relationship. Students will be introduced to diagnosis in IECMH using the Diagnostic & Statistical Manual of Mental Disorders – fifth edition (DSM-V) and the Diagnostic Classification of Mental Health & Developmental Disorders of Infancy and Early Childhood (DC:0-5) classification systems, as well as crossover considerations between the two systems. Students will conduct a thorough and multi-modal assessment of a caregiver-child relationship and will integrate the information learned into a professional report. Students will practice treatment planning as well as providing feedback to the dyad.

CPSY 5833 Advanced Topics in IECMH: Infant and Early Childhood Mental Health (2 Credits)

This advanced topics course will continue fostering the student's understanding of Infant and Early Childhood Mental Health (IECMH) practice. Throughout the course, in-class discussion centers on developing clinical relationships with families and on how these relationships can support growth and change in both child and caregiver. Of particular importance is the student's continued exploration of use of self, and integrating IECMH practice principles into their field placement and CUB Clinic work. Topics include infant regulatory concerns, attachment difficulties, caregiver mental illness and impact on the child and relationship, parenting self-efficacy, child maltreatment and trauma, and application of IECMH treatment practices in the community. Prerequisite: CPSY 5831 or equivalent with instructor's permission.

CPSY 5834 Perinatal-5 Mental Health: Training Intensive in Evidenced-Based Approaches (2 Credits)

This intensive therapeutic course will continue fostering the student's understanding of Perinatal-Five mental health practice via working knowledge of a psychotherapeutic model used during this time period. In alternating years we will focus on Interpersonal Psychotherapy (IPT) or Parent Child Interaction Therapy (PCIT), two evidenced based approaches, with a focus on use with clients in perinatal through five populations. Students will gain knowledge of IPT or PCIT approaches to assessment and practice via readings, discussions, video, role plays, and case presentations. Of particular emphasis is the student's continued exploration of use of self and integrating P-5 mental health practice principles when learning about and practicing IPT or PCIT.

CPSY 5840 Psychopharmacology (2 Credits)

This course focuses on the various medications prescribed by psychiatrists to alter consciousness, modify behavior, and/or alleviate symptoms in the treatment of mental disorders including depression, bipolar disorder, anxiety, eating disorders, and psychoses. Topics such as sleep, pain and addiction will be covered, as well as drug interactions, psychotropic drugs in pregnancy, the treatment of children, geriatrics, and the psychologist-psychiatrist relationship.

CPSY 5846 Military Psychology and the Culture of Warfighting (2 Credits)

This course is intended to provide an introduction to military and veteran culture as well as military psychology and behavioral health. This course is designed as the first of a series of four courses in military psychology to prepare competent professionals who will utilize knowledge of current affairs, theory, knowledge of the scientific literature, and historical context when working with military members, veterans, and the families of servicemembers. The principal focus will be on training students to utilize culturally competent attitudes and knowledge as clinicians when providing services to servicemembers of the military branches, veterans of the military, and the families of servicemembers. American historical context, military history, and military structure will be covered in this course. Additionally, multiple types of behavioral health services within the United States government will be covered including the Department of Defense, the Public Health Service, and the Department of Veterans Affairs. A survey of world affairs as they currently stand, the U.S. national defense strategy, and current military posture will be covered. Salient health care issues within the military and veteran population will be covered. Legal and ethical issues that are pertinent and complex within military psychology and combat will be examined.

CPSY 5847 Psychology and Physiology of Isolated, Confined, and Extreme Environments (2 Credits)

This course is intended to survey and examine human psychological and physiological performance in extreme, austere, and challenging environments and the secondary effects of these environments after deployment. This course is designed as the second in a series of four courses in military psychology to prepare competent professionals who will utilize knowledge of current affairs, theory, knowledge of the scientific literature, and historical context when working with government, military members, veterans, and the families of servicemembers in an operational, consultative or clinical capacity. This course will examine issues, literature, and critical arguments surrounding team makeup and cohesion in austere environments as well as physiological and cognitive/behavioral effects of operating within these environments. Operational behavioral health will be covered in addition to the physical and psychological after-effects of these deployments. Psychological casualties, forensic issues, and post-deployment transition will also be covered. Prerequisite: CPSY 5846.

CPSY 5848 Evidence-based Practice for Military-related Health Disparities (2 Credits)

This course is intended to survey and examine current evidence-based assessment tools utilized to diagnose certain psychiatric and neurological conditions within military servicemembers and Military Veterans. The course will also focus on the understanding and utility of the best available evidence for the treatment of these psychiatric conditions. Prevalence rates, comorbid conditions, differential diagnosis, and complicating treatment factors within these particular psychiatric conditions will be the primary focus of the course. This course is designed as the third in a series of four courses in military psychology to prepare competent professionals who will utilize knowledge of current affairs, theory, knowledge of the scientific literature, and historical context when working with government, military members, veterans, and the families of servicemembers in an operational, consultative or clinical capacity.

CPSY 5849 Behavioral Medicine and Interprofessional Healthcare in Military/Veterans (2 Credits)

This course is intended to build upon academic and clinical knowledge gained throughout the entirety of the Graduate School of Professional Psychology curriculum and integrate this knowledge with the understanding of clinical and operational psychology within Military and Veteran settings gained through courses in the Sturm Specialty in Military Psychology. This course is focused on the acquisition of knowledge of the unique aspects of Military behavioral medicine and its role within the medical center environment. A second focus of the course is on interprofessional work within healthcare settings and how behavioral science professionals play a role on interprofessional teams within family medicine, primary care, and medical/surgical units within the medical center environment. Additionally, special considerations for behavioral medicine and interprofessional work with Military and Veteran populations will be covered. This course is designed as the fourth in a series of four courses in military psychology to prepare competent professionals who will utilize knowledge of current affairs, theory, knowledge of the scientific literature, and historical context when working with government, military members, veterans, and the families of servicemembers in an operational, consultative or clinical capacity. Enforced Prerequisites: CPSY 5846.

CPSY 5852 Foundations in Substance Use Disorder (2 Credits)

The course examines the major theories addressing substance use disorder and addiction. Students will explore these disorders as understood from a variety of theoretical frameworks (including psychoanalytic, behavioral, humanistic and social learning theory), as well as findings from neuroscience. The course emphasizes a developmental perspective in the understanding of these issues. Further, the course will emphasize current treatment models based on empirically based information and research. Students will gain skills in using their generalist training to conceptualize, diagnose, and treat these difficult disorders.

CPSY 5853 Neurobiology of Attachment, Trauma and Addiction (2 Credits)

The course will examine research and practice findings from the fields of neuropsychology and biology with regard to substance use disorders. Major findings and theories related to brain and nervous system functioning as they relate to substance use will be discussed, and used to further inform treatment considerations and clinical conceptualization. Additionally, students will engage in a more in-depth review of treatment modalities available. Students will build on their knowledge of empirically supported treatments in the first course. Students must successfully pass CPSY 5852 Foundations in Substance Use Disorder prior to enrolling in this course.

CPSY 5854 Behavioral Addictions: Assessment and Treatment (2 Credits)

The course will examine research and practice findings regarding behavioral addictions such as sex, pornography, gambling, food, and others. Discussion of brain and nervous system functioning as they relate to behavioral addiction will be discussed, and used to further inform treatment considerations and clinical conceptualization. Prerequisites: students must successfully pass CPSY 5852 Foundations in Substance Use Disorder prior to enrolling in this course, and completion of CPSY 5853 Neurobiology of Addiction and Advanced Treatment is strongly recommended.

CPSY 5855 Advanced Treatment of Substance Use and Addictive Disorders (2 Credits)

This course will provide students a more nuanced and advanced look at the current treatments for substance use and other addictive disorders. Topics will include medically assisted treatment models, therapeutic communities, and the use of FDA-approved psychoactive substances to treat addictions and underlying disorders.

CPSY 5865 Introduction to Psychosocial Oncology (3 Credits)

In this course, students will be introduced to the field of Psychosocial Oncology. This course will include an overview of the physiological processes involved in cancer prevention, etiology, and treatment. Students will develop a better knowledge of the different types of cancer, staging, and treatment options. A brief history of the field of psychosocial oncology will also be presented. The psychological sequelae of cancer diagnosis, treatment, metastases and recurrence, and survivorship will be included in this course. Special topics will also include working with caregivers and family members of cancer patients, sexuality and cancer, and working with patients and families at the end of life. Common psychotherapeutic interventions and assessments for oncology settings will be explored. In addition, the variety of roles of a psychologist in oncology settings will be discussed. Themes that will be included throughout the course are ethical and reflective practice, working with cancer patients from a multicultural perspective, and reducing compassion fatigue.

CPSY 5866 Interprofessional Systems in Healthcare (2 Credits)

This course will provide an overview of working in an interprofessional system as a psychologist. An introduction to systems theory and its application to a healthcare system will be discussed. Collaborating with other professionals, leading a team, and understanding the roles of a psychologist on an interprofessional team will also be covered. This course is best taken as the final course in the oncology psychology specialty, though it is open to other students with special consideration.

CPSY 5880 Business Issues in Professional Psychology (2 Credits)

This course introduces students to business principles as they apply to professional psychology. Students think through various business practice decisions, such as starting, managing, marketing, and diversifying a psychology practice and consider the related legal, ethical, and financial issues.

CPSY 5989 Doctoral Paper Development (1 Credit)

This course is designed to facilitate the development and writing of the doctoral paper. Students are expected to adhere to the GSPP Doctoral Paper Guidelines and the APA style guidelines. A major feature of the class is student-to-student sharing and critiquing of doctoral project ideas and plans. Students are expected to take advantage of this opportunity to hone their writing skills and develop their doctoral paper proposal. Students have complete the proposal phase of their project further develop their research methodology.

CPSY 5991 Independent Study (1-17 Credits)**CPSY 5993 Advanced Field Placement Experience (1-8 Credits)**

All PsyD students are required to work as a Psychology Trainee in an outside agency each year prior to the internship year. The minimum total is 384 hours per year. Students are expected to arrange with a field placement to receive psychological clinical training, which could include the following types of experiences: psychotherapy, assessments, group therapy, individual therapy, family therapy, supervision, primary care psychology, intake evaluations, case management, consultation, testing, etc.

CPSY 5994 PsyD Internship (4,8 Credits)

The Graduate School of Professional Psychology (GSPP) requires that all students attend a yearlong or two half-time years of clinical internship. Internship is the clinical experience after the student has completed all courses, the clinical competency examination, and at least three years of residency at GSPP. Students typically apply through APPIC and are offered formal internships. Occasionally students create internships, but they must be approved formally through GSPP prior to the start of the internship. The basic experiences may include training in: psychotherapy, assessments, group therapy, individual therapy, family therapy, supervision, primary care psychology, intake evaluations, case management, consultation, testing, etc. To register, student must have departmental approval. Students can register half-time for 4 credit hours or full-time for 8 credit hours.

CPSY 5995 Independent Research (1-17 Credits)

Communication (COMN)

COMN 3130 Organizational Communication (4 Credits)

This is an applied course, service learning course, based on a consulting model. While the course will extend and enrich the topical and theoretical knowledge developed in COMN 1550 and COMN 2130, the primary purpose of this course will be to help students explore how they can put such knowledge into practice by collectively working with a local non-profit organization to first diagnose and then propose (and, in some cases implement) solutions to an organizational communication problem faced by that organization.

COMN 3230 Principles of Leadership (4 Credits)

Roles, functions, behaviors that influence and direct; emphasis on interpersonal effectiveness; theories and methods.

COMN 3270 Health Communication (4 Credits)

This course examines the role of health communication in our everyday lives. We will focus on communication strategies that inform and influence individuals, families and communities in decisions that enhance health. We will also explore the dynamics and impact of health communication between individuals and the health care system such as doctor-patient communication, dissemination of health related information, and the role of mediated communication in examining health communication.

COMN 3280 Family Communication (4 Credits)

The purpose of this course is to enhance understanding about communication patterns within families. In this course, we will examine theory/research on the role of communication in creating and maintaining healthy marriages and families. Specifically, we will study communication and the family life cycle, different family forms, family race/ethnicity, power in families, conflict in families, communication and stress in families, and communication in the aging family. The course format includes lectures, discussions, analysis of case studies, and in class applications.

COMN 3285 Advanced Relational Communication (4 Credits)

Advanced Relational Communication is intended to increase understanding of relationships from diverse perspectives. The three main perspectives we will investigate show how relationships affect and are affected by their context, the individuals involved, and the relational system. The goals of this course are for students to increase their skill in (1) explaining how knowledge about context, individuals, and relational systems increases understanding of communication processes in a variety of relationships; (2) evaluating critically the information about relationships that we encounter in our everyday lives; (3) asking and investigating questions about real-life relationships.

COMN 3290 Communication and Aging (4 Credits)

In this course, we will focus on the communication processes associated with aging. We will explore the implications of aging and how aging affects the process and outcomes social and relational interactions. We will examine communication and aging through interactional processes (intrapersonal, interpersonal and relational) and through context (organization, family, health, and culture). Emphasis will be placed on the theoretical and applied research in communication and aging.

COMN 3300 Principles of Persuasion (4 Credits)

This course involves a social scientific approach to persuasion and social influence. Some of the topics included in this approach are the relationship between attitude and behavior; characteristics of the source, message, and receiver of a persuasive appeal; and models and theories that explain the effects of persuasive communication. By the end of the course, students should be able to think more critically about the persuasive messages they encounter in everyday life, to apply theoretical models of persuasion, and to construct persuasive messages.

COMN 3315 Public Deliberation (4 Credits)

During the last two decades public deliberation has emerged as the centerpiece of theoretical and practical accounts of liberal democracy. This course begins by setting out the nature and functions of public deliberation. We will then track how deliberative democrats respect the traditional accounts of inclusion, equality and reason in an attempt to meet the demands of the deep cultural diversity that marks social life in advanced industrial societies. Specifically we will ask if public deliberation as portrayed in these accounts is sufficient to meet these demands or do we need to expand our understanding of political argument to include a diversity of rhetorical practices? And, once we do expand our account of deliberation how does this transform the traditional problematics of both democratic and rhetorical theory?.

COMN 3425 Rhetoric and Governance (4 Credits)

An introduction to the works of Michel Foucault and his influence on contemporary rhetorical theory. Permission of instructor is required.

COMN 3435 Rhetoric and Public Life (4 Credits)

An introduction to the conceptual and political history of the public sphere. The course pays particular attention to how the normative assumptions of public communication are affected by the demands of cultural pluralism. Permission from instructor is required.

COMN 3470 Seminar in Free Speech (4 Credits)

This course will survey some of the major conceptual innovations in the justifications of freedom of speech. We will begin with an exploration of the traditional defenses of free speech and then move to a reexamination of those defenses in light of modern communication theory and the challenges of pluralism. In particular we will ask if the justifications of free speech need to be rethought given our understanding of speech as a social force that constitutes identities and values rather than merely expressing private opinions. Moreover, given our understanding of the social force of speech, should we regulate speech that is racist, sexist and seems to erode the foundations of a public culture based on mutual respect and public deliberation over social goods? Can we devise a robust defense of free speech based on its social force that both protects those that may be harmed by antidemocratic discourses and still provides the resources for democratic dissent?.

COMN 3680 Gender and Communication (4 Credits)

This course focuses on the interactive relationships between gender and communication in contemporary U.S. society. This implies three priorities for the class. First, the course explores the multiple ways communication creates and perpetuates gender roles in families, media, and society in general. Second, the course considers how we enact socially created gender differences in public and private settings and how this affects success, satisfaction, and self-esteem. Third, the course connects theory and research to our personal lives. Throughout the quarter, the course considers not only what IS in terms of gender roles, but also what might be and how we, as change agents, may act to improve our individual and collective lives. Cross listed with GWST 3680, HCOM 3680.

COMN 3700 Topics in Communication (1-4 Credits)**COMN 3701 Topics in Communication (1-4 Credits)****COMN 3702 Topics in Communication (1-4 Credits)****COMN 3703 Topics in Communication (1-4 Credits)****COMN 3704 Topics in Communication (1-4 Credits)****COMN 3705 Topics in Communication (1-4 Credits)****COMN 3770 Mediated Communication and Relationships (4 Credits)**

This course examines how people develop, define, maintain, and manage interpersonal relationships through their use of mediated communication. We will examine communication in relationships that occur through the internet, text-messaging, cell phones, chat rooms, gaming, and virtual communities. This is a seminar type course where students guide and are guided through their own study of mediated relationships.

COMN 3800 Philosophies of Dialogue (4 Credits)

This course explores the philosophies of dialogue of Martin Buber, Mikhail Bakhtin and others in the context of contemporary communication scholarship on ethics, culture, and relationship. Prerequisite: permission of instructor.

COMN 3850 Communication Ethics (4 Credits)

This class is not just about how to be ethical communicators but it is also about how to discover ethics—the good life and care for others, answerability and responsibility—deep within the structures of human communication itself. The course is committed to a mixture of theory and practice but practice is at the heart of the matter. Half of our sessions will be devoted to dialogue or conversation about ethics in life. There we will try to work as close as we can with ethics in our own lived experience. In the other half, we will explore theory: the ethical/philosophical/communicative ground of ethics.

COMN 3991 Independent Study (1-5 Credits)**COMN 3995 Independent Research (1-10 Credits)**

Topics and quarter hours vary. Prerequisite: instructor's permission.

COMN 4020 Communication Studies: Relational (4 Credits)

Recent social science literature in interpersonal communication; emphasis on pragmatics, meta-level perspectives, relational concerns affecting intimacies, friendships, families.

COMN 4120 Comparative Theories in Human Communication (4 Credits)

Selected efforts to construct theories of human communication; lectures, discussions, student presentations of analysis of readings.

COMN 4232 Critical Sexuality Studies (4 Credits)

This course takes a critical approach to the study of sexualities by challenging our assumptions and everyday knowledges about identities, gender, sexuality, race, and ethnicity. This course is organized around important and recent publications in the fields of Communication Studies and Sexuality Studies. Rather than simply reiterating the canonical voices such as Foucault and Butler, the course focuses on the voices of queer people of color.

COMN 4310 Communication and Collaboration (4 Credits)

A survey of contemporary theories and applications.

COMN 4520 Rhetoric and Social Movement (4 Credits)

This course is designed to survey the range of humanistic/critical scholarship on social movement in Communication Studies. Whether it has approached “social movements” from a rhetorical perspective, or analyzed the rhetoric within and surrounding social change, social movement rhetoric scholarship is characterized by major theoretical debates. These debates will help focus the seminar’s inquiry, and are summarized by the following questions: Are the received tools of rhetorical theory capable of making sense of the (often) non-normative, un-institutionalized expressions of dissent associated with social change? How are scholars to evaluate the ethics and impacts of social movement rhetoric, given its “inherent” nature as challenging to the status quo? What is a social movement, and what is rhetoric’s proper relationship to it? Is the figure of the “social movement” the most insightful means of understanding social change? What is at stake in retaining or abandoning the “social movement” in rhetorical criticism that seeks to understand and evaluate social change?.

COMN 4700 Topics in Communication (1-4 Credits)

COMN 4701 Topics in Communication (1-4 Credits)

COMN 4702 Topics in Communication (1-4 Credits)

COMN 4703 Topics in Communication (1-4 Credits)

COMN 4704 Topics in Communication (1-4 Credits)

COMN 4705 Topics in Communication (1-4 Credits)

COMN 4800 Philosophies of Dialogue (4 Credits)

This course explores the philosophies of dialogue of Martin Buber, Mikhail Bakhtin and others in the context of contemporary communication scholarship on ethics, culture, and relationship.

COMN 4900 Quantitative Methods I (4 Credits)

Lectures, readings, written assignments that facilitate growth and development of the research scholar.

COMN 4913 Rhetorical Criticism (4 Credits)

Like other research methods in communication studies, rhetorical criticism is a means: It is a pathway through which you may reach a desired end, as well as a set of tools with which you may shape your final work. However, following Nothstine, Blair, and Copeland (1994), "criticism is a process"—a pathway which "rarely travels a straight line to its end" (p. 343), and a toolkit which arrives with ambiguous instructions (at best) for how to make use of its contents to assemble a research project. In the humanistic tradition, rhetorical criticism is an art motivated by the critic's vision and guided by her or his deftness, ingenuity, and perseverance. Moreover, rhetorical criticism is a practical endeavor inspired by important public events of the day and the critic's desire to persuade. The significance of rhetorical criticism is born in public dialogue or debate. In the wake of the "critical turn," rhetorical criticism not only inspires academic colloquia. Through it, critics pursue democracy and social justice. In conversation with performance studies and ethnography, rhetorical critics have started to embrace self-reflexivity, and writing as a method of inquiry (not simply the "reporting on" inquiry once it is "done"). Given its rich scholarly history, and its fluidity as a research method, one could imagine several different ways to approach a seminar in rhetorical criticism. Such a course might use hermeneutics (or the art of interpretation) as its guide, encouraging participants to engage a text and arrive at its deeper meanings. It might take a skills-based approach, cultivating the necessary techniques of the critic, including the abilities to: locate interesting and important rhetorical acts; closely analyze a rhetorical act's symbolic action and richly describe it to readers; contextualize a rhetorical act to invite a deeper understanding of its significance; and place a rhetorical act in conversation with relevant theory to generate productive insights into the human condition. A seminar in rhetorical criticism might also take a historical approach, attending to the ways rhetorical theory has shaped criticism as a method—such an approach would introduce the range of theoretical "tools" available to critics as they approach different rhetorical acts. At the risk (and with the benefits) of complexity, we will draw upon each of these possibilities, enacting an "inventional" approach to rhetorical criticism.

COMN 4930 Speech and Communication Research - Qualitative Methods (4 Credits)

Grounded theory, phenomenology and other non-numerical approaches to research in human interaction.

COMN 4990 Graduate Tutorial in Communication Studies (2 Credits)

In this course, students will closely engage in scholarly work with a faculty member, with the intention to foster collaboration on mutually beneficial topics. This close collaboration can take many forms, and much like an independent study, it will be designed by faculty and students together. Such collaboration may include: deeper reading of the literature in a particular communicative context; advancing a research project toward presentation and publication (through data collection, data analysis, or/and manuscript revision); pedagogical development (through the development of syllabi, assignments, teaching materials, and educational philosophy). Students will deepen their knowledge base on a topic of significance in the field, advancing scholarly, pedagogical, and/or creative work.

COMN 4991 Independent Study (1-10 Credits)

COMN 4995 Independent Research (1-10 Credits)

COMN 5991 Independent Study (1-10 Credits)

COMN 5995 Independent Research (1-22 Credits)

Communication Management (COMM)

COMM 4001 Portfolio Foundations (0 Credits)

Master's and certificate-seeking students in Communication Management must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

COMM 4002 Dynamic Presentation and Training Methods (4 Credits)

The increasing presence of technology in the workplace has changed the way we present information and conduct trainings, both in person and virtually. In this course, students hone their presentation and training skills by assessing their audience, purpose, and desired learning outcomes. Students practice using appropriate and memorable visual aids in order to maximize the audience and/or participant engagement. Students employ communication strategies and training techniques to improve participants' receptivity and retention of information and ideas. Whether presenting or training in person or virtually, students will gain the skills and confidence needed for effective communication across varied delivery methods.

COMM 4006 Building High-Performing Teams (4 Credits)

High-performing teams are invaluable to every organization. Ensuring productive and satisfying group and team interactional outcomes in organizational, professional, and personal settings can be difficult. Students focus on theory, application, and the practice of working together to learn the fundamentals of building high-performing teams. Students learn about the development of group dynamics, assessment, and leadership while also gaining knowledge about their strengths and weaknesses in teams, developing new skills, and learning how to enhance productivity while reducing barriers to effective communication.

COMM 4010 Business Insights for Communicators (4 Credits)

Communications leaders must speak the language of business to effectively craft strategies, execute deliverables, and measure outcomes that create tangible value and advance their organizations' objectives. Whether in an industry, public sector, or non-profit role, these leaders gain an edge through supplementing strong technical literacy with the ability to assess operational priorities and execute deliverables accordingly. In this class, students will sharpen their understanding of balance sheets and budgets; demystify key aspects of Information Technology infrastructure (intranets, cloud and on-premises computing, databases, security, etc.); delve into various organizational and divisional/departmental models, functions, and political positions; address the benefits and challenges of globalization and cross-cultural communication; and touch on an assortment of other relevant topics, including managing upward and workflow prioritization. Along the way, students will hone their strategic planning competencies and perspectives by putting all elements learned in this course together. Materials and assessments are geared toward application in relevant contexts.

COMM 4016 Persuasion and Influence (4 Credits)**COMM 4020 Understanding Professional Communication (4 Credits)**

In this course, students develop and refine interpersonal, intercultural, and organizational communication competencies while applying foundational communication models and concepts to a variety of contexts. The mastery of these communication skills leads to more productive written, virtual, and face-to-face interactions, resulting in personal, professional, and organizational success.

COMM 4030 Managing Learning in Organizations (4 Credits)

To support a culture of continuous improvement, Learning and Development (L & D) professionals must quickly and effectively train and develop employees, evaluate results, show a return on investment, and develop new solutions to meet ever-changing business needs. This course prepares students to lead and manage L & D departments, teams, and processes by guiding them to think strategically, generate creative solutions that address root causes, build trusted partnerships with business partners, and manage knowledge assets.

COMM 4032 Managing Organizational Change (4 Credits)

This course prepares students to create and implement effective communication strategies for change management. The course begins with a discussion of seminal organizational change models, how these models support change management communications, and how change affects employees and individuals. Concepts and practices for facilitating change communications are explored, as well as methods of supporting change leaders. Students develop competencies in change communication through discussion, lecture, video, and change assessment inventories.

COMM 4035 Cultural Intelligence through Communication (4 Credits)

There is a growing need to communicate effectively across cultural differences. Writer James Neuliep defines culture as an accumulated pattern of values, beliefs, and behaviors shared by an identifiable group of people with a common history and verbal and nonverbal code system. Culture pervades every aspect of the communicative process. This course uses a contextual approach to examine the ways culture, communication, context, and power intersect in intercultural communication interactions. Students will identify and analyze obstacles and barriers to effective intercultural communication. Finally, students will examine strategies and skills needed to become a competent and effective intercultural communicator.

COMM 4045 Applied Critical Thinking in Communication (4 Credits)**COMM 4050 Communication and Society: Theories and Applications (4 Credits)**

In this course, students develop a command of foundational media frameworks, especially theories of media production and media consumption. By the end of this course, students should be able to implement theoretical concepts in their professional environments. Students will learn to deploy theoretical concepts that help them understand the various roles that media play in culture and society. To this end, students will develop written and visual projects that evaluate the following: media industries that produce media messages, meanings embedded in those messages, and media audiences who interpret media messages.

COMM 4140 Marketing Strategy and Process (4 Credits)

Creating and sustaining competitive advantage is driven by strategies that integrate people, process, and systems. In this application-oriented course, students will examine the fundamentals of marketing, develop the insights and skills to formulate and implement sound marketing decisions, and apply ethical marketing strategies which contribute to the overall business (for-profit and non-for-profit) performance. Students will apply strategic concepts through discussion and teamwork. Throughout the quarter, students will examine how information and research is used to inform marketing management decisions to all level of the organization, including external stakeholders. Because marketing communication plays such a critical role in marketing success, integrating different types of communication channels will be an emphasis.

COMM 4144 Strategic Public Relations (4 Credits)

In a complex global environment, business, government, nonprofit, and other organizations require professional public relations practitioners who can effectively develop two-way relationships with constituents/audiences to enable strategic and effective communication processes. This course prepares students for this complex environment through the study and practice of essential components of public relations, which include the use of strategy, the value of relationship development, an overview of the range of PR tactics, the evolving role of digital communications and social media to PR, and the importance of ethics and transparency in PR practice.

COMM 4145 Public Relations Writing and Content Creation (4 Credits)

Effective and persuasive writing and creative content development are integral parts of today's public relations programs. This course deepens students' knowledge of the range of content available for public relations professionals to build relationships with media while ensuring they become effective, creative, clear, and concise architects and translators of the written word. In this course, students will develop a deep understanding of messaging for target audiences and the wide variety of concepts at their disposal to create effective communication programs. Students will leave the course with the ability to establish key messages using supporting evidence, craft content for target audiences, evaluate the impact of various media relations techniques as a way to achieve earned media coverage. Students will also develop a portfolio of well-written public relations collateral, including long- and short-form materials.

COMM 4146 Ethics in Public Relations (4 Credits)

Public relations professionals, regardless of the industry in which they work, are often tasked with "doing the right thing" when communicating with the public. But what do we mean by "the right thing" in this context? The course explores the role and importance of ethics in public relations practice. Students will consider the fundamentals of transparency and ethics, ethics theory, and ethical decision-making models. With this foundation in place, students will then learn to apply ethical theory and methodology in practice in crisis management, advocacy, corporate social responsibility, and social media contexts.

COMM 4150 Reputation Management & Crisis Communication (4 Credits)

Reputation management is the process of tracking, maintaining, and defending a consistent message and positive image across all media. It applies to corporations and individuals, to billion-dollar brands and grassroots causes. Today's reputation management integrates public relations, search engine optimization (SEO), content marketing, and social media management. It requires constant monitoring and participation in the dialogues that comprise modern media as the traditional roles of sender and receiver merge and evolve. As digital presence has become the front lines of reputation management, systems use various predefined criteria for processing complex data to report behavior and activity surrounding a reputation, thereby automating the process of determining positive sentiment, influence, and trustworthiness. While reputation management is an ongoing proactive effort, PR professionals also need to be prepared to react in a crisis. Crisis communication planning and management strategies are an important subset of this field. Through the study of proactive and reactive programs, students will learn how to apply reputation and crisis management principles in times of quiet and chaos all while monitoring, positioning, and measuring a brand's presence online.

COMM 4154 Media Channels and Technology (4 Credits)

This course will focus on the increasing role technology and analytics play in the public relations profession. Data-driven decision-making is now essential to the development of public relations strategy and tactics. This course will expose students to engagement across media channels—including owned, shared, paid, and earned media—as well as techniques and strategies for the effective use of technology for tracking, planning, and engaging audiences. This course will position students to lead strategic, data-driven decision-making in the public relations field. The course will also provide students with the tools necessary to engage new media and technology effectively in public relations.

COMM 4200 Instructional Design (4 Credits)

Designing training that maximizes results is a central concern in organizations. Students in this course identify the elements of effective learning design, formally and informally, for organizations and professional arenas. Students will strategize instructional approaches in order to meet organizational needs and objectives. Students will create an instructional design product that can be applied appropriately in professional settings.

COMM 4203 Adult Learning Strategies and Theories (4 Credits)

Individuals involved in adult learning design and development benefit from a strong foundation in adult learning theories and strategies to develop effective practices. Adult learners bring unique needs, life experiences, and prior knowledge to learning situations and thrive when inclusive, motivational, and relevant application of knowledge, concepts and skills are utilized. In this course, foundational and emerging theories regarding how adults learn best, along with analysis of key instructional strategies, provide solid grounding for implementing best practice in adult learning.

COMM 4206 Evaluating Learning and Development Effectiveness (4 Credits)

Assessment and evaluation enable learning and development professionals to determine if learners acquired the intended content, knowledge, skills and/or attitudes; if the benefits of the training endeavors are worth the costs; whether training has met organizational goals; and if further training is necessary. Through case studies, practice exercises, and the development of an authentic assessment plan, students learn how to design, interpret, and apply different types of learning and development evaluation concepts and methods to their respective or intended work settings.

COMM 4220 Conflict Resolution Strategies and Process (4 Credits)

Conflict is a natural and common part of human interaction. This course prepares students to thoughtfully and creatively manage and resolve conflict in interpersonal and organizational contexts. Students study the sources, causes, and dynamics of conflict in order to explain and predict the patterns of conflict interactions. Students analyze case studies and develop the most appropriate conflict management and resolution strategies based on analysis and evaluation of the personal, interpersonal, historical, and cultural dynamics of a given conflict. By focusing on the application of conflict resolutions strategies and processes, students develop their interpersonal, analytical, and managerial competencies to creatively address conflict in a variety of situations.

COMM 4222 Negotiation Strategies and Process (4 Credits)

Negotiation is at the core of dispute resolution. This course presents the theoretical groundwork for interest-based dispute resolution upon which principled negotiation and other dispute resolution methods are founded. Topics include the definition of the negotiation process, different types of negotiation, and negotiation strategies. Students have an opportunity to practice and compare different negotiation techniques. Teaching methods are experiential in nature and include mini-lectures, discussions, and role-plays. Students also develop strategies for managing challenging negotiations and breakdowns.

COMM 4226 Managing Organizational Conflict (4 Credits)

Conflict is a part of all businesses, government, and nonprofit organizations. It is a product of human existence and diversity in an interrelated society. Though many people fear conflict as a threat to a productive work environment, it is not conflict itself that jeopardizes harmony but unresolved conflict, and the associated costs are well documented. Organizations increasingly recognize that conflict need not carry costly financial and interpersonal burdens and can, in fact, serve as a productive change agent. Students in this course explore the nature and sources of organizational conflict and facilitate development of practical skills to recognize and manage conflict using case studies, exercises, speakers, and field research. Students are introduced to the concept of various conflict resolution methods, including individual initiative, negotiation, mediation, restorative justice, and arbitration. This course is well suited for leaders and aspiring leaders in any profession who want to increase their interpersonal capability and enhance their value in organizations.

COMM 4235 Integrating Learning and Development Technologies (4 Credits)

Organizational learning and talent development are changing rapidly in the face of staggering technological advances. As organizations become increasingly decentralized, teams interact virtually, and collaboration becomes dependent on digital tools. In this context, it is imperative that learning and development professionals harness technology to meet the changing needs of individuals and the places/spaces in which they work. In this course, students explore the latest technological trends in Learning and Development, while also learning how to evaluate technologies for their appropriateness in meeting organizational learning and development goals. In recognition of the rapidly changing nature of this field, students also develop strategies for future learning to keep their work relevant and engaged.

COMM 4301 Brand Management Strategies (4 Credits)

Organizations of all types – private, public, and nonprofit – increasingly recognize that a strong brand can ultimately become one of an organization's greatest assets. Executing on a strategy designed to build long-lasting brand recognition, resonance, and loyalty is a critical marketing responsibility. In today's dynamic business landscape, brand management requires complex decisions to create meaning and value for consumers. This course covers the essential components of branding with a focus on how to maintain consistent alignment between brand vision and marketing strategies. Students are strongly encouraged to take at least one other marketing concentration course prior to this course.

COMM 4306 UX Strategies and Methods (4 Credits)

This course will cover user experience strategies, tactics, and methodologies. Students will learn how to think about UX from a high level, set goals for a product or project, and turn the strategies into concrete steps. Students will learn how to employ research, design thinking, usability testing and analysis to enhance the user experience.

COMM 4307 Developing Content for User Experience (4 Credits)

This course will explore how strategically developed content is a cornerstone of the user experience. Students will learn the User Experience Design workflow and how to advocate, research and deliver content for digital experiences. The course will also cover how to measure the business impact of content strategy, as well as how to scale content strategy as a practice within organizations.

COMM 4308 UX Team Management (4 Credits)

Building and managing a dynamic UX team is a skillset that goes beyond typical design best practices and team management - the role of design leader today expects company leadership in innovation, creativity and culture. This course will provide the students with the knowledge needed to build, manage, and nurture highly dynamic, fast-paced cross functional teams while also providing experience in the transformational components of design leadership.

COMM 4309 Service Design (4 Credits)

Where UX design is specific to the digital experience, service design crosses over from the tangible to intangible experiences within both digital and analog channels. This course takes students through an in-depth exploration of research, mapping, blueprinting, and deep user flow analysis as it relates to interactions and experiences of all types. The impact behind processes for employees and customers across all sectors including public, private, and nonprofit will be covered.

COMM 4318 Mobile Marketing (4 Credits)

Mobile is global. We are living in an unprecedented time where people all around the world have access to mobile devices. These devices bring the world to the palm of our hands, and we can do almost anything with them. Often a user's first experience with a product or service will be on a mobile device rather than a desktop computer, so we must shift our mindset to a mobile-first mentality. The fast-paced, ever-changing field of mobile marketing has created exciting opportunities for brands to meet customers where they are and approach them with the right strategy. The focus of this course is to provide an expansive grasp of the tools and tactics used to develop and implement a multi-channel mobile marketing strategy. Through discussion, research, and practical experience, students will learn how to maximize mobile to have the greatest impact within their overall marketing plan.

COMM 4319 Visual Storytelling (4 Credits)

In our digital world, communication is increasingly visual. This course will expose students to the art of turning facts into a compelling, strategically-crafted visual narrative that engages an audience. By applying course concepts to existing media, from children's books to blockbuster movies, students will develop the skills and techniques necessary to produce polished print, digital, and video content that effectively tells a story.

COMM 4320 Social Media Strategy (4 Credits)

Social media is a critical communication channel that is constantly evolving. Learn to plan, manage, measure, and anticipate social media efforts that add value to your target audiences through organic and paid options. In this course, students will explore motivations that prompt audiences to engage, identify the tools and technology needed to execute social media campaigns or communication interventions, and devise effective strategy and tactics needed to cut through the noise. Create a stronger online presence, show personality, and build your brand by gaining skills needed to successfully communicate on behalf of any organization or individual using social media. Through online research, case studies, and practical exercises, students will gain first-hand knowledge of social media techniques and how to leverage social media as a communications tool.

COMM 4321 Integrated Digital Marketing (4 Credits)

At an ever-increasing rate, consumers use digital media to live, to work, and to play. Digital marketing leverages digital media and technologies allowing brands to promote their products and services to very targeted audiences at key online touchpoints in highly measurable ways. This course takes a deep dive into digital marketing strategies and provides an expansive grasp of digital marketing tactics. Students will analyze the digital marketplace and make strategic decisions about which tactics will have greatest impact, how to integrate them into the marketing mix, and ultimately how to use digital marketing to achieve overarching marketing goals. Required pre-requisites: COMM 4140.

COMM 4323 Email Marketing (4 Credits)

Today's consumer expectations for relevant, engaging, and timely messages have made email marketing an essential component of the multichannel marketing mix. The creation and delivery of personalized, targeted messages to subscribers can drive both engagement and ROI. This class examines the development and integration of email marketing (including tools, copy, design, service providers, tracking and measurement) to enhance business relationships, encourage customer loyalty and acquire new customers.

COMM 4324 Marketing Analytics (4 Credits)

Marketing analytics leverages business metrics to better understand marketing performance and return on investment (ROI). Through data analysis, attribution modeling, and reporting, marketers are able to measure and optimize their initiatives. This class focuses on developing a performance measurement system for marketing channels, incorporating measuring website traffic, conducting market research, estimating usage patterns, and interpreting website visitor behavior. Key performance indicators are tied to marketing goals and tactical campaigns. Students will conduct a review of online metrics, compare marketing analytics vendors, and develop ways to communicate performance.

COMM 4325 Search Marketing (4 Credits)

Search marketing is a communicator's medium and a vital part of any marketing mix. This type of digital marketing specifically focuses on increasing a website's visibility in the search engine results pages (SERPs) through organic Search Engine Optimization (SEO) and pay-per-click (PPC) while also drawing attention to quality website content or well-crafted paid ad messaging. This class will provide deep insight into the tools and tactics of search marketing. Students will learn what makes search marketing demanding and how to overcome the challenges presented by regular search engine algorithm updates, increasing mobile device usage, and the influence of social media. Two key techniques of SEM will be explored: search engine optimization (SEO) to improve results from the natural or organic listings, and paid search marketing, or pay-per-click (PPC), to deliver results from the sponsored listings within search engines. A variety of search practices, including mobile and local, will be explored.

COMM 4326 Digital Campaign Management (4 Credits)

Any successful marketing or communication campaign – digital or traditional – is dependent on many factors, from its strategic beginnings through its final readout. However, perhaps the most critical factors driving the success of a digital campaign are rooted within the human, technical, and business processes through which that campaign comes to life. Assuming a foundational understanding of digital marketing techniques (i.e., web, search marketing, social media, etc.), this course will focus on the practical management of digital marketing and communication campaign efforts, including planning, management, and measurement. Pre-requisite: COMM 4321.

COMM 4701 Topics in Communication Management (4 Credits)

The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of communication, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects, such as ethics, human communication theory, or interpersonal communication. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

COMM 4900 Communication Inquiry, Analysis, and Trends (4 Credits)

Students will actively engage in their chosen communication field in order to develop the essential networking, writing, inquiry, and analysis skills required to be successful professional communicators. The course has three central components: first, students will develop professional networks to cultivate mentorship, gain intimate knowledge of the field, and become familiar with the field's norms and values. Second, students will strengthen their business-writing skills by creating industry-standard documents, communicating clearly and effectively, and activating their voice to convey their points with authenticity. Finally, students will explore their chosen field of communication to determine the current state of the field and its future trajectory, while also exploring how they may adapt and grow to meet the demands of the future.

COMM 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

COMM 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

COMM 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

COMM 4905 Storytelling through Research and Measurement (4 Credits)

Whether conducting a needs assessment, attempting to understand your audience, or developing a new product, communication professionals regularly harness the power of research, measurement, and storytelling. This course explores mixed-methods research design; data collection strategies; strategies for measuring the impact of communication challenges and interventions; and the fundamentals of telling data-driven stories that persuade stakeholders and demonstrate ROI. Together these tools enable confident problem solving, enhance organizational decision making, and influence stakeholder behavior. This course culminates in an individualized project that integrates research design, data collection, data analysis, and storytelling.

COMM 4920 Portfolio Capstone (4 Credits)

The Portfolio Capstone course provides students the opportunity to reflect upon the work they have done throughout their graduate studies at University College and synthesize their learning. Students in the seminar produce deliverables that include: (1) a thorough annotation of their portfolio, a process requiring critical and creative thinking about their educational experience, and (2) a pinnacle project that identifies, analyzes, and elaborates significant themes in their program experience, evaluates their accomplishments, connects their coursework to their professional goals, and assesses those goals in the context of their chosen field.

COMM 4980 Internship (0-4 Credits)

The Communication Management Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all COMM students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.

COMM 4985 Industry Innovation Project (1-4 Credits)

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

COMM 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. Before registering for the independent study, the student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices. Independent Study is offered only on a for-credit basis.

Computer Science (COMP)

COMP 3001 C and C++ Programming Foundations for New Graduate Students (4 Credits)

This accelerated course covers the basics of discrete mathematics including functions, relations, counting, logic, proofs etc that is necessary to attend CS graduate school. In addition, it includes an introduction to programming and algorithm analysis. Enrollment restricted to graduate students.

COMP 3002 C and C++ Foundations II for New Graduate Students (4 Credits)

This accelerated course continues to build on the basics of discrete mathematics by covering material including advanced counting, recurrences, graphs, trees, traversals, automata etc. that is necessary to attend Computer Science graduate school. In addition, it includes an introduction to additional algorithms and data structures. Prerequisite: COMP 3001.

COMP 3003 Foundations in Computer Systems (4 Credits)

This course introduces computer systems, including instruction set architectures; memory hierarchies including registers, caching, virtual memory, paging, and segmentation; number representations; binary arithmetic and operations; assembly language instructions; and pipelining in the CPU.

COMP 3004 Foundations in Discrete Structures & Algorithms (4 Credits)

Both discrete mathematics and an understanding of algorithms along with their analysis form principle foundations in computer science. In this course, the fundamentals of discrete mathematics including functions, relations, counting, logic, proofs, counting, recurrences, and probability are covered. In addition, beginning data structures and algorithms are covered including linked-lists, graphs, hash-tables, sorting, and binary search. An analysis of these data structures and algorithms is also covered through big-O notation and proof methods.

COMP 3005 Foundations in Python Programming (4 Credits)

This accelerated course covers the basics of Python programming. By the end of the course students will be able to develop, design and implement Python programs, explain the differences between data types, learn to read from and write to files, understand and use data structures, understand and use recursion, and use Python packages.

COMP 3006 Python Software Development (4 Credits)

This accelerated course covers advanced Python programming for data scientists and cybersecurity professionals. Course Objectives: name and demonstrate proficiency using advanced Python programming techniques; analyze a programming task and create a development plan and high-level software design that accomplishes the task; relate common portions of the Python standard library to specific programming tasks; understand and apply aspects of the Python scientific programming ecosystem to achieve an analysis goal. Prerequisite: COMP 3005.

COMP 3007 Foundations in Data Science Mathematics I (4 Credits)

This course presents the elements of calculus essential for work in data science. Students will study differentiation and integration in the context of probability density and of optimization.

COMP 3008 Foundations in Data Science Mathematics II (4 Credits)

This course presents the elements of linear algebra and discrete math essential for subsequent coursework in data science.

COMP 3200 Discrete Structures (4 Credits)

Discrete mathematical structures and non-numerical algorithms; graph theory, elements of probability, propositional calculus, Boolean algebras; emphasis on applications to computer science. Cross-listed as MATH 3200. Prerequisites: (COMP 2300 or MATH 2200) and (COMP 2673 or COMP 1353).

COMP 3351 Programming Languages (4 Credits)

Learn the fundamentals of programming languages through functional programming through an in-depth understanding of syntax and semantics around program structures and how programming languages are parsed and interpreted. Understand recursion as a fundamental problem-solving paradigm and the important role that higher order types and kinds play in eliminating errors and simplifying software development. Prerequisites: COMP 2370 and ((COMP 2355, COMP 2691) or COMP 2362).

COMP 3352 Elements of Compiler Design (4 Credits)

Techniques required to design and implement a compiler; topics include lexical analysis, grammars and parsers, type-checking, storage allocation and code generation. Prerequisite: COMP 3351.

COMP 3353 Compiler Construction (4 Credits)

Design and implementation of a major piece of software relevant to compilers. Prerequisite: COMP 3352.

COMP 3356 Introductory C/C++ Programming (4 Credits)

This course introduces unmanaged programming language concepts to students whose primary programming experience is in a managed language (Java/Python, etc.). Concepts like type safety, manual memory management and "unsafe" library functions are covered. Common pitfalls in these languages from which most security issues arise are explained and students gain experience in understanding such code and evaluating it for program errors. Students will also be introduced to important compiled language concepts of static/dynamic linking, compilation and debugging. Prerequisites: COMP 3006.

COMP 3361 Operating Systems I (4 Credits)

Operating systems functions and concepts; processes, process communication, synchronization; processor allocation, memory management in multiprogramming, time sharing systems. Prerequisites: for undergraduates: (COMP 2355 and COMP 2691) or COMP 2361; COMP 2370; for graduate students: COMP 3003, 3004, and 3005.

COMP 3371 Data Structures & Algorithms (4 Credits)

Design and analysis of algorithms and data structures; asymptotic complexity, recurrence relations, lower bounds; algorithm design techniques such as incremental, divide-and-conquer, dynamic programming, iterative improvement, greedy algorithms; randomized data structures and algorithms. Prerequisites: COMP 2370 or equivalent and COMP 3200.

COMP 3372 Advanced Algorithms (4 Credits)

Advanced techniques for the design and analysis of algorithms and data structures; amortized complexity, self-adjusting data structures; randomized, online, and string algorithms; NP-completeness, approximation and exact exponential algorithms; flow networks.

COMP 3381 Software Engineering I (4 Credits)

An introduction to software engineering. Topics include software processes, requirements, design, development, validation and verification and project management. Cross-listed with COMP 4381. Prerequisites: COMP 3351; COMP 3361 or COMP 2362; or instructor permission.

COMP 3382 Software Engineering II (4 Credits)

Continuation of COMP 3381. Topics include component-based software engineering, model-driven architecture, and service-oriented architecture. Prerequisite: COMP 3381.

COMP 3400 Advanced Unix Tools (4 Credits)

Design principles for tools used in a UNIX environment. Students gain experience building tools by studying the public domain versions of standard UNIX tools and tool-building facilities. Prerequisites: COMP 2400 and knowledge of C and csh (or another shell), and familiarity with UNIX.

COMP 3411 Web Programming II (4 Credits)

In this course you will learn how to develop a full-stack web application that is capable of serving dynamic content from a database. Furthermore, you will learn the core design concepts and principles that will enable you to develop scalable and easy to maintain webapplications - a set of skills that will serve you well in both your personal and professional projects in the future. Prerequisite: COMP 3410.

COMP 3412 Web Projects: Web Development III (4 Credits)

In this course you will learn how to develop, as a group, a full-stack web application that is capable of serving dynamic content from a database. We will use the MongoDB, ExpressJS, Angular, and Node.js (MEAN) software stack to work on a real-life problem presented to us by an external product owner. In the class we will use the Scrum framework for Agile development to work, as a software team, through several sprints of development. You will be peer reviewing each other throughout the course, and the product owner will also be reviewing your product through end-of-sprint demos as features are completed. The goal for this class is for it to be a fun, collaborative, and educational environment that demonstrates what it is like to work as a real software team. Prerequisite: COMP 3411.

COMP 3421 Database Organization & Management I (4 Credits)

An introductory class in database management systems covering both relational and non-relational databases with an emphasis on relational. Topics include database design, ER modeling, relational algebra, SQL, scripting, and embedded SQL. Each student will design, load, query and update a nontrivial database using a relational database management system (RDBMS). In addition, an introduction to a NoSQL database will be included. Graduate students will read one or two relevant technical papers and write a summary report. Prerequisites: for undergraduates: COMP 1353 or COMP 2673; for graduates: COMP 3005.

COMP 3424 NoSQL Databases (4 Credits)

In this course, students learn what NoSQL databases are, learn to identify the differences between them, and gain a fundamental understanding between SQL, relational databases, and NoSQL databases. Students further explore which type of NoSQL database is the correct one given a use-cases, examining types, methods of communicating with it, contrasts to other NoSQL databases, performance and scalability. Prerequisites: for undergraduates, COMP 2355 or COMP 2361; for graduates: COMP 3005.

COMP 3431 Data Mining (4 Credits)

Data Mining is the process of extracting useful information implicitly hidden in large databases. Various techniques from statistics and artificial intelligence are used here to discover hidden patterns in massive collections of data. This course is an introduction to these techniques and their underlying mathematical principles. Topics covered include: basic data analysis, frequent pattern mining, clustering, classification, and model assessment. Prerequisites: COMP 2370.

COMP 3501 Introduction to Artificial Intelligence (4 Credits)

Introduces a variety of Artificial Intelligence concepts and techniques, relevant to a broad range of applications. Students survey multiple techniques including search, knowledge representation and reasoning, probabilistic inference, machine learning, and natural language processing. Examines concepts of constraint programming, evolutionary computation and non-standard computation. Prerequisites: COMP 2673 or COMP 1353.

COMP 3621 Computer Networking (4 Credits)

An introduction to computer networks with an emphasis on Internet protocols. Topics include: internet design, application layer protocols such as SMTP and HTTP, session layer protocols including TCP and UDP, the internet protocol (IP), link layer technology such as Ethernet, and security issues related to networking. Programming experience of client/server architectures using sockets and TCP/UDP through projects is emphasized. Prerequisites: for undergraduates: (COMP 2355 or COMP 2361) and COMP 2370; for graduates COMP 3004 and COMP 3006. Cross listed with COMP 4621.

COMP 3681 Networking for Games (4 Credits)

Implementing the networking code for multiplayer games is a complex task that requires an understanding of performance, security, game design, and advanced programming concepts. In this course, students are introduced to the networking stack and how this is connected to the Internet, learn how to write protocols for games, and implement several large games using a game engine that demonstrate the kind of networking and protocols required by different genres of games. In addition, tools are introduced that help understand and debug networking code, simplify the creation of protocols, and make the development of networking code easier.

COMP 3701 Topics in Computer Graphics (4 Credits)**COMP 3702 Topics in Database (4 Credits)****COMP 3703 Topics-Artificial Intelligence (4 Credits)****COMP 3704 Advanced Topics: Systems (4 Credits)****COMP 3705 Topics in Computer Science (1-4 Credits)****COMP 3731 Computer Forensics (4 Credits)**

Computer Forensics involves the examination of information contained in digital media with the aim of recovering and analyzing latent evidence. This course will provide students an understanding of the basic concepts in preservation, identification, extraction and validation of forensic evidence in a computer system. The course covers many systems level concepts such as disk partitions, file systems, system artifacts in multiple operating systems, file formats, email transfers, and network layers, among others. Students work extensively on raw images of memory and disks, and in the process, build components commonly seen as features of commercial forensics tools (e.g. file system carver, memory analyzer, file carver, and steganalysis). Prerequisites: COMP 3361; COMP 2355 or 2361 for undergraduates; COMP 3006 for graduates.

COMP 3801 Introduction Computer Graphics (4 Credits)

Fundamentals of 3D rendering including the mathematics behind coordinate systems, projections, clipping, hidden surface removal, shadows, lighting models, shading models, and mapping techniques. Significant use of 3D APIs through shader programming is covered along with the basics of 3D model representation and animations. Satisfies "Advanced Programming" requirements for graduate students. Prerequisites: COMP 2370, MATH 1952 or 1962.

COMP 3821 Game Programming I (4 Credits)

Introduces the fundamentals of digital game programming that are essential as future game programmers or game designers. Students have the opportunity to learn game engine architecture, 2D and 3D linear algebra for graphics, sprites and animations, input handling, finite state machines, particle systems, user interfaces, game audio, and artificial intelligence for games. Prerequisites: COMP 2370 and COMP 2821.

COMP 3822 Game Programming II (4 Credits)

In this course, students learn how to work with a 3D game engine and build 3D games. Topics include algorithms, mathematics for 3D game engines, scene management, animations, 3D shaders, particle systems, physics for games, UIs, terrain systems, and working with higher-level scripting languages on top of the low-level implementation language. Prerequisites: COMP 3821. Suggested corequisite or prerequisite: COMP 3801.

COMP 3904 Internship/Co-Op in Computing (0-10 Credits)

Practical experience in designing, writing and/or maintaining substantial computer programs under supervision of staff of University Computing and Information Resources Center. Prerequisites: COMP 2370 and approval of internship committee (see department office).

COMP 3991 Independent Study (1-10 Credits)

Cannot be arranged for any course that appears in the regular course schedule for that particular year.

COMP 4100 Human-Computer Interaction (4 Credits)

Introduces students in computer science and other disciplines to principles of and research methods in human-computer interaction (HCI). HCI is an interdisciplinary area concerned with the study of interaction between humans and interactive computing systems. Research in HCI looks at cognitive and social phenomena surrounding human use of computers with the goal of understanding their impact and creating guidelines for the design and evaluation of software, interfaces, physical products, and services in industry. No prerequisites are required to take the course and students from all disciplines are welcome. Cross listed with COMP 3100.

COMP 4333 Parallel and Distributed Computing (4 Credits)

Current techniques for effective use of parallel processing and large scale distributed systems. Programming assignments will give students experience in the use of these techniques. Specific topics will vary from year to year to incorporate recent developments. This course qualifies for the Computer Science "Advanced Programming" requirement. Prerequisites: COMP2370 and COMP2355, or equivalent.

COMP 4334 Parallel and Distributed Computing for Data Science (4 Credits)

Current techniques for effective use of parallel processing and large-scale distributed systems for data science. Programming assignments will give students experience in the use of these techniques. Specific topics will vary from year to year to incorporate recent developments. This course is not to be used for the MS Computer Science. Prerequisite: COMP 4581.

COMP 4355 Advanced System Programming (4 Credits)

This course covers programming in a UNIX environment, including use of common command line utilities, scripting, source control via Git, and integration of POSIX system calls into C/C++ code. These features will be leveraged to solve practical problems cleanly and efficiently. More emphasis will be placed on using these features than on how those features work. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4362 Operating Systems II (4 Credits)

Continuation of COMP 3361. Case studies of existing operating systems programming. Prerequisite: COMP 3621.

COMP 4370 Algorithmic Problem Solving (4 Credits)

The course is intended for students who are familiar with programming syntax but have not had much experience writing computer programs to solve a problem stated as a high-level description. The course will run through multiple such problem descriptions, discuss the design of programs to solve those problems using popular data structures, and have students implement those designs using a programming language. This course does not count for MS Computer Science requirements. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4372 Advanced Algorithms (4 Credits)

Advanced techniques for the design and analysis of algorithms and data structures; amortized complexity, self-adjusting data structures; randomized, online, and string algorithms; NP-completeness, approximation and exact exponential algorithms; flow networks. Prerequisite: COMP 3371. Cross listed with COMP 3372.

COMP 4384 Secure Software Engineering (4 Credits)

This course is concerned with systematic approaches for the design and implementation of secure software. While topics such as cryptography, networking, network protocols and large scale software development are touched upon, this is not a course on those topics. Instead, this course is on identification of potential threats and vulnerabilities early in the design cycle. The emphasis in this course is on methodologies and paradigms for identifying and avoiding security vulnerabilities, formally establishing the absence of vulnerabilities, and ways to avoid security holes in new software. There are programming assignments designed to make students practice and experience secure software design and development. Prerequisites: COMP 3006, COMP 3361, COMP 3356.

COMP 4431 Data Mining (4 Credits)

Data Mining is the process of extracting useful information implicitly hidden in large databases. Various techniques from statistics and artificial intelligence are used here to discover hidden patterns in massive collections of data. This course is an introduction to these techniques and their underlying mathematical principles. Topics covered include: basic data analysis, frequent pattern mining, clustering, classification, and model assessment. Prerequisites: COMP 4441 and COMP 4581.

COMP 4432 Machine Learning (4 Credits)

This course will give an overview of machine learning techniques, their strengths and weaknesses, and the problems they are designed to solve. This will include the broad differences between supervised/unsupervised and reinforcement learning as well as associated learning problems such as classification and regression. Techniques covered, at the discretion of the instructor, may include approaches such as linear and logistic regression, neural networks, support vector machines, kNN, decision trees, random forests, Naive Bayes, EM, k-Means, and PCA. After course completion, students will have a working knowledge of these approaches and experience applying them to learning problems. Enforced Prerequisites: COMP 4442 and COMP 4581.

COMP 4433 Data Visualization (4 Credits)

This course explores visualization techniques and theory. The course covers how to use visualization tools to effectively present data as part of quantitative statements within a publication/report and as an interactive system. Both design principles (color, layout, scale, and psychology of vision) as well as technical visualization tools/languages will be covered. Prerequisites: COMP 3006.

COMP 4441 Introduction to Probability and Statistics for Data Science (4 Credits)

The course introduces fundamentals of probability for data science. Students survey data visualization methods and summary statistics, develop models for data, and apply statistical techniques to assess the validity of the models. The techniques will include parametric and nonparametric methods for parameter estimation and hypothesis testing for a single sample mean and two sample means, for proportions, and for simple linear regression. Students will acquire sound theoretical footing for the methods where practical, and will apply them to real-world data, primarily using R. Prerequisites: COMP 1671, MATH 1951, MATH 1952; or Data Science Bridge Courses COMP 3005, 3007, and 3008.

COMP 4442 Advanced Probability and Statistics for Data Science (4 Credits)

This course builds on material in Probability and Statistics 1. Students will carry out model fitting and diagnostics for multiple regression, ANOVA, ANCOVA, and generalized linear models. Dimension reductions techniques such as PCA and Lasso are introduced, as are techniques for handling dependent data. The course introduces the principles of resampling and Bayesian Analysis. Students will acquire sound theoretical footing for the methods where practical, and will apply them to real-world data, primarily using R. Enforced Prerequisites: COMP 4441.

COMP 4447 Data Science Tools 1 (4 Credits)

Organizations are using data science to extract actionable insight from data. To highlight the hidden patterns in the data, this course equips students with essential skills for data collection, cleanup, transformation, feature engineering, summarization, and visualization. Students will do assignments and a final project. This is a hands-on course. Students will use Python libraries, Linux commands, and various data sets to perform these activities. Enforced Prerequisites: COMP 3006 and COMP 3008. Co-requisite: COMP 4441.

COMP 4448 Data Science Tools 2 (4 Credits)

Building a successful predictive model is a multi-faceted process. This course focuses on hypothesis testing and the development of predictive models. Students will also learn how to perform graph-based modeling and optimization. Students will do assignments and a final project. This is a hands-on course. Students will use Python libraries, Linux commands, and various data sets to perform these activities. Prerequisite: COMP 4447.

COMP 4449 Data Science Capstone (4 Credits)

Students identify and fill a demand for an innovative data science product, such as a data base tool, analytical software, or domain specific analysis. The product is defined, implemented, documented, tested, and presented by the student or student team with the instructor and other stakeholders acting as a project supervisors to verify that goals are met through the 10-week development process. Prerequisites : COMP 4442, COMP 4448, and COMP 4581.

COMP 4455 Shell Scripting and System Tools (4 Credits)

This course covers navigating and utilizing tools in a UNIX environment, including use of common command line utilities, Bash and Python shell scripting, source control via Git, pipes and I/O redirection, networking in Python and OS multi-processing/multi-threading. More emphasis will be placed on using these tools than on how those tools work. Prerequisite: COMP 3006.

COMP 4510 Software for AI Robotics (4 Credits)

This course provides an introduction to the key artificial intelligence issues involved in the development of intelligent robotics. We will examine a variety of algorithms for autonomous mobile robot behavior, exploring issues that include software control architectures, localization, navigation, sensing, planning, and uncertainty. We also introduce the Robot Operating System (ROS) middleware, which is popular in academic, industry, and government research. This course does not assume any prior knowledge of artificial intelligence or robotics. The course will be project focused. In the project assignments you will learn ROS and learn to implement algorithms essential for conducting AI robotics research. Prerequisites: COMP 3005 and proficiency in Python and Unix command-line tools.

COMP 4531 Deep Learning: Model Design and Application (4 Credits)

This course addresses the foundational concepts and components of Artificial Neural Networks (ANN), highlighting their capabilities, strengths, and weaknesses as a machine learning algorithm. Students taking this course will develop ANN models from scratch in Python as a basis for understanding their design as well as the underlying mechanics and calculations that shape their behavior. Key topics such as forward-backward propagation, loss function characteristics and optimization will be considered in relation to model design and computational efficiency as well as to problems such as exploding and vanishing gradients. Training strategies (e.g., dropout, initialization, batch normalization) will further enable students to assess trade-offs in model bias & variance. Coupled with hands-on assignments, these building blocks provide the knowledge and skills required to effectively design and implement ANN models that are ethically and technically sound. As well as foreground important architectures such as Convolutional ANNs, Recurrent ANNs, LSTMS, and Transformers as well as their applicability to modern problems. Student learning and proficiency will be assessed based on a combination of quizzes, coding assignments, exams, and a culminating project. Prerequisite: COMP 4432.

COMP 4581 Algorithms for Data Science (4 Credits)

This course introduces the design and analysis of algorithms within the context of data science. Topics include; asymptotic complexity and algorithm design techniques such as incremental, divide and conquer, dynamic programming, randomization, greedy algorithms, and advanced sorting techniques. Examples to illustrate techniques are drawn from multi-dimensional clustering (k-means and probabilistic), regression, decision trees, order statistics, data mining using apriori algorithms, and algorithms for generating combinatorial objects. Prerequisites: COMP 3006 and 3008.

COMP 4591 Computational Geometry (4 Credits)

This class deals with the design and implementation of efficient algorithms for problems defined over geometric objects, such as points, lines, polygons, surfaces, etc. The methods and algorithms covered find applications in many areas, including computer graphics (e.g., hidden surface removal), computer-aided design and manufacturing (e.g., 3D printing), machine learning (e.g., supervised and unsupervised classification), geographic information systems (e.g. terrain visibility), robotics (e.g., motion planning), data mining (e.g., dimensionality reduction), and computer vision (3D reconstruction), to name a few. Fundamental geometric problems such as partitioning, proximity, intersection, convexity, visibility, point location, and motion planning are focused on. Efficient data structures and algorithms for their solutions and design techniques germane to the field, such as divide-and-conquer, plane sweep, randomization, duality, etc. are discussed in detail. Practical methods for the robust implementation of geometric algorithms are also covered. Prerequisites: COMP 3200 and COMP 3371. This course satisfies the Theory requirement for graduate students.

COMP 4600 Seminar in Computer Science (0-4 Credits)

Preparation and presentation of lectures on some aspect of current research in computer science; topics not generally encountered in formal courses, may include robotics, pattern recognition, parallel processing, computer applications. 10- to 15- page paper with bibliography required.

COMP 4621 Computer Networking (4 Credits)

The Internet is arguably the most transformative invention in recent history and is at its core a massive global computer network (of networks). Students in this course learn how the Internet works, from the highest-level application layer to the lowest-level hardware layer. Topics covered include the OSI and TCP/IP reference models, physical transmission methods, error detection and correction, addressing, routing algorithms, congestion control and more. Prerequisites: COMP 3006, COMP 3361 (or instructor approval). Cross listed with COMP 3621.

COMP 4701 Special Tpcs-Computer Graphics (1-4 Credits)**COMP 4702 Advanced Topics-Database (3 Credits)****COMP 4703 Adv Topics-Artificial Intell (1-4 Credits)****COMP 4704 Advanced Topics-Systems (3-4 Credits)****COMP 4705 Advanced Topics-Programming (1-4 Credits)****COMP 4709 Special Tpcs-Computer Security (3 Credits)****COMP 4721 Computer Security (4 Credits)**

This course gives students an overview of computer and system security along with some cryptography. Some network security concepts are also included. Other concepts include coverage of risks and vulnerabilities, policy formation, controls and protection methods, role-based access controls, database security, authentication technologies, host-based and network-based security issues. Prerequisites: 3006, COMP 3361 (or advisor/instructor approval).

COMP 4722 Network Security (4 Credits)

Network Security covers tools and techniques employed to protect data during transmission. It spans a broad range of topics including authentication systems, cryptography, key distribution, firewalls, secure protocols and standards, and overlaps with system security concepts as well. This course will provide an introduction to these topics, and supplement them with hands-on experience. In addition, students will perform an extensive analysis, or development of a security related product independently. Prerequisites: COMP 4721 or COMP 3001, 3002, 3003, and 3004.

COMP 4723 Ethical Hacking (4 Credits)

Ethical hacking is the process of probing computer systems for vulnerabilities and exposing their presence through proof-of-concept attacks. The results of such probes are then utilized in making the system more secure. This course will cover the basics of vulnerability research, foot printing targets, discovering systems and configurations on a network, sniffing protocols, firewall hacking, password attacks, privilege escalation, rootkits, social engineering attacks, web attacks, and wireless attacks, among others. Prerequisites: COMP 3361, or COMP 3001, 3002, 3003, and 3004.

COMP 4724 Systems Security Management (4 Credits)

This course covers basic system administration tasks on a Unix environment, with a special focus on command line navigation, file/process access control, setting up network configurations, and managing services related to networks and their security. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4732 Human-Centered Data Security and Privacy (4 Credits)

With an increasing digital presence, it is critical to understand users' needs and requirements in using technological equipment to secure interactions and adhere to privacy perceptions. Thus, it is essential to analyze the cognitive, social, organizational, commercial, and cultural factors in mind. This course will provide a socio-technical approach for analyzing critical user interaction with devices encountered in everyday life, including web, mobiles, and wearables. This course will help students develop an understanding of technological interactions from the perspectives of multiple stakeholders such as users, developers, system administrators, and others and build tools to protect user data.

COMP 4799 Capstone Project in Cybersecurity (1-8 Credits)

The purpose of the cybersecurity capstone project is to provide an integrative experience that ties together the learning outcomes from academic coursework undertakings and industry skills necessary to be productive in delivering an end product. Students will engage in one of many options available, such as involvement in a research project, a case study, a product development project, or an extensive survey paper. Capstone projects are presented at the end of the quarter in front of a representative group. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4991 Independent Study (1-12 Credits)

Independent study on a particular topic supervised by a faculty member. Student must find a faculty member who will supervise work on the topic. Cannot be arranged for any course that appears in regular course schedule for that particular year.

COMP 4995 Independent Research (1-17 Credits)

Research projects undertaken in conjunction with a faculty member.

COMP 5991 Independent Study (1-17 Credits)**COMP 5995 Independent Research (1-17 Credits)**

Conflict Resolution (CRES)

CRES 3951 Mediation Fundamentals (4 Credits)

This course provides 40-hour mediation training following the model standards for Mediator Certification programs established by the Association for Conflict Resolution. It covers the mediation process and mediator skills including preparation, opening statement, information gathering, movement and solution seeking, negotiation, confidentiality, ethics, power balancing and diversity issues. Students engage in video-recorded role-play scenarios to develop mediation skills.

CRES 4111 Reflective Practice and Evaluation (4 Credits)

Course is designed for practitioners who would like to become more reflective and theory oriented in their practice, and for researchers who wish to work with actual data and questions from practice. The goals are to learn techniques for making theories of practice explicit, to examine ways practice and research may modify theory, and to explore how to introduce and expand reflective practice into conflict resolution.

CRES 4221 Negotiation Theory and Practice (4 Credits)

An overview of negotiation theories, strategy and tactics to understand the role of power perceptions, communications, and ethics affect bargaining processes and outcomes.

CRES 4222 Theories of Conflict Practice and Third Party Roles (4 Credits)

An analysis and critique of the nature and role of third parties in conflict intervention including conciliator, arbitrator, facilitator, monitor, trainer. Theoretical perspectives and case studies are used to understand the situations in which third parties operate, what values and resources they bring to their roles, and how power issues affect mediator functioning. Ethical guidelines are also considered.

CRES 4225 Conciliation and Reconciliation (4 Credits)

Societies are often divided along ethnic, racial, or religious lines. Without work at the grassroots level, international peace agreements regularly fail within five years of ratification. How do we create sustainable post-conflict relationships? How does justice factor into peace, or into the sustainability of peace agreements? This course explores these questions by building on concepts and themes introduced in Mediation Theory (CRES 4222), and analyzing topics such as multilevel interventions and their challenges, second track diplomacy, and citizen dialogue. Reconciliation is a key factor in peace building – Voice, Acknowledgement, and Repair are specifically considered within this realm. Focus is also on the challenges presented by deep-rooted, protracted conflicts, allowing for more complete understanding of the situations in which third parties must operate.

CRES 4400 Restorative Justice (2 Credits)

This course explores four leading Restorative Justice practices - Victim-Offender Mediation, Conferencing, Talking Circles, and Truth Commissions - to understand how needs of victims are addressed, and embracing notions of forgiveness, reconciliation and social healing within a set of principles based on social justice.

CRES 4410 Intractable Conflict (2 Credits)

This course is focused on factors that lead to intractability, along with strategies for violence prevention and conflict transformation. Conflict mapping and analysis, sources of intractability, and social, psychological, economic and political dimensions of intractable conflicts are examined.

CRES 4820 Topics in Conflict Resolution (2,4 Credits)

Fields of interest to Conflict Resolution Students such as negotiation, international conflict resolution case studies, restorative justice, conflict transfos, methods for conflict resolution research.

CRES 4830 Topics in Conflict Resolution (2-4 Credits)

Fields of interest to Conflict Resolution Students such as negotiation, international conflict resolution case studies, restorative justice, conflict transformation, methods for conflict resolution research.

CRES 4840 Managing Organizational Conflict in the Workplace (2,4 Credits)

A broad study of conflict in organizations that may involve gender, race, age, disability and other issues, using lecture, case studies, group dialogue, and team projects to develop systems of management and evaluation.

CRES 4850 Creating Agreement (2 Credits)

Multilateral agreements are as complex as they are difficult to create. What are the key elements in this process? The history of such negotiations is one of both successes and failures. This course examines the development of criteria necessary for creating satisfactory and acceptable agreements involving multiple parties through a series of case studies that link negotiation theory and praxis.

CRES 4870 Conflict Vulnerability Assessment (2 Credits)

This course guides students seeking to specialize in early warning and conflict prevention approaches at the community, societal, or country level through the contemporary scholarly literature, policy-related instruments and models that seek to define and measure "conflict vulnerability."

CRES 4961 Professional Development (0 Credits)

To develop the specialized knowledge, skills, attitudes, values, norms, and interest needed to perform professional roles in the Conflict Resolution practitioner community. It involves informal socialization including lessons learned incidentally through association with mentors, networking with practitioners, and observations of conflict resolution processes in all areas of life. Students gain an awareness of how self-image and activities play an active part in professional socialization.

CRES 4971 Practicum (4 Credits)

Students design, execute, and evaluate conflict resolution interventions. Student involvement in planning, implementation, reflection, and evaluation may look different in different contexts, but all elements are present in some form. Students are supervised by faculty with relevant theoretical expertise and practice experience.

CRES 4981 Internship (0-4 Credits)**CRES 4985 Internship (4-8 Credits)****CRES 4991 Independent Study (1-4 Credits)****CRES 4995 Independent Research (1-4 Credits)**

Construction Management (CMGT)

CMGT 4110 Preconstruction Integration and Planning (4 Credits)

This course examines the role of preconstruction services, team integration, and joint design planning in various Integrated Project Delivery (IPD) approaches. Various tools and techniques associated with preconstruction services and design planning from the proposal stage through the design stages of a project are considered.

CMGT 4120 Construction Planning & Scheduling (4 Credits)

Understanding and applying scheduling and control to construction projects is essential to successful construction management. Project scheduling emphasizes network-based schedules, such as critical path management (CPM), network calculations, critical paths, resource scheduling, probabilistic scheduling and computer applications. Project control focuses on goals, flow of information, time and cost control, and change management. Prerequisite or Corequisite: CMGT 4420.

CMGT 4155 Sustainable Development (4 Credits)

The course includes many case studies of historic and contemporary structures exemplifying various sustainability features. Emphasis is placed on how LEED project certification influences the overall construction project. Topics include LEED certification techniques for sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, innovation and design. The following topics are covered from a LEED perspective: ventilation, air conditioning, heating, electrical lighting, energy efficiency, and building control systems. The student studies and analyzes how management and LEED techniques are applied to current construction projects.

CMGT 4177 Environmental Systems and MEP Coordination (4 Credits)

A study of electrical and mechanical systems used in the construction of buildings. Course content includes system design, component selection and utilization for energy conservation, cost estimating or systems, coordination and management of installation. Specific systems included are electrical, air conditioning, heating, ventilation and plumbing, fire protection, life safety, communication, power systems and lighting. The course also considers coordination of MEP systems and explores emerging technology and environmental issues related to mechanical and electrical systems in buildings.

CMGT 4200 Lean Construction Project Management (4 Credits)

This advanced course focuses on cutting edge lean tools and other productive strategies for the management of people and processes in the construction industry. The tools and strategies presented draw on the very successful Toyota Production System adapted to the construction industry. Lean construction methodologies such as the Last Planner System, the Lean Project Delivery System, and Integrated Project Delivery are discussed. Topics also include sustainability and the emerging interest in "green construction," as well as the use of Building Information Modeling to enhance the development and management of integrated projects. This course also looks at the human element in relation to motivation, safety, and environmental stresses. A number of case studies are presented to highlight best practices in Lean Construction Project Management. Prerequisite: CMGT 4480.

CMGT 4230 Design Management and Schedule Control (4 Credits)

This course examines the various strategies and techniques associated with managing the design delivery process to align with the construction budget and schedule needs in an integrated fashion. Design planning, scheduling, and resource allocation are considered along with design value determination and management of the design-construct interfaces.

CMGT 4250 Construction Job Site Management (4 Credits)

This course addresses how a successful construction project is managed and administered from design through construction to closeout. Emphasis will focus on how to unite the key stakeholders (contractors, architects, engineers, etc.) to provide them with a workable system for operating as an effective project team. The latest technology, laws and regulations associated with contract administration will be presented. Topics pertinent to each stage of a project are introduced and discussed as they occur throughout the life of the project. Numerous real-world examples will be utilized throughout the course. Various electronic project administration tools and techniques will be demonstrated including Building Information Modeling.

CMGT 4310 Cost Modeling and Trend Management (4 Credits)

This course covers various approaches to construction cost estimating at the conceptual stages of planning and design through detailed construction. Students learn parametric estimating techniques and how they are applied to construct and predict reliable budgets at the earliest stages of design. Students build cost models and refine those models with greater detail as design develops through a project. Building information modeling is introduced and used to create massing models to demonstrate design impacts on project costs. Cost trending techniques are presented to manage, monitor and document project performance relative to cost.

CMGT 4320 Introduction to Architecture and Design Management (4 Credits)

This course introduces students to the significant value that architecture brings to real estate and the built environment and the various services and professions associated with it. Students will be introduced to principles, protocols and the planning process related to the design function and the link between the architect's vision and the finished physical structure. Students will be introduced to design, thinking, theory and application. Student will learn to read and interpret the various graphical and written construction documents as well as know how they are developed and what information they contain. Architectural, structural, mechanical, electrical, plumbing and civil drawings and specifications are covered. The business model for design services will be explored as well as the unique risks and challenges associated with managing the design throughout the various stages of development and construction.

CMGT 4410 Construction Building Systems (4 Credits)

A survey of residential and commercial construction materials, means, and methods associated with the various structural and architectural systems used to design and construct buildings. Project plans and specifications are incorporated to teach the basic sequencing and overall construction process. The influence of sustainability in construction is introduced. This class will also have an off campus, experiential learning lab associated with it.

CMGT 4420 Construction Estimating (4 Credits)

This course is designed to provide the student with the theory, principles and techniques of quantity analysis (take-off), labor determinations, overhead and profit analysis. It offers insight into the construction estimating process. The role of the estimator, types of estimating, CSI divisions, bid/contract documents, change order pricing, design/build projects and estimation compilation will be introduced. Discussions regarding the cost/benefit of sustainable materials and typical construction materials will enhance the requisite knowledge of construction estimating. Experiential learning lab is associated with this course. Prerequisite: CMGT 4320 and CMGT 4410. This course is a co/prerequisite for CMGT 4120.

CMGT 4480 Const Project Management (4 Credits)

Principles and techniques of construction project management, use of systems analysis, internal and external procedures, planning, programming, budgeting and staffing, controlling major projects, emphasis on construction scheduling techniques with case application.

CMGT 4490 Residential Development (4 Credits)

A course sequence designed to emphasize the practical application of the theories and concepts of residential development. The course provides a capstone experience for seniors. Students are expected to apply their knowledge of general business, real estate and construction management practices by forming a student business entity, acquiring land, building and selling a residential property in a case format. Students will apply accounting, finance, marketing, real estate and construction management techniques in the planning for a residential development. The application of green building materials and methods is emphasized.

CMGT 4560 Relational Contracting and Risk Mitigation (4 Credits)

Relational contracting is a construction project delivery framework for multidisciplinary, integrated projects that focuses on aligned goals, high performance, innovation, mutual respect, open communication and a "no blame" culture between Client, Contractor, and Design Team. This approach to contracting, also known as Alliance Contracting, is becoming more prevalent in the United States and is often applied when using integrated project delivery systems. This course compares and contrasts transactional contracting methods with relational contracting methods and the influences on the project team and projects outcomes. Relational contracting is also considered in the context of risk mitigation and project optimization.

CMGT 4700 Topics in Construction Mgmt (0-4 Credits)**CMGT 4980 Construction Mgmt Internship (0-10 Credits)**

Daniels College of Business's graduate curriculum is designed to be experiential and build upon practical experience. To gain the full benefit of this curriculum, students are encouraged to expand their experiential learning beyond the short term experiences required in the classroom. Internships that allow students to apply newly learned skills and theories in the workplace are considered an integral to the curriculum and all students are strongly encouraged to seek such opportunities.

CMGT 4991 Independent Study (1-10 Credits)**CMGT 4995 Independent Research (1-10 Credits)**

Continuous Enrollment (CENR)

CENR 4500 Continuous Enrollment-Master P (4 Credits)**CENR 4600 Continuous Enrollment-Master (8 Credits)**

Continuous Enrollment 4600 registration permits graduate students to maintain full-time status with the University and to use University resources; including library, e-mail, lab access, student health insurance, and reduced rates at the Coors Fitness Center. It is only for students who have completed all their course work and is allowed only when a student is pursuing full-time academic work/research necessary to complete a degree. Permission to enroll for Continuous Enrollment is granted for up to one academic year beginning in the fall quarter. Students requiring CE must complete and submit the proper permission form prior to registration. CENR 4600 is for master's level and EdS students, including those with approved time extensions for completion of their degrees and who are eligible for financial aid.

CENR 4700 Continuous Enrollment-MAext (0 Credits)

Continuous Enrollment 4700 registration permits graduate students to maintain active status with the University and to use university resources; including library, e-mail, lab access, student health insurance, and reduced rates at the Coors Fitness Center. It is only for students who have completed all their course work and is allowed only when a student is pursuing academic work/research necessary to complete a degree. Permission to enroll for Continuous Enrollment is granted for up to one academic year beginning in the fall quarter. Students requiring CE must complete and submit the proper permission form prior to registration. CENR 4700 is for master's level and EdS students who have an approved extension of time for completion of their degree program, but who are no longer eligible for financial aid because they are past the 7-year master's level (6 years for MSW), or 8-year EdS financial aid eligibility limit. CENR 4700 shows as 0 credit hours and does not confer loan eligibility or loan deferment.

CENR 5600 Continuous Enrollment-PhD (8 Credits)

Continuous Enrollment 5600 registration permits graduate students to maintain full-time status with the University and to use university resources; including library, e-mail, lab access, student health insurance, and reduced rates at the Coors Fitness Center. It is only for students who have completed all their course work and is allowed only when a student is pursuing full-time academic work/research necessary to complete a degree. Permission to enroll for Continuous Enrollment is granted for up to one academic year beginning in the fall quarter. Students requiring CE must complete and submit the proper permission form prior to registration. CENR 5600 is for doctoral level students, including those with approved time extensions for completion of their degrees and who are eligible for financial aid.

CENR 5700 Continuous Enrollment-PhDext (0 Credits)

Continuous Enrollment 5700 registration permits graduate students to maintain active status with the University and to use university resources; including library, e-mail, lab access, student health insurance, and reduced rates at the Coors Fitness Center. It is only for students who have completed all their course work and is allowed only when a student is pursuing academic work/research necessary to complete a degree. Permission to enroll for Continuous Enrollment is granted for up to one academic year beginning in the fall quarter. Students requiring CE must complete and submit the proper permission form prior to registration. CENR 5700 is for doctoral level students who have an approved extension of time for completion of their degree program, but who are no longer eligible for financial aid because they are past the 10-year financial aid eligibility limit. CENR 5700 shows as 0 credit hours and does not confer loan eligibility or loan deferment.

Counseling Psychology (CNP)

CNP 4642 Adult Development (3 Credits)

Literature on normal development of adult thinking and problem-solving processes and the self-esteem. Physiological changes and relationship between cognitive development and developmental tasks of adults included.

CNP 4645 Lifespan Development (5 Credits)

Survey of the principles of development from conception to adulthood, emphasizing biological, environmental, and cultural factors affecting development.

CNP 4700 Counseling Theory (5 Credits)

Basic counseling theories and philosophical principles as a foundation for professional training including history, concepts, techniques and trends.

CNP 4701 Advanced Seminar: Counseling Theory (3 Credits)

Focus on advanced practice issues and (doctoral students only) integration of theory and practice.

CNP 4702 Introduction to Assessment (5 Credits)

This is a biweekly course designed to give students an introduction to the essentials of psychological testing, assessment, and report utilization. This course will provide students with exposure to basic objective tests, projective tests, personality tests and other diagnostic techniques.

CNP 4704 Psychological Assessment (5 Credits)

Administration, scoring and interpretation of objective and projective personality-assessment techniques, the DSM IV, diagnostic categories, report-writing skills, ethical standards for testing. Lab fee required. Prerequisite: counseling or school of psychology Ph.D. student or instructor approval.

CNP 4705 History and Systems of Psychology (3 Credits)

Historical and philosophical basis of modern psychological theories; basic issues as related to major school of psychology.

CNP 4706 Cognitive Assessment (5 Credits)

This course provides students in Counseling Psychology with experience in individual intelligence, learning and memory, and neurocognitive screening test administration, scoring, interpretation, and report writing. Each student has an opportunity to administer various cognitive measures, with particular emphasis on the Wechsler Scales. Contemporary issues pertinent to the assessment of intelligence are covered. Emphasis is placed on synthesizing and integrating information from cognitive assessment with other sources to produce effective intervention and therapeutic recommendations. Issues regarding the use of such tests are discussed, as well as appropriate use in agencies and clinical practice. Lab fee required.

CNP 4707 Introduction to Integrated Health (3 Credits)

This course is designed to provide students with an introduction to issues in the practice of integrated health psychology, including the topics of interprofessionalism, diagnosis and assessment, treatment, treatment adherence, and consultation. Students will learn about the roles held by behavioral health providers, particularly in the primary care medical setting. Emphasis is placed on evidence-based and culturally competent practice in the integrated health environment.

CNP 4710 Career Counseling (5 Credits)

This course is designed to facilitate student development of knowledge, skills and competencies to engage in counseling clients with career issues; utilize occupational/career resources including technology-based resources and assessments; examine theories of career development and decision-making; develop the ability to evaluate and implement appropriate assessments; collaborate with clients in identifying personal and career goals; and organize and implement program planning and techniques and do so in a diversity of work settings. Lab fee required.

CNP 4720 Group Counseling Theory (5 Credits)

This course is designed to introduce graduate counseling students to group counseling theory, research, and practice. This course will focus on group theory and research but will also provide instruction and experiences in a variety of group techniques. The course is designed for students in counseling psychology, school psychology, and other related fields who work with persons in a group context. This course focuses on the entire age range from children, adolescents, and adults. This course aims to define therapeutic groups broadly. Students will learn about group theory, research, and techniques through class lectures and discussion, group demonstrations, videotapes on group topics, reading assignments, a group presentation, an experiential task group, a required paper related to the task group presentation, and other required assignments.

CNP 4730 Research Methods and Program Evaluation (5 Credits)

This course is designed to provide an introduction and overview of comprehensive program development and evaluation, and research methods. The course will provide direction on the following topics: causation, research hypotheses, independent and dependent variables, sampling, internal and external validity, experimental, quasi-experimental, single-subject, causal-comparative, and correlational designs, measurement and data collection procedures, types of instrumentation and methods for determining reliability.

CNP 4740 Basic Counseling Techniques (3 Credits)

Basic counseling and interviewing skills; emphasis on building counseling relationships and facilitating client's self-exploration; skills of empathy, advanced empathy, self-disclosure, confrontation and immediacy.

CNP 4741 Int Counseling Techniques (3 Credits)

Sample of counseling techniques and effectiveness with different types of clients. Prerequisite: CNP 4740.

CNP 4743 Professional Development in Counseling (1 Credit)

Introduction to the field of counseling with special emphasis on practicum placement. Prerequisite: admission to the MA program in counseling psychology.

CNP 4750 Counseling Psychology Beginning Practicum (3 Credits)

Supervised practice in counseling for master's students. Prerequisite: CNP 4740, and be a counseling psychology student.

CNP 4751 M.A. Internship (1-5 Credits)

Yearlong, 600-hour supervised field practice for second-year master's students with weekly seminar. Prerequisites: CNP 4750 and be a counseling psychology master's students.

CNP 4752 Counseling Psychology Advanced Practicum I (3 Credits)

Supervised practice in counseling for doctoral students. Prerequisites: CNP 4750 or prior practicum, and be a counseling psychology student.

CNP 4753 Counseling Psychology Advanced Practicum II (1 Credit)

Group supervised practice in counseling for second-year doctoral students with emphasis on process and countertransference issues. Prerequisite: CNP 4752.

CNP 4754 Couns Psych: PhD Internship (1 Credit)

Meets 12-month internship requirement in counseling psychology. Prerequisites: completion of comprehensive examination and dissertation proposal.

CNP 4755 MA Clinic (5 Credits)

MA clinic is a required course for all students in the 90-credit Clinical Mental Health Counseling Concentration.

CNP 4756 PhD Counseling Clinic (1 Credit)

On-campus, advanced-experience counseling of clients from the community with close supervision and observation. Prerequisite: Doctoral student in counseling psychology.

CNP 4758 PhD Field Experience (8 Credits)

Required 12-month, 40-hour-per-week internship for doctoral students in Counseling Psychology. Registration for this course indicates full-time enrollment. This course is not graded. Prerequisites: completion of comprehensive examination and dissertation proposal. Department approval is required for registration. Fall quarter enrollment must be done in conjunction with CNP 4754.

CNP 4760 School Counseling Practicum (1-4 Credits)

A minimum of 100 hours supervised practice in School Counseling for Master's students in the School Counseling Concentration. Students must be supervised by a licensed school counselor. Enforced Prerequisites: CNP 4740 with a minimum grade of C.

CNP 4761 School Counseling Internship I (1-4 Credits)

100-hour supervised field practice in a school setting for Master's students in the School Counseling Concentration, with weekly seminar. Students must be supervised by a licensed school counselor.

CNP 4762 School Counseling Internship II (1 Credit)

A minimum of 600-hour supervised field practice in a school setting for master's students in the School Counseling Concentration, with weekly seminar. Students must be supervised by a licensed school counselor.

CNP 4768 Counseling Psychology: Social Psychology (3 Credits)

Social Psychology is designed to provide students a broad and general understanding of social psychology. The course will cover aspects of self, cultural dynamics, group processes, emotional/cognitive aspects of social behavior.

CNP 4769 Cognitive Behavioral Therapy (4 Credits)

Cognitive Behavior Therapy (CBT) is a treatment approach that incorporates a multitude of evidence-based strategies to construct an individualized and comprehensive treatment plan for a wide variety of mental/behavioral disorders. CBT has been extensively investigated in both research and applied setting. CBT offers foundational knowledge and skills to provide an active, client involved approach to resolving individual and family challenges. CBT is structured, goal-directed, and focuses directly on client problem areas. Students will practice and develop the skills necessary to implement CBT techniques and strategies.

CNP 4770 Counseling Psychology Seminar: Research (3 Credits)

Review of current process and outcome research in counseling and psychotherapy; substantive issues, including client and therapist variables as well as methodological issues and experimental designs. Prerequisite: doctoral student.

CNP 4772 Diversity Seminar: Psycho-Social Issues (1-5 Credits)

Series of courses to analyze social and psychological impacts of oppression related to minority status, socioeconomic status, gender and family configurations; taught using an awareness and knowledge approach; implications for counseling; series includes general seminar and series of 1 credit follow-up seminars on particular topics, e.g., American Indian mental health, African- American mental health and women's mental health. Prerequisites: CNP 4773 and students must take the 3-credit general seminar prior to the individual seminars.

CNP 4773 Diversity: Multicultural Counseling Psychosocial Issues (5 Credits)

The purpose of this course is to provide an overview of multicultural and social justice issues in the United States. While this is not a skills training course, implications for multicultural counseling skills will also be discussed. Issues and concepts related to gender, race, ethnicity, sexual orientation, gender identity, and social class will be examined within a framework of privilege and oppression. This course is designed to present a general introduction to multicultural and social justice issues as well as culturally responsive counseling. Due to the extensive amount of material in this area, only some selected issues and topics will be presented. Students interested in gaining more specific, or in-depth knowledge of topics covered in this class may pursue the one-credit Counseling Psychology diversity seminars offered in the Counseling Psychology program. Significant emphasis will also be placed on experiential learning and the application of students' awareness and knowledge accrued throughout the quarter.

CNP 4775 Counseling Psychology: Cognitive & Affective Basis of Behavior (3 Credits)

The seminar is intended to enhance students' understanding of the fundamental psychological concepts in cognitive and affective sciences and of the relevance of these theories and concepts to clinical practitioners. This seminar will provide weekly lectures to engage students in core issues surrounding the scientific study of affective and cognitive processes involved in human behavior. Academic inquiry and dialogue will also be fostered through group presentations and discussions of peer-reviewed journal articles and book chapters.

CNP 4776 Family Counseling (3 Credits)

Introduction to family counseling, including survey of major theories and research, and in-class demonstrations of techniques. Prerequisite: advanced master's or doctoral student.

CNP 4778 Health Psychology (3 Credits)

Overview of rapidly expanding field of health psychology; wide variety of topics dealing with role of psychological processes in health and health care; includes impact of stress on physical health, and psychological factors that determine health-related behavior, psychological aspects of delivery of health care, and assessment issues in health psychology.

CNP 4780 Counseling Psychology Seminar: Supervision (3 Credits)

Introduces literature and research on counseling supervision, including awareness of individual differences; provides experience supervising master's level counselors. Prerequisites: doctoral student and CNP 4752.

CNP 4781 Counseling Psychology: Introduction to Psychodynamic Theory (4 Credits)

This class will explore psychodynamic theory, with an emphasis on creating case formulations and practicing an analytic position in the treatment process. We will be focusing primarily on individual treatment with adults in outpatient settings using a developmental lens. You will be encouraged to develop and deepen your capacities for curiosity and self-reflection, in part as they relate to the exploration of countertransference reactions and meaning making. You will be learning both professionally and personally, as they mutually influence one another, what it means to be a psychodynamic clinician.

CNP 4783 Counseling Psychology: Eating Disorders (3 Credits)

This class will offer the opportunity to learn about the diagnosis, assessment, theory, and treatment of eating, weight and shape disorders. While working with clients with eating disorders (EDs) can present unique challenges, we will explore the perception/stigma that these clients are notoriously difficult to treat. We will focus on the importance of integrative treatments, and the role of behavioral, symptom focused techniques in addition to psychodynamic approaches that explore underlying characterological and developmental issues. This class will also consider the impact of culture and media on body image, and the effects of these messages on personal beliefs, attitudes and behaviors.

CNP 4784 Psychopathology (5 Credits)

This course is designed to provide students with a thorough understanding of assessment, diagnosis and classification of psychological abnormalities. Psychopathology is typically characterized by deviance from cultural norms, personal distress, danger to oneself or others, or an inability to function in daily life. We will explore the empirical basis for understanding psychopathology as defined in the DSM 5, as well as, the inherent limitations of the current diagnostic system. Interactions of biological, social, psychological, cultural, political, and environmental factors will be stressed, particularly as they contribute to the development and maintenance of mental disorders. Cultural perspectives on each disorder will be addressed every week to attend to issues of social justice and multiculturalism related to diagnosis.

CNP 4787 Motivational Interviewing (4 Credits)

Motivational Interviewing is a client-centered collaborative style of therapeutic relationship designed to strengthen a person's motivation for and commitment to change. This class will facilitate skill development in managing client ambivalence, eliciting change-talk and honoring the client's autonomy regarding taking steps toward a commonly agreed upon goal.

CNP 4788 Physiological Psychology (3 Credits)

Physiological Psychology is designed to expose students to the field of physiology and highlights its reciprocal relationship with behavior. We will cover topics including the structure and function of the nervous system and areas of research relevant to clinical psychology (e.g., substance abuse, mental illness, and biological rhythms). Given the limited time devoted to each area, more in-depth coverage should be pursued by interested persons.

CNP 4789 Pharmacology of Addictive Behavior I and II (4 Credits)

This class provides a solid base of knowledge about the drugs of abuse including what occurs physiologically with drug use and other addictive behaviors. Additionally, this course explores neuroscience and genetic research on addiction to better understand the changes in the brain that underlie drug use and addictive behaviors.

CNP 4790 Counseling Psychology Seminar: Ethics (3 Credits)

Professional ethics in practice and research in counseling psychology, including informed consent, confidentiality, clients' rights, psychologists' obligations, etc.; basic APA documents. Prerequisite: doctoral student.

CNP 4791 Counseling Psychology Seminar: Counseling Couples (3 Credits)

Introduction to couples counseling, including survey of major theories and research.

CNP 4792 Pro-Seminar in Counseling Psychology (1 Credit)

Introduction to field of counseling psychology required for all first-quarter doctoral students. Prerequisite: counseling psychology doctoral students.

CNP 4794 Counseling Psychology Seminar: Special Topics (1-15 Credits)

Variety of special topics on research and practice in counseling psychology; readings, lectures and projects to provide an in-depth understanding of topics, which vary from to year and cover areas such as counseling women, counseling in business and industry, advanced group therapy, time-limit counseling, vocational counseling, etc.

CNP 4795 Master of Arts Counseling: Legal and Ethical Issues (5 Credits)

Introduction to ethical and legal issues in school and agency counseling for master's students. Prerequisite: Master's student in Counseling Psychology.

CNP 4797 Counseling Addictive Behavior (4 Credits)

Introduction to assessment, treatment and outcome evaluation of chemical and nonchemical addictive behaviors. Requirements include abstinence from a "compulsive" behavior; journaling about one's cognitive, emotional and behavioral reactions during the abstinence period; attending 12-step meetings; participating in a quasi-12-step in class meeting; critiquing a film depicting dynamics of an alcoholic family.

CNP 4799 Infectious Diseases in Addictive Behaviors (2 Credits)

Drug and alcohol abuse and infectious diseases go hand in hand. This class explores the high risk for contracting and spreading infectious diseases among drug abusers. This class helps prepare students to identify such diseases, determine client risk for infection, and educate students about disease prevention and treatment options.

CNP 4800 Consultation (1 Credit)

This course is designed to teach the basic theories of psychological consultation that can be used to guide practice in a variety of settings. Students learn to differentiate process, collaborative and expert consultation. The class format includes presentations from practitioners working in school, medical, forensic, and business settings. In addition, students also learn about the ethical principles that guide their practice and to also become sensitive to how their work with diverse cultural backgrounds may be perceived. Prerequisite: must be enrolled in the Counseling Psychology doctoral program.

CNP 4991 MA Independent Study (1-10 Credits)**CNP 4995 Independent Research (1-10 Credits)****CNP 5771 Counseling Psychology: Doctoral Research Seminar (3 Credits)**

The purpose of this course is to guide students in completing the Dissertation. This is not a research methods course but a course focused on the application of research understandings, knowledge, concepts, and terminology in the design of a dissertation. It is assumed that prerequisite research courses provide students with considerable information, foundational knowledge, and conceptual understandings of both quantitative and qualitative research methodologies and other relevant topics.

CNP 5991 PhD Independent Study (1-10 Credits)**CNP 5995 Independent Research (1-20 Credits)**

Curriculum and Instruction (CUI)

CUI 4020 Introduction to Curriculum (3 Credits)

Introduces curriculum theory and curriculum as a field of study; includes study of issues such as standards, cognition, diversity, ecology, and social justice, among others.

CUI 4021 Models of Curriculum (3 Credits)

Reflects on ways various curriculum orientations may resolve modern issues or problems, with students' independent pursuit of one or two orientations in depth; orientations examined include cognitive pluralism, developmentalism, rational humanism and reconceptualism, among others. Recommended prerequisite: CUI 4020.

CUI 4022 Curriculum Theory into Practice (3 Credits)

Helps students move from theoretical concepts and decisions involved in curriculum development to actual construction of curricula; survey of potential components encompassed in a variety of curricula followed by participation in designing a curriculum as a member of a student team; final facet requires students to develop a curriculum. Prerequisites: CUI 4020 and 4021 or instructor's permission.

CUI 4027 Implementing Curriculum: A Practicum (3 Credits)

Opportunity to experience authentic role of curriculum on site; work at the Denver Zoo, the Denver Museum of Nature and Science, other museums and school sites; to develop and implement curriculum.

CUI 4031 Teaching and Learning (3 Credits)

This course builds the biological and contextual foundations for learning, including brain and cognitive development theory. The course also helps students build a framework for culturally responsive classroom management, including rituals, routines, and relationships with students and families. Students apply cognitive development theory and equitable classroom management strategies to analytical case studies. Course restricted to students in TEP program or instructor approval.

CUI 4032 Analysis of Teaching (3 Credits)

Provides a systematic introduction to the research base that characterizes effective practice and to the array of research methods that can be employed to study teaching and teacher development.

CUI 4033 The Practice of Teaching (3 Credits)

Course explores personal, conceptual, and empirical understandings of "teaching practice." Topics addressed have included: metaphors for teaching practice, best practices for equity and social justice, professional development practices.

CUI 4034 Curriculum & Cultural Context (3 Credits)

This course will address the influence of cultural, political, sociological, and economic factors on curriculum at the instructional, situational, societal, and ideological levels. Students should be interested and willing to explore these issues through readings and discussion. We will be exploring various perspectives, including our own, which inform the discussion on this critical area of education.

CUI 4035 Critical Perspectives in Education (3 Credits)

In this course, students will examine issues related to democracy, power, and privilege in public education. Specifically, students will learn about how anti-democratic groups are working to undermine public education in the U.S. Students will explore White privilege, racism, classism (and other "isms") and the impact they have had and continue to have in public school settings, particularly at schools that serve historically marginalized and oppressed students. Theoretical frameworks such as Critically Relevant Teaching and Critical Race Theory will be introduced in this class as well.

CUI 4039 Transformational Teaching and Learning (3 Credits)

This course takes an exploratory approach to the analysis of transformation teaching and learning. It asks questions such as "What are effective teaching and learning environments?" "For whom and under what circumstances?" "How can we create such environments?" We will explore how patterns of activities in the classroom can be designed to achieve simultaneously all of the major goals of educational reform. The term classroom is not restricted to the physical classroom space but "classroom" in the sense of the organized instructional activities that can extend outside of the school building into the community.

CUI 4041 School and Curricular Reform (3 Credits)

A look into school reform movements, why most fail and only a few succeed.

CUI 4043 Development of Technology Enhanced Educational Environments (3 Credits)

Utilizing emerging Learning Theories and complex Instructional Design Theories, students will move into advanced educational web page development including designing with style sheets and layers. Several customized technology mediated lessons or professional projects will be created for use in practice. Various tools, designed to enhance learning environments, will be explored.

CUI 4046 Technology Leadership (3 Credits)

Explores the role of ethics, values, social, legal, and power issues associated with technology in education. Analyzes how technology is transforming learning, equitable distribution of information, and the implications for providing optimal education to diverse learning populations.

CUI 4047 Humanizing Pedagogies (3 Credits)

This course will provide a foundation in the conceptualization, design, and implementation of a humanizing pedagogy. A humanizing pedagogy is a "revolutionary approach to instruction that ceases to be an instrument by which teachers can manipulate students, but rather expresses the consciousness of students themselves" (Freire, 1970, p. 51). Students in this course will apply their knowledge of humanizing pedagogy to specific content areas, practice, and research through the tenets of a humanizing pedagogy. Moreover, students will explore humanizing literacy and math as fundamental human rights that afford access and equity to historically marginalized communities.

CUI 4050 Research Seminar: Conducting Systematic Reviews (0-3 Credits)

The Curriculum and Instruction (C&I) Research Seminar: Conducting Systematic Reviews (CUI 4050, 3 credits) is the first of a series of courses for doctoral-level students in the Curriculum and Instruction Program. It is also available to students in other programs who would like to learn how to complete a systematic literature review, as well as think about identifying a research problem to address and research purpose.

CUI 4051 Seminar in Dissertation Organization and Design (1-5 Credits)

Individualized assistance in developing the dissertation topic, issue, problem; guidance in preparation for proposal orals and application to the Institution Review Board (IRB), direction for dissertation chapter organization, writing and completion. This seminar is targeted for the student who needs support in completing the dissertation.

CUI 4058 Teacher as Researcher (3 Credits)

Emerging philosophical and methodological issues that arise when school practitioners undertake research within their own sites; range of research traditions including quantitative, statistical research and qualitative methodologies; mastering relevant skills and accessing resources for students to be better prepared to conduct their own inquiries and understand and solve problems.

CUI 4130 Philosophy of Education (3 Credits)

Focuses on 3-4 philosophers and examines the contributions their philosophical ideas have on education. Philosophers studied have included John Dewey, Cornel West, Nel Noddings and Maxine Greene.

CUI 4131 Spirituality in Education (3 Credits)

This course will explore the role of spirituality in education from both the student and educator point of view through an examination of the big questions that are held close to the heart; the ones that guide us toward meaning making in the world. The primary goal of the course is to plumb the depths of spirituality, a deep sense of inner meaning making, that calls us toward a particular profession. The course will focus on the interface between spirituality in education through the lenses of curriculum and instruction.

CUI 4153 Practicum: Curriculum and Instruction (0-5 Credits)

Designed to fit the educational needs of the individual student who may choose from a wide variety of practicum (internship) experiences, including teaching, curriculum development, museum internships or research projects in curriculum and instruction on or off campus. In the case of taking on a paid position, students should consult the Office of Internationalization about their visa status and requirements. Students should work with their advisor before they plan to register in order to get this course in the class schedule when it will be needed.

CUI 4155 Special Topics (1-10 Credits)

Special topics in the field of education.

CUI 4160 Race, Class and Gender in Education (3 Credits)

Ethnicity, Class & Gender in Education applies the concepts and theories of social science disciplines - sociology, social psychology, anthropology, historical perspectives and philosophical orientations - to the inclusive examination of the issues of racism, classism, sexism, and homophobia in education. This course seeks to conceptualize ethnicity, gender and social class as interactive systems, not as separate and independent variables, that impact students, teachers, school systems and the educational enterprise. We examine educational systems and practices that historically have disadvantaged women and peoples of color and discuss strategies and techniques for empowerment of the members of these groups.

CUI 4170 Engaging Learners through the Arts (3-5 Credits)

This seven day institute is designed to engage participants in a challenging exploration of the creative process through workshops with professional artists in the disciplines of dance, visual arts, creative writing, music, and theatre, and to provide a greater understanding of the theory and practical applications of school reform.

CUI 4172 Aesthetic Foundation in Education (3 Credits)

Educational enterprise from aesthetic viewpoints; examination of a number of aesthetic theories and exploration of implications for curriculum, teaching, and evaluation.

CUI 4180 History of Education in the United States (3 Credits)

Traces historical context and development of K-12 schools in the United States from initial discovery of North and South America by Europeans to the present; understanding through examination of central issues that strongly influenced our current educational systems - evolution of schools, religion, social and political reform, women's issues, nationalism and ethnicity, industrialization of the nation and world.

CUI 4310 Supporting Apprentice Teachers (3 Credits)

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn as they learn to create culturally responsive classroom environments and to address the strengths and needs of all students particularly Culturally and Linguistically Diverse (CLD) Learners and students in Special Education. Topics addressed include mentor support for apprentice teachers' planning, teaching of reading and writing, applying a teacher evaluation framework, designing and interpreting formative and summative assessment, using data to inform instruction and differentiation for ELLs and GT identified students.

CUI 4311 Supporting Apprentice Teachers II (3 Credits)

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn about developing unit and lesson plans, literacy (specifically reading), and developing competencies in the evaluative framework for residency or student teaching used in a teacher education program.

CUI 4312 Supporting Apprentice Teachers III (3 Credits)

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn about developing formative assessment plans, literacy (specifically writing), and developing competencies in the evaluative framework for residency or student teaching used in a teacher education program.

CUI 4313 Supporting Apprentice Teachers IV (3 Credits)

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn about using data to inform instruction, differentiating instruction for English Language Learners and Gifted and Talented identified students, and developing competencies in the evaluative framework for residency or student teaching used in a teacher education program.

CUI 4400 Nature and Needs of Gifted Learners (3 Credits)

This course is designed to provide participants with an understanding of 1) conceptual foundations and definitions of giftedness, 2) how intelligence, creativity, and non-intelligence factors are related to giftedness, 3) the nature, development, types, and needs of gifted individuals, 4) principles and issues in the identification of gifted individuals, and 5) the major issues and tensions in the education of gifted and talented individuals. Lectures, discussions, and other class activities and assigned readings and projects will include topics such as the history and nature of the giftedness construct; theories of intelligence and creativity and their relationship to conceptions of giftedness; types of giftedness; the diversity of gifted individuals and their personal and educational needs; the role of identification in the education and development of gifted children and youth; and purposes and perspectives in gifted education.

CUI 4401 Psychological Aspects of Giftedness (3 Credits)

The psychological development of gifted children is examined through a study of current theories, models, research, and case histories. Understanding of psychological development creates a foundation for applications and practices that nurture the psycho-social-emotional development of gifted individuals. Specific topics include the psychological nature and needs of the gifted; perfectionism, stress, and underachievement; special issues for gifted boys and gifted girls; highly gifted; and pertinent theories of psychological development. Emphasis is placed on synthesis of theories and application to specific situations.

CUI 4402 Curriculum for Gifted Learners (3 Credits)

This course is designed to provide participants with an understanding of the conceptual foundations in the design and development of curriculum for gifted and talented students. Includes theories, models and processes for curriculum modification and curriculum design; strategies for adapting educational content, process, product, and learning environment based on the educational characteristics and needs of gifted learners; and curriculum design and development approaches that are effective in the intellectual and personal growth of gifted and talented learners. Content in this course is aligned with appropriate instructional strategies and techniques recommended for use with gifted and talented learners. Lectures, discussions, class activities, assigned reading and projects include topics such as a general overview of curricular principles and perspectives; critical analysis of general curriculum; issues of diversity in curriculum development and modification including cultural congruence; recommended models of curriculum development for gifted and talented learners; and national trends in gifted education.

CUI 4403 Instructional Strategies for Gifted Learners (3 Credits)

This course provides a basic understanding of how to adapt curriculum for gifted learners through various instructional strategies. Strategies studied include: acceleration, enrichment, differentiation, compacting, grouping, independent study, and service learning. By selecting instructional strategies based on assessed learner needs, educators can reach many types of gifted learners in their classrooms including gifted students of poverty and gifted learners of cultural and ethnic diversity. The objectives of this class are that participants: know about and be able to define instructional strategies that meet assessed academic and affective needs of gifted learners and be able to adapt curriculum for gifted learners using learned instructional strategies.

CUI 4404 Twice-Exceptional Students (3 Credits)

The purpose of this course is to acquaint the student with the various areas of exceptionalities typically encountered with gifted students and to provide classroom related techniques to assist the teacher in identifying and working with twice-exceptional children in an effective manner. Environmental, behavioral, motivational, emotional and educational needs are addressed. Legal responsibilities, parent communication and staff development will be emphasized.

CUI 4405 Practicum in Gifted Education (1-3 Credits)

Students wishing to earn credit for the Practicum in Gifted Education must complete an experience in three of the five areas (Teaching, Assessment, Administration, Research, or Policy). Students must submit a Practicum Proposal outlining the intended practicum experiences. This Proposal must be approved by the practicum faculty supervisor when the practicum experiences are begun.

CUI 4407 Current Issues in Gifted Education: Identification (3 Credits)

This course focuses on the screening and selecting of gifted and talented students. It is designed for practicing professionals - teachers, counselors, psychologists, and administrators - who must make decisions about the identification and serving of gifted and talented students. Course uses multiple assessments, both quantitative and qualitative, to identify gifted students within an increasingly diverse population (including culturally- and ethnically-diverse, high-potential, linguistically-different students with unique affective needs as well as high-potential economically-disadvantaged students). Students will use data to diagnose educational needs, prescribe appropriate educational strategies and to incorporate appropriate identification strategies for identifying gifted and talented students. Legal responsibilities and parent communication as well as staff development are emphasized. Students are required to develop an identification model based on relevant theory and current practices to be used in their particular setting. Enforced Prerequisites: CUI 4400 with a minimum grade of C- OR CUI 4401 with a minimum grade of C-.

CUI 4408 Creativity: Theory & Practice (3 Credits)

The essence of innovation is creativity, in thought, process and outcome. Classic and current theories provide a foundation for analysis of the concept of creativity. This course is designed to provide participants with an understanding of 1) the conceptual foundations and definitions of creativity; 2) how intelligence, creativity, and non-intellective factors are related to the constructs of giftedness; 3) documented brain research underlying exceptional cognition and/or creativity; 4) principles and issues in the identification and appropriate programming for creative individuals; and 5) the multiple perspectives and manifestations of creativity. Salon discussion groups, lectures, class activities and assigned readings and projects focus on the history and nature of the construct of creativity, theories of creativity, the role of innovation and transformation, assessment and measurement tools, environmental support of the creative process and creativity, and teaching and learning applications.

CUI 4410 Prog Dev/Ldrshp/Comm Gifted Ed (3 Credits)

This course emphasizes the concepts and practices involved in development and management of school- and district-based programs for the special education of gifted and talented children and youth. The course leads to in-depth understanding of program components and systems, program planning and evaluation, program leadership, advocacy in gifted education, and communications. In addition, emphasis is placed on planning and development of staff development in relation to gifted children. This course includes extensive in-class discussion and field applications.

CUI 4411 Wkshp: Gifted & Talented Educ (1-3 Credits)

This blended course is designed to provide participants with an overview of the education of gifted and talented students. Areas of focus within the course include definitions of gifted and talented learners, gifted learner characteristics, educational/academic and affective/psychosocial needs, common identification methods, and research-based instructional strategies for gifted learners. Course restricted to students in TEP program or instructor approval.

CUI 4412 Culturally and Linguistically Diverse Learners in Gifted Education (3 Credits)

Culturally and Linguistically Diverse Learners have inequitable access to gifted programming, curricula and services; therefore, they do not receive instruction that nurtures their learning talents, culture, and emergent bilingualism. This course is designed to address the needs of the Culturally and Linguistically Diverse (CLD) and the Gifted and Talented (GT) learner. Upon completion of this course, students should be able to meet the approved standards for the English Language Learner Professional Development Pathway. In addition to ELL standards, this course is aligned with state gifted education standards.

CUI 4450 Education and Psychology of Exceptional Children (3 Credits)

Characteristics of students with moderate needs and state criteria used to determine eligibility for special education population.

CUI 4451 Teaching the Exceptional Child (3 Credits)

This course provides a broad overview of the field of exceptionality and special education. Included are discussions of current issues and controversies in the field, characteristics, classification, diagnosis, and educational interventions for early childhood and school-aged children with high-incidence and low-incidence disabilities who have exceptional education needs. This course also explores the characteristics of students with various disabilities, the history of Special Education, The Individuals with Disabilities Education Act (IDEA) and its current implications, the Response to Intervention Model (RtI) and the Individualized Education Plan (IEP). Prerequisite: CUI 4450.

CUI 4452 Low Incidence Disabilities and Behavior Intervention (3 Credits)

This course reviews a wide range of neurodevelopmental disorders and low-incidence disabilities including fragile X syndrome and Fetal Alcohol Syndrome, along with syndromes associated with chromosomal deletions. Implications for assessment and intervention are outlined including diagnostic criteria, prevalence and treatment. Research on identification and treatment including state of the art interventions and assistive technology are addressed. This class also addresses theories, research, effective practices, and background information needed to implement successful behavior intervention programs for whole classroom management and for students identified with behavioral needs. Prerequisites: TEP 4010 and CUI 4451.

CUI 4453 Curriculum Adaptations and Assessments for Children with Disabilities (3 Credits)

This course applies theories, research, effective practices, and background information for assessment for students with disabilities, monitoring student academic progress, and transition planning for students exiting K-12 schools.

CUI 4455 Assessment of Students with Special Needs (3 Credits)

Theories, research, effective practices and background information needed to develop, implement, analyze, and apply assessment data for mild/moderate-needs students.

CUI 4457 Behavior Intervention (3 Credits)

Theories, research, effective practices, and background information needed to implement successful behavior intervention programs for mild/moderate-needs students.

CUI 4459 Curriculum, Collaboration, and Transitions in K-12 Schools (3 Credits)

Knowledge, techniques to develop independent skills for K-12 moderate/mild-needs students and transitions across grade levels.

CUI 4500 Elementary Literacy: Theory and Practice I (1-3 Credits)

This course provides an introduction and overview to the many components that make up a quality balanced literacy program. During the course students will analyze current research and theory in reading and writing instruction. This course will use students' classroom placements to create a foundational understanding on which to build solid literacy philosophy as well as instructional ideas and strategies.

CUI 4501 Elementary Literacy: Theory and Practice II (1-3 Credits)

This course is an extension of Elementary Literacy I and concentrates on the continued development of theories and practical strategies for teaching literacy in diverse classrooms. This course will supply K-6 teachers with the skills to assess student abilities, select appropriate instructional strategies, and design effective instructional programs that lead to increased listening, speaking, reading and writing achievement of all children.

CUI 4502 Elementary Science and Social Studies Methods for Cultural Linguistic Diversity (3-4 Credits)

This course will enable students to develop a deeper understanding of science and social studies content and curriculum in the elementary classroom. Students will explore a range of instructional materials and develop teaching strategies with the guidance of state content standards and research on effective classroom instruction for culturally and linguistically diverse students. This course will revolve around discussion of key questions in the following eight areas: The Role of Social Studies and Science; Instruction; Standards; Content Knowledge; Curriculum Integration; Technology; Culturally Responsive Pedagogy; Sheltered Instruction. Course restricted to students in TEP program or instructor approval.

CUI 4503 Elementary Math Methods for Culturally and Linguistically Diverse Learners (3,4 Credits)

This course prepares students for mathematics instruction in elementary classrooms. We will study theories of learning, the development of children's mathematical thinking, and research-based instructional practices in mathematics. Students will solve mathematical problems using a variety of methods, practice giving math lessons, engage in continuous instructional improvement activities, grapple with issues of equity—race, class, gender, ability, and the intersections therein—as they pertain to math teaching and explore digital resources related to teaching math for understanding. Course restricted to students in TEP program or instructor approval.

CUI 4504 Elementary Math, Science, and Social Studies Methods Cultural Linguistic Diversity I (3 Credits)

This course is the first of a two-course study that will prepare students to develop a deeper understanding of math, science and social studies content and curriculum in the elementary classroom as guided by Colorado Model Content Standards and research on effective sheltered content instruction for culturally and linguistically diverse students. Pre-service teachers will develop an understanding of how students in the elementary grades construct meaning through active engagement in purposeful learning opportunities.

CUI 4505 Mathematics across the Content Areas (2,3 Credits)

In this class, prospective secondary teachers study fundamental mathematical ideas and how they apply to various real-world settings. For instance, students may explore the mathematics of gerrymandering and map projections. Students will also engage in mathematical practices such as argumentation and justification. Finally, students will learn about inquiry-based approaches to teaching that they can use in their secondary classrooms with their students.

CUI 4506 Mathematics for Elementary School Teachers I (2,3 Credits)

In this class, prospective elementary school teachers experience an in-depth look at the representations of rational numbers, including base-ten and decimal numbers, integers, fractions, and arithmetic operations on these sets. Problem solving is emphasized throughout. Students also learn about inquiry-based approaches to teaching that they can use in their classrooms with their students.

CUI 4507 Mathematics for Elementary School Teachers II (3 Credits)

In this class, prospective elementary school teachers study fundamental mathematical ideas typically taught in grades 5-8. Students learn about visualization and its importance in geometry. Students study geometric shapes and solve a variety of problems involving geometric shapes. In addition, students learn some fundamental ideas of measurement and study length, area, volume, dimension, error and precision. Students also solve problems involving area, learn about solid shapes, and solve volume and surface area problems. Finally, students learn about inquiry-based approaches to teaching that they can use in their classrooms with their students. Prerequisite: CUI 4506.

CUI 4508 Mathematics for Elementary School Teachers III (3 Credits)

In this class, prospective elementary school teachers study fundamental mathematical ideas typically taught in grades 5-8. Students learn about visualization and its importance in geometry. Students study geometric shapes and solve a variety of problems involving geometric shapes. In addition, students learn some fundamental ideas of measurement and study length, area, volume, dimension, error and precision. Students also solve problems involving area, learn about solid shapes, and solve volume and surface area problems. Finally, students learn about inquiry-based approaches to teaching that they can use in their classrooms with their students. Prerequisites: CUI 4506.

CUI 4509 Mathematics for Middle School Teachers (3 Credits)

Mathematics education for middle school teachers. Meets Common Core State Standards.

CUI 4511 Secondary Literacy: Reading and Writing Across Content Areas I (3 Credits)

This course is the first of a two-course study that is designed to give secondary Residents an introduction to best practices in content area literacy instruction for in 6-12 classrooms. In support of the instructional shifts presented by the Common Core State Standards, Residents will explore the rationale behind instructional strategies for literacy instruction in the content area classrooms, as well as examine tools and techniques for teaching students to become strategic readers and writers as they model their own thinking and scaffold students' use of strategies for content area literacy.

CUI 4512 High School Mathematics from an Advanced Perspective (3 Credits)

High School mathematics education. Meets Common Core State Standards.

CUI 4513 Elementary Math, Science, and Social Studies Methods Cultural Linguistic Diversity II (3 Credits)

This course is an extension of the Autumn quarter session and will prepare students to develop a deeper understanding of math, science and social studies content and curriculum in the elementary classroom as guided by Colorado Model Content Standards, Next Generation Science Standards and research on effective sheltered content instruction for culturally and linguistically diverse students. Pre-service teachers will develop an understanding of how students in the elementary grades construct meaning through active engagement in purposeful learning opportunities.

CUI 4514 Secondary Literacy: Reading and Writing Across Content Areas II (3 Credits)

This course is an extension of the Autumn quarter session. In this course, Residents will deepen their knowledge of the English language and linguistics, through an analysis of socio and psycholinguistics, as well as rigorous practice in grammar, syntax and semantics. As Residents gain a more practical understanding of the complexities of the English language, they will be better able to support their English Language Learners. This course addresses the following Common Core State Standards: L1: Demonstrate command of the conventions of standard English grammar and usage when writing or speaking L3: Apply knowledge of language to understand how language functions in different context to make effective choices for meaning or style, and to comprehend more fully when reading or listening. W4: Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.

CUI 4521 Urban Education II: School, Student, Family and Community Influences on Student Learning (2-4 Credits)

This course will consider how teachers are able to foster meaningful connections between the educational goals of the schools and the personal and cultural experiences of young people. Students will study the child in relation to family, school, and community, as well as the relationships between teacher and pupil. We will emphasize the cultural complexity of an urban society and pay special attention to ways that curriculum, language, and literacy affect school success.

CUI 4527 Supporting English Language Learners and Students with Special Needs Across Content Areas (3 Credits)

This course evaluates similarities and differences in theory, methods, approaches, and techniques in meeting the needs of diverse learners including English Language Learners, special needs, and/or gifted. Differentiated instruction, Sheltered instruction, and Response to Intervention (RTI) are key methodologies in meeting needs of diverse learners.

CUI 4529 Foundations of Education for Culturally and Linguistically Diverse Learners (3 Credits)

This course will examine the essential knowledge and orientations educators must possess to effectively meet the needs of culturally and linguistically diverse (CLD) learners through the analysis of historical, political, ethical, and legal foundations of language education in the United States. This course will explore the immigrant experience and the experience of CLD learners in schools in order to understand how the psychosocial aspects of the immigrant experience can impact second language learning. Course restricted to students in TEP program or instructor approval.

CUI 4530 Second Language Acquisition (1-3 Credits)**CUI 4531 Language Development and Strategies for Culturally and Linguistically Diverse Learners (3,4 Credits)**

This course will evaluate methods, approaches, and techniques in language teaching. This course will also explore classroom strategies and practices for content-area instruction through sheltered instruction, and socio-cultural context of second language acquisition in U. S. public schools including how teachers can support bilingualism, multilingualism, biculturalism, and multiculturalism in the mainstream classroom. Furthermore, this course will explore the needs of special education and gifted culturally and linguistically diverse learners.

CUI 4532 Culturally Responsive Pedagogy (3,4 Credits)

This course examines the intricate web of variables that interact in the effort to create culturally responsive pedagogy. It examines the need and establishes a definition for culturally responsive pedagogy; and includes an examination of one's conception of self and "others;" conception of social relations; and conception of knowledge teaching and learning in a culturally diverse context. Furthermore, it cultivates the practice of culturally responsive teaching as well as explores the reality of implementing cultural responsive pedagogy in an era of standardization. In sum, this course helps practicing teachers acquire the dispositions, cultural knowledge, and competencies to adapt their curriculum and instructional skills for culturally responsive classroom practice.

CUI 4536 Language and Cultural Issues in Assessment and Instruction (3-4 Credits)

This course expands the educators' knowledge of the connection between data-based instruction and assessment. Educators assess student learning by utilizing strategies that provide continuous feedback on the effectiveness of instruction. Educators learn informal and formal assessment practices that promote student learning and achievement. Educators develop knowledge and understanding of initial assessment of culturally and linguistically diverse learners' skills and abilities in order to provide appropriate placement and instruction. Educators utilize native language tests to promote adequate placement/transition of students. This course also helps educators develop a framework to analyze and develop culturally responsive assessment practices in order to improve student achievement. Finally, this course integrates Response to Intervention (RTI) strategies to improve student assessment.

CUI 4538 Literacy and Language Development for Culturally and Linguistically Diverse Learners (3,4 Credits)

Attaining age-appropriate English literacy skills poses many challenges to culturally and linguistically diverse (CLD) learners. Educators must therefore develop proficiency in effective literacy instruction for CLD learners. Effective literacy instruction includes a repertoire of teaching practices designed to scaffold literacy and language across the content areas, and culturally relevant curriculum as an essential component to support the achievement of CLD learners. This course will focus on helping educators gain the necessary skills, orientations, and competencies to advance the literacy of CLD learners through linguistic and cultural knowledge.

CUI 4540 Curriculum, Instruction and Assessment: Theory and Practice I (1-3 Credits)

This course explores the theoretical underpinning and practical application of curriculum design. Students design their own curriculum unit aligned to standards, essential questions, big understandings, and social justice themes. Course restricted to students in TEP program or instructor approval.

CUI 4541 Curriculum, Instruction, and Assessment: Theory and Practice II (1-4 Credits)

In this course, apprentice teachers will explore the theoretical underpinnings and practical application of data and assessment. This course will build essential knowledge and skills in school and classroom assessments, research methodology, and equity in assessment practices. Students will design a series of assessments aligned to unit goals. Course restricted to students in TEP program or instructor approval.

CUI 4542 Curriculum, Instruction, and Assessment: Theory and Practice III (1-4 Credits)

This is the third and final quarter of an academic year-long weekly seminar to foster reflective, research-based classroom practice. Teacher candidates will deepen their understanding of teaching and learning in contemporary schools through a guided teaching apprenticeship with a trained mentor teacher, focused observations of a myriad of classrooms, readings, interviews, discussions, critical writing, and presentations. Course restricted to students in TEP program or instructor approval.

CUI 4544 Ed Psych: Exceptional Child (1-3 Credits)

The focus of this course is on educating children and adolescents with special needs in the general education classroom. The intent is to enable future educators to better serve the needs of these children in their classrooms. Topics such as the special education process, information on specific disabilities, accommodations and modifications, behavior issues, mental health, and communicating with parents will be addressed.

CUI 4600 History and Philosophy of STEM Education (3 Credits)

The goal of this course is to help future Science, Technology, Engineering, and Mathematics (STEM) education leaders understand the historical trajectory of public education in relation to the larger sociopolitical forces of American history. Two premises guide this course: 1. Social and political conditions in society exert intense pressure on STEM fields and STEM education, which poses significant challenges to STEM education leaders. 2. Education in general – and STEM education in particular – are political, economic, and social endeavors that reflect social arrangements. This course will enable students to view their specialization as part of a complex and larger milieu; that is the U.S. educational system.

CUI 4610 Learning & Teaching of STEM (3 Credits)

In this course, students will be introduced to foundational research literature on learning and teaching in STEM education. The research introduced will focus extensively on theories of learning and how these theories are influencing P-16 STEM curriculum, instruction and assessment. The literature base introduced is foundational to research conducted in STEM education.

CUI 4620 Research on Diversity, Equity, and Social Justice in STEM Education (3 Credits)

The goal of this course is to help future STEM education leaders understand the current context of issues of diversity, equity and social justice in STEM education and explore its implications for access and opportunity for traditionally marginalized students. Two premises guide this course: 1. Social and political conditions in contemporary society exert intense pressure on STEM fields and STEM education. 2. Education in general – and STEM education in particular – are political, economic, and social endeavors that reflect social arrangements. This course will enable students to view their specialization as part of a complex and larger milieu; that is the U.S. educational system.

CUI 4640 Improving STEM Instruction (3 Credits)

For as long as the United States has implemented public education—well over 100 years—many features of schooling have stayed the same. Despite waves of curricular and policy reforms, widespread anxiety over student achievement (especially in comparison to other countries), and concerted efforts to “disrupt” education, many elements of teaching and learning persist. In STEM education, especially, scholars and practitioners have been advocating for the same things for decades: teaching for conceptual understanding, using rich tasks that encourage student collaboration, incorporating discourse in the classroom, and supporting students to engage in STEM practices like proof, argumentation, and the scientific method. We know that these things can support meaningful student learning. But most K-12 STEM classrooms are centered on memorization and standardized testing. Why is it so hard to change? The short answer: It’s complicated. In this course, students will critically examine various instructional improvement efforts, identifying both the ways in which these efforts are potentially productive and potentially destructive. We’ll juxtapose these efforts with relevant research on teacher learning and organizational change in order to critique reform efforts. Ultimately, students will become more critical consumers of instructional improvement efforts and will be better prepared to translate research into practice. Although STEM is the focus of this class, the overarching ideas of the course are applicable to many other subjects.

CUI 4690 Field Experience: Curriculum & Instruction (3 Credits)

This course provides students with an authentic field experience for those pursuing a degree in Curriculum & Instruction. Field Experience in Curriculum & Instruction is an off-campus, experience taken throughout the coursework plan. Field Experience is designed to broaden one’s professional skills and is considered a critical transition of substantial growth. Field Experience is a hybrid on-line and face-to-face seminar that is designed to facilitate case analysis, ongoing self-reflection, and to provide peer consultation and professional feedback relevant to best practices. The Field Experience is considered a critical professional transition to help consolidate learning and professional competencies in preparation for employment. All students engage in weekly experience seminars (either on-line or face-to-face) facilitated by a University Supervisor. Supervision is designed to provide ongoing professional feedback, case analysis, peer consultation, and continued professional development and experiences pertinent to successful practice. This course promotes the idea that educators are lifelong learners and regularly reflect on and adjust their practice.

CUI 4700 Foundations of Education: Cognitive Theory I (3 Credits)

Introduction to cognitive research in education. Includes theories and research regarding the implementation of these theories in specific curricula.

CUI 4710 Foundations of Education: Cognitive Theory II (3 Credits)

Second course in cognitive research in education. Includes theories and research regarding the implementation of these theories in specific curricula. Prerequisite: CUI 4700.

CUI 4720 Discourse in the Mathematics Classroom (3 Credits)

The study of discourse as it relates to mathematics teaching and student learning.

CUI 4730 STEM and Instructional Technology (3 Credits)

The goal of this course is to help students understand the role of technology in teaching and learning, particularly in Science, Technology, Engineering, and Mathematics (STEM) courses. Three premises guide this course: 1) Technology offers great potential for innovation in education, but it also can be dangerous if used inappropriately and indiscriminately; 2) Social and political conditions in society exert intense pressures on technology in STEM education, which poses significant challenges to STEM education leaders; and, 3) Education in general – and STEM education in particular – are political, economic, and social endeavors that reflect social arrangements. This course will enable students to view their specialization as part of a complex and larger milieu; that is the U.S. educational system.

CUI 4740 Policy and STEM Education (3 Credits)

In this course, students will be introduced to and explore a range of educational policies and how those policies have influenced and continue to influence Science, Technology, Engineering, and Mathematics (STEM) education. A particular focus of the class will be the underlying ideologies of policies that have had a strong influence on the development of curriculum and research in STEM education. Students will learn how to critique educational policies in general and policies that have influenced STEM education in particular. Students will also develop a policy brief that is specific to some area of STEM education that they will publicly disseminate.

CUI 4991 MA Independent Study (1-10 Credits)**CUI 4995 Independent Research (1-10 Credits)****CUI 5980 Research as Problem Analysis (3 Credits)**

This course is the first of three culminating research courses for students in the Ed.D. in Curriculum and Instruction. This course is designed to guide candidates through the doctoral proposal process and introduce the initial stages of data collection and analysis.

CUI 5981 Research as Intervention (3 Credits)

This course is the second of three culminating research courses for students in the Ed.D. in Curriculum and Instruction and is designed to help candidates finish collecting their data and analyze their data. This course will also introduce and develop the evaluation or analysis section of the doctoral paper and the beginning steps of the dissemination of the research project.

CUI 5982 Applied Research (3 Credits)

This course is the final of three culminating research courses for students in the Ed.D. in Curriculum and Instruction and is designed to help candidates disseminate their project, reflect on their project, and defend their project. This course is specifically focused on writing the quasi-practical section of the doctoral paper and the dissemination of the research project to the community partner.

CUI 5983 Defense of Research (1 Credit)

This course will build on the "persistent problems of practice" and research questions identified in CUI: 5980, data collection and analysis in CUI 5981, and applied research skills in CUI 5982. By the end of the course you will be able to schedule and present your doctoral research project for defense. Completion of CUI: 5982 "Research as Applied Research" or permission of the instructor.

CUI 5991 PhD Independent Study (1-10 Credits)**CUI 5993 Dissertation in Practice (1-4 Credits)**

Doctoral research credits for doctoral research project toward the EdD. Prerequisite: Must be an EdD student in C&I; must have completed C&I doctoral research courses (CUI 5980, CUI 5981, and CUI 5982).

CUI 5995 Independent Research (1-10 Credits)

Economics (ECON)

ECON 3040 Marxian Political Economy (4 Credits)

An exposition of Marx's theory of value through a detailed reading of Capital, vol. I. Excerpts from other readings by Marx, and some of the relevant secondary literature used. Restriction: junior standing. Prerequisite: ECON 2020 or ECON 2030.

ECON 3075 Marxism (4 Credits)

This course is a survey in the theoretical and political work influenced by the writings of 19th century philosopher and economist, Karl Marx. The course covers both the historical traditions in Marxism in the 19th, 20th, and 21st century as well as the geographical traditions of these time periods in France, Germany, England, Italy, Russia, China, and America. It is not necessary that students have a prior background in Marx's work, but it is highly recommended. Requires junior standing or above. Cross listed with PHIL 3075.

ECON 3110 European Economic History (4 Credits)

The emergence of capitalism from feudal society; the Industrial Revolution, English capitalism; European industrialization; state and economy in capitalism; 20th-century Europe and the global economy. Restriction: junior standing. Prerequisite: ECON 2020 or ECON 2030.

ECON 3460 Monetary Theory and Policy (4 Credits)

Studies the interaction between money and the economy. Examines the workings of the financial institutions and how they affect the economy. Looks at the questions of what serves as money, what determines interest rates, and how the central bank conducts monetary policy and its effect on the performance of the economy. Restriction: junior standing. Prerequisite: ECON 2030.

ECON 3480 Money & Financial Markets (4 Credits)

Examines workings of the money and financial markets and their relation to the monetary system and to the macroeconomy. Restriction: junior standing. Prerequisite: ECON 2020 or ECON 2030.

ECON 3500 Economic Development (4 Credits)

Careful re-examination of the works of the prominent development economists of the immediate postwar decades to critically shed light on the treatment of topical development problems by modern economists. Restriction: junior standing. Prerequisite: ECON 2020 or 2030.

ECON 3590 Urban Economics (4 Credits)

Covers topics and issues of economic growth and decline in metropolitan areas, emphasizing urban economic issues. A broad range of policy areas is discussed, including labor market policy, welfare reform, housing policy, racial segregation, transportation, and environmental policy, among others. Restriction: junior standing. Prerequisite: ECON 2020 or 2030.

ECON 3600 International Monetary Relations (4 Credits)

Theory, policy, and history of international organization of money and finance; open-economy macroeconomics: balance of payments, exchange rate dynamics, monetary policy effectiveness. Cross-listed with INTS 3600. Restriction: junior standing. Prerequisite: ECON 2030.

ECON 3610 International Trade Theory & Policy (4 Credits)

Examines topical trade issues confronting the United States, policies proposed to tackle them, and the theoretical underpinnings of these policies. Studies how those policies could affect the less developed countries as determined by the environment established under the World Trade Organization. Prerequisite: ECON 2020 or 2030. Recommended: ECON 2610.

ECON 3620 Philosophical Perspectives on Economics and Social Sciences (4 Credits)

This course provides an advanced survey of conceptual and methodological issues that lie at the intersection of philosophy, economics, and the social sciences. More specifically, the main goal is to engage in a critical discussion of how sciences such as psychology, sociology, and neuroscience can challenge and modify the foundations and methodology of economic theories. The course is structured around three broad modules. After a brief introduction, we begin by discussing the emergence of rational choice theory which constitutes the foundation of classical and neoclassical economics and present some paradoxical implications of expected utility theory. The second module focuses on the relationship between economics and psychology. More specifically, we examine the emergence of behavioral economics, the study of the social, cognitive, and emotional factors on the economic decisions of individuals and institutions and their consequences for market prices, returns, and resource allocation. Finally, the third module focuses on the implications of neuroscience on decision making. We discuss some recent developments in neuroeconomics, a field of study emerged over the last few decades which seeks to ground economic theory in the study of neural mechanisms which are expressed mathematically and make behavioral predictions.

ECON 3740 Health Economics (4 Credits)

This course is designed to study the nature of the organization of health care production, delivery and utilization according to economic theory. It introduces the up-to-date problems and issues in the U.S. health care system by studying demand for and supply of health care services, health care production and costs, and market analysis of health care industry. Important parties playing roles in health care industry such as private health insurance firms, physicians, pharmaceutical industry, and hospital services will be studied in detail. In addition, the course deals with the role of government in health care industry and various health care reforms proposed in the U.S. Restriction: junior standing. Prerequisite: ECON 2020 or 2030.

ECON 3830 Topics in Macroeconomics (4 Credits)

Coverage varies but may include advanced topics in monetary theory, the study of business cycles, or the works of important monetary and macroeconomic theorists. Restriction: junior standing. Prerequisite: ECON 2030.

ECON 3900 Growth, Technology and Economic Policy (4 Credits)

This course will introduce students to the important issues related to technological change and how it relates to economic growth. The lectures seek to explain how technology and innovation determine growth and development with special emphasis on learning-by-doing, organizational capability, appropriation and spillover effects. The core topics that will be covered include: (1) origins of new technology and its market introduction, (2) the process of technological adoption and advancement, (3) the dissemination of technology and innovations within and cross firms, industries and countries, (4) the impacts of technological change, including benefits and costs, on individual and society at large and (5) policy implications to promote innovation and to reduce its negative effects. The rest of the course will focus on the relationship of technological change to human development, social welfare, as well as prior experiences of industrialized economies and emerging economies. Prerequisites: ECON 2020 and junior standing.

ECON 3970 Environmental Economics (4 Credits)

This course examines economic perspectives of environmental and resource problems, ranging from peak oil, food crisis, and climate change. Topics include the property-rights basis of polluting problems, environmental ethics, benefit-cost analysis, regulatory policy, incentive-based regulation, clean technology, population growth and consumption, and sustainable development. Restriction: junior standing. Prerequisite: ECON 2020.

ECON 3991 Independent Study (1-8 Credits)

Prerequisites: ECON 1030.

ECON 3995 Independent Research (1-4 Credits)

This research project is based on a topic that the student picks in consultation with the chair of the economics department. During the consultation process a faculty supervisor is assigned to work with the student throughout the research process. The topic is preferably one that requires the student to demonstrate her/his ability to apply what he/she has learned in the intermediate-level required courses for the economics major. Restriction: senior standing.

ECON 4020 Adv Macroeconomic Theory (4 Credits)

Determinants of national income and its components and of the level of employment and the general price level; also examines business cycles and alternative macroeconomic theories.

ECON 4030 Advanced Microeconomic Theory (4 Credits)

The course covers a broad range of topics in mainstream microeconomic theory, which is based on individual maximizing behavior under constraints. Topics include Games and the role of institutions, General Equilibrium Theory, Externalities, and Incomplete Contracts, and more. The focus of the class is twofold: to understand the modeling foundations and underlying assumptions, and the limitation they imply; and to gain competence working through microeconomic models to evaluate their implications in terms of economic efficiency, social welfare, and distribution.

ECON 4050 Origins of Modern Economics (4 Credits)

This course covers the development of economic theory from the decline of the classical school through the emergence of the Keynesian theory and investigates in detail the structure of the neoclassical theory and the degree to which Keynesian economics provides an alternative. We examine why economists thought that certain theoretical frameworks were better than others and what problems still remain.

ECON 4670 Econometrics: Multivariate Regression Analysis for Economists (4 Credits)

This course develops the theoretical foundations of ordinary least squares (OLS) regression analysis and teaches students how to specify, estimate, and interpret multivariate regression models. Students have to apply what they have learned using a popular software package used for econometrics and real data. Special topics also covered include regression models that include dummy variables, log-linear models, fixed effects models, a brief discussion of instrumental variables, and an introduction to time-series analysis and forecasting. Cross-listed with ECON 3670.

ECON 4850 Mathematics for Economists (4 Credits)

Graduate level equivalent of ECON 3850.

ECON 4980 Internship (0-1 Credits)

Students doing an internship and writing an impact assessment report based on their work to demonstrate their understanding of economic theory relevant to the analysis and assessment of social policy to satisfy a MS in Economics and Social Policy degree requirement take this course. This course may also be taken for zero credit by students enrolled in the MA in Economics program who do a degree-related internship. Students must complete one 3000-level ECON course with a passing grade prior to enrollment in ECON 4980.

ECON 4991 Independent Study (1-10 Credits)**ECON 4993 Thesis Topic Development and Defense (4 Credits)**

This resembles an independent-study where a student will work under the supervision of a professor. The aim is to encourage the student, as s/he completes a certain number of hours of course work, to actively formulate and develop her/his thesis topic, and to formally present and defend it in a thesis workshop scheduled by the Department. A minimum of 20 credit hours of graduate-level course work must be completed. Instructor's permission required.

ECON 4994 Comprehensive Exam (1 Credit)

Students taking the comprehensive exam scheduled by the department that tests their understanding of economic theory relevant to the analysis and assessment of social policy to satisfy a MS in Economics and Social Policy degree requirement take this course.

ECON 4995 Independent Research (1-10 Credits)

Emergent Digital Practices (EDPX)

EDPX 4000 Digital Design Concepts (4 Credits)

An introductory course requiring conceptual, perceptual and manual skills to meet rigorous studio research into the history of mark-making, letter forms and layout designs as reflective of cultural, social, political and psychological contexts of interpretation. This class also emphasizes 2-D principles of design, including form, structure, conceptual understanding, visual aesthetics, semiotics, organizational systems, relationships of typography and imagery. Lab fee.

EDPX 4010 Emergent Digital Tools (4 Credits)

This course serves as a primer on the tools essential to expression, sharing, and creation in digital mediums. This includes knowledge of web technologies, creative coding, video, audio, and the basic historical and theoretical contexts of each. Lab fee.

EDPX 4020 Emergent Digital Cultures (4 Credits)

This course familiarizes students with current crucial approaches to understanding digital media and the impacts these media have in personal, community, cultural, social, institutional and international life. The course pays particular attention to cultural constructions of emergent digital media and practices. This course introduces graduate students to a variety of disciplinary lenses and conceptual practices, with readings and research ranging from media theory and studies, philosophy of technology, media archaeology and history, to science fiction studies as approaches to digital media and cultures.

EDPX 4100 Programming for Play (4 Credits)

This course offers an introduction to the creation of games and playful interactive objects. Students explore the space of socially conscious and humane games as well as investigate the creation of compelling interfaces and interactive opportunities. Cross listed with EDPX 3100. Prerequisites: EDPX 4000 and EDPX 4010, or permission of the instructor.

EDPX 4112 Rapid Physical Game Design & Prototyping (4 Credits)

This course is a rigorous investigation into games, rules, systems, interaction, collaboration, and the iterative design methodology through the rapid creation of large, human scale, "Big Games." The ambition is for students, working in changing collaborative groupings, to rapidly create games in response to varying material and conceptual constraints. Participants will both create and constructively critique games created by classmates. Participants are expected to become reflective in their play. Class time will be devoted to play-testing and discussion. Prerequisite: EDPX 4000. Lab fee.

EDPX 4200 Data Visualization (4 Credits)

This course explores the creation of informational graphics for visual unpacking of relationships within and among data sets. Students learn to visualize large data sets as a means of revealing and exploring patterns of information. Creating interactive visualizations is also covered, allowing for deep and participatory engagement with information. The resulting mediums include print and web. Lab fee. Cross listed with EDPX 3200. Prerequisites: EDPX 4000 and EDPX 4010 or permission of the instructor.

EDPX 4210 Typographic Landscapes (4 Credits)

This class is a rigorous investigation of the expressive potential of typography as a crucial element of visual expression and electronic media. This class presumes no background in typography. Students are guided through project-based explorations that range from hand-rendered inter-letter spatial relationships to the typesetting of modest sets of pages for paper and e-books. Lab fee. Prerequisite: EDPX 4000 or permission of the instructor.

EDPX 4270 Making Networked Art (4 Credits)

In this course networked art is understood in the broadest sense from art that natively exists on digital networks to art that critiques and engages with the concept of the network in contemporary society. This course aims to develop a critical understanding of and response to the social, cultural, aesthetic and technical contexts of network culture, building on a deep understanding of contemporary and historical networked art practices. Students will engage with network architectures and platforms developing experimental approaches to user interface and interaction, deploying a range of digital materials from data to rich multimedia content to create work that produces new understandings of the role of the network in a post digital age. Prerequisite: EDPX 4250, or permission of the instructor. Lab fee. Crosslisted with EDPX 3270.

EDPX 4310 Tangible Interactivity (4 Credits)

Explores methods and devices for human-computer interaction beyond the mouse and keyboard. Students learn to create and hack electronic input and output devices and explore multi-touch augmented reality, and other forms of sensor-based technologies. Lab fee. Prerequisite: EDPX 4010 or permission of the instructor.

EDPX 4320 Interactive Art (4 Credits)

This course expands the concepts, aesthetics, and techniques critical to the exploration and authoring of interactive art. It explores human computer interactions; user/audience interface design/development; interactive logic, author-audience dialogue; meta-data/multimedia asset acquisition and authoring environments. While utilizing students' skills in numerous media forms, the class focuses on sensing, interactive scripting techniques, and emerging forms of digital narrative. Emphasis is on the development of interactive media deployment and distributions ranging from screen media to physical environments. Lab fee. Cross listed with EDPX 3320. Prerequisites EDPX 4310 or EDPX 4450.

EDPX 4330 Advanced Coding (4 Credits)

This course is focused on text-based creative coding for multiple purposes. Specific applications change each quarter and can include mobile apps, computer vision, machine learning, generative art, programming reactive spaces, web animation, and other emerging ideas, all driven by creative coding. Prerequisite: EDPX 4010.

EDPX 4340 Designing Social Good (4 Credits)

This course focuses on interdisciplinary approaches to artistic, scholarly and cultural methods for creating change in contemporary societal mindsets for a more sustainable and equitable future. Our objectives are to understand how current practices are reinforced and to then make experiences that encourage new ideas in the personal and global sphere. Lab fee. Cross listed with EDPX 3340. Prerequisites: EDPX 4000 and EDPX 4010.

EDPX 4350 Sustainable Design (4 Credits)

This course reviews and implements advanced sustainable design strategies as a praxis intersecting the domains of digital media design, dissemination, community organization and networking. The course builds upon the basic paradigms that have coalesced in the organizational and critical platforms of the sustainable design movement including ecology/environment, economy/employment, equity/equality and education/pedagogy/dissemination. The class reviews a wide spectrum of sustainable design strategies including: mapping of consumptive origin-thru-fate, green materials usage, creative commons, open source software/hardware movements, collaborative design, predictive complexity modeling, biomimicry, evolutionary design methods, and greening infrastructure, among others. Lab fee. Prerequisite: EDPX 4000 and EDPX 4010 or permission of the instructor.

EDPX 4370 Biomedica in Emergent Digital Practices (4 Credits)

The graduate section of Biomedica is an EDP advanced art-science course that will survey and investigate the interplay between new media, biological systems/ technologies and bioethics as they relate to creative inquiry at the juncture of life sciences, digital media and contemporary technoculture. The course will build upon the basic paradigms and platforms of biosemiotics and biomimetics to expand into a coverage of our framing of corporeality, biological/environmental sensibilities and our perceptions and interconnections with biomaterials and lifeforms that we exist thru and within. Course topics will adapt to significant developments in biological sciences, emergent media and bioethics. The course can be repeated for credit with offering of new course topics. EDPX 4370 Graduate students will lead collaborative group projects. Additional graduate assignments will undertake individual biomedica research projects for adding experimental depth to course topics i.e. development of creative tools for transcoding, modeling or bioethics critique. Tools will be demonstrated and made usable in group projects. Cross Listed with EDPX 3370.

EDPX 4400 Video Art (4 Credits)

This course continues the investigation of theories and practice of electronic media and expands into an exploration of video art, providing the basic principles of video technology and independent video production through a cooperative, hands-on approach utilizing various video formats. The course may be repeated for credit with permission of the instructor and when projects vary. Lab fee. Prerequisite: EDPX 4010 or permission of the instructor. Cross listed with EDPX 3400.

EDPX 4410 Advanced Video Art (4 Credits)

This course continues the investigation of theories and practices of electronic media and expands into an individual exploration of video art focusing on "off-screen" time-based media through conceptual and technological experimentation. Projects explore creating digital video for projection into spaces, onto buildings, and in the form of installations, to name a few formats. Projects are used as a platform for creative expression focusing on the critical skills necessary for the conception and completion of ideas. Lab fee. Prerequisite: EDPX 4400 or permission of instructor.

EDPX 4440 Site-Specific Installation (4 Credits)

This class produces projects investigating physical space, virtual space and site-specific public installations. Lab fee. Cross listed with EDPX 3440. Prerequisites: EDPX 4000 and EDPX 4010.

EDPX 4450 Visual Programming (4 Credits)

This course introduces intuitive visual "programming" that allows rapid building of personalized tools for data, video, image, and sound manipulation. These tools can be used in real-time editing or performance, complex effects processing, or to bridge between multiple pieces of software. Lab fee. Cross listed with EDPX 3450. Prerequisite: EDPX 4010 or permission of the instructor.

EDPX 4460 Visual Programming II (4 Credits)

This class uses advanced visual programming concepts (as provided by Max/MSP and Jitter) to explore visualization and sonification techniques in an artistic context. Areas of exploration include OpenGL modeling and animation, virtual physics emulation, audio synthesis techniques, and external data manipulation. Students use these concepts to create art installation and performance projects. Lab fee. Cross listed with EDPX 3460. Prerequisite: EDPX 4450.

EDPX 4490 Expanded Cinema (4 Credits)

This course introduces several forms of expanded cinema, such as video remixes and mashups; live cinema and audiovisual performance; VJing; sonic visualization; visual music; and ambient video. The class extends the student's multitrack video and audio mixing skills to an emphasis on both performance and generative approaches to audiovisual media. It introduces software and hardware sets including VJ tools and visual programming for generating as well as manipulating video files and real-time source streams. Lab fee. Cross listed with EDPX 3490. Prerequisite: EDPX 4010 or permission of the instructor.

EDPX 4500 Sonic Arts (4 Credits)

This class introduces the tools and techniques of the sonic arts, including field recording; sampling and synthesis; sound editing and effects processing; and mixing. Students survey a variety of sonic arts, historical and contemporary, to understand techniques and strategies for developing and distributing sonic artifacts. Lab fee. Cross listed with EDPX 3500. Prerequisite: EDPX 4010 or permission of the instructor.

EDPX 4600 3D Modeling (4 Credits)

This course serves as an introduction to 3D modeling, texturing, and lighting on the computer. Students complete a series of projects in which the processes of preparing and producing a 3D piece are explored. Various strategies and techniques for creating detailed models to be used in animation and games are examined. Additional attention is spent on virtual camera techniques as well as the use of compositing in creating final pieces. Current trends in the field are addressed through the analysis and discussion of current and historical examples. Lab fee. Cross listed with EDPX 3600, MFJS 3600. Prerequisite: EDPX 4000 or permission of the instructor.

EDPX 4610 3D Animation (4 Credits)

This course examines animation within virtual 3D environments. Starting with basic concepts, the course develops timing and spacing principles in animation to support good mechanics. They also serve as the basis for the more advanced principles in character animation as the class progresses. Lab fee. Cross listed with EDPX 3610. Prerequisite: EDPX 4600.

EDPX 4620 3D Spaces (4 Credits)

An exploration of 3D digital space and the possibilities found in games, narratives and visualizations in these spaces. A real-time engine is used by students to examine the opportunities of virtual 3D worlds. Lab fee. Prerequisites: EDPX 4010 and EDPX 4600, or permission of the instructor.

EDPX 4700 Topics in Digital Cultures (4 Credits)

This course provides an in-depth exploration of the emergent digital practices of a particular culture and unique area of advanced study (for example, art and science studies; activism; youth culture; critical game studies; the philosophy of technology; or social networking). Students learn the social/historical context of the particular culture and observe and document the interplay between cultural practices and particular technologies. Prerequisite: varies with topic.

EDPX 4701 Topics in Emergent Digital Practices (1-4 Credits)

Topics in Emergent Digital Practices.

EDPX 4710 Critical Game Studies (4 Credits)

This course is a critical investigation of contemporary ludic cultures. Ludic cultures are environments and practice of play. This course is taught with a hybrid teaching model where games are treated as texts, and outcomes are in the form of discussion and synthetic media responses. We construct and play a hyper-local canon of games, both in and outside of class. We read from the growing body of literature in game studies. We reflect and respond to these texts through shareable media. This course partially satisfies a cultures requirement for emergent digital practices majors and minors. Lab fee.

EDPX 4730 21st Century Digital Art (4 Credits)

An exploration of Digital Art and surrounding culture from the last 15 years. Topics will include machinima, demoscenes, MMO performances, interactive installations, VR, animation, video shorts, and much more. Students will actively search for, share and critically review much of the creative work for the class.

EDPX 4740 Performance Cultures (4 Credits)

This course explores the history and current state of technology and performance. Topics covered include expanded cinema, live cinema, VJing, performance art, and the intersections of audiovisual media and technologies with dance, theater, and more. This course incorporates reading and discussion of critical texts and documentation of theory, process and practices, and the class includes screening and discussion of examples of both historical and emerging forms of media-enriched performance. Students produce written media on a variety of performance-related issues, artifacts, and practitioners, culminating in a written document or interactive publication. Lab Fee. Prerequisites: EDPX 4010 and EDPX 4020, or permission of the instructor.

EDPX 4750 Sound Cultures (4 Credits)

This course explores the sonic turn of emergence in contemporary digital culture. New sound technologies and practices, along with the development of interdisciplinary sound studies, have made avant-garde composition, sound art, film soundtracks, electronic music, turntablism, jazz, and alternative as well as popular musical forms equally essential zones in which we attune to changing technocultural conditions. To situate the course's emphasis on contemporary sonic experience and auditory ways of being in the world, an historical portion of the class establishes the ways in which new sound cultures have appeared since WWII to transform how musicians, artists, scholars, and listeners experience and understand sound. The class facilitates experiences ranging from the pole of auditory realism to that of sonic speculation and futurism. Students will develop a sonic literacy that includes: listening as a creative act; understanding how to work with diverse sonic materials; and appreciating the critical voice as a creative and cultural imperative. Prerequisites: EDPX 4010 and 4020.

EDPX 4770 Cybercultures (4 Credits)

This course encompasses a variety of lenses through which to view, evaluate and critique ideas of 'community' and communities in cyberspace (cyber culture). The course covers such issues as: identity and race in cyberspace (including 'identity and racial tourism'); communication technologies and social control; digital censorship; and utopian and dystopian representations of digital technology. The course also engages with social theories involving issues of technological determinism and the popular representation of technology. It explores the views of a diverse set of critics to ask whether digital things are 'good' for you and your communities. Cross listed with EDPX 3770. Prerequisite: EDPX 4020.

EDPX 4780 Science Fiction: Digital Culture (4 Credits)

This course explores the intersections of emergent digital practices and cultures with the extrapolative thought experiments, technical speculations, and social criticisms of science fiction. Students read, discuss, write and otherwise respond to primary texts by the likes of William Gibson, Bruce Sterling, Cory Doctorow, Philip K. Dick, and Hiroshi Yamamoto. Science fiction studies may also include sub-genres (steampunk, hard science fiction, ecological) and regional categories (Japanese sci-fi), as well as consider science fiction in other media formats (sound recordings, film, games). Students produce written materials in a variety of formats, culminating in a formal essay or interactive publication. Cross listed with EDPX 3780. Prerequisite: EDPX 4020 or permission of the instructor.

EDPX 4800 Topics in Digital Making (4 Credits)

This course provides an in-depth exploration of the emergent digital practices of a technology or method for making (for example, wearables; interactive projections; augmented reality; immersive multi-channel soundscapes). Students learn the social/historical context of the particular method and consider the role and function their creations serve when it becomes public. Lab Fee. Prerequisite: varies with topic.

EDPX 4980 Internship (0-8 Credits)

Instructor approval required.

EDPX 4991 Independent Study (1-8 Credits)

Independent Study form required.

EDPX 5000 Graduate Seminar (4 Credits)

Topics vary. Reading and discussion of critical theory. May include project(s) related to the topic. Course may be repeated up to six times.

EDPX 5100 Graduate Critique (4 Credits)

The course focuses on student's creative production. Critiques are moderated by a different faculty member each quarter. Conceptual, methodological and theoretical concerns are stressed. Critiques are designed to assist in the experimentation, preparation and construction of individual art projects. Time is also spent on preparing students for a professional practice in the Arts. Course may be repeated up to six times.

EDPX 5700 Research & Theoretical Methods (4 Credits)

This course provides graduate students with the strategies and techniques of research in the area of digital media studies.

EDPX 5800 M.A. Thesis (4-8 Credits)

Independent work toward completion of the MA Thesis. May only be taken with the permission of the Graduate Director. May be taken for up to 8 credit hours.

EDPX 5850 M.A. Project (1-4 Credits)

Independent work toward completion of the MA Project. May only be taken with the permission of the Graduate Director. May be taken for up to 8 credit hours.

EDPX 5900 MFA Exhibition (1-12 Credits)

Independent work toward completion of the MFA Thesis Exhibition. May only be taken with the permission of the Graduate Director. May be taken for up to 12 credit hours.

Engineering (ENGR)

ENGR 3340 Product Development and Market Feasibility (4 Credits)

In this course, students gain knowledge of designing products for market success by developing a product and optimizing its design for specific mass manufacturing technologies. Students gain experience through the design development process including market feasibility research, human-centered design, brainstorming and ideating new concepts, refinement through design iteration, and constructing alpha and beta prototypes that are designed with mass manufacturing considerations. Projects are based upon real world new product development principles. Students learn and practice the fundamentals of design thinking, design process, and entrepreneurship.

ENGR 3510 Renewable and Efficient Power and Energy Systems (4 Credits)

This course introduces the current and future sustainable electrical power systems. Fundamentals of renewable energy sources and storage systems are discussed. Interfaces of the new sources to the utility grid are covered. Prerequisite: ENEE 2012.

ENGR 3520 Introduction to Power Electronics (4 Credits)

This covers fundamentals of power electronics. We discuss various switching converters topologies. Basic knowledge of Efficiency and small-signal modeling for the DC-DC switching converters is covered. Furthermore, magnetic and filter design are introduced. Prerequisites: ENEE 2211 and ENGR 3722.

ENGR 3525 Power Electronics and Renewable Energy Laboratory (1 Credit)

In this course the fundamentals of switching converters and power electronics in a real laboratory set-up are covered. The course incorporates hardware design, analysis, and simulation of various switching converters as a power processing element for different energy sources. The energy sources are power utility, batteries, and solar panels. Prerequisite: ENGR 3520.

ENGR 3540 Electric Power Systems (4 Credits)

This course covers methods of calculation of a comprehensive idea on the various aspects of power system problems and algorithms for solving these problems. Prerequisite: ENGR 3530.

ENGR 3620 Advanced Engineering Mathematics (4 Credits)

Applied mathematics for engineers. Systems and series solutions of ordinary differential equations, Fourier analysis, partial differential equations, linear algebra, vector calculus, special functions, unconstrained and combinatorial optimization, and applied probability and statistics. Prerequisites: MATH 2070 and MATH 2080 or instructor permission.

ENGR 3621 Advanced Engineering Mathematics (4 Credits)

Applied mathematics for engineers. Topics include vector spaces, normed vector spaces, inner product spaces, linear transformations, finite-dimensional linear transformations, linear operators, finite-dimensional linear operators, linear differential systems, linear difference systems, orthogonal transformations, amplitude estimation, fundamentals of real and functional analysis, and introduction to partial differential equations, and applications to engineering systems.

ENGR 3630 Finite Element Methods (4 Credits)

Introduction to the use of finite element methods in one or two dimensions with applications to solid and fluid mechanics, heat transfer and electromagnetic fields; projects in one or more of the above areas. Prerequisites: ENME 2541 AND ENGR 1572.

ENGR 3650 Probability and Statistics for Engineers (4 Credits)

This course covers quantitative analysis of uncertainty and decision analysis in engineering. It covers the fundamentals of sample space, probability, random variables (discrete and continuous), joint and marginal distributions, random sampling and point estimation of parameters. It also covers statistical intervals, hypotheses testing and simple linear regression. The course includes applications appropriate to the discipline. Prerequisite: MATH 1953.

ENGR 3721 Controls (3,4 Credits)

Modeling, analysis and design of linear feedback control systems using Laplace transform methods. Techniques and methods used in linear mathematical models of mechanical, electrical, thermal and fluid systems are covered. Feedback control system models, design methods and performance criteria in both time and frequency domains. A linear feedback control system design project is required. Prerequisites: ENEE 2022, ENGR 3611 or permission of instructor.

ENGR 3722 Control Systems Laboratory (1 Credit)

This laboratory course serves as supplement to ENGR 3721. It aims at providing "hands on" experience to students. It includes experiments on inverted pendulum, gyroscopes, motor control, feedback controller design, time-domain and frequency domain. Corequisite: ENGR 3721.

ENGR 3730 Robotics (3 Credits)

Introduction to the analysis, design, modeling and application of robotic manipulators. Review of the mathematical preliminaries required to support robot theory. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning, and kinetics. Cross listed with ENGR 4730. Prerequisites: ENME 2520 and MATH 2060 or MATH 2200 or permission of instructor.

ENGR 3731 Robotics Lab (1 Credit)

Laboratory that complements the analysis, design, modeling and application of robotic manipulators. Implementation of the mathematical structures required to support robot operation. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning and kinetics. Applications include programming and task planning of a manufacturing robot manipulator. Corequisite: ENGR 3730 or permission of instructor.

ENGR 3800 Topics (ENGR) (1-4 Credits)

Special topics in engineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENGR 3900 Engineering Internship (0-4 Credits)

Students in engineering may receive elective credit for engineering work performed for engineering employers with the approval of the chair or associate chair of the department. At the end of the term, a student report on the work is required, and a recommendation will be required from the employer before a grade is assigned. Junior, senior, or graduate status in engineering is normally required. May not be used to satisfy technical requirements. May be taken more than one for a maximum of 6 quarter hours. Prerequisite: permission of instructor.

ENGR 4100 Instrumentation and Data Acquisition (4 Credits)

This course examines different instrumentation techniques and describes how different measurement instruments work. Measurement devices include length, speed, acceleration, force, torque, pressure, sound, flow, temperature, and advanced systems. This course also examines the acquisition, processing, transmission and manipulation of data. Final project or paper. Cross listed with ENGR 3100. Prerequisites: PHYS 1213 OR PHYS 1214.

ENGR 4200 Introduction to Nanotechnology (4 Credits)

The most important recent accomplishments so far in the application of nanotechnology in several disciplines are discussed. Then a brief overview of the most important instrumentation systems used by nanotechnologists is provided. The nature of nanoparticles, nanoparticle composites, carbon nanostructures, including carbon nanotubes and their composites is subsequently discussed. The course also deals with nanopolymers, nanobiological systems, and nanoelectronic materials and devices. The issues of modeling of nanomaterials and nanostructures is also covered. Multiscale modeling based on finite element simulations, Monte Carlo methods, molecular dynamics and quantum mechanics calculations are briefly addressed. Most importantly, students should obtain appreciation of developments in nanotechnology outside their present area of expertise. Cross listed with ENGR 3200.

ENGR 4300 Advanced Numerical Methods (4 Credits)

Fundamental and advanced numerical methods to approximate mathematical problems for engineering applications using modern software such as Matlab. Topics include numerical differentiation and integration, solution to linear and non-linear equations, ordinary and partial differential equations, and initial, boundary, and eigen value problems. Recommended prerequisite: MATH 2070.

ENGR 4350 Reliability (4 Credits)

An overview of reliability-based design. Topics include: fundamentals of statistics, probability distributions, determining distribution parameters, design for six sigma, Monte Carlo simulation, first and second order reliability methods (FORM, SORM). Most Probable Point (MPP) reliability methods, sensitivity factors, probabilistic design. Cross listed with ENGR 3350.

ENGR 4501 Graduate Capstone Design I (3 Credits)

This is a project-centered course. This is the first third of a practical class that plans the engineering design project prior to addressing the design in earnest. This requires teamwork to develop the plan that details the schedule, cost, and who is responsible for which portions of the design effort. In this segment, the engineering teams establish the starting point for the design. This class puts theory into practice with the "shredding" of the RFP, defining a strategy for the team, balancing what has to be done with existing constraints, understanding the "true" problem of the customer, capturing the associated risks, and capturing margins required for the start of any design activity.

ENGR 4502 Graduate Capstone Design II (3 Credits)

This is a project-centered course. This is the second third of a practical class that implements the engineering design process (left side of the vee). This requires teamwork to develop the detailed design, which is a continuation of the accepted proposal. In this segment, the engineering teams add the details to a conceptual design. This class puts theory into practice with requirements development, balancing requirements against the constraints, completing a functional decomposition, developing a CONOPs document, developing a physical architecture, developing a functional architecture, and defining the interfaces through an ICD.

ENGR 4503 Graduate Capstone Design III (3 Credits)

This is a project-centered course. This is the third of a practical class that implements the engineering design process (right side of the vee). This requires teamwork to build, checkout, and test the final product. In this segment, the engineering teams build or procure hardware as a step towards the integration of the system. This class puts theory into practice by building components, developing software modules, integrating software with hardware, checkout of the system, and performing tests to verify construction, validate models, and collect data for acceptance by the team prior to demonstrating the operations of the product to the customer. Test data is collected through instrumentation of the final product with a buy-out and certification by the team. Testing may include performance testing and environmental testing as envisioned in the context diagram.

ENGR 4504 Graduate Capstone Design IV (3 Credits)

This is a project-centered course. This is the fourth of a practical class that implements the entire engineering "vee" design process. This requires teamwork to build, checkout, and test the final design product, e.g. hypothetical missile. In this segment, the engineering teams fine-tune the design process which may address advanced topics such as fault management and resilience. This class puts theory into practice by building components, developing software modules, integrating software with hardware, checkout of the system, and performing tests to verify construction, validate models, and collect data for acceptance by the team prior to demonstrating the operations of the product to the customer. It may also include addressing the beginning of the program through early management and pre-phase A activities. Test data is collected through instrumentation of the final product with a buy-in and certification by the team. Testing may include performance testing, functional testing, and environmental testing as envisioned in the system process.

ENGR 4530 Intro to Power and Energy (4 Credits)

Basic concepts of AC systems, single-phase and three-phase networks, electromechanical energy conversion, electric power generation, transformers, transmission lines, AC machinery, DC motors, and contemporary topics in power and energy conversion. Cross listed with ENGR 3530.

ENGR 4545 Electric Power Economy (4 Credits)

This course covers economy aspects of electric power industry and the implications for power and energy engineering in the market environment. Cross listed with ENGR 3545.

ENGR 4560 Power Generation Operation and Control (4 Credits)

This course covers economic dispatch of thermal units and methods of solution; transmission system effects; generate with limited energy supply; production cost models; control of generation; interchange of power and energy; power system security; state estimation in power systems; optimal power flow. Prerequisite: ENGR 3530 or ENGR 4530 or permission of instructor.

ENGR 4590 Power System Protection (4 Credits)

This course covers methods of calculation of fault currents under different types of fault; circuit breakers, current transformers, potential transformers; basic principles of various types of relays; applications of relays in the protection of generator, transformer, line, and bus, etc. Prerequisite: ENGR 3530 or ENGR 4530.

ENGR 4620 Optimization (4 Credits)

The development and application of various optimization techniques will be explored with engineering examples. Topics include: analytical and numerical methods, linear and non-linear programming techniques for unconstrained and constrained problems, and advanced optimization techniques, e.g. global optimization. Optimization methods will be developed and evaluated in code and used in a real-world application project.

ENGR 4622 Advanced Optimization (4 Credits)

Optimization is an indispensable tool for many fields of science and engineering and is one of the pillars of data science and machine learning. This course introduces optimization methods that are suitable for large-scale problems arising in data science, machine learning, and other engineering applications. We will discuss the development, computation, and convergence aspects for algorithms including gradient methods, accelerated methods, quasi-Newton methods, stochastic optimization, variance reduction, online optimization, as well as distributed optimization. We will also exploit the efficacy of these methods in concrete data science problems, including learning low-dimensional models, deep learning, and (possible) reinforcement learning. This course together with ENGR 4620 Optimization will provide in-depth introductions to optimization.

ENGR 4680 Fault Diagnosis & Prognostics for System Design (4 Credits)

Reliability engineering is a sub-discipline of systems engineering that emphasizes dependability in the lifecycle management of a product. Reliability, describes the ability of a system or component to function under stated conditions for a specified period of time. Reliability is closely related to availability, which is typically described as the ability of a component or system to function at a specified moment or interval of time. Normally, quality focuses on the prevention of defects during the warranty phase whereas reliability looks at preventing failures during the useful lifetime of the product or system from commissioning to decommissioning. Diagnosis is used, with variations in the use of logic, analytics, and experience, to determine "cause and effect". In systems engineering, it is typically used to determine the causes of symptoms, mitigations, and solutions. Prognostics is an engineering discipline focused on predicting the time at which a system or a component will no longer perform its intended function. This lack of performance is most often a failure beyond which the system can no longer be used to meet desired performance. The predicted time then becomes the remaining useful life (RUL), which is an important concept in decision making for contingency mitigation. Success in this course requires knowledge of probability theory and statistics, and familiarity with MATLAB/Simulink.

ENGR 4723 Digital Control (4 Credits)

The course focuses on modeling, analysis, and design of digital control systems. Topics include: z-Transform and difference equations; sampling and aliasing; Zero-Order Hold (ZOH); A/D and D/A conversions; pulse transfer function representation; time and frequency domain representations; input/output analysis; analysis of sample data systems; stability; design of discrete-time controllers; introduction to state-space representation. Cross listed with ENGR 3723. Prerequisites: ENGR 3721 and ENGR 3722.

ENGR 4730 Introduction to Robotics (4 Credits)

Introduction to the analysis, design, modeling and application of robotic manipulators. Review of the mathematical preliminaries required to support robot theory. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning, and kinetics. Applications include programming and task planning of a manufacturing robot manipulator. Cross listed with ENGR 3730. Prerequisites: ENME 2520 and MATH 2060 or MATH 2200 or instructor approval.

ENGR 4735 Linear Systems (4 Credits)

This course focuses on linear system theory in time domain. It emphasizes linear and matrix algebra, numerical matrix algebra and computational issues in solving systems of linear algebraic equations, singular value decomposition, eigenvalue-eigenvector and least-squares problems, linear spaces and linear operator theory. It studies modeling and linearization of multi-input/multi-output dynamic physical systems, state-variable and transfer function matrices, analytical and numerical solutions of systems of differential and difference equations, structural properties of linear dynamic physical systems, including controllability, observability and stability. It covers canonical realizations, linear state-variable feedback controller and asymptotic observer design, and the Kalman filter. Cross listed with ENGR 3735. Prerequisites: ENGR 3611, ENGR 3721, ENGR 3722, or permission of the instructor.

ENGR 4740 Adaptive Control Systems (4 Credits)

Theoretical and application aspects of robust adaptive control design for uncertain dynamical systems. Topics include: parameter estimation, stability, model reference adaptive systems, self-tuning regulators, gain scheduling, design for robustness against unmodeled dynamics and disturbance signals. Examples will be given from aerospace engineering (changes in the dynamics of aircraft), process control, and robotics. Modern alternatives to traditional adaptive control will be discussed (switching multi-model/multi-controller adaptive schemes). Prerequisites: ENEE 3111, ENGR 3611, and ENGR 3721, or permission of instructor. Familiarity with MATLAB/Simulink.

ENGR 4745 Adv Non-Linear Control System (4 Credits)

Nonlinear system analysis methods: Existence of solutions of ODEs, uniqueness, continuity, compactness, fixed point, linearization, metric spaces, Contraction Mapping Theorem, Gronwall-Bellman lemma. Phase plane analysis; Limit Cycles. Lyapunov stability of autonomous and non-autonomous systems. Circle criterion, absolute stability, Popov criterion. Passivity and Lyapunov stability. Input-to-State stability. Small Gain Theorem. Describing functions. Nonlinear control system synthesis methods: Passivity-based control. Stability via Feedback Linearization. Lie derivatives.

ENGR 4750 Networked Control Systems (4 Credits)

Fundamental tools and recent advances in networked control. Topics include the control of multi-agent networks found in multi-vehicle coordination, control of sensor networks, unmanned vehicles, and energy systems. Network models, distributed control and estimation, distributed control under limited communications and sensing, formation control, coverage control in mobile sensor networks. Prerequisites: linear algebra, linear control systems, differential equations, familiarity with MATLAB, or permission of instructor.

ENGR 4755 Optimal Control (4 Credits)

Introduction to optimal control theory (control laws that maximize a specified measure of a dynamical system's performance). Topics include: optimality conditions and constraints; calculus of variations; review of mathematical programming (Lagrange multipliers, convexity, Kuhn-Tucker theorem); Pontryagin's maximum principle (constraints, Hamiltonians, bang-bang control); dynamic programming and Linear Quadratic Regulation (Riccati, Hamilton-Jacobi equation). Prerequisites: ENGR 3721 (Controls) and ENGR 3735/4735 (Linear Systems) or equivalent courses.

ENGR 4760 Multivariable Control (4 Credits)

Multivariable aspects of control (systems with multiple actuators and sensors); performance analysis of feedback control systems; sensitivity; robustness and stability margins; disturbance attenuation; design tradeoffs; singular value; characteristic locus. Modern H-infinity control theory and 'mu' synthesis-based robust control design techniques. Enforced Prerequisites and Restrictions ENGR 3721 (Controls) and ENGR 4735 (Linear Systems at a graduate level) or equivalents.

ENGR 4765 Robot Control (4 Credits)

The course focuses on different techniques, methods, and theories for control of robots. The topics covered include: introduction to nonlinear control theory, review of independent joint control, nonlinear and multivariable robot control, feedback linearization control of robots, control of underactuated robots, control of nonholonomic and mobile robots. force and impedance control, and vision-based control. Pre-requisite or co-requisite: ENGR 3730 or ENGR 4730, or equivalent is recommended.

ENGR 4790 Systems Engineering Requirements (4 Credits)

The course covers fundamentals of design and requirements analysis of complex systems to meet overall mission requirements. It spans the whole requirements engineering phase that includes requirements analysis, decomposition, derivation, allocation, verification and validation planning. Students acquire expertise in creating UML and SYML case diagrams and in defining and implementing verification and validation plans. Requirement management methods and tools, associated vernacular, and requirements configuration control are also covered. Prerequisites: ENMT 4100, or permission by the Instructor.

ENGR 4810 Advanced Topics (ENGR) (1-5 Credits)**ENGR 4865 Design, Innovation, and Entrepreneurship (4 Credits)**

The course focuses on design and innovation of engineering systems and products. It deals with entrepreneurship, critical and innovative thinking, creativity and lateral thinking, research and technology challenges that lead to innovation, entrepreneurship and new product development, problem solving and decision making. It discusses factors that affect innovation (e.g. tech insertion), as well as a wide range of case studies in diverse application domains. Course Requirements: Projects.

ENGR 4910 Conceptual Design (4 Credits)

Conceptual design is the part of the design process where—by identifying the essential problems through abstraction, establishing function structures, searching for appropriate working principles and combining these into a working structure— the basic solution path is laid down through the elaboration of a solution principle. Conceptual design specifies the principle solution. Concept design rarely starts at the same point; you might have an existing design that needs iterating or the requirement to create a conceptualized form. Problem solving consists of using generic or ad hoc methods in an orderly manner to find solutions to problems. George Polya (mathematician) presented two important decision-making principles, understanding the problem and devising a plan. To understand what is new, students are asked to look at intellectual property, a category of property that includes intangible creations of the human intellect. There are many types of intellectual property such as patents, and some countries recognize more than others. Designers assess the many different directions a design could take at this stage will allow you to identify what you like and don't like from each one. The preferred concept will then be further developed using engineering drawings, schematics and possibly 3D models which will show how the design will look and operate.

ENGR 4920 Aerospace Missions (4 Credits)

The Design "Problem" in Advanced Aerospace Systems describes the problems in the conceptual design of various types of aircraft, spacecraft, and complex vehicles. It covers the following topics: design of orbital spacecraft, design for Moon missions (such as landers), design for Mars missions (including rovers), design of an unmanned drone for surveillance (high-altitudes), CubeSats (having large constellations), and rockets and missiles (including hypersonic). Problem statements are concise descriptions of design problems. Design teams use them to define the current and ideal states, to freely find user-centered solutions. This class stands as a reference of interest to engineers and scientists working in aerospace engineering and related topics.

ENGR 4940 Mission Operation Controls (4 Credits)

Space operations is based at a centralized control center, a facility used for command & control (C2), and related communication equipment (antennas, etc.). The human operators conduct the day-to-day operations for controlling the spacecraft. They control the spacecraft and its payloads, and carries out all activities related to mission planning and scheduling. For example, normal orbital operations are interrupted every six months to conduct orbital maneuvers. Launch operations begin with spacecraft integration and checked-out for launch. Once safely placed in orbit, command and control goes back and forth between the ground control station and the spacecraft or satellite. A key aspect of spacecraft operations is the transferring of data from the onboard instruments collected by its payload to the ground, eventually disseminating the data to concerned users and analysts through a ground data network. This requires an on-orbit communication architecture.

ENGR 4991 Independent Study (1-5 Credits)**ENGR 4995 Independent Research (1-16 Credits)****ENGR 5991 Independent Study (0-10 Credits)****ENGR 5995 Independent Research (1-16 Credits)**

Engineering, Bio (ENBI)

ENBI 4200 Medical Device Development (4 Credits)

Working in a fast-paced competitive biomedical R&D firm is a dramatic change of pace from most college classes. This course will create a realistic industry environment where students take on the role of development engineers to design and manufacture real-world medical devices. This course is intended to provide a working knowledge of the design and development process specifically for medical device applications.

ENBI 4500 Biofluids (4 Credits)

The application of fluid dynamics theory and design to problems within the biomedical community. Specific topics covered include the mechanics of inhaled therapeutic aerosols, basic theory of circulation and blood flow, foundations in biotechnology and bioprocessing, and controlled drug delivery. Cross listed with ENBI 3500.

ENBI 4510 Biomechanics (4 Credits)

An introduction to the mechanical behavior of biological tissues and systems. Specific topics covered include: Analysis of the human musculoskeletal system as sensors, levers, and actuators; Joint articulations and their mechanical equivalents; Kinematic and kinetic analysis of human motion; Introduction to modeling human body segments and active muscle loading for analysis of dynamic activities; Mechanical properties of hard and soft tissues; Mechanical and biological consideration for repair and replacement of soft and hard tissue and joints; Orthopedic implants. Cross listed with ENBI 3510.

ENBI 4520 Introduction to Cardiovascular Engineering (4 Credits)

An introduction to cardiovascular mechanics with a focus on the quantitative understanding of the mechanical phenomena that governs the cardiovascular system. Specific topics covered include: basic principles of circulation including macro and micro circulation, soft tissue mechanics, applications to cardiovascular diseases, modelling techniques, clinical and experimental methods, and design of cardiovascular devices.

Recommended prerequisites: ENME 2541 and ENME 2661.

ENBI 4530 Biomechanics of Human Movement (4 Credits)

An introduction to engineering-based analysis of human movement. Topics include: musculoskeletal anatomy, neuromuscular physiology, muscle mechanics, electromyography, sensorimotor integration, anthropometry, kinematics and kinetics. Recommended pre-requisite material: knowledge of MATLAB, ENGR 1572.

ENBI 4800 Adv Topics (Bioengineering) (1-5 Credits)

Various topics in Bioengineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENBI 4991 Independent Study (1-5 Credits)**ENBI 4995 Independent Research (1-18 Credits)**

Engineering, Computer (ENCE)

ENCE 3231 Embedded Systems Programming (4 Credits)

Design, construction and testing of microprocessor systems. Hardware limitations of the single-chip system. Includes micro-controllers, programming for small systems, interfacing, communications, validating hardware and software, microprogramming of controller chips, design methods and testing of embedded systems. Prerequisite: ENCE 3210.

ENCE 3250 HDL Modeling & Synthesis (3 Credits)

Introduction to Hardware Design Language (HDL). Language syntax and synthesis. Applications related to digital system implementation are developed. Project. Prerequisite: ENCE 2101 or instructor's permission.

ENCE 3321 Network Design (4 Credits)

Introduction to network components. Layering of network architecture. Analysis of Local Area Network (LAN) concepts and architecture based on IEEE standards. Design principles including switching and multiplexing techniques, physical link, signal propagation, synchronization, framing and error control. Application of probability and statistics in error detecting and control. Ethernet, Token-ring, FDDI (Fiber Distributed Data Interface), ATM (Asynchronous Transfer Mode), ISDN (Integrated Service Data Networks). Prerequisite: ENEE 3111, ENCE 2101 or permission of instructor.

ENCE 3501 VLSI Design (3 Credits)

Design of Very Large Scale Integration systems. Examination of layout and simulation of digital VLSI circuits using a comprehensive set of CAD tools in a laboratory setting. Studies of layouts of CMOS combinational and sequential circuits using automatic layout generators. Fundamental structures of the layout of registers, adders, decoders, ROM, PLA's, counters, RAM and ALU. Application of statistics and probability to chip performance. CAD tools allow logic verification and timing simulation of the circuits designed. Cross listed with ENCE 4501. Prerequisite: ENCE 3231.

ENCE 3620 Computer Vision (4 Credits)

This course is an introduction to the basic concepts in image processing and computer vision. First, an introduction to low-level image analysis methods, including radiometry and geometric image formation, edge detection, feature detection, and image segmentation are presented. Then, geometric-based image transformations (e.g., image warping and morphing) for image synthesis will be presented in the course. Furthermore, methods for reconstructing three-dimensional scenes including camera calibration, Epipolar geometry, and stereo feature matching are introduced. Other important topics include optical flow, shape from shading, and three-dimensional object recognition. In conclusion, students learn and practice image processing and computer vision techniques that can be used in other areas such as robotics, pattern recognition, and sensor networks. Cross listed with ENCE 4620. Prerequisite: ENEE 3111.

ENCE 3630 Pattern Recognition (4 Credits)

This class provides an introduction to classical pattern recognition. Pattern recognition is the assignment of a physical object or event to one of several prescribed categories. Applications includes automated object recognition in image and videos, face identification, and optical character recognition. Major topics include Bayesian decision theory, Parametric estimation and supervised learning, Linear discriminant functions, Nonparametric methods, Feature extraction for representation and classification, Support Vector Machines. Cross listed with ENCE 4630.

ENCE 3631 Machine Learning (4 Credits)

This class covers topics in machine learning including but not limited to Bayesian decision theory, supervised learning, unsupervised learning and clustering, linear discriminant functions, deep learning, neural networks, linear classification techniques, manifold learning, bag of words, and Support Vector Machines. Cross listed with ENCE-4631.

ENCE 4110 Modern Digital Systems Design (4 Credits)

This course focuses on the design of digital systems using combinational, sequential, and programmable logic devices and Hardware Description Languages (HDL). Techniques for logic design including asynchronous logic, physical world interfaces to digital systems, and system performance analysis methods are studied. Students also learn HDL-Verilog to program CPLD devices and FPGA systems. Cross listed with ENCE 3100.

ENCE 4210 Microprocessor Systems I (4 Credits)

Introduction to microprocessors and to the design and operation of computer systems. A study of the microprocessor and its basic support components. Analysis of CPU architectures of modern computers. Assembly language programming. Use of an assembler and other development tools for programming and developing microprocessor-based systems. Cross listed with ENCE 3210.

ENCE 4231 Embedded Systems Programming (4 Credits)

Design, construction and testing of microprocessor systems. Hardware limitations of the single-chip system. Includes micro-controllers, programming for small systems, interfacing, communications, validating hardware and software, microprogramming of controller chips, design methods and testing of embedded systems.

ENCE 4250 Advanced Hardware Description Language (HDL) Modeling and Synthesis (4 Credits)

This course covers advanced concepts in Hardware Description and Language (HDL) modeling and Synthesis. It covers topics including but not limited to digital system design, simulation, and synthesis using Verilog HDL and VHDL. The course also covers RTL design, behavioral description, system Verilog, and timing analysis using CAD tools.

ENCE 4501 Advanced VLSI Design (4 Credits)

Advanced techniques in the fabrication and design of VLSI circuits and systems. Modeling of parasitic components. Floor-planning, clock distribution, routing, and low power design. Cross listed with ENCE 3501. Prerequisite: ENCE 3501 or permission of instructor.

ENCE 4620 Advanced Computer Vision (4 Credits)

This course covers advanced concepts in image processing and computer vision including but not limited to image radiometry and geometric formation, edge detection, geometric based transformations (e.g., image warping and morphing), camera calibration, Epipolar geometry, and stereo feature matching. Other advanced topics include optical flow, shape from shading, and three-dimensional object recognition. In conclusion, students learn and practice advanced topics in image processing and computer vision techniques that can be used in other areas such as robotics, pattern recognition, and sensor networks. Cross listed with ENCE 3620. Prerequisite: ENEE 3311.

ENEE 4630 Advanced Pattern Recognition (4 Credits)

This class covers advanced topics in pattern recognition including but not limited to Bayesian decision theory, parametric estimation and supervised learning, linear discriminant functions, nonparametric methods, feature extraction for representation and classification, manifold learning, bag of words, and Support Vector Machines. Cross listed with.

ENEE 4631 Advanced Machine Learning (4 Credits)

This class covers advanced topics in machine learning including but not limited to Bayesian decision theory, supervised learning, unsupervised learning and clustering, linear discriminant functions, deep neural networks, deep learning, linear classification techniques, manifold learning, bag of words, and Support Vector Machines. Cross listed with ENEE 3631.

ENEE 4800 Advanced Topics (CPE) (1-5 Credits)

Various topics in computer engineering as announced. May be taken more than once. Cross-listed with ENEE 3321, ENEE 3620.

ENEE 4991 Independent Study (1-10 Credits)**ENEE 4995 Independent Research (1-18 Credits)****ENEE 5995 Independent Research (1-18 Credits)**

Engineering, Electrical (ENEE)

ENEE 3011 Physical Electronics (4 Credits)

The basic physical concepts of electronics, electrons and holes in semiconductors, transport and optical processes. Concentration on device concepts, including material synthesis and device processing, P-N junction diodes, junctions with other materials, bipolar transistors, field effect transistors (JFET, MESFET, MOSFET) and optoelectronic effect transistors (JFET, MESFET, MOSFET) and optoelectronic devices (lasers, detectors). Prerequisites: CHEM 1010 or CHEM 1610, PHYS 1213 or PHYS 1214 or permission of instructor.

ENEE 3111 Signals & Systems (4 Credits)

Introduces continuous time and discrete time linear system analysis, Fourier series, Fourier transforms and Laplace transforms. Specific engineering tools for discrete time linear system analysis include discrete time convolution, Z-transform techniques, discrete Fourier transform and fast Fourier transform (DFT/FFT), and the design and analysis of analog and digital filters for real-world signal processing applications. Prerequisites: ENEE 2012, MATH 2070.

ENEE 3141 Digital Communications (3 Credits)

Introductory course on modern digital communication systems. The basic communication system theory, probability and random processes, baseband digital data transmission, coherent and non-coherent digital modulation techniques and analysis of bit error probability. Bandwidth efficiency and transmission of digital data through band-limited channels. Prerequisites: ENEE 3111, ENGR 3611 or permission of instructor.

ENEE 3620 Optical Fiber Communications (4 Credits)

A comprehensive treatment of the theory and behavior of basic constituents, such as optical fibers, light sources, photodetectors, connecting and coupling devices, and optical amplifiers. The basic design principles of digital and analog optical fiber transmission links. The operating principles of wavelength-division multiplexing (WDM) and the components needed for its realization. Descriptions of the architectures and performance characteristics of complex optical networks for connecting users with a wide range of transmission needs (SONET/SDH). Discussions of advanced optical communication techniques, such as soliton transmission, optical code-division multiplexing (optical CDMA) and ultra-fast optical time-division multiplexing (OTDM). Laboratory. Cross listed with ENEE 4620. Prerequisite: ENEE 3030 or permission of instructor.

ENEE 3641 Introduction to Electromagnetic Compatibility (4 Credits)

The study of the design of electronic systems so that they operate compatibly with other electronic systems and also comply with various governmental regulations on radiated and conducted emissions. Topics may include Electromagnetic Compatibility (EMC) requirements for electronic systems; non-ideal behavior of components; radiated emissions and susceptibility; conducted emissions and susceptibility; shielding and system design for EMC. Cross listed with ENEE 4640. Prerequisites: ENEE 3111, ENEE 2611 and ENEE 2223.

ENEE 3670 Introduction to Digital Signal Processing (4 Credits)

Introduction to the theory and applications of Digital Signal Processing. Special attention is paid to the fast Fourier transform and convolution and to the design and implementation of both FIR and IIR digital filters. Prerequisite: ENEE 3111.

ENEE 4030 Optoelectronics (4 Credits)

Optical fibers: structures, waveguiding, and fabrication; attenuation and dispersion; optical sources (LED, LASER, Fiber laser); power launching and coupling; photodetectors (APD, PIN, MSM); and practical optical transmitter and receivers. Cross listed with ENEE 3030.

ENEE 4141 Digital Communications (4 Credits)

Introductory course on modern digital communication systems. The basic communication system theory, probability and random processes, baseband digital data transmission, coherent and non-coherent digital modulation techniques and analysis of bit error probability. Bandwidth efficiency and transmission of digital data through band-limited channels.

ENEE 4620 Adv Optical Fiber Comm (4 Credits)

A comprehensive treatment of the theory and behavior of basic constituents, such as optical fibers, light sources, photodetectors, connecting and coupling devices, and optical amplifiers. The basic design principles of digital and analog optical fiber transmission links. The operating principles of wavelength-division multiplexing (WDM) and the components needed for its realization. Descriptions of the architectures and performance characteristics of complex optical networks for connecting users who have a wide range of transmission needs (SONET/SDH). Discussions of advanced optical communication techniques, such as soliton transmission, optical code-division multiplexing (optical CDMA), and ultra-fast optical time division multiplexing (OTDM). Advanced Project. Cross listed with ENEE 3620. Prerequisite: instructor permission.

ENEE 4630 Optical Networking (4 Credits)

This course provides a technical overview of optical networking. It gives students a solid understanding of optical networking field principles and practice. Underlying principles are reviewed along with common optical solutions and practices. It explains and provides practical tips on how to design and implement Networks. Examples are used to demonstrate key concepts of ATM, SONET/SDH and DWDM implementation. Prerequisite: ENEE 3011 or instructor approval.

ENEE 4640 Electromagnetic Compatibility (4 Credits)

The study of the design of electronic systems so that they operate compatibly with other electronic systems and also comply with various governmental regulations on radiated and conducted emissions. Topics may include: Electromagnetic Compatibility (EMC) requirements for electronic systems; non-ideal behavior of components; radiated emissions and susceptibility; conducted emissions and susceptibility; shielding and system design for EMC. Final Project. Cross listed with ENEE 3641.

ENEE 4800 Advanced Topics (EE) (1-5 Credits)

Various advanced topics in electrical engineering as announced. May be taken more than once. Cross-listed with ENEE 3035.

ENEE 4950 ECE Graduate Assessment (0 Credits)

This class does not meet. All graduate (MS and PhD) ECE students will enroll in this class during their last quarter. All required assessment materials will be uploaded online in Canvas Assignments to meet the course requirements. Students will receive Canvas course announcements and or emails from the instructor notifying the students of what are required to be uploaded. The purpose is to collect data for the assessment and continuous improvement of the graduate programs.

ENEE 4991 Independent Study (1-10 Credits)**ENEE 4995 Independent Research (1-16 Credits)****ENEE 6991 Ph.D Independent Study (1-10 Credits)****ENEE 6995 Independent Research (1-16 Credits)**

Engineering, Mechanical (ENME)

ENME 3320 Computer Aided Design and Analysis (4 Credits)

Introduction to the use of computer aided design and analysis with applications to solid and fluid mechanics, heat transfer and vibrations; projects in one or more of the above areas. Emphasis on how to use the software to analyze engineering systems. Prerequisites ENME 2541 and ENME 2651.

ENME 3511 Machine Design (3 Credits)

Application of statics, dynamics, mechanics of materials and manufacturing processes to the design of machine elements and systems. Properties of materials and design criteria. Synthesis and analysis of a machine design project. Prerequisites: ENME 2520 and ENME 2541.

ENME 3545 Mechanisms (4 Credits)

Synthesis, analysis and use of mechanisms. Mechanisms studied include cams, gears and planar linkages, with an emphasis on planar linkages. Prerequisites: ENME 2530 and ENGR 1572.

ENME 3651 Computational Fluid Dynamics (4 Credits)

This course introduces principles and applications of computational methods in fluid flow and topics chosen from heat transfer, mass transfer or two phase flow. The conservation equations, their discretizations and solutions, are presented. Convergence and validity of solutions along with computational efficiency are explored. Students learn to apply these techniques using the latest software packages. Prerequisites: ENME 2671.

ENME 3661 Mechanical Energy Systems Engineering (4 Credits)

This course covers energy systems engineering analysis from a mechanical and materials engineering perspective. This course covers energy production from traditional energy systems that use fossil fuel combustion such as internal combustion engines, coal-fired plants, and natural gas turbines, to nuclear energy and renewable energy methods such as wind, solar, hydraulic, and geothermal. Lastly, the course will survey emerging technologies for future (21st century) energy systems. Students should have taken at a minimum Thermodynamics, Dynamics, and Fluid Dynamics courses. Prerequisites: ENME 2720, ENME 2510, ENME 2651.

ENME 3720 Aerospace Engineering: Atmospheric Flight Dynamics (4 Credits)

This course provides an introduction to aerospace engineering analysis and design. In the atmospheric domain, the basics of aerodynamics are covered, followed by flight mechanics. The approach is from a practical perspective in which analysis and design are intertwined. Prerequisites: ENME 2651 and ENME 2720 and ENME 2530.

ENME 3730 Aerospace Engineering: Space Flight Dynamics (4 Credits)

This course is focused on the aerospace discipline of space environment and orbital mechanics. The topics in this discipline are discussed in detail and provide aid in designing spacecraft/space missions. Some of the topics covered in this course include space environment, satellite orbits, spacecraft configurations, transfer orbits, and elementary space propulsion. Prerequisites: ENME 2651 and ENME 2720 and ENME 2530.

ENME 3810 Mechanical Engineering Capstone Laboratory (3 Credits)

This course is the capstone mechanical engineering laboratory course requiring independent experimental design by student teams. Using experimental equipment available in heat transfer, fluid mechanics, solid mechanics, thermodynamics, and measurement and control, the student team is required to design experiments to solve given problems which will be unique to each team. This course encourages students to develop experimental design and research techniques while continuing to improve skills in fundamental lab notebook keeping, uncertainty analysis in measurements, data acquisition, data analysis, report writing, oral presentations, and laboratory safety and procedures. Prerequisite: ENME 2810.

ENME 4020 Adv Finite Element Analysis (4 Credits)**ENME 4310 Computational Methods for Mechanics and Materials (4 Credits)**

An introductory course for the general-purpose computational methods in advanced multiscale materials and mechanics. Students learn the fundamentals on the numerical methods used in mechanical and materials engineering. Cross listed with ENME 3310.

ENME 4360 Elasticity (4 Credits)

Students will be able to apply the fundamental principles of elasticity to solve two- and three-dimensional mechanical engineering problems involved in modern applications of elastic structures, composite materials, tribology and contact mechanics. Dependence on previous knowledge of solid mechanics, continuum mechanics or mathematics is minimized. The emphasis is placed on the engineering applications of elasticity. Suggested prerequisite: ENME 2541.

ENME 4400 Fatigue (4 Credits)

A detailed overview of fatigue. Topics include: stress life and strain life approaches, fracture mechanics, constant amplitude and spectrum loading, life prediction, fatigue at notches, microstructural effects, environmentally assisted fatigue, retardation and acceleration, multi-axial fatigue, design against fatigue and reliability. Cross listed with ENME 3400.

ENME 4520 Intermediate Dynamics (4 Credits)

Development and analysis of dynamic systems through classical approaches. Topics will include: Vector algebraic/differential geometry for 3D translational and rotational kinematic analyses with motion constraints. Formulation of equations of motion for 3D multibody systems using: Newton/Euler equations; Angular momentum principle; and D'Alembert principle (aka road-maps). Some exposure to Euler-Lagrange and Kane's Methods calculations. Symbolic and numerical computational solutions to linear/nonlinear algebraic and differential equations governing the configuration, forces, and motion of systems with multiple degrees of freedom. Recommended prerequisites: MATH 2070.

ENME 4530 Advanced Dynamics (4 Credits)

Formulation of equations of motion for constrained 3D multibody systems with: D'Alembert principle (MG road-maps); power, work, and energy; Lagrange's equations; and Kane's method. Euler parameters/quaternions, specified motion, constraint force/torque calculations, feed-forward control, inequality constraints and/or intermittent contact. Tensors and mass property calculations. Symbolic and numerical computer skills for geometry/kinematic analysis, mass/inertia calculations, forces and motion, and simulation of multi-body dynamic systems. Training for advanced research and professional work. Recommended pre-requisite: ENME 4520.

ENME 4541 Advanced Mechanics of Materials (4 Credits)

This is a second-level course in mechanics of materials with an emphasis on techniques that are useful for mechanical design. Topics may include energy methods, non-symmetrical and nonlinear bending, shear and torsion of closed and open sections, beams in elastic foundations, membrane stress in axisymmetric shells, axisymmetric bending of cylindrical shells, thick-walled cylinders and disks, curved beams, and elastic stability. Recommended prerequisite: ENME 2541.

ENME 4630 Viscous Flow (4 Credits)

Course covers the fundamentals of fluid mechanics from an advanced point of view with emphasis on the mathematical treatment of viscous-flow phenomena. Topics cover the Navier-Stokes equations and its exact and similarity solutions, laminar boundary layer theory, free-shear flows, and the phenomena of instability and transition to turbulence. Recommended prerequisite: ENME 2661.

ENME 4670 Advanced Computational Fluid Dynamics (4 Credits)

Building on the principles and applications of computational methods in fluid flow and topics chosen from heat transfer, mass transfer and two phase flow. Specifically, Monte Carlo and volume of fluid techniques are discussed at length. Additionally, students learn how to set up automated design optimization using the latest software packages. Time permitting, students also are introduced to fluid-solid interaction modeling. Prerequisite: ENME 3651.

ENME 4671 Convective Heat Transfer (4 Credits)

The objective of this course is to examine the physical phenomena associated with heat transfer in the presence of fluid flow. We will develop a mathematical description of the processes (fluid flow and heat transfer) for laminar and turbulent flows for both internal and external situations. Exposure to the fundamentals of fluid mechanics and heat transfer is expected before taking this course.

ENME 4800 Advanced Topics (ME) (0-5 Credits)

Determined by interest and demand. May be taken more than once for credit.

ENME 4900 Grad Professional Development (1 Credit)

This course is required for all MME MS graduate students and all MME PhD graduate students who enter with a BS or enter with an MS but fail their first qualifying exam. One of our objectives is for all graduating students to have good written and verbal communication skills. This course is set up to meet those objectives. During this course, students write a mini-proposal and/or literature review. Students follow guidelines for a funding agency (e.g. NSF or NIH) for the mini-proposal. If students have a research advisor, students can coordinate with their advisor. If students do not have a research advisor, students may pick a topic that most interests them. Both a written proposal and an oral presentation are required of all students. Graduate standing is required.

ENME 4950 Graduate Assessment (0 Credits)

This graduate assessment course is required for all MME graduate students to be taken in their last quarter. All required assessment materials are uploaded to DU Assessment to meet the course requirements. Students will receive emails through the DU Assessment system notifying you of what is required to be uploaded.

ENME 4991 Independent Study (1-10 Credits)**ENME 4995 Independent Research (1-16 Credits)****ENME 5991 Independent Study (1-10 Credits)****ENME 5995 Independent Research (1-16 Credits)**

Engineering, Mechatronic Syst (ENMT)

ENMT 3220 Mechatronics II - Real-Time Systems (4 Credits)

Real-time systems require timely response by a computer to external stimuli. This course examines the issues associated with deterministic performance including basic computer architecture, scheduling algorithms, and software design techniques including data flow diagrams, real-time data flow diagrams, state transition diagrams, and petri nets. In the lab portion of this class, students program a microcontroller to interact with mechatronic devices. Prerequisite: ENCE 3210.

ENMT 4000 Space Systems Design I (4 Credits)

The application of advanced theory and concepts as they relate to the development of spacecraft and missile subsystems, and how those subsystems are related under the umbrella of systems engineering. The course emphasizes practical aspects of space systems design and integration, and is team-taught by faculty and functional experts in the various fields. Lecture topics include aerospace materials, mechanics, thermal control, embedded systems, distributed sensor networks and aerospace probability and statistics.

ENMT 4010 Space Systems Design II (4 Credits)

The continuation of Space Systems Design I. Lecture topics include payload communications, guidance and control, spacecraft electric power, propulsion systems, radiation and avionics and sensor subsystems. Prerequisite: Space Systems Design I.

ENMT 4100 Systems Engineering (4 Credits)

Systems engineering is an interdisciplinary field of engineering and engineering management that focuses on how to design and manage complex systems over their life cycles. At its core, systems engineering utilizes systems thinking principles to organize this body of knowledge. Systems follow systems theory by having the design interface with its environment. System design typically follows the "V-diagram", a serial process with structured verification occurring at each level of abstraction (system-subsystem-component hierarchy levels). The V-diagram traces the basic design process, starting with a problem, developing requirements, definitized with a concept of operations, and accomplishing a functional analysis and decomposition. Systems engineering takes a holistic approach to design, taking an idea to a concept and detail design. This includes a functional architecture and physical architecture, with particular attention paid to interfaces. Having built or procured components and developing software, the system is assembled and integrated. Verification and Validation is accomplished at each level of decomposition, starting at the lowest level and moving up to a system level that can be validated with the customer or shareholders. There are a series of milestones that are used to monitor the progress of the design. Instructor permission required.

ENMT 4220 Mechatronics II (4 Credits)

This course combines systems design and integration with a real world project involving the design and fabrication of an integrated system. Prerequisite: Mechatronics I or equivalent.

ENMT 4225 System Models, Simulation & Tools (4 Credits)

A physical model is a smaller or larger physical copy of an object. Physical models allow visualization, from examining the model, of information about the thing the model represents. A model can be a physical object such as a spacecraft or spacecraft subsystem. Modeling and simulation are a key enabler for systems engineering activities as the system representation in a computer readable (and possibly executable) model enables engineers to reproduce the system (or Systems of System) behavior. Modeling is a tool for diagramming and understanding complex processes; Model-Based Systems Engineering (MBSE) is a powerful engine for design growth. It's endlessly adaptable to human needs and technological trends, unlocking incredible potential for analysis, and helping solve tomorrow's grand engineering challenges such as in aerospace. Physics-based models can be combined for use with equations of mathematical physics, coupled with real-time sensor measurements, and their numerical solution in an effort to understand complex design and operations.

ENMT 4270 Fundamentals of System Electrical, Mechanical and Software Design (4 Credits)

Design of individual electrical and mechanical components comprising a system. Comprehensive integrated approach making the transition from design of individual electrical/mechanical components into a complete electrical-mechanical system design. Topics include systems engineering of complex electronics (FPGAs, ASICs, Hybrids), electromagnetic compatibility, electromagnetic interference, electrical compatibility analysis, system power modeling and energy efficiency, electrical systems integration and test methodologies, mechanical system modeling, system thermal/stress analysis methods and tools, mass management, mechanical systems integration and test methodologies. Prerequisites: ENMT 4000, ENMT 4010, or permission by the Instructor. Course Requirements: Assignments and projects.

ENMT 4275 Applied System Electrical, Mechanical, and Software Design (4 Credits)

This is a practice-centered course. Assess case studies of design, implementation and testing, validation and verification of complete complex (e.g. spacecraft) systems to meet mission requirements with performance guarantees. Prerequisites: It is recommended that the elective course ENMT 4270 is taken first, or permission by the Instructor.

ENMT 4280 Design for Feasibility and Resilience (4 Credits)

A feasible design is an activity based on selected testing and engineering analysis, which presents enough information to determine whether or not the project should be advanced to the final design and production fabrication stage. In the fields of engineering, resilience is the ability to absorb or avoid damage without suffering complete failure and is an objective of the design. Resilience is described as the ability to return to the steady-state condition following a perturbation of the control behavior. When thinking about resilience, system engineering typically refer to this as an alternative (or as a complement) to the conventional view of safety. But resilience (or more accurately, the ability to perform in a resilient manner) is not about avoiding failures and breakdowns, i.e., it is not just the opposite of a lack of safety. This has led to early discussions about resilience versus robustness, resilience versus brittleness, etc. The focus of resilience engineering is thus resilient performance, rather resilience as a property (or quality) or resilience in a 'X versus Y' dichotomy. Students enrolling in this course should have knowledge of probability and statistics, familiarity with MATLAB/Simulink, or permission of the instructor.

ENMT 4285 Complex System Architectures, Models, and Tools (4 Credits)

The course focuses on mission requirements and how an overall mission should function by examining different architecture configurations and tools for modeling purposes. Example architecture models include: executable, networked, distributed, real-time, information assurance, framework, and reference. Students learn about development and allocation of functional and non-functional requirements and how to analyze architecture issues. Emphasis is on development of Service Oriented Architecture (SOA) solutions and ability to modeling and analysis using Systems Modeling Language (SysML). Prerequisites: ENMT 4100, or permission by the instructor. Course Requirements: Assignments and projects.

ENMT 4730 Advanced Ground Robotics (4 Credits)

Introduction to path planning and sensing and estimation for robotic manipulations and mobile robots. Review of the mathematical preliminaries required to support robot theory. Topics include advanced sensors, mobile robot mechanisms, advanced manipulator mechanisms, path planning in 2-D and 3-D, and simultaneous localization and mapping. Applications include task and motion planning for idealized and real robots.

ENMT 4800 Adv Topics (Mechatronics) (1-5 Credits)

Various topics in Mechatronics System Engineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENMT 4801 Adv Topics (Mechatronics) (1-5 Credits)

Various topics in Mechatronics System Engineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENMT 4991 Independent Study (1-5 Credits)**ENMT 4995 Independent Research (1-18 Credits)**

Engineering, Systems (ENSY)

ENSY 4010 Systems Engineering Fundamentals (3 Credits)

An overview of systems engineering, including V-diagrams, functional architecture, physical architecture, system assembly and integration, verification and validation, and milestones to monitor the progress of the design.

ENSY 4012 Systems Engineering Requirements Development (3 Credits)

The course covers fundamentals of design and requirements analysis of complex systems to meet overall mission requirements. Spanning the requirements engineering phase, topics include: decomposition, derivation, allocation, verification and validation planning. Prerequisite: ENSY 4010, or permission of instructor.

ENSY 4014 Complex System Architectures (3 Credits)

The course focuses on mission requirements and how an overall mission should function by examining different architecture configurations and tools for modeling purposes. Topics include: allocation of functional and non-functional requirements, Service Oriented Architecture (SOA) and architectural modeling using the System Modeling Language (SysML). Prerequisite: ENSY 4010.

ENSY 4016 Conceptual Design of Systems (3 Credits)

Conceptual design is the part of the design process that yields a basic solution path, which leads to the principle solution. The focus of the course is on two important decision making principles: understanding a problem and devising a plan. Topics include: intellectual property and the development of engineering drawings, schematics and 3D models.

ENSY 4021 Design of Space Systems Part 1 (3 Credits)

This course is part one of a two-part series on spacecraft design by integrated systems and subsystems. Topics include: spacecraft overview, subsystem interfaces, concepts of operation (CONOPS) and the systems engineer's role as a generalist as opposed to specialists.

ENSY 4022 Design of Space Systems Part 2 (3 Credits)

This course is part two of a two-part series on spacecraft design by integrated systems and subsystems. Topics correspond to decomposition of the spacecraft into classical spacecraft subsystems. Practical applications and core functionality of these subsystems are presented, including required testing and integration at the subsystem and spacecraft levels. Prerequisite: ENSY 4021.

ENSY 4024 Applied Electrical, Mechanical and Software Systems (3 Credits)

This is a practice-centered course. Assess case studies of design, implementation and testing, validation and verification of complete complex (e.g. spacecraft) systems to meet mission requirements with performance guarantees. Prerequisites: ENSY 4012, ENSY 4014, and ENSY 4016, or permission by the Instructor.

ENSY 4030 Introduction to Aerospace Missions (3 Credits)

This class is for individuals working in aerospace engineering and related fields. Topics include: design of orbital spacecraft, design for Moon missions (such as landers), design for Mars missions (including rovers), design of an unmanned drone for surveillance (high-altitudes), CubeSats (having large constellations), and rockets and missiles (including hypersonic).

ENSY 4040 Systems Optimization (3 Credits)

The development and application of various optimization techniques will be explored with engineering examples. Topics include: analytical and numerical methods, linear and non-linear programming techniques for unconstrained and constrained problems, and advanced optimization techniques, e.g. global optimization. Assignments are in context of Systems Engineering case studies.

ENSY 4042 Optimization for Advanced Systems (3 Credits)

Advanced optimization algorithms are presented, as a pillar of data science and machine learning. Topics include: linear, nonlinear and integer programming models. Students will learn to understand tractability of models, particularly complex models as are central to the discipline of Systems Engineering. Prerequisite: ENSY 4040.

ENSY 4050 Digital Transformation for Advanced Integration (3 Credits)

Digital engineering technologies address the difficulties of managing complex and evolving technologies over their lifecycles of (i) development and (ii) operations & maintenance. This course will focus on digital technologies to integrate data across the enterprise, break organizational silos, and drive culture to realize risk reduction. Topics include: elements of the digital thread, such as digital twins and simulation, as well as machine learning and data analytics to inform decision-making throughout the lifecycle.

ENSY 4060 Practical Model Based Systems Engineering (3 Credits)

MBSE is part of a long-term trend toward model-centric approaches adopted by other engineering disciplines, including mechanical, electrical and software. In this course, students will be given hands-on access to MBSE tools in order to learn the UML/SysML language of MBSE and to practice systems engineering methods using the digital thread that is enabled by MBSE. Students will also gain an understanding of MBSE being a subset of Model Based Design (MBD). Prerequisite: ENSY 4050, or permission of instructor.

ENSY 4090 Project Management in Relation to Systems Engineering (3 Credits)

An overview of the skills and strategies for managing people, risks, schedules, and information to meet goals and objectives in large, complicated engineering projects. Includes managing project constraints, and best practices for working with project managers. Emphasis is on People, Process and the Business Environment.

ENSY 4112 Practical Validation and Verification Test Planning (3 Credits)

In this course, students gain a practical understanding of V-diagrams, and the path that must be traveled to fully validate and verify any system. Topics include: traceability between requirements and validation and verification test plans, including practical development of detailed test procedures at any level of integration. Prerequisite ENSY 4012, or permission by the instructor.

ENSY 4170 Practical Approaches to Continuous Improvement (3 Credits)

In this course, students learn practical differences between Continuous Improvement (CI) methods, such as Kaizen, Lean, Six Sigma, and Total Quality Management (TQM). Current events will be used as case studies to apply practical understanding of these CI methods. Practical application of the methods will leverage principles taught in ENSY 4010, ENSY 4071 and ENSY 4072. Case studies and assignments are based on illustrations of value added CI engineering in the Systems Engineering discipline. Prerequisites: ENSY 4010, ENSY 4071 and ENSY 4072; or instructor approval.

ENSY 4950 Graduate Assessment for Master of Science degree in Systems Engineering (0 Credits)

This class does not meet. All MS in Systems Engineering (MSSY) graduate students will enroll in this class during their last quarter. The purpose is to collect data for the assessment and continuous improvement of the graduate programs. All required assessment materials will be uploaded online in Canvas Assignments to meet the course requirements. Students will receive Canvas course announcements and or emails from the instructor notifying the students of what are required to be uploaded.

English (ENGL)

ENGL 3000 Advanced Creative Writing-Poetry (4 Credits)

Technique, writing practice and criticism.

ENGL 3001 Advanced Creative Writing-Poetry (4 Credits)

Technique, writing practice and criticism.

ENGL 3002 Advanced Creative Writing-Poetry (4 Credits)

Technique, writing practice and criticism.

ENGL 3003 Advanced Creative Writing-Poetry (4 Credits)

Technique, writing practice and criticism.

ENGL 3010 Advanced Creative Writing-Fiction (4 Credits)

Technique, writing practice and criticism.

ENGL 3011 Advanced Creative Writing-Fiction (4 Credits)

Technique, writing practice and criticism.

ENGL 3012 Advanced Creative Writing-Fiction (4 Credits)

Technique, writing practice and criticism.

ENGL 3013 Adv Creative Writing-Fiction (4 Credits)

Technique, writing practice and criticism.

ENGL 3015 Advanced Creative Writing: Non-Fiction (4 Credits)

ENGL 3017 Travel Writing-Fiction & Fact (4 Credits)

A study of European, American and other narratives of travel. This course examines relevant postcolonial and literary theories of travel and nationhood.

ENGL 3040 Introduction to Publishing (4 Credits)

Cross listed with ENGL 2040, MFJS 3140.

ENGL 3121 Chaucer: Canterbury Tales (4 Credits)

Life, culture, language and literary trends of Chaucer's age as reflected in "The Canterbury Tales".

ENGL 3320 Oral Literature and Orality in Literature (4 Credits)

The term "oral literature" generally refers to narratives and poems (including songs) performed and disseminated orally from one generation to the other. Oral literature is, in some respects, the foundational 'text' of written literature. The questions that we explore in this course include: How did oral literature develop, and what are the characteristics? How has oral literature been shaped by time and place? How is it distinct from as well as related to written literature? To answer these questions, we explore different forms of oral literature and also study the use of orality in written literature. Our studies involve the examination of material and texts from different parts of the world.

ENGL 3402 Early Romantics (4 Credits)

ENGL 3405 Postmodern Visions of Israel (4 Credits)

This course investigates how representation of Israel as a modernist utopia have been replaced in contemporary literature with images of Israel as a dystopia. The class discusses the historical context that gave rise to visions of an idealized Israel, and the role the Hebrew language played in consolidating and connecting narration to nation. Next the class considers how belles-lettres from recent decades have reimagined Israel as a series of multilingual "multiverses." A selection of fiction translated from Hebrew forms the core of class reading. Theoretical exploration of postmodernism help us conceptualize the poetics of postmodern literature. No knowledge of Israeli history or Jewish culture is necessary to succeed in this course. Cross listed with JUST 3405.

ENGL 3706 Writing the American West (4 Credits)

Explores historical and contemporary writing produced in and about the American West.

ENGL 3711 20th-Century American Fiction (4 Credits)

Fiction, poetry, drama, and non-fiction on selected themes by 20th and 21st century American writers. Topics for study may include issues related to regionalism, ethnicity and gender, as well as specific social and historical concerns.

ENGL 3730 Literature and Medicine: Addiction and Modernity (4 Credits)

This course introduces students to accounts of substance use and addiction from the nineteenth century through the present day. We will examine canonical and contemporary literary texts, medical writings, visual representations, smartphone applications, and films alongside topics such as liberalism, inequality, imperial expansion, consumerism, "digital drugs," and the pathologization of addiction. We will consider our readings in light of the following questions: What role do substance use and addiction play in constructing the modern self and society? What can representations of addiction teach us about our relationship with the external world? How does addiction act as a metaphor, a narrative device, or even a political sign? How do gender, class, and race affect narratives of addiction? How do accounts of addiction interact with philosophical texts, medical treatises, and imperial and colonial discourses? In addition to writing critical essays, students will evaluate smartphone addiction treatment apps and devise a creative project on a topic relevant to this course.

ENGL 3731 Topics in English (1-4 Credits)

ENGL 3732 Topics in English (1-4 Credits)

ENGL 3733 Topics in English (1-4 Credits)

Topics vary reflecting the interdisciplinary nature of the department and studies of the faculty.

ENGL 3742 Jesus in Jewish Literature (4 Credits)

This course surveys literary depictions of Jesus in Jewish literature. Readers are often surprised to learn that throughout the twentieth century and into the twenty-first century, major Jewish writers have incorporated the figure of Jesus of Nazareth into their work. This class explores the historical, aesthetic, and spiritual reasons for the many Jewish literary representations of Jesus and of his literary foil, Judas. A selection of materials including short stories, poems, novels, scholarly essays and polemics in English and in translation from Hebrew and Yiddish demonstrate the depth of Jewish literary culture's engagement with Jesus' life and teachings. Among the many writers we will read are: S.Y. Agnon, Sholem Asch, Uri Zvi Greenberg, Haim Hazaz, Emma Lazarus, Amos Oz, Philip Roth, and L. Shapiro. Ultimately, this class will consider how literary representations of Jesus can destabilize perceived distinctions between Jews and Christians. While helpful, no knowledge of Jewish languages, religious tradition, or cultural practice is necessary to succeed in this course. This course is cross-listed as JUST 3742.

ENGL 3743 Modern Jewish Literature (4 Credits)

Stories, novels and memoirs by 20th-century Jewish writers; consideration of issues of generation, gender and idea of Jewish literature as a genre. Cross listed with JUST 3743.

ENGL 3744 African American Literature (4 Credits)

This course examines fiction, poetry, autobiography, and drama by African American writers, with strong consideration on the socio-historical conditions that gave rise to and continue to inform this literary tradition.

ENGL 3800 Bibliography/Research Method (4 Credits)**ENGL 3803 Modernism/Postmodernism (4 Credits)****ENGL 3813 History and Structure of the English Language (4 Credits)**

A composite course studying both the structure of modern English and the history of the English language.

ENGL 3815 Studies in Rhetoric (4 Credits)

This course will examine the history and principles of rhetoric and how they pertain to theory and practice in the field of composition and rhetoric.

ENGL 3817 History of Rhetoric (4 Credits)**ENGL 3818 Composition Theory (4 Credits)****ENGL 3819 Old English (4 Credits)**

This class introduces students to Old English grammar, prose, and poetry. This course is a prerequisite for ENGL 3200.

ENGL 3821 Literary Criticism: 19th Century-Present (4 Credits)**ENGL 3822 Literary Criticism: 20th Century (4 Credits)**

Critical methods and philosophies of 20th-century critics; their relationship to traditions.

ENGL 3823 Interpretation Theory (4 Credits)**ENGL 3825 Cultural Criticism (4 Credits)**

Cross listed with ENGL 2835.

ENGL 3852 Topics in Poetics (4 Credits)**ENGL 3982 Writers in the Schools (2,4 Credits)**

This course operates mostly "in the field." Following the models of California Poets in the Schools and Teachers & Writers Collaborative, students are in training with a poet-in-residence, observing him as he conducts a residency in a public school. In addition, we have our own meetings to discuss pedagogy, classroom practices and management, teacher-writer relations, and all other necessary logistical planning. Placement in public schools is facilitated by Denver SCORES, an education program dedicated to increasing literacy in Denver's at-risk school population. For those wishing to work with middle or high school students, or in other community settings (e.g., homeless or women's shelters), special arrangements can be made. This course is a collaborative effort between CO Humanities, Denver SCORES, and the University of Denver.

ENGL 3991 Independent Study (1-17 Credits)**ENGL 3995 Independent Research (1-10 Credits)****ENGL 4000 Colloquium (2 Credits)****ENGL 4001 Sem Creative Writing-Poetry (4 Credits)****ENGL 4009 Seminar -- Creative Nonfiction (4 Credits)**

Advanced writing and study of creative nonfiction, including prose development and structure.

ENGL 4011 Sem Creative Writing-Fiction (4 Credits)**ENGL 4012 History/Theory of Genre-Poetry (4 Credits)****ENGL 4017 Travel Writing (4 Credits)****ENGL 4050 The Critical Imagination (2 Credits)**

This graduate level course explores poetry, fiction, and criticism as different facets of the imagination. This is a large and a necessarily vaguely defined topic. But in the world of literary studies, creativity and criticism are clearly symbiotic. Reading and writing are connected activities. The poet or fiction writer is often a critic, and there are numerous treatments of interpretation in the critical canon suggesting that the act of reading and interpreting is itself an imaginative and creative act. The course explores genre signatures and possibilities, as well as provides an introduction to some of the analytics through which texts, literary and otherwise, are interpreted.

ENGL 4100 Graduate Tutorial (2-4 Credits)**ENGL 4120 Beowulf (4 Credits)**

Reading and translation of the Old English Beowulf. Prerequisite: ENGL 4125.

ENGL 4125 Old English (4 Credits)

This class introduces students to Old English grammar, prose, and poetry. This course is a prerequisite for ENGL 4120.

ENGL 4150 Special Topics in Medieval Lit (4 Credits)**ENGL 4200 Special Topics-Early Mod Lit (4 Credits)****ENGL 4210 Holocaust Literature (4 Credits)**

This seminar presents a multidisciplinary and transnational approach to literature of the Holocaust. Students consider memoir, fiction, and poetry drawn from a variety of national literatures and linguistic traditions. Works written by victims, survivors and 'witnesses through the imagination' are all considered. These readings are supplemented by secondary texts, including historical and philosophical materials, as well as relevant works from the social sciences.

ENGL 4213 Advanced Studies in Early Modern Literature (4 Credits)**ENGL 4220 Seminar-Studies in Shakespeare (4 Credits)****ENGL 4300 Advanced Studies in 18th Century Literature (4 Credits)****ENGL 4424 Topics in English: 19th Century Literature (4 Credits)**

Special Topics courses will explore specific topics within historical periods, single authors, or theoretical/critical/ scholarly issues.

ENGL 4510 ISL Dharamsala: Tibet, Global Citizenship, & Community Literacies (4 Credits)

ISL Dharamsala presents DU students with the unique opportunity to study international community literacies as a practical component of global citizenship through service-learning placements and study in Dharamsala, India. Home of the Dalai Lama and the Tibetan government-in-exile, Dharamsala is a multi-generational community located in the northern Indian foothills of the Himalayas. During fall quarter, students will study community literacies in the practice of global citizenship and service while immersed in the geo-political, religious, and other contexts experienced by Tibetans in exile. During their time in Dharamsala, cultural immersion and a service-learning placement will give students insight into the complexities of social justice issues and cultural nuances they have been studying and provide opportunities to contribute to local and global society through informed and reflective practice.

ENGL 4600 Adv Studies -20th Cent Lit (4 Credits)**ENGL 4621 Adv Studies-20th C. Literature (2-4 Credits)**

This course will offer (and be required of) graduate students an advanced foundation in 20th century literature; the primary texts and their cultural/historical/ theoretical contexts.

ENGL 4650 Special Topics: 20th Cent Lit (4 Credits)**ENGL 4660 The Black Imagination (4 Credits)**

Focusing mainly on Africa, Asia, Europe, and the Americas (especially the USA and the Caribbean/Latin America), this course explores and connects aspects of the black imagination. These aspects include oral performances, thought systems, literature, art, cinema, and critical discourses in different eras and in various places. Studied together, these existential and intellectual signposts provide an expanded insight into black (African and African diasporic) aesthetics from an intercontinental and an interdisciplinary perspective.

ENGL 4675 Theories of Narrative: Formalism, Narratology, Cybertext (4 Credits)

This class traces developments in narrative theory from Russian Formalism through "classical" narratology and on to examine the border between traditional narrative texts and texts that require a higher degree of interactivity, sometimes called "cyber texts." The goal is to identify significant contributions to narrative theory and to suggest the possibilities for the future of the field. Seminal articles, key works, and critical introductions survey key advances in narrative theory to present an overview of the field from its inception to contemporary trends.

ENGL 4700 Antebellum American Literature (4 Credits)**ENGL 4701 Topics in English (2-5 Credits)**

A topics class; topics may change.

ENGL 4702 Topics in English (2-5 Credits)

A topics class; topics may change.

ENGL 4730 American Romanticism (4 Credits)**ENGL 4732 Spc Tpc: Antebellum Amer Lit (4 Credits)****ENGL 4743 Black Feminist Criticism (4 Credits)**

This course examines the discursive reach of black feminist criticism by journeying into the creative terrain of literature, visual art, music, and performance produced by black women in the United States and throughout the black diaspora, from the nineteenth century to the present.

ENGL 4830 Seminar: Teaching and Writing Literature (2-4 Credits)**ENGL 4840 Topics in Composition Studies (2-4 Credits)**

Each offering of this course focuses on specific issues in theory, research, or pedagogy within the broad field of composition studies. Examples of topics include the development of writing abilities; genre theory and composing; multimodal texts and their intersections and disjunctions of rhetoric and composition; the history of composing theories and practices; realms of composing, including the academic, civic, vocational, aesthetic, and interpersonal; institutional formations and settings of composing; discourse theories; stylistics; race, gender, class and composing; and so on.

ENGL 4851 Publishing Institute (6 Credits)**ENGL 4852 Dissertation Colloquium (2 Credits)**

This two-credit dissertation colloquium is offered in the winter and spring for third-year PhD students in English who are in the process of researching and writing their dissertations. In addition to having weekly presentations and discussions of work in progress, the group will peruse prefaces and introductions to former English Department dissertations, write and abstract for their own dissertation, and possibly revise and send out a piece from their dissertation. The class is open to both literary studies and creative writing students. Restricted to doctoral students in English.

ENGL 4991 Independent Study (1-17 Credits)**ENGL 4995 Independent Research (1-17 Credits)****ENGL 5991 Independent Study (1-17 Credits)****ENGL 5995 Independent Research (1-17 Credits)****ENGL 5999 American Literary Marketplace (0-2 Credits)**

"American Literary Marketplace" bridges the culture of writing within the Department of English and Literary Arts with the culture of publishing in the United States. As an experiential learning course, it offers graduate students a formal, structured opportunity—as an internship, externship, or cooperative educational experience, depending on the student's need—to deepen their writing practice and enact classroom learning outside and beyond the literary classroom.

Entrepreneurship & Venture Mgt (EVM)

EVM 4040 Social Entrp in Global Mrkt (4 Credits)

This is a dynamic hybrid course with online readings, cases, quizzes, and blogs, as well as in-class experiential interactions with social enterprises in the community. The distance component of this course is guest speakers from other countries. Students will have the opportunity to network, interact, and work with local social enterprises. A value added component of this course is the coverage of global and cross-cultural concepts and issues critical for successfully running social enterprises in a global context.

EVM 4350 Big Challenges, Big Solutions: The Emerging Start-Up (4 Credits)

Students in the experiential course will start a firm in which they formulate an idea, gather basic data, formulate hypotheses, and then test these hypotheses with potential market participants. Students are likely to pivot several times in this course as the experimentation process helps them shape the emerging firm.

EVM 4351 Designing the Start-Up (4 Credits)

In this class, students will develop an executive summary that outlines the core business concept and the type of governance that will be needed, how the business will scale both in terms of product/service and customers. This executive summary will be used to fund the business and determine how the business will be funded—friends and family, credit cards, second mortgages, crowd funding, angel, or VC.

EVM 4355 Entrepreneurship: Ideation to Creation (2 Credits)

Entrepreneurship: Ideation to Creation is designed as a general introduction to the basic concepts of entrepreneurship as a business discipline, whether you are interested in starting a business, working for an entrepreneurial company, launching an entrepreneurial venture within an existing organization or working with startups as an investor or advisor. The course is a broad overview of early-stage entrepreneurial activities and issues, including identifying business opportunities, structuring and funding, early stage operations and exit strategies. The class will include exercises on developing a creative and innovative mindset and the basics of design thinking and business model development as one approach to entrepreneurial venture development.

EVM 4356 Entrepreneurship II: Ideation to Creation (1 Credit)

Entrepreneurship II builds on Entrepreneurship I, requiring students to use their knowledge of sustainable entrepreneurship and the application of basic business skills to create an innovative enterprise which incorporates renewable, reusable and sustainable approaches to business. This is the second of two classes, taken with at least one quarter separating EVM 4355 and EVM 4356.

EVM 4360 Entrepreneurship: Ideation to Creation (2 Credits)

Entrepreneurship is designed as a general introduction to sustainable entrepreneurship and the application of basic business skills to the creation of innovative enterprises which incorporate renewable, reusable and sustainable approaches to business. Sustainability is unleashing a new wave of innovative and disruptive forces to create new profitable business enterprises. In this course, we will explore the creation of new enterprises that embrace the triple-bottom line of profits, people and planet. Students are then required to use their knowledge of sustainable entrepreneurship and the application of basic business skills to create an innovative enterprise which incorporates renewable, reusable and sustainable approaches to business.

EVM 4400 The Innovation Amphitheater (1 Credit)

As a self-employed entrepreneur or as an employee who works for someone else, an innovative outlook and entrepreneurial mindset is key to solving the problems our companies and society face now, and in the future. Innovators are everywhere and can add value from any role or department within their company, for example: c-suite leaders, facilities staff, IT administrators, and human resource trainers. Innovators share common traits: they see emerging opportunities where others see hopeless problems, they solve problems with creative ideas, and they evaluate ideas for their merits and shortcomings. This course is designed to teach the tools, strategies, and mindset of an innovator to help students ideate, evaluate, and innovate quickly. Students will collaborate using proven strategies and techniques to solve problems in new and unique ways.

EVM 4402 Creating Your Digital Presence (1 Credit)

LinkedIn isn't enough. Your digital presence is a reflection of you, personally and professionally that expands to many social venues online. Your goal is to show customers, strategic partners and stakeholders who you are with a focus on authenticity and transparency. We'll cover content best practices and how your personal brand parallels your business's digital presence. This is a fun class and times goes very fast!

EVM 4403 Ethics in Entrepreneurship (1 Credit)

Creating a business for the sake of generating profit is not enough. Businesses must contribute to the betterment of society through social, environmental and financial gains. This course will help you build the right vision for your business by engaging you in ongoing reflection and dialogue about your ethical responsibilities in product and service innovation, and helping you understand cognitive, behavioral and principled approaches to ethical issues in product and service innovation.

EVM 4404 Primary Research (1 Credit)

To be successful in your business venture, you need to make data-driven decisions. Much of that data can come from internal operations or perhaps secondary sources. But, to truly be successful, you need to gather, analyze, and make decisions based on primary research. In this course, you'll learn the basic tenets of performing primary research activities including defining your business problem, developing research questions, identifying your market segment, building a primary research instrument(s), gathering data using a primary research instrument, analyzing the data, and making recommendations.

EVM 4407 The Perfect Pitch (1 Credit)

Essential to most new business ventures is the ability to raise capital, initially from friend/families, angel investors, and then from venture capitalists (VCs). The capital raising process usually starts with the "pitch", a presentation that is compelling, exciting, informative, and addresses what funds are required by the venture, how they will be used, and how the investor will financially benefit from their investment. Pitching is an important part of sales, which can be applied towards most aspects of life where major decisions are to be made, especially by a group or committee. It is the process of collecting your persuasive thoughts and the proper ability of presenting them, drawing your audience towards a conclusion, ideally one that you want to have happen. This course will help you learn how to pitch, and ultimately create a perfect pitch for your new business venture or other life goals. We will review the elements of both successful and unsuccessful historical pitch presentations, plus elements of ones that you create during the class.

EVM 4408 Accounting For Entrepreneurs (1 Credit)

Accounting is critical to the success of every business—large or small, private or public. Even governments and nonprofits need accounting. In fact, accounting is so important that it's often referred to as the "language of business." This course will introduce you to that language, the process that accountants use to create records of a business's operations and how that information is communicated to decision-makers, including you. An entrepreneur needs relevant, accurate and timely financial information in order to make the best decisions for their business, and you are the one person best suited to make this happen, especially early in the life of your business. Understanding this "language" will also help you become a better business partner to others, a better investor and a better consumer of business news.

EVM 4409 Financial Statement for Entrepreneurs (1 Credit)

The course is designed to help current and future entrepreneurs understand the essential role played by financial statements in measuring a company's performance and planning for its future. Students will key learn key concepts such as tracking/forecasting revenue, operating expenses and profitability. Students will become familiar with financial statements and their sections, learn relevant financial metrics/ratios and how they can be used to inform better decision making. It will then be shown that these same concepts can be used as building blocks in a forward looking financial model. Lastly, students learn to gauge the feasibility of purchasing the equipment needed to maintain and grow the business.

EVM 4413 Design Thinking (1 Credit)

Design Thinking is a creative problem solving process that builds your ability to first see and then solve human-centered opportunities. It starts with empathically looking at frustrations inside and around your organization, then moves through a variety of brainstorming sessions to build customer centric solutions. Design Thinking is a wonderful tool to help you monetize the human capital in your organization. Once we know the process, we will ask students to bring real challenges into the classroom where we will use Design Thinking to build potential new products, services and solutions.

EVM 4414 Market Discovery & Product Market Fit (1 Credit)

Market discovery is about identifying opportunities that you believe are worth exploring. Some markets have already been established; others have yet to be created. Is the product right for the market? Is the market right for the product you want to build? This course is for people who are eager to use their existing ideas or develop new ideas to improve an existing market or discover a new market. We will study the market discovery and product-market fit for companies such as Uber, AirBnB, Tesla, Snap and Slack. You will learn how to quickly identify and test product-fit for your target market.

EVM 4417 Branding & Messaging (1 Credit)

Branding is an essential element for any startup. Your brand is created by you and grows as your business grows. It's more than a logo, colors, and fonts contained in a style guide. It's the experience that you create for your customers. It's something your business should aspire to. Something memorable. And as you work through this course, you will get an understanding of what it takes to build the brand for your business.

EVM 4420 Cloud Technologies (1 Credit)

Welcome to the Cloud! What is the cloud, is it a thing, a concept, a nifty term? If you are starting a new business, thinking about starting a new business or improving the efficiencies in an existing business, you need to understand the available technologies and tools in the Cloud. Where do I host my website, how do I handle accounting, where is the email server, how do I track customers, how do I share information, what tools are available for customer support? These are just a few questions the Cloud will solve efficiently and cost effectively. The Cloud has dramatically changed the competitive landscape for startups by reducing the cost of starting a new business. The Cloud removes costly equipment, software and support expenditures; with the Cloud, you pay for what you use. This course will focus on identifying, analyzing, and implementing Cloud technologies to help run your business. Here are some of the topics we will explore and discuss: flexible costs, how and when to implement these tools, is your data safe, comparing similar services, improving collaboration.

EVM 4421 Intellectual Property Issues for Startup Businesses (1 Credit)

This Intellectual Properties sprint is about identifying, securing, and protecting your intangible, intellectual business assets in order to add monetary value to your business. The course teaches how to apply for trademarks, copyrights, and patents; how to identify what technology is patentable; and how to protect trade secrets. The course includes brand protection issues like domain disputes, DMCA take downs, Amazon counterfeit notifications, and social media infringement. Students will learn what makes a trademark protectable, what it means to have the "freedom to operate", ways that contracts can protect your intellectual property, and make sure you are not infringing on someone else's intellectual property as you start a business of your own. This Sprint has asynchronous work that is available 2-weeks prior to the in-person class. The asynchronous work, up to 40% of the total work for the class, is required to be completed prior to the in-person class. There is a post class project that is due two weeks after the in-person class.

EVM 4422 Startup Legal Issues (1 Credit)

Learning about law has a certain reputation for being dull, hard, confusing, boring, dated, stuffy, and so on. If you grasp the key concepts in this course, you'll realize nothing could be further from the truth. The moment you begin working on an idea that may turn into a business, you are entering a legal system that is fascinating, vibrant, controversial, and engaging, and more importantly something you must be prepared to engage with if you are to be successful. Unfortunately, our primary education provides us with precious few tools to understand and interact with a legal system that affects us whether we want it to or not. This course attempts to change that, with the primary goal being to provide students with a basic, yet comprehensive understanding of the US legal system, and the knowledge necessary to make informed and proactive business decisions. Startup Legal Issues is designed with three groups of people in mind: (1) those who have or intend to start a business, (2) those who want to work at early stage companies, and (3) those who are considering a career in law. The course is meant to be enjoyably challenging and push students to consider and reflect on assumptions they hold. Rest assured, however, that you will not be graded on your ability to grasp complex topics in a short amount of time, and instead will be rewarded for your willingness to engage with the material and display a humility and thoughtfulness appropriate for the subject.

EVM 4424 Visualizing & Presenting Data (1 Credit)

Throughout the last few decades, report development has moved from being a strictly an IT function with a long turnaround time, to company-wide function where the expectation is that anyone can create a report. To that end, it is important that everyone understands the fundamentals of what goes into making a "good report". This course will focus on giving you the tools to create purposeful reports by helping you understand Form, Fit and Function ... components of any good report design.

EVM 4425 Rapid Prototyping - 3D Printing and Laser Engraving (1 Credit)

The purpose of this course is to empower students to more effectively develop their creative and entrepreneurial capacities utilizing the tools of rapid prototyping. Students will identify appropriate rapid prototyping technologies to apply to unique situations. Curriculum over the course of the day progressively builds by presenting more challenging problems. At the conclusion of the course, students will be able to turn ideas into solutions that add value to a product, process, or service.

EVM 4428 Developing a WordPress Website (1 Credit)

What is WordPress, what is a CMS, what is Open Source...., a concept, a nifty term? If you are starting a new business, thinking about starting a new business you need to understand the available technologies and tools to build and manage a website. Where do I host the website, how do I create and update the website, what tools are available? These are just a few questions we will answer in the WordPress Grind. The WordPress Grind has been designed from a beginner's perspective. The goal is to provide a step-by-step tutorial for creating and publishing a WordPress website. The class will cover the conceptual framework of Open Source and Content Management Systems (CMS) and lead into the fundamentals and tools required to build and manage a WordPress website. At the conclusion of this grind, you will be able to develop, publish, and manage your own WordPress website.

EVM 4431 Emotionally Effective Leader (1 Credit)

Did you know emotional and social skills are four times more important than IQ when considering success and prestige in professional settings? Emotional Intelligence (EI) can be confusing. What does it mean? Is it fluffy stuff or something really tangible? Now more than ever, employers and clients are seeking leaders who display emotionally intelligent thinking, decision making and actions. How do you know if you meet those requirements? Up until recently, EI was a “gut assessment” of someone’s ability to control their emotions or care about someone or something. Now, we have a valid and reliable way of understanding our emotional intelligence and that of others. We can even measure the EI of teams! It turns out EI is quite complex. Research has distinguished 12 components of EI including: self regard, self actualization, self awareness, emotional expression, assertiveness, independence, interpersonal relationships, empathy, social responsibility, problem solving, reality testing, impulse control, flexibility, stress tolerance and optimism. Want to know how you score in these areas? EI is a “talent” that, unlike IQ, can be learned and improved throughout one’s life. In the Emotionally Effective Leader Grind, you will have the opportunity to assess your own EI through a valid and reliable EI talent assessment. Revealing your strengths and weaknesses, you will learn how to build your own EI and maximize the magnitude of your impact within the organizations or teams you lead.

EVM 4432 Getting to Know Your Customer (1 Credit)

Developing lasting relationships with customers requires time and energy up front. You need to get to know who your customers are and what they value before they will develop lasting relationships with your brand. This course on Getting to Know Your Customer will introduce students to tools and data sources that can help with segmenting and targeting and developing personas that represent different customer groups.

EVM 4433 The Sales Process for Entrepreneurs (1 Credit)

Sales is all about getting a person to make a purchase. Each business needs a unique step-by-step sales process that aligns with the buyer’s journey. We will discuss the key aspects of the top, middle and bottom of a sales process: We will learn the key metrics and activities, both human and digital for sales teams in today’s modern world. We will learn about lead generation, prospecting, lead nurturing, deal qualification, designing a sales process, sales pipeline, and forecasting, managing customer relationships, negotiating, converting leads to clients. As a self-employed entrepreneur or as an employee who works for someone else, an innovative outlook and entrepreneurial mindset is key to solving the problems our companies and society face now, and in the future. Innovators are everywhere and can add value from any role or department within their company, for example: c-suite leaders, facilities staff, IT administrators, and human resource trainers. Innovators share common traits: they see emerging opportunities where others see hopeless problems, they solve problems with creative ideas, and they evaluate ideas for their merits and shortcomings. This course is designed to teach the tools, strategies, and mindset of an innovator to help students ideate, evaluate, and innovate quickly. Students will collaborate using proven strategies and techniques to solve problems in new and unique ways. This Sprint has asynchronous work that is available 2-weeks prior to the in-person class. The asynchronous work, up to 40% of the total work for the class, is required to be completed prior to the in-person class meeting. There is a project that is due two weeks after the in-person class meeting.

EVM 4435 How To Realistically Fund Your Business (1 Credit)

Essential to most new ventures is the ability to raise capital (“funding”), initially from angel investors and then from venture capitalists (VCs). The capital raising process usually starts with the “pitch”, a presentation that is compelling, exciting, informative, and addresses what funds are required by the venture, how they will be used, and how the investor will financially benefit from their investment. But not all new companies are the same and the ways to fund a new business, business idea or a good old-fashioned startup are many. In this class we will discuss the different funding sources from a check from a friend or family member to loans, credit cards, equity investment, crowd funding and more. This course will help you learn how to identify and determine the best source capital for your business. You will also learn how to present and speak about basic and intermediate funding sources. We will define & review the basic elements of business funding while also listening to the perspectives of several entrepreneurs (small & big) and even a Venture Capitalist. You will ultimately work in groups around a hypothetical business idea. Please feel free to use an existing idea (particularly if you were in my pitch class) or feel free to choose one from the list I have posted in Canvas. Throughout class you and your group members will have several working session moments to create and draft your capital plan for your business. This Sprint has asynchronous work that is available 2-weeks prior to the in-person class. The asynchronous work, up to 40% of the total work for the class, is required to be completed prior to the in-person class. There is a post class project that is due two weeks after the in-person class.

EVM 4436 High Performing Teams (1 Credit)

Success in any business venture is often predicated on the strength of collaboration in and between high performing teams. But teams also come with their own unique set of challenges that can often hinder group productivity and cause friction, such as interpersonal issues, ambiguous goals and objectives, and competing agendas. There are techniques that team and group leaders can use to alleviate those challenges in the current era of volatility, uncertainty, complexity, and ambiguity. The High Performing Teams class is for students who are eager to build their capacity to connect as leaders more effectively and learn to leverage psychological safety to create cultures of connection where risk-taking leads to team success. Together we’ll explore how you can implement the latest trends in remote and hybrid team management in a post-COVID era as well as how to incorporate the principles of diversity, equity and inclusion (DEI) to improve team performance and cohesion. This Sprint has asynchronous work that is available 2-weeks prior to the in-person class. The asynchronous work, up to 40% of the total work for the class, is required to be completed prior to the in-person class. There is a post class project that is due two weeks after the in-person class.

EVM 4437 Design For The Digital Economy (1 Credit)

Essential to a successful business venture is the ability to design and create a brand that resonates with customers. In this course, students will learn the brand design process, review the elements of both successful and unsuccessful brand campaigns, and will critique brand concepts to improve their aesthetic sensibilities. This course will help students learn to use the latest digital technologies to create a brand style guide, and for their final project, students will use the tools to develop a style guide for a new or existing business.

EVM 4438 How to Identify, Evaluate & Beat Your Competition (1 Credit)

Every business has competitors, from large corporations, “main street” businesses, start-ups... they all compete for customers and market-share. Even The University of Denver competes for students. Leave The Competition Behind is for people who like to win and don't like to lose. In this class, you will study strategic frameworks and tools that you can use to identify, understand, and dissect your competitors, the levers that you can pull to beat them (like price, quality, service). We will identify and discuss front-line tactics you can use to outwork your competition. We will explore and discuss real life cases and personal stories from various industries to illustrate the key concepts used by professionals in competitive analysis and strategy. You will apply these concepts during the breakout sessions where we will take on the Media & Entertainment industry.

EVM 4439 Social Entrepreneurship (1 Credit)

Social entrepreneurship is simply applying entrepreneurship principles to societal challenges. This can be for-profit, non-profit, social business, or even not an official organization at all. The consistency across all these is the desire to make society better. Finding a problem that gives you purpose is a challenge in itself, as you cannot simply think about it. You need to create a life that allows you the freedom to find this purpose, and then successfully devote yourself to this purpose. In addition, if your goal is to make society better, you want to avoid the trap of working on one problem while actively contributing to others. So the ideal social entrepreneur creates an organization and life that offers a net improvement to society. This involves learning to “socially” manage others, environmental impact, finances, etc. The Social Entrepreneurship course is for people that are eager to improve the world. We will incorporate concepts from finance, management, psychology, and even neurobiology. You will learn how to find the problem you wish to work on, and how to be more successful in addressing that problem.

EVM 4440 How to Effectively Negotiate in Business (1 Credit)

Every day, and sometimes multiple times a day, we persuade and negotiate with people such as funders, classmates, friends, family members, potential employers, merchants, and coworkers. However, most of us know little about what it takes to be effective negotiators. This class teaches you proven methods to support your desire to reach principled agreements by broadening your basic negotiation skills. We will learn theory-driven negotiation skills, engage in simulated negotiations, and make concrete plans to conduct a future negotiation.

EVM 4441 How To Create A Business Startup Budget & Forecast (1 Credit)

For many people creating and evaluating business budgets and forecasts is intimidating. This applied course is designed to demystify the subject as students study, create, and evaluate budgets and forecasts. This course will provide students tools as they create an entrepreneurial budget and forecast. In addition, you will learn about metrics that entrepreneurs, investors, and banks use to evaluate these financial materials. Along the way we will consider budgets for different types of businesses, including B2B, B2C, products, subscriptions, and services. We will cover budget topics such as unit economics, breakeven, margin analysis, customer acquisition cost, and marketing efficiency plus forecast topics like burn rates, scaling, margin creep, and north star metrics. Plus, we will touch on the basics of valuation and how budget materials relate to valuation. This Sprint has asynchronous work that is available 2-weeks prior to the in-person class. The asynchronous work, up to 40% of the total work for the class, is required to be completed prior to the in-person class. There is a post class project that is due two weeks after the in-person class.

EVM 4442 Selling Online: Using Amazon as a Framework (1 Credit)

Amazon has become the de facto tool for selling Consumer Packaged Goods (CPG) online. If you're not selling your product on Amazon, chances are that someone else is already doing it for you. Unlike real estate, Amazon squatters may have (and, retain) first-mover advantages in selling products and securing organic listing authority. Anyone planning to sell products for themselves or for an employer needs to understand the Amazon landscape. Amazon has become a ubiquitous metaverse for commerce. Everything known tangibly in bricks-and-mortar retail has a virtual analogue expected to move faster and cheaper, all while subject to the scrutiny of customer reviews. The Amazon eco-system includes an army of gig workers and service providers such as lawyers and marketing professionals, subject to the same constraints. Whether you wish to become a third-party seller on Amazon or plan to work for a CPG company, understanding the power of Amazon (and, related tools) has universal application. We plan to cover the risks of entering Amazon, the criteria to evaluate successful products, protecting your brand, organic and pay-per click strategies, third-party tools, and the broad market for trading in Amazon businesses. This Sprint has asynchronous work that is available 2-weeks prior to the in-person class. The asynchronous work, up to 40% of the total work for the class, is required to be completed prior to the in-person class. There is a post class project that is due two weeks after the in-person class.

EVM 4443 The Marketing Mix: Converting Prospects Across the B2B and B2C Buyer's Journey (1 Credit)

How do people who have never heard of a product or company become loyal customers? Marketing leaders use a variety of tactics—from social media, digital advertising, content, customer service, reviews, emails, events, and more—to convert prospective customers to loyal ones. Converting prospects across the buyer's journey from awareness to consideration to purchase in a cost-effective manner is core to every B2B and B2C marketing campaign. During this Sprint we will learn the key elements of the marketing mix and the stages of the buyer's journey they apply to. We'll showcase common tactics and metrics used at each stage, and focus on the importance of using attribution data to improve the effectiveness of each conversion. We will also evaluate how marketing and sales leaders effectively partner across the buyer's journey, learn how the marketing mix can vary across B2B and B2C organizations, and showcase organizations that have developed highly effective marketing mixes. This Sprint has asynchronous work that is available 2-weeks prior to the in-person class. The asynchronous work, up to 40% of the total work for the class, is required to be completed prior to the in-person class. There is a post class project that is due two weeks after the in-person class.

EVM 4444 Innovation & Sustainability (1 Credit)

Want to learn how to make a difference in the world using Sustainability? This course is designed to give you the entrepreneurial skills to incorporate sustainability into a company's products, services, and day to day operations. If you want to learn how to innovate and develop sustainability initiatives that make massive societal and environmental impacts while tackling current challenges like climate change, water scarcity, equity & inclusion, this course is for you. This course provides an essential overview of the challenges that our planet and society are facing and provides you the tools you'll need to ignite your sustainable business vision and bring it to reality. If you have a passion for making a positive impact in the world and an entrepreneurial idea for a new business or a product or business solution within an existing company, come join us! Students will walk away with a working knowledge of sustainability issues and the tools to build sustainable programs into new and existing business ventures that address both a societal and market need. At the end of this sprint course, students should feel empowered with the ability to incorporate sustainable thinking into whatever their future careers hold – whether that be an entrepreneurial venture, the development of a new product, or helping businesses drive business value through sustainability. This Sprint has asynchronous work that is available 2-weeks prior to the in-person class. The asynchronous work, up to 40% of the total work for the class, is required to be completed prior to the in-person class. There is a post class project that is due two weeks after the in-person class. Cross listed with EVM 3444.

EVM 4446 Entrepreneurship in the Arts (1 Credit)

Whether you are a visual artist, musician, dancer, or other member of the arts community, entrepreneurial capabilities will be crucial for monetizing your artistic mission and interests. In this class, we will explore how to find gigs, successfully manage your arts-focused endeavors as a profitable business, negotiate compensation, and channel a range of experiences into career development. In addition to ensuring this foundational knowledge, we will go beyond entrepreneurial basics to help you develop the tools to support your artistic and entrepreneurial endeavors. We will bridge the gap between artistic and business training to provide an expanded perspective on arts entrepreneurship. This Sprint has asynchronous work that is available 2-weeks prior to the in-person class. The asynchronous work, up to 40% of the total work for the class, is required to be completed prior to the in-person class. There is a post class project that is due two weeks after the in-person class. Cross listed with EVM 3446.

EVM 4700 Funding the Business (2,4 Credits)

This course will focus exclusively on financing the business, including crowdfunding, angel investments, and private equity, the documents needed for such funding and the valuation of the firm as a result of funding.

EVM 4704 Topics in EVM (1-8 Credits)**EVM 4710 Innovation/Creativity-Business (4 Credits)**

Cross listed with EVM 3710.

EVM 4980 Internship (1-5 Credits)**EVM 4991 Independent Study (1-10 Credits)**

Environmental Policy & Mgmt (EPM)

EPM 4001 Environmental Foundations and Principles (4 Credits)

This course investigates the field's history, current activities and issues, ethics, systems, and economics; and an overview of key necessary knowledge and skills to work and learn within the field. Students will: gain a strong historical understanding of how environmental and natural resource issues have influenced economic development and societal growth throughout the ages; learn about the complexity of environmental issues and the value of interdisciplinary and systems thinking when applied to making decisions about natural resource usage; understand the role that empirical science, policy analysis and advocacy play in how governments and private companies address complex environmental issues; become aware of the stressors that ecosystems around the globe are experiencing and the value of multidisciplinary approaches to addressing these challenges; and understand the diverse organizations and employment opportunities available in the environmental field.

EPM 4002 Integrated Environmental Systems (4 Credits)

The earth as a whole is comprised of many systems that affect the environment. Some have large wide ranging reach, while others are restricted to a relatively small area. Included is everything in between. Actions in one area or system may have unintended secondary and tertiary consequences in that system or others. This course uses various tools and materials to study a few environmental systems and determine connections, consequences, impacts, barriers, decision making, life cycle costs, etc.

EPM 4003 Environmental Finance and Economics (4 Credits)

The class provides an overview of economics, finance, and sustainability in an environmental and social context. The class examines traditional and alternative performance metrics, such as "Green GDP", and explores the relationship between risk and return, return on investments, including environmental, social, and governance (ESG) investing. The course emphasizes relationships between business management and environmental quality, and provides students with a financial and economic decision-making framework for understanding and analyzing environmental issues. The course utilizes a case-study approach to cover economic and finance concepts in real world scenarios involving natural resource and environmental decisions. Students will leave this course with the ability to confidently converse regarding sustainability in a finance and economics context.

EPM 4040 Wetland Ecology and Management (4 Credits)

This course provides a detailed examination of wetlands and deepwater habitats of the United States, with an emphasis on wetlands. The definition, identification, classification, and management requirements of various wetland communities are stressed. Students identify and classify wetlands and analyze wetlands in the context of federal, state, and local regulatory processes. Students evaluate activities with adverse and beneficial effects to wetlands. Students explore concepts related to wetland management in the public, private and non-profit sectors.

EPM 4108 Impacts of Recreational Use (4 Credits)

The practical and managerial theoretical basis of recreational use of public and private lands is examined in the context of ecosystem management. #The statutory and regulatory policies and current issues regarding the management and use of lands in wilderness systems, wild and scenic river corridors, parks, and open spaces are discussed in detail. #The impacts of recreational uses on the environment and conflicts with other uses of land and resources are discussed. Land use planning policies and decisions, decisions which respond to recreation, wilderness, wilderness and open space issues will be examined. At this end of this course, students will create a visitor impact use assessment using the Inter-agency Visitor Use Management Framework (IVUMF).

EPM 4115 Introduction to Ecology (4 Credits)

This course examines the concepts of the ecosystem, populations, communities, the flows of energy, material cycles, and biotic diversity. Students will analyze ecological concepts including the unity of organisms and inseparable interactions with the physical environment. Class discussions include topics such as the formation, distribution, and organization of ecological communities, plant succession, and nutrient cycling. Students will also evaluate aspects of evolutionary trends within plant and animal communities as they relate to ecological principles. The goals of this class are to transmit the principles, methods, and vocabulary of ecology. Students will critically analyze and discuss issues concerning population ecology, community ecology, and ecosystem ecology. Students will relate concepts of ecology to their personal and professional interests in environmental issues. The ability and necessity of communicating ecological principles within a commercial and/or regulatory environment will be developed. An assignment will provide experience in the collection, interpretation, and analysis of data. The skills learned will be relevant in environmental reporting, discussions, and presentations within a professional environment.

EPM 4120 Introduction to Natural Resource Management (4 Credits)

In this course, students gain an understanding of the roles and responsibilities of federal, state, and local agencies, environmental and wildlife interest groups, and other organizations involved in natural resources management. Students will learn the content and purpose of natural resources management plans, then apply this knowledge to assess and develop policies that will improve natural resources management.

EPM 4140 National Environmental Policy Act (NEPA) (4 Credits)

This course examines the National Environmental Policy Act (NEPA) and its applications. Students will gain both academic and practical experience in studying the intent and application of NEPA by federal agencies. Students will gain practical application by critically reviewing various NEPA documents and examining the components of NEPA documents. Students will prepare an Environmental Assessment (EA) of their choosing for their final project in this course.

EPM 4150 Global Environmental Law and Policy (4 Credits)

International environmental agreements provide a mechanism to address domestic environmental issues caused by foreign countries. However, some agreements have been more successful than others based on various aspects within the agreement and a country's domestic actions taken to enforce the agreement. This course teaches students how international environmental agreements are created, managed, and improved in order to improve environmental issues in different countries and international waters. Students will analyze and comment on existing agreements and create strategies for improving the agreements to strengthen agreements to be more effective in addressing environmental issues. Students learn about the stakeholders involved in creating and improving these agreements. Students will develop marketable analytical skills that help guide organizations toward more robust advocacy strategies designed to make the agreements more enforceable and effective in addressing environmental issues. Prerequisite: Recommended - EPM 4200.

EPM 4200 Environmental Protection Law (4 Credits)

This course provides an examination of the fundamental laws which protect our environment and health. Students will analyze the purpose, context, implementation, and implications of the most important laws, regulations, policies, and court cases that affect the environment, human health, and our economy. Coverage includes: National Environmental Policy Act (NEPA), Clean Air Act (CAA), Clean Water Act (CWA), Resource Conservation and Recovery Act (RCRA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Emergency Planning and Community Right-to-Know Act (EPCRA), related toxics laws, and species and habitat protection statutes. It provides an examination of the legal system and the roles of Congress, the President, executive agencies, states, and courts in shaping and implementing environmental laws. The course also asks students to apply this knowledge to current events in environmental policy and litigation.

EPM 4220 Endangered Species and Wildlife (4 Credits)

This course provides an examination of the basic principles, trends, challenges, and controversies surrounding the administration of maintaining certain wildlife species, specifically through the administration of the Endangered Species Act. Students gain an understanding of the roles and responsibilities of various federal, state and local agencies, environmental and wildlife interest groups, and other organizations involved in endangered species and wildlife management issues. This course will also apply the principles of human dimensions to understand the complex social systems at work to conserve endangered species.

EPM 4230 Renewable and Alternative Energies (4 Credits)

This course provides a well-rounded primer on energy as a resource and its importance in the economy and the world today. Students will examine renewable and alternative energies and alternative transportation fuels. This course analyzes issues surrounding the development, enforcement and application of energy regulatory policies.

EPM 4232 Sustainability: Policy and Practice (4 Credits)

This course teaches students how organizations practice sustainability and how they plan for, shape, and react to the emerging environmental policies necessary to limit global warming. The investment community continues its quest to identify strong sustainability organizations, making public reporting more important than ever. NGOs and governments are pushing for higher ambition. Students will learn to make sustainability reports more meaningful to garner support from NGOs and attract investors. Students will develop marketable analytical skills that help guide organizations toward more robust sustainability actions and reporting, or help NGOs evaluate corporate reports for strengths and gaps.

EPM 4233 Sustainable Transportation (4 Credits)

21st Century transportation planning on the local and global scale involves consideration of environmental policies and sustainable practices. Development of an efficient system for moving goods and people along highways, airways and public transit networks must coordinate with legal requirements governing automobile source emissions, water pollution, mitigation of congestion, and crisis management. Conflicts occur along political fault lines between public interest groups, environmental justice advocates, the business community, government regulators, and the ordinary commuter. Consideration is given to different fuel sources, including carbon-based, hydrogen, electricity, and biofuels. The course also examines fuel efficiency (CAFE) and trends in emission science and regulation.

EPM 4234 Climate Change and Science (4 Credits)

Global Warming" is a cause celebre, but how much do we really know about the science involved in studying the earth's climate? Moving beyond the social and political opinions espoused in the current debate on climate change, this course delves into the chemical and physical forces at play in the arena. This course covers scientific processes used in measuring climate dynamics, among them ozone chemistry, carbon and oxygen cycles, and heat and water budgets. It explores scales and methods for detecting climate change, including analyzing ice cores, instrumental records, and time series. Some attention will be dedicated to "climate forcing" caused by such things as orbital variations, volcanism, plate tectonics, and solar variability.

EPM 4235 Green Building (4 Credits)

Builders, developers and designers increasingly are promoting the use of green construction practices in the pursuit of healthier, smarter buildings. Students in this course examine sustainable building strategies and tools, including LEED (Leadership in Energy and Environmental Design), the nationally-accepted benchmark for the design, construction and operation of high-performance green buildings. LEED promotes a whole-building approach by recognizing performance in five areas: sustainable site development water savings, energy efficiency, materials selection and indoor air quality. What materials are best in the design and operation of green building? How can a designer or building owner make better use of power and water efficiency programs? What are the recent developments, trends and case studies of green buildings and materials?.

EPM 4236 Nuclear, Hydrogen, and Energy Storage Technologies (4 Credits)

The necessity and urgency of moving away from fossil fuels-based energy production to reduce global warming has been well documented. Renewable energy technologies (solar, wind, and water-based) have been widely embraced as alternative energy solutions. However, like all energy production technologies, renewable energy technologies have shortcomings that prevent them from being standalone energy production solutions. Nuclear and fuel cell energy production technologies address the shortcomings of renewable energy technologies and can be considered symbiotic options in the move away from fossil fuels. Improving energy storage technologies will also be required to complete this symbiosis. This course will examine renewable energy technologies shortcomings and how nuclear, fuel cell, and energy storage technologies may be implemented to further facilitate the move away from fossil fuels-based energy production.

EPM 4238 Water and Food Sustainability (4 Credits)

Concurrent food, water, and climate crises amidst widespread hunger and undernutrition have re-focused public attention on the deficiencies and complexities of global food and water systems. This course examines the science and sustainability of our water resources as well as food production with an emphasis on the connections between the two. Increasing water and food system sustainability requires working along multiple disciplines, reconnecting agriculture with ecological systems and ensuring that policies and institutions that impact food and water systems protect social equity and the environment. The course draws from interdisciplinary research and education bridging worldviews and values implicit in different disciplinary and theoretical perspectives. Linking theory and practice is also essential thus the course will incorporate multiple perspectives and case studies from local to global levels. Demand is growing for interdisciplinary scholars and other professionals who are equipped to analyze and address the complex challenges of sustainable water resources, sustainable food production, and water and food security. Students will synthesize information from water, food, and the environment from a systems perspective. They will examine the interactions between science, policy, and ethics and analyze the trade-offs and synergies between different objectives, solutions, and outcomes. Students will devise solutions to problems that incorporate the intricacies and interdependencies of water and food systems.

EPM 4280 Resource Conservation and Recovery Act (RCRA) (4 Credits)

The Resource Conservation and Recovery Act (RCRA) course is a detailed review of the Resource Conservation and Recovery Act that was passed in 1976 and has been continuously updated since that time. RCRA is also known as "the cradle to grave law" dealing with hazardous waste generation and disposal. This course not only covers the important parts of the regulation, but students will also learn how to navigate and practically apply the law and regulations.

EPM 4355 Systems, Standards, and Certifications for Environmental Management (4 Credits)

Students will analyze and apply common environmental management systems, which can be used to ensure and improve quality during the management of a wide range of environmental operations. They will synthesize this knowledge via a project which establishes portions of an environmental management system. Students will execute the plan-do-check-act cycle to improve quality. They will evaluate options to minimize environmental impacts using root cause analysis and generalize common system components that are necessary for an environmental organization to achieve its objectives (establishing environmental policy, establishing performance objectives, monitoring results, evaluating performance, understanding and managing risks, etc.) Course assignments will allow students to practice systemizing and standardizing environmental management processes to improve performance (common procedures, data management, analytical methods, performance monitoring, etc.) Throughout the course, students will discover that management systems beyond subject matter expertise are necessary to do well in environmental careers.

EPM 4390 Environmental Policy Analysis (4 Credits)

This course investigates key issues in environmental policy analysis, including the importance of environmental justice, federalism versus state policy, techniques of environmental assessment, the impacts of politics and case law on environmental policy, and policy decision-making. The class sets a foundation with an overview of the U.S. and international environmental movements. Students look at stakeholder engagement, policy formulation and implementation, and policy evaluation in different institutions. The course emphasizes the important role that the political and judicial process plays in the creation of policy solutions, and assesses the strengths and weaknesses of different techniques of environmental analysis including environmental impact assessments, modeling and simulation, sustainability analysis, and how best to weave environmental justice/equity throughout policy development and implementation.

EPM 4400 Environmental Values and Ethics (4 Credits)

Students examine ethical considerations in environmental management and decision making. Discussions cover personal versus organizational attitudes; cultural, economic, and historic values; science versus politics; and international and intergenerational policies. The course also explores various philosophies of humankind's relationship with the environment. Students are encouraged to develop and express a personal philosophy relative to their role in the regulatory, technical, scientific, and financial management of the environment.

EPM 4465 Environmental Restoration and Waste Management (4 Credits)

Environmental Restoration is the identification and elimination of hazardous materials from a designated site such that the risks to human health and the environment are reduced to an acceptable level for an intended future land use. This course examines successful environmental restoration activities that were used to reduce and mitigate risk associated with past operations of nuclear and nuclear-related facilities and the significant potential to release harmful contaminants. Environmental restoration effects on the ecological and human health risk assessments and analyses related to the transport, treatment, storage, and disposal of waste from the contaminated site are presented. Remediation processes for radioactive materials and other hazardous wastes and the eventual storage, processing, and disposal and the potential effect on humans and the environment is studied. An overview is given on the development of a radiological protection program for an EIS report. External and internal hazards: control measures and monitoring, and other important limits and measurements are explored.

EPM 4500 Leadership for Environmental Managers (4 Credits)

This course provides students with fundamental leadership skills with an emphasis on topics and contexts relevant to environmental professionals. It addresses three main subject areas: leadership principles necessary to positively influence their work environment; how to effectively communicate; and developing a vision and mission for their personal leadership success. Students will assess their own leadership attributes, characteristics, and skills and construct a personal leadership development plan. The class will make use of reading assignments, written assignments, video assignments, situational role-play, and class participation.

EPM 4510 Environmental, and Health & Safety Management (4 Credits)

This course presents the intricacies of establishing environmental and health and safety programs in the workplace. The course is divided into specific environmental and health and safety topics that are relevant to environmental and safety management. There are multiple topics that address the benefits and barriers to designing, implementing, and maintaining environmental and health and safety programs.

EPM 4520 Occupational Safety and Health Act (OSHA) (4 Credits)

This course provides an in-depth review of the laws and regulations that govern the safety and health of workers. The course is of value to students seeking to expand knowledge of the Occupational Safety and Health Act. Emphasis is on the areas of overlap between safety and environmental laws, OSHA's inspection and enforcement authority, employee and employer rights, record keeping requirements and an outline of labor's interest in OSHA cases. Current topics such as OSHA reform legislation and regulatory agenda are discussed.

EPM 4525 Workplace Safety Management (4 Credits)

This course introduces students to core elements in a health and safety management systems approach to identifying and preventing workplace injuries and illnesses. Students examine the five elements of developing an effective occupational health and safety management program. The course also explores the common challenges and obstacles encountered during the development and implementation of these programs. This course includes a general overview of common OSHA regulations, rights, and responsibilities for developing a safety and health program. The format of this class is highly interactive, affording students an opportunity to engage with case studies and their peers, as well as to practice developing health, safety, and environmental programs at their respective establishments.

EPM 4610 Analytics I (4 Credits)

Data and analytics are key for any business domain; data tells us about our customers and markets and analytics make information and knowledge out of data. It's now possible to be inundated with data but gain no new knowledge from it. Analytics help companies demonstrate their ESG behavior and its impact. Companies that can prove and display the environmental impact gain a market advantage. Analytics also demonstrate real environmental impact versus greenwashing. This course has a managerial focus rather than a technical one, though students will perform some data analytics in this course. It is designed to provide managers with sufficient background on the potential value of data analytics, the business process change associated with data analytics, and the underlying technologies, to enable them to interface effectively with analysts and data scientists.

EPM 4615 Analytics II (4 Credits)

Business professionals including those in environmental health and safety (EHS) management, use statistics every day in making decisions. In this graduate-level course, you will gain an overview of the data analytic process and data mining techniques used for discovery knowledge from datasets. The course is designed to highlight the practical aspects of data mining methods and their applications, rather than theoretical aspects of statistical machine learning or optimization. The course also introduces emerging trends in Data Analytics and their applications in decision making process on environmental issues such as sustainability which includes waste management, water, and energy conservation. In summary, data is now an integral part of our lives and to be successful in today's business landscape, we need to be able to leverage data to make critical business decisions on environmental sustainability. This course will teach students how to use data to make those decisions confidently. Prerequisite: EPM 4610.

EPM 4620 Environmental Reporting Standards and Models (4 Credits)

Students learn the reporting requirements of existing and emerging environmental reporting standards, e.g., SEC requirements, EU standards, NGO standards, Global Reporting Initiative environmental performance indicators, and Sustainability Accounting Standards Board recommendations, and how to craft mandatory and optional reports that conform to these standards and requirements.

EPM 4625 Environmental Analysis and Reporting Project (4 Credits)

This is the concluding class for the Environment Analytics and Reporting concentration and graduate certificate. The class centers on performing sophisticated investigations of sustainability-related data sets utilizing the tools and insights of the data analytics revolution. The focus of the course is on applying advanced data analytics techniques (e.g., data mining, predictive analytics, and prescriptive analytics) to support innovative approaches for organizational sustainability, business performance, stakeholder relations, and/or environmental policy. Students will engage in readings, develop an analysis project using Watson Analytics, and prepare a report covering conclusions and recommendations. Prerequisites: EPM 4610, 4615, and 4620.

EPM 4701 Topics in EPM (2-5 Credits)

The content of this course will vary each time it is offered. The topics may include time-sensitive issues in the field of environmental policy and management, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content will be announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

EPM 4705 Land Use Planning (4 Credits)

This course includes a comprehensive examination of the land use planning efforts of federal, state, and local governments. The legal authorities, responsibilities, and conflicts of these governmental entities are examined in detail. Class discussions include: setting goals and objectives for specific components of ecosystems; design of projects to achieve desired ecologic conditions; the interrelationship between home rule authority, local zoning and planning requirements, and federal/state natural resource plans; use of new technologies in planning; and public participation in land use plans.

EPM 4710 Environmental Project Management (4 Credits)

In this course, students will learn about project management concepts and gain practical experience applying basic project management skills. As a part of class assignments, students will work on selected projects while covering the entire project management process, from project initiation to close-out. These projects will cover a range of environmental and / or sustainability project management perspectives, including governmental, industry, and advocacy or non-profit organizations. By the end of the course, students should have a strong understanding of project management skills and terminology, and be able to successfully complete some requirements for project manager certification. They will also understand the similarities and differences in project management for environmental professionals. Please note that while this course will provide a foundation in project management, it will not cover all concepts and terminology in depth or provide the required work hours necessary for project manager certification.

EPM 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

EPM 4902 Capstone Seminar (4 Credits)

The purpose of the Capstone Seminar is to develop and apply transferable professional skills to persuade decision-makers. The course requires students to identify a question, problem, or issue in their field of study or profession to research in order to create a report that argues for an applied solution. Over the duration of the quarter, students will focus on the following: developing an argument in both written and oral format to support their solution through consideration of purpose, audience, and evidence; gathering and evaluating sources in their field or industry; the connection between discipline, style, and format; and their individual writing process.

EPM 4910 Research Practices and Applications (4 Credits)

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

EPM 4980 Internship (0-4 Credits)

The EPM Internship is designed to offer students a purposeful experience in the field of environmental policy and management. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

EPM 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed it with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

Executive MBA (XMBA)

XMBA 4010 Strategic Management (2 Credits)

This course is aimed at providing you some foundations of strategic thinking. As a business leader, your challenge is how to align the aspirations and actions of multiples of employees engaged in diverse activities so as to ensure its long-term performance. One of the founding fathers of the field of corporate strategy, Kenneth Andrews, defined corporate strategy as "the pattern of decisions in a company that determines and reveals its objectives, purposes, or goals, produces the principal policies and plans for achieving those goals. It also defines the range of business the company is to pursue, the kind of economic and human organization it is or intends to be, and the nature of the economic and non-economic contribution it intends to make to its shareholders, employees, customers, and communities" (Andrews 1971: 18-19). Strategy is shaped not only by the market and competitive conditions that prevail in your industry, but also by the resources and capabilities of your organization. My goal in this course is to help you gain a new understanding of what strategy is, why it is needed, and what you must do to lead that effort.

XMBA 4011 Executive Leadership I-Leading Self (2 Credits)

John Maxwell, a well-known leadership writer and speaker, says, "Self-leadership comes first. It makes every other type of leadership possible." In this course, we will explore self-leadership in depth. You began this process in orientation with the Insights session. Your Insights colors should have provided you with a better understanding of yourself—your strengths as well as your development opportunities. But that's just a beginning. In this course we will explore several questions about self-leadership. Among them are: *Why can self-leadership seem more difficult than leading others? *What are the most important values and habits a leader should possess? *How transparent should a leader be about their personal challenges? How can leaders overcome the feelings of loneliness that inevitably come up? *How can leaders develop the ability to filter their emotions in order to make good leadership decisions? We will take an experiential learning approach, making use of self-assessments, student sharing, readings, case studies, video clips, and experiential exercises to keep the classroom a lively, interactive, learning atmosphere and to maximize your learning experience.

XMBA 4013 Ethical Frameworks for Decision-Making (4 Credits)

This course synthesizes major ethical frameworks with real-world business and policy applications. Personal and professional ethical dilemmas are covered helping leaders navigate the grey areas of their lives and careers. The material covers the primary ethical frameworks dealing with the greatest good, duty ethics, virtues, libertarianism, social contract and more. The student will evaluate issues that often interfere with their moral compass such as stress, pressure, and ethical crisis management. Students also will examine what it means to live an authentic life.

XMBA 4014 Business and Economic Context (3 Credits)

This course presents the fundamental concepts of microeconomics and macroeconomics and approaches them from a managerial decision-making perspective. The first half of the course emphasizes applying microeconomic theory to decision-making to help achieve a firm's objective-increasing profit, market share, or growth. In contrast to traditional economics courses, this course emphasizes practical implementation to solve sophisticated abstract problems. The focus is on how economics affects business decision-making. The second half of the course discusses macroeconomics and factors that affect the economy. The goal is to develop an understanding of macro-economic concepts such as GDP, inflation, exchange rates, and trade balances, to obtain a framework to model a firm's behavior according to an informed understanding of what the economy is doing. Armed with an understanding of the cycle of economic activity, one can formulate a firm understanding of policy alternatives by both the Federal Reserve and Congress.

XMBA 4015 Business Ethics (2 Credits)

Business Ethics is an intermediate level graduate course delivering a rigorous introduction to major ethical topics, theories, and issues relevant to the elements of the 21st century business environment. This course also focuses on ethical reasoning and strives to enhance each student's ability to integrate these perspectives into appropriate business decisions. Beyond these overarching goals, this course will encourage students to:

- Acquire the basic analytical tools necessary to engage in ethical analyses of business problems and decisions
- Apply basic ethical concepts to today's business environment
- Appreciate the distinction between an ethical and a legal judgment and deduce useful methods of integrating such perspectives into business decisions
- Attain a knowledge base steeped in major ethical frameworks that will prove invaluable in each individual's course of study, professional career and personal endeavors.

XMBA 4016 Integration: Board Advisory Analysis (1 Credit)

This course is the first of three explicit integration courses in the EMBA curriculum. Coming at the end of the the second quarter (of 6) of the program, it is designed to provide you an opportunity to integrate your learnings across the courses and disciplines that have come so far: Leadership, Ethics, Economics, Financial Accounting, Managerial Accounting, and Introductory Finance. You will be placed in teams to act as consultants to a fictitious company, for which you will analyze a problem situation across all of the above disciplines and present recommendations in written and verbal form to their board of directors. The work will be done offline in the three weeks leading up to the class session with a formal presentation to the board, including Q&A, live on the last day of Quarter 6.

XMBA 4017 Integration: The CFO's Perspective (1 Credit)

This course is the second of three explicit integration courses in the EMBA curriculum. Coming at the end of the third quarter (of 6) of the program, it is designed to provide you an opportunity to integrate your learnings across the courses and disciplines that have come so far with an emphasis on Finance, Accounting, and Strategy. The CFO is the financial strategist of the organization and, as such, they consider issues in an integrated fashion. So, this day allows you to sit in the CFO's seat and take that same integrated perspective. The day is broken into three main components. The day will start with a discussion of Strategic Finance, in essence how do the topics and departments of Finance and Strategy come together to chart the direction of the organization? Next, we will engage in a specific case discussion that illuminates these issues in "real time." Finally, the day will conclude with a roundtable discussion with current CFOs to, again, bring this set of nuanced issues to light.

XMBA 4018 Integration: Your Personal Development (1 Credit)

This course is the third of three explicit integration courses in the EMBA curriculum. Coming at the end of the the fourth quarter (of 6) of the program, it is designed to provide you an opportunity to integrate your learnings and plan for personal growth and development throughout the program. This is aligned with the core objectives of the EMBA program to facilitate your personal development beyond the curriculum in the classroom. The course is designed to return your attention to the your Individual Development Plan (developed in the Executive Leadership cours) and your World Vision work (developed in the Business Ethics course) and to update them as appropriate. The session will unfold in three parts. In the pre-work phase, you will be asked to review your two documents from prior quarters and write a short reflection paper that addresses your progress to date, any issues you see in the plan (weaknesses or pivot opportunities) and any possible changes you might want to make. During class session itself, we will cover additional concepts in personal development (including building accountability mechanisms into your plan) and engage in some peer coaching to help you push your thinking and planning. The post class phase will involve your updating the goals section of your IDP to account for changes in direction and accountability mechanisms, thus adding effectiveness to your plan.

XMBA 4019 Social Impact Project (2 Credits)

The vision of the Executive MBA Social Impact Project is to provide an impactful culminating experience in the MBA curriculum in which students offer their time and business acumen to a local non-profit organization. Through this course students will develop themselves as purpose-driven professionals by choosing a non-profit challenge that is aligned with their values and reflecting on the impact of the work they complete with the organization. Students will work in teams on a critical business issue facing a non-profit organization, develop milestones and an execution timeline for applying their business expertise, and set metrics for evaluating their impact on the organization during the six-month long project. The Social Impact Project kicks off during a non-profit showcase in the second or third quarter where non-profit organizations share their purpose and the project in which students can best assist them over the course of the next six months on a part-time basis. Students will work with their organization outside of the classroom to apply their business acumen to the problem or opportunity identified. The progress of student teams will be evaluated based on the milestones, execution timeline, and metrics agreed upon with the non-profit organization. The Social Impact Project will conclude in quarter five with student presentations highlighting their impact on their organization accompanied by a personal reflection on the learning objectives below.

XMBA 4020 Executive Leadership III-Leading the Organization (2 Credits)

We live in a VUCA (volatile, uncertain, complex and ambiguous) world. Effective leaders are skilled in navigating the challenges presented by this world. This course will introduce you to a framework that will help you navigate our VUCA world. You will come to understand how some decisions that seem to make no sense when viewed from one perspective make eminent sense when viewed from a different perspective. You will be provided a framework for examining and understanding organizations. You will learn your particular perspective on organizations and how it can limit your ability to truly understand leadership situations with which you are faced. This course approaches leadership from a general management perspective; integrating concepts from organizational behavior, human resource management, strategy, and organizational design. Course topics include organizational design, processes, and systems; issues in creating individual and organizational fit; organizational culture; power and influence dynamics in organizations; and the external environment within which the organization operates, including legal, regulatory, demographic, economic and national cultural factors. This course is organized around four integrative perspectives on organizations or "Frames". • The Structural Frame examines the challenges of organizing work activities. • The Human Resources Frame examines the challenges of integrating individuals and organizations. • The Political Frame examines the role of power, conflict and coalitions in organizations. • The Symbolic Frame examines organizational culture, leadership and change. Drawing on several disciplines – Sociology, Social Psychology, Political Science, Cultural Anthropology, Symbology – this course is designed to assist you in developing the skills necessary to understand why things happen the way they do, and how to adapt your style to be a successful and influential executive leader. This is a case based course. As such, you need to come to class prepared having read the cases and assigned readings. Being a case based class, your participation is very important. I will reserve the right to alter your grade up or down depending on the level and quality of your contributions to class discussions.

XMBA 4102 Business & Economic Context (2 Credits)

This introductory course is designed to provide a survey of essential economic concepts and frameworks for executives. Economics provides a clear lens to intelligently evaluate and understand the world around us. Disciplines including finance, strategy, international business and marketing all share a foundation in economic principles. Business decisions require knowledge of economic principles in order to effectively evaluate impact. This course provides a survey of these economic principles, with an emphasis on teaching via case studies and examples.

XMBA 4231 Marketing III - Supply Chain/Digital Marketing (2.5 Credits)

This course captures the executive-level understanding of both basic Supply Chain Management (SCM) and more broadly, Value Chain (VC). Students will analyze a firm's SCM and VC and identify opportunities and challenges. Industry experts and case studies will bring topics to life. The Digital Marketing component of this course will provide executive-level insight into the frameworks used by marketing executives to make decisions on how to spend their budgets to achieve maximum ROI. The digital era has permanently changed the face of marketing and this course will prepare executives to understand how (and where) digital dollars can be spent. Through a detailed overview and hands-on exercises, students can expect to develop the understanding needed to better engage their own marketing departments as well as navigate the online advertising industry as a whole.

XMBA 4234 Digital Marketing (2 Credits)

The Digital Marketing course provides executive-level insight into the frameworks used by marketing executives to make decisions on how to spend their budgets to achieve maximum ROI. The digital era has permanently changed the face of marketing and this course will prepare executives to understand how (and where) digital dollars can be spent. Through a detailed overview and hands-on exercises, students can expect to develop the understanding needed to better engage their own marketing departments as well as navigate the online advertising industry as a whole.

XMBA 4301 Mastering Fourth Industrial Revolution (2 Credits)

This course has two primary objectives. The first is to expose students in a coherent way to current exploding new technologies that create possibilities and challenges for businesses, organizations, and individuals alike. Key 4th industrial revolution technologies such as artificial intelligence (AI), the Internet of Things (IoT), Blockchain technology and cryptocurrency, extended reality (augmented, mixed, and virtual), additive manufacturing, and autonomous vehicles and drones are also introduced. The second objective is to have students digest and think through what these technologies mean for the organizations they do and will lead in the future. Notably, what does it mean to lead an organization and be a well informed customer/user of technology without being a technology expert themselves. In essence, how do you lead a 21st century enterprise that is increasingly shaped by 4th Industrial Revolution technologies?

XMBA 4330 Financial Accounting (2 Credits)

This is a study of the fundamental concepts of financial accounting and reporting by business entities in accordance with generally accepted accounting principles (GAAP). The course approaches the material from the perspective of the financial statement user rather than the financial statement preparer. Emphasis is placed on the use and interpretation of information contained in business financial statements by managers, investors, and creditors.

XMBA 4331 Foundations of Financial Analysis (2 Credits)

This course introduces the tools and techniques for financial analysis and planning. Topics include the tax implications of financial decisions, financial ratio analysis, operating and financial break-even analysis, operating and financial leverage, time value of money, and interest rates in the financial markets.

XMBA 4332 Management Accounting (2 Credits)

This is a study of the fundamental concepts of financial accounting and reporting by business entities in accordance with generally accepted accounting principles (GAAP). The course approaches the material from the perspective of the financial statement user rather than the financial statement preparer. Emphasis is placed on the use and interpretation of information contained in business financial statements by managers, investors, and creditors.

XMBA 4333 Entrepreneurial Mindset II (2.5 Credits)

Entrepreneurial Mindset II applies the concepts of entrepreneurship to an established company. By contrast, Intrapreneurship refers to a 'start up' style of management (characterized by flexibility, innovation, and risk taking) to fast track product development in order to take advantage of a new opportunity or to assess feasibility of a new process or design. The content of this course is designed to help identify the differences and similarities between entrepreneurship and intrapreneurship by looking at such factors as risk/reward systems; corporate culture; autonomy within the context of a large organization; gaining commitment and funding; as well as resource allocation. Intrapreneurs are not just entrepreneurs who happen to work inside an organization; there are some fundamental differences in their motivations, the skills they possess and the environment they need to thrive. From within a company, successful intrapreneurs understand trends and how to develop industry disruptive strategies. In this respect good intrapreneurs are the most important asset a company has: they do more than just commit their time to a company, they also invest their skills. Intrapreneurs see the ability to grow personally along with the company and in this sense, should be seen as investors in a company, rather than just employees.

XMBA 4334 Accounting III - Strategic Management of Costs (2.5 Credits)

Effective cost management is at the core of nearly every successful enterprise. Through this course, students will better understand why, when, and how cost management affects operations. The course materials (including lectures, cases, problems and simulations) provide real-world applications that include cost behavior, budgeting and variance analysis, cost-volume-profit relations, pricing, quality, Activity Based Costing, Target Costing, the Balanced Score Card, ISO 9000, and using relevant costs and revenues in decision making.

XMBA 4336 Finance II - Financial Decision Making (2 Credits)

This course applies the tools of financial analysis to financial decisions. Topics include the valuation of financial assets, capital budgeting, cost of capital, Performance financial statements, business valuations and mergers, return on equity analysis, EPS and stock prices, and cash flow statement analysis.

XMBA 4337 Finance III - Strategic Finance (2.5 Credits)

This course applies the tools of financial analysis to financial decisions. Topics include the valuation of financial assets, capital budgeting, cost of capital, Performance financial statements, business valuations and mergers, return on equity analysis, EPS and stock prices, and cash flow statement analysis.

XMBA 4340 Executive Leadership I (4 Credits)

It is appropriate that the EMBA begins with Executive Leadership. This course sets the tone and framework for what follows. This course in executive leadership has a clear perspective: being a leader in any organization at this time is more than just "managing," especially at the upper levels of an organization: leadership at the executive level is a profession. The Executive Leadership course is all about the essential role of leadership at a time when society faces major challenges and uncertainties. What does it take to be a successful leader of an organization in the current and future environment? Organizations are complex systems that are embedded in larger complex systems. Simple formulas will not provide you with effective solutions covering all situations. We will emphasize the practice of perspective-taking and diagnosis for making better decisions. This course also applies and reflects what is happening in all types of organizations—whether public or private, large or small, and whether product or service oriented. Personal, interpersonal, team and organizational leadership, along with concepts of business execution and performance, are themes that will be woven throughout the course content. Executive Leadership is a two term course. Executive Leadership I includes the Team Sailing Challenge experiential exercise.

XMBA 4341 Executive Leadership II (2 Credits)

This class focuses on an often-overlooked leadership skill – the ability to use power and influence effectively, and to negotiate the relationships critical to being a successful leader. Class time focuses on not only understanding the basics of this critical leadership skill, but also on honing skills through case studies and exercises. Particular attention is given to ethical issues connected with power and negotiation. This course will challenge you to define for yourself what will constitute the effective exercise of power and influence in your life.

XMBA 4342 Talent, People, & Culture (2 Credits)

The course will focus on the role of Human Capital Management as it relates to a firm's performance. The course follows the cycle of business planning and execution and focuses on the key human capital considerations at each step in the cycle. It addresses Talent Management processes while also exploring current and emerging practices. The course has a global focus and gives significant attention to new trends that relate to human capital.

XMBA 4343 Evolving as an Impactful Leader (2 Credits)

In the gap between a brilliant idea and the successful organization lies the discipline of execution. Execution is built on three key processes: the people process, the strategy process, and the operations process. In this course, we study the methods of successful leaders and organizations known for execution, self-evaluate execution skills and reinforce learning via case methodology.

XMBA 4350 Executive Leadership II (2.5 Credits)

In today's world, working with teams is a necessity, yet few of us understand how to do this well. In this class, you will address how high performance teams are built, sustained and integrated through practice and competition. The class will participate in a team building weekend in San Diego (sailing) to gain hands-on experience with these skills. Leadership is about effectively achieving results through others. Technical business knowledge, emotional intelligence competencies, and the ability to execute are all required to achieve this objective. This course examines these elements within the context of developing personal and organizational 'leadership intelligence'. Students will explore ethical, legal, social, and public policy challenges frequently encountered by executives and business leaders in the workplace.

XMBA 4351 Marketing II - Product Innovation (2.5 Credits)

The second course in the marketing sequence shifts from left brain activity to whole brain activity. Building on the tools and disciplines learned in Strategic Marketing, Product Innovation shifts to focus on the art of marketing. The course enables students to understand the role of innovation in delivering value to customers and stakeholders, to acquire the executive competence necessary to secure the innovation investment, and to realize how executives propel and assess innovation through all the stages of the innovation life cycle – from idea exploration to bringing a product/service to market successfully.

XMBA 4353 Global Business I (2.5 Credits)

Students will be asked to apply models, disciplines, and systems learned during the first four quarters of their EMBA program to a global environment. The global course includes a two week practicum where students pick two international cities and go deep into their respective business environments. The ten weeks of learning and research done in Denver, along with the on the ground research process completed in-country, build a global perspective and the student's worldview.

XMBA 4354 Global Business II (2.5 Credits)

Students will be asked to apply models, disciplines, and systems learned during the first four quarters of their EMBA program to a global environment. The global course includes a two week practicum where students pick two international cities and go deep into their respective business environments. The ten weeks of learning and research done in Denver, along with the on the ground research process completed in-country, build a global perspective and the student's worldview.

XMBA 4355 Executive MBA Summit Series (2.5 Credits)

The last five weeks of the 18-month program consists of a series of class sessions centered on topics of particular relevance in today's business environment. The content in this "multi-part course" is designed to be fluid, reflecting the shared interests of the cohort. For example, topics may include subjects such as Board Membership (how to secure a Board position; roles and responsibilities etc.), Crisis Management/Media Relations, Executive Career Development and/or Leadership in Non-Profit Entities. Final presentations for EMBA co-curricular projects (Social Impact Project, Business Plan/New Venture Project) also occur in these final weeks, representing the "summit" of EMBA learning outcomes.

XMBA 4360 Marketing I - Strategic Marketing (2 Credits)

Focused on creating customers, this course will build decision tools, mental models and a holistic framework for finding the right market, the right price, the right communication and the right partners for your product or service. Through market research and competitive intelligence, students will learn to provide customer value, customer information, customer solutions and organizational profitability. Strategic Marketing in a Dynamic Environment explores the science of marketing. Students will acquire a detailed understanding of strategic business- and decision support models that helps executives navigate and lead an enterprise towards sustainable competitive advantage and differentiation. The course allows executives to develop and internalize business acumen as relates to translating the voice of the customer to strategy and orchestrating stakeholders in a way that add value.

XMBA 4361 Go-to-Market Strategy (2.5 Credits)

This course focuses on Go-To-Market strategy as a framework for effectively implementing a business plan. The key areas of Go-To-Market strategies evaluated in this class include approaches to segmentation of key markets, sales organizational and compensation considerations, channel and distribution considerations, and the overall corporate culture to sustain the GTM strategy. The focus is on developing the customer experience while sustaining long-term profitable growth.

XMBA 4362 Strategic Management (2 Credits)

This strategy course covers a range of concepts and analytical techniques relating to creating and sustaining competitive advantage as the basis for superior performance. It deals with contemporary issues such as industry analysis, core competence of organizations, value chain analysis, and strategy implementation. The emphasis is on the application of analytical tools and frameworks to understand complex strategic issues. Competitive Strategy integrates concepts from finance, marketing, accounting, general management, information technology, and operations management.

XMBA 4364 Business Data & Analytics (2 Credits)

This course will familiarize the student with data management and analytic methodologies that are prevalent across most industries today, and will suggest a way-ahead as electrons continue to get cheaper to collect and maintain. A well-designed architecture for collecting, storing, and accessing data is essential for all businesses that want to compete successfully as the pace of the decision-making cycle continues to increase. Traditional statistical techniques are still prevalent (and useful!) with proper mining or sampling of big data, and these remain the workhorses of Business Analytics. Analytic modeling is an integral part of business decision-making, and knowing and identifying the appropriate technique can make the difference between discovering the truth and running into a data wall. With the right toolset, the data analyst can tackle large volumes of data with a "divide and conquer" approach. However, the decisions that lead to parsing the data appropriately require not only an understanding of the data and the available tools, but the question being answered as well.

XMBA 4365 Entrepreneurship & Innovation (2 Credits)

This course provides students with the analytical skills needed to identify and evaluate new business opportunities and the skill set to prepare a business plan for an entrepreneurial venture. The curriculum incorporates insights from successful entrepreneurs and covers topics such as crafting a value proposition, market and sales forecasting, exploration of financing options, and building an effective team. The course concludes with the presentation of student business plans.

XMBA 4366 Stakeholders Beyond the Shareholder (2.5 Credits)

For 100 years, the business community has operated under an increasingly well defined and developed framework of shareholder capitalism. In shareholder capitalism, the purpose of business is to generate profits for shareholders. As such, we have developed well defined and refined processes and frameworks for developing strategies, executing plans, and measuring success and progress against this objective. This course challenges us to examine the other stakeholders who are affected by and affect our organizations and their work, to including (but not exclusively) customers, employees, governments, suppliers, the global environment and the communities in which we do business. What does it mean for a business or organization to consider the wants and needs of these (and other) stakeholders? What are the issues that we as leaders need to be attuned to when considering these stakeholders? Which stakeholders have (or should have) primacy and why? How do we develop strategies and plans to account for a much broader array of stakeholders? And how do we and others measure success? This course provides a framework for considering these questions and three main thrusts to it: • An exploration of Environmental, Social, and Governance (ESG) issues within and around corporations • A deeper dive into the issues of Diversity, Equity, and Inclusion (DEI) in organizations • A bridge to the EMBA Social Impact Project which will proceed through quarters 5 and 6.

XMBA 4367 Stakeholders Beyond the Shareholder I (1 Credit)

For 100 years, the business community has operated under an increasingly well-defined and developed framework of shareholder capitalism. In shareholder capitalism, the purpose of business is to generate profits for shareholders. As such, we have developed well defined and refined processes and frameworks for developing strategies, executing plans, and measuring success and progress against this objective. This course challenges us to examine the other stakeholders who are affected by and affect our organizations and their work, including (but not exclusively) customers, employees, governments, suppliers, the global environment and the communities in which we do business. What does it mean for a business or organization to consider the wants and needs of these (and other) stakeholders? What are the issues that we as leaders need to be attuned to when considering these stakeholders? Which stakeholders have (or should have) primacy and why? How do we develop strategies and plans to account for a much broad array of stakeholders? And how do we and others measure success? This course provides a framework for considering an exploration of Environmental, Social, and Governance (ESG) issues within and around corporations.

XMBA 4368 Stakeholders Beyond the Shareholder II (1 Credit)

For 100 years, the business community has operated under an increasingly well-defined and developed framework of shareholder capitalism. In shareholder capitalism, the purpose of business is to generate profits for shareholders. As such, we have developed well defined and refined processes and frameworks for developing strategies, executing plans, and measuring success and progress against this objective. This course challenges us to examine the other stakeholders who are affected by and affect our organizations and their work, including (but not exclusively) customers, employees, governments, suppliers, the global environment and the communities in which we do business. What does it mean for a business or organization to consider the wants and needs of these (and other) stakeholders? What are the issues that we as leaders need to be attuned to when considering these stakeholders? Which stakeholders have (or should have) primacy and why? How do we develop strategies and plans to account for a much broad array of stakeholders? And how do we and others measure success? This course provides a framework for considering the issues of Diversity, Equity, and Inclusion (DEI) in organizations.

XMBA 4369 Supply Chain Management (2 Credits)

This course captures the executive-level understanding of both basic Supply Chain Management (SCM) and more broadly, Value Chain (VC). Students will analyze a firm's SCM and VC and identify opportunities and challenges. Industry experts and case studies will bring topics to life.

XMBA 4401 Design Thinking (2 Credits)

Design Thinking The course examines the Design Thinking's systematic approach for developing solutions using creative problem-solving techniques and will also build on the concepts introduced in the Marketing and Entrepreneurship classes. We will discuss its application to multiple business domains, the language of design thinking and how this applies to leadership and a broader business mindset. This course will include an immersive activity to understand design thinking, guest speakers, and articles to re-enforce each learning topic. We will discuss several academic models for design thinking.

XMBA 4720 Executive Business Law (2 Credits)

This course is designed to provide executives and entrepreneurs with practical, applied legal information that will lead to better decision-making in the business environment. It also highlights the importance of managing legal professionals and creating a sound legal strategy – both key components of business strategy – and crucial for business success. Emphasis is placed on teaching applied knowledge and using this knowledge to make difficult, real-world business decisions. This course provides a safe learning environment in which management decisions can be carefully analyzed and studied without real world consequences.

XMBA 4900 Integration (1 Credit)

This course will vary from quarter-to-quarter to reflect the integration of learning during the quarter. A variety of activities will be used to effect the integration such as working with a client or visiting a site and speaking with executives.

XMBA 4991 Independent Study (1-10 Credits)**XMBA 4995 Independent Research (1-10 Credits)**

Executive RCM (XRCM)

XRCM 4000 Triple Bottom Line and the Built Environment (4 Credits)

An exploration of the importance of real estate and the built environment through triple bottom line analysis of its social, environmental, and economic impacts. The course considers a "cradle to cradle" sustainability model that links the various phases, functions, and professions of real estate, project delivery, and asset/facility management to create holistic, value-generating solutions for society. Professional practices/skill sets associated with the many career options that engage the built environment are demonstrated.

XRCM 4007 Real Estate Financial Analysis (4 Credits)

Alternative analysis formats that can be applied to a wide array of real estate analysis issues; simulates working/decision-making environment; structured overview of analysis tools focused on specific facets of multidimensional real estate decision-making environment; applications in investment analysis, feasibility analysis, valuation, market analysis, and report writing and presentation. Prerequisite: XRCM 4407.

XRCM 4010 Real Estate Capital Markets (4 Credits)

This course will expose students to the Commercial Real Estate Capital Markets that have evolved from exclusively private in the 1980s to a mix of private and public, including commercial mortgage backed securities (CMBS) and real estate investment trusts (REITs), in the 1990s. Any person involved in real estate today must understand all the alternative capital sources available and their requirements. Students will be exposed to the positives and pitfalls of all the capital market products. This course will provide students with the general concepts and definitions. A combination of lectures, guest lectures from industry experts, text & article readings, class discussions, and case studies using real life examples. Prerequisite: REAL 4007.

XRCM 4110 Preconstruction Integration and Planning (4 Credits)

This course examines the role of preconstruction services, team integration, and joint design planning in various Integrated Project Delivery (IPD) approaches. Various tools and techniques associated with preconstruction services and design planning from the proposal stage through the design stages of a project are considered.

XRCM 4115 Corporate Real Estate and Management (4 Credits)

This course provides a snapshot view of the corporate real estate life cycle and how to strategically plan and manage it. The course addresses key CRE issues including globalization, technology, sustainability and the enterprise business model. Within the framework of a corporate or agency structure, facility management is addressed as a distinct and critical component of successful performance. Topics include facility planning and forecasting, lease administration, space planning, allocation, and management, workplace planning, budgeting, and economic justification, real estate acquisition and disposal, sustainability management, construction project management, move, add, change (MAC) management, operations, maintenance and repair, technology management, emergency, security and life-safety management, and general administrative services.

XRCM 4120 Construction Planning and Scheduling (4 Credits)

Understanding and applying scheduling and control to construction projects is essential to successful construction management. Project scheduling emphasizes network-based schedules, such as critical path management (CPM), network calculations, critical paths, resource scheduling, probabilistic scheduling and computer applications. Project control focuses on goals, flow of information, time and cost control, and change management. Prerequisite: XRCM 4420.

XRCM 4140 Global Perspectives in Real Estate (4 Credits)

Cross listed with REAL 4140.

XRCM 4155 Sustainable Development/LEED (4 Credits)

The course includes many case studies of historic and contemporary structures exemplifying various sustainability features. Emphasis is placed on how LEED project certification influences the overall construction project. Topics include LEED certification techniques for sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, innovation and design. The following topics are covered from a LEED perspective: ventilation, air conditioning, heating, electrical lighting, energy efficiency, and building control systems. The student studies and analyzes how management and LEED techniques are applied to current construction projects.

XRCM 4177 Environmental Systems and MEP Coordination (4 Credits)

A study of electrical and mechanical systems used in the construction of buildings. Course content includes system design, component selection and utilization for energy conservation, cost estimating or systems, coordination and management of installation. Specific systems included are electrical, air conditioning, heating, ventilation and plumbing, fire protection, life safety, communication, power systems and lighting. The course also considers coordination of MEP systems and explores emerging technology and environmental issues related to mechanical and electrical systems in buildings. Cross listed with CMGT 4177.

XRCM 4180 Construction, Layout and Surveying (4 Credits)

Theory, principles and techniques of constructing layout and surveying; field procedures in fundamental surveying; site, foundation and frame layout.

XRCM 4200 Lean Const Project Mgmt (4 Credits)

This advanced course focuses on cutting edge lean tools and other productive strategies for the management of people and processes in the construction industry. The tools and strategies presented draw on the very successful Toyota Production System adapted to the construction industry. Lean construction methodologies such as the Last Planner System, the Lean Project Delivery System, and Integrated Project Delivery are discussed. Topics also include sustainability and the emerging interest in "green construction," as well as the use of Building Information Modeling to enhance the development and management of integrated projects. This course also looks at the human element in relation to motivation, safety, and environmental stresses. A number of case studies are presented to highlight best practices in Lean Construction Project Management. Prerequisite: XRCM 4480.

XRCM 4210 Planning, Entitlements, and Public Finance (4 Credits)

Real estate development, place making, and community building require the combined efforts of the public, for-profit, and non-profit sectors. Participants in the real estate development process need to understand and appreciate the sometimes competing and sometimes collaborative interests of governments, agencies, and the private developer. This course is designed to familiarize students with the overall context of urban planning and land use. Students discover the variety of participants in the development process and also become familiar with the project entitlement process, zoning, and land use regulation. Students also examine public/private financing structures such as public-private-partnerships (P3s) and become familiar with detailed calculations relating to Tax Incremental Financing (TIF) and Metropolitan Districts.

XRCM 4230 Design Management and Schedule Control (4 Credits)

This course examines the various strategies and techniques associated with managing the design delivery process to align with the construction budget and schedule needs in an integrated fashion. Design planning, scheduling, and resource allocation are considered along with design value determination and management of the design-construct interfaces. Constructability, value engineering, design performance.

XRCM 4250 Construction Job Site Management (4 Credits)

This course addresses how a successful construction project is managed and administered from design through construction to closeout. Emphasis will focus on how to unite the key stakeholders (contractors, architects, engineers, etc.) to provide them with a workable system for operating as an effective project team. The latest technology, laws and regulations associated with contract administration will be presented. Topics pertinent to each stage of a project are introduced and discussed as they occur throughout the life of the project. Numerous real-world examples will be utilized throughout the course. Various electronic project administration tools and techniques will be demonstrated including Building Information Modeling.

XRCM 4310 Cost Modeling and Trend Management (4 Credits)

This course covers various approaches to construction cost estimating at the conceptual stages of planning and design through detailed construction. Students learn parametric estimating techniques and how they are applied to construct and predict reliable budgets at the earliest stages of design. Students build cost models and refine those models with greater detail as design develops through a project. Building information modeling is introduced and used to create massing models to demonstrate design impacts on project costs. Cost trending techniques are presented to manage, monitor and document project performance relative to cost. Prerequisite: XRCM 4410.

XRCM 4320 Introduction to Architecture and Design Management (4 Credits)

This course introduces students to the significant value that architecture brings to real estate and the built environment and the various services and professions associated with it. Students will be introduced to principles, protocols and the planning process related to the design function and the link between the architect's vision and the finished physical structure. Students will be introduced to design, thinking, theory and application. Student will learn to read and interpret the various graphical and written construction documents as well as know how they are developed and what information they contain. Architectural, structural, mechanical, electrical, plumbing and civil drawings and specifications are covered. The business model for design services will be explored as well as the unique risks and challenges associated with managing the design throughout the various stages of development and construction.

XRCM 4337 RE Securities/Syn/Entrep (4 Credits)

Introduction to real estate securities; emphasis on private offerings; determining whether a contemplated transaction involves a security, and what happens if it does; exemptions from registration (Reg D); registration requirements; investor suitability, how to syndicate, acquisition of property, marketing of the property, tax structure and formation of syndication, compensation to syndicators, real estate tax considerations. Cross listed with REAL 4337.

XRCM 4347 Management - Income Properties (0-4 Credits)

Complex problems of managing apartments, condominiums, office buildings, industrial property and shopping centers; rental markets, development of rental schedules, leasing techniques and negotiations, repairs and maintenance, tenant relations, merchandising, selection and training of personnel, accounting, owner relations.

XRCM 4357 Corporate Real Estate and Management (4 Credits)

This course provides a snapshot view of the corporate real estate life cycle and how to strategically plan and manage it. Over the ten week period we will address the diverse but critical components that together account for Facility Management. These shall include: Building Life Cycles and sustainability, facility management as part of the enterprise model within a corporate structure, regulatory agencies, professional relationships and the impact of the build environment on the bottom line, contracting and budget management, move-add-change (MAC) / operations, and general administrative services.

XRCM 4369 Real Estate Taxation (4 Credits)

Tax factors affecting investments and operations in real estate; special attention is given to legal forms of ownership, depreciation, tax basis, tax impacts of exchanges, syndications, real estate securities, and other federal tax laws affecting real estate.

XRCM 4407 Income Property Finance (4 Credits)

Conventional and alternative (creative) financing techniques, mortgage banking, law and markets, loan underwriting analysis, the impact of monetary and fiscal policies on the real estate and mortgage markets, emphasis on case studies and microcomputer applications.

XRCM 4410 Construction Building Systems (4 Credits)

A survey of residential and commercial construction materials, means, and methods associated with the various structural and architectural systems used to design and construct buildings. Project plans and specifications are incorporated to teach the basic sequencing and overall construction process. The influence of sustainability in construction is introduced.

XRCM 4417 Income Property Valuation and Appraisal (4 Credits)

Residential/Commercial appraising, including market cost and income approaches to value, gross rent multiplier analysis, neighborhood and site analysis, valuation of income properties including market cost and income approaches to value, capitalization theory and techniques, mortgage-equity analysis, and investment value concepts. Prerequisite: XRCM 4407.

XRCM 4420 Construction Estimating (4 Credits)

Integrated approach addressing construction accounting, estimating, purchasing, and management reporting systems. Cross listed with CMGT 4420. Prerequisite: XRCM 4320 & 4410.

XRCM 4438 Legal Issues & Risk Management (4 Credits)

General contract and real estate law, including property rights, title concepts, deeds, purchase contracts, law of agency, environmental issues and disclosures, basics finance concerns, tax law, landlord-tenant law, construction contracts, indemnity agreements, rights and remedies of property owners, contractors and subcontractors issues, and various areas of liability for real estate practitioners and property owners.

XRCM 4467 Property Development and Feasibility (4 Credits)

Commercial real estate development analysis and feasibility includes economic base analysis, tenant demand analysis, development and construction cost analysis, lease-up analysis, financial feasibility, leasing and property management practices. Five major property types (office, industrial, retail, apartment and hotel) are covered. Prerequisite: XRCM 4007.

XRCM 4477 Income Property Investment (4 Credits)

Comprehensive analytical framework for real estate investment decision-making, equity investment decisions via discounted cash flow, and risk analysis models and strategic planning concepts, structuring parameters to maximize rates of return while controlling downside risks; emphasis on theory, concept building, and practical application to various types of investment properties. Prerequisite: XRCM 4007.

XRCM 4480 Construction Project Mgmt (4 Credits)

This course introduces the student to project management scheduling techniques and methodologies. The student will be exposed to different scheduling techniques, how to develop a project schedule of limited scope, and how to utilize the project schedule for planning and monitoring job progress.

XRCM 4490 Residential Development (4 Credits)

A course sequence designed to emphasize the practical application of the theories and concepts of residential development. Students are expected to apply their knowledge of general business, real estate, and construction management practices by forming a student business entity, acquiring land, building and selling a residential property in a case format. Students apply accounting, finance, marketing, real estate, and construction management techniques in the planning for a residential development.

XRCM 4560 Relational Contracting and Risk Mitigation (4 Credits)

Relational contracting is a construction project delivery framework for multidisciplinary, integrated projects that focuses on aligned goals, high performance, innovation, mutual respect, open communication and a "no blame" culture between Client, Contractor, and Design Team. This approach to contracting, also known as Alliance Contracting, is becoming more prevalent in the United States and is often applied when using integrated project delivery systems. This course compares and contrasts transactional contracting methods with relational contracting methods and the influences on the project team and projects outcomes. Relational contracting is also considered in the context of risk mitigation and project optimization.

XRCM 4580 Strategic Intelligence and Integrated Project Leadership (4 Credits)

This course examines the unique leadership skills and talents associated with leading and facilitating multidisciplinary, integrated design and construction teams. The focus of the course is on applying strategic intelligence and a system of leadership in the development of integrated solutions for the built environment. This leadership model is driven by a compelling purpose and supported by people who share practical values and have excellent processes, to look into the future, create a vision, and bring that vision to reality. Effective strategies for supporting high performance teams are explored.

XRCM 4700 Topics in RE & Const Mgmt (1-5 Credits)

This course will be used for experimental purposes. A way to trial the content of course, relevancy, interest, etc. prior to developing the permanent course.

XRCM 4701 Global Persp in Real Estate II (4 Credits)

This course focuses on inbound U.S. and outbound U.S. real estate issues, with a mix of cultural issues that impact real estate transactions.

XRCM 4702 Argus Financial Analysis (4 Credits)

Using Argus Financial Software to solve complex Real Estate Investment problems. Cross listed with REAL 4500. Prerequisite: XRCM 4007.

XRCM 4705 Risk Management in the Built Environment (4 Credits)

Decision making and risk analysis concepts in the context of real estate and the built environment. This includes, but is not limited to, liability issues as to persons and property, casualty and property damage questions, employee and employer insurance areas, auto insurance, professional liability insurance, directors' and owners' liability issues, medical insurance, life insurance, environmental risks, and much more in areas of exposure that one can face in the business world. The course further examines means to minimize such areas of exposure.

XRCM 4777 Real Estate Principles and Practices (4 Credits)

Introduction to home ownership, real estate industry and its markets; legal aspects of home ownership from consumer's points of view, including property rights, title concepts, deeds, purchase contracts, listing contracts, law of agency, types of mortgages, basics of home loan finance, appraisal, investment and tax benefits. Partially satisfies Colorado real estate sales licensing requirements.

XRCM 4980 Adv Valuation/Report Writing (4 Credits)

Advanced cutting-edge techniques not yet institutionalized nor commonly practiced in the field. Includes writing skills workshops appropriate to specialized nature of appraisal reports, and composition of a complex field problem report to prepare student for writing "demonstration" report required for MAI professional designation. Prerequisite: XRCM 4417.

XRCM 4981 Internship (1-10 Credits)**XRCM 4991 Independent Study (1-10 Credits)**

Finance (FIN)

FIN 4000 Financial Modeling and Databases Bootcamp (1 Credit)

This bootcamp is designed to introduce students to financial databases and to familiarize them with basic financial data analysis using Excel. The goal is for students to become comfortable with platforms such as Capital IQ and WRDS, which they will be using throughout their academic and/or professional careers. In addition, students will acquire a basic command of Excel functionality and efficiency in data analysis, together with modeling best practices and practical finance applications.

FIN 4110 Ethics in Finance (4 Credits)

The objective of this course is to discuss the ethical issues facing financial institutions and professionals and apply ethical principles to the analysis of these issues.

FIN 4150 Advanced Business Valuation (4 Credits)

In this course, students will learn theoretical development, analytical tools and practical approaches to analyze and tackle business valuation issues at the core of the financial professions. The theoretical section of the course provides indepth coverage of the financial theories and models essential to value businesses. The application section provides students with opportunities to apply the valuation principles and techniques to assess business value and develop strategies to create value in a real-world context.

FIN 4160 Treasury Management (4 Credits)

The objective of the course is to provide students with a comprehensive understanding of how various treasury functions are managed in a corporation and build students' capabilities to assume the role of a proficient treasury manager. This course will cover techniques used by major corporations to manage cash, the capital structure, financial risk and working capital. Prerequisite: FIN 4630.

FIN 4180 Global Finance (2 Credits)

This course explores financial management in the international arena. Principal content elements include: The market for foreign exchange, interest rate parity, hedging currency risk, international portfolio management. Prerequisites: FIN 4630.

FIN 4200 Financial Investments and Markets (4 Credits)

Students will learn how households, institutions, firms, and governments interact in financial markets to channel funds from savers to productive uses of capital and provide firms with opportunities to hedge certain risks. This comprehensive understanding of how markets function is essential for anyone with a finance or high-level management role. We will begin by identifying the key institutions in financial markets and how securities come into existence and subsequently trade. We will then learn to measure the risk and return of financial assets while identifying techniques to improve and assess the performance of investment portfolios. Finally, we will introduce derivatives and techniques to wisely hedge firm risks. Prerequisite: FIN 4630.

FIN 4201 MS Management Managerial Finance (2 Credits)

FIN 4201 introduces concepts and analytical techniques to identify and solve financial management problems. The focus on Performance Metrics (Ratios and Du Pont Analysis), Time Value of Money and Opportunity Costs, and Project Analysis prepares managers to operate in an environment that can at times be driven by the financial performance of the company.

FIN 4320 Equity Analysis (4 Credits)

This course is an advanced finance course that focuses on the analysis of equity securities. The curriculum is primarily derived from the Candidate Body of Knowledge (CBOK) from the Chartered Financial Analyst® (CFA®) Program. The goal is to teach students how to implement objective, unbiased valuations through an understanding of the valuation process in theory and practice. Prerequisite: FIN 4200.

FIN 4330 Portfolio Management and Risk Analytics (4 Credits)

Case and project approach to foundation of investment portfolio management. This course emphasizes the application of modern portfolio management concepts and risk management principles. Prerequisite: FIN 4200.

FIN 4410 Financial Planning & Analysis (4 Credits)

Advanced course in financial planning and decision-making focusing on capital structure, working capital management, long-range and short-term financial planning, and other corporate events such as mergers and IPOs. Prerequisite: FIN 4630.

FIN 4420 Capital Expenditure Analysis (4 Credits)

Advanced course in capital budgeting examining capital allocation processes and procedures and the theory and applied techniques of capital spending and divestment under conditions of certainty and uncertainty. Related issues of cost of capital and leasing also included. Prerequisite: FIN 4630.

FIN 4500 Financial Modeling (4 Credits)

Use of various financial software applications to construct models from corporate finance, investments, and financial markets. In particular, the course will cover the application of Excel spreadsheet functions and R programming to various topics including the time value of money, investment projects analysis, financial statements analysis, capital budgeting, portfolio analysis, and data & pivot tables. Prerequisites: FIN 4630.

FIN 4610 Multinational Financial Management (4 Credits)

Financial analysis of multinational corporation operating in international markets, including exchange rates, international instruments, markets, institutions and futures. Prerequisite: MBA 4112.

FIN 4620 Financial Forecasting (4 Credits)**FIN 4630 Managerial Finance (4 Credits)**

This course covers analytical skills and tools of finance managers; theoretical concepts and practical applications are included. Topics include ratio analysis, breakeven analysis and leverage, securities valuation, capital budgeting, financial forecasting, and working capital management. Corequisite: ACTG 4610.

FIN 4700 Topics in Finance (4 Credits)

Topics vary each quarter. Course may be taken more than once if topics are different.

FIN 4701 Topics in Finance (1-10 Credits)

Topics vary. For new/experimental courses taught within the Reiman School of Finance.

FIN 4710 Marsico Investment Fund I (4 Credits)

A securities analysis and portfolio management practicum in which students manage a University endowment gift donated by Tom and Cydney Marsico. Prerequisite: FIN 4630 (or MBA 4285).

FIN 4720 Marsico Investment Fund II (4 Credits)

A securities analysis and portfolio management practicum in which students manage a University endowment gift donated by Tom and Cydney Marsico. Prerequisite: FIN 4710.

FIN 4730 Marsico Investment Fund III (4 Credits)

This course is an elective course that is the third in the series of classes involving the Graduate investment fund class: Marsico Investment Fund I & II. This course allows students to apply the investment, security analysis, and portfolio management tools and techniques that they have learned in their Finance classes. The students manage an actual portfolio, a portion of the University's endowment originally gifted by Tom and Cydney Marsico. The selection of students for this class is competitive. Students must agree to participate for 2 consecutive quarters, and they must be willing to address portfolio issues during the between-quarter periods if necessary. Because the course involves the application of tools and concepts learned in other classes, the best time to take the course is in the last year of a student's program. Prerequisites: FIN 4710 and FIN 4720.

FIN 4740 Managerial Microeconomics (2 Credits)

This course combines the standard tools of microeconomic analysis with a well-rounded appreciation of the important perspectives that form the business environment in the contemporary world. The goal is to provide students with the tools from microeconomics, game theory, and industrial organization that they need to make sound managerial decisions. The course uses case studies to develop practical insights into managing the firm's resources to achieve competitive advantage. The course is divided into two principle modules based on market structure: perfect competition and imperfect competition. Both modules cover optimal behavior and strategies.

FIN 4750 Managerial Macroeconomics (2 Credits)

This course covers the theory and practice of modern macroeconomics. It teaches students how private market forces and government policy decisions drive fluctuations in the global economy and affect the business environment. It explores issues related to inflation, interest rates, foreign exchange rate, business cycles, and monetary and fiscal policies. The course uses case studies to analyze real-life macroeconomic issues, and students are encouraged to investigate the potential and limitations of macroeconomic theory with real-world problems. The course is divided into two principle modules: the economy in the long run, and the economy in the short run. Both modules cover impacts of government policies on the business environment in a closed economy and an open economy.

FIN 4760 Managerial Economics (4 Credits)

This course presents the fundamental concepts of microeconomics and macroeconomics and approaches them from a managerial decision-making perspective. The first half of the course emphasizes applying microeconomic theory to decision-making to help achieve a firm's objective – increasing profit, market share, or growth. In contrast to traditional economics course, this course emphasizes practical implementation AND how economics affects business decision making. The second half of the course discusses macroeconomics and factors that affect the economy. The goal is to develop an understanding of macro-economic concepts such as GDP, inflation, and government policy such as Federal Reserve actions and government spending, to obtain a framework to model a firm's behavior according to an informed understanding of what the economy is doing. Armed with an understanding of the cycle of economic activity, one can formulate a firm understanding of policy alternatives by both the Federal Reserve and Congress.

FIN 4800 An Organized Walk Down Wall Street (4 Credits)

After four class sessions in Denver, participants will spend five days in New York visiting exchanges, brokerage firms, investment bankers, commercial banks, asset managers, and other institutions.

FIN 4830 Econometrics for Finance (4 Credits)

Econometrics for Finance is designed to teach applied statistical tools relevant to understanding financial and economic data. It is designed to cover essential tools for working with financial data, including return forecasting, volatility and econometrics of asset pricing, such as testing market models. The emphasis is on empirical techniques which are used in the analysis of financial markets and how they are applied to actual data. It teaches how to use and apply techniques using R, a free software that is used by many finance professionals. The course is intended to prepare students to possess the quantitative tools to evaluate and implement in the finance arena. Prerequisite: STAT 4610 and FIN 4500 (If no experience in R).

FIN 4835 Executive Education - Finance for Non-Financial Managers (2 Credits)

This Executive Education workshop introduces you to the essential finance skills any business professional needs to know. You will learn the language, tools and techniques to become a more intelligent user of financial reports. Through hands-on learning exercises, you will learn how to simplify, understand and apply data from financial reports and budgets. You will gain the confidence to ask better questions and make more informed financial decisions. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

FIN 4860 Derivatives (4 Credits)

This course provides a theoretical foundation for the pricing of contingent claims and for designing risk-management strategies. It discusses more advanced material in financial derivatives and is intended for students who have a quantitative background and are interested in enhancing their knowledge of the way in which derivatives can be analyzed. This course covers option pricing models, hedging techniques, and trading strategies. It also includes portfolio insurance, value-at-risk measure, multistep binomial trees to value American options, interest rate options, and other exotic options. Prerequisite: FIN 4200.

FIN 4870 Strategic Finance (4 Credits)

Addresses theory, concepts, and techniques associated with asset management and creation of value from a strategic orientation. Links financial theory and practice to strategic and operational objectives of the firm, prepares student to incorporate risk and uncertainty into analytical decision-making process and to analyze divestiture, restructuring, and liquidation decisions. Prerequisite: FIN 4410.

FIN 4875 Executive Education – Strategic Finance (2 Credits)

Today's leading organizations require executives to use rigorous financial analysis in order to make strategic decisions that affect growth, profitability and competitive market advantage. Strategic Finance is a multidimensional Executive Education workshop that uses real simulations and an acquisition case study to map the connections between business strategy, finance and enterprise value creation. The goal of the course is to make you a more intelligent user of finance and strategy. It will enable you to ask better questions and to make better decisions. You will become a more sophisticated manager, particularly when focusing on the interplay and interdependence of strategy, finance & management. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

FIN 4885 Investment Banking and External Financing (4 Credits)

This course is an advanced Corporate Finance course, focusing on the decisions by companies related to external sources of financing. There will be a mix of theory and practice, with outside speakers providing insight into the practice component. Topics will include business valuation, mergers and acquisitions, startup financing, angel investing and venture capital, bank loans, private equity, stock issuance and going private. Prerequisite: FIN 4410.

FIN 4890 Fixed Income Analysis (4 Credits)

Emphasizes valuation and management of fixed income securities in prevailing environment of complex and innovative financial arrangements. Study of the nature of evolving markets, both domestically and internationally. Prerequisite: FIN 4200.

FIN 4980 Finance Internship (0-10 Credits)

Daniels College of Business's graduate curriculum is designed to be experiential and build upon practical experience. To gain the full benefit of this curriculum, students are encouraged to expand their experiential learning beyond the short term experiences required in the classroom. Internships that allow students to apply newly learned skills and theories in the workplace are considered an integral to the curriculum and all students are strongly encouraged to seek such opportunities. Permission of instructor required. Hours and times arranged by student.

FIN 4991 Independent Study (1-10 Credits)

Individual study and report. Hours and times arranged by student.

FIN 6300 Seminar in Finance Research (4 Credits)

Through a survey of research in the discipline of finance, this course illustrates how theory can shape the literature and the formation of research questions. Analysis of key studies will provide business leaders with the tools to analyze how the academic literature can impact and inform the finance profession across such as areas as corporate governance, corporate finance, investments, and financial institutions.

Gender and Women's Studies (GWST)

GWST 4991 Independent Study (1-10 Credits)**GWST 4995 Independent Research (1-10 Credits)**

Geographic Information Systems (GIS)

GIS 4007 Creative Problem Solving and Programming Concepts (4 Credits)

In this course students will develop, or improve upon, their problem-solving skills to analyze problems and create solutions. Students will document their solutions and translate them into running programs written in the enormously popular Python programming language. Students will learn programming concepts including the use of variables, program input and output, flow control, conditionals, interpreter- and code-file-based approaches, and error testing. Students will learn how to set up Integrated Development Environments (IDE) such as Visual Studio Code on their personal computers and/or utilize a Cloud IDE in which they will write programs.

GIS 4080 Python Programming in GIS (4 Credits)

This course introduces Python concepts and the Python scripting environment in a GIS environment. Python is a free, open-source scripting language that has been integrated with GIS. Python is a dynamic, interpreted language that can be used to automate redundant tasks and workflows in GIS. Students learn tools and techniques and proper Python syntax, script flow, and error handling. Students learn to write scripts that allow them to automate redundant tasks and workflows in GIS. Students learn to write scripts that allow them to automate geoprocessing processes and GIS work more efficiently. This course teaches fundamental concepts needed to create Python scripts in ArcGIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4085 Python Programming II (4 Credits)

GIS 4085 builds on GIS Python fundamentals from GIS 4080, covering advanced applications of Python for developing and customizing GIS software, designing user interfaces, and solving complex geoprocessing tasks. Participants will engage with peers in weekly discussions and code reviews. Weekly exercises and assignments provide practical application of concepts. Prerequisites: GIS 4080.

GIS 4100 Geospatial Technologies (4 Credits)

This course is designed to familiarize students with the tools and technology needed to access, manipulate, and display geographic information. Students will also learn how to think spatially in order to help students know when to apply these tools. This course is a combined introduction to geographic information systems (GIS), remote sensing (RS), global positioning systems (GPS), and cartography (the science and art of mapmaking). Students will also learn about ethical issues regarding the use of geospatial technologies, as well as trends in the practical applications of these important tools.

GIS 4101 Introduction to Geographic Information Systems (4 Credits)

This introductory course is designed to provide a general overview of geographic information systems (GIS) including background, development, trends, and prospects in this rapidly evolving technological field. Basic components and functions of GIS as well as fundamental spatial and geographic concepts are explored through lecture notes, assigned readings, videos, discussions, and applied practical experience using GIS software.

GIS 4110 Geographic Statistics (4 Credits)

This course offers an overview of spatial statistics using GIS and publicly available data. This course provides information on the following: spatial statistics, methods, and interpretation; spatial data, collection methods, and resources; and GIS techniques to map and analyze spatial data. Using a popular PC-based desktop mapping software program and statistical package, students learn how to navigate through spatial data, identify data issues, statistically analyze spatial data, map the data, and interpret results from these analyses. Topics include descriptive spatial statistics, hypothesis testing, interpolation, clustering, and spatial regression. Several application areas, such as demographic analysis and facility planning, are used in sample exercises and ethical considerations, such as masking, are discussed. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4200 Geospatial Intelligence (4 Credits)

Geospatial intelligence (GEOINT) is pivotal in linking geography to events and helping us gain insight into what is happening, where it's happening, and why it's happening. GEOINT is derived from the exploitation and analysis of imagery and geospatial information about features and events, with reference to space and time. This course serves as an introduction to the fundamentals of the geospatial intelligence community, core GEOINT technologies and operations, and the role of GEOINT in national, regional and local security affairs. This course is built on a framework of data, technology, and analysis in support of the GEOINT community, which may include natural disasters, first responders, military personnel, homeland defense, and law enforcement. Prerequisite: GIS-4101 Introduction to GIS.

GIS 4504 Cartography and Geovisualization (4 Credits)

The theory and art of map making developed over several thousand years and has been revolutionized by computer technology. This course is designed to expose students to the use of computer techniques in assessing technical design issues in the compilation of accurate and meaningful automated geographic mapping products. GIS software will be used in a series of hands-on lab exercises to produce typical GIS mapping products.

GIS 4510 GIS in Business (4 Credits)

Businesses continue to embrace GIS as an effective alternative to traditional manual mapping analysis methods. GIS has emerged as an affordable solution for performing essential revenue producing and expense reducing functions. Many years ago, successful GIS implementation required huge capital investment and a large staff of GIS experts; however, with the introduction of more powerful inexpensive computers and easier to use software, companies of all sizes are unleashing the business potential of GIS on the marketplace. This course exposes students to various business applications and uses of GIS as well as the underlying theories and technology behind the applications. This course emphasizes various business disciplines including Marketing, Real Estate, Transportation, and Oil & Gas using GIS in practical, hands-on exercises that demonstrate the theories and concepts discussed in the lectures. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4520 GIS in Telecommunications (4 Credits)

Telecommunications is a thriving technology and business, accounting for a significant percentage of technical advances and revenue around the globe. GIS has emerged as a crucial tool in the telecommunications field for maintaining existing entities, planning for additional ones, and for gaining an advantage in this very competitive marketplace. The use of GIS in the telecom industry continues to grow because GIS technology accommodates the many CAD programs and drawings representing plant and transmission towers/coverage as well as the geographic representations of those items. Only a few years ago, introducing GIS into a telecom business required significant cash outlay, but through less expensive hardware and more user-friendly software, now even a modest CLEC can implement an effective GIS. This course exposes students to the various applications and uses for GIS in the telecom arena by breaking down the miscellaneous telecom requirements into GIS components and technological solutions. This course emphasizes specific telecom technology application requirements and allows students, through hands-on-lab work, to discover the power of GIS in delivering superior telecom solutions. This course also focuses on OSP/ISP applications and solutions, network connectivity issues as well as the exploding future of wireless technology. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4530 Crime Mapping (4 Credits)

Municipal police departments, county sheriff departments, and other state and federal law enforcement agencies use GIS technology as a tool to analyze crime statistics and patterns. This course examines how GIS technology is used in law enforcement to provide strategic, tactical, and administrative crime analysis.

GIS 4540 Conservation GIS (4 Credits)

This course is designed to provide students with an introduction to the use of geographic information systems (GIS) in conservation. Students receive an introduction to the use of GIS in various types of conservation studies and preservation. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support planning and management of land, species, and habitats. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4570 Geographic Information Systems in Public Health (4 Credits)

GIS offers many applications and functionality that are tremendously beneficial to the Public Health industry. The ability to visualize cases in space (geographically) and time is invaluable in analyzing spatial clusters of health related events. Further the ability to model the spread of a potential epidemic can literally be a life saver. GIS is a natural choice for solving many Public Health issues including: analyzing the location of diseases; the spread of contagious diseases (both vector borne as well as the spread through human contact); the cause and effect of environmental factors; as well as the availability of Health facilities. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4610 Open Source GIS (4 Credits)

This applied course guides students in their investigation and research of special topics and current events through Open Source geographic information systems (GIS). It builds upon geospatial skills previously acquired and is designed for participants to learn how geospatial work can be done when presented with a proposal or problem but given little to no data, budget, or access to commercial, off-the-shelf software, or other resources. In this course, students will choose their own topic and learn to navigate it by planning, implementing, and disseminating the outcomes of a geospatial project. Prerequisite: GIS 4101 Intro to GIS and additional coursework or experience with GIS Projects. Prerequisite: GIS 4101.

GIS 4620 Geodatabase Application (4 Credits)

This course in Geodatabase Application is logically broken into two separate component parts; the first section deals with Geodatabase concepts and provides a general overview of the Geodatabase structure and implementation including; background, object classes, feature classes, relationship classes, domains, validation rules, and Geodatabase topology. The second portion of the course focuses on Geodatabase Application introducing advanced features of Geodatabase, providing a solid foundation for the application of the Geodatabase to model and address complex real world issues. Geodatabase Linear Referencing, Geodatabase Surface Modeling, and Geocoding Services in the Geodatabase, are explored. This course incorporates a hands-on lab component. Computer lab exercises are designed to introduce the student to concepts and Geodatabase application. Strong emphasis is placed on Geodatabase design. Design objectives, design guidelines and functional requirements of the resulting Geodatabase model are addressed. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4630 Public Domain Data for GIS (4 Credits)

Geospatial data are the foundation upon which GIS and spatial analysis rests. As GIS has matured, the challenge has evolved from generating data to managing the enormous volume of data from government agencies, nonprofit organizations, and industry, and increasingly, from ordinary citizens through citizen science and volunteered geographic information efforts. Key to working with this volume of data are essential issues such as privacy, copyright, public domain, cost recovery, metadata standards, and data quality that GIS professionals must grapple with to be effective in the 21st Century. This class discusses and applies these issues and works with a rich array of data sources to enable effective decision-making in a Geographic Information System. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4650 Demographic Analysis Using GIS (4 Credits)

This course offers an overview of demographic analysis using GIS and U.S. Census data. This course provides pertinent information on the following: demographic concepts and methods; U.S. Census data, collection methods, and reports; and GIS and spatial statistical methods to analyze demographic data. Using a popular PC-based desktop GIS software program, students learn how to navigate through census files and create a variety of thematic maps. Several application areas, such as demographic analysis and facility planning, are used in sample exercises. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4655 Community Intel (4 Credits)

Community Intelligence is about using geospatial data to gain insights and to make informed decisions regarding community demographics, opportunities, risks, and an overall deeper understanding of communities. Whether one is a small business owner, the CEO of fortune 500 companies, an Emergency Manager, or running a non-profit environmental organization, having insights into local and regional communities, and understanding how to engage in this public provides an incredible advantage while maximizing effort, time, and resources. In this course, you will learn how to capture and discover key insights often hidden in complex datasets, and how to strategize and communicate with these data for maximum organizational impact. Course Pre-requisites: GIS-4101 Introduction to GIS. Prerequisites: GIS 4101.

GIS 4660 GIS in Municipal Government (4 Credits)

There are many areas of government where desktop mapping can be extremely helpful in solving problems that are spatial in nature. This course explores the many types of data collected by city and county government agencies from crime and election data to building, assessment, and zoning data and how it can be displayed in map form. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4670 GIS and the Law (4 Credits)

This course explores the legal and technical ramifications created by Geographic Information Systems (GIS), Mobility and the Law, including the legal and policy issues related to the science of GIS, the sharing of geographic information, the data generated by mobile devices, the intellectual property issues, security and privacy issues, business and contractual issues related to GIS, and the standards of care and liability related to GIS. This course also examines the types of issues and concerns that exist in the U.S. and the world created by geographic information science and the mobile device. The evolution of GIS and the mobile device directly impacts governments, companies, and individuals on a daily basis. In today's world, more than three billion people have smart phones in their hands constantly. This creates issues about how to handle data, security and privacy, civil and criminal laws, rules and regulations, contractual agreements, and service-level agreements between parties on many levels from service providers in different states, countries and parts of the world. All of these issues need to be balanced by the differing cultural standards and mores from all over the world and legal (and sometimes not so legal) methods of protecting governments and companies in this ever-changing "always-connected" world created by GIS and the mobile device. Prerequisite: GIS 4101 - Intro to GIS, and GIS 4700 - Remote Sensing I and/or similar GIS course and/or work experience.

GIS 4680 Environmental Applications (4 Credits)

This class provides students with an introduction to practical applications of computerized Geographic Information Systems (GIS) in environmental assessment and natural resource management. Emphasis is placed on automated analytical techniques and data presentation methods that support facility site selection, environmental impact analyses, resource management, and characterization of environmental hazards. This course is designed to provide students who participate in environmental assessment projects with introductory preparation for practice as GIS professionals in public agencies or in the private sector. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4683 GIS for Disaster Management (4 Credits)

This course serves as an introduction to Geographic Information Systems and their application in Emergency Operations. The basic concepts of geography, cartography and Global Positioning Systems will be covered, along with the basic components and capabilities of a geographic information system. Students will learn about the fundamental types of GIS analysis and applications, focusing on those used in Emergency Operations. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4685 GIS and Natural Hazards (4 Credits)

This course is designed to provide students with an introduction to the use of GIS in natural hazard assessment. Students receive an introduction to the use of geographical information systems (GIS) in various types of natural disasters and response management. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support hazard risk and assessment, mitigation, and emergency response planning. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4687 Hydrologic Modeling in GIS (4 Credits)

Hydrology is concerned with movement of the earth's waters through the hydrologic cycle, and the transport of constituents carried in its flow. In GIS, the landscape is represented by means of geographically referenced data describing the character and shape of relief features. A spatial hydrology model simulates the water flow and transport in a specific locale using GIS data structures. Hydrologic modeling in GIS allows us to automatically delineate a drainage system and quantify the characteristics of the system. It focuses on the movement of water across a land surface. This course looks at the basic inputs to hydrological modeling in GIS, walks students through established modeling procedures, and has students work on projects that are real and relevant as model applications. Instruction is largely hands-on, project-oriented. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4690 GPS for GIS (4 Credits)

This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Control and Quality Assurance issues for data collection programs. Lab exercises include planning a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, and data integration into a GIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4700 Remote Sensing I (4 Credits)

This course provides a survey of remote sensing technologies, applications, and the industry. This course is designed for GIS, Geography and Geoscience students who seek to broaden their understanding of remote sensing in support of Geographic Information Systems. Introductions to the electromagnetic spectrum, energy sources, radiation principles, aerial cameras, and electronic imaging provide the student with the initial building blocks to a thorough understanding of remote sensing. This course provides an overview of the various high altitude and space-based collection systems and their characteristics, with a view toward future systems and capabilities. In addition, this course exposes students to the techniques of extracting relevant information from both hard copy and digital imagery. Pre-requisite: This course is a pre-requisite for GIS 4740 – Remote Sensing II.

GIS 4701 Topics in Geographic Information Systems (2-5 Credits)

The content of this course varies each time it is offered, depending on the interests and needs of the students. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

GIS 4740 Remote Sensing II (4 Credits)

The curriculum is a rigorous presentation of digital imaging processing theory with emphasis on its application to airborne and space borne imagery. The course includes computer laboratory exercises and workshops, where the students apply theory to satellite and air photo data. Interpretation of the digitally processed data is also included in the class exercises. Examples of vector and raster data integration are shown as well. Prerequisite: GIS 4700.

GIS 4750 UAS for GIS (4 Credits)

The purpose of this course is to introduce GIS students to the emerging world of using Unmanned Aircraft Systems (UAS) in the GIS workplace for data collection, reconnaissance, and research. UASs are in the news every day, highlighting their use in a military context. The Federal Aviation Administration (FAA) has released new rules and regulations governing the use of UASs in the civilian sector. This course will prepare students to be conversant in the world of UASs, basic aviation, safety, flying, mission planning, and general data gathering techniques for use in GIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4760 UAS Photogrammetry (4 Credits)

Surveying, photogrammetric mapping, GPS, and remote sensing are critical components to working in the UAV and GIS domain. The second course in this two-course sequence will expand on the data collection process highlighted in the first class and deliver the foundations required by GIS professionals working with UAVs. Prerequisite: GIS 4101 or similar GIS course and/or work experience and GIS 4750-UAVS and GIS.

GIS 4770 UAS Ground School Practical (4 Credits)

The purpose of this course is to provide skills and abilities to become a remote pilot in command (RPIC) within the United States. The class content will focus on 14 CFR 107, the rules and regulations that allow RPICs to operate Unmanned Aircraft Systems (UASs) safely and legally. In addition, students will be given hands-on training in the best practices for flying UASs. Course Overview/Purpose: The release of 14 CFR 107 by the FAA has set a legal framework for commercial UAS operations in the United States. The purpose of this course is to help students become well versed in 107 and gain hands-on experience operating UASs. Students will become proficient with UAS aeronautical operation standards, discover the rules and regulations of airspace that all RPICs must comply with, and evaluate the effects that weather has on UASs as well as sources of weather information. Students will also assess the performance abilities and limitations of UASs and explore standard UAS operations as outlined in the 107 regulations. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4860 Web GIS (4 Credits)

Creating web-based maps allows government entities, businesses, and other organizations to publish, discover, and share geospatial information. This course examines web and mobile GIS software applications, where students will learn the framework for creating web apps. Students publish comprehensive projects resulting in the creation of a fully-developed web GIS.

GIS 4980 Internship (0-4 Credits)

GIS students may fulfill up to four quarter hours of electives by enrolling in a GIS internship with a GIS company or an agency actively engaged in GIS activities. Students incorporating professional work experience must work with an approved mentor, who evaluates the student's performance and learning. The internship is designed to provide practical experience to students without prior professional experience in the field. Students who are employed on a full-time basis in the GIS industry may not use paid work experience as part of the academic program.

GIS 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

Geography (GEOG)

GEOG 3000 Advanced Geographic Statistics (4 Credits)

The second in a sequence of two courses that address general statistical applications particular to geography, environmental science and other disciplines dealing with a spatial dimension in the data they work with. The focus of this second course is on the more advanced multivariate statistical techniques. The course has a strong applied orientation as particular attention is given to which technique is the most appropriate to use for a given type of problem and how to interpret and apply the resulting statistics. Extensive use is made of computer statistics packages. Homework exercises involving such statistical techniques as multiple correlation and regression analysis, principle components analysis, discriminate analysis and canonical correlation. Prerequisite: GEOG 2000.

GEOG 3010 Geographic Information Analysis (4 Credits)

Reviews many basic statistical methods and applies them to various spatial datasets. In addition, several spatial statistical methods are applied to spatial datasets. This course is an in-depth study of the interface between GIS, spatial data, and statistical analysis. Preferred prerequisite: GEOG 2000. Prerequisite: GEOG 2100.

GEOG 3030 Advanced Field Methods (4 Credits)

Various field methods used by researchers in physical geography; techniques include field mapping, laboratory analyses, geologic field methods. Prerequisite: GEOG 1201 or equivalent.

GEOG 3040 GPS for Resource Mapping (4 Credits)

This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Control and Quality Assurance issues for data collection programs. Hands-on lab exercises include navigation, mission planning for a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, differential correction, and data integration into a GIS and map production.

GEOG 3100 Geospatial Data (4 Credits)

This graduate-level course is designed to provide graduate students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems are also discussed.

GEOG 3110 GIS Modeling (4 Credits)

This course focuses on the concepts and procedures used in discovering and applying relationships within and among maps. It extends the mapping and geo-query capabilities of GIS to map analysis and construction of spatial models. The course establishes a comprehensive framework that addresses a wide range of applications from natural resources to retail marketing. Topics include the nature of spatial data introduction to spatial statistics and surface modeling in the first five weeks followed by spatial analysis operations and modeling techniques in the second five weeks. The lectures, discussions and independent exercises provide a foundation for creative application of GIS technology in spatial reasoning and decision making.

GEOG 3120 Environmental/GIS Modeling (4 Credits)

Facing challenges brought by the dramatically changing global environment, environmental modeling is increasingly used to support geographical and environmental decision making (e.g., spatial conservation prioritization). Environmental modeling is concerned with the characterization, modeling and simulation of environmental phenomena and processes using conceptual and mathematical models. Environmental phenomena and processes taking place in the geographic space are regulated by spatial principles. They also interact with other phenomena or processes in the attribute space. For example, species distribution is not only constrained by spatial factors such as proximity to other species, but also influenced by environmental factors such as terrain and climatic conditions. Due to its superior capabilities of handling spatial data and modeling spatial and attribute relationships, geographic information system (GIS) provides the ideal tools for environmental modeling. This upper-level undergraduate/graduate-level course surveys the concepts and techniques of GIS supported environmental modeling in three general categories: 1) Modeling in the spatial domain where the focus is on modeling spatial principles (e.g., spatial autocorrelation); 2) Modeling in the attribute domain where the emphasis is on environmental correlations (e.g., environmental niche modeling); 3) Modeling in the combined spatial and attribute domain where both spatial principles and environmental correlations are exploited (e.g., geographically weighted regression). Throughout this course, several real-world applications are used to demonstrate the ideas, concepts, and techniques of GIS supported environmental modeling, including crime spatial pattern modeling, species distribution modeling, and soil-landscape modeling and mapping. Prerequisites: GEOG 2000 and GEOG 2100.

GEOG 3130 GIS Programming with Python (4 Credits)

This advanced course explores the more technical aspects of GIS functions and data structures. Students have hands-on access to both raster (grid-cell) and vector-based software packages in the form of lab exercises that culminate in a small student-designed GIS project. Prerequisite: GEOG 2100.

GEOG 3140 GIS Database Design (4 Credits)

Designing databases to provide a foundation for GIS functions and applications, including investigating techniques used for designing databases in non-spatial environments and learning the applicability to GIS problems. Building on concepts and techniques introduced in the first half to extend traditional techniques and methodologies to model the requirements of spatial problems. Students learn to translate the conceptual spatial model into a physical implementation specific to GIS products. Prerequisite: GEOG 2100 or GEOG 3100.

GEOG 3150 GIS Project Management (4 Credits)

This course provides graduate students seeking a career in GIS, or anyone managing a GIS project, with the knowledge, skill and abilities to take a GIS project or program past the design and implementation phase and into day-to-day operation. Students evaluate and analyze the role of GIS in an organization's overall information system strategy and communicate the importance of geography in an information system. Data sharing in the organization is examined to determine the benefits and costs of distributing data creation and maintenance activities throughout an organization. Finally, the role of GIS professionals and the skill sets required to manage GIS effectively are examined. Students review case studies of successful and not-so-successful GIS projects in North America. GIS management issues are addressed by a series of case studies focusing on various management aspects. Students are also expected to visit operational GIS programs in the metropolitan area and interview GIS managers. Students prepare case study evaluations for review in the classroom. Required for all MSGIS students because of the critical importance of GIS project management.

GEOG 3160 Web GIS (4 Credits)

With the development of internet technologies, the architecture of Geographic Information System (GIS) has evolved from the centralized desktop architecture to the distributed web architecture. Numerous web GIS applications are available (e.g., Google Map, Earth Explorer, and National Map). A web GIS application allows GIS analysts to access, manipulate, and visualize geospatial data from the web without the installation of GIS software. To facilitate the development of web GIS applications, geospatial technology vendors have provided application programming interfaces (APIs) through which GIS professionals can build customized web applications. This course focuses on the concepts and the development of web based GIS applications using industry-relevant geospatial APIs and core web technologies of HTML, CSS, and JavaScript. This is an upper-level undergraduate, to graduate-level course in GIS that introduces fundamental Web GIS concepts, applications and development kits. Concepts and techniques to be covered in this course include: • Web GIS concepts: system architecture, components, and workflow • Web programming languages: Hypertext Transfer Markup Language (HTML), Cascading Style Sheet (CSS) and JavaScript • Web mapping tools: ArcGIS online, Leaflet and their APIs. Prerequisites: GEOG 2100 and GEOG 3130.

GEOG 3190 Lidar. Theory and Applications (4 Credits)

Overview: Lidar (Light Detection and Ranging) is an active remote sensing system that uses laser pulses to measure the distance between the sensor and a surface or objects. Lidar has become an established method for collecting very dense and accurate elevation values, as well as for characterizing the three-dimensional structure of vegetation and urban land cover. In this course, we will build an understanding of the physical principles behind lidar, develop experience working with Lidar datasets, and survey a wide array of lidar applications for mapping and natural resource management. The course will culminate with a student-directed final project. Prerequisites: GEOG 2100 or GEOG 3200.

GEOG 3200 Remote Sensing (4 Credits)

This course acquaints students with the basic techniques of the collection, processing and interpretation of information about the character of the earth's surface from remote locations. Students become familiar with the use of the visible, infrared, thermal and microwave portions of the electromagnetic spectrum as a means of determining land cover and/or land use. Both manual and computer-assisted techniques are discussed and include hands-on applications.

GEOG 3230 Advanced Remote Sensing (4 Credits)

This course will build on the basic remote sensing concepts presented in GEOG 3200. Students will explore more in-depth concepts relevant to satellite and airborne remote sensing, including radiative transfer and information extraction. In addition, students will be introduced to two cutting-edge sources of data about the Earth's surface: hyperspectral and lidar (Light Detection and Ranging) sensors. Students will study specific applications of advanced digital image processing techniques for environmental monitoring, natural resource management, and land-use planning. Finally, students will integrate remote sensing and other spatial datasets in the context of Geographic Information System (GIS) analysis. Prerequisite: GEOG 3200.

GEOG 3300 Cultural Geography (4 Credits)

Themes and methods of cultural geography including cultural area, landscape, history and ecology.

GEOG 3310 Culture/Nature/Economics-Human Ecology (4 Credits)

Cultural adaptation, livelihood strategies and environmental modification among subsistence and peasant societies: responses of such groups to technological change and economic integration.

GEOG 3330 Political Geography (4 Credits)**GEOG 3340 Geographies of Migration (4 Credits)**

This course explores contemporary movement of people across international borders and the social, cultural, political, economic, and environmental repercussions of such movements. The class looks at the global flow of people across national boundaries and the ways in which these dispersed peoples build and maintain social networks across national borders. While doing so, we address the role of globalization in international migration processes. What motivates people to move long distances, often across several international borders and at considerable financial and psychological cost? How do migrants change—and how in turn do they bring change, social as well as economic, to new destinations as well as places left behind? This course examines politics and patterns of migration, transnational migration, and immigration to the United States.

GEOG 3350 Qualitative Methods in Geography (4 Credits)

This course focuses upon qualitative methods in the production of geographic knowledge. Qualitative methods are widely employed by geographers to understand patterns and underlying processes of human and human-environment issues in society. The course is designed to expose participants to the theories, purpose, scope, and procedures of qualitative research. Specific topics include: epistemological theories (ways of knowing); ethics and power in research; research design; data collection techniques in interviewing, participant observation and landscape interpretation, discourse and archive analysis, and case studies; data analysis; and writing and disseminating qualitative findings.

GEOG 3400 Urban Landscapes (4 Credits)

Urbanization as a process; national urban systems; internal spatial structure of cities; role of transportation in urban development; location of residential, commercial and industrial activities; agglomeration economies; residential congregation and segregation; environmental justice; urban growth and growth coalitions; decentralization and urban sprawl; edge cities; impacts on the urban environment; world cities; globalization.

GEOG 3410 Urban Applications in GIS (4 Credits)

This course uses the tools of geographic information systems (GIS) to explore concepts of traditional urban geography, including defining cities/metropolis, internal urban structures, urban systems, industrial location, social and residential patterns, urban form, environmental problems, and urban planning. The course allows students to practice fundamental skills in GIS (e.g., working with attribute tables, spatial analysis, spatial queries) and cartography (map design, color theory, display of information). Depending on the quarter, students pursue individual projects of interest or client-based projects. Prerequisite: GEOG 2100 or GEOG 3100 or equivalent.

GEOG 3420 Urban and Regional Planning (4 Credits)

Historical evolution of planning theory and practices; comprehensive planning process; legal, political, economic, social, environmental aspects of urban planning; urban design; urban renewal and community development; transportation planning; economic development planning; growth management; environmental and energy planning; planning for metropolitan regions; national planning.

GEOG 3425 Urban Sustainability (4 Credits)

The 21st century is being called the 'century of the city.' Now more than ever, humans across the globe call the city their home. Many of the world's most pressing crises are manifest in cities, including: greenhouse gas emissions, land degradation, high mass production and consumption, widespread poverty and hunger, and expanding socio-economic disparities. As 'sustainability' becomes part of mainstream discourse, this course explores what sustainability means for urban contexts around the globe. Arguably, the city has the potential to be the most efficient, equitable, and environmental form of modern human settlement. Covering all dimensions of sustainability from a social science perspective, this course focuses on theoretical groundings, practices of urban sustainability, and new research agendas. Major topics include cities and nature; planning and land use; urban form; community and neighborhoods; transportation systems and accessibility; livelihood and urban economies; and social justice and the city.

GEOG 3440 Urban Transportation Planning (4 Credits)

A specialized course in the urban planning sequence focusing on issues, practices and policies of urban transportation planning. Recommended for anyone interested in timely transportation topics, such as the feasibility and impacts of light rail transit, the planning and implementation of highway projects, and the role of freight and passenger transportation companies in transportation planning.

GEOG 3445 Sustainability and Transportation (4 Credits)

Sustainable transportation aims at promoting better and healthier ways of meeting individual and community needs while reducing the social and environmental impacts of current mobility practices. Given the importance of transport for economic growth, the uncertainties surrounding the availability and price of future sources of energy for transport use, as well as the social and environmental externalities of currently-utilized transport modes, it is imperative that more sustainable ways of providing transportation be developed and utilized.

GEOG 3450 Transportation and Mobilities (4 Credits)

The geographical study of transport has grown considerably and become more diverse, encompassing new areas of inquiry generated from economic, urban, environmental, political, social, and cultural geography, as well as from transport geography itself. The most notable expansion has been in the area of 'mobilities' research, which is focused on the social aspects of mobility, including both the large-scale movements of people, objects, capital, and information across the world, as well as the more local processes of daily transportation, movement through public space and the travel of material things within everyday life.

GEOG 3500 Reconstructing Quaternary Environments (4 Credits)

Nature, magnitude, sequence and causes of Pleistocene and Holocene climatic changes; effects of climatic change on plant/animal distributions and human populations; paleoclimatic research methods. Laboratory and field trips. Prerequisites: GEOG core, ENVI 3000.

GEOG 3510 Biogeography (4 Credits)

Biogeography focuses on present and past distributions of plants and animals. In this course we consider a number of themes central to biogeography, including plate tectonics and biogeography, the effects of climate change of plant and animal distributions, biogeographic realms, island biogeography, biodiversity, human impacts on plants and animals, and the origins of agriculture.

GEOG 3520 Geography of Soils (4 Credits)

Spatial variation in soil characteristics; soil processes, soil morphology, their application in soil studies. Prerequisite: GEOG 1201-1203 Environmental Systems or instructor's permission.

GEOG 3550 Topics in Physical Geography (1-5 Credits)

Investigations into various aspects of physical environment.

GEOG 3560 Fluvial Geomorphology (4 Credits)

Examines how water and sediment interact at Earth's surface to create a variety of landforms ranging from small rills to continental-scale river systems. Introduces fundamental fluvial processes or channel hydraulics and sediment transport. Examines common fluvial landforms including alluvial streams, bedrock streams, floodplains and alluvial fans. Combines traditional lectures and in-class discussions with numerous field excursions to rivers in the Rocky Mountains and Great Plains. Prerequisite: GEOG 1203, GEOG 1218, or GEOG 1266.

GEOG 3600 Meteorology (4 Credits)

The basic theory and skills of weather forecasting. Topics include thorough coverage of atmosphere dynamics and thermodynamics, the evolution of various weather types, the mechanics of storm systems (cyclones, severe storms, hurricanes), creation and interpretation of weather maps, and forecasting techniques.

GEOG 3610 Climatology (4 Credits)

Climatology is the study of the processes that result in spatial and temporal variation of weather. This course introduces the student to the processes responsible for the transfer of matter and energy between the Earth's surface and the atmosphere and the average weather conditions that result. In addition, topics of global concern, such as greenhouse effect, El Nino, urban heat islands and acid rain, are discussed. Laboratory exercises provide an opportunity to investigate climate variation and climatic change through the use of a variety of computer simulations. Prerequisites: GEOG 1201, GEOG 1216, & GEOG 1264.

GEOG 3620 Applied Climatology (4 Credits)

Climatic impact on environmental systems and human behavior; techniques to investigate climatic characteristics of environmental extremes (floods, blizzards), urban climatology and socioeconomic impacts of climate. Prerequisite: GEOG 1201. Recommended Prerequisite: GEOG 3600 or GEOG 3610.

GEOG 3630 Dendroclimatology (2-4 Credits)

Systematic variations in tree ring width and/or density can be used to reconstruct changes in precipitation or temperature well before humans were around to record the variability. This class utilizes hands on methods to introduce the fundamental principles of dendroclimatology. Through readings and lectures, students will learn how tree ring growth can be correlated to climate change. Students will then undertake several research projects to reconstruct past climate variability in the Denver metro area using tree rings. Prerequisite: permission of instructor.

GEOG 3640 Climate Change and Society (4 Credits)

The science of anthropogenic climate change will be presented with an emphasis on critical evaluation of the evidence of climate change and future scenarios and migration strategies. Students will be introduced to the latest climate change research, including the Intergovernmental Panel on Climate Change report, and the most recent literature from the field. The societal and cultural implications of climate change will also be discussed. Prerequisites: GEOG 1201, GEOG 1216, or GEOG 1264.

GEOG 3701 Topics in Geographic Information Science (1-4 Credits)

Topics vary by instructor.

GEOG 3720 Mountain Environments and Sustainability (4 Credits)

Mountain Environments and Sustainability explores the unique physical and cultural aspects of high relief and/or high altitude environments. Covering one quarter of the Earth's land surface, mountains directly or indirectly impact the lives of millions of people. We examine the significance of mountains to climate, water resources, and human activities, and discuss the sustainability of these environments and communities in light of rapid changes in many mountain regions resulting from anthropogenic factors and global change. GEOG 1201, 1202, and 1203 or instructor approval.

GEOG 3750 Topics in Human-Environment Interactions (1-4 Credits)

This course investigates various aspects of the relationships between human societies and the natural environment.

GEOG 3755 Geography of Health (4 Credits)

The geography of health is a thriving area of study that considers the impact of natural, built, and social environments on human health. This course introduces students to three geographical contributions to health studies. First, it emphasizes the importance of ecological approaches to health, which consider interactions between humans and their environments, including topics such as how climate change might influence disease distributions, and how the built environment can influence patterns of physical activity. A second focus is social theory, exploring how aspects such as race, socioeconomic status, and identity play a critical role in influencing human health. A third section of the course considers how spatial methods (cartography, GIS, and spacial statistics) can help answer health-related questions.

GEOG 3800 Geography of Colorado (4 Credits)

This course focuses on the physical and human geography of Colorado, a state that includes the western Great Plains, the southern Rocky Mountains, and the eastern Colorado Plateau. Colorado's varied natural landscapes provide equally varied settings for human settlement and resource use. Recommended Prerequisites: GEOG 1201, GEOG 1202, and GEOG 1203.

GEOG 3820 Kiwis and Kauris: Sustainability in New Zealand (4 Credits)

With its tourist tagline of "100% Pure New Zealand," New Zealand prides itself as a world leader in sustainability, with great efforts made towards sustainable use of resources and renewable energy, conservation of indigenous species, and integration of indigenous Maori understandings of the land into sustainability approaches. At the same time, New Zealand faces significant sustainability challenges, particularly related to climate change, invasive species, continued reliance on extractive industries, and histories of oppression/exploitation of native peoples. This class uses a field-based case study approach to unpick some of these complex issues, as we visit local sites and explore topics such as preserving native species, sustainable resource use, ecotourism, and indigeneity.

GEOG 3840 Water Resource Analysis (4 Credits)

The focus of this course is on complex policy, economic and local, national and international, and political issues surrounding resource use in the western U.S. Issues include exploitation of nonrenewable and renewable energy and mineral resources; and flexible responses to changing public policy.

GEOG 3860 GIS Applications and Natural Resources (4 Credits)

In this course we will use a case study approach to examine domestic and international natural resources such as oil, coal, timber, minerals, and recycled materials. We will use a case study approach to look at resource distribution, and the environmental impacts of extraction, production, and disposal, as well as the legal and economic context. We will use GIS data and analysis to enhance our understanding of these case studies, and students will do a project and paper using GIS data and image analysis at a local, regional or global scale. Prerequisite: Introduction to GIS or Introduction to GIS Modeling.

GEOG 3870 Water Resources & Sustainability (4 Credits)

In this course, we look at water as both a local and global resource and examine what sustainability means for human and ecological realms. After an overview of the physical processes that drive the hydrologic cycle, surface and groundwater hydrology, we examine how we humans have harnessed water for our use and how we both alter and treat its quality. We examine the legal aspects of water allocation in the U.S. and the groups and agencies that are most involved in managing and overseeing water issues. Finally, we examine the most pressing water "issues" related to wildlife, development, scarcity and conflict. We look forward to imagining the power of both the individual and the collective in meeting our future, global water needs.

GEOG 3890 Ecological Economics (4 Credits)

Ecological Economics is an emerging transdisciplinary endeavor that reintegrates the natural and social sciences toward the goal of developing a united understanding of natural and human-dominated ecosystems and designing a sustainable and desirable future for humans on a materially finite planet. In this course we start with a basic overview and summary of the neo-classical economic perspective with a particular focus on the recognized market failures of public goods, common property, and externalities. We begin with a reconceptualization of economic theory by imposing scientific constraints (e.g. conservation of mass and energy, the laws of thermodynamics, evolutionary theory, etc.). Using the ideas developed in this reconceptualization of economic theory we explore the implications for international trade and myriad public policies associated with the ethical, environmental, and economic aspects of sustainability.

GEOG 3910 Geomorphology (4 Credits)

An advanced course that examines how Earth's landforms are created by a range of physical processes. Most landforms can be viewed as a result of some combination of erosion, transport and deposition of rock, soil and sediment. The most common agents causing these geomorphic processes are water, wind, ice and waves. This course examines the processes responsible for eroding, transporting and depositing earth materials and compares these processes with the resulting landforms. Prerequisites: GEOG 1202 or GEOG 1217 or instructor's permission.

GEOG 3920 Remote Sensing Seminar (4 Credits)

Special topics in advanced remote sensing.

GEOG 3930 Cultural Geography Seminar (4 Credits)

Topics, methods and current research in cultural geography.

GEOG 3940 Urban Geography Seminar (4 Credits)

International comparison of economic and social, positive and negative aspects of urban systems.

GEOG 3950 Physical Geography Seminar (2-4 Credits)**GEOG 3955 Pollen Analysis Seminar (3 Credits)**

Pollen grains preserved in sediment provide long-term records of vegetation conditions. Changing proportions of pollen types may reflect climatic fluctuation or human impacts. We review important recent research in pollen analysis (palynology), pollen sampling, laboratory techniques and pollen identification. Students are responsible for counting a number of samples and contributing data for a pollen diagram.

GEOG 3990 Undergraduate Research Seminar (1 Credit)

This course is designed to prepare students who will participate in faculty-supervised summer research projects. Students are introduced to research design, use of the scientific method, research expectations and reporting of results. Preparation of formal research proposal with adviser.

GEOG 3991 Independent Study (1-5 Credits)**GEOG 3995 Independent Research (1-5 Credits)****GEOG 4000 Fundamental Geographic Perspectives (4 Credits)**

A foundation course for persons in the community, without a degree in geography, who want to pursue an education in or make use of computer-based geographic technology but who need a foundation in geographic concepts and perspectives.

GEOG 4020 Geographic Research Design (4 Credits)

This class prepares you to undertake creative geographic research leading to the generation of new knowledge. You will produce a NSF-style proposal by the end of the class. In this class, we focus on your idea generation and proposal writing rather than philosophy or specific methods. Specific objectives of the course include providing you the following skills: 1. The ability to create and communicate scholarly work in writing and orally 2. The ability to critique your own work and the work of other in a constructive fashion 3. Incorporation of the core ideas of geography and your field into your research 4. An understanding and appreciation of the various research methods in geography and other cognate disciplines. This understanding includes a discussion of ethics in research. 5. Ability to write an effective vita, statement of area of specialization, literature review, problem statement, and research proposal.

GEOG 4030 Advanced Field Research (1-5 Credits)**GEOG 4040 Research Topic Identification (0-5 Credits)****GEOG 4110 Geospatial Data (4 Credits)**

This graduate-level course is designed to provide graduate students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems are also discussed.

GEOG 4140 GIS Database Design (4 Credits)

Designing databases to provide a foundation for GIS functions and applications, including investigating techniques used for designing databases in non-spatial environments and learning the applicability to GIS problems. Building on concepts and techniques introduced in the first half to extend traditional techniques and methodologies to model the requirements of spatial problems. Students learn to translate the conceptual spatial model into a physical implementation specific to GIS products.

GEOG 4150 GIS Project Management (4 Credits)

This course provides graduate students seeking a career in GIS, or anyone managing a GIS project, with the knowledge, skill and abilities to take a GIS project or program past the design and implementation phase and into day-to-day operation. Students evaluate and analyze the role of GIS in an organization's overall information system strategy and communicate the importance of geography in an information system. Data sharing in the organization is examined to determine the benefits and costs of distributing data creation and maintenance activities throughout an organization. Finally, the role of GIS professionals and the skill sets required to manage GIS effectively are examined. Students review case studies of successful and not-so-successful GIS projects in North America. GIS management issues are addressed by a series of case studies focusing on various management aspects. Students are also expected to visit operational GIS programs in the metropolitan area and interview GIS managers. Students prepare case study evaluations for review in the classroom. Required for all MSGIS students because of the critical importance of GIS project management.

GEOG 4170 Geospatial Analysis and Project Management (4 Credits)

This course provides an opportunity for students to apply geospatial data analysis to real-world applications. Students will work as a team to develop a project that requires GIS analysis and/or application development, design a project work flow and management plan, and implement a solution. Students will demonstrate competence in GIS techniques, geospatial data analysis, and project management at a professional level. This course may substitute for GEOG 3150 - GIS Project Management. Prerequisites: Completion of a minimum of two GISc courses.

GEOG 4400 Urban Landscapes (4 Credits)

Urbanization as a process; national urban systems; internal spatial structure of cities; role of transportation in urban development; location of residential, commercial and industrial activities; agglomeration economies; residential congregation and segregation; environmental justice; urban growth and growth coalitions; decentralization and urban sprawl; edge cities; impacts on the urban environment; world cities; globalization.

GEOG 4410 Economic Geography (4 Credits)

The study of the location and spatial organization of economic activities at the local, national, and global scales. Concerned with the spatial configuration of firms, networks, industries, and regions within the emerging global economy. Cross listed with INTS 4410.

GEOG 4420 Urban and Regional Planning (4 Credits)

The field of urban and regional planning is concerned with the future of cities, neighborhoods, metropolitan areas, and extended regions. How do local governments (cities, counties) and metropolitan planning organizations (regional planning agencies, councils of governments) work with community stakeholders (neighborhood associations, chambers of commerce, businesses, citizens, non-governmental organizations) to formulate plans that will guide the future development of a city and its region? Cities and their regions face numerous challenges including population and employment growth or decline, economic development, neighborhood vitality, housing availability and affordability, urban design, land use, transportation, sustainability, access to parks and open space, air quality, floodplain management, water resources, and social equity among many others. How places address these challenges is critical to the future health and livability of our cities, neighborhoods, metropolitan areas, and extended regions. This course will have a community-engaged service learning component. Community-engaged scholarship and teaching comprise intellectually and methodologically rigorous work that is grounded in the norms of democratic education: inclusiveness, participation, task sharing, reciprocity in public problem solving, and an equality of respect for the knowledge and experience that everyone involved contributes to education and community building. The specific service learning project for the class will be to assist the Metropolitan Denver Nature Alliance (Metro DNA) with its goal to increase the community's engagement with nearby nature by reviewing, analyzing, and collecting data from park/ open space plans of cities and counties in the Denver metropolitan area. Cross-listed with GEOG 3420.

GEOG 4425 Urban Sustainability (4 Credits)

The 21st century is being called the 'century of the city'. Now more than ever, humans across the globe call the city their home. Many of the world's most pressing crises are manifest in cities, including: greenhouse gas emissions, land degradation, high mass production and consumption, widespread poverty and hunger, and expanding socio-economic disparities. As 'sustainability' becomes part of mainstream discourse, this course will explore what sustainability means for urban contexts around the globe. Arguably, the city has the potential to be the most efficient, equitable, and environmental form of modern human settlement. Covering all dimensions of sustainability from a social science perspective, this course will focus on theoretical groundings, practices of urban sustainability, and new research agendas. Major topics include: cities and nature; planning and land use; urban form; community and neighborhoods; transportation systems and accessibility; livelihood and urban economies; and social justice and the city.

GEOG 4440 Urban Transportation Planning (4 Credits)

A specialized course in the urban planning sequence focusing on issues, practices and policies of urban transportation planning. Recommended for anyone interested in timely transportation topics, such as the feasibility and impacts of light rail transit, the planning and implementation of highway projects, and the role of freight and passenger transportation companies in transportation planning.

GEOG 4460 Air Transportation, High-Speed Rail and Tourism (4 Credits)

This course delves into the world of commercial air passenger transportation, studying the foundations of the industry, its role in the travel and tourism, and strategies for the future. Foundational topics include the history and geography of air transportation, air travel and tourism, the geography of tourism, airline corporate cultures, the role of government, aviation law, regulation, deregulation, and globalization. Study of the principal elements of airline economics, finance, planning, management, operations, pricing, promotion, cost containment, marketing, and policy provide the opportunity for consideration of strategic options within the contemporary airline industry. Further discussion focuses on the planning and management of airport and airway system infrastructure, the issue of sustainable air transportation, and the role of the airline industry within the context of intermodalism. Cross listed with GEOG 3460.

GEOG 4701 Topics in Geography (4 Credits)

Topics vary by instructor.

GEOG 4810 Geography of Latin America (4 Credits)

In this course, we examine how past and present cultural preferences and political economies effect changes in Latin American landscapes. Cross listed with GEOG 2810.

GEOG 4825 Geographies of International Development in Africa (4 Credits)

What are the historical roots of (under)development in sub-Saharan Africa? How is sub-Saharan Africa typically depicted in the media? How can we explain the fact that the Niger Delta provides the bulk of Nigeria's revenue, and yet, it remains the poorest part of the country? Is climate change the major cause of persistent food insecurity in the drylands of Ethiopia and Burkina Faso? How can we make sense of the uneven geography of poverty in Ghana? What explains urban food insecurity in Cape Town, or land struggles in rural South Africa? What are the social processes underlying the spatial disparity in health status in Malawi, or gender differences in HIV rates in Nyanza province, Kenya? And why do land users often resist state conservation efforts in Tanzania? These are some of the critical questions explored in this course. The primary aim is to provide a critical introduction to the geography of sub-Saharan Africa. We will begin by exploring how "the Africa story" is told by the media, scholars and policymakers. Attention will then shift to understanding the key historical processes that shape (under)development in the region. We will cover a broad range of topics, including governance, colonial history, debt and structural adjustment, foreign aid, food and agriculture, gender, climate change, land grabbing, health, population growth, migration, remittances, and resource extraction. We cannot possibly cover all these topics in greater detail; indeed, some are too vast and complex. We will however use specific case studies to illustrate and discuss each of the topics.

GEOG 4880 Geographies of South Africa (4 Credits)

This travel course is designed to give students a first-hand look at the physical and cultural landscapes of South Africa. We will study the varied natural landscapes that produce the commodities (e.g., gold, diamonds, wine, and agriculture) that have attracted the interest of outsiders for centuries and that have influenced the cultural landscapes particular to South Africa. A systematic presentation of the geology of South Africa, and its human history, will unfold throughout our travels.

GEOG 4900 Graduate Colloquium in Geog (0 Credits)

Solid foundation in history and philosophy of the discipline of geography; basis for further exploration of major research specialization.

GEOG 4930 Nicaragua: Development Dilemmas (4 Credits)

This class takes students to post-revolutionary Nicaragua to examine the consequences of recent land grabs by foreigners and transnational companies. Students learn to operate in a country with minimal "western" infrastructure. They learn to examine developing landscapes (that is, resorts and tourism infrastructure) with new eyes and from the perspective of locals who have been left out of the development loop. By the end of the class, students begin to understand the "development game", begin to question the role of tourism in developing economies, begin to know how to interact with other cultures, and finally learn to question the landscapes we "see" and begin to peel back the layers to understand the social and physical evolution of the landscape before their eyes. This class takes an experiential approach and requires students to participate in a service learning experience. Service learning is defined as a course-based, credit bearing educational experience in which faculty, students, and community members participate in an organized service activity that addresses a self-identified community need. We work with several community-based and non-governmental organizations to ensure a good fit between community needs and student expertise.

GEOG 4950 Advanced Field Research (1-17 Credits)**GEOG 4991 Independent Study (1-5 Credits)****GEOG 4993 Capstone or Project (1-4 Credits)**

Includes technical design and development for MA geotechnical track project and MS-GIS capstone project.

GEOG 4994 Report (1-5 Credits)**GEOG 4995 Independent Research (1-5 Credits)**

Includes field research for doctoral dissertation.

GEOG 4999 Geographic Internship (0-5 Credits)

Supervised internship in a government office at local, state or federal level or within private sector. Prerequisite: Permission of instructor.

GEOG 5991 Independent Study (1-5 Credits)**GEOG 5995 Independent Research (1-10 Credits)**

Global Studies (GS)

GS 4010 Global Society: Structures and Stakeholders (4 Credits)

This course provides students with an introduction to the major actors, structures, and issues in contemporary global society. Moving beyond a state-centric view of the global landscape, the course considers the values, interests, and ideas of a variety of stakeholders—including businesses, corporations, institutions, governmental and non-governmental organizations, and grass-roots initiatives—in order to assess some of the ways in which these actors both compete and cooperate for opportunities and resources. Students will apply relevant concepts to their own personal and professional experiences so as to gain a better understanding of how global issues and actors at a variety of levels impact their work and how their work constitutes an important part of global society.

GS 4020 Culture, Identity, and Power (4 Credits)

In a rapidly globalizing world, culture and identity are increasingly recognized as having profound implications for professional success across a range of industries and practices. An understanding and appreciation of difference are central to effective professional interactions and progress. This course presents approaches for thinking about intersecting dynamics of culture, identity, and power in professional environments, and for mitigating cultural and identity-based conflict in the workplace and beyond.

GS 4030 Working Internationally (4 Credits)

Working Internationally is designed for those looking to broaden their personal and professional pursuits in global settings, whether at-home or abroad. This course covers both qualitative and practical considerations. Students will explore the benefits and challenges of working internationally with a focus on cross-cultural communication and management. Through a combination of lectures, case studies, assignments, and group discussions students will develop skills and strategies for building successful relationships with people from different cultural backgrounds. Additionally, the logistical nuances of working abroad will be addressed. Upon completion of the course, students will have a better understanding of how to navigate cultural differences, explore international opportunities, and work effectively in a global environment.

GS 4040 Managing Across Cultures (4 Credits)

This course addresses the impact of culture on management and organizational processes as well as provides students with approaches to engaging effectively in globalized organizational and multicultural contexts. Additionally, the course enables students to distinguish between differences in diversity and culture. They will analyze the impact of global issues and events on the management process in different times and places and evaluate managerial practices in different cultures and institutional environments. The impact of cultural intelligence in organizational citizenship and performance is also addressed. The course will aim to provide opportunities for the practical implementation of the concepts covered.

GS 4050 Diversity and Organizational Structure (4 Credits)

A company is only as good as its culture. It is not only the responsibility of the Diversity, Equity, and Inclusion (DEI) leader to create an inclusive and diverse culture. People managers and employees play a vital role in DEI's success. This course helps students understand ways to make their organizations more engaging and dynamic by discussing the different processes that impact thought and interaction between people. Students will also consider how to bring advocates of DEI together in their organizations. They will analyze and apply best DEI practices from a variety of perspectives by learning the essential pillars of a strong DEI plan. They will also learn critical definitions, apply interventions that override errors in judgment and decision making, dissect inclusion and belonging among work groups and think through the change management and communication aspects of DEI.

GS 4060 Communication and Cultural Memory (4 Credits)

The ability to communicate effectively with employees, stakeholders, and clients from diverse cultural backgrounds requires an understanding of the cultural memories, experiences, and values of everyone involved. The culturally-inflected meanings attached to historical events such as 9/11, the Civil Rights Movement, the Holocaust, and colonialism profoundly influence how people imagine the world and their role in it. This course focuses on the impact of cultural memory on identity, looking in particular at the implications for effective professional communication across an array of organizational contexts. Students will gain an understanding of how history comes to be contested and changed, creating diversity in cultural memories that must be taken into account in professional communication.

GS 4130 Gender and Social Justice: Sex and Power in Global Perspective (4 Credits)

This course provides students with a critical understanding of gender and sexuality in relation to social and institutional processes, particularly as they impact professional interactions and conduct. Issues such as inequalities in the labor force, low wage work and poverty, work/family conflict, and domestic work will be addressed. The course will take an intersectional approach to analyzing gender and sexuality in the workplace and beyond.

GS 4140 Contemporary Racial and Ethnic Relations (4 Credits)

This course provides students with ways of assessing the effects of race and ethnicity in professional settings. Topics addressed will include forms of prejudice and discrimination, manifestations of privilege and inequality, and the intersection of race and ethnicity with other markers of identity. Students will analyze social and institutional practices that foster inclusivity and the implications of such practices on workplace equity and social justice.

GS 4150 Global Trade: The Intersection of Main Street and the World (4 Credits)

Trade is often characterized in terms of economic flows—the exchange of goods and services across borders and the electronic transfer of funds worldwide, as well as associated taxes, tariffs, labor, and production costs in different parts of the world. Yet trade also involves the exchange of ideas, cultures, languages, and people, all of which have profound implications for doing business worldwide. This course addresses trade in its different manifestations and explores the impact of trade on work in a variety of contexts. Students will approach trade from a holistic perspective to analyze its connections to globalization and their own work environments.

GS 4160 Politics and Social Media (4 Credits)

As social media becomes an increasingly prevalent means of distributing information, advertising products and services, and communicating with stakeholders, questions arise regarding the politics and ethics that inform its use. What are the potential consequences of using platforms such as Twitter to disseminate political ideologies? How has the use of LinkedIn affected workplace politics and changed the ways in which professionals network? Does professional success require the use of social media, or does its presence in certain contexts do more harm than good? This course will address these questions and others while providing students with lenses through which to view the intersection of social media and politics in the workplace and beyond.

GS 4200 Globalization and Global Citizenship (4 Credits)

Over the past century the world has witnessed unprecedented developments in communication, technology, and mobility. These have enabled the rapid exchange of money, people, materials, ideas, and cultures across national borders. With these changes have come questions about the roles and responsibilities of individuals, companies, and organizations within this increasingly complex and interconnected global society. Globalization is often used as a buzzword for this ever-evolving context, although its meaning is sometimes unclear. This course clarifies the nature of globalization by introducing students to fundamental concepts of global citizenship, focusing in particular on relationships between the local and the global, and on the necessity of developing a cosmopolitan perspective in order to be more successful in an increasingly globalizing workplace.

GS 4210 The Force of Faith: Religion in the Global Workplace (4 Credits)

This course examines the role of religion in the global workplace, addressing issues involved in working with clients, stakeholders, and employees from diverse religious backgrounds with the aim of increasing students' awareness of their own attitudes toward religious beliefs and professional responsibilities. Students will develop an understanding of the ways in which different religious beliefs impact conceptions of professional communication and conduct, in addition to exploring relationships between religious faiths and business ethics.

GS 4300 Foundations of Translation: The Role of the Professional Translator (4 Credits)

This course examines fundamental translation ideas and theories through assigned readings, lectures, and class discussions. It explores the links between linguistic and cultural factors and their relevance to translation. The course covers the different aspects of translation, surveys translation tools and reference materials, discusses professional roles of translators, analyzes the public perception of the profession, and examines standard business practices and professional codes of ethics. It also introduces the actual practice of translation through realistic exercises.

GS 4301 Written & Sight Translation for Translators & Interpreters (4 Credits)

This is an introductory course for translators and interpreters covering a variety of registers: commercial, journalistic, legal, literary, medical, and technical. Students learn to apply text analysis, text typology, and contrastive analysis of their working languages to identify, analyze, and resolve translation/interpretation problems while independently developing an efficient and rational approach to the process of translation or interpretation. In addition, course assignments include practice and graded exercises in translation and sight translation, utilizing authentic texts drawn from an extensive variety of text categories that include, but are not limited to, current events, general political economy, general legal documents, and scientific and technical topics for general audiences. Language-specific.

GS 4302 Computer Aided Translation (CAT): An Introduction to Software for Translators (4 Credits)

In this course, students examine the various technologies and software used by professional translators. Students will explore the differences between Computer Assisted Translation (CAT) and Machine Translation (MT) and become familiar with the concept of Translation Memory (TM), especially how TM differs from term bases and glossaries. Students will also learn the main features of a professional translation tool and use them in conjunction with QA functionalities, as well as practicing how to revise translation drafts in a consistent work-flow.

GS 4303 Community Engaged Learning in Practice (4 Credits)

This community engaged learning course provides students with an opportunity to apply knowledge and skills gained through their Global Community Engagement coursework to a real-world issue or problem. Students will learn best practices for engaging with communities both global and local, and will develop skills necessary to work effectively in diverse contexts. Equipped with an academic foundation, students will have significant latitude to sketch out a project of their choosing, with the professor's approval.

GS 4304 Introduction to Legal Translation (4 Credits)

Because a legal document bears legal liabilities, the translation of a legal document has the same legal effect as the original. As a result, the requirements for accuracy in legal translation (meaning, tone, and style) are quite high. This course provides an overview of the nature of legal translation and an introduction to the principles of comparative law, such as how to research legal issues in the countries of the language pair. The concepts of equivalence and zero equivalence are analyzed. Participants translate different types of agreements; certificates; and affidavits, as well as a wide array of documents focusing on probate, family, poverty, and criminal law. Students are given assignments on the research approach, steps, and skills needed to tackle a legal translation project from start to finish. Fundamental legal translation theory is emphasized at the beginning of the course and conveyed in the form of assigned readings, lectures, class discussions, and independent research. Language specific. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4305 Localization and Translation of Software and Web Pages (4 Credits)

This course provides students with a general overview of the field of web page translation and an introduction to software localization. Class topics range from technical discussions on computer architecture to tips for managing localization projects. Students gain a thorough understanding of the basic components of a localization project (web, software, online help, and documentation) and insight into the larger context of software/web localization and internationalization processes. Using real-life examples and hands-on exercises, students explore the cultural, technical, and organizational challenges in the adaptation of culturally sensitive elements. Language generic. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4306 Translation of Medical Texts for the Health Care Industry (4 Credits)

This course covers medical terminology involving patient education, medical research, drug development, the human body and systems, major diseases, as well as the most common injuries. Students translate documents used in general medical practice and are introduced to the common roots, prefixes and suffixes in medical terminology. Translation skills are reinforced by analyzing different levels of difficulty in medical texts, by translating, and by addressing requests for editing and rewriting translated materials for patient populations and audiences of different education levels. Students practice translating medical office correspondence, informational brochures, patient letters, discharge information, hospital intake questionnaires, living wills, patient outreach/educational materials, instructions for taking medications, laboratory tests, and medical disability reports, among others. Language-specific. Prerequisites: GS 4301.

GS 4307 Translation Project Management (4 Credits)

This course gives students the opportunity to address both translation and non-translation related issues associated with planning, executing, controlling, and delivering a final translation for a client (either direct or as an agency). Particular focus is given to hands-on practice of the various communications between the parties. The course outlines an effective project management methodology that can be applied to large or small translation/localization projects. Language generic. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4311 The Language Services Business for Translators & Interpreters (4 Credits)

Translation and interpretation are professions that typically require their practitioners to set up businesses on their own. This course addresses the key issues involved in being an independent contractor in the language industry, including how to acquire clients, how to price professional language services, how to estimate different types of service, and how to manage different client relationships, from government entities to private individuals. The course also analyzes the differences between working directly for clients and working with translation agencies or as a staff translator or interpreter, where it is crucial to know how to work on a team with other language professionals and content experts. The course also covers basic standard business practices in the language industry and business codes of ethics.

GS 4312 Research for Translation & Interpretation (4 Credits)

Not so long ago, the only way for translators to conduct research for their assignments was to consult the reference works they happened to own, or (if they lived near a good library), go to the library and hope what they needed was available there. The Internet changed all that, revolutionizing the translation and interpretation professions. Now translators and interpreters have at their disposal a seemingly bottomless well of information. At the same time, the research skills needed for translation and interpretation also have changed. This course teaches students how to conduct research using a variety of online tools, how to distinguish between reliable and unreliable sources of information, how to take advantage of the research tools made available by libraries, and in particular how to leverage the various types of resources offered by different types of libraries. Language-generic.

GS 4313 Translation for the Publishing Industry (4 Credits)

Most professional translators work outside the publishing industry: they work as freelancers or staff translators in business, technical, medical, legal translation—or in some other translation specialization. But when people outside our industry think of translators, it is likely they think of book translators, i.e., translators who work for the publishing industry. Working as a translator for the publishing industry may be rewarding, but in many respects it is different from the kind of work most translators are accustomed to. This course will explore such themes as the difference between working on book-length projects and shorter projects, and the difference between translations performed as "work done for hire" and copyrighted translations. It will look at publishing contracts, and at the difference between translating non-fiction and fiction works. It will also survey the most prominent theories of translation, past and present, to see how they apply to the translation of literature. Language-specific.

GS 4314 Translation & Interpretation for Law Enforcement (4 Credits)

This course explores the scope and nature of translating and interpreting in a law enforcement context, including the kinds of documents a translator is likely to encounter and how an interpreter interacts with both law enforcement professionals and members of the public who lack fluency in English. Language-specific.

GS 4315 Interpreting for Health Care (4 Credits)

In this course, students analyze and learn to apply the correct interpreting mode for different healthcare situations. They develop personalized introductions for use in interpreted sessions to provide a framework for interpretation that is clear to both providers and patients. Students learn to apply the medical code of ethics to different interpreting situations. Selecting from a list of various medical specialties, students create interpreting role plays with classmates that include appropriate introductions, interpreting modes, and terminology in both Spanish and English to simulate real-life interpretation situations. This course cultivates many of the skills needed to pass medical interpreter examinations and helps to prepare students for work as professional healthcare interpreters.

GS 4701 Topics in Global Community Engagement (4 Credits)

The content of this course varies each time it is offered. Specific course content is detailed on quarterly schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

GS 4800 The Puerto Rican Paradox: Challenges and Opportunities in Uncertain Times (4 Credits)

The Commonwealth of Puerto Rico is a tropical paradise boasting vibrant communities, rich cultures, and abundant natural resources. Once coined a "natural jewelry box" by the BBC, Puerto Rico offers sparkling turquoise waters, bioluminescent bays, lush mountainous terrain, and colorful colonial architecture. It is also plagued by a debilitating debt crisis, political corruption, and a crumbling infrastructure, which, particularly in the aftermath of hurricanes Irma and Maria, have caused many residents to flee the island in search of better opportunities and more stable living conditions. In this course, students will examine the paradox that is Puerto Rico. Drawing from literature on culture, history, power, and politics, students will research a topic of their choosing, with the professor's approval. They will then work with local communities in Puerto Rico on a project of mutual interest and importance, culminating in an approach or proposal for addressing the issue(s) at hand. Students will be required to spend 5 days on-site in Puerto Rico, plus any necessary travel time. This course will give students broad exposure to the history and culture of Puerto Rico, in addition to a nuanced understanding of a specific industry, issue, or problem. It will additionally highlight the power, privilege, and oppression that exists in our own backyards on this U.S. Commonwealth island.

GS 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

GS 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

GS 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

GS 4905 Graduate Social Research Methods (4 Credits)

This course provides graduate students with a basic background in the methods of research in the social sciences. In our information-rich society, organizations and institutions have become more aware of the value of research data for informing critical decisions. As leaders in their organizations, graduates should have a knowledge base that allows them to critically examine basic research in the social sciences and to understand the methods involved in generating research results. They should understand the value of research to their organizations, be able to identify opportunities to gather information through research that will benefit those organizations, and participate in the ethical design of basic studies to gather that critical information. Students will develop and write a research proposal around a specific research question informed by a review of the literature.

GS 4980 Internship (0-4 Credits)

The internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

GS 4991 Independent Study (1-5 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

Health Informatics (HINF)

HINF 4010 Health Informatics Communication (4 Credits)

This course focuses on the core skills of healthcare informatics communication such as knowing your audience and how this relates to health informatics specifically. The student will contextualize the role of informatics and Health Informatics/IT in healthcare and the health industry through course projects. Students learn to use communication tools to design communication strategies for informatics, IT, and clinical professionals to achieve success in Health Informatics/IT projects. Through this process, students learn to bridge gaps between Health Informatics/IT professionals, clinicians, and health leaders.

HINF 4020 Healthcare Workflow and Gap Analysis (4 Credits)

The alignment between the steps of a business or patient care transaction in an information system and how that work is done significantly impacts the performance of that organization. It can also impact the quality of data gathered using information system resources in a healthcare organization. This course will provide the learner with a critical view of the interaction between operational processes in a healthcare organization and the information technology used to carry out those processes. The course will begin with an introduction to the System Development Life Cycle (“SDLC”) and how work processes interact with technology. Students will review the skills needed to critically assess processes and identify technology needs. The course will wrap up with a review of operational process analysis with the design of health information systems resources.

HINF 4030 Healthcare Finance (4 Credits)

This course presents an overview of financial management in healthcare organizations operating in the United States. Students will gain a broad overview of the business of healthcare in the United States, including interpretation of financial statements, budgeting, variance analysis, operational analysis, capital investment analysis, expense management issues, revenues, and payment systems used in the current United States healthcare system. The course will use a case-based approach where students will demonstrate mastery of financial management skills through application of knowledge to real-life scenarios from the industry.

HINF 4210 Data Platforms in Healthcare (4 Credits)

Data Platforms in Healthcare focuses on widely used data platforms in data collection, storage retrieval, and use in healthcare and healthy-industry settings. Students will learn the flow of data from data entry to data storage, and they will learn to query, process, and present healthcare data for actionable use. Students will also learn common pitfalls of healthcare data solutions and the legal restrictions involved with personal healthcare information.

HINF 4220 Health Data Mining (4 Credits)

Focusing on creating problem statements and research questions, this course allows you to hone skills related to accurate health data mining. Learn to create clinical partnerships with key stakeholders concerning data in Health Informatics/IT projects while gleaning valuable insight from large health data repositories.

HINF 4230 Healthcare Statistical Dynamics of Machine Learning (4 Credits)

HINF 4230 focuses on data cleaning, statistical analysis, and machine learning using healthcare data. Students will use Python to clean, prepare, and interpret a large dataset and then train and evaluate a machine learning model. Finally, students will debug their models and iterate to make improvements.

HINF 4240 Health Data Science Reporting (4 Credits)

This course will focus on best practices for health data science reporting to improve healthcare into the future. The learner will explore various ways to develop effective reports, inform healthcare leaders, and make appropriate recommendations. Upon completion of this course, students will understand the difference between data and how information provides key insights that allow healthcare leaders to draw conclusions, make decisions, and improve clinical and business outcomes. Preferred prerequisite: HINF 4210.

HINF 4301 Foundations of Digital Health (4 Credits)

This foundational course provides a working knowledge of key HIT definitions, concepts, and relevant advancing forms of technology. It encourages students to review the changes to HIT and evaluate the growth of these systems into the current and future forms of digital health tools. While this course is not designed to turn students into network administrators or software developers; it will equip students to become an active and valuable participant – or even a team leader – in the evaluation, selection, implementation, and ongoing operation of health information systems.

HINF 4310 Healthcare Information Systems (4 Credits)

Electronic health records systems (electronic medical records (EMRs), electronic health records (EHRs), personal health records (PHRs), and health information exchanges (HIEs)) are all the buzz these days, yet for the past 30 years the healthcare sector has clung to paper records, file folders, and clipboards. This course will explore the technical and controversial aspects of healthcare information technology in general, and the specific factors involving evaluation and adoption of EMR systems. The course also covers the fundamental components of modern electronic records systems and reviews their impact on both business and clinical functions. Key areas of interoperability, interfaces, and standards will be introduced. The course will be practical and thought-provoking as it emphasizes critical thinking and the synthesis of ideas from multiple sources and perspectives. Participants will be challenged to develop their own viewpoints and opinions, substantiated by the published work of those who are thought leaders in the field of HIT, as well as the participants’ own experiences.

HINF 4315 Digital and Virtual Health (4 Credits)

With the widespread availability of health-oriented digital and virtual devices and software (apps), healthcare organizations are shifting their approaches to recognize how patients wish to communicate, manage their health, and share their health information. The shift in digital and virtual health is designed to improve healthcare access and quality—particularly in underserved populations, geographies, and specialties. This course will present the current and emerging digital and virtual health services, as well as the benefits and drawbacks of these technologies. This course will address various forms of telehealth, apps, portable devices, and remote monitoring strategies, as well as the role of artificial and augmented intelligence in enhancing digital and virtual experiences. After a broad review of the digital and virtual health field, this course will focus on evaluating, sustaining, and leading a digital or virtual program. Each lecture will discuss regulatory issues such as privacy, security, FDA review/approval, and when digital and virtual health services can be reimbursed. In addition to these regulatory issues, the course will instruct how to conduct a needs assessment, evaluate digital and virtual health products, implement different business models, and evaluate best practices for implementation and adoption. Preferred Prerequisite: HINF 4301.

HINF 4325 Values and Outcomes in Digital Health (4 Credits)

This course covers the major healthcare information technologies and topics other than electronic health records systems. Electronic health records systems represent a large focus in healthcare technology; however, many other important systems form the complete framework of modern connected healthcare. These include electronic practice management (EPM/PMS) systems, scheduling, billing, diagnostics/labs, reporting, payment interfaces, and business intelligence in healthcare. This course focuses on the fundamentals of how to be an analyst of health IT technology. Preferred prerequisite: HINF 4301.

HINF 4335 Healthcare Cybersecurity (4 Credits)

This course will introduce students to information security risks facing the healthcare industry. Students will learn how to protect healthcare organizations and their patients' data better. Students will learn about recent security breaches, the impact of those breaches on healthcare organizations, and all of the key players involved. This course also covers the evolution of healthcare IT and the continuously evolving risk and regulatory landscape. Students will explore regulations of HIPAA, NIST/ONC, HITECH, and Meaningful Use and how they relate to day-to-day operations in healthcare organizations. Additionally, this course will prepare students to support information security initiatives in order to protect the organization while furthering the advancement of healthcare IT capabilities. This is not a technical course; however, the course covers how security is impacted by technology and what one must do across technology to secure healthcare systems, organizations and patients. Preferred prerequisite: HINF 4301.

HINF 4600 Healthcare Data and Delivery by Perspective (4 Credits)

This course evaluates the environment of the U.S. healthcare delivery system and introduces the 4P (patient, provider, payer, population) perspective framework. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, towards the payer, and evolving into population health. Students will learn about the associated data that is generated from the patient as a consumer, from the provider through clinical operations, from the payer perspective, and finally how all of these contribute toward population health data. This course will cover the basics of U.S. healthcare research and clinical intervention, and students will have the ability to model the conceptual as well as practical application of health informatics.

HINF 4610 Healthcare Ethics and Biostatistics (4 Credits)

This course discusses research investigator training and outlines the progression of the Institutional Review Board (IRB) process. In addition, this IRB process will be compared with the business process improvement cycle. Health Insurance Portability and Accountability Act (HIPAA) as well as data governance issues are surveyed from the patient, provider, payer, and population perspectives. The connections between these topics and ethics are explored, and the principles of biostatistics are discussed. Common statistical packages used within healthcare research and business applications are covered, and this course concludes with an analysis of resulting ethical implications of short- and long-term healthcare data. Preferred prerequisite: HINF 4600.

HINF 4620 Healthcare Methods and Programming (4 Credits)

This course presents the basic study designs of epidemiology and illustrates the field's benefit to the healthcare industry. Randomized control trials (RCT) through correlation studies are explained through case studies as well as practical application. Informatics tools such as machine learning, clinical decision support, and natural language processing (NLP) are categorized with respect to their relative positions in the 4P (patient, provider, payer, population) perspective framework. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. This course concludes with the many benefits of auditing as a check and balance for healthcare methods and programming. Preferred prerequisite: HINF 4600.

HINF 4630 Healthcare Data Mining, Integration and Interpretation (4 Credits)

This course explores available public healthcare data sets and the data mining process. In addition, this course articulates the value of mapping relationships between data points and workflows. This process determines the level of integration of disparate data sources and is explored through the 4P (patient, provider, payer, population) perspectives. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. Once the data sources are integrated, the focus becomes how to turn this data into information, knowledge, and insight. This course wraps up by exploring both business and research options for interpreting data through visualizations and predictive analytics. Preferred prerequisite: HINF 4600.

HINF 4640 Healthcare Database Applications (4 Credits)

This course covers the growing functions of security in healthcare data and specifically elaborates on the vulnerabilities and emerging solutions for dealing with data once it is stored. Database architecture is surveyed, which transitions into an exploration of terminologies and standards and how these impact interoperability of data in warehouses. A significant portion of this course focuses on the specifics of medical coding and how coding is affected by the 4P perspectives. This framework is generated from the natural flow of healthcare delivery starting with the patient, moving to the provider, progressing on to the payer, and evolving into population health. The course wraps up with a compilation of Structured Query Language (SQL) capabilities and a study of the influence of their practical application. Prerequisite: recommended HINF 4600.

HINF 4650 Healthcare Project Management and Professionalism (4 Credits)

The course is designed to simultaneously teach project management concepts while preparing a student to operationalize a healthcare project. Students will analyze business problems healthcare organizations are facing to properly scope and plan a project. Students will also work on stakeholder engagement and project documentation development.

HINF 4701 Topics in Health Informatics (1-4 Credits)

This is an advanced special topics seminar course. The focus is on specialized areas of interest. Topics courses may be used as electives within the Health Informatics degree and certificates, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate programs.

HINF 4810 Survey of Health Industry Artificial Intelligence (4 Credits)

Artificial Intelligence (AI) is "the capability of a machine to imitate intelligent human behavior." AI is fast becoming a major player in the health and healthcare industries. In addition to having positive impacts in traditional medical areas such as radiology, pathology, EHR systems, oncology, and cardiology, AI is increasingly being used in the health industry to bridge gaps in the healthcare delivery systems. This course will provide students with the tools to understand how Artificial Intelligence platforms sort and learn from the immense amount of data available in the healthcare field. Students will engage in virtual learning as well as project-based learning offering the next generation of health industry professionals the skills to leverage massive amounts of data into meaningful knowledge.

HINF 4825 Technology and Applications for Telehealth and Virtual Care Success (4 Credits)

This course investigates the technology required for virtual care and technological concepts to advance virtual care models. This will include virtual care applications, telemonitoring systems, and technology concepts to include artificial intelligence, machine learning, informational robotics/ applications.

HINF 4900 Experiential Learning in Health Informatics (4 Credits)

This course is an opportunity to participate in experiential learning by connecting academic research with a real-world healthcare management or health informatics problem. Students may take this class either early in their degree program as an introduction to healthcare or health informatics, or later in the program as a prerequisite for their upcoming Capstone experience. First, students will conduct informational interviews with healthcare management and health informatics instructors to learn more about a chosen problem. Those taking this course as an introduction will learn key skills necessary to identify an independent research project topic, formulate a research question with a business, healthcare or health industry application, investigate research methodologies, explore the requirements for human subjects research through the Institutional Review Board (IRB), and draft a project proposal. Students preparing for their Capstone experience (all health informatics students and some healthcare management students) will prepare a Capstone project proposal according to approvable structure and deliverable guidelines. They will choose and schedule a meeting with their Capstone Advisor, select a research topic, formulate a research question with an industry application, develop a thesis statement, choose appropriate project methodologies, and draft a project proposal that will meet appropriate ethics and compliance requirements for human subjects research, and submit their proposal to the IRB for approval.

HINF 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

HINF 4980 Internship (0-4 Credits)

The Health Informatics Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all Healthcare students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences.

HINF 4991 Independent Study (1-4 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

Health Sciences (HLTH)

HLTH 3000 Seminar in Health Science (1-2 Credits)

This seminar is the capstone course for the Human Health Science & Systems program. This class will focus on the current understanding of several topics in human health. Emphasis will be on critical reading and discussion of current scientific literature related to human health and health care. Students will learn to recognize and appreciate different approaches and methods of health-related research. Students will utilize and integrate knowledge from previous courses to understand to present effective discussions on current topics in health. For students' continued development of strong oral communication skills, student presentations of primary literature will generate the basis of discussion. Prerequisites: HLTH 2000 and 2010.

HLTH 3600 Cultural Responsiveness in Health Care (2 Credits)

To contribute to reducing health inequities and improving health outcomes, this course will promote an improved understanding and responsiveness to the realities of social and structural impacts that influence the health of an individual or community. Topics will include health care delivery and access, political economy of health care, implicit biases, professionalism, relational leadership, dealing with patients in difficult situations, and health equity. The course will help students learn to provide more informed and effective care and promote a more culturally sensitive and responsive future workforce in healthcare, while also serving community needs. Prerequisite: HLTH 2000 or equivalent.

HLTH 3700 Topics in Health (1-4 Credits)

Topics in the area of, but are not limited to, human health and disease, environmental or social impacts on health, healthcare delivery, evidence-based medicine. Students will gain knowledge of a specific topic in human health and/or health care through discussion of current literature and research. May be repeated for credit. Prerequisites: HLTH 2000 or 2010.

HLTH 4210 Advanced Health Education and Promotion (2 Credits)

This course will provide students foundational knowledge about how to deliver health education and promote healthy behaviors to patients and community. This course will provide students with the practical skills and best practices for communicating and educating others about health, clinical tests and results, and clinical plans of action. Students will gain practical skills for encouraging goal setting and behavioral change and will develop an understanding of motivational considerations especially for patients with mental health challenges or psychosocial concerns related to acute and chronic physical disorders. Students will focus on integrating evidence-based research and strategies for the purpose of leading culturally sensitive discussions and/or difficult conversations and encouraging healthy behaviors.

HLTH 4300 Basic Legal Consideration in Healthcare (2 Credits)

This course will provide a basic understanding of legal issues that may affect care providers and business owners. Basic legal terminology and concepts will be presented, in addition to basic court processes and procedures. A goal of establishing this basic understanding is to prevent or reduce the consequences of lawsuits. Professionalism and the code of ethics will also be discussed.

Healthcare Leadership (HC)

HC 4000 Healthcare Systems and Regulatory Environments (4 Credits)

This course opens with a comprehensive overview of the functions of various types of healthcare organizations: providers, insurance companies, government agencies, and professional associations. Alternative payment and provider models are reviewed, regulatory bodies and issues are explored, and healthcare reform efforts and proposals are discussed. Supply and demand projections for personnel are examined. The work of key federal agencies (NIH, National Center for Disease Control, and Food and Drug Administration) is reviewed as well as the activity of national and international non-governmental organizations. Major national and global public health challenges are introduced.

HC 4005 Healthcare Macroeconomics (4 Credits)

This course focuses on macro analysis of the current financial state of healthcare in the United States. The relationships of value, quality, and price are analyzed. Transparency related to price and quality is considered. Fundamental items such as balance sheets/income statements, accounting vs. financial reporting, equity, cash flows, and debt financing are covered in detail. Payment and incentive models are considered in connection with employer-furnished benefits, private health insurance plans, Medicare and Medicaid. Current issues, such as pay for performance, shared savings, cost shifting, and healthcare for the aging, under and uninsured are discussed. Students will discuss variations in health policy related to payment and coverage systems.

HC 4010 Healthcare Communication and Leadership (4 Credits)

This course focuses on the welfare of patient, family, and community in the context of medical team communication and leadership. Models for communicating highly technical medical information with patients and others involved in their care are examined. Students weigh and assess differences in personal and organizational cultures to optimize patient-centered outcomes. Students acquire a sound body of knowledge and terminology to facilitate communication and leadership across a multitude of disciplines essential in the delivery of healthcare. NOTE: This course is strongly recommended within the first 3 terms of study.

HC 4015 Healthcare Finance (4 Credits)

This course presents an overview of financial management in healthcare organizations operating in the United States. Students will gain a broad overview of the business of healthcare in the United States, including interpretation of financial statements, budgeting, variance analysis, operational analysis, capital investment analysis, expense management issues, revenues, and payment systems used in the current United States healthcare system. The course will use a case-based approach where students will demonstrate mastery of financial management skills through application of knowledge to real-life scenarios from the industry.

HC 4100 Management Principles in Healthcare Systems (4 Credits)

Healthcare systems are complex, dynamic, multilayered and unpredictable. They require constant situational awareness to maintain safety, efficiency, compliance, relevance and fiscal responsibility. Management and leadership need to have the vision to respond to changes and unexpected events. In this course, students encounter and explore the management functions required to lead and administer various types of healthcare systems. Students will engage in activities such as analyzing a healthcare system or organization's current level of performance or culture to inform ways to lead that organization toward excellence.

HC 4110 Healthcare: Innovative Strategies and Change Management (4 Credits)

Effective healthcare takes continual innovation to meet the ever-changing needs of the population. Through an examination of disruptions that create a catalyst for change, this course focuses on teaching students how innovative strategies can enable quality care and sustainability both within the healthcare delivery system and the health industry. Further, the drivers of innovation are explored from their use in grassroots efforts through regulatory reform through the lens of supply and demand. Finally, strategic planning for maximum use of financial resources to meet stakeholder expectations is ventured into in this course.

HC 4130 Organizational Behavior in Healthcare (4 Credits)

Customer and employee satisfaction elements of healthcare management are often a result of how well the entire healthcare system functions. Students examine successful and less successful examples of cooperation, compatibility, and dedication within the workplace and explore what contributes to a harmonious and effective healthcare environment. Interpersonal skills are discussed, as are ethical guidelines and laws that define acceptable workplace behavior.

HC 4200 Comparative Healthcare Systems (4 Credits)

This course describes variations in healthcare delivery systems locally, nationally, and globally as they relate to policy, structure, and finance. Comparisons of systems are made relative to expenditure of resources and outcomes. Students learn about healthcare coverage, access to care, healthcare rationing, provider manpower distribution, and seeking healthcare in foreign countries (medical tourism). The discrepancy between the desirable and the practical is explored, and students are asked to outline and defend a system that they believe is both desirable and practical.

HC 4210 Quality Improvement for HC Leaders (4 Credits)

This course is designed to review the body of knowledge and core competencies needed to function at the level of Certified Professional in Healthcare Quality (CPHQ) in a healthcare organization. Skills gained are applicable to managers and administrators of hospitals, practices, and clinics. Course content is beneficial to clinicians and others interested in quality and patient safety. This course facilitates the successful pursuit of the CPHQ certification exam. Core competencies, aligned with the CPHQ certification exam, to be explored in detail include: Leadership and Management; Quality and Performance Improvement; Healthcare Safety; Information Management and Regulation, Accreditation and Continuous Readiness. Students are strongly encouraged to complete HC4000 and HC4220 prior to registering for the course.

HC 4220 Ethical Considerations in Healthcare (4 Credits)

This course provides a survey of important ethical considerations encountered in U.S. and global healthcare, past and present. It covers issues on which consensus has generally been reached, and some on which debate is currently active. Clinical, professional, and organizational scenarios will be examined, with an occasional glance toward public policy. Students will practice recognizing the elements of ethical problems and applying a "toolbox" of principles, theories, and concepts to understand them. Through readings, class discussions, and assignments, students will review noteworthy cases and policies. They will evaluate the merits of ethical arguments taking different forms. They will compare different frameworks for making ethical judgments and solving dilemmas that arise from competing value perspectives. This background is an essential foundation for practitioners and leaders in every role in a healthcare environment.

HC 4225 Healthcare Public Policy and the Legislative Process (4 Credits)

This class provides students with an understanding of the political and legislative procedures that lead to healthcare policy change and reform. Students examine the influences and functions of government agencies, legislative processes and procedures and executive branch rule-making. Students objectively evaluate how policy changes occur at the federal and state levels and subsequently affect the functioning as a citizen and a professional. Class lecture focuses on the legislative path of federal law and then follows it through to the outcomes at the state level. Students explore the importance of developing relationships, communication and advocacy strategies with elected officials and various stakeholder groups that interact with the federal and state legislative processes.

HC 4230 Implementation and Evaluation of Healthcare Public Policy (4 Credits)

This course examines strategies for implementation and evaluation of healthcare public policy. Students develop skills in analyzing issues, considering and weighing pros and cons of proposed policy, and defending strategies for bringing about change. Beginning with the passage of a new law, policy, or regulation, students track the process to implement and evaluate new policy. Topics related to implementation of a new policy include funding the implementation, effect on constituents and the overall national economy, sustainability, and short- and long-term evaluation of the policy. At the conclusion of this course, students will prepare an implementation plan for selected recently passed state legislation. Students are strongly encouraged to complete HC 4000 prior to registering for this course.

HC 4300 Health Equity and Justice (4 Credits)

In this course, definitions and historical perspectives of health equity, health disparity, and social justice will be introduced. Students will learn to recognize the geographic, cultural, and social contexts, where health inequities occur. Through reflection and journaling, students will explore the concept of implicit bias. From this critical reflection, students will gain an understanding of the impact of bias on patient care and population health in the U.S. healthcare system. Issues of, racial, ethnic, and gender status and their relationships to health disparities and inequities will be analyzed. Through course assignments, students will conceptualize interventions and design improvement projects aimed at making substantive positive changes toward health equity and justice.

HC 4305 Healthy Aging: A Healthcare Imperative (4 Credits)

As technology advances, the ability to healthcare to keep people alive increases, but not always in ways conducive to improving quality of life. It is the hope of healthcare providers that quality of life improves as well. However, there are many factors this piece of the puzzle challenging. In this course, the older adult population is examined both for the challenges they face and the effects of an increasing elder population on the healthcare delivery system. The course will focus on specific assessment of the impact of unhealthy lifestyles that create the co-morbidities, health disparities commonly seen in aging populations, and the improvements that can be made in health and technological illiteracy/accessibility on older adults. Extending this assessment, students create a cultural care model for end of life care. These explorations of older adulthood culminating in evaluating the underlying cultural issues that need to be addressed to improve population health and resiliency in meeting the challenges during the end of the life spectrum.

HC 4400 Legal Dynamics of Healthcare Leadership (4 Credits)

This course is a primer on the legal and compliance considerations associated with organization, payment, and administration of facilities and provider groups. Topics will include the corporate and contract law, Stark and anti-kickback law, licensure and credentialing, professional liability, professional review and patient safety, HIPAA and patient privacy, and other laws affecting healthcare providers and organizations.

HC 4410 Legal Frameworks of the Healthcare Industry (4 Credits)

This course reviews the recent history of healthcare reform in the United States beginning with the 2010 Affordable Care Act (ACA) and moving to health reform since the ACA. Students examine the influences and functions of Medicare and Medicaid as well as the Department of Health and Human Services' (HHS) role in shaping benefit coverage throughout the healthcare industry. Students will explore the importance of, and examine legal issues related to, public health and healthcare provided by entities within the Federal Government such as the Department of Veterans Affairs (VA), Department of Defense (DoD), and Indian Health Service (IHS). Students will objectively evaluate the legalities and ethical issues associated with clinical research as well as the Food and Drug Administration (FDA)'s involvement in the development of pharmaceutical agents and medical devices. The course concludes with students analyzing the future landscape of health reform and public sector influence in healthcare.

HC 4420 Legal Fundamentals of Revenue in Healthcare (4 Credits)

This course provides an understanding of the legal complexities of creating and managing delivery and payment models for healthcare services. Course content revolves around the current challenges of evolving from volume-based to value-based payment principles. Topics will include fraud and abuse and compliance, legal foundations of private and public payment systems, fee for service, managed care, value-based systems, and a review of current healthcare payment reform efforts. The course wraps up with the role of clinical health information and related data systems in healthcare delivery and payment.

HC 4430 Significant Healthcare Law (4 Credits)

As a foundation, students begin with an overview of healthcare law and an analysis of the sources of law to include the Constitution, statutes, regulations, and case law. Throughout the course, students will objectively analyze constitutional issues and major federal healthcare laws and will further delve into regulations implementing statutes as well as cases interpreting them. Students will examine the intersection of traditional areas of law and healthcare to include torts, antitrust, contracts, and intellectual property. They will explore the contemporary and emerging areas of information and innovation in healthcare law as well as the Affordable Care Act, to include the Supreme Court's landmark decision. The course concludes with a consideration of the pervasive problem of fraud, waste, and abuse. This course is delivered in a seminar style with significant independent work/research on the part of students and should be taken after introductory and concentration courses.

HC 4500 Operational Challenges in Global Health Management (4 Credits)

This course presents challenges in operations that are unique to healthcare services and products being delivered in the international market. Topics include international marketing of services and healthcare products, negotiation styles, ethical considerations, organizational structure, transporting of medical goods and personnel, individual travel health and medical tourism as a business model. Cultural and religious considerations in healthcare delivery are discussed. Grants and research management for global health are compared with domestic procedures.

HC 4510 Legal and Employment Issues in Global Health Management (4 Credits)

This course presents legal considerations involved in conducting global programs and business related to healthcare services and products. Employment and labor law are discussed in relationship to employment across international lines and within foreign countries. Intellectual property, patent and copyright of healthcare products, curriculum, and programs are examined. Customs laws, foreign trade, and other regulations such as healthcare licensing and credentialing of personnel are developed. Human resource challenges such as remote team management are discussed.

HC 4520 Global Health NGO Management (4 Credits)

Students will examine factors that impact organizational performance in the global nonprofit health sector. Students explore current challenges associated with Non-Government Organizations (NGOs) that operate in low-income and middle-income countries. Examples include Doctors Without Borders, Shoulder to Shoulder, and others. Students are empowered to research and compare different NGOs and analyze factors that impact organizational effectiveness. Key challenges facing NGO leaders are analyzed and students provide recommendations to improve organizational performance. Course topics include assessment of NGO strategies, organizational resources and financing, and stakeholder relations. Other topics include analysis of countries' demographics, culture, healthcare delivery, policies, and external environment. It is recommended that students in the Global Health Program Management concentration or certificate complete HC4500 and HC4510 prior to registering for this course. Students in other concentrations or programs may take this course at any time as an elective.

HC 4530 Regulatory Affairs in Global Health Management (4 Credits)

This course discusses the various regulatory requirements of conducting healthcare related business from the perspective of research, development, and marketing of medical devices and pharmaceuticals. Both domestic and international requirements will be examined. Students will develop a template of skills for investigating healthcare related compliance issues that can be adapted to specific markets as needed.

HC 4701 Topics in Healthcare Management (1-10 Credits)

This is an advanced special topics seminar course. The focus is on specialized areas of interest. Topics courses may be used as electives within the Healthcare Leadership degree and certificates, and, with advance approval from Academic Director, may substitute for core courses in the degree or certificate programs.

HC 4805 Virtual Care: Opportunities and Barriers for Health Systems (4 Credits)

Leaders in telehealth and virtual care settings must learn to balance the needs of the individual with the needs of populations. Students will explore the factors that impact the success of telehealth and virtual care programming including barriers to care, the social determinants of health (SDOH), and the concerns of special populations. Students will develop the skills needed to create a telehealth and virtual care plan that takes into account health policy and regulatory compliance, best practices in population health, and the social context of the healthcare system.

HC 4900 Experiential Learning in Healthcare (4 Credits)

This course is for students who want to do independent research by completing an industry project and serves as a connector between research methods and a student's Capstone Project. The course will connect an academic research question with an experiential learning opportunity in healthcare for students as they prepare for their Capstone Project experience. Students will choose a Capstone Advisor, choose a topic, develop a thesis statement, explore project methodologies, write a proposal, and complete the necessary Institutional Review Board (IRB) requirements. Students will also agree to the structure and deliverables of their projects. There is an expectation for face to face (virtual is acceptable) meetings between students and their prospective Capstone Advisor during this course. This course is a prerequisite for any students planning to complete the Capstone Project (HC 4901) as it is the beginning of the Capstone Project process. Prerequisites: approval by Academic Director, acceptance as a degree candidate, and completion of between 30-40 quarter-hours. This course meets an elective option.

HC 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

HC 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HC 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HC 4910 Research Practices and Applications (4 Credits)

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

HC 4915 Experiential Learning in Business (4 Credits)

This course is for learners who want to increase their range of business skills and industry experience. As learners navigate ten modules, they will walk through reflection on specific activities related to professional business skills. These skills include items such as building a personal brand, creating value add, informational interviewing, negotiating, and system evaluation. This course will use virtual reality to ensure an equitable experience for remote students. At the culmination of this course, learners will have a basic set of professional business skills they can use throughout their careers.

HC 4980 Internship (0-10 Credits)

The Healthcare Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all Healthcare students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences.

HC 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

Higher Education (HED)

HED 4201 Assessment in Higher Education (4 Credits)

This course is designed to give student a broad understanding of assessment in higher education. This course will improve student's familiarity with existing assessment instruments for students, services, programs and facilities as well as provide an understanding importance of maintaining high standards of ethics and integrity in assessment of higher education and student affairs.

HED 4202 Program Evaluation in Higher Education (4 Credits)

This course is an overview of the craft of program evaluation, "...the systematic assessment of the operation and/or the outcomes of a program or policy, compared to a set of explicit or implicit standards, as a means of contributing to the improvement of the program or policy" (Weiss, 1998, p. 4). Program evaluation, simply put, is the craft of applying research methods in a thoughtful way to the task of finding out what and/or how interventions work in the context of the programs or policies in which they operate. This is accomplished by systematically investigating the effectiveness of program processes and outcomes within their political and organizational context. The goal is to inform social action and, by extension, improve conditions for program recipients and participants. Students in this course will explore program evaluation within the context of higher education. The purpose of this course is threefold: (1) Develop an understanding of existing evaluation theory and practice; (2) Apply evaluation theory and approaches to the context education evaluation; and (3) Develop an experiential base upon which to engage in evaluation in educational practice, and for many as a component of doctoral research projects.

HED 4210 Critical Higher Education (4 Credits)

This course examines the social and political context of U.S. education and provides an analysis of schooling, cultural politics, and global influences that inform current practices and structures of the higher education system. Central to this course is the development of a critical understanding of topics related to meritocracy, stratification, diversity, and decentralization in higher education. Prerequisite: Ph.D. student in higher education or permission of instructor.

HED 4211 Current Issues in Higher Ed (4 Credits)

A study of contemporary higher education as a specialized field of inquiry and as a professional area in which to work. Explores institutional missions as well as entities such as administration, faculty, curriculum, and student, in relationship to current issues.

HED 4212 Introduction to Public Policy and Higher Education (4 Credits)

This is an introductory course that gives students an overview of federal and state public policy, current issues, research methods, and practical skills required for the policy formation process. This is the introductory seminar to the Public Policy, Leadership and Organizational Change emphasis area for the master's program.

HED 4213 Leadership and Supervision (4 Credits)

General leadership theory and its implications for higher education; specific focus on leadership skills, such as conflict resolution, problem solving, use of teams and change advocacy.

HED 4214 History American Higher Ed (4 Credits)

The purpose of this course is to trace the history of higher education in the United States from the system's pre-colonial beginnings through the present day. Readings will focus on the original purposes of higher education within the US, the forces leading to system massification and the subsequent competing visions and goals that have led to its becoming one of the most highly contested social institutions within the public arena. Higher education in many ways serves as a mirror to US national and state-level priorities. Understanding this relationship between higher education as a system, and higher education as a national, state and individual level asset helps us understand how we've arrived at our current historical moment: a decentralized system in which education represents a spectrum of institutional types, constituencies and local concerns. One could therefore argue the history of higher education gives us an opportunity to view the US postsecondary educational system as a dynamic reflection of our country's past, present, and future.

HED 4215 Curriculum Development and Teaching Strategies in Higher Education (4 Credits)

The goal of this course is to prepare those who will serve in higher education with the knowledge, skills, and dispositions necessary to design curriculum and pedagogical strategies that produce effective and equitable learning outcomes for all students and adults in postsecondary settings. This course pushes students to think about curriculum and instruction as a decision-making process that requires articulated goals, strategic alignment, and thoughtful planning in order to realize a more effective and inclusive pedagogy. Throughout the course students will come to understand the complexities of curriculum and teaching design, but also have the process clarified with a framework for choosing among different ways of teaching that result in significant and transformative learning experiences for their future students.

HED 4216 HED Research Processes (4 Credits)

Enables students to explore current research and theories associated with their scholarly interests and resources for doing research, and to address problems in conducting original inquiry and investigations in postsecondary education. Attention is directed to the investigation of a research problem of each student's interest. Prerequisite: Successful completion of 10 credit hours of research courses or permission of instructor.

HED 4217 Student Affairs Administration (4 Credits)

A review of student services, emphasis on programmatic content and relationship to student development; organization of student service programs and national trends. To further describe the historical development of student affairs work including significant persons and activities and to begin the development of students' own professional identities as a reflective practitioner and to understand the responsibilities for integrating assistantships/internships/work experiences to theory and new knowledge.

HED 4218 Organization and Governance in Higher Education (4 Credits)

Students enrolled in this course will acquire a nuanced understanding of how colleges and universities are governed in the United States. Questions guiding this course will be: Who has the power to make decisions on college campuses? What roles do various constituents, such as board members, presidents, deans, faculty, staff, chief diversity officers, student affairs professionals, and students play, and how reflective are these individuals of the broad diversity of U.S. higher education? How does the larger social/political context in the U.S. affect how institutions are governed? What does academic governance reveal about power, privilege and oppression? We will explore how organizational characteristics (the culture, history and structure), positionalities and identities, and policies (for example, tenure and promotion, shared governance, and academic freedom) influence the ability of institutions to dismantle systemic oppression, promote opportunity for all stakeholders, and strengthen democratic life. We will use normative and critical theories to examine the organization and governance of higher education.

HED 4219 Introduction to Higher Education (4 Credits)

This course is designed to provide students an overview of higher education as a field of study and practice. The topics covered attempt to equip students with working knowledge of the structures, functions, challenges, concerns, and opportunities within higher education as a social institution. Grounded in values and principles of inclusive excellence, the course take equity and diversity as departure points from which any and all productive understandings of higher education must engage.

HED 4220 Org & Governance of Higher Ed (4 Credits)

Study of theoretical perspectives and empirical research drawn from the social sciences related to higher education organizations and governance with an emphasis on application of theory and practice.

HED 4221 Financing Higher Education (4 Credits)

Financing public and private institutions of higher learning; sources of income, budgeting procedures, funding and control, use of simulated exercises to illustrate principles. Recommended prerequisites: HED 4210, HED 4211 and HED 4214.

HED 4222 Legal Issues in Higher Education (4 Credits)

Review of a broad range of administrative problems with legal dimensions; process for analyzing case law on issues of access, student rights, employment, collective bargaining, church-state relations, private sector and liability. Students gain practical experience (praxis) in analyzing and applying legal concepts to higher education subjects.

HED 4226 The Community College (4 Credits)

General issues related to community college, such as history, mission, characteristics, students, curricula, teaching and student services.

HED 4229 Student Support in College (4 Credits)

This class will introduce students to basic interpersonal helping skills required in Higher Education settings, including relationship building, listening, giving feedback, problem-solving, and resolving conflicts. Students will become familiar with crisis intervention models and techniques; signs and symptoms of distress and mental illness; strategies for making appropriate referrals to mental health providers; and considerations about self and other when engaged in helping relationships, particularly those with cultural differences. Central to the course will be discussion of the appropriate role Higher Education professionals have in helping students while recognizing their limitations.

HED 4230 Reflective ePortfolio (2 Credits)

The purpose of this course is to assist students by facilitating the transition in to professional positions in higher education. A learning portfolio is a required component for completion of the degree program for the master's degree (MA) in Higher Education to demonstrate significant learning about the field of higher education and oneself in the program.

HED 4235 Organizational Change (4 Credits)

This course will focus on designing, implementing, and evaluating effective change in higher education through an equity-minded lens. The course is intended to assist students in developing a set of understandings in how to plan and implement change in higher education organizations, institutions, and as an industry. The course will introduce "equity-minded change" in higher education and will focus on how institutions can change to achieve equity, while addressing the importance of managing organizational development on a macro and micro level in higher education institutions and organizations. Students will acquire tools to manage and understand change through structural, political, human resource, and symbolic perspectives to understand the systemic interrelationships among these factors to effectively meet the changing socio/economic/political environments within higher education as they impact student success.

HED 4242 Educational Policy Analysis (4 Credits)

Students in this experiential course will develop critical policy analysis and Praxis skills that have relevance for the implementation of public policy and finance strategies for higher education. Students will employ critical thinking skills to analyze, evaluate and interpret public policy and finance with the goal of advancing the field of higher education's understanding of effective public policy and finance, as well as the unintended consequences that may arise with various policy solutions and funding strategies. Specifically, students will learn how to evaluate whether public policy and finance hinders or assists post-secondary institutions and their leaders in dismantling systemic oppression while promoting educational equity and opportunity and strengthening the public purposes of higher education. Students will interact directly with public policymakers, post-secondary administrators, policy researchers and policy analysts while assisting with a quarter-long experiential policy analysis project with an intermediary public policy organization. Students will also develop a policy analysis paper.

HED 4246 Issues of Access & Opportunity (4 Credits)

This course addresses theories and research on a variety of issues related to college preparation, school structures, and inequalities in college access. The course will cover different levels of analyses: theoretical, individual levels (i.e., race, ethnicity, and social class), organizational levels (family, geography, high school context, and outreach), and field levels (i.e., policy, testing, rankings, media, and policy). Special attention will be paid to the sociocultural context influencing issues of college access and opportunity for students.

HED 4247 Retention, Persistence, and Student Success in Postsecondary Settings (4 Credits)

This course introduces students to relevant research, theory, and practice related to college student retention and persistence. Students explore cultural, institutional, and individual factors that may impact college student persistence and critically examine theories attempting to explain why students leave college. In addition, students also closely explore the dynamics of oppression at the individual, institutional, and socio-cultural levels and the resulting impact on student retention. Effective retention practices, programs, and assessment procedures are also identified and examined.

HED 4260 Students and College Environments (4 Credits)

This course will serve as an introduction to college environments and the complexity of campus and culture. The purpose of this course is to familiarize you with today's higher education settings and provide you with strategies to maximize learning and development, for all students. In line with inclusive excellence, attention will be paid to the impact of campus environments on diverse student populations. Theoretical concepts will help explain, describe, and examine the college environments as a system and its impact on students, faculty, and staff.

HED 4261 College Student Development Theory (4 Credits)

An overview of human development theories relevant to college students, of traditional and non-traditional ages. This application will enhance the ability of student affairs professionals as they work to maximize the affective and cognitive development of students within the college setting.

HED 4270 Internship in Student Affairs (0-6 Credits)**HED 4281 Inclusive Excellence Programming and Development (4 Credits)**

IE in Programming and Development will provide an overview related to the development and implementation of cultural programming and cultural centers over time. This course will pay specific attention to the role of student activism in creating change on college campuses in the form of cultural programming, centers, diversity curriculum, and inclusive excellence initiatives. The course will also address the challenges and competencies associated with inclusive excellent programming and development.

HED 4284 Inclusive Excellence in Organizations (4 Credits)

In recent years, major demographic and economic changes in this country and worldwide have contributed to the diversification of the workplace. As a result, the need for understanding how to enhance cultural diversity in organizations has taken on a greater importance. Accordingly, framed through the concept of Inclusive Excellence, this course focuses on the changing demographics of our society, especially related to race and culture, gender, age, physical ability, sexual orientation, and socio-economic status, emphasizing the implications these factors have for leadership and management in a variety of organizational settings.

HED 4287 Critical Race Theory and Education (4 Credits)

The purpose of this course is to provide students with an in-depth exposure to Critical Race Theory (CRT) as it pertains to education. Critical Race Theory is an analytical framework that provides race-based epistemological, methodological, and pedagogical approaches to the study of everyday inequalities in P-20 education. Together, we will work through the historical development continuing on to the contemporary nuances of CRT. In addition, we will work to expose the ideological construction of race and education in the U.S. As such, we will also work through the oppressive nature of education and boldly confront notions of colorblindness. Throughout this course, we will struggle with the challenges surrounding the inclusion of multiple voices and multiple perspectives in the complex intersections among race, ethnicity, gender, class, and sexual orientation. Specifically, we will critique the strengths and limitations of CRT as a framework for addressing educational inequalities. Prerequisites: HED 4289.

HED 4288 Gender & Sexuality in Higher Education (4 Credits)

This course examines how gender, sexuality, and their inhabitants have been constructed, confined, and disciplined in U.S. higher education. Although neither a history nor philosophy course, we will engage both history and philosophy of sexuality and gender within and beyond higher education studies. Also, while neither a policy nor an administrative practices course, we will also engage issues of policy and practice in colleges and universities. The considerations, complications, and implications that course participants will engage will have direct import for postsecondary education, yet are transferable to other educational, community, and social contexts.

HED 4289 Race and Racism in Higher Education (4 Credits)

This course explores connections between race, racialization, and racism in American higher education. It draws on historical, political, economic, and cultural explanations of racial inequity in educational outcomes and processes. The course uses institutional and systemic levels of analysis to examine racial equity in higher education.

HED 4294 Seminar in Higher Education (4 Credits)

Advanced seminar to examine timely topics, issues, and problems. The course description is developed each time the course is offered to describe the topics to be investigated.

HED 4295 Internship in College and University Administration (0-6 Credits)

Supervised experience in administration at college or university level.

HED 4296 Internship in Public Policy (0-6 Credits)

Supervised experience in postsecondary public policy analysis or research, usually at a state or national compact or agency in the Denver-Boulder area. Recommended prerequisites: HED 4210, HED 4211, HED 4212, HED 4221, HED 4242, HED 4243.

HED 4297 Internship in College Teaching (0-2 Credits)

Supervised experience in teaching at college level.

HED 4991 MA Independent Study (1-10 Credits)**HED 4995 Independent Research (1-10 Credits)****HED 5991 PhD Independent Study (1-10 Credits)****HED 5993 Doctoral Research - EdD (1-20 Credits)**

Doctoral research credits for doctoral research project toward the EdD. Prerequisite: Must be an EdD student in HED; must have completed at least 80% of coursework; cannot complete more than five credit hours of HED 5993 prior to passing the comprehensive exam.

HED 5995 Independent Research (1-20 Credits)

History (HIST)

HIST 3350 Social History-Modern Britain (4 Credits)

This course investigates the intersections of class, gender, and race in nineteenth-century British society. During this period, Britain became the preeminent world power thanks to its spectacular industrialization and its even more impressive empire. Such success often fostered smugness and complacency, yet British society was also riddled with dissension as people struggled to cope with the enormous changes they were witnessing. Discussions focus on the ways in which Victorian people themselves understood their society and its problems, and how they attempted to construct solutions to those problems. Who was implicitly or explicitly excluded from British society? As we consider these topics, we use a variety of secondary and primary sources, including fiction; one goal of the course is for us to think about how to integrate different kinds of sources as we analyze historical problems and create our own interpretations. Cross listed with MUAC 3350.

HIST 4991 Independent Study (1-10 Credits)**HIST 4995 Independent Research (1-10 Credits)****HIST 5991 Independent Study (1-10 Credits)****HIST 5995 Independent Research (1-10 Credits)**

Human Resource Administration (HRA)

HRA 4130 Finance for HR Professionals (4 Credits)

It is essential for Human Resource professionals to have business acumen as a competency in order to be perceived as valuable business partners. This course addresses financial oversight and budget skills and aims to increase students' knowledge of financial statements, cash flow, operating budget, cost-benefit analysis, and capital budgeting. The course will address financial reports, financial ratios, analysis and measurement tools, and ethical situations as a means to increase the student's business acumen. In addition, the course focuses on understanding how those financial reports influence human capital decisions.

HRA 4140 Principles and Practice of Human Resources (4 Credits)

This course offers an introduction to HR as a professional field of study, and discusses how HR fits into the workplace. The course presents theories and issues in the HR field, and it defines the HR practitioner as a change agent. The course places HR management in the context of organizational strategy and policy. And it defines the core competencies of HR professionals including recruitment, selection, and placement; job classifications and wage and benefits; employee relations, supervision, counseling, discipline, and employment law.

HRA 4150 Human Resources Across Organizations (4 Credits)

This course prepares HR professionals to work in a number of organizational settings and sectors during their careers. Students will explore how organizations may differ in legal structures, HR models, governmental oversight, records access, type and size, compensation processes, and benefits. Students will also assess how HR practices integrate with organizational strategy and mission to ensure a clear linkage to stated goals and objectives.

HRA 4160 Human Resources in a Global Economy (4 Credits)

In this course, students will explore the proprietorships, partnerships, corporations, nonprofits, multinational corporations, strategic alliances, regulatory agencies, and public organizations that cross sector and national boundaries from an HR impact perspective.

HRA 4170 The Inclusive Organization (4 Credits)

Employees are coming into organizations with differences in race, ethnicity, gender, age, religion, sexual orientation, ability, and other aspects of diversity. How can employees, regardless of level or function, contribute to a more inclusive environment that creates space and psychological safety for everyone? In this class, students will come to a nuanced and comprehensive understanding of what inclusion is, what inclusive practices look like, and what it takes to implement them at the personal, group, and organizational levels.

HRA 4180 Organizational Politics and the HR Professional (4 Credits)

Description: Organizational politics may impact programs developed by HR professionals when decisions are made to further individual interest over the interests of others. Despite the inclusion of best practices in recommendations from HR, political reasons, agendas, or actions may drive decision-making, rather than the benefit of employees. This course examines why and how politics may enter HR decision-making, assesses the merits of strategies to navigate organizational politics, and identifies links between motivation and leadership.

HRA 4230 Consulting and Human Resource Applications (4 Credits)

HR professionals often serve in a consulting role, both as internal and external consultants. This course includes models, tools, and concepts to build effective relationships with key stakeholders; identify, analyze, and diagnose organizational issues; develop and implement value-added solutions; effectively manage the change process; and measure/monitor outcomes. Students utilize a consulting model approach to turn strategy into action.

HRA 4240 Human Resources Technology Solutions (4 Credits)

Technological advances have had a major impact on the use of information for managing human resource functions within both large and small organizations. The collection, storage, and analysis of human resources data is an important element of all human resources systems. Students will examine how information is utilized in the functional areas of human resources. Students will also explore the fundamentals of a human resources information system (HRIS) and best practices for implementation of HRIS. Finally, students will apply needs analysis to recommend an HRIS to an organization.

HRA 4250 Integrated Talent Management (4 Credits)

Organizational value depends on developing, utilizing, and retaining human resources. This course examines the importance of demonstrating that value along with what is needed to acquire, hire, and retain talented human resources. This includes workforce planning and forecasting, competency modeling, talent acquisition, onboarding and career development, succession planning, and developing models. Students will examine how political, economic, and social systems can lead to new policies and practices that affect talent management strategies, along with ethical considerations and inclusivity.

HRA 4260 HR Analytics and Research (4 Credits)

This course reviews HR metrics, quantitative techniques, and analysis. Students will examine HR research and consider a process to develop practical questions for HR use. Quantitative skills for modeling, spreadsheet analysis, process mapping, and workforce management reporting are developed. Human resource information systems (HRIS) and their role in supporting strategic decision making are examined and evaluated. #Preferred prerequisite: HRA 4240.

HRA 4270 Value and Impact of HR Interventions (4 Credits)

In this course, students will determine the long-term and short-term impact of interventions, especially looking at a cost-benefit analysis. The object is to have a practical strategy to provide decision makers the data for human capital investments support.

HRA 4500 Organizational Leadership, Team Effectiveness, and Communications (4 Credits)

In the 21st Century, HR professionals are organizational leaders who are often tasked with building teams, leading change and ensuring strong internal communications. This survey course explores a variety of topics including how to champion organizational change, manage organizational crisis, build effective teams, and develop strategic communications. A critical tool also introduced in this course, supporting the role of HR as a strategic partner, is the balanced scorecard. This enables HR leaders to align deliverables in finance, internal processes, customer and learning and growth measures. This broad overview prepares HR professionals to actively engage in the business dialogue.

HRA 4510 Organizational Lifecycles and HR Implications (4 Credits)

This course examines the role of HR at various phases of an organization's lifecycle taking into account mission, vision, and values. Moving from start-up to mature organizations, the course addresses HR responses to compensation, benefits, and HR structure, and addresses how HR can support and facilitate transitions from one lifecycle phase to the next. Students will explore short and long-term strategies that match HR structures and programs to needs of organizations in transition, including change management, crisis management, talent management, total rewards, and organizational communication strategies.

HRA 4520 HR Change Management (4 Credits)

Human Resources play an essential role in planning, implementing, and sustaining organizational change. This course examines the role of HR professionals in leading and advising on organizational change, including how to apply HR management practices to change management plans, and aligning total compensation and performance management practices to support the goals of change initiatives.

HRA 4600 Human Relations in Organizations (4 Credits)

The goal of this course is to examine how human relations are integral to creating systems and communication channels that support healthy employee relations and create positive workplace cultures. This course will equip human resources professionals to integrate positive human relations as a foundational element of human resources management responsibilities such as recruitment and staffing, legal and ethical considerations, onboarding, training, professional development, compensation and benefits, employee well-being, and employee relations. This course also examines the integration of and differences between human resources management, organizational development, and human relations.

HRA 4610 Employee Compensation (4 Credits)

This course explores how to develop and manage employee compensation systems with emphasis on motivational theory, individual and group performance, key elements of compensation-system design, external competitiveness, internal equity, compliance, and innovative reward strategies. Students will explore the practical and strategic purpose of compensation systems from a historical perspective as well as in the context of the social and business issues of today's world economy.

HRA 4620 Employment Total Benefits (4 Credits)

This course develops historical context for employee benefits and the motivational implications. It reviews the wide range of potential benefits and discusses "total rewards" options. The course examines pension plans, social security, ERISA, major benefits legislation, health insurance, flex spending, and budget implications.

HRA 4630 Employment Law (4 Credits)

This course explores current legal issues that affect the HR function in organizations. These include EEO, sexual harassment, managing risk, discrimination, wage and hour, at-will employment, and current Supreme Court decisions. These legal issues will be examined from both the employee and the employer viewpoint. The course will also address issues related to global expansion and international employment laws.

HRA 4701 Topics in Human Resources (4 Credits)

The content of this course varies each time it is offered. The topics may include time-sensitive issues in the field of strategic human resource management, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

HRA 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

HRA 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HRA 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

HRA 4910 Research Practices and Applications (4 Credits)

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

HRA 4980 Internship (0-4 Credits)

The Strategic Human Resource Management Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all SHRM students if they hear of internship possibilities. Students may also work through the DU career center to explore opportunities for internship experiences.

HRA 4985 Industry Innovation Project (1-4 Credits)

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

HRA 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only may be used by degree candidates. Prerequisite: Admitted degree candidate.

Info & Communications Technology (ICT)

ICT 4000 ICT Business Essentials for Technology Leaders (4 Credits)

In this course, students will explore the essential attributes of business research and analysis in the Information and Communications Technology (ICT) field to make appropriate business decisions. Students will individually and in teams explore the economic principles that drive the ICT industry. This course sets the foundation for research, analysis, and critical thinking that will be encountered and required throughout the ICT program. As such, a major component of this course is writing research papers on various ICT topics including economic and technical drivers and challenges, ICT economic principles, and the ICT regulator framework. Additionally, students will participate in collaborative teams as they consider industry trends and customer/user needs during the development process to create a product or service proposal and business case. Lastly, students will have the opportunity to evaluate and utilize management and process tools which will guide class discussions as well as critical thinking and analyses in a structured format. The applicability of these tools extends beyond this course and into the operation and management of an ICT organization.

ICT 4001 Technology Leadership (4 Credits)

This course is designed to give technology students a broader perspective on technology in organizations. The content will focus on bringing students a new set of skills that will enable them to evaluate what it means to be a technology leader. Students will explore how an IT organization establishes a technology vision and strategy and will develop skills such as communicating effectively, building and managing technology teams, managing risk, and technology budgeting. At the end of the ten weeks, students will demonstrate their technology leadership abilities in an executive presentation.

ICT 4005 ICT Technical Essentials (4 Credits)

This course comprehensively reviews the technological foundations of today's ICT industry. The course will provide students with a technical foundation needed for the ICT program. No technology experience is needed prior to taking the course. Topics include knowledge management, big data, artificial intelligence, information security, cloud computing, and other emerging technologies such as Blockchain. The application development process is also briefly reviewed. The course will provide students with an overview of technologies used to translate data into knowledge. The security requirements associated with a variety of information types are introduced, along with the current best practices used in information security.

ICT 4007 Creative Problem Solving and Programming Concepts (4 Credits)

In this course students will develop, or improve upon, their problem-solving skills to analyze problems and create solutions. Students will document their solutions and translate them into running programs written in the enormously popular Python programming language. Students will learn programming concepts including the use of variables, program input and output, flow control, conditionals, interpreter- and code-file-based approaches, and error testing. Students will learn how to set up Integrated Development Environments (IDE) such as Visual Studio Code on their personal computers and/or utilize a Cloud IDE in which they will write programs.

ICT 4010 Enterprise Architecture (4 Credits)

In this course, students will learn how to integrate IT to effectively support business goals. The course examines how enterprise architecture (EA) informs business and technology strategy. The course will explore the basics of EA, such as reference architectures, architecture patterns, and a comparison of EA and other architecture types. Students will also examine the opportunities and limitations of various EA frameworks and will apply the methods and tools of one of those frameworks, TOGAF, to design and document an EA initiative. Additionally, the EA implications of recent ICT trends such as cloud computing, global regulatory compliance, data protection, artificial intelligence, and ICT ecosystems will be explored. Prerequisite: Recommended ICT 4000, ICT 4005.

ICT 4015 Managing Technology for Strategic Value (4 Credits)

Technology's impact on business organizations is tremendous, and will likely only intensify in the future. While some businesses still view technology as an expense to the bottom line, other organizations use technology to gain a competitive advantage. Considering the impact of technology on smaller or startup companies as well as large corporations, this course will explore concepts, tools and frameworks to understand how technology can be used to inform business strategy. Students will apply current methodologies to case studies and projects to gain insight into business and digital transformation. Topics include digital future, business organization framework, technology financial management, data proliferation, technology risk management, disruptive innovations, and performance measurement. Prerequisite: Recommended ICT 4000.

ICT 4020 Business Forecasting and Planning (4 Credits)

This course includes a wide diversity of skills required in one's professional career. Topics include the importance of accurate planning and scheduling for successful projects, risk/opportunity analysis, resource planning and allocation, building budgets, revenue forecasting, profit and loss statements, balance sheet analysis, the importance of managing customer perceptions and expectations, and the impact of economic issues on project success. Students will develop business analyses, including budgets and business plans, for several increasingly difficult scenarios addressing a range of technology applications and services. The final case study will culminate in a presentation to be given to potential investors, banks, or venture capitalists to secure a commitment for funding for a simulated telecom project. Recommended prerequisite: ICT 4000.

ICT 4025 Technology and Innovation Management (4 Credits)

Leaders of innovative firms build commitment to new directions, re-design structures to support new missions, and transform cultures. This course concentrates on the implementation of business strategy through effective structures and systems. Students will apply key aspects of strategic deployment, including organizational structure, product development, business models, and change management. Those aspects of strategic deployment are combined into a business plan. Students will learn how to effectively communicate business plans to decision-makers and stakeholders. Prerequisite: Required ICT 4000.

ICT 4100 Principles of Project Management (4 Credits)

This course will provide students with practical knowledge, tools, and techniques to become an effective project manager and work successfully within a project team. Students will learn real-world application of foundational concepts and develop skills such as stakeholder management, balancing competing constraints, delivery of value, navigating risks and ambiguity, building and running a high-performance project team, defining scope, managing change, and productive communication strategies. Students will practice classroom concepts through hands-on exercises individually and in teams.

ICT 4105 Project Contracts and Procurement (4 Credits)

This course is designed to provide students with leadership and practical skills in project contracts and procurement. The course covers current trends in the procurement marketplace, including digital transformation, supplier relationship management, sustainability, cyber security and agile processes. Students will gain knowledge of the various elements of the contract and procurement process, including procurement plans, requests for proposal (RFP), Statements of Work (SOW), and various types of contracts. Students will learn project management and negotiating skills, and gain hands-on experience developing a procurement plan, supplier selection criteria, an RFP or other appropriate RFx, and contract terms. Recommended prerequisite: ICT 4100.

ICT 4110 Project Risk and Quality Management (4 Credits)

This course introduces students to project risk and quality management and develops advanced skills in applying the project management tools and techniques learned in ICT 4100. A focused examination of scheduling, cost, quality, and risk management processes using advanced tools and techniques is included. Emphasis is placed on the project planning, execution, and monitoring and controlling processes. This course is on the Project Management Institute's (PMI) certification track. Recommended prerequisite: ICT 4100.

ICT 4115 Project Management Dynamics (4 Credits)

This is an advanced course that applies project management knowledge and skills to identify and analyze a complex project dynamics. Case studies will be used to explore the PMI project domains and project management dynamics. Learning is based on reading case material, the PMBOK Standard, completing project management simulations and the practical application of project management tools and techniques. Students receive hands-on simulation experiences in planning and running projects, and working in learning teams to practice project management roles. Students develop a workable project change management system, exercise project integration and communication skills, and demonstrate the ability to keep an overall project on track. They also demonstrate decision-making skills, with emphasis on making trade-offs based on solid business rationale.

ICT 4155 Strategic Alliances in the Technology Sector (4 Credits)

Strategic alliances are one of the key drivers in today's global economy and they have gradually replaced vertical integration as the chief method of corporate expansion. Business-to-Business alliances provide organizations with a variety of benefits including enhancing the capability of organizations and helping to extract maximum value from available resources. While applicable to any industry, strategic alliances are particularly important in the technology sector. This course defines and discusses the roles of various types of strategic alliances in the technology sector, including informal alliances, partnerships, joint ventures, and outsourcing arrangements. Students will use case studies to explore strategies for managing profitability and leveraging these external business relationships. Students will analyze successful and unsuccessful alliances from the perspective of each alliance participant, 3rd party vendors, customers, and a variety of other stakeholders.

ICT 4170 Agile Techniques and Practices in Project Management (4 Credits)

Agile principles and practices are used across many project domains, each with its own unique characteristics and challenges. As the term implies, Agile techniques for the successful use of Agile project management processes are not static; they are dynamic and continuously evolving. The Agile debate is now turning from the tactical to the strategic. Realizing the full benefits of Agile (e.g., faster time to market, improved responsiveness to customers, higher quality, and greater efficiency), means more than improving project execution. It requires understanding the right place for Agile versus traditional methods within a modern enterprise comprised of multiple teams or groups of teams. This course examines both the Agile processes and practices for delivering projects, how to choose when Agile is appropriate versus Predictive methods, and the cultural challenges encountered when transforming into strategic Agile teams. Recommended prerequisite: ICT 4100.

ICT 4200 Cybersecurity Foundations (4 Credits)

This course will provide students with an understanding of cybersecurity and the importance of implementing sound cybersecurity policies, procedures, and systems. The course is for students who are new to cybersecurity (e.g., newly appointed managers with little cybersecurity experience) or those who need a refresher of cybersecurity fundamentals prior to taking additional courses in the concentration.

ICT 4205 Cybersecurity Management (4 Credits)

This course places students in cybersecurity manager roles to expose them to multiple security viewpoints. Students will interact with the full breadth of cybersecurity dimensions, including people, internal and external organizations, systems, and networks. They will learn how organizations strive to control all possible outcomes and occurrences within defined risk contexts as defined by company Directors. Students walk through the management discipline of cybersecurity, starting with the determination of needs and goals and the application of best practices before moving to the continual maintenance and improvement of an organization's cybersecurity stance. The course will provide students with an understanding of management roles and responsibilities including policy and process oversight, adherence to laws and regulations, cybersecurity program management, and understanding the types of reports created and reviewed by cybersecurity managers (such as reports for a Board of Directors). Prerequisite: Recommended ICT 4200 or practical experience in Information Security Principles and Practices.

ICT 4210 Cybersecurity Policy (4 Credits)

This course will help students understand critical events that shaped the U.S. cybersecurity landscape. Students will explore the impact of international cybersecurity policy such as the European General Data Protection Regulation (GDPR) on U.S. businesses. Students will learn how to analyze new cybersecurity policies and regulations to determine their impact on organizations.

ICT 4215 Cybersecurity Risk Management and Incident Response (4 Credits)

This course covers how to manage cybersecurity risk including mitigating risk, responding to incidents, and incident reporting (in particular when governmental and regulatory agencies need to be notified). This course will also address working with a public relations team and the Board of Directors to create press statements regarding cybersecurity incidents or breaches.

ICT 4220 Cybersecurity Leadership and Strategic Planning (4 Credits)

This course covers senior and strategic cybersecurity management roles and responsibilities, including the supervision and management of workers performing cyber-related and cyber operations work. The course also covers developing policies and plans and advocating for policy changes that support organizational cyberspace initiatives or required changes and enhancements.

ICT 4225 Cybersecurity Audits (4 Credits)

Cybersecurity audits play a key role in addressing today's rapidly changing cyber threat landscape. Executives, including members of the Board of Directors may be required to certify that they have taken reasonable steps to protect information assets. Cybersecurity audits are a primary way to verify that information system and process controls effectively address cybersecurity risks. This course will cover cybersecurity audits, providing aspiring audit professionals with the information needed to manage a comprehensive audit of cybersecurity controls. Recommended prerequisite: ICT 4210.

ICT 4300 Web Enabled Information Systems (4 Credits)

This course is an introduction to the development of modern software systems from the desktop to the cloud. The course examines best practices for software development and introduces the three tiers of software development from the web frontend to the database backend using available tools and software. It covers security issues and best practices related to developing web and cloud applications. This course lays the groundwork for a common understanding of full stack development. This should be the first course taken in: Software Design and Programming and Web.

ICT 4305 Object-Oriented Methods and Programming I (4 Credits)
