Those working with the criminal justice system, like other professionals in human services fields, need to provide effective programs and services that are suited to clients and their context. This course introduces students to evaluation and provides an overview of how forensic psychologists can use this discipline to benefit their clients, practice, and programs. The course will explore evaluation's relationship to research, evaluation theories and typologies, and the many evaluation approaches that have evolved, with a focus on evaluation in human service organizations. We also will discuss recommendations for finding applicable grants, crafting a successful grant application using evaluation results and tools such as logic models, fulfilling grant-mandated requirements, and using evaluation results to complete grant reports and improve programs.

CPSY 4120 Psychology of Performing Arts (3 Credits)

Students gain an understanding of the psychological factors involved in the performing arts, including theatre, acting, dancing, music, and circus arts. Students learn about appropriate psychological interventions for these populations to enhance performance. The course format includes lecture, discussion, guest speakers, case studies, and role plays.

CPSY 4130 Organizational Leadership: Center for Performance Excellence (3 Credits)

This course is designed to familiarize CPEX Officers with approaches to effective leadership while engaging in leadership roles within the Center for Performance Excellence (CPEX). Students are exposed to successful leadership strategies from the business world and have the opportunity to implement these strategies into their roles as leaders within CPEX. This course is intended for CPEX Officers only.

CPSY 4140 Exercise Psychology (3 Credits)

In this course, students explore the theory, research, and practice related to psychological aspects of exercise behavior. Students explore research and intervention models in exercise psychology and be able to integrate this knowledge in their practice. Major topics include health behavior change, the impact of exercise on mental health, and exercise motivation and adherence.

CPSY 4150 Psychology of Performance in Business (3 Credits)

Students gain an understanding of the psychological factors involved in the business world. Factors are examined at the individual, team, and organizational level. Students learn about appropriate psychological interventions for these populations to enhance performance. The course format includes lecture, discussion, guest speakers, case studies, and role plays.

CPSY 4160 Psychology of High Risk Occupations (3 Credits)

In this course, students gain an understanding of the psychological factors involved in high risk occupations. High risk occupations include individuals whose profession directly involves saving lives or placing their own life at risk. Students learn about appropriate psychological interventions for these populations to enhance performance and resilience in the high stress situations required by their jobs. The course format includes lecture, discussion, guest speakers, case studies, and role plays.

CPSY 4200 Practicum I: Professional Orientation (2 Credits)

In this first quarter, of a three quarter practicum series, we will discuss issues that have bearing on your work with forensic populations, the central features of which include adapting to the culture of professional psychology by exploring relationships and by engaging in conflict resolution. By the end of the quarter, you will be well versed in the ethical guidelines, standards, and dilemmas facing you as forensic trainees. Also, you will be knowledgeable about issues related to stress and burnout in this field, including topics such as suicide and physical assault risks, and working within a system. Importantly, you will develop the skills needed to best utilize feedback and provide constructive feedback to others.

CPSY 4210 Practicum II: Introduction to Multicultural Issues (1-6 Credits)

In this quarter, we will continue our discussion of the interface between psychology and the law. Emphasis will be on cultural/diversity issues that impact our clinical and forensic practice. By the end of this quarter you should be familiar with terms such as cultural competency, cultural humility, and diversity and be able to integrate these into your theoretical framework as well as apply the concepts to your forensic work.

CPSY 4220 Practicum III: Lifestyle Development (3 Credits)

This course examines professional development through the lens of the foundational and functional competencies of the MAFP program. Students will explore their professional and clinical growth through self-reflective practice, as well as considering their own present and future professional identity. The course will continue discussion of the interface between psychology and the law and career paths within forensic psychology. Students will continue to focus on increasing clinical skills, with a particular focus on consultation skills, case conceptualization, and report-writing skills through vignettes and discussing issues related to their field placement sites. Didactic emphasis will be on forensic assessment, such that by the end of the quarter students will have been exposed to a variety of forensic assessment techniques and instruments and have an increased understanding of the role of psychological assessment in forensic contexts.

CPSY 4230 Practicum IV: Theories of Personality Diagnosis (3 Credits)

This class explores diagnosis beyond organizing external symptoms to a consideration of internal processes, where the internal processes are themselves framed by clinical theories of personality. These include systems theory, performance theory, behaviorism, cognitive-behavior theory, and psychoanalysis. The class also covers the currently dominant research-based theory, the five-factor model, emphasizing its relevance to diagnosis.

CPSY 4240 Practicum V: Theories of Counseling and Behavioral Health Approaches (2 Credits)

The majority of class will be spent discussing real cases from your current practicum sites. Discussions will be rooted in psychological theory and orientations, covering both theory and specific therapeutic techniques. Case discussion will be positive, constructive, and ethical. Also, the course will explore specific topics related to clinical work or life after MAFP, including a focused exercise on examining your thoughts and feelings regarding life as an early career professional.

CPSY 4250 Practicum VI: Professional Identity and Career Development (3 Credits)

This course is designed to be the capstone experience of the forensic training program, allowing students an opportunity to reflect on and synthesize their developmental path toward early career professional. Course goals include enhancing understanding of theory and practice in the field of psychology and, specifically, the forensic arena; applying knowledge gained throughout the course of the program to practical clinical situations, ethical dilemmas, and "real world" dynamics; understanding the importance of professionalism, collaboration, and integrity in the pursuit of a career in this field; and integrating clinical and didactic experiences during the course of training.

CPSY 4260 Psychophysiology and Biofeedback Lab (2 Credits)

This course is designed to be both an introduction to psychophysiology and biofeedback and to its applications, particularly to sport and performance. The principles of psychophysiology, the biofeedback instruments used, the areas of application, the techniques commonly used in conjunction with biofeedback, the diverse field of biofeedback and applied psychophysiology, and the latest uses for optimal self-regulation are covered. The course involves use of biofeedback instrumentation as well as classroom participation and readings and a self-regulation project.

CPSY 4300 Evaluation and Treatment of Juveniles (3 Credits)

This course examines the history and philosophy of the American juvenile justice system and the impact of present interventions and societal reforms on the juvenile system. The course provides an overview of the legal framework in which the juvenile justice system operates will highlight the differences in adult and juvenile law.

CPSY 4310 Ethical and Legal Issues (3 Credits)

Grounded in the American Psychological Association (APA) Ethical Standards, the American Counseling Association (ACA) Ethics Code, and the APA Specialty Guidelines for Forensic Psychology, this course is designed to examine the ethical principles of psychology and the ethical dilemmas faced by mental health professionals in forensic practice. This course will help provide a solid foundation for learning how to categorize ethical problems, understanding the principles and standards that apply to various situations/ethical problems, and developing a decision-making structure for handling ethical dilemmas.

CPSY 4320 Cognitive Assessment (3 Credits)

Students learn to administer, score, and interpret the WAIS. There is some exposure to other intelligence tests as well. Students understand diagnostic validity (Bayes' Theorem), how to identify interpretive material, and how to think ideographically about nomothetic data. Through discussions of legal cases, students learn numerous forensic issues to which cognitive assessment is applicable, including for example testamentary capacity, competence to waive Miranda rights, and ability to enter a contract.

CPSY 4321 Assessment Independent Study (1 Credit)**CPSY 4323 Issues in Measurement & Cognitive Assessment (3 Credits)**

In this course, students will apply their critical thinking and analytical skills to psychological and forensic assessment, with an emphasis on validity, reliability and issues of standardization. Lectures will cover the historical bases of assessment and measure design and will also highlight contemporary approaches to testing. The course will provide exposure to recent social criticisms and ethical concerns surrounding psychological testing. Students will also learn to administer, score, and interpret the WAIS. Students will have exposure to other assessment measures (WISC, WIAT, WRAT) and approaches to diagnosis cognitive and learning disabilities. Students will understand diagnostic validity, how to identify interpretive material, and how to think ideographically about nomothetic data. Through discussions of legal cases, students learn numerous forensic issues to which cognitive assessment is applicable, including competence to waive Miranda rights, and ability to enter a contract. Corequisite: CPSY 4323.

CPSY 4324 Issues in Measurement & Cognitive Assessment Lab Independent Study (1 Credit)

This is a 1-credit course for students in the MAFP program to learn about the administration of and issues related to intelligence testing. Students learn to administer, score, and interpret the WAIS and have exposure to other intelligence and achievement test instruments. The course is required, in conjunction with Issues in Measurement & Cognitive Assessment CPSY 4323, and will primarily consist of weekly lab meetings.

CPSY 4330 Cognitive Behavioral Theory and Interventions (3 Credits)

Considered the “gold standard” of treatment in many forensic contexts, Cognitive Behavioral Therapy (CBT) covers a broad skill set applicable in a variety of treatment settings. This course addresses the principal theories, techniques, and research relating to CBT, focusing on assessment, case conceptualization and intervention approaches within a forensic setting. An emphasis is on understanding CBT theory, applying the theory to cases, and utilizing the techniques with a variety of problems-in-living.

CPSY 4335 Introduction to Trial Consulting (3 Credits)

The art of trial consulting is the skill to meld multiple theories, methodologies, and concepts into a working and research-based strategy. This skill is very reminiscent to the art and practice of therapy. As with any practice, be it law, psychology or trial consulting, a solid base is necessary. This course is an introduction into the theory and application of trial consulting techniques in the criminal and civil arena. This overview addresses the key elements in the trial consulting including and introduction into the psycho-legal perspective, the application of research methodologies utilized by trial consultants, and specific interdisciplinary topics within trial consulting. These specific topics include concepts like the theory of persuasion, jury selection, expert testimony, and neuropsychology.

CPSY 4340 Psychopathology, Evaluation & Treatment of the Adult Offender (3 Credits)

Psychological theories related to etiology, development and prediction of crime and criminogenic potential. We will review foundational models of criminology, focusing on both risk-need-responsivity as well as strengths-based models. The course is a service learning course in which active practice with assessment tools, motivational interviewing, and feedback is expected.

CPSY 4350 Sociocultural Issues in Forensic Psychology (3 Credits)

To the practice of forensic psychology, each of us brings our individual experiences, beliefs, and views on life. We bring our highest selves: our passion, our hard work, our integrity, and our most noble dreams. We also, invariably, bring our worst selves: our “blind spots,” anxieties, misconceptions, and prejudice. As practitioners in a field trusted to explore the limits of human potential and human frailty, we recognize that the costs of ignorance in the arena of cultural awareness are unacceptably high. Rarely, however, do we have the opportunity to take a step back and explore the dynamics of privilege and oppression within society, within our profession, and within ourselves. The goal of this course is to begin the process of reflection and grow in our ability to tolerate ambiguity around issues of profound importance to our clinical practices and personal lives; to question preexisting understandings about how life “is” or “is not”; and to consider with humility, respect, and an open mind perspectives different from our own.

CPSY 4360 Personality Assessment: Self-Report (3 Credits)

Administration and interpretation of objective personality instruments and discussion of their utilization within a forensic setting; use of the MMPI-2 and MCMI.

CPSY 4370 Substance Abuse (3 Credits)

The objectives of this course are to provide an introduction to the assessment, diagnosis, and treatment of substance abuse and related disorders; to become familiar with the dynamics and etiology of substance abuse; to identify psychometric tools used in the evaluation of substance abuse; to develop working knowledge of the resultant psychological and physiological effects of different substances; and to review evidence-based treatment methods and their application to populations. This course is framed in terms of exploring the different models and therapeutic approaches for understanding substance abuse and misuse.

CPSY 4380 Group Interventions (3 Credits)

Interpersonal dynamics of small groups and larger organizational settings; understanding of group processes (such as group formulations and development, group conflict, and group resistance); skills enabling positive group intervention.

CPSY 4400 Projective Assessment and Report Writing (2 Credits)

This class covers idiographic (versus nomothetic) assessment techniques that understand responses in functional relation to their occasioning environments, emphasizing clinical interviewing, early memories, and the Thematic Apperception Test. These are integrated with nomothetic test results to understand referral questions. The class also covers assessment report writing.

CPSY 4410 Criminal Evaluations (2 Credits)

This course will provide an overview of criminal assessment topics, with an emphasis on the literature, theory, procedure, and tools, including legal competencies, criminal responsibility, violence risk, and malingering.

CPSY 4420 Research in Forensic Psychology: Independent Study (1 Credit)

This is a 1-credit course for students in the MAFP program to complete research either by joining faculty research projects or pursuing their own research project. The course is an independent study and will primarily consist of weekly mentorship by a research advisor.

CPSY 4430 Career Counseling (3 Credits)

This course is designed to teach the theoretical framework of career counseling, and introduce the basic counseling tools used in the career counseling process. The course presents major theories of career development, introduce sources of occupational information, and introduce principles of assessment in career counseling. The impact of diversity and difference on career development and choices, as well as the career counseling process, is also explored. Topics include: the role of interests, skills, values and personality in the career development process; social, cultural and family influences on the career development process; and career development across the lifespan.

CPSY 4500 Foundations: Trauma and Global Psychology (2 Credits)

This course is designed to introduce students to core concepts in the fields of trauma psychology & global mental health including: mental health and psychosocial consequences of disaster, cultural considerations in diagnosis and treatment, best practice intervention frameworks and associated guidelines, and basic principles and ethical issues in the delivery of mental health related humanitarian assistance. Through integration of perspectives from various disciplines (e.g. clinical and social psychology, public health, medical anthropology, humanitarian studies), and with a focus on current challenges and opportunities in the relatively new field of Trauma Psychology & Global Mental Health, students will become familiar with mental health and psychosocial issues in international complex emergencies, including possible international career paths for MA psychology graduates.

CPSY 4501 Psychotherapeutic Models of Intervention (3 Credits)

Major psychological models of intervention are the focus of this course. The major theoretical models of personality development, psychopathology and theories of intervention are explored including psychodynamic, family systems, behaviorism, cognitive-behavioral approaches and others.

CPSY 4502 Psychotherapy with Children and Families (3 Credits)

This course provides an understanding of various psychotherapeutic approaches to children and families. The perspectives and techniques of play therapy, behavioral interventions, cognitive-behavioral therapy and integrative work with parents and families are explored.

CPSY 4503 Clinical Interviewing (3 Credits)

Theoretical and practical issues related to clinical interviewing in international and national disaster settings.

CPSY 4505 Multiculturalism and Diversity (3 Credits)

This course continues introducing students to the central concepts of multicultural counseling competencies and multicultural consciousness. The three aspects of cultural competency are addressed in this course: awareness, knowledge, and skills (Sue & Sue, 2016). Additionally, we will examine a range of diverse populations by race, ethnicity, gender, sexual orientation, and physical differences is included in order to examine the cultural context of accurate assessment and appropriate interventions in counseling diverse clients. Students will examine the role, function, and effects of oppression in society as it relates to social, economic, and environmental justice. Assumptions underlying theory and research methodologies from which basic constructs of human behavior are drawn will be examined to understand how power and other dynamics manage and sustain oppression at the individual and institutional levels. Students will learn about the importance of examining power and privilege in the counseling space and/or creating space for each other to explore their own cultures and the biases and internalized messages about those who are different from themselves.

CPSY 4509 Global Mental Health Systems (3 Credits)

This course will focus on the dynamics of mental health systems in developing countries.

CPSY 4510 Intercultural Practice and Development (2 Credits)

This course is designed to prepare students for work with a variety of vulnerable populations in cross-cultural settings. Specifically, this course will prepare students for an 8-week international mental health/psychosocial summer internship in countries with a history of acute, chronic, and/or cyclical human-made and natural disasters (although most are now in a stabilization, reconstruction, and/or development phase). Through a blended composition of instruction, self-reflective exercises, case studies, course readings, lectures, and guest speakers, and integrating perspectives from social psychology, cross-cultural psychology, and medical anthropology, students are expected to identify and reflect on personal expectations heading into internship. In addition, this course is designed to provide students with the skills necessary to anticipate and problem-solve cross-cultural challenges, including potential value conflicts and miscommunication that may arise while in the field.

CPSY 4512 Disaster Mental Health (3 Credits)

This course will explore disaster response systems and their mental health components.

CPSY 4515 Ethics (3 Credits)

The course is designed to educate students about the ethical guidelines in psychology applicable to the field of IDP. Students will learn the APA Ethics Code as well as other more specialized ethics guidelines applicable to the field of IDP. Students will be expected to identify, address and resolve potential ethical conflicts. Potential future trends in the development of ethics in the area of IDP will be addressed.

CPSY 4530 Program Evaluation (3 Credits)

Theory and techniques for developing management information and assessment systems for human service programs. Organization evaluation of international organizations will be discussed. Psychosocial interventions will be highlighted.

CPSY 4535 Practicum: Professional Identity and Practice (2 Credits)

This academic and practicum course in professional identity and practice focuses on introducing students to professional practice of psychology. The focus of this seminar is on developing a professional identity as a clinician and understanding the use of supervision. Various topics will be emphasized in this course that include professional issues, career development and ethical and legal issues. Self-reflective practice will be emphasized and encouraged.

CPSY 4536 Practicum: Working With Diverse Populations (2 Credits)

The academic and practicum course focuses on working with diverse populations globally. Students will reflect on the aspects of their identities and those of their client and how they influence psychotherapy. Cultural considerations will be considered in the areas of interviewing, case conceptualization, development of treatment goals and clinical practice generally. Topics related to cultural humility, intersectionality and identity, stigma and oppression, use of interpretation and various transnational populations will be emphasized.

CPSY 4537 Practicum: Interview, Assessment and Diagnosis (2 Credits)

The focus of this course is academic and practicum experiences related to interviewing, assessment, and diagnosis in practice. Guest speakers, readings, and panels will focus on special considerations for clinical interviewing and assessment with immigrant, refugee, and marginalized populations in the United States.

CPSY 4538 Practicum: Life-span Considerations in Practice (2 Credits)

This academic and practicum course in Life-span Considerations in Practice considers various life-span issues of importance when working with individuals and their families in practice. Important experiences of childhood, adolescence, early adulthood, adulthood and late adulthood and their relevance to and presentation in psychotherapy are considered.

CPSY 4539 Practicum: Evidenced Based Practices in Psychology and Counseling (2 Credits)

The purpose of this practicum is to provide opportunities for didactic and experiential learning in evidence-based practice in psychology, and integrated mental health (IMH). This practicum will also serve as group supervision of clinical work being conducted in the TDR. Practicum is a quarterly required course in the MAIDP program. It is on a two-year cycle focusing on developing therapeutic clinical skills. Practicum work in field-placement sites in the Denver community as well as supervision of cases in the Trauma and Disaster Recovery Clinic occur in this practicum.

CPSY 4540 Practicum: Biopsychosocial Systems in Practice (2 Credits)

This academic and practicum course in Biopsychosocial Systems in Practice considers ways in which cultural, political, environmental, social, physical and developmental factors influence human experience including mental health. The practicum explores how these multi-systemic and interacting factors come to bear on clients' experiences and presentations and how this informs our work.

CPSY 4542 Psychophysiology (3 Credits)

This course is designed to expose students to the field of physiology and highlight it's reciprocal relationship with behavior. We will cover topics including the structure and function of the nervous system and areas of research relevant to clinical psychology (e.g. substance abuse, mental illness, and biological rhythms).

CPSY 4544 Psychological Assessment in Multicultural Contexts (3 Credits)

This course focuses on the building blocks of psychological assessment and interviewing across cultural contexts, with a focus on identifying culturally valid and therapeutically useful assessment techniques. This course focuses on assessment techniques useful for rapport building, case formulation and treatment planning, risk assessment, and diagnostic evaluation. Methods for summarizing and communicating assessment results with allied professionals and providing assessment feedback to clients and families will also be reviewed. Special emphasis will be placed on developing skills necessary for immigration evaluations, such as asylum, hardship, VAWA, and U-Visa evaluations. Throughout the course, principles of multicultural assessment will be combined with key lessons from therapeutic assessment so that students develop a keen understanding of how assessment can be empowering to clients and families on an individual level, and can further principles of social justice on an ideological level.

CPSY 4545 Lifespan Development and the Cultural Context (3 Credits)

This course is designed to examine the various stages of human development, with a special focus on the influence of culture. Students will become familiar with normative developmental processes, methods of studying development, and various theoretical foundations of developmental science. Through the use of lecture, readings, class discussion, and observation, students will be challenged to consider their own development and think critically about the development of others. Students will apply basic information about development to current issues in the field and consider the influence of cultural context on relevant areas of development across the lifespan.

CPSY 4550 Seminar: Therapeutic Interventions (3 Credits)

Small group seminar is a small group class designed to provide students a discussion forum to share and integrate their experiences in the IDP Master's Program. Students are expected to address and share their field placement experiences with other students in their seminar. The seminar will also provide instruction on the implementation of theory in IDP to practice in multiple settings. Faculty will provide supervision for the students' field placements.

CPSY 4555 Trauma & Child Development (3 Credits)

The course reviews the literature regarding childhood trauma and its implications for child and adult development. Models for the conceptualization of trauma and for treatment of childhood trauma are discussed. Cross-cultural theories of childhood development and trauma are emphasized.

CPSY 4556 Trauma Interventions from Cross-cultural Perspectives (3 Credits)

This course, taught by a different visiting professor each year, will take an in-depth look at trauma and the development of mental health systems and interventions internationally.

CPSY 4557 Global Public Health (3 Credits)

This course will provide an overview to the many issues concerning international public health today. Topics include basic epidemiology, malaria, tuberculosis, HIV/AIDS, diarrheal diseases, injury prevention, and environmental health. Specific attention will be given to examining the intersection between disease prevention and disaster mitigation.

CPSY 4560 Humanitarian Law of Armed Conf (3,5 Credits)

This course is a theoretical and practical introduction to international humanitarian law (IHL). IHL is known by many other names such as "humanitarian law," "law of conflict," and "laws of war." All these terms refer to the rules regarding the treatment of civilians and non-combatants. These "rules" are especially important to know if you eventually work for an IO or NGO that finds itself in areas of armed conflict. Cross listed with INTS 4935.

CPSY 4562 Public Policy and Advocacy (2 Credits)

This course focuses on mental health policy and advocacy in the United States and in countries around the world. Students will learn about the World Health Organization policies on mental health and substance abuse and issues of mental-health stigma globally.

CPSY 4563 Family Therapy (3 Credits)

This course examines various approaches to family systems, including an overview of systems theory, plus ideas that have been labelled structural, strategic, and Bowenian. Goffman's performance theory will also be emphasized, especially as it applies to clinical work. Students will practice rethinking interpersonal conflicts, and they will develop increased awareness of their own families and their roles in them. Students will also apply systemic ideas to their own required therapies.

CPSY 4564 Advanced Spanish Language for Clinical Practice (2 Credits)

The purpose of this course is to help students with intermediate to advanced competency in Spanish to develop their clinical linguistic skills in order to better meet the mental health needs of the Latinx population in the United States, and, in the case of those doing international work, in Latin America. Students will be required to take a Spanish proficiency exam, prior to taking the course. The course will focus on developing Spanish abilities in the following areas: 1) building rapport and demonstrating basic helping skills, 2) explaining the purpose and process of therapy/evaluation, 3) conducting diagnostic interviews and intakes, 4) providing psychoeducation about different diagnoses and mental health problems, 5) conducting crisis assessments, and 6) providing skills-based treatments.

CPSY 4565 Group Dynamics of Organizations (3 Credits)

A comprehensive review of the literature regarding the understanding of systems and organizational structure and dynamics. Methods of assessment and interventions in organizational structure will be presented. Cross-cultural implications will also be addressed.

CPSY 4566 From Triage to Justpeace (3 Credits)

This course examines the inter-disciplinary continuum of integrated work that responds initially to natural and human-made disaster, but then leads to coordinated relief and development projects, and eventually seeks longer-term justpeace. Students learn how normative "regimes" or changed behavior are built and sustained by societal, state, and global actors. Students apply critical interview skills among professionals of diverse disciplines, and in particular, meet the range of development organizations headquartered in Colorado.

CPSY 4567 Culture Lab: Cultural Humility & Global Mental Health Internship Preparation (1 Credit)

This course is designed to prepare IDP students for work with a variety of organizations and vulnerable populations in cross-cultural settings, both in-person and virtually. Specifically, this course will prepare students for an 8-week international mental health/psychosocial summer internship in countries with a history of acute, chronic, and/or cyclical human-made and natural disasters (although most are now in a stabilization, reconstruction, and/or development phase). Through a blended composition of instruction, self-reflective exercises, case studies, course readings, lectures, and guest speakers, and integrating perspectives from social psychology, cross-cultural psychology, and medical anthropology, students are expected to identify and reflect on personal expectations heading into internship. In addition, this course is designed to provide students with the skills necessary to anticipate and problem-solve cross-cultural challenges, including potential value conflicts and miscommunication that may arise while in the field.

CPSY 4569 Integrative Psychotherapy with Children, Adolescents and Parents in Crisis (2 Credits)

This course will explore theoretical and practical approaches to working with children, adolescents and their parents. Integrative frameworks will be discussed that view culture, family system and individual functioning as inter-related. Family, parent and child-specific interventions will be explored. Group, family, parent and individual play interventions will be explored. Family and individual therapy approaches to family crises (such as parental divorce conflict, exposure to family violence, parental deployment, parental death) as well as interventions following disasters will be studied. Finally, the problems and solutions to vicarious traumatization of therapists working with traumatized families will be explored.

CPSY 4570 Crisis Intervention & Suicide Prevention (3 Credits)

Mental Health professionals are frequently called upon to intervene in various crisis situations, either at the point of crisis event or in the aftermath. The course includes an emphasis on both domestic and global frameworks and is designed to provide a stimulating environment in which students critically examine theoretical models, recent research, good practice standards, and contemporary debates regarding crisis and suicide intervention strategies. This course teaches a model and techniques for assessment, initial intervention and follow-up with individuals in high stress situations requiring immediate crisis intervention (both domestically and globally). Additional topics include: assessment and intervention in cases of risk of harm to self, non-suicidal self-injury (NSSI) violence in the schools, severe and persistent mental illness (SPMI), working with chronically suicidal clients, the emerging field of Critical Suicidology, M-1 Holds, suicide terrorism and other forensic issues and public health and prevention models. The class will explore ethical issues surrounding intervening in crisis situations. We will also attend to how issues of marginalization and oppression, as well as strengths and resiliency factors, affect crisis intervention with people of color, LGBTQIA+ individuals, indigenous communities, women and others who experience social, economic and political disenfranchisement. Designed to assist students in developing critical thinking skills, necessary for crisis intervention related assessment, program design, implementation, and evaluation this class features case studies and mock risk assessments so that students feel ready to conduct these skills in the real world. At the end of this course students should have knowledge of how to intervene in various types of crises based on empirically supported frameworks and recent developments in the field.

CPSY 4580 Psychodynamic Theory (3 Credits)

Traditional and modern theories of psychodynamic concepts will be presented. Students are instructed on the use of such theories as a tool to structure interventions in their field work.

CPSY 4585 Family Systems (3 Credits)

A comprehensive review of family therapy concepts and treatment theories. A review of the applicable literature of family therapy is provided with an emphasis on cross-cultural models and interventions.

CPSY 4590 Psychology of Loss and Grief (2 Credits)

A review of the theory of loss and grief. The course reviews cultural understandings of loss and grief as seen following disaster and conflict. Treatment modalities of loss and grief are also presented.

CPSY 4591 Supervision Group - IDP (1 Credit)

This class is an opportunity for students in field-placements to receive additional supervision for their field-placement work. Students present and receive supervisory consultation about their work in these settings.

CPSY 4595 Global Mental Health Internship (6 Credits)

Students will spend one quarter in various international locations working in full time internships with international nonprofit organizations applying the principles and knowledge obtained during their study in the IDP program. Students will work under faculty and professional supervision.

CPSY 4600 Community Psychology in an International Setting: South Africa (5 Credits)

Community Psychology in an International Setting: South Africa combines pre-departure academic study at the University of Denver (DU) with service learning field placements in the Republic of South Africa (RSA). The course requires attendance at four classroom session prior to departure, full participation in a field placement while in RSA, and a re-entry meeting upon our return. Overall, the fundamental focus will be on community psychology in RSA - salient issues, challenges, resources, and success in post-Apartheid South Africa. Community psychology both shapes and reflects change. Students will learn about how various historical and current policies in RSA have shaped (and disenfranchised) various communities throughout the country. Field placements will prioritize community psychology issues inherent in the organizations, people, and settings of historically disadvantaged black communities in South Africa. Secondly, academic topics will include the history of RSA (emphasizing pre- and post-Apartheid time periods), current challenges in RSA (ethnicity, immigration, HIV/AIDS, increased crime rate), and cultural aspects of RSA. Pre-departure classes will also focus on the pragmatics of the trip, team-building, and exploring the goals of international service learning.

CPSY 4601 Psychology and Race in an International Setting: South Africa (5 Credits)

Psychology and Race in an International Setting: South Africa combines pre-departure academic study at the University of Denver (DU) with service learning field placements in the Republic of South Africa (RSA). The course requires attendance at four classroom sessions prior to departure, full participation in a field placement while in RSA, and a re-entry meeting upon our return. Overall, the fundamental focus will be on race and psychology in RSA – salient issues, challenges, resources, and successes in post-Apartheid South Africa. Race both shapes and reflects change. Students will learn about how various racially-based historical and current policies in RSA have shaped (and disenfranchised) various communities throughout the country. Field placements will prioritize community psychology issues inherent in the organizations, people, and settings of historically disadvantaged black communities in South Africa. Secondly, academic topics will include the history of RSA (emphasizing pre- and post-Apartheid time periods), current challenges in RSA (ethnicity, immigration, HIV/AIDS, increased crime rate), and cultural aspects of RSA. Pre-departure classes will also focus on the pragmatics of the trip, team-building, and exploring the goals of international service learning.

CPSY 4605 Psychotherapy Interventions (3 Credits)

This course will survey different theoretical models of psychotherapy with an emphasis on specific intervention approaches.

CPSY 4606 Sexuality and Gender-based Violence (3 Credits)

This course will explore human sexuality across the life span as well as and gender-based violence (GBV) in both domestic and international settings. Through engagement with historical artifacts, academic research, case studies, documentary films, and interviews with survivors, students will gain an in depth understanding of the dynamics of violence as it relates to gender identity and expression, sexual orientation, race, class, religion, and culture through the interconnectedness of oppression and critical cultural considerations. We will examine the socioecological and psychological impact of violence, including gender socialization, societal/cultural messages and norms about violence, and the pervasive impact of trauma for survivors of identity-based violence. Students will work collaboratively to interrogate barriers to change, identify effective prevention and response strategies, and develop skills to respond compassionately and intervene in culturally appropriate ways.

CPSY 4610 Exercise Physiology (2 Credits)

This course offers an advanced study of selected areas in physiology of sport and exercise. The applied perspective emphasizes understanding the principles in designing effective conditioning programs for performance, fitness, and health. Empirically valid principles of training for muscular fitness (e.g., strength, power, speed) and energy fitness (i.e., aerobic and anaerobic) are explored. Additionally, environmental influences (e.g., altitude), lifestyle choices (e.g., nutrition), and selected developmental considerations (e.g., as related to gender differences) are discussed. Applications to sport and performance psychology consulting in sport, performing arts, and high-risk professions complement the course content.

CPSY 4615 The Elite Athlete Brain (3 Credits)

The primary goal of this course is to provide students with an understanding of the expert's brain from sport and performance literature. The course will review landmark and recent publications examining expert-novice contrasts, and those of athlete-non athlete comparisons. Students will review literature on training interventions to accelerate the development of expertise and learn to evaluate the validity of scientific claims of related consumer products. Students will gain a basic understanding of where state of science in understanding sport related concussions, including diagnostic tools, recovery, and prevention.

CPSY 4620 Kinesiology (2 Credits)

This course is an in-depth exploration of selected areas of kinesiology as a discipline and a profession focusing on human movement. Based on interdisciplinary theoretical and empirical perspectives, the explored areas include: (a) functional anatomy as related to adaptations to training; (b) biomechanics; (c) neurophysiological processes involved in motor learning and motor control; and (d) other relevant biophysical processes (as related to talent selection and development, physiological adaptations to training, etc.). In addition, this course surveys career opportunities in academic study and clinical practice in various areas of sport, fitness, exercise, and physical education.

CPSY 4630 Adept, Professional, Supervisor and Leader (2 Credits)

This course addresses the multiple roles of sport and performance psychology (SPP) consultants from a developmental perspective (i.e., education and training, early years in the profession, and full professional maturity). In-depth examinations of the consultant as an expert, person, performer, and self-regulator are grounded in the SPP literature and theoretical accomplishments in related fields (e.g., counseling psychology). Additionally, the acquisition of fundamental knowledge, skills, and abilities involved in supervision (mentorship) and further socialization to the field of SPP with an emphasis on positive leadership for local, national, and global progress complement the course content.

CPSY 4635 Athletic and Performance Nutrition (2 Credits)

Graduate level course educating student-coaches and administrators and performance specialists to use research and best practices in performance nutrition to achieve athletic and performance enhancement, and general wellbeing. The course will help facilitate students' ability to influence sporting and general environments to use nutrition as a means to enhance performance, with a secondary examination of preparing students to understand and manage individual differences, needs, and motivations for food choices. Course content will include modeling nutrition, encouraging a sense of family at team meals, leveraging media to internalize nutrition behaviors, and impacting availability of positive nutrition choices.

CPSY 4650 Sport Psychology (3 Credits)

A comprehensive view of the field of sport psychology will be covered. Through participation in this course, students will develop a better understanding of the field of sport and exercise psychology and develop skills that will assist in enhancing their career opportunities. Varied psychology topics (e.g., individual differences/personality, motivational orientations and strategies, applied psychological skills, social influence and group dynamics) with an emphasis on understanding major theories and research and applying those theories and research findings to diverse sport, exercise, and performance settings. Additionally, the psychological effect that participation in a sport or a physical activity has on a performer including anxiety reduction, aggressive behavior, and personality development will be explored.

CPSY 4652 Theoretical Aspects of Sport and Performance Psychology (3 Credits)

This course is an in-depth exploration of selected aspects of the theories of sport psychology along with applications of these theories to other performance domains. An advanced understanding of the field of sport and performance psychology is pursued in relation to psychosocial aspects involved in both the preparation and performance processes among adults, youth, and children who represent all skill levels. The explored areas include: (a) motivation, confidence, and anxiety in sport and performance, (b) selected topics in social psychology and psychobiology, (c) psychological skills training, and (d) special topics (e.g., personality, flow, injuries, burnout).

CPSY 4653 Sport in American Society (4 Credits)

This course examines sport as a social construct within American society. Both aspects of this relationship will be explored: (1) The influence of social context on sport, and (2) The influence of sport on society. The course will emphasize sport as an agent for social change. Topics for exploration will include the intersection of sport and: gender, race/ethnicity/culture, socioeconomic status, media, violence, deviance, religion, and politics.

CPSY 4654 Coaching & Leadership (3 Credits)

This course is a survey of the intersection of coaching, leadership, organizational behavior, organization dynamics, and change management. It examines the definitions, history, theories, and research in the sport and management leadership literature. Students will gain an understanding of how planning, motivation, team building, and leadership impact a team's or organization's effectiveness. Students are expected to learn and personally develop the analytical and leadership skills that affect individual and group performance.

CPSY 4655 Social Psychology of Sport (3 Credits)

This course will address the relationship between sport and cultural dynamics, sociological factors underlying competitive physical activity, and behavioral responses of sport participants and supporters to various socio-cultural motivations. This course will be a serious study of organized professional, amateur, and youth sports in North America. Emphasis will be placed on social forces that both impinge on and enhance athletic activities and organizations, and the influence sport has on society.

CPSY 4656 Psychology of Injury (3 Credits)

In this course, students will explore psychological theory, research, and practice in relation to the prevention, occurrence, and rehabilitation of sport injuries. Major topics will include: psychological risk factors for injury, psychological responses to injury, and psychological interventions to prevent sport injuries and enhance sport injury rehabilitation.

CPSY 4657 Motivational Interviewing (2 Credits)

This is an advanced course reviewing the theories and research findings related to motivational interviewing with the goal to apply them to performance (athletic, non-athletic) and exercise contexts. Topics include motivation for behavior change, transtheoretical model of behavior change, self-determination theory as applied to behavior modification, and the relationship between and the influences of emotion and motivation on counseling and sport and performance consultation. This course will place an emphasis on relating current leading theories and research evidence to consulting work. Equally in importance, there will be in-class hands-on activities (e.g., role playing), experiences (e.g., self-reflective tasks) and assignments (e.g., role playing tasks) that will add to the student competence in motivational interviewing.

CPSY 4660 Sport Psychology Interventions and Techniques (3 Credits)

Students will acquire knowledge and increase their comprehension of cognitive-behavioral intervention strategies (e.g., mental skills training) and how they can be applied to achieve optimal performance of athletes and others. The complex interaction between the sport psychology consultant and performer will be explored.

CPSY 4662 Foundation of Counseling Theories (3 Credits)

This course will review major contemporary counseling models, theories, procedures, and the helping relationship. Advanced study of techniques and research findings. Survey of principles underlying individual, family systems, and multicultural approaches to counseling.

CPSY 4663 Applied Motor Learning (2 Credits)

This course is an advanced examination of applied motor behavior theories and research. Emphasis is given to understanding of the processes involved in controlling skilled movement and the principles of skill acquisition to guide designing effective learning environments, practice schedules, and practice units. The examined areas include: (a) the field of study of motor control and learning; (b) performance and learning variables as impacting retention and transfer; (c) information processing model; (d) sensory and central contributions to motor control; (e) individual differences; and (g) instruction, demonstration, and feedback across different stages in motor learning.

CPSY 4664 Practicum in Sport and Performance Psychology III: Business Principles (3 Credits)

This is the third course in a year long, three-part sequence. This course serves the purpose of (a) providing an opportunity for students to learn about sport and performance psychology through observation and experiential opportunities; (b) providing an intimate forum for discussing the practice of sport and performance psychology; and (c) providing information on professional development and conduct. The course requires didactic and experiential activities. Business, consultation, and professional development issues in sport and performance psychology will be addressed. Prerequisite: CPSY 4673.

CPSY 4665 Beh Kinesiology & Physiology (3 Credits)

A study of human movement. Topics will include but are not limited to structural anatomy, biomechanics, and neurophysiology. the biomechanical etiology of various injuries will be studied.

CPSY 4666 Movement Principles for Performance (3 Credits)

This course is an exploration of selected areas of the exercise and sport sciences. The explored areas include: functional anatomy, biomechanics, and exercise physiology.

CPSY 4668 Psychology of Excellence (3 Credits)

The purpose of this course is to examine the theories, research, and intervention strategies related to the pursuit of excellence. This course explores the deliberate interventions necessary to support the development of excellence and expertise. Students will learn the nature of expertise development, the necessary steps to achieve excellence, and common roadblocks. The concept of excellence will be investigated in many contexts, such as sport and performance, intrapersonal, relationships, and life in general. Topics to be explored include: happiness, contentment, life satisfaction, values, character strengths, emotional intelligence, optimism, hope, flow, and resiliency.

CPSY 4669 Consulting Methods & Practices (3 Credits)

This course is an advanced exploration of theories, research findings, and skills related to the practice of consultation in performance settings. Specific topics include: (a) the consultant roles; (b) the major theoretical approaches to consultation (e.g., mental health, systemic); (c) the processes and stages of consultation (e.g., developing interpersonal relationships; design, implementation, and evaluation of service delivery); (d) ethical and multicultural issues; and (e) students' personal strengths and concerns in the role of a consultant (e.g., values interpersonal style, and consultant variables that impact the effectiveness of their role as an agent of behavior change).

CPSY 4670 Psych of Coaching & Leadership (3 Credits)

Examination of psychological components of coaching and talent development. Explores coaching development, coaching models, as well as strategies for dealing with athletes and different coaching contexts. Discussion of talent development theories including influence of genetic and environmental factors.

CPSY 4671 Theories of Performance Excellence (3 Credits)

This course is designed to familiarize students with theories of performance excellence developed by leading practitioners. Each week, students are exposed to a different practitioner's approach, which often includes an opportunity to observe the practitioner's style through video. Emphasis is placed on the role of theory in practice, theory-based conceptualizations utilizing a case study format, and comparing and contrasting the different theories.

CPSY 4672 Counseling Methods & Practices (3 Credits)

This course is an introduction to counseling microskills and techniques needed in helping relationships, with attention to building the therapeutic alliance. Emphasis placed on learning skills in small group format. Laboratory experience in demonstrating skills and the ability to form an effective counseling relationship is required. Pre-practicum experience to prepare students to work with clients.

CPSY 4673 Practicum in Sport and Performance Psychology 2 (3 Credits)

This is the second course in a year long, three-part sequence. This course serves the purpose of (a) providing an opportunity for students to learn about sport & performance psychology through observation and experiential opportunities; (b) providing an intimate forum for discussing the practice of sport and performance psychology; and (c) providing information on professional development and conduct. The course requires didactic and experiential activities. Psychological consultation, best practices, and professional development issues in sport and performance psychology will be addressed. Prerequisite: Practicum in Sport and Performance Psychology I.

CPSY 4674 Clinical Issues: Interviewing and Diagnosis (3 Credits)

This course examines adult psychopathology as classified in the DSM. Special emphasis will be placed on the intersection of performance with more traditional psychopathology. Students learn about etiology, symptomology, epidemiology, and treatment issues. Possible causes and contributory factors are examined, as well as theoretical and multicultural considerations. Prerequisites: Theoretical Aspects of SPP, Applied SPP, and Ethical Issues in SPP.

CPSY 4676 Assessment and Measurement (3 Credits)

This course covers the selection, use, and proper interpretation of common sport and performance psychology assessments. Basic principles of educational and psychological measurement, including test construction, validity, and reliability are addressed. The assessments taught include those used for individual assessment, individual selection, and organizational assessment (360 degree feedback, surveys, etc.). Prerequisites: CPSY 4652, CPSY 4690, and CPSY 4682.

CPSY 4677 Motivation, Emotion & Learning (3 Credits)

This is an in-depth course reviewing the theories and research related to motivation, emotion, and learning in performance contexts. Topics include the relationships between motivation, emotion, and learning; and the influences of emotion and motivation on counseling and consultation. The course provides basic information about the human cognitive system. Students are taught the basic principles of learning, with a focus on the principles of learning which are most applicable in sport and performance settings. This course places an emphasis on relating current research to practice.

CPSY 4678 Scholarly Writing Methods and Practices (1-3 Credits)

The primary goal of this course is to familiarize students with the methods and practices of scholarly writing. The course focuses on writing a scholarly review of literature, methodology, results, and conclusions according to APA style. Within the course, students are also asked to review one another's work while developing editing skills and methodological complexity.

CPSY 4679 Field Placement Practicum in Sport and Performance Psychology (3 Credits)

Supervised practice sport & performance psychology in an approved sport or performance setting under licensed practitioners.

CPSY 4680 Sport and Performance Psychology Practicum (3 Credits)

This course will familiarize students with professional issues relevant to the practice of sport and performance psychology. Students will be presenting and analyzing their current applied experiences as coaches and leaders in sport and performance settings in the community. This is a participation-intensive course and the students will receive feedback and suggestions from both the instructor and peers in a group supervision format. Importantly, the ongoing feedback and readings will provide an opportunity for students to understand and apply theories and practice systems of behavior change in sport and performance psychology in the context of their own clients/cases. Students will learn the roles and responsibilities inherent in professional and ethical consultation, with a special emphasis given to the dilemmas of serving as an embedded consultant.

CPSY 4681 Multicultural Issues (3 Credits)

This course covers the research and theories of counseling the culturally different client. Students are expected to develop multicultural skills, including culturally-based conceptualization, assessment, and selection of culturally appropriate intervention strategies. This course will examine these issues in general, with a special emphasis on those in sport and performance cultures. This is both an experimental and seminar-based course, aimed at developing student's personal awareness, knowledge, and skills.

CPSY 4682 Ethical and Legal Issues (3 Credits)

This course introduces the students to the ethical principles, codes, and standards related to the profession of sport and performance psychology. This includes an overview of the regulation of the practice of psychology, the relationships between ethical codes and legal statutes, and the development of a personal model for ethical decision-making.

CPSY 4683 Group Interventions (3 Credits)

This course is a survey of group counseling methods and techniques from a theoretical and applied perspective. The course will include practical application of group counseling interventions. Prerequisites: demonstrated knowledge of ethical principles and departmental consent.

CPSY 4684 Team and Organizational Dynamics (3 Credits)

This course examines the principles, theories, and research of human functioning in performance related teams and organizations. It explores the social and psychological factors influencing behavior in organizations, along with individual differences, dyadic relations and small group behavior. Students learn about the dynamics of team and organizational diagnosis, feedback and learning, intervention, and planned change.

CPSY 4685 Human Growth & Development (3 Credits)

This course is a comprehensive analysis of theories and research relating to human psychological development and learning across the lifespan. It explores the cognitive, affective, academic, physiological, moral, and social/cultural/racial domains. An emphasis is placed on a) the theoretical models underlying character and moral development, and b) adolescent and college student development theories.

CPSY 4686 Practicum in Sport and Performance Psychology: Professional Practice (3 Credits)

This course provides an examination of the critical components of successful and ethical professional practice and career building in sport and performance psychology in conjunction with intensive provision of sport and performance psychology services. The entire body of sport and performance psychology theoretical and applied knowledge as well as the skills that the students have acquired will be utilized. Additionally, rigorous self-reflective activities and ethical decision-making will increase the student professional and personal growth as directly related to effectiveness in the sport and performance psychology practice. Emphasis will be placed on diversifying and integrating theoretical knowledge and applied strategies and skills while simultaneously engaging in supervised independent work in real life sport and performance settings.

CPSY 4687 Psychology of Injury (3 Credits)

This course examines the psychological factors involved in injury, rehabilitation, and return to performance. The effects upon social, personal, and performance adjustment are addressed. The course covers how relevant theory and research can be used to inform practical applications to help the injured performer's rehabilitation and return. It presents the major medical aspects of injury and the rehabilitation process.

CPSY 4688 Seminar in Sport and Performance Psychology (3 Credits)

Advanced seminars offered by sport and performance psychology faculty on topics relevant to the practice and science of sport and performance psychology area.

CPSY 4689 Psychophysiology and Biofeedback (2 Credits)

This course explores the underlying mechanisms and psychophysical determinants of behavior in sport and performance settings. Students learn the use of biofeedback in achieving voluntary self-regulation and control of stress related behaviors.

CPSY 4690 Sport and Performance Psychology Interventions (3 Credits)

This course is designed to familiarize students with the application of sport and performance psychology interventions. Students experience the building of a sport and performance psychology program. This program includes the cardinal skills of relaxation, concentration, imagery, self-talk, and mental routine; followed by broader topics such as goal setting, motivation, confidence, cohesion, engagement, and mastery. The instructor briefly reviews relevant theory and research followed by demonstrations of techniques and strategies, after which students learn by doing. Specific attention is given to blending the science of peak performance with the art of applying science.

CPSY 4691 Practice Development in Sport and Performance Psychology (3 Credits)

The primary goal is to acquaint students with the skills needed to develop and implement a private practice in the profession of sport or performance psychology. The course takes students through the process of business development by using the traditional business plan model, from the necessary startup expenses to the executive summary. Throughout the course students learn the What, When, Where, and How of starting their own consulting practice, while learning the basic components of branding, marketing, and operations. Prerequisite: Must be enrolled in the MASPP program or instructor approval.

CPSY 4692 Entrepreneurship in Sport and Performance Psychology (3 Credits)

The primary goal of this course is to provide students with an overview of skills necessary to succeed in the entrepreneurial profession of sport and performance psychology. The course is flexibly designed to accommodate the students' desired career paths. Topics covered may include: sales and marketing, developing a practice, job search and interviewing skills, and understanding the job market.

CPSY 4700 Organization and Administration of Sport (4 Credits)

Graduate level course to educate students on the organization and administration of sport and sport coaching. Course content includes emergency action planning, facility management, human resource management, evaluation and development, legal responsibilities, record keeping, finance, and public relations. Students will learn how to lead organizations and coaching staffs to develop fair and safe participation.

CPSY 4705 Sociocultural Aspects of Sport Coaching (4 Credits)

Graduate level course to educate students on the sociocultural and social-psychological aspects of sport coaching and athletic performance. Students will understand how to analyze and apply social, sociological and social-psychological theory to sport coaching and athletic performance. Consideration will be given to developing a critical understanding of sport coaches' knowledge development, and how to implement multiple, effective and ethical strategies to enhance coach and athletic performance.

CPSY 4710 Motor Learning and Sport Pedagogy (4 Credits)

Graduate level course to educate students on the science and practice of how athletes learn motor skills and how coaches can facilitate skill acquisition. Course content includes the scientific and theoretical frameworks of motor learning, with a secondary examination of motor control and development. Applied course content will focus on how coaches can use learning strategies such as demonstration, instruction, feedback, and practice planning to improve athletic performance.

CPSY 4712 Tactical Strength and Conditioning Coaching (2 Credits)

The purpose of this course is to educate students on the scientific, theoretical and practical aspects of tactical strength and conditioning. Students will learn how to design tactical strength and conditioning programs to enhance performance and reduce and lessen the severity of injury. This course is also intended to help students begin to prepare to pass the National Strength and Conditioning Association's (NSCA) Tactical Strength and Conditioning Facilitator (TSAC-F) certification, and related professional development opportunities.

CPSY 4715 Strength, Conditioning, and Injury Prevention Program Design (4 Credits)

Graduate level course to educate students on the scientific, theoretical and practical foundations of strength, conditioning and injury prevention. Students will learn how to design strength and conditioning programs to enhance athletic performance and reduce and lessen the severity of injury. This course is also intended to help students become familiar with the National Strength and Conditioning Association's (NSCA) Certified Strength and Conditioning Specialist (CSCS) exam, and position statements from several national governing bodies on athlete safety and physical performance.

CPSY 4720 Psychology of Athletic Performance (4 Credits)

Graduate level course to educate students on the psychological aspects of athletic performance, and secondarily coach performance. Course content includes the theoretical and practical application of established mental skills (e.g., motivation, efficacy, arousal, anxiety, focus, self-awareness, goal-setting, imagery, team cohesion). Concepts will be applied to the evaluation and creation of practice and training plans to enhance athletic performance.

CPSY 4722 Social-Psychology of the Body, Health, and Performance (2 Credits)

The purpose of this course is to understand the ways in which people in society understand the body in sport, physical activity and health and wellness. Or in more simple terms, answer the question: why society thinks about the sporting, healthy and physically active body in the ways that it does? In order to acquire this understanding we will explore the complex and powerful historical, social and cultural forces that have shaped the assumptions underpinning the sporting, physically active and healthy body. No prerequisites exist for this course.

CPSY 4723 Applied Sports Technology for Coaches (2 Credits)

This elective graduate level course is designed to educate students on the uses, effects, and ethics of technologies on athletic performance. Students will learn about the breadth of research and uses of technologies in attempts to enhance athletic performance. Course content includes surveying the sports technology field, technology ethics, positive and negative effects of technology, evaluating knowledge claims (i.e., reliability, validity, measurement issues), and common uses of technology to enhance performance (e.g., team communication, athlete monitoring and tracking, instruction and feedback, apps).

CPSY 4725 Philosophy and Ethics of Sport Coaching (4 Credits)

Graduate level course to educate students on the philosophical, social, and ethical foundations of sport and sport coaching. Course content includes the history and formation of sport and sport coaching, social issues (e.g., race, class, gender, inclusivity, etc.), how sport is used for (un)desirable ends and the public good, the coach's role in demonstrating and encouraging ethical behavior, and promoting a healthy and safe environment for numerous stakeholders. Leadership theory (e.g., transformational and servant leadership, emotional intelligence, athlete-centered coaching) is also touched upon and discussed in relation to the ethics and norms of sport, and the relationship between educational institutions and sport/athletics. There are no prerequisites for this course.

CPSY 4730 Biomechanics of Athletic Performance (4 Credits)

Graduate level course to educate students on the biomechanics of athletic performance. Students will learn quantitative and qualitative methods of biomechanics to analyze and enhance athletic performance and prevent injury. Course content includes knowledge of the musculoskeletal system, force development and how additional factors such as body composition and joint structures influence athletic performance and injuries.

CPSY 4735 Understanding Sport Research (4 Credits)

Graduate level course to educate students on understanding and doing sport research. The primary focus of this course is on facilitating student's understanding of research methods commonly used in sport research. Secondly, the course will examine how research is actually done, including reviewing the literature and writing and referencing scholarly work. Course content will cover topics such as paradigms and philosophy of science, epistemology and the creation of knowledge, and numerous research designs, methodologies and methods. Content will also include understanding statistics and qualitative methods.

CPSY 4736 Practicum in Strength and Conditioning and Fitness Coaching (1 Credit)

The purpose of the Practicum in Strength, Conditioning, and Fitness Coaching course is to help students gain the knowledge, skills and attitudes to become a quality coach and a reflective practitioner through experiential learning. Students will be provided with a variety of strategies and methods to solve real-world strength, conditioning, and fitness coaching problems in real life settings. Students will draw upon other coursework, research, and practical insights to exercise professional judgement. Students must complete at least 50 hours of coaching throughout the quarter.

CPSY 4740 Practicum 1 in Sport Coaching (1 Credit)

Practicum 1 in Sport Coaching helps students to gain the knowledge, skills and attitudes to become a quality coach and reflective practitioner through experiential learning. Students will draw upon MASC course content and their coaching experiences to reflect upon the complexities of sport coaching to integrate their knowledge and skills to identify and solve problems. Students must complete at least 50 hours of coaching for every one hour of credit enrolled. This course provides basic to intermediate level content and prepares students for Practicum 2. Prerequisites: Passed background check, submitted current CPR/First Aid certificate at level in which student is coaching and valid for the full quarter while enrolled. Student must be enrolled in the MASC program.

CPSY 4745 Practicum 2 in Sport Coaching (1 Credit)

Practicum 2 in Sport Coaching helps students to gain an advanced understanding of the knowledge, skills and attitudes to become a quality coach and reflective practitioner through experiential learning. Students will draw upon MASC course content and their coaching experiences to reflect upon the complexities of coaching to solve vital problems. Students must complete at least 50 hours of coaching for every one hour of credit enrolled. Prerequisites—one earned credit of Practicum 1, passed background check, submitted current CPR/First Aid certificate at level in which student is coaching and valid for the full quarter while enrolled. Student must be enrolled in the MASC program.

CPSY 4750 Sport Coaching Capstone (1-4 Credits)

Capstone literally means "a finishing stone or a structure." Similarly, students will complete a project that demonstrates the student's initiative and excellence. To help explore the student's interest and refine a suitable topic, students are encouraged to discuss the capstone project with course instructors early and throughout their time in the MASC program. Students may build off a previous course activity or assignment, but the Capstone Project must reflect new and substantive work appropriate to the number of hours enrolled. While students have the autonomy to negotiate new project ideas, sample projects could include: thesis or original research, review of literature paper, presentation at conference, leading a service-learning event, writing a book chapter, authoring a novel or other creative writing, or a webinar. Prerequisites: Students must have completed at least 16 credit hours towards the MASC degree and have completed or being enrolled concurrently in Understanding Sport Research.

CPSY 4751 Applied Sport Coaching 1: Intro to Reflective Practice & Applied Research (1 Credit)

Applied Sport Coaching 1 introduces students to reflective practice and how to become a reflective practitioner. Students will draw upon a variety of discourses and practices to understand the significance of framing and naming problems and implementing potential solutions within their own context. To help become a skilled scholar-coach, students must complete at least 50 hours of coaching or coaching related duties throughout the quarter. The course culminates with an introduction to action research, and other forms of applied research, and shifts the student from their own reflective practice to a wider, rigorous social research approach to addressing sport or coaching problems.

CPSY 4752 Applied Sport Coaching 2: Theory, Literature, and Planning Applied Research (1 Credit)

Applied Sport Coaching 2 introduces students to key issues and challenges of the action research process and additional forms of applied research. Students consider the meaning and social construction of science, research, and enduring concerns such as ethics, power, and benefit and harm. Students consider the role theory takes in action and applied research, identify a focus of the research, review relevant literature, and develop relationships with key stakeholders. Students may also submit institutional review board approval and develop additional materials or tools for their research.

CPSY 4753 Applied Sport Coaching 3: Data Collection and Analysis (1 Credit)

Applied Sport Coaching 3 exposes students to issues and methods pertaining to data collection and analysis. Also, students reconcile issues related to the research process and make decisions that focus the scope of the research. Students further their relationships with key stakeholders and, if not already, obtain institutional review board approval prior to data collection. With stakeholders, students solidify the framing of the problem to be addressed and use data collection and analysis methods to understand the problem.

CPSY 4754 Applied Sport Coaching 4: Implementing Action Plans (1 Credit)

In Applied Sport Coaching 4, students plan, implement, and reflect on their action, or applied, research. Students' time is "in the field" working through the messy complexities of practice in relation to theory and method. Students learn to manage obstacles that arise and deepen their understanding of what is going on in practice and why. As needed, students revisit theory, literature and method to develop new insights on the path of implementing a rigorous sustainable solution to their identified research problem.

CPSY 4755 Applied Sport Coaching 5: Writing and Communicating Research (1 Credit)

Writing up research, as well as creating other ways to communicate the action research to stakeholders and partners, is a significant challenge. In Applied Sport Research 5, students learn issues related to journal style guidelines, including key issues such as audience, tone, writing style, and submission guidelines and instructions for authors. Also, students learn how to communicate in a variety of ways to lay audiences and community partners and stakeholders, which is essential to providing benefit to partners.

CPSY 4756 Applied Sport Coaching 6: Knowledge Dissemination and Reflection (1 Credit)

Applied Sport Coaching 6 is the culmination of two key milestones. First, this course facilitates students' dissemination of their action, or applied, research studies. Students finish their written manuscript and submit it for publication. Students also reflect on the entirety of the research process and reflective practice. Through the submission process, students develop an understanding of what it takes to become a scholar-coach, they contribute to the advancement of science in sport, and they have their work challenged by the peer review process. Second, this course is the culminating experience for students in the Masters of Arts in Sport Coaching degree program. Students reflect on their growth while in the program and consider next steps on the journey as lifelong learners and scholar-coaches.

CPSY 4801 Evidence-Informed Strength and Conditioning and Fitness Coaching 1 (1 Credit)

The purpose of this course is to expose students to the scientific literature in strength, conditioning, and fitness. Course content will cover historical, pioneering, and contemporary research trends in the field. Students will come to appreciate how scientific knowledge is created, disseminated, and influences human behavior and society. Research topics for this course focus on applied aspects of biology, genetics, physiology, and nutrition in relation to strength, conditioning, and fitness.

CPSY 4802 Evidence-Informed Strength and Conditioning and Fitness Coaching 2 (1 Credit)

The purpose of this course is to expose students to the scientific literature in strength, conditioning, and fitness. Course content will cover historical, pioneering, and contemporary research trends in the field. Students will come to appreciate how scientific knowledge is created, disseminated, and influences human behavior and society. Research topics for this course focus on applied aspects of bio-mechanics, anatomy, kinesiology, and motor development in relation to strength, conditioning, and fitness.

CPSY 4803 Evidence-Informed Strength and Conditioning and Fitness Coaching 3 (1 Credit)

The purpose of this course is to expose students to the scientific literature in strength, conditioning, and fitness. Course content will cover historical, pioneering, and contemporary research trends in the field. Students will come to appreciate how scientific knowledge is created, disseminated, and influences human behavior and society. Research topics for this course focus on applied aspects of the psychology of strength, conditioning, and fitness.

CPSY 4804 Evidence-Informed Strength and Conditioning and Fitness Coaching 4 (1 Credit)

The purpose of this course is to expose students to the scientific literature in strength, conditioning, and fitness. Course content will cover historical, pioneering, and contemporary research trends in the field. Students will come to appreciate how scientific knowledge is created, disseminated, and influences human behavior and society. Research topics for this course focus on applied sociocultural aspects of strength, conditioning, and fitness.

CPSY 4991 Independent Study (1-17 Credits)**CPSY 4995 Independent Research (1-17 Credits)****CPSY 5000 Rad Behav/Func Contextl Models (3 Credits)**

CPSY 4000 is designed to provide a historical, philosophical and conceptual background to better understand and appreciate Behaviorist views of "being-in-the world". The course lays the foundation for the sophisticated application of a science of behavior-its theories and methods-to the assessment of clinical problems and the art of doing psychotherapy. The course will invite a little discomfort, disturb some preconceptions, and compel students to address some difficult questions and thorny issues. Among the goals of this course are to see students commit to being more than a psychologist technician, to encourage them to develop a guiding philosophical core in their practice as a psychologist; to assist them in clarifying or deepening whatever philosophical worldview they may hold; and that they will have achieved an informed understanding of radical behaviorism/functional contextualism - whether or not they choose to further pursue these models.

CPSY 5010 Cognitive & Affective Models (3 Credits)

This is the first in a three part sequence that includes Psychophysiology and Clinical Neuropsychology and is designed to introduce students to the current research in cognitive neuroscience and consciousness. This first course focuses on sensation/perception, learning, memory, emotion, language and other higher cognitive functions. Lectures will emphasize current technologies and historical inquiry and the unique contributions made by psychosocial and cultural variables.

CPSY 5020 Psychoanalytic Models (3 Credits)

Psychoanalytic theories, including Freud's topographic and structural theories, ego psychology, object relations theory and modern relational theories, including self-psychology and intersubjectivity.

CPSY 5030 Systems Models (3 Credits)

Basic concepts of general systems theory and their applications in psychology, focusing on family systems, groups and organizations.

CPSY 5040 History and Systems in Psych (2 Credits)

Basic psychological concepts surveyed from a historical point of view, tracing development of psychological bases of professional practice.

CPSY 5050 Advanced Statistics (3 Credits)

This course is designed to increase students understanding of advanced analytical techniques in statistics, particularly as they pertain to psychology. We will take an applied approach, i.e., the course material will emphasize the feasibility, application, and utilization of these analyses rather than the theories upon which they are based.

CPSY 5051 Statistics I Lab (1 Credit)**CPSY 5070 Research Methods (2 Credits)**

Sequential course that cover fundamentals of structuring, analyzing and critiquing research reports and proposals; strategies to guide and facilitate the writing process; attitude and thinking skills necessary for function as a local clinical scientist; research design tools, methods and strategies for answering different types of questions.

CPSY 5071 Research Methods II (2 Credits)

Sequential courses that cover fundamentals of structuring, analyzing and critiquing research reports and proposals; strategies to guide and facilitate the writing process; attitudinal and thinking skills necessary for function as a local clinical scientists; research design tools, methods and strategies for answering different types of questions.

CPSY 5073 Qualitative Research Methods (2 Credits)

Qualitative research involves obtaining in-depth information about the behaviors and beliefs of people in naturally occurring social settings. This course introduces students to the philosophical underpinnings, history, and key elements of five qualitative approaches: narrative research, phenomenology, grounded theory, ethnography, and case study. We compare theoretical frameworks and methodologies, experience the use of data, and discuss writing strategies. In addition, we read articles that are exemplars of each approach.

CPSY 5075 Program Evaluation Technique (3 Credits)

Theory and techniques for developing management information and assessment systems for human service programs.

CPSY 5080 Diagnosis and Classification (2 Credits)

An overview of major DSM diagnostic categories, as well as an introduction to ICD and noncategorical classification.

CPSY 5108 Introduction to Acceptance and Commitment Therapy (ACT) (2 Credits)

Acceptance and Commitment Therapy (ACT) belongs to the movement in clinical psychological science that sees acceptance and openness to experience as an essential addition to change-focused psychotherapeutic treatment strategies. Although consciously based on behavior-analytic thinking, ACT is a hybrid in terms of approach and technique, bringing together aspects of Zen Buddhism, Gestalt therapy, and humanist-existential thought. The paradox upon which ACT is founded is that only radical acceptance of what cannot be changed empowers people to recognize and change the things that they can. The ACT approach is about embracing necessary suffering in order to make more committed, life-affirming choices and live in accordance with personal values. ACT emphasizes that in a very deep sense all human beings are in the same boat. The technical and theoretical bases of ACT are through normal didactics, but the heart and art of the approach occurs through experiential exercises, group process, and from observation and modeling. Prerequisite: CPSY 5000.

CPSY 5120 Introduction to Animal-Assisted Interventions (3 Credits)

This course serves as an introduction to animal-assisted interventions (AAI) as they are commonly used by mental health care professionals. It is designed to provide students with an overview of the foundations of AAI, the variety of ways in which this modality is used, international perspectives on AAI, various perspectives on ethics and animal welfare, and researchers' current understanding of the role of the human-animal bond in facilitating AAI treatment efficacy. General topics to be addressed include the characteristics of the species used in AAI, the basic principles of AAI, the use of AAI with a variety of populations, and animal abuse issues. A number of guest lecturers will share their knowledge and experiences with students throughout the quarter.

CPSY 5130 Issues in Measurement (3 Credits)

Validity, reliability and standardization issues in psychological testing; statistical properties of commonly used tests.

CPSY 5131 Issues in Measurement Lab (1 Credit)

Optional. Focused assistance with basic math skills; review and clarification of class topics.

CPSY 5170 Life Cycle: Inf to Mid Childhd (3 Credits)

Understanding normal development of children (0-12 years), integrating theory, research and a phenomenological perspective.

CPSY 5180 Life Cycle: Adolescent - Adult (2 Credits)

Understanding normal adolescent development (13-18 years), integrating theory, research and a phenomenological perspective. Major theories, life events, crisis and the adult life phases. There will be an emphasis on the diversity of adult experiences.

CPSY 5200 Life Cycle: Late Adulthood (3 Credits)

Theories of aging; social, psychological and biological changes; assessment and intervention methods, emphasizing issues impacting older adults. (65 years and above).

CPSY 5230 Group Dynamics & Interventions (3 Credits)

Provides psychologists in training with multiple learning experiences highlighting that groups and organizations are intensely psychological environments in which most psychologists function professionally and personally and have the potential to impact positively.

CPSY 5231 Social Psychology (3 Credits)

This course explores how social psychologists approach psychology, concentrating on key concepts, research findings, and critical thinking strategies that students can integrate into their own clinical work.

CPSY 5250 Existential and Humanistic Theory and Therapy (2 Credits)

Historical roots and basic assumption of existential and humanistic views. Students encouraged to integrate materials with their personal values and assumptions about human nature and their interaction with clients.

CPSY 5270 Physiological Psychology I (3 Credits)

Terminology and principles of and research in physiological psychology. Where possible, application made to content and practice of clinical psychology.

CPSY 5271 Physiological Lab I (1 Credit)

Optional. Assistance with material covered in CPSY 4170.

CPSY 5273 Physiological Lab II (1 Credit)**CPSY 5290 Clinical Neuropsychology (3 Credits)**

Historical, conceptual and clinical foundation for, as well as current developments related to, the field of clinical neuropsychology. Includes exposure to: developmental neuropsychology and neuroanatomy; higher cognitive functions; neuropsychologically informed interviews and standard neuropsychological test batteries; neuropsychological profiles associated with a variety of acquired disorders (both classical neuropsychological and psychological in nature); ethnic, cultural, age and gender considerations; and current status of a variety of professional/ethical issues. Prerequisite: CPSY 5270.

CPSY 5310 Ethical Issues in Psychology (3 Credits)

In-depth consideration of ethical standards applicable to the science and practice of psychology; pertinent laws and legal standards governing the practice of psychology; areas in which legal and ethical standards suggests contradictory actions on the part of the clinical psychologist.

CPSY 5320 Professional Issues in Psych (2 Credits)

Issues, concerns and controversies impacting current practice of professional psychology at the state and national levels; preparation for future alternative systems of service delivery. Emphasis is on professional life after the PsyD. Required for first year students.

CPSY 5340 Social Psychology of Racism and Oppression (3 Credits)

Theoretical and experimental nature of racism and oppression, primarily in the United States, definition of such terms as stereotypes, prejudice, racism, white supremacy and privilege; exploration of various theories regarding these terms and how they manifest themselves historically and contemporarily.

CPSY 5360 Racial/Ethnic Identity Dvlpmnt (3 Credits)

This course will explicate the concept of ethnic identification, and the process by which this central aspect of a person's overall identity develops. Accordingly, the two central questions that this course will address are: a. who are they? and b. how did they get that way? These questions will be examined utilizing a Descriptive Psychology perspective.

CPSY 5370 Lesbian, Gay, Bisexual and Transgender Issues (3 Credits)

Various aspects of gay, lesbian life explored cross-culturally; nature of homosexuality, including the controversy of heredity vs. choice. Issues of oppression and discrimination will also be explored. The role of psychology and the politics of homosexuality will be studied. Students will also be asked to explore their personal awareness regarding homosexuality in their everyday lives and in a therapeutic context.

CPSY 5380 Culturally Competent Psychotx (3 Credits)

As the final class in the year-long multicultural course sequence, this class will integrate the theoretical content of the preceding classes and focus on their psychotherapeutic implications. This course will address psychotherapy with the following groups - African Americans, Asian Americans, Latinos, Native Americans, and the GLBT community.

CPSY 5385 First-Year Seminar (2 Credits)

This is a clinical and didactic seminar on beginning psychotherapy. The focus will be on case formulation and developing a therapeutic relationship with the client. Content covered will include foundations of evidence-based practice, common factors, documentation standards, standards of practice, emergency/crisis policies and procedures, and foundational applied ethics.

CPSY 5386 Professional Seminar: Treatment of Children and Adolescents (2 Credits)

This seminar involves the evaluation and treatment of children and adolescents (i.e., ages 6 through 18) in the Professional Psychology Center. Supervision is provided from an integrative and relationship-based perspective, and topics relevant child and adolescent treatment are discussed.

CPSY 5388 Professional Seminar: Psychological Assessment (2 Credits)

This seminar will focus on clinical material related to aspects of psychological assessment. It demands more of a time commitment than most other seminars because assessment requires longer sessions with clients to administer tests, time to score and interpret tests, and report writing. Students should not sign up for this seminar if the main reason is to fulfill the GSPP four assessment cases requirement. Students should only rank this seminar if they are passionate about assessment. There will be opportunities to complete ADHD evaluations, learning disability assessments, personality batteries and collaborative therapeutic assessments for children and adults. Students are required to complete a minimum of 4 cases during the course of the year (one per quarter). We will not be providing forensic testing or neuropsychological testing services, although we will discuss some neuropsychological issues as they arise. Students will have the chance to present their cases and consult with the seminar. Requirements for enrollment in the seminar include: prior completion of Cognitive Assessment and Self-Report Assessment, as well as completion of or at least concurrent enrollment in the Introduction to Rorschach class. The seminar co-leaders provide supervision and enrich the experience. Supervision of assigned small subgroups typically takes place either before or after seminar or on Fridays.

CPSY 5389 Professional Seminar: Behavior Therapy (2 Credits)

This advanced professional seminar draws upon pragmatic philosophy and contextualistic worldview as it informs and guides contemporary behavior analytic theory and practice. Students gain experiences using functional analysis as a method for describing and integrating clinical observations and learn to implement a variety of evidence based, acceptance inspired interventions designed to facilitate psychological flexibility and values-congruent living in clients from diverse backgrounds. Therapeutic work is conducted in an atmosphere of care, respect, compassion, and commitment, and challenges the client (and therapist) to be more open, aware, vulnerable, and present in their lives.

CPSY 5390 Professional Seminar: Forensic Issues (2 Credits)

This seminar will introduce students to the various areas and ways in which psychology interacts with the legal and criminal justice systems. Students will develop their capacity to perform evaluations relating to psychological questions, dilemmas, and disputes that are most frequently requested of forensic psychologists. Focus of the seminar will be on assisting students in clarifying their role as an evaluator and consultant to attorneys, judges, and criminal justice personnel; exploring the ethical responsibilities therein; learning to compose reports for a legal rather than a clinical audience; and preparing to testify as an expert witness. Students will formulate and deliver case presentations, participate in a "mock" testimony experience, and submit reports. Students in past seminars have conducted child custody evaluations, mental status at time of offense evaluations, Social Security disability evaluations, asylum, T-visa, and U-visa evaluations, animal abuse, competency and juvenile placement evaluations; these evaluations allow students the opportunity to conduct full battery psychological assessments, and learn how to apply findings to a legal context. In addition, we have been getting more court mandated therapy clients. Thus, students will get assessment experience as well as individual therapy experience with adults and children. Assessment experience required. If you have not completed all assessment courses, please speak to Lavita. Students are required to complete a combination of 4 assessments/therapy clients during the course of the year. Please note that the forensic seminar requires a substantial time commitment because assessments requires longer sessions with clients to administer tests, time to score and interpret tests, and report writing.

CPSY 5391 Professional Seminar: Psychodynamic Therapy (2 Credits)

This seminar focuses on psychodynamic psychotherapy - that is, individual adult psychotherapy with the aim of bringing about meaningful and lasting psychological concepts as they apply to your patients, with a practical, "hands on" focus - for example, what to do and say when your patient shuts down, threatens suicide, act out, comes on to you, misses appointments, gets worse, throws up in your office, and all the other troubling and fascinating things people do from time to time in psychotherapy. Prior or current personal psychotherapy is highly desirable and strongly recommended. Students should be prepared to discuss their clinical work candidly - and help foster an environment of mutual trust, compassion, and respect, in which candid discussion can take place.

CPSY 5392 Professional Seminar: Couple and Family (2 Credits)

This seminar allows students more in-depth training in working with systems including couples and families. Students should take Couples Therapy and Family Therapy either before or concurrent with the seminar. Special topics covered include divorce, step families parenting, sex therapy, multicultural issues, and ethics, as well as more general couple and family therapy work.

CPSY 5393 Professional Seminar: Acceptance and Commitment Therapy (2 Credits)

Acceptance and Commitment Therapy (ACT) is a pragmatically based, relatively new and highly experiential form of therapy whose overarching goals are to a) assist clients (and therapists) in accepting what cannot be changed (i.e., the form or frequency of certain private events), while b) helping them fully commit to behaving in accordance with idiosyncratic values. Although consciously based on behavior-analytic thinking, ACT is a hybrid therapy in terms of approach and technique, bringing together aspects of Zen Buddhism, Gestalt therapy, and humanist-existential thought. In the seminar, students will learn the technical and theoretical bases of ACT through group process, individual and small group supervision, as well as from observation and modeling. Prerequisite: Behavioral Models course.

CPSY 5394 Professional Seminar: Cognitive-Behavior Relational Therapy (2 Credits)

This is a year-long seminar on integrating cognitive-behavior (CBT) and relational therapy. Trainees learn the theory and practice of CBT and relational therapy through readings, didactic presentations, discussion, and especially case presentations of their clients and themselves. Small-group supervision is also required.

CPSY 5396 Professional Seminar: Advanced Psychotherapy (2 Credits)

Seminar will focus on the individual therapy treatment of adult cases. Particular emphasis will be placed on conceptualizing cases from a developmental perspective with no particular emphasis on object relations and the psychology of self. We will evaluate culture, role of trauma, issues of sexual orientation, and developmental history. Students will be encouraged to look at their own and other's responses in a supportive environment that will foster discussion on counter-transference responses. An in depth exploration of client's needs will be assessed and model the treatment to those needs, rather than applying the same treatment model to all patients. Previous exposure and readings on the psychology of self and object relations is helpful. Readings to deepen our understanding of the above will be assigned. Must have taken or be currently enrolled in Adult Psychopathology sequence. Prerequisite: Psychoanalytic Models course.

CPSY 5399 Professional Seminar: Gender Issues (2 Credits)

This seminar will focus on gender issues from developmental and psychodynamic perspectives. Topics will include issues relevant to women, men, and transgendered/intersexed individuals. Clients may include adolescents and adults with a variety of presenting concerns including relationship problems, identity issues, eating disorders, pregnancy and postpartum work, parenthood, mood and anxiety disorders, and aging.

CPSY 5404 Professional Seminar: Integrative Therapy (2 Credits)

This advanced seminar examines various integrative models of psychotherapy, and students will have the opportunity to develop their own therapeutic "voice" by integrating the major theories already learned at the GSPP. While the seminar will be theoretical in nature, one goal is to help students prepare for practice in the real world by exploring the common factors of therapy, and how to work collaboratively in a client-directed fashion. Clients may include adults, adolescents, and children with a wide variety of presenting concerns, in individual, couples, family, or group therapy. Students will be expected to present their work regularly on DVD and (in Dr Cornish's supervision), occasionally behind the two-way mirror. Competency areas covered include: professionalism, reflective practice, scientific knowledge and methods, relationships, individual and cultural diversity, ethical/legal standard and policy, assessment, and intervention. In addition to supervision on psychotherapy, there may be an option for students to be supervised on their supervision of a first year student in the PPC.

CPSY 5405 Professional Seminar: Advanced Relational Psychodynamic (2 Credits)

This seminar focuses on relational psychotherapy from the perspectives of self-psychology and intersubjective systems theory in working with adults. We examine the co-creation of the therapeutic relationship, the making of meaning, emphatic listening, attuning to the other's affective experience and putting the other's subjective experience into words. We develop treatment plans and case formulations that are consistent with this perspective.

CPSY 5406 Professional Seminar: Health Psychology (2 Credits)

This advanced seminar focuses on the ways that clients' physical health concerns affect psychosocial and emotional well-being. We focus on the relationship between the mind and the body and take a holistic and contextual approach to understanding work with clients, keeping in mind relational and cultural variables throughout the seminar. Clients in the PPC that have been in this seminar have had cancer, multiple sclerosis, diabetes, heart failure, chronic pain, autoimmune diseases, etc. As relevant to our work with clients, we discuss pain management, mindfulness, differential diagnosis of depression and anxiety, sleep hygiene, psychosocial oncology, grief and loss, and other empirically supported treatments for issues that clients present. The overarching theoretical framework of the course is relationship-focused, client-centered, and strengths-based. We draw on rehabilitation psychology and medical psychology, and explore diversity issues in a variety of ways, including examining disability as a multicultural issue. We use readings from interpersonal psychotherapy, feminist and multicultural therapy, positive-psychology, meaning-centered psychotherapy, humanistic/existential therapy, client-centered therapy and post-traumatic growth to guide discussions. Particular attention is paid to helping clients enhance their strengths and find meaning in their lives during times of transition. Since many health settings are focused on a short-term model of treatment, students in seminar have the option of taking on shorter-term cases and we explore the use of time-limited psychotherapy in a health setting. It is expected that most students take on new cases in this seminar.

CPSY 5407 Professional Seminar: Caregiver and Child Relationships From Pregnancy Through Early Childhood (2 Credits)

This seminar involves the evaluation and treatment of infants, young children, and their caregivers in the Professional Psychology Center. Supervision is provided from an integrative and relationship-based perspective, and topics relevant to perinatal, infant, and early childhood assessment and treatment are discussed. Prerequisite: CPSY 5385.

CPSY 5408 Professional Seminar: Military Psychology (2 Credits)

This clinical seminar teaches military cultural competency, which is infused throughout topics during the year. There is also a focus on learning the evidence-based treatments taught and utilized within the Department of Defense and the Department of Veteran Affairs as the purpose of this field placement and seminar is to prepare students to serve this population and to work within these large systems of care for their predoctoral internships, postdoctoral fellowships and beyond. A specific focus on the prevention of vicarious trauma, compassion fatigue and burnout is infused throughout the year-long seminar. Throughout case presentations, students are encouraged to discuss how various intersecting aspects of culture and identity contribute to the case and their own interventions as therapists.

CPSY 5420 Behav-Analytic Prin 1 (2 Credits)

This course covers philosophical foundations, assumptions, and principles underlying major systems and models of behaviorism. Emphasis is given to the philosophy of science called radical behaviorism and its behavior-analytic functional-contextualistic tradition. Course 1 specifically targets contingency-shaping selection processes based upon Pavlovian and operant conditioning paradigms. Recommended prerequisite: CPSY 5000.

CPSY 5421 Behavioral Analysis Princ La (1 Credit)**CPSY 5422 Behav-Analytic Prin 2 (2 Credits)**

This course covers philosophical foundations, assumptions, and principles relevant to cultural-linguistic practices. Emphasis is given to the philosophy of science called radical behaviorism and its behavior-analytic functional-contextualistic traditions. Course 2 specifically addresses verbal relational contingency selection processes based upon cultural and its verbal community. Prerequisite: CPSY 5420.

CPSY 5423 Behav-Analytic Assess/Case Frm (2 Credits)

This course covers the philosophical foundations, assumptions, and principles relevant to behavioral assessment and case formulation tactics. Emphasis is given to the philosophy of science called radical behaviorism and its behavior-analytic functional-contextualistic traditions. This course specifically targets an empirical data-driven approach to idiographic assessment for purposes of developing conceptual analyses from the contextual-functional analytic perspective. Prerequisites: CPSY 5420, CPSY 5422.

CPSY 5424 Behavior-Analytic Intervention (2 Credits)

This course provides an overview of issues, principles and methods basic to clinical practice and intervention. Emphasis is given to the philosophy of science called radical behaviorism and its behavior-analytic functional-contextualistic traditions. This course specifically targets a range of commonly used methods of intervention (e.g., counter-conditioning and exposure-based treatments, guided action strategies, acceptance-commitment approaches, Eastern interventions). Issues relevant to the structuring of therapy sessions, the therapeutic relationship, behavioral nonadherence, empirical research, and other topics of therapeutic interest will be reviewed. This course will incorporate the use of experiential exercises, modeled demonstration, and behavior rehearsal methods for training purposes. Prerequisites: CPSY 5420, CPSY 5422, CPSY 5423.

CPSY 5466 Health Psychology (2 Credits)

This course is designed to provide students with a broad overview of the salient empirical and theoretical aspects of health psychology and behavioral medicine. The course will emphasize the role that psychological variables play in the development, exacerbation, treatment and prognosis of both acute and chronic illness. We will also highlight sociopolitical and cultural discourse surrounding end-of-life decision making, healthcare accessibility and the phenomenology of a disabled population.

CPSY 5467 Health Psychology Service Learning Seminar (1 Credit)

The Health Psychology Service Learning Seminar provides the opportunity for students to gain clinical experience with the underserved/underrepresented populations covered in the Health Psychology course (CPSY 5466). Students who enroll in the Seminar must agree to complete 20 hours of supervised clinical service with an agency and supervisor of their choice.

CPSY 5468 Sport and Performance Psychology Practicum in Collegiate Athletics I (2 Credits)

This is the first course in a year long, three-part sequence. This course serves the purpose of providing: a) practice in sport and performance psychology in a NCAA Collegiate Athletic Department under the supervision of licensed practitioners; b) an opportunity for students to learn about sport and performance psychology through observation and experiential opportunities; and c) information on professional development and conduct. The course requires didactic and experiential activities. The didactic component covers the practice of sport and performance consulting, focusing on gaining entry and building working relationships. Current research is integrated with theory, emphasizing empirically validated approaches to best practice.

CPSY 5469 Sport and Performance Psychology Practicum in Collegiate Athletics II (1 Credit)

This is the second course in a year long, three-part sequence. This course serves the purpose of providing: a) practice in sport and performance psychology in a NCAA Collegiate Athletic Department under the supervision of licensed practitioners; b) an opportunity for students to learn about sport and performance psychology through observation and experiential opportunities; and c) information on professional development and conduct. The course requires didactic and experiential activities. Psychological consultation, best practices, and professional development issues in sport and performance psychology are addressed.

CPSY 5470 Sport and Performance Psychology Practicum in Collegiate Athletics III (2 Credits)

This is the third course in a year long, three-part sequence. This course serves the purpose of providing: a) practice in sport and performance psychology in a NCAA Collegiate Athletic Department under the supervision of licensed practitioners; b) an opportunity for students to learn about sport and performance psychology through observation and experiential opportunities; and c) information on professional development and conduct. The course requires didactic and experiential activities. Psychological consultation, best practices, and professional development issues in sport and performance psychology are addressed.

CPSY 5480 Integrated Primary Care (2 Credits)

This course is designed to provide an introduction to the field of Integrated Primary Care (IPC). Primary health care physicians currently serve as the de-facto mental health care providers for approximately 50-80% of the patients they serve. Psychologists are desperately needed to support primary care, yet traditional clinical training does not adequately prepare them to work in this field. Students in this course can expect to acquire a solid knowledge in IPC that will enable them to function effectively in the primary care culture. A clinical exposure component are required so students can experience the pace and problem range seen in the primary care office. Class size is limited. Students not enrolled in the PsyD program must petition the instructor for approval to register.

CPSY 5482 Health Psychology Service-Learning: Clinical Practice in Integrated Primary Care (1 Credit)

This course will be a clinical and didactic seminar for students who are involved in service-learning projects in integrated primary care clinics in the community. Students will participate in service-learning, clinical rotations, and administrative and consultation duties outside of the course time. The course format will include time for clinical supervision of community cases, didactic training on topics of relevance to integrated primary care settings, and lectures from interprofessional community preceptors from the clinics. Prerequisite: Health Psychology CPSY 5466 or permission or the instruction.

CPSY 5500 Diagnosis & Treatment of Children (2 Credits)

The focus of this course will be on the evaluation and treatment of children. Considerations concerning the particulars of the evaluation process will be discussed. An integrative approach to child treatment will be presented with a "child-in-family" approach. Play therapy approaches and techniques will be described and contrasted. Behavioral approaches will be discussed. Work with populations common in child work will be discussed, such as children in high-conflict divorce families, learning disabilities, ADHD, mood disorders and situations of physical/sexual abuse.

CPSY 5505 Diagnosis & Treatment of Adolescents (2 Credits)

This course focuses on counseling and psychotherapy with adolescents from a variety of approaches, including developmental, integrative, psychodynamic, person-centered, reality, rational emotive, cognitive behavioral and systemic. Topics will include the ethical and legal issues involved in psychological interventions, culturally responsive counseling, and orchestrating productive family sessions with challenging adolescents.

CPSY 5550 Couples Therapy (2 Credits)

Theory, techniques and research relating to couples therapy, including theoretical perspectives: behavioral couples therapy, emotionally-focused couples therapy and object relations couples therapy. The course also addresses specific problem areas, including domestic violence, infidelity, depression, anxiety, substance abuse and personality disorders. Prerequisite: CPSY 5030.

CPSY 5560 Family Therapy (2 Credits)

Theory, techniques and research relating to family therapy, including several theoretical perspectives: behavioral, experiential, psychodynamic, multigenerational approaches. Special topics covered include working with community resources, addressing developmental issues of children, working with medical and school systems, utilizing cultural factors in planning programs and interventions and adults in family therapy. Prerequisite: CPSY 5030.

CPSY 5562 Psychological Consultation (2 Credits)

This course provides an overview of the practice of psychological consultation. Theories and models of consultation in various settings including businesses, organizations, health care, and schools are covered. The process and stages of consultation from entry to termination are analyzed. This class differentiates consultation from other types of psychological interventions. Important legal, ethical and multicultural issues in consultation are addressed throughout the course. Students develop their own model for conducting consultation and refine that model through work with local organizations. Students increase their awareness of their strengths and weaknesses in the practice of consultation. Methods of instruction include lecture, discussion, experiential exercises, and interactions with local organizations and professional consultants.

CPSY 5590 Adult Psychopathology I (2 Credits)

Theoretical understanding and treatment of adults within a developmental, ego analytic framework. First quarter-differences between the neuroses, borderline, and psychoses. Prerequisite: CPSY 5020.

CPSY 5591 Psychodynamic Psychotherapy (2 Credits)

Theoretical understanding and treatment of adults within a developmental, ego analytic framework. Second quarter - the neuroses. Prerequisite: CPSY 5020.

CPSY 5592 Adult Psychopathology III (2 Credits)

This course is a continuation of Adult Psychopathology I and II with an emphasis on complex trauma and the psychotic disorders. Diagnostic understanding, differential diagnosis, and treatment implications are emphasized within a psychoanalytic orientation. Prerequisites: CPSY 5590 and CPSY 5591 or instructor approval.

CPSY 5620 Intersubjective Systems Theory (2 Credits)

This course focuses on psychotherapy from the perspectives of intersubjective systems theory in working with adults. We examine the co-creation of the therapeutic relationship, the making of meaning, empathic listening, attuning to the other's affective experience and putting the other's subjective experience into words. We develop treatment plans and case formulations that are consistent with this perspective.

CPSY 5680 Cognitive Assessment (4 Credits)

Theoretical, professional and clinical issues involving intelligence and its measurement; assessment of cognitive functioning and clinical interpretation of test results, focusing on the WAIS-III (and child equivalents). Prerequisite: CPSY 5130.

CPSY 5685 Introduction to Pediatric Neuropsychological Assessment (2 Credits)

Pediatric neuropsychology integrates many basic sciences including behavioral Neurology, developmental psychology, neuroanatomy, psychopathology, and psychological assessment. The role of pediatric neuropsychologist is to provide comprehensive assessment, consultation, and intervention in the context of a developing child. The course will review important concepts, theories, and empirical research in the field of pediatric neuropsychology. Students will learn the basic rationale in conducting a pediatric neuropsychological evaluation, including a brief review of many common pediatric assessment measures. In addition, many common pediatric disorders will be reviewed from a neuropsychological perspective including: Dyslexia, Attention Deficit hyperactivity Disorder, Pervasive Development Disorders, Traumatic Brain Injury, Seizure Disorders, and Mental Retardation. Upon completion of the course the student will have a greater appreciation of a neuropsychological conceptual framework and have a better understanding of specific pediatric disorders.

CPSY 5686 Suicide Prevention, Intervention and Postvention (2 Credits)

Suicide is a serious public health issue and challenge for the nation, Colorado, and our local communities. In 2009, suicide claimed the lives of almost 34,000 people in the United States and is the second leading cause of death for college students and men ages 25-34. In Colorado, there are many more suicides than motor vehicle deaths. While most clinicians are focused on the assessment and treatment of people at high risk for suicide, a more comprehensive approach is needed to prevent people from becoming suicidal in the first place. This course covers best practices in suicide prevention, intervention and "postvention" (suicide crisis response) and will explore the particular issues of several vulnerable populations.

CPSY 5687 Contemporary Issues in Geropsychology (2 Credits)

This course addresses issues in aging. Topics include healthy aging, aging issues in diverse populations, contemporary options for care, challenges in service delivery, the interplay of medical and mental health needs, mental health treatment approaches and issues, and end-of-life issues.

CPSY 5690 Introduction to the Rorschach (4 Credits)

Exner's Comprehensive System for administering, scoring and development hypotheses with the Rorschach Test. Prerequisite: CPSY 5130.

CPSY 5692 Advanced Rorschach Analysis (2 Credits)

This course is an exploration of advanced topics in Rorschach interpretation. Topics will include: conceptual understanding of the Comprehensive System; content and sequence analysis; differential diagnosis; integrating alternative systems of interpretation with the Comprehensive System; development and use of special scales; appropriate use of computerized interpretation; and integration of Rorschach analysis with personality theory. Prerequisites include course work in Rorschach administration, scoring and basic interpretation; and in personality theory. Students will be expected to score, analyze, and present Rorschach protocols.

CPSY 5700 Advanced Personality Assessment (3 Credits)

This class is for students who wish to learn the skills necessary to conduct comprehensive psychological assessments in a competent, ethical, antiracist and culturally informed manner. This course will focus on learning how to integrate multiple personality measures into a cohesive understanding of one's personality. Students will be taught how to write a traditional integrated personality report and several weeks will be spent on Collaborative/Therapeutic Assessment (C/TA). Students will be exposed to several personality tests including the Minnesota Multiphasic Personality Inventory – 3 (MMPI-3), Rorschach Performance Assessment System (R-PAS), Early Memories Procedure, Wartegg Drawing Completion Test (Crisi Wartegg System), Thematic Apperception Test (TAT), Trauma Symptom Inventory – 2 (TSI-2) and the Thurston Cradock Test of Shame (TCTS), among others. Prerequisites: CPSY 5130, CPSY 5680, CPSY 5690, & CPSY 5705.

CPSY 5705 Self Report Assessment (3 Credits)

Construction and application of objective instruments, emphasizing the MMPI and MCMI. Students are required to submit test reposts. Prerequisite: CPSY 5130.

CPSY 5706 Self Report Assessment Lab (1 Credit)

Optional. For students anticipating a need for extra help with repost writing.

CPSY 5710 Intro to the Crisi Wartegg System for the WDCT: Administration, Scoring, and Basic Interpretation (2 Credits)

This course introduces the Crisi Wartegg System (CWS), a new methodology for the clinical use of the Wartegg Drawing Completion Test (WDCT). The WDCT is a projective drawing technique that can be completed in 5-10 minutes and is appropriate for children, adolescents, and adults. It is easy to administer and not overwhelming for clients to complete. The WDCT is not well known in the United States; however, a recent meta-analysis (Gronnerod & Gronnerod, 2011) attests to its validity in assessing personality and psychopathology. The course will review the history and theory of the WDCT, teach its administration, introduce the major features of the scoring system, and discuss basic interpretation. Prerequisites: CPSY 5680 Cognitive Assessment, CPSY 5705 Self Report Assessment, and CPSY 5690 Introduction to Rorschach.

CPSY 5711 Introduction to the Crisi Wartegg System for the WDCT: Lab (1 Credit)

This lab accompanies the Crisi Wartegg System course (CWS). It supplements material presented in the class and provides an experiential component to training in the CWS. It will include applied practice of administration, scoring and calculations, as well as basic clinical case interpretation. Concurrent enrollment in the Crisi Wartegg System course is required. Prerequisites: CPSY 5680 Cognitive Assessment, CPSY 5705 Self Report Assessment, and CPSY 5690 Introduction to Rorschach.

CPSY 5740 Integrative Personality Assessment (2 Credits)

This course is the culmination of the assessment sequence, and integrates techniques, approaches and concepts covered in issues in Measurement, Cognitive Assessment, Objective Personality Assessment, and Rorschach. Aspects of the other core courses in the curriculum will also be brought to bear on the question of how to obtain and how to interpret information within various theoretical models for the purposes of answering referral questions and planning interventions. Projective testing will be introduced as a source of behavior samples for which the occasioning environment is known to the psychologist. There will be focus on distinguishing interpretable from irrelevant information, and on integrating interpretable information into meaningful patterns. The goal of using assessment to answer referral question and plan treatments will generate a special focus on report writing.

CPSY 5741 Therapeutic Assessment (3 Credits)

This course will explore Collaborative/Therapeutic Assessment, which is an approach to psychological assessment that can have extraordinary therapeutic effects with clients. We will focus on the Therapeutic Assessment model developed by Stephen Finn. We will read broadly in the area: from the genesis of collaborative assessment fueled by Fischer to the empirical foundations and structure of Therapeutic Assessment provided by Finn to novel applications of the approach highlighted by Handler, Tharinger, and others. This important paradigm shift in assessment is applicable to personality, cognitive, and neuropsychological assessment as well as any professional endeavor that aims to help clients understand themselves in life-changing ways. The course is designed for those with a solid foundation in assessment who wish to develop greater facility in helping their clients. Prerequisites: CPSY 5130, CPSY 5680, CPSY 5690, & CPSY 5705.

CPSY 5745 Human Sexuality (2 Credits)

The psychology of human sexuality is a survey of historical and contemporary psychological views on a wide variety of sexual behaviors; theory and research bearing on the relationship between life span, psychological development, psychological functioning, interpersonal processes, and sexual behaviors; political and social issues involved in current sexual norms and practices. Specific implications for clinical psychology will be discussed.

CPSY 5750 Supervision (2 Credits)

This course is designed to familiarize students with theories of supervision; provide practical, guided experience in peer supervision/consultation; help students understand and critically discuss the supervisory process; aid in gaining awareness of how multicultural issues may affect supervision; and familiarize students with ethical and legal issues in supervision.

CPSY 5755 Supervision Practicum I (1 Credit)

This is a four quarter sequence, 1 quarter credit hour/ quarter, in which advanced students will have the opportunity to supervise on beginning student under the overall supervision of a faculty member. Each quarter practicum will include appropriate level readings, group discussions and report writing. Admission to the course with instructor's approval.

CPSY 5756 Supervision Practicum II (1 Credit)

This is a four quarter sequence, 1 quarter credit hour/ quarter, in which advanced students will have the opportunity to supervise one beginning student under the overall supervision of a faculty member. Each quarter practicum will include appropriate level readings, group discussions and report writing. Admission to the course with instructor's approval.

CPSY 5757 Supervision Practicum III (1 Credit)

This is a four quarter sequence, 1 quarter credit hour/ quarter, in which advanced students will have the opportunity to supervise one beginning student under the overall supervision on a faculty member. Each quarter practicum will include appropriate level readings, group discussions and report writing. Admission to the course with instructor's approval.

CPSY 5758 Supervision Practicum IV (1 Credit)

This is a four quarter sequence, 1 quarter credit hour/ quarter, in which advanced students will have the opportunity to supervise one beginning student under the overall supervision of a faculty member. Each quarter practicum will include appropriate level readings, group discussions and report writing. Admission to the course with instructor's approval.

CPSY 5760 Professional Issues II (2 Credits)

This class provides an organized and comprehensive approach to pre-doctoral psychology internship selection, emphasizing an understanding of "fit." Topics covered include choosing sites; writing cover letters, CVs, and AAPI essays; preparing application materials; interviewing techniques; rank ordering sites; and dealing with emotions related to the process. The course syllabus includes important readings from the current literature. Lectures are balanced with guest appearances by DU Writing Center staff and others. Opportunities are given for role play among the students.

CPSY 5765 Cognitive Behavioral Therapy (2 Credits)

This course focuses on clinical applications of cognitive-behavioral theory. Major theorists in the area are reviewed, including Ellis, Beck, Lazarus, and Meichenbaum. Research utilizing cognitive-behavioral therapy as an evidence-based practice are reviewed. In addition, key cognitive behavioral techniques are demonstrated and practiced.

CPSY 5775 Clinical Psychology Internsh (8 Credits)**CPSY 5825 Introduction to Latinx Psychology and the Latinx Experience (2 Credits)**

This course will highlight the current psycho-social research and literature relevant to the mental health of Latinx populations including influences of culture, acculturation, immigration, and language on utilization of psychological services. The course will explore the variables that can affect how different Latinx groups respond in a unique way to the various services offered in the community. This course will familiarize the student with the personal, social, cultural and institutional forces that affect the psychology of Latinx groups, to include history, religion, gender roles, emotional processing, violence, bilingualism, and stigmatization and oppression.

CPSY 5826 Latinx & Underserved Populations Advanced Practicum I-Aiming to Reduce Mental Health Disparities (3 Credits)

According to the American Psychological Association, only 5.5 percent of psychologists who identify as Latinx or another race/ethnicity report that they are able to use Spanish to provide clinical services (Smith, 2018). Given the increasingly large percentage of Latinx in the U.S. and of individuals who speak another language other than English, the probability that present and future psychologists and mental health providers will provide services to Latinx and other underserved populations, is extremely high. Future and present providers will need training on how to provide culturally and linguistically appropriate services whether they are bilingual or monolingual English speakers. Moreover, there are mental health and health disparities that are shared among many underserved populations that can be partly addressed through developing a work force armed with knowledge and expertise in reducing cultural, linguistic and regional barriers to mental health. This course is designed to provide training to graduate students on how to provide culturally and linguistically appropriate services to Latinx and other underserved populations including communities of color, speakers of other languages than English, Immigrant and Refugee populations and rural communities. While there is growing attention and interest in health and behavioral health to address underserved populations, students in the health profession also voice an interest in receiving mentorship and networking to find jobs in these areas (Edwards-Johnson, Phillips, & Wendling, 2020). This class will also aim to provide information about the job market in U.S. and Denver that provide services to Latinx and underserved populations and will host presenters from the community who currently work in Denver in these settings.

CPSY 5827 Psychological Assessment with Latinx Populations (3 Credits)

As the third course in GSPP's Latinx Psychology sequence, the Psychological Assessment with Latinx Populations addresses the cultural considerations needed for interviewing and conducting psychological evaluations of Latinx groups. Clinical interviewing techniques and measures across all psychological assessment domains, including diagnosis, personality, and cognition, as well as more specialty-focused areas such as neuropsychological assessment, forensic assessment, and school-based assessment will be covered. The class will explore the strengths and limitations of each assessment measure with a particular focus on language, research and norming issues, and administration.

CPSY 5828 Latinx & Underserved Populations II-Advanced Practicum-Spanish Intensive (2 Credits)

According to the American Psychological Association, only 5.5 percent of psychologists who identify as Latinx or another race/ethnicity report that they are able to use Spanish to provide clinical services (Smith, 2018). Given the increasingly large percentage of Latinx in the U.S. and of individuals who speak another language other than English, the probability that present and future psychologists and mental health providers will provide services to Latinx and other underserved populations, is extremely high. Future and present providers will need training on how to provide culturally and linguistically appropriate service. This is especially true for bilingual providers and trainees who because of their bilingual skills at times are placed in mental health settings to provide bilingual services, without the proper training and/or supervision or administrative support, which can lead to poor quality service delivery and/or burn out for the provider/trainee. This in turn compounds the already existing problem of limited access to mental health services for Latinx and underserved populations. In addition, there are mental health and health disparities that are shared among many underserved populations that can be partly addressed through developing a work force armed with knowledge and expertise in reducing cultural, linguistic and regional barriers to mental health. This course, largely in Spanish, is designed to sharpen student's clinical skills by examining current cases and analyzing appropriate intervention and assessment techniques as a class. Students will formally present cases from their current caseload, in traditional case presentation format. We will base our following discussions in Latinx psychological theory and orientations. Case discussions will be led by students and will be positive, constructive, and ethical. It will be important for students to remain open to feedback, new approaches, constructive criticism, and exploring their strengths and weaknesses as early clinicians among their peers and professor. This training is also meant to bring awareness to the students on mental health and health disparities that exists among underserved populations including racial, economic, regional (i.e. rural), cultural and language barriers. This course is designed to assist the student in the management of their Latinx caseload and seek advisement from the class on professional issues encountered as a psychologist and mental health providers in service of the Latinx population and underserved populations, in order to maintain both an ethical and realistic professional perspective. The class will be made up of class reading discussions, student presentations, community provider presentations, class activities, and class discussions. Grades will consist of professional-level class participation, two case presentations, and class activities/exercises. Lastly, while there is growing attention and interest in health and behavioral health to address underserved populations, students in the health profession also voice an interest in receiving mentorship and networking to find jobs in these areas (Edwards-Johnson, Phillips, & Wendling, 2020) This class will also aim to provide information about the job market in U.S. and Denver that provide services to Latinx and underserved populations and will host presenters from the community who currently work in Denver in these settings.

CPSY 5829 Spanish Clinical Language Lab: Reinforcing the Therapeutic Alliance with Latinx Clients (1 Credit)

This course will be offered as a lab for students in the Latinx Practicum CPSY 5828 class. It is developed to enhance students' linguistic and cultural clinical competence in Spanish. The lab will focus on learning and using mental health terminology, cultural and linguistic metaphors, practicing clinical interviewing skills in Spanish and how to work with interpreters/translators. The lab will be delivered in Spanish and will be divided into 2 sections of Spanish Proficiency Levels. The lab aims to provide students with hands on clinical skills in Spanish to reinforce the therapeutic alliance with Latinx clients. Students will be required to take a Spanish Language Proficiency Exam.

CPSY 5831 Theory and Foundations of IECMH: Infant and Early Childhood Mental Health (2 Credits)

This course will provide an in-depth historical, theoretical, and empirical foundation for students interested in engaging in ongoing research and practice in Infant Early Childhood Mental Health (IECMH). Formative readings from the IECMH literature, including groundbreaking articles and textbooks will be reviewed and discussed. We will examine methods of applied IECMH work, including promotion of well-being and the spectrum of prevention, early intervention, assessment, and treatment with young children and their caregivers. The multidisciplinary nature of IECMH will be explored, along with a focus on how psychologists and infant mental health specialists fit into these teams in various contexts. We will also examine different "ports of entry" or means into treating caregivers, young children, and their relationships from an IECMH framework. Empirical studies establishing the efficacy, effectiveness, and cultural sensitivity (or lack thereof) of various assessments, therapeutic approaches, and practices in the IECMH field will be examined. We will spend the most time examining critical theories of social development including attachment and temperament and will consider their applicability to IECMH work, cultural responsive across several cultures, strengths, and limitations. Throughout the course, will explore the IECMH Diversity tenets created by leaders in the field and will apply the tenets in discussions and coursework.

CPSY 5832 Caregiver-Child Assessment in IECMH: The Process of Assessment, Diagnosis, Report Writing, & Feedback (2 Credits)

Intensive training will be offered in the process of assessing a caregiver and child relationship in a manner designed to inform dyadic treatment planning. All students will be trained in conducting a multi-modal, relationship-based assessment with a caregiver and child under the age of six. Assessment tools used will include the Infant Toddler Mental Status Exam (ITMSE), the Crowell Procedure and the Working Model of the Child Interview (WMCi). Students will also be introduced to the Interpersonal Inventory and paper and pencil means of assessing the individuals and their relationship. Students will be introduced to diagnosis in IECMH using the Diagnostic & Statistical Manual of Mental Disorders – fifth edition (DSM-V) and the Diagnostic Classification of Mental Health & Developmental Disorders of Infancy and Early Childhood (DC:0-5) classification systems, as well as crossover considerations between the two systems. Students will conduct a thorough and multi-modal assessment of a caregiver-child relationship and will integrate the information learned into a professional report. Students will practice treatment planning as well as providing feedback to the dyad.

CPSY 5833 Advanced Topics in IECMH: Infant and Early Childhood Mental Health (2 Credits)

This advanced topics course will continue fostering the student's understanding of Infant and Early Childhood Mental Health (IECMH) practice. Throughout the course, in-class discussion centers on developing clinical relationships with families and on how these relationships can support growth and change in both child and caregiver. Of particular importance is the student's continued exploration of use of self, and integrating IECMH practice principles into their field placement and CUB Clinic work. Topics include infant regulatory concerns, attachment difficulties, caregiver mental illness and impact on the child and relationship, parenting self-efficacy, child maltreatment and trauma, and application of IECMH treatment practices in the community. Prerequisite: CPSY 5831 or equivalent with instructor's permission.

CPSY 5834 Perinatal-5 Mental Health: Training Intensive in Evidenced-Based Approaches (2 Credits)

This intensive therapeutic course will continue fostering the student's understanding of Perinatal-Five mental health practice via working knowledge of a psychotherapeutic model used during this time period. In alternating years we will focus on Interpersonal Psychotherapy (IPT) or Parent Child Interaction Therapy (PCIT), two evidenced based approaches, with a focus on use with clients in perinatal through five populations. Students will gain knowledge of IPT or PCIT approaches to assessment and practice via readings, discussions, video, role plays, and case presentations. Of particular emphasis is the student's continued exploration of use of self and integrating P-5 mental health practice principles when learning about and practicing IPT or PCIT.

CPSY 5840 Psychopharmacology (2 Credits)

This course focuses on the various medications prescribed by psychiatrists to alter consciousness, modify behavior, and/or alleviate symptoms in the treatment of mental disorders including depression, bipolar disorder, anxiety, eating disorders, and psychoses. Topics such as sleep, pain and addiction will be covered, as well as drug interactions, psychotropic drugs in pregnancy, the treatment of children, geriatrics, and the psychologist-psychiatrist relationship.

CPSY 5846 Military Psychology and the Culture of Warfighting (2 Credits)

This course is intended to provide an introduction to military and veteran culture as well as military psychology and behavioral health. This course is designed as the first of a series of four courses in military psychology to prepare competent professionals who will utilize knowledge of current affairs, theory, knowledge of the scientific literature, and historical context when working with military members, veterans, and the families of servicemembers. The principal focus will be on training students to utilize culturally competent attitudes and knowledge as clinicians when providing services to servicemembers of the military branches, veterans of the military, and the families of servicemembers. American historical context, military history, and military structure will be covered in this course. Additionally, multiple types of behavioral health services within the United States government will be covered including the Department of Defense, the Public Health Service, and the Department of Veterans Affairs. A survey of world affairs as they currently stand, the U.S. national defense strategy, and current military posture will be covered. Salient health care issues within the military and veteran population will be covered. Legal and ethical issues that are pertinent and complex within military psychology and combat will be examined.

CPSY 5847 Psychology and Physiology of Isolated, Confined, and Extreme Environments (2 Credits)

This course is intended to survey and examine human psychological and physiological performance in extreme, austere, and challenging environments and the secondary effects of these environments after deployment. This course is designed as the second in a series of four courses in military psychology to prepare competent professionals who will utilize knowledge of current affairs, theory, knowledge of the scientific literature, and historical context when working with government, military members, veterans, and the families of servicemembers in an operational, consultative or clinical capacity. This course will examine issues, literature, and critical arguments surrounding team makeup and cohesion in austere environments as well as physiological and cognitive/behavioral effects of operating within these environments. Operational behavioral health will be covered in addition to the physical and psychological after-effects of these deployments. Psychological casualties, forensic issues, and post-deployment transition will also be covered. Prerequisite: CPSY 5846.

CPSY 5848 Evidence-based Practice for Military-related Health Disparities (2 Credits)

This course is intended to survey and examine current evidence-based assessment tools utilized to diagnose certain psychiatric and neurological conditions within military servicemembers and Military Veterans. The course will also focus on the understanding and utility of the best available evidence for the treatment of these psychiatric conditions. Prevalence rates, comorbid conditions, differential diagnosis, and complicating treatment factors within these particular psychiatric conditions will be the primary focus of the course. This course is designed as the third in a series of four courses in military psychology to prepare competent professionals who will utilize knowledge of current affairs, theory, knowledge of the scientific literature, and historical context when working with government, military members, veterans, and the families of servicemembers in an operational, consultative or clinical capacity.

CPSY 5849 Behavioral Medicine and Interprofessional Healthcare in Military/Veterans (2 Credits)

This course is intended to build upon academic and clinical knowledge gained throughout the entirety of the Graduate School of Professional Psychology curriculum and integrate this knowledge with the understanding of clinical and operational psychology within Military and Veteran settings gained through courses in the Sturm Specialty in Military Psychology. This course is focused on the acquisition of knowledge of the unique aspects of Military behavioral medicine and its role within the medical center environment. A second focus of the course is on interprofessional work within healthcare settings and how behavioral science professionals play a role on interprofessional teams within family medicine, primary care, and medical/surgical units within the medical center environment. Additionally, special considerations for behavioral medicine and interprofessional work with Military and Veteran populations will be covered. This course is designed as the fourth in a series of four courses in military psychology to prepare competent professionals who will utilize knowledge of current affairs, theory, knowledge of the scientific literature, and historical context when working with government, military members, veterans, and the families of servicemembers in an operational, consultative or clinical capacity. Enforced Prerequisites: CPSY 5846.

CPSY 5852 Foundations in Substance Use Disorder (2 Credits)

The course examines the major theories addressing substance use disorder and addiction. Students will explore these disorders as understood from a variety of theoretical frameworks (including psychoanalytic, behavioral, humanistic and social learning theory), as well as findings from neuroscience. The course emphasizes a developmental perspective in the understanding of these issues. Further, the course will emphasize current treatment models based on empirically based information and research. Students will gain skills in using their generalist training to conceptualize, diagnose, and treat these difficult disorders.

CPSY 5853 Neurobiology of Attachment, Trauma and Addiction (2 Credits)

The course will examine research and practice findings from the fields of neuropsychology and biology with regard to substance use disorders. Major findings and theories related to brain and nervous system functioning as they relate to substance use will be discussed, and used to further inform treatment considerations and clinical conceptualization. Additionally, students will be engage in a more in-depth review of treatment modalities available. Students will build on their knowledge of empirically supported treatments in the first course. Students must successfully pass CPSY 5852 Foundations in Substance Use Disorder prior to enrolling in this course.

CPSY 5854 Behavioral Addictions: Assessment and Treatment (2 Credits)

The course will examine research and practice findings regarding behavioral addictions such as sex, pornography, gambling, food, and others. Discussion of brain and nervous system functioning as they relate to behavioral addiction will be discussed, and used to further inform treatment considerations and clinical conceptualization. Prerequisites: students must successfully pass CPSY 5852 Foundations in Substance Use Disorder prior to enrolling in this course, and completion of CPSY 5853 Neurobiology of Addiction and Advanced Treatment is strongly recommended.

CPSY 5855 Advanced Treatment of Substance Use and Addictive Disorders (2 Credits)

This course will provide students a more nuanced and advanced look at the current treatments for substance use and other addictive disorders. Topics will include medically assisted treatment models, therapeutic communities, and the use of FDA-approved psychoactive substances to treat addictions and underlying disorders.

CPSY 5865 Introduction to Psychosocial Oncology (3 Credits)

In this course, students will be introduced to the field of Psychosocial Oncology. This course will include an overview of the physiological processes involved in cancer prevention, etiology, and treatment. Students will develop a better knowledge of the different types of cancer, staging, and treatment options. A brief history of the field of psychosocial oncology will also be presented. The psychological sequelae of cancer diagnosis, treatment, metastases and recurrence, and survivorship will be included in this course. Special topics will also include working with caregivers and family members of cancer patients, sexuality and cancer, and working with patients and families at the end of life. Common psychotherapeutic interventions and assessments for oncology settings will be explored. In addition, the variety of roles of a psychologist in oncology settings will be discussed. Themes that will be included throughout the course are ethical and reflective practice, working with cancer patients from a multicultural perspective, and reducing compassion fatigue.

CPSY 5866 Interprofessional Systems in Healthcare (2 Credits)

This course will provide an overview of working in an interprofessional system as a psychologist. An introduction to systems theory and its application to a healthcare system will be discussed. Collaborating with other professionals, leading a team, and understanding the roles of a psychologist on an interprofessional team will also be covered. This course is best taken as the final course in the oncology psychology specialty, though it is open to other students with special consideration.

CPSY 5880 Business Issues in Professional Psychology (2 Credits)

This course introduces students to business principles as they apply to professional psychology. Students think through various business practice decisions, such as starting, managing, marketing, and diversifying a psychology practice and consider the related legal, ethical, and financial issues.

CPSY 5989 Doctoral Paper Development (1 Credit)

This course is designed to facilitate the development and writing of the doctoral paper. Students are expected to adhere to the GSPP Doctoral Paper Guidelines and the APA style guidelines. A major feature of the class is student-to-student sharing and critiquing of doctoral project ideas and plans. Students are expected to take advantage of this opportunity to hone their writing skills and develop their doctoral paper proposal. Students have complete the proposal phase of their project further develop their research methodology.

CPSY 5991 Independent Study (1-17 Credits)**CPSY 5993 Advanced Field Placement Experience (1-8 Credits)**

All PsyD students are required to work as a Psychology Trainee in an outside agency each year prior to the internship year. The minimum total is 384 hours per year. Students are expected to arrange with a field placement to receive psychological clinical training, which could include the following types of experiences: psychotherapy, assessments, group therapy, individual therapy, family therapy, supervision, primary care psychology, intake evaluations, case management, consultation, testing, etc.

CPSY 5994 PsyD Internship (4,8 Credits)

The Graduate School of Professional Psychology (GSPP) requires that all students attend a yearlong or two half-time years of clinical internship. Internship is the clinical experience after the student has completed all courses, the clinical competency examination, and at least three years of residency at GSPP. Students typically apply through APPIC and are offered formal internships. Occasionally students create internships, but they must be approved formally through GSPP prior to the start of the internship. The basic experiences may include training in: psychotherapy, assessments, group therapy, individual therapy, family therapy, supervision, primary care psychology, intake evaluations, case management, consultation, testing, etc. To register, student must have departmental approval. Students can register half-time for 4 credit hours or full-time for 8 credit hours.

CPSY 5995 Independent Research (1-17 Credits)

Graduate School of Social Work

The Graduate School of Social Work (GSSW) at the University of Denver is internationally recognized as a leader in educating practitioners, scholars, educators and researchers. GSSW's vision aims for the achievement of thriving sustainable communities, actualized human potential, and embodiment of equity across all communities. GSSW's mission promotes social justice by advancing scholarship, education, and community

engagement that leads, connects, mobilizes, and transforms. This mission is carried out in a rich educational environment featuring excellent teaching by award-winning faculty and path-breaking research.

The Master of Social Work (MSW) program is ranked in the top seven percent of all accredited MSW programs in the country by the U.S. News and World Report. GSSW offers four program locations to fit diverse learning needs. Although course options differ between locations, all MSW programs provide small class sizes, field internships and an individualized learning experience. MSW program locations span across Colorado and beyond:

- Denver Campus MSW Program – four unique certificates and international courses
- MSW@Denver - Online MSW Program – course work is 100% online
- Four Corners MSW Program (located in Durango, Colorado) - focus on rural and tribal communities
- Western Colorado MSW Program (located in Glenwood Springs, Colorado) - focus on rural social work practice, integrated health and sustainability

Throughout the MSW program, students gain fundamental skills to make a significant impact on individuals, communities, systems and policy.

GSSW's Denver-based Doctor of Philosophy in Social Work was one of the first in the United States. During the program, students work alongside distinguished faculty to conduct research, write publications and gain substantive knowledge in the field of social work.

Graduate School of Social Work

Doctor of Philosophy in Social Work

The doctoral program at the Graduate School of Social Work trains master's level human service professionals from across the country and around the world to become social work researchers, educators and policy experts.

Founded in 1968, our PhD program is among the oldest social work doctoral programs in the nation. Students work alongside distinguished faculty members (<http://www.du.edu/socialwork/facultyandstaff/facultydirectory/>) to conduct research, write publications and gain substantive and methodological knowledge in the field of social work.

As a doctoral student, you are encouraged to develop a solid understanding of the theories, social interventions and policies that guide research in your individual substantive areas.

The program emphasizes the following:

- knowledge development through advanced coursework in theory, policy and research methodology;
- research competencies through required and elective courses, graduate research assistantships and dissertation research;
- collaboration with faculty working in diverse, substantive areas including youth, child welfare, gerontology, mental health, substance abuse and poverty; and
- teaching skills through pedagogy coursework, a teaching practicum, elective courses, and faculty mentoring.

Watch our PhD video to learn more. (<https://www.youtube.com/watch?v=By-28nhKXPk&t=10s&index=1&list=PLf4Wfa1INgIKRjtLW4X12auqoHShxVK6y>)

MASTER OF SOCIAL WORK WITH A CONCENTRATION IN ADVANCED SOCIAL WORK PRACTICE

The Master in Social Work degree with a concentration in Advanced Social Work Practice will prepare you with the theoretical knowledge, applied skills, and values to work across a continuum of services at micro, mezzo and macro levels. Our model prepares you to practice with a wide range of populations and settings to meet the needs of your community. The curriculum emphasizes culturally responsive practice needed for the increasing diversity within communities at a local, state, national or global context, including a close examination of power, privilege, and oppression. During foundation coursework, students develop a generalist perspective and introductory skills for working with individuals, families, groups, communities, and organizations. During concentration coursework, students customize and specialize their pathway through the curriculum, ranging from a focus on individual therapy to policy practice and social change.

GLOBAL SOCIAL WORK CERTIFICATE (denver campus MSW programs)

The Global Social Work Certificate is designed for students who wish to understand global connections and perspectives, whether they ultimately intend to work internationally or domestically. Certificate courses are anchored in social work values and ethics including a close examination of power, privilege and oppression as it plays out across the world, applying these principles to human rights advocacy and intervention, as well as examining and reflecting on the necessity to avoid the "white savior complex". Approaching international work from a place of humility enables students to decenter their own lens which is crucial for global social work. Students have the opportunity to further their understanding of relationship-based work done in conjunction with local communities, working side by side rather than from a "top down" model. Appropriate roles for working internationally are examined and discussed. Ethical considerations when working in a community other than one's own are examined when focusing

on injustices and inequalities, including the role of domestic and international policies and agreements. The Global Social Work Certificate is a Specialized Graduate Certificate of 12 credits.

Human-Animal-Environment Interactions in Social Work CERTIFICATE (DENVER CAMPUS MSW PROGRAMS)

The Human-Animal-Environment Interactions in Social Work certificate prepares social work students to recognize the importance and impact of human-animal-environment interactions (HAELs) in culturally responsive and ethically advanced professional social work practice settings. Clinical and community settings such as mental health agencies, schools, and shelters are emphasized. The certificate centers social justice and highlights intersecting systems of oppression and violence directed towards humans, animals, and the environment. There are three required certificate courses, which are taken in sequence. Students do not need a specialized field internship placement to complete the certificate.

LatinX Social Work Certificate (DENVER CAMPUS MSW PROGRAMS)

The Certificate in Latinx Social Work prepares students to provide culturally responsive practice with individuals and families of Latin American origin. Three certificate courses and an approved concentration year field internship are required. Students must include a plan for integrating the specific requirements of the certificate into those of the internship on the Individualized Field Education Plan (IFEP). The internship must fulfill the requirements of the concentration year, as well as those of the certificate. The certificate is available to Spanish speaking and non-Spanish speaking students.

SCHOOL SOCIAL WORK Certificate (DENVER CAMPUS MSW PROGRAMS)

Students enrolled in this certificate program are required to complete 12 hours of concentration year field internship (four in each of three quarters) in a school setting in the State of Colorado and with supervision by a school social worker. Students must include a plan for integrating specific requirements of the certificate into those of the internship on the Individualized Field Education Plan (IFEP). The internship must fulfill the requirements of the concentration year, as well as those of the certificate.

The school microsystem is a unique work environment for the social worker. It is a venue that is dynamic and continually changing. Because of the school's central location in the lives of students, the school social worker has the ability to access and to bridge to the peer network, family network, teachers, school administration, neighborhood network, community resources, and the legal system. For some students, the school can be an oasis or a refuge from problems that they are facing outside of school. Other students may keenly feel that the school is a place of humiliation, frustration, or isolation. For both these groups of students, their relationship with their school social worker can have a pivotal role in their lives and their families.

The School Social Work certificate discusses the many roles that the School Social Worker may have and effective techniques for being successful in those many roles. It examines the laws that impact service delivery in the school system. Additionally, it gives students an advanced understanding of school-based assessment and how these assessments fit into the fabric of the school, and by extension, the life of the student and family.

This certificate also addresses the need for students who wish to be School Social Workers to learn and demonstrate culturally responsive interpersonal skills, techniques, and strategies to effectively work with linguistically and culturally diverse students, families, and communities. It helps students apply social work ethics and values within the framework of a school microsystem.

School settings are one of the largest providers of employment to GSSW alumni. As many school districts in Colorado move to a mental health provider model, in which the mental health provider can be a school psychologist or school social worker, the School Social Work Certificate provides the advanced training that social workers need to be competitive in this field.

Accreditation

Since 1933, our MSW program has been accredited by the Council on Social Work Education (CSWE) (<https://www.cswe.org/>), a specialized accrediting body recognized by the Council on Post-Secondary Accreditation.

CSWE accreditation signifies that our MSW program meets nationally accepted standards in eight areas:

- Mission, goals and objectives
- Curriculum
- Governance, structure and resources
- Faculty
- Student professional development
- Non-discrimination and human diversity
- Program renewal
- Program assessment and continuous improvement

All CSWE programs measure and report student learning outcomes. Students are assessed on their mastery of the competencies that comprise the accreditation standards of CSWE. These competencies are dimensions of social work practice that all social workers are expected to master during their professional training. A measurement benchmark is set by the social work programs for each competency. An assessment score at or above that benchmark is considered by the program to represent mastery of that particular competency.

Doctor of Philosophy in Social Work

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well as the baccalaureate.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:

- Doctoral students are expected to enter the program with a basic proficiency in descriptive and inferential statistics. This knowledge is necessary for several of the required doctoral courses. If you lack this required statistical proficiency, you should plan to take a basic statistics course before enrolling at GSSW.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 95
- Minimum IELTS Score: 8
- Minimum C1 Advanced Score: 200
- Minimum Duolingo English Test Score: 125

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Social Work (DENVER CAMPUS, FOUR CORNERS, ONLINE AND WESTERN COLORADO PROGRAMS)

The Four Corners program is unavailable for admission in the 2023-24 academic year. The next cohort of two-year students will begin in the fall of 2024.

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:

- A minimum of 20 semester hours or 30 quarter hours in undergraduate coursework in the arts and humanities, social/behavioral sciences and biological sciences. For each liberal arts course taken to fulfill this requirement, students must earn a grade of "C" (2.0 on a 4.0 scale) or better. In addition, you must have completed at least one course in English composition or present evidence of testing out of the English composition requirement.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 95
- Minimum IELTS Score: 7

- Minimum C1 Advanced Score: 185
- Minimum Duolingo English Test Score: 125

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Social Work Advanced Standing (DENVER CAMPUS, FOUR CORNERS, ONLINE AND WESTERN COLORADO PROGRAMS)

The Four Corners program is unavailable for admission in the 2023-24 academic year. The next cohort of two-year students will begin in the summer of 2025.

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:

- A minimum of 20 semester hours or 30 quarter hours in undergraduate course work in the arts and humanities, social/behavioral sciences and biological sciences. For each liberal arts course taken to fulfill this requirement, students must earn a grade of "C" (2.0 on a 4.0 scale) or better. In addition, you must have completed at least one course in English composition or present evidence of testing out of the English composition requirement.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 95
- Minimum IELTS Score: 7
- Minimum C1 Advanced Score: 185
- Minimum Duolingo English Test Score: 125

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Social Work (Western Colorado Program)

The Western Colorado MSW program is unavailable for admission in the 2022-23 academic year. The next cohort of two-year students will begin in the fall of 2023.

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 95
- Minimum IELTS Score: 7
- Minimum CAE Score: 185

English Conditional Admission: No, this program does not offer English Conditional Admission.

Certificates

Overall Requirements for Admission to Certificate Programs

Students who wish to be considered for admission to any one of the academic certificate programs must:

- successfully complete the foundation curriculum at GSSW or be admitted to the MSW program as an advanced standing student.
- be in good standing in both academics and field.
- declare intention to complete certificate to the GSSW Registrar by completing the form within the GSSW Student Resource Portal (<http://portfolio.du.edu/GSSWStudentResourcePortal/page/92894/>).
- be willing and able to attend all classes required for the certificate at the time these classes are offered.
- be willing and able to meet all academic requirements for concentration coursework, as well as for the certificate program.
- meet any additional eligibility requirements listed within the individual certificate descriptions below.

Global Social Work Certificate

Students who wish to be considered for admission to the Global Social Work Certificate must be in the Denver Campus MSW program at GSSW and are required to:

- meet the general requirements for admission to certificate programs listed in the introductory section.
- complete the Global Social Work Certificate application once matriculated into a MSW degree programs.
- Attend a group information meeting or individual meeting with the certificate coordinator.
- be willing to attend extracurricular, Global Social Work Certificate activities.

Human-Animal-Environment Interactions in Social Work Certificate

Students who wish to be considered for admission to the Human-Animal-Environment Interactions in Social Work Certificate program must be in the Denver Campus MSW program at GSSW and are required to:

- meet the general requirements for admission to certificate programs listed in the introductory section.
- complete the introductory course (SOWK 4795) prior to taking SOWK 4796 and SOWK 4797.
- be willing to attend extracurricular, experiential Human-Animal-Environment Interactions activities offered by the Institute for Human-Animal Connection (IHAC).
- integrate Human-Animal-Environment Interactions concepts into their concentration year field placement. It is not required to have a therapy animal or therapy animal-in-training to fulfill this requirement.

Latinx Social Work Certificate

Students who wish to be considered for admission to the Latinx Social Work Certificate program must be in the Denver Campus MSW program at GSSW and are required to:

- complete the Latinx Social Work Certificate application.
- submit a copy of their current Resume/Curriculum Vitae.
- schedule a meeting with the certificate coordinator.

School Social Work Certificate

Students who wish to be considered for admission to the School Social Work Certificate program must be in the Denver Campus MSW program at GSSW and are required to:

- complete the School Social Work Certificate application.
- submit an application to the certificate coordinator by May 1 in the foundation year or by August 1 for advanced standing and Winter start MSW students within the Denver Campus MSW program.
- have a school placement in the State of Colorado in either their foundation or concentration year.

Doctor of Philosophy in Social Work

University policy requires a minimum of 135 quarter hours beyond a baccalaureate for the doctor of philosophy degree in social work. Up to 60 quarter hours toward this requirement may be credited for "A" or "B" work completed as part of a master's degree conferred through an accredited school of social work.

Minimum number of credits required beyond the MSW: 75

PhD Degree Requirements for candidates with an MSW

| Code | Title | Credits |
|--|---|-----------|
| CORE REQUIRED CURRICULUM | | |
| Professional Development | | 9 |
| SOWK 5000 | Seminar in Professional Social Work Issues (6 credits: 2 credits over three quarters) | |
| SOWK 5450 | Preparing for the Comprehensive Exam: Integration from a Social Justice Perspective (3 credits) | |
| Research Methods | | 17 |
| SOWK 5110 | Introduction to Advanced Quantitative Research Methods (3 credits) | |
| SOWK 5120 | Introduction to Advanced Qualitative Research Methods (2 credits) | |
| SOWK 5121 | Qualitative Data Analysis (3 credits) | |
| SOWK 5130 | Mixed Methods Research in Social Work (3 credits) | |
| SOWK 5405 | Advance Qualitative Analysis (3 credits) | |
| SOWK 5406 | Critical Perspectives on Quantitative Research Methods | |
| Statistics | | 9 |
| SOWK 5201 | Intro to Statistical Methods in Social Work (5 credits) ¹ | |
| SOWK 5202 | Correlation and Regression (4 credits) | |
| Theory | | 6 |
| SOWK 5300 | Social Science Theory and the Philosophy of Science (3 credits) | |
| SOWK 5301 | Social Work Theory in Research and Practice (3 credits) | |
| Policy | | 3 |
| SOWK 5101 | Social Welfare Policy Analysis and Development (3 credits) | |
| Pedagogy | | 9 |

All Concentration level SOWK courses that do not meet the above requirements count towards Concentration Curriculum Electives. See Course Description section for list of all Concentration Curriculum courses.

Advance-Standing students may not take Foundation Curriculum SOWK courses as Concentration Curriculum Electives

Students may take up to 10 credits of coursework from other DU graduate programs with the approval of their advisor and Associate Dean for Academic Affairs.

Total Credits Required for Concentration Curriculum: 45

Total Credits**54****LATINX SOCIAL WORK CERTIFICATE**

Students who wish to be considered for admission to the Latinx Social Work Certificate program are required to:

- a. Complete the Latinx Social Work Certificate application.
- b. Schedule a meeting with the certificate coordinator.

For Spanish Only Courses- Students must demonstrate, at minimum, an Intermediate-Mid Level of proficiency in Spanish. An online proficiency test is offered for applicants. Transcripts or other means may also be used to waive the need for testing. Students who wish to practice Spanish are encouraged to participate in a Spanish conversation group outside of classes.

Non-Spanish speakers are eligible to take all the certificate courses offered in English. For courses offered in Spanish individual and/or collective arrangements will be made to ensure all classes are made accessible.

Students enrolled in this certificate program are required to complete 12 hours of concentration field internship in a program or agency offering the opportunity to work with Latinx clients. Students must include a plan for integrating the specific requirements of the certificate into those of the internship on the Individualized Field Education Plan (IFEP). The internship must fulfill the requirements to earn an MSW, as well as those of the certificate.

Coursework Requirements

Within their course of study, Latinx Social Work Certificate program students must include the following courses:

| Code | Title | Credits |
|----------------------|---|-----------|
| SOWK 4749 | Culturally Responsive Practice with LatinX | 3 |
| SOWK 4750 | Critical Perspectives on the Latinx Context | 3 |
| SOWK 4753 | Social Development in Latin America | 3 |
| SOWK 4757 | Social Work and Latino/a Cultures: An Intensive Practice and Spanish Immersion Course | 3 |
| Total Credits | | 12 |

GLOBAL SOCIAL WORK CERTIFICATE

Social work students are increasingly interested in global work. They are now entering social work programs with rising levels of global experience including previous participation in the Peace Corps. Additionally others are wanting to gain more experience and skills while in graduate school in order to further their careers focused on global issues. Students have goals to work both domestically and internationally. One of the cornerstones of social work education is the focus on the interconnectedness of all systems so it is understandable that students want to enhance their understanding of global work and international perspectives.

Global social work courses are anchored in social work values and ethics and apply a power, privilege and oppression framework to human rights advocacy and intervention. Through the Global Social Work Certificate, you will

- Further your understanding of relationship-based work done in conjunction with local communities—working side by side rather than top-down
- Explore appropriate roles for working internationally
- Weigh ethical considerations when working in a community other than one's own
- Examine injustices and inequalities in the context of domestic and international policies and agreements
- Reflect on the need to avoid the “white savior complex”
- Learn to approach international social work from a place of humility and decenter your own lens

12 Credit Requirement: three, 3-credit academic courses and 3 credits from field internship

Coursework Requirements

Within their course of study, Global Social Work Certificate program students must include the following courses:

| Code | Title | Credits |
|------------------------------|---|-----------|
| Required | | |
| SOWK 4759 | Global Cultural Perspectives: Ethical Considerations | 3 |
| Select two of the following: | | 6 |
| SOWK 4465 | Human Security (3 credits) | |
| SOWK 4642 | Global Trauma (3 credits) | |
| SOWK 4765 | Global Social Change (3 credits) | |
| Field Internship Requirement | | |
| SOWK 4970 | Concentration Field Internship (3 credits from the total 12 credits you will complete for internship will apply to your certificate) | 3 |
| Total Credits | | 12 |

CERTIFICATE IN HUMAN-ANIMAL-ENVIRONMENT INTERACTIONS IN SOCIAL WORK CERTIFICATE

The Human-Animal-Environment Interactions in Social Work certificate of specialization will prepare students to ethically incorporate non-human animals (primarily domesticated species) and the natural world into social work interventions.

Coursework Requirements

Within their course of study, Human-Animal-Environment Interactions in Social Work Certificate program students must include the following courses:

| Code | Title | Credits |
|-----------|--|---------|
| SOWK 4795 | Foundations for Human-Animal-Environment Interactions in Social Work | 3 |
| SOWK 4796 | Human-Animal-Environment Interventions in Social Work Practice | 3 |

| | | |
|----------------------|--|----------|
| SOWK 4797 | Professional Integration of Human-Animal-Environment Interactions in Social Work | 3 |
| Total Credits | | 9 |

SCHOOL SOCIAL WORK CERTIFICATE

Students enrolled in this certificate program are required to complete either 9 credit hours of foundation field internship or 12 credit hours of concentration field internship in a school setting in the State of Colorado and with supervision by a school social worker. 3 of these credits will count toward the School Social Work Certificate. Students must include a plan for integrating specific requirements of the certificate into those of the internship on the Individualized Field Education Plan (IFEP). The internship must fulfill the requirements to earn an MSW, as well as those of the certificate.

Coursework Requirements

Within their course of study, School Social Work Certificate program students must include the following courses:

| Code | Title | Credits |
|----------------------|---|-----------|
| SOWK 4712 | Social Work & the Law | 3 |
| SOWK 4715 | School Social Work Interventions | 3 |

Courses

SOWK 4000 Professional Development Seminar (1 Credit)

The Professional Development Seminar prepares students to develop a reflective practice and to make connections between applicable lived experience and the learning process, emphasizing professional social work identity. The course provides a supplement to the foundation curriculum and an opportunity for students to discuss their professional growth as social workers. The seminar provides opportunities to reflect on social work values and ethics, populations served, and the many fields and career pathways of social work practice. In conjunction with the foundation curriculum, key ethical issues and requirements are discussed so that students can deepen their understanding of ethics in practice with consideration of local, national, and global contexts. The course also gives an opportunity to reflect on their learning styles, participation in group work and the developmental process of practice. The ideas of conscious use of self and self-care concepts will be explored through a variety of learning modalities.

SOWK 4001 Clinical Social Work Skills (3 Credits)

This foundation course focuses on basic skills for micro social work practice with individuals and small groups. The framework of intentional interviewing teaches students to think critically about applying the skills for engagement, assessment and intervention. Attention focuses on use of these skills with clients from multiple social identities (e.g. ethnic, racial, sexual orientation, gender affiliation) and the pitfalls of practitioner micro-aggressions. An active learning approach requires students to participate in role-play exercises both in and outside of class. Students digitally record some of those exercises and share them with the class and instructor.

SOWK 4003 Clinical Social Work Theory and Practice (3 Credits)

This foundation course helps students develop a multi-dimensional assessment and intervention framework for clinical social work practice. This course builds upon knowledge of human behavior in the social environment and adds a focus on theories of change - at the individual and family level. The course is grounded in empirical information about the importance of relationship skills, across a variety of classic and modern approaches to intervention. We use a social work lens to emphasize the importance of context in client lives, including their socioeconomic status, cultural history, and experiences of oppression. Since no single theory captures the totality of human experiences, we integrate a variety of intervention techniques from multiple human behavior theories and ground them in a social work framework for ethical and effective clinical practice.

SOWK 4006 Human Behavior and the Social Environment: Theory and Practice (3 Credits)

This foundation course provides an overview of theoretical frameworks for understanding human behavior from a social work perspective. Theories reviewed include the developmental stages across the life cycle in terms of psychological, cognitive, moral, spiritual, identity and social development. Students apply a biopsychological assessment across the life span. The course emphasizes a social work perspective and key frameworks for social work, with an emphasis on the person in environment and systems theory as they describe diverse individual behavior in relation to social class, race and ethnicity, age, gender orientation, sexual orientation, and other multicultural backgrounds. The course aims to develop students' foundational understanding of how theories are used to promote relationship development with diverse individuals and to guide interventions across all system levels. Students may test out of this course and substitute an advanced course in human development, with advisor approval, if they have already successfully completed an equivalent course in human development.

SOWK 4007 Community and Macro Social Work Theory and Practice (4 Credits)

This foundation course provides students with a foundational level understanding of macro social work practice and roles. The course builds upon knowledge of human behavior in the social environment, and adds theories of change to understand diverse communities and social service networks and the relationship of local, national and global interventions. The course introduces students to empirically supported models and emerging interventions that address macro level social issues. Students complete community/organizational assessments and also participate in work groups to learn how to engage, assess, and intervene in communities and organizations.

SOWK 4020 Integrated Social Work Practice for Social Justice (4 Credits)

This foundation course focuses on professional development and identity for social work practice. The course emphasizes values, ethics and ethical decision making in the context of the history of the profession. Students are introduced to person-in-environment, critical theory and empowerment perspectives and apply these concepts to current field of practice and social work roles. Through integration of field placement experiences, students analyze and apply social work frameworks and generalist practice theories to current social justice challenges and diverse contexts that social workers face.

SOWK 4050 Introduction to the Graduate Internship (1 Credit)

The Introduction to the Graduate Internship seminar prepares students to enter the profession of social work at a graduate level. The course provides an overview of social work values and ethics, populations served, and issues that concern social workers. Through engagement in the course content, students will complete a readiness for field assessment, including their personal and professional motivations to join the profession and serve diverse communities. Students will be exposed to the social work profession's signature pedagogy, field education, and the stages of experiential learning. The course will also help students develop learning goals for field education and identify potential internship sites.

SOWK 4120 Social Policy Analysis, Advocacy, and Practice (3 Credits)

This foundation course analyzes contemporary societal needs and problems, as well as the historical and current context of U.S. social welfare programs and policies. It presents frameworks used to define social problems and analyze social problems, and introduces students to the policy-making process and the role of policy in service delivery with special emphasis on programs designed to aid the poor and the policies that shape them. The course is designed to help social workers advocate for policies within the social welfare system that advance social well-being and fulfill their ethical obligations to improve social conditions and promote social justice.

SOWK 4132 Power, Privilege and Oppression from a Critical Multicultural Perspective (3 Credits)

This foundation course examines the phenomena of power, privilege and oppression and their effect on individuals, families and communities in the context of the values of social and economic justice and the social work profession. The course is intended to increase awareness of the intersectionality of multiple oppressions with a focus on race/ethnicity, gender, socioeconomic status and sexual orientation. Students will gain a beginning self-awareness to identify the influence of personal biases and values that impact practice with diverse groups.

SOWK 4150 Foundation Seminar (1-2 Credits)

Required seminar format used to facilitate the integration of the foundation field practicum and the professional foundation course content; emphasis on linking classroom learning with practice in the field, integrating theory with professional practice; field practicum situations and issues used for discussion and deliberation. Co-requisite: SOWK 4950.

SOWK 4151 Foundation Seminar I (1 Credit)

This required seminar format is used to facilitate the integration of the foundation field practicum and the professional foundation course content, emphasis on linking classroom learning with practice in the field and integrating theory with professional practice, and field practicum situations and issues used for discussion and deliberation.

SOWK 4152 Foundation Seminar II (1 Credit)

This required seminar format is used to facilitate the integration of the foundation field practicum and the professional foundation course content, emphasis on linking classroom learning with practice in the field and integrating theory with professional practice, and field practicum situations and issues used for discussion and deliberation. Prerequisite: SOWK 4151.

SOWK 4153 Foundation Seminar III (1 Credit)

This required seminar format is used to facilitate the integration of the foundation field practicum and the professional foundation course content, with emphasis on linking classroom learning with practice in the field and integrating theory with professional practice, and field practicum situations and issues used for discussion and deliberation. Prerequisite: SOWK 4152.

SOWK 4201 Evidence for Practice (3 Credits)

This foundation course focuses on developing student skills in identifying, analyzing, and applying empirical evidence in order to inform their social work practice. The course introduces students to studies designed to examine the effectiveness of interventions. The course aids students in developing a familiarity with basic research concepts such as research design, internal validity and external validity, so that they may critique the utility of evidence for practice. Students also engage in critically examining available evidence for biases and relevance for the diverse array of clients, populations, and contexts with which they work.

SOWK 4202 Creating a Regenerative Future (3 Credits)

This course explores how we can create a regenerative future that is life-renewing for people and planet—a future in which all people, species, and ecosystems thrive. The concept of a “regenerative future” will be examined for how it goes beyond the limitations of a sustainability paradigm and analyzed from the lenses of ecological justice and power, privilege, and oppression. This course will use frameworks of permaculture, regenerative design, and futures thinking to move beyond “fixing” climate change or other planetary emergencies to a more robust, holistic framework for planning socio-ecological change. Students will gain skills of regenerative design, regenerative mapping, and emergent theories of change. These skills will be discussed in a vast array of applications (with both social and ecological systems) to focus on integration and regeneration of humans and the more-than-human world.

SOWK 4203 Environ Change Impacts & MH (3 Credits)

The impacts of the climate crisis and global environmental degradation are becoming increasingly apparent upon mental health. Social workers are well positioned to address the mental health implications of the climate crisis, ecological injustice, and environmental degradation. Understanding how these phenomena bear upon the mental wellbeing of clients and communities will be explored in this required choice methods/skills class. Emphasis will be placed on building resilience to climate grief, solastalgia, eco-anxiety, and climate trauma utilizing a strengths-based perspective. Students will develop knowledge and awareness of how climate change impacts our thoughts, emotions, and behavior to be of support to clients and foster self-care as social work practitioners.

SOWK 4204 Policy Advocacy for Ecological Justice in the U.S. (3 Credits)

Contemporary policies in the U.S. are critically analyzed for how they promote or hinder human well-being, environmental sustainability, and ecological justice. Students will analyze policies and develop advocacy skills, with emphasis on intervening at local and state levels of U.S. policy making.

SOWK 4205 Contemporary Ecological Justice Issues and Social Work Practice (3 Credits)

This course is designed to support student learning by providing a dynamic review and exploration of contemporary social work issues with a focus on communication and intervention skills for ecological justice social work practice. Current events related to contemporary ecological justice social work practice, theory, or research will be covered included but not limited to: global environmental change, climate justice, environmental degradation and eco-systems loss, disasters, and instances of environmental and ecological injustice. Contemporary social work practice problems and possibilities are elevated, especially in the regard of trending and emerging interventions in social work practice. In this course, students will learn about the disproportionate burdens of ecological injustices in communities at the local, state, national, and international levels. From a social justice perspective, students will critically explore, analyze, and discuss current ecological injustices and relevant social work interventions and communicate them ethically and effectively utilizing web 2.0 platforms and social media outlets.

SOWK 4232 Critical Race Theory Praxis and Social Work (3 Credits)

An advanced multicultural social work practice course, this uses the fundamentals of Critical Race Theory (CRT) as a framework for contextualizing and intervening with client systems at the micro, mezzo, and macro levels. This course is a values elective for all concentrations. CRT is used as a framework to examine, critique, and challenge the way that race and racism is unwittingly sustained and perpetuated by traditional social work approaches to the amelioration of personal and social ills. Through this course, students learn the central tenets of CRT, how to evaluate traditional social work practice using these tenets, and begin to design to design a professional social work practice that uses CRT tenets as a foundation for micro-, mezzo-, and macro-level interventions. This course is offered within the concentration curriculum as a Values for Practice course to assist in the training and preparation of social workers practicing with historical underrepresented and marginalized clients and communities of color. Students develop skills and techniques grounded in anti-oppressive culturally grounded social work practice.

SOWK 4235 Disproportionality and Disparities Across Systems: The Impact on Children and Youth (3 Credits)

This course will explore the interrelatedness of institutional racism and discrimination across major social systems within the U.S., focusing on the historical context of current racial disproportionalities and disparities in youth service systems such as child welfare, juvenile justice, mental health, education, and health. Using a critical lens, the course is designed to help students analyze how policy decisions have long-range impact on generations; specifically for children and youth of color. Students will have the opportunity to apply this critical lens to their current field placement and the youth populations they serve. As an elective course, the class is open to all GSSW students; however, students concentrating in child welfare, children and youth, and families are especially encouraged to take the course.

SOWK 4240 Intergenerational Justice (3 Credits)

This course engages students in the conversation, scholarship, and social work practice issues related to how social justice is promoted across age groups and generational cohorts (i.e., baby boomers, generation X, millennial generation). While looking at debates for how families, local communities, states, and nations link age to power, decision-making, funding, and access to resources, the course also examines what within age group issues of injustice and inequality persist. Topics include: generational equity in terms of government budgets and debt, intergenerational issues related to sustainability and ecological justice, age-based versus need-based service delivery models, interventions to address intergenerational conflicts within families, and best practices in intergenerational social service models. This course is designed as a seminar course for social work students from any concentration to explore values related to social justice as they play out across all levels of practice.

SOWK 4245 Restorative Approaches in Social Work Practice (3 Credits)

This course applies the conceptual framework, strategies, and benefits of restorative approaches to social worker roles and responsibilities. This course is designed to help students develop a historical and theoretical understanding of restorative approaches, build restorative-based skills that can be used in a variety of roles, and apply restorative approaches to a variety of client population systems, settings, and needs. Ethical dilemmas, cultural competence, and decision-making in restorative approaches, and the impact this has on oppressed populations, will be discussed. This course fulfills the Values for Practice requirement, and is a general elective with relevance to all social work concentrations. Prerequisite: SOWK 4132.

SOWK 4250 Concentration Seminar (1 Credit)

This course is taken (by distance education students only) concurrently with the concentration year field practicum and the concentration year required courses. The purpose of this course is to integrate the concentration field experience and concentration year course work to prepare students for employment as professional social workers. This is also an evolving seminar co-created between faculty and students. Clinical issues and skill development at a more advanced clinical level is integrated into the seminar format as well as topics the student and faculty members agree upon that will enhance their first year learning. Prerequisite: SOWK 4150 or 4153 or SOWK 4299.

SOWK 4251 Concentration Seminar I (1 Credit)

This course is taken by MSW@Denver students concurrently with the concentration year field practicum and the concentration year required courses. The purpose of this course is to integrate the concentration field experience and concentration year course work to prepare students for employment as professional social workers. Clinical issues and skill development at a more advanced clinical level will be integrated into the seminar format as well as topics the student and faculty members agree upon that will enhance their first-year learning. Concentration field experiences and their relationship to concentration year field competencies will also be discussed.

SOWK 4252 Concentration Seminar II (1 Credit)

This course is taken by MSW@Denver students concurrently with the concentration year field practicum and the concentration year required courses. The purpose of this course is to integrate the concentration field experience and concentration year course work to prepare students for employment as professional social workers. Clinical issues and skill development at a more advanced clinical level will be integrated into the seminar format as well as topics the student and faculty members agree upon that will enhance their first-year learning. Concentration field experiences and their relationship to concentration year field competencies will also be discussed. Prerequisite: SOWK 4251.

SOWK 4253 Concentration Seminar III (1 Credit)

This course is taken by MSW@Denver students concurrently with the concentration year field practicum and the concentration year required courses. The purpose of this course is to integrate the concentration field experience and concentration year course work to prepare students for employment as professional social workers. Clinical issues and skill development at a more advanced clinical level will be integrated into the seminar format as well as topics the student and faculty members agree upon that will enhance their first-year learning. Concentration field experiences and their relationship to concentration year field competencies will also be discussed. Prerequisite: SOWK 4252.

SOWK 4260 Contemporary Social Work Issues in Western Colorado (3 Credits)

In this hybrid seminar course, students will learn about the disproportionate burdens of environmental injustices in communities across the Western Slope of Colorado. From a social justice and human rights perspective, students will critically explore, analyze and discuss current environmental health disparities and relevant social work interventions. Students will review environmental health and environmental justice theories and perspectives as they bear on place-based case studies from the region. Students will use contemporary media and relevant web 2.0 platforms, including social media to demonstrate understanding of applied e-advocacy social work practice while exploring such case studies.

SOWK 4299 Advanced Standing Seminar (3 Credits)

The seminar reviews knowledge, skills and values that form the basis of GSSW concentration year curricula in clinical practice, community practice and policy practice. The seminar combines content planned by instructors with individualized guided study and planning for field instruction based on student self-assessments. Prerequisite: Admission to advanced standing program.

SOWK 4302 Advanced Evidence for Practice (3 Credits)

This course engages continuing social work students in further developing skills for using research evidence in social work practice. These skills support social workers' need to engage in practice-informed research and research-informed practice, as well as facilitates access to resources in the evidence base to support all aspects of social work practice. This course invites students to consider the place of scientific inquiry and research evidence in the resolution of social problems at various levels (e.g. individual, group, organization, community, or societal). This course further develops student skills in identifying, analyzing, and applying empirical evidence to inform their social work practice. The course focuses on studies designed to examine the effectiveness of interventions, aids students in developing a familiarity with basic research concepts such as research design, internal validity and external validity, so that they may assess the utility of evidence for practice. Students also engage in critically examining available evidence for biases and relevance for the diverse array of clients, populations, and contexts with which they work.

SOWK 4303 Advanced Standing: Engaging Anti-oppressive Social Work (3 Credits)

This course examines the individual, family, community, and societal factors that are linked to the dehumanizing of people engaged with social work institutions. The course is intended to increase analytical skills in the context of individuals, families, organizations, and communities in the preparation for engaging in anti-oppressive practices in micro and macro social work processes. This course uses an ecological systems approach to introduce students to the dynamics of power related to social problems and social action and its impact on social work's engagement with human communities and the environment.

SOWK 4305 Child Maltreatment: Causes and Developmental Consequences (3 Credits)

This course examines theory and research concerning causes and developmental consequences of child maltreatment, as well as theory and research concerning attachment and the developmental consequences of separation and loss that often follow intervention in child maltreatment.

SOWK 4315 Critical Theories of Child and Adolescent Development (3 Credits)

This course provides students with knowledge of critical theories of child and adolescent development. The course focuses on understanding development in context, considering the concepts of trauma, damage, resilience, potential, difference, resources, and healing. Ecological factors, including systemic conditions, that are deleterious to development and those that promote healthy development will be considered. The role of oppression in enabling or constraining children and adolescents' progressive developmental trajectories will be highlighted.

SOWK 4320 Family Systems Theories for Social Work Practices (3 Credits)

This course introduces systems theory as it is applied to family contexts which may include traditional therapeutic settings, home-based practices, parenting approaches, family religious/spiritual strength and conflict, and transgenerational family processes. Emphasis is given to the integration of theory, practice, and skill development. Students will also explore family organization and development and family subsystems, as they apply to assessment, case conceptualization, and intervention from a family systems perspective with clients, individuals, couples, families, organizations, constituencies, and communities. This course analyzes intersecting issues of power, privilege, and oppression, and requires that students examine their own personal characteristics, preferences, experiences, biases, predispositions, and affective reactions that influence the professional relationship.

SOWK 4323 Psychopharmacology (1 Credit)

This course is intended for social work students who plan to work in mental health and health care settings. Students will be introduced to a basic understanding of neurobiology and pharmacotherapy addressing the more common DSM-5 diagnoses. Key medications, including indications, symptom management, and side effects will be addressed. Students will be introduced to the most common medications that providers in medicine and psychiatry use to help improve clients' functioning. The course will provide the basics of the language used to discuss pharmacotherapy and will improve students' ability to interact with prescribers in order to improve care and coordination. The course will emphasize the role of the social worker in alerting medical providers to adverse side effects experienced by the clients, as well as improvement or lack thereof. Critical thinking about pharmacotherapy will emphasize that a good differential diagnostic process must precede any attempt to prescribe medication, just as it precedes the selection of a psychotherapeutic modality. The course will also explore cultural and ethical considerations around the prescription of psychotropic medications.

SOWK 4325 Evolving Perspectives and Trends in Health and Wellness (3 Credits)

This course provides an overview of the frameworks that inform social work practice in the area of health and wellness. The broad concept of health is examined for its understanding and meaning in communities and cultures along with the historical and conceptual bases of public health. There is a focus on understanding racism in health and the impact of health inequities for historically marginalized and oppressed communities. While studying evolving trends in health, a range of topics are covered including a systems perspective along with the integration of health, mental health & wellness. There is a focus on health equity, the social determinants of health, prevention, wellness, complementary and alternative practices with an emphasis on social work's role as change agents working towards solutions and promoting equity.

SOWK 4330 Assessment of Mental Health in Adults (3 Credits)

Focuses on the assessment of psychological, social and biological contributors to mental health disorders in adults and the use of this assessment as a guide for treatment/clinical interventions. Examines the strengths and weaknesses of the DSM-IV classification system in terms of social work values and ethics. Examines symptoms, theories of etiology, treatment interventions and prognosis within each diagnostic category, and reviews a variety of assessment tools in the context of gender, ethnicity, cultural diversity, sexual orientation and historically oppressed and/or disadvantaged populations.

SOWK 4334 Assessment of Mental Health in Children and Adolescents (3 Credits)

This course focuses on the assessment of psychological, social and biological contributors to mental health disorders in children and adolescents and the use of the Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-5) as a guide for mental health assessment. The course examines the strengths and weaknesses of the DSM-5 classification system for children and adolescents, especially in the context of culture and social work values. It examines symptoms, theories of etiology, and prognosis within each diagnostic category and reviews diagnostic challenges in the context of gender, ethnicity, cultural diversity, sexual orientation and historically oppressed and/or disadvantaged children and adolescents.

SOWK 4338 Assessment of Mental Health Across the Lifespan (3 Credits)

This course focuses on the assessment of psychological, social and biological contributors to mental health disorders in children, youth, adults, and older adults and the use of this assessment as a guide for treatment/clinical interventions. It examines the strengths and weaknesses of the DSM-5 classification system in the context of social work values and ethics. It examines symptoms, theories of etiology, treatment interventions and prognosis within each diagnostic category and reviews a variety of assessment tools in the context of gender identity and expression, ethnicity, cultural diversity, sexual orientation and historically oppressed and/or disadvantaged population.

SOWK 4340 Leadership and Supervision Skills (3 Credits)

This course examines the application of leadership and supervision theories to practice settings in communities, organizations and policy contexts. A focus is placed on leadership roles and an examination of leadership styles, with an emphasis on the skills of transformational leadership and supervision. Topics covered include team leadership and supervision, one to one supervision skills, managing conflict, personnel management, and cross cultural work.

SOWK 4345 Intersections of Mental Health, Substance Use and, Trauma (3 Credits)

This course is an advanced theory for practice course with builds upon foundation courses in Human Behavior in the Social Environment (HBSE) and clinical theories, and covers conceptualization, dynamics of, and interventions in mental health, substance use, and trauma. The course examines the independent and intersecting theory bases of mental health, trauma and substance use approaches. It also explores recent evidence about individual and environmental risks associated with these conditions and evidence about both specific therapeutic interventions and the importance of common relational factors. Social workers make up one of the largest professional groups working with clients living with mental health concerns, and bring a unique person-in-environment and strengths perspective to that work, which fits well with a recovery philosophy. Clinical frameworks and interventions common across these fields, such as harm reduction, motivational interviewing, self-determination theory, and the transtheoretical model of changes are presented, and students are introduced to integrative approaches that show promise in responding to client conditions.

SOWK 4350 Evolving Perspectives and Trends in Aging (3 Credits)

This course provides an overview of how theories of aging inform the role of social workers with older adults and their families across a range of service settings, including emerging fields of practice. The course examines multiple perspectives on the late life adult years, spanning the period from middle adulthood and on into late life, including: historical, biological, psychological, social, cross-cultural, and spiritual theories and related empirical evidence. While addressing evolving trends, the importance of difference, and ethical implications the topical issues include: work and retirement; economic status; residence and housing location; education and learning styles; interpersonal relationships with partners, families, and peers; creativity, spirituality, and religiosity; political beliefs and ideologies (including the formation, maintenance and alteration of prejudice and racism); the experience of chronic illness, disability, and death; and wisdom attained during adulthood and aging.

SOWK 4355 Genocide: A Social Justice Issue (3 Credits)

Genocide is both the gravest of crimes under international law and the ultimate violation of human rights. After the Holocaust during WWII, a strong cry of "never again" became the symbol for the world's desire to stop genocide and other crimes against humanity. Unfortunately genocides and other atrocities continue to happen around the globe, including during our present day. This course will study the role that nationalism, propaganda, the media and film have played and continue to play in genocide. We will study how these factors played out in Armenia, the Holocaust, Rwanda and Bosnia, as well as the current situation with the Rohingya people. The role of the United Nations will be studied. We will seek to understand the role of power, privilege and oppression as well as political forces in defining a crime against humanity as a genocide or not. The stages of genocide will be studied and applied to current situations around the globe, including the United States of America. We will pay close attention to how mass atrocities end as well as how they might be prevented.

SOWK 4360 Social-Ecological Resilience: Connecting Human and Environmental Wellbeing (3 Credits)

Social-Ecological Resilience: Connecting Human and Environmental Wellbeing is a required theory-for-practice course in the Sustainable Development and Global Practice concentration. This course builds a social ecology perspective that emphasizes integrated social-ecological systems as a necessary theoretical framework for understanding the inter-connectedness of human health, wellbeing and resilience with that of other species and the natural environment. This course reviews and analyzes theoretical concepts and models for contextualizing the important social and ecological issues impacting our global environment as well as the societal implications of global environmental change. Using an integrated social science approach that highlights regenerative development as a paradigm that acknowledges the interdependence and interconnection between humans and the more-than-human world, social workers practicing in local and global communities will be prepared to implement effective, strengths-based solutions to support sustainable development and capacity-building efforts at various scales. This course promotes systems and critical thinking and develops a knowledge base for resilience-oriented prevention and intervention strategies, environmental awareness, sense of belonging in a social-ecological community, adaptation and advocacy.

SOWK 4361 Adapting and Implementing Interventions (3 Credits)

Although evidence-based practice has been increasingly integrated in social work practice, the growing area of implementation science is relatively new. An important part of implementation science is the process of deciding whether, and how, to implement an intervention. Existing interventions do not well serve all communities and service settings. The course begins with an introduction to implementation science, emphasizing the role of research practices that engage communities in the data collection and implementation process. The course focuses more deeply on using data collection strategies to inform practice-relevant adaptation and implementation research questions with communities including: 1) whether an existing intervention is a good fit for a specific community or context, 2) whether an adaptation or a completely new intervention is warranted, and 3) how to adapt an intervention. This project-based course includes the opportunity for students to focus on individual, family, organizational, or community-focused interventions. Students learn basic skills in specific data collection strategies including conducting surveys, interviews, and focus groups. Over the course of the quarter, students will select an adaptation research question, design a study, pilot a data collection strategy, and identify implementation supports for their intervention.

SOWK 4362 EmBODYed Practice: Ethical Approaches to Fatness and the Body (3 Credits)

Weight-based discrimination is a significant source of social inequity (e.g., economic, healthcare, educational). This class explores body-based oppressions through a lens of weight stigma, body image, & body liberation. Course topics include weight stigma & eating disorders, weight science & associations between weight & health, neoliberal origins of the healthism, racial origins of fat phobia, queering & crippling fatness, indigenous perspectives on embodiment, size-inclusive care, & ethical responses to weight stigma. Students will participate in a photo-voice reflection project to increase awareness of fat discrimination, tell their own body story using traditional or digital mediums, participate in a book club, & write an "ethics brief" documenting their approach to body diversity within the scope of their professional practice.

SOWK 4370 Community and Organizational Change: Theory for Practice (3 Credits)

This course presents key theoretical frameworks for students to be informed and innovative in responding to changing community, organizational and societal contexts. Theories of social change are presented that can assist social work leaders in promoting positive social change in the lives of vulnerable populations through the development of policy, community interventions and human services organizations. Students apply theories to understanding organizational change and innovation and the promotion of social and economic justice through community and policy practice.

SOWK 4390 Cultural and Linguistic Competency in Integrated Behavioral Health (3 Credits)

This course provides students with the skill and tools to deliver culturally responsive and linguistically appropriate services to diverse, vulnerable populations in Integrated Behavioral Health. The course builds on concepts taught in the foundational Power, Privilege, and Oppression course (prerequisite) and integrates key foundational concepts of the Intercultural Development Continuum (Hammer, 2009). The prerequisite for this course is SOWK 4132: Power, Privilege and Oppression from a Critical Multicultural Perspective.

SOWK 4401 Integrated Health Care: Models and Practice (3 Credits)

This course provides an overview of the knowledge, skills and theory of integrated health care social work practice, where physical and behavioral health services are most often provided in a primary care medical environment. Students will learn roles/functions of the behavioral health professional and their effectiveness as a member of the collaborative care team. Incorporating knowledge of evidence-based practice models of care and behavior change theory, they will increase their practice abilities to effectively work at an advanced level of skill as an integrated care behavioral health provider. Strategies and skills in patient engagement, motivational enhancement and advocacy will be taught through case studies and group activities. Cultural competency and effective care planning in an integrated healthcare environment will be emphasized.

SOWK 4410 Prevention & Treatment of Adolescent Substance Abuse (3 Credits)

This course examines causal factors and theories that seek to explain why some adolescents develop problems with alcohol and other drugs. Effective substance abuse prevention and treatment approaches are identified at the individual, family, school and community level.

SOWK 4412 Practice Elements in Interventions with Children and Youth (3 Credits)

This course offers an integrative framework of theory and research to intervene with children and adolescents in school, family, and community-based agencies. Interventions include both direct work with children and collaborative/conjoint work with parents. Techniques include common elements across empirically-supported interventions such as cognitive-behavioral therapy, behavioral treatment, client centered treatment, social skills training, and parent management training. Intervention strategies are described across four primary problem areas common among children/adolescents: anxiety, depression, disruptive behavior, and attention deficit disorder. For each of these problem areas, intervention techniques are demonstrated, practiced in class, implemented in field placements, and monitored for client progress. The use of empirically-supported interventions is discussed from a multidimensional perspective with consideration for cultural context and adaptations necessary for particular client groups.

SOWK 4413 Virtual Field Practicum Experience I (1-4 Credits)

Virtual Field Experience is a non-traditional experiential online course, designed to build social work competencies through participation in purposeful simulation events that mirror real-life situations, and which are nested within a simulated agency environment. Simulations tackle broad complex competencies by partializing them into component skills and developing those skills in a graduated/scaffolded manner. Students will develop significant applied skills prior to beginning a live agency field placement.

SOWK 4414 Virtual Field Practicum Experience II (1-4 Credits)

Virtual Field Experience is a non-traditional experiential online course, designed to build social work competencies through participation in purposeful simulation events that mirror real-life situations, and which are nested within a simulated agency environment. Simulations tackle broad complex competencies by partializing them into component skills and developing those skills in a graduated/scaffolded manner. Students will develop significant applied skills prior to actually beginning a live agency field placement. Prerequisite: SOWK 4413.

SOWK 4416 Foster Care and Permanency Planning (3 Credits)

This course presents strategies for culturally competent assessment and intervention with children who are in foster care, adoption, or with their families. It focuses on permanency planning, involving extended families in making case decisions and caring for children, family reunification, relinquishment of children for adoption, termination of parental rights, preparing children and parents for adoption or guardianship, working with young adults nearing emancipation, and providing post-adoption/guardianship services. Prerequisites: SOWK 4305 and SOWK 4600 or permission of the instructor.

SOWK 4418 Child Welfare Practice: Assessment & Intervention (3 Credits)

This course provides an overview of the continuum of care of child welfare practice from entry to exit. The course uses an evidence-based approach taking a comprehensive look at child welfare services through a culturally responsive and multi-systemic lens. It presents strategies for culturally competent assessment and intervention with children, youth, and families involved with the child welfare system focusing on engaging families in assessment, service, and permanency planning. The course is required for students in the child welfare track. The prerequisite is SOWK 4600 (Child Welfare Policy and Services), or permission from the instructor.

SOWK 4419 Rural Child Welfare Practice: Assessment and Intervention (3 Credits)

This course provides an overview of the continuum of care of rural child welfare practice from entry to exit. The course will provide students with a brief overview of the history of child welfare and relevant major federal legislation that impacts child welfare practice. The course uses an evidence-based and theoretical approach taking a comprehensive look at child welfare services through a culturally responsive and multi-systemic lens. It presents strategies for culturally competent assessment and intervention with children, youth, and families involved with the child welfare system focusing on engaging families in assessment, service, and permanency planning. It focuses on the unique challenges of child welfare practice in rural counties across America. The course is required for students receiving the Title IV-E Child Welfare Stipend in the Four Corners, Western Colorado, or Online MSW programs. It is an elective option for Denver campus students.

SOWK 4420 Multisystemic Social Work Practice and Advocacy with Families (3 Credits)

This course facilitates the development of family systems practice skills with clients, individuals, couples, families, organizations, constituencies, and communities. This course focuses on the development of multisystemic strategies and techniques utilizing family systems theory as part of the ongoing process of engagement, assessment, and preliminary interventions. It emphasizes the integration of research, theory, and practice through experiential learning and skill building. Students will learn strategies and techniques through role play demonstrations practicing intake/assessment/goal setting, preliminary intervention development, and professional documentation. Students will be asked to discuss their own "use of self" development throughout the class and reflect on personal bias, cultural bias, assumptions, values and affective reactions that may influence the relationship with client systems or constituencies. Prerequisite: SOWK 4320.

SOWK 4425 Positive Youth Development Programming (3 Credits)

This course provides an overview of the positive youth development (PYD) approach to working with young people diverse in age, gender, race, ethnicity, sexual orientation, disability status, socioeconomic status, geographic location/neighborhood, religion/faith and culture. Many services provided for young people focus on reducing societally-deemed negative outcomes such as teen parenthood, violence, substance use, and school dropout. Instead of focusing on deficits or reducing problem behaviors, the PYD approach reframes the historical pathological approach to treating deviance and focuses on youth's strengths and building assets and skills. PYD programming employs an intentional, prosocial approach that engages youth within their communities, schools, organizations, peer groups, and families in a manner that is productive and constructive. It promotes positive outcomes by providing opportunities, fostering positive relationships, and harnessing youth leadership. The PYD approach draws attention to opportunity gaps that social workers can address in partnership with young people. Students in this course will design an innovative PYD program, taking into account how such an approach to social work practice can be applied across different community settings to promote young people's well-being.

SOWK 4430 Substance Use Interventions (3 Credits)

There is widespread recognition that substance use is one of America's most pressing social problems. Social workers increasingly find themselves attempting to help individuals and families resolve substance use problems, as well as directly or indirectly related issues. This course introduces students to current and emerging substance use treatment approaches so they can conduct their practices from an informed perspective.

SOWK 4435 Grassroots Organizing for Social Justice (3 Credits)

This course examines grassroots approaches to community organizing and social change for social justice. Topics include: power and empowerment theory, insider/outsider considerations, development of critical consciousness and popular education techniques for organizing, history and genealogy of community organizing and social movements related to social work, direct action tactics and strategies, arts-based organizing, campaign development, and ethics and skills for working with diverse communities.

SOWK 4445 Social Work Assessment and Intervention in Aging (3 Credits)

This course focuses on biological, neurological, psychological, social, spiritual, and environmental aspects of late life as a foundation for the delivery of assessments and interventions to older adults. This course presents information on demographic projections, population trends, and theoretical perspectives that inform gerontological social work practice. This class additionally focuses on the unique nature of social work with this diverse population including a continuum of care services for older adults, interdisciplinary nature of helping services, dynamic nature of aging for multiple vulnerable older adults such as those facing institutionalized oppression, and specific attention to elder wellness.

SOWK 4454 Child and Adolescent Trauma (3 Credits)

This course introduces students to the common concepts (general theory and foundational knowledge), components (intervention and treatment elements) and skills (practitioner skills) underlying evidence-based treatment for children and adolescents who have experienced trauma. Trauma is broadly defined, and includes children and adolescents exposed to traumatic events including, but not limited to natural disasters, war, abuse and neglect, medical trauma, witnessing interpersonal crime (e.g. intimate partner violence), and other traumatic events. The course highlights the role of development, culture, and empirical evidence in trauma-specific interventions with children, adolescents, and their families. It addresses the level of functioning of primary care giving environments and assesses the capacity of the community to facilitate restorative processes. The course focuses on assessment and intervention as a foundation for subsequent learning about treatment. This course incorporates the new National Child Traumatic Stress Network (NCTSN) core curriculum on child trauma (CCCT). The course conveys the crucial evidence-based concepts, components, and skills designed by NCTSN to strengthen competency in assessment, referral, and treatment.

SOWK 4465 Human Security (3 Credits)

Human security is a new paradigm for understanding complex global vulnerabilities. Human security goes beyond traditional notions of national security and highlights the security of the individual rather than that of the nation state. Human security uses a person, entitlement and human rights centered view of security. It is essential for national, regional and global stability and sustainability. In defining human security, the United Nations stressed “the right of all people to live in freedom and dignity, free from poverty and despair”, and recognized that “all individuals, in particular vulnerable people, are entitled to freedom from fear and freedom from want, with an equal opportunity to enjoy all their rights and fully develop their human potential” (A/RES/60/1). “Human security aims at ensuring the survival, livelihood and dignity of people in response to current and emerging threats - threats that are widespread and cross cutting. Such threats are not limited to those living in absolute poverty or conflict.” (UN-OCHA) Today, the impacts of natural disasters, climate change and other forms of environmental change, and global economic crises, among others, are considered to threaten human security in developing as well as developed countries. The increasing numbers of internal violent conflicts, forced migration, natural disasters and environmental degradation have resulted in national and international security failings that reflect the challenges of the post-Cold War security environment. The failure of mainstream development models to generate growth, particularly in Least Developed Countries (LDCs), or to deal with the consequences of complex new threats (e.g., HIV/AIDS, climate change, social and economic inequality) reinforced the sense that international institutions and states are not organized to address such problems in an integrated way. Social workers focusing on human, social and economic issues in global settings will use various human development strategies and other capacity-building approaches in practice. This course will develop students’ skills in human and social development strategies, sustainable livelihood and conflict management strategies, and other capacity-building community strategies, and fosters a solid understanding of the programmatic and practical requirements for human security in a global context.

SOWK 4480 Social Justice in Mental Health (3 Credits)

This course builds skills in identifying, analyzing, and attempting to remedy social justice challenges in mental health practice. These challenges include practices that risk marginalizing, oppressing or doing other harm to people with mental health challenges. Using research, theory, and extensive case studies, the course reviews perceived conflicts between clinical social work’s focus on mental health practice and the larger social work profession’s commitment to social justice. The course then provides an overview of mental health practices that raise ethical and social justice issues, reviews the justifications provided for such practices, and examines the efforts of critics to change them. Special attention is paid to controversial practices with vulnerable populations such as children, older adults, racial and ethnic minorities, and sexual minorities.

SOWK 4500 Foundations of Play Therapy with Young Children (3 Credits)

This course offers an integrative framework of theory and research to understand and intervene in the major mental health problems experienced by children. This course is also designed as an introductory experience to play therapy. Interventions include both direct work with children and collaborative/conjoint work with parents. Play therapy techniques include both directive and non-directive approaches including but not limited to child-centered play therapy and cognitive-behavioral interventions. Children’s development is considered from a multidimensional perspective including cultural context, risk and protective factors, and the development of psychopathology with an emphasis on early and middle childhood.

SOWK 4501 Wellness Assessment & Promotion Across the Lifespan (3 Credits)

This course builds students’ skills and strategies to enhance wellness for individuals, organizations and communities. Students will explore differences and beliefs related to health and wellness in both their internal/personal experience and in social work practice. The western medical industrial complex of ableism and “moral and physical fitness” is focused on illness treatment. In contrast, holistic health models of assessment focus on wellness promotion. Course topics include soul and nature based human development models, Eastern and Indigenous medicine models, and traditional or evidenced based wellness frameworks. Students, use complementary and holistic approaches to assess and address gaps found in public health data, community health, organizational and public policies. The course emphasizes the application of interdisciplinary knowledge and skills, professional ethics and values, and the role of social workers as change agents in creating solutions for public health issues at micro, mezzo and macro levels.

SOWK 4505 Relationship Therapy (3 Credits)

This course focuses on assessment, problem/solution path identification, intervention strategies and outcome evaluation in counseling heterosexual, gay and lesbian couples. Identifies common relationship patterns and explores intervention strategies including behavioral, strategic, structural, narrative, transpersonal and feminist. Also covered are issues such as conflict management, relationship enhancement, intimacy, power and control, domestic abuse, infidelity and divorce. Students will analyze the intersecting issues of oppression: sexism, racism, classism, heterosexism and ageism.

SOWK 4520 Advanced Clinical Social Work Practice with Families (3 Credits)

This course is an advanced skill-based course that extends students’ knowledge and application of family systems therapy. The course engages the activate participation of students in role-play scenarios and the discussion and deconstruction of actual cases enhancing their developing skills as family therapists-in-training. In this course, students have the opportunity to plan and implement an entire course of treatment for a family. This allows the development of a conceptual understanding of family therapy practice, treatment skills and interventions, and utilization of self-as-therapist that influences the therapeutic system. Students have multiple opportunities to practice family interventions and receive feedback from both classmates and the instructor through the use of the clinical family therapy methods of ‘live supervision’ and ‘reflecting teams’. Students will experience the connection between theory and practice and learn to integrate multiple theories. Issues related to transference, culture based countertransference, resistance, and working with involuntary clients are discussed. Advanced Clinical Social Work Skills with Families builds on the family systems theory and practice applications learned in the required family systems concentration courses and expands students’ opportunity to apply theory to cases in diverse practice and client situations. An emphasis is placed on the development of personal theory, professional development, and therapeutic change/outcome as it relates to common factors in family therapy. This course also builds upon SOWK 4505: Relationship Therapy and aspects unique to couple’s therapy. Prerequisites: SOWK 4320 and SOWK 4420.

SOWK 4521 Advanced Skills for Working with Military Families (3 Credits)

The class is designed to give students an understanding of the issues military families face and how to apply that understanding to clinical interventions with military families. It also investigates individual service member concerns, spousal/partner relationships, and family dynamics surrounding deployment, active duty, and returning home permanently or between deployments.

SOWK 4523 Care Management Skills and Resources to Promote Community Living (3 Credits)

Many individuals and their families of all ages cope with physical and mental health conditions that impede their ability to live in the community. A vast array of formal and informal resources, public programs, and privately funded services can promote community living. Social workers often provide care management to enhance access, coordinate care, and ensure equality of these long-term services and supports. This course will develop students' skill at care management and knowledge of resources, including resources for persons with developmental disabilities, chronic mental health conditions, physical disabilities, and age-related functional impairments.

SOWK 4530 Poverty and Community Economic Development (3 Credits)

This is an advanced community practice class focused on poverty, low-income neighborhoods and local economic development. The class begins with a thorough review of the scholarly literature related to poverty, sustainability, and the concentration of poverty in low-income neighborhoods. Then, public and private responses to poverty are examined. The class focuses on both governmental policies and programs supported by the private sector. Next, the class turns to local responses to the concentration of poverty in low-income neighborhoods. The class focuses on the interdisciplinary nature of programs and interventions aimed at community economic development in low-income neighborhoods.

SOWK 4535 Planning and Program Development (3 Credits)

This course prepares students to engage in strategic planning and program development roles and practice within a social work community, organizational, or policy practice setting. Students in this course gain knowledge in the principles of planning, social enterprise, the engagement of stakeholders in planning processes, community collaboration and the elements of designing and implementing programs. Students have the opportunity to put this knowledge base into practice by developing a comprehensive program proposal applying the skills of strategic thinking, planning, critically evaluating research informed practice and practice informed research. In addition, students engage in communicating professional judgment in both written and oral formats.

SOWK 4545 Social Work Practice with LGBTQIA Communities (3 Credits)

This values course will facilitate students' exploration of their own perceptions, biases, and belief systems with regards to the broad topic of LGBTQIA identities and communities. A values perspective encourages students to reflect on their personal, professional, cultural and political perceptions of these identities. This course will explore the social construction of sexual orientation and gender identity, examine the idea of binaries, engage in historical analysis of LGBTQIA histories, and will familiarize students with legal and societal barriers and challenges facing members of the LGBTQIA community. Students will learn definitions around these identities, learn more about the spectrum of sexual orientation and gender, and utilize critical theoretical perspectives. Students will engage in critical dialogue around the representation of LGBTQIA people in our culture and media. Utilizing a person-in-environment perspective, students will look at the Social Work Code of Ethics as it relates to LGBTQIA individuals, explore various facets of self-determination, social justice, dignity and worth of a person, the role of family, friends and community, and how power, privilege and oppression may impact the lives of LGBTQIA people. Lastly, students will synthesize this information to envision how their social work practice will be inclusive of LGBTQIA individuals and communities, including those who hold other marginalized identities. Prerequisite: SOWK 4132.

SOWK 4555 Spirituality and Social Work (3 Credits)

The purpose of this course is to provide students with a nondiscriminatory framework of knowledge to respond competently and ethically to populations with diverse spiritual perspectives and religious cultures in social work practice. This social justice-informed course underlines and respects the diversity of all spiritualities with special attention to spiritual populations historically marginalized and neglected by Eurocentric assumptions common to social work. This course builds on the generalist approach of our foundation curriculum and integrates theories of multiculturalism, human development, and identity development while exploring how individuals view spirituality and religion as they move through the life cycle. Drawing on the work of Edward Canda, Ken Pargament and Froma Walsh, the course will explore definitions of spirituality and religion, survey methods of approaching spiritually sensitive bio-psycho-social assessments, and examine culturally and spiritually sensitive social work interventions. Class activities will emphasize dialogue, reflection, exploration and experiential learning in order to develop a balanced framework for navigating spirituality and religion in practice settings with individuals, groups, families, communities and organizations. In this course, students will gain self-awareness and learn how their own cultural and spiritual perspectives have shaped their worldview and professional sense of self. It is assumed that students enrolling in this course will bring an interest in learning about the many facets of spirituality. As such, students will be asked to explore their own ideology of spirituality as it relates to their professional identity and practice effectiveness. Prerequisite: SOWK 4132.

SOWK 4565 Social and Environmental Impact Assessments (3 Credits)

Social and environmental impact assessments are important tools for analyzing and managing both the intended and unintended consequences of development projects on human and ecological systems in order to bring about a more equitable and sustainable social ecological system. This class will incorporate an understanding of the history and concepts of the three levels of impact assessments (micro, mezzo, and macro) into the research process that is the core of social impact assessments. Students will be able to prepare and evaluate social ecological impact assessments through learning to identify and define problems, select theoretical frameworks appropriate to the problem, identify research questions, design a study appropriate for the identified questions, gather and analyze data, and write the final assessment. Particular attention will be paid to assessing the effects of interventions on vulnerable populations. Other topics will focus on the practical aspects of project team selection and management, timelines, and the communication of findings to stakeholders.

SOWK 4600 Child Welfare History & Policies (3 Credits)

This course examines contemporary U.S. child welfare policies in historical perspective, focusing on prevention, report and investigation of child abuse and neglect, as well as family preservation, out-of-home care, adoption and services for troubled adolescents. Also evaluated are the impact of policies and proposals for change in policies, considering empirical evidence, values and ethics. Provides a framework to analyze policy choices and encourages students to advocate for needed policy changes.

SOWK 4610 Policies and Programs for Children and Youth (3 Credits)

This course examines the history and evolution of social policies and programs targeting high-risk youth. Students will seek to critically analyze the effects of current and recent policies in the context of youth offending and other adolescent problem behaviors. Prerequisite: SOWK 4120 or SOWK 4299.

SOWK 4630 Family Policies and Services (3 Credits)

Identifies challenges contemporary American families are experiencing and presents strategies for developing policies and services to meet these challenges. Examines specific policies and services that most affect families, as well as broader questions concerning power and its distribution, allocation of resources and the role of government in promoting individual and family well-being. Prerequisite: SOWK 4120 or SOWK 4299.

SOWK 4635 Immigration Policies and Services (3 Credits)

This course identifies challenges for immigrants and presents strategies for developing policies and services to meet these challenges. It not only examines specific policies and services that most affect immigrants but also considers broader questions concerning power and its distribution, allocation of resources, and the role of government in promoting individual and family well-being. This is a concentration policy course for all concentrations.

SOWK 4640 Mental Health and Substance Use Policies (3 Credits)

This course provides a comprehensive understanding of policies related to mental health and/or substance use, their historical antecedents, and the socio-political forces that influence their development. This course also introduces students to emerging controversies concerning these policies.

SOWK 4641 An Introduction to Prison-Industrial Complex Abolition (3 Credits)

Grace Lee Boggs said we must “transform ourselves to transform the world,” and this course is rooted in this belief. Prison-industrial complex (PIC) abolition is a philosophy, a daily practice, and an organizing strategy. It requires us to examine our default frameworks (built by settler colonialism, racial capitalism, and white supremacy) for relating to one another, and to create entirely new ways of being with and caring for one another. My aim is to co-create a space with all of you where we can think collectively and speak boldly about how, as the writer, performer, and activist Morgan Bassichis states, “The very systems we are working to dismantle live inside of us.” It’s easier to look outward and critique an institution/system than it is to look inward and be honest about—and work to disassemble—the dangerous carceral logics embedded in our.

SOWK 4642 Global Trauma (3 Credits)

Social workers often find themselves working with people who have experienced, endured, and survived traumatic events such as terrorist attacks, sexual violence, refugee camps, food scarcity, and war. People are fleeing their homes and communities, most often unwillingly, due to forced migration, war, food insecurity, and environmental degradation. Some are unable to leave and are continuously retraumatized. All of this has resulted in increasing numbers of people experiencing trauma on a collective and global scale. Most of this is not new but it is exacerbated by current events, including a global pandemic. This course examines ways in which people collectively experience trauma and the impact on them within their cultural context. The context of peoples' lives will be examined and the unique impact of collective trauma on children will be explored. This course is designed to challenge assumptions about those who have experienced collective trauma and the meaning they place on their experiences. We will also explore the role of international and national policies and communities in causing situations that result in collective trauma as well as their response to it. The role of social work in prevention, advocacy, and intervention will be explored. Resilience of survivors will be studied and the need for self-care will be incorporated into this course.

SOWK 4643 Digital Justice in Social Work (3 Credits)

Should internet access be a universal right? What will be the next “internet”? And what does social work have to do with any of this? Transformation or revolution, the digitalization of the human project is progressing rapidly and demands of social work’s leadership and contributions. As tele-practice evolves across industry, social workers not only require a specific skill set to meet consumer and service delivery demand, but a mindset and approach prepared for an uncertain, innovative, and networked future. This includes the evolution of power, privilege, and oppression and what inclusion and equity mean in a digital ecosystem. This course will explore the possibilities of digital social work practice and opportunities for micro, mezzo, and macro change, while providing students with constructs and strategies for promoting equity.

SOWK 4645 Health Care Policy (3 Credits)

This policy course provides an overview of health care policy as it is relevant to social work practice in multiple health and behavioral care settings. With the advent of health care reform and the implementation and operationalization of the Patient Protection and Affordable Care Act (PPACA), there are rapidly changing policy issues related to this innovative integration and delivery of health care services. Students in this course critically analyze the practice of policy in this new and quickly evolving service arena. This course explores key health policy strategies to foster integrated delivery system development and sustainability in line with health policy goals to reduce cost of care, improve population health and improve quality of integrated care services, with special emphasis on the integration of primary care, behavioral health services and wellness/health promotion initiatives. Strategies for students to influence policies and promote change in the interest of the individual/family/community, agency/organization and the communities they serve are presented. Critical thinking skills in developing and analyzing proposals to improve integrated health policy are encouraged. The course builds on policy content offered in the professional foundation year and links policy to practice and research skills.

SOWK 4650 Aging Policy (3 Credits)

This course provides an overview of social policy and service delivery issues in gerontology. It includes a critical review of rapidly developing policy issues, as well as an overview of U.S. health care and social service delivery systems serving older adults. The course encourages students to participate in critical analysis of issues and to develop and analyze innovative proposals to improve policy and programs for older adults. This course fulfills the policy requirement for the Aging Services and Policy concentration.

SOWK 4655 Mental Health and Health Care Policy (3 Credits)

This course provides an overview of social policy and service delivery issues in mental health and health care, with emphasis on achieving quality and addressing disparities. It includes a critical review of United States' historic and developing policy issues, as well as mental health and health care financing and delivery systems and other key issues in the field. Students will participate in critical analysis of issues and will examine various proposals to improve mental health and health care policy and programs. Prerequisite: SOWK 4120 or SOWK 4299.

SOWK 4660 Social Policy Advocacy (3 Credits)

Facilitates student learning within policy-making arenas. Students are paired with health and social service agencies and coalitions to assist in agenda-setting, legislative research, and issue-advocacy development and implementation in the state legislature and bureaucracy.

SOWK 4670 Policy Development & Analysis (3 Credits)

Focuses on the development and analysis of social welfare policy. Reviews the structure of the policy-making and implementation process, and examines perspectives on the definition of social problems and approaches to the development and analysis of social welfare policies. Students apply the perspectives and frameworks as they analyze a specific social problem and policy directed toward it, identify needed change in policy, select place and strategy for change in policy, and communicate knowledge to central actors in the policy-making and implementation process. Prerequisite: SOWK 4120 or SOWK 4299.

SOWK 4680 Native Peoples Practice: History and Policy (3 Credits)

This course is designed as the background to practice with Native Peoples. It will explore the relationship between theory and practice, socio-economic, political, and health issues, and the dynamics of changes in reservation and urban Native communities. Historical trauma, federal policies, impacting Native people, and laws and regulations that impact social service delivery will be reviewed. Social services delivery systems will be analyzed with the uniqueness of the cultural parameters of tribal communities. Guest lecturers from tribal communities may partner with faculty to teach the course. Prerequisites: SOWK 4132.

SOWK 4681 Cultural Connectedness: A Journey Into Native American Country (3 Credits)

This course provides an immersion experience into the Native American cultures of the Southern Ute, Ute Mountain Ute and Navajo Nation tribes. It provides a mixture of experiential and academic learning based on a community-learning model. The course begins with orientation at GSSW and/or the Four Corners Social Work program in Durango, Colorado. The course is open to foundation, advanced standing, and concentration students. Students must have completed their first year of the academic program. Slots will be distributed proportionately to main campus, Glenwood Springs and Four Corners programs, with priority given to Four Corners students. This course is designed for students in all tracks who have an interest in understanding current and historical issues that impact social work practice with indigenous populations, particularly those who have suffered intergenerational legacies of oppression and genocide. The course will emphasize the development of cultural responsiveness in social work practice with populations who come from a different historical context where oppression and historical trauma have occurred.

SOWK 4682 Values for Social Work Practice Native Peoples (3 Credits)

This course addresses culturally responsive practices with Native individuals, families, and communities. The focus will be on the problem-solving processes across a variety of social systems within Native communities. Social problems that are common in tribal communities will be presented, equipping the student with awareness, a knowledge base, and multilevel practice skills, so that they can effectively engage professionally in Native communities. Students will explore the cultural expectations, understand cultural biases, and standards of practice necessary for assessment, interventions, and evaluation of ethical social work with Native Peoples. Tribal communities and cultures span a wide range of cultural histories, belief systems and practices creating a rich and individual cultural context. It is beyond the scope of this course to address all tribal cultures or a depth of knowledge about any one tribal community. However, foundational perspective that will include values, principles, assumptions and cultural beliefs shared by Native Peoples will be addressed. Given that many tribes experience similar spiritual, physical and mental health consequence as a result of historical and modern colonial violence, content on needed services and delivery systems that are applicable across most tribes, locations, and geographies will be presented. This course provides content relevant to Native Peoples living on their sovereign lands as well as those living in rural and urban areas occupied by the United States. At the end of this course, students will have appropriate skills, processes, and resources required to engage in their own discovery of cultural variations among tribes to address their Native client's needs. Pre-requisite: SOWK 4680: Native Peoples Practice: History and Policy. Prerequisite: SOWK 4680.

SOWK 4700 Solution Focused Brief Therapy (3 Credits)

This course explores solution-focused brief therapy (SFBT) and its application in a variety of settings and populations. Focusing on strategies for assessment, intervention, evaluation, and termination, the course applies solution-focused therapy to specific client systems, drawing on knowledge of appropriate techniques, sociocultural factors, and types of problems presented. Solution-Focused Brief Therapy is an elective course in the Mental Health and Trauma Concentration and the Health Equity & Wellness Concentration.

SOWK 4705 Forensic Orientation in Social Work Practice: Assessment and Interventions with High-Risk Offenders (3 Credits)

Presents and applies a framework for assessing and intervening with offender populations. This risk and containment framework takes a community safety and victim-centered perspective and focuses on assessing and intervening with multiple systems surrounding offenders. The framework is then applied to specific interventions with domestic violence abuse offenders and with adult and adolescent sexual offenders.

SOWK 4710 Intimate Partner Violence (3 Credits)

This is a concentration year practice elective focusing on understanding, assessing, and intervening with domestic violence, understood as violence occurring in the context of intimate relationships. The purpose of this course is to provide students with the theoretical understanding and practice skills necessary to establish a beginning competence in assessing and intervening with domestic violence and in developing community, systemic, and policy responses.

SOWK 4712 Social Work & the Law (3 Credits)

Examines legal principles and procedures relevant to social work practice with families and children: structure and operation of the American legal system, principles to follow in conducting legal research, basic principles of constitutional law and law related to juvenile delinquency, child protection, child adoption, education and domestic relations. Covers legal aspects of social work practice including licensing, confidentiality and professional liability.

SOWK 4713 Interdisciplinary Approaches to School, Family and Community Prevention (3 Credits)

Behavioral health problems in childhood and adolescence take a heavy toll on millions of lives. These problems range widely – from anxiety and depression to alcohol, tobacco, and drug abuse; delinquent and violent behavior; dropping out of school; and risky sexual activity and unwanted pregnancies. SOWK 4713 presents an overview of practices and policies aimed at preventing behavioral health problems in young people. Emphasis is placed on developing the practice and policy skills that are necessary to deliver preventive interventions and programs in schools, families, and communities. Students will select an effective program, learn the skills necessary to deliver the program, and then implement the program in a classroom setting. Class content will emphasize the importance of increasing the role of social work practitioners and social work values in the interdisciplinary field of prevention practice.

SOWK 4715 School Social Work Interventions (3 Credits)

Designed to give students the ability to identify, understand and apply the varied roles of school social worker. Examines politics of education, the educational organizational structure, special education law and process, collaborative teamwork with school and community professionals and intersystem case coordination. Emphasis placed on meeting the needs of special education populations through assessment, intervention and evaluation and on preventive programs for children and youth at risk for school failure, truancy and dropping out.

SOWK 4718 School Social Work Assessment and Realities (3 Credits)

This concentration course is the third in the School Social Work Certification. Both SOWK 4715 (School Social Work Interventions) and SOWK 4712 (Social Work and the Law) are prerequisites for this class. The class provides advanced skills in assessment pertinent to the school ecosystem. It also juxtaposes these skills with field trips to several schools to interact with School Social Workers in a variety of settings and work roles to understand how these assessments are used in the school setting. The course emphasizes the written tasks and social work skills that School Social Workers need to perform on a regular basis, as well as how these skills are used to help the student, family, and school environment. Prerequisites: SOWK 4712 and SOWK 4715.

SOWK 4720 Prevention and Treatment of Juvenile Delinquency and Youth Violence (3 Credits)

Examines causal factors and theories that seek to explain why some adolescents engage in delinquent conduct and/or violent behavior. Effective delinquency and violence prevention and treatment approaches are identified at the individual, family, school and community levels.

SOWK 4721 Existential Social Work Practice (3 Credits)

The problems facing people can be understood in the context of situations and meanings they give to them. This course seeks to identify useful ways to clarify and validate the client's unique "world view", bypassing the many dangers and misuses of diagnostic categorization and empowering clients in relation to themselves and problem definition.

SOWK 4723 Social Work Practice in Health (3 Credits)

This course is designed to explore and develop advanced social work knowledge, skills and practice in diverse health care settings. It includes an examination of the social work role on interdisciplinary teams and how to impact change in the health care system and support positive health outcomes for patients and their families. There is an emphasis on patient and family-centered care and interprofessional collaborative practice to reflect social work values in various health settings by focusing on health literacy, evidence based clinical interventions, and responsive multi-cultural practice for acute and chronically ill patients and their families across the lifespan. Modules include content on bioethics, trauma informed care, grief and loss, self-compassion, and special contemporary topics relevant to a social justice approach to advance health and well-being.

SOWK 4725 Mind-Body Connections and Social Work Practice (3 Credits)

This course teaches skills for implementing mind-body techniques, models for wellness assessments, and evidence-based mind-body strategies for intervention in client and community problems. An evidence-based approach creates a foundation for: 1) understanding the mind-body connection that influences an individual's and community's physical, emotional, and social well-being and 2) the most efficacious methods for mind-body social work practice skills. Research evidence demonstrates that mind-body strategies are helpful for an array of concerns such as, military personnel with PTSD, adults with emotional regulation issues, academic concerns of stressed-urban youth, community mobilization, and emancipatory practice.

SOWK 4726 Experiential Therapy (3 Credits)

This course provides students with knowledge and skills to facilitate experiential-based therapy with children, youth, families and couples with a focus on environmentally sound practices. This is considered a service learning class since we are partnering with nature. Please wear comfortable clothes and comfortable closed toed shoes for all classes and bring a water bottle.

SOWK 4727 Experiential Therapy in Nature (3 Credits)

SOWK 4727 is a methods/skills course which provides students with knowledge and skills to facilitate experiential therapy with groups with a focus on environmentally sound practices in the outdoors.

SOWK 4730 Cognitive Behavioral Therapies (3 Credits)

This course examines major cognitive behavioral therapies (CBT) suggesting methods focusing on clients' problem-solving abilities, building on client strengths, targeting specific thought patterns that impede clients from reaching goals, and assessing outcomes in terms of changes in thinking and behavior. Theory is applied to individuals, dyads, families, and groups. Additionally, this course examines relevant research suggesting both indication and counter-indications of approaches.

SOWK 4732 Disrupting Privilege through Anti-Oppressive Practice (3 Credits)

This course, building on the theoretical foundation in SOWK 4132 Multicultural Social Work Practice, examines the barriers to the professional use of self as an ally to historically disenfranchised groups, both in the context of day-to-day relationships with clients as well as in the context of community and macro-level interventions. The course is intended to assist in understanding the personal, situational, structural, and cultural influences that impede justice-oriented social work practice. The course supports students in developing strategies, skills, and approaches to anti-oppressive practice. Anti-oppressive social work practice is a range of practice approaches that adopt a critical and structural perspective on issues of social inequality, oppression, power, privilege, and domination. It encompasses approaches such as feminist, anti-racist, Afrocentric, disability practice, and critical social work frameworks to name a few (Campbell, 2003). It attends to both process and outcome (Dominelli, 1998), and links the provision of individual assistance to people from marginalized groups with involvement in social movements corresponding to the marginalization (Carniol, 2000). "The [anti-oppressive] framework enables links to be made between individual action and social structures. It informs practice by enabling the worker to evaluate differences that exist at an individual level and within society and how these impact on each other. It provides the means of making accurate assessments by taking into account the inequalities that texture the lives of those denied access to society's resources because of their defined social status and the exclusionary practices of the dominant system. It demands that we consistently engage in the process of critical self examination, which in turn enables us to engage in the process of change." (Dalrymple and Burke, 1995, p. 18). Prerequisites: SOWK 4132.

SOWK 4735 Interpersonal Approaches to Counseling (3 Credits)

This course is an elective course which utilizes the interpersonal models of psychotherapy and neurobiology, drawing upon psychodynamic theories and techniques. The course examines traditional and contemporary psychotherapy theories and techniques. Interpersonal interventions are grounded within the values, ethics and standards of practice for clinical social work.

SOWK 4741 Grief and Loss Across the Lifespan (3 Credits)

This course is designed to prepare students to understand social work roles and practice (engagement, assessment, intervention and evaluation) in working with those experiencing loss across the life span. Whether the loss is related to health or functioning, family system, developmental stage or an actual death, this course prepares students to be culturally responsive to diverse perspectives and bereavement needs. Students will learn theoretical models of grief and loss and how to effectively evaluate the needs of grieving individuals, families, communities and their support systems.

SOWK 4742 Disability Studies (3 Credits)

This values course will facilitate students' exploration of their own perceptions, biases, and belief systems with regards to the broad topic of disability. A values perspective encourages students to reflect on their personal, professional, cultural and political perceptions of the epistemology of the notion of disability. This course will explore the social construction of concepts of ableism and identity, engage in historical analysis of disability (both domestically and internationally), and familiarize students with pertinent legislation/policies that impact persons with disability (PWD). Students will learn definitions of disability, come to know more about the spectrum of disability and utilize critical theoretical perspectives. The study of disability includes persons with disability (PWD), including the broad range of categorizations related to mental health, physical health, and cognitive ability. Students will engage in critical dialogue around the representation of PWD in our culture. Utilizing a person-in-environment perspective, students will look at the Social Work Code of Ethics as it relates to PWD and explore various facets of self-determination, independent living, relationships and sexuality, and the role of family, power and privilege in the lives of persons with disabilities. Prerequisite: SOWK 4132.

SOWK 4749 Culturally Responsive Practice with LatinX (3 Credits)

Addresses issues related to mental health needs within Latinx populations in the US, as well as intervention and theoretical approaches for working with Latinx communities. Covers a selection of interventions and strategies for cross-cultural use in adequately addressing the needs of Latinx communities. A required course for the Latinx Social Work Certificate. Prerequisite: SOWK 4750.

SOWK 4750 Critical Perspectives on the Latinx Context (3 Credits)

This course provides a framework for culturally responsive social work practice designed to meet the needs of the Latinx community. Students acquire core principles grounded in an understanding of social justice, privilege and oppression, including the interconnection between human and civil rights, globalization, immigration and poverty. Students learn about the diversity of Latinx cultures, community development, historical patterns of oppression, spirituality, and the role of Latinx movements. In an effort to decolonize the classroom, the students are invited to engage as full co-creators of the curriculum and class experience through social, emotional and somatic learning. As a result of this course, students understand how to advocate for nondiscriminatory cultural, social and economic practices within a Latinx context and experience. The course is designed for students who have an interest in understanding issues facing the Latinx community. Enrollment preference is given to Latinx Social Work Certificate students. Interested students not in the certificate should contact the Latinx Social Work Certificate coordinator.

SOWK 4752 Trauma Informed Assessment and Interventions (3 Credits)

This course provides an overview of multi-system level definitions of traumatic experience—historical, individual, interpersonal, family, organizational, and community. The emphasis is on social work practice that is culturally responsive, growth-oriented, and strengths based, in which the study of trauma is approached from a theoretical base that perceives the trauma response as a "response" rather than a "disorder." Trauma informed assessment and interventions are examined, incorporating a social justice perspective on historical trauma, poverty, and interpersonal violence. This course promotes the unique contribution social workers offer through the lenses of strength, resilience, and coping as well as commitments to cultural responsiveness and ecological/systems factors. Students will identify how secondary trauma impacts social workers and the importance of professional accountability to self-care and ongoing growth and development.

SOWK 4753 Social Development in Latin America (3 Credits)

This course examines social development in Latin America. Knowledge acquisition is focused on social, political, economic and cultural realities of this region and on the skills required to be an active participant in effective change efforts. This course is required for students in the LatinX Social Work Certificate Program and is open to all students with shared interest.

SOWK 4757 Social Work and Latino/a Cultures: An Intensive Practice and Spanish Immersion Course (1-3 Credits)

This required course (health and travel alerts permitting) for the Latinx Social Work Certificate combines academic classroom instruction with experiential and conversational learning. Country location for this study abroad course is determined based on yearly certificate objectives and travel advisories. The course has previously travel dot Chiapas, Mexico to explore human rights, development, economic policy, culture and language. Students engage and learn alongside community partners, including nonprofit's that focus on hunger and education, gender equity, sustainability as well as nongovernmental organizations that defend human rights by accompaniment with indigenous communities. This class is currently offered entirely in Spanish.

SOWK 4758 Social Work in Kenya: Context, Conservation, Empowerment, Sustainability (1-3 Credits)

This course is designed to introduce students to the social, cultural and conservation issues of Kenya and East Africa. This course is field-based with strong emphasis on service learning and direct experiences. Course readings, lectures, classroom discussions, service learning projects and field work in rural Kenya provide participants firsthand experience in the social, cultural, historical, political, environmental, ecological and economic realities that exist in Kenya. This course is open to qualified concentration and advanced standing Graduate School of Social Work students. The course meets on campus for four sessions before traveling to Nairobi, Voi, and Kasigau, Kenya. Due to the intensive nature, remote travel logistics and costs for this course, direct communication with the professors is required. Qualifications include: willingness to sign International Travel Agreement, willingness to receive required medical authorization and immunization, academic good standing, and readiness for the physical and emotional demands of traveling in rural and remote Africa.

SOWK 4759 Global Cultural Perspectives: Ethical Considerations (3 Credits)

Social workers increasingly practice in global communities both nationally and internationally. Changes in practice environments demand that social work practitioners are informed citizens of comparative cultures and societies. This course examines the values and ethics of social work practice in a global context of power, privilege and oppression. Course materials and educational experiences are used to challenge students to examine ethical and value-based conundrums when practicing in global settings and to develop practice skills to enhance the health, well-being and sustainability of communities. Through the use of case studies, critical thinking, cultural inventories and reflexivity the course supports and challenges students' personal growth and professional practice.

SOWK 4760 Resource Development and Fundraising (3 Credits)

This course examines strategies and tactics around skill building in fundraising, resource-development strategies, grant-proposal writing, budgeting, and fiscal processes common to not-for-profit or governmental organizations. Topics include resource development and acquisition (fundraising) and discussions on the budget process required resource management for nonprofit organizations.

SOWK 4762 Bosnia in Transition: The Social Work Response (1-3 Credits)

This course provides students with the unique opportunity to learn firsthand about the social work response in post-war Bosnia through a social justice lens. The social, cultural, historical, political, economic, religious, legal and ethnic characteristics of the former Yugoslavia will be explored as context for studying the genocide that occurred in the 1990s. Learning will occur in the classroom at GSSW, followed by travel to Bosnia. Students will be exposed firsthand to the local, national and international efforts toward rebuilding and healing, through lectures provided by faculty at the University of Sarajevo School of Social Work, interaction with Bosnian social work students, visits to NGOs focused on the post-war efforts, visits to sites important during the war, visits to war tribunal sites, and exposure to current legal, economic and human service processes.

SOWK 4763 Social Work and Social Justice in South Africa (1-3 Credits)

This three-credit course will be conducted in partnership with Educo Africa in Cape Town, South Africa. The course will provide experiential and service learning social work experiences. Course activities will encourage cross cultural learning experiences and increase knowledge pertinent to South Africa's social, cultural, environmental, political and historical reality. It will expose students to Community Development challenges as well as environmental and social justice issues in a South African context. The goal of the course is to increase personal, community and global leadership potential of social work and social development professionals. This course in partnership to Educo Africa will use a community-based context to increase the effectiveness and expertise of students and will support student's engagement in program development and building international networks and partnerships.

SOWK 4764 Historical Trauma and Healing (3 Credits)

This course is designed to provide students with a context for practice with communities experiencing historical trauma. We learn about the conceptualization of historical trauma, its impact on communities as well as community responses to it. We also discuss the importance of cultural protective factors, strengths, and culturally relevant models of healing around multigenerational, collective experiences of trauma. A number of practice approaches found useful with communities experiencing historical trauma are presented and discussed. Class format includes presentations, small group discussions, films, poetry, movement, and experiential learning in the community. This course is built upon the concepts of empowerment practice, indigenous models of social work, and narrative theory and practice. We use these perspectives as we explore work around historical trauma in communities. This class provides social work direct practice skills on individual, family, community and policy levels.

SOWK 4765 Global Social Change (3 Credits)

Social development is a process of planned change intended to bring about a better correspondence between human needs and social policies and programs. This class has a fully global focus with particular emphasis on transitioning economies to align with human wellbeing. Practice-oriented, the class is geared toward a knowledge of policy-making for global human security within a dramatically changing environment and the skills required for local social development.

SOWK 4782 Feminisms in Social Work Practice (3 Credits)

This course engages students in the conversation of scholarship and social work practice issues related to social justice and the oppression of women. The course is designed to expand the knowledge of theory, research, policy and practice for working with diverse groups of women in multiple settings. Feminist social work perspectives for social work practice at micro, meso and macro practice levels will be critically examined. Topics include feminist theories, or feminisms, including eco-feminism and womanism, clinical and community feminist practice models, globalization and women, and the value of feminist research. These topics will be informed by knowledge and awareness of intersectionality, oppression and privilege. Prerequisite: SOWK 4132.

SOWK 4784 Suicide Assessment and Interventions (3 Credits)

This course builds students' competencies in assessing suicide risk, planning for safety, and providing counseling to individuals who are thinking about suicide or have made a suicide attempt. This class examines theories of suicide causation, methods of suicide risk assessment, and models of techniques for intervention. Students will learn practices for eliciting sensitive information about troubling thoughts, assessing and documenting a client's level of suicide risk, and using cognitive-behavioral and other methods to help reduce suicide risk.

SOWK 4786 Human Trafficking: Prevention, Intervention, and Support of Its Victims (3 Credits)

This course meets the values for practice requirement and is relevant for students who are interested in trauma, human rights, international issues, prevention of child abuse, intervention with victims of violence, interventions with child abuse, interventions with high-risk youth, and PTSD. This class investigates human trafficking from a social work perspective: prevention, intervention, and support of victims. Additionally, this course investigates regional differences in both labor and sex trafficking. The class also studies how prevention, intervention, and giving support to victims change from different regional (Asian, African, European, and Latin American) perspectives. The course also investigates human trafficking in the US, both with domestic and international victims. Prerequisite: SOWK 4132.

SOWK 4790 Human Sexuality (3 Credits)

Integrates human sexuality in the thinking and practice of social workers. By viewing sexual behavior from the social work perspective, the student is prepared to assume a significant role in helping clients deal with issues of human sexuality. Focuses on clients experiencing sexual dysfunction and on sexually oppressed client groups including the elderly, the homosexually or bisexually oriented, the physically or developmentally challenged and the sexually abused. An elective course.

SOWK 4795 Foundations for Human-Animal-Environment Interactions in Social Work (3 Credits)

Foundational course with broad survey of the field and value exploration. Introduction to cultural and social justice aspects of human-animal-environment interactions. Formation of personal HAEI-SW vision and ethical framework, and beginning of culmination project concept development. This is the initial required course for the Human-Animal-Environment Interactions in Social Work (HAEI-SW) certificate.

SOWK 4796 Human-Animal-Environment Interventions in Social Work Practice (3 Credits)

Focus on skill development for the integration of animals in social work practice with a primary focus on treatment. Exploration of clinical and community practice frameworks across the lifespan. This is the second required course for the Human-Animal-Environment Interactions in Social Work (HAEI-SW) certificate. Prerequisite: SOWK 4795 or permission of instructor.

SOWK 4797 Professional Integration of Human-Animal-Environment Interactions in Social Work (3 Credits)

Culmination course with a focus on applying knowledge and demonstrating competence through service or program design. Includes professional development and job search preparation, unique to HAEIs in social work. Prerequisites: SOWK 4795 and SOWK 4796.

SOWK 4900 Methods for Evaluating Practice and Programs (1-3 Credits)

Provides students with strategies for evaluating social work practice at multiple system levels. Prerequisite: SOWK 4201 or admission to advanced standing program.

SOWK 4901 Applied Practice Evaluation Research (3 Credits)

Provides students with the opportunity to conduct a practice evaluation project in their field setting. Prerequisite: SOWK 4900.

SOWK 4902 Public Impact for Policy, Community Organizing, and Research Dissemination (3 Credits)

This course examines strategies for translating research for non-academic audiences. Topics include identifying the best approaches based on audience and goal of dissemination, ethical issues in translating complex research findings, and issues in working with media. A central value of dissemination for public impact is bridging the academy and communities most impacted by the research with particular attention to communities experiencing marginalization.

SOWK 4903 Photovoice as Intervention and Research Methodology (3 Credits)

This course explores the use of Photovoice as a social work intervention, advocacy tool, and research method. Through participating in a mini-photovoice project on the future(s) of social work, students will learn the basics of implementing Photovoice, ethics surrounding the approach, and the various ways it can be applied in practice and research.

SOWK 4904 Introduction to Human-Centered Design for Evaluation & Program Development (3 Credits)

This course will provide an introduction to the Human-Centered Design process and its application in developing and evaluating programs. Human-Centered Design is both a creative and practical process for generating solutions that place the people you serve at the center of the design process. During this course, you will move through the human-centered design process with a team, empathizing, prototyping, iterating, and finally pitching to a community partner from GSSW for whom you will be evaluating and developing a solution. You will first build insight and understanding about a focal issue through interviews with experts and end users, in-person observation, and other creative exercises intended to evaluate existing processes and experiences. Teams will utilize this knowledge to take a fresh look at the presented issue and generate breakthrough ideas in partnership with the end user and the GSSW groups who serve them. An iterative process of ideating and prototyping solutions, eliciting feedback, and refining ideas will culminate in pitch presentations at the end of the course. Your team will document its design process and final solutions in detail, which will then be delivered to the GSSW partner for potential implementation.

SOWK 4950 Foundation Field Internship (0-15 Credits)

This required practicum provides foundation students with the opportunity to integrate social work theory and practice for effective professional intervention at clinical and community levels.

SOWK 4965 International Field Practicum (0-18 Credits)

This international course fulfills partial requirement for a student's concentration year practicum. In an international social work setting, the practicum provides students with the opportunity to integrate social work theory and practice for effective professional intervention at clinical and community levels.

SOWK 4970 Concentration Field Internship (0-18 Credits)

Concentration students participate in planned practice experience that integrates classroom theory, the learning of practice skills and the continued development of social work attitudes, ethics, and values. Prerequisite for 2-year students: successful completion of foundation-year course work and field internship. Prerequisite for students with advanced standing: successful completion of advanced standing prerequisite courses and BSW-year internship. Field must be taken concurrently with concentration-year course work, or after core concentration course work. Concentration-year field requires a minimum of 20 hours a week experience at the assigned field agency. Any deviation from this standard requirement must be approved by the Director of Field Education. Prerequisite: SOWK 4950 or 4299.

SOWK 4971 Experimental Class (3 Credits)

Experimental courses allow GSSW to provide a wide variety of course offerings that respond to current issues and themes in the profession as they arise, as well as providing specialized courses that relate to the interests and areas of expertise of our faculty. All experimental courses are offered as electives open to all students. Prerequisite: determined by each instructor.

SOWK 4990 Topics in Social Work (1-4 Credits)

This topics course provides students with the opportunity to learn content appropriate to graduate social work education that is not currently incorporated into the standard MSW curriculum. Given the ever-changing nature of social work practice, theory, and research, topics of importance emerge each year that have particular relevance for a period of time or may be new emergent topics that will have relevance for the future of the discipline of social work. As such, this course provides a mechanism through which courses may be offered on a one-time basis. Topics may be related to social work practice, theory, or research. Topics vary from term to term and may be limited by program administrators, faculty, or by student interest.

SOWK 4999 Capstone (0-1 Credits)

This course is a 0-1 credit (Pass-Fail) required course in which students document their work through the development of an individual portfolio. Students are asked to upload artifacts (papers, presentations and field accomplishments) from both classroom and field internship that demonstrate how they have met the CSWE foundation and concentration specific EPAS competencies and practice behaviors. Students complete a reflection statement on their learning as it relates to the EPAS competencies.

SOWK 5000 Seminar in Professional Social Work Issues (2-6 Credits)

Examines the dilemmas and challenges confronting the social work profession and social work education. Examines the nature of professional education, the nature of the profession itself and the forces internal and external to the profession that have an impact upon practice and education. Required.

SOWK 5005 Categorical Data Analysis (4 Credits)

This course is an intermediate statistics class for doctoral students in the social sciences. The course is designed to provide a general understanding of categorical data analysis. Course content will focus on regression analyses for categorical dependent variables/outcomes. Students are often familiar with linear regression analyses that are used for continuous dependent variables/outcomes, but these data analysis methods are inappropriate when working with binary, ordinal, multi-categorical (i.e., nominal with >2 categories), and count dependent variables/outcomes. This course will cover a range of data analysis methods to examine categorical dependent variables/outcomes, such as logistic, ordinal, multinomial, and poisson/negative binomial regression analyses. For each method, students will learn the background; statistical underpinnings/assumptions; computation of statistics; interpretation and reporting of statistical results. Students also learn computer applications that are used to perform these statistical analyses. Data analysis using computer software (Stata) is required.

SOWK 5101 Social Welfare Policy Analysis and Development (3 Credits)

Applies analytical techniques to development of social welfare policy stressing the ability to formulate a policy hypothesis (i.e., a statement, in testable form, of a basic premise undergirding a policy position) and to reach conclusions based on analysis of empirical evidence related to the policy hypothesis. Required.

SOWK 5110 Introduction to Advanced Quantitative Research Methods (3 Credits)

This required doctoral course introduces students to quantitative approaches to conducting social research. The course includes material related to measurement, sampling, research design, data collection, and data analysis. While each of these topics encompasses technical issues to be mastered by doctoral students, the logic and underlying rationale of these research methods is of prime importance in this course. A second component of the course requires students to define and begin to develop a substantive area of intended study and research during their enrollment in the doctoral program. Elements of articulating a substantive research area and steps toward defining key research questions in a topical area are reviewed. Aspects of conducting literature reviews leading to the articulation of a substantive research area are discussed in class sessions.

SOWK 5111 Quantitative Methods for Assessing Social Interventions (3 Credits)

Social work researchers are in a unique position to contribute to knowledge about the causes of individual and societal problems and to test interventions that seek to prevent or ameliorate such problems. A variety of qualitative and quantitative research methods are used to advance knowledge about etiological factors contributing to individual and social problems and to assess the outcomes of specific social policies and practice strategies. This course presents a detailed examination of quantitative methods and designs that are useful in assessing the effects of social interventions. Measurement, sampling and design issues in generating and testing research questions and hypothesis are explored. Experimental, quasi-experimental, and survey research designs are assessed and applied to practice and policy issues and problems. Special emphasis is placed on developing skills necessary to conduct intervention research. Cognate students may be permitted on a case by case basis, space permitting.

SOWK 5120 Introduction to Advanced Qualitative Research Methods (1-3 Credits)

This course provides a substantive doctoral-level review of content on qualitative research methods and strategies. It is developed for students from social science disciplines. The content includes the nature of the method, the epistemological implications and assumptions, and appropriate applications. Student learning and evaluation includes the experience of developing a research proposal based on qualitative methodology and conducting data collection for a mini-research project. This course is required for social work doctoral students. Students from other departments may register with permission from the professor.

SOWK 5121 Qualitative Data Analysis (1-3 Credits)

The focus of this course is on data analysis and interpretation, demonstration of the science of the analysis, and presentation of findings in oral and written forms. Students are expected to conduct qualitative analyses on textual data they collected as part of SOWK 5120 or as a result of some other qualitative data collection experience. Over the course of the term students learn to code and analyze their data, interpret findings, orally present those findings, and write a final paper in which they demonstrate a rigorous engagement with qualitative data analysis and the literature relevant to their topic. This course is for SOWK PhD students only. Cognate students may be permitted on a case by case basis, space permitting. Prerequisite: SOWK 5120.

SOWK 5130 Mixed Methods Research in Social Work (3 Credits)

This course introduces doctoral students to mixed methods research in social work and the social sciences. Students explore mixed methods as a third research paradigm that strategically combines both quantitative and qualitative methods within a single inquiry. The course encourages students to actively reflect on previous quantitative and qualitative research training. Specific topics for the course include: history and language of mixed methods research; relevant paradigms and epistemological debates; mixed methods design and research questions; and analysis and dissemination consideration. SOWK PhD students only. Cognate Students will be allowed to register on a case by case basis, space permitting.

SOWK 5201 Intro to Statistical Methods in Social Work (5 Credits)

Examines the use and interpretation of statistics in educational and human services research, including descriptive and inferential statistics. Required.

SOWK 5202 Correlation and Regression (4 Credits)

Examines correlational and multiple regression research designs and their application to social work and social science problems. Cross-listed with RMS 4911, SOWK 5952. Prerequisite: SOWK 5201.

SOWK 5300 Social Science Theory and the Philosophy of Science (3 Credits)

This foundation doctoral level course introduces traditional issues and recent developments in the philosophy of science, and provides an overview of social science theory and theoretical frameworks. It examines philosophical questions on scientific inquiry and the consequences modern science imposes on our basic understanding of knowledge and nature. The course analyzes and critiques the social-and-behavioral-science foundations that undergird the social work knowledge base and current social work theories. There are no prerequisites for this course. This course is required to social work doctoral students.

SOWK 5301 Social Work Theory in Research and Practice (3 Credits)

This course builds on SOWK 5300, Philosophy of Science and Social Work Theory, to examine how theories, conceptual frameworks, perspectives, and models are used specifically within social work research, education, and practice. This course explores how theories are used in research and in social work interventions on individual, family, group, organizational, community, and policy levels. The course analyzes and critiques the social work knowledge base and the current state of social work theories. This course is required for social work doctoral students. Prerequisite: SOWK 5300.

SOWK 5401 Quantitative Research Methods (4 Credits)

Focuses on basic elements of quantitative social research methods: measurement, sampling, research designs, data collection and data analysis. Emphasizes logic and underlying rationale, as well as technical issues. Prior understanding of computer-based statistical analysis is helpful. Required.

SOWK 5405 Advance Qualitative Analysis (3 Credits)

Provides an understanding of analysis methods used to draw meaning from qualitative data, methods that must be practical, applicable and understandable to other observers. Prepares students to use a systematic, scientific process of analysis that captures the meaning of data while avoiding research self-delusion and unreliable or invalid conclusions. Topics include data collection, data reduction, data display, and conclusion drawing and verification. Methods include application of computer software. Prerequisite: SOWK 5121. Required.

SOWK 5406 Critical Perspectives on Quantitative Research Methods (3 Credits)

This required doctoral level course introduces students to critical perspectives on quantitative approaches to conducting social research. The course is the 2nd course in the required quantitative research methods sequence and will examine what it means to be a social scientist with a specific focus on critical perspectives in quantitative methods. The course includes material related to data processing, interpretation of results, use of results for non-academic audiences, and intersectionality, as well as an overview of experiments, surveys, and secondary data analysis. Students should gain mastery in these areas while critically examining the rationale and ethics of quantitative methods. Prerequisite: SOWK 5110.

SOWK 5450 Preparing for the Comprehensive Exam: Integration from a Social Justice Perspective (1-3 Credits)

The focus of this course is to help you frame, organize, develop, and complete a proposal for your comprehensive exam, with a particular emphasis on building your skills in integration, synthesis, and critical thinking related to the social justice implications of your work. Students will receive support and feedback about how to integrate theory, policy and empirical research when stating the aims and implications of their proposal. Additionally, students will learn to apply a critical social work perspective to analyze the limitations of existing understandings of their substantive areas of interest. Students will learn to acknowledge complexity and bias of vantage and values in social work scholarship, identify the influence of context and question assumptions about dominant policy, research, and theoretical frameworks, and demonstrate a general understanding of the ways societal privilege and prejudice set the frame for analysis and intervention with the problem. Advisors and mentors participate in class presentations and critiques as a part of preparing the student for the comprehensive exam proposal meeting.

SOWK 5500 Pedagogy in Social Work Education (3 Credits)

This foundation course examines philosophies, theories, and pedagogical models that are utilized in social work education. It explores how various perspectives shape the approaches and techniques used and how these in turn impact classroom effectiveness and issues of classroom management. The course incorporates concepts and develops skills based on evidence-based teaching. This course is a required course for social work students and has no prerequisite. This course is for SOWK PhD students only.

SOWK 5600 Critical Approaches to Facilitating and Teaching: Anti-Racist, Feminist, and Queer Pedagogies (3 Credits)

This course introduces students to anti-racist, feminist, queer, anti-oppressive and other critical perspectives on facilitation and pedagogy. The course is organized in four sections: theoretical frameworks; the role of identities in facilitation, training, and teaching; facilitation and course design and strategies; and supporting social action. Prerequisite: SOWK 5500.

SOWK 5700 Teaching Practicum (3 Credits)

This 3-hour required course provides classroom instruction and teaching opportunities designed to prepare doctoral students for faculty positions in undergraduate and graduate level social work education. Students work with a faculty mentor to pursue practicum placements that match their substantive interests. Students are expected to devote approximately 8 hours to the practicum per week. Restricted to Ph.D. students only.

SOWK 5903 Photovoice as Intervention and Research Methodology (3 Credits)

This doctoral level course explores the use of Photovoice as a social work intervention, advocacy tool, and research method. Through participating in a mini-photovoice project on the future(s) of social work, students will learn the basics of implementing Photovoice, ethics surrounding the approach, and the various ways it can be applied in practice and research. Finally, students will make an actionable plan for integrating photovoice into their doctoral-level research.

SOWK 5990 Special Topics (1-5 Credits)

This special topics course provides students with the opportunity to learn content appropriate to graduate social work education that is not currently incorporated into the standard PhD curriculum. Given the ever-changing nature of social work practice, theory, and research, topics of importance emerge each year which have particular relevance for a period of time or may be new emergent topics that will have relevance for the future of the discipline of social work. As such, this course provides a mechanism through which courses may be offered on a one-time basis. Topics may be related to advanced social work theory, pedagogy, or research. Topics vary from term to term and may be initiated by program administrators, faculty, or by student interest.

SOWK 5991 Independent Study (1-10 Credits)

This is an opportunity for MSW students to undertake special study in a defined area of interest with faculty consultation.

SOWK 5995 Independent Research (1-10 Credits)

PhD students undertake special study in a defined area of interest with faculty consultation. By arrangement.

SOWK 6995 Independent Research (1-18 Credits)

The formal mechanism for undertaking the dissertation, providing for faculty support through the appointment of a dissertation committee. By arrangement.

Josef Korbel School of International Studies

The Josef Korbel School of International Studies is one of the world's leading schools for the study of international relations. Our interdisciplinary programs prepare tomorrow's global leaders for careers in commerce, government, diplomacy, security, sustainable development, global health and humanitarian relief. Coming together from over 20 different countries, our students provide diverse perspectives that supplement the experience and research of our renowned faculty.

Public Policy

Office: Sie International Relations Complex

Mail Code: 2201 South Gaylord Street, Denver, CO 80208

Phone: 303-871-2544

Email: korbeladm@du.edu

Web Site: <https://korbel.du.edu/academics-advising/programs-gr/mpp-public-policy> (<https://korbel.du.edu/academics-advising/programs-gr/mpp-public-policy/>)

The Master of Public Policy (MPP) prepares students with analytical skills and competencies for professional careers in government, private industry, and non-profits. Skills-based learning is joined by deep engagement in select policy areas of the student's choice—such as sustainability, social policy, urban policy, economic policy, business and government, and foreign policy and international security, among others. MPP faculty provide intensive classroom instruction and include professors from across the Korbel School of International Studies as well as public policy practitioners. Multiple experiential learning opportunities and the capstone individual policy memo prepare students for entering the real-world public policy environment.

MPP students graduate with a job-ready skill set, equally applicable to decision-making and leadership positions in the public, private, and non-profit sectors. MPP graduates are able define to policy problems across disciplinary boundaries and apply a range of methodologies as well as ethical awareness to evaluate and implement alternative courses of action in multiple settings.

The MPP degree is hosted by the Scrivner Institute of Public Policy at the Josef Korbel School of International Studies. The Scrivner Institute is dedicated to a broad, innovative, and robust engagement with the foremost policy issues of the day. It equips students with the life-long capacity to understand, analyze, and address pressing public policy issues, both as practitioners in myriad professions and as engaged citizens.

Master of Public Policy in Public Policy

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- GRE or GMAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842. The code to submit GMAT scores for this program is MZR-Z3-55.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 95
- Minimum IELTS Score: 7
- Minimum C1 Advanced Score: 185
- Minimum Duolingo English Test Score: 125

English Conditional Admission: No, this program does not offer English Conditional Admission.

The Public Policy program at the Josef Korbel School of International Studies is committed to the development of tomorrow's policy leaders through an innovative core curriculum that emphasizes analytical, evidenced, and expertise-based solutions to contemporary policy issues. The Master of Public Policy (MPP) degree, offered by the graduate program in public policy, gives students the opportunity to identify, analyze, and solve challenging policy issues at local, state, national, and global levels of governance.

Curriculum Overview:

Candidates must complete sixty (60) credit hours.

Master of Public Policy

Degree Requirements

| Code | Title | Credits |
|---|---|-----------|
| Degree Core (four courses): | | 16 |
| It is highly recommended that students take these required degree courses in their first year in the MPP program to help prepare them for other courses, to keep them on track for completion, and to integrate them in their cohort. PPOL 4200 and PPOL 4400 are typically offered in the Fall; while PPOL 4500, INTS 4349, and INTS 4750 are typically offered in the Winter and/or Spring. | | |
| PPOL 4200 | Microeconomics for Public Pol. | |
| PPOL 4400 | Introduction to Policy Analysis | |
| PPOL 4500 | Cost-Benefit Analysis/Pub Pol | |
| Politics and Policy-Making (choose one): | | |
| INTS 4349 | Comparative Public Policy and Finance | |
| INTS 4750 | The Policy Making Process | |
| Skills (three courses): | | 12 |
| Upon consultation with the Degree Director, you may be able to take other courses to fulfill the skills requirements. Please consult the skills page in Portfolio for a full schedule of skills classes: https://portfolio.du.edu/korbelgradskills (https://portfolio.du.edu/korbelgradskills/). | | |
| PPOL 4702 | Special Topics in Public Policy Skills (Data, Evidence, and Public Policy) | |
| PPOL 4702 | Special Topics in Public Policy Skills (Policy Briefs and Memos) | |
| Additional Skills (8 credits) – You must take at least one Research Methods course as part of your remaining 8 skills credits. You may take two from the Research Methods list below or you may take one from the Research Methods list below and 2 2-credit skill broadening courses or a specialized combination approved by the degree director. | | |
| Research Methods (choose at least one): | | |
| INTS 4050 | Statistical Methods I | |
| INTS 4051 | Statistical Methods II ¹ | |
| INTS 4057 | Statistical Methods I and II ² | |
| INTS 4058 | Applied Time-Series Analysis | |
| INTS 4059 | Data Science With Python | |
| INTS 4303 | Econometrics for Decision Making I | |
| INTS 4632 | Qualitative Research Methods | |
| INTS 4964 | Political Risk Analysis | |
| Additional Skills Courses (4 credits if only one Research Methods course selected from the above). The recommendation is that PPOL students take two 2-credit skills courses drawn from the Korbel School Skills list to ensure a broadening of skills/approaches. Students may also utilize graduate level skills courses in other DU departments/schools with pre-approval of their degree director. | | |
| Specialization (three courses): | | 12 |
| Specializations are sets of three full credit courses (12 credit hours) that a student takes within their degree that are centered on a common topic, region, or degree relevant methods and must be approved by the degree director. Korbel specializations are open specializations, which is to say that they are totally customizable and can be drawn from any and all eligible University of Denver graduate courses. The key is that they must be approved on submission for graduation by a student's degree director and students are encouraged to engage their degree director early in the process on what are approvable sets of courses. Specializations do not go on transcripts, so it is possible to organize courses into more than one set of three, but for completion of degree requirement purposes, only one specialization is submitted as such on your program statement. Students who participate in a Korbel Certificate will put three of their certificate courses in their specialization and the other three in electives to fit the certificate within the 60 credit hours associated with their degree requirements. For more information on Specializations, see the Specializations section of the Korbel MA Handbook. | | |
| Experiential Learning (12-16 credits): | | 12 |
| PPOL 4350 | The Policy Lab (this course is offered each Spring quarter; students should plan to take it in their first year in the program) | 4 |
| INTS 4981 | Internship ³ | 0 or 4 |
| PPOL 4950 | Policy Memorandum (students will work on this capstone analytical product over the course of their second year in the program) | 4 |
| One practicum-style course approved by Degree Director. | | |
| Options include: PPOL 4701: Negotiating Environmental Conflict & Policy, INTS 4226: Social Entrepreneurship & Sustainable Development, PPOL 4701.2: Special Topics in Public Policy: Health Policy, INTS 4709.3: Environmental Peacebuilding, INTS 4708.2: Development & Sustainability Impact Lab. Students may also propose other courses, including from other DU schools, for Degree Director approval. | | |
| Supporting Courses: | | 4 |

Students will fill out their academic program as needed to reach the minimum requirement of 60 credits with graduate level courses in fields and areas of study related broadly but directly to public policy (international studies) or research/policy areas and/or skills already established in their required coursework. These courses can be from Korbel and/or other relevant graduate departments/programs associated with the University of Denver or beyond. Courses from beyond Korbel should be pre-approved by the student's academic advisor. The total number of credits allowed for the degree beyond Korbel cannot be more than 12.

60

¹ Prerequisite: INTS 4050 Statistical Methods I.

² Students may take INTS 4057 Statistical Methods I and II (which combines Stats I and Stats II), instead of INTS 4051 - Statistical Methods II, if they have a strong quantitative background. This is a fast-paced course and it combines what is taught in Statistics I and Statistics II, so only take INTS 4057 if you are confident in your ability to keep up in such an environment.

³ Internships are required for all of the MA degrees at the Josef Korbel School of International Studies and are managed through the Office of Career and Professional Development at the Korbel School. For a few categories of students, the Korbel School may grant an exemption from the internship requirement. While students in the following categories are highly encouraged to pursue internships to enhance their professional development, they may petition to be exempted from the internship requirement.

- a. Students entering Korbel with substantial degree/field relevant professional work experience, typically at least 5 years.
- b. Students with a confirmed job or job offer in a degree/field relevant sector in which they had been working prior to beginning the Josef Korbel degree.
- c. Students sponsored by foreign governments whose terms of study discourage do not allow internships.
- d. Students with truly unique circumstances in which they have met all of the learning objectives of the internship program in a degree/field relevant way, but the experience does not or did not fall within the bounds of the internship program/requirement

Students who would like to petition for their professional experience to satisfy the internship requirement will need to submit a formal request through the Student Affairs Office (see the Portfolio site for details).

Minimum number of credits required for the degree: 60 credit hours.

Faculty

Naazneen Barma, Associate Professor, PhD, University of California, Berkeley

Ajenai Shareece Clemmons, Assistant Professor, PhD, Duke University

Hinckley Jones-Sanpei, Visiting Teaching Assistant Professor, PhD, University of North Carolina-Chapel Hill

Matthew Andrew Kazan, Professor of the Practice, MPP, The George Washington University

Lapo Salucci, Teaching Associate Professor, PhD, University of Colorado

Kaitlyn Margaret Sims, Assistant Professor, PhD, University of Wisconsin

Courses

PPOL 4100 American Public Policy System (4 Credits)

The American Policy Agenda, which is required for MPP students, will provide an intensive overview of the development of American public policy in the 20th century, with special emphasis on the interconnection between the values of the public and private sectors. Through the lens of a useful descriptive model, graduate students will learn concepts of the role of government have evolved from: the (1) constitutional period, wherein political society was thought to be a rational device for the protection of property and liberty and prosperity was equivalent to the free management of affairs; to the (2) administrative period, wherein powerful regulatory agencies were created to control concentrations of corporate power and the idea developed that the market does not always reflect the social good; to the (3) bureaucratic period, wherein the stock market collapse of 1929 and the Great Depression reversed key ideas of limited government inherent in the constitution and, beginning with the New Deal, social engineering in the "public interest" defined virtually every problem as "national;" to the (4) social welfare period, wherein government became the source of vast entitlements and benefits and interest groups came to dominate the policy debate; to the (5) current period of stalemate, gridlock, and reconsideration, wherein big government is a given, along with a utilitarian social contract defined as that which provides the most efficiency, the most productivity, and the most consumption for the most people.

PPOL 4200 Microeconomics for Public Pol. (4 Credits)

Microeconomics for Public Policy Analysis will provide a comprehensive, case-based overview for the MPP student of the consequences of contemporary public policies for individuals, households, and firms. Public policy is often said to consist of the distribution of scarce or valuable resources or benefits through the mechanisms of the public sector. This course will provide the opportunity to gain fluency and expertise in the application of economic analysis to such problems as transfer payments, entitlements, government subsidies, taxation, housing, education, labor, welfare and crime. Issues concerned with exploring the government's role in encouraging innovation, maintaining a growing economy, and budgeting under conditions of "surplus," will be explored using contemporary policy initiatives. Two competing visions of public policy will be examined: the role of economic policy in securing the benefits of "ordered liberty," which accrues to the individual; and (2) the vision of public policy as fundamental to the correction of anomalies in the market and in the distribution of scarce resources, often based on interest group claims of "disparity" and "inequality".

PPOL 4250 Hacking for Good (4 Credits)

The basic structure of the course involves teams of students competing to find the most innovative approach to a common problem. The course is led by faculty member, who will connect students to local experts and policy makers. Students will work together to research, analyze, propose, and present a proposal that addresses some aspect of a pressing societal project. The final product is judged by a panel of local policy makers and other experts. Topic vary from year to year. Examples include such issues as combatting homelessness in Denver, designing more efficient transportation systems, reducing water use in urban areas, reducing Denver's carbon footprint, and the like.

PPOL 4300 Quantitative Analysis-Pub Pol (4 Credits)

This course will provide the MMP student with the tools of mathematical analysis needed for the advanced study of public policy issues and evaluation of alternatives. Topics will include descriptive statistics, probability, sampling, estimation, inference and hypothesis testing, variable analysis and correlation, regression theory, reliability and validity, and prediction and simulation. Students needing review of college-level algebra will be referred to appropriate tutorials. The overall learning objective of this course is to help students recognize and apply basic statistical concepts to Public Policy and, more in general, Social Science analysis. Students will learn how to use statistical software to: build datasets, describe data in a visual and analytical fashion, perform statistical tests, and construct basic statistical inference models. Students will also learn how to report their analytical findings for Public Policy analysis.

PPOL 4350 The Policy Lab (4 Credits)

The Policy Lab is an experiential course designed to introduce students to the policy-making and political environment surrounding a specific area of public policy at the state and national level. In different years, the Policy Lab might cover as a specific area, for example, fiscal policy, education policy, or health policy, and so on. The basic structure of the course is designed to: (1) introduce students to general thematic scholarship and expertise on the policy area being examined, (2) immerse students in the state and/or national policy-making environment through guest lectures and discussions with lawmakers, academics, policy experts, and political practitioners, and (3) connect students to lawmakers, nonprofit organizations, or other advocacy groups working on the specific policy area in order to work on proposing legislation, ballot initiatives, or other frameworks for reform design and implementation. The final product is a professional policy consultant report or the equivalent. The course will be led by faculty members with deep professional expertise in the policy issue being explored.

PPOL 4400 Introduction to Policy Analysis (4 Credits)

This course will provide the student with the analytical tools necessary to evaluate competing points of view, using empirical techniques, logic, and statistical inference. Case studies will be drawn from the current legislative and regulatory environment and will provide the MPP student with opportunities to construct a course of action, based on the use of logically consistent arguments and on the persuasive use of facts and empirical data. Students in this course will also learn the history and development of the scientific method, how to distinguish speculation, theory, fact, and opinion, how to identify the validity, ideological content or irrationality of data, how to identify the intentional obfuscation of issues, and how to evaluate one's own prejudices and vulnerability to argument not based on evidence. Students in this course how to identify the validity, ideological content or irrationality of information, how to identify the intentional obfuscation of issues, and how to evaluate one's own prejudices and vulnerability to arguments not based on evidence.

PPOL 4410 Health Policy (4 Credits)

This course will examine major health care policy decisions and how each shaped fundamental elements of the U.S. health care system. Course material will explore the questions of why America spends more on health care than other industrial nations, why 8.6 percent of Americans do not have health coverage, and why the location of one's birth or current neighborhood may affect their health. These topics will be explored through the lens of recent and current policy debates, including the Affordable Care Act and other federal health care programs, the response to the COVID-19 pandemic, and the cost and affordability of prescription drugs. In addition to mastering the content in these areas, the course will weave in policy scenarios and exercises meant to mimic decisions federal and state policymakers must make when addressing policy challenges created by the U.S. health care system.

PPOL 4500 Cost-Benefit Analysis/Pub Pol (4 Credits)

How do we determine if programs have met their objectives? Increasingly, this is a matter for empirical evaluation. This course will focus on quantitative approaches to program evaluation and on the primary tool available to the policy analyst in the modern organizational framework, cost-benefit analysis. Various issues will be considered, including the "costs" associated with taxes (and tax expenditures), governmental mandates, health and safety regulation, environmental regulation, government "investments," such as those in education, defense, law enforcement, and the regulation of financial industries.

PPOL 4501 Great Issues Forum (2 Credits)

Intensive Great Issues Forums provide cutting edge opportunities to study emerging issues, like innovation and technology, antitrust, privacy, health care, education, fiscal policy, national security, economic growth, ethics, and metropolitan dynamics. We maintain close affiliations with leading think tanks, such as the Brookings Institution and the American Enterprise Institute in Washington, D.C., and with important political figures and policy-makers. The Great Issues Forums are unique short courses devoted to a single policy issue and taught by a nationally-recognized authority in the area. These courses will occur on a periodic basis, with at least two forums to be offered each academic quarter. Participation in these courses is required for graduate students in the MPP program. Each course will be taught on an intensive workshop basis, over the course of two or more days, for example, all-day sessions on Friday and Saturday. Specific topics will be determined by the immediacy of the policy issue and its relevancy to the curriculum of the MPP.

PPOL 4502 Issues Forum II (2 Credits)

Intensive Great Issues Forums provide cutting edge opportunities to study emerging issues, like innovation and technology, antitrust, privacy, health care, education, fiscal policy, national security, economic growth, ethics, and metropolitan dynamics. We maintain close affiliations with leading think tanks, such as the Brookings Institution and the American Enterprise Institute in Washington, D.C., and with important political figures and policy-makers. The Great Issues Forums are unique short courses devoted to a single policy issue and taught by a nationally-recognized authority in the area. These courses will occur on a periodic basis, with at least two forums to be offered each academic quarter. Participation in these courses is required for graduate students in the MPP program. Each course will be taught on an intensive workshop basis, over the course of two or more days, for example, all-day sessions on Friday and Saturday. Specific topics will be determined by the immediacy of the policy issue and its relevancy to the curriculum of the MPP.

PPOL 4550 International Development Policy (4 Credits)

This course surveys international development policy. It has two main goals: (1) to build a multi-faceted understanding of what constitutes "development" and (2) to compare and assess different approaches to aiding the success of low- and middle-income countries. We will begin by asking what development is and examining the expansive ways in which it can be defined and measured, looking at these questions from economic, institutional, social, and political angles. We will study macro approaches to industrialization, economic growth, and development over the past half-century, with an emphasis on comparing and contrasting different development strategies. We will then focus on the development and aid business, looking at what the World Bank and other aid agencies do, the successes and failures of traditional approaches to foreign aid, and new thinking and actors in international development policy. We will end by examining how development policy could better address key contemporary challenges, such as the natural resource curse, corruption, and the challenges of building effective and legitimate governance in developing countries.

PPOL 4600 Regulation and Institutional Analysis (4 Credits)

This course will provide the MPP student with a solid understanding of the legal basis for policy action, through a case-based examination of executive and legislative authority, judicial policy-making, the expansion of the due process and equal protection clauses of the 14th Amendment, and the expansion of administrative authority under the Administrative Procedure Act. Such issues as affirmative action, government contracting, school finance, antitrust, and substantive due process will be presented utilizing a combination of traditional legal analysis and the cost-benefit approach of the policy specialist.

PPOL 4700 Public Management & Budgeting (4 Credits)

This course introduces students to the topic of public management, which includes concepts such as organizational structure, performance management, and strategy development. In addition, the instructor will teach the techniques and concepts of government and non-profit budgeting/financial management. The budgeting process includes program development/implementation, cost and revenue estimation and projection, and budget evaluation. The relationship between public management and budgeting will be explored.

PPOL 4701 Special Tpcs in Public Policy (4 Credits)

Various topics in public policy are covered. Topic subjects to change each term as deemed appropriate with local, regional and federal policy issues and regulation changes. Two examples are: "Denver Dynamics" explores the policy options and responses to the challenges of big city governance. Exclusive interactions with major stakeholders in the City and County of Denver are featured, with a view to giving the student an insider's view of power, economic development, political influence and decision-making. "Getting Results Inside the Beltway: Power and policy in Washington, D.C." is a travel course consisting of specially-arranged one-on-one sessions with Washington-based lawmakers, decision-leaders, and policy experts, through which graduate students will gain an understanding of the dysfunctionalities of the current budget process, political polarization, the interest groups that shape the current policy dynamic, the increasing importance of media in shaping policy, the solutions that will be required for the United States to regain fiscal sanity and solvency—and the challenges that will need to be met to preserve American hegemony and redefine national security.

PPOL 4702 Special Topics in Public Policy Skills (1-4 Credits)

Various professional skills and competencies are covered in these 1-credit classes. Each student will be required to complete four of these for the MPP degree. The topics are subject to change given student needs. Examples of topics may include: Diversity and Inclusion in Public Policy, Drafting a Policy Memo, Presenting a Policy Position to a Professional Audience, Working in Teams Addressing Complex Issues, Ethics Challenges in Public Policy Choices, and The Practice of Public Policy.

PPOL 4821 Executive Introduction to Public Policy (4 Credits)

This course offers an introduction to the contemporary study of public policy for the Executive MPP student. It has three main goals: (1) to build a multi-faceted understanding of what constitutes public policy, with a particular emphasis on how public policy is co-created by government, private sector, and civil society actors; (2) to understand the range of political, social, economic, and institutional forces that shape public policies and their outcomes; and (3) to introduce different forms and techniques of public policy analysis tied to audience, context, and objectives. We will begin by asking what public policy is and examining why we need it, explicitly addressing how political and societal context and decisions shape public policymaking. We will examine the traditional foundations of how public policy is typically framed and analyzed, rooted in neoclassical economics. We will round out the course by considering new ways of thinking about and analyzing public policy.

PPOL 4822 Executive Microeconomics for Public Policy (4 Credits)

Microeconomics for Public Policy Analysis will provide a comprehensive, case-based overview for the EMPP student of the consequences of contemporary public policies for individuals, households, and firms. Public policy is often said to consist of the distribution of scarce or valuable resources or benefits through the mechanisms of the public sector. This course will provide the opportunity to gain fluency and expertise in the application of economic analysis to such problems as transfer payments, entitlements, government subsidies, taxation, housing, education, labor, welfare, and crime. Issues concerned with exploring the government's role in encouraging innovation, maintaining a growing economy, and budgeting under conditions of "surplus" will be explored using contemporary policy initiatives. Two competing visions of public policy will be examined: the role of economic policy in securing the benefits of "ordered liberty," which accrues to the individual; and (2) the vision of public policy as fundamental to the correction of anomalies in the market and in the distribution of scarce resources, often based on interest group claims of "disparity" and "inequality."

PPOL 4823 Executive Data Analysis and Visualization (4 Credits)

This course is aimed at helping policy professionals to review basic principles of statistics and apply this knowledge to visualizing data for policy analysis and communication. Students will use software to produce visualizations for effective and accessible data description and analysis.

PPOL 4841 Executive Cost Benefit Analysis (4 Credits)

This course will focus on economic analysis and will provide an intensive overview of analytical tools used in public policy decision-making. After discussing economic theory and its role in policymaking, we will cover analytical techniques such as Cost Benefit Analysis, Cost Effectiveness Analysis, Cost Utility Analysis, and other analytical approaches. Economic analysis is both a science and an art. The aim of this course is to give students an understanding both of the practical aspects of economic analysis as well as its economic and philosophical foundations and ethical implications. Students should gain an appreciation of the role of economic analysis in policy decision-making and become comfortable with various analytical approaches commonly used by government officials and policymakers.

PPOL 4842 Executive Policy Making Process (4 Credits)

Governments make public policies through a complex process, which varies in its details across countries, over time, and even from issue to issue within the same country. In this course we will study several parts of those processes and some of the inputs into them. The overall goals for this course are: (1) to introduce students to the multiple features of the policy making process and the literature on those features; (2) to enable students to use effectively databases and other research tools to examine those features of the policy making process; and (3) to give students the experience of tracing a specific policy issue through the policy process to analyze how some features of that process affect the outcomes of the policy.

PPOL 4843 Executive Policy Writing and Briefing (2 Credits)

In this two-credit course, students will develop policy-specific applied writing skills for the most important contexts and purposes in government and policy settings. Students will learn the key elements, formats, and styles for four categories of policy writing: 1) issue analysis briefs, 2) decision briefs, 3) legislative testimony, and 4) comments to proposed regulations. Students will take part in peer-review exercises as well as simulated policy briefings summarizing their written materials.

PPOL 4852 Executive International Economic Policy (4 Credits)

This course focuses on understanding how governments design and implement economic policy and how economic, social, political, and cultural forces impact on that process. The course centers on key debates around major government policy decisions and analyzes the alternative paths open to policymakers at the time at which they took those decisions. We will emphasize central questions in macroeconomics as well as international and development economics through a case-study lens focused on evaluating decisions by assessing the arguments in favor of and against various policy alternatives. In the discussion of these cases, we will contrast neoclassical economic theories of optimal policy design with political economy, structuralist, and institutional views of the policymaking process. Through each example, we will engage with the views, constraints, and motivations of key actors and groups that influenced the policy formation process. Topics covered include global financial and health crises, fiscal deficits, structural adjustment, the role of multilateral organisms, high and runaway inflation, the causes of underdevelopment, economic sanctions, debt limits, the spread of globalization, financing climate action, and the reliability of economic data.

PPOL 4950 Policy Memorandum (4 Credits)

The Policy Memorandum research project is designed to provide the MPP student with a capstone experience that will synthesize the knowledge and skills that were acquired during the 60 quarter hours of formal coursework. Included among the skills that students will apply are research, quantitative methods, economic analysis, cost-benefit analysis, budgeting and project management.

PPOL 4991 Independent Study (1-4 Credits)

Students will work in collaboration with faculty from the Institute for Public Policy Studies to complete an independent study project.

PPOL 4995 Independent Research (1-8 Credits)

The Policy Memorandum research project is designed to provide the MPP student with a capstone experience that will synthesize the knowledge and skills that were acquired during the 60 quarter hours of formal coursework. Included among the skills that students will apply are research, quantitative methods, economic analysis, cost-benefit analysis, budgeting and project management.

Degree Programs

Doctor Of Philosophy in International Studies

The PhD degree is designed as a four to six-year program provided the student a) enters with a closely related master's degree and b) is able to devote full-time study during the entire period. The student working toward this degree must earn a grade average of 3.5 or higher for a minimum of 90 hours of graduate credit. A maximum of 45 course credits can be transferred into the program from another university, while a maximum of 60 course credits can be transferred in from a Korbelt MA. The precise number of course credits that can be transferred in will be decided by the PhD program director to ensure that each student takes a sufficient number of Korbelt courses to back up their studies for the Korbelt PhD. Students select two of the three fields available: Comparative Politics, International Relations, and Political Theory. In addition, each student must meet the core curriculum and field training, methodology, and foreign language requirements, pass written and oral comprehensive field exams, file an approved prospectus, and successfully write and defend a dissertation.

Master of Arts in Global ECONOMIC AFFAIRS

The Global Economic Affairs (GEA) program provides students with a multi-disciplinary, policy-focused examination of the global economy. *Emphasis is on political economy, not on the narrow field of economics as standardly taught in economics textbooks.* Courses within this degree focus on the complex changes underway in the global economy, including the emerging patterns of finance, trade, and investment flows and their effect on national economies; the effect of globalization on state capacity, policy autonomy, and national economic conditions; the relationship between economic, political, and social outcomes of policy choices; corporate governance, competition, and corporate social responsibility; and the politics of economic policy choices at the national and international levels, within multilateral agreements and organizations. All students within this degree receive training in advanced statistical methods, including econometrics. Students also select from a diverse collection of qualitative and quantitative skills courses.

Students pursuing the GEA degree are required to pursue a customized specialization that is tied to their intellectual and career aspirations. Students should meet with the degree director to discuss possible specializations that will meet their needs.

This degree is intended for students looking to pursue a diverse range of careers:

- a. As international economic analysts for public sector agencies, such as the Department of Commerce, the International Trade Administration, Ministries of Finance, crime and security agencies such as the FBI, and state and municipal government;
- b. As analyst for multilateral institutions and organizations, such as the World Bank, the US Trade and Development Agency, the World Trade Organization, United Nations agencies, the African Development Bank, and the Organization for Economic Cooperation and Development;
- c. As researchers and analysts within non-governmental organizations, such as Oxfam, Action Aid, Accion, and Water for People;
- d. As private sector economic policy consultants, political risk or international project analysts, ethical supply chain experts, and international project managers.

Students who seek a more specialized and technical training in portfolio allocation might consider creating their own "customized, flexible dual degree" with the Daniels College of Business (DCB) that allows them to earn an MS in Finance along with the GEA degree (for more information, see the "Flexible Dual Degree Programs (<http://bulletin.du.edu/graduate/dual-degrees/flexible-dual-degree-programs/>)" section of the Graduate Bulletin).

The GEA program is intended for economics majors and non-majors alike. The course "Economics: Fundamental Knowledge, Global Applications" (INTS 4536), offered each fall when enrollments warrant it, is designed for students who have not completed an undergraduate course in Introductory Macroeconomics & Microeconomics (or undergraduate Principles of Economics or undergraduate International Economics). INTS 4536 will prepare students who do not possess this basic economics background to enroll in INTS 4310 (International Trade) and INTS 4320 (International Monetary Relations). It is also sufficient for students without an economics background to take an undergraduate-equivalent course (in person or online—there are many options available) prior to matriculating at Korbelt to prepare themselves for the GEA core classes.

MASTER OF ARTS IN GLOBAL Environmental sustainability

A defining issue of the 21st century will be international challenges posed by a changing environment, population growth, and increased demands on our food, water, and energy resources. Given the complexity and magnitude of these challenges, we need innovative approaches to meeting needs while promoting just and equitable development and a sustainable path for future generations. The Korbelt School is poised to assume a position of leadership in research, teaching, and outreach around issues related to our changing climate and global environment. The Global Environmental Sustainability (GES) MA will stimulate, facilitate, and coordinate these activities in a sustaining manner. Our location in the Front Range puts us at the center of practical discussions about water, agriculture, and energy (both conventional and renewable). Our advantage comes in taking a human-focused approach to understanding the consequences of global change for human well-being.

Master of Arts in International Development

The MA in International Development focuses on development theory, policy-oriented decision-making and analysis, politics of institutions, and in-demand practical skills. The program prepares students for careers in government, multilateral and bilateral development agencies, non-governmental organizations, and the private sector. Development graduates also enter relevant doctoral programs.

The program reflects an approach to development that emphasizes not only economic issues but also the importance and interrelatedness of sustainable economic and human development, human rights, and environmental sustainability. We emphasize the diversity of needs, desires, opportunities, and constraints experienced by individuals of differing socioeconomic classes, ethnicities, and genders, as well as differences among nations and regions.

Students gain analytical skills that address not only policy issues, but also the logics and workings of diverse institutions that create, negotiate, and implement development policy. Students also engage the many power differentials that profoundly influence processes central to sustainable development. These power differentials exist not only among nations, but also among public- and private-sector partners within development programs; between development practitioners and their intended beneficiaries; and among those intended beneficiaries. Thus, we also engage with actors and processes across levels from the most macro-level international institutions and initiatives to the most micro-level agendas and actions taken by communities, firms, movements, and individuals.

The program provides training in key practical skills identified by development employers, including communications, quantitative analysis, program/project-focused management and assessment, qualitative and participatory field research, and cross-sectoral framework development. Through internships, students gain experience in meeting the challenges of development practice while applying these skills and their knowledge of ideas, institutions, and processes that have influenced the course of international development.

Master of Arts in International Human Rights

The MA in International Human Rights provides students with the opportunity to explore issues of human dignity while critically examining the norms, historical processes, social movements, strategies, and institutions designed to promote and protect human rights in our globalizing world. The program is pioneering and unique among its peers for interdisciplinary study, rigor, and flexibility. It links human rights to law, security, gender studies, migration issues, economic development, health, security, human trafficking, humanitarian assistance, geographic areas, and other related themes. It emphasizes both theory and practice.

For practical experience, students can take skills courses, certificates, participate in educational trips, complete internships, and have opportunities for fieldwork in the U.S. and around the world. Through research centers, guest lectures, conferences, and film series, students participate in a wide range of human rights research and advocacy projects. Graduates typically seek and obtain positions in international nonprofits, international human rights advocacy organizations, international aid agencies, governmental and intergovernmental organizations, business sector, the human rights legal profession, and academia.

Master of Arts in International Security

The International Security curriculum provides education and practical training on issues related to the causes and consequences of foreign policies pursued by states plus the goals of non-state actors to advance their position and status in world political dynamics through violent confrontation and war or through cooperative moves towards peace. The Security Program combines traditional issues (state level threats, sovereignty, armament policies) and foundational theoretic perspectives (realism, liberalism, International law) with emerging twenty-first century problems (e.g. human security, climate change, health pandemics, humanitarian assistance, global governance) with exposure and appreciation for updated research and policy perspectives on contemporary topics to enable students to understand continuities and major shifts in the evolving global system, to foresee new threats, and imagine threat responses.

We focus on developing skill sets: written and oral communications; technical tools (graphic displays, statistical analysis) and clear, logical arguments, that are essential for our graduates to be marketable practitioners in the security field—whether working in government, private industry, or the non-profit sector.

We expect everyone to keep current in scholarship and policies presented in mainline journals. By completing the Security program, students will have a sufficient sense of basic concepts, theories, and approaches associated with the field with the confidence to apply this knowledge to real-world problems.

Master of Arts in International Studies

The Master of Arts in International Studies combines a broad understanding of the field of international studies with an issue-oriented specialization, skills courses, and the opportunities for internships or advanced research. It is the traditional professional international studies curriculum, long favored by students pursuing career options in the government, private, and non-profit sectors, as well as those considering a PhD. It is also our most flexible degree, with ample opportunity to tailor a program to fit your specific needs and interests.

Certificates

CERTIFICATE IN GLOBAL ENVIRONMENTAL CHANGE AND ADAPTATION

Environmental change, driven in large part by human activity, is increasingly identified as posing significant challenges to development and security. While climate change has received the most attention (see, e.g., US DOD, *2014 Quadrennial Defense Review*), other changes, e.g. biodiversity loss, ozone depletion, and freshwater use have also been raised as significant issues affecting development and security. These issues have also been tied to

questions related to social justice. The Josef Korbel School of International Studies (Korbel) is building a critical mass of scholars, student interest, and activities related to environmental change, development, security, and justice. This certificate seeks to provide opportunities for students to develop substantive expertise around one of the defining challenges of the 21st century: global environmental change and attempts to adapt thereto in sustainable ways that minimize harm to affected communities.

Note: The GECA certificate is not available to students pursuing the MA in Global Environmental Sustainability.

Certificate in Global Health Affairs

The Certificate in Global Health Affairs (CGHA) is the first global health program to be based in a school of International Studies. Unlike certificates offered by schools of medicine or public health, which emphasize biomedical approaches to health, CGHA places social and political solutions at the forefront of global health action. Combined with a degree, the six-course CGHA sequence prepares students for systematic, evidence-based approaches to a broad range of global health problems relating to development, diplomacy, security, trade, and human rights.

CGHA's core emphasis lies in building sound decision-making skills in an arena often suffused with inefficiency and blindness to political, social, and cultural context. Our courses address the social determinants of individual and population health, emphasizing short- and long-term effects; the increasing globalization of health; and interactions between health and other key factors such as politics, development, trade, and conflict. Practical courses build skills in epidemiology, research methodology, and program design and evaluation.

CERTIFICATE IN GLOBAL justice

Social justice issues, such as the injustices and inequalities faced by women, LGBTQIA+ communities, racial minorities, indigenous people, and the poor, are more salient than ever. And across the world, people are standing up, asserting their rights and devising movements to demand change – indeed, 2019 saw more protests across the globe than any other year on record. The Global Justice Certificate places these struggles in both local and global context, aiming to prepare students to support, participate in, and amplify movements from the #StopTheSweeps movement in Denver challenging mistreatment of the unhoused, to campaigns against femicide in Latin America, to global youth-led movements for climate action.

Upon earning a GJC from the Korbel School, graduates will have a knowledge of theories of social change along with an understanding of clear historical examples; they will understand concrete strategies around using media, advocacy, storytelling, fundraising, and strategic visioning for global changemakers; they will have a toolkit and network to help them launch a career in global social justice organizing and human rights advocacy.

CERTIFICATE IN HOMELAND SECURITY

This certificate program is offered to currently enrolled Josef Korbel School of International Studies' Masters or PhD students. The Homeland Security Certificate Program is a professional certification program focused on preparing participants to step directly into career opportunities in the local, state, and national homeland security profession.

Certificate in Humanitarian Assistance

The Certificate in International Studies with a Concentration in Humanitarian Assistance aims to prepare students to work in the humanitarian sector. The certificate provides students with the theoretical and practical underpinnings for humanitarian work which is in line with efforts to "decolonize" aid, is technically sound, prioritizes the role of affected communities, responds to the diverse needs of affected populations, and sets the stage for locally led, sustainable, and inclusive recovery and development.

Students pursuing a masters degree at Korbel may add the Certificate in International Studies with a Concentration in Humanitarian Assistance. Those interested are encouraged to do so as early as possible in their time at Korbel. For more information about the program, please visit: <https://korbel.du.edu/humanitarianassistance> (<https://korbel.du.edu/humanitarianassistance/>).

INTERDISCIPLINARY CERTIFICATES

Interdisciplinary Certificates allow students to gain competence in relevant issue areas by taking approved coursework in another academic unit, as well as course at JKIS. While these certificates are open to matriculated students pursuing a graduate degree at the Josef Korbel School of International Studies and are offered jointly, they are administratively based in other units.

CERTIFICATE IN global business and corporate social responsibility

As a joint offering between the Daniels College of Business and the Josef Korbel School of International Studies, the graduate Certificate in Global Business and Corporate Social Responsibility (CSR) at the University of Denver focuses specifically on the challenges and opportunities businesses confront in a globalized and developing world.

Businesses today are aware of increased pressure to behave ethically. Many are unsure how to integrate these goals into their business strategy and engage meaningfully with stakeholders. Likewise, governments, civil society organizations, and other stakeholders recognize the importance of having

businesses at the table, but do not always have a clear understanding of how to best engage with the private sector. Both private enterprises and those wishing to affect their behavior are looking for young talent with the capability to navigate this new space.

The certificate curriculum draws from unique course offerings at the Daniels College of Business and the Josef Korbel School of International Studies to provide students with the skills to embrace and navigate the complexity of business and governance issues. The required and elective courses explore the theory and practice related to: economic development, business ethics, CSR strategy, social entrepreneurship, business and human rights, sustainability, impact investing, international business law, financial accounting, managerial accounting, as well as considerations with regards to hard and soft law mechanisms that govern transnational space. Students complete the program with a clear understanding of the complexity of the global business environment, a variety of corporate strategies, best practices and the impact of CSR efforts in particular cases.

The Certificate of Specialization in International Studies with a concentration in Global Business & Corporate Social Responsibility is administered by the Daniels College of Business.

CERTIFICATE IN Public Diplomacy

The Graduate Certificate in Public Diplomacy is an interdisciplinary, 24-credit certificate which examines the history, theory, methods, and uses of strategic communication for the purposes of informing, influencing, and establishing dialogue with international publics and stakeholders. Recognizing the central role of mediated communication in international relations today, the certificate is designed to help students acquire a sophisticated understanding of global media and communication processes and the ways in which they are employed by individuals, groups, organizations, and governments to advance their strategic interests. The certificate combines expertise from the Department of Media, Film, and Journalism Studies and the Josef Korbel School of International Studies, providing students with a truly interdisciplinary experience and preparing them to address contemporary international challenges in ways that make an impact. Those earning this Certificate of Specialization will be equipped with conceptual and practical skills that prepare them for careers in the fields of cultural diplomacy, nation branding, public affairs and information, foreign aid, global health and development communication, international strategic communication, and international education.

The Certificate of Specialization in International Studies with a concentration in Public Diplomacy is administered by the Department of Media, Film & Journalism Studies (MFJS) – Division of Arts, Humanities, and Social Sciences.

CERTIFICATE IN religion and International affairs

The Certificate in Religion and International Affairs provides graduate students pursuing MA degrees in the Department of Religious Studies (AHSS) or the Josef Korbel School of International Studies with the opportunity to enhance their home program of study with specific expertise in the scholarly and professional field of religion and international affairs. This certificate program emphasizes scholarly and practitioner approaches to understanding the intersections between religion and international affairs in the modern world, providing students with an interdisciplinary approach to contemporary case studies as well as theoretical issues. The program will enable certificate students to develop demonstrable competencies that will help them position themselves for academic policy or non-profit careers.

Interested students from the Religious Studies or the Josef Korbel School of International Studies MA programs will submit an online application consisting of a 500-word personal statement, a CV, undergraduate and graduate transcripts, which will be reviewed by an interdepartmental faculty committee. Applicants must be enrolled graduate students in good standing in the Department of Religious Studies MA program or the Korbel School of International Studies MA program.

The Certificate of Specialization in International Studies with a concentration in Religion & International Affairs is administered by the Department of Religious Studies (RLGS) – Division of Arts, Humanities, and Social Sciences.

Doctor of Philosophy in International Studies

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 95
- Minimum IELTS Score: 7
- Minimum C1 Advanced Score: 185
- Minimum Duolingo English Test Score: 125

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Arts in International Studies

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- GRE or GMAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842. The code to submit GMAT scores for this program is MZR-Z3-18.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 95
- Minimum IELTS Score: 7
- Minimum C1 Advanced Score: 185
- Minimum Duolingo English Test Score: 125

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Arts in Global Economic Affairs

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. - Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- GRE or GMAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842. The code to submit GMAT scores for this program is MZR-Z3-23.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 95
- Minimum IELTS Score: 7
- Minimum C1 Advanced Score: 185
- Minimum Duolingo English Test Score: 125

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Arts in International Development

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- GRE or GMAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.

English Conditional Admission: No, this program does not offer English Conditional Admission.

Degree Programs

Doctor of Philosophy in International Studies

Degree Requirements

Coursework Requirements

| Code | Title | Credits |
|--|--|-----------|
| International Studies Core coursework requirements (five courses): ¹ | | 20 |
| INTS 4324 | International Political Economy | |
| INTS 4501 | Comparative Politics in the 21st Century | |
| INTS 4900 | International Politics | |
| INTS 4301 | Introduction to Political Theory | |
| INTS 4822 | Contemporary Political Theory | |
| Field Requirement: (Please note that the courses listed below can be substituted with others with the approval of the PhD program director and the field director.) | | 24 |
| Comparative Politics (CP) | | |
| INTS 4501 | Comparative Politics in the 21st Century | |
| INTS 4349 | Comparative Public Policy and Finance | |
| Plus three additional courses or directed studies in Comparative Politics | | |
| International Relations (IR/IPE) | | |
| INTS 4900 | International Politics | |
| INTS 4648 | Theories of Security in World Politics | |
| INTS 4320 | Int'l Monetary Relations | |
| or INTS 4310 | International Trade | |
| INTS 4903 | Social Construction of International Society | |
| Political Theory (PT) | | |
| INTS 4301 | Introduction to Political Theory | |
| INTS 4526 | Modern Islamic Political Thought | |
| INTS 4802 | Foundational Ideas in Social Science: Marx and Weber | |
| INTS 4820 | Democracy and War | |
| INTS 4822 | Contemporary Political Theory | |
| Professionalization and Methodology (three courses): ² | | 12 |
| INTS 4500 | Social Science Methods | |
| INTS 4522 | Philosophy of Social Science ³ | |
| or INTS 4010 | Epistemology | |
| INTS 4999 | Research Design: Ph.D. Prospectus, Substantial Research Paper, and MA Thesis | |
| Independent Study (optional): | | |
| INTS 5991 | Independent Study ⁴ | |
| Elective requirements (if applicable): | | 34 |
| Total Credits | | 90 |

- 1 Some of these courses overlap with the field course requirements below.
- 2 Methodology training beyond these required courses is a matter of individual needs and interests, and students should consult their advisor or potential dissertation committee chair and members about available options. Students can choose to take statistics courses at Korbel to develop their skills in quantitative analysis. A limited fund is available to fund students to study at methods courses outside of DU, at, for example, methods summer schools. Awards for this purpose will be made on a competitive basis and only when students and their advisors can prove that such training is vital for completion of the Ph.D. dissertation.
- 3 INTS 4522 Philosophy of Social Science is offered every other year.
- 4 Independent and directed studies provides opportunities for the student to do special work under individual supervision in areas not covered by regular class offerings. Independent studies will likely be related to the research area of the student's proposed PhD dissertation. Any Ph.D. student that wishes to complete a graduate independent study (INTS 5991) must consult with and obtain approval from an appointed JKIS faculty member. Ph.D. students are limited to a maximum of 16 credits of independent or directed studies. For more information, contact the Ph.D. Program Director or the Director of Graduate Student Affairs.

Minimum number of credits required for degree: 90 hrs.

Non-coursework Requirements

- **Foreign Language Proficiency:** Required.
- **Field Exam:** Students will study one field intensively—Comparative Politics (CP), International Relations (IR/IPE), or Political Theory (PT)—in which their comprehensive exam will be taken. Each field will comprise 5 courses and directed studies.
- **Comprehensive Written Exams:** PhD candidates must pass one comprehensive exam (in their chosen fields) in order to advance to candidacy. Within three weeks after the written exam, an approximately 1.5 hour oral exam is given. Comprehensive exam committees are comprised of three tenure-line faculty.
- Students cannot progress towards prospectus stage until they successfully pass the exams. A prospectus must have the approval/signatures of all JKIS committee members.
- **Final Dissertation:** Prior to submitting the final dissertation for graduation, students must successfully pass an oral defense of the dissertation.

Master of Arts in Global Economic affairs

The Global Economic Affairs (GEA) program provides students with a multi-disciplinary, policy-focused examination of the global economy. *Emphasis is on political economy, not on the narrow field of economics as standardly taught in economics textbooks.* Courses within this degree focus on the complex changes underway in the global economy, including the emerging patterns of finance, trade, and investment flows and their effect on national economies; the effect of globalization on state capacity, policy autonomy, and national economic conditions; the relationship between economic, political, and social outcomes of policy choices; corporate governance, competition, and corporate social responsibility; and the politics of economic policy choices at the national and international levels, within multilateral agreements and organizations. All students within this degree receive training in advanced statistical methods, including econometrics. Students also select from a diverse collection of qualitative and quantitative skills courses.

Students pursuing the GEA degree are required to pursue a customized specialization that is tied to their intellectual and career aspirations. Students should meet with the degree director to discuss possible specializations that will meet their needs.

This degree is intended for students looking to pursue a diverse range of careers:

- a. As international economic analysts for public sector agencies, such as the Department of Commerce, the International Trade Administration, Ministries of Finance, crime and security agencies such as the FBI, and state and municipal government;
- b. As analyst for multilateral institutions and organizations, such as the World Bank, the US Trade and Development Agency, the World Trade Organization, United Nations agencies, the African Development Bank, and the Organization for Economic Cooperation and Development;
- c. As researchers and analysts within non-governmental organizations, such as Oxfam, Action Aid, Accion, and Water for People;
- d. As private sector economic policy consultants, political risk or international project analysts, ethical supply chain experts, and international project managers.

Students who seek a more specialized and technical training in portfolio allocation might consider creating their own “customized, flexible dual degree” with the Daniels College of Business (DCB) that allows them to earn an MS in Finance along with the GEA degree (for more information, see the “Flexible Dual Degree Programs (<http://bulletin.du.edu/graduate/dual-degrees/flexible-dual-degree-programs/>)” section of the Graduate Bulletin).

The GEA program is intended for economics majors and non-majors alike. The course “Economics: Fundamental Knowledge, Global Applications” (INTS 4536), offered each fall when enrollments warrant it, is designed for students who have not completed an undergraduate course in Introductory Macroeconomics & Microeconomics (or undergraduate Principles of Economics or undergraduate International Economics). INTS 4536 will prepare students who do not possess this basic economics background to enroll in INTS 4310 (International Trade) and INTS 4320 (International Monetary Relations). It is also sufficient for students without an economics background to take an undergraduate-equivalent course (in person or online—there are many options available) prior to matriculating at Korbel to prepare themselves for the GEA core classes.

Degree Requirements

Candidates must complete sixty (60) credit hours.

| Code | Title | Credits |
|---|---|-----------|
| Degree Requirements: | | |
| Korbel Core (one course): | | 4 |
| INTS 4091 | Great Issues in International Affairs (offered each Fall quarter; take as early in the program as possible) | |
| Degree Core (three courses): | | 12 |
| INTS 4310 | International Trade ¹ | |
| INTS 4320 | Int'l Monetary Relations ¹ | |
| One of the following: | | |
| INTS 4324 | International Political Economy | |
| INTS 4370 | The Global Economy: Conflict, Crisis and Cooperation ² | |
| INTS 4372 | Great Books in Political Economy | |
| Specialization (three courses): | | 12 |
| Specializations are sets of three courses full credit courses (12 credit hours) that a student takes within their degree that are centered on a common topic, region, or degree relevant methods and must be approved by the degree director. Korbel specializations are open specializations, which is to say that they are totally customizable and can be drawn from any and all eligible University of Denver graduate courses. The key is that they must be approved on submission for graduation by a student's degree director and students are encouraged to engage their degree director early in the process on what are approvable sets of courses. Specializations do not go on transcripts, so it is possible to organize courses into more than one set of three, but for completion of degree requirement purposes, only one specialization is submitted as such on your program statement. Students who participate in a Korbel Certificate will put three of their certificate courses in their specialization and the other three in electives to fit the certificate within the 60 credit hours associated with their degree requirements. For more information on Specializations, see the Specializations section of the Korbel MA Handbook. | | |
| Skills Requirement (12 credits): | | 12 |
| INTS 4051 or INTS 4057 | Statistical Methods II ³ Statistical Methods I and II ⁴ | |
| INTS 4303 | Econometrics for Decision Making I | |
| A total of 4 more credits (in the form of one 4 credit or 2 credit skills courses) of INTS or PPOL skills coursework drawn from the Korbel School Skills List. GEA students must take a degree relevant option and should get pre-approval from their degree director. This list is updated annually and can be found on the Korbel Student Affairs webpage. Students may also utilize graduate level skills courses in other DU departments/schools with pre-approval of their degree director. | | |
| You can find more information on skills courses offered at https://portfolio.du.edu/issta/page/25872 (https://portfolio.du.edu/issta/page/25872/). | | |
| Internship: | | |
| INTS 4981 | Internship (Required, for 0 or 4 credits.) * | |
| Supporting Courses: | | 20 |
| Students will fill out their academic program as needed to reach the minimum requirement of 60 credits with graduate level courses in fields and areas of study related broadly but directly to international studies (public policy) or research/policy areas and/or skills already established in their required coursework. These courses can be from Korbel and/or other relevant graduate departments/programs associated with the University of Denver or beyond. Courses from beyond Korbel should be pre-approved by the student's academic advisor. The total number of credits allowed for the degree beyond Korbel cannot be more than 12. | | |
| Total Credits | | 60 |

¹ Prerequisite for INTS 4310: grade of B- or better in an undergraduate course in Introductory Microeconomics, Principles of Economics (combining Introductory Micro and Macroeconomics), or International Economics. Prerequisite for INTS 4320: grade of B- or better in undergraduate course in Introductory Macroeconomics, Principles of Economics (combining Introductory Micro and Macroeconomics), or International Economics. Students who have not completed the undergraduate prerequisites for INTS 4310 and INTS 4320 should first complete INTS 4536 Economics: Fundamental Knowledge, Global Applications. *OR*, it is also sufficient for students without an economics background to take an undergraduate-equivalent course (in person or on-line—there are many options available) prior to matriculating at Korbel to prepare themselves for the GEA core classes.

² INTS 4310 and INTS 4320 are recommended prerequisites for INTS 4370.

³ Students must complete INTS 4050 Statistical Methods I (with a grade of C- or better) before they are eligible to register for INTS 4051 Statistical Methods II. Students will receive elective credit for completing INTS 4050 Statistical Methods I, but it cannot be used to satisfy the skills requirement for the degree.

- ⁴ Students may take INTS 4057 Statistical Methods I and II (which combines Stats I and Stats II), instead of INTS 4051 Statistical Methods II, if they have a strong quantitative background. This is a fast-paced course and it combines what is taught in Statistics I and Statistics II, so only take INTS 4057 if you are confident in your ability to keep up in such an environment.

Minimum number of credits required for degree: 60 credit hours.

Non-coursework Requirements

- Thesis (1-8 credits) or Substantial Research Paper (1-4 credits): Optional.

Note: MA in GEA candidates may enroll in a **maximum** of 12 credits at the Daniels College of Business. If a student wishes to take more than 12 credits, s/he must apply, and be accepted, to a graduate degree program at the DCB through the DU flexible dual degree program. No more than 12 credits completed prior to acceptance into such a program may be applied toward a DCB degree. Students currently enrolled in a dual or joint degree program are not impacted by this policy.

To request permission to register for DCB classes, please contact a Graduate Business Advisor at gradbus.advising@du.edu. Students who register without this permission risk disenrollment from the course. All non-DCB students will be registered on a space-available basis.

- * Internships are required for all of the MA degrees at the Josef Korbel School of International Studies and are managed through the Office of Career and Professional Development at the Korbel School. For a few categories of students, the Korbel School may grant an exemption from the internship requirement. While students in the following categories are highly encouraged to pursue internships to enhance their professional development, they may petition to be exempted from the internship requirement.
 - Students entering Korbel with substantial degree/field relevant professional work experience, typically at least 5 years.
 - Students with a confirmed job or job offer in a degree/field relevant sector in which they had been working prior to beginning the Josef Korbel degree.
 - Students sponsored by foreign governments whose terms of study discourage do not allow internships.
 - Students with truly unique circumstances in which they have met all of the learning objectives of the internship program in a degree/field relevant way, but the experience does not or did not fall within the bounds of the internship program/requirement

Students who would like to petition for their professional experience to satisfy the internship requirement will need to submit a formal request through the Student Affairs Office (see the Portfolio site for details).

A defining issue of the 21st century will be international challenges posed by a changing environment, population growth, and increased demands on our food, water, and energy resources. Given the complexity and magnitude of these challenges, we need innovative approaches to meeting needs while promoting just and equitable development and a sustainable path for future generations. The Korbel School is poised to assume a position of leadership in research, teaching, and outreach around issues related to our changing climate and global environment. The Global Environmental Sustainability (GES) MA will stimulate, facilitate, and coordinate these activities in a sustaining manner. Our location in the Front Range puts us at the center of practical discussions about water, agriculture, and energy (both conventional and renewable). Our advantage comes in taking a human-focused approach to understanding the consequences of global change for human well-being.

MASTER OF ARTS IN GLOBAL ENVIRONMENTAL SUSTAINABILITY

Degree Requirements

Candidates must complete sixty (60) credit hours.

Students who would like to petition for their professional experience to satisfy the internship requirement will need to submit a formal request through the Student Affairs Office (see the Portfolio site for details).

Master of Arts in International Development

The MA in International Development focuses on development theory, policy-oriented decision-making and analysis, politics of institutions, and in-demand practical skills. The program prepares students for careers in government, multilateral and bilateral development agencies, non-governmental organizations, and the private sector. Development graduates also enter relevant doctoral programs.

The program reflects an approach to development that emphasizes not only economic issues but also the importance and interrelatedness of sustainable economic and human development, human rights, and environmental sustainability. We emphasize the diversity of needs, desires, opportunities, and constraints experienced by individuals of differing socioeconomic classes, ethnicities, and genders, as well as differences among nations and regions.

Students gain analytical skills that address not only policy issues, but also the logics and workings of diverse institutions that create, negotiate, and implement development policy. Students also engage the many power differentials that profoundly influence processes central to sustainable development. These power differentials exist not only among nations, but also among public- and private-sector partners within development programs; between development practitioners and their intended beneficiaries; and among those intended beneficiaries. Thus, we also engage with actors and processes across levels from the most macro-level international institutions and initiatives to the most micro-level agendas and actions taken by communities, firms, movements, and individuals.

The program provides training in key practical skills identified by development employers, including communications, quantitative analysis, program/project-focused management and assessment, qualitative and participatory field research, and cross-sectoral framework development. Through internships, students gain experience in meeting the challenges of development practice while applying these skills and their knowledge of ideas, institutions, and processes that have influenced the course of international development.

Degree Requirements

Candidates must complete sixty (60) credit hours.

Substitutions *must be* approved, in advance, by the degree director. Students should prioritize completion of the Degree Core and the Statistics requirement during their first year.

A list of recommended supporting courses is available from the degree director. The director will be available to help students shape specializations and to identify relevant electives.

| Code | Title | Credits |
|---|---|-----------|
| Degree Requirements: | | |
| Korbel Core (one course): | | 4 |
| INTS 4091 | Great Issues in International Affairs (offered each Fall quarter; take as early in the program as possible) | |
| Degree Core (three courses): | | 12 |
| INTS 4350 | Economic Development | |
| INTS 4468 | Politics of Development | |
| One of the following: | | |
| INTS 4215 | Gender, Aid, and Development | |
| INTS 4435 | Health and Development | |
| INTS 4521 | Cultures of Development | |
| Note: Not all of these courses will be offered every year. To experience the degree as a cohort, you are encouraged to take the core course offered in Fall, Winter, and Spring quarters of your first year. | | |
| Specialization (three courses): | | 12 |
| Specializations are sets of three courses full credit courses (12 credit hours) that a student takes within their degree that are centered on a common topic, region, or degree relevant methods and must be approved by the degree director.  - Students with truly unique circumstances in which they have met all of the learning objectives of the internship program in a degree/field relevant way, but the experience does not or did not fall within the bounds of the internship program/requirement

Students who would like to petition for their professional experience to satisfy the internship requirement will need to submit a formal request through the Student Affairs Office (see the Portfolio site for details).

Master of Arts in International Human Rights

The MA in International Human Rights provides students with the opportunity to explore issues of human dignity while critically examining the norms, historical processes, social movements, strategies, and institutions designed to promote and protect human rights in our globalizing world. The program is pioneering and unique among its peers for interdisciplinary study, rigor, and flexibility. It links human rights to law, security, gender studies, migration issues, economic development, health, security, human trafficking, humanitarian assistance, geographic areas, and other related themes. It emphasizes both theory and practice.

For practical experience, students can take skills courses, certificates, participate in educational trips, complete internships, and have opportunities for fieldwork in the U.S. and around the world. Through research centers, guest lectures, conferences, and film series, students participate in a wide range of human rights research and advocacy projects. Graduates typically seek and obtain positions in international nonprofits, international human rights advocacy organizations, international aid agencies, governmental and intergovernmental organizations, business sector, the human rights legal profession, and academia.

Degree Requirements

Candidates must complete sixty (60) credit hours.

| INTS 4909 | Climate Migration and Human Rights | |
| Specialization (three courses): | | 12 |

Specializations are sets of three courses full credit courses (12 credit hours) that a student takes within their degree that are centered on a common topic, region, or degree relevant methods and must be approved by the degree director. Korbel specializations are open specializations, which is to say that they are totally customizable and can be drawn from any and all eligible University of Denver graduate courses. The key is that they must be approved on submission for graduation by a student's degree director and students are encouraged to engage their degree director early in the process on what are approvable sets of courses. Specializations do not go on transcripts, so it is possible to organize courses into more than one set of three, but for completion of degree requirement purposes, only one specialization is submitted as such on your program statement. Students who participate in a Korbel Certificate will put three of their certificate courses in their specialization and the other three in electives to fit the certificate within the 60 credit hours associated with their degree requirements. For more information on Specializations, see the Specializations section of the Korbel MA Handbook.

Skills Courses (12 credits):**12**

| | |
|---------------------------|--|
| INTS 4051 or INTS 4057 | Statistical Methods II ¹ Statistical Methods I and II ² |
| INTS 4644 or INTS 4632 | Human Rights Research Methods Qualitative Research Methods |

A total of 4 more credits (in the form of one 4 credit or 2 credit skills courses) of INTS or PPOL skills coursework drawn from the Korbel School Skills List. This list is updated annually and can be found on the Korbel Student Affairs webpage. Students may also utilize graduate level skills courses in other DU departments/schools with pre-approval of their degree director.

Internship:

| | |
|-----------|--|
| INTS 4981 | Internship (Required, for 0 or 4 credits.) * |
|-----------|--|

Supporting Courses:**20**

Students will fill out their academic program as needed to reach the minimum requirement of 60 credits with graduate level courses in fields and areas of study related broadly but directly to international studies (public policy) or research/policy areas and/or skills already established in their required coursework. These courses can be from Korbel and/or other relevant graduate departments/programs associated with the University of Denver or beyond. Courses from beyond Korbel should be pre-approved by the student's academic advisor. The total number of credits allowed for the degree beyond Korbel cannot be more than 12.

Total Credits**60**

¹ Students must complete INTS 4050 Statistical Methods I (with a grade of C- or better) before they are eligible to register for INTS 4051 Statistical Methods II. Students may receive elective credit for completing INTS 4050 Statistical Methods I, but it cannot be used to satisfy the skills courses requirement for the degree.

² INTS 4057 Statistical Methods I and II is the preferred choice for students with a strong quantitative background. This is a fast-paced course and it combines what is taught in Statistics I and Statistics II, so only take INTS 4057 if you are confident in your ability to keep up in such an environment.

Minimum number of credits required for degree: 60**Non-coursework Requirements**

- Thesis (1-8 credits) or Substantial Research Paper (1-4 credits): Optional.

- * Internships are required for all of the MA degrees at the Josef Korbel School of International Studies and are managed through the Office of Career and Professional Development at the Korbel School. For a few categories of students, the Korbel School may grant an exemption from the internship requirement. While students in the following categories are highly encouraged to pursue internships to enhance their professional development, they may petition to be exempted from the internship requirement.
 - Students entering Korbel with substantial degree/field relevant professional work experience, typically at least 5 years.
 - Students with a confirmed job or job offer in a degree/field relevant sector in which they had been working prior to beginning the Josef Korbel degree.
 - Students sponsored by foreign governments whose terms of study discourage do not allow internships.
 - Students with truly unique circumstances in which they have met all of the learning objectives of the internship program in a degree/field relevant way, but the experience does not or did not fall within the bounds of the internship program/requirement

Students who would like to petition for their professional experience to satisfy the internship requirement will need to submit a formal request through the Student Affairs Office (see the Portfolio site for details).

Master of Arts in International Security

The International Security curriculum provides education and practical training on issues related to the causes and consequences of foreign policies pursued by states plus the goals of non-state actors to advance their position and status in world political dynamics through violent confrontation and war or through cooperative moves towards peace. The Security Program combines traditional issues (state level threats, sovereignty, armament policies) and foundational theoretic perspectives (realism, liberalism, International law) with emerging twenty-first century problems (e.g. human security, climate change, health pandemics, humanitarian assistance, global governance) with exposure and appreciation for updated research and policy perspectives on contemporary topics to enable students to understand continuities and major shifts in the evolving global system, to foresee new threats, and imagine threat responses.

We focus on developing skill sets: written and oral communications; technical tools (graphic displays, statistical analysis) and clear, logical arguments, that are essential for our graduates to be marketable practitioners in the security field—whether working in government, private industry, or the non-profit sector. We expect everyone to keep current in scholarship and policies presented in mainline journals. By completing the Security program, students will have a sufficient sense of basic concepts, theories, and approaches associated with the field with the confidence to apply this knowledge to real-world problems.

Degree Requirements

Candidates must complete sixty (60) credit hours.

All Korbel MA students enroll in INTS 4091, Great Issues in International Affairs, during their first year of enrollment. All International Security students should register for INTS 4735 and complete INTS 4051 or INTS 4057 also during their first year (i.e. first three academic terms of enrollment).

| Code | Title | Credits |
|---|---|-----------|

 - b. Students with a confirmed job or job offer in a degree/field relevant sector in which they had been working prior to beginning the Josef Korbel degree.

- c. Students sponsored by foreign governments whose terms of study discourage do not allow internships.
- d. Students with truly unique circumstances in which they have met all of the learning objectives of the internship program in a degree/field relevant way, but the experience does not or did not fall within the bounds of the internship program/requirement

Students who would like to petition for their professional experience to satisfy the internship requirement will need to submit a formal request through the Student Affairs Office (see the Portfolio site for details).

Master of Arts in International Studies

The Master of Arts in International Studies combines a broad understanding of the field of international studies with an issue-oriented specialization, skills courses, and the opportunities for internships or advanced research. It is the traditional professional international studies curriculum, long favored by students pursuing career options in the government, private, and non-profit sectors, as well as those considering a PhD. It is also our most flexible degree, with ample opportunity to tailor a program to fit your specific needs and interests.

Degree Requirements

Candidates must complete sixty (60) credit hours.

Certificates

Certificate of Specialization in Global Environmental Change and Adaptation

Environmental change, driven in large part by human activity, is increasingly identified as posing significant challenges to development and security. While climate change has received the most attention (see, e.g., US DOD, *2014 Quadrennial Defense Review*), other changes, e.g. biodiversity loss, ozone depletion, and freshwater use have also been raised as significant issues affecting development and security. These issues have also been tied to questions related to social justice. The Josef Korbel School of International Studies (Korbel) is building a critical mass of scholars, student interest, and activities related to environmental change, development, security, and justice. This certificate seeks to provide opportunities for students to develop substantive expertise around one of the defining challenges of the 21st century: global environmental change and attempts to adapt thereto in sustainable ways that minimize harm to affected communities.

Note: The GECA certificate is not available to students pursuing the MA in Global Environmental Sustainability.

Requirements

Complete six courses (24 credit hours), as outlined below:

| Code | Title | Credits |
|---|--|---------|
| Required Courses (three courses): | | 12 |
| INTS 4397 | The Environment, The Economy, and Human Well-Being | |
| INTS 4642 | Environmental Security | |
| INTS 4972 | Global Environmental Governance | |
| Additional courses (three courses) from below. Additional courses can be substituted with approval by the certificate director. | | 12 |
| INTS 4110 | Food/Nutrition Security and Sustainable Development | |
| INTS 4215 | Gender, Aid, and Development | |
| INTS 4220 | Political Economy of Energy & Sustainable Development | |
| INTS 4290 | Gender, Environment, and Development | |
| INTS 4339 | Microfinance Lessons: Inclusive Markets and Development | |

| MBA 4446 | Advanced Sustainability * |
| SOWK 4360 | Social-Ecological Resilience: Connecting Human and Environmental Wellbeing * |

Total Credits **24**

Footnotes

*Only one supporting course that is not INTS or PPOL will count towards the Certificate.

The Certificate in Global Health Affairs (CGHA) is the first global health program to be based in a school of International Studies. Unlike certificates offered by schools of medicine or public health, which emphasize biomedical approaches to health, CGHA places social and political solutions at the forefront of global health action. Combined with a degree, the six-course CGHA sequence prepares students for systematic, evidence-based approaches to a broad range of global health problems relating to development, diplomacy, security, trade, and human rights.

CGHA's core emphasis lies in building sound decision-making skills in an arena often suffused with inefficiency and blindness to political, social, and cultural context. Our courses address the social determinants of individual and population health, emphasizing short- and long-term effects; the increasing globalization of health; and interactions between health and other key factors such as politics, development, trade, and conflict. Practical courses build skills in epidemiology, research methodology, and program design and evaluation.

Certificate of Specialization in Global Health Affairs

Program Requirements

Complete six courses (24 total credits), plus an internship/field requirement, as outlined below.

| Code | Title | Credits |
|--|---|-----------|
| Global Health Affairs Core (three courses): | | 12 |
| INTS 4367 | Global Health Affairs (offered every Fall quarter) | |
| INTS 4423 | Introduction to Epidemiology (offered every Spring quarter) | |
| INTS 4516 | Major Diseases in Global Health (From Pathophysiology to Action) (offered every Winter quarter) | |

Additional Supporting Courses from the list below (three 4 credit courses or any other combination of 4 and 2 credit courses that add up to 12 credits from the list): **12**

Note that not all courses are offered annually. You may be able to apply other courses as supporting courses—from PPOL or programs beyond Korbel. Please speak to the Certificate Director for pre-approval of options beyond the list below.

| MFJS 4175 | Justice Equity Diversity and Inclusion in Health Communication |

Total Credits**24****Minimum number of credits required for certificate: 24****Internship/Field Requirement**

- All GHA candidates must conduct a single, 150-hour health-related practical experience or a suitable alternative (see below). This experience must take place during the student's course of study and the work must be carried out off-campus. As an alternative to a traditional internship, this requirement could be fulfilled through current employment, an RPCV local internship, or independent research (as long as it has an off-campus field component and is approved by Certificate Director), or work on a GHA service-based research project.
- To qualify as health-related, a substantive component of the internship/practicum should focus on health issues. If this condition is not met within the context of the internship/practicum, the student may instead submit an additional, separate report on the health implications of their internship/practicum to the certificate director in order to fulfill the requirement. See the Certificate Director for guidelines. It is possible for students to fulfill both a degree and certificate requirement with one internship/practicum.
- Students are encouraged but not required to base their internship on their required proposal for INTS 4367 Global Health Affairs.

Social justice issues, such as the injustices and inequalities faced by women, LGBTQIA+ communities, racial minorities, indigenous people, and the poor, are more salient than ever. And across the world, people are standing up, asserting their rights and devising movements to demand change – indeed, 2019 saw more protests across the globe than any other year on record. The Global Justice Certificate places these struggles in both local and global context, aiming to prepare students to support, participate in, and amplify movements from the #StopTheSweeps movement in Denver challenging mistreatment of the unhoused, to campaigns against femicide in Latin America, to global youth-led movements for climate action. Upon earning a GJC from the Korbel School, graduates will have a knowledge of theories of social change along with an understanding of clear historical examples; they will understand concrete strategies around using media, advocacy, storytelling, fundraising, and strategic visioning for global changemakers; they will have a toolkit and network to help them launch a career in global social justice organizing and human rights advocacy.

CERTIFICATE OF SPECIALIZATION IN GLOBAL JUSTICE

Requirements

Complete six courses (24 credit hours)

| Code | Title | Credits |
|---|---|-----------|
| Required Core - three courses | | 12 |
| INTS 4708 | Topics in International Studies (Foundations of Global Justice: Theories of Power and Transformation) | |

| INTS 4667 | Humanitarian Simulation Preparation | |
| INTS 4709 | Topics in International Studies (Health, Development and Crises) | |
| INTS 4786 | Planning and Assessment in Complex Environments | |
| INTS 4787 | Civil-Military Practices in Humanitarian Responses | |
| INTS 4935 | International Humanitarian Law of Armed Conflict | |
| Supporting Courses (choose two courses): | | 8 |

8 credits of coursework that is directly relevant to your study of Humanitarian Assistance. Courses may be drawn from any relevant INTS, PPOL or other graduate level courses that are approved by the Certificate Director. Elective courses should be pre-approved. Only one HA elective course can be from outside of Korbel (not INTS or PPOL).

Internship:

INTS 4981 Internship

An internship (150 hours) is required for the Humanitarian Assistance Certificate. The Internship must be with an organization whose core work includes international humanitarian assistance or humanitarian research/ policy/advocacy, and the internship itself must be focused on the organization's international humanitarian related work. Internships may be based in the US or abroad. Students usually complete internships in the summer between the first and second years of the MA program. Students arrange their own internship placements but should consult with the HA Certificate Director for ideas, contacts, and to ensure that internships they are interested in meet the organizational and focus requirements. They must obtain approval from the HA Certificate Director prior to starting the internship. The Korbel School Office of Career and Professional Development must also approve internships before they begin.

Total Credits**24****Minimum number of credits required for certificate: 24**

Suggested pathway: (1 course/quarter over 6 quarters)

Year 1: Fall: INTS 4581, Winter INTS 4496, Spring: core or elective

Summer: Internship

Year 2: Fall: core or elective, Winter: core or elective, Spring: core or elective

Chester Lee Brinser III Scholarship for Humanitarian Assistance

- The Chester Lee Brinser III Scholarship for Humanitarian Assistance is awarded annually (funds permitting) to a JK SIS student enrolled in the Certificate in International Studies with a Concentration in Humanitarian Assistance.

Interdisciplinary Certificates

Certificate of SPecialization in Global Business and Corporate Social Responsibility

¹ These courses are open to Korbel students. Students in the Denver MBA do not take ACTG 4610 Financial Accounting and Reporting or FIN 4630 Managerial Finance.

² These courses are only open to students in the Denver MBA. MBA 4130 Accounting I and MBA 4230 Accounting II together are the equivalent of the 4-credit course ACTG 4610 Financial Accounting and Reporting. MBA 4280 Managerial Finance I and MBA 4285 Managerial Finance II together are the equivalent of the 4-credit course FIN 4630 Managerial Finance.

Minimum number of credits required: 24

Certificate of Specialization in Media and Public Communication with Concentration in Public Diplomacy

Program Requirements

Minimum Credits Required for Certificate: 24

Coursework Requirements

Students will take classes in three categories as follows:

| Code | Title | Credits |
|---|---|-----------|
| Foundational Courses | | 8 |
| MFJS 4065 | Public Diplomacy and Nation Branding | |
| MFJS 4160 | Media Theories | |
| or MFJS 4650 | Global Media and Communication | |
| or MFJS 4080 | Global/Multicultural Campaigns | |
| Applied Course | | 4 |
| MFJS 4050 | Foundations of Strategic Communication | |
| MFJS 4060 | Strategic Messaging | |
| MFJS 4165 | Global Health and Development Communication | |
| MFJS 4504 | Social Media Strategies | |
| Context Specialization Courses | | 12 |
| Students should select courses that directly focus on the society, politics, economics, or culture of particular countries or regions or challenges related to a specific theme or issue. Context Specialization courses must be arranged into a logical three-course set (by region and/or theme) that matches student interests and is approved by the Certificate Director(s). Only full-credit, graduate level courses in JKISIS and MFJS, which are approved by the Certificate Director(s) in advance and are not used to meet another Certificate requirement are eligible for this category. At least two of the specialization courses must be from the Josef Korbel School of International Studies (JKISIS). The third course may be from either JKISIS or MFJS. | | |
| Total Credits | | 24 |

* Course may be counted as either Foundation, Applied, or Context Specialization, but cannot be counted in more than one of those categories

Non-Coursework Requirements

Applicants must be enrolled master's students in good standing in either MFJS or JKISIS. Applicants from either unit must apply for the Certificate no later than February 1 in the first year of their master's program in order to be able to complete all of the necessary coursework for the Certificate by the end of their second year.

Certificate of Specialization in Religion and International Affairs

This certificate program provides students pursuing an MA degree in the Department of Religious Studies (CAHSS) or the Joseph Korbel School of International Studies the opportunity to enhance their "home program" with coursework that emphasizes scholarly and practitioner approaches to understanding the intersections between religion and international affairs in the modern world. This certificate requires a minimum of 24 credit hours.

| Code | Title | Credits |
|--------------------------------------|--|-----------|
| Core courses | | 8 |
| INTS 4525 | Religion-State Relations in Comparative Perspectives | |
| RLGS 3760 | Globalization and Religion: Theory and Methods | |
| Elective courses ¹ | | 16 |
| Choose from the following: | | |
| INTS 4526 | Modern Islamic Political Thought | |
| INTS 4534 | Topics in Middle East Politics | |
| RLGS 3302 | Islamic Fundamentalism | |
| RLGS 3452 | Political Theology | |
| RLGS 3693 | Religion and the Media | |
| RLGS 3814 | Modern Hinduism | |
| RLGS 3890 | Religion and Diaspora | |
| Total Credits | | 24 |

¹ Other elective courses may be approved with permission from the director.

Minimum number of credits required for degree: 24

Faculty

Kevin David Archer, Teaching Professor and Assistant Dean, PhD, University of Denver

Ahmed Mohamed Abdrabou, Teaching Assistant Professor, PhD, Hokkaido University

Deborah Avant, Professor, PhD, University of California, San Diego

Marie Elizabeth Berry, Associate Professor, PhD, University of California, Los Angeles

Alvin A. Camba, Assistant Professor, PhD, Johns Hopkins University

Tamra d'Estree, Professor, PhD, Harvard University

Claude d'Estree, Teaching Professor, JD, Northeastern University

Debak Das, Assistant Professor, PhD, Cornell University

George DeMartino, Professor, PhD, University of Massachusetts Amherst

Sachin Chintamani Desai, Teaching Assistant Professor, MBA, University of Denver

Jack Donnelly, Professor, PhD, University of California, Berkeley

Rachel Epstein, Professor, PhD, Cornell University

Tom J. Farer, University Professor, JD, Harvard University

Karen A. Feste, Professor, PhD, University of Minnesota

Lewis K. Griffith, Teaching Professor and Associate Dean, PhD, University of Denver

Rebecca Galemba, Associate Professor, PhD, Brown University

Keith M. Gehring, Teaching Associate Professor, PhD, University of Denver

Ritwick Ghosh, Assistant Professor, PhD, Cornell University

Alan Gilbert, Professor, PhD, Harvard University

David Goldfischer, Associate Professor, PhD, University at Buffalo - State University of New York

Ilene J. Grabel, Professor, PhD, University of Massachusetts Amherst

Lynn Holland, Teaching Professor, PhD, University of California, Los Angeles

Micheline Ishay, Professor, PhD, Rutgers University

Sandy Johnson, Teaching Professor, PhD, Tulane University

Oliver Kaplan, Associate Professor, PhD, Stanford University

Haider A. Khan, Professor, PhD, Cornell University

Frank N. Laird, Associate Professor, PhD, Massachusetts Institute of Technology

Frederick Mayer, Professor and Dean, PhD, Harvard University

Hilary A. Matfess, Assistant Professor, PhD, Yale University

Jonathan David Moyer, Assistant Professor, PhD, University of Denver

Singumbe Muyeba, Assistant Professor, PhD, University of Cape Town

Linda Méndez-Barrientos, Assistant Professor, PhD, University of California, Davis

Kara Neu, Visiting Teaching Assistant Professor, PhD, University of Denver

Barry Hughes, Professor, Emeritus, PhD, University of Minnesota

David Levine, Professor, Emeritus, PhD, Yale University

Tom Rowe, Associate Professor, Emeritus, PhD, University of California, Berkeley

Courses

INTS 3665 Comparative State Building (4 Credits)

Since the fall of the Berlin Wall, countries in East Central Europe have experienced some twenty-five years of fascinating political, economic, and social change as they have tried to rebuild themselves, undergone democratization, and transitioned to a free market. But the legacies of the region's dramatic and often tragic encounters with war and ideology in the 20th and 19th centuries are still shaping how East Central European societies respond to the new horizons following the collapse of the Soviet bloc. This course is designed as an overview and analysis of the processes of state-building in East Central Europe from the eve of imperial independence in the late 19th century to the present day. We will learn about the condition of the states and nations of East Central Europe before WWI and how they embarked on their nation-building projects after the demise of the foreign empires, the Ottoman, the Austro-Hungarian, and the Russian, that had ruled the region for 500 years. We will then discuss the onset of yet another foreign mode of control – communism – and we will learn how communist reality and Soviet hegemony was lived by the people of Poland, Hungary, Czechoslovakia, Serbia, East Germany, Romania, and Bulgaria for over forty years. After the initial wave of optimism after independence, the political chaos and economic backwardness of the interwar period 1918-1939; after the resistance, collaboration and murder of the Second World War; after the terror and senselessness of Stalinism; after the exhilaration and disappointment of the Hungarian Revolution in 1956, of the Prague Spring in 1968, and of Solidarity in Poland in 1981; after the gray monotony of decaying communism and the lonely voices of dissidents, we will come to the triumphant revolutions of 1989 and the challenges of the post-communist transition. For many of these states, the project of building a liberal democratic state and a functioning market economy over the last twenty years can be considered an impressive success. For others, however, the transition has been undermined by political mismanagement, economic backwardness, and ethnic nationalism. We will weigh the roles of domestic actors and of international institutions in bringing about East Central Europe's successes and failures over the last century. At the end we will discuss some of the key outcomes, positive and negative, of the accession to another ("foreign") empire - the European Union, which ten of these post-communist states joined in 2004-07. Prerequisites: INTS 1500 and INTS 1700.

INTS 4010 Epistemology (4 Credits)

An introductory course covering philosophy and history of science, epistemology, causality, and the logic of inquiry as related to international studies. The relation between theory and practical politics is explored, and differences between empirical and normative theory are examined in the context of foundational principles of politics and social science.

INTS 4011 Comparative Genocide (4 Credits)

This course examines the historical origins, patterns, and legacies of contemporary genocides around the world. We begin with the UN Convention on the Prevention and Punishment of the Crime of Genocide in 1948, which legally codified the definition of genocide and compelled ratifying parties to prevent its reoccurrence. Yet as we'll see, genocide has instead reoccurred with alarming frequency. We will discuss the definitional and analytical challenges facing this subject, as well as academic and policy debates regarding how to define and prevent genocide. We will also explore different approaches to seeking justice and reconciliation in the aftermath. To do so, this class will ground theoretical debates in empirical case studies.

INTS 4029 International Business: Strategy and Practice (4 Credits)

This course focuses on applied issues in international business. Students will learn to think strategically about international business issues, and will in turn be able to apply that thinking to best practices. The following subject areas will be covered: country selection, entry mode theory, exporting, born-global businesses, organizational structures internationally, negotiation, consumption, culture, and demand. Other potential topics include global supply chain management/sourcing, country of origin effects, etc.

INTS 4031 Conflict and Security in Cyberspace (4 Credits)

This course is for Korbel in DC program participants only. Cyber conflict is a new and complicated strategic problem that will engage the international community at many different levels. The cyber environment challenges traditional strategic thinking, and work on an adequate policy framework to assess and manage cyber conflict is at an early stage. Many traditional security concepts will need to be adjusted for the cyber environment through review and discussion. This class will look at both the national and international dimensions of cyber conflict in the larger international security context.

INTS 4040 Technology and War (4 Credits)

This course introduces graduate students to past, present, and future trends in warfare, focusing especially on the how technological advances affect the ways in which states engage in international conflict. The course will begin by introducing students to a number of theories that help shed light on why technological developments occur and how they affect the conduct of war. Subsequent classes will then examine important technological developments and assess how each has impacted the use of force over time. Topics range from the invention of gunpowder and the use of machine guns, to the development of nuclear weapons, the use of unmanned technologies on the battlefield, and the growing importance of the cyber domain to future inter-state conflict.

INTS 4046 Global Economic Inequality and Human Rights (4 Credits)

The main purpose of this course is to understand the conceptual and empirical issues underlying the political economy of global inequality and its relation to Human Rights. What is inequality? What are the global dimensions of inequality and what are the connections between global inequalities and human rights? What are the proximate and deeper causes of global inequality? How does the analysis of deeper causes of global inequality and poverty relate to the underlying political economy of global capitalism? In order to do this, we will look at the relationship between the world economic system, economic growth, poverty and inequalities in several different dimensions. After an initial exploration of these issues we will focus on the more recently developed social capabilities approach developed by Amartya Sen and others. In particular we will explore the limits of policies under the existing institutional arrangements and examine the need for fundamental changes in the global political economy. A special feature of the course will be an analysis and assessment of the millennium development goals and the prospects for progressive policies in the post-MDG period, e.g., the SDGs. We will also examine the problems of the advanced countries in a rigorous holistic framework that will go beyond the important work of Picketty and his collaborators on inequality.

INTS 4047 Global Sustainable Development and Human Rights (4 Credits)

The main purpose of this course is to understand critically the conceptual and empirical issues underlying the linkages between sustainable development and human rights globally. For this purpose we will need to understand both the current global political economy (GPE) and Geopolitics. The key questions are: What is sustainable development? What are the global dimensions of sustainable development? What are the linkages between sustainable development and human rights globally and within particular nation states? How does the discourse of the linkages between sustainable development and human rights relate to the underlying political economy and geopolitics of global capitalism? How does the discourse of the linkages between sustainable development and human rights relate to the underlying causes of inequality and poverty in the world? In order to do this, we will look at the relationships among sustainable development, human rights, energy, technology, geopolitics, geoeconomics, economic growth, poverty and inequalities in several different dimensions. After an initial exploration of these issues we will focus critically on the more recently developed social capabilities approach developed by Amartya Sen and others within the context of domestic and global political economy. In particular we will explore the limits of policies under the existing institutional arrangements and examine the need for fundamental changes in the global political economy and within the nation states. For this purpose we will try to find the approximate but deep causal structure of GPE and the place of sustainability and human rights within this GPE. A special feature of the course will be an analysis and assessment of the climate change issues and renewable energy and critiques of technological fix.

INTS 4048 International Politics of Nuclear Weapons (4 Credits)

This MA-level course analyzes subjects central to the understanding of the role of nuclear weapons in international politics. The course addresses the origins of the atomic bomb project, early efforts to control nuclear materials, deterrence theory, nuclear strategy and force posture, and considers contemporary challenges to the global nuclear order including nuclear latency and nuclear terrorism. The goal of the course is to introduce students to the evolution of scholarship on the role of nuclear weapons in international politics, and to evaluate contemporary nuclear security issues in light of this broader context. Each class will focus on a different substantive topic, interweaving theory with history to better understand each issue area. The course will start with the initial development and use of nuclear weapons, followed by an in-depth look at the early thinking on nuclear strategy and escalation during the Cold War. These classes will cover the Manhattan Project, the bombings of Hiroshima and Nagasaki, the basics of deterrence theory, the arms race between the United States and Soviet Union, and historical cases of nuclear crises and brinkmanship (the Cuban Missile Crisis being the most well-known example). During weeks 5-7 students will explore the politics of nuclear acquisition, evaluating different explanations for why states build nuclear weapons. This section of the course will also explore the variety of ways that the international community has sought to prevent the spread of nuclear weapons, including the important role of international institutions, norms, and the nuclear disarmament movement. The final three classes are devoted to contemporary topics in nuclear politics, including the threat of nuclear terrorism, nuclear energy and dual-use issues, regional instability in Northeast and South Asia, the Iran nuclear deal, and the implication of new technologies (e.g. autonomous systems, 3D printing, precision weapons) for nuclear issues. The final class will provide the students with the opportunity to take stock of what we have learnt over the course of the quarter and to reevaluate early thinking on nuclear weapons in light of what we know now.

INTS 4049 Addressing Complex Interagency Problems (4 Credits)

This class will ask students develop the skills and addresses the challenges associated with the process by which policy recommendations are developed within the United States Government, particularly as they relate to complex multi-dimensional security problems. Students will learn about the roles played by various departments and agencies that are engaged in the policy making process, as well as how external actors impact the development of national security policy. This class will also give students the opportunity to learn about the policy making process in the United States inter-agency environment through a series of presentations from practitioners as well as hands-on experience via role-playing and the development of briefing memos, presentations and other materials. Students will learn about the history, structure and function of the interagency process, including past and current reform processes such as the Clinton Administration's Presidential Decision Directive on Managing Complex Contingency Operations (PDD-56) as well as the more recent Project on National Security Reform. Students will also hear several real-life examples of interagency policy-making from former government officials and various subject-matter experts. Students will be expected to role-play members of a mock National Security Council (NSC) team or as representatives of various US Government Departments and Agencies involved in the interagency decision-making process. Students will identify an actual national security problem and be responsible for debating and agreeing to a set of policy recommendations within the format and structure of the mock NSC. Select students may have the opportunity to present their recommendation to a current member of the National Security Council via video-conference. At the end of course, students should have a fundamental understanding of the strengths and weaknesses of the current system; what constitutes good NSC products and how to produce them; and how concession and compromise, trade-offs, external public pressure, intelligence issues and budget realities all can play a role in how national security decisions are made.

INTS 4050 Statistical Methods I (4 Credits)

An introductory course featuring statistical reasoning, probability, sampling, statistical inference, nominal and ordinal measures of association, and correlation. Open only to students with no prior background in statistics.

INTS 4051 Statistical Methods II (4 Credits)

This course is a continuation of Statistical Methods I, covering the fundamentals and primary methods of statistical inference. Topics include two-sample hypothesis testing, analysis of variance, chi-square goodness-of-fit tests, chi-square contingency analysis, correlation, simple regression and multiple regression. Emphasis will be on problem solving, computer applications (using Stata) and interpretation of results. This course is offered in the Winter quarter only. Prerequisites: INTS 4050.

INTS 4052 Statistical Methods III (4 Credits)

This course will serve as continuation of Statistical Methods II. This will be an applied, non-calculus based course on statistical techniques used in nonparametric and multivariate analysis. Emphasis will be on applications and data analysis using the statistical software package SAS. Prerequisite: INTS 4051 or INTS 4057.

INTS 4056 Information Management in Humanitarian Crises (4 Credits)

Accurate, reliable and timely data collection, processing, analysis and dissemination (four steps in information management) are critical for the effective implementation of both development and humanitarian programs. In humanitarian responses, there are numerous challenges to managing information in what may be a rapidly evolving situation. This course introduces students to the theory of information management and its application in the humanitarian context.

INTS 4057 Statistical Methods I and II (4 Credits)

This is a fast-paced course which serves as an introduction to basic and intermediate concepts in statistics and probability, as well as the primary methods of statistical inference. Topics include data collection, presenting data in tables and charts, summarizing and describing numerical data, basic probability, discrete probability distributions, normal distribution, sampling distributions, confidence interval estimation, single-sample and two-sample hypothesis testing, analysis of variance, chi-square goodness-of-fit tests, chi-square contingency analysis, simple regression and multiple regression. Emphasis will be on statistical reasoning, problem solving, computer applications (using Stata), and interpretation of results. Prerequisite: Strong quantitative background and a minimum quantitative GRE score of 148 or permission of the instructor.

INTS 4058 Applied Time-Series Analysis (4 Credits)

This course serves as an introduction to time-series analysis and panel data analysis techniques. Topics include moving averages, exponential smoothing, time-series decomposition, model identification and estimation, Box-Jenkins method, ARMA and ARIMA models, and VAR analysis. Panel data analysis includes fixed effects and random effects models. Emphasis will be on computer applications (using Stata) and interpretation of results.

INTS 4059 Data Science With Python (4 Credits)

Python is a widely used programming language for data exploration. In this course, students will first learn programming concepts like data types, regular expressions, conditional statements, loops, functions, and so forth. They will then learn how to write Python programs to conduct data exploration, statistical analysis, visualization, and predictive analysis techniques like decision trees and text mining. Students will also learn how to use various libraries available in Python (like Numpy, Pandas etc.) in their programs. Finally, they will learn how to read and debug (i.e. fix) Python programs written by someone else. No prior programming experience is necessary to enroll in this course.

INTS 4060 Data Visualization (4 Credits)

"The simple graph has brought more information to the data analyst's mind than any other device," stated John Tukey, a mathematician distinguished for his contributions to the field of statistics. The course, "Data Visualization" will introduce students to the Grammar of Graphics philosophy which has fundamentally changed thinking about data visualization in the last 20 years. We will use two popular data visualization tools designed using this philosophy: Tableau and the ggplot2 package in R. Students will create a portfolio in which their data visualizations implement best practices – and avoid common pitfalls – to effectively deliver insights.

INTS 4061 Introduction to Survey Methods (4 Credits)**INTS 4062 Data Science with R (4 Credits)**

R is a widely used programming language for data analysis. In this course, students will first learn programming concepts like data types, regular expressions, conditional statements, loops, functions etc. They will then learn how to write R programs to conduct data exploration, visualization, basic statistical analyses, as well as produce reproducible reports. Students will also learn how to use various packages available in R in their programs. Finally, they will learn how to read and debug (i.e. fix) R programs written by someone else. No prior programming experience is necessary to enroll in this course.

INTS 4090 Values-Based Leadership in International and Public Affairs (4 Credits)

The professionals who leave Korbel to enter international and public affairs will come to hold positions of influence, privilege, and leadership as they seek to promote the public good. Their behaviors will have significant consequences for those with whom the work, those they serve, and for third parties. Ethical leaders must be attentive to the challenges and contradictions associated with their positions, influence, and interventions. What values do we hope professionals in international and public affairs will embody, and how might they enact those values? This team-taught course engages the entire Korbel graduate student body in centrally important, common, and difficult ethical issues that professionals in international affairs and public policy confront in their work. The course examines values-based leadership, which comprises ethical dilemmas but also issues and questions that commonly arise in practice but do not generally "fit" within the field of professional ethics. Traditional ethics courses tend to teach the two or three principal approaches to ethical frameworks and then present cases to apply those frameworks. This course on values-based leadership (VBL) also examines cases—but it takes the view that professional ethics as it is typically taught does not suffice to prepare students for the complexities of the world they will confront. As a corrective, the course is interdisciplinary, and among other fields incorporates troublesome findings from the new field of behavioral ethics. For example, why do virtuous people often violate their own ethical norms and then fail to recognize that they have done so? The course also reaches beyond ethics to engage other values that are central to responsible leadership—such as inclusivity, allyship, and access to decision-making by those targeted for professional research and policy interventions—while also exploring the contradictions and risks associated with professional privilege. Faculty and students will explore the power dynamics of decision-making where the populations that are the most affected by interventions often lack decision-making authority and may even be further disempowered by professionals' good intentions. The course looks to bring together, in one Korbel-wide, cross-degree conversation, matters pertaining to values in leadership so that students can engage with others with a broad range of backgrounds, orientations, and career aspirations. No one discipline or professional field has a monopoly on good thinking on VBL. And so the course draws widely on the diverse experiences and expertise of students and faculty at Korbel as we confront together some of the most difficult challenges professionals face over the course of their careers.

INTS 4091 Great Issues in International Affairs (4 Credits)

The course embraces a grand challenges approach that focuses on major issues of the day, while introducing key concepts central to the student of international affairs, notably international political economy, international relations, and governance in all its forms. Issues may vary from year to year, but will be those central to the Korbel School's mission. These will likely include: • Economic Inequality • Environmental Sustainability • Democracy and Human Rights • Security A lead professor will teach the first and last weeks of the quarter and coordinate the remaining weeks. Four other faculty members will each teach a two-week unit on one of the core issues. Each unit will seek to develop students understanding of: 1. The nature of the problem, its manifestations, its causes and its consequences 2. The array of possible interventions—by governments, international organizations, private firms, NGOs, and other—that might address causes or ameliorate consequences. 3. How one would decide which course of action to take. The course will utilize a mix of lectures and discussion sections led by PhD students. Generally, the first week of these units will frame the larger issue and the second will focus on a more particular instantiation of that issue. For example, in a unit on Inclusive Economic Growth, a first lecture might be explore the broad contours of economic inequality and its likely causes and second might focus on a narrower topic such as access to education, social mobility, or gendered dimensions of inequality, depending on the expertise of the faculty member leading that unit of the course.

INTS 4105 Campaigns and Foreign Policy (4 Credits)

This course will examine the principles of political campaign management and their application to international political campaigns, foreign policy initiatives and international affairs. Students will be introduced to the tools of political campaign management: message development, survey research, audience targeting, and paid and earned communications. Case studies will focus on elements of both US and other nations' foreign policy. Examples of foreign policy playing a significant role in campaigns in the UK, and Denmark will be highlighted. In addition, there will be a focus on human rights and issue campaign. Classes will be comprised of lectures, discussion and some simulation exercises. Outside specialists will be invited to share their experience and expertise in person or via teleconference. Readings include contemporary journals, periodicals, newspaper reports and excerpts from major studies of campaign and organizational management. Movies and the Internet will be an integral aspect of the class.

INTS 4110 Food/Nutrition Security and Sustainable Development (4 Credits)

This policy-oriented course will examine structures and processes that result in varying food security outcomes across space and time. Food security outcomes reflect interactions among political, economic, socio-cultural, and physical environmental systems. These systems, which are both dynamic and permeable, give rise to particular forms and patterns of food production, distribution, and consumption, and to more or less environmentally-sustainable uses of the natural resources critical to food and nutrition security. Ultimately, food security is realized when all people within a population consume sufficient nutrients to live active and healthy lives. This normative focus on human health and well-being, as the metric by which food security outcomes will be measured, is critical to the framing of this course. Political, economic, and social institutions—positioned at scales encompassing global, national, "local" (micro-regional, community), and household—are simultaneously charged with producing food in particular physical environments and/or making food available and accessible to their populations, and with protecting environmental resources and public health in ways that contribute to nutritional components of human development. The term "political ecology" has been used to describe an analytical framework that explicitly focuses on the interactions among the structures of political economy and those of physical/biological ecologies (including human), together with the socio-cultural contexts that influence structural impacts and help to explain outcomes. This framework incorporates both an explicit navigation among scales (of power and of analysis) and a long-term perspective. Cumulatively, the readings and exercises of this course will build a political ecology of policy domains central to improving food security and nutrition outcomes in both global north and south. We will examine policy issues and constituencies, institutional approaches, theoretical perspectives, and empirical analyses. You will have opportunities to engage with institutional approaches through structured exercises, including a mid-term graded exercise. You will also have an opportunity to produce an independent project that will include your own policy recommendations.

INTS 4127 The Rise and Fall of Great Powers (4 Credits)

This new graduate course provides an in-depth look at often ignored areas of history. Learning about the rise and fall of the Roman Empire, British Empire, Russian Empire, Soviet Empire and Chinese Empire provides an excellent backdrop to understanding important historical lessons that are often downplayed in the early 21st century. The course provides a series of good works that can help students better understand the present and future developments of our century.

INTS 4134 Forever Emerging? The Developmental Trajectory of Modern Brazil (4 Credits)

Brazil has the largest population, economy, and industrial basis in Latin America. It is the seventh largest economy in the world, fifth largest country in land area, outranking the continental United States. Like the US, Brazilians are a mix of indigenous, European, and African peoples, along with subsequent inflows of Asian and Middle Eastern immigration, though race, ethnicity, and class have been interpreted with distinct cleavages and hierarchies. We approach our understanding of Brazil through the country's former capital, Rio de Janeiro, a city of numerous complexities, wonders, contradictions, challenges, and potential. By looking at the historical evolution of this fascinating city, the course will offer students an opportunity to study the evolution of Brazil, from the colonial period to the present day, when the country has increasingly been seen as a regional economic and diplomatic powerhouse, as well as a globally emergent player. By focusing on the historical trajectory of Rio de Janeiro, in an in-depth reflection structured along textual, visual, and in-sight materials and experiences, students are invited to reflect about matters of change and continuity as well as how national socio-political trends are reflected in local contexts, thus also learning to reflect about the interpretive relationship between the micro-macro levels of analysis. Historical political and economic narratives, contemporary analysis of the country's place in the world, films, music, architecture, guided visits to neighborhoods and local cultural institutions will be our explanatory prisms into the Carioca (Rio-based) spirit and cultural memories as expressions of national trends and trajectories. Through lectures, seminar discussions, and field studies, we explore Rio's renowned and sometimes notorious informality, from informal housing (favelas) to language, social organization and economic activities. We also explore themes such as tourism, the history of housing policies, and the transformation of local culture into 'national' and 'export' cultures. Moreover, by looking at the urban transformations over the last 200 years, we explore Brazil's drive to become an industrial power, as well as the new social conflicts produced by these efforts. Finally, we investigate Brazil's contemporary culture, politics, sports, achievements, promises and continued challenges as it proceeds as a so-called emergent nation into the 21st century, while still struggling with its colonial past.

INTS 4136 U.S.-Cuba Relations (4 Credits)

This class will review relations between the U.S. and Cuba from the Spanish-American War in 1898 to present day. On one hand, we find a stand-off that includes an invasion and trade embargo by the U.S., mutual attempts at political disruption, and the exodus of populations from each country to the other. On the other hand, we find surprising levels of cooperation including a longstanding pattern of "back channel" communication between the two governments as well as a degree of cooperation at the societal level. In addition, each country has had a profound influence on the development of social ideals in the other.

INTS 4141 Domestic/Int'l Conseq:Drug War (4 Credits)

Domestic and international policy and the impact of the drug war on both.

INTS 4142 After the Fall: Russia & China (4 Credits)

Provides analysis of the historical rise of Russia and China, and their complex inter-relationship and interaction with the United States and the world.

INTS 4147 American Govt & Pol. Making (4 Credits)

Examines governmental fragmentation affects and policies and examines how policy issues engage different segments of the government.

INTS 4201 Quantitative Analysis of Global Environmental Change (4 Credits)

This course examines the role of the natural and social sciences in the climate change issue. Climate This course examines the role that quantitative analyses play in characterizing risks to society or ecosystems posed by global environmental change, and how various policy options could reduce those risks. We will focus in particular on analyses with "integrated assessment models" (IAMs), which have been influential in shaping the climate change policy debate. IAMs are typically global-scale systems analyses that integrate societal and environmental aspects of the climate issue. The course will survey alternative types of IAMs and explore how they work using one of the original, and still most influential, IAMs in the climate field, the Dynamic Integrated Climate-Economy (DICE) model developed by recent Nobel laureate William Nordhaus. We will use a recent version of DICE to explore how assumptions affect outcomes, and understand the strengths and weaknesses of such models.

INTS 4205 Hacking for Defense (4 Credits)

Hacking for Defense (H4D) is designed to provide students the opportunity to learn how to work with the Department of Defense (DoD) and Intelligence Community (IC) to better address the nation's emerging threats and security challenges. (See the background here.) Unlike current practices in the DoD/IC that can stall and in some cases thwart rapid innovation, this course provides a platform to develop prototypes that address DOD/IC users' needs in weeks. Agencies or Commands in the Department of Defense and Intelligence Community may provide follow-on funding to student teams for further refinement and development of prototypes. In this Hacking for Defense (H4D) course, student teams may either select from an existing set of problems provided by the DoD/IC community or introduce their own ideas for DoD/IC problems that need to be solved. Although teams pick a problem to solve, Hacking for Defense is not a product incubator for a specific technology solution. Instead, it provides teams with a deeper understanding of selected problems and the host of potential technological solutions that might be arrayed against them.

INTS 4207 The Global Political Economy of China (4 Credits)

China's rise in the 21st century has given rise to complex reactions in both the global North and the global South. This course will explore the rise of China and its possible consequences for the Global Political Economy from a complex systems perspective. The recently developed evolutionary theory of Global Political Economy will be the basic framework. We will build up an applicable ecologically sound evolutionary theory from the bottom up to understand 21st century Chinese paradoxes and ambiguities. These paradoxes and ambiguities are not accidental but relate to tensions in the moral economy of PRC embedded in the world of the early 21st century. Furthermore, the uneven development of both the Chinese and Global Political Economies across space and over time has led to immense inequalities among groups and possible polarizations. We will examine these inequalities and related emerging issues both theoretically and empirically and begin a conversation between the theorists and practitioners. In this way, this course is intended to begin the much needed dialogue among students of global society regarding the contemporary relevance of a complex multilayered innovative economy like that of the PRC. The ecological and geopolitical aspects of China's rise will be analyzed within our Evolutionary Ecological Global Political Economy framework. The well-being of the Chinese people and others in the Global Political Economy will be analyzed by using an extension of Sen's capabilities theory called the Socially Embedded Intersectional Capabilities Theory.

INTS 4210 Global Value Chains, Multinational Corporations, and Investment Sustainability (4 Credits)

The emergence of sweeping new legal rights for Multinational Corporations (MNCs) in relation to their foreign direct investment and cross-border trading activities under the avalanche of bilateral investment treaties negotiated in the last few decades and under multilateral conventions such as NAFTA represent what many have termed "revolutionary" changes in the nature of state sovereignty as it relates to state-investor relations. That expansion of investor/MNC rights in relation to state sovereignty has thus seemingly reached a point calling for re-examination of the nature and appropriate scope of MNC rights, as well as the nature of MNE accountability and responsibilities which are the flip side of such rights.

INTS 4215 Gender and Humanitarian Assistance (4 Credits)

In recent decades, the humanitarian system has grappled with the concept of gender and how to operationalize it in the context of humanitarian preparedness and response. Through readings, class discussions, guest speakers and assignments, students will have the opportunity to gain a better understanding of how the humanitarian system's approach is evolving in theory and practice.

INTS 4220 Political Economy of Energy & Sustainable Development (4 Credits)

The main purpose of this course is to understand critically the conceptual and empirical issues underlying the linkages between energy and sustainable development within the current global political economy(GPE) and Geopolitics. What is sustainable development? What are the global dimensions of sustainable development? What are the linkages between energy and sustainable development? How does the discourse of the linkages between energy and sustainable development relate to the underlying political economy and geopolitics of global capitalism? How does the discourse of the linkages between energy and sustainable development relate to the underlying causes of inequality and poverty in the world? In order to do this, we will look at the relationships among energy, geopolitics, geoeconomics, economic growth, poverty and inequalities in several different dimensions.

INTS 4223 Global Dynamics and Local Threats in Agricultural Development (4 Credits)

Many low- and middle-income countries in which agriculture plays a key role for development are characterized by high levels of socio-economic inequality, a mixed human rights record and a dominance of transnational corporate power in domestic agricultural export markets. At the same time, these countries face processes of environmental degradation through anthropogenic and natural drivers of change that affect the availability of ecosystem services and thus shape agricultural development and human wellbeing. This course offers an in-depth study of the political, socio-economic and social-ecological conditions for sustainable agricultural development in low- and middle-income countries. We explore the political economy of agricultural production and trade in countries that depend to a significant extent on the export of agricultural commodities as a source of foreign revenue. We examine the design and implementation of global policy frameworks, international agreements, and national strategies for agricultural production and trade, with a particular focus for the governance of natural resource use. Our goal is to assess the relevance and effectiveness of current governance structures for agriculture to respond to local-, regional-and global-scale environmental changes and socio-economic challenges in ways that address current and future human needs. Through case studies from selected agricultural sub-sectors and diverse countries from across Asia, Africa and Latin America, we investigate local strategies for natural resource use in the context of poverty, inequality, and environmental change. The course provides a comprehensive coverage of the political economy of agricultural development and an introduction to social-ecological systems analysis as a theoretical framework for interdisciplinary research in the field of sustainable development.

INTS 4226 Social Entrepreneurship & Sustainable Development (4 Credits)

This course provides an overview of the role of social entrepreneurs, innovative small firms, and entrepreneurial NGOs in sustainable development and poverty alleviation. Market-driven strategies are increasingly important for all organizations, in government, public, or private sectors, to encourage local solutions that are sustainable and do not require ongoing subsidy. Entrepreneurial NGOs and small firms are a great source of local innovation and adaptation, identifying potential strategies that can be scaled up through partnerships with governments, social purpose organizations, or private capital. These market-driven strategies are based on a good understanding of customers, the value provided, and how to best deliver products and services to vulnerable populations in a responsible way. Further, a strong customer and market focus ensures that all social purpose organizations (both for-profit businesses and NGOs) meet customer needs effectively and develop new products and services efficiently.

INTS 4227 Social Impact & Sustainability Lab (4 Credits)

This course combines classroom work with a project-based learning opportunity that matches students to a specific project for a social enterprise organization or research on a social enterprise topic. The class combines structured introduction to social enterprise business models and strategies to enhance social impact and financial sustainability with real organizations and practical challenges of launching and managing social enterprises. This approach allows teams of students to work together on real issues for social enterprises, learn strategies and tools for designing better solutions to development challenges, and learn some basic consulting and research skills with group discussion and shared learning. While INTS 4226 Social Entrepreneurship & Sustainable Development is not a pre-requisite, it provides a helpful overview.

INTS 4228 Development Practicum in Social Enterprise (4 Credits)

As global development challenges continue to evolve, many are complex, inter-connected social challenges that we call “wicked problems.” These challenges require development organizations and social entrepreneurs to combine human-centered design and systems thinking methods to design better solutions, and to include business planning for implementation and social impact management for continual learning. While not all organizations are “social enterprises” with earned revenue streams to drive their social impact, all social-purpose organizations can benefit from an entrepreneurial approach to problem-solving. They need human-centered and systems-minded impact strategies, market-driven business models, and well-designed performance metrics to guide continual innovation and improvement. Further, organizations that consistently strive to improve customer outcomes and make existing systems work better will be leaders in social innovation that create sustainable change. This Development Practicum is an experiential learning opportunity that matches students with projects for existing development organizations to help strengthen their customer-centered program design, business model, social outcomes, or financial sustainability. This allows teams of students to work together on a real problems, gain experience in how to design better solutions to development challenges, and learn and apply strategies and tools in Human Centered Design, business planning, and social impact management. The Practicum matches teams of 2-3 students to a client consulting projects and provides structured classroom learning about social enterprise principles and strategies for better solution design and successful implementation. This approach gives students structure for their consulting or research projects, and facilitates group learning and insights.

INTS 4234 International Security, Diplomacy and Force (4 Credits)

The course examines the ways and means of war and peace with a focus on both multilateral and bilateral forms of diplomacy. We begin with the use of force and the modalities of peacemaking in the Greco-Roman, Indian and Chinese ancient worlds. Ending wars in the “modern” period has often resulted in new constructs to maintain peace. Thus, the Peace of Augsburg (1555) and the Peace of Westphalia (1648) that ended warfare among German states established a foundation for sovereignty as cornerstone of a new state system. When post-1789 France became a “revolutionary” power, she dramatically upset the status quo. After the defeat of Napoleon in 1815, conservative powers gathered in the Congress of Vienna to restore a balance of power. The arrangements they established (dubbed the “Concert of Europe”) successfully avoided general war for 99 years. World War I (1914-18) was followed by multilateral diplomacy at Versailles and formation of the League of Nations and agreement to maintain international security through application of international law. Failure of this design in the interwar period led to another attempt after World War II (1939-45) at Yalta, Potsdam, Dumbarton Oaks, and San Francisco to establish and maintain peace not just by international law (collective security), but also through alliances (collective defense)—both under United Nations auspices. In the seven decades since, both bilateral and multilateral diplomacy have been used to restore or maintain international peace and security, also engaging in peacekeeping and arms control efforts in relation to weapons of mass destruction, confidence- and security-building measures (CSBMs), space and other security-related matters on present-day national and international security agendas.

INTS 4235 Realism and Great Powers (4 Credits)

We focus in this course on realist understandings that relate to national security—a focus on the power wielded by states and the balance of power among them. Under anarchy (the absence of central authority), wars and “rumors” of wars are the continual expectation, whether dealing with city-states in ancient Greece, Renaissance Italy, American or European states in the 18th and 19th centuries, or interstate conflicts across the globe in the 20th and 21st centuries. It is a world aptly described by Thucydides and Sun Tzu, Machiavelli and Hobbes—not to mention, among others (and with variations in their approach), Carr, Niebuhr, Morgenthau, Waltz, Hoffmann, Gilpin, Schelling and, in our time (in no particular order), Mearsheimer, Walt, Betts, Layne, Posen, Schweller, Grieco, VanEvera, Snyder, Jervis, and Nye. We also take account of critics of realism (for example, Haas, Ruggie, and Ashley)—as well as those who have made their peace with it (for example, Keohane and Wendt). The central question is what does realism offer to both theorists and policy practitioners?

INTS 4236 Human Security and Sexuality (4 Credits)

The root of homophobic views are often religious and cultural (mis)understandings deeply embedded in many societies around the world. Expressed in secular terms, the sexual orientation and identity of the majority trump those of sexuality minorities. Lesbian, gay, bisexual, transgender, other “queer” or questioning, intersex, and asexual (LGBTQIA) individuals have a personal stake in both security and the rights they have as human beings wherever they reside around the world. Violence, threats, discrimination, marginalization and other forms of harm directed to persons due to their sexual orientation or identities are worldwide human-security issues the course addresses.

INTS 4237 Human Rights and Security (4 Credits)

Throughout their 200,000 year history, humans have gathered into groups ruled by strongmen, to seek protection or prey on others. Just three centuries ago, Enlightenment thinkers challenged that conception of society and governance, which soon led to a remarkable event: the 1776 creation of a state whose rationale for existing was to secure the inalienable rights of all individuals to “life, liberty, and the pursuit of happiness.” That changed world politics. It meant that while the fate of states would continue to be shaped by their relative power, a new moral standard would be applied to governments: the extent to which they recognized universal human rights. As John Quincy Adams put it in 1817, the mixture of America’s emerging power and its avowed commitment to human freedom made America a “dangerous nation” in the eyes of the world’s authoritarian regimes. It also meant that competing conceptions of human rights would permeate American domestic struggles: over rights for white men vs. equal rights for all, over rights to property vs. labor rights, over national security vs. free speech and privacy rights, and over whether to defend rights only at home vs. the need (or obligation) to advance them internationally. Along the way, those U.S. debates led to a Civil War, a war to defeat fascism, and a cold war (including U.S. support for many “third world” dictators) to defend the market democracies of the West against authoritarian Communism. From the early post-cold war promise of an advance toward globally inclusive universal rights—during which such subjects as a “responsibility to protect” and support for democratic transitions entered mainstream policy debates—a “democratic recession” has now reached the point of serious threat to preserving even the United States as a rights-based Republic. For the first time since the 1930’s, a U.S. President offers a conception of national security that rejects promotion of human rights abroad. Domestically, a struggle over whether the object of “national security” is a Republic based on equal rights for all, or a racially and religiously defined “nation,” evokes memories of the clash that once led to civil war. Finally, Vladimir Putin’s effort to subvert all Western democracies presents us with a “cyber” version of the 20th century’s international, state-led assaults on the West by fascist and communist major powers. Those struggles are the subject of this course.

INTS 4238 Modern Political Violence and Human Rights (4 Credits)

The landscape of contemporary political violence is marked by a dizzying array of actors, including rebel groups, militias, gangs, and state governments. In this class, students will develop a better understanding of belligerents in modern conflicts and how they relate to one another. Students will also develop an in-depth understanding of a non-state armed group or conflict of their choice.

INTS 4290 Gender, Environment, and Development (4 Credits)

This course is concerned with how and why gender matters in producing environmental, economic, and social outcomes of planned and unplanned development. It is also concerned with gender as a human rights issue and the equity and ethical dimensions of environmental and related economic planning. Beyond these practical implications of gendered environments, the course will engage theoretical and ideological underpinnings for the gendered structures of environmental control and management encountered in a wide range of physical environments.

INTS 4301 Introduction to Political Theory (4 Credits)

Political theory analyzes and interprets the foundations of political life and evaluates its principles, concepts and institutions. It is fundamentally concerned with the normative political relationships among human beings that revolve around the organization and basis of government. This course provides an introduction to Western political theory through key texts and thinkers that are essential reference points in the social science literature. The focus will be on the Enlightenment tradition and the approach will be geared toward understanding how the seminal texts and thinkers of this period have shape—and continue to shape—our understanding of political ideas and norms. This course will also have a pragmatic component, where the books and ideas under consideration will be applied to contemporary international debates and issues. Please note that this course is geared toward students without a strong background in political theory. No previous knowledge is required or assumed. All that is needed is an open mind and willingness to work hard.

INTS 4303 Econometrics for Decision Making I (4 Credits)

The first course in a two course sequence in Applied Econometrics. Introduces basic probabilistic techniques for the quantitative analysis of economic and social data and their application to international public policy decision making. Prepares students to: compile and analyze data sets; build and test regression models; interpret and critically evaluate applied econometric studies; and conduct their own applied econometric research using computerized statistical packages. Prerequisite: INTS 4051 or INTS 4057.

INTS 4310 International Trade (4 Credits)

An intermediate course analyzing causes and consequences of international trade. Classical, neo-classical, and product-cycle models included. Topics include international specification, terms of trade of developed and less-developed countries, distribution of gains from trade, instruments and uses of commercial policy, nominal and effective protection, and theory of customs unions and economic integration. Prerequisite: grade of B- or better in undergraduate course in Introductory Microeconomics, Principles of Economics (combining Introductory Micro and Macroeconomics), or International Economics. Students who have not completed the undergraduate prerequisites for INTS 4310 should first complete INTS 4536.

INTS 4320 Int'l Monetary Relations (4 Credits)

An intermediate course examining history of the monetary system, foreign exchange rates, balance of payments analysis, and adjustment processes under different exchange systems, current status problems, and prospects for reform. Prerequisite: grade of B- or better in undergraduate course in Introductory Macroeconomics, Principles of Economics (combining Introductory Micro and Macroeconomics), or International Economics. Students who have not completed the undergraduate prerequisites for 4320 should first complete INTS 4536.

INTS 4324 International Political Economy (4 Credits)

The course examines 3 contrasting visions of international political economy: economic security, trade and finance.

INTS 4327 Advanced Issues in International Studies (4 Credits)

The purpose of this course is to train students in advanced research in the fields of International Relations and Comparative Politics. The course achieves these ends through an investigation into a particular empirical theme (of the professor's choosing in any given year). While due emphasis is placed on the major findings of the specified literature, as much or more attention is given to the research design, methods and evidence of the selected literature. Students will learn what constitutes a falsifiable hypothesis and what the alternatives to falsifiability are, examine various scholars' methods of operationalization and measurement, consider the merits of treating rival explanations to one's own, and judge the veracity of findings by these and other criteria. In addition, students will apply such knowledge gained by writing their own original research paper during the quarter. The course aims to assist primarily PhD candidates in their abilities to carry out research, to assess the quality of other scholars' research, to teach in the fields of International Relations and Comparative Politics, and to excel in their comprehensive exams. Please note that this course is offered only once every other year. Thus PhD candidates must enroll in the first year it is available in their course program.

INTS 4330 International Business Transactions (4 Credits)**INTS 4332 Data Analysis and Development (4 Credits)****INTS 4333 International Project Design and Monitoring (4 Credits)**

It can be beneficial for graduate students planning careers in multilateral and bilateral development agencies, non-profit organizations, private-sector companies, and professional services organizations to have an understanding of how to develop a project proposal, implement it, and evaluate its results. These are useful skills for entering or reentering employment with these organizations. The Josef Korbel School of International Studies currently offers a trilogy of courses in international project cycle management—international project design and monitoring, project management, and international project evaluation. The three courses are delivered in sequence during the academic year in conformance with the project cycle, but they can be taken out of sequence without prerequisite or need to take them all. Each course uses monitoring and evaluation methods and means to connect the design, management, and evaluation of a project. Students may have been exposed some of these methods in courses covering quantitative and qualitative techniques and field research methods. Each course also shares in common the development teams and managers of those teams to produce the key deliverables at three key stages of the international project cycle. The purpose of the International Project Design and Monitoring course (formerly International Project Analysis) is to provide students with an appreciation for the myriad of considerations in designing and monitoring an international development intervention and exposure to conventional and unconventional methods and means for doing so. The international project cycle begins with identifying an intervention to address a development impediment or opportunity faced by a target group. A development intervention typically falls into a sector or thematic area, such as education and health care, and it is generally directed towards physical, human, institutional/legal capacity building, or a combination of them. Projects can be singular in scope, such as building a new primary school, or broadly scoped to mitigate causes of poverty, such as the Millennium Development Villages project, but they all should be a unique endeavor with a beginning and an end. Much of the physical development today is supported by the private sector or state sponsored organizations, with less support through traditional foreign aid unless it is a major reconstruction effort like in Afghanistan. In this course, students will learn that a project proposal should be designed in concert with the beneficiaries to be relevant, feasible, and supported by their needs, but also recognizing their absorption capacities. Such a project proposal should ideally have gone through a systematic analysis of factors that will affect its design and management of risk, including economic, financial, environmental, technical, and social factors, as well as special safeguard areas. Students will also learn about the continued need for project proposals to define the underlying theory of change, assumptions, and logical framework for linking inputs, activities, outputs, outcomes and ultimately desired impacts. Establishing a performance management plan for the project that defines, among other things, the metrics and milestones for monitoring the process is an essential component of most project proposals. However, students will learn that adherence to plans is challenging under complex development conditions.

INTS 4337 Current Issues in United States Policy in the Middle East (4 Credits)

In this course, we will examine some of the issues, events and decisions that may be contributing to this perception and more generally on the evolving role of the U.S. in the Middle East. Is the perception correct? What might be happening with U.S. policy in the region? What might we expect as the Trump administration's decidedly pro-Israel/pro-Saudi approach solidifies? What are America's genuine policy interests in the region and how should the U.S. be addressing those? And what are the challenges and responsibilities of the governments and peoples of the region in tackling their many problems, from sectarianism to poor economic growth to environmental degradation? Can the U.S. play an effective role in any of those challenges? Through the study of specific issues, we will focus our attention on the policy-making process and decisions, key interests and motivations, alternatives, the decision makers and their unique roles, and the ultimate impact their decisions may have today and in the future. We will also try to understand American attitudes and perceptions that shape policy as well as those of the people in the region. As we proceed through our study, we will ask ourselves how decisions impact the region and the U.S. today and in the future.

INTS 4339 Microfinance Lessons: Inclusive Markets and Development (4 Credits)

This course provides an overview of why microfinance and financial inclusion are key strategies and platforms to build sustainable development and inclusive markets and how the financial inclusion ecosystem supports development outcomes through direct impact of microfinance institutions (MFIs) and systems change. Microfinance and financial inclusion are important ways to improve economic choices and household resilience among the poor, providing access to credit, safe savings options, payment systems, and even micro-insurance to help the poor manage risk and financial uncertainty. They are also important tools to create local, inclusive markets and economic opportunity by facilitating micro and small business development and access to development assets like clean energy, clean water, agricultural inputs, education, and healthcare. We will focus on lessons and insights from microfinance's evolution into financial inclusion, how digital finance and other technology innovations are creating new opportunities and risks in development, and the shared characteristics of highly effective microfinance institutions and NGOs that integrate microfinance into their development strategies.

INTS 4341 Illicit Markets in the Americas (4 Credits)

This course applies the understandings of International Political Economy (IPE) to the study of illicit market activity in the western hemisphere. While sociologists, criminologists, legal scholars and law enforcement agencies have all contributed substantially to this area of study, IPE has only recently been applied. So what can this approach contribute? Through IPE, we can place illicit market activity within the larger structure of trade and monetary relations, the rise of the informal sector and the existence of economic and other inequalities in particular regions. We can consider the nature and impact of North-South relations and the process of structural adjustments as advised by international financial institutions. Further, we can evaluate the overall function and effectiveness of law enforcement, governing institutions and international organizations in controlling illicit market activity. Finally, through IPE, we can consider the ideational context of participation in illicit market activity.

INTS 4342 Project Management (4 Credits)

It can be beneficial for graduate students planning careers in multilateral and bilateral development agencies, non-profit organizations, private-sector companies, and professional services organizations to have an understanding of how to develop a project proposal, implement it, and evaluate its results. These are useful skills for entering or reentering employment with these organizations. The Josef Korbel School of International Studies currently offers a trilogy of courses in international project cycle management—international project design and monitoring, project management, and international project evaluation. The three courses are delivered in sequence during the academic year in conformance with the project cycle, but they can be taken out of sequence without prerequisite or need to take them all. Each course uses monitoring and evaluation methods and means to connect the design, management, and evaluation of a project. Students may have been exposed some of these methods in courses covering quantitative and qualitative techniques and field research methods. Each course also shares in common the development teams and managers of those teams to produce the key deliverables at three key stages of the international project cycle. The purpose of the Project Management course is to expose students to right- and left-brain approaches to managing the knowledge areas of project management, such as time and cost management, as well as approaches used by project managers and their teams. This course concentrates on the implementation and completion/transition phases of the international project cycle. The implementation phase commences after stakeholders approve a project proposal—translated into a project charter—from which a detailed project management plan is developed to execute the project. Project managers rely, to a large extent, on internationally recognized management approaches to move workflow smoothly among project phases, allocate project tasks effectively, efficiency track project milestones, and make adjustment for inevitable and often uncontrollable project delays and cost overruns. The completion/transition phase ends the project and transfers control from the project team to the operational team, preferably through a defined exit strategy. The course covers the knowledge and skills needed to meet the educational requirements for certification by the Project Management Institute (PMI). PMI serves practitioners and organizations by providing standards that describe leading practices, globally recognized credentials that certify project management expertise, and resources for professional development, networking and community. PMI credentials certify your knowledge and experience in project management so you can be more confident at work and more competitive in the job market. Several other organizations will be mentioned that also provide certification, but all share in common required education hours, years of experience, and passing a professional examination. Students in the course will exhibit their new knowledge and skills by joining small teams to prepare a professional project management plan for the selected development project charter and through individual examination.

INTS 4349 Comparative Public Policy and Finance (4 Credits)

Course aims to provide in-depth treatment of the question "why do size, form, financing, and distributive outcomes of government differ so greatly across nations?".

INTS 4350 Economic Development (4 Credits)

This course combines an introduction to the theories and key issues in economic development with a rigorous analysis of empirical evidence from low- and middle-income countries in Asia, Africa, and Latin America. The course enables participants to develop an in-depth understanding of diverse local, national, and regional patterns of economic development, and to critically assess the design and potential social and economic consequences of global policy frameworks and national economic development strategies. The course starts with providing an outline of global trends in poverty, inequality and growth, including a discussion of key concepts and ways of measuring economic development. Part I focuses on classical, neoclassical, and institutional theories of economic development. Linkages between the intellectual basis of different theories and major political currents and ideologies, and the associated policy design, are assessed. In part II, core themes in economic development are explored, including agriculture, trade, industrialization, labor, and the environment. The analysis of diverse country studies illuminates how historically specific social, political, and institutional conditions shape development outcomes. In part III, we examine the design and implementation of economic development policy through an analysis of international aid agendas and institutional modalities of ODA, with a particular focus on emerging donors. We investigate the strength and weaknesses of national economic development policies through an in-depth study of selected country case studies. Please note that a mastering of quantitative economics is not a requirement for this course.

INTS 4355 Finance and Development (4 Credits)

An advanced course which examines the relationship between financial system organization and economic performance. The political economy of financial innovation, liberalization and globalization, state-finance-industry relations, micro-lending, stock markets and regional financing are discussed with reference to Latin America, Asia and African countries. Prerequisites: INTS 4320 is required, and INTS 4350 is strongly recommended.

INTS 4362 Gender and Health (4 Credits)

This course will introduce students to theories/concepts of gender and health and examine the interlinkages between global health policies and programs. It will cover the design, delivery, reception, and effectiveness of international programs aimed at improving health outcomes for women and men. The course will review women and men's access to health, and the influence of patriarchy/masculinity on health at micro, meso and macro levels. The readings from the course focus on major theoretical and analytical debates in the field of international/global health, such as HIV/AIDS, gender-based violence (especially in relation to emergencies/humanitarian crises), key populations (MSM (Men who have sex with men), Commercial sex workers, IDUs (Injecting drug users)), LGBT health, and sexual and reproductive health. Research projects provide students an opportunity to explore further the linkage between health and gender, health care or health policy and gender, gender and health-related issues in emergencies, and the relevant health and gender interventions in a country of their choice.

INTS 4364 Global Poverty and Human Rights (4 Credits)

This course explores the many dimensions of global poverty and human rights and well-being of people around the world. Three particular areas are emphasized and explored in detail. The first is the exact dimensions and extent of globalization. The second is the exact nature of another complex thought called poverty. The third area explores the connections between globalization, poverty, and human rights. After rigorous discussion of the conceptual foundations, we focus on the U.N. millennium development goals for poverty reduction in particular. At the end we will be able to explore the analytical foundation of alternative policies, strategies and evaluate these for formulating alternative strategies addressing human rights issues and global poverty reduction.

INTS 4367 Global Health Affairs (4 Credits)

Introductory survey class for all students interested in intersection of international affairs and global health and security, development and economics.

INTS 4368 HIV & AIDS in International Affairs (4 Credits)

Upon completion of the course, students will understand (a) the concept of global health security; (b) HIV/AIDS as an epidemiological phenomenon; (c) the political, economic and social contexts of HIV/AIDS in specific regions of the world; (d) HIV/AIDS as a threat to security and gender; (e) security considerations of HIV/AIDS impacts in development and as a human right.

INTS 4369 Political Economy of Global Poverty & Inequality (4 Credits)

The main purpose of this course is to understand the underlying causes of inequality and poverty in the world. In order to do this, we look at the relationship between economic growth, poverty, and inequalities in several different dimensions. First, the process of sustainable growth itself is analyzed. Second, the implications of different types of growth for income distribution and poverty are studied. Finally, the implications of such inequalities for human welfare in developing economies in particular are studied. After an initial exploration of the income-based measures of poverty and inequalities we focus on the more recently developed social capabilities approach developed by Amartya Sen and others.

INTS 4370 The Global Economy: Conflict, Crisis and Cooperation (4 Credits)

An introductory course on the nature of global economic integration in the postwar period, including contending theoretic perspectives, and several applied issues and policy dilemmas such as the evolving nature of firms (e.g. globalization of production), the "new international of labor," and the status of national sovereignty/policy autonomy in an integrated world economy, politics and markets, and current themes in political economy.

INTS 4372 Great Books in Political Economy (4 Credits)

This course investigates several contemporary approaches to Political Economy, ranging from institutionalist to Marxist, anti-essentialist, and (postmodernist) feminist thought. Rather than attempt to survey quickly a lot of literature, we carefully read a limited number of influential (and provocative) texts that present a range of perspectives with which most students are largely unfamiliar. These are very challenging texts, and students must be prepared to spend a good bit of time on the assigned readings weekly.

INTS 4379 Gender and Development (4 Credits)

This course is concerned with how and why gender matters in outcomes and impacts of planned and unplanned development. It is also concerned with gender as a human rights issue and the equity and ethical dimensions of development planning. Beyond these practical implications, the course engages theoretical and ideological underpinnings for the gendered structures of economic, political, and social power encountered in a wide range of economic and social development contexts. Throughout the quarter, the class examines interactions among structural and cultural (including ideational) factors that together comprise and construct gendered environments. Structural and cultural factors are, at the least, mutually reinforcing, and may be mutually constitutive. The class interrogates the ways in which each set of economic and social transformations broadly encompassed within a human-rights or human-development approach to international development. The class also engages interacting dimensions of change, including economic, social, political, physical environmental, and human biological dimensions. The class explicitly examines all interactions across scales from global to local. If we were looking for a label for this approach, it could be called "gendered political ecology." We could also use a term coined by Dianne Rocheleau and others, "feminist political ecology," which suggests the need to examine the responsibilities, freedoms, and control of resources, together with the varying forms of agency, strategy, and tactic deployed by women (often in partnership with men) to redress these inequalities. The class considers numerous cases from the Global South, and some from the Global North. These case studies immerse us in the diversity and complexity of gender and development interactions and in the "grounded agency" (Radcliffe 2006) through which women and men attempt to secure livelihoods – that is, "making a living and making living meaningful" (Bebbington 2000) – to enjoy long and healthy lives, and to participate in full citizenship. These cases also illustrate myriad patterns of gender construction across ethnicity, class, age, marital status, and other differences among women and men. This is a policy-oriented course. The class explores the ways in which the gendered division of labor and resources, and the socio-cultural construction of masculinities and femininities, influence perceptions, formulation, and implementation of development policies and practices. The class traces the differential impacts of development policies and initiatives on women, men, and gender relations in the developing world as well as efforts to target women through more gender-sensitive development initiatives. Ultimately, this course considers how ideologies and institutions of global development might yet enable women's empowerment and facilitate equity in a deeply unequal and interconnected world.

INTS 4384 Middle East and U.S. Security (4 Credits)

The course will examine current US strategies toward the Middle East, terrorism, and how Homeland Security in US will respond.

INTS 4391 Financial Management and Fundraising of Non-Profits (4 Credits)

This course will introduce students to the legal, governance and financial structures that enable non-profit organizations to function effectively. It will also provide a practical orientation to financial management issues, such as budgeting, financial reporting, and independent audits. Finally, a comprehensive presentation will be given of the fundraising methods needed to sustain the viability of non-profit organizations. These methods include: annual campaigns, direct mail, special events, major gifts, corporate fundraising, foundation grants, and planned giving. The course combines exploration of the general conceptual issues with an emphasis on practical "how-to's" and skill building.

INTS 4394 Non-Profit Management Issues & Techniques (4 Credits)

Nonprofit management issues and techniques looks at current NGOs and issues in working with corporations.

INTS 4397 The Environment, The Economy, and Human Well-Being (4 Credits)

In this course we will explore the role of the environment plays in society and the determination of human well-being, and how this can be addressed from an economic perspective. A core premise of the course is that the human economy is embedded within the broader context of human society, which in turn is embedded within a natural environment. The natural environment provides a variety of goods and services, which, through interactions between the environment, individuals, and society, contribute to human well-being. Some of these services are directly used by people. Others contribute indirectly by allowing for the continued provision of other services. As such, any discussion of human well-being and development that ignores the natural environment is inherently problematic. We will specifically adopt an economic perspective, but one that goes well beyond that of conventional neoclassical economics.

INTS 4399 Issues in Global Economics and Financial Security (4 Credits)

This course is for Korbel in DC participants only. The course discusses global economic and financial security issues through the prism of the current crisis and its aftermath. We begin by developing the analytical framework and then applying it to key countries/regions. We consider the causes, the policy responses and prospects. We look at ways of ensuring global monetary and financial stability, including appropriate policies to ward off financial crises and asset prices bubbles. Other key topics, including food and energy security and the role of finance in promoting development, are also discussed as time permits. The focus is on applied economics and finance, and their importance as analytical tools in policy discussions on economic security and development. This course is less narrowly technical, more policy and political economy oriented, but nonetheless appropriate for students concentrating in global markets, development, finance and trade. These are a few guest speakers on special topics, in addition to answering questions about career choices and professional development.

INTS 4404 Cities, Security, and Health (4 Credits)

This course will present a framework to analyze the impact of urbanization on human development and security in a comparative context of major urban centers in the developed and developing world. It will provide a practicum for utilizing cross-disciplinary methods and perspectives to address specific challenges to urban and human development. We will examine urbanization through a framework of human development, environmental health and security, and explore how public policy and planning can create short- and long-term impacts on multiple outcomes.

INTS 4423 Introduction to Epidemiology (4 Credits)

Decisions and policy related to global health are based on data from various disciplines such as demography, medicine, and epidemiology. Therefore, it is crucial to correctly understand and interpret what health data and the data in general tell us. This course provides the knowledge and skills required to critically assess data, and understand both strengths and limitations of data and research. This course covers the basic principles and concepts of descriptive and analytical methods in epidemiology and their application to research and practice in public and global health.

INTS 4427 The Political Economy of Sustainable Development in Africa (4 Credits)

This course introduces the political economy of sustainable Development in sub-Saharan Africa (SSA). It uses a multidisciplinary approach that draws on literature from development economics, international relations, comparative politics, sociology, and history, as well as a broad range of country case studies. We engage with the main theoretical and empirical debates on sustainable economic and human development in SSA and examine a diverse range of country case studies. The topics covered include past and current political and economic conditions for economic growth and the improvement of human welfare levels, sustainable agricultural development and governance of natural resources, increased resilience - socially and economically - to rapid environmental change, and the role of foreign aid in African development. We explore the region's integration into the global political economy and examine the role of the state in Africa's development today. The course helps students to understand the major development challenges facing African societies today by illuminating patterns as well as diversity in development trajectories across the region.

INTS 4435 Health and Development (4 Credits)

Looks at how health status of populations affects culture and environment, and also how successful development affects health.

INTS 4437 American Public Opinion & Foreign Policy (4 Credits)

This course examines American public opinion and its impact of foreign policy. The course begins with an investigation of what is public opinion in general and how it is collected, analyzed and used. The primary sources of American public opinion data and analyses are identified. The course proceeds to outline the controversies of American public opinion related to foreign policy decision-making using historical perspectives and the most recent challenges from the first Iraq War to the Arab Spring. Although foreign policy is often a secondary issue for the public compared to domestic issues, in recent times it has been mostly responsible for the transition from a Republican-dominated era to the Democrats' ascendance. A series of principles that have informed practitioners and foreign policy experts concerning American opinion related to foreign policy is examined and affirmed or debunked. Also, media and its persuasive power in opinion formation are considered. At the conclusion of the course, students should be familiar with a selection of foreign policy challenges that America has confronted in the modern era, the role of public opinion in the national decision-making and the existence of guiding principles of public opinion and their exceptions.

INTS 4438 International Public Opinion and Foreign Policy (4 Credits)

This course examines international public opinion and introduces the major international opinion trends that impact foreign affairs. The course first reviews international public opinion worldwide, then by major regions and finally a selection of leading countries. The theoretical question is how public opinion influences foreign policy in countries around the world, and if and when it does, under what conditions. Also, how international opinion affects American foreign policy, including the views of foreign publics toward America and its policies, is also examined. The course begins with an investigation of the history of collection and diffusion of international survey research, the quality of the data and the techniques used to collect it. The relationship of public opinion research and democratic government and media freedom is examined. The second part of the course outlines some of the public opinion benchmarks, their variations and similarities among countries and regions, and their change over time. A variety of the best sources of opinion data are used. Benchmarks include: level of satisfaction with the direction of own nation; satisfaction with and preferences for form of government; satisfaction with and preferences for economic system, the role of government intervention and entrepreneurial values; nationalism and approach to neighbors; attitudes toward Americans, American leadership and foreign policy; and impact of cell phones and Internet on opinion formation and collection. The course's orientation is both from an American foreign policy perspective and from the perspective of key international organizations, such as the UN, OAS, EU, etc. At the conclusion of the course, students should be familiar with the history and sources of international public opinion research, the major similarities and differences in international and regional public opinion, and the impact that it has on both American and international, multinational organization foreign policy decision-making. When available, there are guest speakers concerning the impact of public opinion on foreign policy decision makers.

INTS 4447 Making of Chinese Foreign Policy (4 Credits)

This seminar course examines and analyzes the making of foreign policy in China, a rising power in the 21st-Century. We look at and identify major driving forces behind China's foreign policy-making, including ideational sources (historical legacy, strategic culture, communism, and nationalism), domestic and institutional sources (foreign policy making institutions, elite politics and key players), and international sources (international system and regimes). We also examine China's strategic relations with major powers and its Asian-Pacific neighbors. This course is aimed to equip students with sophisticated understanding of the ongoing debate about the role that a rising China has played and will play in world affairs.

INTS 4450 Democracy and Militarism in Latin America (4 Credits)

Many note that even as democratization has taken place throughout Latin America, there has been a persistent and evolving role for the military, police and private security forces in many cases. The purpose of the class is to explore this apparent contradiction by examining the various internal and external pressures that have come to bear on these societies. Through approaches derived from comparative politics and international political economy we study domestic factors such as interest groups, political parties, social movements and governing institutions on one hand, and the role of international relations and organizations on the other. From this standpoint, the state becomes a mediator of internal and external pressures and is shaped by these pressures in turn. In the first half of the class, we specifically apply institutions, political realist, class analytic and market globalization perspectives to the study of the military. In the second half, we look at the interplay between democratic development and security issues in a changing global environment. This includes a study of the nature of democratization in Latin America, so heavily applauded by scholars, politicians and others, the impact of the truth and reconciliation process that emerged after the bureaucratic-authoritarian era, and the role of civil society and international organizations. In the final part of the class, we turn to the issue of citizen security amid high levels of crime, gang activity, and drug trafficking with a focus on Central America.

INTS 4453 Political Economy of Latin America (4 Credits)

In any part of the world, the earth and its resources constitute the fundamental framework of economic development. The study of development in Latin America offers an opportunity to study the interplay between the forces of economic development and efforts to restore and maintain ecological balance. In the first part of the class, we consider the legacies of colonial rule and foreign intervention including uneven patterns of land ownership, political and social divisions, tension between democratic and authoritarian forms of governance, and a central role for social movements in the struggle for economic justice. We also discuss the current era of export-led development, which has prompted a surge in mining, lumbering, and other forms of extraction, along with environmentally disruptive commercial projects. While increasing economic growth and facilitating some of the largest fortunes in the world, this development model is currently devastating the environment, human health, and the prospects for community survival in many places. On the other hand, communities, indigenous groups, and civil society organizations are challenging this model by advancing an alternative that stresses ecological balance.

INTS 4459 Global Business, Governance & Corporate Social Responsibility (4 Credits)

In an increasingly globalized world, civil society, states and businesses are trying to discern how to govern business conduct across the borders of nation-states. Many of the issues our society faces today—global financial crises, environmental degradation, and corruption, to name a few—are impossible to tackle within a given country. This course will dive into contemporary global governance mechanisms to better understand the opportunities and challenges that states, business, and civil society face when in engaging with issues such as global financial crises, labor standards, respect for human rights and the environment.

INTS 4460 Politics of China's Modernization (4 Credits)

After more than a century of decline and stagnation, China is reemerging as a great power in the twenty-first century. China's rise to the glorious has never been easy and still faces many changes in the year ahead. This course is designed to provide students with a comprehensive understanding of China's rise in the context of its political development. We examine how revolution, nationalism, communism and liberalism have all affected the development of modern China with a focus on the political dynamics of the People's Republic of China (PRC) and the politics of post-Mao economic and political reform. We start by analyzing the rise of the Chinese Communist Party and its state and nation building efforts in the early years of the PRC and move on to examine the Mao's failed socialist transformation and political campaigns (the Hundred Flow Campaign, Great Leap Forward, and the Cultural Revolution). The remainder of the course explores political dynamics of post-Mao economic and political reforms and the prospect for a democratic China. This course aims at equipping students with an analytical perspective for understanding contemporary Chinese politics.

INTS 4468 Politics of Development (4 Credits)

Course explores political factors and parties which affect developing nations and hinder new development.

INTS 4478 Donald Trump, Democratic Decline and Authoritarian Populism (4 Credits)

To affirm that on a global level, liberal democracy is declining and authoritarian populism is ascendant, is to state the obvious. This confirms a trend that Larry Diamond predicted ten years ago about a "democratic recession" that shows no sign of abating. What is most intriguing and in need of explanation is the decline of democracy and the rise of authoritarianism in liberal societies of the West, where democracy has long been established and consolidated. According to the 2018 Democracy Index (published by the Economist Intelligence Unit), the United States in the era of Donald Trump, is better described as a "flawed democracy" rather than a "full democracy." Similar trends are discernible in Europe, Latin America and Asia. How can we explain this development? What social conditions have produced this outcome and what are the implications for world order and the study of international affairs? Can the slide toward authoritarian populism be reversed? We will examine these questions theoretically, historically and comparatively.

INTS 4483 Global Health in Practice (4 Credits)

The purpose of the course is to prepare Global Health Practitioners for realistic situations utilizing practical tools and exercises forged from decades of hands-on experience. Heavy emphasis is placed on program design based on context, authentic dilemmas in implementation, critical components of leadership, and best practices of field operations management. No prior field experience is necessary to attend or to complete this course. The student will acquire practical knowledge about the following areas of health program design and management in the field: research and preparation, creation and implementation, along with team management and operational leadership. Students will develop detailed field perspectives, analyze the implications of their programs, and ultimately assemble their own personal toolkits to build for success. The intent is to develop a solid understanding of and to practice the usage of tools and skills for Global Health Practitioners to thrive in international and domestic programs.

INTS 4484 Agriculture and Sustainable Development (4 Credits)

This course provides an overview of world agriculture and an introduction to agricultural populations, politics, policy paradigms, and institutions. It contains modules in: the history of agricultural production for economic growth and food security; global distributions of (1) agricultural production regimes, (2) land (including historical and contemporary "land grabs") and other productive factors, and (3) uses of agricultural products for food, fuel, feed, fiber, and agro-based construction materials; effects of agricultural trade on economic growth, livelihoods, and food security; relationship between humanitarian food aid and agricultural production and food security; social organization of agriculture and related productivity and human development issues, with special attention to gender; environmental constraints to agricultural sustainability and agricultural constants to environmental sustainability (climate change, water demands and conservation, agricultural energy production and consumption, causes of soil loss and degradation); technological change and innovation in agriculture; and culture and agriculture.

INTS 4485 International Trade and Economic Negotiations (4 Credits)

This course is for Korbel in DC participants only. The purpose of the course is to explore the challenges confronting international trade and economic policy, as well as current negotiations designed to address these circumstances.

INTS 4492 Health and Humanitarian Aid (4 Credits)

According to the World Health Organization, "Health is a state of complete physical, mental, and social well-being and not merely the absence of disease or infirmity." In order to address health in humanitarian settings we must therefore respond to a range of needs and consider the diversity within affected populations. In this course, students will have the opportunity to explore some key sectors of humanitarian aid and how they relate to health. By following a specific ongoing crisis throughout the quarter, each student will have the opportunity to gain a better understanding of the particular challenges inherent in humanitarian assistance and to analyze how the "theory" is actually implemented in practice. Whether the student's future is in the field or at headquarters, internationally or at home, he or she will likely need to quickly and critically review and summarize available information in order to inform decision-making, and students will have ample opportunity to develop this skill during the quarter.

INTS 4493 Humanitarian Aid in Complex Emergencies (5 Credits)

This course will focus on the evolution of humanitarian actions, in the context of the international system, since World War II. Complex humanitarian emergencies will be the focus. Themes will include: disasters, conflicts and humanitarian action; the political economy of conflicts and humanitarian aid; civil-military cooperation; and the impacts of humanitarian intervention on the delivery of aid. Vulnerability analysis, capacity analysis, and risk analysis will be key tools. The structure and function of EWS (early warning systems), especially in the context of famine, also will be key.

INTS 4496 Field Operations for Humanitarian Assistance (4 Credits)

Within a disaster response, various interrelating factors determine the ability of the humanitarian community to adequately respond. From coordination among governments, donors, non-governmental organizations (NGOs) to internal working components within an agency that drive programmatic support, the realm of humanitarian operations is a complex system that should be understood by anyone with an interest in supporting relief efforts. The main focus of this course is concentrating on the practical, specific systems that drive field operations - namely security, logistics, finance, monitoring and evaluation, human resources, administration, and advocacy that support program planning and implementation. Through understanding these components, the challenges that are encountered, and how each interrelates within an organization and the wider response community students gain a balanced understanding of humanitarian operations. While each emergency response comes with varying contextual challenges, the humanitarian imperative mandates the relief community to respond in a neutral manner based on need. Doing so, places strains on the operational systems that need to be overcome to provide quality interventions. Through this course we take an in depth look at both theoretical and practical ideals for humanitarian assistance.

INTS 4497 International Campaign Management (4 Credits)

This course will examine the principles of political campaign management and their application in a number of international political, public affairs and human rights campaigns. It will be an introduction to the tools of political campaign management: message development, survey research, audience targeting, paid and earned communications, fundraising and organizational structure. Case studies of campaigns in countries such as Sweden, the UK, and Australia will be used as examples of these techniques. Class will be comprised of lectures, discussion and some simulation exercises. Efforts will be made to bring outside specialists and experts to the class or by teleconference. Readings may include contemporary journals, periodicals, newspaper reports and excerpts from major studies of campaign and organizational management.

INTS 4499 Evolving Global Security Landscape (4 Credits)

This course is for Korbel in DC participants only. Change brings with it challenges—at the individual, organizational, and systemic levels. It involves behaviors and cultures with often deep-seated traditions. This course will explore the scope and magnitude of the transformational forces at work in the U.S. and to a lesser extent the global security and defense establishments. By its nature the course will be about peace and war—how the nation goes about the business of preparing, equipping, and training itself to deter and if necessary to fight traditional wars and the new kinds of challenges that might lead to armed conflict as well as shaping the post war environment for an enduring peace—but do NOT think about this as a linear process. It will also be about sociology, bureaucratic politics, the role of the media, economics, health care, power.... Most of all this semester it will be about the transformational nature and effects of ROBOTICS, AUTONOMOUS SYSTEMS, and ARTIFICIAL INTELLIGENCE (RAS/AI) on security and the budget pressures on the national security/ defense budgets—and where to consider taking acceptable risks—geographically and functionally and force posture wise (for example, do we need a \$1 Trillion nuclear modernization program; or 2400+ F-35s; or 12 carrier battle groups?). THIS AGENDA NOW IS BEING SHAPED GOVERNMENT and the PRIVATE SECTOR—COMMONLY KNOWN AS THE 3rd OFFSET. (The roots of this can be found in Secretary Hagel's 214 Innovation Initiative. <http://www.defense.gov/News/Article/Article/603658>).

INTS 4500 Social Science Methods (4 Credits)

Prerequisites: The course presumes a basic competence in statistics, social science, international relations, and comparative politics. This is an advanced, fast-paced course that seeks to provide students with a sensitivity to research design choices, both for designing their own projects and as critical consumers of the works of other scholars. The course is primarily intended for Ph.D. students at the pre-dissertation prospectus stage as well as for advanced MA candidates pursuing thesis projects. The course content covers diverse methodological approaches from the discipline of Political Science as well as methods from other fields. The course will cover topics including: research questions and 'puzzles' in political and social science; causality and causal inference; theory construction; measurement; the comparative method; case selection; and quantitative and qualitative methods. Students should enter the course with several research interests in mind since the final project for the course entails producing a research design that could serve as the basis for a future prospectus. The class sessions will include a formal introduction to different methods, a discussion of readings, and work-shopping of student work. We will also informally discuss tips and tradeoffs in the academic profession and for publishing. The class meetings will rely heavily on student participation and peer critique. At the end of the course, students should be able to identify the strengths and weaknesses of different research designs.

INTS 4501 Comparative Politics in the 21st Century (4 Credits)

INTS 4501, Comparative Politics: States and Societies in the 21st Century, is a core course in the graduate program curriculum of the Josef Korbel School of International Studies. The course explores theoretical perspectives and policy-relevant knowledge in comparative politics, a sub-field of contemporary political science that considers the ways in which states and societies govern themselves or "allocate value" in countries around the world. Governance is arguably the pivotal variable in the realization of contemporary global development and human security objectives. The principal question the course addresses is: What is "governance," and how does it serve to work for, or against, peace and development in countries around the world?

INTS 4502 Comparative Revolutions (4 Credits)

An intermediate course focused around the major revolutions that occurred in England, France, 19th century Europe, and in Russia and China during the 20th century. Emphasis is placed on historical facts, key theoretical debates generated during the various social upheavals, and diverse interpretations seeking to understand the nature and causes of revolutions and their impact on societies. Prerequisites: INTS 4702.

INTS 4516 Major Diseases in Global Health (From Pathophysiology to Action) (4 Credits)

As future global health practitioners and policy makers, it is imperative that we each have a complete and solid understanding of the mechanisms, physiology, epidemiology, transmission patterns, and clinical impact of the major diseases affecting global health. How and when does a person transition from simple HIV infection to full-blown AIDS? Why is dracunculiasis so readily amenable to eradication whereas filariasis is not? For what populations is co-infection with HIV and TB or HIV and malaria so critical and why? On the individual patient level, how and why do certain diseases manifest so differently in resource-poor versus resource-rich or urban versus rural settings? Who are the vulnerable populations and how does disease impact them physiologically? When and where would specific program interventions work over other programs and for whom? In this course, the students develop an understanding of the etiology, agents, vectors, burden, methods of detection, basic treatment complexities, and life cycles of major diseases impacting the world. Specifically, this course details HIV/AIDS, TB, malaria, maternal/reproductive health, some protozoa, helminthes, and major parasites, chronic disease such as cancers and diabetes, and violence/trauma. As there is no shortage of amazing and interesting diseases globally, students learn a sound method of inquiry with which to address and disease process. Students also apply this method directly toward program analysis, and in the development of teaching sessions for community health workers.

INTS 4517 Politics of Deeply Divided Societies (4 Credits)

This course focuses on the politics, conflicts, and conflict transformation approaches to deeply-divided societies. While ethnic, religious, and other types of communal conflict have been around for millennia, since the decline of colonization, and especially since the end of the Cold War, such struggles seemed to have exploded onto the world scene. This course focuses on these "contemporary" ethnic, religious, racial, and other communal conflicts to better understand why and how such conflicts develop. We then examine both theory and practice on what can be done to ameliorate or remedy them. Units focus on the nature of identity and identity politics; the use of political violence to pursue identity or nationalistic goals, and nonviolent approaches to identity conflicts. We then look at alternative political and conflict-transformational approaches to such conflicts including frameworks for living together (such as consociationalism, federalism, and power-sharing, and scenarios for separation (partition or succession). We also look at the negotiation, mediation, and other peace processes that have been utilized to try to accomplish such ends, and examine which have worked better than others and (to the extent possible) why. Readings will include both case study and theoretical material. Students are required to make several short class presentations, participate actively in discussions and exercises, and prepare and present a term paper analyzing one currently destructive deeply-divided society, analyzing the cause of the current unrest, and possible remedies to that situation.

INTS 4521 Cultures of Development (4 Credits)

Explores cultural dimensions of economic and social change from perspectives of actors who create, promote, negotiate, and resist different agendas from global to local.

INTS 4522 Philosophy of Social Science (4 Credits)

What is the nature of social science and the knowledge that it produces? This course, which is intended to complement INTS 4500 Social Science Methodology and INTS 4010 Epistemology, it introduces students to the leading mainstream perspectives on the philosophy of social science. Special attention is given to Positivism and Post-Positivism, Post-Structuralism, Pragmatism, and Scientific Realism.

INTS 4525 Religion-State Relations in Comparative Perspectives (4 Credits)

This seminar course provides an introduction to the key readings, concepts and debates on religion-state relations. While the focus is on the Western political tradition we explore the case of India and the Islamic world at the end of the course. Themes such as freedom of belief, the role of religion in the public sphere and debates over the political construction, location and meaning of secularism are examined.

INTS 4526 Modern Islamic Political Thought (4 Credits)

This seminar course explores the key writings of Muslim thinkers who have shaped Islamic political thought during the 20th Century. We begin with the writings of Jamal Eddin Al Afghani and his Egyptian disciple Muhammad Abduh. We then proceed to read from the selected writings and speeches of Hassan al-Banna (founder of the Muslim Brotherhood), Sayyid Qutb (radical Egyptian Islamist theoretician), Adul Ala Maududi (Pakistani Islamic thinker and founder of Jamaat-i Islami) and Ayatollah Ruhollah Khomeini (leader of Iran's 1979 Islamic Revolution). We also investigate some of the writings of Islamic reformist thinkers such as Abdolkarim Soroush, Nasser Hamed Abu Zayd and Khaled Abou El Fadl. The emphasis in this course is on understanding the historical and political context which has shaped Islamic political thought during the 20th Century.

INTS 4534 Topics in Middle East Politics (4 Credits)

This is an advanced topics course centered on major issues in Middle East politics. Students should expect to read one book, as well as relevant scholarly reviews, each week, and should expect regular analytic writing assignments. This class is designed for students who seek a deeper grasp of the Middle East and a more refined understanding of the politics and history of this region. This is not an introductory course on the Middle East, Islam, or the Arab world and previous course work is assumed. Those uncertain about their status should consult with the instructor before enrolling.

INTS 4536 Economics: Fundamental Knowledge, Global Applications (4 Credits)

This course provides an introduction to the methods used to analyze contemporary global economic events by examining the environment in which individual economic agents interact. We analyze what the economic problem is, how consumers and business firms make economic decisions, how markets work and how they fail, and how government public policy decisions affect individual and aggregate behavior in both domestic and international markets. A special feature of the course is the application of economic principles to real world problems.

INTS 4539 Food Security in the United States and the World (4 Credits)

This course discusses: food security in the United States (community food security, food insecurity); stunting and chronic nutritional deficiencies; global water crisis; land degradation; land deals; climate change; dictatorship and kleptocracy; economic approaches (westernized view, food justice, food sovereignty); World Food Summit; achieving food security (the agriculture-hunger-poverty nexus, biotechnology for smallholders in the (sub)tropics); risks to food security (fossil fuel dependence, genetic erosion in agricultural and livestock biodiversity, hybridization, genetic engineering and loss of biodiversity, price setting, treating food the same as other internationally traded commodities); access to basic food supplies; infant feeding; determining nutritional status; supplementary feeding; therapeutic feeding; malnutrition, nutrient requirements and sources.

INTS 4549 Managing Microfinance: Balancing Business with Development (4 Credits)

This course builds on the topics in "Introduction to Microfinance" and delves more deeply into the challenges of managing microfinance institutions (MFIs) and effective social entrepreneurship. How do MFIs make sure they stay in business (with good risk management and financial management) and make sure they have real social impact? How can they innovate financial services and other market-based solutions that create lasting economic opportunity or social change? Whether a market-oriented NGO or a socially-motivated business, an MFI needs a clear development strategy, a clear business strategy, and the operational tools to implement both strategies well. Regardless of legal structure, both NGO and for-profit MFIs need good management and financial information to meet both sustainability and social goals. Whether used for poverty alleviation and or banking services for the poor, there are shared characteristics among successful microfinance organizations, as well as common pitfalls and challenges. As organizations figure out the "business" side of providing loans and savings, they also need to figure out which development services have greatest benefit for clients, choose strategies for social change (e.g. basic education, health care, business skills), and assess how well those strategies are working. For example, large-scale MFIs in India and Latin America have been very successful financially, but have only recently focused on their social impact. Smaller NGOs may serve the poorest and provide many development services, yet struggle to find a viable business strategy and sustainability. MFIs share challenges faced by many development organizations: (1) How do we balance our financial and impact goals; (2) How do we choose where to invest resources for greatest impact (e.g. financial services for many or in-depth assistance for fewer?); (3) What information do we need to ensure financial transparency and accountability; (4) How do we assess social and financial performance to keep improving our business strategies? This class will use weekly readings and case studies of specific microfinance organizations to: Illustrate business challenges and specific business risks in microfinance; Review basic financial statements and key financial measures to assess financial performance and risk, for both for-profit and non-profits; Review different approaches to answering the question "are we making a difference?"; Analyze management situations of "too much profit" and "too much development"; Compare pros and cons of for-profit and NGO legal structures, and implications; Discuss governance and boards of directors, compare and evaluate approaches; Highlight examples of social entrepreneurship powering market-driven change in microfinance and other areas (mobile banking, small-scale solar electricity, etc). Cases include Adelante Foundation, BRAC, Fonkoze, Kenya Women's Finance Trust, ACCION's Center for Financial Inclusion, and others. The first half of each class focuses on a real MFI case study to highlight the issues and understand the topic; the second half on the financial implications of these risks, the financial principles involved, and how well the tools work. Students gain a better understanding of financial statements, MFI operations (with case studies from around the globe), and credit risk, as well as key principles of financial management and good governance.

INTS 4555 Professional Communications (4 Credits)

This course is designed to help graduate students improve their ability to communicate professionally to a variety of national and international/ intercultural audiences for a variety of purposes, and to manage through communications. While INTS 4557, Cross-Cultural Communications, focused heavily on immersive experiences in verbal and non-verbal communication in professional, cross-cultural scenarios, this course will use professional writing in cross-cultural contexts as its starting point. Students will learn the tools they need to adapt their writing in varied professional, cross-cultural contexts and to translate it into effective verbal presentations in these settings. In particular, students will develop an awareness of professional language, written conventions, and multimodal communication, including verbal, written, and digital/visual modes. Students will learn skills in rhetorical analysis, which will enable them to adapt to multifaceted professional writing scenarios in the future. They will apply these skills in the context of case studies and other examples that will address challenges professionals must problem-solve using written communication. All students will complete a professional writing portfolio by the end of the quarter with the goal of being more prepared for the job search.

INTS 4557 Cross-Cultural Communications (4 Credits)

This course is designed to prepare graduate students for careers as international professionals by focusing on the cultural factors that influence communication in international relations as well as the rules that proscribe and prescribe behavior. The course emphasizes culture and will explore how different cultures: perceive and interpret their surroundings, and create and communicate a shared, cultural construct of reality and identity; develop unique communication rules; and evolve culture-specific verbal and non-verbal communication behaviors. Students will immerse themselves in a particular culture (its history, values, world views and associated thought processes, religion, gender and social perception, language, and nonverbal communication) and research its communication conventions, practices, standards, core metaphors, terms, cultural premises, and meaning systems. Students are expected to demonstrate a critical and informed awareness of cultural content and identity, as well as the communication imperatives and procedural issues in their country through class presentations, discussions, and a long paper. The course rationale is that cross-cultural communication is inevitable, and without an understanding of the cultural communication imperatives, it is very difficult, virtually impossible to understand, work with, manage, or influence individuals from another culture. The course will involve theory and proven models, but will primarily focus on cultural immersion, skills development, practical applications, and case studies—exploring how culture both influences and reflects communication dynamics, how to communicate effectively in a multicultural environment, and how to manage and resolve cross-cultural conflicts.

INTS 4569 Migration (4 Credits)

Migration is a fundamental feature of our lives. Indeed, every aspect of our civilization and our self-conception is shaped by the exodus of all humans from our origin as a species in Southern Africa 200,000 years ago. In our own era, the aging of western populations, the rise of new economic powers, and dramatic improvements in human capital have given rise to an era of labor migration unparalleled in magnitude and diversity, though not entirely unique. New technologies have risen to facilitate further migration, enable the transmission of resources and knowledge across borders, and create new transnational patterns of residence and livelihood that challenge our notions of nation, identity, and even the very meaning of the term migrant. To put it simply, migration is the human face of our modern era of globalization, entailing incredible costs, risks, and returns for migrants along with important impacts for host societies, and the global system. Migration comes in many varieties in terms of destruction, permanence, and level of coercion, yet common theoretical, empirical, and policy unite these different forms of mobility. This course offers a holistic view of the migration process from multiple perspectives, at multiple levels of analysis, and on multiple aspects of our world today. As a uniquely individual behavior, migration has proven over time to be notoriously unfriendly to policy, which is often ineffectual or even counterproductive. We explore this cross-cutting concern through case studies illustrating the promise and pitfalls of migration policy.

INTS 4575 Systems Thinking for Social Scientists (4 Credits)

The purpose of this course is to introduce students to systems thinking as an approach for understanding and analyzing real-world issues. In addition to introducing the basic principles of systems thinking, questions that will be addressed include: Why do systems behave the way they do? Why do systems resist change and often end up getting worse when we try to change them? How do you find points of leverage within a system? This course uses examples drawn from a range of issues across the field of international studies. In doing so, it illustrates how a systems perspective can allow you to see parallels between seemingly disparate issues. This course introduces both qualitative and quantitative approaches for analyzing systems and discusses the benefits and limitations of each. Quantitative, computer-based modeling is used in this course, but no background is required.

INTS 4579 International Futures (4 Credits)

Futures forecasting involved decisions about priorities. Decisions require forecasting the trajectory of a society with and without interventions of various kinds. This course involved students in the forecasting and analysis process. In the lab, students learn to use the International Futures (IFs) forecasting system. That system represents multiple issue areas (demographics, economics, energy, agriculture, education, health, socio-political, and environment subsystems) and is supported by a very large database. Students study the structure of each of these modules, learn how they represent the underlying subsystems, how they are linked to other subsystems, and what they tell us about the processes of change globally and in countries and regions around the world. Students use the system for forecasts and analyses of their own.

INTS 4581 Introduction to Humanitarian Systems (4 Credits)

The Humanitarian field has changed significantly since the founding, in 1863, of what is now the International Committee of the Red Cross. Since the early 1990s there have been efforts to improve coordination between humanitarian actors and to improve the quality of international humanitarian response. High profile humanitarian crises such as the Rwandan genocide, the 2004 Indian Ocean Tsunami, the Haitian earthquake, and the conflict in Syria have highlighted weaknesses in the system and spurred reform efforts. Through readings, class discussions, guest speakers, group work and individual assignments, students gain a better understanding of the development of humanitarian systems and policies and how these affect current humanitarian practice. Key debates in the humanitarian system are also discussed and students have the opportunity to grapple with some of the key ethical dilemmas facing humanitarians today. At the completion of the course, students should be able to: Discuss the history of humanitarianism; Recall key components of the humanitarian infrastructure; Describe the humanitarian principles, their interpretation and application; Identify ethical issues which may arise for humanitarians; and discuss the implications for humanitarian practice of key emerging challenges.

INTS 4583 International Protection in the Humanitarian Context (4 Credits)

At the conclusion of World War II after witnessing the horrific and historic loss of life, and in an effort to save future generations from the direct impact of war and conflict, the Western powers created several important legal instruments to protect civilians. These instruments are largely derived from human rights, refugee, and international humanitarian law. These initial legal instruments were later combined with additional instruments, both regional and international in scope, and are collectively and cumulatively considered the legal framework for "International Protections." After sixty years of the progressive legal and theoretical development of international protection and its practical implementation, a slow but evident shift has developed over time. Theoretically speaking, a shift from the end of the Cold War's position of absolute sovereignty to the ideals of the 1990s and the "responsibility to protect" which developed in direct response to the failed efforts of the international community to protect in Bosnia, Rwanda and other conflicts. As a result of the changing nature of conflicts, confusing mandates, ambiguous definitions, and political will, we have witnessed the failure of international protection in numerous humanitarian settings.

INTS 4591 Advcd Fundraising Workshop (4 Credits)

This course compliments INTS 4391, in which an overview of non-profit fundraising - along with financial management - is given. In this course, we take an in-depth look at the major methods of non-profit fundraising, namely, annual giving, special events, corporate fundraising, grant writing, major gifts, and planned giving. The teaching methodology to be employed is that each 3 hour class session is, in effect, an intense workshop on a specific fundraising topic. During each class session, a fundraising professional from the community, who is actively engaged in the particular fundraising activity being discussed, joins the professor in leading the workshop. Due to the advanced nature of this course, enrollment is limited to those who have already been introduced to the major methods of fundraising through the previous completion of INTS 4391, the concurrent enrollment of INTS 4391, or previous fundraising experience or educational pursuit in the fundraising field that is judged by the professor to be sufficient to be an active participant in this course.

INTS 4595 Civil Wars and International Responses: Evaluating Post-War Peacebuilding (4 Credits)

Today, civil wars constitute the principle, realized threat to international security (measured in lives lost). This seminar critically explores the problems to international peace and security posed by contemporary civil wars and the efforts of international - primarily, United Nations - "peace building" missions to implement negotiated settlements aimed at substantially ending such wars and preventing their recurrence. The concept of peace building seeks to capture the complex, multidimensional task of implementing the terms of settlements to end war preventing the recurrence of war, and addressing the deep-seated causes of social conflict and deep divisions that gave rise to protracted armed conflict in the first place. Furthermore, the notion of peace building have been augmented by the concept of state building, which implies that the principle strategic objective of external efforts is to help develop and create legitimate, capable states that are able to realize the provision of security and human development and to manage future social conflict through nonviolent bargaining processes and institutions. The scope of the course includes the analysis of theories, concepts and empirical research in the analysis of post-war international interventions in civil wars and in-depth, student led evaluation of specific cases. Prerequisite: INTS 4495.

INTS 4599 Ethics and International Affairs (4 Credits)

This course examines the following: social "science" and ethics, power-rivalry and capitalism versus human rights and democracy, what are the dimensions of poverty, what role does the World Bank play, "laws of people," two classes of human rights (according to Rawls), national interest, and tolerance.

INTS 4620 Introduction to Middle East and Islamic Politics (4 Credits)

According to 2017 Global Peace Index, the Middle East and North Africa are the least peaceful parts of the world. The instability from this region has gone global and is now destabilizing large parts of the entire world. Why? Answering this question is the focus of this course. The approach taken will be historical and comparative with an emphasis on the relationship between religion and politics in the Islamic Middle East. The politics of the Middle East today cannot be understood without some examination of the West's relationship with the region and the associated view of the Muslim Orient that grew out of this relationship. In light of this reality, the state system that has emerged in the region since the demise of colonialism will form a framework in which to understand the major themes of this course.

INTS 4622 Global Governance (4 Credits)

This course surveys a range of arguments about how, whether, and/or the conditions under which global or transnational issues are governed. It examines different ways of thinking about governance and the governance process. It unpacks the variety of authorities that govern transnational issues. This course also considers different arguments about how the variety of actors engaged in a particular issue affects to the amount and type of governance possible. The course is intended for both masters and PhD students.

INTS 4624 Private Actors and Conflict (4 Credits)

General approaches to conflict focus on violence between the military forces or states. The conflicts of the last two decades, however, involved a variety of other actors: private military companies training or fighting with armies, relief workers trying to mitigate the impact of conflict on non-combatants, environmental NGOs working to lessen the impact of conflict on endangered species, multinational corporations trying to continue their business dealings, paramilitary and/or other citizen groups trying to defend their private property or other rights, criminal networks working to exploit conflict for personal gain, and terrorist networks. How do these different actors behave in conflict situations? Does their presence alter the way conflict unfolds, strategies of conflict (and conflict resolution), and/or the prospects for long-term security (peace, stability and development)? How? How do we decide whether these actors are public or private? How do today's "private" actors in conflict compare with the past? Is this a new phenomenon or simply a return to what has been typical at numerous points in history? This course explores the questions presented by the variety of actors involved in conflict today, compare today's situation with the past, and examine the way states and non-state actors are coming to terms with each other in conflict situations.

INTS 4625 East African Development and Human Rights (4 Credits)

For our purposes, East Africa encompasses the countries of Sudan, South Sudan, Ethiopia, Eritrea, Djibouti, Somalia, Kenya, Uganda, Rwanda, Burundi, and Tanzania. This course begins with an introduction to the cultural richness and diversity of East African societies, with an overview as to how tribes, chiefdoms, and states function. Religious influences are noted. This history of development, as externally conceptualized, begins with the Berlin Conference of 1884/85 and the so-called "scramble for Africa." It features socio-economic and socio-political processes. 20th- and 21st-Century external development programs are covered, most recently exemplified by the former Soviet Union, the United States, and China. Principles of induced development and participatory development are contrasted. Regarding the latter, indigenous innovations are stressed. The history of human rights, as externally conceptualized, begin much later, with the 1969 refugee-related innovations of the Organization of African Unity (now, the African Union). The "classic" issues of tribalism, corruption, and resource exploitation are covered, as well as the "late-breaking" issues of food security, refugee repatriation, and child soldier rehabilitation. Conceptually and theoretically, the course is grounded in disciplinary understandings derived from cultural anthropology, political science, ecology, and history. Resource use, in the context of socio-cultural systems development, are foundational. Special projects are featured, exemplified by those involving University of Denver personnel in Kibera, Kenya (water and sanitation); Mai Misham, Ethiopia (literacy); and Juba, South Sudan (indigenous leadership). At the broadest level, examples are most often drawn from the water/sanitation, agricultural, and health/mental health sectors.

INTS 4626 Civil Resistance (4 Credits)

Civil resistance is the application of unarmed civilian power using nonviolent tactics such as protests, strikes, boycotts, demonstrations, without using or threatening physical harm against the opponent. This method of struggle occurs worldwide in places as diverse as Russia, Moldova, Serbia, Spain, Egypt, Iran, Maldives, the Niger Delta, the West Bank, Thailand, and Burma, among many others. As a consequence of the growing use of civil resistance, the foreign policy community has become interested in understanding the causes, dynamics, outcomes, and consequences of civil resistance campaigns. This course serves as a primer on the topic of civil resistance, introducing students to the primary texts in the field, as well as the policy implications of empirical research on the topic. This five primary goals of this course are to: (1) present leading theories and concepts for understanding civil resistance; (2) explore international history to evaluate theories of civil resistance; (3) apply these theories to analyze current trends and make predictions about future development; (4) provide students with opportunities to synthesize their knowledge in a major written assignment; and (5) allow students to deepen their knowledge about several historical cases around the globe.

INTS 4630 Civilian Protection in Armed Conflicts (4 Credits)

Studies of armed conflict tend to focus on the production of violence to the neglect of how civilians might instead be protected. In this course, we will study how to limit violence against civilians. We will begin with an overview of theories of violence and legal and ethical frameworks governing the use of force. We will then consider how various actors throughout society, from state actors, to international actors, to illegal arms actors, to NGO's, to civilians and their communities—the would-be victims of violence—can either promote or restrain the use of violence. We will also consider the conditions under which the protection of civilians is most feasible as well as research methods for analyzing populations and their protection strategies. In their final projects, students will analyze the threats of violence faced by a particular population and design appropriate protection strategies and policies to deal with them.

INTS 4632 Qualitative Research Methods (4 Credits)

This course provides training in ethnographic and engaged research methods while giving students the opportunity to apply their skills to the local Denver immigrant community. This class requires a commitment to doing fieldwork outside of the classroom and to organizational partners in the community. Students should expect to spend 3-4 hours a week in the field and 1-2 hours on their field note write-ups. Students will work on the Wage Theft in the Denver Construction Industry project being led by Professor Galemba in collaboration with El Centro Humanitario, a day laborer center in Denver. Or they may choose projects with Casa de Paz and the Colorado Immigrant Rights Coalition. Students will gain experience with participant observation, qualitative interviews, data security protections, qualitative data coding, analysis, reflexivity and positionality in research, and writing. The course culminates in a public presentation to share results with the community. Spanish skills are a plus, but are not required for all students.

INTS 4633 Int'l Project Evaluation (4 Credits)

It can be beneficial for graduate students planning careers in multilateral and bilateral development agencies, non-profit organizations, private-sector companies, and professional services organizations to have an understanding of how to develop a project proposal, implement it, and evaluate its results. These are useful skills for entering or reentering employment with these organizations. The Josef Korbel School of International Studies currently offers a trilogy of courses in international project cycle management—international project design and monitoring, project management, and international project evaluation. The three courses are delivered in sequence during the academic year in conformance with the project cycle, but they can be taken out of sequence without prerequisite or need to take them all. Each course uses monitoring and evaluation methods and means to connect the design, management, and evaluation of a project. Students may have been exposed some of these methods in courses covering quantitative and qualitative techniques and field research methods. Each course also shares in common the development teams and managers of those teams to produce the key deliverables at three key stages of the international project cycle. The purpose of the International Project Evaluation course is to provide students with a better understanding of and practical tools for designing, implementing, and reporting project evaluations. In all cases, a good evaluation design that is well implemented will allow the project manager to identify supportable findings, conclusions, and recommendations. The recommendations from both performance and impact evaluations can be directed to decision makers to support changes necessary to correct project deficiencies or to provide lessons learned for designing subsequent development interventions. Project managers can also use community or stakeholder participation in the process to build evaluation capacity and to gain support for the results. More specifically, students will learn about similar approaches used by four organizations that evaluate project, programs, and policies—the U.S. Government Accountability Office, the World Bank, United Nations Development Program, and United States Agency for International Development (USAID). Each of these organizations has developed templates for evaluation design, use similar methods and techniques to collection and analyze data, and share common elements in the framework of their evaluation reports. Two of these organizations have protocols to contract out evaluations to other groups through the preparation of an evaluation statement of work (SOW) or terms of reference (TOR). In this course, students will have the opportunity to compare evaluation approaches and to apply these approaches in preparing evaluation products. Small student teams will produce an evaluation SOW patterned after USAID guidance and defend their design in a final presentation.

INTS 4635 Civil-Military Relations (4 Credits)

Who guards the guardians?" has been a long-standing dilemma in international politics. How can we make sure that military leaders enjoying the control of coercive power submit to civilian political authorities? How can military organizations be powerful enough to counter external threats without becoming themselves a threat to the political community they should protect? How can hierarchical institutions created to exert physical violence be compelled to respect human rights and democratic values? These questions lie at the heart of civil-military relations theory. Analyzing the different ways in which military organizations, political authorities and the broader society interact is crucial to understand political outcomes such as state-building, democratization and the outbreak of war. This course provides students with a comprehensive understanding of the problems surrounding civil-military relations. Besides looking at the theoretical foundations of the field, it offers a comprehensive overview of civil-military relations over time and across countries. Specifically, it focuses on some topical and yet poorly understood cases and phenomena, such as the impact of the rise of private military and security companies on control over the use of force and the role played by military in Middle Eastern countries such as Turkey, Egypt, Syria, Libya, and Pakistan.

INTS 4642 Environmental Security (4 Credits)

This course surveys the expanding literature on the complex interrelationships between the environment, natural resources, conflict, and human security. Since the dawn of agriculture (~7000 BCE), but rapidly accelerating in the industrial age (1750 CE to present), humanity has conducted an uncontrolled experiment in bending the natural environment to fit human needs and desires. Despite the perceived distance that technology has placed between our physical environments and our daily lives, human interactions with our natural environment are still fundamental. Since the end of the Cold War, much attention has been paid to the role of natural resources and environmental scarcity as a source of conflict, ranging from "water wars" between states sharing a common river basin to communal conflict between pastoralists and farmers in the Sahel. This course will survey the expanding literature on environmental impacts on conflict, as well as conflict impacts on the environment, and the potential for making co-management of valuable natural resources and wildlife a source of cooperation, rather than conflict, between communities and states.

INTS 4644 Human Rights Research Methods (4 Credits)

This course is about how social science research can be used as a tool to understand and promote human rights. The field of human rights is bedeviled by several challenging obstacles to research, including reporting bias, hidden abuses, missing data and politicization of the facts. To deal with these obstacles, we learn about various methodological tools and how they are applied for the analysis of special human rights topics. By the end of the course, students are equipped to compile and present information to highlight patterns of rights abuses and identify patterns of cause and effects.

INTS 4646 European Integration: States in Transition (4 Credits)

Not only have the global financial turmoil threatened by the Eurozone crisis and the negotiations of a trade agreement between the European Union (EU) and the United States made the study of EU integration increasingly important for students of International Relations. As a unique political entity distinct from both states and traditional international organizations, the EU remains an unidentified object, whose development has challenged the traditional paradigms of both international relations and political science. Besides providing an in-depth knowledge of a crucial political and economic actor, the study of the EU integration process, its drivers and its shortcomings will therefore enhance students' understanding of some of the most crucial theoretical debates underlying today's international studies. This course intends to provide students with a comprehensive knowledge of the politics and institutions of the EU, analyzing its development from its origins until the present day and beyond. It will do so by focusing on the following core issues: Firstly, it will briefly analyze the history of the EU, seeking to identify the rivers of the integration process and explain why, after the end of World War II, European countries have set aside their centuries-old antagonism and embedded themselves within an ever close political Union. Secondly, it will examine what the EU is and how it functions, analyzing its key institutions, the architecture of its system of multilevel governance and its policy-making processes. Thirdly, it will investigate some key consequences of European integration, focusing on topical debates such as whether and to what extent the shifting of national decision-making powers at the EU level has created a democratic deficit, what is the impact of EU enlargement on both the Union and the institutions, societies and economies of new member states and what have been the economic and political consequences of the introduction of a single currency. Finally, the course intends to engage students in a debate on what is the future of the European Union in light of the latest development brought about by the entering into force of the Lisbon Treaty and the economic and financial crisis suffered by Southern European member countries. Prerequisite:.

INTS 4647 Critical Issues in International Humanitarian Assistance (4 Credits)

In recent decades, the humanitarian system has undergone significant changes related to developments in global governance, lessons learned and relationships between agencies (UN/NGO), governments (donors, affected countries), as the nature of crises themselves the contexts in which they occur and actors involved in crisis response continue to evolve, the humanitarian system and those that work within it must contend with new challenges and critiques. Through readings, class discussions, guest speakers and assignments, students have the opportunity to gain a better understanding of the major emerging policy issues and internal and external challenges facing the international humanitarian system. The class discusses important debates in the humanitarian system and students have the opportunity to grapple with some of the key ethical dilemmas facing humanitarians today. This course is aimed at those with an interest in humanitarian policy as well those who wish to explore the challenges that may face them as they prepare to work in the humanitarian field. Prerequisite: INTS 4581.

INTS 4648 Theories of Security in World Politics (4 Credits)

In the 40 years following World War II, the study of security assumed a divide between international relations (the politics between states) and domestic politics (the politics within states) and gradually became separated from studies of international economics. International or national security largely centered on one empirical and two different theoretical enterprises. The empirical enterprise explored the relationship between the US and Soviet Union, focusing particularly on deterrence and the effect of nuclear weapons. The theoretical enterprises explored the likelihood of conflict between states in different systems and scenarios (when does conflict occur? When is stability more likely?) and examined the causes and consequences for actors of pursuing different strategies (What determines which strategy states will choose and what are the consequences for security – i.e., war, conquest, security gain, security loss, etc. – of different choices). After the end of the Cold War debates about the meaning of security joined change in the prevalence of intra-state conflicts and growing attention to terrorism in ways that led many scholars to question the usefulness of assumed differences between international and domestic politics, and, to a lesser extent, between security and economics. Also studies of conflict and stability have increasingly focused on a variety of transitional and global actors that do not fall into the realm of the nation, the state, or even the "international" system at all. This course focuses on this post-Cold War security agenda. The class begins with a (rather old by now) debate over the definition of security, then consider the role of states and other actors and finally turn to a list of prominent questions. In examining these questions, the class reads studies based in a variety of explanations, research strategies and methods. Students are encouraged to think about prominent explanations that stretch across the questions in different weeks. Students should also consider the costs, benefits, and alternatives to the research strategies and methods that individual authors have chosen. While the focus is on the substance of debates in security studies, the professor hopes to also spend time each session talking about how to frame productive questions and research strategies. In the way of background, if students have never read Kenneth Waltz, *Man, the State, and War*, they are recommended to do so. It would also be useful to have some familiarity with some basic texts in political theory, particularly Hobbes, Machiavelli, Kant, and Weber.

INTS 4649 Human Rights and the Middle East (4 Credits)

This course is shaped in three parts; each focuses on a set of critical human rights questions drawn from different phases of the Arab uprisings. Part I focuses on the Arab Uprising and Promises of Human Rights Progress and asks: 1. What can we learn from past contagion of human rights struggles, while the class analyzes the Middle Eastern social transformation? 2. What are the main causes that shook the Arab Middle East? 3. What was/is the role of major social actors? Part II covers the Rise of the 2012 Islamist tides, which gained new momentums after the electoral victory of the Muslim Brotherhood in Tunisia and Egypt and asks: 1. Are these religious trends consistent with human rights efforts? What accounts for waves of contagious revival of religious fundamentalism in the Middle East and North African region before and after 2012? 3. What is the impact of religious fundamentalism and nationalism among Israelis and Palestinians? Part III analyses the Possible Paths of Democratization and Human Rights in the Middle East and explores: 1. What accounts for different Revolutionary Arab Paths? 2. Is there a human rights answer to the Israeli/Palestinian quandary regarding one or two state solution? What are the current and possible roles of external forces for the region (international and/or regional)?

INTS 4650 Globalization and Economic Crime (4 Credits)

This course explores the policy issues raised by international economic crime, a phenomenon that has mushroomed with globalization and now accounts by some estimates for one-fifth by value of all international commerce. But who gets to define "crime?" Are there standards applicable globally to all situations? Nation states, corporations, nongovernmental organizations and political advocacy groups have issued multiple and often conflicting definitions of acceptable and unacceptable behavior and have been free in affixing blame on other sectors. To assess the part played by economic liberalization in the increase of crime, readings focuses attention on the political, technological and economic factors that encourage criminal activity and on the direct and indirect economic costs of activities such as identity theft and counterfeiting; mislabeling and trade in illicit goods; political corruption; money-laundering; and securities and accounting fraud. The class discusses activities posing definitional challenges to policymakers, such as currency and commodity speculation, re-export, gray marketing and state sponsorship of organized crime. This class also looks at policy options available when state-supported criminal economic activity is deemed to violate peremptory norms, create a substantial domestic effect, or constitute an act of war. This course examines self-help programs such as due-diligence and know-your-customer rules as well as statutory regimes such as the U.S. Foreign Corrupt Practices Act, and the movement toward transparency and uniform financial standards.

INTS 4652 Contemporary Issues in Refugee Studies (4 Credits)

This course is designed to provide a stimulating interdisciplinary environment in which students explore contemporary issues in refugee studies. Through examination of relevant international instruments, research, case studies, agency policies and reports, students will begin to develop the skills necessary for understanding refugee-serving agencies and associated programs in large scale refugee operations. Specific emphasis will be given to recent developments in - refugee terminology, refugee status determination, urban refugee populations, refugee camps, durable solutions, and extremely vulnerable refugees. Throughout, the course will focus on humanitarian assistance and protection frameworks, including analysis of guiding principles and associated policies of refugee-serving organizations such as the United Nations High Commissioner for Refugees (UNHCR). The importance of reliance on refugee voices to frame the debate will also be emphasized. At the end of this course students should be able to integrate and apply knowledge of innovation policy and practice to begin to address contemporary challenges faced by humanitarian agencies working with refugee populations.

INTS 4653 Political Economy of the Resource Curse (4 Credits)

This course is about one of the more curious findings/non-findings in the history of economics and international relations; that valuable natural resources, such as oil, natural gas, and other mined commodities are not, in the main, associated with better development outcomes and may even depress long-run rates of economic growth and discourage democratization and effective governance. Common sense would seem to suggest that if one finds oneself sitting on a gold mine, then one should mine gold (or drill oil, as in the example above). But countries that have specialized in the production of extractive or "point-source" resources, such as mined commodities like gold, diamonds, and oil, tend to be poor, creating a nagging sense that specialization in extraction is a losing proposition in the global division of labor, condemning countries to be the "hewers of wood and drawers of water." This course briefly reviews the basic economics of the resource curse before turning to a discussion of its effects for deeper institutional determinants of long-run development outcomes: democracy, gender equality, state capacity, and civil strife. It then moves into the realm of interstate politics, examining the ways that resource wealth shapes the foreign relations of resource exporters and major importers, principally the United States and China. The last third of the class investigates both domestic and multilateral attempts to address the resource curse through policy interventions, including civil society-led good governance initiatives like the Kimberley Process and the Extractive Industries Transparency Initiative. This course presumes no deep knowledge of economics but will be of interest to students across the realms of security and development.

INTS 4654 Sustainable Energy (4 Credits)

Sustainable energy is much in the news and high on various policy agendas. It is the seventh of the UN Sustainable Development Goals and part of climate and energy policy for numerous national, state, and local governments. This course will examine the politics and policy involved making a transition to a more sustainable energy system. We will explore the history of energy crises, how they have opened opportunities for making changes to the energy system, and the gradual attachment of sustainable energy to environmental issues, most especially climate change. The course will focus on some of the problems and complexities involved in an energy transition, from technological barriers to the need for a just transition.

INTS 4655 Negotiating Environmental Conflict and Policy (4 Credits)

Environmental issues engage multiple stakeholders with differing knowledge sets, beliefs, values, and even worldviews. Science alone is ill-equipped to resolve such complex disputes. Environmental conflicts involve negotiating differences, as do the development and implementation of environmental policies. This course explores both these 'downstream' and 'upstream' arenas. Within the domain of environmental and public policy conflict and policy, it focuses on the range of processes used to address these conflicts and issues, what different processes may have to offer, and the tradeoffs in both process and substance that must be considered. Themes of public involvement, information management & integration, and designing for adaptation will undergird consideration and critique of approaches. Multiple case studies will be explored and compared.

INTS 4656 Power, Institutions, and Justice in Environmental Sustainability (4 Credits)

Sustainability and environmental justice have become ubiquitous buzzwords in society today. We see them everywhere, from politics to popular culture and corporate strategy to grassroots activism. Through an interdisciplinary approach to environmental science, this course examines the relationships between power, institutions, environmental conservation, and environmental justice and explores how issues are defined as problems. The course will cover the theoretical and practical methods used in environmental policy to assist government agencies, from the local to the global, in addressing immediate and long-term environmental sustainability challenges. Particular attention will be focused on power asymmetries among diverse actors, the formal and informal institutions that facilitate or impede environmental sustainability and environmental justice, and how race, class, and gender impacts recognition, participation, and the distribution of natural resource benefits and harms. Students will examine social theories of "nature", as well as, a range of policy responses to address environmental inequities. Emphasis is placed on disadvantaged communities in the United States and the Global South. Theory will be complemented by real-world environmental controversies that will require group collaboration to produce in-class presentations and the completion of policy memos that engage students critically with the course material.

INTS 4657 Environment & Crises (4 Credits)

In recent decades, the relationship between the environment and human lives has been increasingly recognized, including the relationships between the environment and crises, so-called natural disasters, conflict, and related human migration. This course explores these relationships. It looks at aspects of local, regional, and international approaches at the nexus between humanitarianism and development, including preparedness, risk mitigation and responses to environmental crises, the impact of environmental factors including climate change on the nature and severity of crises, and the impact of humanitarian crises and responses on the environment. This course is aimed at those with an interest in environment and crisis-affected contexts. Students are not expected to have a background in crisis response and/or the environment.

INTS 4664 Emerging Powers: Development in Brazil, India and Beyond (4 Credits)

This course deals with two emerging powers, Brazil and India. We trace the political economy of both countries over time, and spend particular time exploring their historical trajectory, current emergence, challenges they face, and the significance of emerging powers for the international political economy. The course is organized around an understanding of their insertion into the international economy, the implications of international insertion for domestic transformation, and the politics of incorporating newly mobilized domestic social and political actors, especially as this plays out in existing political institutions. Students help define some areas of concentration for the course by identifying policy areas in which concentrated research will occur. This course takes an interdisciplinary approach by drawing on political science, economics, and sociology, and we are concerned to understand the potential for emerging powers to alter international relations, as well as the implications of different strategies of international insertion for domestic social sectors, especially those that have traditionally been excluded.

INTS 4667 Humanitarian Simulation Preparation (4 Credits)

What does it feel like to be part of a multi-sectoral team assessing needs and planning responses in an emerging humanitarian crisis? How do you use your expertise to support rather than suppress local knowledge and the work of communities and community-based organizations in a complex setting? This course will focus on how humanitarians assess protection and psychosocial needs in a crisis and prioritize and develop interventions while working in volatile and stressful situations. The course is aimed at those interested in working in humanitarian contexts. In line with efforts to "decolonize" aid, the course will emphasize more equitable frameworks and approaches to humanitarianism.

INTS 4670 Gender, Security and Human Rights (4 Credits)

This course examines the gendered dimensions of security and human rights, with a particular focus on periods of violence and insecurity. Gender equality has been at the heart of human rights and development efforts over the past half-century. Legal and normative instruments have been created to address the ongoing marginalization of women and girls around the world, including the 1979 Convention on the Elimination of Discrimination Against Women (CEDAW) and the 1995 Beijing Platform of Action. More recently there has been increasing attention to the importance of "gendering" discussions of international security. For instance, UN Security Council Resolution 1325, passed in 2000, is widely seen as a landmark framework for ensuring women's inclusion in the post-war peace process.

INTS 4671 Climate, Science, and Society (4 Credits)

This course examines the role of the natural and social sciences in the climate change issue. Climate change is a complex international problem that challenges scientific and policy analysis. Its effects extend far into the future, are globally widespread, and impact many aspects of society and ecosystems. There are also substantial uncertainties in these effects and in how well different policies might work. As a result, the climate issue is ripe for political disagreement. This course will examine the kinds of analyses that underlie key scientific conclusions and policy arguments, as well as the role individual scientists can and do play in scientific and policy discourse. While some familiarity with the climate change issue will be helpful, the course does not assume that students have an extensive scientific background.

INTS 4672 Environmental Peacebuilding (4 Credits)

Natural resources and the environment can contribute to and amplify conflict, but they also represent opportunities for creating sustainable peace. This course will examine conceptions of peace, peacemaking and peacebuilding, and the insights an environment-centered lens can add. We examine peacemaking on environmental issues. We also consider three trajectories of environmental peacebuilding: technical cooperation, joint capacity building and dialogue, and joint and equitable resource distribution and management systems. Each of these has the ability to contribute to Positive Peace efforts throughout the conflict lifecycle—as preventive diplomacy, as confidence building and communication channels amidst conflict, and as post-conflict peacebuilding and sustainable development. Each approach in this new field could be strengthened through the consideration and application of relevant theory and research. This course also considers critiques of peacebuilding models and methods, and the push for better program MEL—monitoring, evaluation, and learning.

INTS 4673 Climate Finance and Other Clean Energy Solutions (4 Credits)

An introduction to climate finance and understanding its ability to advance renewable energy technologies and activities in the global context as a means of significantly reducing carbon emissions. This course will explore financing mechanisms and Green Banks. We will also learn how microfinance can help reduce vulnerabilities. The coursework will involve regular reference to Project Drawdown and specific clean energy technologies such as solar, tidal, wind, carbon sequestration, agroforestry, net zero building, microgrids, as well as other current innovations and their existing use and potential within the developing world. There will be several practitioners in the field serving as guest speakers for this course.

INTS 4674 Water Policy (4 Credits)

Water is a key resource for the sustainment of all life. Under many circumstances, it is scarce, too abundant, and inequitably distributed across groups in society and nature. This diversity of situations produces the conditions for the emergence of conflict among users, hence requiring the design of institutions to facilitate effective management. This makes water governance a complex but urgent issue to tackle. This class examines such institutions in a variety of levels—state, federal, and international—and analyzes how they affect water access and use. Students in the class will also engage in a careful examination of the sources of conflict and cooperation among water stakeholders on a regional and global scale. The main goal of the course is to foster the students' capacity to assess how water-related conflicts can be prevented through the design and implementation of relevant policies.

INTS 4675 Advanced Topic: Defense and Security Policy Lab (4 Credits)

This is an advanced topics course centered on International Security students gaining, developing, and practicing their professional skills (specifically research and analytics, integration of creativity, academic material, and analysis, peer to peer leadership and coordination, project management and collaborative tools, and communications) via engagement with material/techniques associated with as well as the actual development and execution of a group based professional grade defense/security policy analysis. While the class will contain some traditional academic elements to provide all participants with an enhanced tool kit of skills and analytic options, the bulk of the class takes place through the development of the group defense/security policy analysis executed by 6 person student Project Teams that will be developed through an iterative process over the course and then presented to a group of defense and security professionals for their appraisal. Through this process, security students will be able to get a sense of how real world projects are developed and executed as well as the challenges that confront the production thereof.

INTS 4676 Advanced Topics in Security (1-4 Credits)

This is an advanced topics course centered on International Security students gaining, developing, and practicing their professional skills (specifically research and analytics, integration of creativity, academic material, and analysis, peer to peer leadership and coordination, project management and collaborative tools, and communications) via engagement with material/techniques associated with as well as the actual development and execution of a group based professional grade defense/security policy analysis. Prerequisites: INTS 4735.

INTS 4677 Introduction to Law, Foreign Policy, Politics, and Moral Theory in Human Rights (4 Credits)

The authors of the American Declaration of Independence wrote: "We hold these truths to be self-evident: That all men (sic) are endowed by their creator with certain inalienable rights." That first authoritative claim that all human beings regardless of color, class, social status, ethnicity, political and religious beliefs, or location have in common a set of rights did not define or enumerate "rights." The definition implied was an indisputable individual and legitimate demand (with corresponding duties on the part of others) to be treated with respect and given space to shape a life in accordance with ability, opportunity, and will. Roughly a century and a half would pass before the first comprehensive enumeration: The Universal Declaration of Human Rights (1948) and another two decades before the aspirational declaration was translated into formal treaties (the International Covenants respectively on Civil and Political and Economic, Social and Cultural Rights). This course explores the processes by which the language of the Universal Declaration and the enumeration of rights embodied in the Covenants and other international agreements is interpreted, fought over, and applied (or not). Those processes are legal and political. They are suffused with discordant views about the obligations of states in relation to their citizens and the citizens of other states. They expose tensions among rights (for example, between freedom of expression and the obligation of states to outlaw speech tending to incite racial, ethnic, and other loathsome forms of discrimination, between religious freedom and protection from discrimination on the basis of religion [see the Colorado wedding cake case in the US Supreme Court]). Those processes occur both in the international arena and domestic ones. They engage domestic and international institutions, courts, parliaments, presidents, armies, civil society, and NGOs of various kinds. Threading through them are conflicting moral theories, national interests, ideologies, and raw inter-group competition and prejudices. Human Rights can be seen as a collective modifier as in "human-rights perspective." Human rights, after all, are a way of viewing all the great issues of our time including migration, cultural conflict, justifications for the use of force, interrogation of suspected terrorists, poverty and gross inequality, the limits (if any) of religious freedom, the rights of majorities, and those of minorities and indigenous peoples. All of those issues will be on the table in this course.

INTS 4678 The Politics of Global Trade, Investment and Production: The Origins and Consequences of Open Border (4 Credits)

The last half century has seen national borders opened to the multiple flows now characterized as 'globalization' – the movement of traded goods, capital and people, all of which deserve attention. But if the financial crisis alerted the world to the consequences of free capital flows some years ago, the consensus on free trade and foreign direct investment outside of the developed economies is only now being questioned in national politics, most recently and notably in the 2016 US presidential campaign. In that campaign, both candidates questioned the wisdom of the mega-trade deals – the Trans-Pacific Partnership (TPP) and the Transatlantic Trade and Investment Partnership (TTIP) – and one of them promised reverse the tide of outward US company relocation. The loss by the Democrats of much support among voters in blue-collar states affected by deindustrialization has forced a rethinking of both political strategy and policy orientation. The renewed salience of trade politics invites a number of questions, first about how the world managed the politics of surrendering to a large extent trade protectionism from the 1970s onwards, and second, how countries and regions have managed to govern an increasingly open trading order, both in terms of regulating the flow of goods but also in dealing with the domestic consequences – including initially widespread opposition by organized interests and ongoing battles with labor organizations in particular. There is a third question that is central to understanding what has happened with trade, and that concerns the melding of trade as traditionally understood with the transnationalization of production, whereby older and new forms of foreign direct investment (FDI) have created an international web of supply chains within which the greater part of trade (so-called inter-trade) is now conducted.

INTS 4681 Modeling for Development, Environment, and Security (4 Credits)

This course is intended to provide you with a) an overview of the current state of macro-level human development, environment, and security challenges; b) tools to analyze and forecast these dynamics as interdependent systems across long time horizons; and c) deliverables that encourage you to improve your writing for a policy audience. We review various challenges, starting with well-known issues related to climate change and development. We then move forward and explore the relationship between development and conflict, furthering our understanding of how both civil and international conflicts emerge. Finally, we dig more deeply into issues in the field of "traditional" development, focusing on how investments in education, health, infrastructure, and other areas lead to trade-offs and synergies that can help us better shape multidimensional human capabilities moving forward.

INTS 4700 United States Foreign Policy (4 Credits)

An intermediate course on issues and perspectives for evaluating American foreign policy. Topics discussed include theories of foreign policy; historical epochs in Superpower relations: the Cold War, Dente, and confrontation; America's role in the post-Cold War; war, peace, and trade in relation to U.S foreign policy planning and assessment.

INTS 4701 US National Security Policy (4 Credits)

An intermediate course which examines the post-war history of U.S. policy and America's response to the post-Cold War environment. Current issues include alternative strategies in nuclear deterrence and arms control; and security policy toward the Third World, Europe and the Atlantic Alliance, and Japan. Prerequisite: INTS 4702.

INTS 4702 Emerging Issues in International Security (4 Credits)

This course focuses on contemporary challenges to global security. It seeks to familiarize students with the nature of these challenges and analytical tools with which to make sense of (and consider potential responses to) them. In the context of thinking about general issues, students learn about prominent individual instances (or "cases") of problems, think about problems through different theoretical lenses, and consider both logic and empirical evidence in evaluating different arguments. Beyond the substantive focus, the course also encourages students to develop analytical skills and their ability to communicate their analyses effectively.

INTS 4703 Foundations of Security (4 Credits)

This course will focus on the array of factors, options, and realities associated with the creation and execution of Strategy in order to achieve security objectives. The course begins with and centers on the classic works, concepts, and thinkers associated with strategy and then seeks to apply these foundational ideas to a range of current security challenges.

INTS 4705 Democratization (5 Credits)**INTS 4706 Topics in Int'l Studies (1-4 Credits)****INTS 4708 Topics in International Studies (1-4 Credits)****INTS 4709 Topics in International Studies (1-4 Credits)****INTS 4710 Topics in International Studies (1-4 Credits)****INTS 4711 Topics in International Studies (1-4 Credits)****INTS 4715 Comparative Democracies in Disarray: Populism, Polarization, and Democratic Backsliding (4 Credits)**

This is a course in the field of comparative democratization studies and democratic quality. We will cover from the political science perspective topics such as the transition to democracy, consolidation of democracies, and how and why democracy has spread around the world. We will also examine the debates on the virtues and perils of democracy and on the nature and quality of the resulting representative democracies. Through this lens we will also analyze the "democratic backsliding" observed even in well-established democracies during the last decade and a half, which has resulted in the proliferation of new hybrid regimes and other very problematic characteristics of present-day democracies. In this course, we will study many of the aspects that might influence the process of democratization and democratic backsliding such as: institutional design and functioning, political culture, democratic support and the structure of the party system and party competition.

INTS 4720 Capital Markets in Africa (4 Credits)

Capital markets – the buying and selling of equity and debt – are vital to the functioning of an economy. Using a comparative study of capital markets in America and Africa, we will explore how they work, and how inefficiencies and structural challenges can inhibit private investment and access to capital among middle and lower classes in emerging economies generally. The tools in this course will also allow students to assess the efficiency of capital markets in emerging economies throughout the world. The course comprises five modules: 1) Banking and microfinance; 2) Mortgage and housing finance; 3) Private equity (including venture capital); 4) Stock markets; 5) Mobile money. For each module, we will begin with a study of how the industry functions in the United States, which is widely regarded to have the most efficient capital markets. We will then compare the US model to markets in Africa, examining the structural and practical limitations that impede those markets in sub-Saharan Africa (and, by extension, other emerging markets). The course will not attempt a comprehensive analysis of specific African countries, although examples will be drawn from specific markets. Instead, we will focus on many of the structural challenges to the development of mature capital markets in sub-Saharan African countries (mostly excluding South Africa). We will explore questions such as, Can microfinance be profitable? Why isn't housing finance widely available? What types of "mobile money" systems are developing in Africa, and what are their business models? Why aren't there more IPOs in Africa? Class participation is important, as the subject matter will range beyond the readings.

INTS 4722 U.S. Policy in the Middle East Since World War II (4 Credits)

Various experts and commentators now claim that the U.S. is surrendering its preeminent position of power in the Middle East after more than 70 years of almost unchallenged dominance. In this course, we will examine some of the issues, events, and decisions that may be contributing to this perception and more generally to the evolving role of the U.S. in the Middle East. Is the perception correct? What is might be happening with U.S. policy in the region? What might we expect as the Trump administration's decidedly pro-Israel/pro-Saudi approach solidifies? What are America's genuine policy interests in the region and how should the U.S. be addressing those? And what are the challenges and responsibilities of the governments and peoples of the region in tackling their many problems, from sectarianism to poor economic growth to environmental degradation? Through the study of specific issues, we will focus our attention on the policy-making process and decisions, key interests and motivations, alternatives, the decision makers and their unique roles, and the ultimate impact their decisions may have today and in the future. We will also try to understand American attitudes and perceptions that shape policy as well as those of the people in the region. As we proceed through our study, we will ask ourselves how decisions impact the region and the U.S. today and in the future.

INTS 4730 Foundations in Homeland Security: Response and Recovery (4 Credits)

This course will examine the post-1945 history of United States efforts at homeland security, and include an overview of other national efforts (e.g., by the Soviet Union, Switzerland, and Israel.) It will then turn to identifying and analyzing the spectrum of issues associated with U.S. homeland security, in the context of evaluating the United States post-9/11 response to date. Those issues include: framing homeland security, prevention, response and recovery overview, foreign actors and issues, domestic actors/issues, problems of intelligence, terrorism vs. violent crime, public expectations, role of the media, funding and resources, and how to address broad spectrum threats.

INTS 4731 Homeland Defense: Prevention & Mitigation (4 Credits)

This course will examine the following issues: political leadership, foreign and domestic intelligence organization and functions, role of intelligence, principles of indications and warning, legal/civil rights issues: balancing human rights and security, law enforcement, Public health, and the role of various U.S. federal agencies: Department of Energy, Environmental Protection Agency, the INS, border security among others, plus the role of first responders in prevention/detection, and establishing indicators and reporting procedures.

INTS 4733 Introduction to Strategic Cyber Threats and Policy (4 Credits)

At its core, cyber is a suite of complex, interrelated technologies affiliated with computers, communications networks, and digitalization. Like any powerful technology, cyber provides the capabilities for a range of political actors across a range of levels of analysis to increase their capabilities to achieve both benevolent and malignant goals (and which of these any particular effort is often rests in the eyes of the beholder). Yet, the massive scale of the utilization, both current and future, of cyber technologies and the speed, range, and impact that these technologies potentially generate also make cyber a realm, an area of practice, action, and, thus, policy. The challenge with the rise of such a sweeping development in national and international security is understanding the nature of the threat, how unique the characteristics of the threat are versus how much they resemble previous security challenges, how much existing security mechanisms and policies are applicable versus the need for the development of novel solutions and what are the trade-offs that have to be made, and thus will come to define, cyber security policy at the national and international level. This course will engage all four of these basic questions in survey fashion, setting students up for follow-on academic or professional engagement with the realities of strategic level cyber security issues.

INTS 4735 Defense and Security Methods (4 Credits)

The purpose of this overview course in defense analysis methods is to provide students with the foundations to successfully conduct research and analysis in defense-related topics, whether within the national security community, in academia, or as a contractor. This course should also help prepare the student to complete his or her Master's thesis. The course aims to improve the student's ability to comprehend and assess the graduate-level readings assigned in other courses, and to write research papers and complete other written assignments for those courses. The course is intended to provide take-away skills that can be applied to professional activities after graduation: in particular, students should have greater confidence in their abilities to locate, read, commission, design, or conduct relevant research, and to draft research proposals. This class focuses on methods employed in both policy analysis and the social sciences. The emphasis is on qualitative rather than quantitative methods.

INTS 4736 Strategic Intelligence Data Collection and Analysis (4 Credits)

Course focuses on analytical prod. of strategic intell relative to int'l security issues.

INTS 4738 Current Issues in Strategic Intelligence (4 Credits)

Advanced seminar which investigates current issues relative to strategic intell within international studies.

INTS 4739 Defense and Security Quantitative Analysis (4 Credits)

This course is the follow-on to INTS 4735 Defense and Security Methods and is designed to engage students in a professional conversation about the applicability of quantitative analysis and big data based analytics for the execution of defense and security analysis/research. Continuing the development of the students' individual research design proposal, but now introducing an array of quantitative ideas, options, and methods, this course begins with the foundational realities of coding and descriptive statistics before introducing students to bivariate and multivariate analysis, index/scale construction, and hypothesis testing techniques. In addition, the course continues to develop the students ability to engage with and understand real world defense and security research, in this case particularly quantitative analysis. Prerequisites: INTS 4735.

INTS 4750 The Policy Making Process (4 Credits)

Governments make public policies through a complex process, which varies in its details from country to country and even from issue to issue within the same country. In this course we study various parts of those processes and some of the inputs into them. In addition, we pay close attention to problem framing or problem definition in those policy processes. Within all these disparate policy processes political actors must have some notion of what problem they are trying to solve and what constitutes the set of feasible solutions to those problems. These ideas about problems and feasible solutions are not given exogenously, are not some fact of nature, but instead arise from complicated interactions among actors and institutions in the policy process. The quest we ask throughout the course is how policy problems and solutions could be framed differently, how we can learn to look outside the conceptual box that partisans to policy debates try to draw for us. Students write a series of papers during the course following a policy issue of their choice through the policy process.

INTS 4753 Intelligence and National Security (4 Credits)

Focuses on the craft of U.S. Intelligence and its role in the making and implementation of national security policy.

INTS 4760 Russian Foreign and Defense Policy (4 Credits)

Course explores Russian foreign and defense policy from Vladimir Lenin to Vladimir Putin - heavy focus on security policy.

INTS 4786 Planning and Assessment in Complex Environments (4 Credits)

The primary mission of this course is to provide participating students grounding in the planning methodologies, approaches, and expectations used within the US government in both military and civilian agencies as well as increasingly in the security related private and non-profit sectors. The starting point for this effort is Operational Art & Design and the military's Joint Operational Planning Process (JOPP) as well as related literature. Military planning serves as the starting point both because it is the most mature and sophisticated government planning methodology and because most other US government planning practices are direct, contextually appropriate derivatives of DoD planning mechanics.

INTS 4787 Civil-Military Practices in Humanitarian Responses (4 Credits)

Changing U.S. national security priorities following 9/11, including updated Department of Defense doctrine, have led to U.S. military actors prioritizing humanitarian assistance as a central component of theater security cooperation arrangements. This trend includes not only considerations of protection of civilians during military operations but also planning for natural disaster response and steady state engagement to build the capacities of host nations to address crises, including natural and man-made disasters. Through readings, class discussions, group work and individual assignments, students in this course will gain a better understanding of the issues and roles of civilian and military actors in the humanitarian space, with a specific focus on how legal and policy guidance impacts the decision to utilize U.S. military forces in disaster response situations. While this course will focus specifically on how the U.S. government approaches humanitarian activities and the role of the U.S. Department of Defense assets, it will locate this discussion within the broader about the appropriate use of Military and Civil and Defense Assets in international humanitarian community.

INTS 4801 Major Issues in Human Rights (4 Credits)

This co-taught course looks at a wide range of contemporary issues in human rights. It is intended equally as an introductory course for students in other degrees and as an advanced course for Human Rights degree students. Each week will be run by the faculty member who has selected the topic. Readings and any other before-class assignments will be on the Canvas page for the course, in the Files tab, in the folder for the instructor.

INTS 4802 Foundational Ideas in Social Science: Marx and Weber (4 Credits)

Marx's is the most striking and complex theory of revolutionary change. It has inspired millions of workers, peasants, soldiers, students and intellectuals in three large international movements (the International Workingmen's Association, the Second International, the Third International). "Capital" is perhaps the most striking depiction of how factories and capitalist society operate, from the point of view of workers, of any modern economic theory. It is a theory which novelly explains the tensions in the experience of most non-University educated people between their work experience and the current Washington "consensus" about free markets and democracy. It has motivated and empowered striking democratic movements, often across national boundaries, of the oppressed against the privileged. Where successful, however, Marxian movements both brought about significant, common good oriented improvements and failed to withstand external and internal attacks or resolve basic problems in radicals' vision of a new society. Further, Marx's vision has often been interpreted as, except in the immediate unfolding of the revolutions themselves, having little to do with democracy. In radical movements as well as in capitalist societies and academia, Marx has been fiercely attacked. For much of the Cold War, not having read Marx permitted one to expatiate on what Marx's views are; reading Marx was, until the late 1970s and early 1980s a disqualification even in teaching, let alone in the media. Marx's views are often misrepresented, dismissed without investigation as "obviously wrong." This course provides an opportunity to read the first volume of "Capital" and some of Marx's other main works and test them, in whatever depth desired, against Max Weber, the dominant theorist of American sociology and political science.

INTS 4807 Civil-Military Relations During War (1 Credit)

The focus of the course will be on civil-military relations—the interaction between the senior military leadership and elected and appointed civilian officials. Students will have a unique opportunity to learn about the development of national security policy and related issues. The course will examine the civil-military relations during three 20th Century wars and two 21st century conflicts and draw insights about the impact of civil-military relations on national security and the requirements for effective civil-military interaction in the future.

INTS 4820 Democracy and War (4 Credits)

This course explores Socrates' speech at his trial and decision to go to his death as, surprisingly, initiating two central features of modern democratic theory. First, Socrates is often depicted as simply hostile to the many, looking down on Athenian democracy. But what he in fact looks down on is tyrannical mob rule, the "democracy" of a particular interest arbitrarily enforced (what we might call a demented Joe McCarthy-kind of democracy). In contrast, Socrates also incarnates the idea of asking questions in a democracy, that is, dissent (prefiguring what is sometimes called today deliberative democracy). That makes a democracy capable of realizing, sometimes, a common good. Second, Socrates provides a paradigm for modern civil disobedience or satyagraha in Gandhi - we read Gandhi's translation of Plato's Apology - and Martin Luther King's letter from the Birmingham City Jail. Nonviolent civil disobedience is necessary in a modern democracy because party-competition focuses mostly on personality issues and not on fundamental injustices. Further, this kind of protest promises major change even in dictatorships (consider Erica Chenoweth and Maria Stephan, Why Civil Resistance Works). Thus, this emphasis is a novel interpretation of Plato as opposed to, in scholarship and politics, Plato's supposed link to authoritarian "commander-in-chief" power (Heidegger, Leo Strauss and William Kristol for example) which we also contrast in this course. The course explores the subtlety of these dialogues - the question of what Plato intended to teach his long-standing students like Aristotle who studied with him for 20 years - but leave the main points of Gandhi's and King's interpretation intact. Third, the course explores Thucydides, History of the Peloponnesian War and Plato's response to it in the Republic in terms of modern critiques of Empire building and the "unhinged" wars by American democracy (we look at W. Robert Connor's elegant break with previous understandings of Thucydides during Viet Nam and John Mearsheimer's striking criticisms of post-Cold War American policy, echoing Obama's 2013 speech at the National Defense University, in "America Unhinged." Thucydides is a far deeper account of imperial expansion and the corruption of and threat to democracy at home than modern realist and neo-realist gestures at him. Neo-realists methodologically attempt to separate global politics from its domestic consequences as supposedly different levels of analysis; this interplay is the heart of Thucydides' argument and deepest insight into the meaning of war and democracy.

INTS 4822 Contemporary Political Theory (4 Credits)

An examination of current 21st century political theory and how the events of the 20th century helped mold these ideas/ concepts.

INTS 4854 Rising China and Challenges to the Global Order (4 Credits)

This course is for Korbel in DC program participants only. This seminar focuses on contemporary challenges to the global order posed by China's growing economic power. The course charts China's reform and opening, its development and integration into the global economy, and the challenges created for Western economic and security institutions and alliances. Specific topic areas covered include China's non-market status and trade conflict, competition for technological leadership, ICT governance and standard setting, the Belt and Road Initiative, and the implications of China's South China Sea activity. The course will combine extensive background readings, lectures, and discussion. Students will benefit from frequent guest lectures and discussions with experts from the Center for Strategic and International Studies.

INTS 4856 Global Sustainability and Development (4 Credits)

This course is for Korbel in DC participants only. This course considers the interaction of environmental, economics, and energy issues on global ecological systems. It offers an overview of relevant international legal frameworks and national governance systems, the state of major ecosystems – forests and species habitats; wetlands, oceans and rivers, and the atmosphere and selected policy issues related to each. Emphasis is less on "what" to think than "how" to think about and formulate policy responses to complex, multidimensional issues.

INTS 4875 Human Rights and Foreign Policy (4 Credits)

Global human rights issues and how those issues help mold foreign policy decisions.

INTS 4890 The Revolutions of Black, Brown, and Indigenous Peoples: Violence or Nonviolence? (4 Credits)

Marx's is the most striking and complex theory of revolutionary change. It has inspired millions of workers, peasants, soldiers, students and intellectuals in three large international movements (the International Workingmen's Association, the Second International, the Third International). "Capital" is perhaps the most striking depiction of how factories and capitalist society operate, from the point of view of workers, of any modern economic theory. It is a theory which novelly explains the tensions in the experience of most non-University educated people between their work experience and the current Washington "consensus" about free markets and democracy. It has motivated and empowered striking democratic movements, often across national boundaries, of the oppressed against the privileged. Where successful, however, Marxian movements both brought about significant, common good oriented improvements and failed to withstand external and internal attacks or resolve basic problems in radicals' vision of a new society. Further, Marx's vision has often been interpreted as, except in the immediate unfolding of the revolutions themselves, having little to do with democracy. In radical movements as well as in capitalist societies and academia, Marx has been fiercely attacked. For much of the Cold War, not having read Marx permitted one to expatiate on what Marx's views are; reading Marx was, until the late 1970s and early 1980s a disqualification even in teaching, let alone in the media. Marx's views are often misrepresented, dismissed without investigation as "obviously wrong." This course provides an opportunity to read the first volume of "Capital" and some of Marx's other main works and test them, in whatever depth desired, against Max Weber, the dominant theorist of American sociology and political science.

INTS 4891 American Intersectional Inequality: From Local to Homeland Security (4 Credits)

This course advances understanding of how inequality manifest differently by race and ethnicity, class, and gender. Policy topics and case studies will span (1) immigration laws, citizenship, and race-making; (2) state violence, mob rule, and the origins of the American penal system; (3) local law enforcement, courts, and prisons (5) detention centers and homeland security; and (6) demography, census, and democratic representation. The course will feature African American and Latinx populations prominently and incorporate Indigenous, Asian-American, and White populations throughout. The class will center the perspectives of poor Americans, but will incorporate working class, middle class, and elite perspectives when useful comparisons and contrasts are in order. Theories and case studies will be rooted in a U.S. context but occasionally include readings from other democratic nations. Readings will encompass enduring problems and landmark policies, as well as contemporary challenges. Given that this is a writing-in-the-disciplines course, we will devote attention to developing public policy research and memo-writing skills. Students will also gain practice working in teams to sharpen analytical skills and written work.

INTS 4900 International Politics (4 Credits)

Topics on discussion include: levels of analysis; realism; neo-realist structuralism; international society and the English school; international anarchy; process variables and international institutions; international security institutions; rationalism, constructivism, and the purposes of theory; norms and ideas; gender and identity; and postmodernism and post-structuralism.

INTS 4903 Social Construction of International Society (4 Credits)

Examines recent theoretical work in the field of international relations that treats international society and its practices as social constructs.

INTS 4906 Classics of International Theory (4 Credits)

Professor will choose various books by classic political theorists for students to read and discuss in class.

INTS 4907 Terrorism (4 Credits)

Terrorist violence, an issue facing many countries in international and domestic politics, is used by left and right-wing groups, nationalist and religious organizations, revolutionary movements, and state institutions seeking political power. This course is focused on: understanding terrorism (definitions, causes, evolving tactics); analyzing who becomes a terrorist (jihadist, separatist, supremacist ideologies plus radicalization processes); and evaluating effective counter-terrorism measures to reduce or resolve the problem.

INTS 4909 Climate Migration and Human Rights (4 Credits)

The science of climate change, while continuing to become more exact and nuanced, is clear – human behavior has caused the planet to warm unnaturally. Now that the science has been established the next question is how will it affect the ecosystem and, especially human habitation. As seems to be the norm, those most affected by climate change will be the poor, the disempowered, and native populations. The understanding and the possible solutions must be interdisciplinary – human rights, law, economics, development, gender and race equity, security, science – to name a few. The course will look at the history and philosophy of climate justice, which includes such disciplines as environmental justice and sustainability, move through an analysis via a number of different viewpoints, and conclude with a look into the future in terms of education and activism. Climate justice requires a sharp, critical look at systems and an understanding of the interconnectedness of science, ethics, and politics. Examples of this might include the rising of sea levels displacing very large numbers of people adding to the already impossible strain on refugee and IDP resettlement. Or the Brazilian economy's almost sole reliance on hydro-electric power in face of the drying up of rivers and water basins. Or the role of the world's religions and religious leaders in climate justice. One of the unique characteristics of this course will be the number of guest lecturers. It is incumbent on universities and colleges to take a multi-disciplinary approach to climate justice and lower the "silos" between academic units. To that end colleagues from DU and other institutions will bring their disciplines and insights to bear on the topic.

INTS 4912 Development in Africa: Challenges, Constraints and Strategies (4 Credits)

This course is for Korbel in DC participants only. As the Developed World falters over its financial difficulties, many eyes are turning to the third world for resources, markets and solutions. In a real sense, Africa is the "last frontier." With this in mind, this seminar provides an overview of Africa and Development through the eyes of practitioners and scholars from the US and Africa who have devoted considerable effort to trying to affect development on the continent and speculating on what more it will take to make Africa prosperous. Beginning with an overview, the course proceeds through traditional development sectors (agriculture, health and education), newer perspectives and drivers (private sector, ICTs, democratization and China), and the three "C" barriers (corruption, conflict and climate change). Lively exchanges over the role of outsiders and the efficacy of aid as well as Africa's growing role in the outside world, balance more traditional development perspectives.

INTS 4914 Statecraft and Smart Power in the Digital Era (4 Credits)

This course is for Korbel in DC participants only. This course examines new approaches to the practice of statecraft in an era of rapid global change. Globalization is upsetting traditional international order and institutions, and changing the pace and intensity of decision making. Nation-state governments, while still the primary actors, must adjust to new sub-national, regional and transnational forces and players in a far more complex global arena. Digital Communication is revolutionizing relationships and interaction in the global arena. More groups and the general public are involved or mobilized in public participation than ever before. Vastly more information flows ever more quickly. Partisanship rises with segmentation, threatening fragmentation in public life. The new era reflects the imbalances and strains of major demographic change, especially the impact of an expanding tech-savvy younger generation. A significant youth bulge in volatile developing nations fuels reform efforts, but also creates the potential for conflict arising from continuing injustice and unmet expectations. Foreign policy institutions and decision makers here and abroad are increasingly subject to cross-pressures from competing domestic and transnational interests. In the U.S. the Inter-Agency must balance influential single-issue stakeholders and constituencies here and abroad. The course explores how the U.S. and other governments are responding to the new global challenges. Participants see to frame new "rules" of statecraft in the digital era.

INTS 4920 Conflict Resolution (4 Credits)

An introductory course which identifies the collective factors leading to successful reconciliation or agreeable compromises in conflicts; analyzes the role and influence of cultural norms, gender conditioning and different bargaining strategies on the resolution process; applies the practical fundamental of negotiation on particular problem-solving techniques.

INTS 4928 Torture (4 Credits)

This is a reading/seminar course. Students are asked to be well-prepared and contribute to the discussion. We explore mostly modern forms of torture. The use of torture has not abated in the last 100 years despite conventions, treaties and watchdog organizations. What has occurred is that torture has become "stealth", to use Professor Rejali's term. These "stealth" techniques leave no mark and have been developed equally by democratic states and totalitarian regimes. It is also clear that the U.S. has engaged in state sponsored torture (see The Constitution Project bi-partisan report of April, 2013). An important question before us is if there is any place for torture in the 21st century and if torture is an effective means to gather intelligence. If the answer to both questions is "no," and torture violates the most basic ethical, moral, and legal norms of humanity, they why does it persist?.

INTS 4929 Foundations of Human Rights (4 Credits)

There are many ways to approach human rights. This course has a historical and thematic emphasis, raising questions relevant to contemporary issues. What are the origins of human rights? Is religion compatible to secular views of universal rights? Are human rights predominantly Western? Did the industrial revolution and socialist tradition contribute to human rights? What are the limits of the rights to self-determination? Is globalization improving or harming human rights? Is globalization increasing or decreasing the potential for a vibrant civil society? What are the tensions between cultural rights and universalism? Are there tensions between security and universal rights? Are human rights for ALL humans? What political systems, under what circumstances, are most hospitable for social cohesion and/or human rights?.

INTS 4931 International Organizations (4 Credits)

An intermediate course on approaches to the study of international organizations, including institutionalism, neofunctionalism, complex interdependence, international regimes, and epistemic communities. Case studies examining collective security and peacekeeping, human rights, Antarctica, and the environment are discussed.

INTS 4935 International Humanitarian Law of Armed Conflict (4 Credits)

This course is a theoretical and practical introduction to international humanitarianism law (IHL). IHL is known by many other names such as "humanitarian law," "law of conflict," and "laws of war." All these terms refer to the rules regarding the treatment of civilians and non-combatants in areas of armed conflict and the rules of engagement for soldiers and combatants. These "rules" are especially important to know if you eventually work for an IO or NGO that finds itself in areas of armed conflict. Cross listed with CPSY 4560.

INTS 4936 International Law and Human Rights (4 Credits)

An introductory course examining the concept of human rights, including political, economic, social, and cultural rights. International, regional and national institutions, norms and procedures to protect individual and group rights are discussed. Recommended prerequisite: INTS 4940.

INTS 4940 Introduction to Human Rights (4 Credits)

An introductory course focused around historical and theoretically relevant texts in human rights. First and second generation rights are emphasized. Early liberal, conservative, and socialist understandings of human rights are highlighted against their respective historical background.

INTS 4941 Human Rights and International Organizations (4 Credits)

An introductory course exploring the changing roles of international organizations in their efforts to protect and promote human rights. Examination of both the global and regional levels of human rights activities of international intergovernmental organizations are discussed. Recommended prerequisite: INTS 4940.

INTS 4947 Human Rights and Security (4 Credits)

In a sense, the debate over human rights and security is rooted in ancient arguments over power and morality. Yet it is particularly since the end of World War II and the defeat of the Nazis, the emergence of the United States as the leading world power, and the onset of the nuclear age, that the debate over the relationship between human rights and national security has been part of operational discourse in real world politics as well as in university classrooms. The course title suggests an amplitude of subject matter far greater than can be encompassed in the ten weeks of the quarter. So, instructors are likely to differ about which issues to explore in the available time, and inevitably, they will differ in their pedagogical methods. Differences in methodology will reflect differences in taste, personality, training and experience.

INTS 4955 Human Rights Clinic I (0 Credits)

Students in the Human Trafficking Clinic will be asked to undertake a case study on a human rights violation and provide an advocacy report (roughly 5000 words, i.e., 20 double-spaced pages) that includes (a) a synopsis of relevant facts, (b) pertinent domestic (usually constitutional) law of the country where the violation occurs as well as relevant regional and international human rights law, and (c) a recommended course of remedial action using the rule of law. Non-graduating law and JKIS students may seek an overseas assignment in order to either advance their research or initiate the recommendations in their advocacy report. Additional internship or independent research credit may be available for these overseas ventures.

INTS 4956 Human Rights Clinic II (4 Credits)

Students in the Human Trafficking Clinic will be asked to undertake a case study on a human rights violation and provide an advocacy report (roughly 5000 words, i.e., 20 double-spaced pages) that includes (a) a synopsis of relevant facts, (b) pertinent domestic (usually constitutional) law of the country where the violation occurs as well as relevant regional and international human rights law, and (c) a recommended course of remedial action using the rule of law. Non-graduating law and JKIS students may seek an overseas assignment in order to either advance their research or initiate the recommendations in their advocacy report. Additional internship or independent research credit may be available for these overseas ventures.

INTS 4964 Political Risk Analysis (4 Credits)

Investigates risks associated with political instability or uncertainty in countries with emerging markets.

INTS 4966 Applied Field Methods: Africa (4 Credits)

An introductory course for students planning to conduct research in developing countries. Practical information is presented on transforming hypothesis into a fieldwork setting, questionnaire construction and administration, and interviewing techniques.

INTS 4972 Global Environmental Governance (4 Credits)

Global environmental problems pose seemingly intractable problems for international relations and policy. In this seminar, we probe some of the practical and theoretical difficulties associated with solving such problems. These problems include: How can sovereign nation-states agree to cooperate on environmental problems and how can such cooperation include businesses and civil society? No international institution can legitimately coerce nations into such cooperation. Therefore, international institutions must get them to agree to cooperate, must find ways to bring business and civil society into those agreements, and then find ways to monitor and enforce the agreements. This task is harder than it might seem, and we explore both theories and cases that illuminate it.

INTS 4981 Internship (0-4 Credits)

The Josef Korbel School of International Studies (JKIS) recognizes the importance of practical experience as an integral component of a student's education. An internship should both complement the student's academic field of study and relate to his/her career goals. Through internships, students will: Apply acquired academic theory, knowledge, and skills to professional practice; Further develop knowledge and skills needed to work effectively in the field; Gain greater understanding of the private, public, or nonprofit/NGO sectors; Build a network of professional contacts; and Develop career-related skills applicable to the future job search. This course requires the internship be at an organization that is not the University of Denver, and is the course that satisfies the degree requirement for all Korbel MA programs. The course is open to currently enrolled Korbel MA candidates, and registration is by instructor approval after review of materials.

INTS 4987 Forced Labor and Human Trafficking (4 Credits)

This course looks at a brief history of slavery, especially as it pertains to the British, West African, West Indies, and American triangle. We then look at contemporary issues of forced labor, human trafficking and contemporary slavery. Human trafficking is a very complex problem that requires a sophisticated, inter-disciplinary critique.

INTS 4989 North American Defense and Security (4 Credits)

This course will challenge students to analyze the evolving North American Defense and Security environment since 1945. The course will begin by focusing on the history of the Canada - United States (CANUS) defense and security relationship that began in the wake of World War Two and was predicated upon protecting the North American continent from Soviet attack with the formation of the Permanent Joint Board on Defense (PJBD), Military Cooperation Committee (MCC), and North American Air Defense Command (NORAD). However, the end of the Cold War and subsequent terror attacks of 9/11 dramatically changed the North American Defense and Security environment and created the need for enhanced cooperation between the United States, Canada, and Mexico.

INTS 4991 Independent Study (1-12 Credits)

A special individual arrangement for students to pursue more advanced work beyond that available through regular courses. Such study is arranged between professor and student prior to registration. Academic grades are assigned for course performance. Tutorial Record Form required.

INTS 4995 Independent Research (1-8 Credits)

This course allows a student to receive credit for research and writing undertaken as part of the master's thesis. Such study is arranged between professor and student. Academic grades are assigned for performance. Independent Research form required.

INTS 4996 Substantial Research Paper (0-4 Credits)

A Substantial Research Paper (SRP) is a problem-focused paper designed to engage student in the process of applied research. In contrast, an independent study tends to be a more general research project, while an MA thesis involves in-depth academic research typically undertaken by students interested in pursuing a PhD. An SRP is typically shorter than an MA thesis, and does not require a review committee or an oral defense. Rather, the SRP will be supervised and graded by a single appointed faculty member.

INTS 4998 Experiential Learning (0 Credits)

The Josef Korbel School of International Studies (JKSIS) recognizes the importance of practical experience as an integral component of a student's education. Experiential learning should both complement the student's academic field of study and relate to his/her career goals. JKIS recognizes the professional benefits of experiential learning work that occurs on the University of Denver campus. Through on-campus experiential learning, students will: Apply acquired academic theory, knowledge, and skills to professional practice; and Further develop knowledge and skills needed to work effectively in the field. The course is open to currently enrolled Korbel MA candidates, and registration is by instructor approval after review of materials.

INTS 4999 Research Design: Ph.D. Prospectus, Substantial Research Paper, and MA Thesis (4 Credits)

This workshop is designed for students interested in developing a well-crafted thesis proposal, sustaining their research and writing agenda throughout their studies, and learning about the academic profession as a whole. There will be short formal lectures or presentations by the instructor; yet each student needs have a paper on the subject of interest prior to registration to this class, each needs to be prepared weekly to receive constructive suggestions and assessments from the instructor and peers.

INTS 5500 Social Science Methods (4 Credits)

This course is about how to unleash the power of social science to explain and make sense of social behavior, phenomena, and research programs. The course is intended for Ph.D. students interested in developing their skills in research and analysis. As part of the "professionalization" process, the goal of the course is to teach the basic structure of how to produce a research article or larger work—"how to do" political science. We will primarily rely on methodological approaches from the discipline of Political Science but also cover methods from other fields.

INTS 5991 Independent Study (1-12 Credits)**INTS 5995 Independent Research (1-8 Credits)**

This course allows a student to receive credit for research and writing undertaken as part of the doctoral dissertation preparation. Grades of "P" (pass) are assigned after the dissertation is accepted by the committee. Prerequisite: Ph.D Candidacy (passing Comprehensive exams).

Morgridge College of Education

The University of Denver's Morgridge College of Education is committed to preparing highly competent, socially responsible, ethical and caring professionals to promote learning in diverse settings. With a guiding commitment to excellence, our programs offer high-quality and rigorous academics with an emphasis on relevant, impactful practices through field experiences, research and community-oriented projects. Through our focus on inclusiveness and innovation, we strive to create purposeful learning experiences designed to transform people and ideas.

With several regionally and nationally recognized programs, the College is known for its diverse, high quality students and alumni. The College offers face-to-face, hybrid, and online certificate, master's and doctoral programs in Educational Leadership and Policy Studies; Higher Education; Research Methods and Statistics; Library and Information Science; Teacher Preparation; Curriculum and Instruction; Early Childhood Special Education; School Counseling; School Psychology; and Counseling Psychology.

Counseling Psychology

Office: Katherine A. Ruffatto Hall, 2nd floor

Mail Code: 1999 E. Evans Avenue, Denver, CO 80208

Email: mce@du.edu

Web Site: morgridge.du.edu/programs/counseling-psychology/ (<http://morgridge.du.edu/programs/counseling-psychology/>)

Counseling Psychology

As a graduate student in the Department of Counseling Psychology (CP), you'll develop the skills necessary to become an effective practitioner, researcher and/or leader in your field. Our goal is to develop professionals who are insightful and self-reflective, who are innovative risk takers and superior critical thinkers. Our faculty research explores many exciting and critically important areas such as class and race, relationship counseling, women's issues, and health and well-being. You will examine these issues and apply what you learn through hands-on experience at your placements. Our highly selective doctoral program is accredited by the American Psychological Association and is well known for providing access to high-quality practica and national internships for our students. This scientist-practitioner program has a strong focus on both research and practice. Similarly, the master's program has excellent practicum and internship sites all over the Denver area, and is accredited by the Masters in Psychology and Counseling Accreditation Council. One of the strengths for our Counseling Psychology program for both master's and doctoral students is the opportunity to provide counseling in our in-house clinic.

We want our students not only to demonstrate accurate and current knowledge, but to have expertise related to the many issues that confront society, and to have the skills to create effective strategies and approaches to address these challenges.

Doctor of Philosophy in Counseling Psychology

The goal of the CP doctoral curriculum at the University of Denver is to educate counseling psychologists who have a solid foundation in science, practice, and social justice and equity from an intersectional framework. Our PhD program is intended for those preparing to become counseling psychologists. Through coursework and hands-on experience, you will learn to evaluate theories and research critically, while gaining a deeper understanding of the communities and individuals you will serve. Although CP programs may lie at various points on the continuum from a very heavy emphasis on science to a very heavy emphasis on practice, the Counseling Psychology program at DU lies close to the middle of the continuum. Although the course of study provides students with some flexibility to emphasize either the practice or scientific side of the continuum, we expect that all students will have a solid foundation in science and practice and will approach each aspect of their training from a multiculturally informed position. Many of our graduates work in practice settings after graduation, and some are in research/faculty positions across the country. Regardless of their specific work setting, we believe they are trained to practice from a scientific/critical perspective infused with cultural awareness. In this way, our philosophy is consistent with the perspective of Pepinsky (1954), who suggested that the scientist portion of the scientist-practitioner model is reflected in the way counseling psychology practitioners think about and conduct their practice: they think critically and are appropriately skeptical about theories, research findings, and clinical practices, including their own as well as others. In addition, our students strive for cultural competence in order to be effective with diverse clients.

Counseling psychologists encourage groups of individuals in an array of cultural contexts to better understand themselves and their own behavior, to develop an increased repertoire of adaptive skills, and to more effectively approach life problems in light of this understanding and skill development. Counseling psychologists also help individuals make vocational-educational decisions, take productive action in marriage or family systems, and assist individuals with health-related crises, being careful to take cultural consideration into account. Counseling psychologists are also trained to provide supervision, consultation, and interprofessional/interdisciplinary skills and to use these skills in a variety of settings. Consistently, DU Counseling Psychology PhD program emphasizes multicultural counseling and social justice, health psychology, vocational psychology, psychotherapy processes and outcomes, psychological assessment, group dynamics, and treatment of addictions. Seminars are offered in all of these areas.

The faculty encourages students to develop individualized programs of study commensurate with their career goals. Practicum settings are arranged to further intensify training in particular specialty areas (e.g., college counseling, VA, in-patient, integrative care, correctional settings, community mental health). Students whose goals include college teaching are encouraged to co-facilitate introductory counseling classes with faculty and teach undergraduate psychology and counseling courses. Students are also required to participate in and contribute to a pre-dissertation research project that leads to a presentation and/or a submission for publication.

The program offers areas of focus, where you can further your skills and become better equipped to provide solutions for the societal and interpersonal challenges facing clients. Students will be able to integrate research to practice and engage in practice that is informed by research.

We offer an Emphasis in Health Psychology with at least two health-related didactic courses and two supervised clinical practica. Courses may include health psychology, health disparities, integrated health, neurophysiological assessment, and infectious disease in addictive behavior. Please note that the health-related courses are in addition to the required courses for completion of the PhD in Counseling Psychology. Practicum opportunities have included integrated health settings, academic medical centers, and VA Hospitals serving adults, children, and families. Students interested in practicum in health psychology settings may work with their advisor and the training director to identify relevant sites and obtain guidance and support in the application process, but health-related practicum are not guaranteed. Similar to the practicum component, students interested in completing a health psychology related dissertation have several faculty who can support them in this process, but students in consultation with their advisor and/or dissertation chair, select their dissertation topic. The Emphasis in Health Psychology offers an exciting

opportunity to build upon excellent foundational broad and general psychology training to dive deeper into advocating for health equity, developing interprofessional competencies, and partnering with our Denver communities.

Importantly, some faculty research areas include:

- Multicultural counseling
- HIV counseling
- Psychotherapy research
- Romantic relationships
- Health psychology and health disparities
- Addiction counseling
- Group dynamics
- Supervision and training
- Vocational psychology and career development
- Cancer survivorship

Upon completion of our PhD program, and with the additional post-doctoral required hours, you'll be able to apply for licensure as a psychologist in Colorado and various other states (Please check with your state's licensing board to ensure our program meets their licensing requirements).

Interim Master of Arts in Counseling Psychology with a Concentration in General Counseling (for PhD students only)

This concentration leads to a general Master's degree in Counseling, and is available as an interim degree for PhD candidates only. This concentration requires a minimum of 55 quarter hour credits, including a 200-hour practicum, but it does not lead to licensure as a professional counselor on its own.

Master of Arts in Counseling Psychology with a Concentration in Clinical Mental Health Counseling

The Clinical Mental Health Counseling concentration is accredited by the Masters in Psychology and Counseling Accreditation Council (MPCAC) and is aligned with the requirements of the Council for Accreditation of Counseling and Related Educational Programs (CACREP). Students who complete this degree and two years of post-master's work in the field can apply to become a Licensed Professional Counselor in the State of Colorado and various other states (Please check with your state's licensing board to ensure our program meets their licensing requirements). This degree requires two years and 90 quarter credits. It also includes a 200-hour practicum, a 600-hour internship, and two quarters of counseling in our in-house clinic.

Master of Arts in Counseling Psychology with a Concentration in Research Counseling

Some students wish to develop more advanced research skills as well as counseling skills. This concentration requires two years and 72 credit hours to complete. Students wishing to complete a master's thesis are strongly encouraged to apply to participate in this concentration during the winter quarter of the first year of study. If the student chooses to apply for the Research concentration later, it will take longer to complete the degree. It is recommended they begin discussing this option with their advisor during their first quarter of graduate work. Students who complete a thesis are not required to take the comprehensive examination. This is the only concentration students may pursue if they are interested in writing a thesis. The Research concentration does not meet requirements to achieve licensure. Students are not eligible for applying to become a Licensed Professional Counselor after graduation.

MASTER OF ARTS IN School counseling: SchoolCounseling@denver

The Master of Arts in School Counseling (online) program has been designed to help students develop individual, group, and career counseling skills to meet the academic, career, and social/emotional needs of students from diverse backgrounds within the P-12 school system(s) and across the communities in which they serve. Students receive training in the profession as a whole, with focus on counseling skills, development, social justice, application of skills in a school environment, and many other areas. This degree requires a 100-hour practicum and two 300-hour internship experiences, during which students receive on-site supervision at their practicum/internship setting. This 72 quarter hour online Master's degree in School Counseling allows students to apply for licensure as a school counselor in Colorado (through the Colorado Department of Education [CDE]) and various other states. Note that licensing requirements vary from state to state. Check with the licensing board for the state in which you are interested.

Doctor of Philosophy in Counseling Psychology

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the

baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

No, this program does not offer English Conditional Admission

Master of Arts in Counseling Psychology with a Concentration in Clinical Mental Health Counseling, Concentration in General Counseling, Concentration In Research Counseling

Doctor of Philosophy in Counseling Psychology

Degree Requirements

A total of 135 hours are required for the doctorate in the Morgridge College of Education and up to 45 credits from a master's degree may be eligible to be transferred depending on the content overlap with current courses. Students are able to transfer in up to an additional 15 hours for graduate work provided the credits have been earned after the master's degree was awarded and it does not conflict with the doctoral residency requirement.

(Register for this Fall, Winter, and Spring terms during internship year for 8 credits per quarter)

* Assumes completion of a supervised field experience of 400 hours in the MA/MS program (if not, see section on coursework required for those who did not complete a practicum as part of their MA/MS program)

- ** Advanced Practicum I and Advanced Practicum II students are required to spend 15 to 20 hours per week in practicum placement for three consecutive quarters for a total of 500-600 hours per practicum experience (a minimum of which 250 should be direct client time per practicum setting). Ideally a minimum of 500 to 600 direct service hours will be accumulated at the end of the two practicum experiences. All three quarters of each practicum placement must be at the same site and must be consecutive. Some students take an additional practicum placement if necessary based on goals for internship and career. For more information on practicum requirements, please see the separate practicum handbook.
- *** PhD Clinic is generally taken for two consecutive quarters: either winter-spring, spring-summer, summer-fall, or fall-winter. Students are surveyed about their preferences and these are accommodated if possible.
- **** Students must have successfully completed Advanced Practicum I and have completed or are completing Advanced Practicum II.

Interim Master of Arts in Counseling Psychology with a Concentration in General Counseling

To be eligible, students must enter the PhD program **without** an earned master's degree. Students must submit an application to graduate and meet with their advisor for candidacy sign-off by the deadline.

The interim MA does not prepare students for licensure as a Licensed Professional Counselor (LPC). It is intended for students who wish to complete a Master's degree as they pursue their PhD. Students must meet the requirements for the Master of Arts in Counseling Psychology with a Concentration in General Counseling listed below.

Master of Arts in Counseling Psychology with a Concentration in Clinical Mental Health Counseling

Patrick Sherry, Research Associate Professor, PhD, University of Iowa

William Cross Jr., Clinical Professor, Emeritus, PhD, Princeton University

Counseling Psychology Courses

CNP 4642 Adult Development (3 Credits)

Literature on normal development of adult thinking and problem-solving processes and the self-esteem. Physiological changes and relationship between cognitive development and developmental tasks of adults included.

CNP 4645 Lifespan Development (5 Credits)

Survey of the principles of development from conception to adulthood, emphasizing biological, environmental, and cultural factors affecting development.

CNP 4700 Counseling Theory (5 Credits)

Basic counseling theories and philosophical principles as a foundation for professional training including history, concepts, techniques and trends.

CNP 4701 Advanced Seminar: Counseling Theory (3 Credits)

Focus on advanced practice issues and (doctoral students only) integration of theory and practice.

CNP 4702 Introduction to Assessment (5 Credits)

This is a biweekly course designed to give students an introduction to the essentials of psychological testing, assessment, and report utilization. This course will provide students with exposure to basic objective tests, projective tests, personality tests and other diagnostic techniques.

CNP 4704 Psychological Assessment (5 Credits)

Administration, scoring and interpretation of objective and projective personality-assessment techniques, the DSM IV, diagnostic categories, report-writing skills, ethical standards for testing. Lab fee required. Prerequisite: counseling or school of psychology Ph.D. student or instructor approval.

CNP 4705 History and Systems of Psychology (3 Credits)

Historical and philosophical basis of modern psychological theories; basic issues as related to major school of psychology.

CNP 4706 Cognitive Assessment (5 Credits)

This course provides students in Counseling Psychology with experience in individual intelligence, learning and memory, and neurocognitive screening test administration, scoring, interpretation, and report writing. Each student has an opportunity to administer various cognitive measures, with particular emphasis on the Wechsler Scales. Contemporary issues pertinent to the assessment of intelligence are covered. Emphasis is placed on synthesizing and integrating information from cognitive assessment with other sources to produce effective intervention and therapeutic recommendations. Issues regarding the use of such tests are discussed, as well as appropriate use in agencies and clinical practice. Lab fee required.

CNP 4707 Introduction to Integrated Health (3 Credits)

This course is designed to provide students with an introduction to issues in the practice of integrated health psychology, including the topics of interprofessionalism, diagnosis and assessment, treatment, treatment adherence, and consultation. Students will learn about the roles held by behavioral health providers, particularly in the primary care medical setting. Emphasis is placed on evidence-based and culturally competent practice in the integrated health environment.

CNP 4710 Career Counseling (5 Credits)

This course is designed to facilitate student development of knowledge, skills and competencies to engage in counseling clients with career issues; utilize occupational/career resources including technology-based resources and assessments; examine theories of career development and decision-making; develop the ability to evaluate and implement appropriate assessments; collaborate with clients in identifying personal and career goals; and organize and implement program planning and techniques and do so in a diversity of work settings. Lab fee required.

CNP 4720 Group Counseling Theory (5 Credits)

This course is designed to introduce graduate counseling students to group counseling theory, research, and practice. This course will focus on group theory and research but will also provide instruction and experiences in a variety of group techniques. The course is designed for students in counseling psychology, school psychology, and other related fields who work with persons in a group context. This course focuses on the entire age range from children, adolescents, and adults. This course aims to define therapeutic groups broadly. Students will learn about group theory, research, and techniques through class lectures and discussion, group demonstrations, videotapes on group topics, reading assignments, a group presentation, an experiential task group, a required paper related to the task group presentation, and other required assignments.

CNP 4730 Research Methods and Program Evaluation (5 Credits)

This course is designed to provide an introduction and overview of comprehensive program development and evaluation, and research methods. The course will provide direction on the following topics: causation, research hypotheses, independent and dependent variables, sampling, internal and external validity, experimental, quasi-experimental, single-subject, causal-comparative, and correlational designs, measurement and data collection procedures, types of instrumentation and methods for determining reliability.

CNP 4740 Basic Counseling Techniques (3 Credits)

Basic counseling and interviewing skills; emphasis on building counseling relationships and facilitating client's self-exploration; skills of empathy, advanced empathy, self-disclosure, confrontation and immediacy.

CNP 4741 Int Counseling Techniques (3 Credits)

Sample of counseling techniques and effectiveness with different types of clients. Prerequisite: CNP 4740.

CNP 4743 Professional Development in Counseling (1 Credit)

Introduction to the field of counseling with special emphasis on practicum placement. Prerequisite: admission to the MA program in counseling psychology.

CNP 4750 Counseling Psychology Beginning Practicum (3 Credits)

Supervised practice in counseling for master's students. Prerequisite: CNP 4740, and be a counseling psychology student.

CNP 4751 M.A. Internship (1-5 Credits)

Yearlong, 600-hour supervised field practice for second-year master's students with weekly seminar. Prerequisites: CNP 4750 and be a counseling psychology master's students.

CNP 4752 Counseling Psychology Advanced Practicum I (3 Credits)

Supervised practice in counseling for doctoral students. Prerequisites: CNP 4750 or prior practicum, and be a counseling psychology student.

CNP 4753 Counseling Psychology Advanced Practicum II (1 Credit)

Group supervised practice in counseling for second-year doctoral students with emphasis on process and countertransference issues. Prerequisite: CNP 4752.

CNP 4754 Couns Psych: PhD Internship (1 Credit)

Meets 12-month internship requirement in counseling psychology. Prerequisites: completion of comprehensive examination and dissertation proposal.

CNP 4755 MA Clinic (5 Credits)

MA clinic is a required course for all students in the 90-credit Clinical Mental Health Counseling Concentration.

CNP 4756 PhD Counseling Clinic (1 Credit)

On-campus, advanced-experience counseling of clients from the community with close supervision and observation. Prerequisite: Doctoral student in counseling psychology.

CNP 4758 PhD Field Experience (8 Credits)

Required 12-month, 40-hour-per-week internship for doctoral students in Counseling Psychology. Registration for this course indicates full-time enrollment. This course is not graded. Prerequisites: completion of comprehensive examination and dissertation proposal. Department approval is required for registration. Fall quarter enrollment must be done in conjunction with CNP 4754.

CNP 4760 School Counseling Practicum (1-4 Credits)

A minimum of 100 hours supervised practice in School Counseling for Master's students in the School Counseling Concentration. Students must be supervised by a licensed school counselor. Enforced Prerequisites: CNP 4740 with a minimum grade of C.

CNP 4761 School Counseling Internship I (1-4 Credits)

100-hour supervised field practice in a school setting for Master's students in the School Counseling Concentration, with weekly seminar. Students must be supervised by a licensed school counselor.

CNP 4762 School Counseling Internship II (1 Credit)

A minimum of 600-hour supervised field practice in a school setting for master's students in the School Counseling Concentration, with weekly seminar. Students must be supervised by a licensed school counselor.

CNP 4768 Counseling Psychology: Social Psychology (3 Credits)

Social Psychology is designed to provide students a broad and general understanding of social psychology. The course will cover aspects of self, cultural dynamics, group processes, emotional/cognitive aspects of social behavior.

CNP 4769 Cognitive Behavioral Therapy (4 Credits)

Cognitive Behavior Therapy (CBT) is a treatment approach that incorporates a multitude of evidence-based strategies to construct an individualized and comprehensive treatment plan for a wide variety of mental/behavioral disorders. CBT has been extensively investigated in both research and applied setting. CBT offers foundational knowledge and skills to provide an active, client involved approach to resolving individual and family challenges. CBT is structured, goal-directed, and focuses directly on client problem areas. Students will practice and develop the skills necessary to implement CBT techniques and strategies.

CNP 4770 Counseling Psychology Seminar: Research (3 Credits)

Review of current process and outcome research in counseling and psychotherapy; substantive issues, including client and therapist variables as well as methodological issues and experimental designs. Prerequisite: doctoral student.

CNP 4772 Diversity Seminar: Psycho-Social Issues (1-5 Credits)

Series of courses to analyze social and psychological impacts of oppression related to minority status, socioeconomic status, gender and family configurations; taught using an awareness and knowledge approach; implications for counseling; series includes general seminar and series of 1 credit follow-up seminars on particular topics, e.g., American Indian mental health, African- American mental health and women's mental health. Prerequisites: CNP 4773 and students must take the 3-credit general seminar prior to the individual seminars.

CNP 4773 Diversity: Multicultural Counseling Psychosocial Issues (5 Credits)

The purpose of this course is to provide an overview of multicultural and social justice issues in the United States. While this is not a skills training course, implications for multicultural counseling skills will also be discussed. Issues and concepts related to gender, race, ethnicity, sexual orientation, gender identity, and social class will be examined within a framework of privilege and oppression. This course is designed to present a general introduction to multicultural and social justice issues as well as culturally responsive counseling. Due to the extensive amount of material in this area, only some selected issues and topics will be presented. Students interested in gaining more specific, or in-depth knowledge of topics covered in this class may pursue the one-credit Counseling Psychology diversity seminars offered in the Counseling Psychology program. Significant emphasis will also be placed on experiential learning and the application of students' awareness and knowledge accrued throughout the quarter.

CNP 4775 Counseling Psychology: Cognitive & Affective Basis of Behavior (3 Credits)

The seminar is intended to enhance students' understanding of the fundamental psychological concepts in cognitive and affective sciences and of the relevance of these theories and concepts to clinical practitioners. This seminar will provide weekly lectures to engage students in core issues surrounding the scientific study of affective and cognitive processes involved in human behavior. Academic inquiry and dialogue will also be fostered through group presentations and discussions of peer-reviewed journal articles and book chapters.

CNP 4776 Family Counseling (3 Credits)

Introduction to family counseling, including survey of major theories and research, and in-class demonstrations of techniques. Prerequisite: advanced master's or doctoral student.

CNP 4778 Health Psychology (3 Credits)

Overview of rapidly expanding field of health psychology; wide variety of topics dealing with role of psychological processes in health and health care; includes impact of stress on physical health, and psychological factors that determine health-related behavior, psychological aspects of delivery of health care, and assessment issues in health psychology.

CNP 4780 Counseling Psychology Seminar: Supervision (3 Credits)

Introduces literature and research on counseling supervision, including awareness of individual differences; provides experience supervising master's level counselors. Prerequisites: doctoral student and CNP 4752.

CNP 4781 Counseling Psychology: Introduction to Psychodynamic Theory (4 Credits)

This class will explore psychodynamic theory, with an emphasis on creating case formulations and practicing an analytic position in the treatment process. We will be focusing primarily on individual treatment with adults in outpatient settings using a developmental lens. You will be encouraged to develop and deepen your capacities for curiosity and self-reflection, in part as they relate to the exploration of countertransference reactions and meaning making. You will be learning both professionally and personally, as they mutually influence one another, what it means to be a psychodynamic clinician.

CNP 4783 Counseling Psychology: Eating Disorders (3 Credits)

This class will offer the opportunity to learn about the diagnosis, assessment, theory, and treatment of eating, weight and shape disorders. While working with clients with eating disorders (EDs) can present unique challenges, we will explore the perception/stigma that these clients are notoriously difficult to treat. We will focus on the importance of integrative treatments, and the role of behavioral, symptom focused techniques in addition to psychodynamic approaches that explore underlying characterological and developmental issues. This class will also consider the impact of culture and media on body image, and the effects of these messages on personal beliefs, attitudes and behaviors.

CNP 4784 Psychopathology (5 Credits)

This course is designed to provide students with a thorough understanding of assessment, diagnosis and classification of psychological abnormalities. Psychopathology is typically characterized by deviance from cultural norms, personal distress, danger to oneself or others, or an inability to function in daily life. We will explore the empirical basis for understanding psychopathology as defined in the DSM 5, as well as, the inherent limitations of the current diagnostic system. Interactions of biological, social, psychological, cultural, political, and environmental factors will be stressed, particularly as they contribute to the development and maintenance of mental disorders. Cultural perspectives on each disorder will be addressed every week to attend to issues of social justice and multiculturalism related to diagnosis.

CNP 4787 Motivational Interviewing (4 Credits)

Motivational Interviewing is a client-centered collaborative style of therapeutic relationship designed to strengthen a person's motivation for and commitment to change. This class will facilitate skill development in managing client ambivalence, eliciting change-talk and honoring the client's autonomy regarding taking steps toward a commonly agreed upon goal.

CNP 4788 Physiological Psychology (3 Credits)

Physiological Psychology is designed to expose students to the field of physiology and highlights its reciprocal relationship with behavior. We will cover topics including the structure and function of the nervous system and areas of research relevant to clinical psychology (e.g., substance abuse, mental illness, and biological rhythms). Given the limited time devoted to each area, more in-depth coverage should be pursued by interested persons.

CNP 4789 Pharmacology of Addictive Behavior I and II (4 Credits)

This class provides a solid base of knowledge about the drugs of abuse including what occurs physiologically with drug use and other addictive behaviors. Additionally, this course explores neuroscience and genetic research on addiction to better understand the changes in the brain that underlie drug use and addictive behaviors.

CNP 4790 Counseling Psychology Seminar: Ethics (3 Credits)

Professional ethics in practice and research in counseling psychology, including informed consent, confidentiality, clients' rights, psychologists' obligations, etc.; basic APA documents. Prerequisite: doctoral student.

CNP 4791 Counseling Psychology Seminar: Counseling Couples (3 Credits)

Introduction to couples counseling, including survey of major theories and research.

CNP 4792 Pro-Seminar in Counseling Psychology (1 Credit)

Introduction to field of counseling psychology required for all first-quarter doctoral students. Prerequisite: counseling psychology doctoral students.

CNP 4794 Counseling Psychology Seminar: Special Topics (1-15 Credits)

Variety of special topics on research and practice in counseling psychology; readings, lectures and projects to provide an in-depth understanding of topics, which vary from to year and cover areas such as counseling women, counseling in business and industry, advanced group therapy, time-limit counseling, vocational counseling, etc.

CNP 4795 Master of Arts Counseling: Legal and Ethical Issues (5 Credits)

Introduction to ethical and legal issues in school and agency counseling for master's students. Prerequisite: Master's student in Counseling Psychology.

CNP 4797 Counseling Addictive Behavior (4 Credits)

Introduction to assessment, treatment and outcome evaluation of chemical and nonchemical addictive behaviors. Requirements include abstinence from a "compulsive" behavior; journaling about one's cognitive, emotional and behavioral reactions during the abstinence period; attending 12-step meetings; participating in a quasi-12-step in class meeting; critiquing a film depicting dynamics of an alcoholic family.

CNP 4799 Infectious Diseases in Addictive Behaviors (2 Credits)

Drug and alcohol abuse and infectious diseases go hand in hand. This class explores the high risk for contracting and spreading infectious diseases among drug abusers. This class helps prepare students to identify such diseases, determine client risk for infection, and educate students about disease prevention and treatment options.

CNP 4800 Consultation (1 Credit)

This course is designed to teach the basic theories of psychological consultation that can be used to guide practice in a variety of settings. Students learn to differentiate process, collaborative and expert consultation. The class format includes presentations from practitioners working in school, medical, forensic, and business settings. In addition, students also learn about the ethical principles that guide their practice and to also become sensitive to how their work with diverse cultural backgrounds may be perceived. Prerequisite: must be enrolled in the Counseling Psychology doctoral program.

CNP 4991 MA Independent Study (1-10 Credits)**CNP 4995 Independent Research (1-10 Credits)****CNP 5771 Counseling Psychology: Doctoral Research Seminar (3 Credits)**

The purpose of this course is to guide students in completing the Dissertation. This is not a research methods course but a course focused on the application of research understandings, knowledge, concepts, and terminology in the design of a dissertation. It is assumed that prerequisite research courses provide students with considerable information, foundational knowledge, and conceptual understandings of both quantitative and qualitative research methodologies and other relevant topics.

CNP 5991 PhD Independent Study (1-10 Credits)**CNP 5995 Independent Research (1-20 Credits)**

School Counseling Courses

COUN 4001 School Counseling Immersion (0 Credits)

This on-campus experience is for students in the SchoolCounseling@Denver online program.

COUN 4600 Orientation to Professional Counseling & Ethical Practice (4 Credits)

This course provides an introduction to the counseling profession, including an overview of legal, ethical, and structural issues.

COUN 4610 Counseling Techniques (4 Credits)

Foundations and application of counseling and interviewing skills. This course emphasizes building and maintaining counseling relationships, facilitating client self-exploration and expression, and skills including, but not limited to, empathy, reflection, and challenging.

COUN 4620 Counseling Theory (4 Credits)

This course introduces students to basic counseling and psychological theories and philosophical principles as a foundation for professional training including history, concepts, techniques, and trends. Students gain an understanding of the theories and research related to helping relationships and develop the skills to apply their knowledge in therapeutic relationships through experiential activities. Students also develop and refine their own counseling orientation.

COUN 4630 Research Methods and Program Evaluation (4 Credits)

This course provides an introduction and overview of quantitative, qualitative, and mixed-methods research in counseling and education, including the development of program evaluations and assessments.

COUN 4700 Diversity: Multicultural Counseling Psychosocial Issues (4 Credits)

Overview of multicultural and social justice issues in the United States and their relationship with and implications for counseling. Content includes but is not limited to examination of concepts related to race, ethnicity, religion, socioeconomic status, gender, sexuality, and neurodiversity within a framework of privilege, oppression, and intersectionality. Prerequisites: COUN 4600 & COUN 4610.

COUN 4710 Group Counseling (4 Credits)

This course provides an introduction to group counseling theory, process, leadership, and techniques. It includes participation as a group member in a small group activity, as articulated within the course. Prerequisites: COUN 4600, COUN 4610, and COUN 4620.

COUN 4720 Assessment & Appraisal (5 Credits)

This course is designed to give students an introduction to the essentials of psychological testing, assessment, and report utilization. This course provides students with exposure to basic objective tests, projective tests, personality tests, and other diagnostic techniques. Prerequisite: COUN 4600 & COUN 4630.

COUN 4730 Lifespan Development (4 Credits)

Survey of the principles of development from conception to adulthood, emphasizing biological, environmental, and cultural factors affecting development. Prerequisites: COUN 4600, COUN 4610, and COUN 4630.

COUN 4740 Roles & Responsibilities of the School Counselor (4 Credits)

This course provides an in-depth study into the roles and responsibilities of a school counselor including counselor, consultant, coordinator, and educational leader. Strategies for increasing collaboration among interested parties, attendance among students, and involvement among caregivers are included. Students will understand the role of the school counselor as an educational leader and advocate for social justice in the school setting.

COUN 4750 Exceptionalities (2 Credits)

Survey of research and theory related to learners with exceptionalities. This includes but is not limited to differences (e.g., cognitive, behavioral, physical) which warrant additional services toward meeting the needs of the individual. Prerequisites: COUN 4700, COUN 4710, and COUN 4730.

COUN 4800 Career Counseling (4 Credits)

This course facilitates development of knowledge, skills and competencies to engage in counseling clients with career issues, utilize occupational/career resources including technology-based resources and assessments, examine theories of career development and decision-making, develop the ability to evaluate and implement appropriate assessments, collaborate with clients in identifying personal and career goals, and organize and implement program planning and techniques in a diversity of work settings. Prerequisite: COUN 4720.

COUN 4801 Developmental Application (2 Credits)

Application of developmentally informed counseling skills and theories. Prerequisites: COUN 4700, COUN 4710, and COUN 4730.

COUN 4805 Gender & Sexuality (4 Credits)

This course provides students with an understanding of human sexuality and gender identities/expressions throughout the lifespan. It highlights awareness, knowledge, and skills in working with affectionally-, sexually-, and gender-diverse students in schools. The course explores impacts of our dynamic, intersecting identities on sex, sexuality, gender, intimacy, and diverse relationship structures. Prerequisites: COUN 4700 and COUN 4730.

COUN 4810 Comprehensive School Counseling Programs (4 Credits)

This course provides a framework for developing a comprehensive school counseling program in order to meet the development needs of students in the domains of academic, career, and social/emotional development. Students become familiar with the American School Counselor Association's National Model, the use of data to inform programmatic decision making, and factors related to school attendance and safety. The course is designed to provide students with practical experience in needs assessment, and program development, implementation, and evaluation. Prerequisites: COUN 4730 and COUN 4740.

COUN 4815 Program Evaluation (2 Credits)

This course facilitates familiarity with application and implementation of program evaluation concepts, including evaluation design, statistical methods, and ethical and cultural considerations. Prerequisites: COUN 4630, COUN 4730, and COUN 4740.

COUN 4820 Counseling Youth & Families (4 Credits)

Introduction to counseling children and adolescents, with considerations related to counseling within the family system. Includes integration of developmental, psychological, counseling, and family theories, and application of evidence-based interventions. Prerequisites: COUN 4730.

COUN 4825 Activity-Based Counseling (3 Credits)

This course explores activity-based counseling theory and interventions. Emphasis is placed on the ways children and youth use play, fantasy, art, and other activities to communicate. Students learn developmentally appropriate play and activity-based therapy techniques, theory, and practical application. Prerequisites: COUN 4700, COUN 4710, and COUN 4730.

COUN 4830 Diagnosis in Counseling (4 Credits)

This course covers the identification and treatment of psychological disorders and substance use and abuse across the lifespan. Special emphasis is placed on risks, signs, and symptoms of mental health and substance use disorders from a school counseling perspective, including common treatments and both school- and community-based resources and supports. Prerequisites: COUN 4700, COUN 4720, and COUN 4730.

COUN 4835 Counseling for Trauma, Crisis, & Grief (4 Credits)

Through combination of lecture, role plays, and case conceptualization, this course provides students with foundational knowledge of theories, models, and best practices for trauma, grief, and crisis across the lifespan. Emphasis will be placed on learning how to differentiate between trauma, grief, and crisis when assessing, conceptualizing, and providing services to P-12 students. This course will also address the individual and systemic impact of trauma, crisis, and grief on students, families, and communities. Prerequisite: COUN 4700 & COUN 4730.

COUN 4840 Educational Strategies and Policies (4 Credits)

This course provides an overview of the history and current issues in legislation and government policy relevant to school counseling. It provides training in advocacy, leveraging community resources, differentiated instruction, multilingual learners, and classroom management to prepare students for engaging with a diverse P-12 student population. Prerequisites: COUN 4810.

COUN 4850 School Counselor Interventions (4 Credits)

This course focuses on developmentally appropriate evidence-based interventions used in a school setting for prevention and intervention to support and promote academic achievement and post-secondary success. The course explores interventions to address common social emotional, academic, and career-related issues faced by students in schools, including culturally competent peer-, community-, and family-based approaches. Prerequisites: COUN 4810.

COUN 4900 Practicum (4 Credits)

A minimum of 100-hour supervised field practice in a school setting, accompanied by weekly live session meetings which provide group supervision. Students' field practice must be supervised by an approved, appropriately credentialed school counselor. Prerequisites: COUN 4740, COUN 4750, and COUN 4760.

COUN 4901 School Counseling Field Supervision (1 Credit)

This course provides group supervision for students completing supervised field experience in roles and settings with clients relevant to their specialty area. Prerequisite: COUN 4900. This prerequisite may be taken concurrently with COUN 4901.

COUN 4910 Internship I (4 Credits)

A minimum of 300-hour supervised field practice in a school setting, accompanied by weekly live session meetings which provide group supervision. Students' field practice must be supervised by an approved, appropriately credentialed school counselor. Prerequisites: COUN 4900.

COUN 4920 Internship II (4 Credits)

A minimum of 300-hour supervised field practice in a school setting, accompanied by weekly live session meetings which provide group supervision. Students' field practice must be supervised by an approved, appropriately credentialed school counselor. Prerequisites: COUN 4910.

Educational Leadership and Policy Studies

The Educational Leadership and Policy Studies (ELPS) department prepares courageous, visionary, and transformative leaders in educational settings at all levels of the education system. To achieve this, the program offers intensive, integrated academic and field-based experiences and competency-based learning to support students as they develop effective leadership competencies. National partnerships and memberships with the Carnegie Project on the Education Doctorate (CPED), Alliance to Reform Educational Leadership (AREL), University Council of Educational Administration (UCEA), Wallace Foundation, Carnegie Foundation, New York City Leadership Academy, Teach For America, Colorado Association of School Executives (CASE), and local school district partnerships help the program to continuously improve. The ELPS department is a CDE-approved provider of School Turnaround Leadership (<http://www2.ed.gov/programs/turnaroundschldr/?exp=0>). Students within the department focus on leadership, policy studies, and research that are relevant and appropriate for meeting today's and tomorrow's educational challenges.

All of the degree programs in ELPS engage students in rigorous content, collaborative inquiry, and reflective practice within a tightly-connected cohort structure that intentionally builds learning communities and professional networks. Faculty members partner with individuals, schools, districts, and organizations to build leadership capacity and improve all educational contexts. All components of ELPS programs incorporate the following practices to prepare students to generate new knowledge and expand career choices within the field of education.

- Leading change and demonstrating impact in K-12 education
- Learning through integrated academic and school-based experiences and projects
- Grounding all work in social justice, problems of practice, and authentic contexts
- Creating learning communities that foster academic achievement and optimal growth and development for each learner
- Engaging in leadership, policy and research that are relevant and appropriate for meeting today's and tomorrow's educational challenges in complex and ever-changing educational contexts

Doctor of Philosophy (PhD) in Educational Leadership & Policy Studies

The **90-quarter-credit hour-program** beyond a master's degree is a degree with coursework that includes a strong focus on quantitative and qualitative research methods, educational leadership, organizational theory, systems theory, and policy analysis. These areas are studied in an effort to expand and enhance research skills and add to the knowledge base needed for effective schools. The ELPS PhD prepares individuals for successful careers in research, academia, educational leadership, and policy.

The program consists of two years of foundational doctoral coursework (two courses/quarter) and a third year of coursework of research methodology and a specialized focus of study. The coursework in the initial two years of the program is offered in a doctoral cohort format alongside ELPS EdD students. This cohort structure builds a learning community of fellow educational leaders and scholars who support each other through coursework and research. PhD students complete a traditional five-chapter dissertation. In addition to the requirements for the degree, students have the option of completing a 300-hour administrative internship (requirement for Administrator License, Special Education Director License, and Gifted Education Director License). Applicants must hold a master's degree or a juris doctor.

Program Accreditation

Colorado Department of Education (CDE) Approved Educator Preparation Program. Graduates who have completed the Administrative Internship may apply for Colorado Initial Administrator License (<http://www.cde.state.co.us/cdeprof/checklist-initialadministratordirectorofspecial/>) through the CDE.

Doctor of Education (EdD) in Educational Leadership & Policy Studies

This **65-credit-hour degree program** beyond a master's degree builds on prior leadership experience and preparation and prepares students to be transformative leaders in a variety of educational settings. The program consists of two years of foundational doctoral coursework (two courses per quarter). The coursework in the initial two years of the program is offered in a doctoral cohort format with ELPS PhD students. This cohort structure builds a learning community of fellow educational leaders and scholars who support each other through coursework and research. After the initial two years of coursework, EdD students continue to develop and complete their Dissertation in Practice. The Dissertation in Practice is independent research regarding a persistent, complex problem of practice with a supportive structure of quarterly research seminars. In addition to the requirements for the degree, students have the option of completing a 300-hour administrative internship (requirement for Administrator License, Special Education Director License, and Gifted Education Director License). Applicants must hold a master's degree or a juris doctorate and have completed a principal or teacher-leadership program, or have other school leadership-related work experience.

Program Accreditation

Colorado Department of Education (CDE) Approved Educator Preparation Program. Graduates who have completed the Administrative Internship may apply for Colorado Initial Administrator License (<http://www.cde.state.co.us/cdeprof/checklist-initialadministratordirectorofspecial/>) through the CDE.

Master of Arts (MA) in Educational Leadership & Policy Studies with a Concentration in Principal Licensure

The Master of Arts in Educational Leadership and Policy Studies with a concentration in Principal Licensure is designed to be completed the year following the Certificate in Educational Leadership and Policy Studies (see below). The MA offers extended study of transformative and turnaround leadership, covering issues of culture, diversity, poverty, special needs, business design, entrepreneurship, and data-driven leadership. The MA consists of a total of 45 credit hours, which includes the Certificate in Educational Leadership and Policy Studies with a concentration in Principal Licensure program (30 credits) and four additional courses (15 credits). The completion of the MA culminates with the design and execution of an action research or school design project.

This program can be completed in a hybrid in-person format with evening or weekend campus classes or in fully online format with evening or weekend synchronous Zoom classes.

Program Accreditation

Colorado Department of Education (CDE) approved Educator Preparation Program and Turnaround Leader Program. Graduates may apply for Colorado Initial Principal License (<http://www.cde.state.co.us/cdeprof/checklist-initialprincipal/>) through the CDE.

Certificate in Educational Leadership & Policy Studies with a Concentration in Principal Licensure

The 30-credit Certificate in Educational Leadership and Policy Studies leads to recommendation for Colorado Principal Certification. The program offers competency-based learning that is individualized to the leadership needs of the aspiring leader and the needs of the school in which the student is interning. It focuses not only on developing the skills and abilities necessary for success as a school leader, but also on developing a strong commitment to core values essential for ethical and responsible leadership.

The Certificate consists of four quarters of coursework and requires a minimum of 300 internship hours that are integrated into coursework. During the first quarter of the program (usually Summer), students engage in a leadership retreat that builds community and provides an experiential learning experience to practice the leadership theories and concepts that serve as the foundation of the program. The Certificate can be combined with additional coursework for a master's degree (see above).

The cohort structure promotes the development of a rich learning community for collaboration and challenge with many different opportunities for interaction and analysis. Each quarter incorporates face-to-face sessions with cohort and faculty, inquiry projects, self-assessments, various online learning activities including discussion boards and reflection journals, as well as readings to guide instruction and learning.

This program can be completed in a hybrid in-person format with evening or weekend campus classes or in fully online format with evening or weekend synchronous Zoom classes.

Program Accreditation

Colorado Department of Education (CDE) Approved Educator Preparation Program. Graduates may apply for Colorado Initial Principal License (<http://www.cde.state.co.us/cdeprof/checklist-initialprincipal/>) through the CDE.

Doctor of Philosophy in Educational Leadership & Policy Studies

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well as the baccalaureate.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Doctor of Education in Educational Leadership & Policy Studies

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well as the baccalaureate.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:

- Applicants must have completed principal, teacher-leadership or other leadership preparation or served in a leadership position.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

The program consists of four quarters of coursework and requires a minimum of 300 internship hours that are aligned with coursework.

Credits required for degree:**30 credit hours****Faculty**

Erin Anderson, Associate Professor, PhD, University of Virginia

Doris Eileen Candelarie, Clinical Associate Professor, PhD, University of Denver

Kristina A. Hesbol, Associate Professor, PhD, Loyola University, Chicago

Jayson W. Richardson, Professor and Department Chair, PhD, University of Minnesota-Twin Cities

Starla J. Sieveke-Pearson, Clinical Assistant Professor, PhD, University of Colorado Denver

Lolita Antoinette Tabron, Associate Professor, PhD, Texas A&M University

James R. Davis, Professor, Emeritus, PhD, Michigan State University

Susan Korach, Professor, Emerita, EdD, University of Houston

Courses**ADMN 4330 Culturally Responsive Leadership, Mentoring & Supervision (3 Credits)**

The course is designed to assist mentors and instructional leaders in the development and application of skills and to bring these to day-to-day leadership in the current role of supporting a pre-service teacher. Students will analyze their leadership styles and apply their learning to leadership scenarios to refine their school leadership skills. Students will explore the mentor's role as an educational leader to enhance the existing educational experience for their pre-service teacher and classroom students. This course reviews adult learning theory, communication strategies, and problem-solving approaches for continuous school improvement and pre-service teacher supervision and feedback. This course includes studying and applying a variety of approaches for supporting, supervising, and evaluating educator effectiveness, including approaches to classroom observation; mentoring and peer support systems; and tenets of change theory related to school improvement initiatives.

ADMN 4700 Special Topics in K-12 Administration (1-5 Credits)**ADMN 4810 School Administration: Case Studies (3 Credits)**

Focus on current critical aspects of work of effective superintendents and other administrators in key decision-making roles; includes reading, discussions and guest presenters who are practicing administrators; problem scenarios presented for resolution.

ADMN 4812 Perspectives in District Leadership (4 Credits)

District leaders must focus their actions on the common goal of improving student learning and school systems must be organized to make this the fundamental priority. The purpose of this course is to examine district-level leadership, policies, and practices that support a school community committed to and focused on achievement of all students. The district role is emphasized in supporting school improvement, closing achievement gaps, providing resources, monitoring and using accountability data, and working with the community and school board leadership. Responsible administration of human and fiscal resources is necessary to accomplish systemic instructional improvement at the district level. The goal is to prepare leaders who will lead school districts that are culturally responsive and promote equity and excellence. This course includes an experiential learning component.

ADMN 4817 Administrative Internship (0-6 Credits)

Opportunity to be supervised in on-the-job experience to better prepare school administration students for district administration careers.

ADMN 4819 Organization Theory & Behavior (4 Credits)

Educational institutions are complex, political organizations with a wide variety of constituents and many layers of sometimes competing cultures, systems, and explicit and implicit goals. Leaders who work with these systems must find ways to make meaning of the organization and the context in which work occurs. This course will look at organizational behavior from several points of view, with the goal of understanding major theories that have been developed and learning to apply these theories in the management and study of organizations. The roles and responsibilities of various members of the organizations will be examined as well as the governance and control issues surrounding education. Organizational analysis will be viewed through the lens of structural, political, human resource and symbolic frames. Students will critically learn and apply various organizational theories to expand your own beliefs about leadership and learning. This course includes an experiential learning component.

ADMN 4820 Educational Program Evaluation (4 Credits)

The purpose of this course is to review theories of program evaluation, evaluation designs and analysis, and current trends in evaluation. Program evaluation aims to determine whether a program, regulation, or policy is achieving its objectives by ascertaining whether it had the desired effect on intended outcomes. The evaluation process may include evaluation of programs, products, personnel, policy, performance, proposals, technology, research, theory, and even of evaluation itself. The course equips students with basic evaluation tools and understandings necessary to be thoughtful consumers and effective users of program evaluations in improving policy outcomes and designing more effective programs and policies. It is designed to provide students with the meaning and methods of program and policy instrument evaluation in education with the intent to contribute to informed decision making and enlightened change. Students analyze evaluations of the effectiveness of a variety of programs through discussion, field work, and case studies. This course includes an experiential learning component.

ADMN 4821 Improvement Science (4 Credits)

The course focuses on school reform and improvement through improvement science. Improvement science is an emerging concept which focuses on exploring how to undertake continuous quality improvement. The aim of this class is to explore strategies of improvement science to develop educators' knowledge and skills to uncover and use data that exist in classrooms and schools for the purpose of promoting educational change and improvement. The participants in this course will create and conduct an improvement science project. This course includes an experiential learning component.

ADMN 4822 Action Research and Systems Leadership (4 Credits)

This course will prepare students, as scholarly practitioners and academic researchers, to use action research methodology and systems leadership to solve equity related educational problems of practice. Action research, which was developed in education in 1940's by Kurt Lewin, is practitioner-based research, based in traditional research designs. It is focused on improvement, connects theory to practice, encourages empowerment, and advocates for social justice.

ADMN 4823 Educational Policy Making in the United States (4 Credits)

This course focuses on the educational policy system, the policy process, and current educational reforms. In addition to an overview of the basic governmental structure, this course addresses the micropolitics of education, including how to implement and advocate for more equitable, socially just, and anti-racist policies to improve the quality and effectiveness of learning for children and families. Course activities facilitate the development of skills for addressing policies and practices that affect the success of all students and schools, learning how to identify and unpack current critical issues, and identifying where and how to act to influence policy decisions. This course includes an experiential learning component.

ADMN 4827 Foundations of Educational History and Philosophy (4 Credits)

This foundational course examines the various theoretical, ethical, historical and philosophical perspectives that will inform educational leaders as policy and change strategies are formulated. This course includes an experiential learning component.

ADMN 4828 Leadership for the 21st Century: Using Creativity to Build Effective Schools (3 Credits)

Designed to assist leaders, at the district or building level, in the implementation of standards-based education to improve student learning and achievement. Primary emphasis is given to applying strategies for addressing critical issues in sustaining the equitable access to learning in a standards-based educational organization.

ADMN 4834 Culturally Responsive School Leadership (3 Credits)

Extends understanding of complex systems' operations and responses by examining multicultural issues in the historical and social context and complexity of schools and school districts. Opportunities will be provided for students to develop an understanding of issues of diversity and the relationship of these issues to the roles and work of school/district administrators. The exploration of multicultural issues will occur through the examination of various themes relative to school/district administration such as curriculum, administration, human resources, policy and reform. Particular emphasis will be given to the exploration of the historical and future purposes of schooling in a democratic/pluralistic society in an effort to help students to develop critical knowledge and skills essential for providing leadership in 21st century schools.

ADMN 4835 Leading Teaching and Learning (4 Credits)

In this course, students will examine what it means to be a district-level leader focused on and supportive of learning by considering the roles and responsibilities of leaders related to teaching and learning, and by examining the challenges and opportunities inherent in that role. Topics of study relevant to instructional leadership include developing (a) coherent systems of teaching and learning, (b) professional community, (c) professional capacity, and (d) an equitable, student-centered learning climate. Students will gain practical and theoretical tools to improve curriculum development, instruction, and student achievement district wide. Students will meld theory and practice by using empirical thinking and evidence-based change to address social justice concerns within instructional programs in schools and school districts. We will look at how curriculum both reproduces and transforms society and how society both reproduces and transforms curriculum in schools. This course includes an experiential learning component.

ADMN 4836 Improving Organizational Culture (4 Credits)

The purpose of this course is to understand organizational culture as a complex and challenging issue to shape and lead. The complex culture of schools or other educational organizations means many things including climate, organizational members' engagement, culturally competent practices and the quality of human relationships in the organizational environment. This course will enable leaders to analyze the components of an educational organization's culture and develop specific plans to create a culture that supports improved learning outcomes for every student, using high-quality, best instructional practices. Following the collection and analysis of data, students will be prepared to serve as Equity Oriented Change Agents (EOCA), leading the improvement of school culture focused on equitable access to high-quality instruction and services for every student. This course includes an experiential learning component.

ADMN 4840 Strategic and Transformative School Leadership (9 Credits)

Effective school administration is guided by research and best practices which inform governance, vision, leadership, and implementation processes. Effective principals base their work on commitment to moral principles, core values, and the many dimensions of effective theory and practice. Understanding personal values, developing leadership skills and building a strong knowledge base regarding research and best practice are a key focus of the course. In addition, this course also examines strategies for visioning, mission building and branding; defining and assessing value and quality; developing competitive strategy; building networks and partnerships; assessing risk and gauging opportunity; building systems and sustainability; recruiting and developing staff, boards and stakeholders; engaging communities; and acquiring sources of funding. Students must be accepted into an ELPS certificate or MA program.

ADMN 4841 Instructional Leadership for Equitable Schools (5 Credits)

This course serves aspiring principals in the development and application of skills and knowledge associated with standards-based instructional practices, curriculum planning and development, assessment, and program evaluation. Students are assisted in developing and understanding issues of diversity and multiculturalism and their influence on the development and supervision of the instructional program. Although the major focus is on local aspects of standards-based education, some attention is given to the national role in this area. School leaders need to apply quantitative and qualitative research skills in a variety of ways to understand and improve the work of schools. This course reviews methods, applications, and data sources, including assessments and large-scale datasets, for continuous school improvement and program evaluation. In addition to the issues of instructional leadership, considerable attention is given to the examination of the needs of the individual student in the learning environment as well as research on learning styles, learning theories and models of teaching. Primary focus areas are supports for special education students, English Language learners, gifted students, and students in poverty. Students must be accepted into an ELPS certificate or MA program.

ADMN 4842 Human Resource Leadership (5 Credits)

This course focuses upon specific content relative to helping the principal effectively manage human resources within the school setting. It provides examination of organizational dimensions, planning, recruitment, selection, placement and induction, staff development, appraisal, rewards, collective bargaining, and practice of negotiation skills. The course includes study and application of a variety of approaches for supervising and evaluating instruction, including approaches to classroom observation; adapting, adopting, and designing various evaluation systems; advantages and problems of various student achievement and engagement indicators; induction, mentoring, and peer support systems; and leading professional development for self and staff. It includes the relationship of supervision and evaluation of teachers to the improvement of student learning, instruction, assessment and professional development. The legal and technical aspects of teacher evaluation are discussed, while outlining the role and responsibilities of the licensed evaluator in the annual process. Form and informal classroom observations and conferencing with practicing teachers are part of the requirements for this course. Students must be accepted into an ELPS certificate or MA program.

ADMN 4843 Strategic Resource Management for School Leadership (5 Credits)

This course focuses upon specific content relative to helping the principal effectively manage human resources within the school setting. It provides examination of organizational dimensions, planning, recruitment, selection, placement and induction, staff development, appraisal, rewards, collective bargaining, and practice of negotiation skills. The course includes study and application of a variety of approaches for supervising and evaluating instruction, including approaches to classroom observation; adapting, adopting, and designing various evaluation systems; advantages and problems of various student achievement and engagement indicators; induction, mentoring, and peer support systems; and leading professional development for self and staff. It includes the relationship of supervision and evaluation of teachers to the improvement of student learning, instruction, assessment and professional development. The legal and technical aspects of teacher evaluation will be discussed, while outlining the role and responsibilities of the licensed evaluator in the annual process. Formal and informal classroom observations and conferencing with practicing teachers are part of the requirements for this course. Students must be accepted into an ELPS certificate or MA program.

ADMN 4844 Critical Policy Analysis for Educational Systems (4 Credits)

Welcome to Policy Analysis for Educational Systems! Students in this experiential course will develop policy knowledge and skills to analyze P-12 educational policies and legislations with a more critical, equity-oriented lens. Students will also build their knowledge and skills to engage in critical discourse that depolarizes communities, fosters mutual understanding, and a shared vision of equity with groups that hold opposing viewpoints. Students will walk away from this course with a trained eye and skillset to critically analyze policy through a social justice lens and draw out implications for P-12 educational leadership, policy, and praxis.

ADMN 4848 Liberatory Design for School Improvement (4 Credits)

A school district is a large and complex business organization. By design, the course has a broad focus ranging from legislative issues, to manners and matters of local governance, to school finance, capital planning and budgeting concerns to more directed school and district support services. The course demands practitioners become aware of and demonstrate critical thinking as to what constitutes an effective and equitable use of people, time, technology and money in order to ensure achievement for all students. Being able to think differently, create a culture of innovation, and lead a systematic approach to implementing new ways of doing things is one of the most critical aspects of being a school leader. This course will be enhanced with a design thinking framework that takes a human-centered design approach to helping organizations innovate and grow.

ADMN 4849 Action Research for School Leaders (4 Credits)

This course emphasizes the use of research methods which are linked to research needed in schools. Students will learn to identify, analyze and solve problems. Some of the action research methods include focus groups, interviews, observations, school records and surveys. Capstone project will relate directly to the improvement of school policy and practice.

ADMN 4859 Action Research Capstone (1 Credit)

Provides support for students as they develop their action research project into the Capstone for the Masters in Educational Leadership and Policy Studies.

ADMN 4860 Principal Internship (2 Credits)

The purpose of a formal internship with a principal is to participate in supervised practical training in many of the aspects of school building administration. It is imperative that an applicant have as many first hand experiences as possible in all phases of building administration which focus upon the standards set for principals in Colorado. Must be accepted into an ELPS certificate or MA program.

ADMN 4900 Advanced Inquiry and Analysis (4 Credits)

This course is part two of a two-part course series. In part one of this series, Introductory Qualitative Research (RMS 4941), you learned about the foundations of qualitative research including philosophical perspectives, theoretical underpinnings, key characteristics, and common approaches to inquiry and research design: case studies, ethnography, narrative (testimonios), grounded theory, phenomenology, and action research. You ended the course with a design of a qualitative study proposal informed by the extant literature and your personal, practical, and intellectual goals. You completed the course with the design of a qualitative research study. ADMN [xxxx], Advanced Inquiry and Analysis, is the counterpart where you will go in the field to execute your qualitative study designed in your Introductory Qualitative Course. This intermediate level qualitative course builds on the content of other qualitative research courses at the University of Denver. In this course, you will continue to learn the skills and competencies needed to gather, analyze, and report high quality data. You will leave the course well-grounded in the application of the IRB process, data collection, data analysis, data interpretation, handling concerns about reliability, validity, and ethics; and writing the final report. The final product for this course will be the execution of a rigorous qualitative research design with preliminary findings that could be presented at a professional conference and with further development for manuscript publication.

ADMN 4991 MA Independent Study (1-10 Credits)**ADMN 4995 Independent Research (1-10 Credits)****ADMN 5900 Research Planning and Design (3 Credits)**

This course is designed to support doctoral students to design research and successfully defend a research proposal for their culminating project/dissertation.

ADMN 5910 Dissertation Seminar for Educational Leadership and Policy Studies (2 Credits)

This course is designed as a workshop to support students in the ongoing development of the EdD Dissertation in Practice (DiP) or their PhD dissertation, to work collaboratively to finalize the literature review, research plan, and/or data analysis. Our work together will be highly interactive. Students are expected to work closely with their chairs /dissertation directors/advisors and other committee members throughout the process. Feedback from the instructor will in no way supersede the judgment of the chair/dissertation director or committee members. The purpose of this course is to guide students in completing the DiP or the dissertation. This is not a research methods course, but a doctoral dissertation course focused on the application of research understandings, knowledge, concepts, and terminology in the design of a dissertation. It is assumed that prerequisite research courses provide students with considerable information, foundational knowledge, and conceptual understandings of both quantitative and qualitative research methodologies and other relevant topics.

ADMN 5991 PhD Independent Study (1-10 Credits)

Special projects in the field of education, taken by arrangement of Educational Administration faculty.

ADMN 5993 Doctoral Research Seminar (1-5 Credits)

The Doctoral Research Seminar is designed to prepare students to undertake the completion of doctoral research or a dissertation. The research process can often be confusing and overwhelming, especially for students coming from a cohort-based program. This course assists students in turning a research idea into the EDD doctoral research project or a polished dissertation proposal and provides students strategies for making the process manageable and enjoyable.

ADMN 5995 Independent Research (1-10 Credits)

Higher Education

Office: Morgridge Office of Admissions

Mail Code: 1999 E. Evans Avenue, Denver, CO 80208

Phone: 303-871-2509

Email: edinfo@du.edu

Web Site: morgridge.du.edu/programs/higher-education/ (<http://morgridge.du.edu/programs/higher-education/>)

The University of Denver's Higher Education Department (DUHigherEd) engages in collective learning about the foundations of postsecondary institutions, structures, and systems across diverse educational pathways. Our scholarship is grounded in theory, praxis, and community engagement to address persistent and emergent postsecondary phenomena at the institutional, local, regional, tribal, state, and national levels.

The DUHigherEd community is committed to:

- Teaching and mentoring educators and professionals who seek careers related to postsecondary contexts, such as administration, policy, teaching, and research, as well public and private agencies of higher education.

- Uplifting and celebrating the diverse knowledge bases held by communities historically and contemporarily excluded from higher education.
- Centering and generating consequential research, scholarship, and creative activities that addresses interlocking systems of oppression that perpetuate inequities and injustices influencing the ecology of higher education by informing policy, practice, and theory.
- Fostering a sense of accountability to build liberatory practices needed to disrupt and dismantle oppressive higher education policies.
- Engaging in critical self-reflexivity as part of an intergenerational, collective, and life-long (un)learning process.
- Serving and partnering with communities to build knowledge and enact policy and practice that dismantles systems of oppression.

As a policy-aware and globally conscious department, we recognize that U.S.-based institutions of higher education are founded on ideologies of stolen land, bodies, and labor. We align our commitments to uplift critical scholars who name the ableism, genderism, genocide, heterosexism, homophobia, nativism, racism, settler colonialism, sexism, transphobia, and xenophobia continuously informing the operations of education.

As a community of learners, we traverse the boundaries of valuing education as a human right, while understanding the complicated and problematic relationship higher education has with communities that continue to be systemically marginalized. DUHigherEd welcomes learners who seek to actualize a critical praxis for making meaningful contributions that shift the landscape of higher education.

Doctor of Philosophy in Higher Education

Students in the 90-credit Doctor of Philosophy degree program gain knowledge and demonstrate competence through coursework designed to provide a strong foundation in the field of higher education and research methods. In addition, students broaden their scope of study through a wide range of elective possibilities. Students are required to complete a teaching competency during the time of their study, and successfully complete and defend the doctoral comprehensive exam (also known as the *preliminary* oral examination) near the end of coursework. The culminating requirement for the degree is a dissertation, defended in a *final* oral defense.

Doctor of Education in Higher Education

Students in the 65-credit Doctor of Education degree program gain knowledge through coursework and research experience. Competence is demonstrated by the successful completion and oral defense of a doctoral comprehensive exam, and the successful oral defense of the dissertation in practice (DiP). It is expected that the DiP will be a publication quality dissertation that investigates a key issue or problem important to the field of higher education. Upon completing the DiP, students will be able to translate what they have learned into real-world applications, and offer practical and policy related recommendations.

Master of Arts in Higher Education

The 50-credit Higher Education master's degree is designed to prepare professionals for administrative, leadership, student-centered, and/or policy-focused careers in post-secondary institutions, private and public agencies of higher education, and other educational settings. This generalist program enables students to explore the academic and practitioner-oriented issues related to post-secondary settings and to expand their experiential awareness through practical activities in administration, policy, and research. Elective coursework allows students to complete an optional emphasis in one of three areas: College Student Affairs, Diversity and Higher Learning, or Public Policy & Organizational Change. An internship experience is required, and the final degree requirement is the successful completion of an e-portfolio.

Doctor of Philosophy in Higher Education

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well as the baccalaureate.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5

- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Doctor of Education in Higher Education

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well as the baccalaureate.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites

Applicants must have at least 2-3 years of post-master's professional experience in postsecondary education, or a related field, prior to beginning graduate coursework at DU within the Higher Education EdD program. Applicants can demonstrate proof of professional experience via resume submission and a letter of recommendation from a former or current supervisor. Applicants who have not met the preferred years of professional experience may be considered for the program on a case-by-case basis, or encouraged to apply at a later date.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Arts in Higher Education

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Laura Elizabeth Sponsler, Clinical Associate Professor, PhD, University of Pennsylvania

Michele Tyson, Clinical Associate Professor, EdD, University of Denver

Courses**HED 4201 Assessment in Higher Education (4 Credits)**

This course is designed to give student a broad understanding of assessment in higher education. This course will improve student's familiarity with existing assessment instruments for students, services, programs and facilities as well as provide an understanding importance of maintaining high standards of ethics and integrity in assessment of higher education and student affairs.

HED 4202 Program Evaluation in Higher Education (4 Credits)

This course is an overview of the craft of program evaluation, "...the systematic assessment of the operation and/or the outcomes of a program or policy, compared to a set of explicit or implicit standards, as a means of contributing to the improvement of the program or policy" (Weiss, 1998, p. 4). Program evaluation, simply put, is the craft of applying research methods in a thoughtful way to the task of finding out what and/or how interventions work in the context of the programs or policies in which they operate. This is accomplished by systematically investigating the effectiveness of program processes and outcomes within their political and organizational context. The goal is to inform social action and, by extension, improve conditions for program recipients and participants. Students in this course will explore program evaluation within the context of higher education. The purpose of this course is threefold: (1) Develop an understanding of existing evaluation theory and practice; (2) Apply evaluation theory and approaches to the context education evaluation; and (3) Develop an experiential base upon which to engage in evaluation in educational practice, and for many as a component of doctoral research projects.

HED 4210 Critical Higher Education (4 Credits)

This course examines the social and political context of U.S. education and provides an analysis of schooling, cultural politics, and global influences that inform current practices and structures of the higher education system. Central to this course is the development of a critical understanding of topics related to meritocracy, stratification, diversity, and decentralization in higher education. Prerequisite: Ph.D. student in higher education or permission of instructor.

HED 4211 Current Issues in Higher Ed (4 Credits)

A study of contemporary higher education as a specialized field of inquiry and as a professional area in which to work. Explores institutional missions as well as entities such as administration, faculty, curriculum, and student, in relationship to current issues.

HED 4212 Introduction to Public Policy and Higher Education (4 Credits)

This is an introductory course that gives students an overview of federal and state public policy, current issues, research methods, and practical skills required for the policy formation process. This is the introductory seminar to the Public Policy, Leadership and Organizational Change emphasis area for the master's program.

HED 4213 Leadership and Supervision (4 Credits)

General leadership theory and its implications for higher education; specific focus on leadership skills, such as conflict resolution, problem solving, use of teams and change advocacy.

HED 4214 History American Higher Ed (4 Credits)

The purpose of this course is to trace the history of higher education in the United States from the system's pre-colonial beginnings through the present day. Readings will focus on the original purposes of higher education within the US, the forces leading to system massification and the subsequent competing visions and goals that have led to its becoming one of the most highly contested social institutions within the public arena. Higher education in many ways serves as a mirror to US national and state-level priorities. Understanding this relationship between higher education as a system, and higher education as a national, state and individual level asset helps us understand how we've arrived at our current historical moment: a decentralized system in which education represents a spectrum of institutional types, constituencies and local concerns. One could therefore argue the history of higher education gives us an opportunity to view the US postsecondary educational system as a dynamic reflection of our country's past, present, and future.

HED 4215 Curriculum Development and Teaching Strategies in Higher Education (4 Credits)

The goal of this course is to prepare those who will serve in higher education with the knowledge, skills, and dispositions necessary to design curriculum and pedagogical strategies that produce effective and equitable learning outcomes for all students and adults in postsecondary settings. This course pushes students to think about curriculum and instruction as a decision-making process that requires articulated goals, strategic alignment, and thoughtful planning in order to realize a more effective and inclusive pedagogy. Throughout the course students will come to understand the complexities of curriculum and teaching design, but also have the process clarified with a framework for choosing among different ways of teaching that result in significant and transformative learning experiences for their future students.

HED 4216 HED Research Processes (4 Credits)

Enables students to explore current research and theories associated with their scholarly interests and resources for doing research, and to address problems in conducting original inquiry and investigations in postsecondary education. Attention is directed to the investigation of a research problem of each student's interest. Prerequisite: Successful completion of 10 credit hours of research courses or permission of instructor.

HED 4217 Student Affairs Administration (4 Credits)

A review of student services, emphasis on programmatic content and relationship to student development; organization of student service programs and national trends. To further describe the historical development of student affairs work including significant persons and activities and to begin the development of students' own professional identities as a reflective practitioner and to understand the responsibilities for integrating assistantships/ internships/work experiences to theory and new knowledge.

HED 4218 Organization and Governance in Higher Education (4 Credits)

Students enrolled in this course will acquire a nuanced understanding of how colleges and universities are governed in the United States. Questions guiding this course will be: Who has the power to make decisions on college campuses? What roles do various constituents, such as board members, presidents, deans, faculty, staff, chief diversity officers, student affairs professionals, and students play, and how reflective are these individuals of the broad diversity of U.S. higher education? How does the larger social/political context in the U.S. affect how institutions are governed? What does academic governance reveal about power, privilege and oppression? We will explore how organizational characteristics (the culture, history and structure), positionalities and identities, and policies (for example, tenure and promotion, shared governance, and academic freedom) influence the ability of institutions to dismantle systemic oppression, promote opportunity for all stakeholders, and strengthen democratic life. We will use normative and critical theories to examine the organization and governance of higher education.

HED 4219 Introduction to Higher Education (4 Credits)

This course is designed to provide students an overview of higher education as a field of study and practice. The topics covered attempt to equip students with working knowledge of the structures, functions, challenges, concerns, and opportunities within higher education as a social institution. Grounded in values and principles of inclusive excellence, the course takes equity and diversity as departure points from which any and all productive understandings of higher education must engage.

HED 4220 Org & Governance of Higher Ed (4 Credits)

Study of theoretical perspectives and empirical research drawn from the social sciences related to higher education organizations and governance with an emphasis on application of theory and practice.

HED 4221 Financing Higher Education (4 Credits)

Financing public and private institutions of higher learning; sources of income, budgeting procedures, funding and control, use of simulated exercises to illustrate principles. Recommended prerequisites: HED 4210, HED 4211 and HED 4214.

HED 4222 Legal Issues in Higher Education (4 Credits)

Review of a broad range of administrative problems with legal dimensions; process for analyzing case law on issues of access, student rights, employment, collective bargaining, church-state relations, private sector and liability. Students gain practical experience (praxis) in analyzing and applying legal concepts to higher education subjects.

HED 4226 The Community College (4 Credits)

General issues related to community college, such as history, mission, characteristics, students, curricula, teaching and student services.

HED 4229 Student Support in College (4 Credits)

This class will introduce students to basic interpersonal helping skills required in Higher Education settings, including relationship building, listening, giving feedback, problem-solving, and resolving conflicts. Students will become familiar with crisis intervention models and techniques; signs and symptoms of distress and mental illness; strategies for making appropriate referrals to mental health providers; and considerations about self and other when engaged in helping relationships, particularly those with cultural differences. Central to the course will be discussion of the appropriate role Higher Education professionals have in helping students while recognizing their limitations.

HED 4230 Reflective ePortfolio (2 Credits)

The purpose of this course is to assist students by facilitating the transition in to professional positions in higher education. A learning portfolio is a required component for completion of the degree program for the master's degree (MA) in Higher Education to demonstrate significant learning about the field of higher education and oneself in the program.

HED 4235 Organizational Change (4 Credits)

This course will focus on designing, implementing, and evaluating effective change in higher education through an equity-minded lens. The course is intended to assist students in developing a set of understandings in how to plan and implement change in higher education organizations, institutions, and as an industry. The course will introduce "equity-minded change" in higher education and will focus on how institutions can change to achieve equity, while addressing the importance of managing organizational development on a macro and micro level in higher education institutions and organizations. Students will acquire tools to manage and understand change through structural, political, human resource, and symbolic perspectives to understand the systemic interrelationships among these factors to effectively meet the changing socio/economic/political environments within higher education as they impact student success.

HED 4242 Educational Policy Analysis (4 Credits)

Students in this experiential course will develop critical policy analysis and Praxis skills that have relevance for the implementation of public policy and finance strategies for higher education. Students will employ critical thinking skills to analyze, evaluate and interpret public policy and finance with the goal of advancing the field of higher education's understanding of effective public policy and finance, as well as the unintended consequences that may arise with various policy solutions and funding strategies. Specifically, students will learn how to evaluate whether public policy and finance hinders or assists post-secondary institutions and their leaders in dismantling systemic oppression while promoting educational equity and opportunity and strengthening the public purposes of higher education. Students will interact directly with public policymakers, post-secondary administrators, policy researchers and policy analysts while assisting with a quarter-long experiential policy analysis project with an intermediary public policy organization. Students will also develop a policy analysis paper.

HED 4246 Issues of Access & Opportunity (4 Credits)

This course addresses theories and research on a variety of issues related to college preparation, school structures, and inequalities in college access. The course will cover different levels of analyses: theoretical, individual levels (i.e., race, ethnicity, and social class), organizational levels (family, geography, high school context, and outreach), and field levels (i.e., policy, testing, rankings, media, and policy). Special attention will be paid to the sociocultural context influencing issues of college access and opportunity for students.

HED 4247 Retention, Persistence, and Student Success in Postsecondary Settings (4 Credits)

This course introduces students to relevant research, theory, and practice related to college student retention and persistence. Students explore cultural, institutional, and individual factors that may impact college student persistence and critically examine theories attempting to explain why students leave college. In addition, students also closely explore the dynamics of oppression at the individual, institutional, and socio-cultural levels and the resulting impact on student retention. Effective retention practices, programs, and assessment procedures are also identified and examined.

HED 4260 Students and College Environments (4 Credits)

This course will serve as an introduction to college environments and the complexity of campus and culture. The purpose of this course is to familiarize you with today's higher education settings and provide you with strategies to maximize learning and development, for all students. In line with inclusive excellence, attention will be paid to the impact of campus environments on diverse student populations. Theoretical concepts will help explain, describe, and examine the college environments as a system and its impact on students, faculty, and staff.

HED 4261 College Student Development Theory (4 Credits)

An overview of human development theories relevant to college students, of traditional and non-traditional ages. This application will enhance the ability of student affairs professionals as they work to maximize the affective and cognitive development of students within the college setting.

HED 4270 Internship in Student Affairs (0-6 Credits)**HED 4281 Inclusive Excellence Programming and Development (4 Credits)**

IE in Programming and Development will provide an overview related to the development and implementation of cultural programming and cultural centers over time. This course will pay specific attention to the role of student activism in creating change on college campuses in the form of cultural programming, centers, diversity curriculum, and inclusive excellence initiatives. The course will also address the challenges and competencies associated with inclusive excellent programming and development.

HED 4284 Inclusive Excellence in Organizations (4 Credits)

In recent years, major demographic and economic changes in this country and worldwide have contributed to the diversification of the workplace. As a result, the need for understanding how to enhance cultural diversity in organizations has taken on a greater importance. Accordingly, framed through the concept of Inclusive Excellence, this course focuses on the changing demographics of our society, especially related to race and culture, gender, age, physical ability, sexual orientation, and socio-economic status, emphasizing the implications these factors have for leadership and management in a variety of organizational settings.

HED 4287 Critical Race Theory and Education (4 Credits)

The purpose of this course is to provide students with an in-depth exposure to Critical Race Theory (CRT) as it pertains to education. Critical Race Theory is an analytical framework that provides race-based epistemological, methodological, and pedagogical approaches to the study of everyday inequalities in P-20 education. Together, we will work through the historical development continuing on to the contemporary nuances of CRT. In addition, we will work to expose the ideological construction of race and education in the U.S. As such, we will also work through the oppressive nature of education and boldly confront notions of colorblindness. Throughout this course, we will struggle with the challenges surrounding the inclusion of multiple voices and multiple perspectives in the complex intersections among race, ethnicity, gender, class, and sexual orientation. Specifically, we will critique the strengths and limitations of CRT as a framework for addressing educational inequalities. Prerequisites: HED 4289.

HED 4288 Gender & Sexuality in Higher Education (4 Credits)

This course examines how gender, sexuality, and their inhabitants have been constructed, confined, and disciplined in U.S. higher education. Although neither a history nor philosophy course, we will engage both history and philosophy of sexuality and gender within and beyond higher education studies. Also, while neither a policy nor an administrative practices course, we will also engage issues of policy and practice in colleges and universities. The considerations, complications, and implications that course participants will engage will have direct import for postsecondary education, yet are transferable to other educational, community, and social contexts.

HED 4289 Race and Racism in Higher Education (4 Credits)

This course explores connections between race, racialization, and racism in American higher education. It draws on historical, political, economic, and cultural explanations of racial inequity in educational outcomes and processes. The course uses institutional and systemic levels of analysis to examine racial equity in higher education.

HED 4294 Seminar in Higher Education (4 Credits)

Advanced seminar to examine timely topics, issues, and problems. The course description is developed each time the course is offered to describe the topics to be investigated.

HED 4295 Internship in College and University Administration (0-6 Credits)

Supervised experience in administration at college or university level.

HED 4296 Internship in Public Policy (0-6 Credits)

Supervised experience in postsecondary public policy analysis or research, usually at a state or national compact or agency in the Denver-Boulder area. Recommended prerequisites: HED 4210, HED 4211, HED 4212, HED 4221, HED 4242, HED 4243.

HED 4297 Internship in College Teaching (0-2 Credits)

Supervised experience in teaching at college level.

HED 4991 MA Independent Study (1-10 Credits)

HED 4995 Independent Research (1-10 Credits)

HED 5991 PhD Independent Study (1-10 Credits)

HED 5993 Doctoral Research - EdD (1-20 Credits)

Doctoral research credits for doctoral research project toward the EdD. Prerequisite: Must be an EdD student in HED; must have completed at least 80% of coursework; cannot complete more than five credit hours of HED 5993 prior to passing the comprehensive exam.

HED 5995 Independent Research (1-20 Credits)

Research Methods and Information Science

Doctor of Philosophy in Research Methods and Statistics

The goal of the Research Methods and Statistics (RMS) PhD is to prepare graduate students with the state-of-the-art skills needed to conduct research in education and the social and health sciences. The faculty members equip students with cutting#edge research skills, creative educational vision, social responsibility, and sufficient experience in the application of these skills and knowledge to achieve mastery. The faculty are committed to shaping a safe, sustainable, democratic, and just world and believe that high-quality research is one approach to achieving this goal.

The education and social and health sciences fields have a growing need for professionals with strong skills in research design, statistics, qualitative and mixed methods, and data analysis. The RMS PhD course plan provides the courses and experiences necessary to conduct and supervise effective social science research.

Graduates with RMS PhD degrees hold leadership positions in testing and program evaluation companies, universities, school districts, and state agencies, among others.

Doctor of Philosophy in Research Methods and Statistics with a Concentration in Institutional Research

The RMS concentration in Institutional Research is targeted towards professionals with career goals in institutional research in applied settings including higher education, K-12 schools, non-profits, government settings, and business. Foundational coursework will equip Institutional Research students with strong quantitative, qualitative, and mixed research methods skills. Students will specialize in higher education or library and information science and take institutional research content knowledge courses in management, business intelligence, and public policy.

Doctor of Philosophy in Research Methods and Statistics with a Concentration in Qualitative Research

The RMS concentration in Qualitative Research primarily focuses on preparing students with strong, versatile, qualitative research methods skills to be utilized in different fields.

Master of Arts in Research Methods and Statistics

The goal of the Research Methods and Statistics (RMS) MA is to enhance student development and use of research in education and the social and health sciences with a specific focus on program evaluation. The faculty equip students with cutting#edge research skills, creative educational vision, social responsibility, and sufficient experience in application of your skills and knowledge to achieve mastery. RMS is committed to shaping a safe, sustainable, democratic and just world and believe that high-quality research is one approach to doing this.

The education and social and health sciences fields have a growing need for professionals with strong skills in research design, statistics, qualitative and mixed methods, and data analysis. The RMS MA degree requirements provide the courses and experiences necessary for graduates to conduct effective social science research.

Graduates with RMS MA degrees hold professional positions in program evaluation at non-profit organizations, service agencies, school districts, and state agencies, among others.

(online) MASTER OF ARTS IN RESEARCH METHODS AND STATISTICS

Designed with working professionals in mind, our online M.A. option is self-paced and flexible. Whether you're looking to advance your career or simply have a passion for data science – you'll have the opportunity to learn on your terms and earn a degree from a Top 100 college. Applications are currently being accepted.

The program **learning outcomes** for the Master of Arts in Research Methods and Statistics are as follows:

- Students will design research projects with faculty members and community partners using knowledge of the strengths and limitations of diverse modes of inquiry.
- Students will create and evaluate quantitative and/or qualitative instruments/protocols.
- Students will communicate research design and methods in writing according to APA format and orally.
- Students will apply research ethics and adhere to an ethical code of conduct when engaging with professional and local communities.

Master of Library and Information Science in Library and Information Science / MLIS@Denver

Library and Information Science (LIS) has developed a distinctive program of study to serve the rapidly changing needs of future librarians, archivists and information professionals in the Rocky Mountain region. There are a number of areas of focus including: Archives and Special Collections, Digital Libraries, Early Childhood Librarianship, Academic Libraries, Public Libraries, School Libraries Concentration, Special Libraries, and Web Services Librarianship.

With a dedicated faculty, we get to know our students very well through face-to-face interaction so that we can connect them to the highly regarded professional network in the region (and beyond). Practitioners speak highly of our students and are eager to have DU MLIS students as interns and employees.

Program Accreditation

American Library Association

Master of Library and Information Science in Library and Information Science with a Concentration in Teacher Librarian

The DU Teacher Librarian (T-L) Program is authorized by the Colorado Department of Education (CDE). A concentration in School Libraries prepares students to work with children and young adults in K-12 school libraries as well as youth services departments in public libraries. Colorado endorsement as a Teacher- Librarian requires applicants to have a valid teaching credential, one year of classroom teaching and pass the Place Exam (School Librarian endorsement is available for applicants without classroom teaching experience). Recommendation for the added endorsement as a school librarian is made by the DU LIS Program, but endorsement is granted by the State of Colorado. Individual State requirements vary and may include teaching experience and media examinations in addition to a valid teaching credential. Students should consult with the Colorado Department of Education for the most updated endorsement requirements. Dr. Mary Stansbury of the LIS faculty is the primary contact for this specialization.

Program Accreditation and Authorization

American Library Association

Colorado Department of Education (CDE)

Master of Library and Information Science in Library and Information Science with a Concentration in Research Data Management

Research Data Management responds to the emerging need for well-trained information professionals in the digital environment. The concentration prepares professionals to support the research data life-cycle in the areas of scholarly communication, open access, copyright advice, and research data management, providing bridging coursework in information science and research methods and statistics. It prepares information professionals to manage research data at academic libraries, research service centers, research centers, government agencies, and non-profit organizations.

CERTIFICATE in LIBRARY AND INFORMATION SCIENCE WITH A Concentration IN RESEARCH DATA MANAGEMENT

The knowledge students gain in our library information science certificate program can prepare them to provide support in many areas in research data management. Research data expertise can be invaluable in scholarly communication, open access, copyright advice and research data management. Students take part in rigorous coursework in information science, research methods and statistics, collaborating with classmates as part of this comprehensive 28-credit program.

Our students can learn how to manage research data at a variety of settings, including academic libraries, research service centers, scientific and research organizations, government agencies and non-profit organizations. Graduates can enter into fields with significant needs for well-trained information professionals who can manage, preserve and share data generated throughout the research process.

Doctor of Philosophy in Research Methods & Statistics

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well as the baccalaureate.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- The Graduate Record Examination (GRE) is required. Scores must be received directly from the appropriate testing agency by the deadline. The institution code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Arts in Research Methods & Statistics

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Doctor of Philosophy in Research Methods and Statistics

Degree requirements

Coursework requirements

| Code | Title | Credits |
|---|--|---------|
| I. Morgridge College of Education requirements | | |
| A. Research | | 17 |
| Complete all of the following courses: | | |
| RMS 4930 | Quantitative Research Design | |
| RMS 4941 | Introduction to Qualitative Research | |
| RMS 5995 | Independent Research (Minimum 10 credits) ¹ | |

II. Program requirements

| | | |
|--|--|-----------|
| A. Measurement | | 10 |
| RMS 4921 | Psychometric Theory | |
| RMS 4922 | Item Response Theory | |
| RMS 4924 | Advanced Measurement | |
| B. Research Methods | | 23-24 |
| Complete all of the following courses: | | |
| RMS 4931 | Survey and Design Analysis | |
| RMS 4932 | Meta-Analysis Social Science Research | |
| RMS 4942 | Qualitative Data Collection and Analysis | |
| RMS 4951 | Mixed Method Research Design | |
| RMS 4952 | Research Ethics | |
| RMS 4960 | Introduction to Evaluation Research | |
| Select at least one of the following: | | |
| RMS 4940 | Structural Foundations of Research in Social Sciences ² | |
| RMS 4945 | Community-Based Research ² | |
| RMS 4946 | Advanced Qualitative Research ² | |
| RMS 4947 | Arts-Based Research ² | |
| RMS 4959 | Topics in Research Design ² | |
| C. Statistics | | 26 |
| Complete all of the following courses: | | |
| RMS 4911 | Correlation and Regression | |
| RMS 4912 | Analysis of Variance | |
| RMS 4913 | Multivariate Analysis | |
| RMS 4914 | Structural Equation Modeling | |
| RMS 4915 | Hierarchical Linear Modeling | |
| RMS 4916 | Latent Growth Curve Modeling | |
| RMS 4918 | Propensity Score Analysis ² | |
| III. Practicum | | 3 |
| Complete the following course: | | |
| RMS 4980 | Practicum in Research | |
| IV. Cognate (Minimum 10 credit hours) | | 10 |
| Total Credits | | 90 |

¹ In order to maintain degree candidacy, MCE doctoral students who have finished all requested course work will register for one dissertation or doctoral research credit or other credit for consecutive terms fall through spring (summers not required) until the student graduates.

² Optional

A minimum of 90 credit hours is required beyond the earned master's degree. No credit hours from the earned master's degree can be transferred into the PhD.

Non-coursework requirements

- Doctoral comprehensive exam
- Dissertation and oral defense
- Alternative Dissertation Option – The Journal Article Format

Doctor of Philosophy in Research Methods and Statistics with a Concentration in Institutional Research

Library Information Science Courses

LIS 4000 Foundations of Library, Archival, and Information Science (3 Credits)

An overview of the theoretical and conceptual foundations of library, archival, and information sciences and an introduction to the information professions, including principles, values, professional organizations, publications, current and future challenges.

LIS 4001 Immersion (0 Credits)

This on-campus experience is for students in the MLIS@Denver online program.

LIS 4005 Privilege & Equity (3 Credits)

This course is a reflection and discussion-guided exploration of various societal privileges and how they affect equity in library, archives, and other information professions. The topics of race, ethnicity, gender, socio-economic status, and education will be considered.

LIS 4010 Organization of Information (3 Credits)

This course introduces basic concepts in the theoretical, practical, and technological aspects of information organization. It provides an overview of the methodologies for organizing and representing information resources in the library, archives, and museum settings.

LIS 4011 Information Access & Retrieval (3 Credits)

Information retrieval is defined as the process of searching for (and retrieving) relevant information within a document collection. The document collection could be textual (bibliographic records), structured and unstructured data, library databases, web based information resources, multimedia resources, and numerical data. This course introduces students to important access and retrieval tools and technologies used to retrieve information that are relevant to a user's information need. In addition to the underlying principles and processes revolving around access and retrieval such as text operations, indexing, query languages, and searching, the course covers relevant topics such as library discovery systems, web based information retrieval technologies, and enterprise search systems.

LIS 4015 User and Access Services (3 Credits)

Overview of human information processing and user services in the changing information environment and different communities of practice. This course introduces the concepts of user information needs, seeking, and processing as a foundation for understanding users and designing user-centered information services. The course examines both traditional reference and current/emerging information services in different settings and populations. Course also introduces the concepts of information literacy, user education, and assessment of information services.

LIS 4040 Management of Information Organizations (3 Credits)

An introduction to current theory and practice of management in information organizations through the study of organizations, communications, decision making, planning, leadership, human resources and budgeting. Prerequisite: LIS 4000 or instructor approval.

LIS 4043 Advocacy and Marketing in LIS (3 Credits)

An overview of advocacy and marketing foundations as they relate to libraries. The course examines practical tools and applications of both marketing and advocacy. It helps to distinguish the difference between the two disciplines and when the two should be used together.

LIS 4050 Library and Information Technologies (3 Credits)

A foundation course on the applications of information and communications technology in libraries and information agencies. Integrated library systems and the acquisition, evaluation, and implementation of library automation solutions, including electronic resource management systems are explored. The course further introduces database design, Internet technology, web services, cloud computing, computer networks, telecommunications, and computer security. Hardware, software, and other productivity tools and utilities from organizations such as OCLC, Amazon, and Google are discussed.

LIS 4060 Reference (3 Credits)

Information resources include a number of different kinds of reference materials in a wide variety of formats. These include guidebooks, encyclopedias and dictionaries, indexes and abstracts, handbooks, bibliographies, biographical finding tools and biographies, data sets and much more. Many of these resources are available on-line, as well as in print and other digital formats. This course will help students identify and evaluate the most likely resources for information queries in particular settings. It will also provide the opportunity to find answers to real research questions. The course will cover the primary resources for the broad disciplines of business, humanities, sciences, social sciences and government publications in print and electronic formats. Class exercises will reflect the multidisciplinary and multicultural interests and characteristics of library users. Prerequisite: LIS 4015. Recommended prerequisites: LIS 4000 and LIS 4011.

LIS 4070 Cataloging & Classification (3 Credits)

Theory and practice of bibliographic control including the study of representative cataloging using Anglo American Cataloging Rules, 2d ed., rev. with amendments and Library of Congress Rule Interpretations, machine-based representation using the USMARC formats and other standards, and subject analysis and classification using Library of Congress Subject Headings, Dewey Decimal Classification, and Library of Congress Classification, with principle focus on monographs, major media, sound recordings, and serials. Prerequisite: LIS 4010 or instructor approval.

LIS 4135 Scholarly Communication (3 Credits)

This course will provide a broad understanding of scholarly communication systems regarding the creation, dissemination, and evaluation of scientific information. The concept of scholarly communication refers to the ways researchers publish and disseminate their research findings in the digital environment and encompasses formal and informal channels of communication among scholars. Traditionally, scholarly dissemination systems have involved conference presentations and publication of books and articles in subscription-based journals. Digital technology has transformed scholarly communication by introducing open access publishing models and alternative ways of measuring scholarly impact. This course will explore the changing nature of scholarship and will examine the topics of scholarly publishing, peer review, intellectual property, the open access movement, digital repositories, bibliometrics, and altmetrics.

LIS 4206 Web Content Management (3 Credits)

This course will include instruction in web page creation, selection, and evaluation of web content as well as web site management. Selection of web page content will be discussed in the context of organizational knowledge management and competitive intelligence needs. Differences in information needs for provision of public information and competitive intelligence on Internet pages versus the organizational information needs of Intranets in knowledge management will be explored. This course also will address human-computer interface design to allow web page designers to create effective web pages according to established principles of design.

LIS 4208 Usability (3 Credits)

This course provides an overview of usability analysis and user experience research and introduces students to practical methods and techniques in conducting usability evaluation. The focus of the course will be on the selection of appropriate evaluation methods, as well as planning, designing, and conducting usability evaluations of information services. In addition, the course will discuss the methods and tools of user-experience research, the theoretical underpinnings of usability, and the role of usability in iterative design and the development of information systems.

LIS 4209 Information Architecture (3 Credits)

The web is a complex information environment consisting of billions of web pages, users, and clicks and interaction every single day. This course introduces students to the fundamentals of web information architecture (IA) - a discipline that aims to understand the information needs and activities of web visitors and create design elements to help users find their way around in the complex information environment with ease. The course will cover various strategies and skills, in which information architects structure, organize, label, navigate, and search for information on large websites. A service learning component is built into this course so that students can transfer their IA knowledge and skills to a real-world project. The course is designed following a project management approach and students will be exposed to different activities from start to finish.

LIS 4210 Data Visualization (3 Credits)

This course provides a practical introduction to the principles, theories, and applications of information visualization in the research data context. This course contextualizes modern practices in information visualization by examining historical approaches to visualization with an eye on theories that inform contemporary visualization best practices. Using a hands-on component, students will get real-world experience in visualizing datasets, and building visualization dashboards that integrate multiple visualizations.

LIS 4220 Data Curation (3 Credits)

Across the academic domains, digital data are becoming more visible as critical products of scholarly work. Digital technologies, such as sensor networks in the environmental sciences, social networking tools in the social sciences, and the digitization of cultural artifacts in the humanities, allow researchers to produce far greater volumes and complexities of digital data than were possible in the past. Digital technologies, and the data that they produce, offer tremendous opportunity for researchers in every academic discipline to ask questions that were previously impossible to study. Some digital technologies enable researchers to study very local phenomena in great detail. Others enable the integration of many diverse data streams in order to conduct synthesis and longitudinal studies. But while the possibilities of digital data are exciting, they also present tremendous challenges: how to best organize and manage data, how to make data discoverable and accessible to diverse user communities, and how to store and preserve data over the long term.

LIS 4230 Database Management Systems (3 Credits)

This is a foundation course on the principles of database design and the use of database management systems for information professionals. The course covers database systems, data modeling, relational models, relational algebra, SQL, emerging NoSQL systems, data storage and querying, query languages, query optimization, OLAP, transaction management, data warehousing, and data mining. In addition, fundamentals on systems analysis and the database application lifecycle will be reviewed.

LIS 4235 Scripting for Large Databases (4 Credits)

This course will introduce students to the basics of data storage and acquisition as part of a multi-step data gathering, processing, analysis and visualization effort. The logic and structure of relational databases will be reviewed, exploring the more common databases like SQL Server and Postgres, along with exploration of JSON and NoSQL based data stores. Techniques and methods for automation and scalable data processing will be introduced under the Python programming language with a focus on using Pandas and other libraries to simplify data tasks. These skills will be integrated and applied by the student through the use of prepared data sources, along with use of APIs and web scraping technique to acquire data through internet sources.

LIS 4320 Outreach (3 Credits)

Outreach as a library service is evolving at a rapid pace. This course will examine the history, current practice, and future promise of outreach across all kind of library organizational settings. Topics addressed in this course will include competencies for outreach librarianship; practices in outreach services; definition and scope; planning, designing and budgeting for services; environmental scanning, key performance indicators, and barriers; developing and maintaining partnerships.

LIS 4321 Collection Management (3 Credits)

Topics addressed in this course include collection development and access policies, selection methods and practices, collection assessment, preservation and conservation, de-selection, treatment of rare material, manuscripts and archives, U.S. government publications, non-book and digital formats management, juvenile, and other special materials.

LIS 4330 Information Literacy Instruction (3 Credits)

This course provides an introduction to the principles of library instruction and information literacy including a historical overview of their place within the profession. Emphasis is on instruction within an academic setting, but students will learn important educational theories that can be applied to a variety of settings. ACRL and AASL standards will be examined as well as types of instruction, instructional design, collaboration with faculty, various competencies, assessment, and lifelong learning. The class has a strong emphasis on public speaking, communication skills, and the practical application of educational theory.

LIS 4350 Adult Materials & Services (3 Credits)

This course provides the student with an opportunity to explore readers advisory service from a customers perspective. Students study the readers advisory literature and examine all types of genre fiction. Lecture, readings and class discussion will focus on specific genres and authors within them. Students will also be required to read in all the genres.

LIS 4355 The Reading Experience in LIS (3 Credits)

Working with readers has always been a cornerstone of library practice. Traditionally referred to as readers' advisory, reading work has expanded beyond book displays, individual requests for a good read, and book clubs. It has become a foundation of extensive library programming, meaningful leisure, and personal enjoyment, and an instrument of building healthy and engaged communities; it has turned from monolingual to multilingual; and it has claimed its place in the virtual library environment. No longer limited to public libraries, reading work comprises a growing area of interest in academic and special libraries, book publishing, and book trade. This course will introduce students to the selected theories of reading behaviors; practical skills of engaging readers, developing reader services, programming, and advocacy; the major genres and sub-genres of fiction and nonfiction materials; a wide array of print and electronic tools facilitating this practice; electronic reading and online reading communities; and foundations of bibliotherapy. This course is focused on adult readers. For other audiences, see LIS 4510 Children's Materials & Services & LIS 4520 Young Adult Materials & Services.

LIS 4370 Database Searching (2 Credits)

Nearly all historic, traditional search and retrieval tools such as library catalogs, indexes, microform guides, and archival findings aids have migrated to web-based systems. This course explores the complexities of searching for materials in an online environment. Topics to be covered include database and field structures; controlled vocabularies and indexing schema; search syntaxes, reference linking; data exploring and manipulation; non-textual database searching including numerical, image, and multimedia data; metasearch and web-scale discovery technologies.

LIS 4404 Metadata Architectures (3 Credits)

Provides an overview of the principles and theories of metadata development in the digital environment. Focuses on the design and application of metadata schemas for distinct domains and information communities, issues in metadata interoperability, vocabulary control, quality control and evaluation. Examines international standards, activities and projects. Prerequisite: LIS 4010.

LIS 4510 Children's Materials and Services (3 Credits)

This course is designed to prepare librarians to work with children (ages birth to 12 years) in school and public libraries. Topics covered include children's development, reading interests and needs, materials selection, collection development (including print and non-print materials), discussions of specific genres, reading motivation skills, designing a children's area, and developing various programming ideas. Students read/view/listen to and evaluate a wide variety of materials for and about this age group, prepare and present booktalks and stories, become familiar with review sources, and design a one-year plan for youth services in a school or public library.

LIS 4520 Young Adult Materials & Services (3 Credits)

This course prepares librarians to work with young adults (ages 12-18) in school and public libraries. Topics covered include young adult development, reading interests and needs, materials selection, collection development (including print and non-print materials), and discussions of specific genres, reading motivation skills, designing a YA area, programming, and intellectual freedom issues. Participants will read/view/listen to and evaluate a wide variety of materials for and about this age group, prepare and present booktalks, become familiar with review sources, and design a one-year plan for a YA department in a small school or public library.

LIS 4535 School Libraries (2 Credits)

This course is a study of school libraries and the characteristics that make them different from other types of libraries. There is an emphasis on information literacy and educational technology standards as they apply to school libraries, the collaborative instructional process, and standards-based instruction including summative and formative assessment revision techniques. Collaborative planning and curriculum development through the school library program is addressed, as well as an understanding of networks and instructional delivery systems. Various strategies to improve students' reading will be addressed, as well as a variety of methods for promoting children's and teen literature through collaboration with classroom teachers. Administration of the school library is addressed in a review of mission statements, goals and objectives, strategic planning, policies and procedures, and communication with school administration. The discussions will create an awareness of the important of leadership and professionalism through educational and professional organizations, lifelong learning, educational research, and mentoring. Most of the concepts in this class will have been introduced in other classes. This class will specifically tie the concepts to the school library setting.

LIS 4610 Career Development (3 Credits)

This course addresses issues in career planning and professional development. Key skills that graduate professional students build are: using self-assessment and reflection to understand existing skills and expertise; identifying the expectations of the LAIS profession; acquiring skills related to finding a professional position; and, developing a career plan.

LIS 4700 Topics in LIS (1-5 Credits)

This flexible library and information science course will provide students with the opportunity to explore issues of current importance in the field. Topics and credit hours will vary and will address subjects such as emerging technologies, new methodologies, specific reader services, standards and practices, and social and economic trends in the profession. Prerequisite courses may be recommended or required as determined by the content of the specified course.

LIS 4701 Reference Topics (1 Credit)

This course provides the student with an opportunity to explore information resources in specific subject materials. Lecture, readings, class discussions, and exercises will address all formats of materials including print, electronic, and web resources.

LIS 4702 Type of Library: Topics (1-3 Credits)

This course is a study of specific types of libraries, such as public libraries, academic libraries, and special libraries, and the characteristics that make them different from other types of libraries. Specific topics covered will depend on the type of library, but may include collections, management, budgets and funding, as well as professional competencies.

LIS 4800 Introduction to Archives (3 Credits)

This course provides an introduction to the objectives and methods of the archival and records management professions including an overview of terminology, issues, and common practices. The systematic control of records throughout their life cycle from creation through processing, distribution, organization, retrieval and archival disposition will be covered. Prerequisites: LIS 4000 and LIS 4010; or instructor permission.

LIS 4805 Records Management (3 Credits)

This course covers the establishment of information maintenance plans, evaluations and audits of records and information management Programs, the records and information survey, retention policies and legal requirements, and techniques for integrating automation to records and information management.

LIS 4806 Advanced Archives (3 Credits)

In this course, students will be given the opportunity to put into practice basic archival principles and functions. Students will perform the actions of appraisal, accessioning, arrangement, description, and access solution review for both analog and digital archival collections. Additionally, students will be given the task of providing solutions for new paradigms in archival processing such as creating a web archive, processing email collections, and capturing social media content. The course will be a combination of lecture, demonstration, lab time, discussion, and projects.

LIS 4810 Digital Libraries (3 Credits)

This course provides a theoretical foundation for the study of digital libraries and discusses the technological, organizational, social, and legal issues associated with the development and use of digital libraries. Through this course students develop an understanding of digital library components and explore theoretical and practical approaches to constructing, maintaining, and evaluating digital libraries. Topics examined include digital library definitions, design and architecture of digital libraries. Topics examined include digital library definitions, design and architecture of digital libraries, information access in the digital library environment, digital library users and user services, data repositories, digital curation, digital preservation, digital library evaluation, and digital librarianship.

LIS 4820 Digitization (3 Credits)

The course offers an introduction to issues and trends in planning, developing and managing digitization projects at libraries, archives, and museums. The focus of the course is on the conversion process of analog materials into the digital format, online delivery, and preservation of master files. The course discusses collection development policy for digital projects, copyright, digital imaging technology, digitization standards and best practices for text, images, audio, and video, metadata for cultural heritage collections, delivery platforms, preservation, project management, sustainability, documentation, promotion, and evaluation of digital projects.

LIS 4850 Digital Preservation (3 Credits)

Students will learn the principles and practices of preserving access to information encoded in digital form. They will learn how to assess digital preservation needs within an institution, write digital preservation policies, and how to collect and present data to make a case for acquiring funds for digital preservation activities. Students will learn the basics of digital information encoding as it applies to the technological aspects of digital preservation, and will learn about current tools and practices used to preserve access to digitally encoded information over time. The course will be a combination of lecture, discussion, and problem solving. It requires participants to conduct independent research and writing. Critical reading of course materials is essential to stimulate active participation in class discussions.

LIS 4901 Capstone Course (3 Credits)

Students in this course will design and complete a project to demonstrate the ability to integrate and synthesize their masters course work and apply their knowledge to a topic. The class meets with an instructor regularly over the nine-week summer quarter. The instructor monitors and guides the students to ensure that they complete the phases of the project in accordance with the proposed timeline and goals. Evaluation will be based on individual performance, with respect to the quality and professionalism of the research, the management of the project, and analytical and writing skills. Prerequisite: Minimum of 45 quarter hours of graduate LIS course work completed, including all core courses, a proposal approved by the academic advisor and faculty permission.

LIS 4902 Internship (1-4 Credits)

This course will offer up to 4 credits for an internship position in libraries and archives. Students are encouraged to gain practical experience.

LIS 4910 Culminating Internship (3 Credits)

This course is designed to supplement the classroom experience by giving students practical experience working in a library or information agency. Various options are available to students depending on their areas of interest and specialization. Opportunities for experience include fields of medicine, law, art, public, and academic libraries. It is the student's responsibility to select a practicum site and a field supervisor, who must be approved by LIS faculty. Seventy-five hours of service over a 10-week quarter are required. The student, faculty, and field supervisor will determine specific requirements for the final paper or report. Students must notify the LIS academic advisor one quarter before enrolling in Culminating Internship. Prerequisites: Completion of a minimum of 38 quarter hours of graduate LIS coursework, including all core courses.

LIS 4911 Elementary School Culminating Internship (2 Credits)

This course is designed to provide elementary school practical experience for teacher-librarians by working a minimum of 80 hours in an elementary school library. Prerequisite: Students must have completed most of the required coursework for the degree before enrolling in the Practicum.

LIS 4912 Secondary School Culminating Internship (2 Credits)

This course is designed to provide secondary school practical experience for teacher-librarians by working a minimum of 80 hours in middle or high school library. Prerequisite: Students must have completed most of the required coursework for the degree before enrolling in the Practicum.

LIS 4920 Service Learning in LIS (1-4 Credits)

This course is designed to supplement the classroom experience by giving students an opportunity to participate in a service learning project. Students will propose an independent study component highlighting the learning aspects of the project. The experience should provide practical work in a library or information agency. Various options are available to students depending on their areas of interest and specialization. Opportunities for experience include many areas related to the information needs of an underserved population. It is the students responsibility to select a site and a field supervisor. The student, faculty coordinator, and field supervisor will work together to establish the goals and objectives of the experience. A minimum of 40 hours of service is required for two quarter hours of credit.

LIS 4991 MA Independent Study (1-10 Credits)

Independent study projects allow students more in-depth investigation of the many facets of library and information science. Students must work with an approved faculty advisor and submit a proposal outlining the objectives, scope, outcomes, and evaluation criteria. The faculty advisor and the department director must approve proposals. Prerequisites: Completion of a minimum of 30 quarter hours of graduate LIS coursework, including all core courses and a minimum GPA of 3.0.

LIS 4995 Independent Research (1-10 Credits)**Research Methods and Stats Courses****RMS 4900 Education Research and Measurement (4 Credits)**

This course is intended for Master's degree students in the College of Education. Quantitative research designs, empirical methods of data collection and interpretation, and measurement issues in research are examined.

RMS 4910 Introductory Statistics (4 Credits)

This beginning statistics course examines use and interpretation of statistics in educational and human services research, including descriptive and inferential techniques. Cross listed with SOWK 5930.

RMS 4911 Correlation and Regression (4 Credits)

This course focuses on the study of correlation and multiple regression research designs and their application to educational and social science programs. Cross listed with SOWK 5202. Prerequisite: RMS 4910.

RMS 4912 Analysis of Variance (5 Credits)

Conceptual and applied analyses of one-way through factorial nested analysis of variance designs and multivariate analysis of variance are presented. Prerequisite: RMS 4910.

RMS 4913 Multivariate Analysis (5 Credits)

Conceptual and applied analyses of common multivariate statistical techniques used in research in social sciences are presented as are assumptions and limitations of techniques and interpretation of results. Cross listed with SOWK 5950. Prerequisite: RMS 4911 or RMS 4912.

RMS 4914 Structural Equation Modeling (4 Credits)

This course covers major applications of and issues related to covariance structure modeling, specifically confirmatory factor analysis and latent variable path modeling; types of research applications for which covariance structure modeling analyses are appropriate. Prerequisite: RMS 4913 and RMS 4921.

RMS 4915 Hierarchical Linear Modeling (4 Credits)

This course introduces models that extend multiple regression to analysis of nested data structures common in education and other social sciences. Application of those methods to various forms of multilevel data, including repeated measure (growth trajectory) data is emphasized. Prerequisite: RMS 4911.

RMS 4916 Latent Growth Curve Modeling (4 Credits)

This course covers advanced issues in longitudinal data analysis using structural equation modeling and hierarchical linear modeling with latent variables. It involves both conceptual development and practical implementation of longitudinal data analysis. This course is intended to be a hands-on approach to working with data and addressing research questions that can be best answered by longitudinal data. Prerequisite: RMS 4914.

RMS 4918 Propensity Score Analysis (3 Credits)

Propensity score analysis provides a conceptual understanding of the rationale and importance of controlling for biases that might emerge during the selection process in experimental research. The common procedures of fitting a propensity score model and estimating the effect of the treatment after correction for biases are demonstrated.

RMS 4919 Topics in Statistics (1-5 Credits)

Topics vary by quarter but may include log-linear analysis, factor analysis, or missing data analysis.

RMS 4920 Educational Measurement (3 Credits)

This course examines the meaning, characteristics, and processes of educational measurement and evaluation. Development and interpretation of both standardized and informal tests are considered.

RMS 4921 Psychometric Theory (3 Credits)

This course examines major psychometric theories (e.g., classical, item response) as related to reliability, generalizability, validity, and item analysis methods. Prerequisite: RMS 4910.

RMS 4922 Item Response Theory (3 Credits)

Theory and methods for the educational and psychological measurement of latent variables using item response theory are covered in this course. Prerequisite: RMS 4910, RMS 4921.

RMS 4924 Advanced Measurement (4 Credits)

This course instructs students in advanced measurement models and techniques are employed in the social sciences. Prerequisites: RMS 4921 & RMS 4911.

RMS 4929 Topics in Psychometrics (1-3 Credits)

Topics vary, but include: large scale testing, computer applications of item response theory, affective measure construction, generalizability theory, additive conjoint measurement, and standing testing. Prerequisite: RMS 4921 or instructor permission.

RMS 4930 Quantitative Research Design (3 Credits)

This course provides in depth study of empirical research methods involved in experimental, quasi-experimental, single-subject, and non-experimental quantitative research designs.

RMS 4931 Survey and Design Analysis (3 Credits)

Survey techniques, needs assessment, item construction, sampling, maximizing response rates and data analysis; survey construction and data analysis are required. Prerequisite: RMS 4910.

RMS 4932 Meta-Analysis Social Science Research (3 Credits)

This course examines meta analytic techniques in the social sciences. Included are discussions of review of critical data bases, coverage of all major methods of data collection and analysis, and coverage of how best to present meta analytic findings for publication. Prerequisite: RMS 4911, RMS 4930, and preferred RMS 4912.

RMS 4939 Topics in Quantitative Research Methods (1-5 Credits)

Topics vary, but include minimization as an alternative to randomization, propensity score modeling as an alternative to experimental control, and analysis of data from single-subject designs. Prerequisites: RMS 4930 or instructor permission.

RMS 4940 Structural Foundations of Research in Social Sciences (3 Credits)

This introductory course on epistemology and research includes discussion of identification and development of problems for research; introduction to basic quantitative and qualitative methods of conducting research in social science settings, ethnographic, and criticism methods.

RMS 4941 Introduction to Qualitative Research (4 Credits)

This course is designed to provide students with more in-depth understanding of naturalistic, qualitative research methods. It is assumed that students enrolling in this course have already completed an introductory research methods course in either education or another discipline. Purposes and questions posed in their course include: Why should a researcher choose to conduct a qualitative study? How are data collection strategies carried out in a qualitative research design? What are some of the ethical concerns that impact qualitative research?

RMS 4942 Qualitative Data Collection and Analysis (4 Credits)

In this intermediate level qualitative research course students learn about design, purposeful sampling, field work, observational approaches, and interviews, with special attention directed to the skills and competencies needed to gather and analyze high quality data. Prerequisite: RMS 4941 or instructor permission.

RMS 4945 Community-Based Research (4 Credits)

This class introduces the emerging philosophical and methodological issues that arise when university faculty students collaborate on research with community-based organizations. Prerequisites: RMS 4942 and RMS 4930 or instructor permission.

RMS 4946 Advanced Qualitative Research (4 Credits)

This course introduces exemplary qualitative studies and consideration of implications for education and the social sciences, and considers the types of questions asked by qualitative researchers and methods they use, particularly observation and interviewing. Students undertake their own qualitative study to consider application of theory, techniques, and practice to their dissertation research. Prerequisite: RMS 4941 and RMS 4942 or instructor permission.

RMS 4947 Arts-Based Research (3 Credits)

In this course students explore the ground upon which arts-based research is built and become acquainted with salient issues regarding this kind of research. We practice interviewing, observations and a few arts-based practices. Prerequisites: RMS 4941 or instructor permission.

RMS 4948 Criticism and Connoisseurship: Qualitative research and the enhancement of practice (3 Credits)

Qualitative inquiry in educational settings takes many forms: ethnography, grounded theory, case-study research, and more. What these methods have in common is a framework built upon social science. Criticism and connoisseurship, however, draws its conceptual underpinnings from the arts and humanities. What does it mean to have a conceptual framework dependent upon the arts? How are the methods of educational criticism different from other research methods? This class teaches students how to conduct research using this method and it provides responses to these types of questions in order that students can defend this type of research as well as others that depend on the arts and humanities as their basis. Prerequisite: RMS 4941.

RMS 4949 Topics in Qualitative Research (1-5 Credits)

This seminar builds on the content of other qualitative research courses offered in the RMS program and meets the students where they are on their dissertation journey; thus learning opportunities are tailored to individual needs as far as possible. Assignments focus on the issues pertinent to the design of dissertation proposals and writing, including ethical issues and IRB preparation, theoretical/conceptual framework, literature review, methodology, data collection and analysis strategies, and various forms of representation. Prerequisite: RMS 4941.

RMS 4950 Qualitative Research Methodologies (3 Credits)

Each year this course examines three qualitative research methods. The methods that might be covered in any given year include: phenomenology, grounded theory, narrative, case study, and ethnography. For each method, the following is addressed: philosophical and historical foundations, various ways the method has been utilized, and practical recommendations for conducting research utilizing this method. Prerequisite: RMS 4941.

RMS 4951 Mixed Method Research Design (4 Credits)

This course is designed as a fundamental exploration of mixed model and mixed method approaches. Students design mixed model and mixed method research studies with a particular emphasis on multi-site and longitudinal designs that are especially suited to educational issues. Students learn analysis approaches that incorporate previously learned quantitative and qualitative skills, and apply these in practice problem examples. Prerequisites: RMS 4910, RMS 4930 and RMS 4941, and one of the following: RMS 4942, RMS 4947, or RMS 4948, or instructor permission.

RMS 4952 Research Ethics (3 Credits)

This course introduces ethical theory and a selection of current issues in research ethics.

RMS 4953 Topics in Data Management (1-3 Credits)

This is a preparatory course emphasizing the manipulation and analysis of data in electronic form.

RMS 4959 Topics in Research Design (1-5 Credits)

Topics vary, but include single subject design issues, minimization as an alternative to randomization, advances in quasi-experimental design. Prerequisite: RMS 4930.

RMS 4960 Introduction to Evaluation Research (3,4 Credits)

This course provides an introduction to frameworks for designing evaluation research studies.

RMS 4963 Evaluation Research Practice I (3 Credits)

This service learning course provides part 1 of a 2-part introductory experience in the practical craft of evaluation. Students who enroll in RMS 4963 must take RMS 4964 in the following quarter. The course is not a traditional lecture course; it is a course-embedded experiential learning course.

RMS 4964 Evaluation Research Practice II (3 Credits)

This service learning course provides part 2 of a 2-part introductory experience in the practical craft of evaluation. Students who enroll in RMS 4964 must have taken RMS 4963 in the preceding quarter.

RMS 4969 Topics in Program Evaluation (1-5 Credits)

Topics vary, but include advocacy and policy change, assessment in higher education, multi-level evaluation, cost effectiveness analysis, data visualization and reporting, assessment in distance education, and evaluation in the arts and culture. Prerequisite: RMS 4960.

RMS 4978 Practicum in Qualitative Research (1-4 Credits)

Students may complete the Practicum in Qualitative Research with an individual professor or with a community partner. The goal of this practicum is to provide further experiences in thinking about, conceptualizing, designing, conducting, and/or presenting qualitative research. Prerequisites: RMS 4941, RMS 4942, and at least two of the following classes RMS 4945, RMS 4946, RMS 4947, RMS 4948.

RMS 4980 Practicum in Research (1-5 Credits)

This course provides a supervised experience in design and implementation of an empirical research or evaluation study. Organization of research proposals, completion of human subjects applications, collection, and analysis of data are emphasized. Students are expected to prepare a written report of their project which is suitable for professional presentation or publication.

RMS 4981 Community-Based Research Practicum (1-5 Credits)

Students provide community-based research assistance to a community partner (non-profit, school, community based organization, etc). Student researchers are supervised by DU faculty. This course is an excellent opportunity to match the student's research expertise with the real needs of community partners. Prerequisite: RMS 4945.

RMS 4982 Practicum in Evaluation Research (1-6 Credits)

Students provide evaluation assistance to a university or community partner (non-profit, school, community-based organization, etc.). Student researchers are supervised by DU faculty. This course is an excellent opportunity to match the student's evaluation and research expertise with the real needs of university or community partners. Prerequisite: RMS 4960.

RMS 4991 Independent Study (1-10 Credits)

This course allows Masters students in RMS to study a topic area independently in conjunction with a cooperating faculty member.

RMS 4995 Independent Research (1-10 Credits)

This course is for Masters students in RMS whose program requires completion of a Master's thesis.

RMS 5991 Independent Study (1-10 Credits)

This course allows Ph.D. students in RMS to study a topic area independently in conjunction with a cooperating faculty member.

RMS 5995 Independent Research (1-18 Credits)

This course is for Ph.D. students in RMS who are engaged in completing their doctoral dissertation.

Doctor of Philosophy in School Psychology

The School Psychology (SP) Ph.D. program is designed to prepare highly competent, collaborative, ethical, and self-reflective scientist-practitioners who can problem-solve and share decision-making with others to optimize social, emotional, cognitive, academic, and behavioral outcomes for typically and atypically developing children and youth. The learning objectives aim to produce professionals who are competent in *consultation*, *assessment*, *intervention*, and *scholarship/advocacy* as they work on behalf of individuals, families, schools, and communities. These competency areas are defined as follows:

- *Consultation*: to collaborate in strengths-based, problem-solving, interdisciplinary teams with families, teachers, administrators, and other school and community personnel and to demonstrate appropriate interpersonal relations and professional dispositions and work characteristics;
- *Assessment*: to demonstrate evidence-based and culturally competent decision-making regarding selection, administration, and interpretation of assessments;
- *Intervention*: to employ data-based decision-making and systems-thinking that links assessment outcomes to effective individual, family, and group change and to deliver preventative, remedial strategic accommodations, intervention, and crisis services in a timely and professional manner;
- *Scholarship and Advocacy*: to apply, translate, and expand upon scientifically-based pedagogy and professional practice; able to advocate for the needs of children and families, to respect the dignity and worth of all persons, to exhibit compassion and self-awareness, and to demonstrate strong listening, oral and written communication skills.

The curriculum provides a strong foundation and core knowledge base in developmental, psychological, and learning theories, general and special education, and legal, ethical, and professional standards of practice. Professional skills and advanced training are required in research, measurement, program evaluation, assessment, prevention, intervention, and consultation with family, school, and community professionals. All SP applied experiences are designed within the *CoRE* framework. Ph.D. students gain competencies in conducting original research, grant writing, advanced qualitative and quantitative analysis, research design, and statistics. Graduates assume positions as administrators, university professors, and educational evaluators. Ph.D. students are expected to gain a high level of independent and collaborative research involvement with a faculty advisor.

Program Accreditation

The SP EdS and Ph.D. programs are fully accredited by the National Association of School Psychologists (NASP). The Ph.D. program is also accredited by the American Psychological Association (APA).

Ph.D graduates are assured eligibility for the National Certificate in School Psychology (NCSP), pending the completion of an internship consistent with NASP standards and a passing score on the National School Psychology Examination administered by the Educational Testing Service (ETS) as a part of the Praxis II Series. For further information, visit <http://www.nasponline.org/certification/NASPAproved.aspx>

Doctor of Philosophy in Curriculum and Instruction

Curriculum and Instruction (C&I) Ph.D. students take a wide range of courses in curriculum, instruction, foundations, diversity, and research.

The program is particularly well suited for students interested in becoming higher education faculty and leaders in schools and colleges of education. Dissertation topics cover a broad assortment of theoretical and practical topics in schools or associated institutions or communities.

Additionally, students are encouraged to consider enrolling in courses in other academic units in the Morgridge College of Education and throughout the University in order to enhance or expand their educational experience. Specializations are offered in the following areas: Curriculum Studies, Gifted Education, STEM Education, Culturally and Linguistically Diverse Education, and Special Education.

Doctor of Education in Curriculum and Instruction

The Curriculum and Instruction (C&I) EdD is designed to prepare educational practitioners as experts of curriculum and instruction, capable of engaging in problems and challenges in a variety of educational institutions and contexts, particularly at the school or district level. The aim of this program is to produce graduates who are leaders and innovators in education, equipped with cutting-edge applied research skills, creative educational visions based on established academic disciplines, moral imagination, curricular expertise, and commitments to issues of equity and social responsibility. Specializations are offered in the following areas: Curriculum Studies, Gifted Education, STEM Education, Culturally and Linguistically Diverse Education, and Special Education.

Educational Specialist Degree in School Psychology

The School Psychology (SP) Educational Specialist (Ed.S.) degree prepares professionals in all aspects of school psychology services to work with children and families from birth to age 21 in school or community settings. All graduates of the Ed.S. program are eligible for a Colorado Department of Education license in School Psychology and the NASP National Certification (NCSP) after the successful completion of all coursework and passing the Praxis II licensing exam.

Program Accreditation

The SP Ed.S Degree is fully accredited by the National Association of School Psychologists (NASP).

Graduates are assured eligibility for the National Certificate in School Psychology (NCSP), pending the completion of an internship consistent with NASP standards and the attainment of a passing score on the National School Psychology Examination administered by the Educational Testing Service (ETS) as a part of the Praxis II Series. For further information, visit <http://www.nasponline.org/certification/NASPAproved.aspx>

Educational Specialist Degree in School Psychology with a Concentration in Early Childhood school psychology

The SP Educational Specialist (Ed.S.) degree with Early Childhood School Psychology Concentration prepares professionals to work with children and families from birth to age 21. This degree requires an additional 12 hours of integrated core and practical coursework. All graduates of the Ed.S. program are eligible for a Colorado Department of Education license in School Psychology and the NASP National Certification (NCSP), after the successful completion of all coursework and passing the Praxis II/National Association of School Psychology licensing exam.

Program Accreditation

The SP Ed.S./ECSP Degree is fully accredited by the National Association of School Psychologists (NASP).

Graduates are assured eligibility for the National Certificate in School Psychology (NCSP), pending the completion of an internship consistent with NASP standards and a passing score on the National School Psychology Examination administered by the Educational Testing Service (ETS) as a part of the Praxis II Series. For further information, visit <http://www.nasponline.org/certification/NASPAproved.aspx>

EDUCATIONAL SPECIALIST DEGREE IN SCHOOL PSYCHOLOGY WITH A CONCENTRATION IN ADDICTIONS

The School Psychology (SP) Educational Specialist (Ed.S.) degree with an Addictions Concentration prepares professionals to intervene early, with children and adolescents, to address and prevent substance abuse. This degree requires an additional 12 hours of core and practical coursework. All graduates of the Ed.S. program are eligible for a Colorado Department of Education license in School Psychology and the NASP National Certification (NCSP) after the successful completion of all coursework and passing the Praxis II licensing exam.

Program Accreditation

The SP Ed.S./AC Degree is fully accredited by the National Association of School Psychologists (NASP).

Graduates are assured eligibility for the National Certificate in School Psychology (NCSP), pending the completion of an internship consistent with NASP standards and the attainment of a passing score on the National School Psychology Examination administered by the Educational Testing Service (ETS), part of the Praxis II Series. For further information, visit <http://www.nasponline.org/certification/NASPAproved.aspx>

Master of Arts in School Psychology

The School Psychology (SP) Master's (MA) degree prepares students interested in working in community agencies or educational settings that emphasize policy as it relates to direct service to young children and families. Licensure as a school psychologist is not available with the SP MA degree. However, MA courses are aligned with the SP PhD degree and prepare students for further study.

Program Accreditation

The SP Ed.S. and Ph.D. degree programs are fully accredited by the National Association of School Psychologists (NASP).

Graduates of approved degrees are assured eligibility for the National Certificate in School Psychology (NCSP), pending the completion of an internship consistent with NASP standards and a passing score on the National School Psychology Examination administered by the Educational Testing Service (ETS) as a part of the Praxis II Series. For further information, visit <http://www.nasponline.org/certification/NASPAproved.aspx>

Master of Arts in Curriculum and Instruction

This degree program is designed with the individual student's background and career goals in mind. Most students prepare for traditional and non-traditional positions in education that require planning, consulting, research, curriculum development, evaluation and policy-making. Instructional coaching is established in a profession that is increasingly gaining national attention. Many school districts across the US, including several in Colorado, are implementing instructional coaching as a component of transformative school reform. Specializations are offered in the following areas: Curriculum Studies, Gifted Education, STEM Education, Culturally and Linguistically Diverse Education, and Special Education.

Master of Arts in Curriculum and Instruction with a Concentration in Teacher Education Program-Elementary/Secondary/K-12

The Teacher Education Program (TEP) offers an intensive, integrated, professional preparation experience. The program is structured similarly to clinical preparation models where coursework and field experiences are purposeful, connected, gradual, and cumulative. Program features such as small class sizes, built-in peer support, high academic standards, and a year-long residency in closely supervised field experiences in linguistically and culturally diverse settings promote student success in mastering the competencies of an effective teacher. Apprentice teachers can complete this program in one year, earning both teaching licensure and a master's degree.

Apprentice teachers are required to complete 840 hours of field experience in diverse public school classrooms. Apprentice teachers are required to be at their fieldwork site three days a week during the fall and winter quarters and four-five days a week in the spring quarter. A gradual release of responsibility leads to solo teaching throughout the year-long residency.

The mission of the TEP concentrations is to provide an extensive, integrated, professional experience that supports apprentice teachers in developing the dispositions, knowledge, and skills of an effective teacher of diverse learners in under-served K-12 schools. Ultimately, effective teachers engage, plan, teach, and lead to promoting the growth and development of *all* learners, and they take an active role in their own professional development.

Dual Undergraduate-Graduate Program in Teacher Education

The Dual Undergraduate-Graduate Degree program in Teacher Education concentration is an approved program in which the University of Denver Undergraduate student begins taking classes toward a teaching license and a graduate degree program prior to earning a baccalaureate degree. Both degrees must be earned within five years of matriculation into the undergraduate degree program. Dual-degree students in the TEP program will select a cognate consisting of 9 credits of graduate course work to be completed in their undergraduate senior year. Please see the complete dual-degree guidelines and policy posted here (<http://bulletin.du.edu/graduate/dual-degrees/dual-undergraduate-graduate-degree-programs/morgridge-college-of-education/>). The nine hours of MCE coursework can be spread across the fall, winter, or spring quarters; or stacked into one or two quarters. Dual-degree students should initiate the admissions process in the winter of their junior year.

Program Authorization and Accreditation

The program is authorized by the Colorado Department of Education (CDE) and accredited by the Council for Accreditation of Education Preparation (CAEP).

Master of Arts in Early Childhood Special Education

The MA in Early Childhood Special Education (ECSE) focuses on opportunities for specialized work with young children (birth through 8 years old) and families in school and community settings. It also is a pipeline to licensure and non-licensure degrees, including a PhD. Students develop the knowledge and practical skills needed to work successfully within the early childhood school and community agencies that serve children from birth through eight years old. Students are required to complete practicum hours and Praxis II tests in alignment with Colorado Department of Education licensing requirements.

Our goal is to prepare highly competent, collaborative, ethical, and self-reflective Early Childhood Special Education Specialists, who serve young children with special needs and their families in schools, districts, and community organizations. This program facilitates training and development as a scientist-practitioner who can solve problems and share decision-making with others to optimize social-emotional, cognitive, academic, and behavioral outcomes for children from birth to age eight with special needs, and their families.

Certificate in Curriculum and Instruction with a Concentration in the Teacher Education Program - Elementary/Secondary/K-12

The Teacher Education Program (TEP) offers an intensive, integrated, professional preparation experience. The program is structured similarly to clinical preparation models where coursework and field experiences are purposeful, connected, gradual, and cumulative. Program features such as small class sizes, built-in peer support, high academic standards, and a year-long residency in closely supervised field experiences in linguistically and culturally diverse settings promote student success in mastering the competencies of an effective teacher. Upon completion of the certificate program, the student will be eligible to apply for teacher licensure through the Colorado Department of Education.

Apprentice teachers are required to complete 840 hours of field experience in diverse public school classrooms. Apprentice teachers are required to be at their fieldwork site three days a week during the fall and winter quarters and four-five days a week in the spring quarter. A gradual release of responsibility leads to solo teaching throughout the year-long residency.

The mission of the TEP concentrations is to provide an extensive, integrated, professional experience that supports apprentice teachers in developing the dispositions, knowledge, and skills of an effective teacher of diverse learners in under-served K-12 schools. Ultimately, effective teachers engage, plan, teach, and lead to promoting the growth and development of *all* learners, and they take an active role in their own professional development.

Program Authorization and Accreditation

The program is authorized by the Colorado Department of Education (CDE) and accredited by the Council for Accreditation of Education Preparation (CAEP).

Certificate in Early Childhood Special Education

The Early Childhood Special Education Certificate is designed as a 1-year program that is aligned with the Masters of Arts in Early Childhood Special Education. As with the MA ECSE program, the candidates in the ECSE Certificate program are required to complete practicum hours and Praxis tests in alignment with Colorado Department of Education licensing requirements and apply to the state for the Early Childhood Special Education Specialist Endorsement.

Certificate in Gifted Core Education

The Gifted Education Certificate seeks to prepare educators in the theories and best practices of Gifted Education and includes courses necessary for the Colorado Department of Education endorsements: Gifted Education Core, Gifted Education Specialist, and Director of Gifted Education.

Certificate For Special Education Generalist

The Certificate for Special Education Generalist focuses on expanded learning opportunities for students interested in specialized work with children (5-21 years) with developmental delays and disabilities. Students in the SEG certificate program will develop the knowledge and practical skills needed to work successfully with special education programs in public schools, private schools, and community agencies that serve families with children with developmental delays, disabilities, or at-risk characteristics and qualities.

Students qualify for a Colorado Department of Education endorsement if they have a Colorado teaching license.

The Culturally and Linguistically Diverse Education (CLDE) Certificate courses prepare students to be evidence-based practitioners and researchers who can foreground culturally responsive pedagogy and the cultural, linguistic, cognitive, and academic needs of culturally and linguistically diverse learners in communities and classroom practices. Throughout their coursework, candidates learn and apply knowledge about first and second language acquisition, the selection and utilization of culturally relevant literature, essential literacy components, and curriculum and assessment practices for CLD learners with an emphasis on language and funds of knowledge to bridge communities, classrooms, and schools. Students qualify for a Colorado Department of Education endorsement if they have a Colorado teaching license.

Doctor of Philosophy in School Psychology

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well as the baccalaureate.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Doctor of Philosophy in Curriculum & Instruction

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well as the baccalaureate.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the

baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

¹ *In order to maintain degree candidacy, MCE doctoral students who have finished all requested coursework will register for one dissertation or doctoral research credit or other credit for consecutive terms fall through spring (summers not required) until the student graduates.*

Non-coursework Requirements

- Passing of Praxis Exam
- Comprehensive Examination
- Dissertation
- Oral defense of Dissertation

Doctor of Philosophy in School Psychology (Pathway for EDS Professionals)

Degree Requirements

A minimum of 52 credit hours is required beyond the earned EdS degree. No credit hours from the earned EdS can be transferred into the PhD.

Coursework Requirements

| Code | Title | Credits |
|---|---|-------------------|
| A. Research, Measurement, Program Evaluation | | 22 credits |
| Student must complete the following courses: | | |
| RMS 4930 | Quantitative Research Design | 3 |
| RMS 4941 | Introduction to Qualitative Research | 4 |
| Select a minimum of 15 credits from the following Intermediate/Advanced Courses: | | |
| RMS 4911 | Correlation and Regression | 4 |
| RMS 4912 | Analysis of Variance | 5 |
| RMS 4920 | Educational Measurement | 3 |
| RMS 4921 | Psychometric Theory | 3 |
| RMS 4931 | Survey and Design Analysis | 3 |
| RMS 4932 | Meta-Analysis Social Science Research | 3 |
| RMS 4942 | Qualitative Data Collection and Analysis | 4 |
| RMS 4959 | Topics in Research Design | 1-5 |
| STAT 4810 | Nonparametric Statistics | 4 |
| RMS 4913 | Multivariate Analysis | 5 |
| RMS 4914 | Structural Equation Modeling | 4 |
| RMS 4915 | Hierarchical Linear Modeling | 4 |
| RMS 4916 | Latent Growth Curve Modeling | 4 |
| RMS 4919 | Topics in Statistics | 1-5 |
| RMS 4922 | Item Response Theory | 3 |
| RMS 4929 | Topics in Psychometrics | 1-3 |
| RMS 4945 | Community-Based Research | 4 |
| RMS 4946 | Advanced Qualitative Research | 4 |
| RMS 4947 | Arts-Based Research | 3 |
| RMS 4951 | Mixed Method Research Design | 4 |
| B. Dissertation | | 4 credits |
| CFSP 5995 | Independent Research ¹ | 4 |
| C. Field Experience | | 8 credits |
| CFSP 4361 | Supervision in School Psychology | 2 |
| CFSP 4354 | School Psychology Advanced Practicum (3 courses taken quarterly for 2 credits each) | 6 |
| CFSP 4369 | School Psychology Pre-Doctoral Terminal Internship | 1-8 |
| D. Cognate Courses | | 12 credits |
| CFSP 4360 | Doctoral Seminar in School Psychology | 3 |
| Possible concentrations include: Data-based Decision Making; Assessment and Evaluation; Prevention, Intervention, and Consultation; Advanced Developmental Theory; Advocacy, Policy and Leadership; Clinical Psychology (APA) | | 9 |
| Total Credits | | 52 |

¹ In order to maintain degree candidacy, MCE doctoral students who have finished all requested coursework will register for one dissertation or doctoral research credit or other credit for consecutive terms fall through spring (summers not required) until the student graduates.

Non-coursework Requirements

- Comprehensive Exam

Child, Family School Psych Courses

CFSP 3991 Independent Study (1-10 Credits)

CFSP 4301 Professional, Legal and Ethical Issues in School Psychology (4 Credits)

This course examines professional, legal, and ethical issues pertinent to working with birth to age 21 populations in school and community settings. Attention is focused on federal and state education legislation, special and regular education case law, and psychological practice case law.

Professional issues and contemporary service models are reviewed, including an introduction to ethical issues, federal mandates, professional training, and roles and responsibilities. Students engage in casework discussion regarding delivery of assessment, intervention, and consultation services. Special emphasis is given to current mental health and education regulations and reforms. Differential issues facing school psychology professionals in urban and rural settings are discussed, and students become acquainted with a variety of legal and ethical issues affecting practice in public schools, private settings, and higher education. Students learn about ethical standards, reasoning processes, and conduct in applied settings. Prerequisites: None.

CFSP 4302 Special Education & Gifted Education Legal Issues (3 Credits)

This course is designed to provide students with foundational knowledge regarding the legal issues affecting special education and gifted education in early childhood and K-12 educational settings. Attention is focused on federal and state education legislation, special education case law and gifted statutes specific to Colorado. Consideration also is given to the interaction of ethical standards of practice as they relate to legal mandates and court decisions to meet the educational and psychological needs of all students, especially those with disabilities and twice exceptionalities. Students will be exposed to legal issues affecting practice in the public schools community agencies and early childhood environments. Prerequisites: None.

CFSP 4303 Psychopathology: Prevention, Diagnosis, Treatment (4 Credits)

This course is designed to provide students with knowledge of mental health disorders, the diagnostic criteria as well as culturally-relevant prevention and intervention strategies. Participants obtain practical information regarding the assessment, identification, amelioration, facilitative responses, and intervention in school and community settings. Using a strengths-based approach, prevention principles, curriculum, and policy agendas are discussed. Additionally, this course explores implications for school psychologists and other school-based practitioners working with those at risk for or suffering from mental health disorders. Prerequisites: CFSP 4322, 4323, 4324, 4340, 4343.

CFSP 4304 Diversity in School and Community Settings (3 Credits)

This course explores diversity in children and families, and the impact of culture on personal and family development. Emphasis is placed on the intersection of school and community settings' cultures and those of children and families, and how this affects learning and development for individuals and groups of children. Attention is given to students' cultures and cultural experiences, and how these affect the work they do with children and families in school and community settings. Prerequisites: None.

CFSP 4305 Exceptionalities in Education: High Incidence in Disabilities (3 Credits)

This course provides a broad survey of the field of exceptionality and special education. Included are discussions of current issues and controversies in the field, characteristics, classification, diagnosis, and educational interventions for early childhood and school-aged children with high-incidence and low-incidence disabilities who have exceptional educational needs. Biomedical and psychosocial etiologies are reviewed. Implications for child and family interventions and supports also are addressed. Prerequisites: CFSP 4310, 4311, 4312.

CFSP 4306 Exceptionalities in Special Ed (3 Credits)

This course provides a broad survey of the field of exceptionality and special education. Included are discussions of current issues and controversies in the field, characteristics, classification, diagnosis, and educational interventions for early childhood and school-aged children with disabilities who have exceptional educational needs. Biomedical and psychosocial etiologies are reviewed. Implications for child and family interventions and supports are also addressed.

CFSP 4308 Early Academic Competencies and Interventions (3 Credits)

This course provides an overview of early language and literacy development across diverse settings and stakeholders, such as families, teachers/providers, programs, and communities. A comparative analysis of evidence-based early literacy strategies, environments, curriculum, and a review of current evaluation and instructional language and literacy practices for working with teachers, families, and young children are undertaken. Play-based and other informal methods of assessment and intervention are covered, including the integration of technology and strategies to promote early language and literacy with infants, toddlers and preschoolers in natural environments. Prerequisite: CFSP 4310; None for ECSE CERT Students.

CFSP 4310 Early Childhood Development (3 Credits)

This course focuses on early childhood development during, from the prenatal period to approximately five years of age. Major theories of early childhood development and research methods for studying infant and early childhood behavior will be discussed. Emphasis will be on the physical, cognitive, communicative, social, and emotional aspects of development, for children who are typically developing, at risk or with special needs. All-inclusive issues, as well as health, risk and protective factors will be addressed. The importance of investing in early childhood programs, fostering nurturing relationships during the early years, and addressing the diverse needs of families will be emphasized. Prerequisites: None.

CFSP 4311 Child and Adolescent Development (3 Credits)

This course provides an overview of growth and development from age five through 21 years of age. We will explore theories and research in developmental psychology to provide a context for typical child development. Attention will be given to the social, emotional, cognitive, and biological development of the child, with a particular focus on attachment as a framework for healthy development in these domains. Case studies will allow for the application and integration of child development theory and counseling practice. Prerequisites: None.

CFSP 4312 Learning Theories & Behavioral Analysis (3 Credits)

This course examines learning theories and applied behavioral principles. Students learn to apply theories to case studies and fieldwork relating to children along the developmental spectrum and across cultural contexts. Students work to investigate and analyze concepts relating to learning and behavior at home and school, and to develop positive behavioral support and effective learning plans. Prerequisites: None.

CFSP 4315 Professional, Leadership and Ethical Issues in Special Education: Birth to 21 (3 Credits)

This course provides students with an understanding of the roles & responsibilities of an Early Childhood Special Education Specialist and Special Education Generalist. This course serves as the foundation for students who are interested in pursuing a profession in special education and working with children with disabilities from birth to 21 years. This course includes the ethical and professional practice standards and understanding of the multiple roles and complex situations across wide age and developmental ranges. This course also briefly covers the historical laws and legal issues associated with the profession. The course also highlights why special educators engage in professional activities and learning communities that benefit individuals with developmental disabilities and their families, colleagues, and their own professional growth. This course promotes the idea that special educators are lifelong learners and regularly reflect on and adjust their practice. Prerequisites: None.

CFSP 4316 Infant through Adolescent Development (3 Credits)

This course focuses on early childhood development from the prenatal period to approximately five years of age. Major theories of early childhood development and research methods for studying infant and early childhood behavior will be discussed. Emphasis will be on the physical, cognitive, communicative, social, and emotional aspects of development, for children who are typically developing, at risk or with special needs. All-inclusive issues, as well as health, risk and protective factors will be addressed. The importance of investing in early childhood programs, fostering nurturing relationships during the early years, and addressing the diverse needs of families will be emphasized.

CFSP 4317 Topics in Special Education: Learning Differences (1-3 Credits)

This course reviews the challenges that arise in special education settings related to children who exhibit academic and behavioral differences and delays. Academic and behavioral interventions and differentiation strategies will be addressed. Additionally, the course will cover the approaches for addressing children who require additional academic and behavioral support in the classroom. Prerequisites: None.

CFSP 4318 Pharmacology of Addictive Behaviors I & II - Applications for schools (3 Credits)

This class provides a solid base of knowledge about the drugs of abuse including what occurs physiologically with drug use and other addictive behaviors with a focus on adolescent development. Additionally, this course explores neuroscience and genetic research on addiction to better understand the changes in the brain that underlie drug use and addictive behaviors with an emphasis on adolescent development.

CFSP 4319 Counseling Adolescent Addictive Behaviors (3 Credits)

Introduction to assessment, treatment and outcome evaluation of chemical and non-chemical addictive behaviors in adolescents. Gain familiarity with major addiction treatment models and their underlying assumptions in order to generate comparative critiques. Examination of the major treatment approaches to substance abuse and their accompanying theories of etiology with a focus on adolescence. Explore meaning of addiction and abuse in relation to related non-substance use compulsive behaviors. Develop basic assessment skills to identify and differentiate substance abuse from other clinical disorders within the school environment. Develop an understanding of the interpersonal function of substance abuse and related addictive behaviors as well as an understanding of the skills and attitudes that underlie effective addiction treatment in adolescents.

CFSP 4320 Early Childhood Assessment: Formal & Standardized (3 Credits)

This course is designed to teach students how to assess young children (birth to 5 years) using a variety of formal and standardized methods. Assessment will focus on normed-referenced, standardized measures of cognitive, communication, emotional, social, sensory and physical motor development. Students will gain experience in administering assessments to young children, interpreting assessment results, writing assessment reports, and reporting the results to families and professionals. A variety of assessment tools will be studied for their appropriate use with young children and their families. Prerequisite: CFSP 4310.

CFSP 4321 Psycho-educational Assessment I (4 Credits)

This course is designed for graduate students in school psychology to advance their knowledge of, skills in, and attitudes toward the assessment of cognitive functioning in children and adolescents. This course will include (a) review of historical and current theories of intelligence, (b) review of psychometric constructs relevant to the measurement of cognitive functioning, (c) practice in the administration and scoring of widely used measures of cognitive functioning, (d) practice in the interpretation of test scores, (e) practice in the preparation of written reports summarizing test results, (f) exploration of multicultural issues related to assessment, and (g) review of the clinical application of psychological testing in school and clinical settings. The course is a combination of lecture and lab intended to provide broad and specific instruction on the procedures and techniques for administering, scoring, and interpreting cognitive measures with children, adolescents, and adults. Student knowledge, skills, and attitudes will be formally assessed through performance on mock examinations, administration of psychological assessments, written reports, and group presentations. Students will find that a large amount of time outside of class is required to successfully complete this course. Learning to administer and interpret cognitive assessments takes many hours of practice. Students should be aware of this and budget their time accordingly.

CFSP 4322 Psycho-Educational Assessment II (4 Credits)

This course is designed for graduate students in school psychology to advance their knowledge of, skills in, and attitudes toward the assessment of academic functioning in children and adolescents. The course is designed to train students in identification and assessment for academic difficulties. Recent paradigm shifts in general and special education, fueled by federal and state law, are calling for school personnel, particularly school psychologists, who have the knowledge, skills, and leadership competencies necessary to promote better academic assessment and intervention practices for all students. The role of school psychologists is expanding and diversifying. In an era that emphasizes universal prevention and swift early intervention at the first sign of difficulty (i.e., MTSS), school psychologists may be among the best educational professionals for preventing and intervening when children experience academic difficulties. The course is a combination of lecture and lab intended to provide broad and specific instruction on the procedures and techniques for administering, scoring, and interpreting achievement measures with children, adolescents, and adults. Student knowledge, skills, and attitudes will be formally assessed through performance on mock examinations, administration of psychological assessments, written reports, and group presentations. Students will find that a large amount of time outside of class is required to successfully complete this course. The readings and the practical work assignments required to master the techniques covered in this course are time-consuming and demanding. Students will be expected to learn the formal scoring systems used for each instrument and the theory underlying the use of these techniques. Learning to administer and interpret academic assessments takes many hours of practice. Students should budget their time accordingly.

CFSP 4323 Psycho-Educational Assessment III (4 Credits)

This course is the second of two required courses designed to provide students in School Psychology with expertise in individual intelligence and achievement test administration, scoring, interpretation, and report writing. Each student has an opportunity to administer various cognitive and achievement measures, with particular emphasis on the Woodcock Johnson Scales. Nontraditional forms of assessment, as well as adaptive behavior measures, are also covered. Integrating results of assessments with other data to provide effective educational recommendations continues to be an emphasis. The focus of the class is on the assessment of school-aged children. Lab fee required. Prerequisites: CFSP 4312, 4322.

CFSP 4324 Psycho-educational Assessment IV (3 Credits)

This course is designed to provide students with knowledge of the major approaches to assess a school-aged student's social and emotional status. Instruction includes underlying theories, use and interpretation of interviewing techniques, observation methods, objective behavior ratings, self-report measures, sociometric procedures and selected projective measures. Emphasis is placed on the integration and interpretation of multimethod, multisource and multisetting data to improve diagnostic accuracy, and the use of assessment results in developing effective intervention strategies. Students learn to incorporate such assessment information using case studies. In addition, students develop skills in writing case reports and in making effective presentations of social-emotional assessment results. Consideration is given to contemporary issues in the assessment of children's social emotional functioning. Lab fee required. Prerequisites: CFSP 4310, 4311, 4322, 4323.

CFSP 4326 Early Childhood Assessment: Informal & Play-Based (3 Credits)

This course is designed for students to learn informal and play-based assessment processes for young children (birth-6 years) using a variety of non-standardized, informal and play-based assessment methods. The entire assessment process, including screening, evaluation, interpreting results, writing an integrated report, and providing feedback to families and professionals, will be the focus. Assessment measures will be examined with consideration for when and why specific instruments should be used, in addition to the benefits and disadvantages of the instruments. Students will be trained in-depth in the administration and interpretation of a variety of instruments for assessment of the whole child including the cognitive, language, social-emotional, and sensorimotor developmental domains. Prerequisite: CFSP 4310.

CFSP 4330 Family-School Partnering and Consultation (3 Credits)

This course is designed to familiarize educational, mental health, and early childhood service providers with essential attitudes, approaches, and actions necessary to form successful family-school-community partnerships that can foster development and learning, especially for children with disabilities. Ecological, family systems, and family-centered theory and principles serve as the foundation for working collaboratively with families from diverse cultural and social backgrounds within school and community settings. Students gain skills in family interviewing; consultation to identify family strengths, needs, and resources; collaborative problem-solving; and multi-systemic learning. Evidence-based family involvement, education, and intervention strategies contribute to positive family-school partnering relationships are reviewed within a multi-tiered, school-based service delivery framework. Prerequisite: CFSP 4332; None for ECSE Students.

CFSP 4331 School and Organizational Consultation I (3 Credits)

This course is designed to acquaint students with current directions in school and organizational consultation. Key principles of successful system-wide prevention, intervention and evaluation are covered. The importance of maintaining an ecological perspective in organization consultation activities is stressed.

CFSP 4332 School and Organizational Consultation II (3 Credits)

This course builds on content covered in School and Organizational Consultation I. It is designed to acquaint students with current directions in classroom management and school-based consultation. Covered are issues related to consultant and consultee characteristics, consultation practices and processes, models and stages of consultation, facilitating desired outcomes in consultation, and evaluation of consultation outcomes. Special emphasis is also given to problems of classroom management and collaboration with parents, teachers and other educational and community personnel. Case analysis and practice are required.

CFSP 4335 Infant & Family Interventions (3 Credits)

This course will describe various models for intervention with infants and toddlers with disabilities, emphasizing intervention within natural environments. Working with children and families in home, childcare, and other community settings will be emphasized and contrasted with intervention in more clinical settings. Students learn how to consult with parents and community professionals in providing coordinated transdisciplinary services when working with children in home and community settings. All areas of development will be addressed. Field experiences with children and families are expected to practice the skills addressed in class. Families will be asked to share their experiences to enable students to gain the "human" side of theory and practice. Prerequisites: None.

CFSP 4336 Preschool Interventions (3 Credits)

This course covers early childhood interventions applicable within community, preschool and home environments. A hierarchy of intervention strategies is addressed including universal, targeted, and intensive approaches. There is a focus on building supportive networks, routine-based intervention strategies, and collaboration to enhance family resources. Students review empirically validated early interventions and curriculum for young children exhibiting both normal and delayed development. Prerequisite: CFSP 4310, 4312; None for ECSE CERT Students.

CFSP 4337 School Age Academic Competencies and Interventions (3 Credits)

The purpose of this course is to review current theories of learning disability and practices that can support the diverse learning needs of school-aged students with and without disabilities. An integrated response to intervention model will be reviewed to identify difficulties, delays, and disabilities in the domains of literacy (oral, writing, speaking, listening), mathematics, and self-regulation. Students will learn to: a) evaluate differentiated instructional environments and adaptations that can support learning; b) employ focused assessments to identify academic strengths and weaknesses; c) formulate instructional hypotheses and learning goals; and d) link assessment results to evidence-based intervention approaches or instructional strategies designed to address phonemic awareness, decoding/phonics, reading fluency, listening/reading comprehension, spelling, written expression, vocabulary, mathematical calculation, mathematical problem-solving, and study/organization/test-taking skills. Effective practices will be reviewed to reduce learning barriers and increase learning supports across school, home, and community settings. Students will collaborate on the development of instructional hypotheses and learning goals that respect cultural diversity and language differences and will develop plans to monitor instructional fidelity and students' progress over time. These goals are accomplished through critical readings, classroom discussion, homework assignments, demonstrations, modeling, video analysis, and practice with hypothetical and authentic cases referred for learning and academic issues. Prerequisite: CFSP 4312.

CFSP 4338 Exceptionalities in Education: Low Incidence Disabilities (3 Credits)

This course reviews a wide range of neurodevelopmental disorders and low incidence disabilities such as blindness/visual impairment, deafness/hearing impairment, deaf blindness, traumatic brain injury, Fragile X syndrome, Fetal Alcohol Syndrome, traumatic brain injury, and syndromes associated with chromosomal deletions. Implications for assessment and intervention will be outlined including diagnostic criteria, prevalence and treatment. Research on identification and treatment including state of the art interventions and assistive technology will be addressed. Community experts on specific disabilities will be used as guest lecturers. Prerequisite: None.

CFSP 4339 Introduction to Play Therapy (3 Credits)

This course examines the history and theoretical bases of major theories of play to enhance children's social-emotional and adaptive functioning. Child-centered, interpretive, and structured play therapy models are reviewed. Information is covered regarding preparation, selection of materials and toys, playroom characteristics, facilitative responses, and how to adapt play therapy in school, home and clinical settings. The play therapy process is illustrated from the initial referral and contact through termination, including observing and responding during sessions, facilitation and interpretation, therapeutic limit setting, and group play therapy strategies. Case studies, role play, video and script analysis are incorporated as is brief play therapy and applications with special populations. Efficacy, evaluation and future areas for professional development are reviewed. This course is designed as an introductory experience to prepare students for further supervised practica in play therapy. Prerequisite: CFSP 4310.

CFSP 4340 School Mental Health Counseling I (3 Credits)

School Mental Health Counseling I is designed as a foundational introduction to major theories behind contemporary, evidence-based school mental health counseling approaches for children and adolescents. Students will learn developmentally informed and empirically driven individual and group counseling theory. Ethical guidelines are reviewed. This course and its contents are a prerequisite to prepare students for School Mental Health Counseling II, a theoretical class that incorporates in-depth analysis of counseling theories to individual and group cases and an integrative approach to bridge the research to practice gap.

CFSP 4341 School Mental Health Counseling II (4 Credits)

School Mental Health Counseling II is designed as an introduction to discrete techniques behind contemporary, evidence-based school mental health counseling approaches for children and adolescents. Students will learn research-based counseling techniques and practical skills within a multi-tiered system of support. Consideration is given to integrative counseling approaches and differences between individual and group processes. These goals are accomplished through instruction and experiences that include examination of research, analysis and transcription of case studies, demonstrations, modeling, in-vivo practice, self-reflection and evaluative feedback. This course and its contents are a prerequisite to prepare students for School Mental Health Counseling III, an advanced class that incorporates in-depth analysis of applying counseling theories to individual and group cases, as well as supervised counseling experience.

CFSP 4342 Crisis Intervention and Prevention (3 Credits)

This course provides knowledge about crisis prevention and intervention theory and effective strategies for use in direct and indirect services for children and staff in schools and in practice with children. Emphasis is on application to child-centered and school-based crises such as bullying, child abuse, death, loss and grief, trauma, community and school-based violence, threats, and suicide. The course provides students with basic knowledge and skills for crisis intervention in school settings. Prerequisites: CFSP 4301, 4304, 4310, 4311, 4340, 4343.

CFSP 4343 School Mental Health Counseling III (2 Credits)

School Mental Health Counseling III is designed as an advanced counseling application class that incorporates supervised counseling experiences to improve interpersonal, emotional, and social functioning in young children to adolescents. Students learn to design, deliver, and evaluate evidence-based prevention and intervention approaches and consultative mental health services. By working alongside a field site supervisor, students engage in case review, analysis, and delivery of counseling services designed to mirror expectations placed on mental health professionals in school and community settings. Self-reflection, transcript analysis, and peer, instructor, and supervisor feedback are employed to develop professional and personal individual and group counseling skills within a multi-tiered system of support.

CFSP 4349 School Psychology Practicum I (2 Credits)

Taken during the first year of entry, the Practica is a supervised initial year field experience designed to expose students to a variety of home-, community- and school-based settings that serve families with children who have developmental and special needs, and in the CFSP Clinic. Each week for up to four hours, students are expected to attend, observe, and participate in a range of site-specific team meetings and services offered to families and children. For the MA in Educational Psychology degree, students, during the fall or winter quarter, identify, develop and initiate a research project with input from the faculty. The MA project culminates during the fourth quarter (summer) and serves as the final project in lieu of a comprehensive exam. Prerequisites: CFSP 4301, 4304, 4349 - Must pass all prior quarters as listed in the handbook.

CFSP 4351 School Psychology Practicum: Clinic Assignment (1-3 Credits)

CFSP Clinic is a supervised field experience in the Morgridge College of Education's Counseling and Educational Services Clinic. Through all experiences, Clinic students will work with students and families within the zero to college age range. Casework may include: interview, assessment, data analysis, report writing for different audiences, diagnostics, data presentation, intervention, and consultation for a variety of psychoeducational and developmental concerns of children and families. Prerequisites: All prior first year courses as listed in the handbook, CFSP 4351 - prior quarters.

CFSP 4353 School Psychology Practicum II (2 Credits)

This is a 500 hour supervised field experience taken after the successful completion of core courses and Practica I experience. Practica is considered a critical professional transition year to help consolidate learning and professional competencies in preparation for a subsequent Internship. Students work throughout the year with Clinic Faculty and a licensed Field Supervisor within the University of Denver psycho-educational clinic and infant, preschool, elementary, middle or high school settings and also attend weekly Practicum seminars or individual supervision sessions with a University Faculty member. Supervision is designed to provide ongoing professional feedback, case analysis, peer consultation, continued professional development pertinent to the successful practice of School Psychology in urban and rural settings. Prerequisites: All prior first year courses as listed in the handbook, CFSP 4353 - prior quarters.

CFSP 4354 School Psychology Advanced Practicum (2 Credits)

This is a supervised field placement in public and/or private school, clinical, or community mental health settings or related child agency for the purpose of psychoeducational evaluation and concomitant consultation with service components in the area of school psychology. Advanced Practicum may extend beyond one term. (Repeatable). Prerequisite: PhD students only; Pass first year courses and CFSP 4353.

CFSP 4355 School Psychology Internship - EdS (1 Credit)

This course is designed to provide the student with their final supervised experience prior to graduation. The student will complete 1200 clock hours of supervised field experience across an academic year. The student will be closely supervised by a licensed school psychologist in the field based setting. The student will participate in all aspects of the role of a school psychologist including assessment of cognitive, social-emotional, academic, and behavioral traits of a student in need; consultation with teachers on interventions to meet student needs; presentation of information at case conferences; consultation with parents regarding ways to assist their children's learning; developing programs to address school-wide needs, including crisis intervention; and sharing of new ideas with educational staff. Prerequisite: Must have passed all other courses in degree plan.

CFSP 4356 School Psychology Pre-Doctoral Internship (4-8 Credits)

Meets 12-month internship requirement in school psychology. Prerequisites: completion of comprehensive examination and dissertation proposal.

CFSP 4357 Early Childhood Practicum (1-4 Credits)

This course provides students with a field experience in an Early Childhood environment for students who are interested in pursuing a profession in Early Childhood Special Education. Field Practicum in Early Childhood Special Education is an off-campus, 600-hour minimum supervised experience taken throughout your coursework. Field Practicum is designed to broaden one's professional skills and is considered a critical transition of substantial growth. Each student is required to successfully complete 3 practica; an infant/toddler, (Birth to 3 years) a preschool (3-5 years) and an early elementary focused (Kindergarten through 3rd grade). Practicum seminar is designed to facilitate case analysis, ongoing self-reflection, and to provide peer consultation and professional feedback relevant to best practice. The field practicum is considered a critical professional transition to help consolidate learning and professional competencies in preparation for employment. All students work with a licensed Field Supervisor. Students will be placed in infant, preschool, elementary school settings. During practicum, students provide direct and indirect services that support children and/or families in a variety of settings. All students attend weekly practicum seminars facilitated by a University Supervisor. Supervision is designed to provide ongoing professional feedback, case analysis, peer consultation, and continued professional development and experiences pertinent to successful practice. This course promotes the idea that special educators are lifelong learners and regularly reflect on and adjust their practice. Restricted to ECSE students only.

CFSP 4359 School Psychology Pre-Doctoral Internship (1 Credit)

This course is designed to provide the student with their final supervised experience prior to graduation. The student will complete 1200 clock hours of supervised field experience across an academic year. The student will be closely supervised by a licensed school psychologist in the field based setting. The student will participate in all aspects of the role of a school psychologist including assessment of cognitive, social-emotional, academic, and behavioral traits of a student in need; consultation with teachers on interventions to meet student needs; presentation of information at case conferences; consultation with parents regarding ways to assist their children's learning; developing programs to address school-wide needs, including crisis intervention; and sharing of new ideas with educational staff. Prerequisite: Must have passed all other courses in degree plan.

CFSP 4360 Doctoral Seminar in School Psychology (3 Credits)

Current topics and/or controversies in the profession of Child, Family and School Psychology are addressed in an advanced seminar format. Topics vary by instructor and year and may address current issues in research, theory, policy development, and/or clinical practice.

CFSP 4361 Supervision in School Psychology (2 Credits)

This is a supervised field placement in public and/or private school, clinical, or community mental health settings or related child agency for the purpose of psychoeducational evaluation and concomitant consultation with service components in the area of school psychology. Advanced Practicum may extend beyond one term. (Repeatable). Prerequisites: PhD Students only; CFSP 4351, 4353.

CFSP 4363 School Psychology Program Development and Evaluation (3 Credits)

This course focuses on theory and practice of program development and evaluation in school and community agency settings. Both qualitative and quantitative methods of program evaluation are discussed. Students have the opportunity to collaborate on a comprehensive evaluation of a specific educational, health, or mental health program. Prerequisites: RMS 4910, CFSP 4332.

CFSP 4365 School Psychology Terminal Internship - EdS (1-8 Credits)

Meets 9-24 month internship requirement in school psychology. Prerequisites: Completion of all Practica and Program Permission. Students can only enroll in this course if they're also enrolled in CFSP 4355.

CFSP 4369 School Psychology Pre-Doctoral Terminal Internship (1-8 Credits)

This course is designed to provide the student with their final supervised experience prior to graduation. The student will complete 2000 clock hours of supervised field experience across an academic year in public and/or private school, clinical, or community mental health settings or related child agency for the purpose of psychoeducational evaluation and concomitant consultation with service components in the area of school psychology. The student will be closely supervised by a licensed psychologist in the field based setting. The student will participate in all aspects of the role of a school psychologist including assessment of cognitive, social-emotional, academic, and behavioral traits of a student in need; consultation with teachers on interventions to meet student needs; presentation of information at case conferences; consultation with parents regarding ways to assist their children's learning; developing programs to address school-wide needs, including crisis intervention; and sharing of new ideas with educational staff. Prerequisites and Restrictions: Students must be enrolled in the CFSP doctoral program. They must have successfully completed Practicum I, Practicum II and Advanced Practicum. Additionally, they must have successfully passed comprehensive exams and dissertation proposal. All other students must obtain instructor permission. Corequisite: CFSP 4359.

CFSP 4991 MA Independent Study (1-10 Credits)

This course allows MA or EdS Child, Family, and School Psychology students to study a specific topic area in detail in conjunction with a cooperating faculty member.

CFSP 4995 Independent Research (1-10 Credits)

This course is for students whose program requires completion of a masters level thesis.

CFSP 4999 Advanced Seminar in School Psychology (1-3 Credits)

This course is designed as an advanced topical seminar in which students will focus on the professional literature and research relevant to important topics in the field of School Psychology. There will be analysis and discussion of these advanced topics with consideration of the implications for research and practice in School Psychology. Required meeting time and assignments would be commensurate with number of credits (Repeatable). Prerequisite: Instructor Permission.

CFSP 5991 PhD Independent Study (1-10 Credits)

This course allows PhD Child, Family, and School Psychology students to study a specific topic area in detail in conjunction with a cooperating faculty member.

CFSP 5995 Independent Research (1-20 Credits)

This course is for PhD Child, Family, and School Psychology students engaged in completing their doctoral dissertation. Advisor permission required.

Curriculum and Instruction Courses**CUI 4020 Introduction to Curriculum (3 Credits)**

Introduces curriculum theory and curriculum as a field of study; includes study of issues such as standards, cognition, diversity, ecology, and social justice, among others.

CUI 4021 Models of Curriculum (3 Credits)

Reflects on ways various curriculum orientations may resolve modern issues or problems, with students' independent pursuit of one or two orientations in depth; orientations examined include cognitive pluralism, developmentalism, rational humanism and reconceptualism, among others. Recommended prerequisite: CUI 4020.

CUI 4022 Curriculum Theory into Practice (3 Credits)

Helps students move from theoretical concepts and decisions involved in curriculum development to actual construction of curricula; survey of potential components encompassed in a variety of curricula followed by participation in designing a curriculum as a member of a student team; final facet requires students to develop a curriculum. Prerequisites: CUI 4020 and 4021 or instructor's permission.

CUI 4027 Implementing Curriculum: A Practicum (3 Credits)

Opportunity to experience authentic role of curriculum on site; work at the Denver Zoo, the Denver Museum of Nature and Science, other museums and school sites; to develop and implement curriculum.

CUI 4031 Teaching and Learning (3 Credits)

This course builds the biological and contextual foundations for learning, including brain and cognitive development theory. The course also helps students build a framework for culturally responsive classroom management, including rituals, routines, and relationships with students and families. Students apply cognitive development theory and equitable classroom management strategies to analytical case studies. Course restricted to students in TEP program or instructor approval.

CUI 4032 Analysis of Teaching (3 Credits)

Provides a systematic introduction to the research base that characterizes effective practice and to the array of research methods that can be employed to study teaching and teacher development.

CUI 4033 The Practice of Teaching (3 Credits)

Course explores personal, conceptual, and empirical understandings of "teaching practice." Topics addressed have included: metaphors for teaching practice, best practices for equity and social justice, professional development practices.

CUI 4034 Curriculum & Cultural Context (3 Credits)

This course will address the influence of cultural, political, sociological, and economic factors on curriculum at the instructional, situational, societal, and ideological levels. Students should be interested and willing to explore these issues through readings and discussion. We will be exploring various perspectives, including our own, which inform the discussion on this critical area of education.

CUI 4035 Critical Perspectives in Education (3 Credits)

In this course, students will examine issues related to democracy, power, and privilege in public education. Specifically, students will learn about how anti-democratic groups are working to undermine public education in the U.S. Students will explore White privilege, racism, classism (and other "isms") and the impact they have had and continue to have in public school settings, particularly at schools that serve historically marginalized and oppressed students. Theoretical frameworks such as Critically Relevant Teaching and Critical Race Theory will be introduced in this class as well.

CUI 4039 Transformational Teaching and Learning (3 Credits)

This course takes an exploratory approach to the analysis of transformation teaching and learning. It asks questions such as "What are effective teaching and learning environments?" "For whom and under what circumstances?" "How can we create such environments?" We will explore how patterns of activities in the classroom can be designed to achieve simultaneously all of the major goals of educational reform. The term classroom is not restricted to the physical classroom space but "classroom" in the sense of the organized instructional activities that can extend outside of the school building into the community.

CUI 4041 School and Curricular Reform (3 Credits)

A look into school reform movements, why most fail and only a few succeed.

CUI 4043 Development of Technology Enhanced Educational Environments (3 Credits)

Utilizing emerging Learning Theories and complex Instructional Design Theories, students will move into advanced educational web page development including designing with style sheets and layers. Several customized technology mediated lessons or professional projects will be created for use in practice. Various tools, designed to enhance learning environments, will be explored.

CUI 4046 Technology Leadership (3 Credits)

Explores the role of ethics, values, social, legal, and power issues associated with technology in education. Analyzes how technology is transforming learning, equitable distribution of information, and the implications for providing optimal education to diverse learning populations.

CUI 4047 Humanizing Pedagogies (3 Credits)

This course will provide a foundation in the conceptualization, design, and implementation of a humanizing pedagogy. A humanizing pedagogy is a "revolutionary approach to instruction that ceases to be an instrument by which teachers can manipulate students, but rather expresses the consciousness of students themselves" (Freire, 1970, p. 51). Students in this course will apply their knowledge of humanizing pedagogy to specific content areas, practice, and research through the tenets of a humanizing pedagogy. Moreover, students will explore humanizing literacy and math as fundamental human rights that afford access and equity to historically marginalized communities.

CUI 4050 Research Seminar: Conducting Systematic Reviews (0-3 Credits)

The Curriculum and Instruction (C&I) Research Seminar: Conducting Systematic Reviews (CUI 4050, 3 credits) is the first of a series of courses for doctoral-level students in the Curriculum and Instruction Program. It is also available to students in other programs who would like to learn how to complete a systematic literature review, as well as think about identifying a research problem to address and research purpose.

CUI 4051 Seminar in Dissertation Organization and Design (1-5 Credits)

Individualized assistance in developing the dissertation topic, issue, problem; guidance in preparation for proposal orals and application to the Institution Review Board (IRB), direction for dissertation chapter organization, writing and completion. This seminar is targeted for the student who needs support in completing the dissertation.

CUI 4058 Teacher as Researcher (3 Credits)

Emerging philosophical and methodological issues that arise when school practitioners undertake research within their own sites; range of research traditions including quantitative, statistical research and qualitative methodologies; mastering relevant skills and accessing resources for students to be better prepared to conduct their own inquiries and understand and solve problems.

CUI 4130 Philosophy of Education (3 Credits)

Focuses on 3-4 philosophers and examines the contributions their philosophical ideas have on education. Philosophers studied have included John Dewey, Cornel West, Nel Noddings and Maxine Greene.

CUI 4131 Spirituality in Education (3 Credits)

This course will explore the role of spirituality in education from both the student and educator point of view through an examination of the big questions that are held close to the heart; the ones that guide us toward meaning making in the world. The primary goal of the course is to plumb the depths of spirituality, a deep sense of inner meaning making, that calls us toward a particular profession. The course will focus on the interface between spirituality in education through the lenses of curriculum and instruction.

CUI 4153 Practicum: Curriculum and Instruction (0-5 Credits)

Designed to fit the educational needs of the individual student who may choose from a wide variety of practicum (internship) experiences, including teaching, curriculum development, museum internships or research projects in curriculum and instruction on or off campus. In the case of taking on a paid position, students should consult the Office of Internationalization about their visa status and requirements. Students should work with their advisor before they plan to register in order to get this course in the class schedule when it will be needed.

CUI 4155 Special Topics (1-10 Credits)

Special topics in the field of education.

CUI 4160 Race, Class and Gender in Education (3 Credits)

Ethnicity, Class & Gender in Education applies the concepts and theories of social science disciplines - sociology, social psychology, anthropology, historical perspectives and philosophical orientations - to the inclusive examination of the issues of racism, classism, sexism, and homophobia in education. This course seeks to conceptualize ethnicity, gender and social class as interactive systems, not as separate and independent variables, that impact students, teachers, school systems and the educational enterprise. We examine educational systems and practices that historically have disadvantaged women and peoples of color and discuss strategies and techniques for empowerment of the members of these groups.

CUI 4170 Engaging Learners through the Arts (3-5 Credits)

This seven day institute is designed to engage participants in a challenging exploration of the creative process through workshops with professional artists in the disciplines of dance, visual arts, creative writing, music, and theatre, and to provide a greater understanding of the theory and practical applications of school reform.

CUI 4172 Aesthetic Foundation in Education (3 Credits)

Educational enterprise from aesthetic viewpoints; examination of a number of aesthetic theories and exploration of implications for curriculum, teaching, and evaluation.

CUI 4180 History of Education in the United States (3 Credits)

Traces historical context and development of K-12 schools in the United States from initial discovery of North and South America by Europeans to the present; understanding through examination of central issues that strongly influenced our current educational systems - evolution of schools, religion, social and political reform, women's issues, nationalism and ethnicity, industrialization of the nation and world.

CUI 4310 Supporting Apprentice Teachers (3 Credits)

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn as they learn to create culturally responsive classroom environments and to address the strengths and needs of all students particularly Culturally and Linguistically Diverse (CLD) Learners and students in Special Education. Topics addressed include mentor support for apprentice teachers' planning, teaching of reading and writing, applying a teacher evaluation framework, designing and interpreting formative and summative assessment, using data to inform instruction and differentiation for ELLs and GT identified students.

CUI 4311 Supporting Apprentice Teachers II (3 Credits)

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn about developing unit and lesson plans, literacy (specifically reading), and developing competencies in the evaluative framework for residency or student teaching used in a teacher education program.

CUI 4312 Supporting Apprentice Teachers III (3 Credits)

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn about developing formative assessment plans, literacy (specifically writing), and developing competencies in the evaluative framework for residency or student teaching used in a teacher education program.

CUI 4313 Supporting Apprentice Teachers IV (3 Credits)

This course is designed to support mentor teachers as they build relationships with the apprentice teachers during the residency or student teaching phase of a teacher education program. It is designed to complement the professional standards-aligned coursework that apprentice teachers complete as part of the licensing process. As such, this course is designed to strengthen the connection between the institute of higher education and the field placement site. In doing so, mentor teachers can support the learning of apprentice teachers in the practical application of theoretical frameworks. This course specifically addresses supporting apprentice teachers as they learn about using data to inform instruction, differentiating instruction for English Language Learners and Gifted and Talented identified students, and developing competencies in the evaluative framework for residency or student teaching used in a teacher education program.

CUI 4400 Nature and Needs of Gifted Learners (3 Credits)

This course is designed to provide participants with an understanding of 1) conceptual foundations and definitions of giftedness, 2) how intelligence, creativity, and non-intelligence factors are related to giftedness, 3) the nature, development, types, and needs of gifted individuals, 4) principles and issues in the identification of gifted individuals, and 5) the major issues and tensions in the education of gifted and talented individuals. Lectures, discussions, and other class activities and assigned readings and projects will include topics such as the history and nature of the giftedness construct; theories of intelligence and creativity and their relationship to conceptions of giftedness; types of giftedness; the diversity of gifted individuals and their personal and educational needs; the role of identification in the education and development of gifted children and youth; and purposes and perspectives in gifted education.

CUI 4401 Psychological Aspects of Giftedness (3 Credits)

The psychological development of gifted children is examined through a study of current theories, models, research, and case histories. Understanding of psychological development creates a foundation for applications and practices that nurture the psycho-social-emotional development of gifted individuals. Specific topics include the psychological nature and needs of the gifted; perfectionism, stress, and underachievement; special issues for gifted boys and gifted girls; highly gifted; and pertinent theories of psychological development. Emphasis is placed on synthesis of theories and application to specific situations.

CUI 4402 Curriculum for Gifted Learners (3 Credits)

This course is designed to provide participants with an understanding of the conceptual foundations in the design and development of curriculum for gifted and talented students. Includes theories, models and processes for curriculum modification and curriculum design; strategies for adapting educational content, process, product, and learning environment based on the educational characteristics and needs of gifted learners; and curriculum design and development approaches that are effective in the intellectual and personal growth of gifted and talented learners. Content in this course is aligned with appropriate instructional strategies and techniques recommended for use with gifted and talented learners. Lectures, discussions, class activities, assigned reading and projects include topics such as a general overview of curricular principles and perspectives; critical analysis of general curriculum; issues of diversity in curriculum development and modification including cultural congruence; recommended models of curriculum development for gifted and talented learners; and national trends in gifted education.

CUI 4403 Instructional Strategies for Gifted Learners (3 Credits)

This course provides a basic understanding of how to adapt curriculum for gifted learners through various instructional strategies. Strategies studied include: acceleration, enrichment, differentiation, compacting, grouping, independent study, and service learning. By selecting instructional strategies based on assessed learner needs, educators can reach many types of gifted learners in their classrooms including gifted students of poverty and gifted learners of cultural and ethnic diversity. The objectives of this class are that participants: know about and be able to define instructional strategies that meet assessed academic and affective needs of gifted learners and be able to adapt curriculum for gifted learners using learned instructional strategies.

CUI 4404 Twice-Exceptional Students (3 Credits)

The purpose of this course is to acquaint the student with the various areas of exceptionalities typically encountered with gifted students and to provide classroom related techniques to assist the teacher in identifying and working with twice-exceptional children in an effective manner. Environmental, behavioral, motivational, emotional and educational needs are addressed. Legal responsibilities, parent communication and staff development will be emphasized.

CUI 4405 Practicum in Gifted Education (1-3 Credits)

Students wishing to earn credit for the Practicum in Gifted Education must complete an experience in three of the five areas (Teaching, Assessment, Administration, Research, or Policy). Students must submit a Practicum Proposal outlining the intended practicum experiences. This Proposal must be approved by the practicum faculty supervisor when the practicum experiences are begun.

CUI 4407 Current Issues in Gifted Education: Identification (3 Credits)

This course focuses on the screening and selecting of gifted and talented students. It is designed for practicing professionals - teachers, counselors, psychologists, and administrators - who must make decisions about the identification and serving of gifted and talented students. Course uses multiple assessments, both quantitative and qualitative, to identify gifted students within an increasingly diverse population (including culturally- and ethnically-diverse, high-potential, linguistically-different students with unique affective needs as well as high-potential economically-disadvantaged students). Students will use data to diagnose educational needs, prescribe appropriate educational strategies and to incorporate appropriate identification strategies for identifying gifted and talented students. Legal responsibilities and parent communication as well as staff development are emphasized. Students are required to develop an identification model based on relevant theory and current practices to be used in their particular setting. Enforced Prerequisites: CUI 4400 with a minimum grade of C- OR CUI 4401 with a minimum grade of C-.

CUI 4408 Creativity: Theory & Practice (3 Credits)

The essence of innovation is creativity, in thought, process and outcome. Classic and current theories provide a foundation for analysis of the concept of creativity. This course is designed to provide participants with an understanding of 1) the conceptual foundations and definitions of creativity; 2) how intelligence, creativity, and non-intellective factors are related to the constructs of giftedness; 3) documented brain research underlying exceptional cognition and/or creativity; 4) principles and issues in the identification and appropriate programming for creative individuals; and 5) the multiple perspectives and manifestations of creativity. Salon discussion groups, lectures, class activities and assigned readings and projects focus on the history and nature of the construct of creativity, theories of creativity, the role of innovation and transformation, assessment and measurement tools, environmental support of the creative process and creativity, and teaching and learning applications.

CUI 4410 Prog Dev/Ldrshp/Comm Gifted Ed (3 Credits)

This course emphasizes the concepts and practices involved in development and management of school- and district-based programs for the special education of gifted and talented children and youth. The course leads to in-depth understanding of program components and systems, program planning and evaluation, program leadership, advocacy in gifted education, and communications. In addition, emphasis is placed on planning and development of staff development in relation to gifted children. This course includes extensive in-class discussion and field applications.

CUI 4411 Wkshp: Gifted & Talented Educ (1-3 Credits)

This blended course is designed to provide participants with an overview of the education of gifted and talented students. Areas of focus within the course include definitions of gifted and talented learners, gifted learner characteristics, educational/academic and affective/psychosocial needs, common identification methods, and research-based instructional strategies for gifted learners. Course restricted to students in TEP program or instructor approval.

CUI 4412 Culturally and Linguistically Diverse Learners in Gifted Education (3 Credits)

Culturally and Linguistically Diverse Learners have inequitable access to gifted programming, curricula and services; therefore, they do not receive instruction that nurtures their learning talents, culture, and emergent bilingualism. This course is designed to address the needs of the Culturally and Linguistically Diverse (CLD) and the Gifted and Talented (GT) learner. Upon completion of this course, students should be able to meet the approved standards for the English Language Learner Professional Development Pathway. In addition to ELL standards, this course is aligned with state gifted education standards.

CUI 4450 Education and Psychology of Exceptional Children (3 Credits)

Characteristics of students with moderate needs and state criteria used to determine eligibility for special education population.

CUI 4451 Teaching the Exceptional Child (3 Credits)

This course provides a broad overview of the field of exceptionality and special education. Included are discussions of current issues and controversies in the field, characteristics, classification, diagnosis, and educational interventions for early childhood and school-aged children with high-incidence and low-incidence disabilities who have exceptional education needs. This course also explores the characteristics of students with various disabilities, the history of Special Education, The Individuals with Disabilities Education Act (IDEA) and its current implications, the Response to Intervention Model (RtI) and the Individualized Education Plan (IEP). Prerequisite: CUI 4450.

CUI 4452 Low Incidence Disabilities and Behavior Intervention (3 Credits)

This course reviews a wide range of neurodevelopmental disorders and low-incidence disabilities including fragile X syndrome and Fetal Alcohol Syndrome, along with syndromes associated with chromosomal deletions. Implications for assessment and intervention are outlined including diagnostic criteria, prevalence and treatment. Research on identification and treatment including state of the art interventions and assistive technology are addressed. This class also addresses theories, research, effective practices, and background information needed to implement successful behavior intervention programs for whole classroom management and for students identified with behavioral needs. Prerequisites: TEP 4010 and CUI 4451.

CUI 4453 Curriculum Adaptations and Assessments for Children with Disabilities (3 Credits)

This course applies theories, research, effective practices, and background information for assessment for students with disabilities, monitoring student academic progress, and transition planning for students exiting K-12 schools.

CUI 4455 Assessment of Students with Special Needs (3 Credits)

Theories, research, effective practices and background information needed to develop, implement, analyze, and apply assessment data for mild/moderate-needs students.

CUI 4457 Behavior Intervention (3 Credits)

Theories, research, effective practices, and background information needed to implement successful behavior intervention programs for mild/moderate-needs students.

CUI 4459 Curriculum, Collaboration, and Transitions in K-12 Schools (3 Credits)

Knowledge, techniques to develop independent skills for K-12 moderate/mild-needs students and transitions across grade levels.

CUI 4500 Elementary Literacy: Theory and Practice I (1-3 Credits)

This course provides an introduction and overview to the many components that make up a quality balanced literacy program. During the course students will analyze current research and theory in reading and writing instruction. This course will use students' classroom placements to create a foundational understanding on which to build solid literacy philosophy as well as instructional ideas and strategies.

CUI 4501 Elementary Literacy: Theory and Practice II (1-3 Credits)

This course is an extension of Elementary Literacy I and concentrates on the continued development of theories and practical strategies for teaching literacy in diverse classrooms. This course will supply K-6 teachers with the skills to assess student abilities, select appropriate instructional strategies, and design effective instructional programs that lead to increased listening, speaking, reading and writing achievement of all children.

CUI 4502 Elementary Science and Social Studies Methods for Cultural Linguistic Diversity (3-4 Credits)

This course will enable students to develop a deeper understanding of science and social studies content and curriculum in the elementary classroom. Students will explore a range of instructional materials and develop teaching strategies with the guidance of state content standards and research on effective classroom instruction for culturally and linguistically diverse students. This course will revolve around discussion of key questions in the following eight areas: The Role of Social Studies and Science; Instruction; Standards; Content Knowledge; Curriculum Integration; Technology; Culturally Responsive Pedagogy; Sheltered Instruction. Course restricted to students in TEP program or instructor approval.

CUI 4503 Elementary Math Methods for Culturally and Linguistically Diverse Learners (3,4 Credits)

This course prepares students for mathematics instruction in elementary classrooms. We will study theories of learning, the development of children's mathematical thinking, and research-based instructional practices in mathematics. Students will solve mathematical problems using a variety of methods, practice giving math lessons, engage in continuous instructional improvement activities, grapple with issues of equity—race, class, gender, ability, and the intersections therein—as they pertain to math teaching and explore digital resources related to teaching math for understanding. Course restricted to students in TEP program or instructor approval.

CUI 4504 Elementary Math, Science, and Social Studies Methods Cultural Linguistic Diversity I (3 Credits)

This course is the first of a two-course study that will prepare students to develop a deeper understanding of math, science and social studies content and curriculum in the elementary classroom as guided by Colorado Model Content Standards and research on effective sheltered content instruction for culturally and linguistically diverse students. Pre-service teachers will develop an understanding of how students in the elementary grades construct meaning through active engagement in purposeful learning opportunities.

CUI 4505 Mathematics across the Content Areas (2,3 Credits)

In this class, prospective secondary teachers study fundamental mathematical ideas and how they apply to various real-world settings. For instance, students may explore the mathematics of gerrymandering and map projections. Students will also engage in mathematical practices such as argumentation and justification. Finally, students will learn about inquiry-based approaches to teaching that they can use in their secondary classrooms with their students.

CUI 4506 Mathematics for Elementary School Teachers I (2,3 Credits)

In this class, prospective elementary school teachers experience an in-depth look at the representations of rational numbers, including base-ten and decimal numbers, integers, fractions, and arithmetic operations on these sets. Problem solving is emphasized throughout. Students also learn about inquiry-based approaches to teaching that they can use in their classrooms with their students.

CUI 4507 Mathematics for Elementary School Teachers II (3 Credits)

In this class, prospective elementary school teachers study fundamental mathematical ideas typically taught in grades 5-8. Students learn about visualization and its importance in geometry. Students study geometric shapes and solve a variety of problems involving geometric shapes. In addition, students learn some fundamental ideas of measurement and study length, area, volume, dimension, error and precision. Students also solve problems involving area, learn about solid shapes, and solve volume and surface area problems. Finally, students learn about inquiry-based approaches to teaching that they can use in their classrooms with their students. Prerequisite: CUI 4506.

CUI 4508 Mathematics for Elementary School Teachers III (3 Credits)

In this class, prospective elementary school teachers study fundamental mathematical ideas typically taught in grades 5-8. Students learn about visualization and its importance in geometry. Students study geometric shapes and solve a variety of problems involving geometric shapes. In addition, students learn some fundamental ideas of measurement and study length, area, volume, dimension, error and precision. Students also solve problems involving area, learn about solid shapes, and solve volume and surface area problems. Finally, students learn about inquiry-based approaches to teaching that they can use in their classrooms with their students. Prerequisites: CUI 4506.

CUI 4509 Mathematics for Middle School Teachers (3 Credits)

Mathematics education for middle school teachers. Meets Common Core State Standards.

CUI 4511 Secondary Literacy: Reading and Writing Across Content Areas I (3 Credits)

This course is the first of a two-course study that is designed to give secondary Residents an introduction to best practices in content area literacy instruction for in 6-12 classrooms. In support of the instructional shifts presented by the Common Core State Standards, Residents will explore the rationale behind instructional strategies for literacy instruction in the content area classrooms, as well as examine tools and techniques for teaching students to become strategic readers and writers as they model their own thinking and scaffold students' use of strategies for content area literacy.

CUI 4512 High School Mathematics from an Advanced Perspective (3 Credits)

High School mathematics education. Meets Common Core State Standards.

CUI 4513 Elementary Math, Science, and Social Studies Methods Cultural Linguistic Diversity II (3 Credits)

This course is an extension of the Autumn quarter session and will prepare students to develop a deeper understanding of math, science and social studies content and curriculum in the elementary classroom as guided by Colorado Model Content Standards, Next Generation Science Standards and research on effective sheltered content instruction for culturally and linguistically diverse students. Pre-service teachers will develop an understanding of how students in the elementary grades construct meaning through active engagement in purposeful learning opportunities.

CUI 4514 Secondary Literacy: Reading and Writing Across Content Areas II (3 Credits)

This course is an extension of the Autumn quarter session. In this course, Residents will deepen their knowledge of the English language and linguistics, through an analysis of socio and psycholinguistics, as well as rigorous practice in grammar, syntax and semantics. As Residents gain a more practical understanding of the complexities of the English language, they will be better able to support their English Language Learners. This course addresses the following Common Core State Standards: L1: Demonstrate command of the conventions of standard English grammar and usage when writing or speaking L3: Apply knowledge of language to understand how language functions in different context to make effective choices for meaning or style, and to comprehend more fully when reading or listening. W4: Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.

CUI 4521 Urban Education II: School, Student, Family and Community Influences on Student Learning (2-4 Credits)

This course will consider how teachers are able to foster meaningful connections between the educational goals of the schools and the personal and cultural experiences of young people. Students will study the child in relation to family, school, and community, as well as the relationships between teacher and pupil. We will emphasize the cultural complexity of an urban society and pay special attention to ways that curriculum, language, and literacy affect school success.

CUI 4527 Supporting English Language Learners and Students with Special Needs Across Content Areas (3 Credits)

This course evaluates similarities and differences in theory, methods, approaches, and techniques in meeting the needs of diverse learners including English Language Learners, special needs, and/or gifted. Differentiated instruction, Sheltered instruction, and Response to Intervention (RTI) are key methodologies in meeting needs of diverse learners.

CUI 4529 Foundations of Education for Culturally and Linguistically Diverse Learners (3 Credits)

This course will examine the essential knowledge and orientations educators must possess to effectively meet the needs of culturally and linguistically diverse (CLD) learners through the analysis of historical, political, ethical, and legal foundations of language education in the United States. This course will explore the immigrant experience and the experience of CLD learners in schools in order to understand how the psychosocial aspects of the immigrant experience can impact second language learning. Course restricted to students in TEP program or instructor approval.

CUI 4530 Second Language Acquisition (1-3 Credits)**CUI 4531 Language Development and Strategies for Culturally and Linguistically Diverse Learners (3,4 Credits)**

This course will evaluate methods, approaches, and techniques in language teaching. This course will also explore classroom strategies and practices for content-area instruction through sheltered instruction, and socio-cultural context of second language acquisition in U. S. public schools including how teachers can support bilingualism, multilingualism, biculturalism, and multiculturalism in the mainstream classroom. Furthermore, this course will explore the needs of special education and gifted culturally and linguistically diverse learners.

CUI 4532 Culturally Responsive Pedagogy (3,4 Credits)

This course examines the intricate web of variables that interact in the effort to create culturally responsive pedagogy. It examines the need and establishes a definition for culturally responsive pedagogy; and includes an examination of one's conception of self and "others;" conception of social relations; and conception of knowledge teaching and learning in a culturally diverse context. Furthermore, it cultivates the practice of culturally responsive teaching as well as explores the reality of implementing cultural responsive pedagogy in an era of standardization. In sum, this course helps practicing teachers acquire the dispositions, cultural knowledge, and competencies to adapt their curriculum and instructional skills for culturally responsive classroom practice.

CUI 4536 Language and Cultural Issues in Assessment and Instruction (3-4 Credits)

This course expands the educators' knowledge of the connection between data-based instruction and assessment. Educators assess student learning by utilizing strategies that provide continuous feedback on the effectiveness of instruction. Educators learn informal and formal assessment practices that promote student learning and achievement. Educators develop knowledge and understanding of initial assessment of culturally and linguistically diverse learners' skills and abilities in order to provide appropriate placement and instruction. Educators utilize native language tests to promote adequate placement/transition of students. This course also helps educators develop a framework to analyze and develop culturally responsive assessment practices in order to improve student achievement. Finally, this course integrates Response to Intervention (RTI) strategies to improve student assessment.

CUI 4538 Literacy and Language Development for Culturally and Linguistically Diverse Learners (3,4 Credits)

Attaining age-appropriate English literacy skills poses many challenges to culturally and linguistically diverse (CLD) learners. Educators must therefore develop proficiency in effective literacy instruction for CLD learners. Effective literacy instruction includes a repertoire of teaching practices designed to scaffold literacy and language across the content areas, and culturally relevant curriculum as an essential component to support the achievement of CLD learners. This course will focus on helping educators gain the necessary skills, orientations, and competencies to advance the literacy of CLD learners through linguistic and cultural knowledge.

CUI 4540 Curriculum, Instruction and Assessment: Theory and Practice I (1-3 Credits)

This course explores the theoretical underpinning and practical application of curriculum design. Students design their own curriculum unit aligned to standards, essential questions, big understandings, and social justice themes. Course restricted to students in TEP program or instructor approval.

CUI 4541 Curriculum, Instruction, and Assessment: Theory and Practice II (1-4 Credits)

In this course, apprentice teachers will explore the theoretical underpinnings and practical application of data and assessment. This course will build essential knowledge and skills in school and classroom assessments, research methodology, and equity in assessment practices. Students will design a series of assessments aligned to unit goals. Course restricted to students in TEP program or instructor approval.

CUI 4542 Curriculum, Instruction, and Assessment: Theory and Practice III (1-4 Credits)

This is the third and final quarter of an academic year-long weekly seminar to foster reflective, research-based classroom practice. Teacher candidates will deepen their understanding of teaching and learning in contemporary schools through a guided teaching apprenticeship with a trained mentor teacher, focused observations of a myriad of classrooms, readings, interviews, discussions, critical writing, and presentations. Course restricted to students in TEP program or instructor approval.

CUI 4544 Ed Psych: Exceptional Child (1-3 Credits)

The focus of this course is on educating children and adolescents with special needs in the general education classroom. The intent is to enable future educators to better serve the needs of these children in their classrooms. Topics such as the special education process, information on specific disabilities, accommodations and modifications, behavior issues, mental health, and communicating with parents will be addressed.

CUI 4600 History and Philosophy of STEM Education (3 Credits)

The goal of this course is to help future Science, Technology, Engineering, and Mathematics (STEM) education leaders understand the historical trajectory of public education in relation to the larger sociopolitical forces of American history. Two premises guide this course: 1. Social and political conditions in society exert intense pressure on STEM fields and STEM education, which poses significant challenges to STEM education leaders. 2. Education in general – and STEM education in particular – are political, economic, and social endeavors that reflect social arrangements. This course will enable students to view their specialization as part of a complex and larger milieu; that is the U.S. educational system.

CUI 4610 Learning & Teaching of STEM (3 Credits)

In this course, students will be introduced to foundational research literature on learning and teaching in STEM education. The research introduced will focus extensively on theories of learning and how these theories are influencing P-16 STEM curriculum, instruction and assessment. The literature base introduced is foundational to research conducted in STEM education.

CUI 4620 Research on Diversity, Equity, and Social Justice in STEM Education (3 Credits)

The goal of this course is to help future STEM education leaders understand the current context of issues of diversity, equity and social justice in STEM education and explore its implications for access and opportunity for traditionally marginalized students. Two premises guide this course: 1. Social and political conditions in contemporary society exert intense pressure on STEM fields and STEM education. 2. Education in general – and STEM education in particular – are political, economic, and social endeavors that reflect social arrangements. This course will enable students to view their specialization as part of a complex and larger milieu; that is the U.S. educational system.

CUI 4640 Improving STEM Instruction (3 Credits)

For as long as the United States has implemented public education—well over 100 years—many features of schooling have stayed the same. Despite waves of curricular and policy reforms, widespread anxiety over student achievement (especially in comparison to other countries), and concerted efforts to “disrupt” education, many elements of teaching and learning persist. In STEM education, especially, scholars and practitioners have been advocating for the same things for decades: teaching for conceptual understanding, using rich tasks that encourage student collaboration, incorporating discourse in the classroom, and supporting students to engage in STEM practices like proof, argumentation, and the scientific method. We know that these things can support meaningful student learning. But most K-12 STEM classrooms are centered on memorization and standardized testing. Why is it so hard to change? The short answer: It's complicated. In this course, students will critically examine various instructional improvement efforts, identifying both the ways in which these efforts are potentially productive and potentially destructive. We'll juxtapose these efforts with relevant research on teacher learning and organizational change in order to critique reform efforts. Ultimately, students will become more critical consumers of instructional improvement efforts and will be better prepared to translate research into practice. Although STEM is the focus of this class, the overarching ideas of the course are applicable to many other subjects.

CUI 4690 Field Experience: Curriculum & Instruction (3 Credits)

This course provides students with an authentic field experience for those pursuing a degree in Curriculum & Instruction. Field Experience in Curriculum & Instruction is an off-campus, experience taken throughout the coursework plan. Field Experience is designed to broaden one's professional skills and is considered a critical transition of substantial growth. Field Experience is a hybrid on-line and face-to-face seminar that is designed to facilitate case analysis, ongoing self-reflection, and to provide peer consultation and professional feedback relevant to best practices. The Field Experience is considered a critical professional transition to help consolidate learning and professional competencies in preparation for employment. All students engage in weekly experience seminars (either on-line or face-to-face) facilitated by a University Supervisor. Supervision is designed to provide ongoing professional feedback, case analysis, peer consultation, and continued professional development and experiences pertinent to successful practice. This course promotes the idea that educators are lifelong learners and regularly reflect on and adjust their practice.

CUI 4700 Foundations of Education: Cognitive Theory I (3 Credits)

Introduction to cognitive research in education. Includes theories and research regarding the implementation of these theories in specific curricula.

CUI 4710 Foundations of Education: Cognitive Theory II (3 Credits)

Second course in cognitive research in education. Includes theories and research regarding the implementation of these theories in specific curricula. Prerequisite: CUI 4700.

CUI 4720 Discourse in the Mathematics Classroom (3 Credits)

The study of discourse as it relates to mathematics teaching and student learning.

CUI 4730 STEM and Instructional Technology (3 Credits)

The goal of this course is to help students understand the role of technology in teaching and learning, particularly in Science, Technology, Engineering, and Mathematics (STEM) courses. Three premises guide this course: 1) Technology offers great potential for innovation in education, but it also can be dangerous if used inappropriately and indiscriminately; 2) Social and political conditions in society exert intense pressures on technology in STEM education, which poses significant challenges to STEM education leaders; and, 3) Education in general – and STEM education in particular – are political, economic, and social endeavors that reflect social arrangements. This course will enable students to view their specialization as part of a complex and larger milieu; that is the U.S. educational system.

CUI 4740 Policy and STEM Education (3 Credits)

In this course, students will be introduced to and explore a range of educational policies and how those policies have influenced and continue to influence Science, Technology, Engineering, and Mathematics (STEM) education. A particular focus of the class will be the underlying ideologies of policies that have had a strong influence on the development of curriculum and research in STEM education. Students will learn how to critique educational policies in general and policies that have influenced STEM education in particular. Students will also develop a policy brief that is specific to some area of STEM education that they will publicly disseminate.

CUI 4991 MA Independent Study (1-10 Credits)**CUI 4995 Independent Research (1-10 Credits)****CUI 5980 Research as Problem Analysis (3 Credits)**

This course is the first of three culminating research courses for students in the Ed.D. in Curriculum and Instruction. This course is designed to guide candidates through the doctoral proposal process and introduce the initial stages of data collection and analysis.

CUI 5981 Research as Intervention (3 Credits)

This course is the second of three culminating research courses for students in the Ed.D. in Curriculum and Instruction and is designed to help candidates finish collecting their data and analyze their data. This course will also introduce and develop the evaluation or analysis section of the doctoral paper and the beginning steps of the dissemination of the research project.

CUI 5982 Applied Research (3 Credits)

This course is the final of three culminating research courses for students in the Ed.D. in Curriculum and Instruction and is designed to help candidates disseminate their project, reflect on their project, and defend their project. This course is specifically focused on writing the quasi-practical section of the doctoral paper and the dissemination of the research project to the community partner.

CUI 5983 Defense of Research (1 Credit)

This course will build on the “persistent problems of practice” and research questions identified in CUI: 5980, data collection and analysis in CUI 5981, and applied research skills in CUI 5982. By the end of the course you will be able to schedule and present your doctoral research project for defense. Completion of CUI: 5982 “Research as Applied Research” or permission of the instructor.

CUI 5991 PhD Independent Study (1-10 Credits)**CUI 5993 Dissertation in Practice (1-4 Credits)**

Doctoral research credits for doctoral research project toward the EdD. Prerequisite: Must be an EdD student in C&I; must have completed C&I doctoral research courses (CUI 5980, CUI 5981, and CUI 5982).

CUI 5995 Independent Research (1-10 Credits)**Special Education Courses****SPED 4001 Teaching Individuals with Developmental Disabilities DD and Behavioral Disorders (5 Credits)**

This course will introduce students to the concepts and principles of behavior on which the discipline of applied behavior analysis was founded. Topics of study will include the history and dimensions of applied behavior analysis, defining and measuring behavior, procedures and factors related to behavior change, and the role of the basic principles of behavior (positive and negative reinforcement, punishment, stimulus control, and motivating operations) in establishing new behavior and decreasing problem behavior.

SPED 4002 Teaching Individuals with Developmental Disabilities and Behavioral Disorders (4 Credits)

This course focuses on the basic principles of assessment, instruction, and curriculum development; application of formal and informal assessment procedures for goal selection, formulating instructional plans, and adapting instructional materials to accommodate learning needs of students with developmental disabilities and/or behavioral disorders.

SPED 4003 Advanced Concepts and Principles in Behavior Analysis (5 Credits)

This course focuses on the definitions and characteristics of applied behavior analysis and the concepts, principles, and processes. Concepts related to ethics and behavior change procedures will also be discussed. The purpose of this graduate-level course is to provide students pursuing a BACB® credential with 45 hours of instruction in advanced content areas of philosophical underpinnings and concepts and principles as outlined by the coursework requirements for BACB® credentials. The course covers content from areas A & B from the 5th edition of the BACB®’s Behavior Analyst Task List®.

SPED 4004 Single Case Research Design (5 Credits)

The purpose of this course is to provide master’s level students with 45 hours of instruction in the content areas of measurement, data display, data analysis, and single-case research experimental design and evaluation. This course describes the rationales for single-case research in applied settings. It will equip students to critique, design, and conduct single-case research for applied behavior analysis applications. The course covers content from areas C and D from the 5th edition of the BACB®’s Behavior Analyst Task List®.

SPED 4005 Ethics in Applied Behavior Analysis (5 Credits)

This course focuses on ethical and professional conduct in the field of applied behavior analysis. An overview of the profession of behavior analysis is addressed, including the history, foundations, and ethics of the field, as well as professional skills for ethical practice. During this course, we will specifically review the BACB's Compliance Code and disciplinary systems.

SPED 4991 Independent Study (1-10 Credits)

Independent study/research.

SPED 5001 Multi-tiered Systems of Support (3 Credits)

This course will provide (a) an overview of the historical, legal, and theoretical foundations of multi-tiered systems of support; (b) review the research and evidence-base of a multi-tiered system of support approach for behavior; and (c) explore the influence of behavior analytic procedures within a multi-tiered system of support.

SPED 5002 FBA's and BIP's in Schools (3 Credits)

This course will enable students to develop the skills needed for completing Functional Behavior Assessments (FBA), developing Behavior Intervention Plans (BIP), and applying behavior analytic principles to (1) implement the developed BIP, (2) monitor BIP implementation, (3) measure BIP effectiveness, and (4) collaborate with others to improve BIP implementation. Additionally, the course will focus on applying behavior analytic principles through a developmentally appropriate and culturally responsive lens.

SPED 5003 Supervision and Management (3 Credits)

This course focuses on supervision and management practices in the field of applied behavior analysis and related settings (i.e., clinics, schools). An overview of supervision is addressed, including foundations, ethics, and professional skills for both the supervisor and the supervisee. During this course, we will specifically review the BACB's standards for supervisory practices as they relate to improving and maintain the behavior-analytic, professional, and ethical repertoires of practitioners and facilitate the delivery of high-quality services to his/her clients.

Teacher Ed Prep Courses**TEP 4010 Foundations of Special Education: Inclusive Pedagogy for Students with Dis/Abilities (2-4 Credits)**

This course serves as the foundation for understanding children with disabilities and dis/abilities, as well as the philosophies, laws and policies that support the students. To be responsive to the diverse strengths, needs, and experiences children bring to the classroom, educators need a foundational knowledge of special education and opportunities that can influence student learning. We emphasize a strengths-based perspective and provide pedagogy for supporting for all learners. We introduce the classroom teacher's role in understanding the Individual Education Program (IEP) process, designing lesson plans and inclusive practices based on differentiated and universal design learning instructional strategies and working collaboratively with families and interdisciplinary teams. In addition, we introduce potential commonalities of students with high-incidence disabilities, the history and legal aspects of Special Education and the Response to Intervention Model (RtI)/Multi-Tiered System of Supports (MTSS). Course restricted to students in TEP program or instructor approval.

TEP 4520 Art Methods K-12 (3-4 Credits)

Throughout this course, Apprentice Teachers will analyze the following essential questions about teaching and learning in the visual arts field: 1) What type of visual arts classroom environment best supports student learning and skill development in a 21st century classroom?, 2) How do the Colorado Academic Standards guide arts instruction?, 3) What is the role of descriptive feedback in the reflective practice of teaching and learning?, 4) How can visual arts instruction enhance positive-identity development for diverse learners?, and 5) How can visual arts educators use arts assessment in curriculum planning and to gauge student learning?.

TEP 4590 Elementary Literacy Instruction I (3,4 Credits)

This is the first of two elementary literacy classes. The purpose of Literacy Instruction I is to provide apprentice teachers with the research-based foundations of reading processes for diverse learners. Teacher candidates will be knowledgeable about the development of reading, the science of reading research, and its application to effective instructional practices within the language domains of reading, writing, speaking, and listening. Teacher candidates will learn how to plan and organize core literacy practices such as interactive read alouds and small group reading instruction in conjunction with Colorado Academic Standards and the Common Core State Standards. The National Reading Panel (NRP) summarized their findings in five components of reading instruction that will guide our work together: phonemic awareness, phonics, fluency, vocabulary development, and text comprehension. Course restricted to students in TEP program or instructor approval.

TEP 4591 Elementary Literacy Instruction II (3-4 Credits)

This is the second quarter of a twenty-week course focused on literacy with an emphasis on language, phonics, and writing. The purpose of TEP 4591 or Literacy Instruction is to provide teacher candidates with the research-based foundations and processes employed in skillful speaking, listening, reading and writing. Specifically, we will look at the building blocks of literacy that include phonics and language acquisition: phonology, morphology, and syntax and its application to reading and writing as we build from our reading emphasis the previous quarter. In this course, there will be a shift from literacy input (reading and listening) from the previous quarter to literacy output (writing and speaking). Further, at the end of the course, teacher candidates will reflect upon their literacy philosophy as we review key concepts and classroom strategies. Course restricted to students in TEP program or instructor approval.

TEP 4592 Secondary Literacy Instruction I (3,4 Credits)

This is the first quarter of a twenty-week course on literacy. The purpose of this course is to provide teacher candidates with the research-based foundations of literacy and cognitive processes employed in skillful reading and writing for effective secondary instruction. In this first course, teacher candidates will be knowledgeable about the stages of reading as well as student literacy development in reading, writing, speaking, and listening. Teacher candidates will practice recognizing and evaluating these skills on a micro level through a mini-case study of an individual student. Teacher candidates will learn how to plan, organize, and tailor literacy instruction in their specific content area using ongoing and summative assessment in conjunction with the Common Core State Standards/Colorado Academic Standards. Teacher candidates will develop the knowledge, skills and understanding of the science of reading as it applies to all students from a wide range of backgrounds. There is a special emphasis in this course on literacy instruction in urban, diverse, and multi-lingual settings. Course restricted to students in TEP program or instructor approval.

TEP 4593 Secondary Literacy Instruction II (3,4 Credits)

This is a literacy course for secondary-level English, math, science and social studies teacher candidates. In this course, there will be a shift of focus from literacy input (reading) from the previous quarter to literacy output (writing), and we will broaden our scope from analyzing one student at a time to assessing and addressing students' literacy needs in a whole-classroom environment. This quarter we will also examine outside influences – such as culture, language, and technology – on classroom literacy and how literacy practices and teaching methods can be adapted for multiple contexts. Throughout the course, teacher candidates will develop and reflect upon their literacy philosophy in terms of planning and instruction in a specific content area. Course restricted to students in TEP program or instructor approval.

TEP 4600 Introduction to Secondary Methods (3-6 Credits)

Provides general introduction to principles of effective secondary instruction curriculum design and assessment. Frequently covered topics include: design of classroom environments, comparison of different instructional practices, purposes for and approaches to assessment, comparison of middle and high school philosophies, introduction to instructional unit plan development, and theories of instructional approach and design. Course lays a foundation for more specialized subject-matter methods courses. Prerequisite: enrollment in the Teacher Education Program.

TEP 4610 English in Secondary School (3-5 Credits)

In this course, Apprentice Teachers will explore the theory and practice of teaching English Language Arts at the secondary level. Topics include standards alignment, student cognitive development, and pedagogical content knowledge. Course restricted to students in TEP program or instructor approval.

TEP 4620 Social Science in Secondary School (3-5 Credits)

In this course, Apprentice Teachers will explore the theory and practice of teaching Social Studies at the secondary level. Topics include standards alignment, student cognitive development, and pedagogical content knowledge. Course restricted to students in TEP program or instructor approval.

TEP 4630 Science in Secondary School (3-5 Credits)

In this course, Apprentice Teachers will explore the theory and practice of teaching Science at the secondary level. Topics include standards alignment, student cognitive development, and pedagogical content knowledge.

TEP 4640 Math in Secondary School (3-5 Credits)

In this course, Apprentice Teachers will explore the theory and practice of teaching Mathematics at the secondary level. Topics include standards alignment, student cognitive development, and pedagogical content knowledge. Course restricted to students in TEP program or instructor approval.

TEP 4650 Foreign Language Methods in K-12 Schools (3-5 Credits)

In this course, Apprentice Teachers will explore the theory and practice of teaching Foreign Language at the secondary level. Topics include standards alignment, student cognitive development, and pedagogical content knowledge.

TEP 4690 Field Experience (1-12 Credits)

Involves field experiences, including full-day teaching for 12 weeks in elementary or secondary school classroom and regularly scheduled seminar discussions with supervisor. Prerequisite: enrollment in the Teacher Education Program.

TEP 4691 Field Experience I (1 Credit)

This is the first quarter of an academic year-long field experience to develop and reflect upon effective teaching practices in an urban school setting. Following the gradual release calendar of teaching responsibilities, Residents will be observed, coached and evaluated on specific LEAP indicators in the domains of learning environment, instruction, and professionalism. In conjunction with the CUI 4540 Curriculum, Instruction and Assessment course, Residents will deepen their understanding of teaching and learning in diverse schools to increase student achievement for all students.

TEP 4692 Field Experience II (1 Credit)

This is the second quarter of an academic year-long field experience to develop and reflect upon effective teaching practices in an urban school setting. Following the gradual release calendar of teaching responsibilities, Residents will be observed, coached and evaluated on specific LEAP indicators in the domains of learning environment, instruction, and professionalism. In conjunction with the CUI 4541 Curriculum, Instruction and Assessment course, Residents will deepen their understanding of teaching and learning in diverse schools to increase student achievement for all students.

TEP 4693 Field Experience III (1 Credit)

This is the final quarter of an academic year-long field experience to develop and reflect upon effective teaching practices in an urban school setting. Following the gradual release calendar of teaching responsibilities, Residents will be observed, coached and evaluated on specific LEAP indicators in the domains of learning environment, instruction, and professionalism. In conjunction with the CUI 4542 Curriculum, Instruction and Assessment course, Residents will deepen their understanding of teaching and learning in diverse schools to increase student achievement for all students.

TEP 4781 Elementary Art Methods (3-6 Credits)

Prepares K-12 art teachers to design and implement effective instruction in elementary school classrooms. Course introduces full array of sound teaching and assessment strategies for all aspects of art. Prerequisite: enrollment in the Teacher Education Program.

TEP 4782 Secondary Art Methods (3-4 Credits)

Prepares K-12 art teachers to design and implement effective instruction in secondary school classrooms. Course introduces full array of sound teaching and assessment strategies for all aspects of art. Prerequisite: enrollment in the Teacher Education Program.

TEP 4991 Independent Study (1-10 Credits)**TEP 4995 Independent Research (1-10 Credits)**

College of Natural Sciences and Mathematics

The College of Natural Sciences & Mathematics offers graduate students opportunities to collaborate with faculty scholars to apply new knowledge and research that changes lives and challenges entrenched ideas. We offer access to resources such as innovative geospatial software, high resolution fluorescence imaging systems, and electron paramagnetic resonance—amongst much more. From the mystery of a blinking binary star system to the movement of a molecule inside a cell, the College of Natural Sciences & Mathematics offers the expertise and resources to support your investigative journey.

Why study biology at the University of Denver?

The department of biological sciences offers graduate programs at the doctoral (PhD) or master's (MS) level. Students earn a degree in biological studies with a concentration in either cell and molecular biology or biology, ecology and evolution. Both program tracks involve a combination of course work, lab or field research and a defended thesis or dissertation. Students begin their research under the direction of a faculty member during the first year. All students are expected to present their work at scientific meetings and publish their work in peer-reviewed scientific journals. Doctoral students also have the opportunity to participate in teaching undergraduate courses.

Research areas

The PhD and MS programs are centered on primary research that coincides with faculty experience and expertise. Students will conduct their research in a university environment using state-of-the-art techniques and facilities. The current research emphases of the department are

- Cell and molecular biology is supported by major research facilities that include real-time PCR instruments, a DNA WAVE HPLC, a Hitachi transmission electron microscope and an Olympus Fluoview 1000 confocal microscope and other advanced imaging systems.
- Biology, ecology and evolution takes advantage of unique field study sites that include an alpine research station on Mt. Evans in the Arapaho National Forest and collaborative research opportunities with the Denver Botanic Gardens.

Career opportunities

A student who completes the MS degree is in a strong position to pursue a range of postgraduate opportunities, including a career in biotech, academic or government lab or agency, or continued studies in a professional or PhD program. The doctoral degree carries the credential for a professional career in research or academics.

Doctor of Philosophy in Biological Sciences with a Concentration in Biology, Ecology and Evolution

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:

- Students with an undergraduate major in chemistry, physics or mathematics and minimal preparation in biological sciences also will be considered but may be required to take undergraduate courses when the prerequisites are lacking. Course prerequisites include: one year of general chemistry, one year of calculus (recommended), one year of physics, two years of biology and one year of organic chemistry.

Standardized Test Scores

- GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.

If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Acceptance Offered: In cases where minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

English Conditional Acceptance Offered: In cases where minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Professional Science Master in Biomedical Sciences

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:

- Applicants must earn and submit proof of earning the equivalent of a baccalaureate degree in biology, biochemistry, biomedical sciences or a related field from a regionally accredited institution prior to beginning graduate coursework at DU. Students with an undergraduate major in chemistry, physics or mathematics and minimal preparation in biological sciences will also be considered but may be required to take undergraduate courses when the prerequisites are lacking. Course prerequisites include: one year of chemistry, one year of calculus (recommended), one year of physics, and two years of biology.

Standardized Test Scores

- GRE, MCAT or DAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Acceptance Offered: In cases where minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Professional Science Master in Biomedical Sciences with a Concentration in Clinical Exercise Physiology

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Acceptance Offered: In cases where minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Graduate studies in the department of biological sciences provide graduate students with a set of structured core classes that establish a strong foundation of basic knowledge in cell and molecular biology or ecology and evolution and that allow the knowledge to be built upon in subsequent specialized courses and independent research. Research areas are usually linked to the interest of the supervising faculty member. The department's current research strengths center around the two areas: cell and molecular biology (biophysics, neuroscience, neuroendocrinology, cell signaling and physiology, developmental biology, aging, molecular forensics and molecular evolution) and ecology and evolution (biogeochemistry, conservation biology, restoration ecology, molecular evolution). To complete research commitments, MS students generally work with a major professor of choice in the laboratory and/or field for about two years, while PhD students generally work for five years.

DOCTOR OF PHILOSOPHY IN BIOLOGICAL SCIENCES WITH A CONCENTRATION IN BIOLOGY, ECOLOGY AND EVOLUTION

Degree Requirements

The major requirements for completion of the PhD degree are 90 quarter hours of graduate course work and research credit, completion of all candidacy exams, and successful defense of the PhD dissertation. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by their adviser and dissertation committee.

Coursework Requirements

The course work includes the following graduate core curriculum:

| Code | Title | Credits |
|---------------------------|---|---------|
| BIOL 4220 | Grad Sem: Ecology & Evolution | |
| BIOL 4090 or BIOL 4085 | Biostatistics Accelerated Biostatistics | |
| BIOL 4095 | Research Methods and Analysis | |
| BIOL 4330 | Foundations in Literature: Ecology (3 terms required) | |
| BIOL 4231 | Responsible Conduct in Rsrch | |
| BIOL 5991 or BIOL 5995 | Independent Study (*) Independent Research | |

- Courses that the dissertation committee judges to complement the student's major field also may be used.

Total Credits

90

Non-coursework requirements

Additional requirements are attendance at departmental seminars, passing performance in the qualifying examination and the research proposal examination, presentation of one departmental seminar per year, completion of a research dissertation of publishable quality, and successful oral defense of the dissertation. PhD students are required to pass both a qualifying exam and research proposal exam to advance to candidacy.

Up to 10 quarter hours of graduate credit (or a blanket transfer of 45 quarter hours from a previous master's program) may be accepted as transfer credit with approval of the departmental graduate committee and the Office of Graduate Studies.

DOCTOR OF PHILOSOPHY IN BIOLOGICAL SCIENCES WITH A CONCENTRATION IN CELL AND MOLECULAR BIOLOGY

Degree Requirements

The major requirements for completion of the PhD degree are 90 quarter hours of graduate course work and research credit, completion of all candidacy exams, and successful defense of the PhD dissertation. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by their adviser and dissertation committee.

Coursework Requirements

The course work includes the 20-credit graduate core curriculum:

| Code | Title | Credits |
|---------------------------|--|---------|
| BIOL 4211 | Advanced Cell Biology | |
| BIOL 4212 | Advanced Molecular Biology | |
| BIOL 4213 | Advanced Cell Signaling | |
| BIOL 4310 | Foundations in Literature: Cell and Molecular Biology (3 terms required) | |
| BIOL 4090 or BIOL 4085 | Biostatistics Accelerated Biostatistics | |
| BIOL 4231 | Responsible Conduct in Rsrch | |
| BIOL 5991 or BIOL 5995 | Independent Study (*) Independent Research | |

- Courses the dissertation committee judges to complement the student's major field also may be used.

Total Credits

90

Non-coursework requirements

Additional requirements are attendance at departmental seminars, passing performance in the qualifying examination and the research proposal examination, presentation of one departmental seminar per year, completion of a research dissertation of publishable quality, and successful oral defense of the dissertation. PhD students are required to pass both a qualifying exam and research proposal exam to advance to candidacy.

Up to 10 quarter hours of graduate credit (or a blanket transfer of 45 quarter hours from a previous master's program) may be accepted as transfer credit with approval of the departmental graduate committee and the Office of Graduate Studies.

PROFESSIONAL SCIENCE MASTER IN BIOMEDICAL SCIENCES

The Professional Science Master's (PSM) program in Biomedical Sciences offers rigorous academic training and professional practical skills to prepare students for challenging careers in the biomedical and health sciences. Through advanced coursework in the natural sciences and complementary coursework, students gain in-depth scientific knowledge and a strong foundation in ethics, leadership, communication and professional skills. Furthermore, the students will gain awareness of the many issues, concerns, and future directions of health and biomedical sciences fields.

This multi- and inter-disciplinary program is designed to be very individualized with one-on-one advising to customize the curriculum and capstone internship in order to complement and expand on the student's past academics and experiences and to prepare them for their future career goals. The student is matched with a capstone mentor whose professional experiences aligns with the student's future career goals. The overall goal of the capstone experience is for the student to gain advanced disciplinary knowledge and professional skills by applying the appropriate modes of inquiry, research and professional skills to address a specific problem or concern in the biomedical sciences.

The PSM program emphasizes active communication with an external Advisory Board to ensure that the curriculum and capstone experiences are relevant and beneficial to both students and the bioscience and healthcare industries. The advisory board, comprised of leaders in biomedical research, biotechnology, clinical healthcare, health institutions and hospital administration, provides input regarding the knowledge and skill set and professional competencies most sought by employers and academic graduate programs in biomedical fields. This Master's program is recognized and approved as an affiliated PSM program with the National Professional Science Association.

Total Credits**45****Minimum credits required for degree: 45****Non-coursework Requirements**

- Capstone project- The program requires a capstone project which involves interactions with health or biomedical professions from outside of the DU community. The capstone experience will be culminated in a formal scholarly work (both written and orally presented) that reflects a student's individual professional interest and the integration of science with strong professional skills. Thus, the capstone project includes a written and public oral presentation of the project.

Additional requirements:

- maintain a minimum GPA of 3.0
- successful completion of capstone project
- completion of capstone paper
- successful oral defense of capstone project

PROFESSIONAL SCIENCE MASTER IN BIOMEDICAL SCIENCES with a concentration in clinical exercise physiology

The Professional Science Master's (PSM) in Biomedical Sciences program offers rigorous advanced academic training and professional practical skills in order to prepare students for challenging careers in the biomedical sciences and health sciences. The PSM in Biomedical Sciences is a rigorous one-year academic program requiring 45-credit hours of course work and successful completion of the written and oral defense of a capstone project. The concentration in Clinical Exercise Physiology provides expanding academic offerings in the area of integrative human physiology, as well as advanced knowledge of cardiovascular, pulmonary and metabolic diseases, orthopedic or musculoskeletal, neuromuscular, and neoplastic immunological or hematological diseases.

Students who enroll in the concentration in Clinical Exercise Physiology are required to complete the PSM required coursework and choose from the physiology-selected elective coursework. The physiology coursework is relatively flexible to consider the academic background of the individual student. All coursework plans will be determined in collaboration with the program director and approved by the director. For the concentration in CEP, student will complete a capstone project related to exercise physiology with a capstone mentor who specializes in a specific physiological system and/or exercise physiology.

| BIOL 4980 | Internship in Biomedical Sciences | 2 |
| BIOL 4991 | Independent Study | 1 |

Elective Courses**20**

Electives can be chosen from the approved list of existing elective courses in consultation with the Program Director. Additional upper level (3000- or 4000-level) elective courses will be considered with approval of the Program Director.

Natural Sciences

Non-coursework Requirements

- Capstone project- The program requires a capstone project which involves interactions with health or biomedical professions from outside of the DU community. The capstone experience will be culminated in a formal scholarly work (both written and orally presented) that reflects a student's

professional interest and the integration of science with strong professional skills. Thus, the capstone project includes a written and public oral presentation of the project.

Additional requirements:

- maintain a minimum GPA of 3.0
- successful completion of capstone project
- completion of capstone paper
- successful oral defense of capstone project

MASTER OF SCIENCE IN BIOLOGICAL SCIENCES WITH A CONCENTRATION IN BIOLOGY, ECOLOGY AND EVOLUTION

Degree Requirements

The major requirements for completion of the MS degree are 45 quarter hours of course work and research credit, and successful defense of the MS thesis. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by the major adviser and thesis committee.

Coursework Requirements

The course work includes the following graduate core curriculum:

| Code | Title | Credits |
|---------------------------|---|---------|
| BIOL 4220 | Grad Sem: Ecology & Evolution | |
| BIOL 4090 or BIOL 4085 | Biostatistics Accelerated Biostatistics | |
| BIOL 4095 | Research Methods and Analysis | |
| BIOL 4330 | Foundations in Literature: Ecology (3 terms needed) | |
| BIOL 4231 | Responsible Conduct in Rsrch | |
| BIOL 4991 or BIOL 4995 | Independent Study (*) Independent Research | |

- Courses the thesis committee judges to complement the student's major field also may be used.

Total Credits

45

Non-coursework Requirements

Additional requirements are attendance at all departmental seminars, a thesis based on a research project approved by the thesis committee, and a successful oral defense of the thesis.

MASTER OF SCIENCE IN BIOLOGICAL SCIENCES WITH A CONCENTRATION IN CELL AND MOLECULAR BIOLOGY

Degree Requirements

The major requirements for completion of the MS degree are 45 quarter hours of course work and research credit, and successful defense of the MS thesis. Graduate Students must maintain a minimum GPA of 3.0 and make adequate progress on research as assessed by the major adviser and thesis committee.

Coursework Requirements

The course work includes the 16-credit graduate core curriculum:

| Code | Title | Credits |
|---------------------------|--|---------|
| BIOL 4211 | Advanced Cell Biology | |
| BIOL 4310 | Foundations in Literature: Cell and Molecular Biology (3 terms required) | |
| BIOL 4231 | Responsible Conduct in Rsrch | |
| BIOL 4090 or BIOL 4085 | Biostatistics Accelerated Biostatistics | |
| BIOL 4212 | Advanced Molecular Biology | |

| | |
|---|---|
| BIOL 4213 | Advanced Cell Signaling |
| BIOL 4991 or BIOL 4995 | Independent Study (*) Independent Research |
| • Courses the thesis committee judges to complement the student's major field also may be used. | |

Total Credits**45****Non-coursework requirements**

Additional requirements are attendance at all departmental seminars, a thesis based on a research project approved by the thesis committee and a successful oral defense of the thesis.

In clinical exercise physiology (CEP), exercise is used to help patients manage or reduce their risk of chronic disease. Clinicians develop exercise recommendations, administer diagnostics tests and provide guidance that promotes healthy lifestyles. This Master's degree program provides in-depth knowledge and hands-on experiences in preventive and rehabilitative practices for patients at-risk of or challenged by cardiovascular, pulmonary and metabolic diseases, orthopedic or musculoskeletal, neuromuscular, and neoplastic immunological or hematological diseases, as well as healthy and low risk populations. The curriculum provides the knowledge, clinical experience and skills needed by individuals preparing for successful completion of the exam for the ACSM clinical exercise physiologist certification. The program prepares students for clinical and research careers in clinics, research centers, or health and wellness centers, especially careers in cardiac rehabilitation, pulmonary rehabilitation, diabetes prevention, cancer prevention and rehabilitation, obesity prevention and treatment, and other related careers. CEPs also could pursue positions working with both amateur and professional athletes who aspire to improve their performance. If further advanced education is of interest, this program provides an excellent foundation for doctoral work in physical therapy, occupational therapy, and other related disciplines or in preparation for medical school.

Master of Science in Clinical Exercise Physiology

Degree Requirements

45 credit hours of coursework and written comprehensive exam and internship presentation

| Code | Title | Credits |

Faculty

Joseph K. Angleson, Associate Professor and Department Chair, PhD, Baylor College of Medicine

Cedric Asensio, Associate Professor, PhD, University of Geneva

Scott A. Barbee, Associate Professor, PhD, University of Colorado at Denver

Todd Blankenship, Professor, PhD, Princeton University

Phillip B. Danielson, Professor, PhD, University of Denver

Robert M. Does, Professor, PhD, University of Minnesota

Jim Fogleman, Professor, PhD, Cornell University

Karen Giesecker, Teaching Assistant Professor, PhD, University of Colorado Denver

Barbekka Hurtt, Teaching Associate Professor, PhD, University of Colorado, Boulder

Erich Joseph Kushner, Associate Professor, PhD, University of Colorado, Boulder

Erica Lee Larson, Associate Professor, PhD, Cornell University

Daniel A. Linseman, Professor, PhD, University of Michigan

Nancy M. Lorenzon, Teaching Professor, PhD, University of Tennessee Health Sciences Center

Patrick H. Martin, Professor, PhD, Cornell University

Julie Ann Morris, Teaching Professor, PhD, Kent State University

Shannon M. Murphy, Professor, PhD, Cornell University

Scott Nichols, Associate Professor, PhD, University of California, Berkeley

Yan Qin, Associate Professor, PhD, Ohio University

Nancy T. Sasaki, Teaching Professor, PhD, Colorado State University

Anna A. Sher, Professor, PhD, University of New Mexico

Robin Tinghitella, Associate Professor, PhD, University of California, Riverside

Schuyler Van Engelenburg, Associate Professor, PhD, University of Colorado Boulder

Jonathan Velotta, Assistant Professor, PhD, University of Connecticut

Dhaval Kartik Vyas, Teaching Assistant Professor, PhD, Colorado State University

Bethany Waddington, Teaching Assistant Professor, PhD, University of Glasgow

Ann M. Wehman, Assistant Professor, PhD, University of California San Francisco

Sarah J. Willis, Teaching Assistant Professor, PhD, University of Lausanne

Xi Yang, Assistant Professor, PhD, Shanghai Institute of Plant Physiology & Ecology, Chinese Academy of Sciences

Dennis Barrett, Associate Professor, Emeritus, PhD, California Institute of Technology

John C. Kinnamon, Professor, Emeritus, PhD, University of Georgia

Biology Courses

BIOL 3005 Science Communication (4 Credits)

Science communication has shaped, and continues to shape, the world in which we live (e.g., why you wash your hands, why we don't feed bears in U.S. national parks anymore, and why some students imagine themselves becoming scientists or not). Sharing how science is conducted and how new knowledge is generated through the scientific method also plays a critical role in our future: creating engaged citizens, shaping the next generation of scientists, increasing diversity and diverse perspectives in the sciences, informing policy-makers and lawyers, combatting misconceptions, increasing trust of scientists, and guiding our own individual behaviors. But, like any other complex skillset, science communication takes practice. This course provides students with a range of resources and skills for effective, ethical, and evidence-based communication of complex socio-scientific issues. It provides a supportive environment in which students will practice and refine their science communication through peer feedback and engagement with real audiences. The focus is on cultivating practical communication skills, with emphasis on effective speaking, writing and exhibition of scientific topics with the variety of audiences students will encounter in their future careers. Course readings, activities, and final projects also examine how identity shapes both the science we do and the lenses we and other stakeholders bring to communication tasks. The course is hybrid, highly interactive, and writing-intensive. This course is restricted to Junior or Senior Standing UG majoring in the College of Natural Sciences and Mathematics.

BIOL 3035 Invasive Species Ecology (4 Credits)

This course investigates those plants and animal species that have dramatically expanded their ranges and cause ecological harm. Topics covered include the mechanisms of ecological impacts across the globe, how invasive species are used to test basic ecological theory, the application of this research for managing real species, and related issues such as the debate within the scientific community about the term "invasive." We use a case-study approach, and students have the opportunity to go into the field as a class to observe the real invasions and learn sampling methods.

BIOL 3044 Coral Reef Ecology (3 Credits)

Ecology of coral reefs; organization and distribution of reefs; review of reef organisms and their interactions with each other and their physical environment; threats to coral reef conservation. This course counts as a category elective for Ecology and Biodiversity majors. Prerequisite: (BIOL 2010 or BIOL 2050) OR (GEOG 1201, GEOG 1202, and GEOG 1203).

BIOL 3045 Coral Reef Ecology Lab (1 Credit)

Ecology of coral reefs laboratory to supplement lecture material; travel to the Caribbean over spring break to observe coral reefs firsthand; introduction to research methods. SCUBA certification and permission of instructor required. A travel and dive fee is associated with this course.

BIOL 3055 Ecology of the Rockies (4 Credits)

A week in residence at the Mt. Evans Field Station prior to the start of fall quarter includes field projects dealing with ecology and environmental issues. On campus classes involve data analysis and interpretation and formal scientific communication. Themes include terrestrial and aquatic ecosystems, taxonomic groups ranging from conifer stands to aquatic insects and mountain goats. Lab fee associated with this course. Prerequisite: BIOL 2010 or permission of instructor.

BIOL 3070 Ecological Field Methods (4 Credits)

Series of field exercises for students to learn principles and procedures of field methodology, data analysis and technical writing in ecology; problems drawn from population, community and ecosystem ecology. Lab fee associated with this course. Prerequisite: BIOL 2010.

BIOL 3085 Insect Ecology (4 Credits)

A general introduction to insect biology and the science of entomology. Arthropods are the most diverse group of animals on Earth and insects account for more than half of all known living organisms. This course explores the biodiversity of insects on Earth, insect morphology and physiology. The evolutionary history and taxonomy of key orders of insects is emphasized as well as the importance of insects to our everyday lives. This course counts as a category elective for Ecology and Biodiversity majors. Prerequisites: BIOL 1010, BIOL 1011, and BIOL 2010.

BIOL 3090 Microbial Ecology (4 Credits)

Interactions among microorganisms and their environment. Impact of ecological principles on microbial diseases, pollutant degradation, nutrient cycles and global change. Prerequisites: BIOL 1010, BIOL 1020, AND BIOL 2510.

BIOL 3095 Global Change Ecology (4 Credits)

Over the past century, the mean surface temperature of our planet has increased slightly less than 1°C. While this may seem like a small increment, this change is already profoundly affecting Earth's organisms and ecological communities, and predictions for the impacts of continued change range from severe to catastrophic. Humans are also changing the environment through alteration of nutrient and water regimes. Topics include cause of climate change, comparison to past climatic change, human contribution to change and effect on organisms, communities and ecosystems. Prerequisites: BIOL 1010, BIOL 1011, AND BIOL 2010. RECOMMENDED PREREQUISITES/COREQUISITES: BIOL 2090.

BIOL 3110 Special Topics: Biology (1-5 Credits)

Topics of special interest to teaching/research faculty of department presented as needed to complement and expand existing curriculum. May be repeated for credit. PREREQUISITES: BIOL 1010.

BIOL 3120 General Microbiology (4 Credits)

Fundamental principles of microorganisms in the world and in disease; role of bacteria in biological phenomena. Includes laboratory. Lab fee associated with this course. Counts as a category elective for Ecology and Biodiversity majors. Prerequisite: BIOL 2120.

BIOL 3145 Cellular and Molecular Biology of Cancer (4 Credits)

This course examines the mechanisms that underlie the development and progression of cancer. The cellular and molecular events that drive uncontrolled cell proliferation and eventual metastasis of tumors are discussed. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

BIOL 3150 Intracellular Dynamics (4 Credits)

Focuses on spatial and temporal control of intracellular processes with an emphasis on neuronal and endocrine cells. Topics include vesicular traffic, protein targeting, dynamics and spatial organization of signaling complexes. Emphasis on modern techniques of cell and molecular biology with examples from primary literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

BIOL 3160 Biophysics: Ion Channels & Disease (4 Credits)

Examines ion channel structure and function and the ways in which this information provides insight into human disease. The focus is on the use of biophysical techniques in combination with molecular and genetic analysis of channel genes. General Physics recommended. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

BIOL 3230 Nutrition (3 Credits)

Investigation of metabolism, all nutrients and various applications of nutrition to sports and healthy living. Prerequisite: BIOL 3250.

BIOL 3241 Anatomy and Physiology of the Skeletal, Nervous and Muscular systems (5 Credits)

This course is designed to introduce students to the fundamental concepts, content and scientific bases of Skeletal, Muscular, and Nervous system anatomy and physiology at both macroscopic and microscopic levels. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. The course will utilize diverse resources, exercises, and activities to engage you in the learning process, including, text, video, animations, models, dissections, inquiry-based learning, and a variety of assessments. Please note that the lab portion of this course does require dissection. Prerequisites: BIOL 2120.

BIOL 3242 Human Anatomy and Physiology - Systems of homeostasis (5 Credits)

This course is designed to introduce students to the fundamental concepts, content and scientific bases of Cardiovascular, Respiratory, Urinary, Digestive, Immune and Reproductive system anatomy and physiology at both macroscopic and microscopic levels. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. The course will utilize diverse resources, exercises, and activities to engage you in the learning process, including, text, video, animations, models, dissections, inquiry-based learning, and a variety of assessments. Please note that the lab portion of this course does require dissection. Prerequisites: BIOL 2120.

BIOL 3245 Human Anatomy (5 Credits)

This course is designed to introduce you to the fundamental concepts, content and scientific bases of human anatomy. Specific content covered in the course includes: the Language of Anatomy, Body Organization, Histology, and Integument, Skeletal, Muscular, Nervous, Cardiovascular, Respiratory, Urinary, Digestive and Reproductive anatomy at both macroscopic and microscopic levels. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. The course will utilize diverse resources, exercises, and activities to engage you in the learning process, including, text, video, animations, models, dissections, inquiry-based learning, and a variety of assessments. Please note that the lab portion of this course does require dissection. Prerequisite: BIOL 2120 Cell Structure and Function.

BIOL 3250 Human Physiology (5 Credits)

Functional relationships of human organ systems with coordinated laboratory activities and experiments that demonstrate and test physiological principles. Lab fee associated with this course. Prerequisites: BIOL 1010.

BIOL 3251 Exercise Physiology (4 Credits)

This course will cover exercise physiology topics included but not limited to: energy systems, physiological response to exercise/training, and exercise programming. A strong background in human physiology is recommended. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 1010.

BIOL 3252 High Altitude Physiology (4 Credits)

This course is an advanced course in physiology for those interested in both the impacts of altitude exposure on health and athletic performance. We live at altitude in Denver, and in fact there are many factors affecting our bodies (which we may or may not realize) that impact our daily lives. This course aims to provide insight on the acute and chronic physiological responses of altitude as well as to provide a deeper understanding into the use of hypoxic environments for improving health and benefiting athletic performance. We will explore the physiological mechanisms related to these reduced oxygen environments as well as develop projects that contribute to the understanding of using this environment as a stimulus. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 3242.

BIOL 3253 Environmental Physiology of Animals (4 Credits)

By studying species across the animal kingdom, we will learn about the vast array of physiological strategies that have evolved to help animals maintain homeostasis in the face of varied environmental challenges. We will cover foundational principals of animal physiological ecology and evolution, as well as new and exciting discoveries through weekly discussions of primary literature. We will focus primary literature discussions on "extreme environments," as Earth's harshest landscapes provide exciting and powerful examples of adaptations of physiological systems. This course will be delivered through a combination of lectures, active learning assignments, readings from the scientific literature, and group discussions. By the end of this course, you will develop a new perspective on the ecological and evolutionary factors that shape physiological similarities and differences among the animals of our planet (including humans). This course counts as a category elective for the Ecology and Biodiversity major and Physiology in Health and Disease major. Prerequisites: BIOL 1010 and BIOL 1011.

BIOL 3256 Advanced Human Anatomy & Physiology (5 Credits)

This one quarter course is intended for advanced biology and physiology majors with an interest in the anatomical structure and physiological functioning of body systems. This course builds upon the Human Anatomy and Human Physiology courses that are prerequisites. This advanced course will explore in greater depth understanding mechanisms of action of major body systems and elaborate on the relationship between structure and function. In addition to didactic content, students will complete evaluation of primary literature and design laboratory experiments to test hypotheses of interest. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, models, dissections, inquiry-based learning, experimentation and a variety of assessments. The course consists of both lecture and laboratory sessions each week and requires attendance and participation in both. Please note that the lab portion of this course requires dissection. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisites: BIOL 3241 and BIOL 3242.

BIOL 3260 Nutritional Physiology (4 Credits)

This course is designed to introduce the fundamental concepts, content and scientific bases of nutritional physiology at the levels. This course will examine the scientific structure and properties of carbohydrates, proteins and lipids as the major macronutrients required for human health. In addition, it includes exploration of the digestion, absorption and metabolism of both macronutrients and micronutrients. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, inquiry-based learning, experimentation and a variety of assessments. Prerequisite: BIOL 2120.

BIOL 3280 Intro to Pathophysiology (4 Credits)

This course is designed as an introduction of the mechanisms and consequences of disease based on physiological dysfunction in the major organ systems. The course will focus on the fundamental concepts and processes of human pathophysiology through exploration of the unique physiological roles of several body systems, how these systems have important integrative relationships that underlie the overall physiological functioning of healthy humans, and how system function is altered in disease and the clinical manifestations of these changes. This course counts as a category elective for the Physiology in Health and Disease major. Prerequisite: BIOL 2120. A course in human physiology is recommended.

BIOL 3410 Animal Behavior (4 Credits)

This class examines animal behavior from an evolutionary and ecological perspective. The course provides the background needed to understand behavioral evolution, including a focus on the inheritance of behavior, natural selection, sexual selection, and kin selection. This class studies the evolution of a variety of behaviors, including communication and displays, mate choice, parental care, cooperation, mating systems, social behavior, habitat selection, foraging, and anti-predator behavior. The emphasis is on theoretical principles, design of experiments, and interpretation of data. This course counts as a category elective for the Ecology and Biodiversity major. Prerequisites: BIOL 1010 and BIOL 1011, and BIOL 2010. Recommended Prerequisite: BIOL 2090.

BIOL 3560 Molecular Biology Laboratory (4 Credits)

Laboratory based course that covers techniques in gene excision, cloning and reinsertion and gene sequencing. Lab fee associated with this course. Prerequisite: BIOL 2510, or permission of instructor.

BIOL 3570 Proteins in Biological Systems (4 Credits)

Proteins considered in their biological setting; protein synthesis and degradation; survey of protein functions in vivo; introduction to protein biotechnology. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120.

BIOL 3610 Developmental Biology (4 Credits)

Processes and mechanisms of development, exemplified by higher animal embryogenesis, with consideration of microbial model systems. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120 and 2510.

BIOL 3615 Blood Vessel Development and Disease (4 Credits)

This course details the underlying biological programs during blood vessel development and mechanisms that lead to vascular pathologies. The class will incorporate aspects embryology, signaling transduction, and genetics as well as current techniques in developmental biology to comprehensively cover how blood vessels are formed embryonically. Additionally, we will discuss in detail how defects in blood vessel-related signaling programs later manifest into disease. Prerequisite for this course is Cell Structure and Function (BIOL2120/2121).

BIOL 3630 Cell Biology of Development (4 Credits)

Every organism has a stereotypical shape, but how does this shape arise? This course examines the cellular and molecular mechanisms that direct the forming of body and tissue shape. This course counts a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

BIOL 3640 Introductory Neurobiology (4 Credits)

Organization and function of vertebrate central nervous system; nature of action potential, biochemistry of neurotransmitters, neuropeptides, functional anatomy of nervous system, phylogeny of nervous system. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

BIOL 3641 Systems Neuroscience (4 Credits)

Structure and function of the brain and spinal cord, emphasis on functional systems including sensory perception, motor control and consciousness. This course counts as a category elective for the Cognitive Neuroscience concentration. Prerequisite: BIOL 3640.

BIOL 3642 Neuropharmacology (4 Credits)

How psychoactive drugs exert their effects on the nervous system; drugs of abuse and drugs used in the treatment of psychotic and neurodegenerative disorders. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120. Recommended prerequisites: BIOL 3640.

BIOL 3644 Neuromuscular Pathophysiology (4 Credits)

Cellular and molecular basis for normal nerve and muscle functions and the alteration of these functions by toxins, trauma and diseases of the brain, nerves and muscles; how specific insults produce clinical symptoms and pathology. Prerequisite: BIOL 2120.

BIOL 3646 Seminar: Cognitive Neuroscience (2 Credits)

This seminar is the capstone course for the neuroscience portion of the cognitive neuroscience program. Seminar topics include but are not limited to neurological disorders, model systems in neuroscience and sensory systems.

BIOL 3647 Neuroscience of Movement (4 Credits)

Producing the vast array of movements that humans (and many animals) use everyday represents one of the body's greatest challenges and greatest successes. These various movements require that the nervous, muscular, and skeletal systems work in concert to achieve a common goal. This course will explore the scientific basis of movement production, with particular emphasis on the neuroscience of motor control. We will explore how the nervous system drives the development of movement strategies at an early age, modifies movement strategies to adapt to changing demands throughout life, and how injury, dysfunction, and/or aging can lead to movement challenges. This course counts as a category elective for the Physiology in Health and Disease major and Cognitive Neuroscience concentration. Required prerequisite: Cell Structure & Function (BIOL 2120); Recommended prerequisite (1 or more of the following): Introduction to Neuroscience (BIOL 3640) or permission of instructor.

BIOL 3648 Molecular Mechanisms of Neurological Disease (4 Credits)

This course will be an in-depth study into some of the key molecular mechanisms involved in the pathogenesis of human neurological disease. A particular emphasis will be placed on the role of RNA regulation and metabolism. The primary focus will be on five devastating diseases: 1. Spinal Muscular Atrophy (SMA) 2. Fragile X Syndrome (FXS) and Fragile X Tremor Ataxia Syndrome (FXTAS) 3. Myotonic Dystrophy type 1 and 2 (DM1 and DM2) 4. Spinocerebellar Ataxia type 2 (SCA2) 5. Amyotrophic Lateral Sclerosis (ALS) and Frontotemporal Dementia (FTD) This course will cover a variety of topics including disease pathophysiology and pathogenesis. However, readings will be assigned from the recent primary literature discussing cellular and molecular mechanisms. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2510 Genetics.

BIOL 3649 Neurodegeneration and Neurotrauma: Mechanisms and Therapeutics (4 Credits)

Neurodegeneration and Neurotrauma: Mechanisms and Therapeutics covers the following disorders: Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, Huntington's disease, spinocerebellar ataxia, Creutzfeldt-Jakob disease, multiple sclerosis, traumatic brain injury and spinal cord injury. Course literature includes primary journal articles and review papers describing the etiology and pathophysiological mechanisms of these disorders. Potential therapeutic approaches to treatment are also investigated. The course format typically includes a lecture reviewing the basic biology, symptoms, and current treatments for each disorder, followed by a thorough analysis of primary research papers focused on novel molecular mechanisms and new targets for therapeutic development. Grading is based on 3 exams throughout the academic quarter and participation in discussing journal articles in class. This course counts as a category elective for the Cognitive Neuroscience concentration. Prerequisite: BIOL 2120 Cell Structure and Function. Recommended: BIOL 3640 Introductory Neurobiology. For Graduate Students: an additional term paper is required with the exact topic to be agreed upon by the student and instructor.

BIOL 3650 Endocrinology (4 Credits)

Mechanisms of hormone action, evolution of vertebrate endocrine systems, analysis of function integration of hormonal responses in maintenance of homeostasis. This course counts as a category elective for the Molecular Biology major and Cognitive Neuroscience concentration. Prerequisite: BIOL 2120.

BIOL 3656 Cellular Aspects of Diabetes and Obesity (4 Credits)

This course focuses on specific cellular and molecular events key to the understanding of the pathological conditions of diabetes and obesity. Topics include the endocrine pancreas, adipose tissue and neuroendocrine control energy expenditure and feeding behavior. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2120.

BIOL 3670 Molecular Immunology (4 Credits)

The ability to distinguish self from non-self is crucial to all organisms. In humans Organs, cells and other higher animals, this task fall to the immune system. Suppression of this system is key to numerous pathogenic viruses including Ebola and human immunodeficiency virus. The failure to adequately regulate immune response underlies allergic reactions, arthritis and diabetes. This course will introduce students to the organs, cells and molecules that underlie mammalian immune response; immunogenetics and the fundamental mechanisms of cell mediated and humoral immune response; and the relationship of immune system to human disease. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510.

BIOL 3675 Virology (4 Credits)

Viruses are the ultimate cell biologists. They usurp essential cellular components to create new virus progeny leading to pathological cellular physiology. This course will delve into the genetic and cellular principles that govern virus entry, replication, and assembly and cover a broad range of DNA and RNA-based virus families. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120 and BIOL 2510.

BIOL 3700 Topics in Ecology (1-4 Credits)

Topics vary; may include plant, animal, biochemical, alpine or aquatic; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: one quarter of undergraduate ecology and/or instructor's permission.

BIOL 3701 Topics in Genetics (1-4 Credits)

Topics vary; may include genetic methods, molecular genetics, human genetics, chromosomes or population genetics; one topic per quarter. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510 and/or instructor's permission.

BIOL 3702 Advanced Topics in Regulatory Biology (1-4 Credits)

Topics vary; may include endocrinology, physiology or immunology; one topic per quarter. May be repeated for credit. Taught from original literature. Prerequisite: varies with topic and instructor; instructor's permission usually required.

BIOL 3703 Advanced Topics in Developmental Biology (1-4 Credits)

Topics vary; may include gene expression in development, developmental immunogenetics, developmental biochemistry or aging; one topic per quarter. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: instructor's permission.

BIOL 3704 Advanced Topics in Cell Biology (1-4 Credits)

Topics vary; may include supramolecular structure, microscopy, membranes and techniques. May be repeated for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisites: BIOL 2120.

BIOL 3705 Advanced Topics in Molecular Biology (1-4 Credits)

Topics vary, but may include biochemistry, supramolecular structure and function, molecular genetics, membrane biology. May be taken more than once for credit. Taught from original literature. This course counts as a category elective for the Molecular Biology major. Prerequisite: varies with course and instructor; instructor's permission usually required.

BIOL 3706 Topics in Evolution (1-4 Credits)

Topics vary, but may include molecular evolution, plant evolution and animal evolution. Prerequisite: BIOL 2120 and BIOL 2510.

BIOL 3707 Advanced Topics in Conservation Biology (1-4 Credits)**BIOL 3708 Topics in Integrative Physiology (2-4 Credits)**

Topics for this course include, but are not limited to, human physiology and disease, integrative physiology, environmental or social impacts on human physiology and health, and comparative physiology. Students will gain knowledge of a specific topic in physiology and/or pathophysiology through discussion of current literature and research. May be repeated for credit. Prerequisite: BIOL 2120.

BIOL 3800 Human Molecular Biology (4 Credits)

Medical Genetics is the 24th member of the American Board of Medical Specialties. This course will introduce students to the fundamentals of molecular biology with an emphasis on understanding of how the field is applied in the context of medical diagnostics, personalized/precision medicine and other commercial applications. Students will be introduced to published research reports and provided with opportunities to critically examine the application of molecular biology to central questions in such areas as oncology, inherited diseases and genetically engineered organisms. Prerequisite: BIOL 2510.

BIOL 3850 Genetic Engineering (4 Credits)

This course will cover principles in gene manipulation and its application in research, medicine and industry. More specifically, this course will explain emerging technologies in genetic engineering and its practical and ethical implications. Topics will incorporate historical and emerging aspects of developmental biology, chemistry, and genetics as well as current techniques in genetic manipulation that are related to genomic editing. Additionally, students will be trained to interface with genomic databases and employ DNA sequence editing software to manipulate DNA sequences to achieve novel cloned products. This course counts as a category elective for the Molecular Biology major. Prerequisite for this course is Genetics BIOL 2510.

BIOL 3855 Genetic Model Organisms in Health & Disease (4 Credits)

This course is focused on how basic science studies using genetic model organisms have had a major impact on human health and disease in addition to helping us understand fundamental aspects of biology. We will cover clinically relevant recent advances from bacterial studies (i.e. CRISPR/Cas9-mediated genome editing) to how studies in fruit flies revealed insights into immune disease. Students will gain a better appreciation for why researchers using model organisms were awarded Nobel prizes as well as why major medical funding organizations like the National Institutes of Health, American Cancer Society, and American Heart Association support research using non-human systems. This course will prepare students to understand health-relevant research from varied model systems. Students will learn practical aspects for determining which model systems are best suited to answer which types of questions. They will also practice designing experiments and defending their importance in grant abstract-style essays. Prerequisites: BIOL 2120 and BIOL 2510.

BIOL 3910 Viruses & Infectious Human Diseases (4 Credits)

From sexually transmitted viruses to bacterial pneumonia, infectious pathogens are the number one threat to human health. This course will introduce students to prions, viruses and bacterial pathogens with an emphasis on those commonly encountered in clinical medical practice. Through the use of technical/scientific research journals students will be encouraged to investigate the etiology, pathogenesis and treatment of human infectious disease with an emphasis on the clinical, molecular diagnostic and therapeutic aspects of the disease. This course counts as a category elective for the Molecular Biology major. Prerequisite: BIOL 2510. Recommended prerequisite: BIOL 3800.

BIOL 3950 Undergraduate Research (1-10 Credits)

Participation in faculty research programs by agreement between student and faculty member. Maximum of 5 quarter hours of BIOL 3950 and/or BIOL 3991 may be applied to the 45-quarter-hour requirement for a major in biological sciences.

BIOL 3991 Independent Study (1-10 Credits)

Topic in biology studied under faculty supervision. Student's responsibility to identify faculty supervisor before registering for class. Maximum of 5 quarter hours of BIOL 3991 and/or BIOL 3950 may be applied toward the 45-quarter-hour requirement for a major in biological sciences.

BIOL 3995 Independent Research (1-10 Credits)**BIOL 4050 Topics in Plant Biology (2 Credits)**

Varying topics; areas of plant-animal interactions, co-evolution, plant ecology, plant biochemistry/physiology.

BIOL 4085 Accelerated Biostatistics (2 Credits)

This is an accelerated online statistics course for graduate students in Biology. Basic probability and hypothesis testing is the foundation of teaching applied statistics, including simple statistics (t-tests, F-tests, and chi square) and more advanced procedures (regression, correlation, analysis of variance). In addition, students learn more complex tools (multiple regression, multi-classification ANOVA, Student-Newman-Keuls tests), including non-parametric Tests (Mann-Whitney U, Sign test, Wilcoxon Rank Sum).

BIOL 4090 Biostatistics (4 Credits)

Statistic on biological research; emphasis on procedures, applications of regression, correlation, analysis of variance, and nonparametric tests. Include instruction on computer aided (Mac and PC) statistical analysis and presentation of results. Cross listed with BIOL 2090.

BIOL 4095 Research Methods and Analysis (4 Credits)

The purpose of this course is to introduce you to topics of applying statistical knowledge to real data, including specific tests/models as well as issues related to project design such as adequate sample size, avoiding confounding variables, unexplained error, and other common challenges. It is geared toward both field and lab-based projects, but the topics covered are relevant to research generally. Each week we will discuss the reading for that week with the objective of clarifying points and where possible, applying the concepts to real data from our own work. Prerequisites: BIOL 4090 or permission of instructor. Prerequisites: BIOL 4090.

BIOL 4150 Special Topics in Adv Biology (1-4 Credits)

Topics of special interests to teaching and research faculty presented as needed to complement and expand existing curriculum. May be taken more than once for credit.

BIOL 4155 Leadership in Science (1 Credit)

This course addresses the basic leadership skills necessary to succeed in the dynamic professional environment of the biomedical sciences.

Topics covered include leadership strategies and professional negotiation, conflict resolution, and team-building. Students will determine leadership strengths and weaknesses and use case studies to strengthen their leadership practices.

BIOL 4211 Advanced Cell Biology (3 Credits)

Students study the subcellular structure and organization of the cell. Organelle structure and function are examined in detail as well as biogenesis and degradation (turnover) of these subcellular structures. Cytoskeletal dynamics are also a major focus. Specific topics covered include cell division, macromolecular synthesis, membrane transport, cell-matrix and cell-cell communication, cell migration, cell differentiation, and mechanisms of cell death. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students. Cross listed with BIOP 4150.

BIOL 4212 Advanced Molecular Biology (3 Credits)

This course focuses on a detailed analysis of regulated gene expression. The topics include lectures and readings of relevant literature in areas covering gene regulation at multiple steps, including transcription, RNA processing, and translation. In particular, the logic of experimental design and data analysis are emphasized.

BIOL 4213 Advanced Cell Signaling (3 Credits)

Students in this course investigate a large array of cellular signal transduction cascades. Specific signaling pathways to be covered include growth factor receptors, cytokine receptors, steroid receptors, integrin-extracellular matrix, heterotrimeric G-protein coupled receptors, monomeric G-proteins, transcription factors, lipids, cytoskeleton, cell cycle, and apoptosis. Each of these topics is examined in the context of normal cell physiology as well as their roles in specific disease processes. The course follows a lecture format in conjunction with selected journal article presentations and discussions by the students.

BIOL 4220 Grad Sem: Ecology & Evolution (2 Credits)

A series of student presentations focusing on varied topics involving ecology and evolution. May be taken more than once for credit.

BIOL 4231 Responsible Conduct in Rsrch (1 Credit)

This course covers several topics regarding guidelines for ethical practices in research. Topics include: data ownership, conflict of interest and commitments, human subjects, animal welfare, research misconduct, authorship, mentoring, peer review, and collaboration. The course includes an online training component and meets one hour each week to discuss these topics.

BIOL 4310 Foundations in Literature: Cell and Molecular Biology (2 Credits)

Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Cell and Molecular Biology.

BIOL 4330 Foundations in Literature: Ecology (2 Credits)

Students participate in a weekly discuss group that focuses on recent papers from the primary literature in Ecology.

BIOL 4331 Foundations in Literature: Evolution (2 Credits)

Students participate in a weekly discussion group that focuses on recent papers from the primary literature in Evolution.

BIOL 4500 Clinical Exercise Physiology (5 Credits)

This graduate course in clinical physiology will provide an understanding of fundamental practices and assessments within clinical settings. We will combine knowledge from various backgrounds in physiology and tie theoretical and practical concepts together for assessing body function and developing methods for improving health and performance. We will connect the physiological concepts related to the cardiovascular, respiratory, and muscle systems as well as develop projects that require combining knowledge of the assessment skills and evaluation for clear communication and exercise prescription to special populations.

BIOL 4510 Exercise Testing & Prescription (4 Credits)

The purpose of this graduate course is to develop knowledge combined with hands-on skills for integration of exercise testing and prescription concepts. Material in this course will be applicable for performance as well as clinical considerations. This is an active course which will require your participation as both the subject and technician, giving perspective and understanding of methods and protocols along with their justification for various purposes. Prerequisite: BIOL 4500.

BIOL 4515 Research Techniques in Exercise Physiology (4 Credits)

This graduate level course is designed to provide exposure to several methods of research within the area of exercise physiology. This is a hands-on course that combines theory and literature with practical research experiences in physiology. In this course, students will perform data collection and analysis of differing topics. These may include the following topics: pulse and tissue oxygenation, signaling (heart rate variability, oxygen kinetics), respiratory loops, Doppler ultrasound (blood flow and tissue structure), etc. Our aims will focus on understanding how and why the method works, how to collect data, as well as the analysis and reporting of variables for proper interpretation.

BIOL 4520 Advanced Nutrition and Exercise (4 Credits)

This is a one quarter course intended for graduate students and advanced biology and physiology majors. This course builds upon the prerequisite introductory nutrition course. The course will focus on understanding, evaluating and implementing the fundamental principles and evidence based best practices of nutrition related to exercise, physical activity and health. Starting with a review of nutritional biochemistry and exercise, major macromolecule and micronutrient metabolism will be addressed in depth. Applications of nutritional science to various types of exercise (endurance, power, speed) will be explored, as well as nutrition and exercise specific to age and sex across the lifespan. In addition to didactic content, students will complete evaluation of primary literature and propose a nutritional program for a specific population of interest. The course will utilize diverse resources, exercises, and activities in the learning process including text, video, animations, inquiry-based learning, experimentation and a variety of assessments. Prerequisite: BIOL 3260 Nutrition or the equivalent.

BIOL 4530 Advanced Cardiovascular and Pulmonary Physiology (4 Credits)

This course is developed to provide a deeper level of physiological knowledge of the cardiac, vascular, circulatory, and pulmonary systems and their functions. With both lecture materials as well as in-class discussion of concepts and research articles, we will go deep into the basic levels of composition and function and facilitate the understanding of mechanisms that limit disease populations, elderly, etc. How can we adapt our lifestyles to improve our cardiovascular health? Prerequisite: BIOL 3250.

BIOL 4540 Electrocardiogram Interpretation (2 Credits)

This course is an advanced course in cardiac physiology for those interested in understanding principles associated with cardiac function, electrical physiology of the heart, and interpretation of the electrocardiogram. As the functions related to our heart drive our cardiovascular system, we will find ways to relate our experiences of daily life to the concepts and principles learned throughout this course to deepen our knowledge and retain this information. We will explore the physiological mechanisms related to the cardiac system as well as develop projects that require combining knowledge of the electrical pathways and of use of electrocardiography for proper interpretation.

BIOL 4550 Cardiopulmonary Rehabilitation (2 Credits)

This course focuses specifically on cardiopulmonary rehabilitation. Students will gain an understanding of (1) the impact of lung and heart disease on daily physical activity levels, (2) common mechanisms limiting exercise tolerance, and (3) risks and benefits of exercise for patients with lung and heart disease. Students will learn guidelines for exercise prescription and rehabilitation programs for patients with cardiovascular and pulmonary diseases. Practical application of knowledge and skills gained in BIOL 4530 will be emphasized. Prerequisite: BIOL 4530 Advanced Cardiovascular & Pulmonary Physiology.

BIOL 4570 Advanced Human Pharmacology (2 Credits)

This class will focus on how drugs and other therapeutics can be used to treat and prevent diseases. Students will develop a deep understanding of pharmacokinetics/ pharmacodynamics, the major classes of drugs, how and why they are used, drug side effects, and drug interactions. Specific emphasis will relate to effects of drugs utilized for disease prevention or treatment on physical activity and exercise.

BIOL 4580 Physical Activity for Management of Chronic Diseases (3 Credits)

This one quarter course is intended for graduate students in the clinical exercise physiology program or other related programs. This course builds upon previous coursework in clinical exercise physiology. It will focus on understanding, evaluating and implementing the fundamental principles and evidence based best practices of exercise management for persons with chronic diseases and disabilities. Starting with an overview of the concept of "exercise as medicine," the principles of safe exercise as a method for improving health outcomes will be applied to individuals with chronic diseases. Various chronic disease states and their associated medical challenges will be explored, and the recommendations for modified exercise activities, durations and outcomes to support healthy and safe outcomes will be addressed. In addition to didactic content, students will complete evaluation of primary literature in the field. Prerequisite BIOL 4500/4510 Clinical Exercise Physiology I and II.

BIOL 4870 Medical Ethics (4 Credits)

This course presents knowledge and discussion of ethical issues that arise from advances in the biomedical sciences and medicine. Several specific ethical issues and policies related to methodologies and procedures, emerging medical technologies, treatment decisions, doctor-patient relationship, informed consent, medical experimentation/clinical research, and health care reform.

BIOL 4880 Capstone in Biomedical Sciences (4 Credits)

This is the capstone course for students enrolled in the Professional Science Master's program. In this course, students integrate advanced knowledge in science and math along with courses taken outside traditional science and math courses as their electives. This course incorporates lectures, guest speakers, and class discussions focusing on current issues or concerns in the chosen concentration. PSM students only. Requires instructor approval.

BIOL 4980 Internship in Biomedical Sciences (1-4 Credits)

The internship course provides individualized opportunities to gain experience and professional skills. This course includes a structured practical and productive internship experience that allows for the integration and application of disciplinary knowledge in a professional setting. The internship can be administrative, clinical, programmatic, or research focused. Students will work with a professional from healthcare, pharmaceutical and biotech companies, or private and public health services to identify the student's specific project focus.

BIOL 4991 Independent Study (1-17 Credits)**BIOL 4995 Independent Research (1-8 Credits)****BIOL 5991 Independent Study (1-17 Credits)****BIOL 5995 Independent Research (1-8 Credits)**

Health Sciences Courses

HLTH 3000 Seminar in Health Science (1-2 Credits)

This seminar is the capstone course for the Human Health Science & Systems program. This class will focus on the current understanding of several topics in human health. Emphasis will be on critical reading and discussion of current scientific literature related to human health and health care. Students will learn to recognize and appreciate different approaches and methods of health-related research. Students will utilize and integrate knowledge from previous courses to understand to present effective discussions on current topics in health. For students' continued development of strong oral communication skills, student presentations of primary literature will generate the basis of discussion. Prerequisites: HLTH 2000 and 2010.

HLTH 3600 Cultural Responsiveness in Health Care (2 Credits)

To contribute to reducing health inequities and improving health outcomes, this course will promote an improved understanding and responsiveness to the realities of social and structural impacts that influence the health of an individual or community. Topics will include health care delivery and access, political economy of health care, implicit biases, professionalism, relational leadership, dealing with patients in difficult situations, and health equity. The course will help students learn to provide more informed and effective care and promote a more culturally sensitive and responsive future workforce in healthcare, while also serving community needs. Prerequisite: HLTH 2000 or equivalent.

HLTH 3700 Topics in Health (1-4 Credits)

Topics in the area of, but are not limited to, human health and disease, environmental or social impacts on health, healthcare delivery, evidence-based medicine. Students will gain knowledge of a specific topic in human health and/or health care through discussion of current literature and research. May be repeated for credit. Prerequisites: HLTH 2000 or 2010.

HLTH 4210 Advanced Health Education and Promotion (2 Credits)

This course will provide students foundational knowledge about how to deliver health education and promote healthy behaviors to patients and community. This course will provide students with the practical skills and best practices for communicating and educating others about health, clinical tests and results, and clinical plans of action. Students will gain practical skills for encouraging goal setting and behavioral change and will develop an understanding of motivational considerations especially for patients with mental health challenges or psychosocial concerns related to acute and chronic physical disorders. Students will focus on integrating evidence-based research and strategies for the purpose of leading culturally sensitive discussions and/or difficult conversations and encouraging healthy behaviors.

HLTH 4300 Basic Legal Consideration in Healthcare (2 Credits)

This course will provide a basic understanding of legal issues that may affect care providers and business owners. Basic legal terminology and concepts will be presented, in addition to basic court processes and procedures. A goal of establishing this basic understanding is to prevent or reduce the consequences of lawsuits. Professionalism and the code of ethics will also be discussed.

Chemistry and Biochemistry

Office: F.W. Olin Hall, Room 202

Mail Code: 2190 E. Iliff Ave., Denver, CO 80208

Why study chemistry at the University of Denver?

Consider the advantages:

- Excellent, research-active faculty
- Small classes, personal attention
- First-rate teaching facilities
- Modern, state-of-the-art equipment

At the University of Denver, we offer the training and activities to energize your graduate experience and help you develop into a professional scientist.

The Department of Chemistry and Biochemistry at the University of Denver offers programs leading to MA, MS or PhD degree in chemistry.

Our faculty members actively involve students in research programs supported with more than \$1.5 million in annual funding from federal agencies, state governments and private industries. In our programs, you will enjoy the benefits of a friendly, personalized learning environment that offers nationally competitive and extremely productive research opportunities.

The Department of Chemistry and Biochemistry has much to offer a graduate student: close and frequent student-faculty interaction; an integrated program of courses; and excellent equipment and facilities including 500 MHz NMR, single-crystal X-ray diffraction, multiple EPR spectrometers, ICP-mass spectrometer, Raman microscope, photon counting lifetime fluorescence, nanosecond laser flash photolysis, aerosol particle monitoring spectrometer, and fluorescence microscopy.

Faculty research interests encompass biophysical, organic, analytical and environmental chemistry, and biochemistry. The department's relatively small size allows a broader, more interdisciplinary approach than in large departments. Our instructional format merges traditional disciplines into interdisciplinary courses that more closely reflect current trends in chemistry.

The department of Chemistry and Biochemistry also participates in an interdepartmental PhD program in Molecular and Cellular Biophysics at the University of Denver. See the molecular and cellular biophysics bulletin (p. 738) for more specific details.

Doctor of Philosophy in Chemistry

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites

- Applicants must earn and submit proof of earning the equivalent of a baccalaureate degree in chemistry, biochemistry or a related field from a regionally accredited institution prior to beginning graduate coursework at DU.

Additional Requirements

- Applicants may be contacted to schedule an admissions interview.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Arts in Chemistry

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Additional Requirements

- Applicants may be contacted to schedule an admissions interview.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Science in Chemistry

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites

- Applicants must earn and submit proof of earning the equivalent of a baccalaureate degree in chemistry, biochemistry or a related field from a regionally accredited institution prior to beginning graduate coursework at DU.

Additional Requirements

- Applicants may be contacted to schedule an admissions interview.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Doctor of Philosophy in Chemistry

The PhD is the highest degree awarded and is intended for students seeking a career in scientific research. The ultimate aim of this degree is to train a scientist who can independently design and supervise a research project. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student's progress.

Degree Requirements

Coursework Requirements

| Code | Title | Credits |
|--|-------------------------------|--------------|
| Required Courses | | |
| Chemical systems (three-quarter sequence) | | |
| CHEM 3110 | Chemical Systems I | 3 |
| CHEM 3120 | Chemical Systems II | 3 |
| CHEM 3130 | Chemical Systems III | 3 |
| Molecular structure and energetics (two-quarter sequence) | | |
| CHEM 3310 | Structure and Energetics I | 3 |
| CHEM 3320 | Structure and Energetics II | 3 |
| Biochemistry (two-quarter sequence) | | |
| CHEM 3831 | Advanced Protein Biochemistry | 3 |
| CHEM 3705 | Topics in Biochemistry | 3 |
| Analytical | | |
| CHEM 3220 | Advanced Analytical Chemistry | 3 |
| Independent research (repeats allowed) | | |
| CHEM 4995 | Independent Research | 1-10 |
| Additional Coursework | | 56-65 |
| Advanced topics | | |
| CHEM 4XXX or others if pre-approved by the graduate committee | | |
| Total Credits | | 90 |

Minimum credits required for degree: 90 (of which a minimum of 75 hours must be earned at the University of Denver)

Because a PhD in chemistry is primarily a degree in which competence in research is learned and demonstrated, a large percentage of these hours are earned as credit for research (CHEM 4995 Independent Research). A minimum of 70 graduate level quarter hours must be in CHEM courses; a maximum of 20 quarter hours may be outside of CHEM courses, but must remain within natural sciences (e.g., courses with BIOL, MATH, GEOG and/or PHYS prefixes). The formal or classroom course requirements are the same as those for the MS degree.

The graduate core curriculum must be completed with a GPA of 3.0 or better.

Non-coursework Requirements

- Qualifying Examinations

All students in the PhD program are required to take a qualifying examination at the end of the spring quarter in their first academic year. This examination covers the material presented in the core curriculum, with each course contributing 100 points. To qualify for continuance in the program, the student must score at least 500 (out of 800 points). The faculty will meet to discuss exam results and decide whether the candidate will continue in the PhD program.

- Cumulative Examinations

The PhD candidate must complete the cumulative examination requirement by the seventh quarter in residence. These examinations are prepared from topics appearing in the current literature and fundamental materials found in review articles.

- Research Proposal Examination

By the end of the eighth quarter in residence, the student should give an oral presentation of a scholarly proposal developed by the student concerning a topic that is within the scope of the adviser's research program. It is possible to propose a topic that is unrelated to the research program, but only with the prior approval of the adviser. After the public presentation, the student will defend the proposal before a committee of four faculty members (the advisory committee and one additional member). A written version of the proposal will also be required one week prior to the public presentation.

- Dissertation

A dissertation of publishable quality based on the student's original research must be completed. A summary of the dissertation is presented in a public seminar and later defended in a private oral examination. The dissertation examination committee will consist of the three members of the student's advisory committee, one additional member of the chemistry faculty to be selected by the advisory committee and an outside chair.

- Seminars

All students in the PhD program are expected to present a departmental “non-thesis” seminar. This seminar should be presented fairly early in the degree program. In addition, the student must present public seminars as part of the proposition oral exam and final thesis defense. The student is also expected to attend Departmental seminars.

Master of Arts in Chemistry

The MA degree is intended primarily to meet the needs of students, such as those working full time in local industry or secondary education, who are seeking an advance degree with only a small research component. The primary difference between the MA degree and the MS degree is that a research thesis is required for the MS degree. The research required for the MS degree is often not feasible for students who work full time or is not of interest to those preparing for a career, for example, in secondary education. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student’s progress.

Degree Requirements

Coursework Requirements

| Independent study or independent research (repeats allowed) | | 6 |
| CHEM 4991 | Independent Study | |
| CHEM 4995 | Independent Research | |
| Additional Coursework | | 15 |
| One advanced topic course or additional research credits | | |
| CHEM 4XXX or others if pre-approved by the graduate committee | | |
| Total Credits | | 45 |

Minimum credits required for degree: 45 (of which a minimum of 35 credit hours must be earned at the University of Denver)

The graduate core curriculum must be completed with a GPA of 3.0 or better. If it is appropriate, and approved by the graduate committee, other graduate courses may be substituted for part of the graduate core curriculum.

Independent Study and/or Research

A minimum of six credit hours of independent study and/or independent research approved by the student’s advisory committee must be completed.

Courses in Other Departments

A minimum of 35 credit hours must be taken in courses offered by the Department of Chemistry and Biochemistry. As many as 10 credit hours may be taken in science-related 3000- to 4000- graduate level courses approved by the student’s advisory committee.

Seminars

All students in the MA degree program must present a technical seminar and attend Departmental seminars.

Master of Science in Chemistry

The MS degree is intended for students who wish an advanced degree in chemistry primarily for the purpose of better preparation to conduct research work in chemistry or biochemistry. To facilitate the educational process, each student has an advisory committee that functions to both advise the student and monitor the student’s progress.

| Required Courses | | |
| Chemical systems (three-quarter sequence) | | |
| CHEM 3110 | Chemical Systems I | 3 |
| CHEM 3120 | Chemical Systems II | 3 |
| CHEM 3130 | Chemical Systems III | 3 |
| Molecular structure and energetics (two-quarter sequence) | | |
| CHEM 3310 | Structure and Energetics I | 3 |
| CHEM 3320 | Structure and Energetics II | 3 |
| Biochemistry (two-quarter sequence) | | |
| CHEM 3831 | Advanced Protein Biochemistry | 3 |
| CHEM 3705 | Topics in Biochemistry | 3 |
| Analytical | | |
| CHEM 3220 | Advanced Analytical Chemistry | 3 |
| Independent research (repeats allowed) | | |
| CHEM 4995 | Independent Research | 1-10 |
| Additional Coursework | | 11-20 |
| Advanced topics or additional research | | |
| CHEM 4XXX or others if pre-approved by the graduate committee | | |
| Total Credits | | 45 |

Minimum credits required for degree: 45 (of which a minimum of 35 credit hours must be earned at the University of Denver)

The graduate core curriculum must be completed with a GPA of 3.0 or better.

Seminars

All students in the MS program must present one departmental "non-thesis" seminar, in addition to the thesis seminar and attend Departmental seminars.

Non-coursework Requirements

Thesis- A thesis of publishable quality must be completed. A summary of the thesis is presented in an oral defense. The thesis defense committee will consist of a minimum of two faculty members from the Department of Chemistry and Biochemistry and an outside chair.

Faculty

Allegra T. Aron, Assistant Professor, PhD, University of California, Berkeley

Emily Faye Barter, Teaching Associate Professor, PhD, Indiana University Bloomington

Erich Galen Chapman, Assistant Professor, PhD, University of Oregon

Bryan L. Cowen, Teaching Associate Professor, PhD, Yale University

Gareth Eaton, Professor, PhD, Massachusetts Institute of Technology

Sandra Eaton, Professor, PhD, Massachusetts Institute of Technology

Scott Horowitz, Associate Professor, PhD, University of Michigan

Alex Huffman, Associate Professor, PhD, University of Colorado - Boulder

Ogar Ofuka Ichire, Teaching Associate Professor, PhD, University of Montana

Michelle Knowles, Associate Professor, PhD, University of Oregon

Sunil Kumar, Assistant Professor, PhD, Clemson University

Brian Jacob Majestic, Associate Professor and Department Chair, PhD, University of Wisconsin - Madison

Keith E. Miller, Associate Professor and Associate Provost, PhD, University of Washington

Martin Margittai, Professor, PhD, Freie Universität Berlin

Brian William Michel, Associate Professor, PhD, University of Utah

Debbie Gale Mitchell, Teaching Associate Professor, PhD, University of Denver

Balasingam Murugaverl, Teaching Associate Professor, PhD, University of Denver

Todd A. Wells, Teaching Associate Professor, PhD, University of Nebraska - Lincoln

Brady Thomas Worrell, Assistant Professor, PhD, The Scripps Research Institute

Lawrence J. Berliner, Professor, Emeritus, PhD, Stanford University

Dwight Smith, Professor, Emeritus, PhD, Pennsylvania State University

Sheldon York, Associate Professor, Emeritus, PhD, Stanford University

Courses

CHEM 3110 Chemical Systems I (3 Credits)

Advanced discussion of modern concepts of organic chemistry; bonding, stereochemistry, reaction mechanisms. Prerequisites: CHEM 2453 and equivalent of one year of physical chemistry.

CHEM 3120 Chemical Systems II (3 Credits)

Interpretation of trends in the chemistry of the elements in terms of orbital interactions. Most examples will be taken from the third row transition metals and the boron and carbon groups. Prerequisites: CHEM 2131, CHEM 3310 and CHEM 3110.

CHEM 3130 Chemical Systems III (3 Credits)

Advanced-level physical biochemistry course intended for advanced-level undergraduates and graduate students. Focuses on kinetic, thermodynamic and dynamic aspects of biopolymers; delineates the relationship of these properties to the mechanism and function of biological macromolecules. Prerequisites: CHEM 3811, CHEM 3812, CHEM 3813, CHEM 3610 or the equivalent.

CHEM 3220 Advanced Analytical Chemistry (3 Credits)

Principles of chemical instrumentation applied to analytical measurements; principles, instrumentation and applications of spectrometric and chromatographic measurements. Prerequisites: CHEM 3210 and CHEM 3621, or the equivalent.

CHEM 3310 Structure and Energetics I (3 Credits)

Fundamentals of quantum chemistry, and introduction to symmetry and molecular structure of small and large systems. Prerequisite: one year of physical chemistry.

CHEM 3320 Structure and Energetics II (3 Credits)

Computational methods in chemistry. Prerequisites: CHEM 3310, one year of physical chemistry.

CHEM 3410 Atmospheric Chemistry (3 Credits)

The concepts of equilibrium thermodynamics, kinetics, and photochemistry will be applied to understanding atmospheric processes. Covers urban air pollution in detail with focus on primary pollutants. Also covers stratospheric chemistry with focus on ozone chemistry and the chemistry of climate change. Prerequisites: (CHEM 2270 and CHEM 2453) OR CHEM 2240.

CHEM 3411 Aquatic Chemistry (3 Credits)

The circulation of the oceans and their chemical make-up. 'Classical water pollution problems' like biological oxygen demand and turbidity are discussed. Also presented: aquifer structure and flow, ground water chemistry, pollutant partitioning between stationary and mobile phases, heterogeneous surface chemistry, and the detection of trace contaminants. Prerequisites: (CHEM 2270 and CHEM 2453) or CHEM 2240.

CHEM 3412 Environmental Chemistry & Toxicology (3 Credits)

A survey of environmental toxicology concepts: animal testing, dose-response data, epidemiology, risk assessment. The course includes ecotoxicology, focusing on the alteration of biological and chemical systems beyond the simple response of an individual to an environmental chemical. Prerequisites: (CHEM 2270 or CHEM 2011) and CHEM 2453.

CHEM 3610 Physical Chemistry I (3 Credits)

Fundamentals of thermodynamics, including phase and reaction equilibria, properties of solutions, and electrochemistry needed for advanced study in life sciences and for Physical Chemistry II and III. May be taken for graduate credit by nonchemistry majors. Prerequisites: CHEM 2453, calculus and physics.

CHEM 3620 Physical Chemistry II (3 Credits)

Fundamentals of quantum chemistry, including theories of atomic and molecular structure and spectroscopy. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3610.

CHEM 3621 Physical Chemistry III (3 Credits)

Fundamentals of kinetic theory and statistical mechanics. May be taken for graduate credit by nonchemistry majors. Prerequisite: CHEM 3620.

CHEM 3703 Topics in Organic Chemistry (3 Credits)

May include organic photochemistry, organic synthesis, organic electrochemistry or natural products. May be repeated for credit. Prerequisites: CHEM 3110 or equivalent and others depending on topic.

CHEM 3705 Topics in Biochemistry (3,4 Credits)

May include physical techniques for exploring biological structure, biological catalysis, and selected fields within biochemistry taught from original literature. May be repeated for credit. Prerequisites: CHEM 3831 and 3813.

CHEM 3811 Biochemistry-Proteins (3 Credits)

Protein structure and function, starting with the building blocks and forces that drive the formation of protein structure and the basic concepts of protein structure, and continuing with enzyme catalysis, kinetics, and regulation. Prerequisites: CHEM 2453 or instructor permission.

CHEM 3812 Biochemistry-Membranes/Metabolism (3 Credits)

Membranes and membrane mediated cellular processes, energy and signal transduction, and metabolic/biosynthetic pathways. Prerequisite: CHEM 3811 or CHEM 3831.

CHEM 3813 Biochemistry-Nucleic Acids (3 Credits)

Molecular processes underlying heredity, gene expression and gene regulation in prokaryotes and eukaryotes. Prerequisites: CHEM 2453 and CHEM 3811.

CHEM 3831 Advanced Protein Biochemistry (3 Credits)

This course provides fundamental insights into the chemistry and physics of proteins. It investigates how amino acids form proteins with highly complex three-dimensional structures and how these structures mediate function. We examine key research articles and their contribution to our current understanding of proteins. Topics range from protein folding to enzyme kinetics and emphasize basic principles. Prerequisites: CHEM 2453 and instructor permission.

CHEM 3991 Independent Study (1-10 Credits)

May be repeated for credit.

CHEM 3995 Independent Research (1-10 Credits)

Research project conducted under guidance of a faculty member. Credit hours and projects arranged on an individual basis. May be repeated for credit.

CHEM 4900 Chemistry Seminar (0 Credits)

A weekly presentations of research in progress and of current literature by outside speakers. faculty and graduate students.

CHEM 4991 Independent Study (1-10 Credits)**CHEM 4995 Independent Research (1-10 Credits)****CHEM 5991 Independent Study (1-10 Credits)****CHEM 5995 Independent Research (1-10 Credits)**

Geography and the Environment

Office: Boettcher Center West, Room 120

Mailing Address: 2050 E. Iliff Avenue, Denver, CO 80208

Why study geography at the University of Denver?

Consider these advantages:

- Engaged and research-active faculty
- Small classes and personal attention
- State-of-the-art geospatial technology laboratories
- Strong and exciting field orientation
- Excellent location for applied research in physical and human geography

Situated at the foot of the Rocky Mountains in the dynamic city of Denver, the University of Denver is an ideal laboratory for physical and human geographers, as well as those studying human-environment interaction and geographic information science.

Since it was founded in 1945, the University of Denver's department of geography has offered excellent opportunities for graduate students in teaching, research, academia, government and the private sector.

We have state-of-the-art facilities and resources:

- Fully networked labs with frequent upgrades in hardware, specialized equipment and software
- Four Geographic Information Science (GIS) labs which include most industry standard GIS software (All ESRI products, ERDAS Imagine, E-cognition, ENVI, Web Mapping and Geovisualization products)
- USDA-approved soil and sediment lab and the Hoyt Mineral Collection
- Multimedia teaching classrooms
- National and international field trips
- The Mount Evans field station (elevation 10,600 feet), is just 45 minutes from campus

Come visit our facilities, meet our faculty and students and see the advantages for yourself.

The Department of Geography and the Environment at the University of Denver offers programs leading to the MA in Geography, MS in Geographic Information Science (GISc) (on-campus and online programs) and PhD in Geography. Areas of teaching and research include biogeography, climatology, computer-assisted cartography, cultural geography, development, economic geography, environmental geology, geographic information science, geovisualization, geomorphology, global change, hydrology, land use/land cover analysis, Latin America, natural resources, paleoenvironmental change, political ecology, Quaternary studies, remote sensing, soils, spatial analysis, sustainability, transportation, and urban geography and planning. With 12 tenure-line faculty and five full-time teaching faculty, our faculty is very active in research, publishing numerous journal articles and presenting many conference papers every year. Our faculty members also are known for their excellence as instructors, with several faculty having earned major teaching awards.

Doctor of Philosophy in Geography

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Master's degree: This program requires a master's degree as well as the baccalaureate.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Acceptance Offered: In cases where minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Arts in Geography

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5

- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Acceptance Offered: In cases where minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Science in Geographic Information Science

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

Doctor of Philosophy in Geography

Degree Requirements

Coursework Requirements

A minimum of 117 quarter hours of credit is required for the doctoral degree, up to 45 hours of which may be transferred from an earned master's degree from a regionally accredited university.

| Code | Title | Credits |
|--|-------------------------------------|-------------|
| Core coursework requirements | | 12 |
| Complete the following courses or work with your advisor if the equivalent of the following courses were taken as part of your MA or MS program. | | |
| GEOG 3000 | Advanced Geographic Statistics | |
| GEOG 4000 | Fundamental Geographic Perspectives | |
| GEOG 4020 | Geographic Research Design | |
| GEOG 4900 | Graduate Colloquium in Geog | |
| Geography courses | | 32 |
| Complete at least 32 additional credits in geography courses (at least 3000 or higher level) directed toward the dissertation research | | |
| Cognate courses | | 12 |
| Complete at least 12 additional credits in cognate coursework in a related field | | |
| Additional coursework | | 0-16 |
| Complete 2 graduate seminar courses and 2 research tools to reach the number of minimum credits required for the degree | | |
| Transfer Credit | | 0-45 |
| A maximum of 45 credits may be accepted as transferred in from a MA or MS program, including credits substituting core coursework requirements | | |
| Total Credits | | 117 |

Minimum number of credits required for the degree: 117 credits

Non-coursework requirements:

- Two Research Tools Requirement
- PhD Research Proposal Presentation
- Comprehensive Examination
- Dissertation
- Oral Defense

Two Research Tools Requirement

The options to meet the tool requirement include languages, geographic information systems, computer cartography, remote sensing and geographic statistics.

PhD Research Proposal Presentation

Each student is required to prepare and present a dissertation proposal and have it formally approved by the student's faculty committee. This should be completed by the end of the second year for a full-time PhD student.

Comprehensive Exam

This exam, which includes both written and oral parts, is designed to evaluate the student's work at the University of Denver.

This exam is usually scheduled after all substantive course work has been completed and the dissertation proposal has been approved. It must be taken at least three quarters prior to expected graduation. Students should consult with their adviser and committee members to achieve a greater understanding of what will be on the exam. The written portion of the exam can be taken in one of two formats: a written examination conducted in the department usually taken over two days, lasting four hours each day, or a take-home examination in which the student has five days to complete the exam. An oral examination is held two weeks after the written exam has been completed. A candidate who fails one or all parts of the comprehensive exam may petition the department for re-examination. Re-examination, if granted by the department, may not be scheduled until the succeeding quarter and cannot be retaken more than once.

Dissertation and Oral Defense

Upon completion of course work, approved proposal, comprehensive exam and the dissertation, each student will undergo a final oral defense. An oral defense may not be scheduled until at least the second quarter following the quarter in which the comprehensive exam was successfully completed (the summer may count as a quarter, though no examinations should be scheduled during the summer). The final oral defense is to be conducted at least two weeks before the end of the quarter in which the degree is to be awarded. This defense is usually about two hours in length, and is composed of a 20–25 minute presentation by the student followed by questions from the committee. The examining committee is comprised of at least four members: an advisor and three other committee members. The advisor must be a full-time tenure-line faculty member in the Department of Geography & the Environment with a research record and interest appropriate to the student's proposed research area of specialization. All members of the committee must be full-time appointed faculty at DU and have research records appropriate to the student's area of specialization. Faculty

from appropriately-related units who hold the terminal degree in their field may serve on the committee as long as the candidate's graduate unit has the majority representation and a two-thirds majority of the committee hold the earned doctorate. There is also a non-voting Oral Defense Committee Chair who must be a tenured faculty member from another department at the University of Denver serving as the university representative for the final oral defense.

For doctoral programs, research areas are limited to the fields of biogeography, climatology, cultural geography, economic geography, geographic information science, geomorphology, global change, human environment interaction, Latin America, paleoenvironmental change, Quaternary studies, transportation geography and urban geography in accordance with current faculty expertise.

Master of Arts in Geography

Requirements for students with prior degrees in geography:

For the MA degree, 45 quarter hours of course work and a thesis are required. Students can specialize in subfields within physical geography, human geography or human-environment interaction (please see the Department of Geography and the Environment Graduate Student Handbook for detailed information).

Degree requirements

Coursework requirements

| Code | Title | Credits |
|---|-------------------------------------|-----------|
| Core coursework requirements: | | |
| GEOG 3000 | Advanced Geographic Statistics | 4 |
| GEOG 4000 | Fundamental Geographic Perspectives | 4 |
| GEOG 4020 | Geographic Research Design | 4 |
| GEOG 4900 | Graduate Colloquium in Geog | 0 |
| Additional transfer, departmental, and other university courses | | 0-33 |
| Total Credits | | 45 |

Note: Students must take a minimum of 33 credits in GEOG courses

Minimum number of credits required for degree: 45 credits

Non-coursework requirements:

- Research proposal presentation
- Thesis
- Final Oral Defense

Research Proposal Presentation

Each student is required to prepare and present a thesis proposal and have it formally approved by the student's faculty committee.

Thesis Requirement

Original research of a geographic topic is required, the scope of which is determined by the thesis committee. The thesis should be of publishable quality.

Final Oral Defense

Upon completion of required course work, proposal approval and the thesis, each student will undergo a final oral defense. This defense is usually about two hours in length. The defense will address both course work and the thesis research. The final oral defense is to be conducted at least two weeks before the end of the quarter in which the degree is to be awarded. The oral defense committee is comprised of at least three members: an advisor and two other committee members. The advisor must be a full-time tenure-line faculty member in the Department of Geography & the Environment with a research record and interest appropriate to the student's proposed research area of specialization. All members of the committee must be full-time appointed faculty at DU and have research records appropriate to the student's area of specialization. DU faculty from appropriately-related units who hold the terminal degree in their field may serve on the committee as long as the candidate's graduate unit has the majority representation. There is also a non-voting Oral Defense Committee Chair who must be a tenure-line faculty member from another department at the University of Denver serving as the university representative for the final oral defense.

Master of Science in Geographic Information Science

Degree requirements

Coursework requirements

| Code | Title | Credits |
|------------------------------|---------------------------------|---------|
| Core coursework requirements | | 28 |
| GEOG 3000 | Advanced Geographic Statistics | |
| GEOG 3010 | Geographic Information Analysis | |

| | |
|-----------|-----------------------------|
| GEOG 3140 | GIS Database Design |
| GEOG 3150 | GIS Project Management |
| GEOG 3200 | Remote Sensing |
| GEOG 4020 | Geographic Research Design |
| GEOG 4900 | Graduate Colloquium in Geog |
| GEOG 4993 | Capstone or Project |

Electives **8-20**

A minimum of 8 quarter hours of electives must be taken in geography from any of the GEOG courses at 3000 level or above. It is strongly recommended that students take GEOG 4000 Fundamental Geographic Perspectives as one of their elective courses.

Total Credits **48**

Note: At least 24 quarter hours must be completed in courses taken within the Department of Geography & the Environment at the University of Denver. No more than 24 credits will be accepted in transfer from the GIS certificate program.

Minimum number of credits required for degree: 48 credits

Non-coursework requirements:

- Capstone project
- Capstone project presentation

Capstone Project

Students will be required to produce a final project of professional quality demonstrating their ability to apply geographic information science to their chosen area of specialization. The project is done for, and with, a company, agency, nongovernmental organization or faculty member who is referred to as the client. The project must be used by the client and may be predominantly technical in nature or may include a research component. The project must demonstrate a mastery of one or more of the several geospatial technologies. It must require the student to engage in all facets of a project, from design to implementation. At the completion of the project, students will present their work to their peers.

Master of Science in Geographic Information Science (Online Program)

This option is designed for people wishing to complete the degree via an online format.

Degree requirements

Coursework requirements

| Code | Title | Credits |
|-------------------------------------|-------|-----------|
| Core coursework requirements | | 20 |

Complete all of the following courses:

| | |
|-------------|--|
| GEOG 3000 | Advanced Geographic Statistics |
| GEOG 3010 | Geographic Information Analysis |
| GEOG 3140 | GIS Database Design |
| GEOG 3150 | GIS Project Management |
| GEOG 3200 | Remote Sensing (Remote Sensing is elective in GIS certificate program) |
| or GIS 4700 | Remote Sensing I |

Geography/GIS Elective Courses **20**

Complete a minimum of five elective courses from any University College GIS certificate program course and not already used to meet a required course, or choose from the courses below.

| | |
|-----------|--|
| GEOG 3040 | GPS for Resource Mapping |
| GEOG 3410 | Urban Applications in GIS |
| GEOG 3860 | GIS Applications and Natural Resources |
| GEOG 3130 | GIS Programming with Python |

Acceptable University College GIS certificate electives can be found at the University College GIS certificate program website. ¹

Capstone courses **8**

Complete both of the following courses:

| | |
|-----------|----------------------------|
| GEOG 4020 | Geographic Research Design |
| GEOG 4993 | Capstone or Project |

Total Credits **48**

Note: At least 24 credits counted towards the degree must be taken within the Department of Geography & the Environment at the University of Denver. No more than 24 credits will be accepted in transfer from the GIS certificate program.

Minimum number of credits required for degree: 48 credits**Non-coursework requirements:**

- Capstone project

Geography Courses**GEOG 3000 Advanced Geographic Statistics (4 Credits)**

The second in a sequence of two courses that address general statistical applications particular to geography, environmental science and other disciplines dealing with a spatial dimension in the data they work with. The focus of this second course is on the more advanced multivariate statistical techniques. The course has a strong applied orientation as particular attention is given to which technique is the most appropriate to use for a given type of problem and how to interpret and apply the resulting statistics. Extensive use is made of computer statistics packages. Homework exercises involving such statistical techniques as multiple correlation and regression analysis, principle components analysis, discriminate analysis and canonical correlation. Prerequisite: GEOG 2000.

GEOG 3010 Geographic Information Analysis (4 Credits)

Reviews many basic statistical methods and applies them to various spatial datasets. In addition, several spatial statistical methods are applied to spatial datasets. This course is an in-depth study of the interface between GIS, spatial data, and statistical analysis. Preferred prerequisite: GEOG 2000. Prerequisite: GEOG 2100.

GEOG 3030 Advanced Field Methods (4 Credits)

Various field methods used by researchers in physical geography; techniques include field mapping, laboratory analyses, geologic field methods. Prerequisite: GEOG 1201 or equivalent.

GEOG 3040 GPS for Resource Mapping (4 Credits)

This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Control and Quality Assurance issues for data collection programs. Hands-on lab exercises include navigation, mission planning for a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, differential correction, and data integration into a GIS and map production.

GEOG 3100 Geospatial Data (4 Credits)

This graduate-level course is designed to provide graduate students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems are also discussed.

GEOG 3110 GIS Modeling (4 Credits)

This course focuses on the concepts and procedures used in discovering and applying relationships within and among maps. It extends the mapping and geo-query capabilities of GIS to map analysis and construction of spatial models. The course establishes a comprehensive framework that addresses a wide range of applications from natural resources to retail marketing. Topics include the nature of spatial data introduction to spatial statistics and surface modeling in the first five weeks followed by spatial analysis operations and modeling techniques in the second five weeks. The lectures, discussions and independent exercises provide a foundation for creative application of GIS technology in spatial reasoning and decision making.

GEOG 3120 Environmental/GIS Modeling (4 Credits)

Facing challenges brought by the dramatically changing global environment, environmental modeling is increasingly used to support geographical and environmental decision making (e.g., spatial conservation prioritization). Environmental modeling is concerned with the characterization, modeling and simulation of environmental phenomena and processes using conceptual and mathematical models. Environmental phenomena and processes taking place in the geographic space are regulated by spatial principles. They also interact with other phenomena or processes in the attribute space. For example, species distribution is not only constrained by spatial factors such as proximity to other species, but also influenced by environmental factors such as terrain and climatic conditions. Due to its superior capabilities of handling spatial data and modeling spatial and attribute relationships, geographic information system (GIS) provides the ideal tools for environmental modeling. This upper-level undergraduate/graduate-level course surveys the concepts and techniques of GIS supported environmental modeling in three general categories: 1) Modeling in the spatial domain where the focus is on modeling spatial principles (e.g., spatial autocorrelation); 2) Modeling in the attribute domain where the emphasis is on environmental correlations (e.g., environmental niche modeling); 3) Modeling in the combined spatial and attribute domain where both spatial principles and environmental correlations are exploited (e.g., geographically weighted regression). Throughout this course, several real-world applications are used to demonstrate the ideas, concepts, and techniques of GIS supported environmental modeling, including crime spatial pattern modeling, species distribution modeling, and soil-landscape modeling and mapping. Prerequisites: GEOG 2000 and GEOG 2100.

GEOG 3130 GIS Programming with Python (4 Credits)

This advanced course explores the more technical aspects of GIS functions and data structures. Students have hands-on access to both raster (grid-cell) and vector-based software packages in the form of lab exercises that culminate in a small student-designed GIS project. Prerequisite: GEOG 2100.

GEOG 3140 GIS Database Design (4 Credits)

Designing databases to provide a foundation for GIS functions and applications, including investigating techniques used for designing databases in non-spatial environments and learning the applicability to GIS problems. Building on concepts and techniques introduced in the first half to extend traditional techniques and methodologies to model the requirements of spatial problems. Students learn to translate the conceptual spatial model into a physical implementation specific to GIS products. Prerequisite: GEOG 2100 or GEOG 3100.

GEOG 3150 GIS Project Management (4 Credits)

This course provides graduate students seeking a career in GIS, or anyone managing a GIS project, with the knowledge, skill and abilities to take a GIS project or program past the design and implementation phase and into day-to-day operation. Students evaluate and analyze the role of GIS in an organization's overall information system strategy and communicate the importance of geography in an information system. Data sharing in the organization is examined to determine the benefits and costs of distributing data creation and maintenance activities throughout an organization. Finally, the role of GIS professionals and the skill sets required to manage GIS effectively are examined. Students review case studies of successful and not-so-successful GIS projects in North America. GIS management issues are addressed by a series of case studies focusing on various management aspects. Students are also expected to visit operational GIS programs in the metropolitan area and interview GIS managers. Students prepare case study evaluations for review in the classroom. Required for all MSGIS students because of the critical importance of GIS project management.

GEOG 3160 Web GIS (4 Credits)

With the development of internet technologies, the architecture of Geographic Information System (GIS) has evolved from the centralized desktop architecture to the distributed web architecture. Numerous web GIS applications are available (e.g., Google Map, Earth Explorer, and National Map). A web GIS application allows GIS analysts to access, manipulate, and visualize geospatial data from the web without the installation of GIS software. To facilitate the development of web GIS applications, geospatial technology vendors have provided application programming interfaces (APIs) through which GIS professionals can build customized web applications. This course focuses on the concepts and the development of web based GIS applications using industry-relevant geospatial APIs and core web technologies of HTML, CSS, and JavaScript. This is an upper-level undergraduate, to graduate-level course in GIS that introduces fundamental Web GIS concepts, applications and development kits. Concepts and techniques to be covered in this course include: • Web GIS concepts: system architecture, components, and workflow • Web programming languages: Hypertext Transfer Markup Language (HTML), Cascading Style Sheet (CSS) and JavaScript • Web mapping tools: ArcGIS online, Leaflet and their APIs. Prerequisites: GEOG 2100 and GEOG 3130.

GEOG 3190 Lidar. Theory and Applications (4 Credits)

Overview: Lidar (Light Detection and Ranging) is an active remote sensing system that uses laser pulses to measure the distance between the sensor and a surface or objects. Lidar has become an established method for collecting very dense and accurate elevation values, as well as for characterizing the three-dimensional structure of vegetation and urban land cover. In this course, we will build an understanding of the physical principles behind lidar, develop experience working with Lidar datasets, and survey a wide array of lidar applications for mapping and natural resource management. The course will culminate with a student-directed final project. Prerequisites: GEOG 2100 or GEOG 3200.

GEOG 3200 Remote Sensing (4 Credits)

This course acquaints students with the basic techniques of the collection, processing and interpretation of information about the character of the earth's surface from remote locations. Students become familiar with the use of the visible, infrared, thermal and microwave portions of the electromagnetic spectrum as a means of determining land cover and/or land use. Both manual and computer-assisted techniques are discussed and include hands-on applications.

GEOG 3230 Advanced Remote Sensing (4 Credits)

This course will build on the basic remote sensing concepts presented in GEOG 3200. Students will explore more in-depth concepts relevant to satellite and airborne remote sensing, including radiative transfer and information extraction. In addition, students will be introduced to two cutting-edge sources of data about the Earth's surface: hyperspectral and lidar (Light Detection and Ranging) sensors. Students will study specific applications of advanced digital image processing techniques for environmental monitoring, natural resource management, and land-use planning. Finally, students will integrate remote sensing and other spatial datasets in the context of Geographic Information System (GIS) analysis. Prerequisite: GEOG 3200.

GEOG 3300 Cultural Geography (4 Credits)

Themes and methods of cultural geography including cultural area, landscape, history and ecology.

GEOG 3310 Culture/Nature/Economics-Human Ecology (4 Credits)

Cultural adaptation, livelihood strategies and environmental modification among subsistence and peasant societies: responses of such groups to technological change and economic integration.

GEOG 3330 Political Geography (4 Credits)**GEOG 3340 Geographies of Migration (4 Credits)**

This course explores contemporary movement of people across international borders and the social, cultural, political, economic, and environmental repercussions of such movements. The class looks at the global flow of people across national boundaries and the ways in which these dispersed peoples build and maintain social networks across national borders. While doing so, we address the role of globalization in international migration processes. What motivates people to move long distances, often across several international borders and at considerable financial and psychological cost? How do migrants change—and how in turn do they bring change, social as well as economic, to new destinations as well as places left behind? This course examines politics and patterns of migration, transnational migration, and immigration to the United States.

GEOG 3350 Qualitative Methods in Geography (4 Credits)

This course focuses upon qualitative methods in the production of geographic knowledge. Qualitative methods are widely employed by geographers to understand patterns and underlying processes of human and human-environment issues in society. The course is designed to expose participants to the theories, purpose, scope, and procedures of qualitative research. Specific topics include: epistemological theories (ways of knowing); ethics and power in research; research design; data collection techniques in interviewing, participant observation and landscape interpretation, discourse and archive analysis, and case studies; data analysis; and writing and disseminating qualitative findings.

GEOG 3400 Urban Landscapes (4 Credits)

Urbanization as a process; national urban systems; internal spatial structure of cities; role of transportation in urban development; location of residential, commercial and industrial activities; agglomeration economies; residential congregation and segregation; environmental justice; urban growth and growth coalitions; decentralization and urban sprawl; edge cities; impacts on the urban environment; world cities; globalization.

GEOG 3410 Urban Applications in GIS (4 Credits)

This course uses the tools of geographic information systems (GIS) to explore concepts of traditional urban geography, including defining cities/metropolis, internal urban structures, urban systems, industrial location, social and residential patterns, urban form, environmental problems, and urban planning. The course allows students to practice fundamental skills in GIS (e.g., working with attribute tables, spatial analysis, spatial queries) and cartography (map design, color theory, display of information). Depending on the quarter, students pursue individual projects of interest or client-based projects. Prerequisite: GEOG 2100 or GEOG 3100 or equivalent.

GEOG 3420 Urban and Regional Planning (4 Credits)

Historical evolution of planning theory and practices; comprehensive planning process; legal, political, economic, social, environmental aspects of urban planning; urban design; urban renewal and community development; transportation planning; economic development planning; growth management; environmental and energy planning; planning for metropolitan regions; national planning.

GEOG 3425 Urban Sustainability (4 Credits)

The 21st century is being called the 'century of the city.' Now more than ever, humans across the globe call the city their home. Many of the world's most pressing crises are manifest in cities, including: greenhouse gas emissions, land degradation, high mass production and consumption, widespread poverty and hunger, and expanding socio-economic disparities. As 'sustainability' becomes part of mainstream discourse, this course explores what sustainability means for urban contexts around the globe. Arguably, the city has the potential to be the most efficient, equitable, and environmental form of modern human settlement. Covering all dimensions of sustainability from a social science perspective, this course focuses on theoretical groundings, practices of urban sustainability, and new research agendas. Major topics include cities and nature; planning and land use; urban form; community and neighborhoods; transportation systems and accessibility; livelihood and urban economies; and social justice and the city.

GEOG 3440 Urban Transportation Planning (4 Credits)

A specialized course in the urban planning sequence focusing on issues, practices and policies of urban transportation planning. Recommended for anyone interested in timely transportation topics, such as the feasibility and impacts of light rail transit, the planning and implementation of highway projects, and the role of freight and passenger transportation companies in transportation planning.

GEOG 3445 Sustainability and Transportation (4 Credits)

Sustainable transportation aims at promoting better and healthier ways of meeting individual and community needs while reducing the social and environmental impacts of current mobility practices. Given the importance of transport for economic growth, the uncertainties surrounding the availability and price of future sources of energy for transport use, as well as the social and environmental externalities of currently-utilized transport modes, it is imperative that more sustainable ways of providing transportation be developed and utilized.

GEOG 3450 Transportation and Mobilities (4 Credits)

The geographical study of transport has grown considerably and become more diverse, encompassing new areas of inquiry generated from economic, urban, environmental, political, social, and cultural geography, as well as from transport geography itself. The most notable expansion has been in the area of 'mobilities' research, which is focused on the social aspects of mobility, including both the large-scale movements of people, objects, capital, and information across the world, as well as the more local processes of daily transportation, movement through public space and the travel of material things within everyday life.

GEOG 3500 Reconstructing Quaternary Environments (4 Credits)

Nature, magnitude, sequence and causes of Pleistocene and Holocene climatic changes; effects of climatic change on plant/animal distributions and human populations; paleoclimatic research methods. Laboratory and field trips. Prerequisites: GEOG core, ENVI 3000.

GEOG 3510 Biogeography (4 Credits)

Biogeography focuses on present and past distributions of plants and animals. In this course we consider a number of themes central to biogeography, including plate tectonics and biogeography, the effects of climate change of plant and animal distributions, biogeographic realms, island biogeography, biodiversity, human impacts on plants and animals, and the origins of agriculture.

GEOG 3520 Geography of Soils (4 Credits)

Spatial variation in soil characteristics; soil processes, soil morphology, their application in soil studies. Prerequisite: GEOG 1201-1203 Environmental Systems or instructor's permission.

GEOG 3550 Topics in Physical Geography (1-5 Credits)

Investigations into various aspects of physical environment.

GEOG 3560 Fluvial Geomorphology (4 Credits)

Examines how water and sediment interact at Earth's surface to create a variety of landforms ranging from small rills to continental-scale river systems. Introduces fundamental fluvial processes or channel hydraulics and sediment transport. Examines common fluvial landforms including alluvial streams, bedrock streams, floodplains and alluvial fans. Combines traditional lectures and in-class discussions with numerous field excursions to rivers in the Rocky Mountains and Great Plains. Prerequisite: GEOG 1203, GEOG 1218, or GEOG 1266.

GEOG 3600 Meteorology (4 Credits)

The basic theory and skills of weather forecasting. Topics include thorough coverage of atmosphere dynamics and thermodynamics, the evolution of various weather types, the mechanics of storm systems (cyclones, severe storms, hurricanes), creation and interpretation of weather maps, and forecasting techniques.

GEOG 3610 Climatology (4 Credits)

Climatology is the study of the processes that result in spatial and temporal variation of weather. This course introduces the student to the processes responsible for the transfer of matter and energy between the Earth's surface and the atmosphere and the average weather conditions that result. In addition, topics of global concern, such as greenhouse effect, El Nino, urban heat islands and acid rain, are discussed. Laboratory exercises provide an opportunity to investigate climate variation and climatic change through the use of a variety of computer simulations. Prerequisites: GEOG 1201, GEOG 1216, & GEOG 1264.

GEOG 3620 Applied Climatology (4 Credits)

Climatic impact on environmental systems and human behavior; techniques to investigate climatic characteristics of environmental extremes (floods, blizzards), urban climatology and socioeconomic impacts of climate. Prerequisite: GEOG 1201. Recommended Prerequisite: GEOG 3600 or GEOG 3610.

GEOG 3630 Dendroclimatology (2-4 Credits)

Systematic variations in tree ring width and/or density can be used to reconstruct changes in precipitation or temperature well before humans were around to record the variability. This class utilizes hands on methods to introduce the fundamental principles of dendroclimatology. Through readings and lectures, students will learn how tree ring growth can be correlated to climate change. Students will then undertake several research projects to reconstruct past climate variability in the Denver metro area using tree rings. Prerequisite: permission of instructor.

GEOG 3640 Climate Change and Society (4 Credits)

The science of anthropogenic climate change will be presented with an emphasis on critical evaluation of the evidence of climate change and future scenarios and migration strategies. Students will be introduced to the latest climate change research, including the Intergovernmental Panel on Climate Change report, and the most recent literature from the field. The societal and cultural implications of climate change will also be discussed. Prerequisites: GEOG 1201, GEOG 1216, or GEOG 1264.

GEOG 3701 Topics in Geographic Information Science (1-4 Credits)

Topics vary by instructor.

GEOG 3720 Mountain Environments and Sustainability (4 Credits)

Mountain Environments and Sustainability explores the unique physical and cultural aspects of high relief and/or high altitude environments. Covering one quarter of the Earth's land surface, mountains directly or indirectly impact the lives of millions of people. We examine the significance of mountains to climate, water resources, and human activities, and discuss the sustainability of these environments and communities in light of rapid changes in many mountain regions resulting from anthropogenic factors and global change. GEOG 1201, 1202, and 1203 or instructor approval.

GEOG 3750 Topics in Human-Environment Interactions (1-4 Credits)

This course investigates various aspects of the relationships between human societies and the natural environment.

GEOG 3755 Geography of Health (4 Credits)

The geography of health is a thriving area of study that considers the impact of natural, built, and social environments on human health. This course introduces students to three geographical contributions to health studies. First, it emphasizes the importance of ecological approaches to health, which consider interactions between humans and their environments, including topics such as how climate change might influence disease distributions, and how the built environment can influence patterns of physical activity. A second focus is social theory, exploring how aspects such as race, socioeconomic status, and identity play a critical role in influencing human health. A third section of the course considers how spatial methods (cartography, GIS, and spacial statistics) can help answer health-related questions.

GEOG 3800 Geography of Colorado (4 Credits)

This course focuses on the physical and human geography of Colorado, a state that includes the western Great Plains, the southern Rocky Mountains, and the eastern Colorado Plateau. Colorado's varied natural landscapes provide equally varied settings for human settlement and resource use. Recommended Prerequisites: GEOG 1201, GEOG 1202, and GEOG 1203.

GEOG 3820 Kiwis and Kauris: Sustainability in New Zealand (4 Credits)

With its tourist tagline of "100% Pure New Zealand," New Zealand prides itself as a world leader in sustainability, with great efforts made towards sustainable use of resources and renewable energy, conservation of indigenous species, and integration of indigenous Maori understandings of the land into sustainability approaches. At the same time, New Zealand faces significant sustainability challenges, particularly related to climate change, invasive species, continued reliance on extractive industries, and histories of oppression/exploitation of native peoples. This class uses a field-based case study approach to unpick some of these complex issues, as we visit local sites and explore topics such as preserving native species, sustainable resource use, ecotourism, and indigeneity.

GEOG 3840 Water Resource Analysis (4 Credits)

The focus of this course is on complex policy, economic and local, national and international, and political issues surrounding resource use in the western U.S. Issues include exploitation of nonrenewable and renewable energy and mineral resources; and flexible responses to changing public policy.

GEOG 3860 GIS Applications and Natural Resources (4 Credits)

In this course we will use a case study approach to examine domestic and international natural resources such as oil, coal, timber, minerals, and recycled materials. We will use a case study approach to look at resource distribution, and the environmental impacts of extraction, production, and disposal, as well as the legal and economic context. We will use GIS data and analysis to enhance our understanding of these case studies, and students will do a project and paper using GIS data and image analysis at a local, regional or global scale. Prerequisite: Introduction to GIS or Introduction to GIS Modeling.

GEOG 3870 Water Resources & Sustainability (4 Credits)

In this course, we look at water as both a local and global resource and examine what sustainability means for human and ecological realms. After an overview of the physical processes that drive the hydrologic cycle, surface and groundwater hydrology, we examine how we humans have harnessed water for our use and how we both alter and treat its quality. We examine the legal aspects of water allocation in the U.S. and the groups and agencies that are most involved in managing and overseeing water issues. Finally, we examine the most pressing water "issues" related to wildlife, development, scarcity and conflict. We look forward to imagining the power of both the individual and the collective in meeting our future, global water needs.

GEOG 3890 Ecological Economics (4 Credits)

Ecological Economics is an emerging transdisciplinary endeavor that reintegrates the natural and social sciences toward the goal of developing a united understanding of natural and human-dominated ecosystems and designing a sustainable and desirable future for humans on a materially finite planet. In this course we start with a basic overview and summary of the neo-classical economic perspective with a particular focus on the recognized market failures of public goods, common property, and externalities. We begin with a reconceptualization of economic theory by imposing scientific constraints (e.g. conservation of mass and energy, the laws of thermodynamics, evolutionary theory, etc.). Using the ideas developed in this reconceptualization of economic theory we explore the implications for international trade and myriad public policies associated with the ethical, environmental, and economic aspects of sustainability.

GEOG 3910 Geomorphology (4 Credits)

An advanced course that examines how Earth's landforms are created by a range of physical processes. Most landforms can be viewed as a result of some combination of erosion, transport and deposition of rock, soil and sediment. The most common agents causing these geomorphic processes are water, wind, ice and waves. This course examines the processes responsible for eroding, transporting and depositing earth materials and compares these processes with the resulting landforms. Prerequisites: GEOG 1202 or GEOG 1217 or instructor's permission.

GEOG 3920 Remote Sensing Seminar (4 Credits)

Special topics in advanced remote sensing.

GEOG 3930 Cultural Geography Seminar (4 Credits)

Topics, methods and current research in cultural geography.

GEOG 3940 Urban Geography Seminar (4 Credits)

International comparison of economic and social, positive and negative aspects of urban systems.

GEOG 3950 Physical Geography Seminar (2-4 Credits)**GEOG 3955 Pollen Analysis Seminar (3 Credits)**

Pollen grains preserved in sediment provide long-term records of vegetation conditions. Changing proportions of pollen types may reflect climatic fluctuation or human impacts. We review important recent research in pollen analysis (palynology), pollen sampling, laboratory techniques and pollen identification. Students are responsible for counting a number of samples and contributing data for a pollen diagram.

GEOG 3990 Undergraduate Research Seminar (1 Credit)

This course is designed to prepare students who will participate in faculty-supervised summer research projects. Students are introduced to research design, use of the scientific method, research expectations and reporting of results. Preparation of formal research proposal with adviser.

GEOG 3991 Independent Study (1-5 Credits)**GEOG 3995 Independent Research (1-5 Credits)****GEOG 4000 Fundamental Geographic Perspectives (4 Credits)**

A foundation course for persons in the community, without a degree in geography, who want to pursue an education in or make use of computer-based geographic technology but who need a foundation in geographic concepts and perspectives.

GEOG 4020 Geographic Research Design (4 Credits)

This class prepares you to undertake creative geographic research leading to the generation of new knowledge. You will produce a NSF-style proposal by the end of the class. In this class, we focus on your idea generation and proposal writing rather than philosophy or specific methods. Specific objectives of the course include providing you the following skills: 1. The ability to create and communicate scholarly work in writing and orally 2. The ability to critique your own work and the work of other in a constructive fashion 3. Incorporation of the core ideas of geography and your field into your research 4. An understanding and appreciation of the various research methods in geography and other cognate disciplines. This understanding includes a discussion of ethics in research. 5. Ability to write an effective vita, statement of area of specialization, literature review, problem statement, and research proposal.

GEOG 4030 Advanced Field Research (1-5 Credits)**GEOG 4040 Research Topic Identification (0-5 Credits)****GEOG 4110 Geospatial Data (4 Credits)**

This graduate-level course is designed to provide graduate students from a broad range of disciplines with the skills to carry out applied research tasks and projects requiring the integration of geographic information system technologies and geospatial data. Students are introduced to a collection of techniques and data sources with a focus on acquiring and integrating data. Legal, ethical, and institutional problems related to data acquisition for geospatial information systems are also discussed.

GEOG 4140 GIS Database Design (4 Credits)

Designing databases to provide a foundation for GIS functions and applications, including investigating techniques used for designing databases in non-spatial environments and learning the applicability to GIS problems. Building on concepts and techniques introduced in the first half to extend traditional techniques and methodologies to model the requirements of spatial problems. Students learn to translate the conceptual spatial model into a physical implementation specific to GIS products.

GEOG 4150 GIS Project Management (4 Credits)

This course provides graduate students seeking a career in GIS, or anyone managing a GIS project, with the knowledge, skill and abilities to take a GIS project or program past the design and implementation phase and into day-to-day operation. Students evaluate and analyze the role of GIS in an organization's overall information system strategy and communicate the importance of geography in an information system. Data sharing in the organization is examined to determine the benefits and costs of distributing data creation and maintenance activities throughout an organization. Finally, the role of GIS professionals and the skill sets required to manage GIS effectively are examined. Students review case studies of successful and not-so-successful GIS projects in North America. GIS management issues are addressed by a series of case studies focusing on various management aspects. Students are also expected to visit operational GIS programs in the metropolitan area and interview GIS managers. Students prepare case study evaluations for review in the classroom. Required for all MSGIS students because of the critical importance of GIS project management.

GEOG 4170 Geospatial Analysis and Project Management (4 Credits)

This course provides an opportunity for students to apply geospatial data analysis to real-world applications. Students will work as a team to develop a project that requires GIS analysis and/or application development, design a project work flow and management plan, and implement a solution. Students will demonstrate competence in GIS techniques, geospatial data analysis, and project management at a professional level. This course may substitute for GEOG 3150 - GIS Project Management. Prerequisites: Completion of a minimum of two GISc courses.

GEOG 4400 Urban Landscapes (4 Credits)

Urbanization as a process; national urban systems; internal spatial structure of cities; role of transportation in urban development; location of residential, commercial and industrial activities; agglomeration economies; residential congregation and segregation; environmental justice; urban growth and growth coalitions; decentralization and urban sprawl; edge cities; impacts on the urban environment; world cities; globalization.

GEOG 4410 Economic Geography (4 Credits)

The study of the location and spatial organization of economic activities at the local, national, and global scales. Concerned with the spatial configuration of firms, networks, industries, and regions within the emerging global economy. Cross listed with INTS 4410.

GEOG 4420 Urban and Regional Planning (4 Credits)

The field of urban and regional planning is concerned with the future of cities, neighborhoods, metropolitan areas, and extended regions. How do local governments (cities, counties) and metropolitan planning organizations (regional planning agencies, councils of governments) work with community stakeholders (neighborhood associations, chambers of commerce, businesses, citizens, non-governmental organizations) to formulate plans that will guide the future development of a city and its region? Cities and their regions face numerous challenges including population and employment growth or decline, economic development, neighborhood vitality, housing availability and affordability, urban design, land use, transportation, sustainability, access to parks and open space, air quality, floodplain management, water resources, and social equity among many others. How places address these challenges is critical to the future health and livability of our cities, neighborhoods, metropolitan areas, and extended regions. This course will have a community-engaged service learning component. Community-engaged scholarship and teaching comprise intellectually and methodologically rigorous work that is grounded in the norms of democratic education: inclusiveness, participation, task sharing, reciprocity in public problem solving, and an equality of respect for the knowledge and experience that everyone involved contributes to education and community building. The specific service learning project for the class will be to assist the Metropolitan Denver Nature Alliance (Metro DNA) with its goal to increase the community's engagement with nearby nature by reviewing, analyzing, and collecting data from park/ open space plans of cities and counties in the Denver metropolitan area. Cross-listed with GEOG 3420.

GEOG 4425 Urban Sustainability (4 Credits)

The 21st century is being called the 'century of the city'. Now more than ever, humans across the globe call the city their home. Many of the world's most pressing crises are manifest in cities, including: greenhouse gas emissions, land degradation, high mass production and consumption, widespread poverty and hunger, and expanding socio-economic disparities. As 'sustainability' becomes part of mainstream discourse, this course will explore what sustainability means for urban contexts around the globe. Arguably, the city has the potential to be the most efficient, equitable, and environmental form of modern human settlement. Covering all dimensions of sustainability from a social science perspective, this course will focus on theoretical groundings, practices of urban sustainability, and new research agendas. Major topics include: cities and nature; planning and land use; urban form; community and neighborhoods; transportation systems and accessibility; livelihood and urban economies; and social justice and the city.

GEOG 4440 Urban Transportation Planning (4 Credits)

A specialized course in the urban planning sequence focusing on issues, practices and policies of urban transportation planning. Recommended for anyone interested in timely transportation topics, such as the feasibility and impacts of light rail transit, the planning and implementation of highway projects, and the role of freight and passenger transportation companies in transportation planning.

GEOG 4460 Air Transportation, High-Speed Rail and Tourism (4 Credits)

This course delves into the world of commercial air passenger transportation, studying the foundations of the industry, its role in the travel and tourism, and strategies for the future. Foundational topics include the history and geography of air transportation, air travel and tourism, the geography of tourism, airline corporate cultures, the role of government, aviation law, regulation, deregulation, and globalization. Study of the principal elements of airline economics, finance, planning, management, operations, pricing, promotion, cost containment, marketing, and policy provide the opportunity for consideration of strategic options within the contemporary airline industry. Further discussion focuses on the planning and management of airport and airway system infrastructure, the issue of sustainable air transportation, and the role of the airline industry within the context of intermodalism. Cross listed with GEOG 3460.

GEOG 4701 Topics in Geography (4 Credits)

Topics vary by instructor.

GEOG 4810 Geography of Latin America (4 Credits)

In this course, we examine how past and present cultural preferences and political economies effect changes in Latin American landscapes. Cross listed with GEOG 2810.

GEOG 4825 Geographies of International Development in Africa (4 Credits)

What are the historical roots of (under)development in sub-Saharan Africa? How is sub-Saharan Africa typically depicted in the media? How can we explain the fact that the Niger Delta provides the bulk of Nigeria's revenue, and yet, it remains the poorest part of the country? Is climate change the major cause of persistent food insecurity in the drylands of Ethiopia and Burkina Faso? How can we make sense of the uneven geography of poverty in Ghana? What explains urban food insecurity in Cape Town, or land struggles in rural South Africa? What are the social processes underlying the spatial disparity in health status in Malawi, or gender differences in HIV rates in Nyanza province, Kenya? And why do land users often resist state conservation efforts in Tanzania? These are some of the critical questions explored in this course. The primary aim is to provide a critical introduction to the geography of sub-Saharan Africa. We will begin by exploring how "the Africa story" is told by the media, scholars and policymakers. Attention will then shift to understanding the key historical processes that shape (under)development in the region. We will cover a broad range of topics, including governance, colonial history, debt and structural adjustment, foreign aid, food and agriculture, gender, climate change, land grabbing, health, population growth, migration, remittances, and resource extraction. We cannot possibly cover all these topics in greater detail; indeed, some are too vast and complex. We will however use specific case studies to illustrate and discuss each of the topics.

GEOG 4880 Geographies of South Africa (4 Credits)

This travel course is designed to give students a first-hand look at the physical and cultural landscapes of South Africa. We will study the varied natural landscapes that produce the commodities (e.g., gold, diamonds, wine, and agriculture) that have attracted the interest of outsiders for centuries and that have influenced the cultural landscapes particular to South Africa. A systematic presentation of the geology of South Africa, and its human history, will unfold throughout our travels.

GEOG 4900 Graduate Colloquium in Geog (0 Credits)

Solid foundation in history and philosophy of the discipline of geography; basis for further exploration of major research specialization.

GEOG 4930 Nicaragua: Development Dilemmas (4 Credits)

This class takes students to post-revolutionary Nicaragua to examine the consequences of recent land grabs by foreigners and transnational companies. Students learn to operate in a country with minimal "western" infrastructure. They learn to examine developing landscapes (that is, resorts and tourism infrastructure) with new eyes and from the perspective of locals who have been left out of the development loop. By the end of the class, students begin to understand the "development game", begin to question the role of tourism in developing economies, begin to know how to interact with other cultures, and finally learn to question the landscapes we "see" and begin to peel back the layers to understand the social and physical evolution of the landscape before their eyes. This class takes an experiential approach and requires students to participate in a service learning experience. Service learning is defined as a course-based, credit bearing educational experience in which faculty, students, and community members participate in an organized service activity that addresses a self-identified community need. We work with several community-based and non-governmental organizations to ensure a good fit between community needs and student expertise.

GEOG 4950 Advanced Field Research (1-17 Credits)**GEOG 4991 Independent Study (1-5 Credits)****GEOG 4993 Capstone or Project (1-4 Credits)**

Includes technical design and development for MA geotechnical track project and MS-GIS capstone project.

GEOG 4994 Report (1-5 Credits)**GEOG 4995 Independent Research (1-5 Credits)**

Includes field research for doctoral dissertation.

GEOG 4999 Geographic Internship (0-5 Credits)

Supervised internship in a government office at local, state or federal level or within private sector. Prerequisite: Permission of instructor.

GEOG 5991 Independent Study (1-5 Credits)**GEOG 5995 Independent Research (1-10 Credits)****Geology Courses****GEOL 3100 Environmental Geology (4 Credits)**

Environmental geology examines geologic hazards, both natural and those attributable to human impacts on the environment from urban and regional development. Specific topics may include disposal of municipal solid waste and radioactive waste; flood, earthquake, volcanic hazards; groundwater pollution and withdrawal; mass-wasting phenomena; and energy-related issues. Prerequisite: GEOL 1010, GEOG 1203 or instructor's permission.

GEOL 3540 Hydrology (4 Credits)

This course provides an overview of the hydrologic cycle with emphasis placed on the study of applied hydrology. Discussions include the fundamental characteristics of precipitation, runoff processes, calculation of flood hazards, aquifers (porosity and permeability), the geologic settings of groundwater, the basic physics of groundwater flow, and water supply and use. Prerequisite: GEOL 1010, GEOG 1203 or instructor's permission. Recommended prerequisite: one introductory statistics course.

GEOL 3900 Geomorphology Seminar (1-5 Credits)

Hill slopes comprise the vast majority of the Earth's land surface. It is upon these surfaces that nearly all of the human population must exist and, hopefully, flourish. Hill slopes assume various forms, and their shape influences their utility for various human endeavors. Numerous geomorphic processes operate upon hill slopes to determine their form, and human activities strongly influence the frequency and magnitude of these geomorphic processes. Consequently, hill slopes are an interface between the Earth and the human population. Prerequisite: GEOL 3010 or permission of instructor.

GEOL 3991 Independent Study (1-5 Credits)

The Department of Mathematics at the University of Denver offers MA, MS and PhD degrees in mathematics. Our graduate programs enroll about 30 students and provide a personalized, congenial and rewarding educational atmosphere where you will interact with faculty from the start. We have an extraordinarily active faculty of accomplished teachers and researchers with expertise in algebraic logic, computational geometry, dynamical systems, functional analysis, nonassociative mathematics, ordered structures, probabilistic combinatorics, quantum structures, and set theory.

The MS and MA degrees prepare students for careers in which mathematics plays a central role. The PhD is a research degree that prepares students to advance the frontiers of knowledge within a specific area of mathematics.

Our graduates are highly sought, not only for their knowledge of mathematics, but also for their ability to solve problems, to think abstractly, to see the big picture, and to articulate their ideas with clarity and precision. Our graduates have been successful in a remarkably diverse collection of careers, including industry, business, education and academia.

Doctor of Philosophy in Mathematics

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Acceptance Offered: In cases where minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test scores were not achieved or no English proficiency test was taken, the program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Arts in Mathematics

Doctor of Philosophy in Mathematics

This degree requires completion of at least 135 graduate-level credits beyond the BA or BS degree; passing of preliminary examinations; completion of a tool requirement; and completion of a written dissertation.

Although a master's degree is not a prerequisite for acceptance into the PhD program, each student is required to obtain a master's degree in mathematics before completing 80 credits in the PhD program.

Degree Requirements

Course Requirements

Students are required to pass both of the sequences MATH 3161, MATH 4165, MATH 4110 and MATH 3170, MATH 4166, MATH 4176 in their first year. Based on performance in preliminary examinations or other considerations, students may be allowed to replace some courses in a sequence by other offerings.

Every student's course of study must be approved in consultation with a designated departmental advisor.

| Code | Title | Credits |
|--|-------|------------|
| MATH 4XXX courses (minimum of 36 credits) | | |
| Additional Coursework (Chosen in consultation with the student's academic advisor.) | | |
| Up to 35 credits may be taken in other relevant disciplines, as approved by the mathematics department graduate committee. | | |
| Total Credits | | 135 |

Minimum credits required for degree: 135

Non-coursework Requirements

- Preliminary Examinations

Every student admitted to the PhD program is expected to pass a written preliminary examination in analysis and a written preliminary examination in algebra. Both preliminary examinations are designed to test whether students in the PhD program have the adequate undergraduate preparation to continue in the program with a reasonable chance of success.

Both examinations are offered twice per year: during the week immediately preceding the first week of the fall quarter, and during the first week of the winter quarter. A student must pass both exams by no later than the end of the winter quarter of his/her second year in the program unless the graduate committee grants an extension of this deadline for exceptional and documented reasons.

- Tool Requirement

It is strongly recommended that students satisfy their tool requirement by demonstrating the ability to use a modern computer typesetting system. Other options include: reading competency in two languages selected from French, German and Russian; a series of outside courses in another discipline; a significant laboratory experience involving mathematics.

- Dissertation and Oral Defense

The dissertation must make a significant contribution to the research literature in mathematics.

After the dissertation has been completed, the student must defend it in a final examination, as specified by the Office of Graduate Education.

Master of Arts in Mathematics

Degree Requirements

Coursework Requirements

Every student's course of study must be approved in consultation with a designated departmental advisor.

| Code | Title | Credits |
|---|-------|-----------|
| Approved MATH 4XXX courses (minimum 12 credits) | | |
| Approved cognate area (up to 15 credits) | | |
| Additional graduate-level MATH courses | | |
| Total Credits | | 45 |

Minimum credits required for degree: 45

This degree requires completion of 45 credits of graduate-level MATH courses, including at least 12 credits of approved MATH courses at the 4000 level. Students are required to pass at least one of the sequences MATH 3161, MATH 4165, MATH 4110 or MATH 3170, MATH 4166, MATH 4176.

Up to 15 credits may be in an approved cognate area. At most 10 credits from another university may count toward the degree, and such credits must be approved in writing by an advisor from the Mathematics faculty.

Non-coursework Requirements

- Students are required to give an oral presentation in mathematics. This will typically occur after the completion of at least 24 credits of coursework, and should be scheduled after approval from a Mathematics faculty advisor.

No thesis is required.

Master of Science in Mathematics

Degree Requirements**Coursework Requirements**

Every student's course of study must be approved in consultation with a designated departmental advisor.

| Code | Title | Credits |
|---|-------|-----------|
| Approved MATH 4XXX courses (minimum 12 credits) | | |
| Approved cognate area (up to 15 credits) | | |
| Additional graduate-level MATH courses | | |
| Total Credits | | 45 |

Minimum credits required for degree: 45

This degree requires completion of 45 credits of graduate-level MATH courses, including at least 12 credits of approved MATH courses at the 4000 level. Students are required to pass both of the sequences MATH 3161, MATH 4165, MATH 4110 and MATH 3170, MATH 4166, MATH 4176.

Up to 15 credits may be in an approved cognate area. At most 10 credits from another university may count toward the degree, and such credits must be approved in writing by an advisor from the Mathematics faculty.

Non-coursework Requirements

- Tool requirement- Demonstrated competency in a tool is required and may be chosen from among the following: proficiency in the use of a modern computing typesetting system; approved outside courses; laboratory experience; or reading competency in French, German or Russian.
- Students are required to give an oral presentation in mathematics. This will typically occur after the completion of at least 24 credits of coursework, and should be scheduled after approval from a Mathematics faculty advisor.

No thesis is required.

James Hagler, Professor, Emeritus, PhD, University of California, Berkeley

L. Alayne Parson, Professor, Emerita, PhD, University of Illinois at Chicago

Courses

MATH 3000 The Real World Seminar (1 Credit)

Lectures by alumni and others on surviving culture shock when leaving the University and entering the job world. Open to all students regardless of major. Cross listed with COMP 3000.

MATH 3040 Lattices and Order (4 Credits)

Ordered sets, lattices as relational and as algebraic structures, ideals and filters, complete lattices, distributive and modular lattices, Boolean algebras, duality for finite distributive lattices. Prerequisite: MATH 2200.

MATH 3050 Set Theory (4 Credits)

Zermelo-Fraenkel axioms, axiom of choice, Zorn's Lemma, ordinals, cardinals, cardinal arithmetic. Prerequisite: MATH 2200.

MATH 3060 Mathematical Logic (4 Credits)

Classical propositional calculus (deductive systems and truth-table semantics), first-order logic (axiomatization and completeness), elements of recursion theory, introduction to nonclassical logics. Prerequisite: MATH 2200.

MATH 3090 Mathematical Probability (4 Credits)

Limit theorems for independent random variables, multivariate distributions, generating functions. Prerequisites: MATH 2080 and MATH 3080.

MATH 3151 Advanced Linear Algebra (4 Credits)

Vector spaces, linear mappings, matrices, inner product spaces, eigenvalues and eigenvectors. Prerequisite: MATH 2060 and MATH 2200.

MATH 3161 Introduction to Real Analysis (4 Credits)

A theoretical introduction to the structure of real numbers, to convergence of sequences and series, and to the topology of the real line, including limits and continuity. Prerequisites: MATH 2080 and MATH 2200.

MATH 3162 Introduction to Real Analysis II (4 Credits)

A rigorous introduction to the analysis of functions of a real variable, including differentiation, Riemann integration, and the notions of pointwise and uniform convergence for sequences of functions. Prerequisite: MATH 3161.

MATH 3166 Group Theory (4 Credits)

Groups and homomorphisms, isomorphism theorems, symmetric groups and G -sets, the Sylow theorems, normal series, fundamental theorem of finitely generated abelian groups. Cross listed with MATH 4166. Prerequisite: MATH 3170.

MATH 3170 Introduction to Abstract Algebra (4 Credits)

Examples of groups, permutations, subgroups, cosets, Lagrange theorem, normal subgroups, factor groups, homomorphisms, isomorphisms, rings, integral domains, quaternions, rings of polynomials, Euclid algorithm, ideals, factor rings, maximal ideals, principal ideals, fields, construction of finite fields. Prerequisite: MATH 2060 and MATH 2200.

MATH 3260 Metric Spaces (4 Credits)

Metric spaces and continuous functions; completeness and compactness; examples including norm spaces; pointwise and uniform convergence; Baire Category Theorem. Cross listed with MATH 4260. Prerequisite: MATH 3161 or equivalent.

MATH 3311 Linear Programming (4 Credits)

Linear optimization models, simplex algorithm, sensitivity analysis and duality, network models, dynamic programming, applications to physical, social and management sciences. Prerequisite: MATH 2060.

MATH 3312 Markov Chains (4 Credits)

Discrete-time and continuous Markov Chains, ergodic theorems, random processes, elementary queueing theory, applications. Prerequisite: MATH 2060 and MATH 3080.

MATH 3351 Introduction to Dynamical Systems (4 Credits)

Dynamical systems (one-parameter families such as circle rotations/tent maps, shift spaces); global properties (transitivity/mixing/sensitivity); behavior of trajectories (chaos, long-term averages, periodicity). Prerequisite: MATH 3161.

MATH 3400 Introduction to Geometry (4 Credits)

Specific geometrical systems including finite, Euclidean, non-Euclidean and projective geometries. Prerequisite: MATH 2200.

MATH 3451 Chaos, Dynamics & Fractals (4 Credits)

Introduction to one-dimensional dynamical systems, fractals; fixed and periodic points; sources and sinks; period doubling and tangent node bifurcations; chaotic dynamical systems; Sarkovskii's Theorem. Prerequisite: MATH 3161.

MATH 3550 Introduction to Theory of Numbers (4 Credits)

Concepts of nonanalytic number theory and its history; prime numbers, divisibility, continued fractions, modular arithmetic, Diophantine equations and unsolved conjectures. Prerequisites: MATH 2200.

MATH 3651 Ordinary Differential Equations (4 Credits)

Modeling of phenomena by ordinary differential equations; techniques of analysis and solution of such equations; oscillation theory and boundary value problems, power series methods, special functions, Laplace transforms and difference equations. Prerequisites: MATH 2060 and MATH 2070.

MATH 3661 Partial Differential Equations (4 Credits)

First and second order linear equations, Fourier series, the wave equation, the Cauchy problem, the heat equation, maximum principles, Laplace's equation, Green's functions. Prerequisites: MATH 2070 and MATH 2080.

MATH 3701 Combinatorics (4 Credits)

The principle of inclusion and exclusion, elementary counting techniques, systems of distinct representatives, partitions, recursion and generating functions, Latin squares, designs and projective planes. Prerequisite: MATH 2200.

MATH 3705 Topics in Mathematics (4 Credits)

Varying selected advanced topics in mathematics, depending on student demand and instructor interest.

MATH 3710 Graph Theory (4 Credits)

Paths, cycles, trees, Euler tours and Hamilton cycles, bipartite graphs, matchings, basic connectivity theorems, planar graphs, Kuratowski's theorem, chromatic number, n -color theorems, introduction to Ramsey theory. Prerequisite: MATH 2200.

MATH 3720 Coding Theory (4 Credits)

Goals of coding theory and information theory, instantaneous and Huffman codes, Shannon theorems, block and linear codes, generating and parity-check matrices, Hamming codes, perfect codes, binary Golay code, Reed-Muller codes, cyclic codes, BCH codes, Reed-Solomon codes, ideas of convolutional and turbo codes. Prerequisite: MATH 3170.

MATH 3851 Functions Complex Variable (4 Credits)

Complex numbers, analytic functions, complex integration, series expansions, residue theory, conformal maps, advanced topics and applications. Prerequisites: MATH 2060 and MATH 2080 and MATH 2200.

MATH 3900 Mathematics Internship (0-1 Credits)

Graduate students in mathematics may receive elective credit for mathematically related work performed for employers with the approval of the department. At the end of the term, a student report on the work is required, and a recommendation will be required from the employer before a grade is assigned.

MATH 3991 Independent Study (1-10 Credits)

Cannot be arranged for any course that appears in regular course schedule for that particular year.

MATH 4050 Combinatorial Set Theory (4 Credits)

Beginning with a quick review of ZFC, the standard axioms of set theory, the course covers advanced ordinal and cardinal arithmetic and infinitary combinatorics, including Ramsey theory. Additional axioms such as the Continuum Hypothesis, Martin's Axiom, and combinatorial principles such as Diamond and their consequences for mathematics are studied. Prerequisite: MATH 3050.

MATH 4060 Descriptive Set Theory (4 Credits)

Descriptive Set Theory is one of the main branches of modern set theory. Set theory provides techniques for the precise study of real analysis. This course covers trees as tools for analyzing sets of real numbers, Polish spaces, the Borel hierarchy, Baire-measurability, extensions of continuous functions, separation theorems, and more. Prerequisite: MATH 3050.

MATH 4070 Proof Theory (4 Credits)

Hilbert-style systems, Natural deduction, (simply typed) lambda calculus, combinatory logic, the Curry-Howard correspondence, normalization, cartesian closed categories, Sequent calculi, cut elimination and applications, structural rules; logical systems: classical, intuitionistic, relevance, linear; algebraic semantics. Recommended prerequisite: MATH 2200.

MATH 4080 Algebraic Logic (4 Credits)

Elements of universal algebra, lattice theory and first-order logic; elements of abstract algebraic logic (deductive systems, algebraization, deduction filters, deduction theorems, matrix semantics); sequent calculi for substructural logics, residuated lattices, structure theory for congruences and deductive filters; subvariety lattices (atomic varieties, axiomatizations of joins, translations); algebraic cut elimination; (un)decidability and finite model property. Prerequisites: MATH 3170 and either MATH 3040 or MATH 3060.

MATH 4110 Topology (4 Credits)

Point set topology including topological spaces, connectedness, compactness and separate axioms; preparation for advanced courses in analysis. Prerequisite: MATH 3161. Cross listed with MATH 3110.

MATH 4120 Algebraic Topology (4 Credits)

Fundamental groups, simplicial homology, Euler characteristic classification of surfaces, manifolds. Prerequisites: MATH 3170 and MATH 3110/4110.

MATH 4162 Rings and Modules (4 Credits)

Ideals, left and right R-modules, simple modules, totally decomposable modules, Wedderburn-Artin theorems, Artinian and Noetherian rings and modules, Hopkins theorem, Hilbert basis theorem, free modules, projective and injective modules, Kaplanski theorem. Prerequisites: MATH 3176 or MATH 4176.

MATH 4163 Universal Algebra (4 Credits)

Universal algebras, congruences, lattices, distributive lattices, modular lattices, Boolean algebras, subdirectly irreducible algebras, Mal'cev theorems, varieties, Birkhoff theorem. Prerequisites: MATH 3170 and either MATH 3040 or MATH 3060.

MATH 4164 Galois Theory (4 Credits)

The fundamental theorem of algebra, field extensions, ruler and compass constructions, normal and separable extensions, field automorphisms, Galois correspondence, solvability and simplicity, calculating Galois groups. Prerequisite: MATH 3176/MATH 4176 and MATH 3166/MATH 4166.

MATH 4165 Introduction to Real Analysis II (4 Credits)

A rigorous introduction to the analysis of functions of a real variable, including differentiation, Riemann integration, and the notions of pointwise and uniform convergence for sequences of functions. Prerequisites: MATH 3161.

MATH 4166 Group Theory (4 Credits)

Groups and homomorphisms, isomorphism theorems, symmetric groups and G-sets, the Sylow theorems, normal series, fundamental theorem of finitely generated abelian groups. Cross listed with MATH 3166. Prerequisite: MATH 3170.

MATH 4168 Lie Groups and Lie Algebras (4 Credits)

Lie groups and Lie algebras, fundamental theorems of Lie, general structure theory; compact, nilpotent, solvable, semisimple Lie groups; classification of semisimple Lie algebras; representation theory of compact and semisimple Lie algebras and Lie groups. Additional topics as time permits: universal enveloping algebras, symmetric spaces. Prerequisites: MATH 3161 and MATH 3170.

MATH 4176 Rings and Fields (4 Credits)

Rings, domains, fields; ideals, quotient rings, polynomials; PIDs, UFDs, Euclidean domains; maximal and prime ideals, chain conditions; extensions of fields, splitting fields, algebraic and transcendental extensions; brief introduction to Galois theory. Cross listed with MATH 3176. Prerequisite: MATH 3170 or equivalent.

MATH 4181 Loop Theory (4 Credits)

Quasigroups, loops, latin squares, 3-nets, isotopy, multiplication groups, inner mapping groups, nuclei, commutant, center, associator subloop, inverse properties, power-associative loops, Bruck loops, Bol loops, Moufang loops, octonions. Prerequisites: MATH 3166 or MATH 4166.

MATH 4260 Metric Spaces (4 Credits)

Metric spaces and continuous functions; completeness and compactness; examples including norm spaces; pointwise and uniform convergence; Baire Category Theorem. Cross listed with MATH 3260. Prerequisite: MATH 3161 or equivalent.

MATH 4270 Hilbert Spaces (4 Credits)

Schwarz and triangle inequalities, Riesz lemma, subspaces and orthogonal projections, orthonormal bases, spectrum of bounded linear operators, compact, self-adjoint, normal and unitary operators, spectral theorem and, if time permits, unbounded operators. Also, if time permits, applications to partial differential equations, physics and engineering. Prerequisites: MATH 3260 or MATH 4260 or MATH 3110 or MATH 4110.

MATH 4280 Measure Theory and Applications (4 Credits)

Definition of Measure spaces; Lebesgue measure; limit theorems; Raydon-Nikodym Theorem; introduction to L_p spaces. Prerequisite: (MATH 3260 with a minimum grade of D- or MATH 4260 with a minimum grade of C-) or (MATH 3110 with a minimum grade of D- or MATH 4110 with a minimum grade of C-).

MATH 4290 Dynamical Systems (4 Credits)

Topological and measure theoretic dynamical systems; properties and invariants of systems; symbolic dynamics; Ergodic Theorems; applications. Prerequisites: MATH 3110/4110 or MATH 3260/4260.

MATH 4300 Graduate Seminar (1-4 Credits)

Students research a topic of their choosing with the aid of a faculty member, and then prepare and present a formal lecture on the subject.

Prerequisite: graduate standing or consent of the instructor.

MATH 4400 Differential Geometry (4 Credits)

Planar and spatial curves, global properties of curves, surfaces in three dimensions, the first fundamental form, curvature of surfaces, Gaussian curvatures, geodesics, Theorema Egregium, hyperbolic geometry. Prerequisites: MATH 3170 and either MATH 3110/4110 or MATH 3260/4260.

MATH 4501 Functional Analysis (4 Credits)

Advanced topics in structure of linear spaces; Banach spaces; Hahn-Banach Theorem and Duality; Uniform Boundedness Theorem; Open Mapping and Closed Graph Theorems; Stone-Weierstrass Theorem; Topics in Hilbert Spaces. Prerequisite: MATH 4280.

MATH 4700 Special Topics in Mathematics (1-4 Credits)**MATH 4701 Combinatorial Algorithms (4 Credits)**

Basic enumeration techniques; representations of combinatorial objects; algorithms for searching, sorting, generating combinatorial objects, graph algorithms. Prerequisites: MATH 3701 or MATH 3710.

MATH 4705 Special Topics Applied Math (1-5 Credits)

Varying selected advanced topics in mathematics, depending on student demand. Possible alternatives include of variations, partial differential equations, algebraic topology, differential manifolds, special functions.

MATH 4991 Independent Study (1-10 Credits)

Cannot be arranged for any course that appears in course schedule for that particular year.

MATH 4995 Independent Research (1-10 Credits)

Research projects undertaken in conjunction with a faculty member.

MATH 5000 Doctoral Seminar (3 Credits)

Techniques, methods used in mathematical, computing research. Includes proofs, bibliographic searching, writing styles, what constitutes an acceptable dissertation.

MATH 5991 Independent Study (1-10 Credits)

Cannot be arranged for any course that appears in the regular course schedule for that particular year.

MATH 5995 Independent Research (1-10 Credits)

Research leading to a dissertation.

Molecular and Cellular Biophysics

The Molecular and Cellular Biophysics PhD (MCB) program provides opportunities for doctoral studies in the interdisciplinary field of biophysics. Participation of faculty from the Departments of Biological Sciences, Chemistry & Biochemistry, and Physics & Astronomy enhances the strength and breadth of our program by incorporating cross-disciplinary and collaborative approaches to research. The MCB PhD program is centered on research activities that coincide with faculty experience and expertise. Areas of research in the MCB program include cellular physiology, developmental dynamics, protein folding and aggregation, protein network analysis, signal transduction cascades, synthetic biology, systems biology and the development of novel imaging techniques. Projects at the interface of traditional disciplines of physics, biology and chemistry as well as methods of mathematical analysis and computer modeling are particularly encouraged.

The MCB PhD program offers both a core foundation in biophysical theory and practice yet provides flexibility and individualized attention such that students with diverse scientific backgrounds will have the opportunity to be trained in molecular and cellular biophysics. During their first year in the program, students conduct lab rotations, take a year-long course sequence that covers foundations of molecular and cellular biophysics and take additional graduate courses to supplement their undergraduate training. At the end of their first year, students will join the lab in which they will conduct their thesis research.

Students with strong quantitative undergraduate backgrounds (e.g., undergraduate degrees in physics, chemistry, mathematics, computer science/engineering) who desire to apply these skills to various biological problems, as well as students with a background in cell or molecular biology with a solid foundation in mathematics and physics are particularly encouraged to apply. Financial aid is usually offered in the form of Graduate Teaching or Graduate Research Assistantships, which cover tuition costs and provide a stipend for living expenses.

Doctor of Philosophy in Molecular & Cellular Biophysics

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Prerequisites:

- A minimum of one year of calculus and one year of college physics (preferably calculus-based), regardless of undergraduate major, are required.

Standardized Test Scores

- GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.

If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

Additional Requirements

- Applicants may be contacted to schedule an admissions interview.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Doctor of Philosophy in Molecular and Cellular Biophysics

Graduate studies in the program are highly individualized; programs should fit each student's unique needs and interests. Students are required to perform original, publishable research and to present a thesis based on research to the faculty of the molecular and cellular biophysics program.

A student qualifies for the PhD degree after demonstrating growth as an independent investigator—identifying a significant research question; proposing a hypothesis or model to answer the question; testing the hypothesis with appropriate experiments; and writing a dissertation acceptable to the department.

The structure of the PhD program in Molecular and Cellular Biophysics is as follows:

- required core courses and elective courses during the first year
- required lab rotations during the first year
- required seminar/special topics courses during the second year
- qualifying exams first year and second year
- thesis research second year to completion

Degree Requirements

Coursework Requirements

| Code | Title | Credits |
|-------------------------|---------------------------|---------|
| Required Courses | | |
| First Year | | |
| BIOP 4100 | Foundations in Biophysics | 3 |
| BIOP 4150 | Cellular Biophysics | 3 |

| | | |
|--|------------------------------|-----------|
| CHEM 3130 | Chemical Systems III | 3 |
| BIOP 4995 | Independent Research | 1-9 |
| Second Year | | |
| 3 quarters of BIOP 4210 are required | | |
| BIOP 4210 | Current Topics in Biophysics | 2 |
| BIOP 4210 | Current Topics in Biophysics | 2 |
| BIOP 4210 | Current Topics in Biophysics | 2 |
| Electives | | |
| During the first two years electives can be chosen from existing 3000- or 4000-level courses in the Division and must be chosen with consultation and the approval of the Steering committee. This use of electives is critical given the interdisciplinary nature of this PhD program and scientific discipline and the fact that incoming students will come from a range of disciplines in the physical sciences and life sciences. | | |
| The remainder of the credit hours required for the degree may include: | | |
| BIOP 4992 | | |
| BIOP 4995 | Independent Research | |
| BIOP 5995 | Independent Research | |
| Total Credits | | 90 |

Minimum credits required for the degree: 90 (must be approved by the program Steering committee)

Non-coursework Requirements

- passing performance in the qualifying examinations
- completion of a research dissertation of publishable quality
- successful oral defense of the dissertation

Additional requirements:

- successful completion of research rotations during the first year
- maintaining a minimum GPA of 3.0
- passing performance in the qualifying examinations
- attendance at departmental seminars and the presentation of one seminar per year
- completion of a research dissertation of publishable quality
- successful oral defense of the dissertation

A complete description of the program's official requirements and details of qualifying examinations are available on the Natural Sciences & Mathematics (<http://www.du.edu/nsm/departments/molecularandcellular/>) website.

Master of Science in Molecular and Cellular Biophysics

The MS in Molecular and Cellular Biophysics is a terminal master's degree for students who enter the PhD in Molecular and Cellular Biophysics but demonstrate a mastery in the program that indicates an MS degree is more suitable.

Degree Requirements

Coursework Requirements

| Code | Title | Credits |
|---|---|-----------|
| Required courses | | |
| BIOP 4100 | Foundations in Biophysics | 3 |
| BIOP 4150 | Cellular Biophysics | 3 |

Website: <https://physics.du.edu/>

The Department of Physics and Astronomy at the University of Denver combines a tradition of individualized instruction with a contemporary research focus. The department underwent a strong expansion with eight tenure-track and two teaching professor positions filled since 2006. Our diverse and dynamic faculty of 12 includes four women and come from seven different countries. We provide an attentive, hands-on research and learning community for undergraduate and graduate students up through the PhD level. The department also offers a low student-to-faculty ratio in all advanced and graduate physics and astronomy courses and stresses individualized attention to each student. The program is recognized by the APS among US PhD-granting departments for our high percentage (50%) of female graduates: placing second nationally at the undergraduate level and third at the graduate level (APS data for the period 2011-2013).

The department has major research thrusts in stellar astronomy/astrophysics, biophysics, and condensed matter/materials physics. Our faculty members are internationally recognized and accomplished researchers. The department is a part of the University of Denver's interdisciplinary Molecular and Cellular Biophysics program (<https://science.du.edu/biophysics/>). Major state-of-the-art instrumentation is available both in the department and through collaborations with nearby national institutes in the region (NIST and NREL). Also, the University of Denver maintains our own Linux cluster for in-house high-performance computational needs.

Doctor of Philosophy in Physics

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

- GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.

If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Master of Arts in Physics

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

Doctor of Philosophy in Physics

The Department of Physics and Astronomy offers PhD degree in physics that prepares students for careers across a spectrum of scientific pursuits. At the conclusion of your degree, you'll be equipped with the experience and knowledge necessary to build a career in the advancement of scientific knowledge or education at the highest levels, which can open doors to careers in research and development in academia, government, and private industry.

Our department offers research opportunities in theoretical, experimental and computational astronomy and astrophysics, biophysics, and condensed matter and materials physics. PhD candidates in the program will work closely with faculty advisors to create a path of study that culminates in a dissertation defense based on independent research of a publishable quality.

Degree Requirements

Coursework Requirements

Both 4000- and 3000-graduate level courses may be applied toward the degree, with the approval of the Graduate Committee or the Dissertation Committee.

| Code | Title | Credits |
|---|--------------------------------|--------------|
| Graduate Core Courses | | 19-23 |
| Physics & Astronomy Graduate Core Courses are the following 8 courses (19-23 qtr hrs) that all students are expected to take during the first two years in the program: | | |
| PHYS 4611 | Adv Electricity & Magnetism I | 3 |
| PHYS 4612 | Adv Electricity & Magnetism II | 3 |
| PHYS 4111 | Quantum Mechanics I | 3 |
| PHYS 4112 | Quantum Mechanics II | 3 |
| PHYS 4811 | Statistical Mechanics I | 4 |
| PHYS 4001 | Introduction to Research I | 1,2 |
| PHYS 4002 | Introduction to Research II | 1-3 |
| PHYS 4003 | Introduction to Research III | 1,2 |
| Additional Coursework | | 71-67 |
| Minimum credits required for the degree | | 90 |

Minimum credits required for degree: 90 of which a minimum of 60 must be in Physics and Astronomy including the Graduate Core Courses, which constitute 19-23 quarter hours.

Non-Course Requirements

- Regular attendance at the Physics and Astronomy colloquia;
- Annual presentation at the Physics and Astronomy colloquia;
- Passing Comprehensive Examination at the PhD level;
- Advancement to Preliminary Candidacy at the PhD level;
- Formation of the Dissertation Committee;
- Passing Oral Dissertation Research Proposal;
- Advancement to Candidacy at the PhD level;
- Dissertation;
- Dissertation Defense. Three departmental faculty members and an Outside Chair are required for the Oral Defense.

Other Degree Requirements

- Good academic standing: a GPA of 3.0 or higher;
- No grades lower than C- are accepted toward the degree;
- No more than one-fourth of the hours accepted toward the degree may be of C+, C, or C- grade;

Master of ARTS in Physics

The Department of Physics and Astronomy offers a Master of Arts (MA) in Physics that prepares the student for a wide variety of jobs. The MA degree is intended primarily for students who are seeking an advanced degree without a significant research component. For instance, the MA degree is appropriate for students pursuing careers in pre-college or community college teaching, planetarium or museums, or as technical representatives of various organizations. With complementary courses in education, MA graduates are well qualified to teach at the secondary level. The main difference between the MA and MS degree is that a research thesis is not required for the MA degree. However, students pursuing the MA degree will get exposed to some research experience through Introduction to Research courses in their first year in the program.

Degree Requirements

Coursework Requirements

Both 4000- and 3000-graduate level courses may be applied toward the degree, with the approval of the Graduate Committee or the Master's Committee.

Master of Science in Physics

The Department of Physics and Astronomy offers a Master of Science (MS) in Physics that prepares the student for a wide variety of jobs in industry, government and educational institutions. Our graduates have obtained industrial or governmental laboratory research positions, entered pre-college or community college teaching, joined planetarium or museum staffs, and become technical representatives of various organizations. With complementary courses in education, MS graduates are well qualified to teach at the secondary level. The MS in Physics is also a popular course of study and professional improvement for people already working in industry. For those currently employed, research projects can usually be matched to the employer's programs, and often someone from the industry can serve as co-advisor so that the continuing education benefits both the student and the employer.

Faculty

Davor Balzar, Associate Professor and Department Chair, PhD, University of Zagreb

Maria M. Calbi, Professor, PhD, Universidad de Buenos Aires

Xin Fan, Associate Professor, PhD, University of Delaware

Kingshuk Ghosh, Professor, PhD, University of Massachusetts Amherst

Jennifer L. Hoffman, Professor, PhD, University of Wisconsin - Madison

Steven Iona, Teaching Professor, PhD, University of Denver

Dinah Loerke, Associate Professor, PhD, University of Göttingen

Pavel Salev, Assistant Professor, PhD, University of Tulsa

Mark Siemens, Professor, PhD, University of Colorado Boulder

Toshiya Ueta, Associate Professor, PhD, University of Illinois at Urbana-Champaign

Tristan D. Weber, Visiting Teaching Assistant Professor, PhD, University of Colorado Boulder

Barry L. Zink, Professor, PhD, University of California, San Diego

Ronald Blatherwick, Associate Research Professor, Emeritus, PhD, University of Denver

Robert E. Stencel, Professor, Emeritus, PhD, University of Michigan

Walter J. Williams, Professor, Emeritus, MS, University of Denver

Courses**PHYS 3111 Quantum Physics I (4 Credits)**

First of a two-quarter sequence. The Schrödinger equation: interpretation of wave functions; the uncertainty principle; stationary states; the free particle and wave packets; the harmonic oscillator; square well potentials. Hilbert space: observables, commutator algebra, eigenfunctions of a Hermitian operator; the hydrogen atom and hydrogenic atoms. Prerequisites: PHYS 2252, PHYS 2260, PHYS 2556, PHYS 3612 and MATH 2070.

PHYS 3112 Quantum Physics II (4 Credits)

Second of a two-quarter sequence. Angular momentum and spin; identical particles; the Pauli exclusion principle; atoms and solids: band theory; perturbation theory; the fine structure of hydrogen; the Zeeman effect; hyperfine splitting; the variational principle; the WKB approximation; tunneling; time dependent perturbation theory; emission and absorption of radiation. Scattering: partial wave analysis; the Born approximation. Prerequisite: PHYS 3111.

PHYS 3251 Astrophysics: Radiative Processes (4 Credits)

Because light is the primary means by which astronomers learn about the Universe, understanding the production and subsequent behavior of light is key to interpreting astronomical observations. This course introduces students to the physics of astrophysical radiation and its interaction with matter as it travels from its source to our detectors. Topics may include radiative transfer, emission and absorption processes, Compton processes, synchrotron radiation, thermodynamic equilibrium, radiative and collisional excitation, and spectroscopy of atoms and molecules. The course is aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. Credit can apply toward physics or astrophysics minor. Prerequisites: PHYS 2252 and MATH 1953, or instructor's permission.

PHYS 3252 Astrophysics: Observations (4 Credits)

Astronomy is fundamentally an observational science and as such it is important for practitioners to understand how their data are collected and analyzed. This course is therefore a comprehensive review of current observational techniques and instruments, aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. This class introduces students to the capabilities and limitations of different types of instruments while exploring the sources and types of noise and providing statistical tools necessary for interpreting observational data. Credit can apply toward physics or astrophysics minor. Prerequisites: PHYS 2252 and MATH 1953, or instructor's permission.

PHYS 3254 Astrophysics: Stars (4 Credits)

Stars are the fundamental building blocks of the Universe. Hence, understanding the nature of stars is the first step toward understanding the Universe. This course is therefore intended to introduce students to the rigorous physical and mathematical treatise of stellar structure and evolution. Topics may include the theoretical origins and applications fundamental equations of stellar structure and other supporting equations, and theoretical and observational applications of stellar evolution. The course is aimed at advanced undergraduates, as well as graduate students focusing on astrophysics research. Credit can apply toward Physics major or Astrophysics minor. Prerequisites: PHYS 2252 and MATH 1953, or instructor's permission.

PHYS 3270 Workshop: Practical Astronomy (1-5 Credits)

Capstone coursework featuring studies in experimental, computational, and/or theoretical work in astronomy and astrophysics. Credit can apply toward physics or astrophysics minor.

PHYS 3510 Analytical Mechanics I (4 Credits)

Lagrangian and Hamiltonian mechanics. Prerequisites: PHYS 1113, PHYS 1213, or PHYS 1214 and MATH 2070 and consent of instructor.

PHYS 3611 Electromagnetism I (4 Credits)

First of a two-quarter sequence. Vector algebra; differential vector calculus (gradient, divergence and curl); integral vector calculus (gradient, divergence and Stokes' Theorems); line, surface and volume integrals; Electrostatics: the electric field, electric potential, work and energy in electrostatics; method of images, boundary value problems and solutions to Laplace's equation in Cartesian, spherical and cylindrical coordinates; multipole expansion of the electric potential; electric fields in matter: polarization; the electric displacement vector; boundary conditions, linear dielectrics. Magnetostatics: magnetic fields and forces. Prerequisites: PHYS 1113, PHYS 1213, or PHYS 1214 and MATH 2070.

PHYS 3612 Electromagnetism II (4 Credits)

Second of a two-quarter sequence. Magnetic vector potential; magnetic fields in matter: magnetization; fields of magnetized objects; linear and nonlinear magnetic materials; electromotive force, Ohm's law; electromagnetic induction; Faraday's law; Maxwell's equations; the displacement current; boundary conditions; the Poynting theorem; momentum and energy density of the fields; the Maxwell stress tensor; the wave equation and electromagnetic waves in vacuum and matter; absorption and dispersion; wave guides; the potential formulation and gauge transformations; retarded potentials; dipole radiation. Prerequisite: PHYS 3611.

PHYS 3700 Advanced Topics: General (3 Credits)

Offered irregularly, depending on demand. May be taken more than once for credit. Prerequisite: instructor's permission.

PHYS 3711 Optics I (4 Credits)

First of a two-quarter sequence. Gaussian optics and ray tracing; matrix methods and application to optical design; elementary theory of aberrations; light as electromagnetic wave, diffraction and interference; interferometers and their applications. Elementary theory of coherence; selected topics. May include laboratory work as appropriate. Prerequisites: PHYS 1113, PHYS 1213 or PHYS 1214, and MATH 2070.

PHYS 3841 Thermal Physics I (4 Credits)

First of a two-quarter sequence. Laws of thermodynamics; thermal properties of gases and condensed matter; kinetic theory of gases, classical and quantum statistics. Prerequisites: PHYS 1113, PHYS 1213 or PHYS 1214 and MATH 2070.

PHYS 3991 Independent Study (1-10 Credits)**PHYS 3995 Independent Research (1-10 Credits)****PHYS 4001 Introduction to Research I (1,2 Credit)**

This course is the first of the 3-course sequence designed to provide the opportunity of learning fundamental skills to conduct independent research in any physical science discipline. In this course, students review essential material in mathematical physics, learn basic programming techniques and improve upon their skills in literature search and scientific writing, especially proposal writing. Special in-class seminars in collaboration with the Penrose Library and Writing and Research Center are scheduled. Student are introduced to research conducted by Physics and Astronomy faculty so that they can choose a faculty member with whom to take on a Winter Research Project during the winter interterm and winter quarter as part of Introduction to Research II. Students must prepare and submit a research proposal before the end of the fall quarter.

PHYS 4002 Introduction to Research II (1-3 Credits)

This is the second of the 3-course sequence to provide the opportunity of learning fundamental skills to conduct independent research in any physical science discipline. In this course, students conduct an independent research or study project that they have outlined in the research proposal they submitted as part of Introduction to Research I under supervision of a faculty advisor of their choosing. At the same time, students have time to review issues that we face as researchers. Prerequisites: PHYS 4001 and consent of a faculty research advisor.

PHYS 4003 Introduction to Research III (1,2 Credit)

This is the third of the 3-course sequence to provide students with the opportunity of learning fundamental skills to conduct independent research in any physical science disciplines. In this course, students complete their Winter research project conducted as part of Introduction to Research II and present the results in writing as a term paper and in oral presentation as part of the Departmental Colloquia. Special in-class sessions in collaboration with the Writing and Research Center are included. Prerequisite: PHYS 4002.

PHYS 4100 Foundations of Biophysics (3 Credits)

Focus of the course is on application of basic physics principles to the study of cells and macromolecules. Topics include diffusion, random processes, thermodynamics, reaction equilibriums and kinetics, computer modeling. Must be admitted to the MCB PhD program or related graduate program with instructor approval. Cross listed with BIOP 4100.

PHYS 4111 Quantum Mechanics I (3 Credits)**PHYS 4112 Quantum Mechanics II (3 Credits)****PHYS 4251 Intro to Astrophysics I (3 Credits)****PHYS 4252 Intro to Astrophysics II (3 Credits)****PHYS 4350 Physics and information (4 Credits)**

Students in Physical Sciences are often well versed in the art of model building but less so in the process of model-selection when multiple models can describe the same data. Students rarely learn tools beyond curve fitting and least square error minimization for model selection. Consequently, students are often unaware of the scope of different tools and fail to make judicious choice of algorithms/theories when faced with diverse problems. For example, building a model from data is very different from generating data (stochastic or deterministic) from a model. Next consider two contrasting challenges of model building i) when there is limited data vs ii) when there is too much data. For the first problem – inferring models from limited data – the solution can be traced back to Boltzmann's formulation of Statistical Physics describing motion of atoms. The connection between Information theory, Inference and Boltzmann's description, however, is often overlooked in introductory or even advanced classes in Physics, and Statistics. Studying these similarities can unlock novel solutions for problems well outside of thermodynamics, even as far as Image processing, Biology and Network science. Inference also requires us to appreciate fundamental topics in Probability – difference between frequentist and non-frequentist approach, Bayesian formalism – that are rarely taught to physical scientists, life scientists or engineers. At the other extreme, faced with data deluge, we routinely ask: how do we make sense of too much data? We use clustering, PCA, Neural Networks. In this course we will discuss and connect all these seemingly disparate concepts and apply them – at the appropriate context – to diverse problems in Physics, Chemistry, Biology and beyond. In the process we will gain an in-depth knowledge about commonly heard but perhaps less understood topics such as: Entropy, Likelihood maximization, Bayesian statistics, PCA, Classification algorithms, and Neural Networks. We will also address another often overlooked but fundamental and fascinating topic, biology's inherent ability to encode and decode information. Currently there is no such course that address all these topics in Information and Data Science in a unified manner – deeply connecting their formal basis, regime of applicability – grounded on physical principles, with a forward looking approach towards application in many areas well outside of traditional sciences. A lot of learning in the course will happen 'on the fly', where the tools and application problems are learnt as needed.

PHYS 4411 Advanced Condensed Matter I (3 Credits)

Materials structure; structure analysis; elastic properties; defects; plastic mechanical properties; thermal properties and phonons; free electron gas; energy bands and Fermi surfaces; crystalline and amorphous semiconductors; quasiparticles and excitations; electrical properties and ferroelectrics; magnetic properties and ferromagnetics; classical and high-Tc superconductors; other advanced materials. Co-requisite: PHYS 4111.

PHYS 4412 Advanced Condensed Matter II (3 Credits)

Materials structure; structure analysis; elastic properties; defects; plastic mechanical properties; thermal properties and phonons; free electron gas; energy bands and Fermi surfaces; crystalline and amorphous semiconductors; quasiparticles and excitations; electrical properties and ferroelectrics; magnetic properties and ferromagnetics; classical and high-Tc superconductors; other advanced materials. Co-requisite: PHYS 4112.

PHYS 4511 Advanced Dynamics I (4 Credits)**PHYS 4611 Adv Electricity & Magnetism I (3 Credits)****PHYS 4612 Adv Electricity & Magnetism II (3 Credits)****PHYS 4720 Light-Matter Interaction (4 Credits)**

This course will introduce the theory and applications of light-matter interactions. Fundamental theory will be explored from both semi-classical and quantum perspectives, and photon-carrier interactions will be studied in a variety of physical systems, including atoms, glasses, semiconductors, and metals. Experimental techniques will also be discussed, such as absorption, photoluminescence, and coherent spectroscopies, in addition to ultrafast nonlinear optical interactions. Students will also build their own demonstration and teaching module for elementary-age children, and will use their module to teach children at a local school.

PHYS 4750 Seminar in Physics (1 Credit)**PHYS 4811 Statistical Mechanics I (4 Credits)**

Fundamentals of thermodynamics, microcanonical and canonical ensemble, quantum formulation noninteracting particle systems.

PHYS 4860 Numerical and Computational Methods in Physics (4 Credits)

The main goal of this course is to gain a better understanding of physical problems by solving them numerically; in the process, students learn about several numerical methods and computational techniques that have a very broad range of applications in many other scientific fields. Depending on the problem, students work with a software package (Mathematica), and also acquire coding experience in different programming languages. Graduate students carry out projects involving more complex simulation and numerical methods currently used in many areas of condensed matter physics, quantum chemistry and biophysics, such as Density Functional calculations, Monte Carlo and Molecular Dynamics methods.

PHYS 4870 Special and General Relativity (4 Credits)

This course will start with the techniques in Special Relativity and build familiarity with tensors. In the second part of the quarter, we will generalize to curved spaces and the Schwarzschild solution. And, finally, we will set up and solve the Einstein equations using the Cartan equations of structure to study the Robertson Walker metric spacetime used to construct the energy budget of the universe.

PHYS 4910 Special Topics Physics (1-5 Credits)**PHYS 4991 Independent Study (1-10 Credits)****PHYS 4995 Independent Research (1-10 Credits)**

Sturm College of Law

At the University of Denver Sturm College of Law, students don't just study law, they *experience* it. As the only law school in the nation with three practical skills programs ranked in the Top 10 by U.S. News & World Report (clinics, legal writing, and trial advocacy), we are a national leader in experiential legal training. Our nine in-house clinics, multiple simulation-based classes, and extensive externship program provide students with abundant opportunities to develop their legal skills and to chart their professional futures.

Faculty at the Sturm College of Law are national leaders in fields such as animal law, corporate governance, energy law, free speech, governmental transparency, health law, and immigration law. Within our full-time juris doctor (JD) program and part-time JD program, students can pursue certificates in six specialty fields: constitutional rights and remedies; corporate and commercial law; environmental and natural resources law; international legal studies; intellectual property law; and workplace law. We also offer an extensive range of master's degrees, including leading programs in environmental law and tax.

Since opening our doors in 1892, innovation has defined our culture. In 1904, we launched the nation's first law clinic. In the 1960s, we helped found the Law and Society Movement, combining the study of law with cutting-edge perspectives from the social sciences. In 2003, we constructed the nation's first LEED Gold-certified "green" law building. And, in 2018, we launched our #10-ranked Professional Part-Time JD Program, taught on alternating weekends and up to one-third online – a program that allows working professionals to advance their careers on their own schedules and from virtually any location in the nation.

Throughout our history, the Sturm College of Law has been committed to diversity, equity and inclusion, and we continue to be recognized as a top law school for diversity by *preLaw* magazine. Our Associate Dean of Diversity, Equity and Inclusion, Office of Student Affairs, nationally recognized mentoring program, student affinity groups, and Alumni Council work together to forge a culture of respect and belonging and to prepare members of our community to practice in an increasingly diverse and globalized workplace.

Web Site: <http://www.law.du.edu/>

Denver Law offers a number of advanced degrees (LLM and Master's) that can supplement a student's law degree with specialized knowledge, introduce foreign lawyers and those educated in other disciplines to the U.S. legal system, or train students in the unique rigors of tax or legal administration. It is the goal of each academic program to bridge the objectives of its students to the curriculum and the University of Denver's mission to make a meaningful impact, both locally and globally.

Juris Doctor

Degree and GPA Requirements

- To be enrolled at the University of Denver Sturm College of Law, you must hold a bachelor of arts or a bachelor of science degree from a regionally accredited college or university. No undergraduate field of study is favored, based on evidence that a strong student in any major can develop the skills of writing, analysis and persuasion necessary for success in law school.

Standardized Test Scores

- Valid Law School Admissions Test ((<http://www.lsac.org/jd/lsat/about-the-lsat.asp>)LSAT) score

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS test score requirements for this degree program are:

- TOEFL Paper-based test: 587
- TOEFL Internet-based test: 95
- IELTS: 7.0

Additional Requirements for International Students

- LSAC Credential Assembly Service (CAS)
 - If you have completed any post-secondary work outside the US (including its territories) or Canada, these transcripts must be submitted to the LSAC to be translated and evaluated. A foreign credential evaluation will be completed by the American Association of Collegiate Registrars and Admissions Officers and included with your CAS report.
 - We will not accept any other translation or evaluation services for the admissions process.
 - If you have questions, contact the office of admissions at admissions@law.du.edu

Master of Laws in American Law Practice

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Other Requirements

- A Juris Doctorate (JD) or equivalent is required.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Sturm College of Law may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Laws in Environmental/Natural Resource Law Policy

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- **Program GPA requirement:** The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Other Requirements

- A Juris Doctorate (JD) or equivalent is required.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Sturm College of Law may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Laws in International Business Transactions

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Other Requirements

- A Juris Doctorate (JD) or equivalent is required.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Sturm College of Law may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Legal Studies in Legal Studies

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the

baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Sturm College of Law may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Legal Studies in Environmental/Natural Resource Law Policy

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

- Minimum CAE Score: 176

English Conditional Admission: No, this program does not offer English Conditional Admission.

Juris Doctor

Degree Requirements

The Sturm College of Law awards the degree of Juris Doctor to those students who successfully fulfill the following requirements:

- Completion of ninety [90] semester credit hours with passing grades. A grade of F or NP (No Pass) constitutes a failing grade for purposes of this requirement. Students receive no credit hours toward graduation for courses in which they earn a grade of F or NP.
- Maintenance of the required cumulative grade point average: **a cumulative GPA of 2.3 or higher**
- **Successful completion of all required courses** (as defined in the chart that follows this section). A student who receives a grade of F in a required course must retake the course and earn a passing grade. Both grades remain on the student's transcript and affect the student's cumulative GPA.
- **Completion of the Upper Level Legal Writing requirement**
- **Completion of the Public Service requirement**
- **Completion of Experiential Coursework Requirement. All students must successfully complete a curricular offering of six or more semester credit hours. A list of qualifying courses will be made available each semester prior to registration.**
- **Students may not exceed 25 or more total Out-of-Class credits. Out-of-class credits include clinics, directed research or experiential projects, externships, Semester in Practice, journals, and non-JD courses. The additional limits apply:**
 - Clinics-25 credits or less
 - Directed Experiential Project-5 credits or less
 - Directed Research-5 credits or less
 - Externships-15 credits or less
 - Semester in Practice-19 credits or less
 - Journals-6 credits or less
 - Non-JD courses-8 semester credits (12 quarter credits) or less. Dual degree students may take up to 10 semester credits (15 quarter credits)
- **Completion of Career & Professional Development requirement**
- **Completion of ABA Standard 303(c) Requirement**
- **Resolution of all financial obligations to the University of Denver**
- Completion of all credit hours within a specified time period following initial matriculation at law school. The American Bar Association requires law students to complete their legal educations within seven years. Full-time day-division students at the Sturm College of Law normally meet all JD requirements by the end of their third year. Part-time evening or weekend-division students at the Sturm College of Law normally complete all JD requirements by the end of their fourth year.

Good Standing

All students who enter the Sturm College of Law in the 2007 Fall, or any subsequent, semester must maintain a cumulative grade point average of at least a 2.3 to remain in good standing.

Students may check their Degree Audit on MyWeb. Students have the responsibility to check MyWeb carefully and to contact the Registrar's Office if students note any discrepancy between their understanding of their degree requirements and their Degree Audit. Students have the sole responsibility to ensure that they have completed all graduation requirements.

| Electives | | 50 |
| Total Credits | | 90 |

Public Service Requirement

All law students must satisfy the Public Service Requirement (PSR) in order to graduate. To satisfy the requirement, each student must perform a minimum of 50 hours of supervised, uncompensated, legal public service work that is approved through the Director of Externships & Public Interest Initiatives. Generally, you must complete 28 academic credit hours prior to satisfying the requirement. However, if you have completed one academic year, even if you have not completed 28 academic credit hours, you may satisfy the PSR via Option #4 (Volunteer Legal Experience) below.

You can satisfy the requirement in one of the following ways:

- Registering for, and passing, an externship for credit at a government agency, judicial chambers, nonprofit organization, or private firm (as long as the 50 hours is pro bono at the firm) via the Legal Externship Office (<http://www.law.du.edu/index.php/legal-externship-program/>).
- Registering for, and receiving a grade of C or better, in a clinic via the Student Law Office (<http://www.law.du.edu/index.php/law-school-clinical-program/>).
- Registering for, and receiving a grade of C or better, in an eligible course. Eligible courses may include: Homeless Advocacy Seminar, International Criminal Law Practicum, Live Client Lab, Low-Income Taxpayer Clinic, Mediation Practicum, Poverty and Low Wage Work in America, Public Interest Lawyering Lab, Trial Practice III: Instructor's Practicum, Trial Practice III: Mentor's Practicum, Wills Lab, Workplace Rights Projects Lab, Youth Rights Workshop, and/or the Animal Activist Legal Defense Fund.
- Volunteering, and engaging in 50 hours of supervised, uncompensated legal work, at a government agency, judicial chambers, nonprofit organization, or private firm, as long as the work at the firm is pro bono. This is known as a Volunteer Legal Experience.

In order to satisfy the requirement via option #4, a Volunteer Legal Experience, you must abide by all rules and regulations for the Public Service Requirement indicated on our website (<https://www.law.du.edu/index.php/public-service-requirement/>). You must complete an online **student certification and evaluation form about your volunteer experience. Your supervisor, who must be licensed to practice law for at least three years, must complete an online **supervisor certification and evaluation form** which asks for the number of hours worked (must be at least 50), the timeframe in which the work was completed, and an evaluation of the student's work. When both of these forms are completed and submitted online, and it is confirmed that the work satisfies the requirement, your Degree Audit will be updated to reflect that you satisfied the PSR. Students engaging in this option are strongly encouraged to check in with the Public Interest Office prior to do the work to confirm it is eligible.

Please note: You are not required to complete the steps outlined above if you are satisfying the public service requirement via options #1, 2, or 3 above. For these options, your Degree Audit will reflect that you satisfied the PSR at the conclusion of the relevant semester.

Students are strongly encouraged to complete this requirement before their last semester of law school.

For more information about the PSR, visit this page (<http://www.law.du.edu/index.php/public-service-requirement/>) and/or contact the Public Interest Office at publicinterest@law.du.edu.

Upper Level Legal Writing Requirement

All law students must satisfy the Upper Level Legal Writing requirement prior to graduation. The requirement provides students additional instruction and practice in research, organization and expression.

To satisfy the requirement, each student must*:

- Complete a written product of at least ten (10) pages on an appropriate legal subject determined by a professor and the student.
- Secure the professor's written comments as to the substance and style of the student's written project
- Prepare a second draft of the written project in response to the professor's comments to the professor's satisfaction.

Students may satisfy the Upper Level Legal Writing requirement in the following ways:

a. *Advanced Legal Writing Course*

A student can enroll in and successfully complete the upper level legal writing course entitled "Advanced Legal Writing."

b. *Designated Seminar Classes or Clinics*

A student can enroll in and successfully complete a seminar or clinical course that satisfies the Upper Level Legal Writing requirement. This designation is available on the class schedule published by the Office of the Registrar. Not all clinics and seminars satisfy this requirement.

c. *Directed Research Projects*

The student may enroll in and successfully complete a 2-3 credit hour Directed Research Project with a full-time faculty member. If the student successfully completes a Directed Research project that fulfills the Upper Level Legal Writing requirement, the professor must certify to the Registrar that the student has completed the Upper Level Legal Writing requirement. A student who elects to fulfill the Upper Level Legal Writing requirement under this option must make certain that the Registrar's Office receives certification from the professor that the student successfully fulfilled the Upper Level Legal Writing requirement. Only after the Registrar's Office has received official certification has the student completed this graduation requirement.

d. *Certification by Professor*

Any full-time or adjunct professor can offer a student the opportunity to complete the Upper Level Legal Writing requirement within the course taught by the professor or independently of the course taught by the professor. Upon successful completion of the Upper Level Legal Writing requirement, the professor must certify to the Registrar that the student has completed the requirement. A student who elects to fulfill the Upper Level Legal Writing requirement under this option must make certain that the Registrar's Office receives certification from the professor that the student successfully fulfilled the Upper Level Legal Writing requirement. Only after the Registrar's Office has received official certification has the student completed this graduation requirement.

e. A student may not use the same curricular offering to satisfy both the upper level writing requirement and the experiential requirement

Experiential Coursework Requirement

- a. All law students must successfully complete a curricular offering of six or more semester credits hours of experiential coursework.
- b. Experiential courses include simulations, clinics, and field placements. To satisfy this requirement, the course must be primarily experiential in nature and must (a) integrate doctrine, theory, skills, and legal ethics, and engage students in the performance of professional skills, which include knowledge and understanding of the law, legal analysis and research, problem-solving, written and oral advocacy, and the exercise of proper professional and ethical responsibilities to clients and the legal system; (b) develop the concepts underlying the professional skills being taught; (c) provide multiple opportunities for performance; and (d) provide opportunities for self-evaluation.
- c. The College of Law Registrar shall maintain a list of courses that satisfy the experiential skills requirement on the College of Law webpage. The College of Law Modern Learning Committee and Curriculum Committee shall be responsible for approving courses that satisfy the experiential requirement, and for periodically updating that list. Each course description for each class that satisfies the experiential requirement shall indicate that it does so.
- d. A student may not use the same curricular offering to satisfy both the upper level writing requirement and the experiential requirement

Career & Professional Development Requirement

- The Career & Professional Development Requirement ensures that Denver Law students will graduate with the knowledge and skills they need to thrive in the entry-level job market. All incoming JD students need to complete a total of seven Career & Professional Development experiences through a combination of qualifying programs and individual career advising appointments in order to graduate.
- To satisfy the CPD Requirement, each 1L student must complete 5 sessions of their choice during the 1L year from any or all of the following core competency areas:
 - Career & Academic Planning
 - Interviewing and Networking
 - Job Search Documents
 - Professional Development
 - Wellness / Personal Development
- The Office of Career Development & Opportunities ("CDO") will maintain a list of qualifying programs. Students may satisfy up to 2 of the 1L sessions through individual career advising appointments with the CDO.

- In addition, each JD student must participate in at least 2 individual career advising appointments after the 1L year.
- Students who have secured postgraduate employment and are no longer seeking employment may opt-out of the CPD requirement at any time by providing all ABA-required employment information to the CDO. The CPD requirement is administered and tracked by the Office of Career Development & Opportunities (“CDO”) and recorded by the Office of the Registrar. Completion of this requirement is indicated on the Degree Audit.

ABA Standard 303(c) Requirement

- All students must complete education on bias, cross-cultural competency, and racism that meets the requirements of ABA Standard 303(c) by completing the following:
- applicable mandatory orientation programming and one of the following:
 - successful completion of a non-credit bearing program designed to meet the standards of ABA Standard 303(c), or
 - successful completion of a clinic run by the Student Law Office (SLO), or
 - successful completion of an externship through the Externship Office, or
 - successful completion of a class designated by the law school as meeting the requirement. Class offerings in this area will vary.
- Note: Students involved in a class working with live clients (e.g law clinics, field placements, etc.) must complete the ABA Standard 303(c) education prior to or concurrently with enrollment in the live-client experiential class.

Master of Laws (LLM) in American Law Practice

Degree Requirements

Coursework Requirements

This customizable LLM degree introduces foreign-trained attorneys to the US Legal framework and allows for area specializations with a particular emphasis on College of Law’s Experiential Advantage Curriculum. Course plans vary based on individual student’s objectives.

| Code | Title | Credits |
|--|---|-----------|
| Required Courses: | | 18 |
| LAWS 4064 | Introduction to the American Legal System | |
| LAWS 4032 | Legal Analysis Strategies | |
| LAWS 4425 | Legal Profession | |
| LAWS 4034 | Legal Research and Writing for Graduate Students (Legal Research and Writing for Graduate Students) | |
| All students must also choose at least two courses from the following list (8 credits) | | |
| LAWS 4120 | Civil Procedure | |
| LAWS 4164 | Constitutional Law | |
| LAWS 4175 | Contracts | |
| LAWS 4190 | Corporations | |
| LAWS 4195 | Criminal Law | |
| LAWS 4235 | Evidence | |
| LAWS 4490 | Property | |
| LAWS 4610 | Torts | |
| Elective Courses | | 6 |
| The remaining 6 credits may be taken in any course in the curriculum that is available to JD students and is offered an in-person class. | | |
| Total Credits | | 24 |
| Minimum GPA: 2.7 | | |

Additional Degree requirements:

1. Students must complete the degree in no fewer than two full-length semesters.
2. Students may not complete more than 4 semester credits in any summer term while in the program.

Minimum Number of Credits Required: 24

Master of Laws (LLM) in GLOBAL Natural resources, energy, and environmental law

Degree Requirements

Dual JD/ IBT LLM degree available to those pursuing a JD at the Sturm College of Law. (<http://www.law.du.edu/index.php/graduate-legal-studies/dual-degrees/>)

Master of Laws in Clinical Legal Education

Graduate fellows in the Clinical Teaching LLM program enroll in a three-year program during which they are in residence in a particular clinic at the Student Law Office, the College of Law's in-house clinical program. Fellows earn between four and six credits per semester for each of the eight semesters they are enrolled. Over the course of their three-year term, fellows also supervise JD students enrolled in the clinics, work on cases and other legal matters, assist in teaching clinic seminars, and engage in scholarship.

Fellows earn academic credit for supervision of students and for scholarship, which culminates in the production of a publishable quality article. Fellows also participate in a teacher training courses as well as structured teaching rounds and scholarship workshops. Fellows must maintain a minimum GPA of 3.0 to remain in good standing and graduate from the program.

Degree Requirements

All students must complete a minimum of 48 credits in the program curriculum and complete a final, publishable quality paper.

| Code | Title | Credits |
|--|--|------------------|
| Orientation: | | |
| LAWS 4000 Fellowship Orientation (4 credits) | | |

| LAWS 4355 | Labor Law | |

Complete a capstone experience in the Workplace Law curriculum. Capstone options include:

a. An employment/labor related clinical experience through the SLO.

b. A workplace-related externship approved by the Program Director.

c. Completion of a research paper satisfying the College of Law's upper-level writing requirement through a Workplace Law class or through directed research with a Workplace Law faculty member.

d. Publishing a note on a workplace law topic in the Denver University Law Review under the supervision of a Workplace Law faculty member.

e. In the event that the SCOL obtains or establishes a workplace law publication, serving as a student editor for the review or journal.

f. Completion of a designated experiential advantage course in the Workplace Law curriculum.

Minimum Number of Credits Required **12**

A minimum of 12 credits is required.

Faculty

Robert S. Anderson, Professor of the Practice of Law, JD, University of California, Berkeley

Debra Sue Austin, Professor of the Practice of Law, PhD, University of Denver

Rebecca J. Aviel, Professor, JD, Harvard University

Tanya K. Bartholomew, Professor of the Practice of Law, JD, Drake University

Law Courses

LAWS 4002 Accounting for the Small Legal Practice (3 Credits)

This course will provide an introduction to basic accounting fundamentals, provide key concepts that apply to attorneys and solo practitioners, and explore situations where accounting plays a role in the practice of law. Topics include: understanding the balance sheet, income statement, statement accounting; partnership vs. LLC; income tax accounting; money management and cash flow in a law practice; retainers; trust accounts; income measurement; auditing; and billing/fees/timekeeping.

LAWS 4003 Appellate Advocacy (3 Credits)

This course focuses on developing skills necessary for effective appellate advocacy. It includes discussion of the critical differences between trial and appellate practice and techniques for presenting a persuasive case on appeal. Students will write appellate briefs and present oral argument to a panel of judges. Students will also observe oral arguments presented in Colorado appellate courts.

LAWS 4006 Accounting for Lawyers (3 Credits)

This class introduces students to accounting principles and practices to prepare them for the manner in which transactional and other lawyers will be presented with accounting, auditing, and financial matters that must be understood to enable them to provide effective legal representation to clients. The course includes an introduction to basic concepts of bookkeeping and financial accounting, reading and understanding traditional financial statements, financial statement analysis and the use of financial ratios, and legal issues involving accountancy. The class will also examine the role and responsibilities of the independent auditor and the concept of full and fair disclosure of financial information as required by generally accepted accounting principles.

LAWS 4007 Business Development: Marketing and Client Service (3 Credits)

This course provides students with the tools to effectively market a solo practice and connect with the client. Topics include: client relationship management; social media; building a brand; networking fundamentals; website development; managing client expectations; effective communications; and, referrals.

LAWS 4008 Privacy Law (3 Credits)

This Privacy Law seminar examines the development of privacy rights as a key consideration in the business and governmental policy debates within the U.S. and E.U. These debates range from the appropriate role of government collection retention and usage of personal identifiable information (PII) as well as regulating the private sectors' usage of PII. The E.U. has taken the lead in establishing an all-encompassing privacy policy for both the public and private sectors, whereas the U.S. has established a sectorial approach to establishing privacy law and regulations. Lawyers will continue to play a significant role in shaping governmental privacy policy, drafting statutes and regulations, as well as business drafting and negotiating technology contracts.

LAWS 4009 Community Expectations in Sustainable Development of Natural Resources (3 Credits)

The spread of democracy, the rapid development of open information regimes, and the Internet means that it is increasingly important what local communities want, and how they view natural resource production. Sustainable development is a set of concepts that attempts to harmonize a number of seemingly competing goals. These include providing better conditions of life and more opportunities for people, especially the poor. They also include bringing production and consumption within limits that an ecosystem can tolerate in the long run. The new legal challenges need to be understood on a variety of levels: 1) the emerging set of international standards and requirements governing foreign direct investment; 2) changing national priorities in mineral legislation and the laws governing the extraction and use of mineral products; and 3) meeting community expectations for sustainable development.

LAWS 4010 International Dispute Resolution (3 Credits)

This class addresses critical topics for the attorney representing clients in international business transactions, including the role of the international lawyer, performing international research and locating international and foreign law resources, jurisdiction, provisional relief, choice of law, proof of foreign law, choice of forum or arbitration, service of process, obtaining the evidence, act of state, sovereign immunity, law of the seas, and enforcement of judgments. The class will consider relevant treaties and U.S. law, including the Hague Convention on Choice of Courts Agreement, the Uniform Foreign Country Money-Judgments Recognition Act, and potential litigation under such laws as the U.S. Foreign Corrupt Practices Act. The course addresses topics relevant to both litigation and arbitration.

LAWS 4011 Labor and Employment Writing Seminar (3 Credits)

The goal of this class is for students to research and write a scholarly law review article of publishable quality. Students will select topics relating to current issues in labor and employment law and will write publishable articles based on independent research. Students will present their papers to the class toward the end of the semester. The top two papers will be selected for entry in the Jackson, Lewis National Labor and Employment Writing Competition.

LAWS 4012 Protecting Intellectual Property in International Business Transactions (3 Credits)

The first portion of this seminar will cover topics such as general international conventions and treaties designed to protect intellectual property; conventions and treaties are designed specifically for patents, trademarks and copyrights. Students will determine what protections to try to seek for a variety of intellectual property examples and, in pairs, if possible, negotiate and draft a licensing agreement and a manufacturing agreement. Students will then choose a topic from a selection of hypothetical problems, such as filing for patent protection in various jurisdictions, service of process on a foreign corporation, enforcing an arbitral award, resolving conflicts of laws, pre-litigation options. Each student will prepare a presentation for the class on the topic. The students will use the class feedback their research for the presentation to complete a paper on their topic. The drafting and paper will take the place of the final exam.

LAWS 4013 Trial Practice II: Depositions (3 Credits)

A deposition is the most important pre-trial discovery tool for the litigator. A successful deposition requires technical skills and extensive preparation. Most cases are won or lost based upon deposition testimony. The objectives of this class are to understand the applicable rules of civil procedure and the rules of evidence, the fundamentals of taking and defending depositions, utilizing depositions in discovery, settlement and trial, preparing witness for depositions, and applying proven strategies and techniques for successful depositions. The class will be taught using actual cases, deposition transcripts and video depositions.

LAWS 4014 Emerging International Standards for Sustainable Development of Natural Resources (3 Credits)

This course will focus on emerging international standards, legal, and "law-like" instruments designed to form the "rules of the road" in the dealings among private investors, host country governments, local communities, and other actors involved with sustainably developing natural resources. We will look at the track record of development: to what extent have natural resource projects helped make the world's poor better off? And what is meant by "better off?" What is a "fair deal" between a corporation from, for example, Europe or North America and a developing country government in Africa? How are disputes resolved?.

LAWS 4015 Intermediate Legal Analysis (3 Credits)

Intermediate Legal Analysis will provide students with instruction in analytical skills in substantive areas of the law taught in the first year curriculum. Students will do multiple short assignments, primarily practice exams, in small sections. The course is a skills-based course, designed to develop analytical strategies necessary for success in law school, including rule synthesis and application, statutory interpretation, case analysis and briefing, fact evaluation, discernment of legal principles and theories, and effectiveness in written communication. The course will provide multiple opportunities for practice and feedback with exercises designed to help students learn, understand, and recall course materials with a particular emphasis in developing writing approaches and strengths for solving hypothetical legal problems. Upon successful completion of the coursework, students should be able to separate relevant from irrelevant facts, analyze statutory and case materials, apply relevant law to material facts in a competent manner to solve hypothetical legal problems, communicate effectively in writing, and complete analytical tasks within limited time constraints. The course will conclude with a final exam.

LAWS 4018 Criminal Law (Advanced) (3 Credits)

This course examines actual criminal cases from around the world and the application of the law at the time and place of the crime. The students will then compare this to the law today in the same jurisdiction and the Model Penal Code as applied to the same facts. This course also reviews current Colorado Law as it relates to liability and punishment based on the same fact pattern. The course will encourage analysis of what the law is and should be, and the aftermath of each case will lead to discussion about what actually happened to the defendant and why.

LAWS 4019 Animal Rights (3 Credits)

Students who have participated in the Civil Litigation Clinic for one semester are eligible to enroll in the Advanced Civil Litigation Clinic. The purpose of the advanced clinic is to provide students who have developed fundamental trial skills in the areas of landlord-tenant, domestic violence, and workplace law to further develop those skills and to work on cases and matters with greater independence for an additional semester without repeating the seminar component of the clinic.

LAWS 4022 Criminal Clinic (Advanced) (3 Credits)**LAWS 4023 Civil Litigation Clinic (Adv.) (1-10 Credits)****LAWS 4025 Administrative Law (3 Credits)**

This class provides an introduction to the administrative process of government. Topics include Constitutional issues of separation of powers; delegation of legislative and judicial power; legislative and judicial authority in government agencies; agency exercise of policy-making functions; and controls imposed on agencies by administrative procedure legislation, Constitutional principles, and judicial review of agency action. Pre-req or co-req: LAWS 4164-Constitutional Law.

LAWS 4026 Criminal Procedure (Adv.) (3 Credits)

From the commencement of formal proceedings to collateral attacks on convictions, this course guides students through the laws regulating criminal prosecutions. The course topics typically include pleas; trial rights; discovery; bail procedures; sentencing; double jeopardy; the death penalty; and habeas corpus. The focus of the course is on the federal constitutional rights and the federal rules of procedure that are applicable to each stage of a criminal proceeding. Prerequisite: LAWS 4200.

LAWS 4027 Trial Practice II: Voir Dire (3 Credits)

This course covers the practical process of jury selection including the court rules and statutes that apply as well as Constitutional issues including fair cross-section and discriminatory challenges. An exploration of the demographic, legal, and case-specific issues that can be addressed in jury selection. The course couples traditional lectures with emphasis on student exercises. The course culminates in a final voir dire where the student is given a case problem and required to incorporate persuasive introductions, law questions, case-specific questions, and conclusions. Student participation throughout the class is required as both the inquiring attorney and as a juror.

LAWS 4028 Civil Procedure (Advanced) (3 Credits)

Topics for this course include post-trial procedure, injunctions, and other advanced civil procedure matters.

LAWS 4030 Family Law (Adv.) (3 Credits)

Advanced Family Law is a practicum oriented class. This class has some lecture components, but there will be significant practicum aspects for students interested in learning about the practice of family law. Students will gain a general knowledge of family law, and more specifically the substantive and procedural aspects of dispute resolution oriented domestic relations practice. The subjects covered are divorce, custody and child support jurisdiction (intrastate and interstate); domestic case procedure, meeting with and managing your client; working with opposing counsel; temporary status conferences and agreements, Domestic Violence, discovery and use of experts, unbundled legal services, access to justice issues, and the permanent orders (final orders in the divorce); and attorney's fees. Prerequisite: LAWS 4240.

LAWS 4031 Mediation (3 Credits)

Students who have completed the basic Alternative Dispute Resolution course may enroll in this program that focuses on clients with more complex cases in both the civil and criminal arenas. Clients will be selected based on both public interest aspect and the propriety of the case as a learning vehicle for planning, pleading, negotiation, discovery, research and trial work. Prerequisite: LAWS 4060.

LAWS 4032 Legal Analysis Strategies (3 Credits)

This course provides last semester graduating students with instruction, guidance and feedback to develop foundational skills necessary to achieve success on both the bar exam and in the legal profession as skilled legal analysts. Substantively, the course will focus on core bar exam subjects (constitutional law, contracts, property, evidence, torts and criminal law/procedure) using practical problems in all three examination formats of the bar exam - essays, performance tests, and multiple-choice questions. Initially, the course provides a diagnostic evaluation of analytical and communicative strengths using a performance test and multiple-choice questions. Subsequent classes require submission of written practice exams with follow-up class presentations by students of analytical strategies used to solve hypothetical problems posed in essay questions, performance tests and multiple-choice questions. The course includes a final exam given during the final exam period designed to simulate bar exam protocols.

LAWS 4033 Representing the Spanish Speaking Client (3 Credits)

This course is a survey of the substantive law of matters likely to be encountered by attorneys representing Spanish-speaking clients in the United States. Topics may include, among others, immigration law, family law, criminal law, employment law, wills and estates, and consumer rights. The course will introduce vocabulary required to communicate with Spanish-speaking clients in the United States, as well as, survey the basic substantive law in each area. The course will be taught in Spanish.

LAWS 4034 Legal Research and Writing for Graduate Students (2 Credits)

This course will introduce students to the fundamentals of legal analysis in a common law system and various forms of legal writing. The course will also introduce students to current practice in legal research in the US legal system. This course is available to non-JD students only.

LAWS 4035 Legal Research for Practice (2 Credits)

Most new lawyers spend the bulk of their time conducting legal research. This course provides students with the practical research skills needed to succeed in today's law practice settings. The course follows an innovative sequence of classes structured around the most important research methods, tools, and search techniques for legal research proficiency. This approach teaches students the skills they need to be as effective and efficient as possible in their research, regardless of the research platform selected or the type of legal source one wishes to search. This course also uses a problem-based approach designed to simulate the types of research requests made in law practice settings. Course assignments include a variety of exercises, both in-class and outside of class, as well as four research assignments that demonstrate students' understanding of practice-focused research. Laptops are required for this course.

LAWS 4037 European Union Environmental Law and Policy (3 Credits)

The European Union (EU) has become a leading player in the context of European environmental legislation and policy making. Of particular interest has been the underpinning of the EU's single market, and environmental protection, the importance of which is clearly set out in the European Community Treaty. Matters dealing with climate change, genetically modified organisms, and recycling are now dealt with on a regular basis at EU level.

LAWS 4042 Trial Practice (Advanced) (3 Credits)

This class is an advanced study of trial practice issues and skills. Prerequisite: LAWS 4635.

LAWS 4048 Agency Partnership & LLC (4 Credits)

This course investigates the structure and implications of various unincorporated business entities within three main categories: agency relationships, partnerships, and limited liability companies. Through the readings and various practice-oriented exercises, students will learn to understand and apply the rules, statutes, and doctrines that establish the governing framework for those entities, which range from some of the most basic to some of the most sophisticated forms of doing business. In addition to enhancing their ability to think critically and strategically about a variety of unincorporated business organization structures, students will develop practical skills that will improve their readiness upon graduation for the practice of law in various business contexts.

LAWS 4050 Topics in Constitutional Law: Individual Rights (3 Credits)

This course is an advanced constitutional law course, focusing on a selection of individual rights: equal protection; substantive due process; speech; the free exercise of religion; and the free establishment of religion. In each area, the course will seek to achieve a deep, descriptive understanding of the doctrine, and the ability to evaluate the doctrine in that area from a normative perspective.

LAWS 4051 Topics in Constitutional Law-First Amendment (3 Credits)

This is an advanced course in constitutional law that focuses on the law of the First Amendment. Most of the course will examine topics concerning the Free Speech Clause, including the theories of free speech, regulation of incitement, fighting words, defamation, offensive speech, hate speech, sexually explicit speech, and speech in the context of new communication media. It will also cover free speech doctrine and how it applies to symbolic speech, speech on government property, government compelled speech, speech in schools and by public employees as well as some topics concerning freedom of the press. The last part of the course will cover issues of freedom of religion under the First Amendment's Free Exercise Clause and Establishment Clause.

LAWS 4055 Environmental and Agricultural Law (3 Credits)

Agriculture contributes more than \$800 billion to the U.S. gross domestic product and provides 11 percent of US employment. As important as the food and fiber industries are to the American economy, devoting land to agriculture significantly affects the environment. Crop production can diminish habitat for wildlife, destroy wetland areas, erode the soil, cause nutrient and pesticide runoff, and pollute the air and water. This course addresses the complex and interconnected relationship of agriculture and environmental law, agriculture's historical roots in the United States, the evolution of agricultural policy, and modern developments in agriculture and environmental protection. The course is divided into three parts. In Part I, we will explore agriculture in a historical legal context and discuss USDA and Farm Bill programs. In Part II, we will focus on key environmental statutes and regulatory schemes that affect agriculture, including the Swampbuster program designed to prevent soil erosion and protect wetlands, the Clean Water Act, and the problems presented by Confined Animal Feeding Operations (CAFOs). In Part III, we will focus on emerging food systems in the United States, including certification and labeling programs, regulation of genetically engineered crops, the challenges (and opportunities) presented to farmers by climate change, as well as current and future trends in food production. We will discuss key policy and legal issues that surround each of these topics, with a particular focus on administrative law. Case studies of specific lawsuits will often be used to illustrate fault lines in how our society attempts to balance the need to produce cheap and abundant food against the need to protect the environment and public health.

LAWS 4060 Alternative Dispute Resolution (3 Credits)

The course examines the full range of contemporize dispute resolution processes: negotiation, mediation, arbitration and formal litigation. Conceptual and functional similarities and distinctions between these processes are explored. Additionally the processes; impacts upon disputants, role of the lawyer, the legal system and social order are reviewed.

LAWS 4064 Introduction to the American Legal System (2 Credits)

This course is designed for international LLM students who have not previously had exposure to either the US legal system or other common law systems. It focuses on the American legal system, include the three branches of government, federalism, the hierarchy of courts, and the anatomy of a law suit. Students will get a rigorous writing experience, drafting at least on legal document, such as a memorandum or a brief. In doing so, students will learn about legal research, analysis, writing, and Bluebooking. Students may also be asked to deliver and oral argument.

LAWS 4065 American Legal History (3 Credits)

This course concerns itself with the interaction between the legal system and social change in what is now the United States. Chronologically, the course materials run from the colonial period to the New Deal, although the nineteenth century will receive particular emphasis. A principal focus is the interrelationship of law, social life, economy, and ideology.

LAWS 4070 Antitrust and Unfair Competition (3 Credits)

The expansion of our economy over time has required the federal government and the courts to rethink their respective roles in regulating business conduct in the United States. The laws regulating business conduct are as dynamic as the notion of competition itself. This course teaches the history and fundamentals of antitrust and unfair competition laws in the United States. This course discusses the competitive problems which arise from monopolization, price and supply agreements, tying arrangements, exclusive dealings, cartel activity and mergers. The course also examines the interplay between federal, state and private enforcement of these laws.

LAWS 4080 Real Estate, Title and Finance (3 Credits)

This is an introduction to real estate transactions as they are encountered in the practice of law. We have shortened the course to a two-hour format to make it more accessible. Our emphasis will be on the representation of a client or an institution in the title and finance aspects of the real estate deal, which are central to every transaction. We will spend less time on contract formation and the role of brokers.

LAWS 4085 Trial Practice III: Trial Practicum (3 Credits)

Trial Practice III - The Trial Practicum (TP) is based upon the same educational platform as Trial Practice III - The National Trial Team (NTT). They are the same course, with the only difference being the TP students do not travel to compete against other schools, rather TP students compete in intra-school tournaments. TTP was created in response to the students who desire to benefit from the intensive study and simulated pre-trial and trial experience received by students on the National Trial Team course, and be "practice ready" upon licensure. This year-long, nine credit (three per semester), course is by invitation-only, and is demanding and intensive.

LAWS 4089 Business Development: Marketing & Client Services (3 Credits)

This course provides students with the tools to effectively market a solo practice and connect with the client. Topics include: client relationship management; social media; building a brand; networking fundamentals; website development; managing client expectations; effective communications; and referrals.

LAWS 4090 Bankruptcy (4 Credits)

This course introduces the federal bankruptcy system and Bankruptcy Code, including both the law of consumer bankruptcy and the law of corporate reorganizations. Topics include the rights of creditors in bankruptcy law and state law, the scope of the automatic stay, the treatment of executory contracts, the sale of assets in bankruptcy, the avoiding powers, bankruptcy planning, the restructuring of corporations in Chapter 11, and the procedure for confirming plans of reorganization.

LAWS 4095 Real Estate (3 Credits)

This course serves as an introduction to contractual, priority of right, and title assurance issues involved in transferring real estate. This is a highly recommended survey course for all law students regardless of specialization because much of the course material is heavily examined on the Multi-state, Colorado and other state Bar Exams. This class also serves as a gateway course for real estate specialists.

LAWS 4096 Patent Law (3 Credits)

This course reviews the major patent law doctrines. Topics include patentability requirements under 35 U.S.C. 101, 102, 103, and 112, claim construction, various infringement doctrines, affirmative defenses and remedies.

LAWS 4100 Basic Tax (4 Credits)

This course provides students with a general understanding of tax law. Materials cover topics from personal and business deductions, to property basis and depreciation.

LAWS 4105 Business & Commercial Law Sem (1-3 Credits)

Topical seminars scheduled periodically to afford students the opportunity for focused study of business and commercial law matters such as: consumer credit; mergers and acquisitions; corporate practice; bankruptcy; antitrust; quantitative evidence; representation of minority- and women-owned business firms. Prerequisite: LAWS 4190.

LAWS 4108 Governance Workshop: Transparency and Privacy (2 Credits)

This seminar will focus on cutting-edge legal issues related to governance, with a special focus on information: transparency, government accountability, information collection, and privacy. It will also provide an opportunity for students to engage in substantial scholarship of their own, improving their writing skills and providing insights into avenues for publishing written work. Most weeks, the Workshop will host a professor from another school to present a draft of a paper that has not yet been published. Students will carefully read the draft and participate in an in-depth discussion with the author. Through this process, students will have the opportunity to engage with many of the leading thinkers in the field. Some weeks, substantive material will be covered related to the course topics, including topics related to writing legal scholarship. Students will develop their own writing both in the workshop itself, and in scholarship groups of other students that will be assigned for the semester. Students will be expected to produce a significant piece of scholarship related to the topical area of this course by the end of the semester.

LAWS 4110 Business Planning (3 Credits)

The course introduces students to the transactional lawyering considerations involved in forming and representing an emerging growth business. The course examines the life cycle of a start-up company, including selecting the appropriate entity form, structuring the economic interests and managerial control among various owners, considering the lawyer's duties to the entity in dealing with its founders and management, and documenting various approaches to raising capital. Using a simulated deal format, students will draft, review and analyze documents typically used in organizing and financing a start-up business.

LAWS 4112 Trademark Law (Advanced) (2 Credits)

This seminar focuses on complex practical and legal issues confronted by today's trademark practitioners, ranging from brand protection strategies to litigating equitable relief claims for trademark infringement. The course also covers how trademark principles are being applied to the internet and e-Commerce. The course focuses on U.S. trademark law, but includes exposure to the aspects of international trademark law that are most frequently encountered by U.S. trademark practitioners. The course calls for students to participate in hands-on exercises, such as developing a new brand and arguing a preliminary injunction motion. The course requires a basic familiarity with trademark law, but the specific Trademark Law class is not a prerequisite. Prerequisite: LAWS 4310 or equivalent.

LAWS 4115 Trademark Law (3 Credits)

This course covers common law doctrines. Topics include the acquisition and preservation of trademark rights, false advertising claims, infringement doctrines, defenses, and remedies, with attention to internet issues and recent developments in the law. Recommended prerequisite: LAWS 4310.

LAWS 4117 Taxation of Property Transactions (3 Credits)

This course includes basis of property; capital expenditures and current expense comparison; depreciable status; amortization of intangible property; depreciation methods; property casualties and losses; profit or loss computation and characterization for taxable property dispositions; limitations on passive losses; lessor and lessee reporting; tax-deferred dispositions. Cross listed with TAX 4110.

LAWS 4119 Animal Law Survey (2 Credits)

This class is an introduction to the field of law referred to as "animal law." It is a survey course; we will study a range of legal topics that implicate the status and well-being of non-human animals. The course will not simply look casually or superficially at a spattering of areas where the law intersects with animals. Rather, the goal is to demonstrate that the field of animal law, like all great topics of legal study, is relevant to understanding general trends and overarching themes in U.S. law and policy. The course is a blend of theoretical and doctrinal materials, of historical reflections and future strategies. We will explore a variety of animal law topics and approaches for understanding "animal rights," but an overriding theme of the course is to understand whether and to what extent animal protection should be considered a civil rights movement. What is the role of activists versus lawyers? What is the role of criminal law in advancing the agenda of the movement? What is the role of constitutional law, and of science? And, do some species deserve more legal protections than others, and if so why?.

LAWS 4120 Civil Procedure (4 Credits)

This required introductory course examines how Constitutional statutory and judicial rules frame the determination of court controversies. They also explore the doctrines, remedies, and other principles pertinent to judicial dispute resolution.

LAWS 4129 Comparative Corporate Law Seminar (2 Credits)

Comparative Corporate Law examines the system for forming and managing businesses in the United States and overseas. We examine the impact of culture and other factors on legal regimes and examine whether a uniform international system is developing. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4131 Commercial Law Survey (4 Credits)

This course provides an introduction to the concepts and methods of commercial law. As a survey course, it explores the major Articles of the Uniform Commercial Code, namely, Article 2 (Sales), Article 9 (Secured Transactions), Article 3 (Payment Systems), as well as Article 5 (Letters of Credit) and Article 7 (Documents of Title). In addition, the intersection of Article 9 and Bankruptcy Law will be discussed in some depth. The completion of this course gives students a firm footing for any advanced course in commercial law. Students taking only one course in commercial law receive broad exposure to the basics of commercial law.

LAWS 4132 Colorado Legal Research (2 Credits)

This course introduces students to legal materials generated by executive/administrative, legislative, and judicial branches of Colorado government. Students develop research strategies for answering legal questions using primary and secondary resources and learn to relate the various sources of authority to the structure of Colorado government. Students are required to bring laptop computers to class.

LAWS 4133 Corporate Social Responsibility (3 Credits)

Corporate Social Responsibility represents the integration of a various environmental, social, ethical, and even political considerations into basic business strategies to produce a positive impact on society while still earning profits. With increasing frequency, consumers and investors reward companies that embrace CSR by purchasing their products and stock. This seminar in Corporate Social Responsibility explores a variety of pressing legal issues involving corporate governance, sustainable development, shareholder activism, executive compensation, the role of religion in the boardroom, international regulation, and CSR certification, among other topics. Through the readings and discussions, students examine the American approach to CSR in light of international regulatory efforts and models of socially responsible business practices in various countries around the world. Students gain a greater sense of the special role lawyers play in burgeoning CSR movement by examining some sophisticated examples of corporate strategy, planning, and litigation on CSR matters. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4135 Comparative Law (3 Credits)

Comparative Law is the study of the foundation of legal traditions and systems which exist in the world today. The major topics covered in this course are legal history and culture; legal structures; legal actors; and procedure and sources of law. The interactive course begins with an overview followed with coverage of each of the topics in relation to the United States legal system. We then cover the same topics in relationship to the common law tradition and the civil law tradition.

LAWS 4137 Comparative Environmental Law (3 Credits)

Comparative Environmental Law is an introduction to the growing network of international law (multilateral and bilateral treaties, customary law, adjudications, etc.) that govern environmental law. The course focuses on international legal issues including global climate change; trans boundary pollution; resource depletion; toxic waste export; biodiversity and wildlife/plant extinction; deforestation; desertification; ocean pollution; sustainable development; etc. (The internal domestic environmental laws of individual countries receive some attention as does trade law, but these are covered with more detail in Comparative Law and International Business Transactions, respectively).

LAWS 4139 Commercial Law for Foreign Investors in Guatemala (2 Credits)

This class uses the Dominican republic-Central America-United States Free Trade Agreement (CAFTA-DR) and the North American Free Trade Agreement (NAFTA) to examine the legal framework regulating foreign investment in Central America and Mexico. With Guatemala's ratification of CAFTA-DR, Guatemala opened its doors not only to trade but also to foreign investment, including from U.S. companies looking to do business in Guatemala. While the CAFTA-DR includes norms that govern the relationship between foreign investors and Member States, the domestic laws of each Member State continue to provide the central regulatory structure that governs relations among the parties, including in the areas of commerce, intellectual property, labor and the environment. This is an introductory course that examines the principle commercial norms that would apply to foreign investors in Guatemala, with a special emphasis on the law of contracts. The course examines the comparable norms applicable under NAFTA and introduces the topic of how CAFTA's ratification has promoted rule of law reforms in Guatemala in the areas of commerce, intellectual property, labor and the environment. This course is taught in Spanish.

LAWS 4143 Commercial Paper (2,3 Credits)

This course introduces students to Article 3 of the Uniform Commercial Code, Negotiable Instruments. After studying this part of the UCC at the beginning of the semester, students will engage in a simulated, complex business transaction for the remainder of the course. The simulation involves problem solving, extensive document drafting, client counseling and professionalism, among other topics. The simulation involves transactions in a business/banking context, but is not an overview of banking law.

LAWS 4144 Comparative Free Speech and Access to Information in the Americas (2 Credits)

This course looks at the history and text of the guarantees of free speech in the constitutions of the United States and Latin American countries, including Guatemala; at judicial decisions interpreting them; and at the actual scope of those guarantees of free speech in practice, with emphasis on the function of free speech in facilitating democracy. The course also looks at the impact of globalization on free speech guarantees, including the impact of international treaties, the activities of NGOs, and speech on the Internet. The course compares the systems for providing citizens access to government information in the U.S. and Latin America, particularly Guatemala, and looks closely at areas where interest in disclosure and secrecy conflict.

LAWS 4145 Computer and Internet Law (3 Credits)

Computers and Internet Law is designed to consider the areas in which computer technology and the legal environment intersect. This includes legal protection of computer software; contracting for computer services; computer data banks and privacy; the check-less society; and the relationships between Federal Communications Commission policies and computers.

LAWS 4160 Conflict of Laws (3 Credits)

Conflict of Laws is an analysis of legal problems arising in cases when at least one of the operative facts cuts across state or national boundaries. Topics covered include problems of interstate jurisdiction over parties and subject matter the application of principles of full faith and credit and comity on the recognition and enforcement of interstate and multinational judgments; the comparison of various theories of law choice in the context of the Constitutional threshold constraints of the due process and full faith and credit clauses.

LAWS 4164 Constitutional Law (4 Credits)

This required introductory course examines the role of the United States Supreme Court and, in particular, the Court's power in exercising judicial review in cases interpreting the U.S. Constitution. The course focuses primarily on two topics. First is the doctrine of Separation of Powers: examining the structure and interrelationship of the three branches of the federal government, Congress, the Executive Branch, and the federal judiciary. Second is the doctrine of Federalism: the relationship and power distribution between the federal government and state governments. In addition, all sections devote part of the course to an introduction to at least one aspect of the large field of individual constitutional rights. The specific rights covered vary by instructor. Among the possible topics are: the Equal Protection Clause and Due Process Clause of the Fourteenth Amendment, the First Amendment, and/or the Fifth Amendment's Takings Clause. Students who wish to gain a deeper understanding of these topics are strongly encouraged to take Constitutional Law II.

LAWS 4166 Constitutional Law II (3 Credits)

This course provides upper level students exposure to a range of constitutional issues not covered in the basic required Constitutional Law course. At the discretion of the faculty, and in addition to a survey of constitutional law issues, this course may emphasize one or more specific topics, including but not limited to Sexuality, Causation, Poverty, First Amendment and Individual Rights.

LAWS 4168 Constitutional Litigation Seminar (3 Credits)

This course examines individual and class action litigation brought against government officials for the violation of constitutional rights under 42 U.S.C. section 1983, the primary federal civil rights statute, and other civil rights statutes. The historic interplay between substantive Constitutional law and traditional doctrines of tort liability has developed into an entire body of law under section 1983 that any civil rights or government lawyer must regularly confront. The seminar focuses on the most critical substantive issues in pursuing Constitutional litigation. This includes the history and purposes of section 1983; the elements of constitutional torts; rules governing liability of government officials and municipal liability; immunity doctrines; remedies; jurisdictional and procedural barriers to section 1983 litigation; and recovery of attorney's fees. The class also discusses the availability and viability of alternative remedial mechanisms to section 1983. Prerequisite: LAWS 4164.

LAWS 4169 Constitutional Law Writing Seminar (3 Credits)

This course satisfies the Upper Level Writing requirement (ULM). Permission by instructor only.

LAWS 4175 Contracts (4 Credits)

Consideration of the restatement of contracts and the relevant provisions of the Uniform Commercial Code. Legal protection accorded contracts: remedies and measure of recovery; damages; specific performance; restitution. Elements of agreement: preliminary negotiations; agreements unenforceable for indefiniteness; mutual assent. Consideration and the seal; bases of contractual liability; consideration; reliance and estoppel; mutuality. Problems of offer and acceptance; termination of offeree's power of acceptance; contracts concluded by correspondence; unilateral contracts—notice, knowledge, revocation of offer; contracts implied from conduct. Special problems of consideration. Third-party beneficiaries. Assignment. Effects of changes or unforeseen circumstances. Conditions in contracts—problems of draftsmanship: express and implied conditions; conditions precedent, subsequent and concurrent; severability of contract provisions. Procedures after default. The Statute of Frauds.

LAWS 4178 Contracts Drafting (3 Credits)

This course addresses the perspectives and skills that a lawyer must develop in order to assist clients with transactional work and aligning business objectives and contracts. In addition to delving deeper into selected areas of substantive contract law, students read materials that focus on writing and interpreting contractual provisions. Because a core focus of the class is writing for contracts, students regularly engage in drafting exercises to hone their drafting skills. The course also focuses on negotiation in a transactional setting, and how discussions with both clients and other parties can distill the key business terms that are to be reflected in a contract. Although substantive law and theory is utilized throughout the course, the primary objective of the course is exposing students to some of the practical, real-world skills essential to a transactional law practice.

LAWS 4179 Construction Law Seminar (3 Credits)

This course examines the legal relationships, obligations, rights, and remedies that govern the diverse parties to a construction project, including owners, lenders, contractors, material men, sureties, insurers, subcontractors, laborers, and others. A substantial portion of construction law (and accordingly, the primary focus of this class) is advanced contract law. Experience in the construction industry is not required, but those students who are unfamiliar with construction will benefit from spending a little extra time learning basic construction concepts and processes.

LAWS 4181 Corporate Drafting Seminar (3 Credits)

Corporate drafting focuses on writing responsive, lucid, unambiguous corporate documents. Students assume the role of the in-house counsel and other members of the corporate negotiating team as the team structures, negotiates, drafts, and implements corporate transactions. This course requires extensive writing. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4182 Negotiation and Drafting in an International Business Context (4 Credits)

This course will focus on the basic principles of negotiation and contract drafting, as applied to international business transactions. Special emphasis will be placed on financial and corporate contracts, with a focus on a cross-border merger and acquisition transaction. The class will have three major components. First, we will cover the basic principles of effective contracts negotiation, paying particular attention to issues of cultural understanding and inter-cultural communication. Second, we will cover the basic principles of clear and unambiguous contract drafting and we will study and apply the basic 'geography' or building blocks of a cross border merger contract. Finally, we will draft and revise specific documents and agreements necessary to complete a cross border merger transaction. The seminar is taught through a combination of lectures, simulations, and hands-on drafting and negotiation exercises. This class requires extensive writing and team-based negotiations.

LAWS 4185 Business Entities (4 Credits)

The course provides an overview of the differences in the operation of a trade or a business as an LLC/LLP, an S-Corporation and a C-Corporation. The class offers an overview of the state law requirements for the operation of each type of business (Model Business act and LLC/LLP state statutes) and the difference in the tax treatment for each type of business. The objective is to give students a basic understanding of some of the do's and don'ts for each business and how they might advise a client as to the preferred business form in typical factual situations. The class explores both the legal and tax effects during the life cycle of any business, including formation, operation, distribution, redemption, sale of an interest, liquidation, mergers and divisions, and the death of the owner. Prerequisite: LAWS 4100.

LAWS 4186 Corporate Taxation I (3 Credits)

The federal income taxation of corporations and their shareholders with emphasis on the creation of the corporation, establishment of its capital structure, operational alternatives, distribution to shareholders, stock dividends and redemptions, personal holding company, and accumulated earnings tax. Cross listed with TAX 4200.

LAWS 4187 Corporate Taxation II (3 Credits)

A continuation of Corporate Taxation I with emphasis on corporate reorganizations, operation, liquidation of subsidiary corporations and corporate division, and carryover of tax attributes. Cross listed with TAX 4300. Prerequisite: LAWS 4186.

LAWS 4188 Corporate Taxation III (3 Credits)

Advanced corporate taxation problems with emphasis on collapsible corporations; liquidations; detailed study of sections 305, 36, 307; loss carryovers and Subchapter S corporations. Cross listed with TAX 4330. Prerequisite: LAWS 4186.

LAWS 4190 Corporations (4 Credits)

Corporations provides students with a basic introduction to corporations, including the roles of shareholders and creditors. The instructor also covers the various duties and liabilities of officers and directors, and supplies a brief overview of the applicability of the federal securities laws.

LAWS 4195 Criminal Law (4 Credits)

The course explores the definition of crime and criminal liability.

LAWS 4197 Victim's Rights (3 Credits)

Victim's rights has emerged as an important arena for the criminal justice field in the 21st Century. Anyone planning a career in criminal justice will want to engage in this seminar class to learn about the law and its application to victim's rights. This class is designed to explore beyond advanced criminal procedure the role of the criminal justice system and its response to victim's. In-depth discussions will be held about victim's rights and criminal procedure.

LAWS 4200 Criminal Procedure (3 Credits)

Criminal Procedure outlines Constitutional and other rules regulating pretrial evidence acquisition by government officials in criminal matters. The course commonly includes the following topics: an overview of criminal justice administration; arrest; search and seizure; the exclusionary rule and its administration; wiretapping electronic eavesdropping; entrapment; interrogation; and confessions and lineup practices.

LAWS 4201 Death Penalty Jurisprudence (3 Credits)

The course is designed to make students aware of the substantive body of law surrounding the modern death penalty and the policy issues raised by the law. The course begins with the class constructing a fair death penalty. Students decide whether they, as the omnipotent legislature, want a death penalty. Then, students construct one that is fair, just and humane, and that achieves the goals that they have established for their death penalty.

LAWS 4202 Disability Law (2-3 Credits)

This course covers theories of disability and provides a brief history of disability rights in the United States. The course will explore the major federal laws protecting individuals with disabilities in various contexts such as housing, public accommodations, schools, and employment. Relevant federal statutes we will examine include Section 504, the Americans with Disabilities Act, the Fair Housing Act, and the Individuals with Disabilities Education Act. The course will also provide an overview of the Supreme Court's landmark decision in *Olmstead v. LC*.

LAWS 4203 Elder Law (3 Credits)

The course explores a range of issues relevant to legal counseling of elderly clients, such as mental and physical impairments, public assistance, Medicaid, social security, nursing homes, guardianships, trusts, and right to die issues.

LAWS 4205 Employment Law Survey (3 Credits)

This course provides a broad overview of the field of employment law. It begins with an exploration of the employer/employee relationship and the "at will" rule. It then addresses various constitutional, statutory, and common law doctrines that tend to be applied to the employer/employee relationship, often as exceptions to the "at will" rule. Contract, tort, and anti-discrimination doctrines will be covered, as well as constitutional doctrines addressing free speech and privacy in the workplace, and regulatory regimes addressing wages and hours. Finally, this course explores the post-employment relationship, including trade-secrets and non-competition agreements. These topics are addressed at both a theoretical and practical level.

LAWS 4206 Environmental Law Clinic (3-6 Credits)

The goal of the Environmental Law Clinic of the Student Law Office (SLO) is to protect the environment and public health, while teaching students practical legal skills that will translate into any practice area. Students applying for the Environmental Law Clinic are asked to select between two tracks: the Federal Wildlife Project or the Colorado Urban Project. Students who select the Federal Wildlife Project (FWP) track in the Environmental Law Clinic will work on the preservation of endangered species and their habitats throughout Colorado and the western United States. Students who select the Colorado Urban Project (CUP) track in the Environmental Law Clinic will work to address the emerging environmental issues along Colorado's urban Front Range. This course may satisfy the Upper Level Writing Requirement (ULW). Corequisite: LAWS 4802. It is recommended, but not required, that students complete Evidence and Legal Profession before registering for this clinic.

LAWS 4210 Energy Law (3 Credits)

Energy Law presents the regulation of production, conversion, transportation, distribution and pricing of fossil, hydro, nuclear, and other conventional sources of primary energy. It also offers insight into the regulation of renewable energy resources, including energy from the sun, wind, biomass, oceans, earth (geothermal), and rivers (including low-head hydro). There is an emphasis on new legislative and judicial development relating to these various energy sources. The course is taught in a seminar format, and students present and critique classmate papers as part of the class. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4212 Public Interest Capstone (0 Credits)

This is a zero-credit opportunity for JD students nearing graduation that will allow for the informal community building that is so critical for sustaining student commitment and public interest attorneys for the long term. It will be a time for sharing, reflection, camaraderie, and connections, as well as advising and planning for a career in the public sector.

LAWS 4214 Copyright Law (3 Credits)

This course covers the major copyright law doctrines. Topics include the subject matter of copyright, the scope of protection, rights conferred, infringement doctrines, defenses, remedies, and attention to particular industries and recent development in the law. Recommended prerequisite: LAWS 4310.

LAWS 4215 Entertainment Law (3 Credits)

Entertainment Law focuses on issues that have an impact on the entertainment industry. Topics include copyright; service and trademark; licensing; publishing; unfair competition; antitrust; agency; and labor law. The class also explores publishing agreements.

LAWS 4218 Discovery Practicum (3 Credits)

Most civil litigations never get to trial. Instead, these cases are settled after the discovery period has revealed the strengths and weaknesses in the case. This course focuses on the instruments, rules, and case law governing discovery of information in litigation: interrogatories, document requests, requests for admissions, and depositions. It is taught in the form of a "whole-course simulation," which means students will represent a party and have an opposing counsel in a simulated litigation throughout the course. Students prepare and serve discovery documents (just as in practice), take, defend, and act as a witness in a deposition, and reach a settlement of the case at the end of the course. Because of the nature of the course and the many practice documents prepared during the semester, there is no final examination. This course will satisfy the Upper Level Writing requirement (ULW). This course is a "Carnegie Integrated Course."

LAWS 4219 Environmental Justice (3 Credits)

This course will introduce students to environmental injustice - the disproportionate environmental impacts to low-income and of color communities. The study of environmental injustice delves into environmental, civil rights and poverty issues. Specifically, environmental justice seeks to remove these disproportionate impacts through a combination of laws, most notably civil rights, environmental and tort. Students completing this course will understand what environmental injustice is, the history of the Environmental Justice movement in the United States and the tools used to try to level the playing field regarding environmental justice decision-making. The class will include hands-on exposure to those facing such environmental injustices. The grade for this course will be based on class participation, short assignments and a final paper.

LAWS 4220 Environmental Law (3 Credits)

Environmental Law covers the major federal laws and programs for environmental protection. These laws and programs include the National Environmental Policy Act; Clean Water Act; Clean Air Act; Resource Conservation and Recovery Act; and Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Although the course focuses primarily on federal statutory law, it also incorporates some discussion of common law remedies. Recommended prerequisite: LAWS 4025.

LAWS 4221 Navigating the National Environmental Policy Act (NEPA) (2 Credits)

The National Environmental Policy Act (NEPA) was the first major environmental law enacted in the United States, requiring Federal agencies to evaluate the environmental impacts of their proposed actions prior to making decisions. Both scorned and praised, familiarity with NEPA is must-know territory for any environmental lawyer. This class will leave you with a solid understanding of NEPA regulations and caselaw, categorical exclusions, environmental assessments and environmental impact statements, public involvement and public comment, interaction with other environmental laws and processes, recent and far-reaching streamlining efforts, how to write a NEPA document, and advice for working with Federal land management agencies.

LAWS 4224 Employment Law Benefits (3 Credits)

This course is a statute and case law course that introduces students to Employment Retirement Income Security Act (ERISA), the important federal law that controls the design and operation of virtually all employee benefit plans. The course offers students an understanding of the application of ERISA and how ERISA issues arise in business and private law practice. The classroom scenarios include lecture, problem solving and role playing to identify the kinds of experiences students are likely to experience in private practice.

LAWS 4225 Estate and Gift Taxation (3 Credits)

This class is a study of the federal estate tax; federal gift tax; and federal generation skipping transfer tax.

LAWS 4227 Employment Discrimination Law (3 Credits)

This course concerns federal constitutional and statutory law that prohibits discrimination in the workplace, including regulation of both private employers and the federal government. The course covers theoretical issues, such as the definition of equality, and practical problems that involve the complex procedural requirements of the applicable statutes.

LAWS 4229 Employment Law Seminar (3 Credits)

Students select topics relating to current issues in labor and employment law and will write publishable articles based on independent research. Students present their papers to the class toward the end of the semester. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4230 Estate Planning (2 Credits)

Estate analysis, including fact gathering and the analysis of data; the psychological aspects of "role playing" in estate planning; the members of the team (the attorney, the CPA, the life underwriter, the trust officer); life insurance in an estate and business planning context; planning with trusts, including revocable, short-term, and irrevocable; the transfer of a closely held business interest from one generation to the next, including full and partial stock redemptions, cross purchase agreements, private annuity, installment sale, retirement, recapitalization, qualified and nonqualified plans of deferred compensation; special estate planning considerations for the professional corporation, the highly paid executive, and the farmer and rancher; specific cases analyzed.

LAWS 4232 European Union Law (3 Credits)

The European Union (EU) has been described as the 21st century's newest superpower. Bearing in mind the rapidly growing importance of the EU, this course introduces EU law, and emphasizes its historical underpinnings, institutional framework, legal procedures, and internal market. Moreover, emerging policies (e.g. enlargement, environment) are considered. The course examines these topics in the context of European political integration and where appropriate, the ongoing tension in the trans-Atlantic relationship between the EU and United States.

LAWS 4235 Evidence (4 Credits)

This required course is an introduction to procedural rules that regulate the use of evidence at trial, including coverage of the mode of examination, relevance, impeachment, character evidence, hearsay, expert evidence, and privileges. Particular attention is paid to the Federal Rules of Evidence.

LAWS 4236 Election Law (3 Credits)

This course examines federal and state election laws. Topics to be covered include the Voting Rights Act, redistricting, the Electoral College, gerrymandering, ballot initiatives, and campaign finance. Time permitting, we'll also cover open records laws and regulations around lobbying.

LAWS 4237 Evidence Practicum (3 Credits)

This practicum is designed to help students build trial skills and make the transition from evidence law learned in the classroom to evidence used in the courtroom. It provides simulation-type experiences requiring students to understand the foundations required to admit different kinds of evidence, to anticipate evidentiary issues, to make and to respond to objections, and to prepare examinations designed to avoid objections. The course supplements Trial Practice by focusing heavily on the rules of evidence. Prerequisite: LAWS 4235.

LAWS 4238 Exempt Organizations (2 Credits)

The statutory exemption for "charities," social welfare and social clubs, homeowners' associations, fraternal orders, employee benefit organizations, mutual or cooperative companies, business and professional leagues, labor unions, exempt organizations, property title companies, federally organized or chartered organizations, and political organizations' activities, funds, and lobbying activities; prohibited transaction rules; the private foundation; the unrelated business and debt-financed income tax exposures; excise tax exemptions; administrative appeal and declaratory judgment procedures; anti-discrimination considerations; charitable contributions. Crosslisted with TAX 4430.

LAWS 4240 Family Law (3 Credits)

This course is an examination of laws that involve and/or regulate families. Students learn the legal rights of families in cases incidental to marriage or without marriage. This includes child-parent relationships and the dissolution of marriage. This class also provides students with an understanding of new familial relationships.

LAWS 4250 Federal Courts (3 Credits)

This is an advanced public law course that examines the role of the federal courts in our constitutional system. It focuses on the federal courts' role and power in relation to the other branches of the national government (separation of powers) and in relation to state and local governments (federalism). Specific topics include: the organic judicial powers of the federal judiciary, including Article III's Case or Controversy requirement; congressional power to restrict or expand federal jurisdiction, the Supreme Court's power to review state court rulings on federal law by direct appeal and on collateral review (habeas corpus), federal question jurisdiction, federal civil rights law under 42 U.S.C. § 1983, and many of the doctrines that limit federal judicial power to provide remedies to parties whose federal constitutional and civil rights have been violated, including official immunity, state sovereign immunity, and the abstention doctrines. It is highly recommended for students interested in pursuing federal judicial clerkships and/or careers in federal civil rights litigation, government representation, or other federal litigation.

LAWS 4251 Federal Wildlife Law (3 Credits)

This course covers federal wildlife law beginning with the Constitutional underpinnings of federal wildlife law. It focuses on the Endangered Species Act with some coverage of the Migratory Bird Treaty Act. The course takes new approaches to species and habitat preservation, paying particular attention to Colorado species.

LAWS 4259 Global Climate Change Law and Policy (3 Credits)

As concern over the threat of global climate change spreads, action on greenhouse gas emissions (GHGs) is increasingly commanding attention. This seminar consists of supervised research and writing on the issue of climate change and the legal and policy responses. The course focuses on the effects of climate change on development and the environment in industrialized and developing countries and the laws in the international, regional and domestic arenas that address the problem.

LAWS 4260 Gender and the Law (3 Credits)

This course examines the role of gender in many areas of the law, including employment discrimination and reproductive rights. Provides perspectives on the effects of gender-based hierarchy on the structure of the law and legal processes. Explore contemporary feminist jurisprudence and the impact of women in the legal profession.

LAWS 4262 Sexual Orientation Law Seminar (3 Credits)

This seminar offers an opportunity for students of any or no sexual orientation to study the relationship between law and sexual orientation to study the relationship between law and sexual orientation. Historically, law in the United States consistently and pervasively regulated the realm of human identity and behavior we call sexuality. Questions and claims challenging traditional assumptions about sexual orientation surfaced in the last twenty-five years. Our study of sexual orientation and law allows us to view the relationship between law and society through a new lens, that of sexual orientation. Specifically, we examine issues of sexual orientation arising in areas ranging from constitutional law criminal law, employment law, family law, health law, immigration law, to tax law. We discuss some or all of the currently controversial issues relating to sexual orientation and law, including such topics as the proliferation of both nondiscrimination laws and anti-gay initiatives like amendment 2 in Colorado, the constitutionality of laws prohibiting specified sexual behavior between different-sex and same-sex adults, the constitutionality of laws limiting the right to speak about sexual identity, public and private employment discrimination against gays and lesbians including the military ban on persons who are openly gay or lesbian, and discrimination against same-sex couples with respect to marriage, parenting, health benefits, and taxes.

LAWS 4265 Government Contracts Seminar (3 Credits)

This seminar provides an in depth examination of the unique statutory, regulatory and administrative process used by the U.S. Government when it annually spends more than \$1 trillion taxpayer dollars to contract for goods and services used by Federal departments and agencies. Topics include the contract award and contract administration processes, with an emphasis on practical solutions to issues which routinely confront attorneys who advise businesses that do business with the Government.

LAWS 4270 LLCs and Operating Agreements (1 Credit)

This course provides an overview of limited liability companies, including the attributes and characteristics of LLCs, the pros and cons of the LLC form, and a comparison of LLCs to other types of entities. The course also covers the structure and components of the operating agreement, including an in-depth examination of various provisions included in operating agreements. In conjunction with the course content, students will also be exposed to client interview techniques for in person client meetings, as well as client conference calls.

LAWS 4276 Health Law (3 Credits)

This survey course introduces students to how the legal environment of health care shapes both its quality and its distribution. The course begins with a foundation in how health care is both provided and financed in the U.S., including managed care, Medicare, and Medicaid. This foundation sets the stage for studying the laws and policies that impact health law, including ERISA, antitrust, fraud and abuse, the False Claims Act, Stark, and HIPAA. This course does not focus on bioethics or medical malpractice. Students must submit a publishable quality paper on a health law topic approved by the professor.

LAWS 4277 Holocaust Seminar (2-3 Credits)

This class focuses on conceptions of individual and state accountability. By understanding how the Holocaust occurred, and how individual and collective acquiescence combined with affirmative conduct, we can begin to grasp the complex web that created a moment in time where morality and civilization were abdicated and almost eradicated. We examine how law, culture, power, ignorance and fear combined to create the Final Solution, and how conceptions of moral agency and accountability were forged in flames that marked the death camps. Students read narratives of resistance and collaboration and historical accounts of how the U.S., Europe and religious institutions interacted with the Third Reich. Through the readings and discourse that follow, students have the unique opportunity to question what constitutes moral agency and how individuals and cultural systems should be held accountable for circumstances that created the Third Reich and its ideology. This class is interdisciplinary thereby integrating law with literature, political theory and philosophy. Prerequisite: instructor's permission.

LAWS 4278 Lawyering for Racial Justice (1 Credit)

This seminar provides a unique opportunity for Denver Law students to earn one credit by studying a significant topic related to the law and racial justice. The seminar will allow students to begin to develop 1) a substantive understanding of the application of critical race theory to a variety of contemporary legal and social issues, and 2) a sense of professional identity through the examination of lawyering practice in the context of critical race theory. Topics discussed generally change each semester to respond to current events and pressing needs and interests. The course may include guest lectures from faculty and practitioners in other disciplines. Students will thus have an opportunity to interact with an array of professors who have expertise and interest in critical race theory and practice.

LAWS 4280 Hughes Research Seminar (1-5 Credits)

Topic of Seminar to be determined by Hughes Research professor teaching the course.

LAWS 4285 Legal Research Skills - Specialized (0 Credits)

This zero-credit course introduces students to sources and methods for administrative law and legislative history research as well as subject-specific research on selected topics such as securities, natural resources, intellectual property, immigration, environmental and international law. Topics change each semester. Print and electronic materials are used throughout the course. Students must attend twelve (12) classes and pass the post-class assignments to complete the course successfully.

LAWS 4287 Legal Research Skills - Basic (0 Credits)

This zero-credit course introduces students to the basic primary sources of American law (cases and statutes), secondary sources, the Bluebook and citators and other tools for updating research. Print and electronic materials are used throughout the course. Students must attend eight (8) classes and pass the post-class assignments to complete the course successfully.

LAWS 4288 International and Human Rights: Indigenous Peoples (3 Credits)

This course explores some of the major contemporary legal issues facing indigenous peoples across the globe. The course covers issues as far ranging as: how indigenous groups are defined under the law; ethical and legal issues pertaining to indigenous self-governance including the tension between minority rights, individual rights, and democratic precepts; the uneasy application of self-determination law to indigenous self-governance; the implications of human rights, environmental, intellectual property, and international trade regimes for indigenous peoples; and international legal texts affecting indigenous peoples, such as the United Nations Declaration of the Rights of Indigenous Peoples. At the option of the individual student, this course can be used to satisfy the Upper Level Writing requirement (ULW).

LAWS 4289 Legal Research Skills - International (0 Credits)

This zero-credit course introduces students to sources and methods for international, comparative and foreign law research. Topics may include treaty research, international trade law, human rights law, international intellectual property law, customary international law and private international law. Topics change each semester. Print and electronic materials are used throughout the course. Students must attend twelve (12) classes and pass the post-class assignments to complete the course successfully.

LAWS 4290 Human Rights Law (2 Credits)

The course provides an introduction to international civil and political rights and economic, social, and cultural rights in the international arena. It also covers the means available to protect such rights of the individual and groups. The focus is on the implementation part at the United Nations and other international, regional and national settings. Prerequisite: LAWS 4320.

LAWS 4292 Individual Tax Problems (3 Credits)

Using the Internal Revenue Code and the Federal Income Tax Regulations as a basis, substantive issues relating to individual taxation are covered. Areas included are general concepts of gross income, individual employee benefits and deductions, charitable deductions, alternative minimum tax, deductibility and classes of interest, office in home and vacation homes, and a general overview of the interrelationships of various statutory and non-statutory principles. Cross listed with TAX 4020.

LAWS 4295 Immigration Law (3 Credits)

This is a study of the historical development and current jurisprudence in American immigration law. The course examines such concepts as sovereign authority, exclusion, expulsion and asylum, and current developments in the area.

LAWS 4297 Forced Migration & Human Trafficking (3 Credits)

This course will examine the laws and policies governing forced migration. Students will get an overview of the scale, scope, and causes of forced migration, and will explore what it means to be a refugee according to the international conventions and U.S. law. We will ask and try to answer questions including: what conduct constitutes "persecution"? How is someone fleeing violence different from a refugee? What kinds of durable solutions exist to address the refugee crisis? In this participatory class students will also learn about human trafficking and the national and international efforts to respond to this crime. In addition to the normal substantive course work, students are required to observe 4-6 hours of refugee-related hears at the Executive Office of Immigration Review in Denver.

LAWS 4298 Immigration Law Advanced (3 Credits)

This course provides theoretical and practical approaches to the representation of non-citizens in removal proceedings. This course is designed for students who have an interest in practicing immigration law with a focus on deportation and removal practice before the Department of Homeland Security, the Executive Office for Immigration Review, and the federal courts. The goal of this course is to give students a theoretical framework for identifying and assessing immigration issues, including immigration consequences of criminal convictions, and for formulating strategies for effective prosecution and representation of non-citizens in removal proceedings. The instructor also teaches the practical tools and procedures, which students may apply to actual case representation. Prerequisite: LAWS 4295 or an immigration related externship.

LAWS 4300 Native American Tribes and Federal Law (3 Credits)

This course introduces the legal relationship between Native American tribes and the federal government. This body of law, consisting of hundreds of treaties and Presidential executive orders, thousands of Congressional statutes, and tens of thousands of reported court decisions, is also known as Federal Indian Law. The course explores the legal development of Native American tribal sovereignty and self-determination from the British Crown to the present day, including tribes' rights to land and natural resources; the federal government's trust responsibility to tribes; tribe's inherent powers of self-government; modern civil and criminal jurisdiction; the relationship of tribes to state and local governments; the federal government's legal obligation to consult with tribal leaders on decision-making by executive branch departments and agencies, including with respect to cultural resource protection; and the legal and political status and civil rights of individual Native Americans and Alaska Natives in the federal constitutional system.

LAWS 4303 International Criminal Law Practicum (3 Credits)

In this course, the class collectively analyzes the genocide, war crimes and crimes against humanity charges against an accused in a major international tribunal prosecution. Each student is assigned witnesses in the case and is expected to analyze that testimony and record their work in the case database using Casemap software meticulously following previously established protocols. The work involves the students learning the nature of the conflict generally, thoroughly learning the indictment against Taylor, getting up to speed on the law of war crimes and crimes against humanity, and finally assessing the witness testimony for relevant facts and attributing those facts to the legal outline in the case.

LAWS 4304 Insurance Law (3 Credits)

A comprehensive overview of laws, standards, concepts and remedies related to Insurance, including: interests protected by Insurance; selection and control of risks; insurable interest; the principle of indemnity; types and classifications of Insurance; making, dealing with and termination of insurance contracts; underwriting and claims handling; regulation of Insurance and insurers; subrogation; and extra-contractual liability. This course will satisfy the Upper Level Writing requirement (ULW).

LAWS 4309 International Law and the Use of Force (3 Credits)

This course deals with the two aspects of the use of force by countries: the initial decision to resort to force and then the regulation of that force once the conflict begins. In 1945, the United Nations Charter set out to prohibit the resort to force by its member states except in two limited situations: self-defense or where authorized by the Security Council. The Geneva Conventions and its protocols, as well as customary international law, regulate how that force is applied. The subject of this course is how these provisions have been interpreted since 1945 and trends in the law that will guide us in the future.

LAWS 4310 Introduction to Intellectual Property (3 Credits)

This survey course covers the basics of United States intellectual property law, including patents, copyrights, trademarks, and trade secrets. The course addresses the policies underlying the protection of intellectual property and compares the different ways organizations and individuals can use intellectual property to protect their interests. This course is intended both for students who want an introduction to intellectual property and for those who intend to pursue a career in intellectual property law.

LAWS 4315 International Business Transactions: Survey Course (3 Credits)

This course provides students with a general overview of international business transactions. The course examines the legal framework of international sales transactions including the commercial terms of the sales agreements, shipping contracts, insurance, financing arrangements and customs documentation. The course also examines the foreign direct investment transaction, international franchise and distribution agreements. The regulation of international business is reviewed, with special attention to the World Trade Organization agreements and regional trade areas.

LAWS 4317 International Environmental Law (3 Credits)

This is an introduction to International Environmental Law – the expanding field of multi-nation treaties, laws, judicial decisions, policies, practices, and politics governing the global environment. IEL backgrounds students on the 21st century's hottest international law topics – sustainable development, climate change, transboundary air and water pollution, natural resources development, international trade, toxic waste and recycling, and protection of wildlife, ecosystems, human life, and human rights.

LAWS 4318 International Business Transactions: Federal Regulation (3 Credits)

IBT: Federal regulation examines the ability of the federal government to control international trade. The focus of the course is US export controls, embargoes, anti-terrorism regulations that apply to international commerce, and the Foreign Corrupt Practices Act. Students prepare a compliance program integrating these regulations into a workable framework for a company.

LAWS 4319 International Human Rights (3 Credits)

The seminar begins with a general overview of international human rights as put forth in the International Bill of Rights. The second part of the course focuses on the emerging area of corporate social responsibility and human rights. The last part of the seminar consists of student presentations on the topics of the research papers required for the course.

LAWS 4320 International Law (3 Credits)

International Law is the foundational course in public law, treaties, systems, and policies that bind nations into a world community of law. The class places special emphasis on the origins of international law; statehood; international responsibility and claims; use of force; and human rights.

LAWS 4341 International Commercial Arbitration Moot (3 Credits)

This course uses the Willem C. Vis International Commercial Arbitration Moot Competition to give students practical skills-based training in the most important aspects of international commercial arbitration and international sales law. The Vis Moot is based on a problem governed by the U.N. Convention on Contracts for the International Sale of Goods (the "CISG").

LAWS 4342 International and Comparative Mining Law (3 Credits)

The course deals with basic concepts of mineral law, as practiced in various jurisdictions. This includes exploration, mining and environmental protection and reclamation issues. It then focuses on the current evolution and legal and policy status of mining legislation, mineral investment agreements, and major actors. Students completing this course develop a basic understanding of the general approaches, legal frameworks, policies and agreements used to regulate the mining industry in key jurisdictions outside the United States. This course is taught in Spanish.

LAWS 4343 International and Comparative Petroleum Law (3 Credits)

The course deals with basic concepts of international law relating to petroleum investment, current elements of petroleum legislation, and petroleum investment agreements (production-sharing, concession, joint venture, service, management contracts). Also, students explore such aspects of petroleum law as dispute settlement and legal status. The instructor will discuss the major actors (international petroleum companies, state petroleum enterprises, Ministries of Energy) and their legal and policy status. Students completing the course leave with a basic understanding of the general approaches, policies, and agreements used to regulate the petroleum industry in key selected jurisdictions outside the United States.

LAWS 4344 International Tax (3 Credits)

Introduction to U.S. international taxation with an equal emphasis on inbound and outbound transactions. Resident and nonresident alien taxation, withholding taxes, effectively connected (business) income, foreign investment in U.S. real estate, tax treaties, branch taxes, earnings stripping, conduit financing rules, foreign earned income exclusion, classification of foreign entities, foreign tax credit, foreign personal holding companies, controlled foreign corporations, passive foreign investment companies, export transactions, Subpart F manufacturing rules, outbound property transfers, and transfer pricing. Cross listed with TAX 4420.

LAWS 4345 Jurisprudence (3 Credits)

The course is designed to introduce several contemporary modes of legal thought. The course is an exploration and critical evaluation of these differing perspectives on law are pursued to foster an understanding of the interdependency between legal philosophy and legal decision process, the role law plays in our culture, and the social and philosophical impediments to law's effectiveness.

LAWS 4346 International Sales (3 Credits)

This course will examine the laws governing the international sale of goods, including the Unidroit Principles, the relevant rules adopted by the United Nations Commission on International Trade Law, the Convention on the International Sale of Goods (CISG), and the International Chamber of Commerce (ICC) Modern International Sale Contract. Special emphasis shall be given to the CISG as well as to comparing the law of international sale of goods with United States contract law. Issues such as international payments methods, letters of credit, customs clearing procedures, and dispute resolution will also be discussed. Two large topics - (1) the CISG and (2) letters of credit and other means of financing cross-border transactions - comprise the bulk of the course.

LAWS 4347 International Environmental Law in Latin America (2 Credits)

This course examines the role of international law in promoting cooperative solutions to some of the most pressing environmental problems confronting the planet. The course begins with an introduction to the international law framework within which international environmental law has developed, and emphasizes the relationship between international environmental law and international human rights law. The course then uses several case studies to analyze the legal regimes that have developed to address environmental problems of particular relevance to Latin America, including protection of biodiversity, climate change adaptation and mitigation, and protection of water resources. This course is taught in Spanish.

LAWS 4348 International Criminal Procedure and Practice (3 Credits)

The International Criminal Court and the various international and internationalized tribunals such as the International Criminal Tribunal for Rwanda and for the former Yugoslavia prosecute a unique and evolving set of international criminal laws designed to end the impunity of military and political leaders engaged in mass violence. The post-World War II Nuremberg trials were the first attempt to use tribunals to hold individuals criminally responsible. Later, the Nuremberg present was the basis of the creation of ad hoc war crimes tribunals for the former Yugoslavia and Rwanda in the early 1990s, which then opened the door to other tribunals such as the Special Court for Sierra Leone, the Extraordinary Chambers for Cambodia and the International Criminal Court. The practitioners of the tribunals represent the range of cultures, mores and legal traditions of the world. These varied experiences create different expectations as to the conduct of proceedings and what amounts to procedural fairness. This course studies the rules of procedure and practice that have developed at the international tribunals in the multi-cultural context.

LAWS 4350 Juvenile Law (3 Credits)

This course examines the legal parameters surrounding juveniles. Students gain a basic understanding of juvenile law, such as the legal definition of who is considered a child and the allocation of power between the state, parent(s), and the children. The class examines what protection the Constitution provides children and the historical development and philosophy of juvenile justice to understand the foundation of juvenile law. The focus of the class also includes an examination of rights of abused children and children who are delinquents and status offenders.

LAWS 4351 International Mergers and Acquisitions (3 Credits)

Using recent articles as case studies, students will consider what motivates corporations to undertake cross-border acquisitions and divestitures, why most transactions ultimately fail to meet expectations, and how lawyers structure transactions to avoid these pitfalls, including (i) corporate forms worldwide (corporations, partnerships, LLCs); (ii) the timeline of M&A transactions from the initial idea through transfer of ownership and the 5 years thereafter; (iii) forms of acquisition (merger, asset purchase and stock purchase); and finally (iv) negotiation of the pertinent legal documents. This course has become increasingly relevant as the world becomes less open and congenial, while businesses continue to seek geographically and culturally diverse markets. This course is appropriate for both students with no business background and students with extensive business and legal experience.

LAWS 4355 Labor Law (3 Credits)

Labor Law provides a background of modern labor relations law and union pressures with an historical review of the laws that shape this field. Laws covered include the National Labor Relations Act; National Labor Management Relations Act; Labor-Management Reporting and Disclosure Act of 1959; Civil Rights Act of 1964; employer unfair labor practices; union unfair labor practices; internal affairs of labor organizations; collective bargaining and settlement of labor disputes; and state labor legislation. Also, it explores employer and union labor practices and manners in which disputes concerning these practices may be resolved.

LAWS 4358 Land Conservation Transactions (3 Credits)

This course covers the fundamental law and principles related to land conservation. It is a research based class, and students are responsible for researching, presenting information and drafting regarding a specific conservation project. This course provides all the background necessary to allow students to conduct a meaningful research foray in and to create conservation easements for land conservation.

LAWS 4360 Land Use Planning (3 Credits)

This course examines government controls used in the regulation of land use and development and the urbanization of the built environment in cities and metropolitan areas in the United States. The course includes an analysis of state and local laws and federal constitutional issues related to the use of master plans, zoning and land development codes, growth management and smart growth development techniques, as well as the topics of subdivision regulation, eminent domain and urban renewal. Special problems in land use planning studied include exclusionary zoning, regulation of aesthetics, design controls and visual beauty, signs and billboard, religious land use, protection of natural lands and wildlife habitat, regulation of natural resources development, fair housing laws, and the protection of private property rights in the urban regulatory process.

LAWS 4362 Latin American Law (3 Credits)

This course seeks to provide students with a basic understanding of Latin American legal traditions. Intended for students who will come into contact with Latin American law in their work as lawyers, international civil servants, business executives and diplomats. The course examines the civil law tradition and constitutional law issues and current developments, such as Latin American economic integration, reform of the public sector, and the emergence of the Inter-American system for the protection of human rights.

LAWS 4365 Law and Economics (3 Credits)

This course is an examination of selected common law, regulatory law, and Constitutional law issues from the perspective of economic efficiency analysis.

LAWS 4370 International Investments (3 Credits)

The global investor is faced with a complicated task. He must deal with multiple currencies, multiple markets, multiple cultures, and multiple regulatory environments. However, the most important aspect of international investment is the use of multiple currencies. Accordingly, the first module of this course lays the foundation of foreign exchange rates: the basic facts of foreign exchange quotations, international parity conditions and arbitrage implications, and exchange rate forecasting. The second module covers the various assets and markets available for global investing: international bonds, equities, alternative investments, and optimal international portfolio selection. The third and final module develops risk control techniques available with derivatives: forwards, futures, options, and swaps. Overall, this course will emphasize conceptual understanding and applications, rather than lengthy theoretical exposition and mathematical analysis.

LAWS 4371 International Investment Arbitration Practice & Procedure (3 Credits)

International investment arbitration has a few names. It has been referred to as investor-state arbitration, investor-state dispute settlement (ISDS), and sometimes simply international arbitration. Investor-state arbitration is a powerful and relatively new form of dispute resolution. It largely originates from the many bilateral investment treaties (BITs) developed in the 1950s, and has expanded to larger and more complicated international treaties such as NAFTA, CAFTA, and the Trans Pacific Partnership (TPP). Today, this is the fastest growing field for international legal practitioners. Any international transaction with the characteristics of a foreign investment implicates investment treaties. With the development of new trade agreements such as the TPP and Transatlantic Trade and Investment Partnership (TTIP) the field will only continue to grow. This course is experiential in nature. It examines the field of investor-state arbitration from the perspective of an investment dispute. The class will simulate an investment dispute in the context of an International Centre for the Settlement of Investment Disputes (ICSID) proceeding. The course will move through a typical ICSID case from beginning to end (in an abbreviated format) and focus on key areas in the field of investor-state arbitration. This course will only be taught in the spring semester and serves as the gateway to the University of Denver Foreign Direct Investment Moot Team (<http://www.fdimoot.org>). Students with a strong interest in joining the FDI Moot Team and attending the FDI Moot as counsel the following fall semester will be given preference to join the class.

LAWS 4373 International Practice and Procedure (3 Credits)

This course is only open to members of the current Jessup Team and focuses upon the practice and procedure before the International Court of Justice. Students will examine the ICJ's history, organization, competence, and role as the primary judicial organ of the United Nations and permanent institution for the pacific settlement of disputes between States. The course will be split between both theory and practice, wherein students will study the major landmark cases of the ICJ affecting the practice of international law, and be exposed to the rules of procedure and style of practice before the ICJ through the use of a hypothetical contentious case between two States. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4375 Law and Society (3 Credits)

The primary focus of this seminar is on law as a product of the structure of society. The subject matter can be divided into four distinct sections: 1) What factors affect the development of substantive law? This section examines the influence of values, beliefs and norms. 2) Given the existence of substantive law, what organizations develop to carry out the administration of law? Here concentration is on the phenomena classified as legal roles, organizations, institutions, and inter-institutional relations -e.g., juries, the legal profession, courts, legislature, etc. 3) How does law affect social behavior? and 4) What is the role of law in social change?.

LAWS 4376 Law and Emerging Technologies (3 Credits)

Technological innovations have created challenges for regulators and policymakers. This course focuses on recent emerging technologies and introduces law students to ways law interacts with technology. Students are encouraged to think creatively to address the current challenges and anticipate future legal impacts. It also familiarizes students with the recent legal scholarship in this field. Topics covered in this course include autonomous vehicles, AI and facial recognition, big data, digital privacy, deep fakes, platform governance, and quantum computing.

LAWS 4378 Race, Class & Reproductive Justice (2,3 Credits)

This course examines how race and class status affect women's reproductive rights and how both legal rules and medical practices in this area rely on stereotypes and enforce norms of "good motherhood" on women. Topics covered include some or all of the following: abortion, contract parenthood ("surrogacy"), cloning, sterilization, embryo freezing, pregnancy-based employment discrimination, criminal prosecutions of women for prenatal substance abuse, and court-ordered Cesarean sections.

LAWS 4379 International Trade Law (3 Credits)

This course examines the law of international trade in goods and services, focusing principally on the law of the World Trade Organization and the General Agreement on Tariffs and Trade. We examine the trading system's rules restraining national restrictions on trade that address, among other things, tariff and non-tariff barriers, discrimination, regionalism, anti-dumping, countervailing duties, and safeguards. The course also spends time considering the relationship between trade and other regulatory areas or social values, such as environmental protection, health and safety standards, human rights, intellectual property protection, and other facets of globalization. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4380 Hazardous Waste and Toxic Substances (3 Credits)

This practical, hands-on course reviews the major federal environmental protection programs, with an emphasis on the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or "Superfund") and the Resource Conservation and Recovery Act (RCRA). It also covers Toxic Torts, Underground Storage Tanks, the Clean Water Act, Safe Water Drinking Act, and the Clean Air Act. Other materials may be distributed by the instructor on OSHA, NEPA, TSCA, OPA, the Colorado state voluntary cleanup program (VCUP), toxicology, and immunity issues. The course emphasizes practical application of major environmental laws. Students become familiar with statutory and regulatory schemes, and are expected to be able to identify environmental legal issues and apply environmental laws and regulations to hypothetical problems. JD student prerequisites: LAWS 4220, LAWS 4450, or LAWS 4495. LLM and MRLS student prerequisites: LAWS 4220, LAWS 4450, or LAWS 4495, or be registered to take any of these.

LAWS 4382 Legislative Process: Institutions & Interpretations (3 Credits)

This course is designed to be a three credit introductory course on the legislative process. This course focuses on theories of the process through an examination of theories of representation, theories of deliberation, direct democracy, and due process of lawmaking. Finally, this course will also explore legisprudence. Legisprudence explores theories of statutory interpretation and constitutional/statutory provisions which govern the political process and its participants. This course is intended to serve very practical goals. Students considering careers as legislative drafters, legislative staffers, elected officials, lobbyists or activists should emerge from this course with an understanding of the legislative process and a sense of how courts, agencies, and the executive branch are likely to interpret statutes. This course provides litigators with the tools to convince the courts that their interpretation of a statute is the correct one. For those students whose careers will require advising others about the meaning of statutes, this course helps provide the skills needed to perform that task.

LAWS 4383 Doing Business-Latin America (3 Credits)

Taught in Spanish, this course acquaints students with the legal framework of business transactions in Latin America. The course exposes students to the civil law system used in most Latin American countries and covers selected topics of importance to lawyers advising clients doing business, or seeking to do business in Latin America. Topics may include the development of Latin American law, types of corporate and partnership organization, trade law, foreign investment, intellectual property, taxation of foreign income, environmental and labor standards, and dispute resolution.

LAWS 4385 Lawyering Process I (3 Credits)

The Lawyering Process Course provides first-year law students with a foundation in the essential lawyering skills that are necessary to be an effective, ethical, and professional member of the legal community in a rigorous, supportive learning environment that uses a client-centered approach. The first semester focuses on introducing students to the legal system, legal research, and providing client advice through written analysis.

LAWS 4386 Lawyering Process II (3 Credits)

The Lawyering Process Course provides first-year law students with a foundation in the essential lawyering skills that are necessary to be an effective, ethical, and professional member of the legal community in a rigorous, supportive learning environment that uses a client-centered approach. The first semester focuses on introducing students to the legal system, legal research, and providing client advice through written analysis. The second semester builds on students' research, writing, analytical, and oral presentation skills in the context of advocating for a client.

LAWS 4387 Professionalism and Well-being Skills for the Effective Lawyer (2 Credits)

The objective of this course is to support professional identity formation and growth in the professionalism and well-being skills of future lawyers as they progress toward growing competence as professionals. The first half of the course focuses on law student well-being and optimizing brain health and mental strength to enhance performance. The second half of the course is devoted to the development of professionalism skills such as professional development, self-awareness, bias, social proficiency, wisdom, and leadership, essential attributes of a high-performance legal practice.

LAWS 4390 Law and Neuroscience (3 Credits)

In this survey course, we will cover some neuroscience basics, including a brief history of neuroscience, how neurons and neurotransmitters work, what is currently known about how the brain is organized, both structurally and functionally, how modern neuroscience views the so-called Cartesian dichotomy between emotion and cognition, and the basics of the most common types of neuroimaging. We will then explore the law and neuroscience of pain, memory, lie detection and criminal responsibility, discussing how neuroscientific discoveries might or might not change how the law handles these discrete problems, and the related evidentiary issues of how to get neuroscientific evidence admitted or excluded in cases involving these problems. We will finish, time permitting, with some speculations about artificial intelligence and neuroprosthetics.

LAWS 4395 Military Law (3 Credits)

This course will review the history, nature and sources of military law; the Uniform Code of Military Justice and the functions and procedures of military courts-martial, including the rights and status of military personnel. It will also cover an overview of the laws of armed conflict; national security and domestic application of operational military law; and the policies and international treaties affecting the detention and prosecution of enemy combatants and other foreign nationals. The course materials will rely on primary sources including statutes, cases, treaties, and selected law review and other articles, which will be provided electronically to each student. The course will review these military law topics with an emphasis on case studies and policy discussions in the context of recent current events.

LAWS 4400 Lobbying Law (3 Credits)

This course will focus on the role and nature of advocacy and lobbying before state and federal legislative and regulatory bodies. The areas will include but are not limited to the role of financing with emphasis on Citizens United, the issues involved in Department of Interior Policy and public lands, the structure and lobbying of new tax legislation, high frequency trading in securities markets, Dodd-Frank and the new regulations, the JOBS Act and crowdfunding, immigration law and border security, state legislative lobbying and healthcare lobbying. Some guest lecturers will be invited, including former cabinet members at the federal level, judges, former White House counsel, financial analysts who are lawyers, members of Congress and Senators. Students will be required to develop a lobbying and advocacy program in an area assigned by the Professor.

LAWS 4410 Public Sector Employment Law (2 Credits)

In Public Sector Employment Law, students will learn the law unique to public employment. Particular emphasis will be placed on constitutional legal claims brought under 42 USC Sec. 1983, including claims for violation of the freedoms of speech and association, equal protection, due process, and privacy. The class will also cover public administrative remedies, various governmental immunities, and open records laws. The course materials will be taught through a combination of traditional Socratic method and practical real world exercises, including the drafting of pleadings, interviewing of parties, and arguing of substantive legal motions.

LAWS 4411 Mergers & Acquisitions (4 Credits)

This course investigates the legal framework and strategies for structuring mergers and acquisitions ("M&A"). The class will be taught in the "modern learning" format to help students develop practical skills that will improve their readiness upon graduation for the practice of law in diverse business contexts. Among other topics, the course will address structuring various acquisition transactions, negotiating terms of the deal, drafting deal documents, conducting due diligence, advising boards on fiduciary obligations, interpreting relevant state law and federal securities laws, and exploring litigation to thwart potential business combinations. Throughout the course, students will engage in a variety of research, drafting, interviewing, counseling, and advocacy exercises. Through those exercises, group reflections on various assignments, and class discussions of other assigned readings, students will enhance their ability to think critically about a variety of M&A issues from both transactional and litigation perspectives. Pre-req: LAWS 4190.

LAWS 4412 Sustainable Cities Practicum (3 Credits)

Communities around the west are increasingly working to accommodate population growth without promoting sprawl. From transit oriented development in the suburbs to urban infill projects in the city center, cities are exploring ways of promoting new, more sustainable forms of development – sometimes in places that are not ready to accept increased density and amidst changing notions of what Americans really want. This course will explore issues of sustainability, as they relate to land use, and will help prepare students to work in the field of urban planning and development. Partnering with a local organization and utilizing the concept of "Action Learning," students will work in teams as they engage in real-time problem solving of a complex issue involving land use and sustainability. It is anticipated the course will include a field trip and work with practitioners engaged in the issue of concern. A research paper and final presentation will be required.

LAWS 4413 Trial Tactics (3 Credits)

This course is intended for those who truly desire to be a trial lawyer. It is an advanced, hands-on course which is designed to teach you how to be successful in trial – not just trial practice, but overall trial strategy. This course will teach you not just what to do in trial, but will also answer the question as to why you do what you do. It involves the strategy of trying cases, including trial themes, as well as preparation and participation in doing voir dire, opening statements, direct and cross examination of witnesses, when to make objections and when not to make objections, as well as closing. You will learn to use various trial techniques included in the text Rules of the Road, and will learn all the ins and outs of trying a case in front of a jury.

LAWS 4414 Private Equity Seminar (3 Credits)

In this course students will learn legal doctrine and practical skills through the examination of various aspects of private equity groups. The class will focus on legal issues arising in private equity investment cycles, including raising a fund, investing the fund, managing the investment, and exiting the investment. Students will consider the legal foundations of fund formation, business law, and structuring investments, including state and federal laws affecting business associations and corporate transactions. The class will also highlight tax and regulatory considerations of private equity groups and their investments. The class will have a heavy emphasis on practical skills, including critical thinking, and best practices for beginning lawyers, including structuring transactions, drafting transactional documents, and negotiating deals.

LAWS 4415 Protecting Intellectual Property in International Business Transactions (3 Credits)

The first portion of this seminar will cover topics such as general international conventions and treaties designed to protect intellectual property; conventions and treaties designed specifically for patents, trademarks and copyrights. Students will determine what protections to try to seek for a variety of intellectual property examples and, in pairs, if possible, negotiate and draft a licensing agreement, a manufacturing agreement, an employment agreement or some other agreement that embodies international intellectual property issues. Students will then choose a topic, such as patent, trademark or copyright issues in a particular region or particular industry. Each student will prepare a presentation for the class on the topic. Then the student will use the class feedback in conjunction with research for the presentation to complete a paper on the topic. The drafting and paper will take the place of a final exam. The paper qualifies for the Upper Level Writing Requirement.

LAWS 4416 Representing the Marijuana Client (3 Credits)

This class is designed to provide students with an understanding of the realities of representing a marijuana client (either private or public) in the current turbulent legal environment. We will study the background of marijuana regulation at the state and federal levels in the United States, with particular attention paid to the federalism implications of the dispute between state and federal law in this area. We will then turn to specific areas of law impacted by marijuana law reform in the states, from legal ethics, to regulatory compliance, to criminal law enforcement, to the financial and tax aspects of running a marijuana business in the current legal regime.

LAWS 4417 Representing the Spanish Speaking Client (3 Credits)

This course is a survey of the substantive law of matters likely to be encountered by attorneys representing Spanish-speaking clients in the United States. Topics may include, among others, immigration law, family law, criminal law, employment law, wills and estates, and consumer rights. The course will introduce vocabulary required to communicate with Spanish-speaking clients in the United States, as well as, survey the basic substantive law in each area. The course will be taught in Spanish.

LAWS 4418 Workplace Law Practicum: Sports & Entertainment Law (3 Credits)

This course will expose students to contemporary sports law practice as an aspect of general entertainment law from a of labor and employment perspective. Students will learn relevant doctrine regarding such matters as collective bargaining, individual contract rights, administrative law, interest and grievance arbitration and the impact of the anti-trust laws on labor and employment relations at the professional and collegiate levels. They will have the opportunity to develop practical skills by drafting documents for a simulated NLRB union organizing or unfair labor practice proceeding, reading and interpreting actual transcripts of NLRB or arbitration proceedings, acting as an advocate in a mock baseball arbitration, and engaging in simulated negotiations by drafting bargaining proposals and arguing for those proposals in a bargaining session among classmates.

LAWS 4421 Introduction to Small Practice Management (3 Credits)

This course provides an introduction to the administrative needs necessary to open and operate a solo or small legal practice. Topics include: administrative needs specific to various types of legal practice; space and facilities; technology; document management systems; malpractice insurance; outsourcing; health insurance; conflicts; and human resources issues.

LAWS 4423 Legal Databases Research (3 Credits)

This course introduces students to a variety of legal databases, both fee-based and free, that can be utilized for conducting effective legal research as a student and practicing lawyer. Students learn to analyze and critically evaluate whether or not a database provides accurate information and resources. Students learn to determine which legal databases are most useful for specific types of information and resource needs. Students learn to construct successful search strategies that can be employed to search a database and find the information required. This course equips students to become expert searchers in the online environment.

LAWS 4424 Legal Spanish for Lawyers (2 Credits)

This course prepares students with basic Spanish proficiency to represent Spanish-speaking clients in the U.S. legal system or to work in Spanish on transnational matters involving Latin America. It combines one-on-one Spanish immersion instruction with a structured classroom component. The Spanish immersion component introduces and builds on each student's legal Spanish vocabulary in areas of law likely to require lawyering in Spanish or in areas identified as priorities by the student. The structured classroom component allows students to practice skills in Spanish, such as client interviewing, intake, and client counseling, through simulations and group exercises. This course is taught in Spanish.

LAWS 4425 Legal Profession (3 Credits)

This required course is the study of the legal profession in American society. Topics include the history, structure, and function of the legal profession; the role of lawyers in the delivery of legal services; standards of professional ethics (including the Code of Professional Responsibility and the Rules of Professional Conduct); professional responsibility problems that confront the legal profession; developments in the delivery of legal services; disciplinary procedures; and admission to the practice of law.

LAWS 4430 Mediation and Arbitration Clinic (3 Credits)

This is a course offering clinical experience in both mediation and arbitration. The student learns mediation skills, performs mediation simulations, and mediates actual cases. Students are oriented to the role of arbitrator, perform arbitration simulations, and attend actual arbitrations. By gaining experience in both roles, students learn which process to choose for resolving a particular dispute. In addition, students learn lawyering skills such as communication, negotiation, problem solving, and drafting agreements. Application must be sent to the Student Law Office for admission to this course. Students will earn 3 out of class credits for this course and 2 in class credits through the corequisite course L4803, Mediation and Arbitration Clinic Seminar. Corerequisite: LAWS 4803. Prerequisite: permission of faculty supervisor.

LAWS 4433 Media Law (3 Credits)

This course addresses the First Amendment, statutory, and common law regimes under which the news media operate in the United States, ranging from the seminal *New York Times v. Sullivan* to the recent decisions on anonymity for online bloggers. This course is designed to provide opportunities for serious study/discussion of legal issues affecting the news media, as well as opportunities for practical experience in the tasks confronted by today's media lawyers. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4436 Litigation Technology (3 Credits)

Litigation Technology gives students up-close, hands-on learning to prepare and effectively use electronic illustrative aids and demonstrative exhibits in trial and alternative dispute settings. Each student prepares opening statements, closing arguments, and direct and cross-examinations, utilizing litigation software. Students learn to create their own presentations, and how to advocate most effectively using technology.

LAWS 4440 Mental Health and the Law (3 Credits)

This course will help students understand how mental illness and psychopathology interface with the legal system, in both the civil and the criminal justice systems. Taught by a practicing lawyer and a board-certified forensic psychiatrist, the course will begin with an overview of approaches to diagnosing and treating mental disorders, a brief discussion of psychotropic medications, and a description of the process for conducting forensic mental examinations of the sort used in court proceedings. We then will survey the many different contexts in which mental health intersects with the law before examining some of those contexts in detail. Specific areas of focus will include risk assessment and civil commitment, the right to treatment, informed consent and the right to refuse treatment, special competency issues involving children and older people, workplace discrimination based on mental illness, and a series of criminal law issues, including competency to stand trial and mental status defenses, sentencing, mental health and the death penalty, the evaluation and incarceration of sexual predators, and mental health issues involving incarcerated persons.

LAWS 4442 Trial Practice III: Mentors Practicum (3 Credits)

Advanced Trial Practice: Mentors Practicum is a year-long, skills-based course for law school students seeking to refine their trial skills, and improve their understanding and application of evidence and criminal procedure, through teaching these skills to local area high school mock trial students. The course consists of two classes a week. The first takes place at the law school. This weekly class involves case analysis and evidentiary discussion, resulting in the law students preparing their lesson plans to be taught to the high school students. Lesson plans include trial topics such as case analysis and evidentiary discussions, direct and cross-examination, objections and the rules of evidence, opening statements, closing arguments, and development of theme and theory. The second weekly class takes place at a local area high school, where the law students act as mentor-coaches to high school mock trial teams.

LAWS 4444 Medical Malpractice (3 Credits)

This course is a study of the various types of medical malpractice claims, and special issues encountered in medical malpractice litigation. Students learn how to select and prepare medical negligence cases for trial, with focus on the use of discovery tools in medical cases, hiring and working with medical experts, and explore settlement, subrogation, and probate approval for the settled claims of a minor. Medicine is central to medical malpractice litigation, so students are also exposed to concepts in anatomy, physiology, pathology, medical terminology, and medical records in this course.

LAWS 4445 Mining Law (3 Credits)

This course provides the basic framework of mining law. It begins with the acquisition of title to and development of deposits of hard minerals and energy resources under the mining and mineral leasing laws of the federal and state governments in the western United States. Next, it emphasizes the practices and procedures of the various proprietary and regulatory agencies responsible for the management and administration of public lands. Finally, students learn how to resolve competitive demands for exclusive and multiple use of public lands for mineral production and conservation.

LAWS 4446 Multiculturalism, Race and the Law Seminar (3 Credits)

This course is designed to examine the interstices of cultures, race, identity and the law as manifested in legislation and jurisprudence. Through case law and articles, we uncover and examine the ways in which legal systems define and promote certain racial and cultural activities, identities, and classifications and discourage others. Some are advanced as legitimate, and deserving of protection, and others not so. These endorsements have a significant impact on the makeup of American society. We see ourselves as a melting pot of cultures and peoples from all over the world, but do our laws really promote this vision? Have our laws evolved to promote racial and cultural harmony, or to discourage it? While most discussion focuses on these issues as they appear in the United States, we also discuss cases and materials from other nations, including Australia, Canada, India, Israel, Europe and Africa. Race and culture have played a pivotal role in historical and current political events and these will also be examined from a global perspective. There is no final exam, but written work is assigned throughout the term, and a final research paper is required.

LAWS 4450 Natural Resource Law (3 Credits)

The course is designed primarily for students who wish to have an introduction to and an overview of the entire natural resources law area in one course. Students survey the primary natural resources subject matter areas: water law; mining law; oil and gas law; public land law; environmental law; and energy law.

LAWS 4452 Economics of Natural Resource and the Environment: Policy, Markets, and Economic Measurement (3 Credits)

This course deals with the basic concepts of financial evaluation of a natural resources project. The emphasis is on financial evaluation topics and issues relevant to a lawyer's participation in a project. Students are introduced to the time-value of money; spreadsheet analysis; discounted cash flow; and spreadsheets, with relevancy to negotiations. Students are encouraged to consult with the director of this program before enrollment.

LAWS 4454 Psychiatry and the Law (3 Credits)

This course explores the relationships between psychiatry, psychology, medicine and the law. Subjects to be covered include: DSM-IV diagnoses and psychopharmacology; sanity and competency determinations; role of mental health experts in the court; special issues involving the mentally ill and death penalty; issues particular to juvenile offenders; third party protections and reporting requirements in child abuse and danger to third parties; civil commitment and involuntary treatment of the mentally ill; malpractice including professional misconduct and sexual boundary violations, and standards of mental health care; professional ethics in medicine and the law; law of informed consent and proxy decision making for medical treatment; confidentiality; clinical and legal aspects of end of life care; and prisoners' rights in correctional settings including sex offender treatment. Readings include landmark state and federal decisions shaping each of these areas, along with readings from legal and mental health literature.

LAWS 4460 Negotiation and Mediation (3 Credits)

The course examines principles of negotiation, bargaining and dispute problem solving. Builds the development of skills in negotiation and later mediation. Principles of problem solving introduced in negotiation are further developed in an exploration of mediation, it's legal, economic, skills context and its propriety as a process to resolve disputes in varying circumstances.

LAWS 4462 Negotiating Natural Resources Agreements (3 Credits)

Students completing this course leave with an understanding of the general approaches, and primary issues and motivations pertaining to the negotiation of large, internationally funded petroleum and mining projects. They particularly gain a perspective on the negotiation of first-tier agreements between trans-national companies and governments, and joint venture agreements between private parties.

LAWS 4463 Qualified Pension and Profit Sharing Plans (3 Credits)

An in-depth study of ERISA, labor department rules, and Internal Revenue Code provisions relating to qualified deferred compensation. The course is geared toward an understanding of all the pension and profit sharing rules required for plan qualification, with emphasis on qualified plan planning for both incorporated and unincorporated forms of business. Cross listed with TAX 4120.

LAWS 4464 Natural Resources Distinguished Practitioner Seminar (3 Credits)

The Distinguished Natural Resources Practitioner in Residence Seminar is a "capstone seminar" taught each year in the Spring Semester by a different but prominent natural resources or environmental law lawyer who has extensive experience in energy, resources, or environmental law work. The focus of the Seminar is on skills training, where the skills taught are those that all lawyers need in order to have a successful career in the practice of law. Among the "how-to" skills typically addressed are (1) how to obtain a job, either as a lawyer or as a law-trained worker; (2) how to obtain and retain clients; (3) how to work in the private sector, government sector, business sector, and in-house sector; (4) how to write; (5) how to work with associates and colleagues; (6) how to deal with technical or scientific matters in a legal context; (7) how to work in the litigation arena, before trial and appellate courts; (8) how to practice or appear before administrative agencies; (9) how to organize and refine a mass of complicated information so that a decision-maker can make sense of it. There is no final exam or paper expected; the grade is usually by class participation and small writing exercises. Prerequisite: permission of instructor.

LAWS 4465 Oil and Gas Law (3 Credits)

This course surveys the various characteristics of oil and gas interests. Topics include mineral rights, and how ownership leases and transfers of these rights should be handled. The instructor also distinguishes the field of oil and gas law on private lands from those in the public domain.

LAWS 4468 Pre-Trial and Discovery Practicum (3 Credits)

This "hands-on" course provides students with a practical understanding of the pretrial process and how discovery procedures shape and impact civil litigation today. The progression of class topics mirror the pretrial process within the context of a hypothetical case. Starting with initial client interviews, class topics include interrogatories, requests for production, electronic discovery, depositions, and expert discovery. Students also consider ethical issues relating to discovery and the pretrial process, and what remedies or sanctions are available for discovery abuses. This course will satisfy the Upper Level Writing requirement (ULW).

LAWS 4470 Banking Law (3 Credits)

This course provides an overview of the banking system, including the economic function of banks, the role of the central bank, and U.S. banking history. This course will cover the evolution of banking regulation, as well as recent developments that have intensified scrutiny on banks. Additionally, a "Real Deal" Workshop will provide students with an opportunity to a) gain hands-on training in transactional practice, (b) experience a "deal" from a lawyer's perspective and learn about what transactional practice entails and (c) learn to draft stock purchase agreements, credit documents and other fundamental transactional agreements. Topics that will be covered include permissible activities of banks, the role of the FDIC, the Federal Reserve Board, and the Comptroller of Currency; and the regulatory response to crises in the banking system.

LAWS 4474 Patent Prosecution (2-3 Credits)

This course explores practical and procedural aspects of patent law. These aspects include application drafting, patent examination and prosecution, and patent appeals. Students will be expected to do some role playing as inventor, patent attorney, and/or examiner. While Patent Law is not a formal prerequisite for this course, students who have not taken Patent Law should be prepared to do extra reading in the first few weeks of the semester to familiarize themselves with the basic concepts of patent law.

LAWS 4480 Professional Ethics Seminar (3 Credits)

This seminar begins with brief introductions to ethics in general and professional ethics specifically, and then turns to in depth consideration of theoretical perspectives on lawyer's ethics. For the remainder of the semester the seminar focuses on: (1) Comparative professional ethics: comparing the ethics of other professions—medicine, journalism and business, for example—with the ethics of lawyering. (2) Narrative ethics: stories (from literature, biography, or tradition) and how they inform ethical perception and choice. (3) Topics chosen by students for research and presentation.

LAWS 4481 Partnership Taxation (3 Credits)

Tax treatment of partnership income in the hands of the partner; the conduit rule; problems associated with the formation, operation, and dissolution of the partnership; sale of the partnership interest; withdrawal and retirement of partners; basis adjustments, unrealized receivables, and substantially appreciated inventory. Cross listed with TAX 4320.

LAWS 4483 Patent Litigation (3 Credits)

This is an in-depth study of laws, strategies and tactics of patent litigation. Topics include legal principles, procedures and strategies associated with patent claim construction, infringement, invalidity and unenforceability. Also, students cover patent trial practice with a focus on both the knowledge and practical skills necessary to litigate patent cases.

LAWS 4485 Business & Commercial Law Seminar (3 Credits)

Topical seminars scheduled periodically to afford students the opportunity for focused study of business and commercial law matters such as: consumer credit; mergers and acquisitions; corporate practice; bankruptcy; antitrust; quantitative evidence; representation of minority—and women—owned business firms.

LAWS 4487 Prosecutor as Protagonist (3 Credits)

This seminar is an in depth examination of the role of the prosecutor in our justice system. Attorney General Suthers leads wide ranging discussions about crime and punishment. Topics discussed and debated include the purpose of criminal sentencing, minimum mandatory sentences, the death penalty, the juvenile justice system, plea bargaining, prosecutor ethics, special prosecutors, criminal justice interest groups, prosecution oversight of police, forensic science, federalization of crime, attorney general activism, jury reform, reform of drug laws, and mental illness in the criminal justice system. Some of the top experts in Colorado on these subjects speak to the seminar participants.

LAWS 4489 Civil and Criminal Tax Procedure (2-4 Credits)

Statute of limitations on assessment/collection of deficiencies, definition of deficiency, restrictions on assessment and collection; statute of limitations on overpayments, claims and suits for refund, and limitations for criminal prosecutions; regulations and rulings—retroactive revocation; administrative settlements, closing agreements and compromises; civil penalties; tax return preparer penalties; civil litigation—injunctions, jurisdiction of Tax Court, District Court, and Court of Claims, small claims procedure, authority to increase deficiencies, choice of forum; jeopardy assessments and termination of taxable years; criminal tax investigations—administrative summons, document production (taxpayer and third party), constitutional protections, common law privileges, strategies; professional responsibilities and ethics for the tax practitioner. Cross listed with TAX 4310.

LAWS 4490 Property (4 Credits)

This course introduces selected topics relating to rights and interests in land and personal property. These topics include estates in land and future interests; private and/or public restriction of land use; conveyancing; interests and estates in land; and landlord/tenant relations.

LAWS 4495 Public Land & Resources Law (3 Credits)

This course provides an overview of law, policy, and procedures governing the third of United States land managed by the federal government for the benefit of all the people. The course traces the interwoven law, history, and economics controlling acquisition and allocation of public lands and resources and examines a selection of significant commercial uses and resource categories of land use practices. Recommended prerequisite: LAWS 4025.

LAWS 4497 Law & Popular Culture (3 Credits)

Why are there so many jokes about lawyers? Why is John Grisham so popular? What explains the success of the "Law and Order" franchise? Does popular culture affect the outcomes of trials? This seminar explores the role law plays in popular culture (for example, how law and lawyers are portrayed and perceived; how law shapes and defines pop culture) and the role popular culture plays in law and in the lives of lawyers (for example, the impact of cameras in the courtroom); should lawyers be allowed to write books and sell their clients' stories? The reading list includes traditional materials (case law and legal scholarship) as well as movies, novels and other popular culture materials. Recommended prerequisite: LAWS 4425.

LAWS 4498 Public Interest Practicum (1 Credit)

The Public Interest Practicum is one option for students to satisfy the Public Service Requirement. The only satisfying course offered for only zero or one credit, it requires participation of the JD student in a 50-hour, non-compensated, law-related, public interest placement under the supervision of an attorney or judge who has been in practice or on the bench for a minimum of three years. A practicum student must complete the minimum of 50 hours in one of the following settings: judicial internship; government agency; private law firm doing pro bono or low bono work; non-profit (501(c)(3)) organization; or pre-approved uncompensated research project for a faculty member. A student may decide to take the Public Interest Practicum for 1 credit or 0 credit. The Public Interest Practicum for 1 Academic Credit requires a Public Interest Practicum Online Seminar component to supplement the practical experience. The Public Interest Practicum is beneficial for students who are not planning on satisfying the Public Service Requirement through other opportunities.

LAWS 4500 Public Utility Regulation (3 Credits)

This intensive, 1-week course presents law practitioners with recent innovations in the economics and policy of utility regulation. Course features guest lectures with individuals from industry and government sectors that are involved with utility regulation. Students learn the social science of utility regulation and gain insight into how utility regulation is conducted.

LAWS 4506 Energy & Project Finance Law (3 Credits)

This course explores the legal, economic, technological, and policy underpinnings of the Renewable Energy Industry, global warming, and associated implications to the electric utility and transportation sectors. The course addresses both domestic and international perspectives on renewable energy development.

LAWS 4508 Renewable Energy for the 21st Century: Law, Policy & Markets (3 Credits)

Renewable Energy for the 21st Century helps prepare students for future involvement in this dynamic sector. Students are introduced to the policy and legal framework involving renewables and energy efficiency as well as important technological and market-based issues.

LAWS 4509 Renewable Energy: Project Development and Regulation (3 Credits)

This course examines the broad range of legal topics that a renewable energy lawyer must understand in order to practice effectively. We examine the structure, regulation, and functioning of the electric energy industry in the United States. We explore in detail the law applicable to the development, ownership and operation of renewable projects across the spectrum of technologies. Significant emphasis is placed on the practical "real world" issues encountered in developing, financing and operating these projects.

LAWS 4510 Business Legal Research (2 Credits)

This course will introduce the legal material, research methodologies, and resources used in conducting business legal research. Students will gain experience locating and using law and guidance produced by government agencies, business-oriented legal treatises, transactional materials, and company/industry research. This class will take an integrative approach between the different business-related disciplines to provide students with a well-rounded knowledge base.

LAWS 4511 Renewable Energy Law (3 Credits)

The development of renewable energy sources has grown exponentially both nationally and worldwide. The increased appetite for renewable energy sources has driven a need for more information about those sources and the significant legal implications arising from the development of those sources. This course is organized by resource—solar, wind, hydropower, biomass, and geothermal. It focuses primarily on critical legal issues in tort, property, and contract areas raised by the expansion of these key renewable energy sources. The course also addresses the role of energy efficiency and some of the broader legal hurdles facing renewable energy use from a nationwide perspective.

LAWS 4520 Remedies (3 Credits)

Remedies provides students with the basic principles and problems of damages, restitution, and equity. Students enter into an investigation of fundamental concepts, such as remedial goals, problems of proof, and the relationship between remedies and substantive rights. The course also explores equitable remedies and alternative remedial devices available in any given situation.

LAWS 4524 Russian for Lawyers I (3 Credits)

This is a unique chance to break stereotypes about Russia! This sequence of courses introduces students to the fundamentals of the Russian language, with emphasis on legal and economic vocabulary. More specifically, this includes vocabulary and reading assignments that involve finance, international trade, stock exchange, and with a special focus on Natural Resources and Environmental Law in Russia. No prior knowledge of Russian is required.

LAWS 4525 Russian for Lawyers II (3 Credits)

This course picks up where Russian for Lawyers I leaves off by continuing to introduce students to the fundamentals of the Russian language, but with an emphasis on legal and economic vocabulary. More specifically, this includes vocabulary and reading assignments that involve finance and banking, insurance, international trade, and stock exchange/securities matters. Prerequisite: LAWS 4524.

LAWS 4526 Sales and Leases (3 Credits)

This course examines the formation and terms, as well as remedies for breach, of contracts for the sale of goods under Article 2 of the Uniform Commercial Code (UCC). The course completes the coverage of Article 2 of the UCC that was introduced in the first-year Contracts course. In addition, the course also examines the provisions on leases in Article 2A, sales transactions involving the use of documents of title (Article 7) and letters of credit (Article 5).

LAWS 4527 School of Mines Exchange (3 Credits)**LAWS 4528 Securities Law (3 Credits)**

Students in this course study the statutes and regulations regulating the offer and sale of securities by private and public corporations. Course material information pertaining to the Securities Exchange Act of 1934; federal regulation of the public securities markets; insider trading; broker-dealer regulation; tender offers; and public corporations. Recommended prerequisites: LAWS 4190 or LAWS 4048.

LAWS 4529 Securities Litigation (3 Credits)

The main focus of this course is the granting of a security interest in collateral in exchange for a loan and the priority among creditors to the collateral in case the debtor defaults on its obligation to repay. Secured transactions can be involved in a wide variety of legal representations, including transactional matters and litigation. The Secured Transactions Class is designed to provide students with a working understanding of Article 9 of the Uniform Commercial Code and how it comes into play in these transactions. Students who have taken the Commercial Law Survey course should not take this unless they wish to study this subject in greater depth.

LAWS 4530 Secured Transactions (3 Credits)

This course covers the law of secured transactions in personal property. It is not a securities course. Students who have taken the Commercial Law Survey course should not take this unless they wish to study this subject in greater depth. The main focus of this course is the granting of a security interest in collateral in exchange for a loan and the priority among creditors to the collateral in case the debtor defaults on its obligation to repay. Secured transactions can be involved in a wide variety of legal representations, including transactional matters and litigation. The Secured Transactions Class is designed to provide students with a working understanding of Article 9 of the Uniform Commercial Code and how it comes into play in these transactions.

LAWS 4539 Social Change Lawyering (2 Credits)

This seminar explores the role of law and the legal profession in pursuing broader social causes across the political spectrum, such as the pursuit of civil rights for racial minorities or the effort to overturn the constitutional right to abortion. Distinguished from the practice of law solely advocating the interests of individual clients, social change lawyering is a major component of the legal profession of the 21st century. Known variously as “public interest law,” cause lawyering, and by numerous other labels, this area of practice implicates many important issues worthy of serious scholarly consideration. Some of the topics that may be examined include: the competing definitions of social change lawyering and the relevance of such definitions; the history of American law and social change; the role of progressive/conservative ideologies in social change lawyering; the role of government and private firm lawyers in effectuating social change; strategies and organizational models for social change lawyering groups; the relationship between social change lawyers and their clients; the economics and financing of social change lawyering; ethics and social change lawyering; legal education and social change. Throughout the course, students are asked to critically examine the role of lawyers in social change, and question whether and how lawyers have been effective agents of social change in American society. The course does not use a traditional casebook. Rather, students study a set of materials comprised of excerpts from law review articles and books, historical and sociological materials, and problems. Students are required to write short, reflective discussion board posts on each week’s readings, as well as a more comprehensive final paper. Students may elect to use this seminar to fulfill the upper level writing requirement if they submit a draft of the final paper and do a substantial rewrite after receiving the instructor’s feedback. Prerequisite: permission of instructor.

LAWS 4543 Sexual Orientation and the Law (3 Credits)

This seminar offers an opportunity for students to study the relationship between law and sexual orientation. Historically, law in this country consistently and pervasively regulated the realm of human identity and behavior we call sexuality. However, questions and claims challenging traditional assumptions about sexual orientation have surfaced in the last twenty-five years. Our study of sexual orientation and law allows students to view the relationship between law and society through a new lens, that of sexual orientation.

LAWS 4545 Sports Law (3 Credits)

The course studies the legal problems of professional athletics. It applies the application of contract law, antitrust, labor law and income tax to the functioning of a professional league. The question of governmental regulation of professional sports is a constant focus of students' work. Special attention is given to the impact of these questions on negotiating players' contracts.

LAWS 4550 State & Local Government (2,3 Credits)

The institutional framework within which the decision-making process affecting urban areas operate; the rules by which the formal power to govern in urban areas is organized, limited and divided among decision-making units. Although dealing largely with the subject matter of traditional courses in municipal corporations, this course broadens that perspective to include newer institutional and organizational arrangements.

LAWS 4552 Securities Law Seminar (3 Credits)**LAWS 4553 The Spanish Speaking Lawyer: Introductory Legal Skills and Vocabulary in Spanish (3 Credits)**

This introductory course will provide law students an avenue to become more comfortable speaking about legal matters in Spanish. Students will acquire Spanish-language vocabulary relating to the lawyer-client relationship, litigation, and various substantive areas of law, with the opportunity to utilize this vocabulary. Students can expect to gain legal skills in Spanish, including performing intake, managing good phone etiquette, interviewing clients, drafting correspondence, communicating fees, explaining civil and criminal court proceedings, and understanding ethics and confidentiality. The course will also provide students with an opportunity to begin to achieve cultural competency when representing Spanish-speaking clients. The class will be interactive, and may include: discussions of readings, small group discussions, simulations, presentations, arguments, speakers on different substantive areas of law and viewing of law-related films. This course will primarily be taught in Spanish.

LAWS 4555 Street Law (3 Credits)

Under faculty supervision, students in two-person teams will teach law in urban high schools. An underlying principle of the course is that one of the best ways to learn is to teach. There will be weekly seminars and field performances supervised by the instructor. Students will develop skills in: practical application of legal concepts; substantive topics in federal and Colorado Law; teaching techniques; classroom management; and the multi-faceted roles of lawyers in the community. Each student will participate in researching, drafting, and presenting a course in a particular field of substantive law.

LAWS 4556 Sustainable Dev & Trade (3 Credits)

This seminar is designed to give an introduction to the convergence of trade, environment, and development issues and law, addressing areas of conflict and synergies among them. It focuses on rules, procedures, and institutions aimed at making globalization compatible with sustainable development by integrating trade policy and law with policies that address other aspects of "human development", such as, environmental concerns, social concerns, human rights, gender issues, and governance. This course satisfies the Upper Level Writing requirement (ULW).

LAWS 4560 Colorado Legal Research (1 Credit)

This course will focus on Colorado-specific primary and secondary sources using a problem-based approach, so as to simulate the type of work performed at law firms. It is geared toward students who have some experience with research and want to improve their skills and writing ability before they finish law school. Students will gain hands-on experience researching judicial (case law), legislative (statutory), and executive (administrative) legal materials and will learn research methodologies and strategies to tackle research problems effectively. Classes will combine instruction with hands-on scenarios using print and electronic resources and students will complete research and writing projects for this course, which runs for the first seven weeks of the semester. Students are required to bring their laptops to class.

LAWS 4561 Crimmigration Law Seminar: The Intersection of Criminal Law and Immigration Law (3 Credits)

This seminar addresses the historical and contemporary relationship between criminal and immigration law. In particular, the course explores how individuals perceived to have violated a criminal offense are treated in the immigration law system, how individuals thought not to be citizens of the United States are uniquely affected by criminal procedure norms and substantive criminal law, and how states and the federal government have sought to police criminal activity by noncitizens. In the process, course participants will learn to analyze constitutional, statutory, and regulatory provisions concerning immigration, as well as procedural and substantive requirements concerning criminal proceedings as they affect noncitizens. Participants will also consider the motivations that resulted in various enforcement policies grounded in civil or criminal law related to immigration and immigrants.

LAWS 4562 E-Discovery (3 Credits)

Litigation is undergoing a significant transformation as technology continues to evolve and Society transitions from a "paper" to a "digital" world. That transformation inevitably impacts the legal community, confronting lawyers and clients with the choice of conducting discovery on a pre-computer, "business as usual" basis or embracing the challenges and opportunities presented by "e-discovery." This course provides students with an understanding of the legal and practical challenges presented by "e-discovery" and how electronically stored information ("ESI") shapes and impacts litigation and the pretrial process.

LAWS 4563 Environmental Law, Energy, & Natural Resources in Indian Country (3 Credits)

This Seminar explores energy and natural resources development on Native American tribal lands in the United States, and how tribes, states and the federal government regulate and enforce environmental quality within Indian Country. The Seminar is open to all interested students and does not require any previous study or experience in American Indian law. It provides an introduction to tribal sovereignty and self-determination, along with some of the basics of Indian Country jurisdiction and tribal sovereign immunity. Students will examine the federal governments trust responsibility to Indian tribes and nations. The Seminar also examines the legal framework used to regulate and enforce environmental quality, traditional and renewable energy development, and the use and stewardship of other natural resources on Indian lands. The goal of this Seminar is for students to gain a greater awareness of Indian tribes and nations and the critical role they play in overall U.S. environmental, energy, and natural resource law and public policy.

LAWS 4564 Immigration Law in Spanish (3 Credits)

Immigration Law in Spanish is a survey of the fundamental concepts of U.S. immigration law. In addition, students learn and practice the vocabulary required to appropriately communicate these concepts to Spanish-speaking clients. The class is taught entirely in Spanish, and requires a working-level written and spoken proficiency in the language.

LAWS 4565 Intellectual Property Capstone (1-3 Credits)

The intellectual property capstone is a simulation based course that crosses different intellectual property disciplines. Several different adjuncts are asked to prepare real world problems in different substantive and procedural contexts. The problems vary from year to year, but generally deal with patent, copyright and trademark law from litigation, administrative (i.e. representation before the patent and trademark office) and business perspectives. Students are expected to have taken at least one prior intellectual property course. This course fulfills the experiential component of the IP Certificate requirement.

LAWS 4570 Introduction to Contracts and Torts (3 Credits)

This online course provides an introduction to the foundational principles of Contract Law, including the restatement of contracts and the relevant provisions of the Uniform Commercial Code, and foundational principles of Tort Law, including intentional torts, negligence, and strict liability. This course is available to non-JD students only.

LAWS 4571 Introduction to Forensic Engineering and Construction Dispute Resolution (3 Credits)

This online course introduces students to the forensics industry and how forensics applies to claims and disputes in design and construction issues. The course addresses common disputes such as insurance claims, contract disputes, negligence claims, etc. This course will also discuss the different dispute resolution forums and venues, from insurance appraisals, to mediation, to arbitration or litigation. This course is available to non-JD students only, and is required for students in the Master of Legal Studies in Forensic Engineering.

LAWS 4572 Forensic Scheduling (1 Credit)

This online course covers the five standard forensic scheduling methods: Impacted As-Planned Method, As-Planned v. As-Built Method, Time Impact Analysis, Windows Analysis, and Collapsed As-Built Method. This class will use Primavera P6 scheduling software. This class is limited to non-JD students only.

LAWS 4574 Expert Report Preparation (1 Credit)

Forensic consultants need to understand how to outline, assemble, and clearly communicate issues and opinions within expert reports. This course reviews standard report templates and covers how to prepare report sections including-but not limited to-executive summaries, summary of opinions, assignment, documents reviewed, analysis, conclusions, and demonstratives.

LAWS 4575 Civil Trial Practice-Forensic Engineering (3 Credits)

This online class will cover the main aspects of civil litigation and trial practice as they relate to forensic engineering including discovery, trial, examination and cross-examination, and expert testimony. Pre-requisite: LAWS 4571.

LAWS 4576 Building Envelop & Civil Construction Review (1 Credit)

This course would review the components of building envelope and civil design. It would also review standard contract drawing details, manufacturer's recommendations, and code requirements for various building components.

LAWS 4589 LLM and Master's Internship (0 Credits)

The Sturm College of Law encourages students to gain practical experience and to develop professional skills in the legal and policy fields. Some students may elect to pursue externships for credit while others may choose to pursue paid opportunities during their study in the program. Internships are supervised by faculty and GLS department who interact with the eligible student and the employer or organization that provides the externship. The internship should provide a new learning experience for the student intern and must be related to their field of studies (e.g. business and commercial law; environmental law and policy). Satisfactory completion of the internship will result in a passing grade for the externship. The Program Director and/or GLS Advisor may serve as Supervisor for non-JD interns.

LAWS 4590 JD Internship (0 Credits)

The Sturm College of Law encourages students to gain practical experience and to develop professional skills in the legal and policy fields. Some students may elect to pursue externships for credit while others may choose to pursue paid opportunities during their study in the program. The internship should provide a new learning experience for the student intern and must be related to their field of studies (e.g. business and commercial law; environmental law and policy). Satisfactory completion of the internship is determined by review of an Internship Assessment Form submitted to the externship office at the end of the term.

LAWS 4605 Taxation of Natural Resource (2 Credits)

This course outlines the financial, business, and legal tax problems that may be encountered during the acquisition, operation, and disposition of natural resources properties. It is a strong course for students to develop skills in general tax planning for natural resources ventures.

LAWS 4610 Torts (4 Credits)

This introductory course considers compensation for private wrongs, covering harm to persons and property, with attention to legal theories of intentional torts, negligence and strict liability.

LAWS 4615 Torts (Advanced) (3 Credits)

Advanced Torts combines practical and theoretical discussion of issues that personal injury lawyers face in practice. The topics in the seminar vary but generally include fee agreements, damages, use of experts, medical malpractice, hospital and other liens, subrogation, and governmental immunity. The seminar emphasizes the empirical reality of injuries, claims, and litigation. Prerequisite: LAWS 4610.

LAWS 4618 Representing Clients Before the SEC (3 Credits)

SEC insiders explain the processes and practices of the Division, intertwined with discussion and analysis of SEC enforcement actions past and present. This course gives students critical information to effectively represent a wide variety of clients before the Division, among them public companies, regulated entities, defrauded investors, and perpetrators of crime.

LAWS 4631 Commercial Space Law (2 Credits)

This course is designed to provide a basic understanding of legal principles and issues in international and domestic space law, with a focus on commercial space law. You will study issues of importance to the Colorado space industry. Those issues, however, touch everyone in the world. For example, we will evaluate issues relating to the use of GPS timing and location signals, remote sensing of the earth from space, and the use of satellite communication. These technologies and associated legal issues reach every country in the world. We start with a survey of the international laws that govern outer space activity. You will be introduced to space law treaties addressing the use of outer space for peaceful purposes, liability for damage caused by space objects, jurisdiction and control of space objects, the rescue and return of astronauts and space objects, property rights in space, and other matters. We will discuss the influence on space laws of cold war politics, developing versus developed country tensions, and the impact of sovereignty interests on technologies that can broadcast television signals direct to homes and extract information about a country's natural resources – all from space. Then we will address U.S. space laws and regulations impacting space activities. Finally, the class will explore specific commercial space activities such as satellite communication, space stations, space tourism, space launches, remote sensing of the earth from space, and the financing and insuring of space activities.

LAWS 4633 Day One: Civil Practice Lab (3 Credits)

Day One: Civil Practice Lab is designed to take students from client intake through to the eve of trial, simulating the research, analysis, drafting, and verbal argument that lawyers encounter every day in civil cases. Through the course, students learn about the practical aspects of running a firm, valuing cases, and managing client and firm expectations. They also learn how to draft memoranda, disclosures, discovery, motions and mediation statements, while practicing the skills of examining witnesses, negotiating, and oral argument through mock depositions, mediation, and evidentiary hearings. The classes provide a procedurally chronological picture of a civil case and weave throughout practical considerations and application of the rules of professional conduct. In short, the class prepares students to practice on day one of their new career.

LAWS 4634 Motions Practice (3 Credits)

In this class, students learn how to present and argue pre-trial motions. These motions include motions from civil practice (motion for preliminary injunction, motion to dismiss, motion for summary judgment, etc.) criminal practice (motion to suppress, Rule 35 (c), etc.) and evidentiary motions (Rules 403, 404, and 405.) In addition, the course covers both legal and evidentiary motions in limine. Each student is asked to prepare, present, and argue a motion, as well as decide motions presented by others after making appropriate findings of fact and conclusions of law. Because a number of the motions involve the presentation of witnesses and appropriate case and statutory law, students learn trial skills, as well as refresh their knowledge of criminal and civil procedure, and the rules of evidence. Students are not asked to draft motions or prepare written briefs.

LAWS 4635 Trial Practice I: Basic Courtroom Skills (2-3 Credits)

The course is designed to teach the concepts and organizing principles of the formal trial process. It emphasizes the understanding necessary to develop, evaluate, prepare, and present a case for trial before a judge, jury, or other fact-finder. Exercises and simulations are used to demonstrate the importance of theory building and teach the functions of each stage of a trial. Students develop the advocacy skills appropriate to adversary adjudication. Prerequisite or corequisite: LAWS 4235.

LAWS 4637 Civil Litigation Practicum (3 Credits)

This course provides students a practical, hands-on approach to civil pretrial litigation. Students draft pleadings, motions and discovery requests essential in the litigation process prior to the actual trial stage.

LAWS 4638 Trial Practice III: Mentor's Practicum (3 Credits)

The Mentor's Practicum employs and relies upon integrated teaching, feedback, student collaboration, and multiple assessment. The practicum is designed for law school students who have exhibited advanced skills in trial advocacy, client advocacy, case analysis and communication.

LAWS 4639 Survey of Trusts and Estates (3 Credits)

This course will provide a broad introduction to trusts and estate planning, including an overview of property disposition through intestate succession, wills, and trusts.

LAWS 4640 Trusts and Estates (4 Credits)

Students enrolled in this course learn the ins-and-outs of trusts and estates planning. The course surveys everything involving succession wills, trusts, the role of third parties to a trust or estate, and property disposition.

LAWS 4651 Advanced Legal Writing and Research (3 Credits)

This course provides students with practical experience in drafting various documents they will likely encounter in the practice of law, including both objective and persuasive writing. Students will learn the advanced research skills they need to locate relevant legal materials, including an in-depth knowledge of legal research methods and resources. Students will then use their research results to create precise, clear, effective, and legally sound written documents for a series of modern law practice situations. There will be in-class exercises designed to develop student expertise with particular legal research and writing skills. Course assessments include an internal memorandum, a pleading, a motion, and a decision. This course satisfies the upper-level writing requirement. Laptops are required for this course.

LAWS 4660 Scientific Evidence (3 Credits)

The course begins with the U.S. Supreme Court decision in *Daubert v. Merrell Dow Pharmaceuticals, Inc.* (113 S.Ct. 2786 (1993)). This decision threw out the Frye Rule that had governed the admission of scientific evidence in federal courts since 1923. While the Daubert rule now applies in all federal courts, states are free to either stay with the Frye Rule, adopt the new Daubert Standard or adopt some combination of the two. Students discuss the implications of these evidentiary changes in a number of areas of legal controversy. The course concentrates primarily on the use of social science evidence; however, topics include tort litigation involving Bendectin, and the controversy over the use of DNA testing in criminal cases. Other topics include the use of scientific evidence in consumer confusion cases; obscenity cases and the question of community standards; and the number of syndrome evidence cases, including post-traumatic stress disorder, battered woman syndrome, and rape trauma syndrome. Constitutional law cases include coverage of death penalty issues, jury size cases, and school segregation by race and gender (including the controversy over single-sex education, and the ending of school busing mandates by the federal courts). The goal of this course is to increase the proficiency of lawyers to use scientific evidence on behalf of clients and be able to defend against such evidence when presented by the opposing counsel.

LAWS 4670 Water Law (3 Credits)

Water Law is an introductory course for students interested in pursuing water law. It covers private property rights in water, and the legal and environmental controls surrounding it. Recommended prerequisite: LAWS 4025.

LAWS 4672 International Water Law (3 Credits)

This course presents a global overview of water law, systems, and practice in the modern world. It includes coverage of hydrology, history, national legal systems, and modern international treaties and cases. It has a special emphasis on sustainable development, equitable utilization, pollution control, and ecosystem protection utilized for multi-nation water basins. LAWS 4670 Water Law and LAWS 4320 International Law courses are not a prerequisite, as basics will be covered.

LAWS 4674 White Collar Crime (3 Credits)

This course is designed for students with an interest in advanced criminal law practice, particularly the growing legal field of white collar crime. This seminar course will introduce students to the major substantive legal areas that make up the white collar field, including mail and securities fraud, bribery, health care fraud, conspiracy, and money laundering. In addition, students will learn the basics of conducting a corporate internal investigation, dealing with search warrants and subpoenas, criminal pre-trial matters, special considerations for criminal discovery, and common ethical issues. By the end of the course, students will have learned the basic substantive and procedural issues involved in white collar practice. Students will learn from and interact with a variety of practitioners drawn from the private and government sector. Instructor permission is required for enrollment.

LAWS 4686 Wills Lab (1 Credit)

This lab is designed to provide students with practical experience with interviewing and drafting for a real client while under the close supervision of a practicing attorney. Clients come primarily from Legal Aid. Each student is individually supervised by a volunteer attorney or by Prof. Marsh. The attorney goes with the student to the first interview with the client to assist the student if any difficulties come up in the interview. Then the student drafts the appropriate documents from scratch, and the attorney helps the student determine what revisions are necessary. When documents are in final form the attorney assists the student in having the documents properly signed. Documents include will, living will, and medical or financial powers of attorney, as appropriate. Letter grades are given by Prof. Marsh. Note that no student is allowed to drop the Wills Lab after the first interview with the client unless there is a severe medical emergency. There will be one introductory meeting scheduled during lunch time. All the rest of the work is scheduled individually by the student, supervising attorney, and client. NOTE: Students will NOT be allowed to drop the course after the first interview with the client. Prerequisite: LAWS 4640 or LAWS 4639.

LAWS 4700 Special Topics (1-5 Credits)**LAWS 4701 Special Topics (1-5 Credits)****LAWS 4702 Special Topics (1-6 Credits)****LAWS 4703 Special Topics (1-5 Credits)****LAWS 4704 Special Topics (1-5 Credits)****LAWS 4705 Special Topics (1-5 Credits)****LAWS 4706 Special Topics (1-5 Credits)****LAWS 4707 Special Topics (1-5 Credits)****LAWS 4708 Special Topics (1-5 Credits)****LAWS 4709 Special Topics (1-15 Credits)****LAWS 4800 Criminal Defense Clinic (3-6 Credits)**

This clinic offers students the opportunity to defend low-income clients charged with various criminal offenses. These offenses include DUI/DDWAI; domestic violence; assault; theft; disturbance; child abuse and neglect; menacing; etc. Students represent their clients in various municipal and county courts in the area. This course requires numerous court appearances for arraignments, pre-trial motions, and sentencing. Students should be prepared for an intense litigation experience in misdemeanor criminal defense. Corequisite: LAWS 4801. Prerequisite: permission of faculty supervisor.

LAWS 4801 Criminal Defense Clinic Seminar (3-4 Credits)

The Criminal Law Clinic Seminar must be taken in conjunction with the Criminal Law Clinic. Class sessions will be devoted to a variety of topics, including classes on lawyering skills, substantive law, issues of lawyering and society, and case review sessions, in which student attorneys will present information about their cases/projects to each other and give and solicit feedback about issues they are confronting in the representation of their clients. The classes include simulation exercises that are critiqued by faculty, and field exercises that involve trips to the Denver jail. Classes are taught by clinical faculty and by guest speakers who include area judges, practitioners, interpreters and other court personnel. Co-requisite: LAWS 4800.

LAWS 4802 Environmental Law Clinic Seminar (3 Credits)

THE ELCP clinic seminar must be taken in conjunction with the ELCP Clinic. During class, students will review federal civil procedure through a lecture series entitled "anatomy of a lawsuit," have specific lectures on effective legal writing, and commonly used statutes such as the Freedom of Information Act, and Endangered Species Act. Each student must also prepare a class presentation on their assigned major case, and participate in random, less formal docket meetings. Students must also attend four guest lectures from lawyers and other professionals on environmental law advocacy issues. Students earn 3 in class credits for this course and 3 out of class credits through the corequisite course. Corequisite: LAWS 4206.

LAWS 4803 Mediation & Arbitration Clinic Seminar (2 Credits)

The Mediation and Arbitration Clinic Seminar must be taken in conjunction with the Mediation and Arbitration Clinic. The seminar meets once a week for 90 minutes. Students read articles on mediation issues and receive intensive training in the classroom that is reinforced with classroom simulations. Students are also required to critique each other in the simulations. The seminar focuses upon identifying and resolving issues that arise during actual mediations. Students will earn 2 in class credits for this course and 3 out of class credits through the corequisite course. Corequisite: LAWS 4430.

LAWS 4805 Civil Litigation Clinic (5 Credits)

The Civil Litigation Clinic students represent low-income clients in a variety of civil disputes. The clinic permits students to participate in the selection of cases and problems they work on. Students have represented clients in areas involving wage and hour claims, housing discrimination, eviction defense and domestic violence protection orders. Additionally, the Civil Litigation Clinic requires some form of community outreach project enabling the student to learn about the client populations they serve. Students will earn 5 out of class for this course and 4 in class credits through the co-requisite course. Corequisite: LAWS 4806.

LAWS 4806 Civil Litigation Clinic Seminar (4 Credits)

The Civil Litigation Clinic students represent low-income clients in a variety of civil disputes. The clinic permits students to participate in the selection of cases and problems they work on. Students have represented clients in areas involving wage and hour claims, housing discrimination, eviction defense and domestic violence protection orders. Additionally, the Civil Litigation Clinic requires some form of community outreach project enabling the student to learn about the client populations they serve. Students will earn 4 in-class credits for this course and 5 out-of-class credits through the co-requisite course. Corequisite: LAWS 4805.

LAWS 4807 Child Advocacy Seminar (2 Credits)

The Child Advocacy Externship Seminar is a course and taught by the Rocky Mountain Children's Law Center. In the fall semester, the seminar course focuses on the laws surrounding advocacy for children in dependency & neglect, delinquency, civil protection order, and education cases. In the spring, students can enroll in a 2-credit Advanced Child Advocacy seminar to expand on the fall semester with topics such as the overlap of child welfare and family law, immigration advocacy, appellate advocacy for children, trial practice in the child welfare context, ethical issues in the representation of children, and a variety of other hot topic child advocacy issues. Students can choose to also enroll in a corresponding externship for credit. For more information on the field work component, please visit <http://www.law.du.edu/index.php/legal-externship-program/specific-externship-programs/child-advocacy-externship-program>.

LAWS 4809 Civil Rights Clinic (3-6 Credits)

The Civil Rights Clinic (CRC) represents individuals and groups in civil and human rights matters. The CRC's current cases address a range of complex constitutional issues litigated before the Federal District Court for the District of Colorado. Some of the claims currently being litigated in the CRC will impact constitutional jurisprudence nationwide. The current CRC docket is focused on the constitutional rights of prisoners. These cases challenge prison conditions and policies pursuant to the First, Fifth, Eighth and Fourteenth Amendments on issues such as: indefinite solitary confinement, failure to provide prisoners with adequate medical or mental health care, long-term denial of outdoor exercise, and the prison's refusal to provide meaningful process to individuals placed in long-term segregation. Co-requisite course LAWS 4812, Civil Rights Clinic Seminar. Pre-requisite or co-requisite course: LAWS 4425, Legal Profession. This course meets the Upper Level Writing requirement (ULW).

LAWS 4812 Civil Rights and Disability Law Clinic Seminar (3 Credits)

The Civil Rights Clinic (CRC) represents individuals and groups in civil and human rights matters. The CRC's current cases address a range of complex constitutional issues litigated before the Federal District Court for the District of Colorado. Some of the claims currently being litigated in the CRC will impact constitutional jurisprudence nationwide. The current CRC docket is focused on the constitutional rights of prisoners. These cases challenge prison conditions and policies pursuant to the First, Fifth, Eighth and Fourteenth Amendments on issues such as: indefinite solitary confinement, failure to provide prisoners with adequate medical or mental health care, long-term denial of outdoor exercise, and prison's refusal to provide meaningful process to individuals placed in long-term segregation. Students will earn 3 in class credits for this course and 3 out of class through the corequisite course L4805, Civil Rights Clinic. This course meets the Upper Level Writing requirement (ULW).

LAWS 4825 Immigration Law and Policy Clinic (5 Credits)

For the fieldwork component of the Immigration Law and Policy Clinic (ILPC), student attorneys appear in immigration court representing indigent, detained clients in bond and/or removal proceedings. Students may also provide consultations with student counsel in the Criminal Defense Clinic on the immigration consequences facing CDC clients. There may be additional opportunities for advocacy in post-conviction and/or federal habeas litigation, and in matters in which the ILPC will provide counsel and legal assistance to non-profit advocacy organizations pursuing policy or legislative reform or other non-litigation (or possibly litigation) matters. Throughout their fieldwork, student attorneys apply knowledge gained through the ILPC seminar by practicing lawyering skills such as interviewing, client counseling, fact investigation, legal research and writing, oral advocacy, negotiation, policy advocacy, and preparation for, and advocacy in, contested hearings. Through the ILPC fieldwork, students will have opportunities to explore systemic problems in the immigration enforcement system—particularly where immigration and criminal enforcement are conflated and entwined—such as racial and economic bias, law enforcement accountability, hyperincarceration, and access to justice. Credit Hours: 5 out-of-class credits (Fall term) / 2 to 7 out-of-class credits (Spring term) ULW: This course does not automatically meet the Upper Level Writing (ULW) requirement. Students who, in the course of their fieldwork, complete written work sufficient to meet the ULW requirement may obtain certification from their instructor.

LAWS 4826 Immigration Law and Policy Seminar (2-4 Credits)

The Immigration Law and Policy Clinic (ILPC) seminar provides timely instruction in topics relevant to student attorneys appearing in immigration court representing indigent, detained clients in bond and removal proceedings. In seminar, students will learn lawyering skills such as interviewing, client counseling, fact investigation, legal research and writing, oral advocacy, negotiation, policy advocacy, and preparation for, and advocacy in, contested hearings. Some classes may address issues that have not yet arisen in their clinic cases, with the goal of exposing students to different lawyering methods and advocacy tools. Through the ILPC seminar classes and related fieldwork, students will have opportunities to explore systemic problems in the immigration enforcement system—particularly where immigration and criminal enforcement are conflated and entwined—such as racial and economic bias, law enforcement accountability, hyperincarceration, and access to justice. This course does not meet the Upper Level Writing (ULW) requirement. Credit Hours: 4 in-class credits (Fall) / 2 in-class credits (Spring).

LAWS 4835 Community Economic Development Clinic (3 Credits)

The Community Economic Development ("CED") Clinic is a clinical legal education program that provides free transactional (non-litigation) legal services to small businesses, low-wealth entrepreneurs, community-based enterprises, nonprofit organizations, and artists. The Clinic is designed to simultaneously teach student attorneys the fundamentals of transactional practice while providing high-quality and invaluable legal representation to its clients. Through the representation of the Clinic's clients, student attorneys are exposed to the intersection of business law concepts and CED practice. Student attorneys learn that transactional lawyering is preventive lawyering, which involves avoiding conflict, litigation, and other negative outcomes. The Clinic's focus on the legal practice of CED will expose student attorneys to the variety of social systems, government programs, and federal, state, and local government laws that impact their clients. Client work includes drafting corporate formation documents; assisting nonprofit organizations with tax-exempt applications and maintenance of tax-exempt status; drafting and negotiating contracts; and acting as general counsel to both small businesses and non-profit organizations. In addition, students may research issues related to public policies that affect clinic clients and provide community education workshops on substantive law issues pertinent to one of the clinic's practice areas. Co-req: LAWS 4836, co-req/pre-req: LAWS 4425.

LAWS 4836 Community Economic Development Clinic Seminar (3 Credits)

The Community Economic Development ("CED") Clinic is a clinical legal education program that provides free transactional (non-litigation) legal services to small businesses, low-wealth entrepreneurs, community-based enterprises, nonprofit organizations, and artists. Clinic students are required to attend this bi-weekly 75 minute seminar while participating in the clinic. The seminar focuses on both substantive corporate law and transactional lawyering skills and is reinforced with complex simulations that students perform and then critique with faculty. Co-req LAWS 4835, pre-req/co-req LAWS 4425-Legal Profession.

LAWS 4867 Advising the Adviser: Compliance and Enforcement under the Investment Advisers Act (3 Credits)

This class will focus generally on investment adviser (IA) compliance with the federal securities laws and the Securities and Exchange Commission's (SEC) role with respect to that compliance. We will focus on how to advise an IA with respect to SEC regulations, touching on topics such as an IA's role as a fiduciary and an IA's requirements with respect to marketing, best execution, and principal and cross trading. We will also focus on what's necessary to establish and operate a robust IA compliance program.

LAWS 4880 DU Law Journal (0-3 Credits)

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4884 Int'l Law Journal (0-3 Credits)

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4885 Preventive Law Journal (0-6 Credits)

An enrollment card obtained from the Managing Editor is required.

LAWS 4888 Transportation Law Journal (0-3 Credits)

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4889 Water Law Review (0-3 Credits)

Scholarly journals are edited at the College of Law, allowing students to participate in research in various fields. Permission to enroll is obtained from the managing editor for credit of 0-3 semester hours.

LAWS 4900 Introduction to Clinical Pedagogy & Scholarship (1-2 Credits)

The purpose of this yearlong, two-credit (total) seminar is to introduce graduate teaching fellows to fundamental concepts of teaching and scholarship. Upon completion of this course, students understand: theoretical frameworks for supervision of J.D. students in the fieldwork portion of a clinic; the goals of seminar teaching, including the theory of backward design and the use of case rounds and other signature pedagogies; and the key differences between legal writing and academic scholarship, with an emphasis on developing a habit of and timeline for scholarly writing.

LAWS 4905 Scholarship Seminar I (4 Credits)

This is a semester-long, four-credit, intensive course taken after completion of the first academic year in which students produce and present drafts of scholarly articles along a timeline set out at the start of the semester.

LAWS 4910 Co/Shadow Supervision Practicum (4 Credits)

During their first academic year enrolled in the clinical LL.M. program, fellows will "shadow" or "co-supervise" law students with experienced faculty. Throughout the fellowship term, the fellows will receive instruction and feedback about their supervision that will continue to facilitate their development as clinical teachers. Clinical fellows are expected to participate in mid-semester or mid-year evaluation sessions with students and to participate in a traditional grading process.

LAWS 4920 Supervision Practicum II (4 Credits)

During their first academic year enrolled in the clinical LL.M. program, fellows "shadowed" or "co-supervised" law students with experienced faculty (for which they will receive four credits per semester). In their second year, fellows supervise on their own two students and in their third year, four students. Throughout the fellowship term, the fellows will receive instruction and feedback about their supervision that will continue to facilitate their development as clinical teachers. Clinical fellows are expected to participate in mid-semester or mid-year evaluation sessions with students and to participate in a traditional grading process.

LAWS 4921 Clinical Pedagogy & Design I (1 Credit)

The purpose of this yearlong, two-credit course is to explore more deeply the pedagogy and methods for teaching in both student supervision and classroom seminar settings. This series of courses accomplishes two important goals: (1) building a learning community through which a group of faculty come together and increase faculty collaboration around a shared enterprise of teaching; and (2) improving teaching. Graduate fellows will talk about events in their classrooms/supervision sessions, present "problems" to be unpacked and re-conceptualized, solicit ideas about what and how to teach, and share innovative assessment tools. Fellows reflect with supportive colleagues about the relationship between what they have done and their teaching goals and formulate plans with the benefit of the insights of others. The objective of this course is to have discussions that will facilitate the development of both concrete solutions and broader themes in the fellows' teaching.

LAWS 4925 Scholarship Seminar II (4 Credits)

This is a semester-long, four-credit, intensive course taken after completion of the second academic year in which students produce and present drafts of scholarly articles along a timeline set out at the start of the semester.

LAWS 4930 Supervision Practicum III (1-6 Credits)

The expectations for student supervision increase in the third year. Throughout the fellowship term, the fellows will receive instruction and feedback about their supervision that will continue to facilitate their development as clinical teachers. Clinical fellows are expected to participate in mid-semester or mid-year evaluation sessions with students and to participate in a traditional grading process.

LAWS 4931 Advanced Clinical Pedagogy & Design (1 Credit)

The purpose of this yearlong, two-credit course is to explore more deeply the pedagogy and methods for teaching in prior years; hone methods to fellows' unique professional, academic identities; and reflect on these and their experiences teaching in both supervision and classroom settings to articulate and design their own clinics. This course accomplishes two important goals: (1) building a learning community through which a group of faculty come together and increase faculty collaboration around a shared enterprise of teaching; and (2) improving teaching. During rounds, graduate fellows talk about events in their classrooms/supervision sessions, present "problems" to be unpacked and re-conceptualized, solicit ideas about what and how to teach, and share innovative assessment tools. Fellows reflect with supportive colleagues about the relationship between what they have done and their teaching goals and formulate plans with the benefit of the insights of others.

LAWS 4950 Scholarship (1 Credit)

The transition from legal advocacy writing to academic legal scholarship is challenging. In addition to learning a new style of writing and new methods of research, fellows must devote substantial time to the academic writing endeavor. Most students (and faculty) reflect in hindsight that writing a law review article for the first time takes substantially longer than they anticipated. Over the course of the fellowship, fellows earn one credit per semester for making progress toward completion of a paper of publishable quality. In this course, fellows apply theories of research and writing to the activities of writing (choosing topics, creating timelines, researching, and drafting sections of their articles).

LAWS 4991 Corporate Apprenticeship Program (4 Credits)

The Corporate Apprenticeship Program's purpose is to provide the opportunity for law students to learn about the distinct challenges facing corporate counsel. This program is offered solely in the spring term and consists of four mandatory seminars and 15 hours of work per week (preferably on consecutive days) in the legal department of sponsoring corporations. The interactive seminars are designed to introduce students to the practice environment and operations of an in-house corporate legal department.

LAWS 4996 Thesis (1-10 Credits)

The program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and the the community. Example placements include public defenders' offices; prosecutors' offices; the Attorney General's office; Legal Service offices; judicial clerkships; and selected private firms. Need special enrollment permission from Internship/Externship Office. A maximum of 10 credit hours may be awarded for this program.

LAWS 4999 Directed Research (1-5 Credits)

Direct Research is an opportunity for students to research and write on any area of law approved by a full-time faculty member who agrees to direct the project. The research project must be completed within the semester for which the student is registered. The research is compiled into a paper of publishable quality. A copy is delivered to the supervising faculty member for grading and a second copy is delivered to the associate dean for academic affairs by the last day of exams for that semester. Students may petition for either two or three semester hours. A maximum of five semester hours credit for Directed Research is permitted in satisfaction of the 90-credit degree requirement. A Directed Research application form (available in the registrar's office) signed by both the faculty supervisor and student is required for enrollment. The registrar's office will register the student for his or her directed research once the student's application form has been approved. All directed research projects must conform with the upper level writing requirement, which involves a mandatory rewrite, in addition to any other requirements. This course satisfies the Upper Level Writing requirement (ULW). Permission is required from the faculty supervisor and the Assistant Dean for Student Affairs to increase credit hours to 4 or 5.

LAWS 5025 Externship (1-10 Credits)

The program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and community. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; judicial clerkships; and selected private firms. Externship Seminar: In conjunction with the above field placement each student shall meet in a seminar under the supervision of a member of the law faculty to explore common and contrasting areas of professional responsibility, professional tasks and skills, decision making and dispute resolution presented in the various extern settings.

LAWS 5026 Trial Practice III: National Trial Team (3 Credits)

The Trial Teams Course is for the new and veteran students who are selected to represent the school on one of the national trial teams. The course meets one night a week during the summer session for five hours each night. The course is split into two sections, one for returning team members, and one for the newly-selected team members. The course is an advanced courtroom-simulation course in which students work intensely with other students and the instructor, delving into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. The veteran section begins the first class with students presenting both sides of a criminal case. The new member section begins with refreshers on case analysis, evidence, and courtroom strategies, and culminates with final trials. There is weekly out-of-class case analysis, drafting, and preparation required. Grading is based on classroom participation, written homework, simulated courtroom presentations, and a final trial.

LAWS 5027 American Association for Justice Trial Team (3 Credits)

Sturm's American Association for Justice Trial Team (AAJ) is one of four of the school's advanced courtroom-simulation based "team-courses" in which students find themselves working intensely with five other students and an instructor, delving deeply into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. Students must be invited to be on one of Sturm's National Trial Teams, after tryouts that are held every spring (April). The team-courses meet all three semesters (fall, spring and summer). Being invited onto one of the teams is a two-year commitment. Starting the first week of each semester, and continuing throughout the entire semester, the AAJ team-course meets once a week in a classroom environment, for a total of 2.5 classroom hours per week. The AAJ team-course also meets a second time each week for courtroom simulation performances and video review, for an additional four (4) hours. There is also substantial out-of-class case analysis and examination drafting required. The team competes on the national level in the fall at an "invitational" tournament, and in the spring in the AAJ tournament against other ranked law schools from around the country. Grading is based on classroom participation, written homework, and simulated courtroom presentations. Prerequisite: LAWS 4635.

LAWS 5028 ABA Trial Team (3 Credits)

Sturm's ABA/NTC team is one of four of the school's advanced courtroom-simulation based "team-courses" in which students find themselves working intensely with five other students and an instructor, delving deeply into increasingly complex areas of case analysis, evidentiary interpretation and application, examination drafting and presentation, and ethical dynamics of fact patterns. Students must be invited to be on one of Sturm's National Trial Teams, after tryouts that are held every spring (April). The team-courses meet all three semesters (fall, spring, and summer). Being invited onto one of the teams is a two-year commitment. Starting the first week of each semester and continuing throughout the entire semester, the ABA/NTC team-course meets twice a week in a classroom environment, for a total of five (5) classroom hours per week. The ABA/NTC team-course also meets a third time each week for courtroom simulation performances and video review, for an additional four (4) hours. There is also substantial out-of-class case analysis and drafting required. The team competes on the national level in the fall at an "invitational" tournament, and in the spring in the ABA/NTC tournament against other ranked law schools from around the country. Grading is based on classroom participation, written homework, and simulated courtroom presentations.

LAWS 5029 Semester in Practice (1-12 Credits)

The Semester in Practice program is designed to allow students the opportunity to develop practice skills by working full-time in legal programs of concern to the legal profession and community. This is a capstone experience offered to students in their last year of law school, where students have significant exposure to the substantive law in their externship. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; judicial clerkships; and selected private firms. As this is an externship, credit may vary, up to 12 credits, depending on the student. Externship Seminar: In conjunction with the above field placement, each student shall meet in a three-credit graded seminar under the supervision of a member of the externship faculty to explore common and contrasting areas of professional responsibility, professional tasks and skills, decision making and dispute resolution presented in the various extern settings.

LAWS 5030 Semester in Practice Seminar (3 Credits)

This seminar is the classroom component of the Semester in Practice (SIP) course. Through class discussion, we explore a variety of issues that provide students with the opportunity to reflect on the legal profession and how they perceive their role in the profession - currently and prospectively. We focus primarily on professional identity and ethical issues of key importance to the practice of law.

LAWS 5031 Legal Externship Seminar (1-3 Credits)

The Legal Externship Program is divided into practice-specific programs. Students enrolled in each of these programs are required to also enroll in an accompanying for-credit seminar that addresses topics specific to each practice area.

LAWS 5035 Public Service Externship (2-6 Credits)

The externship program is designed to allow students the opportunity to gain experience working in legal programs of concern to the legal profession and community. Example placements include public defenders' offices; prosecutors' offices; the attorney general's office; legal service offices; and judicial clerkships. To ensure that the College of Law remains in the forefront of public service, every Juris Doctor student is required to perform a minimum of 50 hours of supervised, uncompensated, law-related public service work during his or her law school career as a prerequisite to graduation. This requirement may be fulfilled by registering for, and passing, an externship for credit at a government agency, judicial chambers, or nonprofit organization via the Legal Externship Office, as long as no financial compensation of any kind whether from the employer or outside source was received for the externship.

LAWS 5999 Law Consortium Visit (0-18 Credits)

This is a placeholder course that allows students to remain actively enrolled at Sturm College of Law for purposes of enrollment reporting and financial aid disbursement while students are participating in an approved visit at another ABA approved law school per a consortium agreement. Credits associated for this course are replaced by transfer credit once a final transcript is received by the host institution.

Legal Administration Courses**MSLA 4050 The Impact of Court Governance (1 Credit)**

This course informs students on the policy making process of local court governance and the impact of the process on court operations and public services. Various governance structures are explored to include the benefits of principle based governance. Students gain in-depth insight into the roles and relationships of judges and court administrators as leaders and governing authorities within the judicial system. Course knowledge is applicable to all levels of national and international court jurisdiction.

MSLA 4080 Law Firm Information Technology (2 Credits)

This course is designed to inform the student on the complexities of information technology in a law firm setting. Topics include time and billing, assessing the IT needs of the office, networking abilities, creating a paperless office, security, case management, outsourcing, and knowledge management.

MSLA 4090 Court Information Technology (2 Credits)

This course is designed to introduce students to the intricacies of information technology in a court setting and the importance of an efficient and effective system. Topics include communications technology (internal and external), virtual courthouses, electronic case filing, legal research systems, information and systems security, networking abilities and needs, court reporting/recording and accessibility to the public (website).

MSLA 4100 Court Fiscal Management (3 Credits)

This course focuses on the key aspects of fiscal management in a court setting. Students learn models of public budgeting, internal controls, procurement, outsourcing, RFPs, internal and external auditing, and government funding models. Prerequisite: MSLA 4410.

MSLA 4121 Human Res & Performance Mgmt (3 Credits)

This course will provide a broad overview of the field of human resource and performance management. Students learn what managers and administrators need to know to effectively address Human Resource issues in today's workplace. The course will provide major concepts and techniques of performance management in law and court environments. By employing perspectives of both the employer and employee the class will focus on "best practices" utilized by managers and administrators and emphasize decision-making skills and processes in the context of Human Resources law and policy. Students will learn how to achieve organizational goals via management of a company's most precious resource, their people. This textbook provides an overview of the content upon which the most common HRCI certifications (SPHR, PHR) are based.

MSLA 4151 Applied Leadership and Management Theory (3 Credits)

This course is designed to provide the student with an understanding of the importance of effective leadership and management in the workplace. Students will learn the tools necessary to manage conflict, build strong teams, function as a team, manage performance, create and maintain a positive work environment, and motivate others.

MSLA 4180 Court Case Flow and Load Management (2 Credits)

This course is designed to provide the student with the fundamental principles of managing an effective case management system. Students will learn the importance of an efficient case flow management system, the history of case management, electronic case filing, civil and criminal rules of procedure, case assignment, quality assurance and time standards and major case, records management and reporting systems, strategies necessary to gain judicial support, leadership and cooperation to effectuate effective case flow management practices, and improve judicial performance as it relates to the disposition of actions.

MSLA 4181 Inclusiveness in the Legal Profession - The Next Generation of Diversity Efforts (1 Credit)

Diversity and inclusiveness are hot topics in the legal profession. This highly interactive course will educate students about the state of diversity and inclusiveness within the legal profession, the systemic underpinnings of the lack of diversity, how to create inclusive environments for successful retention and advancement of female and diverse attorneys and staff, as well as the importance of diversity and inclusiveness to the viability of the legal profession. Students will be challenged to draw upon their own life experiences, to consider different perspectives, and provide thoughtful analysis on how they can incorporate diversity and inclusiveness practices with their career path and future legal organizations.

MSLA 4200 The Business of Courts (3 Credits)

This course is designed to provide the student with the fundamental principles and elements of the key functions performed by the courts. These functions include jury management, court based mediation and arbitration programs, court reporting, client expectations, contingency planning, continuity of operations planning, needs and expectations of litigants without lawyers, interpreter services, court and staff performance measurement and management, and the role of the court administrator.

MSLA 4201 Law Firm Administration (3 Credits)

This course informs the student of the fundamental principles, elements and day-to-day operational processes of law office management. Topics covered in this course include law office culture, law firm organization, succession planning, practice areas, client communication flow, collection challenges, and understanding and working with law office timekeeping, accounting, and billing systems.

MSLA 4205 Lawyer Recruitment, Development, and Advancement in Law Firms (2 Credits)

This course will focus on the key aspects of lawyer recruitment, development and advancement in law firms. Students will learn the primary methods for recruiting and hiring lawyers at all experience levels, and the most important elements of lawyer development, including orientation, integration, legal and core skills training, experiential learning, mentoring, performance management, and evaluations. Traditional compensation and advancement models, as well as emerging trends in all of these areas, will also be covered during the course.

MSLA 4215 Court Space, Facilities and Security (2 Credits)

This course is designed to inform the students of the fundamentals of managing the court's space, facilities and security. Aspects of this course include: facilities management, operational standards and management, safety and security, assessing courthouse building needs, developing space planning reports, the management of all types of space projects, building and personnel security issues, contingency planning, and disaster recovery.

MSLA 4300 Introduction to the United States Judicial System (3 Credits)

This course provides the student with an overview of the United States judicial system. Students learn the fundamentals of our legal system, historical basis of the U.S. judicial system, the foundation, structure, purpose, what it stands for, and the varying levels of the U.S. court system.

MSLA 4301 Judicial Performance and Evaluation (1 Credit)

This course informs students on the complexities of judicial performance and evaluation. Students learn the fundamentals of developing a judicial performance program, measuring the effectiveness of performance recommendations, commissions on judicial performance, and the components of the evaluation process.

MSLA 4310 World Judicial Systems (3 Credits)

The goal of this course is to compare and contrast the role of the judiciary in various legal systems. Topics include types of courts and court systems (including domestic, supranational, i.e., the European Union, and international courts), judicial independence, separation of powers, and challenges facing the judiciary such as miscarriages of justice. Students also compare court procedures (civil, criminal, appellate review) in different types of legal systems.

MSLA 4320 Fundamentals of Comparative Law (3 Credits)

This course introduces the classifications of the world's legal systems: (civil law, common law, Islamic law, customary law, and mixed law systems). Students will learn the general elements of a legal system then compare and contrast these features in different types of legal systems as they are used in various countries or other jurisdictions including the European Union. Students will also explore internet and electronic resources to research and analyze foreign legal systems.

MSLA 4330 Specialty Courts (2 Credits)

This course will provide the students with an understanding of the purpose, functionality and effectiveness of specialty courts. Topics will include the types of specialty courts and how to create them, maintaining sustainability, treatment options, demographics, budgeting and measuring specialty court performance.

MSLA 4380 Communication, Writing, and Research in Legal Business (3 Credits)

This is a foundation course is designed to provide students with effective, productive, and relevant communication, writing, and research skills used in legal business today. Topics will include writing press releases, social media news/headlines/updates, executive summaries, email strategies based on audience, etc.

MSLA 4384 Court Comm & Media Relations (2 Credits)

This course will inform the students how to address communications and manage media relations for the courts. Topics will include views of the court from multiple perspectives, communicating to different constituencies, public relations and customer satisfaction, and educational outreach programs.

MSLA 4385 Law Firm Communications and Technology (3 Credits)

This course is designed to build student's foundation knowledge of technology in the legal environment. The competitive landscape³ in the law firm setting is stronger than it ever has been, and this competitiveness forces law firms to find efficient and innovative ways to conduct business in this new landscape through the use of technology. Topics of this course will include identification of technologies used in law firms and legal departments as well as thoughts about how to leverage those technologies to help gain efficiencies.

MSLA 4386 Law Firm Client Services and Satisfaction (2 Credits)

This course is designed to inform the student of the importance of client service and satisfaction and its value to the law firm. Topics covered in this course include external communication, client feedback, partnering with clients, client relationship management, and evaluation and survey design.

MSLA 4410 Accounting and Financial Management in Legal Business (3 Credits)

This course will explore the principals and practices of financial accounting including the standards that govern the preparation of financial statements in legal business. Students will gain a comprehensive overview of double entry accounting, a detailed understanding of assets, liability, equity, revenue and expenses and how they affect the income statement, balance sheet, and statement of cash flows. Special attention will be given to the unique attributes of financial reports related to law firms.

MSLA 4415 Statistics for the Legal Administrator (2 Credits)

This course will introduce the fundamentals of statistics for the legal administrator. Students will learn how to measure efficiencies and work performance, perform and analyze needs assessment, track productivity; measure cases flows, and assess client needs.

MSLA 4420 Legal Practice Seminar-Law as a Business (3 Credits)

This course provides an overview of the business functions of a law practice. Students learn how effective law practice administrators and managers base policy and management decisions on a comprehensive understanding of the law firm as a complex and interdependent equation. MSLA course, open to JD students with approval from Associate Dean.

MSLA 4640 ADR for the Court and Law Firm Administrators (3 Credits)

This course has been designed for the Court/Legal Administrator to explore and understand the skills essential when negotiating/mediating conflict and to examine the ADR system designed for court-annexed, Federal/state agency and private sector arbitration/mediation programs. Students will have an opportunity to explore issues related to ADR in the public and private sector by actively participating in weekly online discussions and experience hands-on learning by developing an ADR system to include the process for selecting a panel of ADR specialists, and a process for implementing and managing the program.

MSLA 4901 Law Firm Financial Management (3 Credits)

This course focuses on the key aspects of financial management in a law firm setting. Students analyze financial reports/data, work flow analysis and assessment, understand trust accounts, client billing and internal controls, to ultimately recognize and understand the financial health of the law firm. Prerequisite: MSLA 4410.

MSLA 4950 Strategic Planning in Courts (2 Credits)

This course is designed to prepare the student in creating a strategic plan for the courts. Students learn to think strategically, design surveys, perform an environmental analysis, set goals, develop action plans, and measurement tools.

MSLA 4954 Project Management (3 Credits)

This course is designed to provide students with the tools to effectively manage a project regardless of its size. Topics include clarifying the project goals, using objectives to define responsibilities, understanding GANTT and PERT charts, goal setting, prioritization, time management, consensus building, developing creative teams, empower the project team, motivating the team, communications tools, how to handle conflicts, and how to celebrate your success.

MSLA 4999 Directed Research MSLA (1-17 Credits)

MSLA Directed Research is an opportunity for students to research and write on any area of legal administration approved by an MSLA faculty member who agrees to direct the project. The research project must be completed within the semester for which the student is registered. The research is compiled into a paper of publishable quality that is delivered to the MSLA program director by the last day of exams for that semester. A Directed Research application form (available in the Registrar's Office) signed by both the faculty supervisor and student is required for enrollment. The Registrar's Office will register the student for his or her directed research once the student's application form has been approved.

MSLA 5010 Capstone: Externship/Project (3 Credits)

The externship or creative project is designed to complement the student's area of study. The externship enables the student to work in a practical setting and acquire the experience in a legal environment. The creative project option provides students, already working in the legal environment, an opportunity to complete a project or research paper on a topic determined by student and MSLA office. A grade of "pass" is given after the work is completed, and a letter from the supervisor summarizing the student's experience is submitted to the MSLA Office.

Graduate Tax Program

The Graduate Tax Program was created at the University of Denver in 1975 in response to the demand for trained tax specialists in both the legal and accounting professions. Initially an evening program catering to the needs of practicing attorneys and accountants employed in the Denver area, it has evolved into one of the few such programs to offer a curriculum designed for both the full- and part-time student. The Graduate Tax Program is offered to highly qualified students who are graduates in law, accounting, or business in both in-person and online formats.

The Graduate Tax Program prepares students for entry into professional tax practice in both the public and private sectors. Through the interdisciplinary nature of the program, the law graduate learns the accounting aspects of tax practice, and the accounting graduate acquires a thorough understanding of the legal process.

Graduate Tax Program

Office: Sturm College of Law

Mail Code: 2255 E. Evans Ave., Denver, CO 80208

Phone: 303-871-6249

Email: gradadmissions@law.du.edu

Web Site: <http://www.du.edu/tax> (<http://www.du.edu/tax/>)

The Graduate Tax Program at the University of Denver has been a leader in the education of tax professionals for more than 40 years. The demand for our graduates continues to increase, along with the complexity of our nation's tax laws. Our curriculum combines both the law and accounting aspects of tax practice, giving our graduates the ability to provide thoughtful, practical advice to their clients.

We offer degree tracks that meet your academic and professional needs and prepare you to continue your career in Tax, including an LLM for lawyers, Master of Taxation for accountants and other graduate students, and a flexible online program for those who cannot be here in person.

Our Graduate Tax Program continues to update its curriculum to reflect the latest changes in the law and offer an in-depth, cutting-edge tax curriculum that meets students' professional needs. Our academic program focus exclusively on taxation, and includes courses in: international taxation, state and local taxation, estate planning, individual taxation, entity taxation, and tax controversy.

Additionally, you can earn credit by participating in our Low Income Taxpayer Clinic (LITC), which has served the Denver community since 1982. This hands-on, real-world experience provides students the opportunity to handle work papers, participate in research, and represent clients before the IRS and Tax Court. Participation in the clinic creates a multidisciplinary network that lasts long after graduation. LITC participation is available for online and onsite students.

Master of Laws in Taxation

Master of Laws (MT) Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the

baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.

- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

LL.M. Requirements

- The JD degree or its equivalent (such as an LLB) from a college of law approved by the American Bar Association (no GMAT or LSAT score submission) is required. Those pursuing a JD at the Sturm College of Law at the University of Denver may apply to pursue a formal dual JD/LLM in Taxation option. Please see the dual degree policy (<http://bulletin.du.edu/graduate/dual-degrees/formal-dual-graduate-degrees/>).

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Graduate Tax Program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Taxation

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

Standardized Test Scores

The GMAT or GRE is required. Scores must be received directly from the appropriate testing agency by the deadline. The GMAT code number is MZR-GT-68. The GRE code number is 4842. We will consider you waived from the GRE/GMAT if you have one or more of the following:

- You received a bachelor's degree in accounting or a business administration degree with a major in accounting with a cumulative GPA greater than or equal to 3.0.
- You received a bachelor's degree in accounting or a business administration degree with a major in accounting, and you have earned a graduate level degree from an accredited school.
- You have passed all four parts of the CPA Exam. Verification must be sent as an official document from the testing authority to Graduate Legal Studies before you can register for classes.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/CAE test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum CAE Score: 176

English Conditional Admission: In cases where minimum TOEFL/IELTS scores were not achieved or no English proficiency test was taken, the Graduate Tax Program may offer English Conditional Admission (ECA) to academically qualified non-native English speakers.

Master of Laws in Taxation

Degree Requirements

All students must complete 24 semester hours within the approved GTP curriculum. Curriculum is applicable to both online and onsite degree options (with the exception of the Low Income Tax Payer Clinic).

Coursework Requirements

| Code | Title | Credits |
|--|--|--------------|
| Required Courses | | |
| TAX 4001 | Fundamentals of Taxation | 4 |
| TAX 4002 | Corporate Taxation | 3 |

Faculty

Samantha Ann Galvin, Professor of the Practice of Taxation, LLM, University of Denver

Isaac Lodico, Professor of the Practice of Taxation and Department Chair, LLM, University of Denver

John Wilson, Professor of the Practice of Taxation, JD, Stanford University

Courses

TAX 4001 Fundamentals of Taxation (4 Credits)

This class will cover fundamental concepts of the federal income tax system, including the definition of income, adjusted gross income, taxable income, exclusions from income, business and personal deductions, tax credits, basis, amount realized, gain and loss, capital gains and losses, depreciation, involuntary conversions, like-kind exchanges.

TAX 4002 Corporate Taxation (3 Credits)

This required course covers the taxation of corporations and shareholders, including formation, nonliquidating distributions, the dividends received deduction, stock redemptions, distributions in kind, constructive distributions and liquidating distributions.

TAX 4003 Partnership Taxation (3 Credits)

Tax treatment of partnerships and partners; aggregate and entity principles; problems associated with the formation, operation, and dissolution of partnerships; transactions between partnerships and partners; compensation of service partners; sales of partnership interests; withdrawal and retirement of partners; basis adjustments; treatment of unrealized receivables and substantially appreciated inventory.

TAX 4004 Tax Procedure (1-2 Credits)

This required course addresses foundational procedural matters that must be addressed in resolving tax controversies with the Internal Revenue Service. Topics covered include filing obligations, statutes of limitation on assessment and collection of taxes and claims for refund, statutory notices, administrative appeals, limitations on injunctions against the assessment and collection of tax, examination procedures and collections procedures. Students are also introduced to ethical obligations of tax advisors.

TAX 4005 Taxation Research and Writing (1-2 Credits)

Research sources, techniques, and practice; in-depth research of selected areas. Emphasis on argument and communication of conclusions; evaluation of legislative history and administrative authorities.

TAX 4015 S Corporations (2 Credits)

This elective course addresses the federal taxation of S corporations and their shareholders. Topics covered include qualification as an S corporation, elections, the flow through of items to shareholders, basis in S stock and debt, accumulated adjustments account, the built-in gains tax, and passive activity limitations and taxes. Prerequisite: TAX 4002 - Corporation Taxation.

TAX 4024 Advanced Tax Procedure (2 Credits)

This class addresses advanced procedural matters arising in tax controversy. Topics covered include innocent spouse relief, jurisdiction of courts to resolve tax matters, petitioning Tax Court, and bringing suit for refund in U.S. district courts and US Court of Federal Claims. Prerequisite: TAX 4004.

TAX 4025 Estate & Gift Taxation (2 Credits)

This elective course will cover taxation of gratuitous transfers under the federal estate and gift tax codes, including taxable inter vivos gifts, annual exclusion, gift-splitting, gift tax charitable deduction, gift tax on powers of appointment, estate tax on owned interests, property transferred inter vivos with retained interests and powers, property subject to powers of appointment or transferred in contemplation of death, jointly owned property, life insurance proceeds, annuities and employee death benefits, marital deduction, charitable deduction, estate tax credits, estate tax deductions and valuation problems.

TAX 4035 Tax Accounting (2 Credits)

This elective course covers adoption of and change in accounting periods; income recognition and deduction allowance under the cash and accrual methods; prepaid and contested income and expenses; long-term contracts; capitalization and expensing; interest, original issue discount, and the time value of money; deferred payment transactions; income and deduction reversals; accounting method and practice changes.

TAX 4045 Exempt Organizations (2 Credits)

The statutory exemption for "charities," social welfare and social clubs, homeowners' associations, fraternal orders, employee benefit organizations, mutual or cooperative companies, business and professional leagues, labor unions, exempt organizations, property title companies, federally organized or chartered organizations, and political organizations' activities, funds, and lobbying activities; prohibited transaction rules; the private foundation; the unrelated business and debt-financed income tax exposures; excise tax exemptions; administrative appeal and declaratory judgment procedures; anti-discrimination considerations; charitable contributions.

TAX 4050 International Taxation-Inbound (2 Credits)

This course addresses the U.S. taxation of foreign taxpayers with economic activity connected to or within the United States. Topics covered include jurisdiction to tax, determination of residence, source, categorization of income, and tax treaties.

TAX 4055 Tax & Financial Planning (2 Credits)

This course addresses the Federal income taxation of investments and introduces students to the concepts and tools used to advise clients in investing and planning for the taxation of their investments and accumulated wealth.

TAX 4060 Natural Resources Taxation (2 Credits)

Tax problems encountered in the acquisition, operation, and disposition of natural resource properties; pre-production expenditures, depletion, depreciation, and ad valorem taxes; emphasis on overall tax planning for natural resource ventures.

TAX 4065 Taxation of Corporate Mergers and Acquisitions (2 Credits)

This course addresses the taxation of corporate mergers and acquisitions. Students will be introduced to the law governing the taxation of corporate mergers and acquisitions, whether taxable or tax-free, and learn to advise taxpayers on the results.

TAX 4121 Taxation of Retirement Plans and Deferred Compensation (2 Credits)

Taxation of Retirement Plans and Deferred Compensation introduces students to issues related to retirement savings plans available to employers and taxpayers, including vesting requirements, top-heavy plans, and the taxation of plan contributions and distributions. The course also addresses non-qualified deferred compensation governed by § 409A, including, traditional non-qualified deferred compensation plan designs, executive compensation programs (e.g., equity compensation arrangements and types of non-qualified trusts established for the benefit of executives), common § 409A errors and correction, tax and accounting implications, and the "special timing rule" for FICA taxes.

TAX 4125 Fiduciary Income Taxation (2 Credits)

This course covers the federal income taxation of estates and trusts. Included is a discussion of the concept of an estate or trust; trust accounting income for a simple and complex trust; calculation of taxable income, including special rules on the calculation of distributable net income, capital gains, personal exemptions, and charitable contributions; the separate share rule and trapping distributions; income in respect of a decedent; the grantor trust rules under sections 671-678; trust ownership rules for subchapter S stock; and the calculation of the alternative minimum tax. Estate & Gift Taxation is highly recommended before taking this course.

TAX 4150 Special Topics in International Taxation (2 Credits)

This class addresses the U.S. taxation of U.S. taxpayers with economic activity outside of the United States. Topics covered include foreign tax credits, subpart F income, hybrid entities, global intangible low-taxed income and foreign-derived intangible income.

TAX 4165 Taxation of Startups and Venture Capital (2 Credits)

This course addresses taxation of startups and venture capital. Topics covered include choice of entity, taxation of intellectual property, carried interests, employee compensation, international expansion, and exit strategies. TAX 4003 Partnership Taxation and Tax 4002 Corporate Taxation are co-requisites or pre-requisites for this course.

TAX 4225 Estate Planning (2 Credits)

This course is a survey of estate planning issues. We will analyze an estate from the beginning through the end of the process. We will examine fact gathering and the analysis of data; the psychological and ethical aspects of working with families at different phases of the estate plan; the members of the team (the attorney, the CPA, the life underwriter, the trust officer); life insurance and retirement planning in an estate and business planning context; planning with trusts; and the transfer of wealth and a closely held business interest from one generation to the next. We will also study ways to plan for future generations and domestic asset protection planning. Estate and Gift Taxation (TAX 4025) is a pre-requisite for the for this course.

TAX 4325 Tax Planning for Closely Held Businesses (2 Credits)

This course addresses succession planning for closely held businesses. Topics covered include buy-sell agreements, stock redemptions, intra-family transfers of business entities, compensation arrangements, and family limited partnerships. TAX 4003 Partnership Taxation and TAX 4002 Corporate Taxation are pre-requisite or co-requisites for this course. Estate Planning and Fiduciary Income Taxation are recommended.

TAX 4415 Low Income Taxpayer Clinic (1-8 Credits)

Using a focused series of classes related to issues facing individual low income taxpayers embroiled in conflict with the Internal Revenue Service or in litigation before the United States Tax Court (innocent spouse relief, earned income credit, dependency exemptions, appeals of audits and collection due process issues, tax litigation), this course first prepares tax students to represent taxpayers regarding such issues, then provides the opportunity to practice before the IRS and in the Tax Court. In a clinical setting, students are trained in all facets of practice before the IRS and the Tax Court. Once trained, under the supervision of clinical staff, the students undertake representation of low income taxpayers in tax audits, appeals, collection proceedings, and, if necessary, before the Tax Court. All facets of client representation, including initial client meetings, representation agreements, client advocacy, and ending the representation, are experienced by each clinic participant.

TAX 4550 Consolidated Returns (2 Credits)

This course covers the rules and requirements for consolidated income tax returns, including qualification for consolidation, determination of consolidated taxable income, allocations of liability, adjustments of E&P and basis, and various loss limitations.

TAX 4590 State and Local Taxation (2 Credits)

This course addresses state law approaches to taxation, including variations in state rules, constitutional limitations on states' authority to impose tax, and various approaches to apportionment of taxation. We will also discuss policy considerations underlying these systems.

TAX 4625 Accounting for Income Taxes (2 Credits)

Accounting for Income Taxes examines the financial accounting and reporting of income taxes under Statement of Financial Accounting Standards Codification Topic 740 (FASB ASC 740), formerly known as FAS 109, and related accounting literature.

TAX 4701 Special Topics in Taxation (1-5 Credits)

Special topics courses are used for timely offerings of specialized courses not otherwise found in the course catalog. Titles will vary. Please see law.du.edu/registrar for more information.

TAX 4750 Special Topics in International Taxation (2 Credits)

This advanced seminar discusses international taxation of economic activity arising in multiple jurisdictions. Topics discussed can include tax treaties, dual residence entities, anti-abuse regimes, approaches to base erosion and profit shifting, taxation of intangible income, and issues related to stateless income. TAX 4150 International – Outbound is a prerequisite for this course.

TAX 4985 Internship (0 Credits)

The Graduate Tax Program (GTP) encourages students to gain practical experience and to develop professional skills in the field of taxation. Internships are supervised by faculty who interact with the eligible student and the employer or organization that provides the internship. The internship should provide a new learning experience for the student intern and must be related to taxation. Satisfactory completion of the internship results in a passing grade for the internship. The GTP Director or a full time GTP faculty member may serve as Faculty Supervisor for GTP interns. Students must obtain approval from the GTP Program Manager.

TAX 5025 Tax Externship (1-4 Credits)

The Graduate Tax Program (GTP) encourages students to gain practical experience and to develop professional skills in the field of taxation. Tax externships are designed to allow students the opportunity to gain monitored work experience in Tax-oriented placements outside of the law school. Example placements include judicial chambers, government agencies, private firms, corporations, and nonprofit organizations. Students should discuss any placement with the Director of the Graduate Tax Program before enrolling in this course. Externships are supervised by faculty who interact with the eligible student and the employer or organization that provides the externships. The externship should provide a new learning experience for the student and must be related to taxation. Satisfactory completion of the externship results in a passing grade for the externship. The GTP Director or a full time GTP faculty member may serve as Faculty Supervisor for students. Students may complete an externship for 1 to 4 credits. Each credit corresponds to 42.5 hours of work and thus students can work from 42.5 hours to 170 hours. This class does not satisfy the upper-level writing requirement.

TAX 5991 Independent Study (1-3 Credits)

Opportunity to study and write in any area agreed upon between the student and a member of the faculty. The student is required to produce a written work of publishable quality to receive a final grade for the course. Must obtain pre-approval from the Graduate Tax Program.

University College

As the University of Denver's college of continuing and professional studies, University College (<http://universitycollege.du.edu/answers/why-university-college.cfm>) delivers a personalized education from a top 100 university, as ranked by *U.S. News & World Report*. Delivered entirely online or evenings on campus, career-focused programs help you envision your future and be a leader in your chosen field. Build your network and your knowledge at University College, where you can earn a master's degree (<http://universitycollege.du.edu/masters-degrees.cfm>) in 18 months, a specialized graduate certificate (<https://universitycollege.du.edu/certificate/>) in six months, or a graduate certificate (<https://universitycollege.du.edu/certificate/>) in less than a year. The top-ranked bachelor's completion program (<https://universitycollege.du.edu/bachelors/>) is also available for those with some college credit who want to finish their degree.

Arts and Culture Management

The Arts and Culture Management program helps students enhance their ability to support, promote, and lead both public and private sector arts and cultural organizations. The program's larger aim is to prepare students to strengthen their communities through the dissemination of artistic and cultural creations that address and celebrate diverse constituencies, whether based on age, ethnic background, religious/philosophical identity, or political commitments. The program fosters the study of best practices in areas such as advocacy, community outreach, marketing, fundraising, facilities management, organizational development, budgeting, and governance. The program develops critical and creative thought through a combination of academic and applied inquiry to fully understand the needs of communities and organizations and to meet those needs in the most effective ways.

This program prepares students to:

- Develop careers in public and/or private arts and culture organizations
- Implement best practices to support organizational stability and creative vibrancy
- Cultivate strong connections between arts and culture organizations and the communities they serve
- Effectively deliver well-planned programs and events tailored to diverse audiences

Master of Arts in Arts and Culture Management with a Concentration in Arts and Culture Outreach and Advocacy

Students in the Arts and Culture Outreach and Advocacy concentration learn strategies and methods for creating strong relationships between arts and culture organizations and the communities they serve. Instructors with current expertise in arts and culture outreach and advocacy offer current industry insight and help students develop the practical knowledge they need to advocate for arts and culture in communities of all kinds. By designing engaging events and targeted programs, applying entrepreneurial thinking and skills to issues of community outreach, and developing effective approaches to securing grant support, graduates with this concentration will bring core skills to any organization they join in the arts and culture sector.

This degree prepares students to:

- Design events and programs that cultivate connections between arts and culture organizations and the communities they serve
- Develop winning proposals to secure grant support for outreach and advocacy initiatives

- Evaluate the opportunities to build a strategic marketing plan using various forms of media
- Apply creative, entrepreneurial approaches to help both nonprofit and for-profit organizations develop a strong, productive community presence

Master of Arts in Arts and Culture Management with a Concentration in Arts and Culture Marketing

In the Arts and Culture Marketing concentration, students learn to plan, sustain, and develop strategic marketing initiatives and campaign assessment methodologies on behalf of arts and culture organizations, both nonprofit and for-profit. Instructors with current expertise in arts and culture marketing provide industry insight and help students develop the practical knowledge they need to work as effective members of arts and culture marketing teams.

This degree prepares students to:

- Design effective marketing strategies to cultivate audiences for arts and culture events
- Identify, develop, and retain key audiences
- Evaluate the opportunities to build strategic marketing plans using various forms of promotion, advertising, digital communications, and social media
- Assess individual campaigns and overarching strategies to improve them over time

Master of Arts in Arts and Culture Management with a Concentration in Arts and Culture Fundraising and Development

Students in the Arts and Culture Fundraising concentration learn the practical steps involved in creating successful fundraising campaigns on behalf of nonprofit arts and culture organizations. From crowdsourcing and kick-starting campaigns to capital fundraising and legacy gifts, nonprofits must cultivate and retain donors from diverse contexts, prospect for new gifts, and demonstrate impact. Students will demonstrate the knowledge and skills to navigate these changing trends to increase the impact and drive ahead their organization's mission. Students will apply their passion and pragmatism as they learn about the scale and planning needed to develop the resources to carry out their arts and culture organization's mission.

This degree prepares students to:

- Assess different development approaches to determine the scale and mission appropriateness for nonprofit/nongovernmental organizations of varied sizes.
- Synthesize knowledge about different development approaches.
- Apply diverse development strategies to conduct and prepare development plans.
- Demonstrate financial literacy needed to develop successful nonprofit arts and culture organizations that employ structured fundraising tools and techniques.
- Demonstrate cultural competence and understanding of how fundraising strategies may work across diverse cultural contexts.

Master of Arts in Arts and Culture Management with a Concentration in Mission-Driven Operations and Management

In the Arts and Culture Mission-Driven Operations and Management concentration, students learn how to help program operations and organizational management work together to accomplish a nonprofit arts and culture organization's mission impact. Organizations need to develop effective program design to include staffing, performance measurements, and the human and financial resources to ensure success. In this concentration students will link financial goals to grants management, partnership cultivation and community-based strategies that further the goals of the organization. Together, students will examine the evidence of effective nonprofit programming as grounded in research. Students will identify program evaluation strategies that demonstrate community impact and mission accomplishment. Volunteer and advocacy operations are also examined as programming strategies that accomplish a nonprofit arts and culture organization's mission.

This degree prepares students to:

- Demonstrate planning practices for effectively resourced nonprofit/nongovernmental program development.
- Evaluate existing nonprofit programs' design using critical thinking to determine resource allocation and impact measurement.
- Demonstrate program-evaluation-planning skills to include collective impact, logic models.
- Examine diverse funding structures, including grants cultivation and management, to determine how best to resource program operations.

Graduate Certificate in Arts and Culture management with a Concentration in Arts and Culture Outreach and Advocacy

Students earning a certificate in the Arts and Culture Outreach and Advocacy learn strategies and methods for creating strong relationships between arts and culture organizations and the communities they serve. Instructors with current expertise in arts and culture outreach and advocacy offer

current industry insight and help students begin to develop the practical knowledge they need to advocate for arts and culture in communities of all kinds. By designing engaging events and targeted programs, applying entrepreneurial thinking and skills to issues of community outreach, and developing effective approaches to securing grant support, certificate students will develop core skills that are easily transferable to any organization they join in the arts and culture sector. Students will also learn additional skills and knowledge in arts and culture through elective coursework.

Graduate Certificate in Arts and Culture Management with a Concentration in Arts and Culture Marketing

Students earning a certificate in Arts and Culture Marketing learn to plan, sustain, and develop strategic marketing initiatives and campaign assessment methodologies on behalf of arts and culture organizations, both nonprofit and for-profit. Instructors with current expertise in arts and culture marketing provide industry insight and help students begin to develop the practical knowledge they need to work as effective members of arts and culture marketing teams. Students will also learn additional skills and knowledge in arts and culture through elective coursework.

Graduate Certificate in Arts and Culture Management with a Concentration in Arts and Culture Fundraising and Development

Students earning a graduate certificate in Arts and Culture Fundraising and Development learn the practical steps involved in creating successful fundraising campaigns on behalf of nonprofit arts and culture organizations. From crowdsourcing and kick-starting campaigns to capital fundraising and legacy gifts that nonprofits must cultivate and retain donors from diverse contexts, prospect for new gifts, and demonstrate impact. Students will demonstrate the knowledge and skills to navigate these changing trends to increase the impact and drive ahead their nonprofit's mission through diverse development approaches and fundraising. Students will apply their passion and pragmatism as they learn about the scale and planning needed to develop the resources to carry out the organization's mission.

Specialized Graduate Certificate in Arts and Culture Marketing

Students earning a specialized graduate certificate in Arts and Culture Marketing learn to plan, sustain, and develop strategic marketing initiatives and campaign assessment methodologies on behalf of arts and culture organizations, both nonprofit and for-profit. Instructors with current expertise in arts and culture marketing provide industry insight and help students begin to develop the practical knowledge they need to work as effective members of arts and culture marketing teams.

Specialized Graduate Certificate in Arts and Culture Outreach and Advocacy

Students earning a specialized graduate certificate in the Arts and Culture Outreach and Advocacy learn strategies and methods for creating strong relationships between arts and culture organizations and the communities they serve. Instructors with current expertise in arts and culture outreach and advocacy offer current industry insight and help students begin to develop the practical knowledge they need to advocate for arts and culture in communities of all kinds. By designing engaging events and targeted programs, applying entrepreneurial thinking and skills to issues of community outreach, and developing effective approaches to securing grant support, certificate students will develop core skills that are easily transferable to any organization they join in the arts and culture sector.

Master's Degree Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Courses

MALS 4050 World Visual & Performance Art (4 Credits)

This course draws upon global artistic traditions of visual art and performance in conveying how human beings express ideas, themes, and emotions. Students view and experience artistic forms and movements throughout history and from a variety of traditions across the world, critically analyzing art movements and forms across time. They synthesize ideas across cultures, traditions, and types of creative expression and make connections and distinctions between genres and art forms. A different, rich, artistic theme is the focus each time the course is taught.

MALS 4200 Grant Writing (4 Credits)

This course gives students the opportunity to develop a thorough understanding of proposal writing. Students will receive practical grant writing advice and support, and they will work to sharpen their writing, program design, budgeting, and evaluation skills. Prospect research, development planning, and grasping the dynamics of the broader philanthropic landscape are important components of a holistic funding strategy that produces a successful fundraising program. Students will explore the place of contributed income in a healthy and diversified funding plan, develop research and planning skills, and learn the best practices that are fundamental to building strong philanthropic relationships.

MALS 4281 Event Planning (4 Credits)

Events play a large role in connecting community and audiences within the arts and culture sector. Students will learn to develop and manage arts and culture events to achieve an organization's mission, goals, and objectives within the constraints of the event's scope, timing, and budget. Event management systems addressed include strategic planning, event design, marketing and audience development, site management, and partnership development. Students will create a program and plan for an event supporting a particular arts and culture organization.

MALS 4283 Strategic Marketing Planning for Arts and Culture (4 Credits)

This course provides a strategic approach to attracting audiences through arts marketing. Students learn to build a cohesive strategic marketing plan that aligns with the mission and programming of a real-life arts organization. Students will make a wide range of strategic marketing management decisions, preparing them for decision-making positions in arts marketing.

MALS 4284 Arts and Culture Entrepreneurship (4 Credits)

In any sector of the Arts and Culture field, whether government, nonprofit, or for profit, it is essential to be able to develop programs and/or organizations from conception through implementation and assessment. This development requires the clear communication of what is needed to develop, implement, and sustain this plan over time. In this course, students take an entrepreneurial approach to develop a program or organization in the arts and culture field. Students will develop and present a comprehensive business plan to define, map, structure, and assess the program/organization in either the nonprofit or for-profit sector.

MALS 4285 Basics of Arts and Culture Marketing (4 Credits)

This course provides a strategic approach to audiences and markets through an arts and cultural lens. Students will study basic principles of marketing, audience characteristics, and theories of creating commitment to the arts.

MALS 4286 Social Media and Digital Marketing for Arts and Culture (4 Credits)

Marketing arts and culture in the digital age is an art unto itself. Today's arts marketers are expected to produce visual, audio, and written content that matches the quality of the art, on stage or in the gallery, or the cultural programming presented to the public. This course provides students with a framework for planning, producing, executing, and measuring the impact of digital campaigns that build communities around art and culture.

MALS 4287 Managing Demand and Pricing for Arts and Culture (4 Credits)

Tomorrow's arts leaders need to be prepared to face the emotional subject of pricing in a way that is responsive to the community yet supports a sustainable business model. This class takes an evidence-based approach to determining the demand for arts and culture programming and setting prices for programs and events offered by arts and culture organizations. Students will explore dynamic pricing strategies, approaches to communicating the relationship between price and value, and how artistic and cultural programming enriches the broader community.

MALS 4340 Arts and Culture Leadership for Social Change (4 Credits)

Art and culture are powerful tools for the transformation of society and individuals: they sustain communities in resistance, provide powerful social critiques, expose audiences to multiple experiences and points of view and utilize collaboration, co-creation, dialogue, and exchange, to effect social change. In this course, students will learn how cultural institutions can become active agents in the work of social change. We will examine theories of movement building, explore case studies and develop advocacy, outreach, and program planning strategies for successful arts and social justice leadership.

MALS 4444 Emerging Trends in Visual and Performance Art (4 Credits)

Whether you're curating visual art for a large regional venue or staging work at a local theater or gallery, understanding current artistic trends can be critical to your success. This course looks into major developments in Contemporary visual and performance art around the world. From new approaches to materials and techniques to expressions of identity and cultural/political critique, students will examine and engage with the latest, most significant artistic trends that are shaping the Contemporary art experience.

MALS 4470 Arts and Culture: History, Context, and Trends (4 Credits)

This course examines the significant and growing economic, social, and educational impact of the arts and culture sector on our increasingly diverse communities. Focusing on historical and current trends in the visual, performing, literary, and media arts, students will develop a stronger grasp of the role arts and culture organizations play in enriching our understanding of the world around us.

MALS 4475 Organizational Vibrancy and Measurement (4 Credits)

As database and analytics systems for arts organizations grow ever more sophisticated, arts leaders must be literate in basics concepts of statistics, finance, and data analysis. This course will prepare students to examine data critically, explore the stories that data can tell, and determine how to measure success and vibrancy.

MALS 4480 Arts and Culture: Best Practices and Practical Skills (4 Credits)

This course will engage students in the management and operations of arts and cultural non-profits through terms, techniques, and applications specifically focusing on analysis of mission/visioning, planning, staffing, volunteerism, board governance, fiduciary actions, fundraising/development, marketing/promotion and assessment. This is in preparation for a variety of experiences students may explore, including new aspects of arts management, either in positions of leadership, employment in the field, or a higher interest in volunteerism.

MALS 4485 Legal Landscape of Arts and Culture (4 Credits)

Professionals in arts and culture, whether they are artists, managers, directors, or others working in the private, government, or nonprofit sector, will encounter a variety of legal issues during their careers. Through readings, case studies, assignments, and research, students will be introduced to a complex interdisciplinary system of relevant laws that impact and, in some cases, govern arts and culture organizational activities.

MALS 4490 Arts and Culture Programs for Social Impact (4 Credits)

In this course, students explore changing attitudes toward arts participation and cultural philanthropy, focusing especially on the need for new approaches to engaging and working with culturally diverse populations. Students explore the cultivation of effective cross-disciplinary partnerships to create impactful programs that can transform communities. Programs at diverse arts organizations serve as case studies for practical applications. Students use theory-of-change models to develop programs that connect arts and cultural work with social-impact activities beyond the arts and culture sector.

MALS 4701 Topics in Arts and Culture (4 Credits)

The content of this course varies each term. The topics may include time-sensitive issues in the area of literature, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

MALS 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

MALS 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

MALS 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

MALS 4905 Graduate Social Research Methods (4 Credits)

This course provides graduate students with a basic background in the methods of research in the social sciences. In our information-rich society, organizations and institutions have become more aware of the value of research data for informing critical decisions. As leaders in their organizations, graduates should have a knowledge base that allows them to critically examine basic research in the social sciences and to understand the methods involved in generating research results. They should understand the value of research to their organizations, be able to identify opportunities to gather information through research that will benefit those organizations, and participate in the ethical design of basic studies to gather that critical information. Students will develop and write a research proposal around a specific research question informed by a review of the literature.

MALS 4980 Internship (0-4 Credits)

The internship is designed to offer students a purposeful experience in a practical, industry-related setting. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

MALS 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a credit basis and only for degree candidates.

Communication Management

Effective communication is essential for every organization. This program provides you with the tools to play a central role in developing and implementing effective communication strategies. From the nuance required to handle interpersonal conversations or lead organizational change, to the strategy behind impactful digital communication or training, our curriculum develops your expertise in meaningful, data-driven storytelling.

In this fully online program, you'll enhance your abilities to strategically craft messages, measure their impact, and create desired outcomes—whether that's gaining stakeholder buy-in, gathering participant feedback, engaging target audiences, or building brand awareness. Graduates of this program are well-positioned to take their careers to the next level through demonstration of advanced critical thinking skills and a refined sophistication for how to apply communication best practices strategically in a variety of contexts.

This program receives direction from an Advisory Board made up of senior industry experts, and our instructors bring extensive industry experience to every course.

This degree prepares students to do the following:

- Demonstrate ability to integrate learning, including creating links between course concepts and personal and professional experiences in order to synthesize learning and apply it to new situations.
- Demonstrate critical thinking abilities, including exploring issues, ideas, and events before formulating an opinion or drawing a conclusion.
- Demonstrate behaviors, skills, and characteristics of intercultural communication and competence, including appropriate application of these in varied contexts.
- Demonstrate organizational literacy, specifically the role of communication efforts in organizations and the relationship between these efforts and essential organizational functions (structures, finance, strategy, etc.).
- Demonstrate effective communication skills by crafting strategic plans, campaigns, or interventions that meet organizational/client needs.

Master of Arts in Communication Management with a Concentration in Learning and Development

Take your ability to effectively facilitate adult learning to the next level. As organizations continue to invest in improving employee performance, this program will prepare you to lead learning and development efforts by leveraging your technology, facilitation, and evaluation skills. From design to implementation, learn to strategically execute entire L&D programs and specialized initiatives from start to finish.

This concentration prepares students to do the following:

- Design and execute projects from needs assessment through design, delivery, implementation, and evaluation
- Elucidate key components of adult learning theories; assess contributions of these theories; articulate challenges to, limits of, and new directions for these theories; and apply them to meet organizational needs
- Identify, analyze, choose, and defend best instructional strategies and techniques to achieve learning objectives
- Develop advanced facilitation and communication skills and demonstrate the ability to respond appropriately to varied audiences with diverse needs and across platforms
- Evaluate and communicate impact of projects using most relevant metrics and analytics

Master of Arts in Communication Management with a Concentration in Marketing Communication

Discover the power of brands to move an audience while learning how to craft, deploy, and measure campaigns from start to finish. Create integrated marketing plans that are driven by strategic objectives, backed by data-informed decisions, and deliver desired results. Apply your learning from each course as you receive hands-on experience evaluating traditional and digital marketing communication tactics while digging deep into marketing trends.

This concentration prepares students to do the following:

- Design, manage, and measure persuasive, integrated marketing communication campaigns
- Assess the current scope and learn how to anticipate future trends in traditional, social, mobile, email, and search marketing
- Measure marketing communication efforts and create plans to adjust and defend future decisions based on results
- Create strategies to elevate an organization's or client's marketing and branding efforts through the use of appropriate tactics

Master of Arts in Communication Management with a Concentration in Organizational Communication

Effective communication and advanced problem-solving skills are at the top of every organization's wish list. Are you prepared to meet the demand? Find the key to your next job or your next promotion in the communication field. Learn to harness the potential of your team, manage change initiatives, and meet needs by persuading stakeholders. In this program, you will enhance and deepen your interpersonal, organizational, and managerial abilities.

This concentration prepares students to do the following:

- Articulate and defend various interpersonal and organizational communication techniques to make contextually appropriate decisions
- Evaluate and utilize business communication concepts, tools, and presentation techniques
- Assess and apply theories and best practices of group and team dynamics

- Identify barriers of effective communication and develop plans to ensure productive outcomes
- Create strategies to lead change by applying principles of change, critical change dynamics, and processes for knowledge transfer within organizations

Master of Arts in Communication Management with a Concentration in Organizational Development

Successful organizations are dynamic entities that are constantly adjusting goals, organizational structures, and strategies in response to varying organizational needs and influences. Sometimes these adjustments are large, but quite often there are a series of small to mid-size changes that affect employees and processes, resulting in the need for an organizational development (OD) intervention. In this concentration, students learn about organizations, organizational culture, and effective intervention strategies. Students also learn the history, challenges, and successes of OD and the different models and techniques to warrant a productive culture in a variety of organizational sizes, sectors, and types. An OD intervention strategy is created by defining the role of the practitioner as an internal or external consultant and constructing a diagnosis plan, synthesizing data from interviews and observations, and effectively communicating the findings in various applicable formats. Finally, a personal philosophy regarding change is developed and then examined through the context of analyzing organizational values and ethics, culture, and the human impact of change on employees.

This concentration prepares students to do the following:

- Articulate and define organizational development, history of OD, and challenges and possibilities using an intentional OD intervention
- Develop and defend a personal philosophy of organizational change
- Evaluate the impact of organizational culture and core values on OD interventions
- Integrate the contract for a successful OD intervention with the organizational culture and determine the role of an OD practitioner in each stage of an OD intervention, distinguishing between an internal and external consultant
- Assess, compare, and contrast different models of change and describe the impact of each model on an OD process
- Define and organize OD strategies for different types of organizations (sectors, life cycle, size, industry, types of innovation, or other defining characteristics) for maximizing impacts of OD interventions
- Summarize the importance and impact of the different organizational structures and design on OD strategy and interventions
- Construct an organizational diagnosis plan by using interviewing, group facilitation, process observation, synthesis of data, and writing effective reports, while providing effective presentations of the findings
- Analyze the human side of change and build strategies for successful implementation of an OD intervention that honor the loss, resistance and acceptance of changes

Master of Arts in Communication Management with a Concentration in Public Relations

Public relations careers show up in virtually every sector and industry. Gain practical experience using technology to manage how information flows to and from key audiences. You'll learn how to use data to connect with influencers, and leverage social media in a strategic way, all while employing principles of persuasion and quality content creation. From researching and evaluating audiences, to assessing the value of PR campaigns, you will apply critical thinking, precise writing, principles of ethics, and complex reasoning throughout your courses.

This concentration prepares students to do the following:

- Communicate persuasively to targeted audiences to meet specific organizational outcomes
- Create communication plans with measurable results using public relations best practices, tactics, and strategies
- Develop, manage, and analyze effective media relations practices
- Articulate and defend the selection of techniques to measure, monitor, and influence an organization's reputation
- Articulate the primary principles, practices, and ethics of public relations in an increasingly interconnected, global economy

MASTER OF ARTS IN COMMUNICATION MANAGEMENT WITH A CONCENTRATION IN USER EXPERIENCE STRATEGY

In our current engagement economy, effectively moving an audience lies at the intersection of communication and technology. Students will learn to think critically and strategically about the user experience in a way that enables greater innovative agility across all communication platforms. Students will gain skills to manage and direct cross-functional teams equipped to defend technology, marketing, and communication decisions using data generated from deep user journey and user experience analysis.

This concentration prepares students to do the following:

- [Analyze the components and implications of user experience design across communication channels.](#)
- [Use critical analysis to manage the strategy and execution of interactive experiences.](#)
- [Analyze user-journey data to measure and inform decisions across digital platforms, communication channels, and marketing programs.](#)
- [Create engaging digital content that enhances the user experience through strategic choices with technology, design, and copy.](#)

Certificate in Communication Management with a Concentration in Learning and Development

Gain insight to the strategies needed to effectively facilitate adult learning. Organizations continue to invest in improving employee performance, and in this program you will learn to lead learning and development efforts by leveraging your technology, facilitation, and evaluation skills. From design to implementation, learn to strategically execute entire L&D programs and specialized initiatives from start to finish. Students will also gain additional skills and knowledge in communication management through elective coursework.

Master's Degree Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Courses

COMM 4001 Portfolio Foundations (0 Credits)

Master's and certificate-seeking students in Communication Management must register for and take Portfolio Foundations in their first quarter in the program. Students must complete the course and assessment-related tasks, including writing their learning goals, in order to pass the course. Non-completion of this required course will result in a no-pass grade on student transcripts.

COMM 4002 Dynamic Presentation and Training Methods (4 Credits)

The increasing presence of technology in the workplace has changed the way we present information and conduct trainings, both in person and virtually. In this course, students hone their presentation and training skills by assessing their audience, purpose, and desired learning outcomes. Students practice using appropriate and memorable visual aids in order to maximize the audience and/or participant engagement. Students employ communication strategies and training techniques to improve participants' receptivity and retention of information and ideas. Whether presenting or training in person or virtually, students will gain the skills and confidence needed for effective communication across varied delivery methods.

COMM 4006 Building High-Performing Teams (4 Credits)

High-performing teams are invaluable to every organization. Ensuring productive and satisfying group and team interactional outcomes in organizational, professional, and personal settings can be difficult. Students focus on theory, application, and the practice of working together to learn the fundamentals of building high-performing teams. Students learn about the development of group dynamics, assessment, and leadership while also gaining knowledge about their strengths and weaknesses in teams, developing new skills, and learning how to enhance productivity while reducing barriers to effective communication.

COMM 4010 Business Insights for Communicators (4 Credits)

Communications leaders must speak the language of business to effectively craft strategies, execute deliverables, and measure outcomes that create tangible value and advance their organizations' objectives. Whether in an industry, public sector, or non-profit role, these leaders gain an edge through supplementing strong technical literacy with the ability to assess operational priorities and execute deliverables accordingly. In this class, students will sharpen their understanding of balance sheets and budgets; demystify key aspects of Information Technology infrastructure (intranets, cloud and on-premises computing, databases, security, etc.); delve into various organizational and divisional/departmental models, functions, and political positions; address the benefits and challenges of globalization and cross-cultural communication; and touch on an assortment of other relevant topics, including managing upward and workflow prioritization. Along the way, students will hone their strategic planning competencies and perspectives by putting all elements learned in this course together. Materials and assessments are geared toward application in relevant contexts.

COMM 4016 Persuasion and Influence (4 Credits)**COMM 4020 Understanding Professional Communication (4 Credits)**

In this course, students develop and refine interpersonal, intercultural, and organizational communication competencies while applying foundational communication models and concepts to a variety of contexts. The mastery of these communication skills leads to more productive written, virtual, and face-to-face interactions, resulting in personal, professional, and organizational success.

COMM 4030 Managing Learning in Organizations (4 Credits)

To support a culture of continuous improvement, Learning and Development (L & D) professionals must quickly and effectively train and develop employees, evaluate results, show a return on investment, and develop new solutions to meet ever-changing business needs. This course prepares students to lead and manage L & D departments, teams, and processes by guiding them to think strategically, generate creative solutions that address root causes, build trusted partnerships with business partners, and manage knowledge assets.

COMM 4032 Managing Organizational Change (4 Credits)

This course prepares students to create and implement effective communication strategies for change management. The course begins with a discussion of seminal organizational change models, how these models support change management communications, and how change affects employees and individuals. Concepts and practices for facilitating change communications are explored, as well as methods of supporting change leaders. Students develop competencies in change communication through discussion, lecture, video, and change assessment inventories.

COMM 4035 Cultural Intelligence through Communication (4 Credits)

There is a growing need to communicate effectively across cultural differences. Writer James Neuliep defines culture as an accumulated pattern of values, beliefs, and behaviors shared by an identifiable group of people with a common history and verbal and nonverbal code system. Culture pervades every aspect of the communicative process. This course uses a contextual approach to examine the ways culture, communication, context, and power intersect in intercultural communication interactions. Students will identify and analyze obstacles and barriers to effective intercultural communication. Finally, students will examine strategies and skills needed to become a competent and effective intercultural communicator.

COMM 4045 Applied Critical Thinking in Communication (4 Credits)**COMM 4050 Communication and Society: Theories and Applications (4 Credits)**

In this course, students develop a command of foundational media frameworks, especially theories of media production and media consumption. By the end of this course, students should be able to implement theoretical concepts in their professional environments. Students will learn to deploy theoretical concepts that help them understand the various roles that media play in culture and society. To this end, students will develop written and visual projects that evaluate the following: media industries that produce media messages, meanings embedded in those messages, and media audiences who interpret media messages.

COMM 4140 Marketing Strategy and Process (4 Credits)

Creating and sustaining competitive advantage is driven by strategies that integrate people, process, and systems. In this application-oriented course, students will examine the fundamentals of marketing, develop the insights and skills to formulate and implement sound marketing decisions, and apply ethical marketing strategies which contribute to the overall business (for-profit and non-for-profit) performance. Students will apply strategic concepts through discussion and teamwork. Throughout the quarter, students will examine how information and research is used to inform marketing management decisions to all level of the organization, including external stakeholders. Because marketing communication plays such a critical role in marketing success, integrating different types of communication channels will be an emphasis.

COMM 4144 Strategic Public Relations (4 Credits)

In a complex global environment, business, government, nonprofit, and other organizations require professional public relations practitioners who can effectively develop two-way relationships with constituents/audiences to enable strategic and effective communication processes. This course prepares students for this complex environment through the study and practice of essential components of public relations, which include the use of strategy, the value of relationship development, an overview of the range of PR tactics, the evolving role of digital communications and social media to PR, and the importance of ethics and transparency in PR practice.

COMM 4145 Public Relations Writing and Content Creation (4 Credits)

Effective and persuasive writing and creative content development are integral parts of today's public relations programs. This course deepens students' knowledge of the range of content available for public relations professionals to build relationships with media while ensuring they become effective, creative, clear, and concise architects and translators of the written word. In this course, students will develop a deep understanding of messaging for target audiences and the wide variety of concepts at their disposal to create effective communication programs. Students will leave the course with the ability to establish key messages using supporting evidence, craft content for target audiences, evaluate the impact of various media relations techniques as a way to achieve earned media coverage. Students will also develop a portfolio of well-written public relations collateral, including long- and short-form materials.

COMM 4146 Ethics in Public Relations (4 Credits)

Public relations professionals, regardless of the industry in which they work, are often tasked with "doing the right thing" when communicating with the public. But what do we mean by "the right thing" in this context? The course explores the role and importance of ethics in public relations practice. Students will consider the fundamentals of transparency and ethics, ethics theory, and ethical decision-making models. With this foundation in place, students will then learn to apply ethical theory and methodology in practice in crisis management, advocacy, corporate social responsibility, and social media contexts.

COMM 4150 Reputation Management & Crisis Communication (4 Credits)

Reputation management is the process of tracking, maintaining, and defending a consistent message and positive image across all media. It applies to corporations and individuals, to billion-dollar brands and grassroots causes. Today's reputation management integrates public relations, search engine optimization (SEO), content marketing, and social media management. It requires constant monitoring and participation in the dialogues that comprise modern media as the traditional roles of sender and receiver merge and evolve. As digital presence has become the front lines of reputation management, systems use various predefined criteria for processing complex data to report behavior and activity surrounding a reputation, thereby automating the process of determining positive sentiment, influence, and trustworthiness. While reputation management is an ongoing proactive effort, PR professionals also need to be prepared to react in a crisis. Crisis communication planning and management strategies are an important subset of this field. Through the study of proactive and reactive programs, students will learn how to apply reputation and crisis management principles in times of quiet and chaos all while monitoring, positioning, and measuring a brand's presence online.

COMM 4154 Media Channels and Technology (4 Credits)

This course will focus on the increasing role technology and analytics play in the public relations profession. Data-driven decision-making is now essential to the development of public relations strategy and tactics. This course will expose students to engagement across media channels—including owned, shared, paid, and earned media—as well as techniques and strategies for the effective use of technology for tracking, planning, and engaging audiences. This course will position students to lead strategic, data-driven decision-making in the public relations field. The course will also provide students with the tools necessary to engage new media and technology effectively in public relations.

COMM 4200 Instructional Design (4 Credits)

Designing training that maximizes results is a central concern in organizations. Students in this course identify the elements of effective learning design, formally and informally, for organizations and professional arenas. Students will strategize instructional approaches in order to meet organizational needs and objectives. Students will create an instructional design product that can be applied appropriately in professional settings.

COMM 4203 Adult Learning Strategies and Theories (4 Credits)

Individuals involved in adult learning design and development benefit from a strong foundation in adult learning theories and strategies to develop effective practices. Adult learners bring unique needs, life experiences, and prior knowledge to learning situations and thrive when inclusive, motivational, and relevant application of knowledge, concepts and skills are utilized. In this course, foundational and emerging theories regarding how adults learn best, along with analysis of key instructional strategies, provide solid grounding for implementing best practice in adult learning.

COMM 4206 Evaluating Learning and Development Effectiveness (4 Credits)

Assessment and evaluation enable learning and development professionals to determine if learners acquired the intended content, knowledge, skills and/or attitudes; if the benefits of the training endeavors are worth the costs; whether training has met organizational goals; and if further training is necessary. Through case studies, practice exercises, and the development of an authentic assessment plan, students learn how to design, interpret, and apply different types of learning and development evaluation concepts and methods to their respective or intended work settings.

COMM 4220 Conflict Resolution Strategies and Process (4 Credits)

Conflict is a natural and common part of human interaction. This course prepares students to thoughtfully and creatively manage and resolve conflict in interpersonal and organizational contexts. Students study the sources, causes, and dynamics of conflict in order to explain and predict the patterns of conflict interactions. Students analyze case studies and develop the most appropriate conflict management and resolution strategies based on analysis and evaluation of the personal, interpersonal, historical, and cultural dynamics of a given conflict. By focusing on the application of conflict resolutions strategies and processes, students develop their interpersonal, analytical, and managerial competencies to creatively address conflict in a variety of situations.

COMM 4222 Negotiation Strategies and Process (4 Credits)

Negotiation is at the core of dispute resolution. This course presents the theoretical groundwork for interest-based dispute resolution upon which principled negotiation and other dispute resolution methods are founded. Topics include the definition of the negotiation process, different types of negotiation, and negotiation strategies. Students have an opportunity to practice and compare different negotiation techniques. Teaching methods are experiential in nature and include mini-lectures, discussions, and role-plays. Students also develop strategies for managing challenging negotiations and breakdowns.

COMM 4226 Managing Organizational Conflict (4 Credits)

Conflict is a part of all businesses, government, and nonprofit organizations. It is a product of human existence and diversity in an interrelated society. Though many people fear conflict as a threat to a productive work environment, it is not conflict itself that jeopardizes harmony but unresolved conflict, and the associated costs are well documented. Organizations increasingly recognize that conflict need not carry costly financial and interpersonal burdens and can, in fact, serve as a productive change agent. Students in this course explore the nature and sources of organizational conflict and facilitate development of practical skills to recognize and manage conflict using case studies, exercises, speakers, and field research. Students are introduced to the concept of various conflict resolution methods, including individual initiative, negotiation, mediation, restorative justice, and arbitration. This course is well suited for leaders and aspiring leaders in any profession who want to increase their interpersonal capability and enhance their value in organizations.

COMM 4235 Integrating Learning and Development Technologies (4 Credits)

Organizational learning and talent development are changing rapidly in the face of staggering technological advances. As organizations become increasingly decentralized, teams interact virtually, and collaboration becomes dependent on digital tools. In this context, it is imperative that learning and development professionals harness technology to meet the changing needs of individuals and the places/spaces in which they work. In this course, students explore the latest technological trends in Learning and Development, while also learning how to evaluate technologies for their appropriateness in meeting organizational learning and development goals. In recognition of the rapidly changing nature of this field, students also develop strategies for future learning to keep their work relevant and engaged.

COMM 4301 Brand Management Strategies (4 Credits)

Organizations of all types – private, public, and nonprofit – increasingly recognize that a strong brand can ultimately become one of an organization's greatest assets. Executing on a strategy designed to build long-lasting brand recognition, resonance, and loyalty is a critical marketing responsibility. In today's dynamic business landscape, brand management requires complex decisions to create meaning and value for consumers. This course covers the essential components of branding with a focus on how to maintain consistent alignment between brand vision and marketing strategies. Students are strongly encouraged to take at least one other marketing concentration course prior to this course.

COMM 4306 UX Strategies and Methods (4 Credits)

This course will cover user experience strategies, tactics, and methodologies. Students will learn how to think about UX from a high level, set goals for a product or project, and turn the strategies into concrete steps. Students will learn how to employ research, design thinking, usability testing and analysis to enhance the user experience.

COMM 4307 Developing Content for User Experience (4 Credits)

This course will explore how strategically developed content is a cornerstone of the user experience. Students will learn the User Experience Design workflow and how to advocate, research and deliver content for digital experiences. The course will also cover how to measure the business impact of content strategy, as well as how to scale content strategy as a practice within organizations.

COMM 4308 UX Team Management (4 Credits)

Building and managing a dynamic UX team is a skillset that goes beyond typical design best practices and team management - the role of design leader today expects company leadership in innovation, creativity and culture. This course will provide the students with the knowledge needed to build, manage, and nurture highly dynamic, fast-paced cross functional teams while also providing experience in the transformational components of design leadership.

COMM 4309 Service Design (4 Credits)

Where UX design is specific to the digital experience, service design crosses over from the tangible to intangible experiences within both digital and analog channels. This course takes students through an in-depth exploration of research, mapping, blueprinting, and deep user flow analysis as it relates to interactions and experiences of all types. The impact behind processes for employees and customers across all sectors including public, private, and nonprofit will be covered.

COMM 4318 Mobile Marketing (4 Credits)

Mobile is global. We are living in an unprecedented time where people all around the world have access to mobile devices. These devices bring the world to the palm of our hands, and we can do almost anything with them. Often a user's first experience with a product or service will be on a mobile device rather than a desktop computer, so we must shift our mindset to a mobile-first mentality. The fast-paced, ever-changing field of mobile marketing has created exciting opportunities for brands to meet customers where they are and approach them with the right strategy. The focus of this course is to provide an expansive grasp of the tools and tactics used to develop and implement a multi-channel mobile marketing strategy. Through discussion, research, and practical experience, students will learn how to maximize mobile to have the greatest impact within their overall marketing plan.

COMM 4319 Visual Storytelling (4 Credits)

In our digital world, communication is increasingly visual. This course will expose students to the art of turning facts into a compelling, strategically-crafted visual narrative that engages an audience. By applying course concepts to existing media, from children's books to blockbuster movies, students will develop the skills and techniques necessary to produce polished print, digital, and video content that effectively tells a story.

COMM 4320 Social Media Strategy (4 Credits)

Social media is a critical communication channel that is constantly evolving. Learn to plan, manage, measure, and anticipate social media efforts that add value to your target audiences through organic and paid options. In this course, students will explore motivations that prompt audiences to engage, identify the tools and technology needed to execute social media campaigns or communication interventions, and devise effective strategy and tactics needed to cut through the noise. Create a stronger online presence, show personality, and build your brand by gaining skills needed to successfully communicate on behalf of any organization or individual using social media. Through online research, case studies, and practical exercises, students will gain first-hand knowledge of social media techniques and how to leverage social media as a communications tool.

COMM 4321 Integrated Digital Marketing (4 Credits)

At an ever-increasing rate, consumers use digital media to live, to work, and to play. Digital marketing leverages digital media and technologies allowing brands to promote their products and services to very targeted audiences at key online touchpoints in highly measurable ways. This course takes a deep dive into digital marketing strategies and provides an expansive grasp of digital marketing tactics. Students will analyze the digital marketplace and make strategic decisions about which tactics will have greatest impact, how to integrate them into the marketing mix, and ultimately how to use digital marketing to achieve overarching marketing goals. Required pre-requisites: COMM 4140.

COMM 4323 Email Marketing (4 Credits)

Today's consumer expectations for relevant, engaging, and timely messages have made email marketing an essential component of the multichannel marketing mix. The creation and delivery of personalized, targeted messages to subscribers can drive both engagement and ROI. This class examines the development and integration of email marketing (including tools, copy, design, service providers, tracking and measurement) to enhance business relationships, encourage customer loyalty and acquire new customers.

COMM 4324 Marketing Analytics (4 Credits)

Marketing analytics leverages business metrics to better understand marketing performance and return on investment (ROI). Through data analysis, attribution modeling, and reporting, marketers are able to measure and optimize their initiatives. This class focuses on developing a performance measurement system for marketing channels, incorporating measuring website traffic, conducting market research, estimating usage patterns, and interpreting website visitor behavior. Key performance indicators are tied to marketing goals and tactical campaigns. Students will conduct a review of online metrics, compare marketing analytics vendors, and develop ways to communicate performance.

COMM 4325 Search Marketing (4 Credits)

Search marketing is a communicator's medium and a vital part of any marketing mix. This type of digital marketing specifically focuses on increasing a website's visibility in the search engine results pages (SERPs) through organic Search Engine Optimization (SEO) and pay-per-click (PPC) while also drawing attention to quality website content or well-crafted paid ad messaging. This class will provide deep insight into the tools and tactics of search marketing. Students will learn what makes search marketing demanding and how to overcome the challenges presented by regular search engine algorithm updates, increasing mobile device usage, and the influence of social media. Two key techniques of SEM will be explored: search engine optimization (SEO) to improve results from the natural or organic listings, and paid search marketing, or pay-per-click (PPC), to deliver results from the sponsored listings within search engines. A variety of search practices, including mobile and local, will be explored.

COMM 4326 Digital Campaign Management (4 Credits)

Any successful marketing or communication campaign – digital or traditional – is dependent on many factors, from its strategic beginnings through its final readout. However, perhaps the most critical factors driving the success of a digital campaign are rooted within the human, technical, and business processes through which that campaign comes to life. Assuming a foundational understanding of digital marketing techniques (i.e., web, search marketing, social media, etc.), this course will focus on the practical management of digital marketing and communication campaign efforts, including planning, management, and measurement. Pre-requisite: COMM 4321.

COMM 4701 Topics in Communication Management (4 Credits)

The content of this course varies each time it is offered. Topics may include time-sensitive issues in the field of communication, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects, such as ethics, human communication theory, or interpersonal communication. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

COMM 4900 Communication Inquiry, Analysis, and Trends (4 Credits)

Students will actively engage in their chosen communication field in order to develop the essential networking, writing, inquiry, and analysis skills required to be successful professional communicators. The course has three central components: first, students will develop professional networks to cultivate mentorship, gain intimate knowledge of the field, and become familiar with the field's norms and values. Second, students will strengthen their business-writing skills by creating industry-standard documents, communicating clearly and effectively, and activating their voice to convey their points with authenticity. Finally, students will explore their chosen field of communication to determine the current state of the field and its future trajectory, while also exploring how they may adapt and grow to meet the demands of the future.

COMM 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

COMM 4902 Capstone Seminar (4 Credits)

The Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem in their degree field of study. The students produce a Capstone of 7000-8000 words that presents a position on a relevant problem, supports the position with professional and academic literature, analyzes and tests the proposed solution, and discusses the findings as related to the field of study. The seminar is dependent upon quality, collegial discussion, and feedback of students' research and work products, under the facilitation of a faculty member. The course structure guides the students through the process of independent, secondary research and writing of a Capstone. No primary research is allowed. Students generate the course content through ongoing discussion and peer feedback on the Capstone process and individual topic areas under investigation. Students professionally and academically communicate through written work and oral presentation. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

COMM 4904 Interdisciplinary Capstone Seminar (4 Credits)

The Interdisciplinary Capstone Seminar is a graduate seminar in which students utilize the knowledge and skills gained through the degree program to create a culminating work that critically addresses a problem or issue in the degree field of study. Members of the class will include students from various UCOL programs, representing multiple topics of study. On campus offerings of this course include required online components. The student produces a paper of 7000-8000 words that presents a position on a relevant problem or issue, supports the position with professional and academic work in the field, analyzes and tests the paper position, and discusses the role of the findings within the field of study. Students professionally and academically communicate their findings through written work and oral presentations. The seminar is dependent upon active and collegial discussion and critique of student research and work under the facilitation of a faculty member, and it is governed by the quality of participation and contributions of the students. Students must have: Acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better. Students must complete the Capstone Seminar in one quarter; no incomplete grades are assigned.

COMM 4905 Storytelling through Research and Measurement (4 Credits)

Whether conducting a needs assessment, attempting to understand your audience, or developing a new product, communication professionals regularly harness the power of research, measurement, and storytelling. This course explores mixed-methods research design; data collection strategies; strategies for measuring the impact of communication challenges and interventions; and the fundamentals of telling data-driven stories that persuade stakeholders and demonstrate ROI. Together these tools enable confident problem solving, enhance organizational decision making, and influence stakeholder behavior. This course culminates in an individualized project that integrates research design, data collection, data analysis, and storytelling.

COMM 4920 Portfolio Capstone (4 Credits)

The Portfolio Capstone course provides students the opportunity to reflect upon the work they have done throughout their graduate studies at University College and synthesize their learning. Students in the seminar produce deliverables that include: (1) a thorough annotation of their portfolio, a process requiring critical and creative thinking about their educational experience, and (2) a pinnacle project that identifies, analyzes, and elaborates significant themes in their program experience, evaluates their accomplishments, connects their coursework to their professional goals, and assesses those goals in the context of their chosen field.

COMM 4980 Internship (0-4 Credits)

The Communication Management Internship is designed to offer students a purposeful experience in a practical, industry related setting. The internship is an individualized learning experience. A training plan is created for each student in conjunction with the internship site supervisor to provide experiences related to the skills and knowledge covered in the certificate and master's programs as well as professional goals. Students are responsible for finding their own internship site and proposing their internship ideas. University College will send notification to all COMM students if they hear of internship possibilities. Students may also work through the DU career center, to explore opportunities for internship experiences. To be eligible for an internship, completion of a minimum of 28 hours of graduate coursework in the field of specialty is required OR Academic Director approval for students with previous work experience in the field.

COMM 4985 Industry Innovation Project (1-4 Credits)

Students in this course will participate as a part of a team of cross-discipline students working on an innovation project that is scoped to meet the specific needs of its industry client. Students will have a choice between a variety of project types so that each student can select the industry and team role that best supports their specific area(s) of study. Teams will consist of 4-8 students pursuing a mix of technical, business, and liberal arts degrees. Every project will be led by an experienced industry advisor who will be responsible for managing the project workplan, client engagement, and end product quality. Students will gain direct industry experience in their area of study with an emphasis on innovative thinking, team collaboration, and independent project management skills. Prerequisite: Academic director and academic advisor approval is required. Selection criteria will include academic status and project availability.

COMM 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. Before registering for the independent study, the student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices. Independent Study is offered only on a for-credit basis.

Environmental Policy and Management

MASTER OF SCIENCE IN ENVIRONMENTAL POLICY AND MANAGEMENT

The Master of Science in Environmental Policy and Management degree may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults.

The Master of Science in Environmental Policy and Management degree prepares students to enter the dynamic industry of Environmental Policy and Management, which is emerging in importance and popularity around the world. Students will receive engaging instruction from professional

practitioners who work and teach in fields such as sustainability, climate change, natural resource management, renewable energy, law, environmental finance and economics, among many others. Graduates learn to address and manage complex environmental problems.

This degree prepares students to do the following:

- Apply major environmental laws to current policy and environmental challenges to identify limitations and opportunities to improve environmental governance.
- Recommend sustainable actions to high-level stakeholders fluently using the language of both sustainability and fiscal responsibility.
- Apply appropriate research methods/designs to address a research hypothesis and questions.
- Compose research arguments to validate claims based on a variety of professional and academic sources.
- Resolve an authentic problem that is relevant to a current or aspirational position in the discipline.

MASTER OF SCIENCE IN ENVIRONMENTAL POLICY AND MANAGEMENT WITH A CONCENTRATION IN Emergency planning and Response

The Emergency Planning and Response master's degree concentration is offered to meet the needs of busy adults and prepares current or aspiring emergency response professionals to effectively strategize and implement emergency plans and responses. Graduates will learn to compare and contrast plans and responses to various events and disasters. Students will learn strategies for effective communication in all phases of emergency management (i.e., mitigation, preparedness, response, and recovery).

Whether an emergency is natural or human caused, emergency preparedness is vital to ensure minimize impacts on the welfare of those affected. The Emergency Planning and Response master's degree concentration covers emergency planning, mitigation of potential hazards, response, and recovery. Professional practitioners who work in the emergency planning and response field teach the Emergency Planning and Response master's degree concentration. Classes focus on the integrated system at every stage of a disaster and define the roles of emergency response teams, government agencies, businesses, and private citizens.

This degree prepares students to do the following:

- Develop emergency response plans to ensure that organizations or communities possess necessary resources (e.g., personnel, equipment, communications, etc.) to respond to emergency incidents;
- Identify the potential hazards within a community or organization that require mitigation to minimize the health, economic, and environmental consequences of potential emergency incidents;
- Develop critical incident management actions that will save lives, protect property and the environment, and meet the basic human needs during a critical incident;
- Construct Recovery Plans to repair damages and restore the health, economy, infrastructure, and environment of the affected community following a large-scale disaster.

Master of Science in Environmental Policy and Management with a Concentration in Energy and Sustainability

The Energy and Sustainability master's degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Students are prepared to enter the dynamic industry of energy and sustainability, which is emerging in importance and popularity around the world. Students will establish a solid foundation in energy and sustainability concepts, and then learn to integrate environmental systems, put policy into practice, and develop effective sustainability plans. Regulatory and policy issues related to energy development, implementation, and use, energy finance, and alternative and renewable energy processes will be examined, along with renewable energy sources, plans for integration, and trends within the field of energy.

Sustainable systems must be considered and developed in the areas of growth, transportation, energy, policy, and business models in order to head off looming environmental, political, and humanitarian problems. This will be accomplished through a comprehensive study of sustainability in the areas of economic development, green building, land use, transportation, and water resources.

This degree prepares students to do the following:

- Demonstrate a solid understanding of how non-renewable and renewable energy sources are developed, used, regulated, and financed;
- Articulate a strong working knowledge of sustainability concepts;
- Show an understanding of trends and issues in areas of traffic management, climate science, water supplies, and green buildings;

- Develop plans for the integration of sustainable practices into products, business and marketing plans, environmental policies, and organizational processes;
- Build finance schemes and marketing strategies for their plans so they can be presented to an organization leader as an executable idea.

Master of Science in Environmental Policy and Management with a Concentration in Environmental Analytics and Reporting

The Environmental Analytics and Reporting master's degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. This certificate and concentration emphasize learning how to utilize the tools and insights of the data analytics revolution to perform sophisticated environmental analyses and reports. Students learn possible uses of data analytics in an era of sustainability and ever-increasing complexity to manage the environmental elements of their organizations more effectively. Constructively reporting these results, trends, and accomplishments is an important avenue of communication in any organization. Environmental professionals will learn to identify and obtain a data set from a publicly traded company, from their own organization, or another public or governmental source suitable to use for carrying out analytics projects. Clear questions will be formulated and framed; analytical algorithms will be run on cloud technologies to reveal relevant insight into environmental issues. Context for these analyses will be provided through study of ISO 14001, fundamental U.S. environmental statutes, and governmental and NGO environmental reporting standards and requirements.

This degree prepares students to do the following:

- Assess the value, function, and application of data analytics to create or enhance organizational value;
- Differentiate the function and limitations of data and analytics methods and tools to inform selection of an optimal approach for a specific need;
- Prepare analyses of environmental data to support preparation of reports for organizations and agencies (e.g., ESG, SEC, SASB, NGO, EPA, OSHA, state and local agencies);
- Conduct analyses of a structured data set to craft the routine environmental reporting elements of organizational reports including sustainability, risk, efficiency, impacts, permit status, routine releases, unplanned events, strategies, operations monitoring, management monitoring, ethics, stakeholder perceptions, innovation, and collaboration;
- Formulate an analytics modeling project and report.

Master of Science in Environmental Policy and Management with a Concentration in Environmental, Health and Safety

The Environmental, Health and Safety master's degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Whether students currently work in environmental health and safety positions for commercial or government operations, or aspire to, the Environmental, Health and Safety master's degree prepares them with the management skills and technical knowledge required to become a health and safety manager or officer. Students will begin with the foundational statutory and regulatory origins of environmental health and safety compliance management and learn how to effectively and efficiently streamline resources to integrate safety and health regulations across sectors and industries.

Critical instruction is given on relevant training, emergency planning, procedural operations, and the management of worker health and safety, in addition to environmental management and reporting systems and business and finance strategy.

This degree prepares students to do the following:

- Evaluate the benefits and barriers to integration of environmental health and safety including the fundamentals of safety management, training requirements, emergency planning, setting goals, objectives, and operating procedures, and how management views environmental health and safety;
- Describe the Occupational Safety and Health Act and other rules governing workplace safety with emphasis on the overlap between safety and environmental laws, OSHA's inspection and enforcement authority, employee and employer rights and record keeping requirements;
- Develop and apply compliance programs including how to reduce losses of direct and indirect costs due to accidents and how to convince management and employees that safety programs are beneficial;
- Investigate workplace safety topics including costs of accidents, investigation programs, practical application of worker's compensation, confined space entry programs, injury/illness records and reporting, programs for new fall protective rules and personal protective equipment programs.

Master of Science in Environmental Policy and Management with a Concentration in Environmental Management

The Environmental Management master's degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Master's degree students will learn environmental management and

leadership essentials, providing them with critical knowledge related to technology, law, and economics as they each relate to the environment. Facilitating environmental innovation, development plans, and integration will be discussed, along with essential permitting and regulatory issues that environmental managers need.

Students in the Environmental Management master's concentration will receive engaging instruction from professional practitioners who work in the fields in which they teach in topics ranging from economics to law, leadership to regulations, as each topic relates to the environment. Designed for students seeking a combination of leadership, policy, and environmental issue education, the concentration prepares graduates to address and manage complex environmental systems.

This degree prepares students to do the following:

- Examine the requirements and implementation strategies of the National Environmental Policy Act and the requirements of various federal agencies which are responsible for National Environmental Policy Act implementation;
- Critique Environmental Impact Statements and Environmental Assessments for regulatory compliance and thoroughness in disclosing environmental effects of proposed actions;
- Investigate the Resource Conservation and Recovery Act's regulations governing performance requirements for treatment, storage and disposal of solid and hazardous waste generation and disposal;
- Explain and summarize developing trends in waste minimization, solid waste management and special waste controls;
- Demonstrate how to use the ISO 14001 framework as a proactive and systematic approach to environmental management and develop a complete program that integrates the ISO 14001 requirements with the existing strategic management methods of an organization;
- Assess personal leadership attributes and construct a personal leadership development plan that integrates leadership principles necessary for advancement including interpersonal communication and leading environmental innovation using the natural world as a model.

Master of Science in Environmental Policy and Management with a Concentration in Environmental Policy

Supply chains are everywhere, from the local store to a large multinational electronics manufacturer operating halfway across the world. From cradle to grave, it is the supply chain management system that links all of the numerous stakeholders into one strategic plan for us as customers in markets.

These systems link processes such as product design, sourcing, forecasting, planning, manufacturing, distribution, logistics, retailing and material disposal and reuse. In today's fast paced markets driven by globalization and technology, knowledgeable professionals in supply chain management are increasingly important for companies to achieve their business objectives. Some of the most successful manufacturers (e.g., Apple and Samsung) and retailers (e.g., Wal-Mart and Amazon) are winning as a result of their supply chain strategies. Especially as markets change rapidly, supply chain management professionals will be integral to a company's success.

Earned entirely online, in the Supply Chain Management concentration students learn the six pillars of the field, and how to solve problems through the use of Six Sigma principles and the use of data analytics. Through hands-on projects with companies students gain real-world experience on the challenges facing global supply chains in the 21st-century while learning from current leaders in the field.

This degree prepares students to do the following:

- Outline the legal and philosophical underpinnings of the environmental movement, both in the United States and internationally, including the use of international laws and treaties to mitigate, lessen, or eliminate damage to various aspects of the environment;
- Analyze global environmental issues including endangered species, overpopulation, resource depletion, biodiversity, ocean dumping, deforestation, desertification, global warming, and ozone depletion;
- Explain how to encourage sustainability through consumption patterns that ensure a continuing resource supply for future generations and through achieving a balance between environmental protection and economic development;
- Describe the field of public environmental policy including contemporary methods of policy analysis, agenda-setting, models of policy formulation and implementation, and policy evaluation;
- Examine ethical considerations in environmental management and decision making and explore various philosophies of humankind's relationship with the environment;
- Develop and express a personal philosophy addressing one's own role in the regulatory, technical, scientific, and financial management of the environment.

Master of Science in Environmental Policy and Management with a Concentration in Natural Resource Management

The Natural Resource Management master's degree concentration may be earned online or in a combination of online, on campus, and hybrid courses at the University of Denver in the evenings to meet the needs of busy adults. Designed for professionals whose primary interest is the management of natural resources for organizations which plan or regulate the use of natural resources, or commercial operations which extract and use natural resources (e.g., mining or forestry management), the Natural Resource Management concentration prepares students to work in professional roles overseeing natural resource management for commercial or government purposes. Learn historic and contemporary management systems and principles, along with key policies and procedures needed to excel in the public or private sectors related to natural resource management.

Degree-seeking students are exposed to a breadth of knowledge pertaining to natural resources, water management, zoning, forestry management, mining, and land use issues. Focused skills concentrate on technology, management, and communication knowledge that is critical to success in the natural resource management field.

This degree prepares students to do the following:

- Analyze the practical and theoretical basis of recreational land use in the context of ecosystem management and explore the responsibilities of various federal, state and local agencies, environmental and wildlife interest groups, and other organizations involved in wildlife management issues;
- Discuss the statutory and regulatory policies and current issues regarding the management and use of lands in wilderness systems, wild and scenic river corridors, parks, and open spaces;
- Explain historic and contemporary management systems and principles by examining key policies, guidelines, and planning procedures of governmental agencies, resource-based industry and the public;
- Describe how the biological, physical, social, and economic aspects of lands, waters, and natural resources work together to achieve sustainable conditions that encourage preservation and management of natural resources for recreation;
- Investigate the basic principles, trends, challenges, and controversies of the administration of maintaining certain wildlife species including threats from water and air pollution, poaching and other illegal actions;
- Characterize the field of public environmental policy including contemporary methods of policy analysis, agenda-setting, models of policy formulation and implementation, and policy evaluation.

Master of Science in Environmental Policy and Management with a Concentration in Supply Chain Management

The Supply Chain Management master's degree concentration is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. Students learn tactical innovation and change management using vision, values, and mission as an overall guide. Led by professional practitioners who work in the fields in which they teach, leadership classes provide professionals the skills to manage change, encourage innovation, and develop effective strategic initiatives while fulfilling an organization's mission.

The Supply Chain Management concentration will teach students to apply principles of environmental sustainability as they plan for and manage the end-to-end flow of products, including closed loop supply chains. Students will explore the many links in the supply chain that have significant impact on the environment, from raw material sourcing to energy use to transportation. Students will gain hands-on experience, learn new technologies, and develop skills ranging from logistics to organizational development.

This degree prepares students to do the following:

- Articulate the six pillars of supply chain management to diagram the process to appraise their role in the market system;
- Apply the six pillars of supply chain management to realistic problem scenarios to develop strategies to diagnose and address future supply chain problems;
- Assess supply chains using a multidimensional perspective that includes connections between supply chain processes and fundamental business topics such as financial management and technology;
- Solve supply chain problems using a nonlinear process that addresses connections between supply chain pillars, market trends, and business best practices;
- Apply best practices to address an authentic supply chain problem in a work setting.

Certificate in Environmental Policy and Management with a Concentration in Energy and Sustainability

The graduate certificate in Energy and Sustainability concentration may be earned online to meet the needs of busy adults. Busy adults who already hold master's degrees, or professionals who work within the field of energy development, will benefit from a graduate certificate in Energy and Sustainability, a dynamic field that is emerging in importance and popularity. Ideal for students seeking further study related to sustainable systems, energy development and use, energy finance, and alternative and renewable energy process, the graduate certificate in Energy and Sustainability may be earned online or on campus in the evenings. Students will develop integration strategies, build finance schemes and marketing plans, articulate a strong working knowledge of sustainability concepts, and learn about energy and sustainability systems. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

Sustainable systems must be considered and developed in the areas of growth, transportation, energy, policy, and business models in order to head off looming environmental, political, and humanitarian problems. This will be accomplished through a comprehensive study of sustainability in the areas of economic development, green building, land use, transportation, and water resources. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

Certificate in Environmental Policy and Management with a Concentration in Environmental Analytics and Reporting

The Environmental Analytics and Reporting certificate may be earned online to meet the needs of busy adults. This certificate emphasizes learning how to utilize the tools and insights of the data analytics revolution to perform sophisticated environmental analyses and reports. Students learn possible uses of data analytics in an era of sustainability and ever-increasing complexity to manage the environmental elements of their organizations more effectively. Constructively reporting these results, trends, and accomplishments is an important avenue of communication in any organization. Environmental professionals will learn to identify and obtain a data set from a publicly traded company, from their own organization, or another public or governmental source suitable to use for carrying out analytics projects. Clear questions will be formulated and framed; analytical algorithms will be run on cloud technologies to reveal relevant insight into environmental issues. Context for these analyses will be provided through study of ISO 14001, fundamental U.S. environmental statutes, and governmental and NGO environmental reporting standards and requirements. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

Certificate in Environmental Policy and Management with a Concentration in Environmental, Health and Safety

The graduate certificate in Environmental, Health and Safety concentration may be earned online to meet the needs of busy adults. Designed and delivered for professionals who already holds a master's degree, or for professionals looking to further their environmental career with a new skillset, the graduate certificate in Environmental, Health and Safety concentration may be earned online or on campus in the evenings. Certificate students will explore the foundational statutory and regulatory origins of environmental health and safety compliance management and learn how to effectively and efficiently streamline resources to integrate safety and health regulations across sectors and industries. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

Students pursuing this graduate certificate will acquire environmental management skills and technical knowledge that prepare them to work with health and safety statutes and regulations, management of worker health and safety issues, environmental management and reporting systems, and business and finance. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

Certificate in Environmental Policy and Management with a Concentration in Environmental Management

The graduate certificate in Environmental Management concentration may be earned online to meet the needs of busy adults. Environmental Management certificate students will develop essential management skills and technical knowledge required to function in a variety of managerial positions within the environmental field. Certificate students learn to facilitate environmental innovation and integrate systems while complying with regulatory and policy matters.

The Environmental Management certificate is designed for busy adults who already hold a master's degree, or for professionals looking to further their environmental career with a new skillset in leadership, policy, and environmental issues. The graduate certificate in Environmental Management concentration provides detailed instruction on statutes and regulations, management and reporting systems, business and finance strategy, and communication and negotiation skills as they each relate to environmental management. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework. Environmental Management graduate certificate students take master's-level classes but do not complete a capstone project. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

Certificate in Environmental Policy and Management with a Concentration in Environmental Policy

The graduate certificate in Environmental Policy concentration may be earned online to meet the needs of busy adults. Designed and delivered for professionals who already hold master's degrees or for those looking to further their environmental career with a new skillset, the graduate certificate in Environmental Policy concentration is ideal for adult students seeking an innovative, career relevant graduate certificate. Environmental policy analysis at the public level will be discussed, including contemporary methods for analytical model development, implementation, and evaluation. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

Environmental Management and Policy students who are currently in the field of environmental policy, or for those aspiring to join the field, will develop skills through the online graduate certificate program that will serve them well in a policy making organization, such as values and ethics, communication and negotiation, policy analysis, and environmental laws and regulations. Environmental Policy graduate certificate students take master's level classes, but do not complete a capstone project. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

Certificate in Environmental Policy and Management with a Concentration in Natural Resource Management

The Natural Resource Management graduate certificate concentration may be earned online to meet the needs of busy adults. Designed for professionals who already hold master's degrees, or for busy adults looking to further their environmental career with a new skillset, the graduate certificate in Natural Resource Management will prepare students to work in natural resource management roles for commercial or government organizations. Certificate students will learn historic and contemporary management systems and principles, in addition to essential policies and procedures needed to thrive in natural resource management in the public or private sectors. Students will also gain additional skills and knowledge in environmental policy and management through elective coursework.

The graduate certificate is designed for professionals whose primary interest is the management of natural resources for organizations which plan or regulate the use of natural resources, or commercial operations which extract and use natural resources. Graduate certificate students will develop organizational leadership skills and learn environmental statutes and regulations pertaining to natural resource management. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

SPECIALIZED GRADUATE CERTIFICATE IN ENVIRONMENTAL ANALYTICS AND REPORTING

The Environmental Analytics and Reporting specialized graduate certificate emphasizes learning how to utilize the tools and insights of the data analytics revolution to perform sophisticated environmental analyses and reports. Students learn possible uses of data analytics in an era of sustainability and ever-increasing complexity to manage the environmental elements of their organizations more effectively. Constructively reporting these results, trends, and accomplishments is an important avenue of communication in any organization. Environmental professionals will learn to identify and obtain a data set from a publicly traded company, from their own organization, or another public or governmental source suitable to use for carrying out analytics projects. Clear questions will be formulated and framed; analytical algorithms will be run on cloud technologies to reveal relevant insight into environmental issues. Context for these analyses will be provided through study of fundamental U.S. environmental statutes, and governmental and NGO environmental reporting standards and requirements.

SPECIALIZED GRADUATE CERTIFICATE IN ENVIRONMENTAL, HEALTH AND SAFETY

The specialized graduate certificate in Environmental, Health and Safety may be earned online to meet the needs of busy adults. Students will explore the foundational statutory and regulatory origins of environmental health and safety compliance management and learn how to effectively and efficiently streamline resources to integrate safety and health regulations across sectors and industries.

Students pursuing this certificate, will acquire environmental management skills and technical knowledge that prepare them to work with health and safety statutes and regulations, management of worker health and safety issues, environmental management and reporting systems, and business and finance. Credits earned through the specialized graduate certificate may apply toward a master's degree in Environmental Policy and Management.

SPECIALIZED GRADUATE CERTIFICATE IN ENVIRONMENTAL MANAGEMENT

The specialized graduate certificate in Environmental Management may be earned online to meet the needs of busy adults. The Environmental Management specialized graduate certificate is designed for busy adults who already hold a master's degree, or for professionals looking to further their environmental career with a new skillset in leadership, policy, and environmental issues. The graduate certificate in Environmental Management concentration provides detailed instruction on statutes and regulations, management and reporting systems, business and finance strategy, and communication and negotiation skills as they each relate to environmental management. Students will take master's-level classes but do not complete a capstone project. Credits earned through this certificate may apply toward a master's degree in Environmental Policy and Management.

SPECIALIZED GRADUATE CERTIFICATE IN ENVIRONMENTAL POLICY

The specialized graduate certificate in Environmental Policy may be earned online to meet the needs of busy adults. Designed and delivered for professionals who already hold master's degrees or for those looking to further their environmental career with a new skillset. Environmental policy analysis at the public level will be discussed, including contemporary methods for analytical model development, implementation, and evaluation.

Environmental Management and Policy students will develop skills that will serve them well in a policy making organization, such as values and ethics, communication and negotiation, policy analysis, and environmental laws and regulations. Environmental Policy specialized graduate certificate students take master's level classes, but do not complete a capstone project. Credits earned through this graduate certificate may apply toward a master's degree in Environmental Policy and Management.

SPECIALIZED GRADUATE CERTIFICATE IN ENERGY AND SUSTAINABILITY

The specialized graduate certificate in Energy and Sustainability may be earned online to meet the needs of busy adults. Students will develop integration strategies, build finance schemes and marketing plans, articulate a strong working knowledge of sustainability concepts, and learn about energy and sustainability systems.

Sustainable systems must be considered and developed in the areas of growth, transportation, energy, policy, and business models in order to head off looming environmental, political, and humanitarian problems. This will be accomplished through a comprehensive study of sustainability in the areas of economic development, green building, land use, transportation, and water resources. Credits earned through this certificate may apply toward a master's degree in Environmental Policy and Management.

SPECIALIZED GRADUATE CERTIFICATE IN NATURAL RESOURCE MANAGEMENT

The Natural Resource Management specialized graduate certificate may be earned online to meet the needs of busy adults. Students will learn historic and contemporary management systems and principles, in addition to essential policies and procedures needed to thrive in natural resource management in the public or private sectors.

The certificate is designed for professionals whose primary interest is the management of natural resources for organizations which plan or regulate the use of natural resources, or commercial operations which extract and use natural resources. Students will develop organizational leadership skills and learn environmental statutes and regulations pertaining to natural resource management. Credits earned through this certificate may apply toward a master's degree in Environmental Policy and Management.

Master's Degree Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

|--|-------------------------------------|-----------|
| EPM 4150 | Global Environmental Law and Policy | 4 |
| EPM 4232 | Sustainability:Policy and Practice | 4 |
| EPM 4390 | Environmental Policy Analysis | 4 |
| EPM 4400 | Environmental Values and Ethics | 4 |
| Elective requirements (Choose four courses) | | 16 |
| Total Credits | | 48 |

Minimum number of credits required: 48

Students will work with their Academic Advisor to determine the best set of courses to choose for their electives.

In University College graduate-level programs, grades of C or greater are considered passing, whereas grades of C- or lower are considered failing. Courses with a grade of C- or below will not count toward meeting degree or certificate requirements. Also, no more than one-fourth of the hours accepted toward the degree be grades of "C". A cumulative and program grade-point average of 3.0 or better must be maintained at all times.

Master of Science in Environmental Policy and Management with a Concentration in Natural Resource Management

Degree Requirements

| Code | Title | Credits |
|--|---|-----------|
| Core coursework requirements | | |
| EPM 4003 | Environmental Finance and Economics | 4 |
| EPM 4200 | Environmental Protection Law | 4 |
| EPM 4910 | Research Practices and Applications | 4 |
| EPM 4901 or EPM 4902 | Capstone Project Capstone Seminar | 4 |
| Concentration requirements | | |
| EPM 4108 | Impacts of Recreational Use | 4 |
| EPM 4120 | Introduction to Natural Resource Management | 4 |
| EPM 4220 | Endangered Species and Wildlife | 4 |
| EPM 4390 | Environmental Policy Analysis | 4 |
| Elective requirements (Choose four courses) | | 16 |
| Total Credits | | 48 |

Minimum number of credits required: 48

SPECIALIZED GRADUATE CERTIFICATE IN energy and sustainability

| Code | Title | Credits |
|----------------------|------------------------------------|-----------|
| EPM 4002 | Integrated Environmental Systems | 4 |
| EPM 4230 | Renewable and Alternative Energies | 4 |
| EPM 4232 | Sustainability:Policy and Practice | 4 |
| EPM 4233 | Sustainable Transportation | 4 |
| Total Credits | | 16 |

SPECIALIZED GRADUATE CERTIFICATE IN natural resource management

| Code | Title | Credits |
|----------------------|---|-----------|
| EPM 4108 | Impacts of Recreational Use | 4 |
| EPM 4120 | Introduction to Natural Resource Management | 4 |
| EPM 4220 | Endangered Species and Wildlife | 4 |
| EPM 4390 | Environmental Policy Analysis | 4 |
| Total Credits | | 16 |

Courses

EPM 4001 Environmental Foundations and Principles (4 Credits)

This course investigates the field's history, current activities and issues, ethics, systems, and economics; and an overview of key necessary knowledge and skills to work and learn within the field. Students will: gain a strong historical understanding of how environmental and natural resource issues have influenced economic development and societal growth throughout the ages; learn about the complexity of environmental issues and the value of interdisciplinary and systems thinking when applied to making decisions about natural resource usage; understand the role that empirical science, policy analysis and advocacy play in how governments and private companies address complex environmental issues; become aware of the stressors that ecosystems around the globe are experiencing and the value of multidisciplinary approaches to addressing these challenges; and understand the diverse organizations and employment opportunities available in the environmental field.

EPM 4002 Integrated Environmental Systems (4 Credits)

The earth as a whole is comprised of many systems that affect the environment. Some have large wide ranging reach, while others are restricted to a relatively small area. Included is everything in between. Actions in one area or system may have unintended secondary and tertiary consequences in that system or others. This course uses various tools and materials to study a few environmental systems and determine connections, consequences, impacts, barriers, decision making, life cycle costs, etc.

EPM 4003 Environmental Finance and Economics (4 Credits)

The class provides an overview of economics, finance, and sustainability in an environmental and social context. The class examines traditional and alternative performance metrics, such as "Green GDP", and explores the relationship between risk and return, return on investments, including environmental, social, and governance (ESG) investing. The course emphasizes relationships between business management and environmental quality, and provides students with a financial and economic decision-making framework for understanding and analyzing environmental issues. The course utilizes a case-study approach to cover economic and finance concepts in real world scenarios involving natural resource and environmental decisions. Students will leave this course with the ability to confidently converse regarding sustainability in a finance and economics context.

EPM 4040 Wetland Ecology and Management (4 Credits)

This course provides a detailed examination of wetlands and deepwater habitats of the United States, with an emphasis on wetlands. The definition, identification, classification, and management requirements of various wetland communities are stressed. Students identify and classify wetlands and analyze wetlands in the context of federal, state, and local regulatory processes. Students evaluate activities with adverse and beneficial effects to wetlands. Students explore concepts related to wetland management in the public, private and non-profit sectors.

EPM 4108 Impacts of Recreational Use (4 Credits)

The practical and managerial theoretical basis of recreational use of public and private lands is examined in the context of ecosystem management. #The statutory and regulatory policies and current issues regarding the management and use of lands in wilderness systems, wild and scenic river corridors, parks, and open spaces are discussed in detail. #The impacts of recreational uses on the environment and conflicts with other uses of land and resources are discussed. Land use planning policies and decisions, decisions which respond to recreation, wilderness, wilderness and open space issues will be examined. At the end of this course, students will create a visitor impact use assessment using the Inter-agency Visitor Use Management Framework (IVUMF).

EPM 4115 Introduction to Ecology (4 Credits)

This course examines the concepts of the ecosystem, populations, communities, the flows of energy, material cycles, and biotic diversity. Students will analyze ecological concepts including the unity of organisms and inseparable interactions with the physical environment. Class discussions include topics such as the formation, distribution, and organization of ecological communities, plant succession, and nutrient cycling. Students will also evaluate aspects of evolutionary trends within plant and animal communities as they relate to ecological principles. The goals of this class are to transmit the principles, methods, and vocabulary of ecology. Students will critically analyze and discuss issues concerning population ecology, community ecology, and ecosystem ecology. Students will relate concepts of ecology to their personal and professional interests in environmental issues. The ability and necessity of communicating ecological principles within a commercial and/or regulatory environment will be developed. An assignment will provide experience in the collection, interpretation, and analysis of data. The skills learned will be relevant in environmental reporting, discussions, and presentations within a professional environment.

EPM 4120 Introduction to Natural Resource Management (4 Credits)

In this course, students gain an understanding of the roles and responsibilities of federal, state, and local agencies, environmental and wildlife interest groups, and other organizations involved in natural resources management. Students will learn the content and purpose of natural resources management plans, then apply this knowledge to assess and develop policies that will improve natural resources management.

EPM 4140 National Environmental Policy Act (NEPA) (4 Credits)

This course examines the National Environmental Policy Act (NEPA) and its applications. Students will gain both academic and practical experience in studying the intent and application of NEPA by federal agencies. Students will gain practical application by critically reviewing various NEPA documents and examining the components of NEPA documents. Students will prepare an Environmental Assessment (EA) of their choosing for their final project in this course.

EPM 4150 Global Environmental Law and Policy (4 Credits)

International environmental agreements provide a mechanism to address domestic environmental issues caused by foreign countries. However, some agreements have been more successful than others based on various aspects within the agreement and a country's domestic actions taken to enforce the agreement. This course teaches students how international environmental agreements are created, managed, and improved in order to improve environmental issues in different countries and international waters. Students will analyze and comment on existing agreements and create strategies for improving the agreements to strengthen agreements to be more effective in addressing environmental issues. Students learn about the stakeholders involved in creating and improving these agreements. Students will develop marketable analytical skills that help guide organizations toward more robust advocacy strategies designed to make the agreements more enforceable and effective in addressing environmental issues. Prerequisite: Recommended - EPM 4200.

EPM 4200 Environmental Protection Law (4 Credits)

This course provides an examination of the fundamental laws which protect our environment and health. Students will analyze the purpose, context, implementation, and implications of the most important laws, regulations, policies, and court cases that affect the environment, human health, and our economy. Coverage includes: National Environmental Policy Act (NEPA), Clean Air Act (CAA), Clean Water Act (CWA), Resource Conservation and Recovery Act (RCRA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Emergency Planning and Community Right-to-Know Act (EPCRA), related toxics laws, and species and habitat protection statutes. It provides an examination of the legal system and the roles of Congress, the President, executive agencies, states, and courts in shaping and implementing environmental laws. The course also asks students to apply this knowledge to current events in environmental policy and litigation.

EPM 4220 Endangered Species and Wildlife (4 Credits)

This course provides an examination of the basic principles, trends, challenges, and controversies surrounding the administration of maintaining certain wildlife species, specifically through the administration of the Endangered Species Act. Students gain an understanding of the roles and responsibilities of various federal, state and local agencies, environmental and wildlife interest groups, and other organizations involved in endangered species and wildlife management issues. This course will also apply the principles of human dimensions to understand the complex social systems at work to conserve endangered species.

EPM 4230 Renewable and Alternative Energies (4 Credits)

This course provides a well-rounded primer on energy as a resource and its importance in the economy and the world today. Students will examine renewable and alternative energies and alternative transportation fuels. This course analyzes issues surrounding the development, enforcement and application of energy regulatory policies.

EPM 4232 Sustainability: Policy and Practice (4 Credits)

This course teaches students how organizations practice sustainability and how they plan for, shape, and react to the emerging environmental policies necessary to limit global warming. The investment community continues its quest to identify strong sustainability organizations, making public reporting more important than ever. NGOs and governments are pushing for higher ambition. Students will learn to make sustainability reports more meaningful to garner support from NGOs and attract investors. Students will develop marketable analytical skills that help guide organizations toward more robust sustainability actions and reporting, or help NGOs evaluate corporate reports for strengths and gaps.

EPM 4233 Sustainable Transportation (4 Credits)

21st Century transportation planning on the local and global scale involves consideration of environmental policies and sustainable practices. Development of an efficient system for moving goods and people along highways, airways and public transit networks must coordinate with legal requirements governing automobile source emissions, water pollution, mitigation of congestion, and crisis management. Conflicts occur along political fault lines between public interest groups, environmental justice advocates, the business community, government regulators, and the ordinary commuter. Consideration is given to different fuel sources, including carbon-based, hydrogen, electricity, and biofuels. The course also examines fuel efficiency (CAFE) and trends in emission science and regulation.

EPM 4234 Climate Change and Science (4 Credits)

"Global Warming" is a cause celebre, but how much do we really know about the science involved in studying the earth's climate? Moving beyond the social and political opinions espoused in the current debate on climate change, this course delves into the chemical and physical forces at play in the arena. This course covers scientific processes used in measuring climate dynamics, among them ozone chemistry, carbon and oxygen cycles, and heat and water budgets. It explores scales and methods for detecting climate change, including analyzing ice cores, instrumental records, and time series. Some attention will be dedicated to "climate forcing" caused by such things as orbital variations, volcanism, plate tectonics, and solar variability.

EPM 4235 Green Building (4 Credits)

Builders, developers and designers increasingly are promoting the use of green construction practices in the pursuit of healthier, smarter buildings. Students in this course examine sustainable building strategies and tools, including LEED (Leadership in Energy and Environmental Design), the nationally-accepted benchmark for the design, construction and operation of high-performance green buildings. LEED promotes a whole-building approach by recognizing performance in five areas: sustainable site development water savings, energy efficiency, materials selection and indoor air quality. What materials are best in the design and operation of green building? How can a designer or building owner make better use of power and water efficiency programs? What are the recent developments, trends and case studies of green buildings and materials?.

EPM 4236 Nuclear, Hydrogen, and Energy Storage Technologies (4 Credits)

The necessity and urgency of moving away from fossil fuels-based energy production to reduce global warming has been well documented. Renewable energy technologies (solar, wind, and water-based) have been widely embraced as alternative energy solutions. However, like all energy production technologies, renewable energy technologies have shortcomings that prevent them from being standalone energy production solutions. Nuclear and fuel cell energy production technologies address the shortcomings of renewable energy technologies and can be considered symbiotic options in the move away from fossil fuels. Improving energy storage technologies will also be required to complete this symbiosis. This course will examine renewable energy technologies shortcomings and how nuclear, fuel cell, and energy storage technologies may be implemented to further facilitate the move away from fossil fuels-based energy production.

EPM 4238 Water and Food Sustainability (4 Credits)

Concurrent food, water, and climate crises amidst widespread hunger and undernutrition have re-focused public attention on the deficiencies and complexities of global food and water systems. This course examines the science and sustainability of our water resources as well as food production with an emphasis on the connections between the two. Increasing water and food system sustainability requires working along multiple disciplines, reconnecting agriculture with ecological systems and ensuring that policies and institutions that impact food and water systems protect social equity and the environment. The course draws from interdisciplinary research and education bridging worldviews and values implicit in different disciplinary and theoretical perspectives. Linking theory and practice is also essential thus the course will incorporate multiple perspectives and case studies from local to global levels. Demand is growing for interdisciplinary scholars and other professionals who are equipped to analyze and address the complex challenges of sustainable water resources, sustainable food production, and water and food security. Students will synthesize information from water, food, and the environment from a systems perspective. They will examine the interactions between science, policy, and ethics and analyze the trade-offs and synergies between different objectives, solutions, and outcomes. Students will devise solutions to problems that incorporate the intricacies and interdependencies of water and food systems.

EPM 4280 Resource Conservation and Recovery Act (RCRA) (4 Credits)

The Resource Conservation and Recovery Act (RCRA) course is a detailed review of the Resource Conservation and Recovery Act that was passed in 1976 and has been continuously updated since that time. RCRA is also known as "the cradle to grave law" dealing with hazardous waste generation and disposal. This course not only covers the important parts of the regulation, but students will also learn how to navigate and practically apply the law and regulations.

EPM 4355 Systems, Standards, and Certifications for Environmental Management (4 Credits)

Students will analyze and apply common environmental management systems, which can be used to ensure and improve quality during the management of a wide range of environmental operations. They will synthesize this knowledge via a project which establishes portions of an environmental management system. Students will execute the plan-do-check-act cycle to improve quality. They will evaluate options to minimize environmental impacts using root cause analysis and generalize common system components that are necessary for an environmental organization to achieve its objectives (establishing environmental policy, establishing performance objectives, monitoring results, evaluating performance, understanding and managing risks, etc.) Course assignments will allow students to practice systemizing and standardizing environmental management processes to improve performance (common procedures, data management, analytical methods, performance monitoring, etc.) Throughout the course, students will discover that management systems beyond subject matter expertise are necessary to do well in environmental careers.

EPM 4390 Environmental Policy Analysis (4 Credits)

This course investigates key issues in environmental policy analysis, including the importance of environmental justice, federalism versus state policy, techniques of environmental assessment, the impacts of politics and case law on environmental policy, and policy decision-making. The class sets a foundation with an overview of the U.S. and international environmental movements. Students look at stakeholder engagement, policy formulation and implementation, and policy evaluation in different institutions. The course emphasizes the important role that the political and judicial process plays in the creation of policy solutions, and assesses the strengths and weaknesses of different techniques of environmental analysis including environmental impact assessments, modeling and simulation, sustainability analysis, and how best to weave environmental justice/equity throughout policy development and implementation.

EPM 4400 Environmental Values and Ethics (4 Credits)

Students examine ethical considerations in environmental management and decision making. Discussions cover personal versus organizational attitudes; cultural, economic, and historic values; science versus politics; and international and intergenerational policies. The course also explores various philosophies of humankind's relationship with the environment. Students are encouraged to develop and express a personal philosophy relative to their role in the regulatory, technical, scientific, and financial management of the environment.

EPM 4465 Environmental Restoration and Waste Management (4 Credits)

Environmental Restoration is the identification and elimination of hazardous materials from a designated site such that the risks to human health and the environment are reduced to an acceptable level for an intended future land use. This course examines successful environmental restoration activities that were used to reduce and mitigate risk associated with past operations of nuclear and nuclear-related facilities and the significant potential to release harmful contaminants. Environmental restoration effects on the ecological and human health risk assessments and analyses related to the transport, treatment, storage, and disposal of waste from the contaminated site are presented. Remediation processes for radioactive materials and other hazardous wastes and the eventual storage, processing, and disposal and the potential effect on humans and the environment is studied. An overview is given on the development of a radiological protection program for an EIS report. External and internal hazards: control measures and monitoring, and other important limits and measurements are explored.

EPM 4500 Leadership for Environmental Managers (4 Credits)

This course provides students with fundamental leadership skills with an emphasis on topics and contexts relevant to environmental professionals. It addresses three main subject areas: leadership principles necessary to positively influence their work environment; how to effectively communicate; and developing a vision and mission for their personal leadership success. Students will assess their own leadership attributes, characteristics, and skills and construct a personal leadership development plan. The class will make use of reading assignments, written assignments, video assignments, situational role-play, and class participation.

EPM 4510 Environmental, and Health & Safety Management (4 Credits)

This course presents the intricacies of establishing environmental and health and safety programs in the workplace. The course is divided into specific environmental and health and safety topics that are relevant to environmental and safety management. There are multiple topics that address the benefits and barriers to designing, implementing, and maintaining environmental and health and safety programs.

EPM 4520 Occupational Safety and Health Act (OSHA) (4 Credits)

This course provides an in-depth review of the laws and regulations that govern the safety and health of workers. The course is of value to students seeking to expand knowledge of the Occupational Safety and Health Act. Emphasis is on the areas of overlap between safety and environmental laws, OSHA's inspection and enforcement authority, employee and employer rights, record keeping requirements and an outline of labor's interest in OSHA cases. Current topics such as OSHA reform legislation and regulatory agenda are discussed.

EPM 4525 Workplace Safety Management (4 Credits)

This course introduces students to core elements in a health and safety management systems approach to identifying and preventing workplace injuries and illnesses. Students examine the five elements of developing an effective occupational health and safety management program. The course also explores the common challenges and obstacles encountered during the development and implementation of these programs. This course includes a general overview of common OSHA regulations, rights, and responsibilities for developing a safety and health program. The format of this class is highly interactive, affording students an opportunity to engage with case studies and their peers, as well as to practice developing health, safety, and environmental programs at their respective establishments.

EPM 4610 Analytics I (4 Credits)

Data and analytics are key for any business domain; data tells us about our customers and markets and analytics make information and knowledge out of data. It's now possible to be inundated with data but gain no new knowledge from it. Analytics help companies demonstrate their ESG behavior and its impact. Companies that can prove and display the environmental impact gain a market advantage. Analytics also demonstrate real environmental impact versus greenwashing. This course has a managerial focus rather than a technical one, though students will perform some data analytics in this course. It is designed to provide managers with sufficient background on the potential value of data analytics, the business process change associated with data analytics, and the underlying technologies, to enable them to interface effectively with analysts and data scientists.

EPM 4615 Analytics II (4 Credits)

Business professionals including those in environmental health and safety (EHS) management, use statistics every day in making decisions. In this graduate-level course, you will gain an overview of the data analytic process and data mining techniques used for discovery knowledge from datasets. The course is designed to highlight the practical aspects of data mining methods and their applications, rather than theoretical aspects of statistical machine learning or optimization. The course also introduces emerging trends in Data Analytics and their applications in decision making process on environmental issues such as sustainability which includes waste management, water, and energy conservation. In summary, data is now an integral part of our lives and to be successful in today's business landscape, we need to be able to leverage data to make critical business decisions on environmental sustainability. This course will teach students how to use data to make those decisions confidently. Prerequisite: EPM 4610.

EPM 4620 Environmental Reporting Standards and Models (4 Credits)

Students learn the reporting requirements of existing and emerging environmental reporting standards, e.g., SEC requirements, EU standards, NGO standards, Global Reporting Initiative environmental performance indicators, and Sustainability Accounting Standards Board recommendations, and how to craft mandatory and optional reports that conform to these standards and requirements.

EPM 4625 Environmental Analysis and Reporting Project (4 Credits)

This is the concluding class for the Environment Analytics and Reporting concentration and graduate certificate. The class centers on performing sophisticated investigations of sustainability-related data sets utilizing the tools and insights of the data analytics revolution. The focus of the course is on applying advanced data analytics techniques (e.g., data mining, predictive analytics, and prescriptive analytics) to support innovative approaches for organizational sustainability, business performance, stakeholder relations, and/or environmental policy. Students will engage in readings, develop an analysis project using Watson Analytics, and prepare a report covering conclusions and recommendations. Prerequisites: EPM 4610, 4615, and 4620.

EPM 4701 Topics in EPM (2-5 Credits)

The content of this course will vary each time it is offered. The topics may include time-sensitive issues in the field of environmental policy and management, elective courses that are not scheduled regularly during the course of the year, or advanced inquiry into core-course subjects. Each time the course is offered, the specific content will be announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

EPM 4705 Land Use Planning (4 Credits)

This course includes a comprehensive examination of the land use planning efforts of federal, state, and local governments. The legal authorities, responsibilities, and conflicts of these governmental entities are examined in detail. Class discussions include: setting goals and objectives for specific components of ecosystems; design of projects to achieve desired ecologic conditions; the interrelationship between home rule authority, local zoning and planning requirements, and federal/state natural resource plans; use of new technologies in planning; and public participation in land use plans.

EPM 4710 Environmental Project Management (4 Credits)

In this course, students will learn about project management concepts and gain practical experience applying basic project management skills. As a part of class assignments, students will work on selected projects while covering the entire project management process, from project initiation to close-out. These projects will cover a range of environmental and / or sustainability project management perspectives, including governmental, industry, and advocacy or non-profit organizations. By the end of the course, students should have a strong understanding of project management skills and terminology, and be able to successfully complete some requirements for project manager certification. They will also understand the similarities and differences in project management for environmental professionals. Please note that while this course will provide a foundation in project management, it will not cover all concepts and terminology in depth or provide the required work hours necessary for project manager certification.

EPM 4901 Capstone Project (4 Credits)

The Capstone Project provides students the opportunity to research a topic, problem, or issue within their field of study, and work individually with a Capstone advisor. Similar in weight to a thesis, but more flexible, this final project will synthesize and apply core concepts acquired from the program. The student will select an appropriate Capstone advisor who is knowledgeable in the field of study to work closely with and whom can guide the research project. Evaluation will be focused on the quality and professionalism of applied research and writing; critical and creative thinking; problem-solving skills; knowledge of research design, method, and implementation; and contribution to the field and topic of study. Please see the Capstone Guidelines for additional details. Prerequisites: A Capstone Proposal that has been approved by both the Capstone Advisor and the Academic Director, acceptance as a degree candidate, completion of at least 40 quarter-hours (including all core courses) with a cumulative GPA of 3.0 or better.

EPM 4902 Capstone Seminar (4 Credits)

The purpose of the Capstone Seminar is to develop and apply transferable professional skills to persuade decision-makers. The course requires students to identify a question, problem, or issue in their field of study or profession to research in order to create a report that argues for an applied solution. Over the duration of the quarter, students will focus on the following: developing an argument in both written and oral format to support their solution through consideration of purpose, audience, and evidence; gathering and evaluating sources in their field or industry; the connection between discipline, style, and format; and their individual writing process.

EPM 4910 Research Practices and Applications (4 Credits)

This course develops competencies including principles and practices of: academic inquiry, writing, and ethics. Students will complete Institutional Review Board (IRB) training, data collection, analysis, and evaluation; and synthesize application of peer-reviewed literature. Competencies will be applied and integrated throughout the course of study and demonstrated in the culminating work of the master's degree. Competencies are additionally developed for use in professional employment settings.

EPM 4980 Internship (0-4 Credits)

The EPM Internship is designed to offer students a purposeful experience in the field of environmental policy and management. The internship is an individualized learning experience and a training plan is created for each student in conjunction with the internship site to provide experiences related to the skills and knowledge covered in the certificate and master's programs.

EPM 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed it with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

Geographic Information Systems

Certificate in Geographic Information Systems

The certificate in Geographic Information Systems is offered online or on campus at the University of Denver in the evenings, or in a combination of both, to meet the needs of busy adults. University College offers the region's first complete graduate certificate program in Geographic Information Systems. Designed and delivered for busy adults, the Geographic Information Systems graduate certificate helps professionals add to their skillset with technology skills that help solve real-world spatial problems.

Certificate students receive applied instruction from professional practitioners who work in the fields in which they teach, as they learn to create, implement, and execute a project using GIS, GPS, remote sensing, internet mapping, or digital image processing. The GIS certificate allows students to explore training fundamentals at a very hands-on, applied level necessary to succeed in the field.

Students gain a contextual background in GIS, from the management of natural resources to public utility management, public works engineering, environmental impact assessment, and even market research. In a burgeoning integrative world, it is vital to grasp the diverse fundamentals of each topic within the Geographic Information Systems industry and gain an insider's perspective to specific fields as they each relate to GIS training. Credits earned through this graduate certificate may apply toward a master's degree in Geographic Information Science offered in the Department of Geography and the Environment at the University of Denver or a master's degree in Information and Communications Technology offered through University College at the University of Denver.

This program prepares students to do the following:

- Analyze the nature of, uses for, and implementation processes for geographic data.
- Select appropriate applications of GIS technology to solve spatial problems based on organizational/client needs.
- Solve real-world problems through analysis and selection of appropriate GIS tools and processes to address the issues.

SPECIALIZED GRADUATE CERTIFICATE IN GIS AND UNMANNED AIRCRAFT SYSTEMS

This specialized graduate certificate prepares students for the rapidly expanding UAS application to GIS and mapping. Students will take four courses: Introduction to GIS and then three focused courses; one on the use of UAS in the GIS industry, a ground school where students will learn to fly, and photogrammetry where students will learn the science of preparing aerial photography products collected from drone platforms for GIS mapping and analysis.

After completing this certificate, students will

- Establish a working knowledge for the safe and efficient use of UAS.
- Prove their ability to perform several aircraft maneuvers in a safe and efficient manner.
- Execute an aerial mapping exercise for use in GIS.

SPECIALIZED GRADUATE CERTIFICATE IN GEOGRAPHIC INFORMATION SYSTEMS IN THE ENVIRONMENT

The environmental movement decades ago gave rise to GIS as we know it today. In this specialized graduate certificate, students focus on GIS applications in the environment. Environmental assessment and natural resource management, conservation and preservation take center stage, as well as a look at natural hazard risk assessment and planning.

After completing this certificate, students will

- Evaluate the application of GIS technology, analytical techniques and data presentation methods that support facility site selection, environmental impact analyses, resource management, and characterization of environmental hazards.
- Participate in environmental assessment projects with introductory preparation for practice as GIS professionals in public agencies or in the private sector.
- Analyze applications that support hazard risk and assessment, mitigation, and emergency response planning.

SPECIALIZED GRADUATE CERTIFICATE IN GEOGRAPHIC INFORMATION SYSTEMS IN PUBLIC SAFETY

How do we protect against threats that challenge the safety of our communities? GIS provides the tools we need to assess threats and plan for a safer tomorrow. This specialized graduate certificate challenges students to examine health and safety in their communities and apply tools and analytical techniques to understand and mitigate issues affecting public safety.

After completing this certificate, students will

- Analyze the location of diseases, the spread of contagious diseases (both vector-borne as well as the spread through human contact), the cause and effect of environmental factors, and the availability of health facilities.
- Analyze crime statistics and patterns to explore how GIS technology is used in law enforcement to provide strategic, tactical, and administrative crime analysis.
- Analyze privacy, copyright, public domain, cost recovery, metadata standards, and data quality issues affecting decision making in the public safety sector.

SPECIALIZED GRADUATE CERTIFICATE IN GEOGRAPHIC INFORMATION SYSTEMS TOOLS AND TECHNOLOGY

Many GIS professionals are interested in the “nuts and bolts” that make GIS software, data, and applications work. In this specialized GIS graduate certificate, students will focus on tools that are integral to building databases, customizing applications, streamlining spatial data processing workflows, and publishing maps and services to the web.

After completing this certificate, students will:

- Manifest the ability to write scripts that allow them to automate redundant tasks and workflows in GIS to work more efficiently.
- Design and implement geodatabases including object classes, feature classes, relationship classes, domains, validation rules, and geodatabase topology.
- Create a working web site using different technologies.

Certificate Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Certificate in Geographic Information Systems with a Concentration in Geographic Information Systems

Program Requirements

| Code | Title | Credits |
|--|--|-----------|
| Core coursework requirements | | 8 |
| Complete the following two courses: | | |
| GIS 4101 | Introduction to Geographic Information Systems | |
| GIS 4504 | Cartography and Geovisualization | |
| Elective requirements (Choose four courses) | | 16 |
| Total Credits | | 24 |

Minimum number of credits required for certificate: 24 credits

Students will work with their Academic Advisor to determine the best set of courses to choose for their electives.

SPECIALIZED GRADUATE CERTIFICATE IN GIS AND UNMANNED AIRCRAFT SYSTEMS

| Code | Title | Credits |
|----------|--|---------|
| GIS 4101 | Introduction to Geographic Information Systems | 4 |
| GIS 4750 | UAS for GIS | 4 |
| GIS 4760 | UAS Photogrammetry | 4 |

| | | |
|----------------------|-----------------------------|-----------|
| GIS 4770 | UAS Ground School Practical | 4 |
| Total Credits | | 16 |

SPECIALIZED GRADUATE CERTIFICATE IN GIS IN THE ENVIRONMENT

| Code | Title | Credits |
|----------------------|--|-----------|
| GIS 4101 | Introduction to Geographic Information Systems | 4 |
| GIS 4540 | Conservation GIS | 4 |
| GIS 4680 | Environmental Applications | 4 |
| GIS 4685 | GIS and Natural Hazards | 4 |
| or GIS 4687 | Hydrologic Modeling in GIS | |
| Total Credits | | 16 |

specialized graduate certificate in GIs in Public Safety

| Code | Title | Credits |
|----------------------|---|-----------|
| GIS 4101 | Introduction to Geographic Information Systems | 4 |
| GIS 4530 | Crime Mapping | 4 |
| GIS 4570 | Geographic Information Systems in Public Health | 4 |
| GIS 4630 | Public Domain Data for GIS | 4 |
| Total Credits | | 16 |

SPECIALIZED GRADUATE CERTIFICATE in GIs Tools and Technology

| Code | Title | Credits |
|----------------------|--|-----------|
| GIS 4101 | Introduction to Geographic Information Systems | 4 |
| GIS 4080 | Python Programming in GIS | 4 |
| GIS 4620 | Geodatabase Application | 4 |
| GIS 4860 | Web GIS | 4 |
| Total Credits | | 16 |

Courses

GIS 4007 Creative Problem Solving and Programming Concepts (4 Credits)

In this course students will develop, or improve upon, their problem-solving skills to analyze problems and create solutions. Students will document their solutions and translate them into running programs written in the enormously popular Python programming language. Students will learn programming concepts including the use of variables, program input and output, flow control, conditionals, interpreter- and code-file-based approaches, and error testing. Students will learn how to set up Integrated Development Environments (IDE) such as Visual Studio Code on their personal computers and/or utilize a Cloud IDE in which they will write programs.

GIS 4080 Python Programming in GIS (4 Credits)

This course introduces Python concepts and the Python scripting environment in a GIS environment. Python is a free, open-source scripting language that has been integrated with GIS. Python is a dynamic, interpreted language that can be used to automate redundant tasks and workflows in GIS. Students learn tools and techniques and proper Python syntax, script flow, and error handling. Students learn to write scripts that allow them to automate redundant tasks and workflows in GIS. Students learn to write scripts that allow them to automate geoprocessing processes and GIS work more efficiently. This course teaches fundamental concepts needed to create Python scripts in ArcGIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4085 Python Programming II (4 Credits)

GIS 4085 builds on GIS Python fundamentals from GIS 4080, covering advanced applications of Python for developing and customizing GIS software, designing user interfaces, and solving complex geoprocessing tasks. Participants will engage with peers in weekly discussions and code reviews. Weekly exercises and assignments provide practical application of concepts. Prerequisites: GIS 4080.

GIS 4100 Geospatial Technologies (4 Credits)

This course is designed to familiarize students with the tools and technology needed to access, manipulate, and display geographic information. Students will also learn how to think spatially in order to help students know when to apply these tools. This course is a combined introduction to geographic information systems (GIS), remote sensing (RS), global positioning systems (GPS), and cartography (the science and art of mapmaking). Students will also learn about ethical issues regarding the use of geospatial technologies, as well as trends in the practical applications of these important tools.

GIS 4101 Introduction to Geographic Information Systems (4 Credits)

This introductory course is designed to provide a general overview of geographic information systems (GIS) including background, development, trends, and prospects in this rapidly evolving technological field. Basic components and functions of GIS as well as fundamental spatial and geographic concepts are explored through lecture notes, assigned readings, videos, discussions, and applied practical experience using GIS software.

GIS 4110 Geographic Statistics (4 Credits)

This course offers an overview of spatial statistics using GIS and publicly available data. This course provides information on the following: spatial statistics, methods, and interpretation; spatial data, collection methods, and resources; and GIS techniques to map and analyze spatial data. Using a popular PC-based desktop mapping software program and statistical package, students learn how to navigate through spatial data, identify data issues, statistically analyze spatial data, map the data, and interpret results from these analyses. Topics include descriptive spatial statistics, hypothesis testing, interpolation, clustering, and spatial regression. Several application areas, such as demographic analysis and facility planning, are used in sample exercises and ethical considerations, such as masking, are discussed. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4200 Geospatial Intelligence (4 Credits)

Geospatial intelligence (GEOINT) is pivotal in linking geography to events and helping us gain insight into what is happening, where it's happening, and why it's happening. GEOINT is derived from the exploitation and analysis of imagery and geospatial information about features and events, with reference to space and time. This course serves as an introduction to the fundamentals of the geospatial intelligence community, core GEOINT technologies and operations, and the role of GEOINT in national, regional and local security affairs. This course is built on a framework of data, technology, and analysis in support of the GEOINT community, which may include natural disasters, first responders, military personnel, homeland defense, and law enforcement. Prerequisite: GIS-4101 Introduction to GIS.

GIS 4504 Cartography and Geovisualization (4 Credits)

The theory and art of map making developed over several thousand years and has been revolutionized by computer technology. This course is designed to expose students to the use of computer techniques in assessing technical design issues in the compilation of accurate and meaningful automated geographic mapping products. GIS software will be used in a series of hands-on lab exercises to produce typical GIS mapping products.

GIS 4510 GIS in Business (4 Credits)

Businesses continue to embrace GIS as an effective alternative to traditional manual mapping analysis methods. GIS has emerged as an affordable solution for performing essential revenue producing and expense reducing functions. Many years ago, successful GIS implementation required huge capital investment and a large staff of GIS experts; however, with the introduction of more powerful inexpensive computers and easier to use software, companies of all sizes are unleashing the business potential of GIS on the marketplace. This course exposes students to various business applications and uses of GIS as well as the underlying theories and technology behind the applications. This course emphasizes various business disciplines including Marketing, Real Estate, Transportation, and Oil & Gas using GIS in practical, hands-on exercises that demonstrate the theories and concepts discussed in the lectures. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4520 GIS in Telecommunications (4 Credits)

Telecommunications is a thriving technology and business, accounting for a significant percentage of technical advances and revenue around the globe. GIS has emerged as a crucial tool in the telecommunications field for maintaining existing entities, planning for additional ones, and for gaining an advantage in this very competitive marketplace. The use of GIS in the telecom industry continues to grow because GIS technology accommodates the many CAD programs and drawings representing plant and transmission towers/coverage as well as the geographic representations of those items. Only a few years ago, introducing GIS into a telecom business required significant cash outlay, but through less expensive hardware and more user-friendly software, now even a modest CLEC can implement an effective GIS. This course exposes students to the various applications and uses for GIS in the telecom arena by breaking down the miscellaneous telecom requirements into GIS components and technological solutions. This course emphasizes specific telecom technology application requirements and allows students, through hands-on-lab work, to discover the power of GIS in delivering superior telecom solutions. This course also focuses on OSP/ISP applications and solutions, network connectivity issues as well as the exploding future of wireless technology. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4530 Crime Mapping (4 Credits)

Municipal police departments, county sheriff departments, and other state and federal law enforcement agencies use GIS technology as a tool to analyze crime statistics and patterns. This course examines how GIS technology is used in law enforcement to provide strategic, tactical, and administrative crime analysis.

GIS 4540 Conservation GIS (4 Credits)

This course is designed to provide students with an introduction to the use of geographic information systems (GIS) in conservation. Students receive an introduction to the use of GIS in various types of conservation studies and preservation. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support planning and management of land, species, and habitats. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4570 Geographic Information Systems in Public Health (4 Credits)

GIS offers many applications and functionality that are tremendously beneficial to the Public Health industry. The ability to visualize cases in space (geographically) and time is invaluable in analyzing spatial clusters of health related events. Further the ability to model the spread of a potential epidemic can literally be a life saver. GIS is a natural choice for solving many Public Health issues including: analyzing the location of diseases; the spread of contagious diseases (both vector borne as well as the spread through human contact); the cause and effect of environmental factors; as well as the availability of Health facilities. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4610 Open Source GIS (4 Credits)

This applied course guides students in their investigation and research of special topics and current events through Open Source geographic information systems (GIS). It builds upon geospatial skills previously acquired and is designed for participants to learn how geospatial work can be done when presented with a proposal or problem but given little to no data, budget, or access to commercial, off-the-shelf software, or other resources. In this course, students will choose their own topic and learn to navigate it by planning, implementing, and disseminating the outcomes of a geospatial project. Prerequisite: GIS 4101 Intro to GIS and additional coursework or experience with GIS Projects. Prerequisite: GIS 4101.

GIS 4620 Geodatabase Application (4 Credits)

This course in Geodatabase Application is logically broken into two separate component parts; the first section deals with Geodatabase concepts and provides a general overview of the Geodatabase structure and implementation including; background, object classes, feature classes, relationship classes, domains, validation rules, and Geodatabase topology. The second portion of the course focuses on Geodatabase Application introducing advanced features of Geodatabase, providing a solid foundation for the application of the Geodatabase to model and address complex real world issues. Geodatabase Linear Referencing, Geodatabase Surface Modeling, and Geocoding Services in the Geodatabase, are explored. This course incorporates a hands-on lab component. Computer lab exercises are designed to introduce the student to concepts and Geodatabase application. Strong emphasis is placed on Geodatabase design. Design objectives, design guidelines and functional requirements of the resulting Geodatabase model are addressed. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4630 Public Domain Data for GIS (4 Credits)

Geospatial data are the foundation upon which GIS and spatial analysis rests. As GIS has matured, the challenge has evolved from generating data to managing the enormous volume of data from government agencies, nonprofit organizations, and industry, and increasingly, from ordinary citizens through citizen science and volunteered geographic information efforts. Key to working with this volume of data are essential issues such as privacy, copyright, public domain, cost recovery, metadata standards, and data quality that GIS professionals must grapple with to be effective in the 21st Century. This class discusses and applies these issues and works with a rich array of data sources to enable effective decision-making in a Geographic Information System. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4650 Demographic Analysis Using GIS (4 Credits)

This course offers an overview of demographic analysis using GIS and U.S. Census data. This course provides pertinent information on the following: demographic concepts and methods; U.S. Census data, collection methods, and reports; and GIS and spatial statistical methods to analyze demographic data. Using a popular PC-based desktop GIS software program, students learn how to navigate through census files and create a variety of thematic maps. Several application areas, such as demographic analysis and facility planning, are used in sample exercises. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4655 Community Intel (4 Credits)

Community Intelligence is about using geospatial data to gain insights and to make informed decisions regarding community demographics, opportunities, risks, and an overall deeper understanding of communities. Whether one is a small business owner, the CEO of fortune 500 companies, an Emergency Manager, or running a non-profit environmental organization, having insights into local and regional communities, and understanding how to engage in this public provides an incredible advantage while maximizing effort, time, and resources. In this course, you will learn how to capture and discover key insights often hidden in complex datasets, and how to strategize and communicate with these data for maximum organizational impact. Course Pre-requisites: GIS-4101 Introduction to GIS. Prerequisites: GIS 4101.

GIS 4660 GIS in Municipal Government (4 Credits)

There are many areas of government where desktop mapping can be extremely helpful in solving problems that are spatial in nature. This course explores the many types of data collected by city and county government agencies from crime and election data to building, assessment, and zoning data and how it can be displayed in map form. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4670 GIS and the Law (4 Credits)

This course explores the legal and technical ramifications created by Geographic Information Systems (GIS), Mobility and the Law, including the legal and policy issues related to the science of GIS, the sharing of geographic information, the data generated by mobile devices, the intellectual property issues, security and privacy issues, business and contractual issues related to GIS, and the standards of care and liability related to GIS. This course also examines the types of issues and concerns that exist in the U.S. and the world created by geographic information science and the mobile device. The evolution of GIS and the mobile device directly impacts governments, companies, and individuals on a daily basis. In today's world, more than three billion people have smart phones in their hands constantly. This creates issues about how to handle data, security and privacy, civil and criminal laws, rules and regulations, contractual agreements, and service-level agreements between parties on many levels from service providers in different states, countries and parts of the world. All of these issues need to be balanced by the differing cultural standards and mores from all over the world and legal (and sometimes not so legal) methods of protecting governments and companies in this ever-changing "always-connected" world created by GIS and the mobile device. Prerequisite: GIS 4101 - Intro to GIS, and GIS 4700 - Remote Sensing I and/or similar GIS course and/or work experience.

GIS 4680 Environmental Applications (4 Credits)

This class provides students with an introduction to practical applications of computerized Geographic Information Systems (GIS) in environmental assessment and natural resource management. Emphasis is placed on automated analytical techniques and data presentation methods that support facility site selection, environmental impact analyses, resource management, and characterization of environmental hazards. This course is designed to provide students who participate in environmental assessment projects with introductory preparation for practice as GIS professionals in public agencies or in the private sector. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4683 GIS for Disaster Management (4 Credits)

This course serves as an introduction to Geographic Information Systems and their application in Emergency Operations. The basic concepts of geography, cartography and Global Positioning Systems will be covered, along with the basic components and capabilities of a geographic information system. Students will learn about the fundamental types of GIS analysis and applications, focusing on those used in Emergency Operations.

Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4685 GIS and Natural Hazards (4 Credits)

This course is designed to provide students with an introduction to the use of GIS in natural hazard assessment. Students receive an introduction to the use of geographical information systems (GIS) in various types of natural disasters and response management. Emphasis is placed on the types of applications and analytical techniques in environmental fields where GIS is commonly used as a mapping and analytical tool. The analytical techniques used in lab exercises consist of practical applications that support hazard risk and assessment, mitigation, and emergency response planning. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4687 Hydrologic Modeling in GIS (4 Credits)

Hydrology is concerned with movement of the earth's waters through the hydrologic cycle, and the transport of constituents carried in its flow. In GIS, the landscape is represented by means of geographically referenced data describing the character and shape of relief features. A spatial hydrology model simulates the water flow and transport in a specific locale using GIS data structures. Hydrologic modeling in GIS allows us to automatically delineate a drainage system and quantify the characteristics of the system. It focuses on the movement of water across a land surface. This course looks at the basic inputs to hydrological modeling in GIS, walks students through established modeling procedures, and has students work on projects that are real and relevant as model applications. Instruction is largely hands-on, project-oriented. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4690 GPS for GIS (4 Credits)

This course is an introduction to GPS (Global Positioning Systems) concepts, techniques, and applications as they relate to GIS data collection. Lectures focus on satellite surveying, GPS technology, error sources, program planning, data collection design, and Quality Control and Quality Assurance issues for data collection programs. Lab exercises include planning a GPS survey, designing a field data collection plan and associated data dictionary, field data collection, and data integration into a GIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4700 Remote Sensing I (4 Credits)

This course provides a survey of remote sensing technologies, applications, and the industry. This course is designed for GIS, Geography and Geoscience students who seek to broaden their understanding of remote sensing in support of Geographic Information Systems. Introductions to the electromagnetic spectrum, energy sources, radiation principles, aerial cameras, and electronic imaging provide the student with the initial building blocks to a thorough understanding of remote sensing. This course provides an overview of the various high altitude and space-based collection systems and their characteristics, with a view toward future systems and capabilities. In addition, this course exposes students to the techniques of extracting relevant information from both hard copy and digital imagery. Pre-requisite: This course is a pre-requisite for GIS 4740 – Remote Sensing II.

GIS 4701 Topics in Geographic Information Systems (2-5 Credits)

The content of this course varies each time it is offered, depending on the interests and needs of the students. Each time the course is offered, the specific content is announced in the quarterly course schedule. Depending on the subject matter, students may be required to have completed prerequisite courses.

GIS 4740 Remote Sensing II (4 Credits)

The curriculum is a rigorous presentation of digital imaging processing theory with emphasis on its application to airborne and space borne imagery. The course includes computer laboratory exercises and workshops, where the students apply theory to satellite and air photo data. Interpretation of the digitally processed data is also included in the class exercises. Examples of vector and raster data integration are shown as well. Prerequisite: GIS 4700.

GIS 4750 UAS for GIS (4 Credits)

The purpose of this course is to introduce GIS students to the emerging world of using Unmanned Aircraft Systems (UAS) in the GIS workplace for data collection, reconnaissance, and research. UASs are in the news every day, highlighting their use in a military context. The Federal Aviation Administration (FAA) has released new rules and regulations governing the use of UASs in the civilian sector. This course will prepare students to be conversant in the world of UASs, basic aviation, safety, flying, mission planning, and general data gathering techniques for use in GIS. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4760 UAS Photogrammetry (4 Credits)

Surveying, photogrammetric mapping, GPS, and remote sensing are critical components to working in the UAV and GIS domain. The second course in this two-course sequence will expand on the data collection process highlighted in the first class and deliver the foundations required by GIS professionals working with UAVs. Prerequisite: GIS 4101 or similar GIS course and/or work experience and GIS 4750-UAVS and GIS.

GIS 4770 UAS Ground School Practical (4 Credits)

The purpose of this course is to provide skills and abilities to become a remote pilot in command (RPIC) within the United States. The class content will focus on 14 CFR 107, the rules and regulations that allow RPICs to operate Unmanned Aircraft Systems (UASs) safely and legally. In addition, students will be given hands-on training in the best practices for flying UASs. Course Overview/Purpose: The release of 14 CFR 107 by the FAA has set a legal framework for commercial UAS operations in the United States. The purpose of this course is to help students become well versed in 107 and gain hands-on experience operating UASs. Students will become proficient with UAS aeronautical operation standards, discover the rules and regulations of airspace that all RPICs must comply with, and evaluate the effects that weather has on UASs as well as sources of weather information. Students will also assess the performance abilities and limitations of UASs and explore standard UAS operations as outlined in the 107 regulations. Prerequisite: GIS 4101 or similar GIS course and/or work experience.

GIS 4860 Web GIS (4 Credits)

Creating web-based maps allows government entities, businesses, and other organizations to publish, discover, and share geospatial information. This course examines web and mobile GIS software applications, where students will learn the framework for creating web apps. Students publish comprehensive projects resulting in the creation of a fully-developed web GIS.

GIS 4980 Internship (0-4 Credits)

GIS students may fulfill up to four quarter hours of electives by enrolling in a GIS internship with a GIS company or an agency actively engaged in GIS activities. Students incorporating professional work experience must work with an approved mentor, who evaluates the student's performance and learning. The internship is designed to provide practical experience to students without prior professional experience in the field. Students who are employed on a full-time basis in the GIS industry may not use paid work experience as part of the academic program.

GIS 4991 Independent Study (1-8 Credits)

This is an advanced course for students wishing to pursue an independent course of study. The student must be accepted in a degree program, have earned a grade point average of 3.0 or better, obtained the approval of the department director, and have completed the Independent Study form and filed the form with all appropriate offices before registering for the independent study. Independent Study is offered only on a for-credit basis.

Global Community Engagement

Office: University College Student Support Center

Mail Code: 2211 S. Josephine St., Denver, CO 80208

Phone: 303-871-2291, 800-347-2042

Email: ucol-support@du.edu

Web Site: www.universitycollege.du.edu (<http://www.universitycollege.du.edu>)

Master of Arts in Global Community Engagement

Professional success in an increasingly globalized world requires a nuanced understanding of how events, actors, and processes worldwide impact work at the local level. It requires the ability to interact effectively with people from diverse cultural, national, and linguistic backgrounds, in addition to adapting industry-specific policies and practices to the ever-changing demands of multinational and multicultural environments. This program provides working professionals with the knowledge and skills necessary to effectively navigate the complexities of their profession in an increasingly diverse 21st century workplace. Hands-on opportunities enable students to apply knowledge gained through the program to their own professional lives. Students acquire the tools necessary to thrive in diverse environments and to achieve organizational goals while developing a greater understanding of their own roles as citizens of the greater global community.

This degree prepares students to:

- Optimize organizational effectiveness by taking into account the impact of diversity and shifting global perspectives
- Interact effectively with people whose ideas are rooted in cultural backgrounds other than one's own
- Apply global cultural awareness to the structures and process of specific professions and industries
- Engage effectively with communities impacted by timely global struggles
- Leverage global and cultural practices of organizations and/or communities to effect change at home or abroad

Master of Arts in Global Community Engagement with a Concentration in Advancing Diversity, Equity, and Inclusion in Organizations

Advancing diversity, equity, and inclusion is critical to achieving organizational goals, positioning organizations for success in today's world, and creating environments where everyone has the opportunity to thrive. In this master's degree concentration, you will gain skills that are crucial for advancing equity as an integrated part of organizational strategy while developing solutions that meaningfully leverage diversity to create a culture of belonging. Learn about the historical, cultural, and economic factors that shape identity and apply appropriate tools and techniques to help organizations achieve their vision for change as it relates to diversity, equity, and inclusion practices.

This degree prepares students to:

- Assess the influence of historical, social, cultural, and economic factors in shaping one's identity and conceptions of diversity, equity, and inclusion practices.
- Integrate an understanding of social and cultural difference, perspective-taking, and empathy to better inform interpersonal communication and problem-solving strategies.
- Develop practices that advance equity as an integrated component of organizational strategy.
- Design solutions that meaningfully leverage diversity to achieve organizational goals and cultivate a culture of belonging across different organizational settings.
- Apply change models, tools and techniques to successfully achieve a vision for change.

Certificate in Global Community Engagement with a Concentration in ADVANCING DIVERSITY, EQUITY, AND INCLUSION IN ORGANIZATIONS

Advancing diversity, equity, and inclusion is critical to achieving organizational goals, positioning organizations for success in today's world, and creating environments where everyone has the opportunity to thrive. In this graduate certificate, you will gain skills that are crucial for advancing equity as an integrated part of organizational strategy while developing solutions that meaningfully leverage diversity to create a culture of belonging. Learn about the historical, cultural, and economic factors that shape identity and apply appropriate tools and techniques to help organizations achieve their vision for change as it relates to diversity, equity, and inclusion practices.

Certificate in Global Community Engagement with a Concentration in Global Issues

The graduate certificate in Global Issues offered at University College focuses on the impact of global events, actors, and processes worldwide on students' work and experiences at the local level. Students will assess the effects of global issues on domestic organizations, structures, and procedures in addition to relating their own roles as citizens in a globalizing world. Credits earned through this certificate may be applied toward a master's degree in Global Affairs.

Master's Degree Admission

Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80 with minimum of 20 on each sub-score
- Minimum IELTS Score: 6.5 with minimum of 6.0 on each band score
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Courses**GS 4010 Global Society: Structures and Stakeholders (4 Credits)**

This course provides students with an introduction to the major actors, structures, and issues in contemporary global society. Moving beyond a state-centric view of the global landscape, the course considers the values, interests, and ideas of a variety of stakeholders—including businesses, corporations, institutions, governmental and non-governmental organizations, and grass-roots initiatives—in order to assess some of the ways in which these actors both compete and cooperate for opportunities and resources. Students will apply relevant concepts to their own personal and professional experiences so as to gain a better understanding of how global issues and actors at a variety of levels impact their work and how their work constitutes an important part of global society.

GS 4020 Culture, Identity, and Power (4 Credits)

In a rapidly globalizing world, culture and identity are increasingly recognized as having profound implications for professional success across a range of industries and practices. An understanding and appreciation of difference are central to effective professional interactions and progress. This course presents approaches for thinking about intersecting dynamics of culture, identity, and power in professional environments, and for mitigating cultural and identity-based conflict in the workplace and beyond.

GS 4030 Working Internationally (4 Credits)

Working Internationally is designed for those looking to broaden their personal and professional pursuits in global settings, whether at-home or abroad. This course covers both qualitative and practical considerations. Students will explore the benefits and challenges of working internationally with a focus on cross-cultural communication and management. Through a combination of lectures, case studies, assignments, and group discussions students will develop skills and strategies for building successful relationships with people from different cultural backgrounds. Additionally, the logistical nuances of working abroad will be addressed. Upon completion of the course, students will have a better understanding of how to navigate cultural differences, explore international opportunities, and work effectively in a global environment.

GS 4040 Managing Across Cultures (4 Credits)

This course addresses the impact of culture on management and organizational processes as well as provides students with approaches to engaging effectively in globalized organizational and multicultural contexts. Additionally, the course enables students to distinguish between differences in diversity and culture. They will analyze the impact of global issues and events on the management process in different times and places and evaluate managerial practices in different cultures and institutional environments. The impact of cultural intelligence in organizational citizenship and performance is also addressed. The course will aim to provide opportunities for the practical implementation of the concepts covered.

GS 4050 Diversity and Organizational Structure (4 Credits)

A company is only as good as its culture. It is not only the responsibility of the Diversity, Equity, and Inclusion (DEI) leader to create an inclusive and diverse culture. People managers and employees play a vital role in DEI's success. This course helps students understand ways to make their organizations more engaging and dynamic by discussing the different processes that impact thought and interaction between people. Students will also consider how to bring advocates of DEI together in their organizations. They will analyze and apply best DEI practices from a variety of perspectives by learning the essential pillars of a strong DEI plan. They will also learn critical definitions, apply interventions that override errors in judgment and decision making, dissect inclusion and belonging among work groups and think through the change management and communication aspects of DEI.

GS 4060 Communication and Cultural Memory (4 Credits)

The ability to communicate effectively with employees, stakeholders, and clients from diverse cultural backgrounds requires an understanding of the cultural memories, experiences, and values of everyone involved. The culturally-inflected meanings attached to historical events such as 9/11, the Civil Rights Movement, the Holocaust, and colonialism profoundly influence how people imagine the world and their role in it. This course focuses on the impact of cultural memory on identity, looking in particular at the implications for effective professional communication across an array of organizational contexts. Students will gain an understanding of how history comes to be contested and changed, creating diversity in cultural memories that must be taken into account in professional communication.

GS 4130 Gender and Social Justice: Sex and Power in Global Perspective (4 Credits)

This course provides students with a critical understanding of gender and sexuality in relation to social and institutional processes, particularly as they impact professional interactions and conduct. Issues such as inequalities in the labor force, low wage work and poverty, work/family conflict, and domestic work will be addressed. The course will take an intersectional approach to analyzing gender and sexuality in the workplace and beyond.

GS 4140 Contemporary Racial and Ethnic Relations (4 Credits)

This course provides students with ways of assessing the effects of race and ethnicity in professional settings. Topics addressed will include forms of prejudice and discrimination, manifestations of privilege and inequality, and the intersection of race and ethnicity with other markers of identity. Students will analyze social and institutional practices that foster inclusivity and the implications of such practices on workplace equity and social justice.

GS 4150 Global Trade: The Intersection of Main Street and the World (4 Credits)

Trade is often characterized in terms of economic flows—the exchange of goods and services across borders and the electronic transfer of funds worldwide, as well as associated taxes, tariffs, labor, and production costs in different parts of the world. Yet trade also involves the exchange of ideas, cultures, languages, and people, all of which have profound implications for doing business worldwide. This course addresses trade in its different manifestations and explores the impact of trade on work in a variety of contexts. Students will approach trade from a holistic perspective to analyze its connections to globalization and their own work environments.

GS 4160 Politics and Social Media (4 Credits)

As social media becomes an increasingly prevalent means of distributing information, advertising products and services, and communicating with stakeholders, questions arise regarding the politics and ethics that inform its use. What are the potential consequences of using platforms such as Twitter to disseminate political ideologies? How has the use of LinkedIn affected workplace politics and changed the ways in which professionals network? Does professional success require the use of social media, or does its presence in certain contexts do more harm than good? This course will address these questions and others while providing students with lenses through which to view the intersection of social media and politics in the workplace and beyond.

GS 4200 Globalization and Global Citizenship (4 Credits)

Over the past century the world has witnessed unprecedented developments in communication, technology, and mobility. These have enabled the rapid exchange of money, people, materials, ideas, and cultures across national borders. With these changes have come questions about the roles and responsibilities of individuals, companies, and organizations within this increasingly complex and interconnected global society. Globalization is often used as a buzzword for this ever-evolving context, although its meaning is sometimes unclear. This course clarifies the nature of globalization by introducing students to fundamental concepts of global citizenship, focusing in particular on relationships between the local and the global, and on the necessity of developing a cosmopolitan perspective in order to be more successful in an increasingly globalizing workplace.

GS 4210 The Force of Faith: Religion in the Global Workplace (4 Credits)

This course examines the role of religion in the global workplace, addressing issues involved in working with clients, stakeholders, and employees from diverse religious backgrounds with the aim of increasing students' awareness of their own attitudes toward religious beliefs and professional responsibilities. Students will develop an understanding of the ways in which different religious beliefs impact conceptions of professional communication and conduct, in addition to exploring relationships between religious faiths and business ethics.

GS 4300 Foundations of Translation: The Role of the Professional Translator (4 Credits)

This course examines fundamental translation ideas and theories through assigned readings, lectures, and class discussions. It explores the links between linguistic and cultural factors and their relevance to translation. The course covers the different aspects of translation, surveys translation tools and reference materials, discusses professional roles of translators, analyzes the public perception of the profession, and examines standard business practices and professional codes of ethics. It also introduces the actual practice of translation through realistic exercises.

GS 4301 Written & Sight Translation for Translators & Interpreters (4 Credits)

This is an introductory course for translators and interpreters covering a variety of registers: commercial, journalistic, legal, literary, medical, and technical. Students learn to apply text analysis, text typology, and contrastive analysis of their working languages to identify, analyze, and resolve translation/interpretation problems while independently developing an efficient and rational approach to the process of translation or interpretation. In addition, course assignments include practice and graded exercises in translation and sight translation, utilizing authentic texts drawn from an extensive variety of text categories that include, but are not limited to, current events, general political economy, general legal documents, and scientific and technical topics for general audiences. Language-specific.

GS 4302 Computer Aided Translation (CAT): An Introduction to Software for Translators (4 Credits)

In this course, students examine the various technologies and software used by professional translators. Students will explore the differences between Computer Assisted Translation (CAT) and Machine Translation (MT) and become familiar with the concept of Translation Memory (TM), especially how TM differs from term bases and glossaries. Students will also learn the main features of a professional translation tool and use them in conjunction with QA functionalities, as well as practicing how to revise translation drafts in a consistent work-flow.

GS 4303 Community Engaged Learning in Practice (4 Credits)

This community engaged learning course provides students with an opportunity to apply knowledge and skills gained through their Global Community Engagement coursework to a real-world issue or problem. Students will learn best practices for engaging with communities both global and local, and will develop skills necessary to work effectively in diverse contexts. Equipped with an academic foundation, students will have significant latitude to sketch out a project of their choosing, with the professor's approval.

GS 4304 Introduction to Legal Translation (4 Credits)

Because a legal document bears legal liabilities, the translation of a legal document has the same legal effect as the original. As a result, the requirements for accuracy in legal translation (meaning, tone, and style) are quite high. This course provides an overview of the nature of legal translation and an introduction to the principles of comparative law, such as how to research legal issues in the countries of the language pair. The concepts of equivalence and zero equivalence are analyzed. Participants translate different types of agreements; certificates; and affidavits, as well as a wide array of documents focusing on probate, family, poverty, and criminal law. Students are given assignments on the research approach, steps, and skills needed to tackle a legal translation project from start to finish. Fundamental legal translation theory is emphasized at the beginning of the course and conveyed in the form of assigned readings, lectures, class discussions, and independent research. Language specific. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4305 Localization and Translation of Software and Web Pages (4 Credits)

This course provides students with a general overview of the field of web page translation and an introduction to software localization. Class topics range from technical discussions on computer architecture to tips for managing localization projects. Students gain a thorough understanding of the basic components of a localization project (web, software, online help, and documentation) and insight into the larger context of software/web localization and internationalization processes. Using real-life examples and hands-on exercises, students explore the cultural, technical, and organizational challenges in the adaptation of culturally sensitive elements. Language generic. Prerequisites: GS 4301 and admission to the Master of Liberal Studies in Global Affairs with a Translation Studies specialty of the Certificate of Advanced Study in Translation Studies.

GS 4306 Translation of Medical Texts for the Health Care Industry (4 Credits)

This course covers medical terminology involving patient education, medical research, drug development, the human body and systems, major diseases, as well as the most common injuries. Students translate documents used in general medical practice and are introduced to the common roots, prefixes and suffixes in medical terminology. Translation skills are reinforced by analyzing different levels of difficulty in medical texts, by translating, and by addressing requests for editing and rewriting translated materials for patient populations and audiences of different education levels. Students practice translating medical office correspondence, informational brochures, patient letters, discharge information, hospital intake questionnaires, living wills, patient outreach/educational materials, instructions for taking medications, laboratory tests, and medical disability reports, among others. Language-specific. Prerequisites: GS 4301.
