GRADUATE BULLETIN

Select from more than 120 graduate degree and certificate programs that will challenge, inspire and prepare you to achieve your highest academic and professional goals. DU graduate programs combine rigorous study with critical thinking, collaboration and applied learning experiences that will enable you to expand your skills, deepen your expertise and apply your knowledge to benefit you and the world.

About this Bulletin

The University of Denver Graduate Bulletin has been prepared by the faculty and administration to serve as the governing document for University's graduate academic programs, courses and policies. The Graduate Bulletin represents the University's best planning at the time of publication. Course and curriculum changes; modification to tuition, fees or other charges; and unforeseen changes in other aspects of the University of Denver sometimes occur after the bulletin has been published, but before the changes can be incorporated in a later edition and apply to all students as of the date they become effective, regardless of whether they were in effect at the time the student initially enrolled at the University of Denver. Students are responsible for knowing all academic and administrative policies and regulations affecting their program of study and for abiding by all such policies and regulations during their period of enrollment at the University. The Graduate Bulletin does not constitute a contract between the University of Denver and its students on either a collective or individual basis.

This 2025-2026 edition is intended for students admitted to graduate programs during the 2025-2026 academic year. Students admitted in previous academic years should refer to the Past Bulletins (http://bulletin.du.edu/archives/) link for the bulletin related to that year. The Graduate Bulletin is published and distributed annually in both a web and a PDF version. Maintaining document fidelity, both versions remain static after publication. Corrections to published errors can be obtained on the errata page accessed through the table of contents and on the Registrar's Office website.

About the University of Denver

The University of Denver

Founded in 1864, the University of Denver is an independent coeducational institution located in a residential neighborhood eight miles southeast of downtown Denver. Colleges, schools and divisions of the University include the following:

- College of Arts, Humanities and Social Sciences
- · College of Natural Sciences and Mathematics
- · Daniel Felix Ritchie School of Engineering and Computer Science
- · Daniels College of Business
- · Josef Korbel School of International Studies
- Graduate School of Professional Psychology
- · Graduate School of Social Work
- Morgridge College of Education
- College of Professional Studies
- Sturm College of Law

Students

University of Denver students come from all 50 states, in addition to the District of Columbia and from several U.S. territories, and from 122 different countries. Enrollment is approximately 12,800: 6,600 undergraduates and 6,200 graduate students.

Accreditation Institutional Accreditation

The University of Denver is accredited as a doctoral degree-granting institution by the Higher Learning Commission (HLC) and is authorized to offer post-secondary education in the state of Colorado by the Colorado Department of Higher Education.

Higher Learning Commission 230 South LaSalle Street, Suite 7-500 Chicago, IL 60604-1413 312-263-0456 800-621-7440 https://www.hlcommission.org/

Colorado Department of Higher Education 1600 Broadway, Suite 2200 Denver, CO 80208 303-866-2723 http://cdhe.colorado.gov (https://cdhe.colorado.gov/)

Specialized Accreditation

Individual academic programs undergo periodic review by accreditation or certification bodies in their field.

- · Accreditation Association for Ambulatory Health Care
- Accrediting Board for Engineering and Technology
- American Bar Association
- American Chemical Society
- · American Library Association
- American Psychological Association
- · Association to Advance Collegiate Schools of Business International
- · Colorado Department of Education
- · Council for Accreditation of Educator Preparation
- Council on Social Work Education
- · Master's in Psychology and Counseling Accreditation Council
- · National Association for the Education of Young Children
- · National Association of Schools of Arts and Design
- · National Association of School Psychologists
- National Association of Schools of Music
- · National Professional Science Master's Association

Office of Graduate Education

The Office of Graduate Education (OGE) provides leadership and support for graduate education and advocates on behalf of graduate students and programs at the University of Denver. Under the direction of the Vice Provost for Research and Graduate Education, the OGE partners with deans, academic units and University governance to ensure excellence and integrity in educational programs and curricula. The OGE facilitates the development of new degree programs at the graduate level, oversees processes to ensure the quality of graduate and credential programs, acts as an advisory resource to programs initiating or transforming their academic programs, and ensures the University is in compliance with all federal, state, and university policies related to graduate education. On behalf of the Provost and working in consultation with the Graduate Council, the office is responsible for the authorship and oversight of graduate policy.

Graduate Council

The Vice Provost and the Graduate Council are charged with the responsibility of reviewing, formulating, and implementing policy concerning graduate education.

Composition

Council membership includes the Vice Provost for Research and Graduate Education, all of the academic deans from units with graduate programs, an elected faculty representative from each division, two elected representatives from the Faculty Senate and two representatives of the Graduate Student Government. Administrators such as the Registrar, the Dean of the Library, the Vice Chancellor for University Technology Services, the Chair of the Undergraduate Council, the Vice Provost for Research and the Vice Provost for Internationalization serve *ex officio* and participate in the Committee's proceedings as voting members.

Responsibilities

The Graduate Council shall oversee the configuration of graduate degree and certificate programs, monitor the degree to which these programs further the University's mission, avoid unwarranted program duplication, and establish, monitor and maintain academic standards across the graduate curricula. The Council shall recommend policies including, but not limited to, the structure and quality of the graduate curricula; procedures concerning graduate student appeals; and policies governing the initiation and termination of graduate degree programs.

Academic Calendar

Courses for programs other than the Sturm College of Law are offered on the quarter system; the Sturm College of Law operates on a semester calendar.

Quarter System

The academic calendar is divided into fall, winter and spring quarters and a summer session. Each quarter is approximately ten weeks long and summer session is nine weeks. There are two interterm sessions. Students may complete degree requirements through continuous enrollment, including summers, or may arrange the normal work of a three-quarter academic year in any desirable sequence of quarters and summer session.

Semester System

The academic calendar is divided into fall, spring and summer semesters.

Interterms

Interterms are the periods preceding each academic quarter, during which short, innovative on-campus, online, and travel experiences for undergraduate and graduate students are offered. Hours completed in interterms are applied as credit toward graduation requirements and may be applied to the major or minor. Students can find more information about and register for interterm classes through the Academic Programs (https:// www.du.edu/interterm/) office. Questions about interterms should be directed to Academic Programs, Mary Reed Building, Room 301, 2199 S. University Blvd., Denver, CO 80208-2360, or by emailing uap@du.edu.

Summer Session

Summer session (http://www.du.edu/summer/) is an avenue for continuing undergraduate and graduate students to accelerate their programs or complete necessary coursework. Elective, Common Curriculum and required courses for majors and minors are offered in a variety of time frames. Travel and other unique courses including short, intensive workshops are part of the summer program. Visiting students, professionals and individuals from the community interested in attending for the summer only are encouraged to attend and are admitted (http://bulletin.du.edu/undergraduate/ admission/traditionalbachelorsprogram/summer/) under an open-enrollment policy.

University's Non Discrimination Statement

The information below is accurate as of the date of publication of the Bulletin. For the current version of the University's Non-Discrimination Statement and current contact information for the Office of Equal Opportunity & Title IX (EOIX) staff members, please visit the webpages for the Non-Discrimination Statement (https://www.du.edu/equalopportunity/non-discrimination-statement/) and EOIX Staff (https://www.du.edu/ equalopportunity/who-we-are/)

University's Non-Discrimination Statement

The University of Denver prohibits discrimination and does not discriminate on the basis of an individual's actual or perceived race, color, national origin (including shared ancestry or ethnic characteristics), ancestry, age, religion, creed, disability, sex, sexual orientation, gender identity, gender expression, marital status, pregnancy, childbirth and related medical conditions (in employment), genetic information (in employment), citizenship or immigration status (in employment), military enlistment, or veteran status, and any other class of individuals protected from discrimination under federal, state, or local law, regulation, or ordinance (each a Protected Status) in any of the University's educational programs and activities, and in the employment (including application for employment) and admissions (including application for admission), as required by Title IX of the Education Amendments of 1972; the Americans with Disabilities Act; Section 504 of the Rehabilitation Act of 1973; Title VI and Title VII of the Civil Rights Act of 1964; the Age Discrimination Act of 1975; the Age Discrimination in Employment Act of 1967; the Equal Pay Act; the Colorado Equal Pay for Equal Work Act; the Colorado Protecting Opportunities and Workers' Rights ("POWR") Act; and any other federal, state, and local laws, regulations, or ordinances that prohibit discrimination, harassment, and/or retaliation.

The University prohibits unlawful harassment of students, employees, and third parties on the basis of any applicable Protected Status identified above.

The University also prohibits retaliation against any individual for reporting, participating, administering or assisting in any matter before the Office of Equal Opportunity & Title IX (EOIX) pursuant to the University's Discrimination and Harassment Policy.

The University has designated the Associate Vice Chancellor for Equal Opportunity & Title IX/Title IX Coordinator (AVC for EOIX) to coordinate the University's compliance with federal, state, and local laws, regulations, or other ordinances referenced above:

The University's AVC for EOIX is:

Lin-Chi Wang, JD Interim Associate Vice Chancellor for Equal Opportunity & Title IX Office of Equal Opportunity & Title IX (303) 871-7016 https://www.du.edu/equalopportunity/index.html (https://www.du.edu/equalopportunity%22%20/t%20%22_blank/) titleix@du.edu (%20titleix@du.edu) #orLin-Chi.Wang@du.edu

The University's Title IX Coordinator is:

Molly Hooker

Interim Title IX Coordinator Office of Equal Opportunity & Title IX Driscoll Center South, Suite 30 2050 E. Evans Avenue Denver CO 80208 (303) 871-7016 https://www.du.edu/equalopportunity/index.html (https://www.du.edu/equalopportunity/) TitleIX@du.edu or Molly.Hooker@du.edu

The University complies with all federal and state laws that protect individuals with disabilities from discrimination based on their disability or perceived disability status. As such, the University makes available reasonable accommodations and auxiliary aids and services to individuals with disabilities when such modifications and services are necessary to access the University's programs and services.

The University's ADA/504 Coordinator is

Joshua Kaufman ADA Coordinator Office of Equal Opportunity & Title IX Driscoll Commons, Suite 30 2050 E. Evans Ave.

16 Unit of Credit

Denver CO 80208 (303) 871-3941 Accessibility | Denver (du.edu) https://www.du.edu/equalopportunity/index.html (https://www.du.edu/equalopportunity/) ADACoordinator@du.edu

Inquiries about the University's prohibitions against discrimination and harassment and related retaliation under the University's Discrimination and Harassment Policy may be directed to the AVC for EOIX (for all forms of discrimination or harassment based on Protected Status) or the ADA/504 Coordinator (for disability-related questions or requests for reasonable accommodations from University Employees, applicants for employment or admission, visitors, and guests).

Complaints and inquiries regarding discrimination, harassment, and retaliation involving federal laws may be directed to:

Any person who believes the University as a federal contractor has violated nondiscrimination obligations may contact the Office of Federal Contract Compliance Programs (OFCCP) at:

OFCCP

U.S. Department of Labor 200 Constitution Ave. NW Washington, D.C. 20210 www.dol.gov Telephone: (800) 397-6251 TTY: (202) 693-133

The University provides more information about the Office of Equal Opportunity & Title IX (EOIX) on the EOIX website (https://www.du.edu/ equalopportunity/), including the University's Discrimination and Harassment Policy (https://www.du.edu/equalopportunity/policies-procedures/), the EOIX Procedures (https://www.du.edu/equalopportunity/policies-procedures/), and the EOIX Online Reporting Form (https://www.du.edu/ equalopportunity/reporting-resources/).

Unit of Credit Unit of Credit

Credit hours are the unit of measure of the amount of work represented by specified learning outcomes in an academic program. Academic programs at the University of Denver are scheduled on both quarter and semester (College of Law) calendars. Each academic program specifies the number of (quarter- or semester-hour) credits required. Courses award credit based on learning outcomes for the course. For lecture courses, one credit hour represents one hour of classroom or direct faculty instruction and a minimum of two hours of out-of-classroom student work each week the quarter or semester. Credit for non-lecture courses such as laboratories, internships, practica, studios or music performance classes represent equivalent learning outcomes. The amount of scheduled times for these courses vary.

More information regarding the University of Denver's credit guidelines and instructional methodology definitions can be found on the Registrar website (https://www.du.edu/registrar/course/credithourguidelines.html).

Authorization and Disclosure

In October 2010, the Federal Department of Education issued "Program Integrity" regulations that require all Title IV eligible schools to obtain approval to operate in every state in which a student is located while receiving instruction. This is true for all educational programs, including distance education.

If an institution is offering postsecondary education through distance or correspondence education in a state in which it is not physically located, the institution must meet any state requirements for it to be legally offering distance or correspondence education in that state. In order to offer online educational opportunities to other states' residents, DU must comply with those states' policies for distance education and be able to demonstrate compliance upon request. Authorization and compliance is done through participation in State Authorization Reciprocity Agreements.

In 2014, the University of Denver was approved by Colorado to participate in the State Authorization Reciprocity Agreements (SARA) through the National Council for State Authorization Reciprocity Agreements (NC-SARA). NC-SARA is a voluntary, regional approach to state oversight of postsecondary distance education. Participating in SARA allows the university to offer online and distance education in all 49 states except California. As a private, non-profit university, the University of Denver is authorized to offer distance education within California outside of SARA.

Please direct questions about state authorization to the Office of the Registrar (http://www.du.edu/registrar/).

Student Complaint State Contacts

This list below includes contact information for all 50 states, the District of Columbia and US territories and should not be construed as informative of what agencies regulate the institution or in what states the institution is licensed or required to be licensed. States, through the relevant agencies or Attorneys General Offices, may accept complaints regardless of whether the institution is required to be licensed in that state.

Dual Degree Programs

Dual Undergraduate-Graduate Degree Programs (p. 29)

Flexible Dual Degree Programs (p. 54)

Formal Dual Graduate Degrees (p. 55)

Dual Undergraduate-Graduate Degree Programs

Dual Undergraduate-Graduate Degree Programs

A Dual Undergraduate-Graduate Degree Program is an institutionally approved program in which a DU undergraduate student begins taking classes toward a graduate degree program prior to earning a baccalaureate degree. Both degrees must be earned within five years of matriculation into the undergraduate degree program. Students pursuing a dual degree with a Juris Doctorate must earn both degrees within six years.

The programs may reduce a limited number of both undergraduate and graduate credit hours toward both degrees.

The amount of the credit hour reduction is variable across programs. To be admitted, a student's academic progress must demonstrate that the requirements of the program can be completed within the set time-frame.

Undergraduates still need to meet all normal core, major, minor and total credit hour requirements of their respective majors and minors before receiving the undergraduate degree. Graduate coursework is usually taken during the undergraduate "senior" year. Students should be admitted to the dual undergraduate-graduate program *before* taking graduate courses since undergraduate students generally may not take graduate courses. Usually, no more than 30 hours of electives may be used in the senior year to begin the graduate/professional program. Only graduate credit may be counted

for the graduate degree. The total number of credit hours required varies by department. All requirements of the graduate or professional program need to be completed before receiving the advanced degree.

- · For students enrolled in a dual degree program, the University will award the undergraduate degree at the time it is earned.
- A student who chooses not to continue on for the graduate degree may count the graduate courses, if approved as relevant by the advisor, toward the undergraduate degree (Students should visit the appropriate college or school for opt-out options and requirements).
- Students enrolled in the dual undergraduate-graduate program who have been awarded the BA/BS degree, completed all required coursework and are working on a thesis may be eligible to enroll in graduate continuous enrollment.

Dual Undergraduate-Graduate Financial Aid

Eligibility for financial aid differs for undergraduate and graduate students and it differs for institutional aid and federal aid. Students enrolled in dual degree programs are considered graduate students for federal financial aid purposes after attaining 198 credit hours even if the student has not met the undergraduate degree requirements. Federal regulations do not allow students in dual degree programs who have completed four academic years (defined as 198 credit hours) to continue to receive undergraduate aid. Students in the law school dual degree program are aided as graduate students after three undergraduate academic years (149 hours for federal aid purposes). While undergraduate merit or need-based institutional grant aid are not available for fifth-year dual-degree students, each graduate department may offer graduate students grant or scholarship funds at their discretion. Students should contact their graduate program for details on available funding for the fifth year.

Institutional Aid Eligibility Differs From Federal Aid Eligibility

Institutional Aid

The Financial Aid office expects first-time, first-year undergraduate students to be eligible for consideration for institutional merit or need-based undergraduate financial aid for a maximum of four academic years from the point of initial enrollment (excluding summer and interterm periods), or until the student earns the bachelor's degree, whichever comes first. For institutional aid eligibility for dual degree students the university defines four academic years as up to 12 quarters of fall, winter, spring enrollment. Students who receive any amount of credit in a quarter are considered to be enrolled. If a student is not receiving aid in one or more of those enrolled quarters, the timeline for 12 quarters of aid eligibility continues. For example, a student may not continue to receive undergraduate aid into a 13th quarter of enrollment due to not receiving aid or not accepting aid in one or more of the prior 12 quarters of fall, winter, spring institutional aid consideration, but it also is not the intent to allow students who are enrolled in dual degree programs to continue into their fifth year of enrollment as undergraduate students. Any student who has taken the undergraduate degree is no longer eligible for undergraduate institutional aid regardless of the number of quarters of aid already received.

Federal Aid

For federal aid purposes dual degree students automatically become graduate students in the next enrollment period after attaining 198 hours of earned or accepted credit. Any dual degree student who has completed their undergraduate degree requirements is considered a graduate student regardless of the number of quarters of prior enrollment. For example, a student who has accelerated their program with outside credits or additional credits during prior academic years (overload enrollment, interterms, summer, AP or IB) and completes their baccalaureate degree or reaches the credit threshold stated above is automatically treated as a graduate student for federal aid purposes regardless of the number of quarters of prior enrollment or prior aid consideration.

Dual Undergraduate-Graduate Admission and Records Procedures

The following must be followed consistently and accurately:

- Students are admitted to dual undergraduate-graduate degree programs by the graduate admission unit. The graduate unit follows all normal admission procedures and the student must meet all admission criteria for the graduate program other than receipt of the baccalaureate degree. Students should be admitted to the dual undergraduate-graduate program as early as practical for financial aid and other reasons. They must be admitted to the dual undergraduate program by the start of the first term that the student reaches senior standing (135 earned credits).
- The effective term for admission should be the term in which the student is permitted to take graduate courses. For example, if the student's senior year begins in the fall and the student meets admission criteria and may begin taking graduate courses in the subsequent spring term, the admission term should be that spring.
- · Graduate units are responsible for assuring that the student information is accurate.

Note: A student who receives a bachelor's degree and was not previously enrolled in a dual undergraduate-graduate program is **not** eligible to return and enroll in a graduate program and reduce the number of credit hours for the graduate degree.

College of Arts, Humanities and Social Sciences

Master of Arts in Art History or Master of Arts in Art History with a Concentration in Museum Studies and Bachelor of Arts in Art History

- · Undergraduate-level credits required with the dual degree: 171
- Undergraduate credit reduction with dual degree: 12 credits from the original 183 required for the undergraduate degree
- · Graduate-level credits required with dual degree: 56
- Graduate credit reduction: 0
- · Minimum number of credits required with dual degree: 227

All students pursuing the dual BA in Art History/MA in Art History, Concentration in Museum Studies are required to complete all degree requirements for both the BA and MA degrees.

Master of Arts in Art History, Master of Arts in Art History with a Concentration in Museum Studies

Daniel Felix Ritchie School of Engineering and Computer Science

Up to nine credit hours of qualifying coursework (3000- or 4000-level) may be used to satisfy degree requirements for both the B.S. and M.S. degrees. Other degree requirements and restrictions will be as described in the Graduate Bulletin for the appropriate M.S. program.

Students must satisfy the B.S. and M.S. degree requirements separately with the exception that a maximum of nine credit hours of qualifying coursework (3000- or 4000-level) taken to satisfy B.S. requirements can also be used to fulfill nine credit hours of M.S. degree requirements. Admission to the Dual Undergraduate-Graduate Degree Program does not require completion of the bachelor's degree; however, admission to the M.S. degree will require completion of the bachelor's degree.

Master of Science in Bioengineering, Computer Engineering, Electrical Engineering, Engineering, Materials Science, Mechanical Engineering or Mechatronic Systems Engineering and Bachelor of Science in Game Development

• Undergraduate-level credits: 183

- 9 credit hours (3000- or 4000-level) may be used to satisfy degree requirements for both the B.S. and M.S. degrees.
- Graduate-level credits required with dual degree: 45
- · Minimum number of total undergraduate and graduate credits required with dual degree: 219

All students pursuing the dual degree program are required to complete all degree requirements for both the Bachelor's and Master's.

Degree Requirements - Electrical and Computer Engineering (p. 283)

Bachelor of Science in Computer Science

Degree Requirements (http://bulletin.du.edu/undergraduate/majorsminorscoursedescriptions/traditionalbachelorsprogrammajorandminors/ computerscience/#programofstudytext)

Master of Science in Computer Science and Bachelor of Science in Computer Science

· Undergraduate-level credits: 183

- · Graduate-level credits required with dual degree: 36
- · Minimum number of total undergraduate and graduate credits required with dual degree: 219

All students pursuing the dual degree program are required to complete all degree requirements for both the Bachelor's and Master's.

Master of Science in Computer Science

Admission Requirements - Computer Science (p. 257)

Degree Requirements - Computer Science (p. 259)

Bachelor of Science in Computer Science

Degree Requirements (http://bulletin.du.edu/undergraduate/majorsminorscoursedescriptions/traditionalbachelorsprogrammajorandminors/ computerscience/#programofstudytext)

Master of Science in Bioengineering, Computer Engineering, Electrical Engineering, Engineering, Materials Science, Mechanical Engineering or Mechatronic Systems Engineering and Bachelor of Science in Mechanical Engineering

Undergraduate-level credits: 192

- 9 credit hours (3000- or 4000-level) may be used to satisfy degree requirements for both the B.S. and M.S. degrees.
- · Graduate-level credits required with dual degree: 45
- · Minimum number of total undergraduate and graduate credits required with dual degree: 228

All students pursuing the dual degree program are required to complete all degree requirements for both the Bachelor's and Master's.

Master of Science in Bioengineering, Computer Engineering, Electrical Engineering, Engineering, Materials Science, Mechanical Engineering and Mechatronic Systems Engineering

Admission Requirements - Engineering (p. 308)

Admission Requirements - Mechanical and Materials Engineering (p. 332)

Admission Requirements - Electrical and Computer Engineering (p. 280)

Degree Requirements - Engineering (p. 309)

Degree Requirements - Mechanical and Materials Engineering (p. 334)

Degree Requirements - Electrical and Computer Engineering (p. 283)

Bachelor of Science in Mechanical Engineering

Degree Requirements (http://bulletin.du.edu/undergraduate/undergraduateprograms/traditionalbachelorsprogram/bachelorofscienceinmechanicalengineering/)

Master of Science in Computer Science and Bachelor of Science in Mechanical Engineering

- Undergraduate-level credits: 192
- 9 credit hours (3000- or 4000-level) may be used to satisfy degree requirements for both the B.S. and M.S. degrees.
- · Graduate-level credits required with dual degree: 48
- · Minimum number of total undergraduate and graduate credits required with dual degree: 231

All students pursuing the dual degree program are required to complete all degree requirements for both the Bachelor's and Master's.

Master of Science in Computer Science

Admission Requirements - Computer Science (p. 257)

Degree Requirements - Computer Science (p. 259)

Bachelor of Science in Mechanical Engineering

Degree Requirements (http://bulletin.du.edu/undergraduate/undergraduateprograms/traditionalbachelorsprogram/bachelorofscienceinmechanicalengineering/)

Master of Science in Bioengineering, Computer Engineering, Electrical Engineering, Engineering, Materials Science, Mechanical Engineering or Mechatronic Systems Engineering and Bachelor of Science in Computer Engineering

- Undergraduate-level credits: 192
- 9 credit hours (3000- or 4000-level) may be used to satisfy degree requirements for both the B.S. and M.S. degrees.
- · Graduate-level credits required with dual degree: 45
- Minimum number of total undergraduate and graduate credits required with dual degree: 228

All students pursuing the dual degree program are required to complete all degree requirements for both the Bachelor's and Master's.

Master of Science in Bioengineering, Computer Engineering, Electrical Engineering, Engineering, Materials Science, Mechanical Engineering and Mechatronic Systems Engineering

Admission Requirements - Engineering (p. 308)

Admission Requirements - Mechanical and Materials Engineering (p. 332)

Admission Requirements - Electrical and Computer Engineering (p. 280)

Degree Requirements - Engineering (p. 309)

Degree Requirements - Mechanical and Materials Engineering (p. 334)

Degree Requirements - Electrical and Computer Engineering (p. 283)

Bachelor of Science in Computer Engineering

Degree Requirements (http://bulletin.du.edu/undergraduate/undergraduateprograms/traditionalbachelorsprogram/bachelorofscienceincomputerengineering/)

Master of Science in Bioengineering, Computer Engineering, Electrical Engineering, Engineering, Materials Science, Mechanical Engineering or Mechatronic Systems Engineering and Bachelor of Science in Electrical Engineering

Undergraduate-level credits: 197

• 9 credit hours (3000- or 4000-level) may be used to satisfy degree requirements for both the B.S. and M.S. degrees.

- · Graduate-level credits required with dual degree: 45
- · Minimum number of total undergraduate and graduate credits required with dual degree: 233

All students pursuing the dual degree program are required to complete all degree requirements for both the Bachelor's and Master's.

Master of Science in Bioengineering, Computer Engineering, Electrical Engineering, Engineering, Materials Science, Mechanical Engineering and Mechatronic Systems Engineering

Admission Requirements - Engineering (p. 308)

Division of Natural Sciences and Mathematics

Master of Science in Geographic Information Science and Bachelor of Arts in Environmental Science

- Undergraduate-level credits required with dual degree: 180
- Undergraduate credit reduction with dual degree: 3 credits from the original 183 required for the undergraduate degree
- Graduate-level credits required with dual degree: 48
- Graduate credit reduction: 0
- Minimum number of credits required with dual degree: 228

All students pursuing the dual BA in Environmental Science and the MS in Geographic Information Science are required to complete all degree requirements for both the BA and the MS degrees.

Master of Science in Geographic Information Science

Admission Requirements (p. 848)

Degree Requirements (p. 850)

Bachelor of Arts in Environmental Science

Degree Requirements (http://bulletin.du.edu/undergraduate/majorsminorscoursedescriptions/traditionalbachelorsprogrammajorandminors/geographyandtheenvironment/#programofstudytext)

Master of Science in Geographic Information Science and Bachelor of Science in Environmental Science

- Undergraduate-level credits required with dual degree: 180
- Undergraduate credit reduction with dual degree: 3 credits from the original 183 required for the undergraduate degree
- Graduate-level credits required with dual degree: 48
- Graduate credit reduction: 0
- · Minimum number of credits required with dual degree: 228

All students pursuing the dual BS in Environmental Science and the MS in Geographic Information Science are required to complete all degree requirements for both the BS and the MS degrees.

Master of Science in Geographic Information Science

Flexible Dual Degree Programs

Flexible Dual Degree Programs

Students may propose a flexible dual degree program that links two master's degrees or a master's degree and a JD degree.

Students must submit the proposal for the flexible dual degree no later than one term prior to matriculation into the second degree.

Dual degrees must be pursued concurrently, not consecutively. In order to meet this requirement, students interested in pursuing a dual degree must be matriculated in both programs for one full academic year (three quarters or two semesters). Students in a one year program must matriculate into the second program no later than the first admission term following fifty percent (50%) coursework completion of the first program.

Students are required to complete both degree programs within five years of matriculation in to the first program. Students must apply for graduation for both programs and both degrees will be awarded at the same time.

Any significant changes to the approved program require the student to resubmit a revised proposal packet to the deans/chairs/directors and advisors of both programs and the Office of Graduate Education.

Proposing a Flexible Dual Degree

To propose a flexible dual degree, the student must first apply to and be admitted by both programs, pay application fees and admissions deposits for both programs, and seek the counsel of an advisor in each program. Admission into each program does not take the place of filing a Flexible Dual Degree proposal (found on the Office of Graduate Education's website (https://www.du.edu/graduate-education/current-student-resources/academic-resources/)) nor guarantee approval of the proposal.

The dean, chair, or director of each degree program and both program advisors must carefully compare the requirements for each program and approve the proposed curriculum. The student must then submit a copy of the original requirements for each degree (printout from the unit website or copy from the student handbook is acceptable), a detailed course plan showing all proposed courses, the credit hours, and non-coursework requirements; a one to two- page statement of the educational/career objectives stating the reasons for the specific course selection and which courses most clearly serve the educational and career goals of the student; and current official/unofficial transcript(s) showing any work already completed towards the proposed program and degrees.

The student then submits the documents listed above to the Office of Graduate Education, which reviews and decides on the proposals. Proposals with errors or course/program inconsistencies will be returned for revision.

Once the proposal is approved, the student will be entered into the University computer system as a flexible dual degree student.

Curriculum Structure

Students may propose any flexible dual degree program that seems reasonable to them and their advisors for academic and career objectives. Only elective courses may be counted among the hours used for reduction.

All the core requirements of each program must be preserved and cannot be overlapped or waived. Credit reduction of elective courses will be limited to the following for each program as determined by the original number of credit hours required for each degree.

Required credit hours for degrees and flexible dual degree reduction allowed:

- 45-60 quarter hour degree program: Reduce a maximum of 10 quarter hours for the one degree without outside transfer credit. The traditional
 maximum outside transfer credit allowed in this case would be 11-15 quarter hours. A reduction of 15 quarter hours from the original degree will be
 the maximum allowed when combining outside transfer hours and the reduction of degree hours.
- 61-75 quarter hour degree program: Reduce a maximum of 12 quarter hours for the one degree without outside transfer credit. The traditional
 maximum outside transfer credit allowed in this case would be 15-19 quarter hours. A reduction of 25 quarter hours from the original degree will be
 the maximum allowed when combining outside transfer hours and the reduction of degree hours.
- 76-90 quarter hour degree program: Reduce or cross-count a maximum of 15 quarter hours for the one degree without outside transfer credit. The traditional maximum outside transfer credit allowed in this case would be 19-22.5 quarter hours. A reduction of 35 quarter hours will be the maximum allowed from the original degree when combining outside transfer hours and the reduction of degree hours.

Note: Credits at the Sturm College of Law for a JD degree are calculated using semester hours: 1 semester hour equals 1.5 quarter hours. A 90 semester hour JD degree may only be reduced by a maximum of 10 semester hours for a total of 80 semester hours completed for the JD (10 semester hours equals 15 quarter hours).

Non-Course Requirements

All non-course requirements must be fulfilled for both programs. If one of the non-course requirements of both intended programs is the writing and defense of a thesis, then (with prior approval from both departments) a combined thesis may be written as long as both departments are equally represented (from original proposal to completion) and so long as the most rigorous requirements are adhered to for completion and oral defense.

Students who decide to only complete one degree must inform the units, program advisors and the Office of Graduate Education in writing of their intention to nullify the flexible dual degree proposal. Students must complete all the original requirements for the remaining degree in order to graduate.

Formal Dual Degree Programs

Formal Dual Degree Programs

A formal dual degree program links two master's degrees or a master's program with a JD program and leads to two degrees. The Graduate Council and the Senior Vice Provost for Research and Graduate Education must approve all proposals for formal dual degree programs.

There are two types of formal dual degree programs. Type one incorporates two distinct disciplines where students complete two separate sets of core courses and reduce electives. Type two incorporates two areas of study within one discipline where students can cross-count a common set of core courses and take separate sets of electives.

Dual degrees must be pursued concurrently, not consecutively. In order to meet this requirement, students interested in pursuing a dual degree must be matriculated in both programs for one full academic year (three quarters or two semesters). Students in a one year program must matriculate into the second program no later than the first admission term following fifty percent (50%) coursework completion of the first program.

Students are required to complete both degree programs within five years of matriculation in to the first program. Students must apply for graduation for both programs and both degrees will be awarded at the same time.

With fully developed and approved curricula, these programs are available to graduate students who are admitted to both schools and submit the Graduate Formal Dual Degree Verification Form (found on the Office of Graduate Education's website (https://www.du.edu/graduate-education/ current-student-resources/academic-resources/)) during the program's first term. For program details, please contact the school, college or department.

Non-Course Requirements

All non-course requirements must be fulfilled for both programs. If one of the non-course requirements of both intended programs is the writing and defense of a thesis, then (with prior approval from both departments) a combined thesis may be written as long as both departments are equally represented (from original proposal to completion) and so long as the most rigorous requirements are adhered to for completion and oral defense.

Students who decide to only complete one degree must inform the units, program advisors and the Office of Graduate Education in writing of their intention to nullify the formal dual degree. Students must complete all the original requirements for the remaining degree in order to graduate.

Daniel Felix Ritchie School of Engineering and Computer Science Formal Dual Degree Programs

A formal dual degree program links two master's degrees or a master's program with a JD program and leads to two degrees. The Graduate Council and the Senior Vice Provost for Research and Graduate Education must approve all proposals for formal dual degree programs.

There are two types of formal dual degree programs. Type one incorporates two distinct disciplines where students complete two separate sets of core courses and reduce electives. Type two incorporates two areas of study within one discipline where students can cross-count a common set of core courses and take separate sets of electives.

Dual degrees must be pursued concurrently, not consecutively. In order to meet this requirement, students interested in pursuing a dual degree must be matriculated in both programs for one full academic year (three quarters or two semesters). Students in a one year program must matriculate into the second program no later than the first admission term following fifty percent (50%) coursework completion of the first program.

Students are required to complete both degree programs within five years of matriculation in to the first program. Students must apply for graduation for both programs and both degrees will be awarded at the same time.

With fully developed and approved curricula, these programs are available to graduate students who are admitted to both schools and submit the Graduate Formal Dual Degree Verification Form (found on the Office of Graduate Education's website (https://www.du.edu/graduate-education/ current-student-resources/academic-resources/)) during the program's first term. For program details, please contact the school, college or department.

Non-Course Requirements

All non-course requirements must be fulfilled for both programs. If one of the non-course requirements of both intended programs is the writing and defense of a thesis, then (with prior approval from both departments) a combined thesis may be written as long as both departments are equally represented (from original proposal to completion) and so long as the most rigorous requirements are adhered to for completion and oral defense.

Students who decide to only complete one degree must inform the units, program advisors and the Office of Graduate Education in writing of their intention to nullify the formal dual degree. Students must complete all the original requirements for the remaining degree in order to graduate.

Formal Dual Degree Programs

A formal dual degree program links two master's degrees or a master's program with a JD program and leads to two degrees. The Graduate Council and the Senior Vice Provost for Research and Graduate Education must approve all proposals for formal dual degree programs.

There are two types of formal dual degree programs. Type one incorporates two distinct disciplines where students complete two separate sets of core courses and reduce electives. Type two incorporates two areas of study within one discipline where students can cross-count a common set of core courses and take separate sets of electives.

Dual degrees must be pursued concurrently, not consecutively. In order to meet this requirement, students interested in pursuing a dual degree must be matriculated in both programs for one full academic year (three quarters or two semesters). Students in a one year program must matriculate into the second program no later than the first admission term following fifty percent (50%) coursework completion of the first program.

Students are required to complete both degree programs within five years of matriculation in to the first program. Students must apply for graduation for both programs and both degrees will be awarded at the same time.

With fully developed and approved curricula, these programs are available to graduate students who are admitted to both schools and submit the Graduate Formal Dual Degree Verification Form (found on the Office of Graduate Education's website (https://www.du.edu/graduate-education/ current-student-resources/academic-resources/)) during the program's first term. For program details, please contact the school, college or department.

Non-Course Requirements

All non-course requirements must be fulfilled for both programs. If one of the non-course requirements of both intended programs is the writing and defense of a thesis, then (with prior approval from both departments) a combined thesis may be written as long as both departments are equally represented (from original proposal to completion) and so long as the most rigorous requirements are adhered to for completion and oral defense.

Students who decide to only complete one degree must inform the units, program advisors and the Office of Graduate Education in writing of their intention to nullify the formal dual degree. Students must complete all the original requirements for the remaining degree in order to graduate.

Master of Arts in Geography and Juris Doctor

- · JD credits required with dual degree: 80 semester credits
- · JD credit reduction with dual degree: 10 semester credits from the original 90 required for the JD
- · MA credits required with dual degree: 35 quarter credits
- · MA credit reduction: 10 quarter credits from the original 45 required for the MA
- · Minimum number of credits required with dual degree: 115 (80 semester credits and 35 quarter credits)

Formal Dual Degree Programs

A formal dual degree program links two master's degrees or a master's program with a JD program and leads to two degrees. The Graduate Council and the Senior Vice Provost for Research and Graduate Education must approve all proposals for formal dual degree programs.

There are two types of formal dual degree programs. Type one incorporates two distinct disciplines where students complete two separate sets of core courses and reduce electives. Type two incorporates two areas of study within one discipline where students can cross-count a common set of core courses and take separate sets of electives.

Dual degrees must be pursued concurrently, not consecutively. In order to meet this requirement, students interested in pursuing a dual degree must be matriculated in both programs for one full academic year (three quarters or two semesters). Students in a one year program must matriculate into the second program no later than the first admission term following fifty percent (50%) coursework completion of the first program.

Students are required to complete both degree programs within five years of matriculation in to the first program. Students must apply for graduation for both programs and both degrees will be awarded at the same time.

With fully developed and approved curricula, these programs are available to graduate students who are admitted to both schools and submit the Graduate Formal Dual Degree Verification Form (found on the Office of Graduate Education's website (https://www.du.edu/graduate-education/ current-student-resources/academic-resources/)) during the program's first term. For program details, please contact the school, college or department.

Non-Course Requirements

All non-course requirements must be fulfilled for both programs. If one of the non-course requirements of both intended programs is the writing and defense of a thesis, then (with prior approval from both departments) a combined thesis may be written as long as both departments are equally represented (from original proposal to completion) and so long as the most rigorous requirements are adhered to for completion and oral defense.

Students who decide to only complete one degree must inform the units, program advisors and the Office of Graduate Education in writing of their intention to nullify the formal dual degree. Students must complete all the original requirements for the remaining degree in order to graduate.

College of Arts, Humanities and Social Sciences

The College of Arts, Humanities, and Social Sciences (CAHSS) is the liberal arts hub of the University of Denver and represents a variety of schools, departments, and programs.

Our approximately 40 graduate programs include two top-ranked doctoral programs in English and Literary Arts and in Psychology. Our masters of arts programs range from a MA in Economics to a MA in Music with a concentration in Musicology, and from a MA in Religious Studies to a MA in International and Intercultural Communication - all grounded in academic rigor and focused on launching students toward successful and meaningful post-graduation careers.

With about 280 CAHSS graduate students, our student-centered graduate programs feature small class sizes, with teaching and mentoring from supportive faculty who are nationally and internationally recognized for their research and creative endeavors.

Our interdisciplinary, highly collaborative environment helps foster meaningful partnerships among students and faculty, supports student research opportunities, and provides both theoretical and "real-world" learning opportunities for our graduate students.

Anthropology

Office: Sturm Hall, Room 146 Mail Code: 2000 E. Asbury Ave., Denver, CO 80208 Phone: 303-871-2406 Email: anthropology@du.edu Web Site: http://www.du.edu/ahss/anthropology (http://www.du.edu/ahss/anthropology/)

The department of anthropology has a research-active faculty that works closely with students in developing their academic and professional interests on a one-on-one basis, in classes, the field, archaeology and ethnographic labs, and the Museum of Anthropology.

Anthropology is the study of human cultural and biological diversity across time and space. It is an interdisciplinary field concerned with topics that cross-cut the natural sciences, social sciences, arts and humanities. In the words of the American cultural anthropologist Alfred Kroeber: "Anthropology is the most humanistic of the sciences and the most scientific of the humanities."

There are three basic options for construction of a master's degree in anthropology: archaeology, cultural anthropology, and museum and heritage studies. Each concentration has its own formal course work, independent study and requirements for graduation.

Master of Arts in Anthropology with a Concentration in Archaeology

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

ANTH 3001 Race, Sex and Evolution (4 Credits)

The course examines the paleoanthropology of race and sex. Our focus is on the nature and evolution of human racial differences, sexual anatomy, reproductive strategies, and gender roles. We will consider the history of thinking about race and sex in anthropology and related disciplines, and the uses to which particular conceptions have been put in our culture. We will discuss and evaluate alternative models for explaining the evolution of alleged biological and behavioral differences between racial groups and between men and women. Evaluation will proceed in light of evolutionary theory, comparative primate anatomy and behavior, the human fossil record, and general anthropological knowledge. Our aim is to examine myth and reality in popular and scientific understandings of these aspects of the human condition and, in the end, the social and political (i.e., policy) consequences of this knowledge. Enforced Prerequisites and Restrictions: ANTH 2105.

ANTH 3020 Native Religions (4 Credits)

A cross-cultural survey of concepts used to understand and talk about "religion," "the supernatural," and associated behavior among Native peoples of Turtle Island. Topics include healing and techniques of controlling and channeling supernatural power; sacred places and their significance; myths and symbols in their cultural contexts; initiation rites; conceptualizations of male and female deities; and responses of indigenous people to attempted missionization.

ANTH 3030 Digital Anthropology (4 Credits)

Digital Anthropology introduces students to computer technology used in anthropological research. Students study and then produce a number of digital products useful in the analysis and interpretation of museum collections, for archaeological mapping and research, and for the dissemination of anthropological knowledge online. This process covers the use of Geographic Information Systems (GIS) for spatial analysis, three-dimensional imaging programs ranging in scale from broad landscape mapping to detailed digital artifact analysis. In addition, the use of geophysical methods for imaging what is below the surface allows students to produce images of what lies below the ground in archaeological contexts.

ANTH 3040 Anthropologies of Place (4 Credits)

This class is an exploration of the relationship between people and places from an anthropological viewpoint. We concern ourselves with a variety of ideas about place, emphasizing not just how places are used, but how they infuse themselves into the lives, histories and ethics of those who interact with them. The course readings include book-length anthropological case studies interspersed with interdisciplinary readings about place and landscape. The course includes seminar-style discussions of readings, workshops and observations in the field. On several occasions, we take our class on the road, working together to think about how people and place interact. By the end of the class, each student creates his or her own anthropology of a place. Must be junior standing or above.

ANTH 3060 Cultural Narratives (4 Credits)

Human beings are natural storytellers. Whether reciting oral traditions or recounting personal experience, people everywhere use narratives as a way to express and to understand themselves. This course approaches cultural narratives from two angles. First, it explores the ways that anthropologists, usually trained in the social sciences, make use of and study narratives, whether through ethnographic observation, conducting an interview, gathering folklore or archaeological interpretation. Second, the class investigates narratives that, although produced by non-anthropologists, engage with anthropological issues such as kinship, gender, work, tradition and identity. The narratives range broadly from fiction, to poetry, to film. These two approaches are framed by theoretically informed readings about narrativity, both from the social sciences and the humanities. The class involves intensive reading and writing, as it makes use of both discussion and workshop formats. Each student in the course completes a research and writing project culminating in his or her own cultural narrative. Must be junior standing or above.

ANTH 3070 Folklore and Cultural Heritage (4 Credits)

Folklore and Cultural Heritage is the study of the expressive behaviors and practices that constitute the ordinary, everyday life of communities. Folklore includes the intangible cultural heritages of all peoples, for example, the artistic expression reflected in stories and storytelling, music, dance, legends, oral history, proverbs, jokes, popular beliefs, customs, dialects and ways of speaking. Everyone has folklore and participates in the "folklore process." Prerequisite: introductory social science course. Cross-listed with ANTH 4070.

ANTH 3080 Memory and Memorialization (4 Credits)

The course focuses on how social groups represent, experience and commemorate the remembered past; it explores issues of construction of memory, particularly how representations of the past- and its materialization through monuments, ruins, and landscapes- are connected with issues of institutionalized perceptions of national, ethnic, racial and religious identity. Furthermore, it discusses concepts such as "authenticity," "tradition," and "modernity" in the interpretation of cultural heritage and how the interpretation of the past and of culture depend on context (political and historical), experience and point of view. The course aims to develop an interdisciplinary approach to memory and to methodologies and empirical research.

ANTH 3090 God and Giving? Religion and Philanthropy in America (4 Credits)

This course is cross-listed with JUST 3090 and RLGS 3090. The United States is notable for its high levels of religious participation and for its wellestablished and rapidly expanding nonprofit sector. In this course, we will explore these phenomena from a variety of disciplinary perspectives including anthropology, history, and religious studies in order to understand the intersections of religion and philanthropy. By looking at religious ideologies, social theory, and legal and economic contexts, we will consider how religion, government, and philanthropy shape and are shaped by one another. We will examine a number of case studies including faith responses to Hurricane Katrina, the history of philanthropy in Denver, and U.S.-based religious global giving. We will explore key questions regarding community and social responsibility and ask which actors get to define key societal problems and who is ultimately responsible for responding to these problems.

ANTH 3130 The Archaeology of Gender (4 Credits)

This course examines the ways archaeology can contribute to the study of gender through investigations of the deep through recent past. The class will include readings on gender theory, the uses of archaeological data and specific case studies of engendered lives in the past. Cross listed with GWST 3130.

ANTH 3131 Visual Ethnography (4 Credits)

What happens when we represent the results of social scientific research in images and sounds? Do we have to change our theories about humans and their social worlds? Do we have to change the methods that we use to do social science? Visual Ethnography is designed to explore these questions. Attention will be given to the use of photography, film, and video in the representation of individuals and groups. Students will be exposed to the historical, theoretical and practical perspectives of visual ethnography and its current relationship to the production of knowledge. We will read about ethnography, as a social scientific method and a representational genre, and about film.

ANTH 3132 Digital Anthropology (4 Credits)

This course introduces students to the theories and methods necessary for doing research in digital anthropology. Digital anthropology is the study of the impact of digital technology on social relationships and human culture. Digital technology is treated as a cultural construct, the characteristics and impacts of which are analyzed through the interplay between technology and society in everyday life. The focus will be on ethnographic work, but as this is a rapidly growing interdisciplinary field of study, we will explore a broad range of scholarship. We will employ five different strategies to address this large and varied body of research: (1) literature reviews; (2) current event assignments; (3) reading responses; (4) autoethnographic journal entries; and (5) a digital deliverable. Taken as a whole, these strategies not only structure the course, but provide tools for selecting and responding to scholarly work, writing reviews, and designing an ethnographic research project.

ANTH 3135 Feasting, Fasting and Food: The Anthropology of Food (4 Credits)

Feasting, Fasting and Food focuses on foodways and food culture. Food and its acquisition and preparation are tied to the historical, social and cultural lives of all peoples. By drawing on historical sources, ethnography and a number of anthropological perspectives, we look at foodways as symbols of identify, culinary tourism, food work as trade or profession, the study of food as art and theater, and food and memory. Prerequisite: ANTH 2010.

ANTH 3155 Native American Resistance in the Digital Age (4 Credits)

Since Europeans first made contact with the Americas five centuries ago, depictions of indigenous peoples have largely been created by and for the colonizers. Only recently have native activists begun to take back control of their image. The course begins with the premise that indigenous peoples have been active producers of their own cultural heritage both before and after European expansion into the Americas. A postcolonial approach will be used to evaluate resistance from a historical standpoint, starting with the colonial period and into the twenty-first century. Primary attention will be placed on the late twentieth century and twenty-first century to better understand how indigenous filmmakers, curators, scientists, healers, artists, and scholars use indigenous knowledge systems to contest Western conceptions of authority. Specific topics include indigenous film and media; indigenous feminisms; the use of indigenous perspectives in natural resource management; indigenous voices in the decolonization of museums; and the role indigenous communities play in educating the public of long-lived environmental contamination of water and other natural resources. The course will be designed to explore the voice and agency of indigenous peoples in each of the aforementioned fields, and to teach the validity of indigenous perspectives. While students will be introduced to indigenous case studies from around the world, primary attention will be given to Native American tribal groups in the United States. Prerequisite: Any ANTH 1000-level course.

ANTH 3170 Applied Heritage Management (4 Credits)

Considers the role of archaeology in preservation and the management of cultural resources in terms of legislation, ethics and practical application, with emphasis of the utility, necessity and reality of doing archaeology today in the public sector. Site report writing, governmental regulations and the business side of archaeology are stressed. Archaeological information from site reports and artifact analysis are compiled and presented in a digital format. Prerequisite: ANTH 2310.

ANTH 3200 Human Origins and Evolution (4 Credits)

Examines the fossil record for human evolution from 6 million years ago to the origin of modern Homo sapiens, including current theories, evidence and controversies. Considers the historical and sociological contexts of human evolutionary studies, popular myths and misconceptions, and alternative scenarios for the future evolution of the human species.

ANTH 3225 Human Rights in Latin America (4 Credits)

This course aims to provide students with an overview of human rights issues and how they have evolved in recent Latin American history, from the military dictatorships of the authoritarian period to contemporary challenges faced in the region's democracies. It also aims to place human rights concerns in a broader sociopolitical context. Many of today's human rights issues are rooted in the past, but others respond to new and emerging challenges. In this class, we will explore the roots and contemporary realities of human rights movements in Latin America. The examination of these topics should allow us to pose broader questions about the meaning of human rights in a globalized world, the efficacy of international instruments for rights enforcement, and the complex challenges that linger in the aftermath of authoritarianism and state-sponsored terror.

ANTH 3255 Ancient North America (4 Credits)

This course examines the history of American Indian cultures from their earliest archaeological traces on this continent up to and including contact with European explorers and colonists.

ANTH 3290 Art and Anthropology (4 Credits)

Study of the concept of art and its multiple roles in society from a cross-cultural and historical perspective. Commodification of culture through tourism and the global art market; arts of resistance and survival; and cultural expression and community development.

ANTH 3310 Indigenous Environment (4 Credits)

The purpose of this course is to introduce students to particular environmental issues that affect indigenous peoples, including subsistence and economic issues; sacred lands; cultural property dilemmas; and the impact that use of traditional cultural properties by others-including nation-state governments, corporations and tourists-have on indigenous peoples' cultural and social integrity. Particular focus is on one of these issues-travel and particularly "ecotravel" and "ecotourism.

ANTH 3320 Medical Anthropology (4 Credits)

This course is an introduction to medical anthropology. As a professional and academic field, medical anthropology provides conceptual and analytical tools for a comprehensive understanding of health, illness and healing. It is concerned with the ways in which individual experience is inserted in social and historical contexts and it explores ideas and behaviors related to health in different societies and social groups, as well as the ways in which different groups organize their resources to face health-related needs in the context of their social and economic realities.

ANTH 3330 Human Rights of Indg Peoples (4 Credits)

This course introduces students to the concept and definition of "indigenous peoples." It covers the history of resistance, revitalization, and assertion of sovereignty by Indigenous peoples, and why the United Nations felt it necessary to adopt a "Declaration on the Rights of Indigenous Peoples" in 2007. It covers how indigenous identities and indigenous rights issues do or do not "fit" with internationally accepted definitions of human rights. The course will concentrate on the intersection of indigenous autonomy with globalization, neo-liberal ideologies, and nation-state policies. Case studies focus on Iroquois, Crees, Mayans, Mapuche, Zapatistas, Maoris, and Sami.

ANTH 3350 Latin American Archaeology (4 Credits)

Covers the prehistory of the Western Hemisphere south of the Mexico-U.S. border, from initial colonization of the hemisphere by Paleo-Indian people, to the origins of agriculture and the rise of civilization. Olmec, Mayan, Aztec, Chavin, Moche and Inca cultures are covered in detail.

ANTH 3370 Social Inequalities and Social Justice in Latin America (4 Credits)

This course uses an intersectional approach to the study of gender, class and ethnicity in Latin America. Intersectionality aims at understanding the interlocking relation between these and other variables, how they are rooted in historical and social structures, and are reproduced and resisted through individual and collective experience. The course aims at understanding history, culture and peoples with a special emphasis on examining their heterogeneity, and how such heterogeneity is also related to social inequality. It examines contemporary issues such as women and LGBTQ+ rights, Indigenous movements, human rights, migrations, and economics from the perspective of intersectionality.

ANTH 3390 Geoarchaeology (4 Credits)

Use of geological methods to interpret archaeological sites, ancient landscape reconstruction, study of environmental change and habitation.

ANTH 3470 Applied Anthropology (4 Credits)

The practical application of cross-cultural knowledge and awareness to the solution of social and cultural problems. Ethnographic methodologies, a review of the history of applied anthropology and a consideration of the ideological and ethical components of applied anthropology are covered.

ANTH 3500 City and Society (4 Credits)

Examines the recent past and future of the city as a human built environment that reflects and reproduces social, political, economic, and cultural forces and ideals. Begins with the origin of 'modern' cities in the 19th century and ends with contemporary urban landscapes. Analysis is focused on both the technologies (physical qualities) and aesthetics of urban form. Emphasis is on re-imagining urban design to meet the social equity, cultural diversity, and environmental sustainability challenges of 21st century city life.

ANTH 3510 The Ancient City (4 Credits)

The archaeological study of ancient cities around the world is a booming and controversial area of research. This course investigates what we know about the nature of the earliest cities in the great original cradles of civilization: Mesopotamia, Asia, Africa, and the Americas. Our focus is on how the first cities were planned, built, and experienced by citizens.

ANTH 3540 The Nature of Language (4 Credits)

Language as social, psychological, cultural phenomenon; relationship between cultures, semantics; language as medium of cultural unification; relationship between dialects, social structure.

ANTH 3620 Ethnoarchaeology (4 Credits)

Ethnography has often been used as an illustrative device to animate archaeological remains, or to develop models of human behavior, regardless of the geographic and chronological distance between the ethnographic and the archaeological data. This course addresses different perspectives and theories concerning the use of ethnoarchaeology to complement archaeological information. It aims to define the role of ethnoarchaeology in the study of human past; to establish an agenda of issues to which their use is relevant; and to provide a critical overview of major approaches to the use of ethnographic analogies and historical information in archaeology.

ANTH 3630 Archaeological Method and Theory (4 Credits)

This class presents methods for gathering archaeological data in the laboratory and then using a variety of theoretical approaches in its interpretation. Students gather archaeological data using museum collections from a variety of sites. Those artifacts include stone tools and ceramics as well as other environmental data and architectural information in a variety of environmental and landscape contexts. For each site studied students are presented with a body of theoretical literature from which to interpret these data. A variety of interpretative methods can potentially be chosen for each site, and in most cases there is no right answer, only answers that can be supported by the data collected and interpreted using the theoretical constructs read. All students are required to write up complete site reports for each project including all raw data collected in the analysis and theoretical approaches used in interpretation.

ANTH 3640 Race and Human Evolution (4 Credits)

Examines the history of thought about the nature and evolution of human racial differences and sexual characteristics, from the mid-19th century to the present day. Considers scientific and poplar models for explaining the evolution of racial differences, male-female reproductive behavior and gender roles. These models are examined in light of comparative primate data, ethnographic data and the material record of human evolution. Prerequisite: ANTH 2010.

ANTH 3655 Indigenous Feminisms (4 Credits)

This course examines a wide array of Indigenous feminisms. Rather than think of Indigenous feminisms as one static thing, we will inspect the field from multiple viewpoints and perspectives. We will draw from various thematic and transnational contexts across the Americas and Native Pacific in order to analyze the scope and significance of such knowledges, particularly as they relate to broader theories and practices of decolonization. We will begin by examining the foundational inquiries and methods of Indigenous feminist scholarship. Is gender a useful category of analysis? How have Indigenous women thought of gender? How have Indigenous women thought about, and responded to, feminism? With an emphasis on Indigenous scholars and feminists, we will cover a range of topics including (but not limited to) how Indigenous feminism fits into the feminist project, the connection between colonization and violence against Native women, the reclamation of women's initiations, gender and sovereignty, queer indigeneity, Indigenous feminist allies, and decolonial love. We will draw from readings across feminist movements, and as feminist Kanaka Maoli Professor Lani Teves says, we will attempt to "make links between Indigenous feminisms and Latinx feminisms, Black feminisms, and transnational feminisms. Rather than shy away from the tensions that emerge between multiple feminisms, instead we will attempt to cultivate nodes of alliance and solidarity to diversify our feminist tactics."

ANTH 3660 Anthropological Theory and Context (4 Credits)

History and development of particular schools of thought, paradigms, methods and methodologies that characterize contemporary anthropology. Intellectual, artistic developments, world-wide sociopolitical and economic processes that shaped much of anthropological thinking of the times. Research methods in reconstruction of human history and qualitative ethnolographical research.

ANTH 3661 Museums and their Visitors (4 Credits)

This course is designed to be a comprehensive introduction to museums and their approaches to serving visitors, primarily through exhibitions and education. It examines current research and museum practice as it relates to the museum as an environment for meaningful visitor experiences and learning. The course is organized around the following core issues: (1) What do visitor experiences look like in a museum context? (2) How do museums design for different audience types? (3) What do we learn from assessing visitors' experiences? (4) How do objects, ideas and spaces affect visitor learning and experiences? Cross listed with ARTH 3661.

ANTH 3680 Quantitative Methods-Anthropology (4 Credits)

The use of statistics in all branches of anthropology; data screening; parametric and nonparametric statistics. Prerequisite: any course in basic statistics.

ANTH 3701 Topics in Anthropology (4 Credits)

Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit.

ANTH 3702 Topics in Anthropology (4 Credits)

Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit. Prerequisite: ANTH 1010.

ANTH 3703 Topics in Anthropology (4 Credits)

Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit. Prerequisite: ANTH 1010.

ANTH 3742 Museum Exhibit Development (4 Credits)

Introduces general principles of planning, development, production and evaluation of museum exhibits. Explores design elements and methods of evaluation. Students have the opportunity to do exhibit mockups and exhibit evaluation.

ANTH 3743 Managing Collections (4 Credits)

Principles and methods regarding acquisition, documentation, conservation and accessibility of collections. Law, registration methods, computerization, policy, development, ethics and preventive conservation are also discussed.

ANTH 3750 Ethnographic Methods (4 Credits)

In this course, students study the art and science of ethnographic research methods, conduct quarter-long field research projects, and write practice ethnographies. The course requires students to apply the American Anthropological Association's Code of Ethics in their research and to write Institutional Review Board applications for their projects. Course readings include texts on ethnographic methods as well as controversial and exemplary ethnographic publications for student dissection and debate.

ANTH 3780 Anthropology of Gardening (4 Credits)

ANTH 3790 Field Methods in Archaeology (4 Credits)

The purpose of this class is to introduce students to archaeological field methods through a combination of readings, lecture, discussion, and handson experience. Training begins with issues of archaeological ethics, legal mandates, and research designs. Students then transition to learning skills and methods both in the classroom and in the field. Methods you will learn will include the basics of site survey and mapping, testing, excavation, artifact recovery and field processing, and data recording in the field. Cross-listed with ANTH 1790. Prerequisite: ANTH 2310.

ANTH 3791 Critical Perspectives in Museum Studies (4 Credits)

This course critically explores museums and heritage complexes as sites of cultural production and consumption at different historical moments and in diverse cultural and national settings. Special attention is given to contemporary issues, debates, and approaches in the context of museum anthropology and heritage studies. The term museum is used to include a wide range of heritage projects that do not rely only on the traditional institution established to collect, conserve and exhibit material culture, but includes intangible heritage, historic built environment and event natural environment that was used and marked by human action.

ANTH 3850 We are Family: Anthropological Perspectives on Kinship and Relations (4 Credits)

Anthropologists have long been fascinated with defining who is related to whom. In the first half of this course, we will read works by leading historical anthropologists in order to gain an understanding of the various ways kinship has been defined in anthropology and defined in a diversity of cultures. These works will help us understand various kinship systems throughout the world and explore how anthropologists have worked with the concept of relatedness. This course will then turn to contemporary issues and we will devote our time to investigating current kinship studies of relatedness and how this applies to new reproductive technologies (like surrogate mothers, IVF, etc), and adoption.

ANTH 3875 Research Methods in Anthropology (4 Credits)

This course offers an in-depth introduction to anthropological research methods with the aim of providing students with the tools necessary to design a coherent research proposal. Starting with the notion that anthropological research is a scientific endeavor, the course offers knowledge and skills that allow for a systematic application of qualitative and quantitative methods to respond to research questions. Students will learn when and how to use one method, as well as the implications of doing it. Students will also learn how to critically read research reports that use qualitative, quantitative, or mixed methods. The course is organized in two portions. The qualitative portion will focus on a detailed exploration of the continuum that goes from posing a research question, choosing a methodology, carrying it on, and reporting the results. The quantitative portion is concentrated on collecting numerical data, methods of which are often based on a qualitative understanding of people. Quantitative analysis will present tools used to take readings, acquire data, observations, and other information necessary to test hypotheses about people, cultures and how we can understand them from their material remains. The purpose of the quantitative part of the class is to determine what is statistically significant and what ideas about people are supportable using the scientific method. This course is required for all anthropology graduate students, and suggested for advanced undergraduates who are working on senior theses, and have an interest in anthropological research. The course is also open to non-anthropology students interested in anthropological research.

ANTH 3880 Culture, Ecology, Adaptation (4 Credits)

This course is organized around these concepts: "ecology," "adaptation," "landscape," "technology," "artifact," and "architecture." The course focuses on defining and examining adaptation and the role of culture and technology in achieving adaptations, or in not achieving them. This focus will be especially pursued with respect to the concept of landscape--that is, culturally defined physical space--and the cultural artifacts that interpret and modify it in the course of human adaptation to its ecological components.

ANTH 3890 Context of Material Culture (4 Credits)

Examines how material culture both reflects and actively structures political, economic and cultural life. Considers the relationship between people and their material culture (portable objects, non-portable objects, buildings, socially-created landscapes) in Western, non-Western, ancient, and contemporary cultural contexts. Reading materials draw from the fields of ethnology, archaeology, folklore, geography, history, art and architecture.

ANTH 3981 Museum Internship (1-6 Credits)

ANTH 3990 Summer Field School-Archaeology (4-6 Credits)

Archaeological excavation, survey and recordings; analysis and conservation of artifacts in the field.

ANTH 3991 Independent Study (1-15 Credits)

ANTH 3995 Independent Research (1-10 Credits)

ANTH 4000 Advanced Anthropology (4 Credits)

ANTH 4040 Historical Archaeology: Theory and Method (4 Credits)

Because it is the archaeology of periods for which there is also written history, historical archaeology is a dynamic and interdisciplinary field. It also has a distinct set of concerns and methods that builds upon, but does not replicate, those of prehistoric archaeology. This course is designed to engage students in the practice of historical archaeology through readings, discussions, and the hands-on analysis of archaeological materials. The first class of each week is a discussion of readings in historical archaeology. The readings introduce students to theoretical and methodological issues in the discipline, as well as important case studies. Many of the readings have a North American focus, but address international practice. The second class of each week has a hands-on focus. Backed by readings on historic materials analysis, we discuss and practice the types of research historical archaeologists perform on actual materials, focusing on different material types each week. Students in the course each process and analyze a set of materials excavated from a historic site. Cross-listed with ANTH 2040.

ANTH 4070 Folklore and Cultural Heritage (4 Credits)

Folklore and Cultural Heritage is the study of the expressive behaviors and practices that constitute the ordinary, everyday life of communities. Folklore includes the intangible cultural heritages of all peoples, for example, the artistic expression reflected in stories and storytelling, music, dance, legends, oral history, proverbs, jokes, popular beliefs, customs, dialects and ways of speaking. Everyone has folklore and participates in the "folklore process." Cross-listed with ANTH 3070.

ANTH 4200 Native North America (4 Credits)

Native American cultures north of Mexico. Cross-listed with ANTH 2200.

ANTH 4220 Human Rights in Latin America (4 Credits)

This course aims to provide students with an overview of human rights issues and how they have evolved in recent Latin American history, from the military dictatorships of the authoritarian period to contemporary challenges faced in the region's democracies. It also aims to place human rights concerns in a broader sociopolitical context. Many of today's human rights issues are rooted in the past, but others respond to new and emerging challenges. In this class, we explore the roots and contemporary realities of human rights movements in Latin America. The examination of these topics should allow us to pose broader questions about the meaning of human rights in a globalized world, the efficacy of international instruments for rights enforcement, and the complex challenges that linger in the aftermath of authoritarianism and state-sponsored terror.

ANTH 4290 Art and Anthropology (4 Credits)

This class introduces students to anthropological approaches to the study of art and visual culture. The first part of the course covers foundational work in the field, introducing key concepts as well as methods for viewing and understanding art from a cross-cultural/comparative and interdisciplinary perspective. We examine the relationships among art, technology and the environment, as well as the importance of form, function, style, meaning, and aesthetics in the study of art. The second part addresses issues of contemporary concern in art and anthropology, such as the influence of market forces and tourism on artistic traditions and cultural expressions; the intersection of art and identity; the politics of cultural representation. The course also explores the ethnographic turn in some forms of contemporary art as well as doing ethnography as art.

ANTH 4320 Medical Anthropology (4 Credits)

This course is an introduction to medical anthropology. As a professional and academic field, medical anthropology provides conceptual and analytical tools for a comprehensive understanding of health, illness and healing. It is concerned with the ways in which individual experience is inserted in social and historical contexts and it explores ideas and behaviors related to health in different societies and social groups, as well as the ways in which different groups organize their resources to face health-related needs in the context of their social and economic realities.

ANTH 4360 Cross-Cultural Perspectives of Women (4 Credits)

Cross-listed with ANTH 3360.

ANTH 4370 Sex, Class and Race in Latin America (4 Credits)

This course uses an intersectional approach to the study of sex, class and race in Latin America. Intersectionality aims at understanding the interlocking relation between sex, class, race and other aspects, and how these are rooted in historical and social structures, and are reproduced and resisted through individual and collective experience. In this course we will aim at understanding such history, culture and peoples with a special emphasis on examining their heterogeneity, and aiming at understanding how such heterogeneity is also related with social inequality. We will also examine some contemporary issues such as women's rights, indigenous movements, human rights, migrations, and economy with an emphasis on their manifestations at the intersections of sex, class, and race.

ANTH 4660 Anthropological Theory and Context (4 Credits)

History and development of particular schools of thought, paradigms, methods and methodologies that characterize contemporary anthropology. Intellectual, artistic developments, world-wide sociopolitical and economic processes that shaped much of anthropological thinking of the times. Research methods in reconstruction of human history and qualitative ethnolographic research.

ANTH 4700 Readings in Anthropology (1-5 Credits)

Directed readings in anthropology under faculty supervision. May be repeated for credit.

ANTH 4701 Special Topics in Anthropology (1-5 Credits)

ANTH 4702 Special Topics in Anthropology (1-5 Credits)

ANTH 4703 Special Topics in Anthropology (1-5 Credits)

ANTH 4704 Special Topics in Anthropology (1-5 Credits)

ANTH 4740 Perspectives-Museum Studies (4 Credits)

ANTH 4744 Museum Anthropology (4 Credits)

This course introduces students to museum anthropology and the ethnography of museums as well as the theoretical and practical sides of museum studies. The course is based on the following premises: Museum anthropology is a form of applied anthropology in which museums are a venue for making anthropological insights and knowledge accessible and relevant to the public; Museums, as institutions of public culture, are a forum for exploring contemporary social issues and concerns; The role of museums in society and civic engagement is at the core of contemporary museum anthropology and Museology.

ANTH 4745 Museum Practicum (2 Credits)

Individually designed practicum in student's area of interest.

ANTH 4751 Ethnographic Methods (4 Credits)

Ethnographic methods offer research tools that are effective when dealing with complex problems, when the peculiarities of everyday life are relevant, or when an in-depth understanding is needed. These methods have been developed in the past century, primarily by anthropologists and sociologists, but have been successfully adopted and adapted in fields as diverse as psychology, education, public health, international development, marketing, social work, nursing, economics, business management and political science. As a result, ethnography is understood by some as one type of qualitative research involving specific techniques, while others see it as a broader methodological approach that implies a way of being in the world. This course aims to answer this meta-question: what knowledge, skills and attitudes are needed to successfully carry on ethnographic research? Learning objectives are: (1) To understand what are ethnographic methods through their history, uses and ethical dilemmas. (2) To develop skills and attitudes necessary to do ethnographic research through active participation in all phases of an ethnographic research project. (3) To apply ethnographic methods to the design of a project of interest to each student (ideally relevant to their senior project, thesis or dissertation). Class meetings will consist of lectures to introduce topics and concepts and group discussions to apply the concepts and examine them critically. Students will also work on individual projects for which they will give short oral presentations. The course will collaborate with a community organization, putting ethnographic methods in practice to help answer a need identified by our community partners.

ANTH 4981 Museum Internship (1-6 Credits) ANTH 4991 Independent Study (1-17 Credits) ANTH 4995 Independent Research (1-17 Credits)

Courses

ANTH 3001 Race, Sex and Evolution (4 Credits)

The course examines the paleoanthropology of race and sex. Our focus is on the nature and evolution of human racial differences, sexual anatomy, reproductive strategies, and gender roles. We will consider the history of thinking about race and sex in anthropology and related disciplines, and the uses to which particular conceptions have been put in our culture. We will discuss and evaluate alternative models for explaining the evolution of alleged biological and behavioral differences between racial groups and between men and women. Evaluation will proceed in light of evolutionary theory, comparative primate anatomy and behavior, the human fossil record, and general anthropological knowledge. Our aim is to examine myth and reality in popular and scientific understandings of these aspects of the human condition and, in the end, the social and political (i.e., policy) consequences of this knowledge. Enforced Prerequisites and Restrictions: ANTH 2105.

ANTH 3020 Native Religions (4 Credits)

A cross-cultural survey of concepts used to understand and talk about "religion," "the supernatural," and associated behavior among Native peoples of Turtle Island. Topics include healing and techniques of controlling and channeling supernatural power; sacred places and their significance; myths and symbols in their cultural contexts; initiation rites; conceptualizations of male and female deities; and responses of indigenous people to attempted missionization.

ANTH 3030 Digital Anthropology (4 Credits)

Digital Anthropology introduces students to computer technology used in anthropological research. Students study and then produce a number of digital products useful in the analysis and interpretation of museum collections, for archaeological mapping and research, and for the dissemination of anthropological knowledge online. This process covers the use of Geographic Information Systems (GIS) for spatial analysis, three-dimensional imaging programs ranging in scale from broad landscape mapping to detailed digital artifact analysis. In addition, the use of geophysical methods for imaging what is below the surface allows students to produce images of what lies below the ground in archaeological contexts.

ANTH 3040 Anthropologies of Place (4 Credits)

This class is an exploration of the relationship between people and places from an anthropological viewpoint. We concern ourselves with a variety of ideas about place, emphasizing not just how places are used, but how they infuse themselves into the lives, histories and ethics of those who interact with them. The course readings include book-length anthropological case studies interspersed with interdisciplinary readings about place and landscape. The course includes seminar-style discussions of readings, workshops and observations in the field. On several occasions, we take our class on the road, working together to think about how people and place interact. By the end of the class, each student creates his or her own anthropology of a place. Must be junior standing or above.

ANTH 3060 Cultural Narratives (4 Credits)

Human beings are natural storytellers. Whether reciting oral traditions or recounting personal experience, people everywhere use narratives as a way to express and to understand themselves. This course approaches cultural narratives from two angles. First, it explores the ways that anthropologists, usually trained in the social sciences, make use of and study narratives, whether through ethnographic observation, conducting an interview, gathering folklore or archaeological interpretation. Second, the class investigates narratives that, although produced by non-anthropologists, engage with anthropological issues such as kinship, gender, work, tradition and identity. The narratives range broadly from fiction, to poetry, to film. These two approaches are framed by theoretically informed readings about narrativity, both from the social sciences and the humanities. The class involves intensive reading and writing, as it makes use of both discussion and workshop formats. Each student in the course completes a research and writing project culminating in his or her own cultural narrative. Must be junior standing or above.

ANTH 3070 Folklore and Cultural Heritage (4 Credits)

Folklore and Cultural Heritage is the study of the expressive behaviors and practices that constitute the ordinary, everyday life of communities. Folklore includes the intangible cultural heritages of all peoples, for example, the artistic expression reflected in stories and storytelling, music, dance, legends, oral history, proverbs, jokes, popular beliefs, customs, dialects and ways of speaking. Everyone has folklore and participates in the "folklore process." Prerequisite: introductory social science course. Cross-listed with ANTH 4070.

ANTH 3080 Memory and Memorialization (4 Credits)

The course focuses on how social groups represent, experience and commemorate the remembered past; it explores issues of construction of memory, particularly how representations of the past- and its materialization through monuments, ruins, and landscapes- are connected with issues of institutionalized perceptions of national, ethnic, racial and religious identity. Furthermore, it discusses concepts such as "authenticity," "tradition," and "modernity" in the interpretation of cultural heritage and how the interpretation of the past and of culture depend on context (political and historical), experience and point of view. The course aims to develop an interdisciplinary approach to memory and to methodologies and empirical research.

ANTH 3090 God and Giving? Religion and Philanthropy in America (4 Credits)

This course is cross-listed with JUST 3090 and RLGS 3090. The United States is notable for its high levels of religious participation and for its wellestablished and rapidly expanding nonprofit sector. In this course, we will explore these phenomena from a variety of disciplinary perspectives including anthropology, history, and religious studies in order to understand the intersections of religion and philanthropy. By looking at religious ideologies, social theory, and legal and economic contexts, we will consider how religion, government, and philanthropy shape and are shaped by one another. We will examine a number of case studies including faith responses to Hurricane Katrina, the history of philanthropy in Denver, and U.S.-based religious global giving. We will explore key questions regarding community and social responsibility and ask which actors get to define key societal problems and who is ultimately responsible for responding to these problems.

ANTH 3130 The Archaeology of Gender (4 Credits)

This course examines the ways archaeology can contribute to the study of gender through investigations of the deep through recent past. The class will include readings on gender theory, the uses of archaeological data and specific case studies of engendered lives in the past. Cross listed with GWST 3130.

ANTH 3131 Visual Ethnography (4 Credits)

What happens when we represent the results of social scientific research in images and sounds? Do we have to change our theories about humans and their social worlds? Do we have to change the methods that we use to do social science? Visual Ethnography is designed to explore these questions. Attention will be given to the use of photography, film, and video in the representation of individuals and groups. Students will be exposed to the historical, theoretical and practical perspectives of visual ethnography and its current relationship to the production of knowledge. We will read about ethnography, as a social scientific method and a representational genre, and about film.

ANTH 3132 Digital Anthropology (4 Credits)

This course introduces students to the theories and methods necessary for doing research in digital anthropology. Digital anthropology is the study of the impact of digital technology on social relationships and human culture. Digital technology is treated as a cultural construct, the characteristics and impacts of which are analyzed through the interplay between technology and society in everyday life. The focus will be on ethnographic work, but as this is a rapidly growing interdisciplinary field of study, we will explore a broad range of scholarship. We will employ five different strategies to address this large and varied body of research: (1) literature reviews; (2) current event assignments; (3) reading responses; (4) autoethnographic journal entries; and (5) a digital deliverable. Taken as a whole, these strategies not only structure the course, but provide tools for selecting and responding to scholarly work, writing reviews, and designing an ethnographic research project.

ANTH 3135 Feasting, Fasting and Food: The Anthropology of Food (4 Credits)

Feasting, Fasting and Food focuses on foodways and food culture. Food and its acquisition and preparation are tied to the historical, social and cultural lives of all peoples. By drawing on historical sources, ethnography and a number of anthropological perspectives, we look at foodways as symbols of identify, culinary tourism, food work as trade or profession, the study of food as art and theater, and food and memory. Prerequisite: ANTH 2010.

ANTH 3155 Native American Resistance in the Digital Age (4 Credits)

Since Europeans first made contact with the Americas five centuries ago, depictions of indigenous peoples have largely been created by and for the colonizers. Only recently have native activists begun to take back control of their image. The course begins with the premise that indigenous peoples have been active producers of their own cultural heritage both before and after European expansion into the Americas. A postcolonial approach will be used to evaluate resistance from a historical standpoint, starting with the colonial period and into the twenty-first century. Primary attention will be placed on the late twentieth century and twenty-first century to better understand how indigenous filmmakers, curators, scientists, healers, artists, and scholars use indigenous knowledge systems to contest Western conceptions of authority. Specific topics include indigenous film and media; indigenous feminisms; the use of indigenous perspectives in natural resource management; indigenous voices in the decolonization of museums; and the role indigenous communities play in educating the public of long-lived environmental contamination of water and other natural resources. The course will be designed to explore the voice and agency of indigenous peoples in each of the aforementioned fields, and to teach the validity of indigenous perspectives. While students will be introduced to indigenous case studies from around the world, primary attention will be given to Native American tribal groups in the United States. Prerequisite: Any ANTH 1000-level course.

ANTH 3170 Applied Heritage Management (4 Credits)

Considers the role of archaeology in preservation and the management of cultural resources in terms of legislation, ethics and practical application, with emphasis of the utility, necessity and reality of doing archaeology today in the public sector. Site report writing, governmental regulations and the business side of archaeology are stressed. Archaeological information from site reports and artifact analysis are compiled and presented in a digital format. Prerequisite: ANTH 2310.

ANTH 3200 Human Origins and Evolution (4 Credits)

Examines the fossil record for human evolution from 6 million years ago to the origin of modern Homo sapiens, including current theories, evidence and controversies. Considers the historical and sociological contexts of human evolutionary studies, popular myths and misconceptions, and alternative scenarios for the future evolution of the human species.

ANTH 3225 Human Rights in Latin America (4 Credits)

This course aims to provide students with an overview of human rights issues and how they have evolved in recent Latin American history, from the military dictatorships of the authoritarian period to contemporary challenges faced in the region's democracies. It also aims to place human rights concerns in a broader sociopolitical context. Many of today's human rights issues are rooted in the past, but others respond to new and emerging challenges. In this class, we will explore the roots and contemporary realities of human rights movements in Latin America. The examination of these topics should allow us to pose broader questions about the meaning of human rights in a globalized world, the efficacy of international instruments for rights enforcement, and the complex challenges that linger in the aftermath of authoritarianism and state-sponsored terror.

ANTH 3255 Ancient North America (4 Credits)

This course examines the history of American Indian cultures from their earliest archaeological traces on this continent up to and including contact with European explorers and colonists.

ANTH 3290 Art and Anthropology (4 Credits)

Study of the concept of art and its multiple roles in society from a cross-cultural and historical perspective. Commodification of culture through tourism and the global art market; arts of resistance and survival; and cultural expression and community development.

ANTH 3310 Indigenous Environment (4 Credits)

The purpose of this course is to introduce students to particular environmental issues that affect indigenous peoples, including subsistence and economic issues; sacred lands; cultural property dilemmas; and the impact that use of traditional cultural properties by others-including nation-state governments, corporations and tourists-have on indigenous peoples' cultural and social integrity. Particular focus is on one of these issues-travel and particularly "ecotravel" and "ecotourism.

ANTH 3320 Medical Anthropology (4 Credits)

This course is an introduction to medical anthropology. As a professional and academic field, medical anthropology provides conceptual and analytical tools for a comprehensive understanding of health, illness and healing. It is concerned with the ways in which individual experience is inserted in social and historical contexts and it explores ideas and behaviors related to health in different societies and social groups, as well as the ways in which different groups organize their resources to face health-related needs in the context of their social and economic realities.

ANTH 3330 Human Rights of Indg Peoples (4 Credits)

This course introduces students to the concept and definition of "indigenous peoples." It covers the history of resistance, revitalization, and assertion of sovereignty by Indigenous peoples, and why the United Nations felt it necessary to adopt a "Declaration on the Rights of Indigenous Peoples" in 2007. It covers how indigenous identities and indigenous rights issues do or do not "fit" with internationally accepted definitions of human rights. The course will concentrate on the intersection of indigenous autonomy with globalization, neo-liberal ideologies, and nation-state policies. Case studies focus on Iroquois, Crees, Mayans, Mapuche, Zapatistas, Maoris, and Sami.

ANTH 3350 Latin American Archaeology (4 Credits)

Covers the prehistory of the Western Hemisphere south of the Mexico-U.S. border, from initial colonization of the hemisphere by Paleo-Indian people, to the origins of agriculture and the rise of civilization. Olmec, Mayan, Aztec, Chavin, Moche and Inca cultures are covered in detail.

ANTH 3370 Social Inequalities and Social Justice in Latin America (4 Credits)

This course uses an intersectional approach to the study of gender, class and ethnicity in Latin America. Intersectionality aims at understanding the interlocking relation between these and other variables, how they are rooted in historical and social structures, and are reproduced and resisted through individual and collective experience. The course aims at understanding history, culture and peoples with a special emphasis on examining their heterogeneity, and how such heterogeneity is also related to social inequality. It examines contemporary issues such as women and LGBTQ+ rights, Indigenous movements, human rights, migrations, and economics from the perspective of intersectionality.

ANTH 3390 Geoarchaeology (4 Credits)

Use of geological methods to interpret archaeological sites, ancient landscape reconstruction, study of environmental change and habitation.

ANTH 3470 Applied Anthropology (4 Credits)

The practical application of cross-cultural knowledge and awareness to the solution of social and cultural problems. Ethnographic methodologies, a review of the history of applied anthropology and a consideration of the ideological and ethical components of applied anthropology are covered.

ANTH 3500 City and Society (4 Credits)

Examines the recent past and future of the city as a human built environment that reflects and reproduces social, political, economic, and cultural forces and ideals. Begins with the origin of 'modern' cities in the 19th century and ends with contemporary urban landscapes. Analysis is focused on both the technologies (physical qualities) and aesthetics of urban form. Emphasis is on re-imagining urban design to meet the social equity, cultural diversity, and environmental sustainability challenges of 21st century city life.

ANTH 3510 The Ancient City (4 Credits)

The archaeological study of ancient cities around the world is a booming and controversial area of research. This course investigates what we know about the nature of the earliest cities in the great original cradles of civilization: Mesopotamia, Asia, Africa, and the Americas. Our focus is on how the first cities were planned, built, and experienced by citizens.

ANTH 3540 The Nature of Language (4 Credits)

Language as social, psychological, cultural phenomenon; relationship between cultures, semantics; language as medium of cultural unification; relationship between dialects, social structure.
ANTH 3620 Ethnoarchaeology (4 Credits)

Ethnography has often been used as an illustrative device to animate archaeological remains, or to develop models of human behavior, regardless of the geographic and chronological distance between the ethnographic and the archaeological data. This course addresses different perspectives and theories concerning the use of ethnoarchaeology to complement archaeological information. It aims to define the role of ethnoarchaeology in the study of human past; to establish an agenda of issues to which their use is relevant; and to provide a critical overview of major approaches to the use of ethnographic analogies and historical information in archaeology.

ANTH 3630 Archaeological Method and Theory (4 Credits)

This class presents methods for gathering archaeological data in the laboratory and then using a variety of theoretical approaches in its interpretation. Students gather archaeological data using museum collections from a variety of sites. Those artifacts include stone tools and ceramics as well as other environmental data and architectural information in a variety of environmental and landscape contexts. For each site studied students are presented with a body of theoretical literature from which to interpret these data. A variety of interpretative methods can potentially be chosen for each site, and in most cases there is no right answer, only answers that can be supported by the data collected and interpreted using the theoretical constructs read. All students are required to write up complete site reports for each project including all raw data collected in the analysis and theoretical approaches used in interpretation.

ANTH 3640 Race and Human Evolution (4 Credits)

Examines the history of thought about the nature and evolution of human racial differences and sexual characteristics, from the mid-19th century to the present day. Considers scientific and poplar models for explaining the evolution of racial differences, male-female reproductive behavior and gender roles. These models are examined in light of comparative primate data, ethnographic data and the material record of human evolution. Prerequisite: ANTH 2010.

ANTH 3655 Indigenous Feminisms (4 Credits)

This course examines a wide array of Indigenous feminisms. Rather than think of Indigenous feminisms as one static thing, we will inspect the field from multiple viewpoints and perspectives. We will draw from various thematic and transnational contexts across the Americas and Native Pacific in order to analyze the scope and significance of such knowledges, particularly as they relate to broader theories and practices of decolonization. We will begin by examining the foundational inquiries and methods of Indigenous feminist scholarship. Is gender a useful category of analysis? How have Indigenous women thought of gender? How have Indigenous women thought about, and responded to, feminism? With an emphasis on Indigenous scholars and feminists, we will cover a range of topics including (but not limited to) how Indigenous feminism fits into the feminist project, the connection between colonization and violence against Native women, the reclamation of women's initiations, gender and sovereignty, queer indigeneity, Indigenous feminist allies, and decolonial love. We will draw from readings across feminist movements, and as feminist Kanaka Maoli Professor Lani Teves says, we will attempt to "make links between Indigenous feminisms and Latinx feminisms, Black feminisms, and transnational feminisms. Rather than shy away from the tensions that emerge between multiple feminisms, instead we will attempt to cultivate nodes of alliance and solidarity to diversify our feminist tactics."

ANTH 3660 Anthropological Theory and Context (4 Credits)

History and development of particular schools of thought, paradigms, methods and methodologies that characterize contemporary anthropology. Intellectual, artistic developments, world-wide sociopolitical and economic processes that shaped much of anthropological thinking of the times. Research methods in reconstruction of human history and qualitative ethnolographical research.

ANTH 3661 Museums and their Visitors (4 Credits)

This course is designed to be a comprehensive introduction to museums and their approaches to serving visitors, primarily through exhibitions and education. It examines current research and museum practice as it relates to the museum as an environment for meaningful visitor experiences and learning. The course is organized around the following core issues: (1) What do visitor experiences look like in a museum context? (2) How do museums design for different audience types? (3) What do we learn from assessing visitors' experiences? (4) How do objects, ideas and spaces affect visitor learning and experiences? Cross listed with ARTH 3661.

ANTH 3680 Quantitative Methods-Anthropology (4 Credits)

The use of statistics in all branches of anthropology; data screening; parametric and nonparametric statistics. Prerequisite: any course in basic statistics.

ANTH 3701 Topics in Anthropology (4 Credits)

Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit.

ANTH 3702 Topics in Anthropology (4 Credits)

Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit. Prerequisite: ANTH 1010.

ANTH 3703 Topics in Anthropology (4 Credits)

Specialized topics in anthropology. Check with the Department of Anthropology or the Schedule of Classes for further information; open to students who are non-majors; may be repeated for credit. Prerequisite: ANTH 1010.

ANTH 3742 Museum Exhibit Development (4 Credits)

Introduces general principles of planning, development, production and evaluation of museum exhibits. Explores design elements and methods of evaluation. Students have the opportunity to do exhibit mockups and exhibit evaluation.

ANTH 3743 Managing Collections (4 Credits)

Principles and methods regarding acquisition, documentation, conservation and accessibility of collections. Law, registration methods, computerization, policy, development, ethics and preventive conservation are also discussed.

ANTH 3750 Ethnographic Methods (4 Credits)

In this course, students study the art and science of ethnographic research methods, conduct quarter-long field research projects, and write practice ethnographies. The course requires students to apply the American Anthropological Association's Code of Ethics in their research and to write Institutional Review Board applications for their projects. Course readings include texts on ethnographic methods as well as controversial and exemplary ethnographic publications for student dissection and debate.

ANTH 3780 Anthropology of Gardening (4 Credits)

ANTH 3790 Field Methods in Archaeology (4 Credits)

The purpose of this class is to introduce students to archaeological field methods through a combination of readings, lecture, discussion, and handson experience. Training begins with issues of archaeological ethics, legal mandates, and research designs. Students then transition to learning skills and methods both in the classroom and in the field. Methods you will learn will include the basics of site survey and mapping, testing, excavation, artifact recovery and field processing, and data recording in the field. Cross-listed with ANTH 1790. Prerequisite: ANTH 2310.

ANTH 3791 Critical Perspectives in Museum Studies (4 Credits)

This course critically explores museums and heritage complexes as sites of cultural production and consumption at different historical moments and in diverse cultural and national settings. Special attention is given to contemporary issues, debates, and approaches in the context of museum anthropology and heritage studies. The term museum is used to include a wide range of heritage projects that do not rely only on the traditional institution established to collect, conserve and exhibit material culture, but includes intangible heritage, historic built environment and event natural environment that was used and marked by human action.

ANTH 3850 We are Family: Anthropological Perspectives on Kinship and Relations (4 Credits)

Anthropologists have long been fascinated with defining who is related to whom. In the first half of this course, we will read works by leading historical anthropologists in order to gain an understanding of the various ways kinship has been defined in anthropology and defined in a diversity of cultures. These works will help us understand various kinship systems throughout the world and explore how anthropologists have worked with the concept of relatedness. This course will then turn to contemporary issues and we will devote our time to investigating current kinship studies of relatedness and how this applies to new reproductive technologies (like surrogate mothers, IVF, etc), and adoption.

ANTH 3875 Research Methods in Anthropology (4 Credits)

This course offers an in-depth introduction to anthropological research methods with the aim of providing students with the tools necessary to design a coherent research proposal. Starting with the notion that anthropological research is a scientific endeavor, the course offers knowledge and skills that allow for a systematic application of qualitative and quantitative methods to respond to research questions. Students will learn when and how to use one method, as well as the implications of doing it. Students will also learn how to critically read research reports that use qualitative, quantitative, or mixed methods. The course is organized in two portions. The qualitative portion will focus on a detailed exploration of the continuum that goes from posing a research question, choosing a methodology, carrying it on, and reporting the results. The quantitative portion is concentrated on collecting numerical data, methods of which are often based on a qualitative understanding of people. Quantitative analysis will present tools used to take readings, acquire data, observations, and other information necessary to test hypotheses about people, cultures and how we can understand them from their material remains. The purpose of the quantitative part of the class is to determine what is statistically significant and what ideas about people are supportable using the scientific method. This course is required for all anthropology graduate students, and suggested for advanced undergraduates who are working on senior theses, and have an interest in anthropological research. The course is also open to non-anthropology students interested in anthropological research.

ANTH 3880 Culture, Ecology, Adaptation (4 Credits)

This course is organized around these concepts: "ecology," "adaptation," "landscape," "technology," "artifact," and "architecture." The course focuses on defining and examining adaptation and the role of culture and technology in achieving adaptations, or in not achieving them. This focus will be especially pursued with respect to the concept of landscape--that is, culturally defined physical space--and the cultural artifacts that interpret and modify it in the course of human adaptation to its ecological components.

ANTH 3890 Context of Material Culture (4 Credits)

Examines how material culture both reflects and actively structures political, economic and cultural life. Considers the relationship between people and their material culture (portable objects, non-portable objects, buildings, socially-created landscapes) in Western, non-Western, ancient, and contemporary cultural contexts. Reading materials draw from the fields of ethnology, archaeology, folklore, geography, history, art and architecture.

ANTH 3981 Museum Internship (1-6 Credits)

ANTH 3990 Summer Field School-Archaeology (4-6 Credits)

Archaeological excavation, survey and recordings; analysis and conservation of artifacts in the field.

ANTH 3991 Independent Study (1-15 Credits)

ANTH 3995 Independent Research (1-10 Credits)

ANTH 4000 Advanced Anthropology (4 Credits)

ANTH 4040 Historical Archaeology: Theory and Method (4 Credits)

Because it is the archaeology of periods for which there is also written history, historical archaeology is a dynamic and interdisciplinary field. It also has a distinct set of concerns and methods that builds upon, but does not replicate, those of prehistoric archaeology. This course is designed to engage students in the practice of historical archaeology through readings, discussions, and the hands-on analysis of archaeological materials. The first class of each week is a discussion of readings in historical archaeology. The readings introduce students to theoretical and methodological issues in the discipline, as well as important case studies. Many of the readings have a North American focus, but address international practice. The second class of each week has a hands-on focus. Backed by readings on historic materials analysis, we discuss and practice the types of research historical archaeologists perform on actual materials, focusing on different material types each week. Students in the course each process and analyze a set of materials excavated from a historic site. Cross-listed with ANTH 2040.

ANTH 4070 Folklore and Cultural Heritage (4 Credits)

Folklore and Cultural Heritage is the study of the expressive behaviors and practices that constitute the ordinary, everyday life of communities. Folklore includes the intangible cultural heritages of all peoples, for example, the artistic expression reflected in stories and storytelling, music, dance, legends, oral history, proverbs, jokes, popular beliefs, customs, dialects and ways of speaking. Everyone has folklore and participates in the "folklore process." Cross-listed with ANTH 3070.

ANTH 4200 Native North America (4 Credits)

Native American cultures north of Mexico. Cross-listed with ANTH 2200.

ANTH 4220 Human Rights in Latin America (4 Credits)

This course aims to provide students with an overview of human rights issues and how they have evolved in recent Latin American history, from the military dictatorships of the authoritarian period to contemporary challenges faced in the region's democracies. It also aims to place human rights concerns in a broader sociopolitical context. Many of today's human rights issues are rooted in the past, but others respond to new and emerging challenges. In this class, we explore the roots and contemporary realities of human rights movements in Latin America. The examination of these topics should allow us to pose broader questions about the meaning of human rights in a globalized world, the efficacy of international instruments for rights enforcement, and the complex challenges that linger in the aftermath of authoritarianism and state-sponsored terror.

ANTH 4290 Art and Anthropology (4 Credits)

This class introduces students to anthropological approaches to the study of art and visual culture. The first part of the course covers foundational work in the field, introducing key concepts as well as methods for viewing and understanding art from a cross-cultural/comparative and interdisciplinary perspective. We examine the relationships among art, technology and the environment, as well as the importance of form, function, style, meaning, and aesthetics in the study of art. The second part addresses issues of contemporary concern in art and anthropology, such as the influence of market forces and tourism on artistic traditions and cultural expressions; the intersection of art and identity; the politics of cultural representation. The course also explores the ethnographic turn in some forms of contemporary art as well as doing ethnography as art.

ANTH 4320 Medical Anthropology (4 Credits)

This course is an introduction to medical anthropology. As a professional and academic field, medical anthropology provides conceptual and analytical tools for a comprehensive understanding of health, illness and healing. It is concerned with the ways in which individual experience is inserted in social and historical contexts and it explores ideas and behaviors related to health in different societies and social groups, as well as the ways in which different groups organize their resources to face health-related needs in the context of their social and economic realities.

ANTH 4360 Cross-Cultural Perspectives of Women (4 Credits)

Cross-listed with ANTH 3360.

ANTH 4370 Sex, Class and Race in Latin America (4 Credits)

This course uses an intersectional approach to the study of sex, class and race in Latin America. Intersectionality aims at understanding the interlocking relation between sex, class, race and other aspects, and how these are rooted in historical and social structures, and are reproduced and resisted through individual and collective experience. In this course we will aim at understanding such history, culture and peoples with a special emphasis on examining their heterogeneity, and aiming at understanding how such heterogeneity is also related with social inequality. We will also examine some contemporary issues such as women's rights, indigenous movements, human rights, migrations, and economy with an emphasis on their manifestations at the intersections of sex, class, and race.

ANTH 4660 Anthropological Theory and Context (4 Credits)

History and development of particular schools of thought, paradigms, methods and methodologies that characterize contemporary anthropology. Intellectual, artistic developments, world-wide sociopolitical and economic processes that shaped much of anthropological thinking of the times. Research methods in reconstruction of human history and qualitative ethnolographic research.

ANTH 4700 Readings in Anthropology (1-5 Credits)

Directed readings in anthropology under faculty supervision. May be repeated for credit.

ANTH 4701 Special Topics in Anthropology (1-5 Credits)

ANTH 4702 Special Topics in Anthropology (1-5 Credits)

ANTH 4703 Special Topics in Anthropology (1-5 Credits)

ANTH 4704 Special Topics in Anthropology (1-5 Credits)

ANTH 4740 Perspectives-Museum Studies (4 Credits)

ANTH 4744 Museum Anthropology (4 Credits)

This course introduces students to museum anthropology and the ethnography of museums as well as the theoretical and practical sides of museum studies. The course is based on the following premises: Museum anthropology is a form of applied anthropology in which museums are a venue for making anthropological insights and knowledge accessible and relevant to the public; Museums, as institutions of public culture, are a forum for exploring contemporary social issues and concerns; The role of museums in society and civic engagement is at the core of contemporary museum anthropology and Museology.

ANTH 4745 Museum Practicum (2 Credits)

Individually designed practicum in student's area of interest.

ANTH 4751 Ethnographic Methods (4 Credits)

Ethnographic methods offer research tools that are effective when dealing with complex problems, when the peculiarities of everyday life are relevant, or when an in-depth understanding is needed. These methods have been developed in the past century, primarily by anthropologists and sociologists, but have been successfully adopted and adapted in fields as diverse as psychology, education, public health, international development, marketing, social work, nursing, economics, business management and political science. As a result, ethnography is understood by some as one type of qualitative research involving specific techniques, while others see it as a broader methodological approach that implies a way of being in the world. This course aims to answer this meta-question: what knowledge, skills and attitudes are needed to successfully carry on ethnographic research? Learning objectives are: (1) To understand what are ethnographic methods through their history, uses and ethical dilemmas. (2) To develop skills and attitudes necessary to do ethnographic research through active participation in all phases of an ethnographic research project. (3) To apply ethnographic methods to the design of a project of interest to each student (ideally relevant to their senior project, thesis or dissertation). Class meetings will consist of lectures to introduce topics and concepts and group discussions to apply the concepts and examine them critically. Students will also work on individual projects for which they will give short oral presentations. The course will collaborate with a community organization, putting ethnographic methods in practice to help answer a need identified by our community partners.

ANTH 4981 Museum Internship (1-6 Credits)

ANTH 4991 Independent Study (1-17 Credits)

ANTH 4995 Independent Research (1-17 Credits)

School of Art and Art History

Office: Shwayder Art Building Mail Code: 2121 E. Asbury Ave., Denver, CO 80208 Phone: 303-871-2846 or 800-876-3323 Email: AboutArt@du.edu (saah-interest@du.edu) Web Site: http://du.edu/art (http://du.edu/art/)

The School of Art and Art History offers two tracks in our Art History MA degree program: Art History and Art History with a Museum Studies concentration. Our program of about 20 students emphasizes a collegial student-faculty atmosphere. The Art History program offers courses in most areas of world art with special emphasis on the arts of Europe, the Americas, the Islamic tradition, and global contemporary art. In addition to our own Vicki Myhren Gallery, our partnerships with the Denver Art Museum and other cultural institutions in Denver provide opportunities for museum internships and exhibition-based courses.

Our graduates are competitive in sought-after positions. Some go on to doctoral studies in the United States or overseas; others hold respected jobs at distinguished art museums or take the road less traveled, entering careers with art-related nonprofit organizations.

At the School of Art and Art History, we offer many advantages:

- · small classes and personal attention
- · in-depth training in Art History and research methods
- · an on-site art gallery
- · practical museum training
- · museum internships in local and national institutions
- a strong alumni network

· vibrant and diverse cultural activities in Denver

Master of Arts in Art History

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Arts in Art History with a Concentration in Museum Studies

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Arts in Art History

Master of Arts in Art History

Degree requirements		
Coursework requirements	S	
Code	Title	Credits
Core coursework require	ements	12
Complete all of the follow	wing courses:	
ARTH 4301	Seminar in Art History Methods	
ARTH 4302	Research Practicum	

ARTH 4995

Total Credits	56
Complete an additional 16 credits in ARTH seminars	
Art History seminars	16
Complete an additional 28 credits in ARTH courses	
Art History courses	28

Minimum credits required for degree: 56 credits

Non-coursework requirements:

- Qualifying Examination
- Language Requirement
- Comprehensive Examination
- Master's Research Paper

Qualifying Examination

A qualifying examination is used by the faculty to determine the newly admitted student's strengths and weaknesses and to facilitate program planning. The exam is normally taken on the Friday before the first week of classes. Incoming graduate students who graduated from the University of Denver with an Art History major within two years of entering the MA program are exempted from taking the Qualifying Exam.

Language Requirement

Demonstration of reading proficiency in one modern foreign language is required for all MA candidates. An exam is offered each quarter by the Department of Languages and Literatures, or the student may take the fourth semester (or sixth quarter) of a college language course and receive a grade of B+ or better to demonstrate reading proficiency. A language should be chosen, in consultation with the graduate adviser, that supports the student's research interests and career plans, keeping in mind that some PhD programs still require French and German. This requirement must be met before the student advances to candidacy.

Comprehensive Examination

The comprehensive examination is designed to evaluate the student's retention and synthesis of Art History course work taken at the University of Denver. Students are encouraged to take the test as soon as possible after the final quarter in which they are enrolled in course work. Planning for this examination takes place under supervision of the graduate adviser.

Master's Research Paper

MA degree students are required to write a research paper of publishable quality. Although work on the master's research paper should not begin prior to completion of the language requirement, students often choose subjects on which they have already conducted some research during prior seminars or lecture classes. Guidelines should be obtained from the School of Art and Art History.

ARTH 3035 Whitewalling: Racial Politics of the Art World (4 Credits)

Aruna D'Souza defines whitewalling as "a neologism that expands in many directions: the literal site of contention, i.e., the white walls of the gallery; the idea of 'blackballing' or excluding someone; the notion of 'whitewashing,' or covering over that which we prefer to ignore or suppress; the idea of putting a wall around whiteness, of fencing it off, of defending it against incursions." By examining the state of the art world through the lens of critical race and ethnic studies, this course will investigate a series of case studies that highlights these many manifestations of whitewalling in modern and contemporary art. Through lectures, readings, discussions, and written assignments, the course aims to explore the following questions: How does race intersect with art and art history? How do the shifting racial politics of the art world map histories of racial construction, systemic oppression, and subversive resistance? Should artistic freedom be prioritized, limited, or censored when an artwork includes harmful racial representations or ideologies? How can art institutions be critiqued as sites of contention? And perhaps most importantly, how can art scholars, workers, and creators collectively move towards a politics of racial justice? In this course, students will not only engage in art historical debates that address the critical role that art has played in shaping perceptions of race and racism, but students will also consider how the art world can provide platforms for anti-racist solidarity and protest.

ARTH 3656 Curatorial Practicum (4 Credits)

Students will work in curatorial teams to plan and execute an effective exhibition of contemporary art. This process may include choosing a theme and selecting works of art, researching artists and themes, budgets, scheduling, developing an exhibition checklist, modeling the gallery, visual exhibition design, conservation and collections management factors, shipping, installation, educational outreach to the public, publicity and other issues related to exhibition planning.

ARTH 3661 Learning in Museums (4 Credits)

Comprehensive introduction to museum education. Examines informal education, learning theories, interactive education, exhibits and programs. Cross-listed with ANTH 3661.

ARTH 3701 Topics in Art History (1-4 Credits)

Selected themes and topics from the history of art. Content changes and course may be repeated to a maximum of 12 credits.

ARTH 3702 Topics in Contemporary Art (4 Credits)

This course offers an in-depth exploration of contemporary art and critical theory from a cross-disciplinary, global perspective beginning in the 1960s. We couple intensive reading and writing assignments to meetings with guest creatives and thinkers, visits to local art spaces, and roundtable discussions about new research. The particular art historical topic varies from year to year.

ARTH 3813 Arts of the American West (4 Credits)

This class covers a wide range of art objects and styles from the 17th century to the present in the West of the United States, from buffalo robe paintings and baskets to cowboy art and contemporary abstract landscapes. Particular attention is paid to the diversity of art traditions--Native American, Spanish and Mexican, European, Asian and Latin American--as they converge in this geographic space.

ARTH 3815 Puritan, Shaker, Hindu: Material Religion in North America (4 Credits)

The diversity of religious experience and spirituality is emphasized in this historical examination of image and artifact in North America. Beginning with sacred indigenous arts and including Puritans, Shakers, Judaism, Mormons, Ghost Dance religion, Buddhists, Hindus, and others, this class considers the ways in which different spiritual worldviews are expressed through and shaped by the art and objects people create and the environments they build. It looks at the encounters between cultures in colonial and post-colonial contexts that result in ever changing material forms of religion. Students learn through slide-lecture-discussions, reading, small group discussions, research papers or presentations, and field trips.

ARTH 3817 Gothic Art (4 Credits)

This course examines the art of the Late Middle Ages in Europe, from roughly 1140 to 1400. Gothic architecture, sculpture, painting, stained glass and the sumptuous arts (metal, textiles) are examined within their broader social, political and religious contexts. Particular attention is paid to the Gothic Cathedral - that quintessential window into the medieval world–its beliefs, aspirations, social and political realities.

ARTH 3818 Art of Renaissance Europe (4 Credits)

This course provides an examination of the artistic cultures in Europe during the Renaissance (15th and 16th centuries). Depending upon the quarter, this course will be a general survey of European art during the Renaissance or a more focused exploration of a sub-period, such as painting in fifteenth-century Italy. Chronological and geographic factors determine the overall theme and structure of the course. Students gain both a sound knowledge of key artistic monuments of the period, as well as a conceptual framework according to which they may organize their knowledge. This class may be repeated for a maximum of 8 credits.

ARTH 3822 Northern Renaissance Art (4 Credits)

This course explores the dramatic developments in the arts (particularly panel painting, manuscript illumination and sculpture) in Northern Europe from around 1350 to 1550. From lavishly decorated Books of Hours and the development of stunningly naturalistic oil paintings on panel in the early 15th century through the development of printing and the rise of self-portraiture, genre and landscape depictions, this class traces the important role played by Dutch, Flemish, German and French artists in the transition from late medieval to early modern artistic forms and practices. The role of art in shaping and expressing religious, civic, political and economic concepts are explored, as well as the rise of the social and intellectual standing of the artist. Among the artists examined include Jan van Eyck, Rogier van der Weyden, Albrecht Dürer, Hieronymus Bosch and Pieter Bruegel the Elder.

ARTH 3823 17th-Century European Art (4 Credits)

This course considers European arts of the 17th century. Depending upon the quarter it may be a general survey of European art during the seventeenth century or a more focused exploration of a sub-period, such as Italian Baroque or the Old Dutch Masters: Rembrandt, Vermeer and Frans Hals. This class may be repeated for a maximum of 8 credits.

ARTH 3825 Abstract Expressionism (4 Credits)

In the years immediately following World War II, American art flourished through a generation of artists whose work successfully moved beyond (and at its best, matched) the substantial innovations of modern artists working in Europe around the time of World War I. From richly varied backgrounds and equipped with a deep understanding of art history, these artists forged careers during the Depression and, though fiercely independent, united in the late 1940s with the goal of establishing a new American modern art. Their monumental, highly singular, expressive abstractions (and near-abstractions) gave rise to the movement called Abstract Expressionism, which dominated American painting in the 1950s and beyond.

ARTH 3832 19th-Century Art (4 Credits)

This course surveys the major art movements in Europe from the late 18th century to the end of the 19th century. Major painters, sculptors, printmakers and architects of the following movements will be presented: Neo-classicism, Romanticism, Academic Painting, Realism, the Pre-Raphaelites, Impressionism, Post-Impressionism, Symbolism and Art Nouveau. Their works will be studied in light of the social, political and cultural milieu in which they appeared. Special attention will be paid to representations of race, class, gender and colonialism.

ARTH 3834 Global Contemporary Art (4 Credits)

This class explores contemporary art, including but not limited to painting, sculpture, performance art, installations, and new media, through the lenses of identity, the body, time, place, language, and spirituality. These narratives provide threads of continuity across time and place, but we will also focus on individual artistic interpretations as we delve deeper into cultural specificities and audience reception around the world. We will identify and analyze connections between recent art theoretical perspectives and the emergence of various art trends. This course considers the role of the international art market, global art fairs, artist retrospectives, and recent museum and gallery exhibitions as participatory elements in the construction and discussion of contemporary art.

ARTH 3838 Connoisseurship (4 Credits)

In this class the historical roots, theoretical and philosophical underpinnings, and actual practice of connoisseurship are studied using objects from the museum's collection.

ARTH 3839 Topics in Modern Art (4 Credits)

Selected themes and topics from the 18th century to the present. Topics change, and the course may be repeated to a maximum of 12 credits.

ARTH 3840 Sacred Arts of Asia (4 Credits)

This course explores the sacred art and architecture of Asia, including but not limited to India, China, and Japan. Major religious traditions, including Buddhism, Hinduism, and Islam, are viewed through the lens of artistic development; indigenous religious traditions and philosophical constructs, including Shintoism, Daoism, Confucianism, and Bon are also explored for their influence in art, architecture, and visual culture more broadly in and between Asian regions.

ARTH 3862 Olmec to Aztec: Mesoamerica (4 Credits)

This course is an introduction to the art and archaeology of the indigenous peoples of Mesoamerica from about 2000 BC to AD 1521. The course explores the early royal art of the Olmec, the colossal pyramids of Teotihuacan, the manuscripts of the Mixtec, and the imperial power of the Aztecs. This class presents a timeline of Mesoamerica and investigates how the various civilizations of Mesoamerica shared aspects of world-view, cosmology and daily life. Students will be able to identify and discuss how these elements manifested in the art and architecture of Mesoamerican cultures. Furthermore, the course investigates issues of shamanism, kingship and power, warfare, gender, and human sacrifice.

ARTH 3863 Kings and Cosmology: Maya Art (4 Credits)

This course is an introduction to the art and archaeology of the Maya from about 300 BCE to 1200 CE, although the beliefs and traditions of the living Maya will inform this study of the past. The Maya are perhaps the most famous of the several cultures comprising what is known as Mesoamerica. A highly advanced culture, they built soaring temples, carved elaborate portraits of their kings and developed a complex writing system including a calendar. The course explores these things with a constant eye to understanding the Maya worldview, cosmology and daily life. By the conclusion of the class, students should be able to read their intricate pictures, discuss the strategies of powerful Maya rulers and understand how Maya art and architecture reflect their concepts of time and the cosmos.

ARTH 3864 Buddhism(s) and Arts (4 Credits)

This survey examines the history, practices, ritual contexts, aesthetics and artistic traditions of Buddhism including architecture, calligraphy, sculpture and painting, in terms of its social and historical context, political and religious functions, as well as issues including artistic production, changing techniques and symbols, and the market/audience. The primary goal is to understand Buddhism as reflected in art and culture.

ARTH 3867 The Circle and the Four Corners: Native North American Art (4 Credits)

This course is designed as an introduction to the art and architecture of the native peoples of North America from the earliest signs of humans in North America to the present. Cultures covered include those from the Southwest, the Northwest, the Southeast Ceremonial Complex, the Plains and contemporary Native American artists. By the conclusion of the class, students will understand the cultural sequence and geographic dispersion of native North America. Students will also understand how the various civilizations of North America shared aspects of world-view, cosmology and daily life, and be able to identify and discuss how these elements manifested in the art and architecture of native North American cultures.

ARTH 3868 Art of the Andes (4 Credits)

This course is designed as an introduction to the art and architecture of the native Pre-Columbian peoples of the Andes. Cultures covered include Chavin, Nasca, Wari and the Inca.

ARTH 3871 Women in Art (4 Credits)

This course considers the roles of women in art and explores the impact of race, class and gender on art produced from the Middle Ages to the present with discussions of women artists, women patrons and images of women. Cross listed with GWST 3871.

ARTH 3872 Introduction to Conservation (4 Credits)

This lecture course familiarizes the student with the concepts and challenges of conservation, its role in museums and the care of collections. Specific emphasis is given to the materials, structure, deterioration and preservation of material culture. Field trips to various museums and/or workshops to make appropriate display mounts and storage containers enhance the understanding gained from readings and lectures.

ARTH 3875 History of Collections (4 Credits)

This course traces the history of collections from the Renaissance to the present, addressing the interconnections between artists, patrons, dealers, art markets, provenance, connoisseurship and the historical development of museums and private collections. Each week's readings of journal articles and chapters focus on different types of collections or themes, including royal and imperial collections, cabinets of curiosities, excavating and transporting antiquities, British country estates and the Grand Tour, the establishment of national museums, the relationship between American collectors and dealers, ethnographic objects in Western collections, Nazi looting, restorers and forgers, and artists' collections, to name a few.

ARTH 3880 Mosques and Aniconism: Islamic Art and Architecture 650-1250 (4 Credits)

What is 'Islamic' in Islamic art? An introduction to art and architecture in the Islamic lands from the days of the Prophet Muhammad in the 7th century until the Mongol conquest of the Middle East in the mid-13th century. The course surveys mosques, palaces, madrasas, and tombs, and also calligraphy, sculpture, ceramics, and painting in historical and literary contexts. It covers a vast geographical area, from Spain in the west to Iran and Central Asia in the east, and discusses both common and unique characteristics of architecture and figurative representations in these regions. Emphasis will be given to the early Islamic period in Greater Syria and to artists' response to Byzantine and Sassanid (pre-Islamic Persian) art and architecture.

ARTH 3881 Dragons and Sultans: Islamic Art and Architecture 1250-1600 (4 Credits)

Art and architecture in the Islamic lands from Genghis Khan in the 13th century to the Ottoman Sultan Suleyman the Magnificent in the 16th century. The course consists of three parts. First, it examines the changes that occurred in Islamic art as a result of artists' acquaintance with East Asian art and culture (14th century). Second, it discusses art and architecture in Central Asia and Afghanistan under Timurid rule (late14th-15th century), followed by an overview of the artistic achievements in the Early Modern Islamic lands under the Ottomans, Safavids, and Mughals (16th century). The course explores works of art in historical, cultural, and literary contexts, and points to the unique characteristics of each geographical region, as well as to pan-Islamic form and content. Among the topics that will be discussed: the architect Sinan and his legacy, the response of Islamic painting to European art, and representations of royal and religious concepts.

ARTH 3910 Art History Travel (4 Credits)

A travel course to selected locations to study major monuments and collections of art and architecture. Location and content change. This class may be repeated for a maximum of 8 credits. Prerequisite: instructor's permission.

ARTH 3991 Independent Study (1-10 Credits)

This class should be used for individual study of a special topic that is not offered in the art history curriculum described in this catalog. Permission/ registration form is available from the Office of the Registrar.

ARTH 4301 Seminar in Art History Methods (4 Credits)

This seminar considers the history of art history and the development of various methods that art historians use to interpret and understand art. Required of all MA candidates in art history.

ARTH 4302 Research Practicum (4 Credits)

The major goal of this course is to learn methods and resources for doing primary research in the history of art. In this practicum, students will gain practical research experience by carrying out original research on two projects: research on an object from the DU collection and research on a contemporary artist. Students will learn to track down biographical information, locate and examine works of art, and reconstruct historical context using archival, material, human, and electronic sources. Students will learn to develop research questions, create and follow through on a research strategy, organize research data, and document the research process. This course will help you prepare for many aspects of your graduate papers, including the Master's Research Paper. Required of all MA students in art history.

ARTH 4312 Seminar: Indigenous American Art (4 Credits)

Selected topics in Indigenous American Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4313 Seminar in Islamic Art (4 Credits)

Selected topics in Islamic Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4314 Seminar in Medieval Art (4 Credits)

Selected topics in Medieval Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4321 Seminar in Renaissance Art (4 Credits)

Selected topics in Renaissance Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4333 Seminar in 20th Century Art (4 Credits)

Selected topics in 20th century Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4334 Selected Topics in Contemporary Art (4 Credits)

Selected topics in contemporary art. Advanced research papers and presentations. Content changes. May be repeated for a maximum of 8 credits.

ARTH 4336 Seminar in American Art (4 Credits)

Selected topics in American Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4651 Museum Methods and Principles (4 Credits)

This class surveys the major activities, goals, and organization of the art museum within today's world. Students meet with a variety of museum professionals to discuss the changing dynamics within art museums, as well as ethical and practical issues of museum work. The class reads both classic and current literature on museum issues and practice, and participates in research, collection, and exhibition projects. Required of all M.A. art history students pursuing the Museum Studies option.

ARTH 4652 Museum Internship (0-10 Credits)

Arranged internship in student's area of specialization. Students should take ARTH 4651 Museum Methods and Principles first. Prerequisite: instructor's permission.

ARTH 4801 World Art I for Graduates (0 Credits)

Survey of World Art Prehistory-1000 for graduate students who are required to take this course due to performance on the art history Qualifying Exam.

ARTH 4802 World Art II for Graduates (0 Credits)

Survey of World Art 1000-1700 for graduate students who are required to take this course due to performance on the art history Qualifying Exam.

ARTH 4803 World Art III for Graduates (0 Credits)

Survey of World Art 1700-present for graduate students who are required to take this course due to performance on the art history Qualifying Exam.

ARTH 4991 Independent Study (1-10 Credits)

This class should be used for individual study of a special topic that is not offered in the art history curriculum described in this catalog. Permission/ registration form is available from the Office of the Registrar.

ARTH 4995 Independent Research (4 Credits)

Students should see their advisor for guidelines regarding the Master's Research Paper class.

Courses

ARTH 3035 Whitewalling: Racial Politics of the Art World (4 Credits)

Aruna D'Souza defines whitewalling as "a neologism that expands in many directions: the literal site of contention, i.e., the white walls of the gallery; the idea of 'blackballing' or excluding someone; the notion of 'whitewashing,' or covering over that which we prefer to ignore or suppress; the idea of putting a wall around whiteness, of fencing it off, of defending it against incursions." By examining the state of the art world through the lens of critical race and ethnic studies, this course will investigate a series of case studies that highlights these many manifestations of whitewalling in modern and contemporary art. Through lectures, readings, discussions, and written assignments, the course aims to explore the following questions: How does race intersect with art and art history? How do the shifting racial politics of the art world map histories of racial construction, systemic oppression, and subversive resistance? Should artistic freedom be prioritized, limited, or censored when an artwork includes harmful racial representations or ideologies? How can art institutions be critiqued as sites of contention? And perhaps most importantly, how can art scholars, workers, and creators collectively move towards a politics of racial justice? In this course, students will not only engage in art historical debates that address the critical role that art has played in shaping perceptions of race and racism, but students will also consider how the art world can provide platforms for anti-racist solidarity and protest.

ARTH 3656 Curatorial Practicum (4 Credits)

Students will work in curatorial teams to plan and execute an effective exhibition of contemporary art. This process may include choosing a theme and selecting works of art, researching artists and themes, budgets, scheduling, developing an exhibition checklist, modeling the gallery, visual exhibition design, conservation and collections management factors, shipping, installation, educational outreach to the public, publicity and other issues related to exhibition planning.

ARTH 3661 Learning in Museums (4 Credits)

Comprehensive introduction to museum education. Examines informal education, learning theories, interactive education, exhibits and programs. Cross-listed with ANTH 3661.

ARTH 3701 Topics in Art History (1-4 Credits)

Selected themes and topics from the history of art. Content changes and course may be repeated to a maximum of 12 credits.

ARTH 3702 Topics in Contemporary Art (4 Credits)

This course offers an in-depth exploration of contemporary art and critical theory from a cross-disciplinary, global perspective beginning in the 1960s. We couple intensive reading and writing assignments to meetings with guest creatives and thinkers, visits to local art spaces, and roundtable discussions about new research. The particular art historical topic varies from year to year.

ARTH 3813 Arts of the American West (4 Credits)

This class covers a wide range of art objects and styles from the 17th century to the present in the West of the United States, from buffalo robe paintings and baskets to cowboy art and contemporary abstract landscapes. Particular attention is paid to the diversity of art traditions--Native American, Spanish and Mexican, European, Asian and Latin American--as they converge in this geographic space.

ARTH 3815 Puritan, Shaker, Hindu: Material Religion in North America (4 Credits)

The diversity of religious experience and spirituality is emphasized in this historical examination of image and artifact in North America. Beginning with sacred indigenous arts and including Puritans, Shakers, Judaism, Mormons, Ghost Dance religion, Buddhists, Hindus, and others, this class considers the ways in which different spiritual worldviews are expressed through and shaped by the art and objects people create and the environments they build. It looks at the encounters between cultures in colonial and post-colonial contexts that result in ever changing material forms of religion. Students learn through slide-lecture-discussions, reading, small group discussions, research papers or presentations, and field trips.

ARTH 3817 Gothic Art (4 Credits)

This course examines the art of the Late Middle Ages in Europe, from roughly 1140 to 1400. Gothic architecture, sculpture, painting, stained glass and the sumptuous arts (metal, textiles) are examined within their broader social, political and religious contexts. Particular attention is paid to the Gothic Cathedral - that quintessential window into the medieval world-its beliefs, aspirations, social and political realities.

ARTH 3818 Art of Renaissance Europe (4 Credits)

This course provides an examination of the artistic cultures in Europe during the Renaissance (15th and 16th centuries). Depending upon the quarter, this course will be a general survey of European art during the Renaissance or a more focused exploration of a sub-period, such as painting in fifteenth-century Italy. Chronological and geographic factors determine the overall theme and structure of the course. Students gain both a sound knowledge of key artistic monuments of the period, as well as a conceptual framework according to which they may organize their knowledge. This class may be repeated for a maximum of 8 credits.

ARTH 3822 Northern Renaissance Art (4 Credits)

This course explores the dramatic developments in the arts (particularly panel painting, manuscript illumination and sculpture) in Northern Europe from around 1350 to 1550. From lavishly decorated Books of Hours and the development of stunningly naturalistic oil paintings on panel in the early 15th century through the development of printing and the rise of self-portraiture, genre and landscape depictions, this class traces the important role played by Dutch, Flemish, German and French artists in the transition from late medieval to early modern artistic forms and practices. The role of art in shaping and expressing religious, civic, political and economic concepts are explored, as well as the rise of the social and intellectual standing of the artist. Among the artists examined include Jan van Eyck, Rogier van der Weyden, Albrecht Dürer, Hieronymus Bosch and Pieter Bruegel the Elder.

ARTH 3823 17th-Century European Art (4 Credits)

This course considers European arts of the 17th century. Depending upon the quarter it may be a general survey of European art during the seventeenth century or a more focused exploration of a sub-period, such as Italian Baroque or the Old Dutch Masters: Rembrandt, Vermeer and Frans Hals. This class may be repeated for a maximum of 8 credits.

ARTH 3825 Abstract Expressionism (4 Credits)

In the years immediately following World War II, American art flourished through a generation of artists whose work successfully moved beyond (and at its best, matched) the substantial innovations of modern artists working in Europe around the time of World War I. From richly varied backgrounds and equipped with a deep understanding of art history, these artists forged careers during the Depression and, though fiercely independent, united in the late 1940s with the goal of establishing a new American modern art. Their monumental, highly singular, expressive abstractions (and near-abstractions) gave rise to the movement called Abstract Expressionism, which dominated American painting in the 1950s and beyond.

ARTH 3832 19th-Century Art (4 Credits)

This course surveys the major art movements in Europe from the late 18th century to the end of the 19th century. Major painters, sculptors, printmakers and architects of the following movements will be presented: Neo-classicism, Romanticism, Academic Painting, Realism, the Pre-Raphaelites, Impressionism, Post-Impressionism, Symbolism and Art Nouveau. Their works will be studied in light of the social, political and cultural milieu in which they appeared. Special attention will be paid to representations of race, class, gender and colonialism.

ARTH 3834 Global Contemporary Art (4 Credits)

This class explores contemporary art, including but not limited to painting, sculpture, performance art, installations, and new media, through the lenses of identity, the body, time, place, language, and spirituality. These narratives provide threads of continuity across time and place, but we will also focus on individual artistic interpretations as we delve deeper into cultural specificities and audience reception around the world. We will identify and analyze connections between recent art theoretical perspectives and the emergence of various art trends. This course considers the role of the international art market, global art fairs, artist retrospectives, and recent museum and gallery exhibitions as participatory elements in the construction and discussion of contemporary art.

ARTH 3838 Connoisseurship (4 Credits)

In this class the historical roots, theoretical and philosophical underpinnings, and actual practice of connoisseurship are studied using objects from the museum's collection.

ARTH 3839 Topics in Modern Art (4 Credits)

Selected themes and topics from the 18th century to the present. Topics change, and the course may be repeated to a maximum of 12 credits.

ARTH 3840 Sacred Arts of Asia (4 Credits)

This course explores the sacred art and architecture of Asia, including but not limited to India, China, and Japan. Major religious traditions, including Buddhism, Hinduism, and Islam, are viewed through the lens of artistic development; indigenous religious traditions and philosophical constructs, including Shintoism, Daoism, Confucianism, and Bon are also explored for their influence in art, architecture, and visual culture more broadly in and between Asian regions.

ARTH 3862 Olmec to Aztec: Mesoamerica (4 Credits)

This course is an introduction to the art and archaeology of the indigenous peoples of Mesoamerica from about 2000 BC to AD 1521. The course explores the early royal art of the Olmec, the colossal pyramids of Teotihuacan, the manuscripts of the Mixtec, and the imperial power of the Aztecs. This class presents a timeline of Mesoamerica and investigates how the various civilizations of Mesoamerica shared aspects of world-view, cosmology and daily life. Students will be able to identify and discuss how these elements manifested in the art and architecture of Mesoamerican cultures. Furthermore, the course investigates issues of shamanism, kingship and power, warfare, gender, and human sacrifice.

ARTH 3863 Kings and Cosmology: Maya Art (4 Credits)

This course is an introduction to the art and archaeology of the Maya from about 300 BCE to 1200 CE, although the beliefs and traditions of the living Maya will inform this study of the past. The Maya are perhaps the most famous of the several cultures comprising what is known as Mesoamerica. A highly advanced culture, they built soaring temples, carved elaborate portraits of their kings and developed a complex writing system including a calendar. The course explores these things with a constant eye to understanding the Maya worldview, cosmology and daily life. By the conclusion of the class, students should be able to read their intricate pictures, discuss the strategies of powerful Maya rulers and understand how Maya art and architecture reflect their concepts of time and the cosmos.

ARTH 3864 Buddhism(s) and Arts (4 Credits)

This survey examines the history, practices, ritual contexts, aesthetics and artistic traditions of Buddhism including architecture, calligraphy, sculpture and painting, in terms of its social and historical context, political and religious functions, as well as issues including artistic production, changing techniques and symbols, and the market/audience. The primary goal is to understand Buddhism as reflected in art and culture.

ARTH 3867 The Circle and the Four Corners: Native North American Art (4 Credits)

This course is designed as an introduction to the art and architecture of the native peoples of North America from the earliest signs of humans in North America to the present. Cultures covered include those from the Southwest, the Northwest, the Southeast Ceremonial Complex, the Plains and contemporary Native American artists. By the conclusion of the class, students will understand the cultural sequence and geographic dispersion of native North America. Students will also understand how the various civilizations of North America shared aspects of world-view, cosmology and daily life, and be able to identify and discuss how these elements manifested in the art and architecture of native North American cultures.

ARTH 3868 Art of the Andes (4 Credits)

This course is designed as an introduction to the art and architecture of the native Pre-Columbian peoples of the Andes. Cultures covered include Chavin, Nasca, Wari and the Inca.

ARTH 3871 Women in Art (4 Credits)

This course considers the roles of women in art and explores the impact of race, class and gender on art produced from the Middle Ages to the present with discussions of women artists, women patrons and images of women. Cross listed with GWST 3871.

ARTH 3872 Introduction to Conservation (4 Credits)

This lecture course familiarizes the student with the concepts and challenges of conservation, its role in museums and the care of collections. Specific emphasis is given to the materials, structure, deterioration and preservation of material culture. Field trips to various museums and/or workshops to make appropriate display mounts and storage containers enhance the understanding gained from readings and lectures.

ARTH 3875 History of Collections (4 Credits)

This course traces the history of collections from the Renaissance to the present, addressing the interconnections between artists, patrons, dealers, art markets, provenance, connoisseurship and the historical development of museums and private collections. Each week's readings of journal articles and chapters focus on different types of collections or themes, including royal and imperial collections, cabinets of curiosities, excavating and transporting antiquities, British country estates and the Grand Tour, the establishment of national museums, the relationship between American collectors and dealers, ethnographic objects in Western collections, Nazi looting, restorers and forgers, and artists' collections, to name a few.

ARTH 3880 Mosques and Aniconism: Islamic Art and Architecture 650-1250 (4 Credits)

What is 'Islamic' in Islamic art? An introduction to art and architecture in the Islamic lands from the days of the Prophet Muhammad in the 7th century until the Mongol conquest of the Middle East in the mid-13th century. The course surveys mosques, palaces, madrasas, and tombs, and also calligraphy, sculpture, ceramics, and painting in historical and literary contexts. It covers a vast geographical area, from Spain in the west to Iran and Central Asia in the east, and discusses both common and unique characteristics of architecture and figurative representations in these regions. Emphasis will be given to the early Islamic period in Greater Syria and to artists' response to Byzantine and Sassanid (pre-Islamic Persian) art and architecture.

ARTH 3881 Dragons and Sultans: Islamic Art and Architecture 1250-1600 (4 Credits)

Art and architecture in the Islamic lands from Genghis Khan in the 13th century to the Ottoman Sultan Suleyman the Magnificent in the 16th century. The course consists of three parts. First, it examines the changes that occurred in Islamic art as a result of artists' acquaintance with East Asian art and culture (14th century). Second, it discusses art and architecture in Central Asia and Afghanistan under Timurid rule (late14th-15th century), followed by an overview of the artistic achievements in the Early Modern Islamic lands under the Ottomans, Safavids, and Mughals (16th century). The course explores works of art in historical, cultural, and literary contexts, and points to the unique characteristics of each geographical region, as well as to pan-Islamic form and content. Among the topics that will be discussed: the architect Sinan and his legacy, the response of Islamic painting to European art, and representations of royal and religious concepts.

ARTH 3910 Art History Travel (4 Credits)

A travel course to selected locations to study major monuments and collections of art and architecture. Location and content change. This class may be repeated for a maximum of 8 credits. Prerequisite: instructor's permission.

ARTH 3991 Independent Study (1-10 Credits)

This class should be used for individual study of a special topic that is not offered in the art history curriculum described in this catalog. Permission/ registration form is available from the Office of the Registrar.

ARTH 4301 Seminar in Art History Methods (4 Credits)

This seminar considers the history of art history and the development of various methods that art historians use to interpret and understand art. Required of all MA candidates in art history.

ARTH 4302 Research Practicum (4 Credits)

The major goal of this course is to learn methods and resources for doing primary research in the history of art. In this practicum, students will gain practical research experience by carrying out original research on two projects: research on an object from the DU collection and research on a contemporary artist. Students will learn to track down biographical information, locate and examine works of art, and reconstruct historical context using archival, material, human, and electronic sources. Students will learn to develop research questions, create and follow through on a research strategy, organize research data, and document the research process. This course will help you prepare for many aspects of your graduate papers, including the Master's Research Paper. Required of all MA students in art history.

ARTH 4312 Seminar: Indigenous American Art (4 Credits)

Selected topics in Indigenous American Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4313 Seminar in Islamic Art (4 Credits)

Selected topics in Islamic Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4314 Seminar in Medieval Art (4 Credits)

Selected topics in Medieval Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4321 Seminar in Renaissance Art (4 Credits)

Selected topics in Renaissance Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4333 Seminar in 20th Century Art (4 Credits)

Selected topics in 20th century Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4334 Selected Topics in Contemporary Art (4 Credits)

Selected topics in contemporary art. Advanced research papers and presentations. Content changes. May be repeated for a maximum of 8 credits.

ARTH 4336 Seminar in American Art (4 Credits)

Selected topics in American Art. Advanced research papers and presentations. Content changes. May be repeated to a maximum of 8 credits.

ARTH 4651 Museum Methods and Principles (4 Credits)

This class surveys the major activities, goals, and organization of the art museum within today's world. Students meet with a variety of museum professionals to discuss the changing dynamics within art museums, as well as ethical and practical issues of museum work. The class reads both classic and current literature on museum issues and practice, and participates in research, collection, and exhibition projects. Required of all M.A. art history students pursuing the Museum Studies option.

ARTH 4652 Museum Internship (0-10 Credits)

Arranged internship in student's area of specialization. Students should take ARTH 4651 Museum Methods and Principles first. Prerequisite: instructor's permission.

ARTH 4801 World Art I for Graduates (0 Credits)

Survey of World Art Prehistory-1000 for graduate students who are required to take this course due to performance on the art history Qualifying Exam.

ARTH 4802 World Art II for Graduates (0 Credits)

Survey of World Art 1000-1700 for graduate students who are required to take this course due to performance on the art history Qualifying Exam.

ARTH 4803 World Art III for Graduates (0 Credits)

Survey of World Art 1700-present for graduate students who are required to take this course due to performance on the art history Qualifying Exam.

ARTH 4991 Independent Study (1-10 Credits)

This class should be used for individual study of a special topic that is not offered in the art history curriculum described in this catalog. Permission/ registration form is available from the Office of the Registrar.

ARTH 4995 Independent Research (4 Credits)

Students should see their advisor for guidelines regarding the Master's Research Paper class.

Economics

Office: Sturm Hall, Room 246, 2000 E. Asbury Ave., Denver, CO 80208 Phone: 303-871-2685 Email: Economics@du.edu

Graduate Education in Economics

If you're looking for a career as a business or government economist, the University of Denver's MA in Economics program offers excellent preparation.

Our MA program helps you build the solid skills and respected credentials that employers want. The degree also prepares students for doctoral studies, particularly if they want to explore alternative approaches and develop further insights about economics before entering doctoral programs.

We also offer a BA/MS dual-degree program ("4+1") for current undergraduate majors at DU. Students who meet the admissions requirements can start taking graduate-level ECON courses during their junior and senior years and will complete the MS in Economics and Social Policy during their fifth year at DU.

For individuals looking for a less committing entrance into graduate studies in Economics, we offer a Specialized Graduate Certificate.

Information for applicants to one of our graduate programs: https://liberalarts.du.edu/economics/admission-aid/graduate-applicants (https://liberalarts.du.edu/economics/admission-aid/graduate-applicants/)

Our department's strengths

- Macroeconomics
- · Economics of money, banking and finance
- · Environmental economics
- · Health economics
- · International and development economics
- · Alternative approaches to economics
- History of economic thought
- Econometrics
- · Economics of gender / feminist economics

- · Economics of technology and innovation
- Urban economics

Master of Arts in Economics

- 45 credits of graduate coursework
- Thesis Required

Masters of Science in Economics and Social Policy

- Undergraduate-Graduate Dual-Degree Program for DU Economics Majors
- 45 credits of graduate coursework
- No Thesis Required

Specialized Graduate Certificate in Economics

- 16 credits of graduate coursework
- No Thesis Required

Master of Arts in Economics

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Science in Economics

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Science in Economics and Social Policy

Degree and GPA Requirements

All 3000-level courses taken for credit towards the MS must be taken for GR credit: students must inform the instructor and the registrar that course is being taken for GR credit, and students must meet the graduate-level expectations set by the instructor. Student who take ECON 3670 or ECON 3850 for undergraduate (UG) credit meet the course requirement of the MS but need take an additional graduate-level (GR) course to meet the credit requirement.

- 2 The comprehensive exam / internship requirement will be graded P/F and will not affect the minimum GPA calculation.
- 3 Elective courses can be 3000-level ECON courses taken for graduate (GR) credit or or 4000-level ECON courses. When taking a 3000-level course, confirm with the instructor the course can be taken for GR credit.

Non-coursework Requirements

 Demonstrated competency using the tools (including relevant guantitative approaches) and concepts of economics to analyze and assesses social policy options. This is assessed either via a comprehensive exam or a policy impact assessment that the student submits to the department after completion of a policy-oriented internship.

Admissions Requirements

The MS in Economics and Social Policy is only available as a dual-degree program in combination with the BA in Economics.

- · Current undergraduate student at the University of Denver pursuing the BA in Economics (declared first or second major must be economics).
- · Completion of at least 20 credits worth of ECON courses with a GPA in the Economics major of 3.5 or greater.
- · Application must be submitted before the end of first quarter as a senior (before the completion of 135 credits towards the BA degree).
- No GRE or other standardized test required.

Specialized Graduate Certificate Program

Specialized Graduate Certificate in Economics

This Specialized Graduate Certificate is earned by taking a combination of foundational theory courses and electives that allow some customization. It certifies that the recipient has graduate-level training in at least one core area of economics (microeconomics or macroeconomics), the historical context which lead to the development of contemporary economic theory and its alternatives, and up to two topical concentrations with current policy implications.

Required Coursework Code	Title	Credits
Required Courses		8
ECON 4050	Origins of Modern Economics	
Choice of either:		
ECON 4020	Adv Macroeconomic Theory	
ECON 4030	Advanced Microeconomic Theory	
Elective Courses		8

Student chooses two (2) graduate-level elective courses. ¹

Total Credits

1

3000-level ECON courses taken for graduate-credit (GR) and 4000-level ECON courses can count as electives. When registering for a 3000-level course, confirm with the instructor that the course can be taken for GR credit.

Non-Coursework Requirements

Must maintain a cumulative a GPA of 3.0 across ECON courses taken for graduate credit towards completion of the specialized graduate certificate.

Degree Credits

- · Undergraduate credit reduction with dual degree: 20 (163 total undergraduate credits required instead of 183)
- · Graduate credits required: 45 (no reduction in graduate credits required for the MS)
- · Minimum credits required with dual degree: 208 (total 79 ECON credits)

Undergraduate Program (years 1-4)

ECON 3040 Marxian Political Economy (4 Credits)

An exposition of Marx's theory of value through a detailed reading of Capital, vol. I. Excerpts from other readings by Marx, and some of the relevant secondary literature used. Restriction: junior standing. Prerequisite: ECON 2020 or ECON 2030.

12

ECON 3075 Marxism (4 Credits)

This course is a survey in the theoretical and political work influenced by the writings of 19th century philosopher and economist, Karl Marx. The course covers both the historical traditions in Marxism in the 19th, 20th, and 21st century as well as the geographical traditions of these time periods in France, Germany, England, Italy, Russia, China, and America. It is not necessary that students have a prior background in Marx's work, but it is highly recommended. Requires junior standing or above. Cross listed with PHIL 3075.

ECON 3110 European Economic History (4 Credits)

The emergence of capitalism from feudal society; the Industrial Revolution, English capitalism; European industrialization; state and economy in capitalism; 20th-century Europe and the global economy. Restriction: junior standing. Prerequisite: ECON 2020 or ECON 2030.

ECON 3500 Economic Development (4 Credits)

Careful re-examination of the works of the prominent development economists of the immediate postwar decades to critically shed light on the treatment of topical development problems by modern economists. Restriction: junior standing. Prerequisite: ECON 2020 or 2030.

ECON 3600 International Monetary Relations (4 Credits)

Theory, policy, and history of international organization of money and finance; open-economy macroeconomics: balance of payments, exchange rate dynamics, monetary policy effectiveness. Cross-listed with INTS 3600. Restriction: junior standing. Prerequisite: ECON 2030.

ECON 3701 Topics in Economics (4 Credits)

Specialized topics in Economics. Check with the Department of Economics or the Schedule of Classes for further information.

ECON 3991 Independent Study (1-8 Credits)

Prerequisites: ECON 1030.

ECON 3995 Independent Research (1-4 Credits)

This research project is based on a topic that the student picks in consultation with the chair of the economics department. During the consultation process a faculty supervisor is assigned to work with the student throughout the research process. The topic is preferably one that requires the student to demonstrate her/his ability to apply what he/she has learned in the intermediate-level required courses for the economics major. Restriction: senior standing.

ECON 4020 Adv Macroeconomic Theory (4 Credits)

Determinants of national income and its components and of the level of employment and the general price level; also examines business cycles and alternative macroeconomic theories.

ECON 4030 Advanced Microeconomic Theory (4 Credits)

The course covers a broad range of topics in mainstream microeconomic theory, which is based on individual maximizing behavior under constraints. Topics include Games and the role of institutions, General Equilibrium Theory, Externalities, and Incomplete Contracts, and more. The focus of the class is twofold: to understand the modeling foundations and underlying assumptions, and the limitation they imply; and to gain competence working through microeconomic models to evaluate their implications in terms of economic efficiency, social welfare, and distribution.

ECON 4050 Origins of Modern Economics (4 Credits)

This course covers the development of economic theory from the decline of the classical school through the emergence of the Keynesian theory and investigates in detail the structure of the neoclassical theory and the degree to which Keynesian economics provides an alternative. We examine why economists thought that certain theoretical frameworks were better than others and what problems skill remain.

ECON 4110 European Economic History (4 Credits)

The emergence of capitalism from feudal society; the Industrial Revolution, English capitalism; European industrialization; state and economy in capitalism; 20th-century Europe and the global economy.

ECON 4460 Advanced Topics on Monetary Theory and Policy (4 Credits)

Studies the interaction between money and the economy. Examines the workings of the financial institutions and how they affect the economy. Looks at the questions of what serves as money, what determines interest rates, and how the central bank conducts monetary policy and its effect on the performance of the economy.

ECON 4480 Money & Financial Markets (4 Credits)

Examines workings of the money and financial markets and their relation to the monetary system and to the macroeconomy.

ECON 4590 Urban Economics (4 Credits)

Covers topics and issues of economic growth and decline in metropolitan areas, emphasizing urban economic issues. A broad range of policy areas is discussed, including labor market policy, welfare reform, housing policy, racial segregation, transportation, and environmental policy, among others.

ECON 4610 International Trade Theory & Policy (4 Credits)

Examines topical trade issues confronting the United States, policies proposed to tackle them, and the theoretical underpinnings of these policies. Studies how those policies could affect the less developed countries as determined by the environment established under the World Trade Organization.

ECON 4670 Econometrics: Multivariate Regression Analysis for Economists (4 Credits)

This course develops the theoretical foundations of ordinary least squares (OLS) regression analysis and teaches students how to specify, estimate, and interpret multivariate regression models. Students have to apply what they have learned using a popular software package used for econometrics and real data. Special topics also covered include regression models that include dummy variables, log-linear models, fixed effects models, a brief discussion of instrumental variables, and an introduction to time-series analysis and forecasting. Cross-listed with ECON 3670.

ECON 4701 Topics in Economics (4 Credits)

Specialized topics in Economics.

ECON 4740 Health Economics (4 Credits)

This course is designed to study the nature of the organization of health care production, delivery and utilization according to economic theory. It introduces the up-to-date problems and issues in the U.S. health care system by studying demand for and supply of health care services, health care production and costs, and market analysis of health care industry. Important parties playing roles in health care industry such as private health insurance firms, physicians, pharmaceutical industry, and hospital services will be studied in detail. In addition, the course deals with the role of government in health care industry and various health care reforms proposed in the U.S.

ECON 4850 Mathematics for Economists (4 Credits)

Graduate level equivalent of ECON 3850.

ECON 4900 Growth, Technology and Economic Policy (4 Credits)

This course will introduce students to innovation dynamics – technological change as the foundation for the growth of and structural changes in economic activity - through the lenses of 1) economic theory, as evolutionary economics, in particular original institutional economics and neo-Schumpeterian economics, as well as Marxian themes around dynamics of change in economies and societies; 2) economic history, to further underline the nature of innovation as a social phenomenon that has impacted technological capability and economic activity, in scope, reach, and level, in societies as well as societies themselves; and 3) economic policy, to emphasize focus areas for the successful support of innovation, and desired innovation, with examples drawing from the economic development process as well as national innovation systems concepts and the role of the public sector as an active participant in economic activity in general. The focus for the course under all three perspectives will be on changes to technological capability, from a social perspective that emphasizes systemic components in the processes of innovating and change.

ECON 4970 Environmental Economics (4 Credits)

This course examines economic perspectives of environmental and resource problems, ranging from peak oil, food crisis, and climate change. Topics include the property-rights basis of polluting problems, environmental ethics, benefit-cost analysis, regulatory policy, incentive-based regulation, clean technology, population growth and consumption, and sustainable development.

ECON 4980 Internship (0-1 Credits)

Students doing an internship and writing an impact assessment report based on their work to demonstrate their understanding of economic theory relevant to the analysis and assessment of social policy to satisfy a MS in Economics and Social Policy degree requirement take this course. This course may also be taken for zero credit by students enrolled in the MA in Economics program who do a degree-related internship. Students must complete one 3000-level ECON course with a passing grade prior to enrollment in ECON 4980.

ECON 4991 Independent Study (1-10 Credits)

ECON 4993 Thesis Topic Development and Defense (4 Credits)

This resembles an independent-study where a student will work under the supervision of a professor. The aim is to encourage the student, as s/he completes a certain number of hours of course work, to actively formulate and develop her/his thesis topic, and to formally present and defend it in a thesis workshop scheduled by the Department. A minimum of 20 credit hours of graduate-level course work must be completed. Instructor's permission required.

ECON 4994 Comprehensive Exam (1 Credit)

Students taking the comprehensive exam scheduled by the department that tests their understanding of economic theory relevant to the analysis and assessment of social policy to satisfy a MS in Economics and Social Policy degree requirement take this course.

ECON 4995 Independent Research (1-10 Credits)

Courses

ECON 3040 Marxian Political Economy (4 Credits)

An exposition of Marx's theory of value through a detailed reading of Capital, vol. I. Excerpts from other readings by Marx, and some of the relevant secondary literature used. Restriction: junior standing. Prerequisite: ECON 2020 or ECON 2030.

English and Literary Arts

Office: Sturm Hall Mail Code: 2000 E. Asbury Ave., Denver, CO 80208 Phone: 303-871-2266 Email: noah.west@du.edu Web Site: http://www.du.edu/english (http://www.du.edu/english/)

The Department of English and Literary Arts offers a PhD in English and Literary Arts with concentrations in creative writing and literary studies as well as an MA with a concentration in literary studies and an MA in English for Teaching.

Our major areas for dissertation research include creative writing; modern and contemporary British literature; American literature; American multicultural literature and Anglophone literatures; genre studies; and literary theory and rhetoric. We also offer course work in traditional literary fields, cultural studies, ethnic literatures and gender studies.

The University of Denver's Department of English and Literary Arts is small and intimate, with 18 faculty members, all of whom publish widely and seek to translate their expertise into shared learning experiences in and out of the classroom.

Our distinctive curriculum allows students to tailor their degrees to their specific talents and interests. We offer not only typical graduate seminars but also writing workshops, individually designed tutorials and colloquia devoted to teaching and professional development. Such a curriculum encourages students to cross genre boundaries in their writing, to relate theory to practice and to work creatively with scholarly projects.

Doctor of Philosophy in English and Literary Arts with a Concentration in Creative Writing

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

Master's degree: This program requires a master's degree as well as the baccalaureate.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- · Minimum Duolingo English Test Score: 115

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- · Minimum Duolingo English Test Score: 115

Master of Arts in English and Literary Arts with a Concentration in Literary Studies

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Doctor of Philosophy in English and Literary Arts with a Concentration in Creative Writing

Degree Requirements

Course Requirements

At least 48 hours of foundational course work must be taken as formal ENGL classes, excluding Independent Research (ENGL 4995, ENGL 5995), Independent Study (ENGL 4991, ENGL 5991), and tutorials (ENGL 4100).

Five courses distributed over three literary periods. Students must take at least one course in one period and at least two courses in the other two periods. Students may only take two approved 3000 level courses (ENGL 3800 and 3982) in the Department of English. Registration for any other ENGL 3000 level class must be made by special petition to be approved by the full Graduate Committee.

Workshops. Students on the Creative Writing track must take three workshops.

Coursework Requirements	
Courses listed below are representative examples. Students may consult the department for additional course options.	
Before 1700	
ENGL 4125 Old English	
ENGL 4150 Special Topics in Medieval Lit	
ENGL 4200 Special Topics-Early Mod Lit	
ENGL 4213 Advanced Studies in Early Modern Literature	
ENGL 4220 Seminar-Studies in Shakespeare	
1700-1900	
ENGL 4300 Advanced Studies in 18th Century Literature	
ENGL 4424 Topics in English: 19th Century Literature	
ENGL 4700 Antebellum American Literature	
ENGL 4730 American Romanticism	
ENGL 4732 Spc Tpc: Antebellum Amer Lit	

After 1900

ENGL 4600	Adv Studies -20th Cent Lit	
ENGL 4621	Adv Studies-20th C. Literature	
ENGL 4650	Special Topics: 20th Cent Lit	
Graduate Tutorials (Students may take	e up to 5 tutorials, 10 credits total)	
ENGL 4100	Graduate Tutorial	
Three Graduate Professional Seminar	s (count towards the 48 hours of course work)	6
ENGL 4050	The Critical Imagination	2
ENGL 4830	Seminar. Teaching and Writing Literature	
ENGL 4000	Colloquium	
Three writing workshops		12
ENGL 4001	Sem Creative Writing-Poetry	
ENGL 4011	Sem Creative Writing-Fiction (ENGL 4011 Sem Creative Writing-Prose)	
or ENGL 4011	Sem Creative Writing-Fiction	
ENGL 4017	Travel Writing	
ENGL 4650	Special Topics: 20th Cent Lit (Translation)	
Total Credits		90

Minimum number of credits required for the degree: 90 graduate-level quarter hours beyond the master's degree Non-Course Requirements:

- · Preliminary advancement to candidacy
- · Advancement to candidacy
- A dissertation of publishable quality that makes a significant contribution to its field. This will take the form of an extended scholarly and critical work (usually between 150 and 250 pages) OR a creative work (fiction or poetry). The creative dissertation must include a critical preface that situates the dissertation in its literary context.
- Oral defense. When the dissertation is completed, it must be defended by the candidate. For spring quarter graduates, the defense should take place by April 30. Typically no dissertation defenses will be held during the summer quarter. The candidate is therefore advised to set the defense date as far in advance as possible. The defense takes the form of a discussion with the committee concerning the content, context and implications of the work.
- · Tool proficiency may be established by completing any one of the following:
 - Successful completion of ENGL 3800 Bibliography and Research Methods class in the Department of English.
 - · Successful completion of ENGL 3982 (Writers in the Schools).
 - · Successful completion of a graduate translation class (students must secure approval of instructor).
 - · Successful completion of Old English (4 credits).
 - Selection and successful completion of a cognate course in another department that will augment specific skills. This course must be approved by the Graduate Committee.

Students may also consult the department for additional Tool proficiency options. The Tool requirement must be completed one quarter before graduation.

- Proposal & Prospectus review. By the end of the Fall quarter of the third year, students must submit a Dissertation Area Proposal to the director
 of graduate studies. This proposal is a brief description (250-300 words) of the proposed area of the dissertation; it must be signed by at least
 two dissertation committee members. Before the end of the Winter quarter of the third year of study, all students should complete the prospectus
 review, which is an oral discussion based on the written dissertation prospectus. The prospectus review is conducted by a committee consisting
 of the first two readers of the dissertation. The prospectus should be approximately 2,500–3,000 words and should be presented to the faculty
 readers well in advance of the review. For students concentrating in Creative Writing, the prospectus should discuss the theoretical and generic
 origins of the project, its methodology and artistic goals.
- Written comprehensive exam. After completing 60 credit hours, including the 48 hours of foundational coursework, doctoral students will take written comprehensive examinations during the week prior to the start of Fall Quarter of their third year of study. Students will be examined in three (out of four) areas of study: (1) an author or major figure; (2) a genre; (3) a period; and (4) a second period or special topic. Students will prepare a reading list for each examination area in consultation with two faculty examiners; the scope of each exam must be approved by the faculty examiners and the graduate director. All lists must be signed by both examiners and submitted to the graduate director by the date published in the department's Graduate Handbook (typically during the first week of May) or the student will not be allowed to take the exam the following fall.

Degree Requirements

Course Requirements

- 45 hours of course credit, up to 13 hours of which may be taken in graduate tutorials (ENGL 4100), independent research (ENGL 4995) and/or cognate courses outside the department.
- All course work for the MA should be taken at the University of Denver, but, in rare exceptions, a maximum of 10 credit hours may be transferred to count for the requirements if approved by the director of graduate studies and meet the University's transfer of credit policy.
- While students have no specific course requirements beyond the 32-hour minimum within the Department of English and the 13 hours of tutorials or cognate courses, they are advised to work closely with an adviser to determine a balance between coverage and focus. Students may only take two approved 3000 level courses (ENGL 3800 and 3982) in the Department of English. Registration for any other ENGL 3000 level class must be made by special petition to be approved by the full Graduate Committee. Courses must be completed within three years of enrollment (excluding ENGL 4995).

Title

Coursework Requirements

Minimum of 32 classroom hours (eight courses) is required.

Up to 13 credits may be taken in graduate tutorials (ENGL 4100), independent research (ENGL 4995) and/or cognate courses outside the department.

Total Credits

Minimum number of credits required for the degree: 45

Non-Course Requirements

- Advancement to candidacy
- A thesis of at least 18,000 words. The thesis for an MA in literary studies is either a single scholarly/critical essay or two 30-page scholarly/critical essays. The thesis adviser must approve a prospectus for the thesis.
- Oral Defense. The defense takes the form of a discussion on the content, context and implications of the work.

Total Credits

ENGL 3000 Advanced Creative Writing-Poetry (4 Credits)

Technique, writing practice and criticism.

ENGL 3001 Advanced Creative Writing-Poetry (4 Credits) Technique, writing practice and criticism.

ENGL 3002 Advanced Creative Writing-Poetry (4 Credits) Technique, writing practice and criticism.

ENGL 3003 Advanced Creative Writing-Poetry (4 Credits) Technique, writing practice and criticism.

ENGL 3010 Advanced Creative Writing-Fiction (4 Credits) Technique, writing practice and criticism.

ENGL 3011 Advanced Creative Writing-Fiction (4 Credits)

Technique, writing practice and criticism.

ENGL 3012 Advanced Creative Writing-Fiction (4 Credits)

Technique, writing practice and criticism.

ENGL 3013 Adv Creative Writing-Fiction (4 Credits)

Technique, writing practice and criticism.

ENGL 3015 Advanced Creative Writing: Non-Fiction (4 Credits)

ENGL 3017 Travel Writing-Fiction & Fact (4 Credits)

A study of European, American and other narratives of travel. This course examines relevant postcolonial and literary theories of travel and nationhood.

ENGL 3040 Introduction to Publishing (4 Credits)

Cross listed with ENGL 2040, MFJS 3140.

ENGL 3121 Chaucer: Canterbury Tales (4 Credits)

Life, culture, language and literary trends of Chaucer's age as reflected in "The Canterbury Tales".

ENGL 3320 Oral Literature and Orality in Literature (4 Credits)

The term "oral literature" generally refers to narratives and poems (including songs) performed and disseminated orally from one generation to the other. Oral literature is, in some respects, the foundational 'text' of written literature. The questions that we explore in this course include: How did oral literature develop, and what are the characteristics? How has oral literature been shaped by time and place? How is it distinct from as well as related to written literature? To answer these questions, we explore different forms of oral literature and also study the use of orality in written literature. Our studies involve the examination of material and texts from different parts of the world.

ENGL 3402 Early Romantics (4 Credits)

ENGL 3405 Postmodern Visions of Israel (4 Credits)

This course investigates how representation of Israel as a modernist utopia have been replaced in contemporary literature with images of Israel as a dystopia. The class discusses the historical context that gave rise to visions of an idealized Israel, and the role the Hebrew language played in consolidating and connecting narration to nation. Next the class considers how belles-lettres from recent decades have reimagined Israel as a series of multilingual "multiverses." A selection of fiction translated from Hebrew forms the core of class reading. Theoretical exploration of postmodernism help us conceptualize the poetics of postmodern literature. No knowledge of Israeli history or Jewish culture is necessary to succeed in this course. Cross listed with JUST 3405.

ENGL 3706 Writing the American West (4 Credits)

Explores historical and contemporary writing produced in and about the American West.

ENGL 3711 20th-Century American Fiction (4 Credits)

Fiction, poetry, drama, and non-fiction on selected themes by 20th and 21st century American writers. Topics for study may include issues related to regionalism, ethnicity and gender, as well as specific social and historical concerns.

ENGL 3730 Literature and Medicine: Addiction and Modernity (4 Credits)

This course introduces students to accounts of substance use and addiction from the nineteenth century through the present day. We will examine canonical and contemporary literary texts, medical writings, visual representations, smartphone applications, and films alongside topics such as liberalism, inequality, imperial expansion, consumerism, "digital drugs," and the pathologization of addiction. We will consider our readings in light of the following questions: What role do substance use and addiction play in constructing the modern self and society? What can representations of addiction teach us about our relationship with the external world? How does addiction act as a metaphor, a narrative device, or even a political sign? How do gender, class, and race affect narratives of addiction? How do accounts of addiction interact with philosophical texts, medical treatises, and imperial and colonial discourses? In addition to writing critical essays, students will evaluate smartphone addiction treatment apps and devise a creative project on a topic relevant to this course.

ENGL 3731 Topics in English (1-4 Credits)

ENGL 3732 Topics in English (1-4 Credits)

ENGL 3733 Topics in English (1-4 Credits)

Topics vary reflecting the interdisciplinary nature of the department and studies of the faculty.

ENGL 3742 Jesus in Jewish Literature (4 Credits)

This course surveys literary depictions of Jesus in Jewish literature. Readers are often surprised to learn that throughout the twentieth century and into the twenty-first century, major Jewish writers have incorporated the figure of Jesus of Nazareth into their work. This class explores the historical, aesthetic, and spiritual reasons for the many Jewish literary representations of Jesus and of his literary foil, Judas. A selection of materials including short stories, poems, novels, scholarly essays and polemics in English and in translation from Hebrew and Yiddish demonstrate the depth of Jewish literary culture's engagement with Jesus' life and teachings. Among the many writers we will read are: S.Y. Agnon, Sholem Asch, Uri Zvi Greenberg, Haim Hazaz, Emma Lazarus, Amos Oz, Philip Roth, and L. Shapiro. Ultimately, this class will consider how literary representations of Jesus can destabilize perceived distinctions between Jews and Christians. While helpful, no knowledge of Jewish languages, religious tradition, or cultural practice is necessary to succeed in this course. This course is cross-listed as JUST 3742.

ENGL 3743 Modern Jewish Literature (4 Credits)

Stories, novels and memoirs by 20th-century Jewish writers; consideration of issues of generation, gender and idea of Jewish literature as a genre. Cross listed with JUST 3743.

ENGL 3744 African American Literature (4 Credits)

This course examines fiction, poetry, autobiography, and drama by African American writers, with strong consideration on the socio-historical conditions that gave rise to and continue to inform this literary tradition.

ENGL 3800 Bibliography/Research Method (4 Credits)

ENGL 3803 Modernism/Postmodernism (4 Credits)

ENGL 3813 History and Structure of the English Language (4 Credits)

A composite course studying both the structure of modern English and the history of the English language.

ENGL 3815 Studies in Rhetoric (4 Credits)

This course will examine the history and principles of rhetoric and how they pertain to theory and practice in the field of composition and rhetoric.

ENGL 3817 History of Rhetoric (4 Credits)

ENGL 3818 Composition Theory (4 Credits)

ENGL 3819 Old English (4 Credits)

This class introduces students to Old English grammar, prose, and poetry. This course is a prerequisite for ENGL 3200.

ENGL 3821 Literary Criticism: 19th Century-Present (4 Credits)

ENGL 3822 Literary Criticism: 20th Century (4 Credits)

Critical methods and philosophies of 20th-century critics; their relationship to traditions.

ENGL 3823 Interpretation Theory (4 Credits)

ENGL 3825 Cultural Criticism (4 Credits)

Cross listed with ENGL 2835.

ENGL 3852 Topics in Poetics (4 Credits)

ENGL 3982 Writers in the Schools (2,4 Credits)

This course operates mostly "in the field." Following the models of California Poets in the Schools and Teachers & Writers Collaborative, students are in training with a poet-in-residence, observing him as he conducts a residency in a public school. In addition, we have our own meetings to discuss pedagogy, classroom practices and management, teacher-writer relations, and all other necessary logistical planning. Placement in public schools is facilitated by Denver SCORES, an education program dedicated to increasing literacy in Denver's at-risk school population. For those wishing to work with middle or high school students, or in other community settings (e.g., homeless or women's shelters), special arrangements can be made. This course is a collaborative effort between CO Humanities, Denver SCORES, and the University of Denver.

ENGL 3991 Independent Study (1-17 Credits)

ENGL 3995 Independent Research (1-10 Credits)

ENGL 4000 Colloquium (2 Credits)

ENGL 4001 Sem Creative Writing-Poetry (4 Credits)

ENGL 4009 Seminar -- Creative Nonfiction (4 Credits)

Advanced writing and study of creative nonfiction, including prose development and structure.

ENGL 4011 Sem Creative Writing-Fiction (4 Credits)

ENGL 4012 History/Theory of Genre-Poetry (4 Credits)

ENGL 4017 Travel Writing (4 Credits)

ENGL 4020 The Essay: Criticism, Culture, and the Modern Intellectual (4 Credits)

This course examines the modern essay as a form of intellectual and cultural expression, looking at seminal texts by figures ranging from Ralph Waldo Emerson and W.E.B. Du Bois to George Orwell, Stanley Cavell, James Baldwin, Susan Sontag, and T.J. Clark. It asks: How is the self located, produced, or communicated in an essay? What is the essayist's relationship to topic, style, resistance, and the public? What does beginning and closure look like in an essay? And what is the essay's relationship to thinking? We will study the genre's relationship to rhetoric, power, and influence, while investigating its interdisciplinary nature—its capacity to at once entail cultural discourse and philosophy, personal reflection and criticism. We will also ask why it is novelists and poets have historically turned to the essay form.

ENGL 4050 The Critical Imagination (2 Credits)

This graduate level course explores poetry, fiction, and criticism as different facets of the imagination. This is a large and a necessarily vaguely defined topic. But in the world of literary studies, creativity and criticism are clearly symbiotic. Reading and writing are connected activities. The poet or fiction writer is often a critic, and there are numerous treatments of interpretation in the critical canon suggesting that the act of reading and interpreting is itself an imaginative and creative act. The course explores genre signatures and possibilities, as well as provides an introduction to some of the analytics through which texts, literary and otherwise, are interpreted.

ENGL 4100 Graduate Tutorial (2-4 Credits)

ENGL 4120 Beowulf (4 Credits)

Reading and translation of the Old English Beowulf. Prerequisite: ENGL 4125.

ENGL 4125 Old English (4 Credits)

This class introduces students to Old English grammar, prose, and poetry. This course is a prerequisite for ENGL 4120.

ENGL 4150 Special Topics in Medieval Lit (4 Credits)

ENGL 4200 Special Topics-Early Mod Lit (4 Credits)

ENGL 4210 Holocaust Literature (4 Credits)

This seminar presents a multidisciplinary and transnational approach to literature of the Holocaust. Students consider memoir, fiction, and poetry drawn from a variety of national literatures and linguistic traditions. Works written by victims, survivors and 'witnesses through the imagination' are all considered. These readings are supplemented by secondary texts, including historical and philosophical materials, as well as relevant works from the social sciences.

ENGL 4213 Advanced Studies in Early Modern Literature (4 Credits)

ENGL 4220 Seminar-Studies in Shakespeare (4 Credits)

ENGL 4300 Advanced Studies in 18th Century Literature (4 Credits)

ENGL 4424 Topics in English: 19th Century Literature (4 Credits)

Special Topics courses will explore specific topics within historical periods, single authors, or theoretical/critical/ scholarly issues.

ENGL 4511 Translingualism and Multilingualism (4 Credits)

The course starts with an introduction to the field of Translation Studies and Practice but continues to focus on two particular aspects of the field: translingualism and multilingualism. We delve into the various phenomena of language porousness, such as linguistic elements existing in and moving across multiple languages as well as language users morphing multiple languages or navigating between several. We discuss theoretical debates about these phenomena and their impact on the praxis of translating and writing, in the context of language pedagogy and creative practices. We also study examples of creative work that embody translingualism and multilingualism to different extents using various methodologies. Students write critically in conversation with the theoretical material and create their own works implementing and exploring linguistic porousness offered by translingualism and multilingualism.

ENGL 4515 The Novella: craft and construction (4 Credits)

This graduate praxis course will focus on approaches to understanding and executing the prose form of the novella. We will look at a number of examples of novella length works as we seek to clarify a definition of the form, understand its affordances, and work to develop new projects adopting the parameters of this form. Students will have options for creative or critical assignments across the quarter, and considerable weekly readings: Students will be asked to commit to the intensive study of a novella of their choosing, to write critically or creatively about about this form, and/or to make interventions in their on-going projects using methods informed by our discussions around the novella form, and there will be opportunities for collaborations if there are those who are keen. Readings for the class may include examples from Henry James, Joseph Conrad, Agota Kristoff, Cesar Aira, Roberto Bolaño, Fleur Jaeggy, Yoko Tawada, Marie NDiaye, Muriel Spark, and Renee Gladman.

ENGL 4600 Adv Studies -20th Cent Lit (4 Credits)

ENGL 4620 A Poetics of Revision: Stevens, Eigner, Berssenbrugge (4 Credits)

This seminar will consider how poems from early twentieth to early twenty-first century Americans negotiated radical changes in how attempts at seeing and being seen were depicted and understood. The great but radically flawed Wallace Stevens, the equally great but physically limited Larry Eigner, and the elegantly visionary Mei Mei Berrssenbrugge all produced depictions of the confused, dynamic cultures they inhabited while attempting to break into clarity and precision. We will reexamine each by questioning our own limitations as inhabitants of a particular time and place, a particularly volatile time and place.

ENGL 4621 Adv Studies-20th C. Literature (2-4 Credits)

This course will offer (and be required of) graduate students an advanced foundation in 20th century literature; the primary texts and their cultural/ historical/ theoretical contexts.

ENGL 4650 Special Topics: 20th Cent Lit (4 Credits)

ENGL 4660 The Black Imagination (4 Credits)

Focusing mainly on Africa, Asia, Europe, and the Americas (especially the USA and the Caribbean/Latin America), this course explores and connects aspects of the black imagination. These aspects include oral performances, thought systems, literature, art, cinema, and critical discourses in different eras and in various places. Studied together, these existential and intellectual signposts provide an expanded insight into black (African and African diasporic) aesthetics from an intercontinental and an interdisciplinary perspective.

ENGL 4665 Postcolonial Modernism (4 Credits)

Referencing geographies of modernism, this course examines the intersection of Euro-American modernity/modernism and postcoloniality/ postcolonialism in Africa, Asia, the Caribbean, Latin America, and Australia. In addition to the relation or "markets of memories" between literature and Empire (including the dis/connection between the postcolonial and the transnational), we also focus on the varied span of postcolonial aesthetics in literature and culture.

ENGL 4675 Theories of Narrative: Formalism, Narratology, Cybertext (4 Credits)

This class traces developments in narrative theory from Russian Formalism through "classical" narratology and on to examine the border between traditional narrative texts and texts that require a higher degree of interactivity, sometimes called "cyber texts." The goal is to identify significant contributions to narrative theory and to suggest the possibilities for the future of the field. Seminal articles, key works, and critical introductions survey key advances in narrative theory to present an overview of the field from its inception to contemporary trends.

ENGL 4700 Antebellum American Literature (4 Credits)

ENGL 4701 Topics in English (2-5 Credits)

A topics class; topics may change.

ENGL 4702 Topics in English (2-5 Credits)

A topics class; topics may change.

ENGL 4730 American Romanticism (4 Credits)

ENGL 4732 Spc Tpc: Antebellum Amer Lit (4 Credits)

ENGL 4743 Black Feminist Criticism (4 Credits)

This course examines the discursive reach of black feminist criticism by journeying into the creative terrain of literature, visual art, music, and performance produced by black women in the United States and throughout the black diaspora, from the nineteenth century to the present.

ENGL 4830 Seminar: Teaching and Writing Literature (2-4 Credits)

ENGL 4840 Topics in Composition Studies (2-4 Credits)

Each offering of this course focuses on specific issues in theory, research, or pedagogy within the broad field of composition studies. Examples of topics include the development of writing abilities; genre theory and composing; multimodal texts and their intersections and disjunctions of rhetoric and composition; the history of composing theories and practices; realms of composing, including the academic, civic, vocational, aesthetic, and interpersonal; institutional formations and settings of composing; discourse theories; stylistics; race, gender, class and composing; and so on.

ENGL 4851 Publishing Institute (6 Credits)

ENGL 4852 Dissertation Colloquium (2 Credits)

This two-credit dissertation colloquium is offered in the winter and spring for third-year PhD students in English who are in the process of researching and writing their dissertations. In addition to having weekly presentations and discussions of work in progress, the group will peruse prefaces and introductions to former English Department dissertations, write and abstract for their own dissertation, and possibly revise and send out a piece from their dissertation. The class is open to both literary studies and creative writing students. Restricted to doctoral students in English.

ENGL 4991 Independent Study (1-17 Credits)

ENGL 4995 Independent Research (1-17 Credits)

ENGL 5991 Independent Study (1-17 Credits)

ENGL 5995 Independent Research (1-17 Credits)

ENGL 5999 American Literary Marketplace (0-2 Credits)

"American Literary Marketplace" bridges the culture of writing within the Department of English and Literary Arts with the culture of publishing in the United States. As an experiential learning course, it offers graduate students a formal, structured opportunity—as an internship, externship, or cooperative educational experience, depending on the student's need—to deepen their writing practice and enact curricular learning outside and beyond the literary classroom.

Courses

ENGL 3000 Advanced Creative Writing-Poetry (4 Credits)

Technique, writing practice and criticism.

ENGL 3001 Advanced Creative Writing-Poetry (4 Credits) Technique, writing practice and criticism.

ENGL 3002 Advanced Creative Writing-Poetry (4 Credits)

Technique, writing practice and criticism.

ENGL 3003 Advanced Creative Writing-Poetry (4 Credits) Technique, writing practice and criticism.

ENGL 3010 Advanced Creative Writing-Fiction (4 Credits) Technique, writing practice and criticism.

ENGL 3011 Advanced Creative Writing-Fiction (4 Credits) Technique, writing practice and criticism.

ENGL 3012 Advanced Creative Writing-Fiction (4 Credits)

Technique, writing practice and criticism.

ENGL 3013 Adv Creative Writing-Fiction (4 Credits)

Technique, writing practice and criticism.

ENGL 3015 Advanced Creative Writing: Non-Fiction (4 Credits)

ENGL 3017 Travel Writing-Fiction & Fact (4 Credits)

A study of European, American and other narratives of travel. This course examines relevant postcolonial and literary theories of travel and nationhood.

ENGL 3040 Introduction to Publishing (4 Credits) Cross listed with ENGL 2040, MFJS 3140.

Cross listed with ENGL 2040, MFJS 3140.

ENGL 3121 Chaucer: Canterbury Tales (4 Credits)

Life, culture, language and literary trends of Chaucer's age as reflected in "The Canterbury Tales".

ENGL 3320 Oral Literature and Orality in Literature (4 Credits)

The term "oral literature" generally refers to narratives and poems (including songs) performed and disseminated orally from one generation to the other. Oral literature is, in some respects, the foundational 'text' of written literature. The questions that we explore in this course include: How did oral literature develop, and what are the characteristics? How has oral literature been shaped by time and place? How is it distinct from as well as related to written literature? To answer these questions, we explore different forms of oral literature and also study the use of orality in written literature. Our studies involve the examination of material and texts from different parts of the world.

ENGL 3402 Early Romantics (4 Credits)

ENGL 3405 Postmodern Visions of Israel (4 Credits)

This course investigates how representation of Israel as a modernist utopia have been replaced in contemporary literature with images of Israel as a dystopia. The class discusses the historical context that gave rise to visions of an idealized Israel, and the role the Hebrew language played in consolidating and connecting narration to nation. Next the class considers how belles-lettres from recent decades have reimagined Israel as a series of multilingual "multiverses." A selection of fiction translated from Hebrew forms the core of class reading. Theoretical exploration of postmodernism help us conceptualize the poetics of postmodern literature. No knowledge of Israeli history or Jewish culture is necessary to succeed in this course. Cross listed with JUST 3405.

ENGL 3706 Writing the American West (4 Credits)

Explores historical and contemporary writing produced in and about the American West.

ENGL 3711 20th-Century American Fiction (4 Credits)

Fiction, poetry, drama, and non-fiction on selected themes by 20th and 21st century American writers. Topics for study may include issues related to regionalism, ethnicity and gender, as well as specific social and historical concerns.

ENGL 3730 Literature and Medicine: Addiction and Modernity (4 Credits)

This course introduces students to accounts of substance use and addiction from the nineteenth century through the present day. We will examine canonical and contemporary literary texts, medical writings, visual representations, smartphone applications, and films alongside topics such as liberalism, inequality, imperial expansion, consumerism, "digital drugs," and the pathologization of addiction. We will consider our readings in light of the following questions: What role do substance use and addiction play in constructing the modern self and society? What can representations of addiction teach us about our relationship with the external world? How does addiction act as a metaphor, a narrative device, or even a political sign? How do gender, class, and race affect narratives of addiction? How do accounts of addiction interact with philosophical texts, medical treatises, and imperial and colonial discourses? In addition to writing critical essays, students will evaluate smartphone addiction treatment apps and devise a creative project on a topic relevant to this course.

ENGL 3731 Topics in English (1-4 Credits)

ENGL 3732 Topics in English (1-4 Credits)

ENGL 3733 Topics in English (1-4 Credits)

Topics vary reflecting the interdisciplinary nature of the department and studies of the faculty.

ENGL 3742 Jesus in Jewish Literature (4 Credits)

This course surveys literary depictions of Jesus in Jewish literature. Readers are often surprised to learn that throughout the twentieth century and into the twenty-first century, major Jewish writers have incorporated the figure of Jesus of Nazareth into their work. This class explores the historical, aesthetic, and spiritual reasons for the many Jewish literary representations of Jesus and of his literary foil, Judas. A selection of materials including short stories, poems, novels, scholarly essays and polemics in English and in translation from Hebrew and Yiddish demonstrate the depth of Jewish literary culture's engagement with Jesus' life and teachings. Among the many writers we will read are: S.Y. Agnon, Sholem Asch, Uri Zvi Greenberg, Haim Hazaz, Emma Lazarus, Amos Oz, Philip Roth, and L. Shapiro. Ultimately, this class will consider how literary representations of Jesus can destabilize perceived distinctions between Jews and Christians. While helpful, no knowledge of Jewish languages, religious tradition, or cultural practice is necessary to succeed in this course. This course is cross-listed as JUST 3742.

ENGL 3743 Modern Jewish Literature (4 Credits)

Stories, novels and memoirs by 20th-century Jewish writers; consideration of issues of generation, gender and idea of Jewish literature as a genre. Cross listed with JUST 3743.

ENGL 3744 African American Literature (4 Credits)

This course examines fiction, poetry, autobiography, and drama by African American writers, with strong consideration on the socio-historical conditions that gave rise to and continue to inform this literary tradition.

ENGL 3800 Bibliography/Research Method (4 Credits)

ENGL 3803 Modernism/Postmodernism (4 Credits)

ENGL 3813 History and Structure of the English Language (4 Credits)

A composite course studying both the structure of modern English and the history of the English language.

ENGL 3815 Studies in Rhetoric (4 Credits)

This course will examine the history and principles of rhetoric and how they pertain to theory and practice in the field of composition and rhetoric.

ENGL 3817 History of Rhetoric (4 Credits)

ENGL 3818 Composition Theory (4 Credits)

ENGL 3819 Old English (4 Credits)

This class introduces students to Old English grammar, prose, and poetry. This course is a prerequisite for ENGL 3200.

ENGL 3821 Literary Criticism: 19th Century-Present (4 Credits)

ENGL 3822 Literary Criticism: 20th Century (4 Credits)

Critical methods and philosophies of 20th-century critics; their relationship to traditions.

ENGL 3823 Interpretation Theory (4 Credits)

ENGL 3825 Cultural Criticism (4 Credits)

Cross listed with ENGL 2835.

ENGL 3852 Topics in Poetics (4 Credits)

ENGL 3982 Writers in the Schools (2,4 Credits)

This course operates mostly "in the field." Following the models of California Poets in the Schools and Teachers & Writers Collaborative, students are in training with a poet-in-residence, observing him as he conducts a residency in a public school. In addition, we have our own meetings to discuss pedagogy, classroom practices and management, teacher-writer relations, and all other necessary logistical planning. Placement in public schools is facilitated by Denver SCORES, an education program dedicated to increasing literacy in Denver's at-risk school population. For those wishing to work with middle or high school students, or in other community settings (e.g., homeless or women's shelters), special arrangements can be made. This course is a collaborative effort between CO Humanities, Denver SCORES, and the University of Denver.

ENGL 3991 Independent Study (1-17 Credits)

ENGL 3995 Independent Research (1-10 Credits)

ENGL 4000 Colloquium (2 Credits)

ENGL 4001 Sem Creative Writing-Poetry (4 Credits)

ENGL 4009 Seminar -- Creative Nonfiction (4 Credits)

Advanced writing and study of creative nonfiction, including prose development and structure.

ENGL 4011 Sem Creative Writing-Fiction (4 Credits)

ENGL 4012 History/Theory of Genre-Poetry (4 Credits)

ENGL 4017 Travel Writing (4 Credits)

ENGL 4020 The Essay: Criticism, Culture, and the Modern Intellectual (4 Credits)

This course examines the modern essay as a form of intellectual and cultural expression, looking at seminal texts by figures ranging from Ralph Waldo Emerson and W.E.B. Du Bois to George Orwell, Stanley Cavell, James Baldwin, Susan Sontag, and T.J. Clark. It asks: How is the self located, produced, or communicated in an essay? What is the essayist's relationship to topic, style, resistance, and the public? What does beginning and closure look like in an essay? And what is the essay's relationship to thinking? We will study the genre's relationship to rhetoric, power, and influence, while investigating its interdisciplinary nature—its capacity to at once entail cultural discourse and philosophy, personal reflection and criticism. We will also ask why it is novelists and poets have historically turned to the essay form.

ENGL 4050 The Critical Imagination (2 Credits)

This graduate level course explores poetry, fiction, and criticism as different facets of the imagination. This is a large and a necessarily vaguely defined topic. But in the world of literary studies, creativity and criticism are clearly symbiotic. Reading and writing are connected activities. The poet or fiction writer is often a critic, and there are numerous treatments of interpretation in the critical canon suggesting that the act of reading and interpreting is itself an imaginative and creative act. The course explores genre signatures and possibilities, as well as provides an introduction to some of the analytics through which texts, literary and otherwise, are interpreted.

ENGL 4100 Graduate Tutorial (2-4 Credits)

ENGL 4120 Beowulf (4 Credits)

Reading and translation of the Old English Beowulf. Prerequisite: ENGL 4125.

ENGL 4125 Old English (4 Credits)

This class introduces students to Old English grammar, prose, and poetry. This course is a prerequisite for ENGL 4120.

ENGL 4150 Special Topics in Medieval Lit (4 Credits)

ENGL 4200 Special Topics-Early Mod Lit (4 Credits)

ENGL 4210 Holocaust Literature (4 Credits)

This seminar presents a multidisciplinary and transnational approach to literature of the Holocaust. Students consider memoir, fiction, and poetry drawn from a variety of national literatures and linguistic traditions. Works written by victims, survivors and 'witnesses through the imagination' are all considered. These readings are supplemented by secondary texts, including historical and philosophical materials, as well as relevant works from the social sciences.

ENGL 4213 Advanced Studies in Early Modern Literature (4 Credits)

ENGL 4220 Seminar-Studies in Shakespeare (4 Credits)

ENGL 4300 Advanced Studies in 18th Century Literature (4 Credits)

ENGL 4424 Topics in English: 19th Century Literature (4 Credits)

Special Topics courses will explore specific topics within historical periods, single authors, or theoretical/critical/ scholarly issues.

ENGL 4511 Translingualism and Multilingualism (4 Credits)

The course starts with an introduction to the field of Translation Studies and Practice but continues to focus on two particular aspects of the field: translingualism and multilingualism. We delve into the various phenomena of language porousness, such as linguistic elements existing in and moving across multiple languages as well as language users morphing multiple languages or navigating between several. We discuss theoretical debates about these phenomena and their impact on the praxis of translating and writing, in the context of language pedagogy and creative practices. We also study examples of creative work that embody translingualism and multilingualism to different extents using various methodologies. Students write critically in conversation with the theoretical material and create their own works implementing and exploring linguistic porousness offered by translingualism and multilingualism.

ENGL 4515 The Novella: craft and construction (4 Credits)

This graduate praxis course will focus on approaches to understanding and executing the prose form of the novella. We will look at a number of examples of novella length works as we seek to clarify a definition of the form, understand its affordances, and work to develop new projects adopting the parameters of this form. Students will have options for creative or critical assignments across the quarter, and considerable weekly readings: Students will be asked to commit to the intensive study of a novella of their choosing, to write critically or creatively about about this form, and/or to make interventions in their on-going projects using methods informed by our discussions around the novella form, and there will be opportunities for collaborations if there are those who are keen. Readings for the class may include examples from Henry James, Joseph Conrad, Agota Kristoff, Cesar Aira, Roberto Bolaño, Fleur Jaeggy, Yoko Tawada, Marie NDiaye, Muriel Spark, and Renee Gladman.

ENGL 4600 Adv Studies -20th Cent Lit (4 Credits)

ENGL 4620 A Poetics of Revision: Stevens, Eigner, Berssenbrugge (4 Credits)

This seminar will consider how poems from early twentieth to early twenty-first century Americans negotiated radical changes in how attempts at seeing and being seen were depicted and understood. The great but radically flawed Wallace Stevens, the equally great but physically limited Larry Eigner, and the elegantly visionary Mei Mei Berrssenbrugge all produced depictions of the confused, dynamic cultures they inhabited while attempting to break into clarity and precision. We will reexamine each by questioning our own limitations as inhabitants of a particular time and place, a particularly volatile time and place.

ENGL 4621 Adv Studies-20th C. Literature (2-4 Credits)

This course will offer (and be required of) graduate students an advanced foundation in 20th century literature; the primary texts and their cultural/ historical/ theoretical contexts.

ENGL 4650 Special Topics: 20th Cent Lit (4 Credits)

ENGL 4660 The Black Imagination (4 Credits)

Focusing mainly on Africa, Asia, Europe, and the Americas (especially the USA and the Caribbean/Latin America), this course explores and connects aspects of the black imagination. These aspects include oral performances, thought systems, literature, art, cinema, and critical discourses in different eras and in various places. Studied together, these existential and intellectual signposts provide an expanded insight into black (African and African diasporic) aesthetics from an intercontinental and an interdisciplinary perspective.

ENGL 4665 Postcolonial Modernism (4 Credits)

Referencing geographies of modernism, this course examines the intersection of Euro-American modernity/modernism and postcoloniality/ postcolonialism in Africa, Asia, the Caribbean, Latin America, and Australia. In addition to the relation or "markets of memories" between literature and Empire (including the dis/connection between the postcolonial and the transnational), we also focus on the varied span of postcolonial aesthetics in literature and culture.

ENGL 4675 Theories of Narrative: Formalism, Narratology, Cybertext (4 Credits)

This class traces developments in narrative theory from Russian Formalism through "classical" narratology and on to examine the border between traditional narrative texts and texts that require a higher degree of interactivity, sometimes called "cyber texts." The goal is to identify significant contributions to narrative theory and to suggest the possibilities for the future of the field. Seminal articles, key works, and critical introductions survey key advances in narrative theory to present an overview of the field from its inception to contemporary trends.

ENGL 4700 Antebellum American Literature (4 Credits)

ENGL 4701 Topics in English (2-5 Credits)

A topics class; topics may change.

ENGL 4702 Topics in English (2-5 Credits)

A topics class; topics may change.

ENGL 4730 American Romanticism (4 Credits)

ENGL 4732 Spc Tpc: Antebellum Amer Lit (4 Credits)

ENGL 4743 Black Feminist Criticism (4 Credits)

This course examines the discursive reach of black feminist criticism by journeying into the creative terrain of literature, visual art, music, and performance produced by black women in the United States and throughout the black diaspora, from the nineteenth century to the present.
ENGL 4830 Seminar: Teaching and Writing Literature (2-4 Credits)

ENGL 4840 Topics in Composition Studies (2-4 Credits)

Each offering of this course focuses on specific issues in theory, research, or pedagogy within the broad field of composition studies. Examples of topics include the development of writing abilities; genre theory and composing; multimodal texts and their intersections and disjunctions of rhetoric and composition; the history of composing theories and practices; realms of composing, including the academic, civic, vocational, aesthetic, and interpersonal; institutional formations and settings of composing; discourse theories; stylistics; race, gender, class and composing; and so on.

ENGL 4851 Publishing Institute (6 Credits)

ENGL 4852 Dissertation Colloquium (2 Credits)

This two-credit dissertation colloquium is offered in the winter and spring for third-year PhD students in English who are in the process of researching and writing their dissertations. In addition to having weekly presentations and discussions of work in progress, the group will peruse prefaces and introductions to former English Department dissertations, write and abstract for their own dissertation, and possibly revise and send out a piece from their dissertation. The class is open to both literary studies and creative writing students. Restricted to doctoral students in English.

ENGL 4991 Independent Study (1-17 Credits)

ENGL 4995 Independent Research (1-17 Credits)

ENGL 5991 Independent Study (1-17 Credits)

ENGL 5995 Independent Research (1-17 Credits)

ENGL 5999 American Literary Marketplace (0-2 Credits)

"American Literary Marketplace" bridges the culture of writing within the Department of English and Literary Arts with the culture of publishing in the United States. As an experiential learning course, it offers graduate students a formal, structured opportunity—as an internship, externship, or cooperative educational experience, depending on the student's need—to deepen their writing practice and enact curricular learning outside and beyond the literary classroom.

Lamont School of Music

Office: Robert & Judi Newman Center for the Performing Arts Mail Code: 2344 E. Iliff Ave., Denver, CO 80208 Phone: 303-871-6400 Email: musicadmissions@du.edu Web Site: http://www.du.edu/lamont (http://www.du.edu/lamont/)

With its wide array of degrees and certificates, outstanding faculty, and superior facilities, the Lamont School of Music is one of the most distinguished music programs in the United States.

If the words dedication, discipline, enthusiasm, and desire define your musical aspirations, then you'll find exciting opportunities at the University of Denver. The Lamont School of Music will lend resonance to your musical career, as well as surrounding you with other talented students and a rich cultural environment in Denver.

The Lamont School of Music offers MM programs with concentrations in composition, conducting, pedagogy, and performance, as well as MA programs in music theory and musicology. We offer certificates with concentrations in conducting, jazz studies, music entrepreneurship, music theory pedagogy, orchestral studies, performance, piano pedagogy, and Suzuki pedagogy. Online certificates include performance & recording and production, performance & composition, and performance & orchestral audition preparation. We also offer artist diploma programs with a concentrations in conducting and performance.

The faculty is composed of professors and instructors who actively perform, compose, publish, and lecture worldwide. The Lamont School of Music is located in the Robert and Judi Newman Center for the Performing Arts, a 186,000-square-foot state-of-the-art facility opened in 2002 and officially inaugurated in 2003. The Newman Center includes an academic building, a 225-seat recital hall, a 1,000-seat concert/opera hall, and a 250-seat flexible theater. The academic building is replete with teaching studios, practice rooms (some of which are digitally enhanced as "virtual" acoustic practice rooms), large rehearsal spaces, a music library, a digital keyboard laboratory, two recording studios, an electronic music lab, classrooms with smart-to-the-seat technology, and an 80-seat recital salon.

Master of Arts in Music with a Concentration in Music Theory

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites:

 Applicants without an undergraduate degree in music must complete additional requirements. Please contact the Lamont Admission Office for details (email: musicadmission@du.edu, phone: 303.871.6973).

Other Required Materials

To be considered for a Theory GTA, please submit the syllabi from your undergraduate theory courses and ask your recommenders to comment on
your teaching abilities, or potential. Please upload the syllabi to your application as a miscellaneous document. Note that we may ask candidates
for GTA positions to take a keyboard and sight-reading test via Zoom.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- · Minimum Duolingo English Test Score: 115

Master of Arts in Music with a Concentration in Musicology

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

• Applicants without an undergraduate degree in music must complete additional requirements. Please contact the Lamont Admission Office for details (email: musicadmission@du.edu, phone: 303.871.6973).

Certificate in Music (Artist Diploma Program) with a Concentration in Performance

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Other Required Materials

Applicants must submit a pre-screening video (25 minutes of performance, unedited) by December 16, 2024.

If accepted to the final round, candidates will be invited to campus to give a live mini-recital, open to public, on Sunday, February 09, 2025. The program should be 25 minutes in length and the applicant must briefly introduce one item on their program to the audience (accommodations can be requested for this requirement).

Both the pre-screening audition video and the live audition should consist of a program that accurately represents the full scope of your abilities. For more information, click here (https://liberalarts.du.edu/lamont/academics-admissions/programs-gr/certificate-artist-diploma-performance/).

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Certificate in Music with a Concentration in Conducting

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Other Required Materials

• Orchestral and Choral conducting applicants must submit a pre-screening audition through the online application by December 16, 2024. Those who advance to the final round will complete a live audition. Audition information and requirements can be found on the Lamont School of Music website (https://liberalarts.du.edu/lamont/academics/conducting-studio/).

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Certificate in Jazz Studies

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Other Required Materials

• All applicants must complete an audition. Audition information and requirements can be found on the Lamont School of Music website (https://liberalarts.du.edu/lamont/academics/jazz-studio/).

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80

Certificate in Music Theory Pedagogy

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

· Applicants must have an undergraduate degree with a major in music, including Music Theory and Aural Skills coursework.

Other Required Materials

- Copies of your undergraduate theory syllabi, including the undergraduate theory core and any advanced courses. Current or former DU undergraduate students are exempt from this requirement.
- Applicants must schedule the Graduate Music Theory Proficiency Exam. Current or former DU students can meet this requirement by having previously received a qualifying score on this exam OR having completed MUAC 3935 Graduate Music Theory Review.
- · All applicants must schedule an interview with the Theory Department faculty.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- · Minimum Duolingo English Test Score: 115

Certificate in Suzuki Pedagogy

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Other Required Materials

- All applicants must complete an audition. Audition information and requirements can be found on the Lamont School of Music website (https://liberalarts.du.edu/lamont/content/string/).
- Applicants applying for the University of Denver Suzuki Cello or Violin Certificate program are required to receive acceptance for teaching training
 through the Suzuki Association of the Americas guidelines. The Suzuki Association is responsible for all Suzuki teacher training that takes place
 in the Americas and approves and supports the University of Denver Lamont School of Music as a university long-term training center for Suzuki
 Method Violin and Cello. A video of your performance must be sent into the Suzuki Association. For audition guidelines, please visit the Suzuki
 Association Website (http://suzukiassociation.org/teachers/guides/audition/).

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5

Artist Diploma Programs

Certificate in Music (Artist Diploma Program) with a Concentration in Conducting

The Artist Diploma with a Concentration in Conducting has three emphases: Choral, Orchestral or Wind

Minimum number of credits required for the certificate: 27 credits

Code	Title	Credits
Core coursework requirements		
Complete all of the following courses	S.	
MUAC, MUPR, MUEN 3XXX or 4XXX	Upper-division Music electives	9
MUPR 4930	Conducting (2 credits each quarter)	12
Students will complete MUAC 4600 f	or 0-2 credits each quarter, earning a minimum of 6 credits prior to program completion.	
MUAC 4600 & 4600 & 4600 & 4600 & 4600 & 4600 & 4600	Extra-Musical Roles of the Music Director and Extra-Musical Roles of the Music Director	6
Total Credits		27

Non-coursework requirements:

· Candidates will be enrolled in the Artist Diploma program for two years.

- · Candidates will make four concert appearances with an appropriate major ensemble, which will be evaluated.
- Candidates will successfully perform one full-length conducting recital while enrolled in the program. If recital preparation continues beyond the completion of coursework, students must perform on or off campus during each additional quarter of recital preparation.

Certificate in Music (Artist Diploma) with a Concentration in Performance

Coursework requirements

Minimum number of credits required for the certificate: 27 credits

Code	Title	Credits
Core coursework requirements		
Complete all of the following courses	X.	
MUAC, MUPR, MUEN 3XXX or 4XXX	Upper-division Music electives	9
MUPR 4XXX	Applied Lessons (2 credits each quarter)	12
MUEN 3XXX	Ensembles/Chamber Music (Must audition for and participate in two ensembles per quarter, at least one of which must be an appropriate major ensemble, if so assigned. See Lamont Student Handbook for details.)	6
Note: These are minimum hours required. Candidates must enroll for at least one credit hour per quarter for each quarter of study and participate in at least two ensembles per quarter of study.		

Total Credits

Non-coursework requirements:

- · Candidates will be enrolled in the Artist Diploma program for two years.
- Candidates will successfully perform three (3) juried, full-length solo recitals while enrolled in the program. If recital preparation continues beyond the completion of coursework, students must perform on or off campus during each additional quarter of recital preparation.

27

· Participate in the Lamont Honors Competitions (concerto and chamber music) at least once during enrollment in the program.

Graduate Certificate Programs

Graduate Certificate in Music with a Concentration in Conducting

The Certificate in Music with a concentration in Conducting has three emphases: Choral, Orchestral, or Wind.

Coursework requirements

Minimum number of credits required for the certificate: 28 credits

Code	Title	Credits
Core coursework requirements		
MUPR 4930	Conducting (2 credits each quarter)	12
Students will complete MUAC 4600 f	or 0-2 credits each quarter, earning a minimum of 6 credits prior to program completion.	
MUAC 4600 & 4600 & 4600 & 4600 & 4600 & 4600 & 4600	Extra-Musical Roles of the Music Director and Extra-Musical Roles of the Music Director	6
MUEN 3XXX	Ensembles	6
Candidates will enroll in the appropriate major ensemble for 1 credit hour per quarter for each quarter of study. They must audition for, and if so assigned, play/sing in said ensemble each quarter. Candidates who do not play an appropriate instrument or who are not accepted into the ensemble for any given quarter will fulfill the credit and requirement by attending all rehearsals and concerts, following along in their scores during rehearsals.		
Select the two courses outside yo	ur emphasis from the following:	
MUAC 3960	Advanced Orchestral Conducting	2
MUAC 3961	Advanced Choral Conducting	2
MUAC 3962	Advanced Wind Conducting	2
Total Credits		28

Non-coursework requirements:

- · Candidates will be enrolled in the Certificate program for two years.
- Candidates will successfully perform one full-length conducting recital while enrolled in the program. If recital preparation continues beyond the completion of coursework, students must perform on or off campus during each additional quarter of recital preparation.

Graduate Certificate in Music with a Concentration in Orchestral Studies Coursework requirements

Minimum number of credits required for the certificate: 18

Code	Title	Credits
MUPR 4XXX Applied Lessons on n	najor instrument (2 credits each quarter)	6

Specialized Certificate in Music with a Concentration in Music Entrepreneurship

The Music Entrepreneurship Specialized Graduate Certificate offers students the opportunity to develop and manage their careers as working artists in the field of music. They will gain the background, practical skills, and critical perspectives necessary to develop an entrepreneurial career in their chosen area of expertise. The certificate combines expertise in 21st-century approaches to marketing with specialized coursework in the Lamont School of Music. It provides a streamlined way for music professionals in the early-to-mid stages of their career to gain the expertise necessary to promote themselves and their work.

This is a 16-credit program that can be completed in one academic year. Students will earn 8 credits offered by the Daniels College of Business, combined with 8 credits in the Lamont School of Music.

Coursework requirements		
Code	Title	Credits
Music courses		8
MUAC 3092	The Business Side of Music	
MUAC 3844	The Artist Entrepreneur	
MUAC 3990	Internship in Music (Complete 2 credits.)	
Business courses (Choose 8 credits	from the following):	8
MKTG 4100	Marketing Concepts	
MKTG 4805	Foundations of Digital Marketing	
MKTG 4815	Social Media Marketing	
MKTG 4825	Mobile Marketing	
MKTG 4835	Search Engine Marketing: Google Analytics & Google Ads	
MKTG 4845	Tech in Marketing: Design Tools and Digital Foundations	
Students may also choose four 1-	credit "Business Sprints" below in lieu of one of the above courses.	
EVM 4407	The Perfect Pitch	
EVM 4408	Accounting For Entrepreneurs	
EVM 4409	Financial Statement for Entrepreneurs	
EVM 4413	Design Thinking	
EVM 4414	Market Discovery & Product Market Fit	
EVM 4417	Branding & Messaging	
EVM 4421	Intellectual Property Issues for Startup Businesses	
EVM 4432	Getting to Know Your Customer	
EVM 4440	How to Effectively Negotiate in Business	
EVM 4441	How To Create A Business Startup Budget & Forecast	
EVM 4448	Navigating the Gig Economy: Turn Your Passion into Profit	

Students will also complete a final portfolio of course projects, resume, artist statement, biographical sketch, and business plan.

Specialized Certificate in Music Theory Pedagogy

The Certificate in Music Theory Pedagogy allows a conductor, composer, musicologist, pedagogue, or performer to develop the skills and knowledge required to teach basic music theory at the high school or possibly college level. The program balances theoretic and analytic skills with practical applications for the classroom. It is designed to be concurrent with an MM degree or an MA in Musicology, but students may also apply to begin the program upon completion of a previous degree in music.

Complete a minimum of 16 credits as follows:

Code	Title	Credits
MUAC 4000-level Music Theory Cou	irses	8
(Often includes MUAC 4006 or MUA preferences should discuss them w	C 4007 Post-Tonal Theory and MUAC 4801 Introduction to Schenkerian Analysis; students with other ith the Chair of Music Theory.)	
MUAC 4010	Pedagogy of Music Theory	4
MUAC 4991	Independent Study (Complete 4 credits of Music Theory Pedagogy Portfolio independent study coursework. Students may choose from a variety of topics for inclusion in the Portfolio, including technology, curricular development, instructional design, inclusive excellence, history of theory pedagogy, or performance/analysis methods, etc. These credits may be taken during a single quarter or split across quarters.)	4
Total Credits		16

Many of these credits may be used to fulfill requirements for the MA in Musicology or MM programs.

Students also will complete a Final Oral Comprehensive Exam, including the defense of Music Theory Pedagogy Portfolio.

Specialized Certificate in Music with a Concentration in Performance

Coursework requirements			
Code	Title	Credits	
MUPR 4XXX Applied lessons on maje	or instrument (2 credits per quarter)	6	
MUEN 3XXX Ensembles, as assigned	by department chair based on the guidelines in the Lamont Student Handbook	3	
MUEN 3XXX Chamber Ensembles or MUAC 4991 Independent Study for voice students		3	
Total Credits		12	

Minimum number of credits required for the certificate: 12

Non-coursework requirements:

- One solo recital consisting of solo repertoire. If recital preparation continues beyond the completion of coursework, students must perform on or off campus during each additional quarter of recital preparation.
- · Juries, as required by the performance area.
- Candidates will normally be enrolled in the Performance Certificate program for one year. A candidate may, however, request to remain in school longer with the stipulation that they must enroll in applied lessons, assigned ensembles, and chamber music every quarter, even after the required number of credits have been met.
- · Please refer to the Lamont Student Handbook for additional details regarding ensemble requirements.

Online Specialized Certificate in Music with a Concentration in Performance and Composition

In this online certificate, performers develop their virtuosity on their major instrument while cultivating skills in original composition. Modules consist primarily of individual lessons in both performance and composition. Live remote meetings are enhanced with flexible tools such as video recordings, asynchronous discussions, online masterclasses, and more.

On their major instrument, students are expected to meet the same high standards as other graduate majors. In composition, faculty meet students where they are—beginning or professional—helping them to develop compelling and substantial projects.

In this online certificate, performers develop their virtuosity on their major instrument while cultivating skills in original composition. Modules consist primarily of individual lessons in both performance and composition. Non-coursework requirements:

- Traditional solo recital or innovative performance project. If recital preparation continues beyond the completion of coursework, students must perform on or off campus during each additional quarter of recital preparation
- · Juries, as required by the performance area.
- · Culminating project in the secondary area (may be combined with solo recital).
- Candidates will normally be enrolled in the Online Certificate program for one year. A candidate may, however, request to remain in school longer with the stipulation that they must enroll in applied performance and composition lessons every quarter, even after the required number of credits have been met.

online certificate in music with a concentration in performance and orchestral audition preparation

With two hours of one-on-one faculty instruction per week, students in the program refine their orchestral repertoire and gain a more thorough understanding of the challenges of performing orchestral music at the professional level. Students will take a weekly one-hour lesson focusing on solo repertoire as well as a second weekly lesson focusing on orchestral repertoire. Graduates leave with refined performance abilities that provide a foothold in the competitive world of orchestral auditions.

MUPR 4XXX Applied Lessons on orch	hestral repertoire (2 credits per quarter)	6
Total Credits		12

Minimum number of credits required for the certificate: 12 Non-coursework requirements:

- · Traditional solo recital or innovative performance project.
- Juries, as required by the performance area.
- Two Orchestral Audition Juries in Audition Format (Winter and Spring Quarters)
- Candidates will normally be enrolled in the Online Certificate program for one year. A candidate may, however, request to remain in school longer with the stipulation that they must enroll in applied performance and composition lessons every quarter, even after the required number of credits have been met.

Online Specialized Certificate in Music with a Concentration in Performance and Recording and Production

In this online certificate, performers develop their virtuosity on their major instrument while cultivating skills in recording/production. Modules consist primarily of individual lessons in both performance and recording/production. The recording/production component can be closely customized to the needs of the individual student and may include topics such as classical/acoustic recording techniques, live concert recording, electro-acoustic production (popular crossover as well as
classical tradition), and performance/improvisation with live electronics. Live remote meetings are enhanced with flexible tools such as video recordings, asynchronous discussions, online masterclasses, and more.

On their major instrument, students are expected to meet the same high standards as other graduate majors. In the recording and production modules, faculty meet students where they are-beginning or professional-helping them to develop exciting and substantial projects.

Coursework Requiremen	ts	
Code	Title	Credits
MUPR 4XXX Applied Le	essons on major instrument (2 credits per quarter)	6
MUPR 4040	Music Production	6
& 4040	and Music Production	
& 4040	and Music Production	
Total Credits		12

Minimum number of credits required for the certificate: 12

Non-coursework requirements:

• Traditional solo recital or innovative performance project.

- · Juries, as required by the performance area.
- · Culminating project in the secondary area (may be combined with solo recital).
- Candidates will normally be enrolled in the Online Certificate program for one year. A candidate may, however, request to remain in school longer with the stipulation that they must enroll in applied performance and composition lessons every quarter, even after the required number of credits have been met.

Music: Academic Classes (MUAC)

MUAC 3002 Form and Analysis (4 Credits)

Analysis of structural elements and stylistic features in solo, chamber and orchestral literature from 1600 to present. Prerequisite: MUAC 2006.

MUAC 3006 Post-Tonal Theory: Mode/Rhythm (4 Credits)

Works of Stravinsky, Bartok, Satie, Debussy, and others are studied, employing various transformational theories, diatonic set theory, and 20th-century metric theories. Prerequisite: completion of Music Theory I and Music Theory II sequences.

MUAC 3023 Rhythm & Meter in Music (4 Credits)

Rhythm pertains to experienced or measured durations in music. Meter pertains to the cyclic organization of music's durations. A hegemonic view of meter emerged in music theory and related disciplines in the mid-20th century, one most appropriate to Western classical music and, to a lesser extent, Anglo-American popular music. This view holds that meter "in music" consists of (1) hierarchically arranged beats (2) whose durations are nominally equivalent and (3) whose onsets among coordinated musicians are nominally aligned. This course examines rhythm and meter by interrogating three components of the standard view of the topic. Looking at Western classical music, but also traditional and commercial music from Africa and the African diaspora, we will explore the nature of meter and rhythm in music where durations might not be arranged hierarchically, of equal length, or aligned.

MUAC 3025 Topics in Analysis: Brahms (4 Credits)

This course explores a variety of analytical techniques used to understand the compositions of Brahms. We examine works by musicologists and theorists such as Allen Forte, Walter, Frisch, Arnold Schoenberg, Carl Schachter, and David Lewin. Issues discussed include developing variations, rhythm, form, and ambiguity in Brahms. We cover a wide range of repertoire, ranging from piano works to choral works to symphonies.

MUAC 3026 Sonata Form (4 Credits)

This is a team-taught course on the topic of "sonata form," one of the central musical structures in classical Western art music, from Mozart to Brahms and beyond. The course will feature a dialogue between history, analysis, and performance, reflected in class activities at multiple levels.

MUAC 3027 Arranging for the Classical Musician (4 Credits)

Music initially created for one context becomes music for a new context through the art of arranging. How much of your professional life will you spend performing or teaching arrangements? Have you ever thought about writing your own? Is an arrangement automatically less worthwhile, or can it ever surpass the quality of the original? Class sessions will be spent studying arrangements of music by Bach, Björk, Chopin, Michael Jackson, Mahler, et al. as arranged by Brahms, Jacob Collier, Gil Evans, The Piano Guys, Ravel, and others. Students will also receive individual guidance as they plan, write, and perform arrangements of pieces and songs of their choice.

MUAC 3030 Seminar-Performance Psychology (2 Credits)

MUAC 3059 Audio Production II (4 Credits)

This course covers theory in audio engineering and provides hands-on training in professional audio engineering for studio sessions and live events. Students receive classroom instruction as well as on-site training at Lamont School of Music performances. This is the first sequence in the audio production concentration.

MUAC 3061 Audio Production I (4 Credits)

An introduction to analog and digital synthesis, MIDI sequencing, and DAW software.

MUAC 3064 Audio Production IV (4 Credits)

This course covers theory in audio engineering and provides hands-on training in professional audio engineering for studio sessions and live events. Students receive classroom instruction as well as on-site training at Lamont School of Music performances. This is the third sequence in the audio production concentration.

MUAC 3065 Audio Production V (4 Credits)

This course covers theory in audio engineering and provides hands-on training in professional audio engineering for studio sessions and live events. Students receive classroom instruction as well as onsite training at Lamont School of Music performances. This is the fourth sequence in the audio production concentration.

MUAC 3087 Intermedia Arts and Cross-Disciplinary Creativity (4 Credits)

In this course we will focus on intermedia and interdisciplinary artistic practices through the study of boundary crossing works drawn from sonic arts, multimedia opera, and dance. We will study artists who have combined their work as musicians with other kinds of mediums and disciplines to create uniquely individual artistic practices. We will also be considering what issues arise when working across disciplines and how to foster effective collaborations. Course assignments will give students opportunities to explore their own cross-disciplinary interests and creativity. As a main assignment, each student will develop an intermedia or interdisciplinary project suited to their individual interests and aimed at enhancing their work as musicians.

MUAC 3088 Composing for Voice: Approaches by Contemporary Female Composers (4 Credits)

This course focuses on composing based on pre-existing models. Students will compose works for voice studying varying approaches by contemporary female composers.

MUAC 3092 The Business Side of Music (4 Credits)

A personal and clinical approach to developing music business skills and strategies.

MUAC 3122 Spectral and Microtonal Music (4 Credits)

This course will follow composers' departure from equal temperament and conventional notions of pitch and harmony (tonal or atonal) in the 20th and 21st centuries, focusing particularly on spectral and microtonal music. Spectral music – in the most general sense – is music that focuses on timbre above all other musical parameters and derives its musical material from the acoustic properties of sound itself (sound spectra), the overtone series, electronic music techniques, and psychoacoustics. Though spectralism was initially developed by a small group of young Parisian composers in the 1970's, its influence has since spread around the world, seemingly achieving wider use and acceptance with each new generation of composers. Microtonality describes a wide array of disparate practices, including those influenced by early music, non-Western music, studies of acoustics, and more intuitive approaches. Over the quarter, we will consider the different ways composers have incorporated these ideas into their music through listening, score study, readings, and analysis.

MUAC 3124 Composition Seminar (1 Credit)

Composition Seminar focuses on the reading and performance of modern scores by Lamont and recognized composers. Any student composing music or wishing to perform new compositions at Lamont may register and participate. Requirements for composers include the completion, rehearsal and performance of a piece of music at the New Music Ensemble concert each quarter. Non-composers are required to rehearse and perform at the New Music Ensemble concert each quarter. Non-compositions submitted as well.

MUAC 3161 Topics in Modern Opera (4 Credits)

This course involves the close study of selected twentieth- and twenty-first-century operas, their respective musical styles and their videotaped performances. This study will include such issues as opera and film, opera libretto criticism, and the personal and public politics of the opera.

MUAC 3204 Afrofuturism in Music (4 Credits)

Numerous Black artists have used images of space travel, extraterrestrials, mysticism, the future, science fiction, and technology in their creations. This course will examine the recurrence of these elements in African diasporic music, focusing on genres including jazz, funk, hip hop, and experimental music. How have artists' racialized views of the future served to critique their contemporary worlds and pose radical visions of the future? In what ways has Black music shaped and been shaped by recording and other technologies? What are "technology" and "Blackness," and how can one help us to understand the other? To answer these questions, we will engage a variety of readings on music, race, gender, sexuality, sound technology, and cyber-theory and view/listen to key Afrofuturist performances. We will also engage in our own music making (no experience required). In all, we will come to better understand the long encounter between people of the African diaspora and the so-called modern world.

MUAC 3212 Digital Music Creation (4 Credits)

In this course, students will create, produce, and present their own digital music. Using one of the industry's leading digital music creation platforms (such as Ableton Live), students will learn the history of electronic music creation, create their own digital music portfolios, become familiar with relevant copyright issues, and oversee public performances of their music.

MUAC 3240 Vocal Pedagogy I (1 Credit)

Psychological and physical aspects of teaching of singing.

MUAC 3241 Vocal Pedagogy II (1 Credit)

Psychological and physical aspects of teaching of singing.

MUAC 3243 Recitative in Opera (2 Credits)

Working as a professional singer your proficiency with recitative should be high. Though a major part of many operas recitative is still often overlooked as a skill set. Through this course we will explore several different approaches to recitative from various compositional styles and time periods.

MUAC 3282 Suzuki Violin Seminar II (2 Credits)

MUAC 3283 Suzuki Violin Seminar II (2 Credits)

MUAC 3284 Suzuki Violin Seminar II (2 Credits) MUAC 3439 Teaching Note Reading (2 Credits)

MUAC 3460 Suzuki Cello Practicum (1 Credit)

The Suzuki Cello Practicum is designed to give the students enrolled in the Suzuki Seminar classes a forum to practice teaching using the pedagogical points and philosophy covered in the seminar classes. The course will also include some lecture and discussion on developing teaching strategies for effective technical development and communication in lessons.

MUAC 3463 Suzuki Cello Seminar I (2 Credits)

MUAC 3464 Suzuki Cello Seminar I (2 Credits)

MUAC 3465 Suzuki Cello Seminar I (2 Credits)

MUAC 3466 Suzuki Cello Seminar II (2 Credits)

MUAC 3467 Suzuki Cello Seminar II (2 Credits)

MUAC 3468 Suzuki Cello Seminar II (2 Credits)

MUAC 3470 Suzuki Violin Seminar I (2 Credits)

Comprehensive study of Suzuki philosophy, repertoire and teaching techniques for violin. Offered fall, winter, and spring quarters. May be repeated for credit.

MUAC 3471 Suzuki Violin Seminar I (2 Credits)

Comprehensive study of Suzuki philosophy, repertoire and teaching techniques for violin. Offered fall, winter, and spring quarters. May be repeated for credit.

MUAC 3472 Suzuki Violin Seminar I (2 Credits)

Comprehensive study of Suzuki philosophy, repertoire and teaching techniques for violin. Offered fall, winter, and spring quarters. May be repeated for credit.

MUAC 3477 Suzuki Violin Practicum (1 Credit)

The Suzuki Violin Practicum is designed to give the students enrolled in the Suzuki Seminar classes a forum to practice teaching using the pedagogical points and teaching philosophy covered in the seminar classes. The course will include some lecture focusing on teaching strategies for effective technical development and effective communication in the lessons. Prerequisite: MUAC 3470.

MUAC 3492 History of Opera: From Monteverdi to Minimalism and Beyond (4 Credits)

This seminar course surveys the history of opera from the invention of the genre c. 1600 to the present day. In addition to assigned excerpts, students view three complete operas during the quarter. Primary and secondary source readings supplement the required text and class lectures. Students write a research paper that may examine some aspect of a particular opera or that may compare a particular aspect found in several operas. With the prior consent of the instructor, students may submit an alternative final project, one that combines performance with some form of written work.

MUAC 3493 Approaches to American Popular Music (4 Credits)

We explore a number of topics involved in the study of popular music, including tensions between analytical and cultural approaches; issues of race, class, and gender; and constructions of authenticity and personae. Listening and reading are wide-ranging, encompassing diverse styles. The course concludes with individual research projects and presentations on topics students choose and develop.

MUAC 3494 Music and Belief in World Cultures (4 Credits)

How does music affect religious experience and how does religion shape musical practice? Why is music vital in some religious rituals and expressly banned in others? If humans use music to create, reflect, and comment upon the worlds they experience and imagine, then the use of music in religious practice is among its most powerful and ephemeral. Students are introduced to a wide range of musical traditions and their relationship to many of the world's religions, including Islam, Judaism, Christianity, Buddhism, Hinduism, Native American belief and the religious practices of Africa and its diaspora. Readings, lectures and discussions are supplemented by guest lecture demonstrations, film/video screenings and hands-on workshops. Prerequisite: Junior or senior standing required; sophomores allowed with instructor approval.

MUAC 3497 Studying Music in the Field: Theory and Method in Ethnomusicology (4 Credits)

This course introduces issues that motivate ethnomusicological research and techniques for carrying out fieldwork, the ethnographic method which has largely come to define the discipline. Our primary texts include Bruno Nettl's classic text, The Study of Ethnomusicology, and Shadows in the Field, a seminal volume of essays discussing ethnomusicological fieldwork. This course also involves hands-on experience in some of the major fieldwork techniques, including field observation and writing fieldnotes, musical transcription and interviewing. This course culminates in a field research project in a Denver musical community determined in consultation with the professor. Note: this course is not open to freshman; sophomores with permission of instructor.

MUAC 3498 Music, Dance, and Everyday Life in South Asia (4 Credits)

This course serves as an introduction to a diverse array of performance traditions from the South Asian subcontinent. We examine the significance of music and dance in everyday life, the influence of media technology, and the relationship of performance to issues such as caste, gender, nationalism and globalization. Class discussions are supplemented by guest lectures, hands-on workshops and film screenings. Our study of music outweighs that of dance, and a music background is strongly encouraged. This course is not open to first-year students. Sophomores allowed with instructor approval.

MUAC 3499 Topics in Musicology (4 Credits)

This course focuses on particular musicology topics determined by the instructor. Course materials may include primary and secondary source readings, theoretical writings from other disciplines, a variety of listening assignments, film/video screenings, guest lecture demonstrations, and hands-on workshops. Students are expected to participate in class discussions and may be asked to write short response papers and/or to give short oral presentations. The course concludes with individual research projects, presented orally and in written form, on topics chosen and developed in consultation with the instructor. Expectations for graduate students enrolled in the course are commensurate with their training and background as compared to undergraduates enrolled in the course. In some cases, with the prior consent of the instructor, students may choose to combine performance with the final research project. Prerequisite: Junior standing.

MUAC 3502 Gender & Genre in World Music (4 Credits)

How are concepts of "maleness," "femaleness" and other gendered categories constructed, maintained, and contested through musical performance? This course examines the issues explored and debated in recent studies of gender relation to music of various cultures including Western art music, popular music, and other world genres. We focus on reading and discussion of ethno-musicological and anthropological ethnographies, musicological studies focusing on gender and theoretical writings from gender and women's studies. Lectures and discussions are supplemented by guest lecturedemonstrations, film/video screenings and hands-on workshops. This course is not open to freshman. Sophomores can register with instructor approval.

MUAC 3503 Black Music and Abolition (4 Credits)

From spirituals to jazz to funk to hip hop, music created by or associated with Black people has long been intertwined with notions of freedom. This seminar explores the ways in which Black music has been a site for working out the possibilities and pitfalls of liberation. In particular, we will trace the histories of U.S. abolition movements (against slavery, police, and prisons) and ongoing musical and non-musical efforts to eradicate oppressive institutions. Examining a variety of sonic practices—from the colonial period to today—we will ask: In what ways has sound been used to contest, dismantle, or reinforce systems of oppression? How might Black musical history provide a window onto present calls to defund police departments, pay reparations, build new systems for community care, and ensure that Black lives matter? How might music offer a unique method, approach, or context for abolitionist conversations? We will explore these questions through scholarly and popular readings, media examples, discussion, written reflections, and creative exercises. Finally, we will examine our own identities, scholarship, and creative work to explore our relationship to Black music and social justice, interrogating how we might or might not engage in contemporary abolitionist dialogues.

MUAC 3511 Mahler and Musical Culture (4 Credits)

We explore Gustav Mahler's life, historical context, and music, all in relation to one another. The focus is on recent and important scholarly approaches to this conductor and composer. The course concludes with individual research projects and presentations on topics students choose and develop.

MUAC 3512 Stories of Music History (4 Credits)

MUAC 3513 Wagner and the Ideology of the Artwork (4 Credits)

We explore Richard Wagner's music dramas, particularly the Ring operas, as well as theories and ideologies surrounding them. The focus is on recent and important scholarly approaches. The course concludes with individual research projects and presentations on topics students choose and develop.

MUAC 3520 Topics in Baroque Music (4 Credits)

Through the study of selected Baroque instrumental, vocal and operatic works, this seminar course considers various approaches to performance practice issues such as "authenticity," the "historically informed" performance, period instruments, ornamentation, continuo realization, and editing. Facsimile editions and primary and secondary source readings serve as the texts for the course. Students write a research paper that examines some aspect of Baroque music with an emphasis on performance practice. With the prior consent of the instructor, students may submit an alternative final project, one that combines performance with some form of written work.

MUAC 3521 Topics in World Music (4 Credits)

MUAC 3525 Four Books on Music: An Essential Reading List for Musicians (4 Credits)

Think of this course as a book club curated just for young musicians. In a fast-paced world where information hits us from all sides in small packages, this class will slow down and savor just four books that we will read cover to cover. Silence your phone and lengthen your attention span as we grapple with some of the biggest questions about music making, musical training, the music industry, and more. I've chosen four books that I think offer life-changing value to every musician. We'll read an 18th-century guide to being a musician, a recent book about how the classical music industry is adapting to the changing economic landscape, an anthropological dissection of an orchestra concert, and even a novel about the power of music and voice in the 1960s. The class will involve a lot of reading but not research. Instead, we will focus on wide-ranging discussions and reflection, just like a book club. Feel free to bring your own tea and cookies!.

MUAC 3536 Topics in Hindustani Music (4 Credits)

This course explores the melodic system (raga) and rhythmic system (tala) of Hindustani music, the classical music of North India. These conceptual frameworks act both as sound structures to be realized in improvised performance and as aesthetic entities manifested in the related traditions of dance, iconography, and film. A major emphasis of this course is developing an understanding of raga and tala as musical structures through intensive listening as well as practical instruction. Accordingly, each class incorporates hands-on music-making through singing, rhythmic exercises, and/or dance. By the end of the term, students will become familiar with several ragas and talas and the stages by which they are developed in performance. A second, equally important objective is to learn to appreciate ragas as aesthetic entities. We analyze their musical characteristics as well as the "extra-musical" characteristics of sentiment (rasa), performance time and/or season and iconographic associations (ragamala painting). Must be at least junior standing or obtain instructor approval.

MUAC 3537 Crouch, Hawkins, and Smallwood: Three Pioneers in Contemporary Gospel Music (4 Credits)

Andraé Crouch, Walter Hawkins, and Richard Smallwood have each influenced the course of black gospel music for the last 50 years. Through listening to recordings, watching video performances, score analysis, readings, performance, and improvisation, this course will examine the music of these unique composer/performers and how their contributions have impacted black gospel music. Rather than simply read about and analyze the music, students will play the music of these composers and literally have hands-on experience with the colors and textures of the music that has shaped church music and the gospel music industry for the last five decades.

MUAC 3577 Advanced Engraving and Notation (4 Credits)

This course will focus on creating scores and parts that are professional, clear, reflective of your individuality and artistry, and able to express any unconventional or difficult-to-notate idea you may need to express.

MUAC 3578 Advanced Composition (4 Credits)

Advanced composition with students composing works of large scope and using a variety of advanced techniques consistent with interests and abilities; emphasis on imagination and originality of personal expression.

MUAC 3590 Guitar History (4 Credits)

MUAC 3630 Basic Jazz Arranging (2 Credits)

A study and practical analysis of the foundational techniques involved with composing and orchestrating for small group jazz ensembles. This course will cover the basics of form, notation, and orchestration in the small group jazz idiom, consisting of one to four horns and/or vocals, guitar, piano, bass, and drums.

MUAC 3650 Orchestral Excerpts-Cello (4 Credits)

This course will explore excerpts from the standard orchestral literature, highlighting favorite audition materials of the major symphony orchestras. Students will be given a list of excerpts and coached on how to prepare them. They will participate in mock auditions and receive feedback. This course will also address the mental aspects involved in taking successful auditions and the expectations demanded of them in the professional world of orchestras.

MUAC 3655 Orchestral Excerpts-Bass (4 Credits)

This course will explore excerpts from the standard orchestral literature, highlighting favorite audition materials of the major symphony orchestras. Students will be given a list of excerpts and coached on how to prepare them. They will participate in mock audition and receive feedback. This course will also address the mental aspects involved in taking successful auditions and the expectations demanded of them in the professional world of orchestras.

MUAC 3660 Orchestral Excerpts-Violin (4 Credits)

This course will explore excerpts from the standard orchestral literature, highlighting favorite audition materials of the major symphony orchestras. Students will be given a list of excerpts and coached on how to prepare them. They will participate in mock auditions and receive feedback. This course will also address the mental aspects involved in taking successful auditions and the expectations demanded of them in the professional world of orchestras.

MUAC 3661 Orchestral Excerpts Viola (4 Credits)

This course explores excerpts from the standard orchestral literature, highlighting favorite audition materials of the major symphony orchestras. Students are given a list of excerpts and coached on how to prepare them. They participate in mock auditions and receive feedback. This course also addresses the mental aspects involved in taking successful auditions and the expectations demanded of them in the professional world of orchestras.

MUAC 3662 Orchestral Studies for Brass (2 Credits)

Study of orchestral literature brass players are likely to be asked to play at auditions for professional orchestras. Undergraduate participants should have passed their Sophomore Proficiency jury with distinction.

MUAC 3663 Orchestral Excerpts, Viola II (4 Credits)

Companion course to Orchestral Excerpts Viola I, this section expands the repertoire list beyond the standard works used for auditions today. In addition to further honing basic requisite material from section I, students study and prepare less frequently required works and principle viola solo repertoire. There is more extensive discussion of the audition process and mock auditions as a part of the course. While it is advised and preferable that students complete the first section of this course it is possible to take the course with the approval of the instructor.

MUAC 3682 Topics-Orchestral Repertoire (4 Credits)

We explore the history of the orchestra and orchestral literature from the baroque through modern eras, and examine a number of test cases in which conventional understanding has been challenged in recent years. The course concludes with individual research projects and presentations on topics students choose and develop.

MUAC 3684 Choral Literature I (2 Credits)

This course is an analysis of the development of choral repertoire from the Middle Ages through the Baroque era.

MUAC 3686 Choral Pedagogy I (2 Credits)

The Choral Pedagogy course focuses on effective choral methods and techniques indigenous to primary schools of thought that have risen to prominence or have proven successful in practice and performance throughout the last 50 years in the academic and professional choral idiom. Through study and analysis of selected works by various composers, effective teaching techniques are explored in performance practice and style interpretation.

MUAC 3688 Choral Pedagogy II (2 Credits)

The Choral Pedagogy course focuses on effective choral methods and techniques indigenous to primary schools of thought that have risen to prominence or have proven successful in practice and performance throughout the last 50 years in the academic and professional choral idiom. Through study and analysis of selected works by various composers, effective teaching techniques are explored in performance practice and style interpretation.

MUAC 3689 Choral Literature II (2 Credits)

This course is an analysis of the development of choral repertoire from the Classical period until the present day. This course is meant to be taken in sequence after Choral Literature I.

MUAC 3698 Carillon History and Mechanics (4 Credits)

A survey of the evolution of signal bells into the musical instrument known as the carillon. This subject is often called "campanology." The history will be traced from the 16th century in the Low Countries through modern times in Europe, North America, Australia/New Zealand and Japan. Topics will include bell foundries, bell casting and tuning, bell chambers, playing actions, carillonneurs, carillon schools, carillon organizations, the use of the carillon in its various regions and basic carillon maintenance.

MUAC 3700 Carillon Repertoire (4 Credits)

A survey of the music expressly produced for carillon from the earliest times through the present. Categories include automatic music (e.g., De Sany, Wyckaert, Eggert), the earliest compositions for manual play (Van den Gheyn and the Louvain manuscripts of the 18th century), and the 20th-century categories: Flemish, Dutch, French and North American. Mainstream publishers as well as incidental publications will be covered. The labs will focus on analysis through recordings and live performances by participants.

MUAC 3706 Pedagogy & Repertoire Tuba (4 Credits)

Teaching techniques and survey of literature and teaching materials for the tuba.

MUAC 3708 Pedagogy & Repertoire Horn (4 Credits)

Teaching techniques and survey of literature and teaching materials for the horn.

MUAC 3710 Carillon Pedagogy I (2 Credits)

An exploration of the physical and psychological elements that can lead to effective carillon teaching: technique, handling/pedaling ("fingering" on the piano), and developing an attitude that fosters successful performance.

MUAC 3712 Pedagogy & Repertoire Trombone (4 Credits)

Teaching techniques and survey of literature and teaching materials for the trombone.

MUAC 3718 Pedagogy & Repertoire Percussion (4 Credits)

Teaching techniques and survey of literature and teaching materials for percussion.

MUAC 3719 Pedagogy & Repertoire Percussion (4 Credits)

Teaching techniques and survey of literature and teaching materials for percussion.

MUAC 3724 Pedagogy & Repertoire Guitar (4 Credits)

Teaching techniques and survey of literature and teaching materials for the guitar.

MUAC 3730 Pedagogy & Repertoire Cello (4 Credits)

Teaching techniques and survey of literature and teaching materials for the cello.

MUAC 3733 Pedagogy & Rep Double Bass (4 Credits)

Teaching techniques and survey of literature and teaching materials for the double bass.

MUAC 3736 Pedagogy & Repertoire Harp (4 Credits)

Teaching techniques and survey of literature and teaching materials for the harp.

MUAC 3737 Pedagogy & Repertoire Harp (4 Credits)

Teaching techniques and survey of literature and teaching materials for the harp.

MUAC 3738 Pedagogy & Repertoire Organ (2 Credits)

Teaching techniques and survey of literature and teaching materials for the organ.

MUAC 3739 Pedagogy & Repertoire Organ (2 Credits)

Teaching techniques and survey of literature and teaching materials for the organ.

MUAC 3740 Pedagogy & Repertoire Organ (2 Credits)

Teaching techniques and survey of literature and teaching materials for the organ.

MUAC 3742 Pedagogy & Repertoire Trumpet (4 Credits)

Teaching techniques and survey of literature and teaching materials for the trumpet.

MUAC 3748 Pedagogy & Repertoire Flute (4 Credits)

Teaching techniques and survey of literature and teaching materials for the flute.

MUAC 3749 Pedagogy & Repertoire Flute (4 Credits)

Teaching techniques and survey of literature and teaching materials for the flute.

MUAC 3751 Pedagogy & Repertoire Clarinet (4 Credits)

Teaching techniques and survey of literature and teaching materials for the clarinet.

MUAC 3752 Pedagogy & Repertoire Clarinet (4 Credits)

Teaching techniques and survey of literature and teaching materials for the clarinet.

MUAC 3754 Pedagogy & Repertoire Saxophone (4 Credits)

Teaching techniques and survey of literature and teaching materials for the saxophone.

MUAC 3755 Pedagogy & Repertoire Saxophone (4 Credits)

Teaching techniques and survey of literature and teaching materials for the saxophone.

MUAC 3757 Pedagogy & Repertoire Oboe (4 Credits)

Teaching techniques and survey of literature and teaching materials for the oboe.

MUAC 3758 Pedagogy & Repertoire Oboe (4 Credits)

Teaching techniques and survey of literature and teaching materials for the oboe.

MUAC 3761 Pedagogy & Repertoire Bassoon (4 Credits)

Teaching techniques and survey of literature and teaching materials for the bassoon.

MUAC 3762 Pedagogy & Repertoire Bassoon (4 Credits)

Teaching techniques and survey of literature and teaching materials for the bassoon.

MUAC 3765 Professional Brass Techniques (4 Credits)

This 4-hour per week course will be divided into a lecture/seminar for two hours and performance practicum for two hours. Topics discussed and performed include orchestral playing, sight reading, practice, solo performance, jazz survival, ornamentation, transposition, and warm-up/maintenance routine.

MUAC 3801 Introduction to Schenkerian Analysis (4 Credits)

MUAC 3804 Topics in Music (1-5 Credits)

MUAC 3810 Voice Repertoire (2 Credits)

Styles, periods and traditions of vocal repertoire from earliest music to contemporary compositions.

MUAC 3811 Voice Repertoire (2 Credits)

Styles, periods and traditions of vocal repertoire from earliest music to contemporary compositions.

MUAC 3812 Voice Repertoire (2 Credits)

Styles, periods and traditions of vocal repertoire from earliest music to contemporary compositions.

MUAC 3822 Piano Repertoire I (2 Credits)

Performance and analysis.

MUAC 3823 Piano Repertoire II (2 Credits)

Performance and analysis.

MUAC 3824 Piano Repertoire III (2 Credits)

Performance and analysis.

MUAC 3828 Songwriting Exploration I: Pop, R&B, & Hip hop (2 Credits)

Songwriting Exploration I is an intermediate to advanced level course for songwriting Pop, R&B, and Hip hop styles. This course focuses on developing the skills necessary for writing thought provoking, creative, and fun songs to compete in today's popular music market. Students will learn song forms and creative lyric writing techniques used by successful songwriters to create hit songs. Students will also learn instrumentation, chord progressions, and the importance of rhythms that are commonly heard in the Pop, R&B, and Hip hop genres. This course will involve video and listening examples of classic and modern songs, in-class discussions, online assignments, student collaboration projects, and in-class presentations/performances of original works. Students will also receive online resources on music technology (electronic instruments) and software that current songwriters/ producers are using to create basic recordings at home using a computer and DAW (Digital Audio Workstation). During the final week of the course, students will have an opportunity to record their songs in the Lamont recording studio on a pre-scheduled date or record at home.

MUAC 3829 Songwriting Exploration II (2 Credits)

MUAC 3829 is an intermediate to advanced level course for songwriting in Contemporary Jazz/Fusion, World, Pop, Rock, and R&B styles. This course focuses on developing the skills necessary for writing thought-provoking and creative songs to compete in today's contemporary and jazz market. Students will analyze more complex song forms, harmony, and creative lyric writing techniques used by successful songwriters. Students will also learn instrumentation, advanced chord progressions, and the importance of rhythms that are commonly heard in the Jazz, World, Pop, Rock and R&B genres. This course will involve video and listening examples of classic and modern songs, in-class discussions, transcription assignments, student collaboration projects, and in-class presentations/performances of original works. Students will also receive online resources on music technology (electronic instruments) and software that current songwriters/producers are using to create basic recordings at home using a computer and DAW (Digital Audio Workstation). During the final week of the course, students will have an opportunity to record their songs in the Lamont recording studio on a pre-scheduled date or record at home. Course Objectives and Relationship to Total Departmental Offerings • Establish and build upon techniques to write creative and compelling lyrics to compete in the modern contemporary music industry • Traditional and modern approaches to songwriting · How to write compelling melodies for lyrics · How to apply advanced harmonic devices and chord progressions to accompany lyrics · Techniques used by successful songwriters past and present • Collaborating with other writers, composers, and producers for projects through interaction with classmates and discussions • Perform works for an audience through in-class performance and other potential performance opportunities • Basic recording techniques for a professional recording studio or home studio • Compose and perform/record 4 songs (undergrad) or 5 songs (graduate) This is a new course being offered by a new faculty member in their area of expertise. This faculty member already offers a 2000 level class in songwriting and recently added the first part of a Songwriting sequence for Winter quarter (covering different writing styles and serving as the prerequisite for this new course). This class is an upper-division class exploring more advanced songwriting techniques and additional styles compared to what was covered in Songwriting Exploration I.

MUAC 3830 Advanced Jazz Arranging I (2 Credits)

A study and practical analysis of small to medium jazz ensemble writing with extended instrumentation. Consisting of nonette-style orchestration including orchestral instruments such as horn, tuba, woodwinds, and voice along with extended electronic textures, this course will cover the basics of from, notation and orchestration in the 21st Century hybrid small to medium size jazz ensemble idiom.

MUAC 3831 Advanced Jazz Arranging II (2 Credits)

A study and practical analysis of large "studio orchestra" type jazz writing with extended instrumentation. Consisting of medium to full orchestral string section, woodwinds, harp, percussion, brass plus jazz rhythm section, voices, and soloists. Exemplified by such modern ensembles as Snarky Puppy with the Metropole Orchestra, this will be a full studio orchestra with modern 21st Century jazz, rock, and pop sensibilities. String bowings and aspects of dynamic ensemble balances in the studio orchestra will be studied, as well as writing for the harp.

MUAC 3832 Arranging for Computer-Based Media (2 Credits)

This course will be an introduction to techniques of composition and arranging music for media, with an emphasis on practical assignments that the student will encounter in the professional world of media composition. Students will learn how to work in collaboration with filmmakers, master techniques of timing and synchronization, use traditional techniques of composition/arranging/orchestration to serve dramatic needs, and work efficiently in the recording studio under time and budget restraints.

MUAC 3844 The Artist Entrepreneur (2 Credits)

The Artist Entrepreneur is a course of study that examines the full spectrum of attributes and skills necessary for a student to "survive and thrive" in the every-changing landscape of the 21st Century. With a two-fold approach of examining effective strategies for a "modern artistry mindset" along with extensive case studies of successful 21st Century professionals, this course will offer the student a wide array of important recourses to guide their career. The case study aspect of The Artist Entrepreneur will be based on multiple evaluations of successful artists in the 21st Century in partnership with local presenters.

MUAC 3845 Writing for The Modern Large Jazz Ensemble I (2 Credits)

A study and practical analysis of the major methods for writing for the modern large jazz ensemble (big band) as exemplified by Frank Foster, Sammy Nestico, Slide Hampton, Bob Brookmeyer and other modern practitioners. Application of analysis will be in the form of a complete arrangment or original composition for modern big band.

MUAC 3846 Writing for the Modern Large Jazz Ensemble II (2 Credits)

A study and practical analysis of the major methods for writing for the modern large jazz ensemble (big band) as exemplified by Bob Brookmeyer, Maria Schneider, Gil Evans, Darcy James Argue, and others. A special emphasis will be placed on creating full works for the large jazz ensemble that uses textures and modern extended form approaches indicative of these artists. Application of analysis will be in the form of a complete arrangement or original composition for modern big band.

MUAC 3860 Basic Jazz Improvisation (4 Credits)

The study of jazz improvisation techniques and forms. Open to music majors or by instructor permission.

MUAC 3870 Jazz Improvisation & Composition (4 Credits)

Improvisational styles of major jazz soloists studied through transcription and analysis of selected recorded jazz solos; scales and modes; rhythmic styles and devices; practice and development of individual student's improvisational technique. Prerequisites: MUAC 1011, MUAC 1012, MUAC 3830.

MUAC 3910 Orchestration (4 Credits)

Techniques of instrumental scoring.

MUAC 3933 Graduate Music History Review (0 Credits)

MUAC 3935 Graduate Music Theory Review (0 Credits)

This course provides an accelerated review of materials from the undergraduate theory core, including analysis and written exercises in diatonic and chromatic harmony, counterpoint, tonal forms, and an introduction to 20th-Century theory.

MUAC 3959 Movement and Expression for Conductors (4 Credits)

Conductors use their whole body to communicate and elicit successful performances from their ensemble. If you have unnecessary tension or lack of ease in your body, this is communicated unconsciously to your ensemble, hindering quality of performance. Additionally, physical tension can prevent your ability to communicate and think clearly under pressure. This course is an exploration of freedom of movement and the physicality of musical expression. Classes will include group activities in free-movement, dance, acting, keeping your cool, poise, balance, tension release, as well as hands-on instruction applying Alexander technique to your conducting.

MUAC 3960 Advanced Orchestral Conducting (2 Credits)

Discussions of and exercises in score study, interpretation, and techniques associated with orchestral conducting. Includes practical experience conducting orchestral repertoire. Required of MM Conducting students with Choral or wind concentrations. Open to other students with permission of instructor. Prerequisite: Permission of instructor (not needed for MM Conducting students with Choral or Wind concentration). Fall quarter only.

MUAC 3961 Advanced Choral Conducting (2 Credits)

Conducting complex choral works, including those with instrumental accompaniment; phrasing, interpretation and score reading. Prerequisite: MUAC 2940. Fall quarter only.

MUAC 3962 Advanced Wind Conducting (2 Credits)

Conducting complex wind compositions; phrasing interpretation and score reading. Prerequisite: MUAC 2970. Spring quarter only.

MUAC 3973 Advanced Wind Literature I (2 Credits)

This course is an overview of wind literature appropriate for junior high school, high school, college and professional programs including strategies in effective programming and creation of appropriate program notes.

MUAC 3974 Advanced Wind Literature II (2 Credits)

An in-depth study of successful compositional techniques by prominent composers of wind literature. Prerequisite: MUAC 3973.

MUAC 3980 Advanced Jazz Improvisation and Composition (4 Credits)

A three term sequence continuing the in-depth study of the theory, performance practices, style, and history of jazz improvisation and composition. Prerequisite: satisfactory completion of the three terms of Jazz Improvisation and Composition or consent of the instructor.

MUAC 3990 Internship in Music (0-8 Credits)

Internship in Music will offer opportunities for music majors to experience actual music related careers within a sponsoring music organization chosen by the student and accepted by the supervising faculty of the School of Music.

MUAC 3991 Independent Study (1-10 Credits)

MUAC 4000 Introduction to Graduate Study (2 Credits)

Problems of research in various chronological epochs of Western musical culture; research techniques and sources used in research; formal writing style.

MUAC 4002 Form and Analysis (4 Credits)

Analysis of structural elements and stylistic features in solo, chamber and orchestral literature from 1600 to present. Prerequisite: MUAC 2006.

MUAC 4006 Post-Tonal Theory: Mode/Rhythm (4 Credits)

Works of Stravinsky, Bartok, Satie, Debussy, and others are studied, employing various transformational theories, diatonic set theory, and 20th-century metric theories. Prerequisite: completion of Music Theory I and Music Theory II sequences.

MUAC 4007 Post-Tonal Theory and Analysis: Set-Theory and Serialism (4 Credits)

This course has two components: (1) A study of selected analytical techniques for post-tonal music, primarily pitch-class set theory and twelve-tone (serial) theory; (2) Analysis of representative works from the twentieth century, focusing on the music from the first half of the century (Schoenberg, Berg, Webern, Stravinsky, and Bartok). Six credits of Theory 2 or permission of instructor required.

MUAC 4008 Modal Counterpoint, Renaissance Vocal Style (4 Credits)

This course teaches students to compose vocal music in the Renaissance style. After surveying species counterpoint, students learn imitative techniques en route to composing three- and four-voice texted pieces.

MUAC 4010 Pedagogy of Music Theory (4 Credits)

Materials, devices, techniques of teaching theory. Students must have succesfully completed undergraduate music theory or passed graduate review theory.

MUAC 4014 Music-Theoretical Approaches to Popular Music (4 Credits)

This course is an environment for engaging with generating music-theory scholarship on popular music. "Popular music" in this context refers to commercially successful music (e.g., hip-hop, rock, pop, country, etc.) as well as the predecessors of those genres (e.g., bluegrass, funk, soul, etc.). The course surveys a scholarly ecosystem that includes both analytical methods designed for older repertoires as well as newer methods that engage popular music's current particularities. These methods explore form, rhythm and meter, timbre, modality, harmony, race & ethnicity, gender & sexuality, interaction & improvisation, music instrument studies, text expression, multimedia, music & technology, philosophical concerns of ontology and groove, and more. The structure of the course is not set by the instructor in advance. Rather, the instructor and individual students will devise a grading contract in the first week that guides the topics in which the students will complete their work. The aim of the work is the further students' scholarly agendas and improve their capacity to read and present secondary scholarship, write and present their own scholarship, transcribe music, and provide feedback to their peers. Cross Listed with MUAC 3014.

MUAC 4020 Introduction to Research in Piano Pedagogy (2 Credits)

This course is designed to support the research requirements for the lecture-recital and/or the independent graduate-level pedagogical project which meet the standard competencies of the piano pedagogy program.

MUAC 4050 Major Adv Repertoire Guitar (2 Credits)

Bibliographical survey of materials related to particular repertoire chosen by student for MA recital in preparation for major written project at end of year.

MUAC 4051 Major Adv Repertoire Guitar (2 Credits)

Bibliographical survey of materials related to particular repertoire chosen by student for MA recital in preparation for major written project at end of year.

MUAC 4052 Major Adv Repertoire Guitar (2 Credits)

Bibliographical survey of materials related to particular repertoire chosen by student for MA recital in preparation for major written project at end of year.

MUAC 4087 Intermedia Arts and Cross-Disciplinary Creativity (4 Credits)

In this course we will focus on intermedia and interdisciplinary artistic practices through the study of boundary crossing works drawn from sonic arts, multimedia opera, and dance. We will study artists who have combined their work as musicians with other kinds of mediums and disciplines to create uniquely individual artistic practices. We will also be considering what issues arise when working across disciplines and how to foster effective collaborations. Course assignments will give students opportunities to explore their own cross-disciplinary interests and creativity. As a main assignment, each student will develop an intermedia or interdisciplinary project suited to their individual interests and aimed at enhancing their work as musicians.

MUAC 4088 Composing for Voice: Approaches by Contemporary Female Composers (4 Credits)

This course focuses on composing based on pre-existing models. Students will compose works for voice studying varying approaches by contemporary female composers.

MUAC 4090 Model Composition (4 Credits)

Students in this course deepen their understanding of musical styles and techniques by composing works that imitate major composers before 1900. Music by each student is performed in a final recital. Prerequisite: Tonal Counterpoint, equivalent coursework from another institution, or permission of instructor.

MUAC 4121 Seminar in Music Theory (4 Credits)

Seminar in Music Theory focuses on special topics chosen by faculty members. Students should expect rigorous course work and a final project or paper.

MUAC 4122 Spectral and Microtonal Music (4 Credits)

This course will follow composers' departure from equal temperament and conventional notions of pitch and harmony (tonal or atonal) in the 20th and 21st centuries, focusing particularly on spectral and microtonal music. Spectral music – in the most general sense – is music that focuses on timbre above all other musical parameters and derives its musical material from the acoustic properties of sound itself (sound spectra), the overtone series, electronic music techniques, and psychoacoustics. Though spectralism was initially developed by a small group of young Parisian composers in the 1970's, its influence has since spread around the world, seemingly achieving wider use and acceptance with each new generation of composers. Microtonality describes a wide array of disparate practices, including those influenced by early music, non-Western music, studies of acoustics, and more intuitive approaches. Over the quarter, we will consider the different ways composers have incorporated these ideas into their music through listening, score study, readings, and analysis.

MUAC 4160 Issues in Opera History and Adaptation (4 Credits)

This course addresses cultural, historical, analytical, aesthetic, and scholarly issues relevant to the history of opera. Students will consider the various ways in which composers, librettists, singers, patrons, conductors, listeners, and scholars have adapted to changes in social and cultural practices surrounding and subsuming opera as a social phenomenon, as well as to changes in the art form itself. We will study representative works and productions from the earliest music dramas of the Baroque period through to contemporary operas and reflect on the challenges posed in staging these works for today's audiences. Assignments may include weekly reflection papers, oral or virtual presentations, and a research project developed in consultation with the instructor.

MUAC 4161 Topics in Modern Opera (4 Credits)

This course involves the close study of selected twentieth- and twenty-first-century operas, their respective musical styles and their videotaped performances. This study will include such issues as opera and film, opera libretto criticism, and the personal and public politics of the opera.

MUAC 4189 Jazz Performance Techniques (2 Credits)

Individual study of jazz performance techniques in a directed study environment.

MUAC 4200 Diction-Graduate Voice Majors (2 Credits)

This course is designed to help refine the diction skills of graduate students in voice, with an emphasis on Italian, French and German. Native speakers will be presented, and the student will learn some basic vocabulary and syntactical aspects of the language.

MUAC 4300 Topics in Jazz History (4 Credits)

A seminar focusing on a major figure of jazz history. Detailed examination of a single artist, their life, music and influences.

MUAC 4305 Advanced Bebop Concepts (2 Credits)

An in-depth study of the language of bebop jazz improvisation. The course will combine listening, composing and performing skills with theoretical knowledge of the great improvisers of the 1940s and 50s.

MUAC 4450 Suzuki Group Lesson Practicum (1 Credit)

The Suzuki Group Lesson Teaching Practicum provides an opportunity for Suzuki Pedagogy master's students and Suzuki Teaching Certificate students to receive feedback on their own group lesson teaching skills from the professor. Prerequisites: MUAC 3477 or MUAC 3461.

MUAC 4492 History of Opera: From Monteverdi to Minimalism and Beyond (4 Credits)

This seminar course surveys the history of opera from the invention of the genre c. 1600 to the present day. In addition to assigned excerpts, students view three complete operas during the quarter. Primary and secondary source readings supplement the required text and class lectures. Students write a research paper that may examine some aspect of a particular opera or that may compare a particular aspect found in several operas. With the prior consent of the instructor, students may submit an alternative final project, one that combines performance with some form of written work.

MUAC 4493 Approaches to American Popular Music (4 Credits)

We explore a number of topics involved in the study of popular music, including tensions between analytical and cultural approaches; issues of race, class, and gender; and constructions of authenticity and personae. Listening and reading are wide-ranging, encompassing diverse styles. The course concludes with individual research projects and presentations on topics students choose and develop.

MUAC 4494 Music and Belief in World Cultures (4 Credits)

How does music affect religious experience and how does religion shape musical practice? Why is music vital in some religious rituals and expressly banned in others? If humans use music to create, reflect, and comment upon the worlds they experience and imagine, then the use of music in religious practice is among its most powerful and ephemeral. Students are introduced to a wide range of musical traditions and their relationship to many of the world's religions, including Islam, Judaism, Christianity, Buddhism, Hinduism, Native American belief and the religious practices of Africa and its diaspora. Readings, lectures and discussions are supplemented by guest lecture demonstrations, film/video screenings and hands-on workshops.

MUAC 4498 Music, Dance, and Everyday Life in South Asia (4 Credits)

This course serves as an introduction to a diverse array of performance traditions from the South Asian subcontinent. We examine the significance of music and dance in everyday life, the influence of media technology, and the relationship of performance to issues such as caste, gender, nationalism and globalization. Class discussions are supplemented by guest lectures, hands-on workshops and film screenings. Our study of music outweighs that of dance, and a music background is strongly encouraged.

MUAC 4499 Topics in Musicology (4 Credits)

This course focuses on particular musicology topics determined by the instructor. Course materials may include primary and secondary source readings, theoretical writings from other disciplines, a variety of listening assignments, film/video screenings, guest lecture demonstrations, and hands-on workshops. Students are expected to participate in class discussions and may be asked to write short response papers and/or to give short oral presentations. The course concludes with individual research projects, presented orally and in written form, on topics chosen and developed in consultation with the instructor. Expectations for graduate students enrolled in the course are commensurate with their training and background as compared to undergraduates enrolled in the course. In some cases, with the prior consent of the instructor, students may choose to combine performance with the final research project.

MUAC 4511 Mahler and Musical Culture (4 Credits)

We explore Gustav Mahler's life, historical context, and music, all in relation to one another. The focus is on recent and important scholarly approaches to this conductor and composer. The course concludes with individual research projects and presentations on topics students choose and develop.

MUAC 4512 Stories of Music History (4 Credits)

We explore a number of case studies in which "conventional wisdom" about a composer, repertory, or a period of time turns out to be not universally "true," but instead contingent on cultural context and changing ideologies about music. The course concludes with individual research projects and presentations on topics students choose and develop.

MUAC 4513 Wagner and the Ideology of the Artwork (4 Credits)

We explore Richard Wagner's music dramas, particularly the Ring operas, as well as theories and ideologies surrounding them. The focus is on recent and important scholarly approaches. The course concludes with individual research projects and presentations on topics students choose and develop.

MUAC 4518 Musical Theft: Music Appropriation and Appreciation from Ariana Grande to Paul Simon (4 Credits)

This course asks, what happens when people engage with music that is not their own? How do we determine who owns music? A piece? A tradition? What is the difference between theft, appropriation, and appreciation? We will explore these questions through diverse case studies examining popular, classical, and traditional musics from around the world. We will examine Paul Simon's engagement with South African musicians during apartheid, rap's overwhelming popularity among young white men in the United States, and Central African musicians' embrace of Cuban music in the 1960s and '70s. We will parse out what kinds of cross-cultural musical engagements occur, their impacts, and the responsibilities of individuals, governments, and international organizations in different contexts.

MUAC 4519 Social Justice and Community Music Making (4 Credits)

What is community music? How do community arts programs function? How do they integrate social justice and music? This interdisciplinary community engaged learning course examines these questions both inside and outside of the classroom. Students will analyze how music programs are built and run by applying ideas from in-class readings and discussions to collaborative projects with local social justice arts-based organizations (e.g., a social justice songwriting project with local teens, a storytelling performance project with a community choir). By working with local community arts and social justice program professionals, students will critically analyze best practices as they learn how organizations are constructed, get funding, demonstrate impact, and pursue their social justice and educational missions. Drawing on scholarship from community arts, social work, ethnomusicology, cultural policy, and music education, this course provides an interdisciplinary foundation for students to engage with (and even create) impactful arts- and social justice-focused programs in their communities.

MUAC 4520 Topics in Hindustani Music (4 Credits)

This course explores the melodic system (raga) and rhythmic system (tala) of Hindustani music, the classical music of North India. These conceptual frameworks act both as sound structures to be realized in improvised performance and as aesthetic entities manifested in the related traditions of dance, iconography, and film. A major emphasis of this course will be developing an understanding of raga and tala as musical structures through intensive listening as well as practical instruction. Accordingly, one class each week is designed to incorporate hands-on music-making through singing, rhythmic exercises, and dance. By the end of the quarter, students will become familiar with several ragas and talas and the stages by which they are developed in performance. A second, equally important objective is to learn to appreciate ragas as aesthetic entities. We will analyze their musical characteristics as well as the "extra-musical" characteristics of sentiment (rasa), performance time and/or season and iconographic associations (ragamala painting).

MUAC 4521 Topics in Baroque Music (4 Credits)

Through the study of selected Baroque instrumental, vocal and operatic works, this seminar course considers various approaches to performance practice issues such as "authenticity," the "historically informed" performance, period instruments, ornamentation, continuo realization, and editing. Facsimile editions and primary and secondary source readings serve as the texts for the course. Students write a research paper that examines some aspect of Baroque music with an emphasis on performance practice. With the prior consent of the instructor, students may submit an alternative final project, one that combines performance with some form of written work.

MUAC 4525 Four Books on Music: An Essential Reading List for Musicians (4 Credits)

Think of this course as a book club curated just for young musicians. In a fast-paced world where information hits us from all sides in small packages, this class will slow down and savor just four books that we will read cover to cover. Silence your phone and lengthen your attention span as we grapple with some of the biggest questions about music making, musical training, the music industry, and more. I've chosen four books that I think offer life-changing value to every musician. We'll read an 18th-century guide to being a musician, a recent book about how the classical music industry is adapting to the changing economic landscape, an anthropological dissection of an orchestra concert, and even a novel about the power of music and voice in the 1960s. The class will involve a lot of reading but not research. Instead, we will focus on wide-ranging discussions and reflection, just like a book club. Feel free to bring your own tea and cookies!.

MUAC 4535 Baroque Opera on Stage (4 Credits)

This course will explore aspects of Baroque opera not immediately conveyed by a score - including staging, gesture, scenic design, machinery, theater space, performers response - as they inform our understanding of specific Baroque operas and the cultural context within which they were performed. We will focus on operas by Monteverdi, Cavalli, Purcell, Handel, Lully, Campra and Rameau, among others. Students should expect to participate in class discussions, to write short response papers, to give short oral presentations, and to write a 12 to 15 page paper that examines a Baroque opera or operas in the light of one or more performance considerations. With the prior consent of the instructor, students may submit an alternative final project, one which combines performance with some form of written work.

MUAC 4536 Musics of the African Diaspora (4 Credits)

How have African music-cultures changed in their transitions to new lands? What performative Africanisms have been retained, reconstructed and/ or highlighted in the aftermath of legal slavery? And within newer Afro-diasporic communities? What role does musical transmission play in cultural retention and survival? This course will explore the connections and differences in musical practice and worldview throughout the African diaspora. We focus primarily on music-cultures of North, South, and Central America, and the Caribbean, examining traditional forms of music and dance associated with religion and ritual such as Afro-Cuban bata drumming, practices which fuse music and movement such as Afro-Brazilian capoeira, jazz, and popular music such as rap. Lectures and class discussions are supplemented by guest lecture-demonstrations, film/video screenings and hands-on workshops.

MUAC 4537 Psalms, Hymns, and Spiritual Songs: The Music of the African American Worship (4 Credits)

This course is an experiential exploration of the spirituality of African-American sacred song. Participants will sing, consider the history of the music and explore their own connection to the songs, as well as the inspiration and challenge these songs may offer to present and future communities.

MUAC 4538 Cultural and Psychological History of the African American Spiritual (4 Credits)

In this graduate academic music course, we trace the cultural and psychological history of African American spirituals, which are the sacred folk songs that were created and first sung in the 18th and 19th centuries by African women and men enslaved in North America. We explore the cultural and psychological functions of the music during slavery and the different functions of choral and art song spirituals that evolved after slavery, peaking in their cultural impact during the Harlem Renaissance of the 1920s and 30s. We also examine the cultural relationship of the spirituals to gospel music, and the influence of the spirituals tradition on the emergence of the freedom songs of the Civil Rights Movement of the 1950s and 60s. Throughout the course, we reflect on the relationship of the spirituals to larger issues of racial identity and social justice. Finally, we examine the cultural and psychological meanings of the spirituals tradition in contemporary twenty-first century America.

MUAC 4539 Music, Politics, and Policy (4 Credits)

This course examines the ways in which policies and politics engage with popular, jazz, folk, and classical musics around the world. Students will explore contemporary and historical cases in which governments and NGOs foster, transform, reject, and otherwise use musics to promote their own ideas about local economies, national cultures, diplomacy, democracy, innovation, cultural diversity, and even criminal law. We ask, can music promote peace? Democracy? How? How do governments create local and national music scenes? Which local and national cultures do they promote and protect? To what end? We look at how the Cuban government has embraced rap music as emblematic of the nation's revolutionary ethos; how the United States government used jazz as a diplomatic tool during the Cold War; how NGOs in Israel and Palestine used popular and classical musics to promote peace and understanding; how American courts have used rap music as evidence in criminal cases; and how funding and intellectual property laws impact musical ownership, tradition, innovation, and creativity.

MUAC 4540 Music and Activism (4 Credits)

In many times and places, people around the world sing, chant, and drum in the streets. Their lived experiences don't line up with the equality and opportunity their governments claim to champion. Music is an integral part of their advocacy work. They play and sing as they draw attention to injustices, foster cohesion and community, communicate messages (both covertly and forcefully), express pain, joy and pride, energize and sustain themselves, as well as (de)humanize themselves and others. This course explores the special place music has in activism around the world. We examine protest movements such as the South African anti-apartheid movement, the American Abolitionist and Civil Rights movements, American/ European White Nationalist movements, the Arab Spring, and the worldwide Black Lives Matter movements. We will explore community music projects with social justice agendas such as Youth on Record, The Spirituals Project, and the West-Eastern Divan Orchestra. We ask, why is music a particularly important part of activist work? What special place does it have? How is it used for both good and bad? For community mobilization, peace, and violence? Drawing on the fields of ethnomusicology, musicology, and cultural policy, we explore music, not just as a means to achieve certain ends, but as integral to the way humans position themselves in the world and advocate for themselves and others.

MUAC 4547 Topics in Advanced Keyboard Repertoire (4 Credits)

Topics in Advanced Keyboard Repertoire focuses on special topics chosen by faculty members. Students should expect rigorous course work and a final project or paper.

MUAC 4548 Advanced Keyboard Repertoire: Piano Plus (4 Credits)

In this course, pianists will survey a slate of chamber music repertoire that includes piano and one or more instrument(s), including piano, strings, woodwinds, brass, and/or percussion. Students will engage in listening, score study, and discussions during class, with additional assignments to explore recordings and scores of works discussed or referenced. This course is designed for graduate-level piano students and have no prerequisites.

MUAC 4577 Advanced Engraving and Notation (4 Credits)

This course will focus on creating scores and parts that are professional, clear, reflective of your individuality and artistry, and able to express any unconventional or difficult-to-notate idea you may need to express.

MUAC 4600 Extra-Musical Roles of the Music Director (0-2 Credits)

Under the supervision and guidance of conducting faculty, students will gain hands-on, actual experience with many of the non-musical tasks that conductors face. Students will learn about and gain hands-on, actual experience with many of the non-musical tasks with which conductors are faced. These experiences will include managing ensemble personnel, librarian activities, running auditions, and recruiting.

MUAC 4602 Free Improvisation Techniques (2 Credits)

Free Improvisation Techniques will explore exercises in Tom Hall's book Free Improvisation: A Practical Guide. We will also explore how those exercises relate to the broader concepts of improvising as discussed in Stephen Nachmanovich's landmark book Free Play. This class is best suited for all musicians, especially those who are seeking to expand the way they relate to performing and how performing relates to other aspects of their life.

MUAC 4801 Introduction to Schenkerian Analysis (4 Credits)

MUAC 4831 Current Trends in Piano Pedagogy (2 Credits)

This course will explore current trends including some of the following topics: technology, professionalism, the history of piano pedagogy, employment opportunities and creative projects.

MUAC 4840 Piano Teaching Practicum (0-2 Credits)

MUAC 4840 is a course designed to provide guided observations, lesson planning, and practice teaching students of various developmental age groups using foundations and principles developed in Piano Pedagogy.

MUAC 4850 Elementary Piano Pedagogy I (2 Credits)

An in-depth study of methods and curriculum for teaching piano at the beginner and elementary level. Focus on philosophical, psychological, and physiological bases of piano study. Study and evaluation of current educational materials.

MUAC 4851 Elementary Piano Pedagogy II (2 Credits)

This course is designed in a sequence with Elementary Piano Pedagogy I. An in-depth study of methods and curriculum for teaching piano at the late elementary to early intermediate levels. Focus on philosophical, psychological, and physiological bases of piano study. Study and evaluation of current educational materials. Prerequisite: MUAC 4850.

MUAC 4852 Group Piano Teaching Techniques (2 Credits)

An in-depth study of methods and curriculum for group study and the teaching of adults and children. Focus on philosophical, psychological, and physiological bases for teaching the piano in groups of all ages. Study and evaluation of current resources.

MUAC 4853 Intermediate Piano Pedagogy I (2 Credits)

Course content will emphasize teaching methods, materials, and curriculum content at the intermediate level of piano study. Reading and discussions will explore practical issues encountered by the contemporary piano teacher.

MUAC 4991 Independent Study (1-10 Credits)

MUAC 4993 Independent Study (1-10 Credits)

MUAC 4995 Independent Research (1-10 Credits)

Music: Studio Lessons (MUPR)

MUPR 3120 Alexander Technique (2 Credits)

The Alexander technique is a skill that can be incorporated into practice, performance, and everyday life. Using the principles discovered by F. Matthias Alexander, students will learn how to identify and change faulty patterns of thought and movement. Emphasis will be placed on recognizing how these patterns affect music-making in practice and performance. Lessons are individually tailored and topics may include injury recovery and prevention, pain and tension reduction, stress management, performance anxiety, freeing the breath, using the back effectively, balance, and ease of motion.

MUPR 3190 Jazz Piano (2 Credits)

MUPR 3210 Piano (2 Credits)

For non-majors only. If you are interested in Piano for Non-Majors, please email lamontpiano@du.edu.

MUPR 3230 Voice (2 Credits)

For non-majors only. If you are interested in Voice for Non-Majors, please email lamontvoice@du.edu.

MUPR 3250 Violin (2 Credits) For non-majors only.

MUPR 3270 Violoncello (2 Credits) For non-majors only.

MUPR 3290 Viola (2 Credits) For non-majors only.

MUPR 3310 Bass Violin (2 Credits)

MUPR 3312 Jazz Bass (2 Credits)

MUPR 3330 Harp (2 Credits)

MUPR 3350 Organ Improvisation (2 Credits)

This course is designed for organ students to introduce them to the art of organ improvisation, hymn and ensemble playing, as well as all possible forms of accompaniment. It is meant for undergraduate students (upper division), graduate students, and artist diploma graduates. Prerequisites: knowledge of music history, figured bass, and counterpoint. Permission of instructor required.

MUPR 3351 Organ (2 Credits)

MUPR 3370 Clarinet (2 Credits) For non-majors only.

MUPR 3390 Flute (2 Credits) For non-majors only.

MUPR 3460 Bassoon (2 Credits)

MUPR 3480 Trombone (2 Credits) For non-majors only.

MUPR 3481 Jazz Trombone (2 Credits)

MUPR 3500 Trumpet (2 Credits) For non-majors only.

MUPR 3520 Horn (2 Credits) For non-majors only.

MUPR 3540 Euphonium (2 Credits)

MUPR 3560 Tuba (2 Credits) For non-majors only.

MUPR 3621 Jazz Guitar (2 Credits)

MUPR 3660 Percussion (2 Credits) For non-majors only.

MUPR 3661 Percussion Set (2 Credits)

MUPR 3680 Oboe (2 Credits)

MUPR 3780 Saxophone (2 Credits)

MUPR 3900 Carillon (2 Credits)

MUPR 3920 Composition (2 Credits)

MUPR 3930 Conducting (2 Credits)

MUPR 4040 Music Production (2 Credits)

This course is designed to meet you where you currently are in your production and theory experience and then progress from there. As such, the first 1 or 2 meetings may be to assess your current status and construct a plan for the academic quarter. Possible directions include, but are not limited to, audio theory, microphone technique, post-production (mixing/mastering), editing, songwriting and production, sound synthesis, and electronic music production, etc.

MUPR 4191 Jazz Piano (2 Credits) MUPR 4210 Piano (2 Credits) MUPR 4230 Voice (2 Credits) MUPR 4250 Violin (2 Credits) MUPR 4270 Violoncello (2 Credits) MUPR 4290 Viola (2 Credits) MUPR 4310 Bass Violin (2 Credits) MUPR 4312 Jazz Bass (2 Credits) MUPR 4330 Harp (2 Credits) MUPR 4350 Organ (2 Credits) MUPR 4370 Clarinet (2 Credits) MUPR 4390 Flute (2 Credits) MUPR 4460 Bassoon (2 Credits) MUPR 4480 Trombone (2 Credits) MUPR 4481 Jazz Trombone (2 Credits) MUPR 4500 Trumpet (2 Credits) MUPR 4520 Horn (2 Credits) MUPR 4540 Euphonium (2 Credits) MUPR 4560 Tuba (2 Credits) MUPR 4600 Classical Guitar (0-2 Credits) MUPR 4610 Classical Guitar (4 Credits) MUPR 4621 Jazz Guitar (2 Credits) MUPR 4660 Percussion (2 Credits) MUPR 4661 Percussion Set (2 Credits) MUPR 4680 Oboe (2 Credits) MUPR 4780 Saxophone (2 Credits) MUPR 4900 Carillon (2 Credits) MUPR 4920 Composition (2 Credits) One-on-one instruction for composition majors.

MUPR 4930 Conducting (2 Credits)

This course provides individualized instruction in conducting for graduate students majoring in conducting. Repertoire selection, analysis, rehearsal procedures, and gestures will all be studied. Students will prepare assigned repertoire for class each week. Significant time will be spent developing gestures that reflect the artistic and pedagogical intentions of each student. The individual lesson is also a mentoring time to develop strategies for career development and recital preparation. Analysis projects may be assigned to provide an opportunity for in-depth scholarly research and presentation of significant literature relating to the theme of the quarter.

MUPR 4991 Independent Study (2-4 Credits)

Media, Film & Journalism Studies

Master of Arts in International and Intercultural Communication

The Master of Arts program in International and Intercultural Communication is a joint master's degree from the Josef Korbel School of International Studies (JKSIS) and the Department of Media, Film & Journalism Studies (MFJS). This highly flexible program allows students to choose from the breadth of coursework available in JKSIS and MFJS, while developing their own specific areas of concentration. Students complete internships to gain professional experience, and may further hone expertise by completing a Graduate Certificate as part of the degree. Certificate Programs include: Global Business & Corporate Social Responsibility; Global Health Affairs; and Public Diplomacy.

International and Intercultural Communication graduates pursue globally-oriented careers in a variety of fields, including: Global health communication; Public diplomacy & Public affairs; International PR and marketing; Nonprofit management; Cross-cultural and diversity training; International education; Human rights and Conflict resolution; International administration, and more.

Effective global communication requires that people understand both international and intercultural dynamics and differences. Success is based on communicating goals and bridging differences. Students pursuing the MA in International and Intercultural Communication establish a strong theoretical and applied foundation, while learning the nuances of the global environment. They then have an opportunity to extend this interdisciplinary base through courses in business, anthropology, education and other areas.

Master of Arts in Media and Public Communication

The Master of Arts in Media and Public Communication is a 48-credit, two-year degree program, which equips students with a combination of essential theoretical and practical skills that prepare them for a variety of professional and research careers in media and communication. The program emphasizes the role of media and communication in bridge building and social justice across diverse audiences. Students can choose one of two areas of concentration: Strategic Communication or Media and Globalization. Depending on students' goals and interests, they can opt to complete a master's thesis, a substantial research paper, or a professional internship as their capstone requirement.

Concentration in Strategic Communication: Strategic communication encompasses skills and activities associated with public relations, advertising, brand management, and marketing communication. This concentration focuses on the nonprofit and government sectors, as well as on international and intercultural issues within strategic communication. Classes emphasize ethical communication and incorporate experiential learning projects in which students work with nonprofit organizations to develop creative and strategically sound communication campaigns. Students benefit from faculty expertise in nonprofit, international, intercultural, health, corporate, and political communication. The coursework integrates theoretical concepts in media and communication with applied research, strategic planning, and messaging skills essential for professional success in the nonprofit, government, and for-profit sectors. Students also gain a solid foundation for pursuing advanced degrees and conducting academic research.

Concentration in Media and Globalization: This concentration is designed for students who are interested in pursuing careers as researchers and media educators. Courses focus on the role of media and communication in social and cultural change in both global and local settings. Students gain in-depth theoretical knowledge of media, culture, and communication and acquire methodological skills needed to conduct independent research projects based on their interests. This concentration emphasizes critical and conceptual thinking, cultural awareness, and social responsibility. Students benefit from faculty's research and community engaged projects in international locations, including Latin America, Africa, Europe, and Asia, as well as from faculty work with immigrant and multicultural communities in the US. Graduates develop a solid foundation for pursuing advanced degrees and careers in higher education and research.

Public Diplomacy Certificate of Specialization

The Public Diplomacy Graduate Certificate is an interdisciplinary, 24-credit certificate, which examines the history, theory, methods and uses of strategic communication for the purposes of informing, influencing, and establishing dialogue with international publics and stakeholders. The certificate is designed to help students acquire a sophisticated understanding of global media and communication processes and the ways in which they are employed by individuals, groups, organizations, and governments to advance their strategic interests. The certificate combines expertise from the Department of Media, Film, and Journalism Studies and the Josef Korbel School of International Studies, providing students with an interdisciplinary learning experience. Graduates of the Public Diplomacy Certificate are equipped with conceptual and practical skills that

prepare them for careers in the fields of cultural diplomacy, nation branding, public affairs and information, foreign aid, global health and development communication, international strategic communication, and international education. The certificate is open to students enrolled in one of the master's programs offered by the Department of Media, Film, and Journalism Studies or the Josef Korbel School of International Studies, and can be integrated into the degree program. This certificate program does not require additional credits.

Master of Arts in International & Intercultural Communication

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Standardized Test Scores

GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application
undergoes a comprehensive evaluation, including a careful review of all application materials. If you choose to submit test scores, you may upload
your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency
upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master's Degree Programs

Master of Arts in International and Intercultural Communication

IIC/Peace Corps' Paul D. Coverdell Fellows Program

In cooperation with the Peace Corps, the Paul D. Coverdell Fellows Program permits students who have completed their service in the Peace Corps to complete the MA in International & Intercultural Communication degree following their service. They receive 3 credits for their Peace Corps service toward the 48 credits required for the degree, leaving 45 credits for the program. In addition, the foreign language proficiency requirement is waived. Students are required to complete an internship with a high needs community in the U.S.

Coursework requirements

Students should plan ahead to ensure they are able to complete their required courses as some are offered every other year. Students are allowed to take one graduate 3000-level course to count towards the 48 hours required, but not if a separate 4000-level of the course exists for graduate students. Students must consult with the instructor and the IIC director before enrolling in any 3000-level course. Grinds courses may not be applied to this degree. Students are welcome to take Grinds courses as desired, but they will not count towards any of the requirements for this degree, including electives.

Minimum number of credits required for degree: 48 credits

Electives serve as additional coursework needed to reach the minimum number of credits required for the degree and to help development a specialization. These may be taken in MFJS, JKSIS, or another department.

Note: The maximum number of credits that will be accepted in transfer toward the degree is 20 credits

Total Credits

* Check prerequisites for these courses

Internship

Internships require 40 hours of work per credit (40 x 4 = 160 hours). IIC Peace Corps Fellows are required to complete five credits of internship with a high-needs community in the United States. An internship is registered as a course (MFJS 4980: Internship), and may be taken for 1 to 5 credits during any one term. (Note: For internships at the end of a student's program, they must be secured or in the process of being secured in the quarter before graduation.) Students in the Paul D. Coverdell Fellows Program must complete their internship in a high-need community within the U.S. Students are encouraged to do the internship after they have completed at least half of the 48 credits required for the MA degree. All internships will be administered and supervised by the Director of Internships for the IIC Program in the Dept. of Media, Film and Journalism Studies. Students must meet with the internship director in order to obtain approval for an internship.

Master of Arts in Media and Public Communication with a Concentration in Media and Globalization

Degree Requirements

The MA in Media and Public Communication with a Concentration in Media and Globalization requires 48 hours of credit, including completing a thesis, a substantial research paper (SRP), or an internship.

Course Requirements

Students should plan ahead to ensure they are able to complete their required courses as some are offered every other year.

Minimum number of credits required for the degree: 48

1. This course may be cross-listed with an undergraduate course.

2. This course is offered infrequently. Please talk to your advisor with questions.

3. Advisor approval is required when taking this course as a concentration course. Students may take 4912 more than once if the course topic is different.

4. Students may take up to 8 Thesis credits, but only 4 Internship or SRP credits.

Internship

Internships require 40 hours of work per credit (40 x 4 = 160 hours). An internship is registered as a course (MFJS 4980: Internship), and may be taken for a maximum of 4 credits during any one term. (Note: For internships at the end of a student's program, they must be secured or in the process of being secured in the quarter before graduation.) Students may elect to do an internship with media/communications agencies, non-profit organizations, corporations, or government, located in the Denver area, or elsewhere in the U.S. or abroad. Students are encouraged to do the internship after they have completed at least half of the 48 credits required for the MA degree. All internships will be administered and supervised by the director of internships in the Dept. of Media, Film and Journalism Studies. Students must meet with the internship director in order to obtain approval for an internship.

Thesis

Students may opt to do a thesis instead of an internship, for a maximum of 4 credits. To begin work on the thesis, the student must first choose an area of interest and develop a research question that will guide the thesis project. At that time, the student should also identify a faculty member with expertise in their area of interest who is available and willing to work with them as a thesis advisor. The advisor will help the student to focus the research question and may suggest additional readings or coursework that will help the student develop the thesis project. Students should review the process and policies for the master's thesis in the Graduate Policy Manual. Students can find "Thesis and Dissertation Formatting Guidelines," "Thesis Oral Defense Information," and "Thesis/Dissertation Submission Instructions via ETD" under the "Graduation and Oral Defense Information on this website. The student should meet with the thesis advisor to finalize a research question and outline the entire project. The student should then begin work on a preliminary proposal which may need to be reviewed by the MFJS Graduate Committee (as determined by the thesis advisor and MA director), and should include the following:

- · research problem or question
- theoretical framework
- · preliminary literature review
- methods

The committee will review the proposal and the student's course record (including grades), consult with the student's advisor and instructors of courses related to the thesis, and make a recommendation to the student on doing a thesis. If the committee recommends against the student doing a thesis, the student is required to do an internship. A student has the option to revise and resubmit the preliminary thesis proposal one time. Once the preliminary proposal has been approved by the graduate committee, the student and advisor will need to select a thesis committee, which includes the advisor and a minimum of two other committee members who will read the formal research proposal and the final report. These additional members should be contacted and asked if they would be willing to serve on the thesis committee. Once the thesis advisor and will vary according to the thesis topic, the specific problem being studied and the methodology proposed to explore that problem. All proposals should include the following (the order may vary):

- · a general introduction to the thesis topic
- · an explication of the problem(s) the research will address (i.e., the purpose of the study)
- · a review of the literature related to the stated problem
- · a clear and succinct statement of the research questions or hypotheses the thesis will address
- · a discussion of the research methods that will be used to explore the questions or hypotheses
- · a description of the material or data that will be examined in order to suggest answers to the research questions or to test the hypotheses
- if appropriate, a discussion of the contributions the study will make to the existing discourse on the thesis topic.
- The student will need to convene the thesis committee for a proposal meeting following completion of the proposal. The committee members should be presented with a draft of the research proposal two weeks prior to this meeting. At the meeting the committee members will question the student on the project's theory, design, and research methods to ensure that the project is rigorous and of appropriate scope. Revisions to the proposal may be required following this meeting. An approved proposal outlines the specific procedures the student must follow to complete the thesis requirement. Following approval of the research proposal, the student may then proceed to conduct the research described in the proposal, then report and discuss the results in the final written thesis report, which must be approved in an oral defense by the thesis committee. The format of the thesis should follow the guidelines developed by the Office of Graduate Studies exactly.

Substantial Research Paper (SRP)

A Substantial Research Paper (SRP) is a problem-focused paper designed to engage students in an independent research project that is longer and more in-depth than a class research paper, but less than a thesis project. Unlike a thesis, an SRP does not require a review committee or an oral defense; rather, it will be supervised and graded by a single appointed faculty member. Also, unlike a thesis, the SRP does not require the collection of primary data, but may use secondary data only.

To begin work on the SRP, the student must first choose an area of research interest and develop a research question that will guide the research. It may be based on a class research paper that will then be expanded for the SRP. The student should choose an SRP faculty advisor with expertise in the student's area of interest. The faculty advisor will help the student to focus the research question and may suggest additional readings or coursework that will help the student develop the SRP. It is important that the student and faculty advisor establish a reasonable and mutually agreeable timeline for exchanging drafts and comments on the student's work. The final copy of the SRP should be formatted according to an academic style, such as APA or MLA, and follow any other guidelines agreed upon with the faculty advisor.

Students opting to complete an SRP should register for MFJS 4995 for a maximum of 4 credits, allocated in the quarters in which they are actually working on the SRP. It is not permissible to register for credit before work has commenced or after the work has been completed.

Master of Arts in Media and Public Communication with a Concentration in Strategic Communication

Degree Requirements

The MA in Media and Public Communication with a Concentration in Strategic Communication requires 48 hours of credit, including completing a thesis, a substantial research paper (SRP), or an internship.

- if appropriate, a discussion of the contributions the study will make to the existing discourse on the thesis topic.
- The student will need to convene the thesis committee for a proposal meeting following completion of the proposal. The committee members should be presented with a draft of the research proposal two weeks prior to this meeting. At the meeting the committee members will question the student on the project's theory, design, and research methods to ensure that the project is rigorous and of appropriate scope. Revisions to the proposal may be required following this meeting. An approved proposal outlines the specific procedures the student must follow to complete the thesis requirement. Following approval of the research proposal, the student may then proceed to conduct the research described in the proposal, then report and discuss the results in the final written thesis report, which must be approved in an oral defense by the thesis committee. The format of the thesis should follow the guidelines developed by the Office of Graduate Studies exactly.

Substantial Research Paper (SRP)

A Substantial Research Paper (SRP) is a problem-focused paper designed to engage students in an independent research project that is longer and more in-depth than a class research paper, but less than a thesis project. Unlike a thesis, an SRP does not require a review committee or an oral defense; rather, it will be supervised and graded by a single appointed faculty member. Also, unlike a thesis, the SRP does not require the collection of primary data, but may use secondary data only.

To begin work on the SRP, the student must first choose an area of research interest and develop a research question that will guide the research. It may be based on a class research paper that will then be expanded for the SRP. The student should choose an SRP faculty advisor with expertise in the student's area of interest. The faculty advisor will help the student to focus the research question and may suggest additional readings or coursework that will help the student develop the SRP. It is important that the student and faculty advisor establish a reasonable and mutually agreeable timeline for exchanging drafts and comments on the student's work. The final copy of the SRP should be formatted according to an academic style, such as APA or MLA, and follow any other guidelines agreed upon with the faculty advisor.

Students opting to complete an SRP should register for MFJS 4995 for a maximum of 4 credits, allocated in the quarters in which they are actually working on the SRP. It is not permissible to register for credit before work has commenced or after the work has been completed.

Certificate of Specialization Program

Certificate of Specialization in Media and Public Communication with Concentration in Public Diplomacy

Program Requirements

Minimum Credits Required for Certificate: 24

Coursework Requirements

Students will take classes in three categories as follows:

Code	Title	Credits
Foundational Courses		8
MFJS 4065	Public Diplomacy and Nation Branding	
MFJS 4160	Media Theories	
or MFJS 4650	Global Media and Communication	
or MFJS 4080	Global/Multicultural Campaigns	
Applied Course		4
MFJS 4050	Foundations of Strategic Communication	
MFJS 4060	Strategic Messaging	
MFJS 4165	Global Health and Development Communication	

MFJS 4504 Social Media Strategies

Context Specialization Courses

Students should select courses that directly focus on the society, politics, economics, or culture of particular countries or regions or challenges related to a specific theme or issue. Context Specialization courses must be arranged into a logical three-course set (by region and/or theme) that matches student interests and is approved by the Certificate Director(s). Only full-credit, graduate level courses in JKSIS and MFJS, which are approved by the Certificate Director(s) in advance and are not used to meet another Certificate requirement are eligible for this category. At least two of the specialization courses must be from the Josef Korbel School of International Studies (JKSIS). The third course may be from either JKSIS or MFJS.

Total Credits

* Course may be counted as either Foundation, Applied, or Context Specialization, but cannot be counted in more than one of those categories

Non-Coursework Requirements

Applicants must be enrolled master's students in good standing in either MFJS or JKSIS. Applicants from either unit must apply for the Certificate no later than February 1 in the first year of their master's program in order to be able to complete all of the necessary coursework for the Certificate by the end of their second year.

MFJS 4001 Producing Video for Social Media and Advocacy (4 Credits)

This course covers the basics in video production and video storytelling for social media and is open to all graduate students at the University of Denver who are interested in YouTube and other social media video content creation for advocacy, education, and support of social movements. Students will maximize their video storytelling abilities, producing storytelling content that can be shared across multiple social media platforms using mobile phones or equivalent basic consumer equipment. Learning takes place within justice, equity, diversity, inclusion and internationalization frameworks consistent with department, College, and University expectations. The course fulfills elective requirements within MEPC and IIC graduate programs and serves as a university graduate level elective.

MFJS 4050 Foundations of Strategic Communication (4 Credits)

Focuses on understanding and implementing public communication campaigns. Central to the course is the exploration of the theoretical social science framework underlying communication campaigns and examination of the ways theories are used to define and explain communication problems and to plan and evaluate campaigns.

MFJS 4055 Media and Cultural Studies (4 Credits)

This class surveys key ideas and authors in the interdisciplinary field of cultural studies with a focus on their contributions to the study of media and communication. Some theoretical concepts to be discussed include: representation, identity, cultural production, ideology, hegemony, intersectionality, and power as these relate to the analysis of media institutions, technologies, cultures, audiences/users, texts, and artifacts. Students will develop an understanding of cultural studies as a theoretical, methodological, and political project, devoted to social critique and transformative praxis.

MFJS 4060 Strategic Messaging (4 Credits)

Continues the focus on learning and applying public relations techniques, emphasizing media relations and media writing. Students develop the ability to formulate and evaluate appropriate communication objectives, strategies, and tactics in response to real-world public relations problems, paying attention to ethical considerations. Students produce a portfolio of written public relations materials. Prerequisite MFJS 4050 or instructor permission.

MFJS 4065 Public Diplomacy and Nation Branding (4 Credits)

Drawing on research from strategic communication, cultural studies, international relations, and marketing, this interdisciplinary course examines how nation-states strive to manage their reputations and increase their influence in the context of globalization and mediatization. Students will learn about the evolution of public diplomacy and nation branding from the Cold War to present day and will discuss current developments and challenges. The course will introduce several theoretical approaches and will use a variety of case studies to help students gain insights into public diplomacy and nation branding as fields of research and of practice. Instructor approval required for all non-MEPC and non-IIC students.

MFJS 4070 Seminar in Strategic Communication (4 Credits)

Through a combination of course readings, case study analyses and guest speakers, students will observe and learn about the practice of public relations in the health and nonprofit sectors. Students will also learn about the goals, challenges and opportunities specific to these sectors. Prerequisite: MCOM/MFJS 4060 or permission of instructor.

MFJS 4080 Global/Multicultural Campaigns (4 Credits)

Explores aspects of international and intercultural public relations, including intercultural communications issues, international media issues, international corporate PR, cross-cultural and diversity training, international media relations, and international public relations of governments. The class focuses on relevant theories and issues, rather than on techniques.

MFJS 4160 Media Theories (4 Credits)

Surveys a number of theoretical approaches to the study of media and mass communication, paying attention to the historical context in which they arise. Students explore the relationships among media technologies, institutions, content, and audiences as well as their impacts on culture and society. The class prepares students to formulate theoretically grounded research questions within the field of media and mass communication.

24

MFJS 4165 Global Health and Development Communication (4 Credits)

This course will begin with an overview of health communication (which includes but is not limited to health promotion and behavior change). We will discuss individual, social, cultural & technological factors, and relevant theories and concepts in relation to international health communication and development. Students will then learn about the role of communication in international health and development and the way it is practiced in the field. We will also discuss and apply the social and cultural factors that influence the design, delivery, reception, and effectiveness of international health communication programs, the role of international health's important players big and small (e.g. WHO, UNAID, PEPFAR, Doctors without Borders, pharmaceutical companies, local village leaders, local ministries of health, husbands, mothers, etc.), and the ways in which the use of both upstream and downstream communication is imperative. We will examine case studies and the latest research for international health communication and its effectiveness while we also apply health communication theories from a variety of perspectives.

MFJS 4175 Justice Equity Diversity and Inclusion in Health Communication (4 Credits)

The course will begin with an overview of Health Communication in the United States and the ways in which health and illness are defined through communication, including media. We will discuss existing health disparities and social determinants of health as we examine health communication in multicultural settings in the U.S. We will further examine multicultural audiences and perspectives about health and illness, including diverse meaning systems and their influences on health attitudes and behaviors. Students will learn about cross-cultural concepts of health and disease and how those are represented in communication about health and illness. As students learn about what it means to develop culturally grounded health communication campaigns, they will examine culture centric messaging in health promotion. We will also discuss the ways in which health care systems are promoting patient-centered, culturally sensitive health care.

MFJS 4200 Topics in Mass Communications (4 Credits)

MFJS 4222 Experimental Theory and Production (4 Credits)

This course is an historical, critical overview of experimental film/video movements; training in experimental projection techniques; production of own experimental projects. Lab fee required. Cross listed with MFJS 3222. Prerequisite: MFJS 4470 or permission of instructor.

MFJS 4227 Producing the Environmental Documentary (4 Credits)

This course is designed to provide you with a basic understanding of cinematography: cameras, lenses, grip equipment, lighting, and composition. When you complete this course, the goal is for you to have an intermediate understanding of cinematography and that which motivates lighting and composition choices. Because people are the most important part of any production, emphasis will be placed on your ability to work effectively with class members. Learning to collaborate is crucial to your success in this class.

MFJS 4229 Video Editing is for Everybody (4 Credits)

Video has become ubiquitous. Whether on YouTube, Hulu, television or a friend's Facebook page, people are exposed to thousands of edited videos every year. From business to anthropology, chemistry to journalism, students in every discipline want to create videos to enhance class projects, aide business plans, promote good works, accompany science processes and create lasting memories. This course is designed to provide students with a basic understanding of television and film editing. When completing this course, the goal is for students to have a basic working knowledge of editing using various media elements (video, audio, photos, music, graphics), editing software and applying a mixture of editing theories and techniques (continuity and montage style editing). There are no prerequisites for this course.

MFJS 4242 Reel Women (4 Credits)

Reel Women explores films from the U.S., England, Senegal, India, Canada, Colombia, and Saudi Arabia that are made for, about, and/or by women with the aim of better understanding and centralizing issues pertinent to women's daily lives across the world.

MFJS 4300 Media Law (4 Credits)

Introduction to freedom of expression and media law. Students learn how the American legal system works and gain an understanding and appreciation of the philosophical foundations of free expression. In addition, students confront many of the issues facing professional communicators today. Topics include incitement, hate speech, student speech, copyright, defamation, and other issues crucial to mass media professionals. The course examines also explores challenges to free expression brought by new(er) communication technologies. The purpose of this class is to give students the knowledge and critical thinking skills needed to be successful in today's rapidly changing communication environment. Cross-listed with MFJS 3040.

MFJS 4310 New Media Law & Regulation (4 Credits)

Examination of current conflicts in mass communications law. Particular emphasis is given the legal problems of communications technologies. Topics may include libel, privacy, obscenity, news gathering, copyright, media ownership and comparative approaches to media law. The course provides insight into how the legal process works and an understanding of the principles and philosophies that underlie the restraints on new communication technologies.

MFJS 4320 Brands and Identities (4 Credits)

Reviews theories and cases of the role and meaning of brands in a consumer society, with a particular emphasis on understanding how brands are implicated in the construction and presentation of personal and group identities. The course combines insights from marketing, social psychology, and cultural studies to explore the importance of brands for both consumers and practitioners. Students master core branding concepts and use them to critically analyze salient social and cultural issues.

MFJS 4504 Social Media Strategies (4 Credits)

In this class, students get familiar with the principles of social media strategy and learn how to design messaging strategies and tactics for social media. In addition, students work with a real client on a strategic communication campaign for social media.

MFJS 4506 Audio Documentaries (4 Credits)

In the past decade, an explosion in the production and accessibility of audio documentary work has created an unprecedented interest and expansion of the documentary form in nearly all sectors of public life. Building on this trend, this course teaches the skills of ethnographically informed audio documentary work that can record and interpret culture and lived experience. We focus on learning the techniques of non-fiction storytelling used in established public radio programs like This American Life, Radio Lab, or Snap Judgement, as well as newer podcasts like Reply All, Invisibilia, or Embedded. The course will prepare students to tell complex stories using strong character-driven narrative. Sound documentation and representation will not be done along journalistic principles, but instead through rigorous ethnography that relies on participant-observation and immersion. Through practical application and the exploration of ethnography and documentary approaches to communication, the course explores questions that surround the interpretation and representation of socio-cultural experience via a sonic medium. To understand the basic mechanics of sound and its narrative form, participants will learn to digitally record and edit audio. Storytelling will then become more complex as students learn to conduct ethnography, interviews, and develop a script for radio. Students will ultimately analyze and create audio documentaries in an effort to understand a significant form of digital storytelling. There are three central learning objectives that will guide us through the course: (1) we will practice ethnographic and documentary methodology, (2) learn to write for radio, and (3) learn the workflow of audio editing to produce an audio documentary.

MFJS 4560 Audience and Communication Research (4 Credits)

This class offers an introduction to social science methods applied to communication and audience research. By the end of the course, students will be familiar with: the role and functions of communication and audience research in contemporary society; the processes and practices involved in developing and executing a research project; the basic different forms of research, both qualitative, such as interviews and focus groups and quantitative, such as surveys and experiments; how to use research skills for different career paths. Cross-listed with MFJS 3110/4560.

MFJS 4567 Activist Media (4 Credits)

In the mediated digital era, communication is changing fast and shifting the dynamics of real-world power, expanding spaces for journalism and activist communication aimed at working for social change and social justice. This dynamic space has enabled citizens, protesters, journalists, PR professionals, tech developers and hacktivists to harness a diverse range of media tools and platforms for activism and social change. Media has played a key role in social and political movements of the past and more recent online movements. Social media platforms have provided new tools to resist the domination and limitations of mainstream corporate media and create new media strategies and messages to promote social change. But these platforms have also created new risks and challenges for activists. In this course, we will address these issues of communication power dynamics and also media strategies and tools of social and political movements working towards social change.

MFJS 4650 Global Media and Communication (4 Credits)

Major theories concerning international communication flows, the impact of globalization and global media, issues of new communication technologies, the rhetoric and media framing of global politics and culture; international marketing and public relations; and national and cultural sovereignty issues related to communication.

MFJS 4652 Feminist Media Studies (4 Credits)

MFJS 4652 (Feminist Media Studies) explores the gendered intersections between media and society through the analytical lens of Feminist Media Studies (FMS). While aligned with the discipline Media Studies, FMS centers questions related to power and patriarchy, and aims to create space for praxis. Paying close attention to issues of intersectionality, this course surveys the historical emergence, and contributions, of feminist methodology and inquiry related to issues such as sexism within gaming, the politics of visibility in television production, the celluloid ceiling, and networked bodies. During the quarter, you will engage in multiple points of active and reflective learning that provide the space to strengthen both your understanding and application of FMS. Assignments include discussion questions, self-reflective analysis, and a final project that highlights application, creativity, and subversion. Cross listed with MFJS 3652.

MFJS 4653 Language, Power, and Globalization (4 Credits)

This course focuses on scholarly and political debates surrounding the social nature of language, language and (inter)national and individual identity, language policy, multilingualism and linguistic diversity, language and globalization, language and media and communication technologies, and, finally, the future of the global language landscape.

MFJS 4654 Intercultural Communication (4 Credits)

This course focuses on the intersections between culture & communication, including intercultural communication in interpersonal and mediated contexts at the local, national and global levels as shaped by processes of globalization. It covers major theoretical perspectives and methods, the role of power and privilege in the construction and articulation of culture and cultural identity, and intersections with race, ethnicity, gender, sexuality and class, intercultural training and the role of communication and culture in conflict and conflict resolution.

MFJS 4655 JEDII (Justice, Equity, Diversity, Inclusion, & Internationalization) Storytelling (4 Credits)

This course focuses on multicultural approaches to journalism and media, including representations and news coverage related to gender, race/ ethnicity, class, and sexuality, disabilities, religion, and nationality, etc.. The class explores culture and intercultural communication and ways to apply these to journalistic writing as a creative process and craft. Prerequisite: Prior journalistic coursework or its equivalent (including writing experience). Cross-listed with MFJS 3655.

MFJS 4656 Cross-Cultural Travel Seminar: Immigration, Communication, and Border Cultures (4 Credits)

This is a one-week intensive travel course that takes place in Tucson, Arizona and south to the US-Mexican border region. The focus of this experiential learning class is to study immigration issues, border cultures, and the role of communication and media through testimonies of immigrants, and visits to key sites such as the migrant trail, immigration detention center and courts. Also included are talks by activists and officials involved in the immigration debate. Class meets for two pre-class sessions in spring quarter. Cross-listed with MFJS 3656.

MFJS 4660 Global Edutainment & Narrative Persuasion (4 Credits)

MFJS 4660 Global Edutainment & Narrative Persuasion serves as a gateway to explore the potential of entertainment as an educational tool that can spread awareness, change attitudes, and/or influence behaviors. In this course, students will trace the history of narrative persuasion strategy, pinpoint the modalities it has embraced (e.g., films, TV shows, music, books, and TikTok videos, etc.), highlight topical areas it has addressed, and assess its effectiveness cross-culturally. MFJS 4660 will culminate in the production of student Edutainment projects that tackle global issues of concern.

MFJS 4912 Seminar in Media Film & Journalism Studies (1-5 Credits)

MFJS 4980 Internship (1-8 Credits)

Arrange with internship director to complete internship with Denver-area media organization. Prerequisite: varies; consult internship director.

MFJS 4991 Independent Study (1-10 Credits)

MFJS 4995 Thesis/Substantial Research Paper (1-8 Credits)

Courses

MFJS 4001 Producing Video for Social Media and Advocacy (4 Credits)

This course covers the basics in video production and video storytelling for social media and is open to all graduate students at the University of Denver who are interested in YouTube and other social media video content creation for advocacy, education, and support of social movements. Students will maximize their video storytelling abilities, producing storytelling content that can be shared across multiple social media platforms using mobile phones or equivalent basic consumer equipment. Learning takes place within justice, equity, diversity, inclusion and internationalization frameworks consistent with department, College, and University expectations. The course fulfills elective requirements within MEPC and IIC graduate programs and serves as a university graduate level elective.

MFJS 4050 Foundations of Strategic Communication (4 Credits)

Focuses on understanding and implementing public communication campaigns. Central to the course is the exploration of the theoretical social science framework underlying communication campaigns and examination of the ways theories are used to define and explain communication problems and to plan and evaluate campaigns.

MFJS 4055 Media and Cultural Studies (4 Credits)

This class surveys key ideas and authors in the interdisciplinary field of cultural studies with a focus on their contributions to the study of media and communication. Some theoretical concepts to be discussed include: representation, identity, cultural production, ideology, hegemony, intersectionality, and power as these relate to the analysis of media institutions, technologies, cultures, audiences/users, texts, and artifacts. Students will develop an understanding of cultural studies as a theoretical, methodological, and political project, devoted to social critique and transformative praxis.

MFJS 4060 Strategic Messaging (4 Credits)

Continues the focus on learning and applying public relations techniques, emphasizing media relations and media writing. Students develop the ability to formulate and evaluate appropriate communication objectives, strategies, and tactics in response to real-world public relations problems, paying attention to ethical considerations. Students produce a portfolio of written public relations materials. Prerequisite MFJS 4050 or instructor permission.

MFJS 4065 Public Diplomacy and Nation Branding (4 Credits)

Drawing on research from strategic communication, cultural studies, international relations, and marketing, this interdisciplinary course examines how nation-states strive to manage their reputations and increase their influence in the context of globalization and mediatization. Students will learn about the evolution of public diplomacy and nation branding from the Cold War to present day and will discuss current developments and challenges. The course will introduce several theoretical approaches and will use a variety of case studies to help students gain insights into public diplomacy and nation branding as fields of research and of practice. Instructor approval required for all non-MEPC and non-IIC students.

MFJS 4070 Seminar in Strategic Communication (4 Credits)

Through a combination of course readings, case study analyses and guest speakers, students will observe and learn about the practice of public relations in the health and nonprofit sectors. Students will also learn about the goals, challenges and opportunities specific to these sectors. Prerequisite: MCOM/MFJS 4060 or permission of instructor.

MFJS 4080 Global/Multicultural Campaigns (4 Credits)

Explores aspects of international and intercultural public relations, including intercultural communications issues, international media issues, international corporate PR, cross-cultural and diversity training, international media relations, and international public relations of governments. The class focuses on relevant theories and issues, rather than on techniques.

MFJS 4160 Media Theories (4 Credits)

Surveys a number of theoretical approaches to the study of media and mass communication, paying attention to the historical context in which they arise. Students explore the relationships among media technologies, institutions, content, and audiences as well as their impacts on culture and society. The class prepares students to formulate theoretically grounded research questions within the field of media and mass communication.

MFJS 4165 Global Health and Development Communication (4 Credits)

This course will begin with an overview of health communication (which includes but is not limited to health promotion and behavior change). We will discuss individual, social, cultural & technological factors, and relevant theories and concepts in relation to international health communication and development. Students will then learn about the role of communication in international health and development and the way it is practiced in the field. We will also discuss and apply the social and cultural factors that influence the design, delivery, reception, and effectiveness of international health communication programs, the role of international health's important players big and small (e.g. WHO, UNAID, PEPFAR, Doctors without Borders, pharmaceutical companies, local village leaders, local ministries of health, husbands, mothers, etc.), and the ways in which the use of both upstream and downstream communication is imperative. We will examine case studies and the latest research for international health communication and its effectiveness while we also apply health communication theories from a variety of perspectives.

MFJS 4175 Justice Equity Diversity and Inclusion in Health Communication (4 Credits)

The course will begin with an overview of Health Communication in the United States and the ways in which health and illness are defined through communication, including media. We will discuss existing health disparities and social determinants of health as we examine health communication in multicultural settings in the U.S. We will further examine multicultural audiences and perspectives about health and illness, including diverse meaning systems and their influences on health attitudes and behaviors. Students will learn about cross-cultural concepts of health and disease and how those are represented in communication about health and illness. As students learn about what it means to develop culturally grounded health communication campaigns, they will examine culture centric messaging in health promotion. We will also discuss the ways in which health care systems are promoting patient-centered, culturally sensitive health care.

MFJS 4200 Topics in Mass Communications (4 Credits)

MFJS 4222 Experimental Theory and Production (4 Credits)

This course is an historical, critical overview of experimental film/video movements; training in experimental projection techniques; production of own experimental projects. Lab fee required. Cross listed with MFJS 3222. Prerequisite: MFJS 4470 or permission of instructor.

MFJS 4227 Producing the Environmental Documentary (4 Credits)

This course is designed to provide you with a basic understanding of cinematography: cameras, lenses, grip equipment, lighting, and composition. When you complete this course, the goal is for you to have an intermediate understanding of cinematography and that which motivates lighting and composition choices. Because people are the most important part of any production, emphasis will be placed on your ability to work effectively with class members. Learning to collaborate is crucial to your success in this class.

MFJS 4229 Video Editing is for Everybody (4 Credits)

Video has become ubiquitous. Whether on YouTube, Hulu, television or a friend's Facebook page, people are exposed to thousands of edited videos every year. From business to anthropology, chemistry to journalism, students in every discipline want to create videos to enhance class projects, aide business plans, promote good works, accompany science processes and create lasting memories. MFJS 4560 Audience and Communication Research (4 Credits)

This class offers an introduction to social science methods applied to communication and audience research. By the end of the course, students will be familiar with: the role and functions of communication and audience research in contemporary society; the processes and practices involved in developing and executing a research project; the basic different forms of research, both qualitative, such as interviews and focus groups and quantitative, such as surveys and experiments; how to use research skills for different career paths. Cross-listed with MFJS 3110/4560.

MFJS 4567 Activist Media (4 Credits)

In the mediated digital era, communication is changing fast and shifting the dynamics of real-world power, expanding spaces for journalism and activist communication aimed at working for social change and social justice. This dynamic space has enabled citizens, protesters, journalists, PR professionals, tech developers and hacktivists to harness a diverse range of media tools and platforms for activism and social change. Media has played a key role in social and political movements of the past and more recent online movements. Social media platforms have provided new tools to resist the domination and limitations of mainstream corporate media and create new media strategies and messages to promote social change. But these platforms have also created new risks and challenges for activists. In this course, we will address these issues of communication power dynamics and also media strategies and tools of social and political movements working towards social change.

MFJS 4650 Global Media and Communication (4 Credits)

Major theories concerning international communication flows, the impact of globalization and global media, issues of new communication technologies, the rhetoric and media framing of global politics and culture; international marketing and public relations; and national and cultural sovereignty issues related to communication.

MFJS 4652 Feminist Media Studies (4 Credits)

MFJS 4652 (Feminist Media Studies) explores the gendered intersections between media and society through the analytical lens of Feminist Media Studies (FMS). While aligned with the discipline Media Studies, FMS centers questions related to power and patriarchy, and aims to create space for praxis. Paying close attention to issues of intersectionality, this course surveys the historical emergence, and contributions, of feminist methodology and inquiry related to issues such as sexism within gaming, the politics of visibility in television production, the celluloid ceiling, and networked bodies. During the quarter, you will engage in multiple points of active and reflective learning that provide the space to strengthen both your understanding and application of FMS. Assignments include discussion questions, self-reflective analysis, and a final project that highlights application, creativity, and subversion. Cross listed with MFJS 3652.

MFJS 4653 Language, Power, and Globalization (4 Credits)

This course focuses on scholarly and political debates surrounding the social nature of language, language and (inter)national and individual identity, language policy, multilingualism and linguistic diversity, language and globalization, language and media and communication technologies, and, finally, the future of the global language landscape.

MFJS 4654 Intercultural Communication (4 Credits)

This course focuses on the intersections between culture & communication, including intercultural communication in interpersonal and mediated contexts at the local, national and global levels as shaped by processes of globalization. It covers major theoretical perspectives and methods, the role of power and privilege in the construction and articulation of culture and cultural identity, and intersections with race, ethnicity, gender, sexuality and class, intercultural training and the role of communication and culture in conflict and conflict resolution.

MFJS 4655 JEDII (Justice, Equity, Diversity, Inclusion, & Internationalization) Storytelling (4 Credits)

This course focuses on multicultural approaches to journalism and media, including representations and news coverage related to gender, race/ ethnicity, class, and sexuality, disabilities, religion, and nationality, etc.. The class explores culture and intercultural communication and ways to apply these to journalistic writing as a creative process and craft. Prerequisite: Prior journalistic coursework or its equivalent (including writing experience). Cross-listed with MFJS 3655.

MFJS 4656 Cross-Cultural Travel Seminar: Immigration, Communication, and Border Cultures (4 Credits)

This is a one-week intensive travel course that takes place in Tucson, Arizona and south to the US-Mexican border region. The focus of this experiential learning class is to study immigration issues, border cultures, and the role of communication and media through testimonies of immigrants, and visits to key sites such as the migrant trail, immigration detention center and courts. Also included are talks by activists and officials involved in the immigration debate. Class meets for two pre-class sessions in spring quarter. Cross-listed with MFJS 3656.

MFJS 4660 Global Edutainment & Narrative Persuasion (4 Credits)

MFJS 4660 Global Edutainment & Narrative Persuasion serves as a gateway to explore the potential of entertainment as an educational tool that can spread awareness, change attitudes, and/or influence behaviors. In this course, students will trace the history of narrative persuasion strategy, pinpoint the modalities it has embraced (e.g., films, TV shows, music, books, and TikTok videos, etc.), highlight topical areas it has addressed, and assess its effectiveness cross-culturally. MFJS 4660 will culminate in the production of student Edutainment projects that tackle global issues of concern.

MFJS 4912 Seminar in Media Film & Journalism Studies (1-5 Credits)

MFJS 4980 Internship (1-8 Credits)

Arrange with internship director to complete internship with Denver-area media organization. Prerequisite: varies; consult internship director.

MFJS 4991 Independent Study (1-10 Credits)

MFJS 4995 Thesis/Substantial Research Paper (1-8 Credits)

Philosophy

Office: Sturm Hall, Room 257 Mail Code: Sturm Hall, Room 257, 2000 E. Asbury, Denver, CO 80208 Phone: 303-871-2063 Email: philosophy@du.edu Web Site: https://liberalarts.du.edu/philosophy (https://liberalarts.du.edu/philosophy/)

Master of Arts in Philosophy

The Department of philosophy at the University of Denver offers an MA in philosophy, but only when done through the university's flexible dualdegree program in conjunction with an MA in another approved discipline. The philosophy faculty places a strong emphasis on research and personal interaction with students. Our program is designed to meet the needs of two kinds of students: those wishing to prepare for doctoral work in philosophy and those seeking an individualized course of study with a more interdisciplinary focus.

Flexible Dual-Degree Program in Philosophy

Students must already have been both admitted and deposited for the master's degree program in another approved DU master's program *before* applying to the MA in Philosophy.

Proposal Process for Flexible Dual-Degree Program

After formal admission into both programs, the dean, chair, or director of each degree program and both program advisors, must carefully compare the requirements for each program and approve the proposal. The student must then submit a copy of the original requirements for each degree (printout from the unit Web site or copy from the student handbook is acceptable), and the flexible dual-degree proposal to the Office of Graduate Education. The philosophy department will provide a coursework template for the student to include with his or her proposal. The student then submits the documents listed above to the Office of Graduate Education, which reviews and decides on the proposals.

Master of Arts in Philosophy

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

• Students must already have been admitted and deposited for the master's degree program in another approved DU master's program before applying to the MA in Philosophy. An undergraduate degree in philosophy is desirable, but talented students from other areas will be considered for admission.

Standardized Test Scores

• GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials. If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

Other Required Materials

• Students are not eligible to apply for the MA in Philosophy until they have been admitted and deposited for their first MA program at DU. To propose a flexible dual-degree, the student must seek the counsel of an adviser in the philosophy department.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Arts in Philosophy

Degree Requirements

Coursework Requirements

45 credit hours in philosophy (students may propose to have this amount reduced by a maximum of 10 credit hours under appropriate circumstances as specified by the flexible dual-degree guidelines). Because philosophy is part of a flexible dual degree program, these hours are required in addition to the required hours in another approved discipline. Courses graded below a C- cannot be counted for a flexible dual degree.

Code	Title	Credits
PHIL 3XXX, 4XXX, or 5XXX courses		45
Total Credits		45

Non-Coursework Requirements

A comprehensive exam

- · A portfolio paper approved by a committee of department faculty
- · An oral defense covering both the comprehensive exam and the portfolio paper

PHIL 3000 Plato's Metaphysics (4 Credits)

A systematic study of Plato's Middle and Late Period Dialogues that focuses on his arguments for the existence of abstract objects and the development of Plato's theory of Forms. Prerequisite: At least Junior standing or permission of instructor.

PHIL 3003 Plato's Theory of Knowledge (4 Credits)

A systematic investigation of Plato's treatments of knowledge throughout the dialogues with a focus on the theory of recollection, Forms as objects of knowledge, the relationship between the Forms and perceptual experience, and the challenges posed by notions of true and false belief. Prerequisites: At least Junior standing or permission of instructor.

PHIL 3010 Great Thinkers: Aristotle (4 Credits)

A study of Aristotle's central theories and doctrines. Prerequisite: junior standing or instructor's permission.

PHIL 3011 Great Thinkers: Virginia Woolf (4 Credits)

In this course we will read Virginia Woolf as a philosopher. We will discuss her philosophy of nature, knowledge, art, politics, science, sensation, gender, and materialism throughout her fiction and non-fiction writings.

PHIL 3023 Great Thinkers: Maimonides: Politics, Prophecy and Providence (4 Credits)

Using "The Guide for the Perplexed" as our central text, we explore the complex philosophical ideas of Moses Maimonides (1135-1204), one of the central figures in medieval philosophy and Jewish thought. Our study includes analyses of his ideas on principles of faith, human perfection, intellectual vs. "imaginational" approaches to truth, pedagogy and politics, reasons for the commandments, the nature of God and divine will, the limits of human knowledge, the mechanics of prophecy, and the parameters and implications of providence. Cross listed with RLGS 3023 and JUST 3023. Prerequisite: junior standing or instructor's permission.

PHIL 3050 Great Thinkers: Hume (4 Credits)

A detailed study of Hume's "radical" empiricism and its impact on contemporary analytic philosophy. Prerequisite: junior standing or instructor's permission.

PHIL 3063 Kant on Religion (4 Credits)

A study of Immanuel Kant's major writings on religion and their subsequent influence on theology and the philosophy of religion. Prerequisite: junior standing or instructor's permission. Cross-listed with RLGS 3456.

PHIL 3070 Great Thinkers: Hegel (4 Credits)

Hegel's "Phenomenology," later system and place in the history of modern philosophy. Prerequisite: junior standing or instructor's permission.

PHIL 3075 Marxism (4 Credits)

This course is a survey in the theoretical and political work influenced by the writings of 19th century philosopher and economist, Karl Marx. The course covers both the historical traditions in Marxism in the 19th, 20th, and 21st century as well as the geographical traditions of these time periods in France, Germany, England, Italy, Russia, China, and America. It is not necessary that students have a prior background in Marx's work, but it is highly recommended. Cross listed with ECON 3075.

PHIL 3090 Great Thinkers: Heidegger (4 Credits)

Study of "Being and Time" and related essays by a major 20th-century philosopher. Prerequisite: junior standing or instructor's permission.

PHIL 3100 Great Thinkers: Wittgenstein (4 Credits)

The course introduces students to Ludwig Wittgenstein's two masterworks, the Tractatus (1922) and Philosophical Investigations (1953), both of which provide fresh, often counterintuitive and conflicting, insights into topics ranging from logic and language to ethics, religion, art and culture. The course explores how the end of the Austro-Hungarian Empire and the pressures of an incipient modernity impacted the style, direction and substance of Wittgenstein's thought, developments that had profound existential and spiritual import for him as he wrestled with the many contradictions of his life and thought. The course concludes with a consideration of the relationship between Wittgenstein's later philosophy and the existential-phenomenology of Martin Heidegger, both of whom insist upon humanity's radical finitude and the pre-ontological understanding (forms of life) that always already conditions and guides our questions about reason, truth, beauty and meaning.

PHIL 3101 Great Thinkers: Kierkegaard (4 Credits)

Each year, the philosophy department offers at least two courses in great thinkers. Specific figures may vary from year to year. Cross-listed with RLGS 3102. Prerequisite: 10 hours of Philosophy at the 2000 level or permission of instructor.

PHIL 3120 Metaphysics (4 Credits)

In the course of this study, we will cover a broad range of philosophical topics falling within metaphysics, philosophy of language, philosophy of science, and epistemology. Prerequisite: junior standing or instructor's permission.

PHIL 3130 Knowledge Problems (4 Credits)

Problems in the foundations and justifications of claims to knowledge. Prerequisite: junior standing or instructor's permission.

PHIL 3146 Great Thinkers: Levinas (4 Credits)

Emmanuel Levinas (1906-1995), famous for his arresting and original idea of "ethics as first philosophy," is an important figure in the histories of phenomenology, metaphysics, and theology. In this course, we set out to explore Levinas' insights on ethics, alterity, and infinity, including the connection of his ideas to Plato, Descartes, Kant, and Husserl, as well as his critical responses to Heidegger and his positive contributions to Derrida. In this course, we work through Levinas' two major works, Ethics and Infinity and Otherwise Than Being or Beyond Essence, as well as a number of shorter writings—including material from his Talmudic commentaries. Themes to be covered include: Being, Goodness, Risk, Ethics, Alterity, Transcendence, Law, Judaism, Gift, Forgiveness, Politics, Theology, and Justice. This course is cross-listed with JUST 3146.

PHIL 3175 Morality and the Law (4 Credits)

A systematic study of various elements of the relation between law and morality. Are we obligated to obey every law the government enacts? Why? If we do have an obligation to obey the law, are civil disobedients like Martin Luther King, Jr. justified in disobeying the law? Are immoral laws, laws at all, or must a law connect with some higher moral truth to have any authority? To what extent is it morally permissible for the law to restrict our personal freedoms? To what extent is it morally permissible for the law to enforce morality, do we incur any obligation to obey the law? Prerequisite: junior standing or instructor's permission.

PHIL 3178 Metaethics (4 Credits)

This course systematically and critically examines the metaphysical, semantic, and epistemic issues central to the study of metaethics. Do moral properties exist? If so, how are they related to natural properties? Do moral properties exist independent of human agency, or do we construct morality? If moral properties exist, how can we come to have justified belief about them? Is it possible to know that a moral belief is true? Doesn't the phenomenon of widespread, intractable disagreement about moral matters establish that there are no objective moral truths? Is the process of gaining scientific knowledge really that different from the process of gaining moral knowledge? Prerequisite: junior standing or instructor's permission.

PHIL 3179 Virtue Ethics (4 Credits)

Virtue ethics purportedly provides a distinct approach to moral deliberation, moral reasoning, moral decision-making, and moral justification. This course is a systematic study o the nature of virtue ethics, the nature of a virtue, and the alleged superiority of virtue ethics over its more familiar consequentialist and deontological alternatives. We also study various responses to the following questions: Have moral psychologists generated any valuable studies on the nature of virtue? What virtues ought we to endorse? At least Junior standing required or permission of the instructor.

PHIL 3210 Philosophy of Movement (4 Credits)

Everything is in motion. Yet, philosophers have consistently considered motion to be a derivative or secondary form of being. Why? What are the political and metaphysical consequences of marginalizing motion in the history of philosophy? The aim of this class is to read the history of philosophy with a unique focus on the status of movement and motion from the ancient to contemporary period.

PHIL 3211 Contemporary Pol Philosophy (4 Credits)

This class focuses primarily on the philosophical problems generated by thinking about political authority and justice. We discuss the nature of political authority, justice, rights, equality and the role of property in a modern state.

PHIL 3212 Philosophy and Mythology (4 Credits)

Before philosophy there was the myth of chaos. In this class we will read the oldest recorded myths in the world to see how their vision of cosmogonic chaos gave birth to form and order. We will track the birth, rise, and fall of creation stories from chaos and identify what may have caused these major shifts, including the rise of philosophy, the state, and imperialism. Specifically we will read the earliest Egyptian, Mesopotamian, Indian, Greek, and Chinese creation stories.

PHIL 3215 Modern Jewish Philosophy (4 Credits)

Prerequisite: junior standing or instructor's permission. Cross listed with JUST 3215.

PHIL 3333 Logic, Language, and Metaphysics (4 Credits)

This course provides a systematic exploration of the foundations of contemporary philosophy—namely, logic and language—and their metaphysical implications. The class can be divided in three broad modules. Our starting point is the collapse of Kant's system due to staggering discovering in physics and geometry. Next, we shall discuss the subsequent development of mathematical logic and the philosophy of language in the work of Frege, Russell, Tarski, and Goedel. The last portion is devoted to philosophical applications of these logical results in the field of metaphysics. Specifically, we shall explore the work of Carnap, Quine, and Kripke. Junior or senior standing required (or instructor permission).

PHIL 3445 Cultural Theory and Critique (4 Credits)

This course will provide an overview of the major theories of culture and cultural critique, as well as a consideration of some of the major controversies and recent developments in this field. It will proceed roughly chronologically, beginning with liberal humanist critique and continuing with hermeneutics, materialist and Marxist critique, psychoanalysis, the Frankfurt School, structuralism, post-structuralism, and contemporary British cultural studies. It will also consider more recent developments, such as feminist critique, GLBT critique, and postcolonialism. While the approach will be mainly philosophical, implications for other areas such as literature, art, emergent media, religion, and politics will also figure in the discussions, so it is appropriate for students in many fields, not just philosophy. Prerequisite: Junior standing or permission of the instructor. Note that this course will serve as a foundational offering for students interested in participating in the Critical Theory specialization.

PHIL 3446 Philosophy in the American Tradition (4 Credits)

The course introduces students to the thought of the three premier American Transcendentalist writers: Ralph Waldo Emerson, Margaret Fuller, and Henry David Thoreau. These three writers—by turns friends, rivals, neighbors, and even housemates in nearby Concord, Massachusetts— created what Emerson called "a poetry and philosophy of insight and not of tradition" and laid the foundations for American philosophy and literature as we know it today. They also led the first countercultural movement in American history, advocating causes as varied as environmentalism, abolitionism, women's rights, and the "higher law" of the individual conscience in an age of unbridled capitalism and populism. We will consider the Transcendentalists as both writers and reformers, examining their calls for a uniquely American literature and their romantic sacralization of nature as well as their deep commitment to reform and their engagement with the turbulent politics of their time. In the final weeks of the course, we will explore the Transcendentalists' profound influence on American cultural history, ranging from their contemporaries (Frederick Douglass, Walt Whitman, Emily Dickinson, and Nathaniel Hawthorne) to ours (Marilynne Robinson, Terrence Malick, and W. S. Merwin).

PHIL 3448 Theory of the Subject: From Hegel to Zizek (4 Credits)

The great French philosopher Michel Foucault in his Collège de France lectures in the early 1980s characterized the theory of the subject as the very key to the development both of Western philosophy and Western thinking in general. This course will explore Foucault's thesis with reference to different theoretical models of subjectivity and "subjectification" (as Jacques Lacan calls it). It will do so through close readings of selections from the works of G.W.F. Hegel, Søren Kierkegaard, Lacan, Alain Badiou, and Slavoj Žižek as well as select portions of Foucault's 1981-82 lectures entitled The Hermeneutics of the Subject. This course is cross-listed with RLGS 3448.

PHIL 3460 Nietzsche & the Death of God (4 Credits)

This course involves an intensive reading and discussion of Friedrich Nietzsche's 'Thus Spake Zarathustra', together with relevant associated materials, especially 'The Gay Science'. Prerequisite: junior standing or instructor's permission. Cross listed with RLGS 3460.

PHIL 3465 Derrida and Postmodernism (4 Credits)

Cross listed with RLGS 3465. Prerequisite: junior standing or instructor's permission.

PHIL 3466 Contemporary Continental Philosophy (4 Credits)

A critical study of current trends in European philosophy, focusing on such thinkers as Deleuze, Badiou, Zizek, Meillassoux, or Laruelle. Prerequisite: junior standing or instructor's permission.

PHIL 3610 Advanced Topics in Philosophy, Psychology, and Cognitive Science (4 Credits)

This course provides an advanced survey of conceptual and methodological issues that lie at the intersection of philosophy, psychology, and cognitive science. More specifically, our main goal is to engage in a critical discussion of how the study of the mind requires an interdisciplinary approach that integrates empirical findings with conceptual and philosophical theorizing. Cross listed with PSYC 3610. Prerequisites: PSYC 1001 and junior standing (or instructor approval).

PHIL 3611 The Boundaries of Scientific Knowledge: A Philosophical Exploration (4 Credits)

Despite its staggering successes, public trust in science is disquietingly low. What has gone wrong? Why is a substantive portion of the population unwilling to trust the advice of specialists? A central problem lies in the tendency of scientists, philosophers, and various pundits to hype, bloat, and overemphasize the promises and results of scientific research. This leads to scientism, broadly conceived as the imperialist tendency to reduce all knowledge to scientific knowledge. But what exactly is scientism? Despite the pejorative connotation of the term, is it an intellectual sin or a virtue? The aim of this course is to map the terrain, exploring various dimensions of scientism, and how it affects the public dimensions of scientific research and its relation to the humanities, religion, and other domains of knowledge, culture, and society.

PHIL 3612 AI and Robotics (4 Credits)

In this interdisciplinary seminar we will discuss foundational issues regarding artificially intelligent systems. We will seek to understand how recent advances in AI research bear on our understanding of the nature of the mind, intelligence, agency, rationality, and consciousness. We will also discuss how philosophical advances can advance empirical progress. Additionally, we will discuss some barriers to progress that these technologies might pose. In particular, we will be focused on three groups of questions: 1. What special opportunities and challenges are presented by deep neural net and deep learning technology regarding building and understanding artificially minded intelligent agents? 2. What is the role of the body and environment in producing intelligence? 3. Deep neural net algorithms are already commonly used to predict recidivism rates, diagnose illnesses, and make advertising more effective. In what ways might such algorithms be approaching human or animal intelligence, or shed light on such intelligence? In what ways might human and animal intelligence be importantly different? In what ways might contemporary intelligence research perpetuate injustice and oppression? This seminar is designed to be interdisciplinary, and I welcome students working in philosophy, robotics/AI, and cognitive science who want to work hard and dig deeper. There are no strict prerequisites, but some background knowledge in relevant disciplines will be highly useful.

PHIL 3618 Philosophy of Biology (4 Credits)

A survey of conceptual issues that lie at the intersection of biology and philosophy: the central concepts of evolutionary theory (such as natural selection, fitness, adaptation and function), the relation of biology to other "lower" sciences (can it be reduced to physics and chemistry?), whether there are genuine scientific laws in biology, and the relation between biology and other fields like cognitive science and ethics. At least Junior standing required.

PHIL 3620 Philosophical Perspectives on Economics and Social Sciences (4 Credits)

This course provides an advanced survey of conceptual and methodological issues that lie at the intersection of philosophy, economics, and the social sciences. More specifically, the main goal is to engage in a critical discussion of how sciences such as psychology, sociology, and neuroscience can challenge and modify the foundations and methodology of economic theories. The course is structured around three broad modules. After a brief introduction, we begin by discussing the emergence of rational choice theory which constitutes the foundation of classical and neoclassical economics and present some paradoxical implications of expected utility theory. The second module focuses on the relationship between economics and psychology. More specifically, we examine the emergence of behavioral economics, the study of the social, cognitive, and emotional factors on the economic decisions of individuals and institutions and their consequences for market prices, returns, and resource allocation. Finally, the third module focuses on the implications of neuroscience on decision making. We discuss some recent developments in neuroeconomics, a field of study emerged over the last few decades which seeks to ground economic theory in the study of neural mechanisms which are expressed mathematically and make behavioral predictions.

PHIL 3699 Proseminar in Philosophy (4 Credits)

Philosophy is a diverse discipline with various subfields, most of which are becoming increasingly specialized and methodologically autonomous. Specialization is often (rightly) perceived as an indicator of disciplinary progress and intellectual development. However, it is important that students of philosophy pursue breadth as well as depth. The goal of this course is to provide an overview of a series of seminal texts in philosophy, from a variety of subfields, epochs, and traditions. Each weekly meeting is devoted to the presentation, analysis, and discussion of a text that any student of philosophy should read at some point in her or his career. Requires junior standing or instructor's permission.

PHIL 3700 Topics in Philosophy (1-4 Credits)

Prerequisite: junior standing or instructor's permission.

PHIL 3701 Topics in Philosophy (1-4 Credits) Prerequisite: junior standing or instructor's permission.

PHIL 3702 Topics in Philosophy (1-4 Credits)

Prerequisite: 10 hours of Philosophy at 2000 level or permission of instructor.

PHIL 3703 Topics in Philosophy (1-4 Credits)

Prerequisite: 10 hours of Philosophy at 2000 level or permission of instructor.

PHIL 3704 Topics in Philosophy (1-4 Credits)

Prerequisite: 10 hours of Philosophy at 2000 level or permission of instructor.

PHIL 3991 Independent Study (1-8 Credits)

PHIL 4991 Independent Study (1-10 Credits)

PHIL 4995 Independent Research (1-10 Credits)

Courses

PHIL 3000 Plato's Metaphysics (4 Credits)

A systematic study of Plato's Middle and Late Period Dialogues that focuses on his arguments for the existence of abstract objects and the development of Plato's theory of Forms. Prerequisite: At least Junior standing or permission of instructor.

PHIL 3003 Plato's Theory of Knowledge (4 Credits)

A systematic investigation of Plato's treatments of knowledge throughout the dialogues with a focus on the theory of recollection, Forms as objects of knowledge, the relationship between the Forms and perceptual experience, and the challenges posed by notions of true and false belief. Prerequisites: At least Junior standing or permission of instructor.

PHIL 3010 Great Thinkers: Aristotle (4 Credits)

A study of Aristotle's central theories and doctrines. Prerequisite: junior standing or instructor's permission.

PHIL 3011 Great Thinkers: Virginia Woolf (4 Credits)

In this course we will read Virginia Woolf as a philosopher. We will discuss her philosophy of nature, knowledge, art, politics, science, sensation, gender, and materialism throughout her fiction and non-fiction writings.

PHIL 3023 Great Thinkers: Maimonides: Politics, Prophecy and Providence (4 Credits)

Using "The Guide for the Perplexed" as our central text, we explore the complex philosophical ideas of Moses Maimonides (1135-1204), one of the central figures in medieval philosophy and Jewish thought. Our study includes analyses of his ideas on principles of faith, human perfection, intellectual vs. "imaginational" approaches to truth, pedagogy and politics, reasons for the commandments, the nature of God and divine will, the limits of human knowledge, the mechanics of prophecy, and the parameters and implications of providence. Cross listed with RLGS 3023 and JUST 3023. Prerequisite: junior standing or instructor's permission.

PHIL 3050 Great Thinkers: Hume (4 Credits)

A detailed study of Hume's "radical" empiricism and its impact on contemporary analytic philosophy. Prerequisite: junior standing or instructor's permission.

PHIL 3063 Kant on Religion (4 Credits)

A study of Immanuel Kant's major writings on religion and their subsequent influence on theology and the philosophy of religion. Prerequisite: junior standing or instructor's permission. Cross-listed with RLGS 3456.

PHIL 3070 Great Thinkers: Hegel (4 Credits)

Hegel's "Phenomenology," later system and place in the history of modern philosophy. Prerequisite: junior standing or instructor's permission.

PHIL 3075 Marxism (4 Credits)

This course is a survey in the theoretical and political work influenced by the writings of 19th century philosopher and economist, Karl Marx. The course covers both the historical traditions in Marxism in the 19th, 20th, and 21st century as well as the geographical traditions of these time periods in France, Germany, England, Italy, Russia, China, and America. It is not necessary that students have a prior background in Marx's work, but it is highly recommended. Cross listed with ECON 3075.

PHIL 3090 Great Thinkers: Heidegger (4 Credits)

Study of "Being and Time" and related essays by a major 20th-century philosopher. Prerequisite: junior standing or instructor's permission.

PHIL 3100 Great Thinkers: Wittgenstein (4 Credits)

The course introduces students to Ludwig Wittgenstein's two masterworks, the Tractatus (1922) and Philosophical Investigations (1953), both of which provide fresh, often counterintuitive and conflicting, insights into topics ranging from logic and language to ethics, religion, art and culture. The course explores how the end of the Austro-Hungarian Empire and the pressures of an incipient modernity impacted the style, direction and substance of Wittgenstein's thought, developments that had profound existential and spiritual import for him as he wrestled with the many contradictions of his life and thought. The course concludes with a consideration of the relationship between Wittgenstein's later philosophy and the existential-phenomenology of Martin Heidegger, both of whom insist upon humanity's radical finitude and the pre-ontological understanding (forms of life) that always already conditions and guides our questions about reason, truth, beauty and meaning.

PHIL 3101 Great Thinkers: Kierkegaard (4 Credits)

Each year, the philosophy department offers at least two courses in great thinkers. Specific figures may vary from year to year. Cross-listed with RLGS 3102. Prerequisite: 10 hours of Philosophy at the 2000 level or permission of instructor.

PHIL 3120 Metaphysics (4 Credits)

In the course of this study, we will cover a broad range of philosophical topics falling within metaphysics, philosophy of language, philosophy of science, and epistemology. Prerequisite: junior standing or instructor's permission.

PHIL 3130 Knowledge Problems (4 Credits)

Problems in the foundations and justifications of claims to knowledge. Prerequisite: junior standing or instructor's permission.

PHIL 3146 Great Thinkers: Levinas (4 Credits)

Emmanuel Levinas (1906-1995), famous for his arresting and original idea of "ethics as first philosophy," is an important figure in the histories of phenomenology, metaphysics, and theology. In this course, we set out to explore Levinas' insights on ethics, alterity, and infinity, including the connection of his ideas to Plato, Descartes, Kant, and Husserl, as well as his critical responses to Heidegger and his positive contributions to Derrida. In this course, we work through Levinas' two major works, Ethics and Infinity and Otherwise Than Being or Beyond Essence, as well as a number of shorter writings—including material from his Talmudic commentaries. Themes to be covered include: Being, Goodness, Risk, Ethics, Alterity, Transcendence, Law, Judaism, Gift, Forgiveness, Politics, Theology, and Justice. This course is cross-listed with JUST 3146.

PHIL 3175 Morality and the Law (4 Credits)

A systematic study of various elements of the relation between law and morality. Are we obligated to obey every law the government enacts? Why? If we do have an obligation to obey the law, are civil disobedients like Martin Luther King, Jr. justified in disobeying the law? Are immoral laws, laws at all, or must a law connect with some higher moral truth to have any authority? To what extent is it morally permissible for the law to restrict our personal freedoms? To what extent is it morally permissible for the law to enforce morality in general? If it is not permissible for the law to enforce morality, do we incur any obligation to obey the law? Prerequisite: junior standing or instructor's permission.

PHIL 3178 Metaethics (4 Credits)

This course systematically and critically examines the metaphysical, semantic, and epistemic issues central to the study of metaethics. Do moral properties exist? If so, how are they related to natural properties? Do moral properties exist independent of human agency, or do we construct morality? If moral properties exist, how can we come to have justified belief about them? Is it possible to know that a moral belief is true? Doesn't the phenomenon of widespread, intractable disagreement about moral matters establish that there are no objective moral truths? Is the process of gaining scientific knowledge really that different from the process of gaining moral knowledge? Prerequisite: junior standing or instructor's permission.

PHIL 3179 Virtue Ethics (4 Credits)

Virtue ethics purportedly provides a distinct approach to moral deliberation, moral reasoning, moral decision-making, and moral justification. This course is a systematic study o the nature of virtue ethics, the nature of a virtue, and the alleged superiority of virtue ethics over its more familiar consequentialist and deontological alternatives. We also study various responses to the following questions: Have moral psychologists generated any valuable studies on the nature of virtue? What virtues ought we to endorse? At least Junior standing required or permission of the instructor.

PHIL 3210 Philosophy of Movement (4 Credits)

Everything is in motion. Yet, philosophers have consistently considered motion to be a derivative or secondary form of being. Why? What are the political and metaphysical consequences of marginalizing motion in the history of philosophy? The aim of this class is to read the history of philosophy with a unique focus on the status of movement and motion from the ancient to contemporary period.

PHIL 3211 Contemporary Pol Philosophy (4 Credits)

This class focuses primarily on the philosophical problems generated by thinking about political authority and justice. We discuss the nature of political authority, justice, rights, equality and the role of property in a modern state.

PHIL 3212 Philosophy and Mythology (4 Credits)

Before philosophy there was the myth of chaos. In this class we will read the oldest recorded myths in the world to see how their vision of cosmogonic chaos gave birth to form and order. We will track the birth, rise, and fall of creation stories from chaos and identify what may have caused these major shifts, including the rise of philosophy, the state, and imperialism. Specifically we will read the earliest Egyptian, Mesopotamian, Indian, Greek, and Chinese creation stories.

PHIL 3215 Modern Jewish Philosophy (4 Credits)

Prerequisite: junior standing or instructor's permission. Cross listed with JUST 3215.

PHIL 3333 Logic, Language, and Metaphysics (4 Credits)

This course provides a systematic exploration of the foundations of contemporary philosophy—namely, logic and language—and their metaphysical implications. The class can be divided in three broad modules. Our starting point is the collapse of Kant's system due to staggering discovering in physics and geometry. Next, we shall discuss the subsequent development of mathematical logic and the philosophy of language in the work of Frege, Russell, Tarski, and Goedel. The last portion is devoted to philosophical applications of these logical results in the field of metaphysics. Specifically, we shall explore the work of Carnap, Quine, and Kripke. Junior or senior standing required (or instructor permission).

PHIL 3445 Cultural Theory and Critique (4 Credits)

This course will provide an overview of the major theories of culture and cultural critique, as well as a consideration of some of the major controversies and recent developments in this field. It will proceed roughly chronologically, beginning with liberal humanist critique and continuing with hermeneutics, materialist and Marxist critique, psychoanalysis, the Frankfurt School, structuralism, post-structuralism, and contemporary British cultural studies. It will also consider more recent developments, such as feminist critique, GLBT critique, and postcolonialism. While the approach will be mainly philosophical, implications for other areas such as literature, art, emergent media, religion, and politics will also figure in the discussions, so it is appropriate for students in many fields, not just philosophy. Prerequisite: Junior standing or permission of the instructor. Note that this course will serve as a foundational offering for students interested in participating in the Critical Theory specialization.

PHIL 3446 Philosophy in the American Tradition (4 Credits)

The course introduces students to the thought of the three premier American Transcendentalist writers: Ralph Waldo Emerson, Margaret Fuller, and Henry David Thoreau. These three writers—by turns friends, rivals, neighbors, and even housemates in nearby Concord, Massachusetts— created what Emerson called "a poetry and philosophy of insight and not of tradition" and laid the foundations for American philosophy and literature as we know it today. They also led the first countercultural movement in American history, advocating causes as varied as environmentalism, abolitionism, women's rights, and the "higher law" of the individual conscience in an age of unbridled capitalism and populism. We will consider the Transcendentalists as both writers and reformers, examining their calls for a uniquely American literature and their romantic sacralization of nature as well as their deep commitment to reform and their engagement with the turbulent politics of their time. In the final weeks of the course, we will explore the Transcendentalists' profound influence on American cultural history, ranging from their contemporaries (Frederick Douglass, Walt Whitman, Emily Dickinson, and Nathaniel Hawthorne) to ours (Marilynne Robinson, Terrence Malick, and W. S. Merwin).

PHIL 3448 Theory of the Subject: From Hegel to Zizek (4 Credits)

The great French philosopher Michel Foucault in his Collège de France lectures in the early 1980s characterized the theory of the subject as the very key to the development both of Western philosophy and Western thinking in general. This course will explore Foucault's thesis with reference to different theoretical models of subjectivity and "subjectification" (as Jacques Lacan calls it). It will do so through close readings of selections from the works of G.W.F. Hegel, Søren Kierkegaard, Lacan, Alain Badiou, and Slavoj Žižek as well as select portions of Foucault's 1981-82 lectures entitled The Hermeneutics of the Subject. This course is cross-listed with RLGS 3448.

PHIL 3460 Nietzsche & the Death of God (4 Credits)

This course involves an intensive reading and discussion of Friedrich Nietzsche's 'Thus Spake Zarathustra', together with relevant associated materials, especially 'The Gay Science'. Prerequisite: junior standing or instructor's permission. Cross listed with RLGS 3460.
PHIL 3465 Derrida and Postmodernism (4 Credits)

Cross listed with RLGS 3465. Prerequisite: junior standing or instructor's permission.

PHIL 3466 Contemporary Continental Philosophy (4 Credits)

A critical study of current trends in European philosophy, focusing on such thinkers as Deleuze, Badiou, Zizek, Meillassoux, or Laruelle. Prerequisite: junior standing or instructor's permission.

PHIL 3610 Advanced Topics in Philosophy, Psychology, and Cognitive Science (4 Credits)

This course provides an advanced survey of conceptual and methodological issues that lie at the intersection of philosophy, psychology, and cognitive science. More specifically, our main goal is to engage in a critical discussion of how the study of the mind requires an interdisciplinary approach that integrates empirical findings with conceptual and philosophical theorizing. Cross listed with PSYC 3610. Prerequisites: PSYC 1001 and junior standing (or instructor approval).

PHIL 3611 The Boundaries of Scientific Knowledge: A Philosophical Exploration (4 Credits)

Despite its staggering successes, public trust in science is disquietingly low. What has gone wrong? Why is a substantive portion of the population unwilling to trust the advice of specialists? A central problem lies in the tendency of scientists, philosophers, and various pundits to hype, bloat, and overemphasize the promises and results of scientific research. This leads to scientism, broadly conceived as the imperialist tendency to reduce all knowledge to scientific knowledge. But what exactly is scientism? Despite the pejorative connotation of the term, is it an intellectual sin or a virtue? The aim of this course is to map the terrain, exploring various dimensions of scientism, and how it affects the public dimensions of scientific research and its relation to the humanities, religion, and other domains of knowledge, culture, and society.

PHIL 3612 AI and Robotics (4 Credits)

In this interdisciplinary seminar we will discuss foundational issues regarding artificially intelligent systems. We will seek to understand how recent advances in AI research bear on our understanding of the nature of the mind, intelligence, agency, rationality, and consciousness. We will also discuss how philosophical advances can advance empirical progress. Additionally, we will discuss some barriers to progress that these technologies might pose. In particular, we will be focused on three groups of questions: 1. What special opportunities and challenges are presented by deep neural net and deep learning technology regarding building and understanding artificially minded intelligent agents? 2. What is the role of the body and environment in producing intelligence? 3. Deep neural net algorithms are already commonly used to predict recidivism rates, diagnose illnesses, and make advertising more effective. In what ways might such algorithms be approaching human or animal intelligence, or shed light on such intelligence? In what ways might human and animal intelligence be importantly different? In what ways might contemporary intelligence research perpetuate injustice and oppression? This seminar is designed to be interdisciplinary, and I welcome students working in philosophy, robotics/AI, and cognitive science who want to work hard and dig deeper. There are no strict prerequisites, but some background knowledge in relevant disciplines will be highly useful.

PHIL 3618 Philosophy of Biology (4 Credits)

A survey of conceptual issues that lie at the intersection of biology and philosophy: the central concepts of evolutionary theory (such as natural selection, fitness, adaptation and function), the relation of biology to other "lower" sciences (can it be reduced to physics and chemistry?), whether there are genuine scientific laws in biology, and the relation between biology and other fields like cognitive science and ethics. At least Junior standing required.

PHIL 3620 Philosophical Perspectives on Economics and Social Sciences (4 Credits)

This course provides an advanced survey of conceptual and methodological issues that lie at the intersection of philosophy, economics, and the social sciences. More specifically, the main goal is to engage in a critical discussion of how sciences such as psychology, sociology, and neuroscience can challenge and modify the foundations and methodology of economic theories. The course is structured around three broad modules. After a brief introduction, we begin by discussing the emergence of rational choice theory which constitutes the foundation of classical and neoclassical economics and present some paradoxical implications of expected utility theory. The second module focuses on the relationship between economics and psychology. More specifically, we examine the emergence of behavioral economics, the study of the social, cognitive, and emotional factors on the economic decisions of individuals and institutions and their consequences for market prices, returns, and resource allocation. Finally, the third module focuses on the implications of neuroscience on decision making. We discuss some recent developments in neuroeconomics, a field of study emerged over the last few decades which seeks to ground economic theory in the study of neural mechanisms which are expressed mathematically and make behavioral predictions.

PHIL 3699 Proseminar in Philosophy (4 Credits)

Philosophy is a diverse discipline with various subfields, most of which are becoming increasingly specialized and methodologically autonomous. Specialization is often (rightly) perceived as an indicator of disciplinary progress and intellectual development. However, it is important that students of philosophy pursue breadth as well as depth. The goal of this course is to provide an overview of a series of seminal texts in philosophy, from a variety of subfields, epochs, and traditions. Each weekly meeting is devoted to the presentation, analysis, and discussion of a text that any student of philosophy should read at some point in her or his career. Requires junior standing or instructor's permission.

PHIL 3700 Topics in Philosophy (1-4 Credits)

Prerequisite: junior standing or instructor's permission.

PHIL 3701 Topics in Philosophy (1-4 Credits)

Prerequisite: junior standing or instructor's permission.

PHIL 3702 Topics in Philosophy (1-4 Credits)

Prerequisite: 10 hours of Philosophy at 2000 level or permission of instructor.

PHIL 3703 Topics in Philosophy (1-4 Credits)

Prerequisite: 10 hours of Philosophy at 2000 level or permission of instructor.

PHIL 3704 Topics in Philosophy (1-4 Credits) Prerequisite: 10 hours of Philosophy at 2000 level or permission of instructor.

PHIL 3991 Independent Study (1-8 Credits)

PHIL 4991 Independent Study (1-10 Credits)

PHIL 4995 Independent Research (1-10 Credits)

Psychology

Office: Frontier Hall Mail Code: 2155 S. Race St., Denver, CO 80208 Phone: 303-871-2478 Email: Web Site: www.du.edu/psychology (http://www.du.edu/psychology/)

The Psychology PhD programs in the Department of Psychology are oriented toward training qualified students to pursue careers in research, teaching, and professional practice. Oue PhD programs include: Experimental Psychology with a concentration in Affect, Social and Cognitive Psychology, Clinical Psychology with a child emphasis, and Developmental and Child Psychology. We also offer a specialization in Developmental Cognitive Neuroscience (DCN).

Doctor of Philosophy in Experimental Psychology with a Concentration in Affect, Social and Cognitive Psychology

The ASC PhD program will prepare you for research and teaching careers in affective science, social or cognitive psychology. You will work closely with faculty and fellow students in labs using psychophysiological measurement, social cognition paradigms, behavioral measures and neuroscience tools such as fMRI. As a student in the ASC program, you will choose an emphasis: Affect, Social, or Cognitive Psychology. Depending on your emphasis area, there are slight variations in how requirements are completed.

Doctor of Philosophy in Clinical (Child emphasis) Psychology

The graduate program in Clinical Psychology focuses on the etiology, treatment and prevention psychopathology with an emphasis on the childhood and adolescent developmental periods.

Doctor of Philosophy in Developmental and Child Psychology

The graduate program in Developmental Psychology focuses on human developmental processes—including biological, cultural, social and psychophysiological factors.

Developmental Cognitive Neuroscience

The specialization in Developmental Cognitive Neuroscience is open to students in any of the graduate programs in Psychology. It is designed to equip students with advanced knowledge and training in an interdisciplinary approach to neuroscience and psychology. The coursework covers diverse fields and research methods including neuroimaging, computational modeling, eye-tracking, psychophysiology, neuropsychology, neuroendocrinology, and behavioral genetics. The program prepares students to be leaders in collaborative science approaches.

Doctor of Philosophy in Psychology with a Concentration in Affective, Social & Cognitive Psychology

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Standardized Test Scores

• GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials. If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- · Minimum TOEFL Score (Internet-based test): 80 (including a minimum of 26 on the speaking section)
- Minimum IELTS Score: 6.5 (including a minimum of 8 on the speaking section)
- Minimum C1 Advanced Score: 176 (including a minimum of 200 on the speaking section)
- Minimum Duolingo English Test Score: 115

Specialization: Developmental Cognitive Neuroscience Requirements

The following requirements for the DCN specialization are in addition to the student's area requirements. The DCN specializations affects how students meet core and tool requirements. DCN students in each of the three majors/areas of the department have additional core requirements. DCN also affects advanced clinical requirements for clinical DCN students and elective requirements for non-clinical DCN students (see below). The neuroscience methods courses listed below which fulfill the DCN tool requirement are also sufficient to fulfill their area's tool requirement.

Any entering student who wishes to specialize in DCN must demonstrate competency in basic neurobiology (e.g., have taken an undergraduate class is biological psychology, neuroanatomy, psychophysiology, etc.). If not, they must take Introduction to Neurobiology offered by the department of Biological Sciences.

Students must take four of the following required core courses (any four):

PSYC 4002	Prosem in Memory and Cognition
PSYC 4033	Devel Proseminar. Biological
PSYC 4045	Proseminar in Human Brain Development
PSYC 4262	Affective Neuroscience
PSYC 4526	Prosem in Cog Neuroscience
PSYC 4660	Perception: A Cognitive Neuroscience Approach

DCN students must also take two of the following tool/methods courses, or have an equivalent approved by the DCN area head:

PSYC 4085	Stress & Health	4
PSYC 4255	Imaging the Mind	4
PSYC 4360	Programming Psychology: Experiment Building with Python	4
PSYC 4365	Programming Psychology: Model-Fitting and Analysis	4
PSYC 4525	Prosem in Develop Neuropsych	4
PSYC 4665	Executive Functioning	4
PSYC 4688	Clinical Psychopharmacology	4

PSYC 4526	Prosem in Cog Neuroscience	
PSYC 4660	Perception: A Cognitive Neuroscience Approach	

DCN students must also take two of the following tool/methods courses, or have an equivalent approved by the DCN area head:

Code	Title	Credits
PSYC 4085	Stress & Health	4
PSYC 4255	Imaging the Mind	4
PSYC 4360	Programming Psychology: Experiment Building with Python	4
PSYC 4365	Programming Psychology: Model-Fitting and Analysis	4
PSYC 4525	Prosem in Develop Neuropsych	4
PSYC 4665	Executive Functioning	4
PSYC 4688	Clinical Psychopharmacology	4

Dual Undergraduate/Graduate Master's Program

Master of Arts in Psychology Dual Degree with BA or BS in Psychology

Minimum of 45 credits required for the MA. 28 credits must be content courses.

Code	Title	Credits		
Foundations In Research Methods a	Foundations In Research Methods and Statistics			
PSYC 4295	Research Design & Inference	4		
PSYC 4300	Correlation and Regression	4		
In addition to PSYC 4295 and PSYC	4300 you must choose one of the following Advanced Statistics Course:	4		
PSYC 4330	Analysis of Variance			
PSYC 4350	Structural Equation Modeling for the Social Sciences			
PSYC 4355	Multilevel Modeling for the Psychological Sciences: Theory and Applications			
Ethics				
PSYC 4920	Ethics-Psych & Rsrch Practice	2		
Proseminar Courses	Proseminar Courses			
Choose two of the following:		8		
PSYC 4002	Prosem in Memory and Cognition			
PSYC 4011	Proseminar in Emotion			
PSYC 4021	Prosem in Social Psychology			
PSYC 4032	Developmental Proseminar. Social-Emotional			
PSYC 4033	Devel Proseminar. Biological			
Electives				
A minimum of two elective courses in PSYC must be taken				
Master's Thesis				
PSYC 5995	Independent Research	1-10		
dditional Credit Hours				
Additional elective courses or indepe	endent research to reach 45 credit minimum			

All courses for the MA must be taken at the 4000#level or above. No course can count for undergraduate and graduate level credit hours. Cross# listed courses taken at one level may not be retroactively applied to another, as requirements and grading criteria may differ.

Programs non#course requirements.

Successful completion of master's research paper or thesis and oral defense.

Grade Requirement:

A grade lower than "C-" renders the credit unacceptable for meeting University degree requirements. Grades of "C-" or better qualify for graduate credit but may not count towards the degree. Students should consult with their program to understand unit-specific minimum grade requirements.

Admission requirements:

- · Current undergraduate student at DU
- · Minimum of 120 credit hours completed when applications are due
- Signed certification from psychology major advisor that undergraduate degree requirements can be fit in alongside MA program
- Completion of Intro Stats (PSYC 2300) or equivalent and Research Methods (PSYC 3050) with a B or higher before Autumn Quarter of the year they begin the program (4th year or equivalent)
- Letter of support from faculty member willing to oversee research thesis, stating research potential as well as capability to contribute to graduate classes
- Completion of personal statement outlining research interests, career goals, and briefly outlining how a research-based MA program will help them
 achieve those goals

PSYC 3020 Adolescence (4 Credits)

This course examines development during the adolescent years exploring biological, cognitive, and social transitions central to this developmental stage. It considers key contexts in which adolescents develop: families, peer groups, schools, work, leisure, and the mass media. Special attention is given to the importance of diverse social and cultural experiences and its impact on adolescent behavior and cognition. Prerequisites: PSYC2070 and PSYC3050, must be major or minor in psychology, must have junior or senior standing.

PSYC 3029 Imaging the Mind (4 Credits)

Imaging the Mind is an introductory course to the basic theory and data analysis techniques used in functional magnetic resonance imaging (fMRI). It will cover basic brain anatomy, the basic physics of MRI, experimental design, data processing and the issues associated with data processing, and interpretation of fMRI data. Students in this course will receive hands-on experience in processing a data set from start to finish. They will apply different image preprocessing techniques, statistical design parameters, and statistical models to determine how these factors influence the outcome of the data and how these factors influence the interpretation of that data. In this manner, each student will be exposed individually to the decision issues and interpretation pitfalls involved in fMRI data analysis. Cross listed with PSYC 4255. Prerequisites: PSYC 2031 and PSYC 3050, must be major or minor in psychology, must have junior standing. Permission of the instructor required.

PSYC 3032 Introduction to Neural Networks (4 Credits)

Introduction to basic principles and computational methods in artificial neural network modeling; neural models of cognitive and psychological processes examined and evaluated. Cross listed with PSYC 4254. Prerequisite: PSYC 1001 and PSYC 3050. Must be major or minor in psychology. Must have junior standing. Permission of instructor required.

PSYC 3035 Seminar: Cognitive Neuroscience (2 Credits)

This seminar is for students in the cognitive neuroscience specialization, a joint program with Biological Sciences. The goal of the seminar is to provide an opportunity for senior-level cognitive neuroscience majors to apply the knowledge and skills they have acquired in other courses to current cutting-edge topics in the field. Prerequisites: PSYC 2031 and PSYC 3050, must have cognitive neuroscience concentration, must have senior standing.

PSYC 3151 Senior Honors Research Seminar (1-5 Credits)

In conjunction with senior research thesis. Prerequisites: PSYC 2750, PSYC 2751 and PSYC 2752.

PSYC 3152 Senior Honors Research Seminar (1-5 Credits)

In conjunction with senior research thesis. Prerequisites: PSYC 2751 and PSYC 2752.

PSYC 3350 Cultural Psychology (4 Credits)

This seminar examines how people's sociocultural context shapes their thoughts, feelings, and behaviors. To approach this question, we read and discuss classic as well as recent theoretical and empirical articles from the field of cultural psychology. Topics include defining culture; dimensions of cultural variation; culture-biology interactions; methodological considerations; cultural influences on cognition, emotion, the self, moral judgment, and health; cultural neuroscience; cultural approaches to race and ethnicity; and mechanisms of cultural influence. Throughout, this course emphasizes sociocultural diversity in psychological processes. Students are encouraged to develop empirically tractable ways of asking and answering questions relating to cultural psychology and to apply concepts of cultural psychology to their own research. Prerequisite: PSYC 2740 and PSYC 3050; must be a major or minor in psychology, must have junior standing.

PSYC 3666 Brain Development & Cognition (4 Credits)

Examines what the brain tells us about development and what development tells us about the brain. Topics include subcortical and cortical developments to the acquisition of language and drawing. Prerequisites: PSYC 2070 and PSYC 3050; must be major or minor in psychology, must have junior standing.

PSYC 3700 Artificial Intelligence and Psychological Science: Exploring Human-Computer Interactions (4 Credits)

This seminar explores the intersections of artificial intelligence, human-computer interaction, psychology, and neuroscience with a focus on how AI technologies—such as generative AI, conversational agents, and social robots —shape and are shaped by human cognition, social behavior, development, and cultural context. Students will critically analyze research on AI's impact on social relationships, child development, cognition, brain function, and mental health. Students will engage in discussions that bridge psychological theory with AI technology. Topics include emotional and social connections with robots, cultural influences on AI interaction, ethical and safety concerns, and the neurocognitive implications of AI in our daily lives. This course aims to provide an understanding of AI's role in human psychological processes and its impacts on our functions across various domains, including education, health care, and social relationships.

PSYC 3701 Topics in Psychology (1-4 Credits)

Prerequisites: PSYC 1001 and PSYC 3050; must be major or minor in psychology, must have junior standing.

PSYC 3991 Independent Study (1-10 Credits)

Maximum of 5 hours per quarter not to exceed a total of 10 quarter hours.

PSYC 4002 Prosem in Memory and Cognition (4 Credits)

Theory/research on thinking, problem solving, language, creative thought, other aspects of knowing process.

PSYC 4011 Proseminar in Emotion (4 Credits)

Social/physiological aspects of emotions, including motivation, physiological processes, basic emotions, cognitive appraisal, cross-cultural issues, empathy, effects of emotions.

PSYC 4015 Nonverbal Behavior (4 Credits)

This course will be cross-listed with Psyc 3015 (undergraduate students in 3015 and graduate students in 4015 will be seated in the same classroom but will have different requirements). Most humans speak for a very small portion of their day (by most estimates, an hour or less) but during every waking moment of your life, you display nonverbal behaviors. These behaviors include facial expressions, eye gaze, posture, head movements, movement toward and away from things, gestures, distance from other people, vocal intonation, and many other subtle bodily actions. In this class, we will survey an enormous scientific literature regarding the causes and consequences of nonverbal behaviors. Our focus will be on nonverbal behavior in humans, but we will also review the role of nonverbal behavior in the social life of human and non-human animals alike. Topics include, but are not limited to questions such as: What methods should scientists use to examine the causes and consequences of nonverbal behavior? Do nonverbal behavior? Do nonverbal behaviors instead function for the purpose of social influence? What is the role of nonverbal behavior? Do people non-consciously process the social meaning of others' nonverbal behaviors?.

PSYC 4020 Proseminar in Personality (4 Credits)

Personality structure/dynamics, theory and findings, interrelationships between personality and socio-cultural determinants of behavior.

PSYC 4021 Prosem in Social Psychology (4 Credits)

Major theoretical issues and empirical research in social psychology; topics include cultural, social structure, cognitive consistency, social neuroscience, social cognition, person perception, the self, social influence, attitudes, relationships, emotion, coping.

PSYC 4025 Intergroup Relations (4 Credits)

This course is intended to provide a foundation in understanding how individuals and groups relate to each other within a social structure. Social groups can take many forms, ranging from classic social groups (e.g., race, gender, ethnicity, religion, sexual orientation) to minimal groups where membership is arbitrary. This course will explore foundational principles in classic and contemporary research on intergroup relations.

PSYC 4028 Social Cognition (4 Credits)

Social cognition describes how people make sense of themselves and others. The emphasis on "how" is important—social cognition research focuses on perceptual, cognitive, and affective processes that help people think about themselves and others. You will learn about the theories, findings, and methods in a specific area of study.

PSYC 4032 Developmental Proseminar: Social-Emotional (4 Credits)

Problems/theories in developmental psychology including Piagetian theory, language, emotional, perceptual, personality development, learning, biological bases of behavior, genetic influences.

PSYC 4033 Devel Proseminar: Biological (4 Credits)

This course provides an overview of major biological processes during development and their effects on physical, cognitive, and social development. Specific topics will include: history, concepts, and central themes of developmental psychology; theoretical and biological models of human development (e.g., developmental psychobiological systems view); brain development and plasticity; behavioral genetics; sleep and circadian rhythms; sexual differentiation and hormonal influences on behavior; stress and the HPA axis; effects of nutrition and toxic substances.

PSYC 4045 Proseminar in Human Brain Development (4 Credits)

This course offers an overview of current research and methodologies in the field of developmental cognitive, affective, and social neuroscience. It explores the insights that the brain provides about development and, conversely, what development reveals about the brain. Topics covered include sensitive periods for neuroplasticity, pediatric neuroimaging techniques, and the development of cognitive, affective, and social processes, as well as the impact of environmental factors. Emphasis is placed on discussing current research, evaluating findings, and proposing new research ideas in the field. Prerequisite: Instructor permission.

PSYC 4055 The Neuroscience and Psychology of Parenthood and Parent-Child Relationships (4 Credits)

This course explores the theory, research and issues relevant to parenthood and parent-child relationships. The course overviews the evolutionary, neurobiological, and psychological perspective of parent-child relationships with a focus on the understanding of recent advances in neuroscience research. Topics include neuroplasticity of parental brain, maternal vs. paternal biology for parenting, and social and biological determinants of parent-child relationships. Emphasis is placed on discussion of current research, evaluation of the findings, and proposals and ideas of new research in the field. The goal is not to memorize facts but rather to learn to think like a developmental cognitive/social neuroscientist. Cross-listed with course PSYC 3055. Prerequisite: Instructor permission.

PSYC 4081 Racism in Psychology (4 Credits)

Racism in Psychology will explore ways individual and systemic racism embedded within psychology shapes research, pedagogy, clinical practice and policy.

PSYC 4085 Stress & Health (4 Credits)

This course will serve as an introduction to the field of psychoneuroimmunology, with a focus on stress and development. The first section of the course will review basic immunology including immune system components and functions, and relations between the immune system and other systems. The later portion of the course will focus on effects of stress for different disease mechanisms (infection, allergy, cancer etc). Instructor approval required.

PSYC 4235 Teaching Psychology (1-5 Credits)

Experiential approach to learning techniques for teaching psychology.

PSYC 4240 Neurodiversity Affirming Assessment and Intervention (4 Credits)

This is a cross-listed course with both a graduate section and an undergraduate section. The primary goal of this course is to teach undergraduate students about neurodiversity across the lifespan by examining the assessment practices for diagnosis and examining the research on the evidencebased interventions. The course will discuss neurodiversity generally; however, when discussing assessment and intervention practices, the course will focus on practices specific to autism spectrum disorder. For graduate students, the course will cover these same topics with an additional goal of providing graduate students in the Clinical Child Psychology Ph.D. program with deeper knowledge of how to assess and conduct evidencebased practices with neurodiverse clients themselves. For both undergraduate and graduate students, course instruction will involve a combination of didactic reading, guided practice (i.e., role-play) and case presentations/case examples. For graduate students in the Clinical Psychology Ph.D. program, course instruction will also include supervised experience conducting evidence-based assessment and/or interventions for neurodiverse clients who present to the Center for Child and Family Psychology for diagnosis or treatment.

PSYC 4241 Seminar-Discourse Processes (4 Credits)

PSYC 4254 Intro to Neural Network Models (4 Credits)

Cross listed with PSYC 3032.

PSYC 4255 Imaging the Mind (4 Credits)

Imaging Cognition is an introductory course to the basic theory and data analysis techniques used in functional magnetic resonance imaging (fMRI). It will cover basic brain anatomy, the basic physics of MRI, experimental design, data processing and the issues associated with data processing, and interpretation of fMRI data. Students in this course will receive hands-on experience in processing a data set from start to finish. They will apply different image preprocessing techniques, statistical design parameters, and statistical models to determine how these factors influence the outcome of the data and how these factors influence the interpretation of that data. In this manner, each student will be exposed individually to the decision issues and interpretation pitfalls involved in fMRI data analysis. Cross listed with PSYC 3029.

PSYC 4256 Seminar:Cognitive Neuroscience (4 Credits)

Neural systems underlying human perception, memory, language, pathological syndromes that result from damage to these systems.

PSYC 4257 Psychophys & Neuroscience Lab (4 Credits)

PSYC 4258 Social Neuroscience (4 Credits)

PSYC 4262 Affective Neuroscience (4 Credits)

Affective neuroscience is the study of emotions in the brain. In this course, we explore how new frontiers in emotion research, from brain scans to psychoactive drugs to monkey colonies, have changed the way we think about emotions and moods. We aim to learn how scientists ask these new questions: how and what can we learn about emotion from animal models, patient studies, genetic studies, brain scans, and drugs? We learn and debate different theories about what emotions are: when are emotions helpful and harmful? Why do we have them? How many are there? Can we control how we feel? Finally, we learn how to think about emotions scientifically: What kind of evidence matters? How do emotion scholars talk about their work? What kind of questions can we ask, and what kind can we hope to answer?.

PSYC 4295 Research Design & Inference (4 Credits)

PSYC 4300 Correlation and Regression (4 Credits)

The course reviews the logic of statistical inference before introducing the procedures of correlation and regression. We begin with simple bivariate relationships before moving on to multivariate relationships for both categorical and continuous independent variables. Topics in regression include multicollinearity, variable selection, and curvilinear relationships. The course emphasizes the (stringent) requirements needed to be able to interpret correlational data in terms of cause and effect. The course also emphasizes the assessment of interactions in regression analysis for both categorical and continuous independent variables. Also included is basic coverage of logistic regression and regression assumptions. Prerequisite: PSYC 4295.

PSYC 4305 Psychology of Inequality (4 Credits)

In this course, we examine economic inequality through a psychological lens. First, we explore current trends in economic inequality and discuss how people perceive and evaluate these disparities. Then, we dive into research about why inequality persists, examining common beliefs about fairness, justice, and motivation, social structures that entrench disparities, and prejudices about marginalized groups. We will also explore the wide-ranging consequences of inequality on politics, health, emotions, decision-making and behavior.

PSYC 4330 Analysis of Variance (4 Credits)

Complex analysis of variance, other quantitative methodologies. Prerequisite: PSYC 4300 or instructor's permission.

PSYC 4350 Structural Equation Modeling for the Social Sciences (4 Credits)

This advanced course covers the basics of structural equation modeling and how this flexible approach to statistical analysis can be applied in the social sciences. Specific techniques that will covered will include testing for mediation, path analysis, confirmatory factor analysis, and the analysis of longitudinal data, as well as other related topics. There will be an emphasis on applying these techniques to students' own research through hands-on demonstrations and homework assignments and an emphasis on interpreting and critiquing structural equation models in published research. A course on correlational methods and regression is a pre/co-requisite.

PSYC 4355 Multilevel Modeling for the Psychological Sciences: Theory and Applications (4 Credits)

This advanced course covers the basics of multilevel (hierarchical) linear modeling and how this flexible approach to statistical analysis can be applied to theory and data in the psychological sciences. Specific techniques that will be covered include the analysis of nested data, family and dyadic data, and longitudinal data as well as mediation and moderation. There will be an emphasis on applying these techniques to students' own research through hands-on demonstrations and homework assignments. There will also be an emphasis on interpreting and critiquing multilevel modeling analyses in published research. Courses on analysis of variance as well as correlational methods and regression are pre/corequisites.

PSYC 4360 Programming Psychology: Experiment Building with Python (4 Credits)

This graduate-level course provides an introduction to computer programming. The goal of the course is to help psychology students develop practical coding skills in Python that will allow them to design and create complex, computer-based experiments. Students will also learn to analyze and plot data. No previous experience with programming is required (or expected). The course begins with an introduction to basic principles of programming with Python. From there, students learn to code by solving challenges specific to the design/construction of a psychological/vision-based experiment. The class is highly interactive— each class includes a mixture of lecture, group-based problem solving, and coding in teams or individually. This class is highly recommended for students who wish to improve their programming proficiency before enrolling in PSYC 4365, although it is not a prerequisite.

PSYC 4365 Programming Psychology: Model-Fitting and Analysis (4 Credits)

An introduction to creating, fitting, and performing statistical inference using computational models with an emphasis on binary choice data. The aims of this course include familiarizing students with the mathematical basis of model-fitting, learning the value of taking a variety of approaches to fitting trial-by-trial data, and giving students practical hands-on experience with maximum likelihood fitting methods. This course will use both MATLAB and R. Though not a prerequisite, this course is intended to follow Programming Psychology: Experiment Building in MATLAB (PSYC 4360), and so will assume students already have a basic knowledge of coding in MATLAB (including debugging, scripts, functions, loops, and plotting). This course is open to graduate students outside of the Department of Psychology.

PSYC 4411 Assessment-Cognition (4 Credits)

This course will provide students with a graduate level overview of theory, research, and practice in the measurement of cognitive functioning. Students will gain practical skills in administering standardized measures of cognitive and academic functioning. They will also develop skills in interpreting cognitive test results and recognizing patterns in cognitive profiles related to specific learning and developmental disorders.

PSYC 4413 Assessment-Psychopathology (Social, Emotional, and Behavioral) (4 Credits)

Overview of evidence-based psychological assessment (emotional, behavioral, and social) with a focus on integrating theory, research, and clinical practice.

PSYC 4512 Prosem in Psychopathology (4 Credits)

PSYC 4518 Readings in Family Therapy (4 Credits)

This course will survey major historical and contemporary theories from the field of family therapy. Basic family therapy techniques will be covered, and integrated with other modes of therapy (e.g. individual, marital). In the second half of the course, students will work with families and receive group supervision.

PSYC 4525 Prosem in Develop Neuropsych (4 Credits)

We will cover the theory and measurement of brain-behavior relations across the lifespan in several major neuropsychological domains, including executive functions, language, memory, and visual-spatial function. As is characteristic of the developmental neuropsychological field, students will learn to integrate information across multiple levels of analysis (genetic, brain, cognitive, behavioral) and draw on principles of neural and cognitive development in their application of neuropsychological theory to research and clinical issues. We will discuss current controversies in the field and continued areas for growth.

PSYC 4526 Prosem in Cog Neuroscience (4 Credits)

This is a graduate-level introduction to cognitive neuroscience. It covers basic theories of cognition and their neurological support.

PSYC 4565 Systems of Psychotherapy (4 Credits)

The course provides an introduction to evidence-based treatment for children and adolescents. Conceptual and empirical underpinnings of youth therapies are examined. Treatments for three prominent child and adolescent disorders - disruptive behavior problems, depression, and anxiety disorders - are highlighted. Demonstration and practice of specific treatment components is included.

PSYC 4566 Systems of Psychotherapy II (4 Credits)

Conceptual/empirical foundations of interventions for clinical problems, including (but not limited to) parasuicidality, Borderline Personality Disorder, and substance abuse.

PSYC 4571 Multicult Issues & Ment Health (4 Credits)

Theory, research, and practice issues related to the mental health of racial/ethnic minority and other diverse groups.

PSYC 4587 Workshop in Marital Therapy (4 Credits)

PSYC 4612 Marital Conflict (1-10 Credits)

PSYC 4620 Advan in Couples Intervention (4 Credits)

PSYC 4625 Couple Therapy with Diverse Populations (4 Credits)

This is a cross-listed course with both a graduate section and an undergraduate section. The primary goal of this course is to teach undergraduate students about the field of couple therapy, the different therapeutic approaches in evidence-based couple therapy and research on couple therapy and couple-focused interventions. For graduate students, the course covers these same topics with an additional goal of providing graduate students in the Clinical Psychology Ph.D. program how to conduct evidence-based couple therapy in practice. For both undergraduate and graduate students, course instruction involves a combination of didactic reading, guided practice (i.e., role-play) and case presentations / case example. For graduate students in the Clinical Psychology Ph.D. program, course instruction also includes supervised experience conducting evidence-based couple therapy with couples who present to the Center for Child and Family Psychology for treatment of relationship distress, co-morbid chronic health conditions and relationship distress, or relationship enhancement.

PSYC 4660 Perception: A Cognitive Neuroscience Approach (4 Credits)

An introduction to human perception with a strong emphasis on visual perception. This course evaluates the current understanding of how neural activity in the brain allows people to perceive basic sensory features (e.g., brightness, color, size, position, depth, movement, loudness and pitch) as well as recognize and discriminate complex perceptual patterns (e.g., 2D-shapes, 3D-objects, faces, and scenes). The underlying mechanisms are discussed on the basis of behavioral, neurophysiological, and computational evidence.

PSYC 4665 Executive Functioning (4 Credits)

This course provides an overview of current research, theories, and methods in the study of executive function and cognitive control. We will explore executive function from an interdisciplinary perspective, drawing on work from cognitive psychology and neuroscience, clinical neuropsychology, and developmental and educational psychology. Topics include the brain basis of executive function and cognitive control, the unity and diversity of executive functions, the development of executive functions, emotion and motivation as modulating influences on executive control, executive function in psychopathology, the role of individual differences, and links between executive function performance and higher-order behavioral outcomes. Enrollment restricted to Ph.D. program or with instructor approval.

PSYC 4688 Clinical Psychopharmacology (4 Credits)

This course offers an in-depth examination of medications used to treat mental disorders, including the neurobiology of these medications. Different options available for each disorder will be discussed, along with issues related to the effective use of psychiatric medications. Prerequisites: Instructor approval required.

PSYC 4700 Artificial Intelligence and Psychological Science: Exploring Human-Computer Interactions (4 Credits)

This seminar explores the intersections of artificial intelligence, human-computer interaction, psychology, and neuroscience with a focus on how AI technologies—such as generative AI, conversational agents, and social robots —shape and are shaped by human cognition, social behavior, development, and cultural context. Students will critically analyze research on AI's impact on social relationships, child development, cognition, brain function, and mental health. Students will engage in discussions that bridge psychological theory with AI technology. Topics include emotional and social connections with robots, cultural influences on AI interaction, ethical and safety concerns, and the neurocognitive implications of AI in our daily lives. This course aims to provide an understanding of AI's role in human psychological processes and its impacts on our functions across various domains, including education, health care, and social relationships.

PSYC 4920 Ethics in Psychological Research & Practice (2 Credits)

Ethical issues on psychological research. Teaching, practice.

PSYC 4925 Clinical Ethics and Professional Issues in Psychology (2 Credits)

Ethical topics related to clinical psychology; professional topics in clinical psychology such as supervision and consultation. Instructor permission required.

PSYC 4928 Initial Clinical Practicum (0 Credits)

Applied clinical training in psychology focused on assessment and therapy, primarily during trainee's first year of training at the Center for Child and Family Psychology. May be repeated up to 5 times. Prerequisite: Admission to doctoral program.

PSYC 4929 Advanced Clinical Practicum (0 Credits)

Applied clinical training in psychology focused on assessment and therapy, primarily during trainee's second year of training at the Center for Child and Family Psychology. May be repeated up to 5 times. Prerequisite: Admission to doctoral program.

PSYC 4930 Psychology Practicum-Clinical (1-5 Credits)

On-the-job training in clinical psychology. May be repeated for a maximum of 24 quarter hours. Prerequisite: Admission to doctoral program.

PSYC 4931 Psychology Practicum-Teaching (0-5 Credits)

On-the-job training in teaching psychology. May be repeated for a maximum of 24 quarter hours. Prerequisite: Admission to doctoral program.

PSYC 4932 Psychology Practicum-Research (1-5 Credits)

On-the-job training in research psychology. May be repeated for a maximum of 24 quarter hours. Prerequisite: Admission to doctoral program.

PSYC 4933 Psychology Practicum - Advanced Clinical (0 Credits)

Advanced on-the-job training in clinical psychology. May be repeated up to 6 times. Prerequisite: Admission to doctoral program.

PSYC 4934 Practicum: DCN Neuropsychology (1-10 Credits)

PSYC 5991 Masters Independent Study (1-10 Credits)

PSYC 5995 Independent Research (1-10 Credits)

PSYC 6981 APA Internship (8 Credits)

1 Year APA approved Internship in clinical psychology - the course is not graded.

PSYC 6991 Ph.D Independent Study (1-10 Credits)

PSYC 6995 Independent Research (1-10 Credits)

Courses

PSYC 3020 Adolescence (4 Credits)

This course examines development during the adolescent years exploring biological, cognitive, and social transitions central to this developmental stage. It considers key contexts in which adolescents develop: families, peer groups, schools, work, leisure, and the mass media. Special attention is given to the importance of diverse social and cultural experiences and its impact on adolescent behavior and cognition. Prerequisites: PSYC2070 and PSYC3050, must be major or minor in psychology, must have junior or senior standing.

PSYC 3029 Imaging the Mind (4 Credits)

Imaging the Mind is an introductory course to the basic theory and data analysis techniques used in functional magnetic resonance imaging (fMRI). It will cover basic brain anatomy, the basic physics of MRI, experimental design, data processing and the issues associated with data processing, and interpretation of fMRI data. Students in this course will receive hands-on experience in processing a data set from start to finish. They will apply different image preprocessing techniques, statistical design parameters, and statistical models to determine how these factors influence the outcome of the data and how these factors influence the interpretation of that data. In this manner, each student will be exposed individually to the decision issues and interpretation pitfalls involved in fMRI data analysis. Cross listed with PSYC 4255. Prerequisites: PSYC 2031 and PSYC 3050, must be major or minor in psychology, must have junior standing. Permission of the instructor required.

PSYC 3032 Introduction to Neural Networks (4 Credits)

Introduction to basic principles and computational methods in artificial neural network modeling; neural models of cognitive and psychological processes examined and evaluated. Cross listed with PSYC 4254. Prerequisite: PSYC 1001 and PSYC 3050. Must be major or minor in psychology. Must have junior standing. Permission of instructor required.

PSYC 3035 Seminar: Cognitive Neuroscience (2 Credits)

This seminar is for students in the cognitive neuroscience specialization, a joint program with Biological Sciences. The goal of the seminar is to provide an opportunity for senior-level cognitive neuroscience majors to apply the knowledge and skills they have acquired in other courses to current cutting-edge topics in the field. Prerequisites: PSYC 2031 and PSYC 3050, must have cognitive neuroscience concentration, must have senior standing.

PSYC 3151 Senior Honors Research Seminar (1-5 Credits)

In conjunction with senior research thesis. Prerequisites: PSYC 2750, PSYC 2751 and PSYC 2752.

PSYC 3152 Senior Honors Research Seminar (1-5 Credits)

In conjunction with senior research thesis. Prerequisites: PSYC 2751 and PSYC 2752.

PSYC 3350 Cultural Psychology (4 Credits)

This seminar examines how people's sociocultural context shapes their thoughts, feelings, and behaviors. To approach this question, we read and discuss classic as well as recent theoretical and empirical articles from the field of cultural psychology. Topics include defining culture; dimensions of cultural variation; culture-biology interactions; methodological considerations; cultural influences on cognition, emotion, the self, moral judgment, and health; cultural neuroscience; cultural approaches to race and ethnicity; and mechanisms of cultural influence. Throughout, this course emphasizes sociocultural diversity in psychological processes. Students are encouraged to develop empirically tractable ways of asking and answering questions relating to cultural psychology and to apply concepts of cultural psychology to their own research. Prerequisite: PSYC 2740 and PSYC 3050; must be a major or minor in psychology, must have junior standing.

PSYC 3666 Brain Development & Cognition (4 Credits)

Examines what the brain tells us about development and what development tells us about the brain. Topics include subcortical and cortical developments to the acquisition of language and drawing. Prerequisites: PSYC 2070 and PSYC 3050; must be major or minor in psychology, must have junior standing.

PSYC 3700 Artificial Intelligence and Psychological Science: Exploring Human-Computer Interactions (4 Credits)

This seminar explores the intersections of artificial intelligence, human-computer interaction, psychology, and neuroscience with a focus on how AI technologies—such as generative AI, conversational agents, and social robots —shape and are shaped by human cognition, social behavior, development, and cultural context. Students will critically analyze research on AI's impact on social relationships, child development, cognition, brain function, and mental health. Students will engage in discussions that bridge psychological theory with AI technology. Topics include emotional and social connections with robots, cultural influences on AI interaction, ethical and safety concerns, and the neurocognitive implications of AI in our daily lives. This course aims to provide an understanding of AI's role in human psychological processes and its impacts on our functions across various domains, including education, health care, and social relationships.

PSYC 3701 Topics in Psychology (1-4 Credits)

Prerequisites: PSYC 1001 and PSYC 3050; must be major or minor in psychology, must have junior standing.

PSYC 3991 Independent Study (1-10 Credits)

Maximum of 5 hours per quarter not to exceed a total of 10 quarter hours.

PSYC 4002 Prosem in Memory and Cognition (4 Credits)

Theory/research on thinking, problem solving, language, creative thought, other aspects of knowing process.

PSYC 4011 Proseminar in Emotion (4 Credits)

Social/physiological aspects of emotions, including motivation, physiological processes, basic emotions, cognitive appraisal, cross-cultural issues, empathy, effects of emotions.

PSYC 4015 Nonverbal Behavior (4 Credits)

This course will be cross-listed with Psyc 3015 (undergraduate students in 3015 and graduate students in 4015 will be seated in the same classroom but will have different requirements). Most humans speak for a very small portion of their day (by most estimates, an hour or less) but during every waking moment of your life, you display nonverbal behaviors. These behaviors include facial expressions, eye gaze, posture, head movements, movement toward and away from things, gestures, distance from other people, vocal intonation, and many other subtle bodily actions. In this class, we will survey an enormous scientific literature regarding the causes and consequences of nonverbal behaviors. Our focus will be on nonverbal behavior in humans, but we will also review the role of nonverbal behavior in the social life of human and non-human animals alike. Topics include, but are not limited to questions such as: What methods should scientists use to examine the causes and consequences of nonverbal behavior? Do nonverbal behavior? Do nonverbal behaviors instead function for the purpose of social influence? What is the role of nonverbal behavior? Do people non-consciously process the social meaning of others' nonverbal behaviors?.

PSYC 4020 Proseminar in Personality (4 Credits)

Personality structure/dynamics, theory and findings, interrelationships between personality and socio-cultural determinants of behavior.

PSYC 4021 Prosem in Social Psychology (4 Credits)

Major theoretical issues and empirical research in social psychology; topics include cultural, social structure, cognitive consistency, social neuroscience, social cognition, person perception, the self, social influence, attitudes, relationships, emotion, coping.

PSYC 4025 Intergroup Relations (4 Credits)

This course is intended to provide a foundation in understanding how individuals and groups relate to each other within a social structure. Social groups can take many forms, ranging from classic social groups (e.g., race, gender, ethnicity, religion, sexual orientation) to minimal groups where membership is arbitrary. This course will explore foundational principles in classic and contemporary research on intergroup relations.

PSYC 4028 Social Cognition (4 Credits)

Social cognition describes how people make sense of themselves and others. The emphasis on "how" is important—social cognition research focuses on perceptual, cognitive, and affective processes that help people think about themselves and others. You will learn about the theories, findings, and methods in a specific area of study.

PSYC 4032 Developmental Proseminar: Social-Emotional (4 Credits)

Problems/theories in developmental psychology including Piagetian theory, language, emotional, perceptual, personality development, learning, biological bases of behavior, genetic influences.

PSYC 4033 Devel Proseminar: Biological (4 Credits)

This course provides an overview of major biological processes during development and their effects on physical, cognitive, and social development. Specific topics will include: history, concepts, and central themes of developmental psychology; theoretical and biological models of human development (e.g., developmental psychobiological systems view); brain development and plasticity; behavioral genetics; sleep and circadian rhythms; sexual differentiation and hormonal influences on behavior; stress and the HPA axis; effects of nutrition and toxic substances.

PSYC 4045 Proseminar in Human Brain Development (4 Credits)

This course offers an overview of current research and methodologies in the field of developmental cognitive, affective, and social neuroscience. It explores the insights that the brain provides about development and, conversely, what development reveals about the brain. Topics covered include sensitive periods for neuroplasticity, pediatric neuroimaging techniques, and the development of cognitive, affective, and social processes, as well as the impact of environmental factors. Emphasis is placed on discussing current research, evaluating findings, and proposing new research ideas in the field. Prerequisite: Instructor permission.

PSYC 4055 The Neuroscience and Psychology of Parenthood and Parent-Child Relationships (4 Credits)

This course explores the theory, research and issues relevant to parenthood and parent-child relationships. The course overviews the evolutionary, neurobiological, and psychological perspective of parent-child relationships with a focus on the understanding of recent advances in neuroscience research. Topics include neuroplasticity of parental brain, maternal vs. paternal biology for parenting, and social and biological determinants of parent-child relationships. Emphasis is placed on discussion of current research, evaluation of the findings, and proposals and ideas of new research in the field. The goal is not to memorize facts but rather to learn to think like a developmental cognitive/social neuroscientist. Cross-listed with course PSYC 3055. Prerequisite: Instructor permission.

PSYC 4081 Racism in Psychology (4 Credits)

Racism in Psychology will explore ways individual and systemic racism embedded within psychology shapes research, pedagogy, clinical practice and policy.

PSYC 4085 Stress & Health (4 Credits)

This course will serve as an introduction to the field of psychoneuroimmunology, with a focus on stress and development. The first section of the course will review basic immunology including immune system components and functions, and relations between the immune system and other systems. The later portion of the course will focus on effects of stress for different disease mechanisms (infection, allergy, cancer etc). Instructor approval required.

PSYC 4235 Teaching Psychology (1-5 Credits)

Experiential approach to learning techniques for teaching psychology.

PSYC 4240 Neurodiversity Affirming Assessment and Intervention (4 Credits)

This is a cross-listed course with both a graduate section and an undergraduate section. The primary goal of this course is to teach undergraduate students about neurodiversity across the lifespan by examining the assessment practices for diagnosis and examining the research on the evidencebased interventions. The course will discuss neurodiversity generally; however, when discussing assessment and intervention practices, the course will focus on practices specific to autism spectrum disorder. For graduate students, the course will cover these same topics with an additional goal of providing graduate students in the Clinical Child Psychology Ph.D. program with deeper knowledge of how to assess and conduct evidencebased practices with neurodiverse clients themselves. For both undergraduate and graduate students, course instruction will involve a combination of didactic reading, guided practice (i.e., role-play) and case presentations/case examples. For graduate students in the Clinical Psychology Ph.D. program, course instruction will also include supervised experience conducting evidence-based assessment and/or interventions for neurodiverse clients who present to the Center for Child and Family Psychology for diagnosis or treatment.

PSYC 4241 Seminar-Discourse Processes (4 Credits)

PSYC 4254 Intro to Neural Network Models (4 Credits)

Cross listed with PSYC 3032.

PSYC 4255 Imaging the Mind (4 Credits)

Imaging Cognition is an introductory course to the basic theory and data analysis techniques used in functional magnetic resonance imaging (fMRI). It will cover basic brain anatomy, the basic physics of MRI, experimental design, data processing and the issues associated with data processing, and interpretation of fMRI data. Students in this course will receive hands-on experience in processing a data set from start to finish. They will apply different image preprocessing techniques, statistical design parameters, and statistical models to determine how these factors influence the outcome of the data and how these factors influence the interpretation of that data. In this manner, each student will be exposed individually to the decision issues and interpretation pitfalls involved in fMRI data analysis. Cross listed with PSYC 3029.

PSYC 4256 Seminar:Cognitive Neuroscience (4 Credits)

Neural systems underlying human perception, memory, language, pathological syndromes that result from damage to these systems.

PSYC 4257 Psychophys & Neuroscience Lab (4 Credits)

PSYC 4258 Social Neuroscience (4 Credits)

PSYC 4262 Affective Neuroscience (4 Credits)

Affective neuroscience is the study of emotions in the brain. In this course, we explore how new frontiers in emotion research, from brain scans to psychoactive drugs to monkey colonies, have changed the way we think about emotions and moods. We aim to learn how scientists ask these new questions: how and what can we learn about emotion from animal models, patient studies, genetic studies, brain scans, and drugs? We learn and debate different theories about what emotions are: when are emotions helpful and harmful? Why do we have them? How many are there? Can we control how we feel? Finally, we learn how to think about emotions scientifically: What kind of evidence matters? How do emotion scholars talk about their work? What kind of questions can we ask, and what kind can we hope to answer?.

PSYC 4295 Research Design & Inference (4 Credits)

PSYC 4300 Correlation and Regression (4 Credits)

The course reviews the logic of statistical inference before introducing the procedures of correlation and regression. We begin with simple bivariate relationships before moving on to multivariate relationships for both categorical and continuous independent variables. Topics in regression include multicollinearity, variable selection, and curvilinear relationships. The course emphasizes the (stringent) requirements needed to be able to interpret correlational data in terms of cause and effect. The course also emphasizes the assessment of interactions in regression analysis for both categorical and continuous independent variables. Also included is basic coverage of logistic regression and regression assumptions. Prerequisite: PSYC 4295.

PSYC 4305 Psychology of Inequality (4 Credits)

In this course, we examine economic inequality through a psychological lens. First, we explore current trends in economic inequality and discuss how people perceive and evaluate these disparities. Then, we dive into research about why inequality persists, examining common beliefs about fairness, justice, and motivation, social structures that entrench disparities, and prejudices about marginalized groups. We will also explore the wide-ranging consequences of inequality on politics, health, emotions, decision-making and behavior.

PSYC 4330 Analysis of Variance (4 Credits)

Complex analysis of variance, other quantitative methodologies. Prerequisite: PSYC 4300 or instructor's permission.

PSYC 4350 Structural Equation Modeling for the Social Sciences (4 Credits)

This advanced course covers the basics of structural equation modeling and how this flexible approach to statistical analysis can be applied in the social sciences. Specific techniques that will covered will include testing for mediation, path analysis, confirmatory factor analysis, and the analysis of longitudinal data, as well as other related topics. There will be an emphasis on applying these techniques to students' own research through hands-on demonstrations and homework assignments and an emphasis on interpreting and critiquing structural equation models in published research. A course on correlational methods and regression is a pre/co-requisite.

PSYC 4355 Multilevel Modeling for the Psychological Sciences: Theory and Applications (4 Credits)

This advanced course covers the basics of multilevel (hierarchical) linear modeling and how this flexible approach to statistical analysis can be applied to theory and data in the psychological sciences. Specific techniques that will be covered include the analysis of nested data, family and dyadic data, and longitudinal data as well as mediation and moderation. There will be an emphasis on applying these techniques to students' own research through hands-on demonstrations and homework assignments. There will also be an emphasis on interpreting and critiquing multilevel modeling analyses in published research. Courses on analysis of variance as well as correlational methods and regression are pre/corequisites.

PSYC 4360 Programming Psychology: Experiment Building with Python (4 Credits)

This graduate-level course provides an introduction to computer programming. The goal of the course is to help psychology students develop practical coding skills in Python that will allow them to design and create complex, computer-based experiments. Students will also learn to analyze and plot data. No previous experience with programming is required (or expected). The course begins with an introduction to basic principles of programming with Python. From there, students learn to code by solving challenges specific to the design/construction of a psychological/vision-based experiment. The class is highly interactive— each class includes a mixture of lecture, group-based problem solving, and coding in teams or individually. This class is highly recommended for students who wish to improve their programming proficiency before enrolling in PSYC 4365, although it is not a prerequisite.

PSYC 4365 Programming Psychology: Model-Fitting and Analysis (4 Credits)

An introduction to creating, fitting, and performing statistical inference using computational models with an emphasis on binary choice data. The aims of this course include familiarizing students with the mathematical basis of model-fitting, learning the value of taking a variety of approaches to fitting trial-by-trial data, and giving students practical hands-on experience with maximum likelihood fitting methods. This course will use both MATLAB and R. Though not a prerequisite, this course is intended to follow Programming Psychology: Experiment Building in MATLAB (PSYC 4360), and so will assume students already have a basic knowledge of coding in MATLAB (including debugging, scripts, functions, loops, and plotting). This course is open to graduate students outside of the Department of Psychology.

PSYC 4411 Assessment-Cognition (4 Credits)

This course will provide students with a graduate level overview of theory, research, and practice in the measurement of cognitive functioning. Students will gain practical skills in administering standardized measures of cognitive and academic functioning. They will also develop skills in interpreting cognitive test results and recognizing patterns in cognitive profiles related to specific learning and developmental disorders.

PSYC 4413 Assessment-Psychopathology (Social, Emotional, and Behavioral) (4 Credits)

Overview of evidence-based psychological assessment (emotional, behavioral, and social) with a focus on integrating theory, research, and clinical practice.

PSYC 4512 Prosem in Psychopathology (4 Credits)

PSYC 4518 Readings in Family Therapy (4 Credits)

This course will survey major historical and contemporary theories from the field of family therapy. Basic family therapy techniques will be covered, and integrated with other modes of therapy (e.g. individual, marital). In the second half of the course, students will work with families and receive group supervision.

PSYC 4525 Prosem in Develop Neuropsych (4 Credits)

We will cover the theory and measurement of brain-behavior relations across the lifespan in several major neuropsychological domains, including executive functions, language, memory, and visual-spatial function. As is characteristic of the developmental neuropsychological field, students will learn to integrate information across multiple levels of analysis (genetic, brain, cognitive, behavioral) and draw on principles of neural and cognitive development in their application of neuropsychological theory to research and clinical issues. We will discuss current controversies in the field and continued areas for growth.

PSYC 4526 Prosem in Cog Neuroscience (4 Credits)

This is a graduate-level introduction to cognitive neuroscience. It covers basic theories of cognition and their neurological support.

PSYC 4565 Systems of Psychotherapy (4 Credits)

The course provides an introduction to evidence-based treatment for children and adolescents. Conceptual and empirical underpinnings of youth therapies are examined. Treatments for three prominent child and adolescent disorders - disruptive behavior problems, depression, and anxiety disorders - are highlighted. Demonstration and practice of specific treatment components is included.

PSYC 4566 Systems of Psychotherapy II (4 Credits)

Conceptual/empirical foundations of interventions for clinical problems, including (but not limited to) parasuicidality, Borderline Personality Disorder, and substance abuse.

PSYC 4571 Multicult Issues & Ment Health (4 Credits)

Theory, research, and practice issues related to the mental health of racial/ethnic minority and other diverse groups.

PSYC 4587 Workshop in Marital Therapy (4 Credits)

PSYC 4612 Marital Conflict (1-10 Credits)

PSYC 4620 Advan in Couples Intervention (4 Credits)

PSYC 4625 Couple Therapy with Diverse Populations (4 Credits)

This is a cross-listed course with both a graduate section and an undergraduate section. The primary goal of this course is to teach undergraduate students about the field of couple therapy, the different therapeutic approaches in evidence-based couple therapy and research on couple therapy and couple-focused interventions. For graduate students, the course covers these same topics with an additional goal of providing graduate students in the Clinical Psychology Ph.D. program how to conduct evidence-based couple therapy in practice. For both undergraduate and graduate students, course instruction involves a combination of didactic reading, guided practice (i.e., role-play) and case presentations / case example. For graduate students in the Clinical Psychology Ph.D. program, course instruction also includes supervised experience conducting evidence-based couple therapy with couples who present to the Center for Child and Family Psychology for treatment of relationship distress, co-morbid chronic health conditions and relationship distress, or relationship enhancement.

PSYC 4660 Perception: A Cognitive Neuroscience Approach (4 Credits)

An introduction to human perception with a strong emphasis on visual perception. This course evaluates the current understanding of how neural activity in the brain allows people to perceive basic sensory features (e.g., brightness, color, size, position, depth, movement, loudness and pitch) as well as recognize and discriminate complex perceptual patterns (e.g., 2D-shapes, 3D-objects, faces, and scenes). The underlying mechanisms are discussed on the basis of behavioral, neurophysiological, and computational evidence.

PSYC 4665 Executive Functioning (4 Credits)

This course provides an overview of current research, theories, and methods in the study of executive function and cognitive control. We will explore executive function from an interdisciplinary perspective, drawing on work from cognitive psychology and neuroscience, clinical neuropsychology, and developmental and educational psychology. Topics include the brain basis of executive function and cognitive control, the unity and diversity of executive functions, the development of executive functions, emotion and motivation as modulating influences on executive control, executive function in psychopathology, the role of individual differences, and links between executive function performance and higher-order behavioral outcomes. Enrollment restricted to Ph.D. program or with instructor approval.

PSYC 4688 Clinical Psychopharmacology (4 Credits)

This course offers an in-depth examination of medications used to treat mental disorders, including the neurobiology of these medications. Different options available for each disorder will be discussed, along with issues related to the effective use of psychiatric medications. Prerequisites: Instructor approval required.

PSYC 4700 Artificial Intelligence and Psychological Science: Exploring Human-Computer Interactions (4 Credits)

This seminar explores the intersections of artificial intelligence, human-computer interaction, psychology, and neuroscience with a focus on how AI technologies—such as generative AI, conversational agents, and social robots —shape and are shaped by human cognition, social behavior, development, and cultural context. Students will critically analyze research on AI's impact on social relationships, child development, cognition, brain function, and mental health. Students will engage in discussions that bridge psychological theory with AI technology. Topics include emotional and social connections with robots, cultural influences on AI interaction, ethical and safety concerns, and the neurocognitive implications of AI in our daily lives. This course aims to provide an understanding of AI's role in human psychological processes and its impacts on our functions across various domains, including education, health care, and social relationships.

PSYC 4920 Ethics in Psychological Research & Practice (2 Credits)

Ethical issues on psychological research. Teaching, practice.

PSYC 4925 Clinical Ethics and Professional Issues in Psychology (2 Credits)

Ethical topics related to clinical psychology; professional topics in clinical psychology such as supervision and consultation. Instructor permission required.

PSYC 4928 Initial Clinical Practicum (0 Credits)

Applied clinical training in psychology focused on assessment and therapy, primarily during trainee's first year of training at the Center for Child and Family Psychology. May be repeated up to 5 times. Prerequisite: Admission to doctoral program.

PSYC 4929 Advanced Clinical Practicum (0 Credits)

Applied clinical training in psychology focused on assessment and therapy, primarily during trainee's second year of training at the Center for Child and Family Psychology. May be repeated up to 5 times. Prerequisite: Admission to doctoral program.

PSYC 4930 Psychology Practicum-Clinical (1-5 Credits)

On-the-job training in clinical psychology. May be repeated for a maximum of 24 quarter hours. Prerequisite: Admission to doctoral program.

PSYC 4931 Psychology Practicum-Teaching (0-5 Credits) On-the-job training in teaching psychology. May be repeated for a maximum of 24 quarter hours. Prerequisite: Admission to doctoral program.

PSYC 4932 Psychology Practicum-Research (1-5 Credits)

On-the-job training in research psychology. May be repeated for a maximum of 24 quarter hours. Prerequisite: Admission to doctoral program.

PSYC 4933 Psychology Practicum - Advanced Clinical (0 Credits)

Advanced on-the-job training in clinical psychology. May be repeated up to 6 times. Prerequisite: Admission to doctoral program.

PSYC 4934 Practicum: DCN Neuropsychology (1-10 Credits)

PSYC 5991 Masters Independent Study (1-10 Credits)

PSYC 5995 Independent Research (1-10 Credits)

PSYC 6981 APA Internship (8 Credits)

1 Year APA approved Internship in clinical psychology - the course is not graded.

PSYC 6991 Ph.D Independent Study (1-10 Credits)

PSYC 6995 Independent Research (1-10 Credits)

Religious Studies

Office: Department of Religious Studies, Room 266 Mail Code: 2000 E. Asbury Ave., Denver, CO 80208 Phone: 303-871-2749 Email: rlgs@du.edu Web Site: du.edu/ahss/religiousstudies/ (http://www.du.edu/ahss/religiousstudies/)

The Department of Religious Studies offers a master of arts (MA) degree in Religious Studies, as well as a graduate certificate in Religious Studies, a graduate certificate in Religion and International Affairs, and a specialized graduate certificate in World Religions. We are major contributors, together with the Iliff School of Theology and other schools and departments at DU, to a doctor of philosophy (PhD) degree in the Study of Religion.

Why pursue an MA in Religious Studies at the University of Denver?

The Department of Religious Studies offers graduate students the opportunity to study with its distinguished faculty in a program that emphasizes breadth and depth. Religious Studies faculty members are well published and have won several distinguished teaching awards. They have served in leadership roles in national learned societies and have received grants from the National Endowment for the Humanities, the American Council of Learned Societies, and the Guggenheim Foundation.

The program provides students with a substantive grounding in the major religious traditions of the world, as well as training in the field of religious studies. Through the areas of specialization, it provides students with the opportunity to develop a specific and scholarly expertise in one of the following particular fields of interest: Sacred Texts, Critical Theory and Religion, Religion and International Studies, Philosophy of Religion, and Lived Religions. Students can use these areas of specializations to deepen their own expertise in a particular area while preparing for thesis work, completing a journal article, undertaking comprehensive exams, or developing a project in applied religious studies.

A remote synchronous online option for students is available nested in the MA in Religious Studies for students following the program's Critical Theory track. In addition to studying religion through the lens of the modern European approach to critical theory, this area of specialization focuses on critical topics including race, class, gender, ethnicity, and globalization. Students in the nested online option will take two live lecture courses offered on Zoom each quarter. These courses, also taken by on-campus students, are planned to meet both the core requirements for the MA in Religious Studies and the requirements for the critical theory specialization. Course offerings have also permitted students to complete the MA's Lived Religions track. Each of the two courses offered on Zoom are set to meet once per week in the late afternoon to early evening, in order to provide flexibility to students with full-time day jobs or other daytime responsibilities. Students pursuing the online option may switch to attend courses on campus at any point during their program. Students studying remotely are eligible for the same funding opportunities as their on-campus colleagues.

As part of broader University aims to support interdisciplinary work and internationalization (study and research abroad), the Department of Religious Studies expects students to embrace multiple disciplinary perspectives. It encourages students to enrich their graduate studies by taking courses in other departments and to work with faculty outside Religious Studies. For example, students in the MA program routinely take graduate-level courses in Anthropology, International Studies, Philosophy and Art History. Similarly, students in the MA program are encouraged to pursue advanced language training in the language(s) of their sub-field as well as modern research languages. Finally, the Department encourages students to study or conduct research abroad, as appropriate, and to seek external support in ways that will enhance their curriculum vitae as well as their scholarly and professional training.

Program advantages include the following:

- The opportunity to develop broad competencies in major religious traditions and the discipline of Religious Studies, while cultivating scholarly
 expertise in a particular area of specialization.
- Small classes that facilitate professor-student interaction, encouraging faculty mentoring while fostering community and collegiality with other graduate students.
- The opportunity to pursue interdisciplinary training and related interests by taking courses or working one-on-one with faculty in other University of Denver departments.
- Preparation either for doctoral work or for a professional career, with strong support from faculty and the University of Denver's career counselors.
- Opportunities to engage with and conduct research within metropolitan Denver, a culturally and religiously diverse city with a high quality of life.
- Substantial scholarship packages, including tuition credits and opportunities to serve as a research assistant.

What do applicants need in order to qualify for the Religious Studies MA program?

Applicants must have an undergraduate degree from an accredited college, with a minimum grade point average (GPA) of 3.0. Applicants, as necessary, must meet the minimum performance standard set by the Office of Graduate Education for the Test of English as a Foreign Language (TOEFL). Applicants must have an appropriate background in the study of the humanities. Undergraduate courses in Religious Studies are highly desirable, but all work in related areas will be taken into consideration.

In addition, successful applicants will have the following qualifications:

- · Academic qualification for graduate-level study;
- · Preparation to do coursework and conduct research that emphasizes engagement with local and global communities;
- · Motivation to work collegially with faculty and other students in a community of learning.

What can graduates do with a MA in Religious Studies?

The MA degree in religious studies prepares students for PhD work or for teaching and careers in journalism, government, education, and nonprofit organizations in which cross-cultural analytical skills are important. The program provides broad competencies in several religious traditions, while offering students the opportunity to specialize in an area of particular interest.

Why pursue a Graduate Certificate in Religious Studies at the University of Denver?

The graduate certificate in Religious Studies provides students with an opportunity to acquire graduate-level exposure to the academic study of religion and to several of the world's major religious traditions. This certificate program provides students with the opportunity to do the following:

- · Develop an introductory, graduate-level understanding of two major world religious traditions;
- · Gain a grasp of pertinent theoretical approaches to the study of religion; and
- · Engage major issues in a particular religious tradition or aspect of religion.

For students currently enrolled in graduate programs in fields other than religious studies or the study of religion - such as business, international studies, law or other CAHSS disciplines - this certificate will augment the competencies gained in their primary program. For students currently pursuing a career, particularly those in consulting, journalism, the law, the non-profit sector, public policy, education, human resources, faith-based institutions/organizations or other professions where a knowledge of religious beliefs, practices and values can be important, this certificate will enhance their professional credentials or expand their expertise into a new arena.

What do applicants need in order to qualify for the Religious Studies graduate certificate program?

Successful applicants will have the following qualifications:

- · Academic qualification for graduate level study;
- · Preparation to do coursework and conduct research that emphasizes engagement with local and global communities;
- · Motivation to work with faculty and other students in a community of learning.

Why Pursue a Graduate Certificate in Religion and International Affairs at the University of Denver?

The Graduate Certificate in Religion and International Affairs provides students pursuing a master's degree in the Department of Religious Studies (CAHSS) or the Josef Korbel School of International Studies the opportunity to enhance their home program of study with specific expertise in the scholarly and professional field of religion and international affairs. This certificate program emphasizes scholarly and practitioner approaches to understanding the intersections between religion and international affairs in the modern world, providing students with an interdisciplinary approach to contemporary case studies as well as theoretical issues.

Why pursue a Specialized Graduate Certificate in World Religions at the University of Denver?

The World Religions Specialized Graduate Certificate offers students the opportunity to acquire graduate-level understanding of three of the world's major religious traditions, grounded in conceptual frameworks of how religion works in today's globalizing world. It aims to augment students'

professional and scholarly knowledge with an understanding of the many ways that religion, politics, economics, culture, and society intersect - in the United States and around the world.

What do applicants need in order to qualify for a Specialized Graduate Certificate in World Religions?

Applicants must have an undergraduate degree from an accredited college, with a minimum grade point average (GPA) of 3.0. Applicants, as necessary, must meet the minimum performance standard set by the Office of Graduate Education for the Test of English as a Foreign Language (TOEFL). Undergraduate courses taken in Religious Studies are highly desirable, but all work in related areas will be taken into consideration. Background in the study of the humanities will be especially useful in Religious Studies courses.

In addition, successful applicants will have the following qualifications:

- · Academic qualification for graduate level study;
- · Preparation to do coursework and conduct research that emphasizes engagement with local and global communities;
- · Motivation to work collegially with faculty and other students in a community of learning.

Joint PhD Program in the Study of Religion

A number of graduates of the Department of Religious Studies' MA program choose to continue their doctoral studies in the Joint PhD program.

The Joint PhD Program, which the University offers in partnership with the Iliff School of Theology, is taught by distinguished faculty from the University of Denver and Iliff. The faculty of the Department of Religious Studies anchor the Joint PhD program on the DU side. The program enrolls students from across the nation and around the world. The facilities and libraries of both institutions are open to all Joint PhD students, offering considerable research and academic resources. Please note that admission to the Joint Doctoral Program is a separate process, distinct from admission to the Department's MA program. For more details, please visit the joint PhD website at www.du.edu/ (http://www.du.edu/ duiliffjoint/).

Master of Arts in Religious Studies

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

 Appropriate undergraduate background in relevant arts, humanities or social science disciplines. Generally, some prior coursework in the academic study of religion is expected.

Standardized Test Scores

• GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials. If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Certificate in Religious Studies

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites:

· Generally, some prior coursework in the academic study of religion is expected.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Certificate of Specialization in Religion and International Affairs

Interested applicants enrolled and in good standing in the Religious Studies MA program or the Korbel School of International Studies MA programs must submit an application form in order to officially add the certificate to their student record.

Certificate in World Religions Degree and GPA Requirements

- Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission:

No, this program does not offer English Conditional Admission.

Master's Degree Program

Master of Arts in Religious Studies

Degree Requirements

Coursework Requirements Minimum number of credits required for the degree: 45

Code	Title	Credits
Course requirements:		
RLGS 3760	Globalization and Religion: Theory and Methods	4
Select three of the following (Two from the Abrahamic Traditions and one from the Asian Traditions)		12
RLGS 3814	Modern Hinduism	
RLGS 3820	Buddhism	
RLGS 3001	Judaism	
or RLGS 3102	Early Judaism	
RLGS 3203	Christianity	
or RLGS 3192	Christian Literature	
RLGS 3500	Islam	
or RLGS 3503	Quran and Hadith	
Areas of specialization		

Select at least 16 hours in one of the following five areas of specialization:

Critical Theory

Critical Theory and Religion brings together a range of disciplines in social sciences and humanities, based on both the original discourses of "critical theory" as developed after WWII by the Frankfurt School, and the "new critical theory" in its interdisciplinary scope. This approach to religion will address topics such as class, race, gender, ethnicity, politics, globalization, and decolonialization. Students pursuing this specialization will choose their courses from a prescribed list of courses both inside and outside of the Religious Studies department. At least 8 of the 16 required credit hours for the specialization must have a RLGS prefix, though a cross-listed course may count. The following is a non-exhaustive sample of courses that meet the Critical Theory specialization criteria. Students will consult with the department's graduate advising team prior to each registration period to confirm whether their courses meet the Critical Theory criteria.

	ANTH 3020	Native Religions
	ANTH 3060	Cultural Narratives
	ECON 3040	Marxian Political Economy
	PHIL 3075	Marxism
	PHIL 3210	Philosophy of Movement
	PHIL 3466	Contemporary Continental Philosophy
	RLGS 3302	Islamic Fundamentalism
	RLGS 3370	Freud, Psychology, & Religion
	RLGS 3452	Political Theology
	RLGS 3453	Is God a Racist Sexist?: Black Liberation and Womanist Theology
	RLGS 3454	Capitalism, Religion, Democracy
	RLGS 3460	Nietzsche & the Death of God
	RLGS 3465	Derrida and Postmodernism
	RLGS 3475	Deleuze and Semiotics
	RLGS 3570	Religion and Morality in the American Public Square
	RLGS 3645	Religious Nationalisms: A Comparative Approach to White Christian Nationalism and Hindu Nationalism
	RLGS 3694	Religion in the Virtual Space: A Critical Theory Approach
	RLGS 3707	Religion and Film
	RLGS/JUST 3740	Bodies and Souls
	RLGS 3890	Religion and Diaspora
Sa	acred Texts	

16

The Sacred Texts specialization focuses on biblical texts/religious traditions such as the Hebrew Bible, Christian Testament, the Qur'an, etc. Within this specialization, students will choose either to direct their study to one religious text, requiring appropriate competency in the relevant language (s), or take a comparative approach. The language requirement for this specialization must be completed either prior to matriculation, or during the student's first year of study, and is equivalent to one full-year of language instruction. The University of Denver does not offer introductory, graduate-level instruction in biblical Hebrew, koine Greek, Qur'anic Arabic, Sanskrit, classical Chinese, or Tibetan. The student may not use language instruction credit to satisfy degree requirements. Any student looking to pursue this specialization must consult the department's graduate advising team to discuss options such as outside language programs. The following is a sample of coursework used to fulfill the required 16 credit hours for the Sacred Texts specialization.

RLGS/JUST 3102	Early Judaism
RLGS 3150	The Bible & Dead Sea Scrolls
RLGS 3151	Dead Sea Scrolls
RLGS 3192	Christian Literature
RLGS 3503	Quran and Hadith
RLGS/JUST 3740	Bodies and Souls
RLGS 3891	Justice: A Biblical Perspective
RLGS 4100	Hebrew Bible Backgrounds: Seminar in Ancient Israelite Religion
RLGS 4150	Biblical Aramaic

Religion and International Studies

The specialization in religion and international studies focuses on the role of religion in the interplay of different religions and cultures within a global context. Particular attention may be given to certain regions such as the Americas, Asia, or the Middle East, depending on the interest or availability of faculty. Students must take at least one course in a specific religious tradition beyond the core requirements as well as one course in the theory of religion that pertains to international and multicultural studies. The remaining courses can be chosen from the department's approved list of courses for the area of specialization. Finally, students must take at least 4 hours of course work (including independent study, service learning, or field work) at a location outside the United States and Canada that meet the student's curricular and long-term professional goals. Depending on the student's program of study, the department may in certain instances require the passing of a competency exam in a language relevant to that program of study (e.g., if the focus is on the Middle East, the language would be Arabic; if on Latin America, Spanish).

RLGS 3302	Islamic Fundamentalism
RLGS 3350	Culture, Psyche, and Religion
RLGS 3452	Political Theology
RLGS 3454	Capitalism, Religion, Democracy
RLGS 3500	Islam
RLGS 3502	Contemporary Islam
RLGS 3503	Quran and Hadith
RLGS 3504	Islam and Gender
RLGS 3645	Religious Nationalisms: A Comparative Approach to White Christian Nationalism and Hindu Nationalism
RLGS 3707	Religion and Film
RLGS 3760	Globalization and Religion: Theory and Methods
RLGS 3814	Modern Hinduism
RLGS 3832	Religious Lives: The Dalai Lamas
RLGS 3890	Religion and Diaspora
RLGS 3893	Buddhism and Social Justice
ANTH 3020	Native Religions
INTS 4011	Comparative Genocide
INTS 4525	Religion-State Relations in Comparative Perspectives
INTS 4517	Politics of Deeply Divided Societies
INTS 4526	Modern Islamic Political Thought
INTS 4649	Human Rights and Security in the Middle East

Lived Religions

The Lived Religions area of specialization allows students to attend closely to the practice of religions, as well as to activities and ways of life that may have had their origins in religions but may now be detached from specific traditions (e.g., meditation, dietary practices). In addition to the core requirements, students must take at least four courses (within or outside the department) in the historical, social, and cultural forms and practices of the world's various religions, which can include new, indigenous, Latino/a, or African and African diasporic religions. Students pursuing a specialization in Lived Religions will meet with the department's advising team prior to registration to verify that their courses meet the Lived Religions criteria.

RLGS 3001	Judaism
RLGS 3203	Christianity
RLGS 3205	Native Americans and Christianity in USA
RLGS 3300	Psychology of Religion
RLGS 3302	Islamic Fundamentalism
RLGS 3350	Culture, Psyche, and Religion
RLGS 3500	Islam
RLGS 3502	Contemporary Islam
RLGS 3570	Religion and Morality in the American Public Square
RLGS/JUST 3740	Bodies and Souls
RLGS 3832	Religious Lives: The Dalai Lamas
RLGS 3814	Modern Hinduism
RLGS 3820	Buddhism
RLGS 3890	Religion and Diaspora
RLGS 3891	Justice: A Biblical Perspective

Philosophy of Religion

Students pursuing a specialization in Philosophy of Religion may take courses in both the Religious Studies and Philosophy departments. Students are required to select at least 8 credit hours of coursework in the theory of religion, and 4 credit hours from each of two major philosophical periods (8 credit hours total), which can focus on one specific philosopher or philosophers. The philosophical periods are Ancient to Modern (Plato to Kant) and Late Modern to Postmodern (Hegel to present). Students pursuing this specialization will meet with the department's graduate advising team to discuss course selection prior to the start of their first term. The following is a non-exhaustive sample of coursework taken to satisfy the requirements of the Philosophy of Religion specialization.

Elective Credits		13
11200 0470	beleaze and berniotics	
BLGS 3475	Deleuze and Semiotics	
RLGS 3465	Derrida and Postmodernism	
RLGS 3460	Nietzsche & the Death of God	
RLGS 3452	Political Theology	
RLGS 3370	Freud, Psychology, & Religion	
RLGS 3192	Christian Literature	
RLGS 3023	Great Thinkers: Maimonides	

Total Credits

Students must declare an Area of Specialization by the time they reach 32 hours of coursework.

Non-Coursework Requirements

In order to complete the MA degree, students must choose one of the following completion options:

- Journal Article Track: The journal article option requires students to take a research paper they submitted as part of a Religious Studies course and expand it into a publishable journal article. Only a course with the prefix RLGS is eligible, unless the student has a compelling case for why a paper without that prefix should be used. Students selecting this option will research Religious Studies academic journals and will select an appropriate target journal with the approval of their advisor. They will shape their article in accordance with the aims and mission of the selected journal, and will format it in accordance with the journal's submission guidelines. The student will submit the final paper to their committee, and present the research as part of an oral presentation. Please note that the department does not require the student to publish the article, or to have it accepted for publication, in that journal. However, it must be the decision of the examining committee that the article meets the standards of the chosen journal.
- Thesis Track: The thesis option requires students to take a religious studies course paper including original research, on which the student received a minimum grade of A-, and revise and expand it into a graduate thesis of approximately 50-60 pages. The thesis may be expanded based on the number of bibliographic materials used as well as the scope of the topic itself. Students should not try to alter the general topic of the original paper in any major way. The thesis involves a substantive undertaking that allows the student to make an original contribution to the field of scholarly religious studies, as well as to demonstrate a mastery of the relevant theories and background literature. It should involve serious engagement with primary sources, as well as sources in the student's research language, if appropriate.

In order to be eligible to write a thesis, a student must agree on a topic as well as a tentative thesis title with the project's first reader *no later than* the end of the quarter in which the student will have completed 24 hours of credit toward the degree. Normally, that means the end of the spring quarter during the academic year when the student entered the program. In addition, students must have completed all their core requirements for the degree by that time.

• Comprehensive Exam Track: The comprehensive exam option is recommended for students for whom the MA is a terminal degree. It is also recommended for those who plan to teach at the secondary school or community college level, or who might otherwise benefit from the certification of competency in the general field of Religious Studies.

Students choosing this option will take ONE exam in the Theory of Religion; ONE in Judaism, Christianity, OR Islam; and ONE in Buddhism OR Hinduism. The department will provide the set reading lists for each exam – approximately 10-12 texts each. The department expects the students to read, analyze, and reflect upon each text and its contribution to each field, as part of their preparation to demonstrate competency in the three fields.

Students planning to take comprehensive exams should meet for a final check-in with their advisor and examiners during the fourth week of the quarter before the one in which they intend to graduate. Students will normally take their exams during the fourth or fifth week of the quarter in which they intend to graduate. The student must opt no later than the last week of the quarter before taking exams whether they want to take three, 3-hour examinations in a proctored setting or three 72-hour take home-exams over a period of two weeks. In both exam formats, students may consult texts and/or notes. Take-home exams will require substantially more writing than proctored exams.

• Project Track: Students pursuing the project option will develop a project that will allow them to make an original contribution to the field of applied religious studies. It may take several forms but should include a substantive written component and a formal presentation.

Please note that all completion option defenses and presentations may only be scheduled during the regular academic year. Fall, winter or spring quarters.

The Department of Religious Studies allows graduate students to transfer up to 10 hours of previous graduate course work from another institution or another department at the University during the first quarter of the student's admission to the program. The transfer must be approved by the department as well as by the Office of Graduate Education. Similarly, the Department allows students to earn waivers for the traditions requirements by submitting syllabi from similar courses taken at the undergraduate level.

Students may also take up to 15 hours in independent study, including independent studies with course numbers outside of the department.

Graduate Certificate Program

Certificate in Religious Studies

The Graduate Certificate program allows students structured flexibility, providing exposure to religious traditions through the traditions requirement, training in the discipline of religious studies with the theory requirement, and the opportunity to pursue particular interests through elective courses. The certificate requires a minimum of 24 credit hours.

Certificate of Specialization Program

Certificate of Specialization in Religion and International Affairs

This certificate program provides students pursuing an MA degree in the Department of Religious Studies (CAHSS) or the Joseph Korbel School of International Studies the opportunity to enhance their "home program" with coursework that emphasizes scholarly and practitioner approaches to understanding the intersections between religion and international affairs in the modern world. This certificate requires a minimum of 24 credit hours.

RLGS 3001 Judaism (4 Credits)

A literary and historical journey through Judaism. This course examines the "Jewish story" from its roots to its modern-day manifestations, focusing on select, classic Jewish texts in their historical contexts. From them, students explore Jewish tradition and practice and actively engage with and in the vivid interpretive imagination of the authors of Judaism throughout the ages. Cross listed with JUST 3001.

RLGS 3002 Creation & Humanity (4 Credits)

Why am I here and what is my place in the world? In this class, students engage a wide-variety of answers to this timeless question. We focus on primary texts regarding the creation of the world and humanity's role within the world from multiple religious traditions, from ancient Near Eastern mythologies to modern spiritualties and film. Themes of the course include humanity's relation to the divine, nature, and one another; we also discuss issues of inequality and sustainability. Students also learn to perform fruitful cross-cultural comparison.

RLGS 3003 The Moses Traditions: Jewish, Christian, and Muslim Traditions about Moses from Past to Present (4 Credits)

The "Abrahamic Traditions" (Judaism, Christianity & Islam) are described as such because each tradition situates its origin in the figure of Abraham, yet there is another foundational figure who looms even larger in all three traditions – Moses. The Moses Traditions traces Jewish, Christian, and Islamic traditions about Moses from the Hebrew Bible through modern America, and in so doing brings into the foreground the religious and interreligious importance of this beloved figure. Drawing from over 2,500 years of texts and traditions, students come away with a deeper understanding of: 1) how the figure of Moses is shaped and reshaped throughout history and across the globe, 2) how religious traditions portray and redescribe foundational figures to suit the ever-changing needs of their communities, and 3) how to engage a multi-faceted, culturally-embedded, and millennia-long collection of traditions in a way that yields fruitful insight into the inner workings of the religious imagination. This course is cross-listed with JUST 3003.

RLGS 3023 Great Thinkers: Maimonides (4 Credits)

Using "The Guide for the Perplexed" as our central text, we explore the complex philosophical ideas of Moses Maimonides (1135-1204), one of the central figures in medieval philosophy and Jewish thought. Our study includes analyses of his ideas on principles of faith, human perfection, intellectual vs. "imaginational" approaches to truth, pedagogy and politics, reasons for the commandments, the nature of God and divine will, the limits of human knowledge, the mechanics of prophecy, and the parameters and implications of providence. Cross listed with PHIL 3023 and JUST 3023. Prerequisite: junior standing or instructor's permission.

RLGS 3024 Maimonides: Greek, Islamic, and Christian Encounters (4 Credits)

Using the "Guide of the Perplexed" as our central text, we explore the complex philosophical ideas of Moses Maimonides (1135-1204), a central figure in the history of philosophy and in the history of Jewish thought. In this course, we examine in depth the relationship between Maimonides' core ideas and various Greek, Muslim and Christian thinkers, including: Aristotle, Plotinus, al-Farabi, Avicenna (Ibn Sina), al-Ghazali, Averroes (Ibn Rushd), and Aquinas. Topics to be explored include: what is "metaphysics?"; God's unity and essence as existence itself; the mystery of knowing and not knowing God (including a consideration of God's ways as well as "negative theology"--viz. the extent to which we do not know God); God as pure intellect; the nature of the cosmos and the "separate intellects"; creation vs. eternity vs. emanation: philosophical and religious perspectives on the origins of the universe and implications for "living in the world with/out God." In our study, we will also address the methodological implications of cross-religious and cross-language analyses, and how to spot and address (in your own work and in the work of others) tacit cultural biases at play in the interpretive process. Cross listed with JUST 3024 and PHIL 3024. Prerequisite: Junior standing or instructor's permission.

RLGS 3086 The Emergence of Monotheism (4 Credits)

This course is cross-listed with JUST 3086. Monotheism, the belief in a singular deity, did not arise out of nothing. Rather, the emergence of monotheism was a multi-stage process spanning several millennia and involving numerous religious traditions, primarily Judaism, Christianity, and Islam. This process was marked by internal and external conflict, as individuals and communities struggled to distinguish themselves from their non-monotheistic predecessors and neighbors, while often attempting to convince others to do the same. In this class, we begin with the ancient Near Eastern religious environment in which the idea of monotheism first appeared, then turn our attention to how the movement toward monotheism shapes the texts of the Hebrew Bible, New Testament, and Quran. We also look to archaeological sites and case studies in material culture to fill out our understanding of the lived experiences at play in the emergence of monotheism.

RLGS 3090 God and Giving? Religion and Philanthropy in America (4 Credits)

This course is cross-listed with JUST 3090 and ANTH 3090. The United States is notable for its high levels of religious participation and for its wellestablished and rapidly expanding nonprofit sector. In this course, we will explore these phenomena from a variety of disciplinary perspectives including anthropology, history, and religious studies in order to understand the intersections of religion and philanthropy. By looking at religious ideologies, social theory, and legal and economic contexts, we will consider how religion, government, and philanthropy shape and are shaped by one another. We will examine a number of case studies including faith responses to Hurricane Katrina, the history of philanthropy in Denver, and U.S.-based religious global giving. We will explore key questions regarding community and social responsibility and ask which actors get to define key societal problems and who is ultimately responsible for responding to these problems.

RLGS 3102 Early Judaism (4 Credits)

This course traces the development of Judaism in history and literature from the Babylonian Exile and the end of the biblical period through the origins of Rabbinic Judaism and the completion of the Babylonian Talmud (c. 650 CE). However, special emphasis is placed on Jewish culture in the late Second Temple period (c. 200 BCE to 100 CE) and its impact on the early Christian movement, including Jewish literature from the time of Jesus, lost texts of the Bible, new evidence from the Dead Sea Scrolls, and the few surviving historical sources of the Second Temple Period. In addition, students analyze how the Bible came to be and understand how sacred texts and their interpretations eventually became the new center of both Judaism and Christianity. Cross listed with JUST 3102.

RLGS 3150 The Bible & Dead Sea Scrolls (4 Credits)

This course includes an advanced study of the Dead Sea Scrolls with a particular focus on the Bible as it appears in the Qumran library. We will discuss the variant versions of the Bible, some of which were previously unknown before the discovery of the Scrolls, and how the findings of the Scrolls may question the very idea of "Bible" itself in the context of the late Second Temple Judaism. Further, we will place particular emphasis on studying the way biblical texts were engaged, interpreted and even written by the authors of the Dead Sea Scrolls. In this way, we shall explore the origins of biblical interpretation and how the notion of the Bible came to be. Cross listed with JUST 3150. Prerequisites: None. The Scrolls will be read in English translation, but those with Hebrew reading skills will have an opportunity to read/translate portions of the Scrolls in community.

RLGS 3151 Dead Sea Scrolls (4 Credits)

The Dead Sea Scrolls represent one of the greatest manuscript finds of the twentieth century and have been said to be the most important discovery in biblical archaeology. These scrolls offer a rare window into early Judaism and Christianity and offer us the earliest and most important witnesses to the (Hebrew) Bible. This course covers the Dead Sea Scrolls in their historical, literary and religious context in English translation, together with relevant scholarly research. Cross listed with JUST 3151.

RLGS 3192 Christian Literature (4 Credits)

Reading and discussion of influential historic books pertaining to Christianity. This course will focus on a selection of primary texts either from a specific period of Christianity (such as early Christianity or medieval Christianity) or on a specific topic within the study of Christianity (such as monasticism or mysticism).

RLGS 3201 Religion and Revelry in Rome (4 Credits)

Rome is a city filled with references to religion. The Pantheon and the Roman forum remind visitors of the centuries where Romans worshipped gods and goddesses; the Vatican and numerous other Catholic churches exemplify the religion that dominates the current context of Italy. Christianity. This travel course will immerse students in both the ancient and the contemporary religious revelry that is found in Rome and the surrounding regions. Students will experience Italy through visits to museums, community dinners, archaeological sites, tours, food, and dialogue.

RLGS 3203 Christianity (4 Credits)

This is an introductory course about the Christian religion, with a substantial component devoted to experiential learning. The primary goal of the course is to acquaint students with the richness, dynamism and diversity of one of the world's largest and most influential religious traditions. Even those students who have some general knowledge of Christianity benefit from the disciplined approach of the academic study of religion.

RLGS 3205 Native Americans and Christianity in USA (4 Credits)

This class will help students explore the forms of Christianity that have emerged among the indigenous peoples of North America. In their struggles against and adaptation to Euro-American cultural forms, indigenous peoples have developed "contextualized" forms of Christian religiosity. Students will develop a careful understanding of the multiplicity and historical contingency of Christianity as it has spread throughout the world.

RLGS 3300 Psychology of Religion (4 Credits)

Beliefs, feelings and actions representing human religious response of experience; function of religion in individual life.

RLGS 3302 Islamic Fundamentalism (4 Credits)

This writing-intensive course introduces students to the history and scope of fundamentalist movements in the Muslim world, focusing on the Middle East. Beginning with a look at the internal traditions of renewal and reform built around the idea of a return to the fundament or origins of Islam, the course examines the rise of major movements from the 1700s to the present. Students will engage with key questions, including the following: What distinguishes fundamentalism from radicalism? How do Sunni and Shii fundamentalisms differ? What roles have these movements played in politics and society, and how might these evolve in the future? How might policy makers and others best approach fundamentalist groups? A basic knowledge of Islam is assumed; students wishing to enroll without this background knowledge will be provided supplementary readings.

RLGS 3315 Religion & Moral Psychology (4 Credits)

Philosophical foundations and research strategies of psychological studies of moral thought; Aristotelian, Kantian and utilitarian thought included, as well as religious dimensions of morality.

RLGS 3350 Culture, Psyche, and Religion (4 Credits)

RLGS 3370 Freud, Psychology, & Religion (4 Credits)

Readings, discussion, and papers help students learn about the life, intellectual and social environment, and clinical and theoretical work of Sigmund Freud. Attention is given to the influence of Freud's work on the understanding of religion at the beginning of the 21st century.

RLGS 3448 Theory of the Subject: From Hegel to Zizek (4 Credits)

The great French philosopher Michel Foucault in his Collège de France lectures in the early 1980s characterized the theory of the subject as the very key to the development both of Western philosophy and Western thinking in general. This course will explore Foucault's thesis with reference to different theoretical models of subjectivity and "subjectification" (as Jacques Lacan calls it). It will do so through close readings of selections from the works of G.W.F. Hegel, Søren Kierkegaard, Lacan, Alain Badiou, and Slavoj Žižek as well as select portions of Foucault's 1981-82 lectures entitled The Hermeneutics of the Subject. This course is cross-listed with PHIL 3448.

RLGS 3452 Political Theology (4 Credits)

A general inquiry, focusing on the modern and postmodern eras, into various forms of philosophical reflection on the relationship between religion and political theory. Survey of the seminal ideas of such major thinkers as Kant, Hegel, Schmidt, Strauss, Derrida, Agamben, Asad, and Zizek.

RLGS 3453 Is God a Racist Sexist?: Black Liberation and Womanist Theology (4 Credits)

What is God's race? Does God have a gender? Is God on the side of the oppressed? Black liberation and Womanist theologies have asked these questions based on experience of black oppression in the context of the United States. African Americans have compelled to make sense of God in light of chattel slavery, Jim Crow laws, the Civil Rights Movement, and the Black Power Movement. This questioning continues in light of today's social enviroment. This seminar course will discuss the many strands of liberation theology in the United States, including Womanist theology. In addition to black liberation theology's methodologies and its challenges to the theological discipline, we will explore the origins and development of theological discourse in the late 1960s during the later part of the Civil Rights Movement and the emergence of the Black Power Movement. Black Theology is a theological perspective which draws on the diverse sources, including religious experience, art, literature, music, and lived narratives. These sources will inform our study. Students will engage critical voices that have shaped the movement such as James Cone, but also engage critiques of Cone and Black Theology. The course will also explore how liberation theologies attempt to deal with the problems of race, class, and gender. Student will be introduced to theological construction in African American communities and analyze the similarities and differences between these theological constructions.

RLGS 3454 Capitalism, Religion, Democracy (4 Credits)

The course explores the historical and contemporary relationship between capitalism, religion, and democracy at a theoretical level. Focus will be on the question of what exactly is capitalism as understood by key political philosophers and social theorists in relationship to the religious world views and values that authorize it. At the same time, the course will examine in what measure these world views and values also promote liberal democracy, or work against it, while offering a genealogical account of such phenomena as slavery, colonialism, gender and class domination, along with present day iterations of ethno-nationalism and neoliberal hegemony.

RLGS 3456 Kant on Religion (4 Credits)

A study of the philosopher Immanuel Kant's major writings on religion and their subsequent influence on critical theory and the philosophy of religion.

RLGS 3460 Nietzsche & the Death of God (4 Credits)

This course will involve an intensive reading and discussion of Friedrich Nietzsche's 'Thus Spake Zarathustra', together with relevant associated materials, especially 'The Gay Science'. Cross listed with PHIL 3460.

RLGS 3465 Derrida and Postmodernism (4 Credits)

Cross listed with PHIL 3465.

RLGS 3470 Mysticism & Psychedelics (4 Credits)

The course will examine various texts, traditions, and practice from indigenous to New Age religions that fall under the general category of what has been historically labelled "mysticism." Special emphasis will be placed on chemical or plant-induced forms of altered consciousness, commonly known as "psychedelics" or "entheogens". that both simulate, and are frequently employed by different peoples in different times and places in tandem with, mystical experiences. The course will also examine the transcultural as well as the syncretic nature of mystical practices, spiritual disciplines, and the use of mind-altering substances, in particular with reference to the misuse of these forms by secular enthusiasts who are responsible for what is known as "cultural appropriation" or "neocolonial" misrepresentation.

RLGS 3475 Deleuze and Semiotics (4 Credits)

Examines the development of the thought of the famous French postmodern thinker Gilles Deleuze with special attention to his cultural and semiotic theory to the degree that it is relevant to the philosophy of religion. The course also investigates how Deleuze's work has shaped, and is beginning to push in new directions, contemporary postmodern philosophy. Prerequisites: must be at least junior standing and have completed at least two undergraduate courses in philosophy.

RLGS 3500 Islam (4 Credits)

Introduction to the history, faith, practice, culture(s), and politics of Islam, starting with the Judeo-Christian Near Eastern context in which it emerged and tracing its theological development and geographic spread around the world. Proceeding thematically along a broad historical frame, the course ends with an examination of the numerous, often competing, trends in contemporary Muslim communities.

RLGS 3502 Contemporary Islam (4 Credits)

This course introduces students to contemporary Islam. After a historical overview, the course looks thematically at different spheres of Muslim life. It considers changes that relate to political systems and forms of governance, styles of education, labor and professional work, changes in daily life habits such as timing and organization, changes in gender relations, and changes in religious authority. It also pays attention to the ways in which faith and practice are articulated through cultural practices like pop music and film.

RLGS 3503 Quran and Hadith (4 Credits)

This course introduces students to the key texts of Islam-the Qur'an and Hadith-including their origins and meaning as well as how they have been interpreted by Muslims over time. It focuses as well on case studies that highlight issues of crucial relevance for today and the future.

RLGS 3504 Islam and Gender (4 Credits)

This upper-level course introduces students to key debates, historical developments, and thematic issues in the study of Islam and gender. It grounds this study in theoretical texts but takes a lived religions approach, focusing primarily on the production of "modern" gender norms in the colonial and post-colonial era. It proceeds thematically, with class sessions on sexualities, dress, reproduction, family roles, masculinities, pious self-construction, and the gendering of pilgrimage, and concludes with a look at contemporary and likely future debates.

RLGS 3505 Gender and Politics in Muslim Pop Cultures (4 Credits)

This undergraduate/graduate course introduces students to contemporary Muslim popular cultures, in the United States and around the world. It uses gender and politics as thematic lenses, taking a lived religions approach to phenomena that range from pious television programming to online efforts to spread Islamophobia.

RLGS 3570 Religion and Morality in the American Public Square (4 Credits)

Close focus on one or two moral issues in which religion is drawn into public debate in the contemporary U.S. Observation of the debate first hand at demonstrations, town meetings, and discussion groups, etc. Analysis of these observations is facilitated by readings on the subject and class discussion.

RLGS 3642 Martin Luther King, Jr., Malcolm X and Civil Rights (4 Credits)

In this course, students will explore the lives and religious thought of Martin Luther King, Jr. and Malcolm X, two of the most prominent black religious leaders during the height of the US Civil Rights Movement, often perceived as ideological opposites. Through engaging with their autobiographies, speeches, students will compare and contrast their thoughts on religion, race, and politics in the United States. During the course, students will be able to identify religious and political similarities and differences between the two leaders. We will also explore the development of their religious and ideological shifts in the context of the struggle for civil rights. Ultimately, we explore how their vision for racial justice developed into a call for social and economic equality and human rights.

RLGS 3645 Religious Nationalisms: A Comparative Approach to White Christian Nationalism and Hindu Nationalism (4 Credits)

This course examines the religious nationalism in the context of South Asia and the US. We investigate the religion, identity, politics, and power with readings/materials that explore historical memory, religious symbols/rituals/canon, political upheavals, and violent actions in both of these regions. In the context of South Asia, we will examine the British colonial period and post-independence India. In the US, we will focus our attention on post-Civil War politics and the development of the modern US polity. We necessarily interrogate the history and dynamism of important terms such as "religion", "nationalism", and "secular" in the context of Hindu Nationalism and white Christian Nationalism in South Asia and the US respectively. At the core of our inquiry is how specific religious traditions have been invoked in political contexts (and vice-versa), public displays of religiosity, and the complex dynamics of religion and the state.

RLGS 3693 Religion and the Media (4 Credits)

Interactions between religion and all forms of communications media in American life.

RLGS 3694 Religion in the Virtual Space: A Critical Theory Approach (4 Credits)

This course uses a critical theory lens to consider religious praxis, traditions, beliefs, canons, and rituals within virtual/digital spaces (e.g. websites, apps, social media, digital platforms for gaming, etc.). Students will be introduced to several scholars of virtual religious spaces and practices who use both netnography techniques and critical theory approaches (e.g. Wendy Chun, Lisa Nakamura, Michelle Zappavigna, Oliver Roy, etc.) as well classical scholars of semiotics and language (Judith Butler, Jacque Derrida, Walter Benjamin, Julia Kristeva, and others). Theoretical works are paired with ethnographic, historical and/or public scholarship/experiential to offer students a "lived perspective" critical approach to the topic of digital or virtual religion.

RLGS 3695 Digital Religion (4 Credits)

This course introduces students to the study of digital religion from a lived religions perspective. It begins with an examination of the history, concepts and methods of the field, and continues with thematic explorations of digital religion scholarship across varied religious traditions. Students develop an understanding of how scholars study religion and spiritual identities, beliefs, and practices online, and how the religious and digital arenas influence and shape one another.

RLGS 3701 Topics in Religious Studies (1-4 Credits)

An exploration of various topics and issues related to the academic study of religion. The subject matter of the course varies and may be taught by the regular faculty of the department or a visiting scholar. Some offerings may include a travel component.

RLGS 3707 Religion and Film (4 Credits)

Understanding religion requires us to take culture seriously. In doing so, we must consider products of culture, including popular culture. This course engages both classic and more recent films as "texts" to be analyzed, not as mere entertainments or diversions. We focus not only on those films that identify themselves explicitly as "religious" or reflect a particular religious tradition, but also moved that render the subject more obliquely, which reveal – via image and sound – religion as a complex human activity.

RLGS 3708 First Americans in Film: Religion, Land, and Identity (4 Credits)

This course will explore, using a chronological approach, the history of Indigenous portrayal in the US Western Cinematic tradition. Students will be exposed to a variety of interweaving historical processes; including colonial history (with particular interest in Indigenous experience), the history of the film industry, the history of Indigenous representation in film, and the history of the 20 Century United States (with particular interest in Indigenous experience). The first two weeks of the course will be dedicated to the development of a theoretical toolbox. This toolbox – consisting of a series of theoretical concepts and analytical approaches – will function as the bedrock of the class and empower students, supplying the necessary lenses through which to analyze the films that will be screened throughout the quarter.

RLGS 3732 Feminist and Queer Theory in Religion (4 Credits)

This course explores the intersection of feminist and queer theories with religious studies. Beginning with feminist theory, we will trace the beginning of the feminist movement and consider the ways in which religion participated in and also resisted feminism. Moving into queer theory, we will critically examine gender and sexuality and center these topics in the field of religious studies. During the course, students will reinterpret religious texts through the use of feminist and queer theory, providing a challenging critique, an imaginative reframing, or even a queering of a sacred text.

RLGS 3740 Bodies and Souls (4 Credits)

This course examines the unique place of the body in biblical religion. We ask how the Bible and its interpreters have shaped current views on sex and the gendered body in Western society. How has the Bible been (mis)used in relation to current understandings of the physical body? Is the saying that a "human" does not have a body, but is a body as true for the Hebrew Bible as the Christian New Testament? How have Judaism and Christianity (de)valued sexuality, procreation, and celibacy? How do the biblical traditions shape our modern opinions about the ideal physical body and body modifications? How can we understand "out-of-body" experiences and notions of death and afterlife in Western religion? Students are encouraged to interpret the Bible and their own beliefs from a uniquely embodied perspective. Cross listed with GWST 3740, JUST 3740.

RLGS 3760 Globalization and Religion: Theory and Methods (4 Credits)

This course explores how religious movements around the world both affect, and are affected by, the process of globalization. A major segment of the course is devoted to various theories of globalization and how they account for the increasingly important role of religion. Focus is largely on the relationship between Christianity, Judaism, and Islam.

RLGS 3814 Modern Hinduism (4 Credits)

Doctrines, practices and history of South Asian Hinduism; conceptions of Gods and gods; image worship and temples; and the influences of caste and gender on the experience of Hinduism.

RLGS 3820 Buddhism (4 Credits)

Buddhist life and thought from origins to present in India, Tibet, Japan and China.

RLGS 3832 Religious Lives: The Dalai Lamas (4 Credits)

This course explores the many lives of the Dalai Lamas and the transformation of a reincarnated religious teacher into the political leader of Tibet and, eventually, a worldwide religious personality. In order to understand that transformation, the course investigates the institution of the Dalai Lamas from historical, doctrinal, and ritual perspectives. We will look at the role of the Dalai Lama as an embodiment of the bodhisattva of compassion at the center of a tapestry of religious ceremony and ritual performances. The course will also consider the religious, ethical, and political thought of several of the most prominent Dalai Lamas, with significant attention given to the writings and work of the current, fourteenth, Dalai Lama.

RLGS 3885 Islamic Mysticism (4 Credits)

The origins and development of Islamic mysticism, including asceticism and the Sufi orders.

RLGS 3890 Religion and Diaspora (4 Credits)

When forced to leave a homeland, displaced communities frequently turn to religion to maintain identity and adapt to-or resist-new surrounding culture(s). This course examines the role of religion and identity in three Jewish and Christian communities living in diaspora and poses questions such as the following: What is the relationship between religion and (home)land? How have the biblical themes of exodus, diaspora, promise and restoration been applied to contemporary experiences? And how have our American stories been interpreted through the lens of the Bible? As part of the service learning component, students have the opportunity to work with religious and immigrant aid organizations in the Denver community. Cross listed with JUST 3890.

RLGS 3891 Justice: A Biblical Perspective (4 Credits)

This is a service learning course designed for religious studies undergraduate majors, though non-majors are welcome to enroll. Cross listed with JUST 3891.

RLGS 3892 Grant Writing for Community Engagement and Research (4 Credits)

This community engagement course introduces student to non-profit work and to scholarship on non-profit activities. It connects students with community partners, continuing the department's commitment to experiential learning and to engagement with living faith communities. Students spend course time discussing scholarship on grant writing and non-profit grant support and discussing logistical and other issues related to their community engagement partners. This course is intended to help provide advanced undergraduate and graduate students with arenas for future research, including possible thesis topics, while also offering a practical opportunity for professional development. Understanding 501(c)3 corporations and experience in writing grant proposals will be an asset for students planning to work in non-profits as well as for those continuing on to doctoral work.

RLGS 3893 Buddhism and Social Justice (4 Credits)

This course examines Buddhist theories and practices of social justice, with a focus on the contemporary global movements known as "Humanistic Buddhism" and "Socially Engaged Buddhism." The course covers topics such as: the roots of engaged Buddhism in social and political movements of 19th and 20-century Asia, the role of meditation and other Buddhist practices as both a support for and a means of social engagement, and Buddhist approaches to contemporary issues of racial justice, equality, economic development, and the environment. In the final analysis, the course asks whether the concept of justice makes sense within a Buddhist worldview, or if Buddhist concerns for social welfare hinge on an entirely different paradigm. This course is a community-engaged service learning course. As part of the course, students work with a local community partner to further their own community engagement work.

RLGS 3898 Dharamsala: Myth, Land, and Traditions (4 Credits)

This course explores the myths and stories that root cultural, religious, social and political traditions in the material landscape of India. It will explore the sacred spaces, images, rituals, and belief-traditions of the Himalayan region surrounding Dharamsala, India. As a study-abroad course, the materials, site visits, and community-engaged learning projects interrogate how myths operate as both cultural "glue" and demarcations of difference. Students participate in community-engaged learning placements to learn how myth creates and fosters cultural communities. Through site visits and readings we will learn how the "lived experience" of cultural belief-traditions, social and political practices, and sacred images and spaces are products of a unique marriage of land, story, and community. We will also have lectures and a Canvas site with pre-travel readings that will prepare you for the cultural and social belief-traditions we will encounter within Dharamsala. While in India, we will continue to read about ritual, devotion, stories of the land, social and political identities rooted in the land, and more. This course will be cross-listed with INTS for undergraduate and graduate elective credit.

RLGS 3991 Independent Study (1-10 Credits)

RLGS 3995 Independent Research (1-10 Credits)

RLGS 4050 History of Islam (4 Credits)

RLGS 4100 Hebrew Bible Backgrounds: Seminar in Ancient Israelite Religion (4 Credits)

This course is designed to train the student in the method and means of engaging in archeo-historical study of the Hebrew Bible. The content of this course focuses on ancient Israelite religion in Iron Age Palestine, particularly on emergent ideas about God ('El) and the development and evolution of the priesthood. Cross listed with JUST 4100.

RLGS 4150 Biblical Aramaic (4 Credits)

Reading seminar in Biblical Aramaic. This course focuses on the vocabulary, syntax and expression of Aramaic in the Bible as well as in some related post-biblical texts (Targums, Dead Sea Scrolls, etc.).

RLGS 4980 Internship (1-4 Credits)

Designed to provide masters students with valuable experience in non-profit, educational, faith-based, governmental, and related organizations. It helps students translate the knowledge and analytical skills learned in Religious Studies courses into a professional context, while exploring potential career paths and professional opportunities. Students interested in pursuing an internship must meet with the Undergraduate Advisor at the start of the previous quarter to discuss internship goals and identify potential placements. Students meet weekly with a faculty supervisor to monitor their internship experience, and complete the internship by writing a reflective essay. For MA students only.

RLGS 4981 Internship in Religious Community (1-4 Credits)

RLGS 4991 Independent Study (1-10 Credits)

RLGS 4995 Independent Research (1-10 Credits)

Courses

RLGS 3001 Judaism (4 Credits)

A literary and historical journey through Judaism. This course examines the "Jewish story" from its roots to its modern-day manifestations, focusing on select, classic Jewish texts in their historical contexts. From them, students explore Jewish tradition and practice and actively engage with and in the vivid interpretive imagination of the authors of Judaism throughout the ages. Cross listed with JUST 3001.

RLGS 3002 Creation & Humanity (4 Credits)

Why am I here and what is my place in the world? In this class, students engage a wide-variety of answers to this timeless question. We focus on primary texts regarding the creation of the world and humanity's role within the world from multiple religious traditions, from ancient Near Eastern mythologies to modern spiritualties and film. Themes of the course include humanity's relation to the divine, nature, and one another; we also discuss issues of inequality and sustainability. Students also learn to perform fruitful cross-cultural comparison.

RLGS 3003 The Moses Traditions: Jewish, Christian, and Muslim Traditions about Moses from Past to Present (4 Credits)

The "Abrahamic Traditions" (Judaism, Christianity & Islam) are described as such because each tradition situates its origin in the figure of Abraham, yet there is another foundational figure who looms even larger in all three traditions – Moses. The Moses Traditions traces Jewish, Christian, and Islamic traditions about Moses from the Hebrew Bible through modern America, and in so doing brings into the foreground the religious and interreligious importance of this beloved figure. Drawing from over 2,500 years of texts and traditions, students come away with a deeper understanding of: 1) how the figure of Moses is shaped and reshaped throughout history and across the globe, 2) how religious traditions portray and redescribe foundational figures to suit the ever-changing needs of their communities, and 3) how to engage a multi-faceted, culturally-embedded, and millennialong collection of traditions in a way that yields fruitful insight into the inner workings of the religious imagination. This course is cross-listed with JUST 3003.

RLGS 3023 Great Thinkers: Maimonides (4 Credits)

Using "The Guide for the Perplexed" as our central text, we explore the complex philosophical ideas of Moses Maimonides (1135-1204), one of the central figures in medieval philosophy and Jewish thought. Our study includes analyses of his ideas on principles of faith, human perfection, intellectual vs. "imaginational" approaches to truth, pedagogy and politics, reasons for the commandments, the nature of God and divine will, the limits of human knowledge, the mechanics of prophecy, and the parameters and implications of providence. Cross listed with PHIL 3023 and JUST 3023. Prerequisite: junior standing or instructor's permission.

RLGS 3024 Maimonides: Greek, Islamic, and Christian Encounters (4 Credits)

Using the "Guide of the Perplexed" as our central text, we explore the complex philosophical ideas of Moses Maimonides (1135-1204), a central figure in the history of philosophy and in the history of Jewish thought. In this course, we examine in depth the relationship between Maimonides' core ideas and various Greek, Muslim and Christian thinkers, including: Aristotle, Plotinus, al-Farabi, Avicenna (Ibn Sina), al-Ghazali, Averroes (Ibn Rushd), and Aquinas. Topics to be explored include: what is "metaphysics?"; God's unity and essence as existence itself; the mystery of knowing and not knowing God (including a consideration of God's ways as well as "negative theology"--viz. the extent to which we do not know God); God as pure intellect; the nature of the cosmos and the "separate intellects"; creation vs. eternity vs. emanation: philosophical and religious perspectives on the origins of the universe and implications for "living in the world with/out God." In our study, we will also address the methodological implications of cross-religious and cross-language analyses, and how to spot and address (in your own work and in the work of others) tacit cultural biases at play in the interpretive process. Cross listed with JUST 3024 and PHIL 3024. Prerequisite: Junior standing or instructor's permission.

RLGS 3086 The Emergence of Monotheism (4 Credits)

This course is cross-listed with JUST 3086. Monotheism, the belief in a singular deity, did not arise out of nothing. Rather, the emergence of monotheism was a multi-stage process spanning several millennia and involving numerous religious traditions, primarily Judaism, Christianity, and Islam. This process was marked by internal and external conflict, as individuals and communities struggled to distinguish themselves from their non-monotheistic predecessors and neighbors, while often attempting to convince others to do the same. In this class, we begin with the ancient Near Eastern religious environment in which the idea of monotheism first appeared, then turn our attention to how the movement toward monotheism shapes the texts of the Hebrew Bible, New Testament, and Quran. We also look to archaeological sites and case studies in material culture to fill out our understanding of the lived experiences at play in the emergence of monotheism.

RLGS 3090 God and Giving? Religion and Philanthropy in America (4 Credits)

This course is cross-listed with JUST 3090 and ANTH 3090. The United States is notable for its high levels of religious participation and for its wellestablished and rapidly expanding nonprofit sector. In this course, we will explore these phenomena from a variety of disciplinary perspectives including anthropology, history, and religious studies in order to understand the intersections of religion and philanthropy. By looking at religious ideologies, social theory, and legal and economic contexts, we will consider how religion, government, and philanthropy shape and are shaped by one another. We will examine a number of case studies including faith responses to Hurricane Katrina, the history of philanthropy in Denver, and U.S.-based religious global giving. We will explore key questions regarding community and social responsibility and ask which actors get to define key societal problems and who is ultimately responsible for responding to these problems.

RLGS 3102 Early Judaism (4 Credits)

This course traces the development of Judaism in history and literature from the Babylonian Exile and the end of the biblical period through the origins of Rabbinic Judaism and the completion of the Babylonian Talmud (c. 650 CE). However, special emphasis is placed on Jewish culture in the late Second Temple period (c. 200 BCE to 100 CE) and its impact on the early Christian movement, including Jewish literature from the time of Jesus, lost texts of the Bible, new evidence from the Dead Sea Scrolls, and the few surviving historical sources of the Second Temple Period. In addition, students analyze how the Bible came to be and understand how sacred texts and their interpretations eventually became the new center of both Judaism and Christianity. Cross listed with JUST 3102.

RLGS 3150 The Bible & Dead Sea Scrolls (4 Credits)

This course includes an advanced study of the Dead Sea Scrolls with a particular focus on the Bible as it appears in the Qumran library. We will discuss the variant versions of the Bible, some of which were previously unknown before the discovery of the Scrolls, and how the findings of the Scrolls may question the very idea of "Bible" itself in the context of the late Second Temple Judaism. Further, we will place particular emphasis on studying the way biblical texts were engaged, interpreted and even written by the authors of the Dead Sea Scrolls. In this way, we shall explore the origins of biblical interpretation and how the notion of the Bible came to be. Cross listed with JUST 3150. Prerequisites: None. The Scrolls will be read in English translation, but those with Hebrew reading skills will have an opportunity to read/translate portions of the Scrolls in community.

RLGS 3151 Dead Sea Scrolls (4 Credits)

The Dead Sea Scrolls represent one of the greatest manuscript finds of the twentieth century and have been said to be the most important discovery in biblical archaeology. These scrolls offer a rare window into early Judaism and Christianity and offer us the earliest and most important witnesses to the (Hebrew) Bible. This course covers the Dead Sea Scrolls in their historical, literary and religious context in English translation, together with relevant scholarly research. Cross listed with JUST 3151.

RLGS 3192 Christian Literature (4 Credits)

Reading and discussion of influential historic books pertaining to Christianity. This course will focus on a selection of primary texts either from a specific period of Christianity (such as early Christianity or medieval Christianity) or on a specific topic within the study of Christianity (such as monasticism or mysticism).

RLGS 3201 Religion and Revelry in Rome (4 Credits)

Rome is a city filled with references to religion. The Pantheon and the Roman forum remind visitors of the centuries where Romans worshipped gods and goddesses; the Vatican and numerous other Catholic churches exemplify the religion that dominates the current context of Italy. Christianity. This travel course will immerse students in both the ancient and the contemporary religious revelry that is found in Rome and the surrounding regions. Students will experience Italy through visits to museums, community dinners, archaeological sites, tours, food, and dialogue.

RLGS 3203 Christianity (4 Credits)

This is an introductory course about the Christian religion, with a substantial component devoted to experiential learning. The primary goal of the course is to acquaint students with the richness, dynamism and diversity of one of the world's largest and most influential religious traditions. Even those students who have some general knowledge of Christianity benefit from the disciplined approach of the academic study of religion.
RLGS 3205 Native Americans and Christianity in USA (4 Credits)

This class will help students explore the forms of Christianity that have emerged among the indigenous peoples of North America. In their struggles against and adaptation to Euro-American cultural forms, indigenous peoples have developed "contextualized" forms of Christian religiosity. Students will develop a careful understanding of the multiplicity and historical contingency of Christianity as it has spread throughout the world.

RLGS 3300 Psychology of Religion (4 Credits)

Beliefs, feelings and actions representing human religious response of experience; function of religion in individual life.

RLGS 3302 Islamic Fundamentalism (4 Credits)

This writing-intensive course introduces students to the history and scope of fundamentalist movements in the Muslim world, focusing on the Middle East. Beginning with a look at the internal traditions of renewal and reform built around the idea of a return to the fundament or origins of Islam, the course examines the rise of major movements from the 1700s to the present. Students will engage with key questions, including the following: What distinguishes fundamentalism from radicalism? How do Sunni and Shii fundamentalisms differ? What roles have these movements played in politics and society, and how might these evolve in the future? How might policy makers and others best approach fundamentalist groups? A basic knowledge of Islam is assumed; students wishing to enroll without this background knowledge will be provided supplementary readings.

RLGS 3315 Religion & Moral Psychology (4 Credits)

Philosophical foundations and research strategies of psychological studies of moral thought; Aristotelian, Kantian and utilitarian thought included, as well as religious dimensions of morality.

RLGS 3350 Culture, Psyche, and Religion (4 Credits)

RLGS 3370 Freud, Psychology, & Religion (4 Credits)

Readings, discussion, and papers help students learn about the life, intellectual and social environment, and clinical and theoretical work of Sigmund Freud. Attention is given to the influence of Freud's work on the understanding of religion at the beginning of the 21st century.

RLGS 3448 Theory of the Subject: From Hegel to Zizek (4 Credits)

The great French philosopher Michel Foucault in his Collège de France lectures in the early 1980s characterized the theory of the subject as the very key to the development both of Western philosophy and Western thinking in general. This course will explore Foucault's thesis with reference to different theoretical models of subjectivity and "subjectification" (as Jacques Lacan calls it). It will do so through close readings of selections from the works of G.W.F. Hegel, Søren Kierkegaard, Lacan, Alain Badiou, and Slavoj Žižek as well as select portions of Foucault's 1981-82 lectures entitled The Hermeneutics of the Subject. This course is cross-listed with PHIL 3448.

RLGS 3452 Political Theology (4 Credits)

A general inquiry, focusing on the modern and postmodern eras, into various forms of philosophical reflection on the relationship between religion and political theory. Survey of the seminal ideas of such major thinkers as Kant, Hegel, Schmidt, Strauss, Derrida, Agamben, Asad, and Zizek.

RLGS 3453 Is God a Racist Sexist?: Black Liberation and Womanist Theology (4 Credits)

What is God's race? Does God have a gender? Is God on the side of the oppressed? Black liberation and Womanist theologies have asked these questions based on experience of black oppression in the context of the United States. African Americans have compelled to make sense of God in light of chattel slavery, Jim Crow laws, the Civil Rights Movement, and the Black Power Movement. This questioning continues in light of today's social enviroment. This seminar course will discuss the many strands of liberation theology in the United States, including Womanist theology. In addition to black liberation theology's methodologies and its challenges to the theological discipline, we will explore the origins and development of theological discourse in the late 1960s during the later part of the Civil Rights Movement and the emergence of the Black Power Movement. Black Theology is a theological perspective which draws on the diverse sources, including religious experience, art, literature, music, and lived narratives. These sources will inform our study. Students will engage critical voices that have shaped the movement such as James Cone, but also engage critiques of Cone and Black Theology. The course will also explore how liberation theologies attempt to deal with the problems of race, class, and gender. Student will be introduced to theological construction in African American communities and analyze the similarities and differences between these theological constructions.

RLGS 3454 Capitalism, Religion, Democracy (4 Credits)

The course explores the historical and contemporary relationship between capitalism, religion, and democracy at a theoretical level. Focus will be on the question of what exactly is capitalism as understood by key political philosophers and social theorists in relationship to the religious world views and values that authorize it. At the same time, the course will examine in what measure these world views and values also promote liberal democracy, or work against it, while offering a genealogical account of such phenomena as slavery, colonialism, gender and class domination, along with present day iterations of ethno-nationalism and neoliberal hegemony.

RLGS 3456 Kant on Religion (4 Credits)

A study of the philosopher Immanuel Kant's major writings on religion and their subsequent influence on critical theory and the philosophy of religion.

RLGS 3460 Nietzsche & the Death of God (4 Credits)

This course will involve an intensive reading and discussion of Friedrich Nietzsche's 'Thus Spake Zarathustra', together with relevant associated materials, especially 'The Gay Science'. Cross listed with PHIL 3460.

RLGS 3465 Derrida and Postmodernism (4 Credits)

Cross listed with PHIL 3465.

RLGS 3470 Mysticism & Psychedelics (4 Credits)

The course will examine various texts, traditions, and practice from indigenous to New Age religions that fall under the general category of what has been historically labelled "mysticism." Special emphasis will be placed on chemical or plant-induced forms of altered consciousness, commonly known as "psychedelics" or "entheogens". that both simulate, and are frequently employed by different peoples in different times and places in tandem with, mystical experiences. The course will also examine the transcultural as well as the syncretic nature of mystical practices, spiritual disciplines, and the use of mind-altering substances, in particular with reference to the misuse of these forms by secular enthusiasts who are responsible for what is known as "cultural appropriation" or "neocolonial" misrepresentation.

RLGS 3475 Deleuze and Semiotics (4 Credits)

Examines the development of the thought of the famous French postmodern thinker Gilles Deleuze with special attention to his cultural and semiotic theory to the degree that it is relevant to the philosophy of religion. The course also investigates how Deleuze's work has shaped, and is beginning to push in new directions, contemporary postmodern philosophy. Prerequisites: must be at least junior standing and have completed at least two undergraduate courses in philosophy.

RLGS 3500 Islam (4 Credits)

Introduction to the history, faith, practice, culture(s), and politics of Islam, starting with the Judeo-Christian Near Eastern context in which it emerged and tracing its theological development and geographic spread around the world. Proceeding thematically along a broad historical frame, the course ends with an examination of the numerous, often competing, trends in contemporary Muslim communities.

RLGS 3502 Contemporary Islam (4 Credits)

This course introduces students to contemporary Islam. After a historical overview, the course looks thematically at different spheres of Muslim life. It considers changes that relate to political systems and forms of governance, styles of education, labor and professional work, changes in daily life habits such as timing and organization, changes in gender relations, and changes in religious authority. It also pays attention to the ways in which faith and practice are articulated through cultural practices like pop music and film.

RLGS 3503 Quran and Hadith (4 Credits)

This course introduces students to the key texts of Islam-the Qur'an and Hadith-including their origins and meaning as well as how they have been interpreted by Muslims over time. It focuses as well on case studies that highlight issues of crucial relevance for today and the future.

RLGS 3504 Islam and Gender (4 Credits)

This upper-level course introduces students to key debates, historical developments, and thematic issues in the study of Islam and gender. It grounds this study in theoretical texts but takes a lived religions approach, focusing primarily on the production of "modern" gender norms in the colonial and post-colonial era. It proceeds thematically, with class sessions on sexualities, dress, reproduction, family roles, masculinities, pious self-construction, and the gendering of pilgrimage, and concludes with a look at contemporary and likely future debates.

RLGS 3505 Gender and Politics in Muslim Pop Cultures (4 Credits)

This undergraduate/graduate course introduces students to contemporary Muslim popular cultures, in the United States and around the world. It uses gender and politics as thematic lenses, taking a lived religions approach to phenomena that range from pious television programming to online efforts to spread Islamophobia.

RLGS 3570 Religion and Morality in the American Public Square (4 Credits)

Close focus on one or two moral issues in which religion is drawn into public debate in the contemporary U.S. Observation of the debate first hand at demonstrations, town meetings, and discussion groups, etc. Analysis of these observations is facilitated by readings on the subject and class discussion.

RLGS 3642 Martin Luther King, Jr., Malcolm X and Civil Rights (4 Credits)

In this course, students will explore the lives and religious thought of Martin Luther King, Jr. and Malcolm X, two of the most prominent black religious leaders during the height of the US Civil Rights Movement, often perceived as ideological opposites. Through engaging with their autobiographies, speeches, students will compare and contrast their thoughts on religion, race, and politics in the United States. During the course, students will be able to identify religious and political similarities and differences between the two leaders. We will also explore the development of their religious and ideological shifts in the context of the struggle for civil rights. Ultimately, we explore how their vision for racial justice developed into a call for social and economic equality and human rights.

RLGS 3645 Religious Nationalisms: A Comparative Approach to White Christian Nationalism and Hindu Nationalism (4 Credits)

This course examines the religious nationalism in the context of South Asia and the US. We investigate the religion, identity, politics, and power with readings/materials that explore historical memory, religious symbols/rituals/canon, political upheavals, and violent actions in both of these regions. In the context of South Asia, we will examine the British colonial period and post-independence India. In the US, we will focus our attention on post-Civil War politics and the development of the modern US polity. We necessarily interrogate the history and dynamism of important terms such as "religion", "nationalism", and "secular" in the context of Hindu Nationalism and white Christian Nationalism in South Asia and the US respectively. At the core of our inquiry is how specific religious traditions have been invoked in political contexts (and vice-versa), public displays of religiosity, and the complex dynamics of religion and the state.

RLGS 3693 Religion and the Media (4 Credits)

Interactions between religion and all forms of communications media in American life.

RLGS 3694 Religion in the Virtual Space: A Critical Theory Approach (4 Credits)

This course uses a critical theory lens to consider religious praxis, traditions, beliefs, canons, and rituals within virtual/digital spaces (e.g. websites, apps, social media, digital platforms for gaming, etc.). Students will be introduced to several scholars of virtual religious spaces and practices who use both netnography techniques and critical theory approaches (e.g. Wendy Chun, Lisa Nakamura, Michelle Zappavigna, Oliver Roy, etc.) as well classical scholars of semiotics and language (Judith Butler, Jacque Derrida, Walter Benjamin, Julia Kristeva, and others). Theoretical works are paired with ethnographic, historical and/or public scholarship/experiential to offer students a "lived perspective" critical approach to the topic of digital or virtual religion.

RLGS 3695 Digital Religion (4 Credits)

This course introduces students to the study of digital religion from a lived religions perspective. It begins with an examination of the history, concepts and methods of the field, and continues with thematic explorations of digital religion scholarship across varied religious traditions. Students develop an understanding of how scholars study religion and spiritual identities, beliefs, and practices online, and how the religious and digital arenas influence and shape one another.

RLGS 3701 Topics in Religious Studies (1-4 Credits)

An exploration of various topics and issues related to the academic study of religion. The subject matter of the course varies and may be taught by the regular faculty of the department or a visiting scholar. Some offerings may include a travel component.

RLGS 3707 Religion and Film (4 Credits)

Understanding religion requires us to take culture seriously. In doing so, we must consider products of culture, including popular culture. This course engages both classic and more recent films as "texts" to be analyzed, not as mere entertainments or diversions. We focus not only on those films that identify themselves explicitly as "religious" or reflect a particular religious tradition, but also moved that render the subject more obliquely, which reveal – via image and sound – religion as a complex human activity.

RLGS 3708 First Americans in Film: Religion, Land, and Identity (4 Credits)

This course will explore, using a chronological approach, the history of Indigenous portrayal in the US Western Cinematic tradition. Students will be exposed to a variety of interweaving historical processes; including colonial history (with particular interest in Indigenous experience), the history of the film industry, the history of Indigenous representation in film, and the history of the 20 Century United States (with particular interest in Indigenous experience). The first two weeks of the course will be dedicated to the development of a theoretical toolbox. This toolbox – consisting of a series of theoretical concepts and analytical approaches – will function as the bedrock of the class and empower students, supplying the necessary lenses through which to analyze the films that will be screened throughout the quarter.

RLGS 3732 Feminist and Queer Theory in Religion (4 Credits)

This course explores the intersection of feminist and queer theories with religious studies. Beginning with feminist theory, we will trace the beginning of the feminist movement and consider the ways in which religion participated in and also resisted feminism. Moving into queer theory, we will critically examine gender and sexuality and center these topics in the field of religious studies. During the course, students will reinterpret religious texts through the use of feminist and queer theory, providing a challenging critique, an imaginative reframing, or even a queering of a sacred text.

RLGS 3740 Bodies and Souls (4 Credits)

This course examines the unique place of the body in biblical religion. We ask how the Bible and its interpreters have shaped current views on sex and the gendered body in Western society. How has the Bible been (mis)used in relation to current understandings of the physical body? Is the saying that a "human" does not have a body, but is a body as true for the Hebrew Bible as the Christian New Testament? How have Judaism and Christianity (de)valued sexuality, procreation, and celibacy? How do the biblical traditions shape our modern opinions about the ideal physical body and body modifications? How can we understand "out-of-body" experiences and notions of death and afterlife in Western religion? Students are encouraged to interpret the Bible and their own beliefs from a uniquely embodied perspective. Cross listed with GWST 3740, JUST 3740.

RLGS 3760 Globalization and Religion: Theory and Methods (4 Credits)

This course explores how religious movements around the world both affect, and are affected by, the process of globalization. A major segment of the course is devoted to various theories of globalization and how they account for the increasingly important role of religion. Focus is largely on the relationship between Christianity, Judaism, and Islam.

RLGS 3814 Modern Hinduism (4 Credits)

Doctrines, practices and history of South Asian Hinduism; conceptions of Gods and gods; image worship and temples; and the influences of caste and gender on the experience of Hinduism.

RLGS 3820 Buddhism (4 Credits)

Buddhist life and thought from origins to present in India, Tibet, Japan and China.

RLGS 3832 Religious Lives: The Dalai Lamas (4 Credits)

This course explores the many lives of the Dalai Lamas and the transformation of a reincarnated religious teacher into the political leader of Tibet and, eventually, a worldwide religious personality. In order to understand that transformation, the course investigates the institution of the Dalai Lamas from historical, doctrinal, and ritual perspectives. We will look at the role of the Dalai Lama as an embodiment of the bodhisattva of compassion at the center of a tapestry of religious ceremony and ritual performances. The course will also consider the religious, ethical, and political thought of several of the most prominent Dalai Lamas, with significant attention given to the writings and work of the current, fourteenth, Dalai Lama.

RLGS 3885 Islamic Mysticism (4 Credits)

The origins and development of Islamic mysticism, including asceticism and the Sufi orders.

RLGS 3890 Religion and Diaspora (4 Credits)

When forced to leave a homeland, displaced communities frequently turn to religion to maintain identity and adapt to-or resist--new surrounding culture(s). This course examines the role of religion and identity in three Jewish and Christian communities living in diaspora and poses questions such as the following: What is the relationship between religion and (home)land? How have the biblical themes of exodus, diaspora, promise and restoration been applied to contemporary experiences? And how have our American stories been interpreted through the lens of the Bible? As part of the service learning component, students have the opportunity to work with religious and immigrant aid organizations in the Denver community. Cross listed with JUST 3890.

RLGS 3891 Justice: A Biblical Perspective (4 Credits)

This is a service learning course designed for religious studies undergraduate majors, though non-majors are welcome to enroll. Cross listed with JUST 3891.

RLGS 3892 Grant Writing for Community Engagement and Research (4 Credits)

This community engagement course introduces student to non-profit work and to scholarship on non-profit activities. It connects students with community partners, continuing the department's commitment to experiential learning and to engagement with living faith communities. Students spend course time discussing scholarship on grant writing and non-profit grant support and discussing logistical and other issues related to their community engagement partners. This course is intended to help provide advanced undergraduate and graduate students with arenas for future research, including possible thesis topics, while also offering a practical opportunity for professional development. Understanding 501(c)3 corporations and experience in writing grant proposals will be an asset for students planning to work in non-profits as well as for those continuing on to doctoral work.

RLGS 3893 Buddhism and Social Justice (4 Credits)

This course examines Buddhist theories and practices of social justice, with a focus on the contemporary global movements known as "Humanistic Buddhism" and "Socially Engaged Buddhism." The course covers topics such as: the roots of engaged Buddhism in social and political movements of 19th and 20-century Asia, the role of meditation and other Buddhist practices as both a support for and a means of social engagement, and Buddhist approaches to contemporary issues of racial justice, equality, economic development, and the environment. In the final analysis, the course asks whether the concept of justice makes sense within a Buddhist worldview, or if Buddhist concerns for social welfare hinge on an entirely different paradigm. This course is a community-engaged service learning course. As part of the course, students work with a local community partner to further their own community engagement work.

RLGS 3898 Dharamsala: Myth, Land, and Traditions (4 Credits)

This course explores the myths and stories that root cultural, religious, social and political traditions in the material landscape of India. It will explore the sacred spaces, images, rituals, and belief-traditions of the Himalayan region surrounding Dharamsala, India. As a study-abroad course, the materials, site visits, and community-engaged learning projects interrogate how myths operate as both cultural "glue" and demarcations of difference. Students participate in community-engaged learning placements to learn how myth creates and fosters cultural communities. Through site visits and readings we will learn how the "lived experience" of cultural belief-traditions, social and political practices, and sacred images and spaces are products of a unique marriage of land, story, and community. We will also have lectures and a Canvas site with pre-travel readings that will prepare you for the cultural and social belief-traditions we will encounter within Dharamsala. While in India, we will continue to read about ritual, devotion, stories of the land, social and political identities rooted in the land, and more. This course will be cross-listed with INTS for undergraduate and graduate elective credit.

RLGS 3991 Independent Study (1-10 Credits)

RLGS 3995 Independent Research (1-10 Credits)

RLGS 4050 History of Islam (4 Credits)

RLGS 4100 Hebrew Bible Backgrounds: Seminar in Ancient Israelite Religion (4 Credits)

This course is designed to train the student in the method and means of engaging in archeo-historical study of the Hebrew Bible. The content of this course focuses on ancient Israelite religion in Iron Age Palestine, particularly on emergent ideas about God ('El) and the development and evolution of the priesthood. Cross listed with JUST 4100.

RLGS 4150 Biblical Aramaic (4 Credits)

Reading seminar in Biblical Aramaic. This course focuses on the vocabulary, syntax and expression of Aramaic in the Bible as well as in some related post-biblical texts (Targums, Dead Sea Scrolls, etc.).

RLGS 4980 Internship (1-4 Credits)

Designed to provide masters students with valuable experience in non-profit, educational, faith-based, governmental, and related organizations. It helps students translate the knowledge and analytical skills learned in Religious Studies courses into a professional context, while exploring potential career paths and professional opportunities. Students interested in pursuing an internship must meet with the Undergraduate Advisor at the start of the previous quarter to discuss internship goals and identify potential placements. Students meet weekly with a faculty supervisor to monitor their internship experience, and complete the internship by writing a reflective essay. For MA students only.

RLGS 4981 Internship in Religious Community (1-4 Credits)

RLGS 4991 Independent Study (1-10 Credits)

RLGS 4995 Independent Research (1-10 Credits)

Daniel Felix Ritchie School of Engineering and Computer Science

The Daniel Felix Ritchie School of Computer Science and Engineering is dedicated to preparing the next generation of innovators to build solutions for some of the world's most challenging problems. We not only ask "can we do this?" but also "should we do this?" and "how can we make a difference for the public good?". Research forms the backbone of graduate education in the Ritchie School. Our researchers work to design new artificial joints, create educational games and develop renewable energy systems. We impact fields ranging from cardiac health to cybersecurity to robotics. In addition to our traditional thesis-based graduate programs, we offer professional graduate programs in Cybersecurity, Data Science, and Systems Engineering to help you build the skills employers need and want. Throughout all our programs we prioritize social responsibility, inclusive excellence, ethical applications of technology.

Computer Science

Office: Ritchie School of Engineering & Computer Science Mail Code: 2155 E Wesley Avenue, Room 379, Denver, CO 80208 Phone: 303-871-2458 Email: info@cs.du.edu Website: Computer Science (http://www.du.edu/rsecs/departments/cs/)

Master's and Doctoral degrees

Why study Computer Science at the University of Denver?

DU's Department of Computer Science (CS) is creating the future of technology by providing a graduate education that emphasizes both multidisciplinary and cross-disciplinary knowledge. The distinguished faculty are creating multi-disciplinary education programs that cover both depth and breadth, and research programs that incorporate and account for technological trends in research and development, along with industry. Graduate students join the faculty in conducting cutting-edge basic and applied research in emerging disciplines developing novel and unique solutions to old and new problems and opportunities. Additionally, students are not required to have a computer science background as we offer foundational courses to prepare students for the road ahead.

All laboratories in the Department contain state-of-the-art equipment and software to support research in algorithms, artificial intelligence, computational geometry, humane games, networks, programming languages, robotics, human-robot interaction, security and privacy, and software engineering, among other research areas. Small classes support our multi-disciplinary and real-time focus by providing close contact between students and faculty, which allows us to meet students' individual career goals.

Denver is a first-rate location for business, government and laboratory partnerships, and technology employment. The Colorado Front Range is consistently rated as one of the top high-tech areas in the country, and DU is located just minutes from the Denver Technological Center, the site of many top technology companies. The Department of Computer Science is committed to active collaboration with these industry leaders. As a result, our students graduate with relevant research experience and a network of employment contacts in the technology sector that is second to none!

Degree Programs

We offer the following graduate computer science degrees:

- MS in Computer Science
- MS in Cybersecurity
- MS in Data Science
- PhD in Computer Science

Doctor of Philosophy in Computer Science

The PhD in Computer Science is, above all, a research degree. When the faculty award a PhD, they certify that the student has a broad foundation and awareness of core concepts in computer science, has advanced the field by performing significant original research and has reported that work in a scholarly fashion. Through this degree, students will be qualified to hold academic positions at universities across the world, to lead research groups in government or industry research laboratories, to be creators of new ideas and approaches in computer science through research, and to be leaders in technology. Our faculty are strong in research and particularly noted in software engineering, robotics, cybersecurity and privacy, and humane games.

Master of Science in Computer Science

The MS in Computer Science prepares students for advancement in academic or industrial careers. The program is designed to provide students with a breadth of advanced knowledge in computer science, while permitting them to achieve depth in areas of current interest within the computing field through electives, as well as the emerging technologies that will have great importance in the future. Students of this degree will be eminently qualified for more advanced careers using computer science given the ubiquitous nature of computing today in every single discipline. Students may also pursue a thesis option, enabling them to begin to perform research and be prepared for a PhD in Computer Science or related discipline.

Master of Science in Cybersecurity

The MS in Cybersecurity prepares students for a change of careers into the cybersecurity field, or for advancement of a current career. Malicious actors, from small-time hackers to nation states, are an ever present threat to users on the internet today. Cybersecurity expertise is invaluable in any field, as nearly all important personal information is stored online and business is increasingly done online. The cybersecurity MS program is designed to provide students with a strong technical foundation in computer science, along with advanced domain knowledge in the field of cybersecurity.

Master of Science in Data Science

The MS in Data Science prepares students for advancement in professional careers. Data Scientists enable knowledge discovery in almost all of the subfields of science, social science, business, and policy. As businesses and government continue to turn to data-informed decision making, data scientists will become more necessary and influential within society as a whole. This program is designed to provide students with a breadth of knowledge in computer science, probability and statistics, data management and exploration, and machine learning, as well as the emerging technologies that will be gaining importance in the future.

Doctor of Philosophy in Computer Science

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites:

Prerequisite courses for the PhD include: COMP 1671 Introduction to Computer Science I, COMP 1672 Introduction to Computer Science II, COMP 2673 Introduction to Computer Science III, COMP 2300 Discrete Structures in Computer Science, COMP 2370 Introduction to Algorithms & Data Structures, and COMP 2691 Introduction to Computer Organization (or equivalent).

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Science Applied Data Science and Artificial Intelligence

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Science in Computer Science

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

Prerequisite courses for the MS include: COMP 1671 Introduction to Computer Science I, COMP 1672 Introduction to Computer Science II, COMP 2673 Introduction to Computer Science III, COMP 2300 Discrete Structures in Computer Science, COMP 2370 Introduction to Algorithms & Data Structures, and COMP 2691 Introduction to Computer Organization (or equivalent).

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- · Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Science in Cybersecurity

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

 Applicants must have the prerequisite knowledge equivalent to an undergraduate minor or greater in computer science and are required to pass a computer science placement exam prior to matriculation into the graduate program. Students with deficiencies will be eligible to complete the foundational courses or pass the computer science placement exam prior to matriculation. The foundational courses are COMP 3003: Foundations in Computer Systems, COMP 3004: Foundational in Discrete Structures & Algorithms, and COMP 3005: Foundations in Python Programming.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Doctoral Program

Doctor of Philosophy in Computer Science Degree Requirements

Coursework Requirements

Code

Title

Three quarters minimum of COMP 4600 : Seminar in Computer Science

At least 36 credits must be at the 4000-level courses

Up to 24 credits may be taken in other relevant disciplines, as approved by the Computer Science Department Graduate Committee.

Courses should be chosen in consultation with, and are subject to the approval of, the student's advisor.

Total Credits

Minimum credit hours required: 90 beyond BA or BS degree

Additional degree requirements applicable to PhD students without a master's degree in Computer Science

 Must complete the requirements of the Master of Science in Computer Science with a thesis at a reasonable pace to remain on pace to complete the PhD in Computer Science on the expected timeline established by the advisor.

Additional Degree Requirements applicable to PhD Students with a 2-year master's degree in Computer Science or related field

- May take a proficiency test in the four required courses for master's degree (COMP 3351 Programming Languages, COMP 3361 Operating Systems
 I, COMP 3371 Data Structures & Algorithms and COMP 3200 Discrete Structures). The test may be offered at a time other than the official final
 exam time of the term. A grade of B+ (B plus) or better must be obtained in the test.
- If the student chooses not to take the proficiency test, the student must register and attend classes for the four required courses (COMP 3351 Programming Languages, COMP 3361 Operating Systems I, COMP 3371 Data Structures & Algorithms and COMP 3200 Discrete Structures). A grade of B+ (B plus) or better must be obtained in the courses.

Non-coursework Requirements:

· Written dissertation and oral defense that makes a significant contribution to the research literature in computer sciences

- Tool requirement
- · Qualifying examination
- · Preliminary examination

Qualifying & Dissertation Examinations

Qualifying Examination

Every PhD student must pass the qualifying exam. It consists of two parts, the breadth requirement and the written and oral exam.

 Breadth Requirement: To fulfill the breadth requirement the student must take 5 graded courses (20 quarter credits) at the 3000- and 4000-level (not including independent study, internship, or independent research). At most, two may be at the 3000-level. At least three must be at the 4000level. The course work should cover at least three distinct areas. Five areas should include a sequence of 3000- and 4000-level courses. The GPA in these courses must be at least 3.7/4.0. No course with a grade below a B may be used to fulfill this requirement. Graduate Computer Science courses taken at another university and transferred for credit at DU may be applied to the breadth requirement up to a maximum of 2 courses (8 quarter credits).

2. Written and Oral Exam: Before being admitted to this exam, the student must have fulfilled the breadth requirement.

The student selects an area of examination from the list of areas in Table 1. The written part of the exam is a take-home exam. It is a handed out on a Friday and is due the following Tuesday. The oral exam is held the following Friday. The take-home exam consists of a set of research questions, a set of related papers and instructions. The student should prepare a written report of at least 10 but no more than 20 pages with answers to the questions. Study guides or other relevant material to prepare for the exam can be obtained from the chair of the examination committee. The oral

Credits

90

portion of the exam is based on a student presentation in which the student explains and defends his/her answers. During the oral exam, questions in other areas of computer science may also be asked.

A failed exam may be retaken once (in the same or another area). Sufficiently prior to the exam date, the department chair will appoint an examination committee of three tenure-track faculty. One of the committee members must be in the area in which the examination will be held. The student's advisor is allowed to be on the committee. The committee creates the take home exam and grades it. After the oral exam, the committee makes a recommendation to the Computer Science faculty on whether the student passes or fails. If the faculty agrees, the committee recommendation stands. If there is a disagreement, the faculty as a whole decides.

Preliminary Examination

Following successful completion of the Qualifying Examination, each student will prepare a dissertation proposal and take the preliminary examination. Passing this examination admits the student to Ph.D. candidacy. The dissertation proposal should be prepared in close consultation with the student's advisor and should be available to all committee members at least two weeks prior to the examination. It should reflect an extensive critical literature survey, and contain an accurate assessment of the state-of-the-art in the area of research, a precise statement of the problem to be solved, motivation for pursuing the research, and evidence to the effect that there is a good likelihood the problem is solvable with reasonable effort.

For full-time students, the preliminary examination must be taken within 5 quarters of passing the qualifying examination. Successful completion of the preliminary examination results in agreement between the student and the committee as to what will constitute successful completion of the dissertation research. The committee may choose to reconvene the examination to allow the student to further research the problem, complete additional course work, or revise the dissertation proposal document.

The examining committee consists of at least three Computer Science faculty members, including the advisor. The preliminary exam is a one hour oral closed exam. If a student passed the preliminary exam, but subsequently switches advisor and hence topic, the preliminary exam must be repeated within one year to ensure capability of the student and feasibility of the project.

Dissertation Defense

After the dissertation has been completed, the student must defend it in a final examination, as specified by the Office of Graduate Studies.

Tool Requirement

It is strongly recommended that students satisfy their tool requirement by demonstrating proficiency in a modern computer typesetting system suitable for writing technical papers that include mathematical equations and graphics. The faculty advisor must approve the specific system used to satisfy this requirement. Other options include reading competency in two languages selected from French, German, and Russian; a series of outside courses in another discipline; or significant laboratory experience involving computer science.

Master's Degree Programs

Master of Science in Applied Data Science and Artificial Intelligence

Degree Requirements

The MS in Applied Data Science and AI requires 48 credits. Students without prerequisite knowledge may take Algebra and Trigonometry (Math 1070) at DU prior to fully matriculating into the program. This program has 8 required classes (32 credits) and 4 electives (16 credits).

Code	Title	Credits
Required Courses		
COMP 3005	Foundations in Python Programming	4
COMP 3006	Python Software Development	4
COMP 3009	Essential Math for Data Science and Al	4
COMP 3421	Database Organization & Management I	4
COMP 4432	Machine Learning	4

48

Additional courses related to Data Science and AI may be approved by the department to count towards the 16 credit elective requirement. These might include topics courses covering areas such as Large Language Models, Advanced Machine Learning, Deep Learning for Sequential Data and Machine Learning Systems and with approval some courses such as Advanced Topics: Systems (COMP 3704) or COMP 3703 Topics-Artificial Intelligence.

Master of Science in Computer Science

Degree Requirements

Coursework Requirements

The Master of Science in Computer Science offers great flexibility in studying computer science beyond an undergraduate degree. Students without a background in computer science will typically begin with foundational courses that prepare them for more advanced work in computer science. An assessment is taken through the department that helps them determine where to begin.

Students are required to take 16 credits of required courses and 32 credits of electives. Of these 32 credits of elective computer science courses, 12 must be at the 4000-level, including 4 credits designated as "Theory". In addition, 8 of the 32 credits must be designated as advanced programming (and may also be 4000-level credits). Students wishing to pursue a thesis may apply up to 12 credits of Independent Research (COMP 4995) towards their 32 elective credits. Finally, students must take 3 quarters of Seminar in Computer Science (COMP 4600).

Code	Title	Credits

COMP 4510	Software for AI Robotics	
COMP 4621	Computer Networking	
Seminar Attendance Requirement		
COMP 4600	Seminar in Computer Science ²	

Non-Thesis Option

A maximum of 12 quarter hours may be earned in Independent Study (COMP 4991), provided the student can find an advisor for such independent study. No thesis is required. Not eligible for support (GTA, GRA).

Thesis Option

A maximum of 12 credits may be earned for thesis credits (COMP 4995 - Independent Research). A thesis of publishable quality and oral defense are required. A student receiving any support from the department (GTA, GRA) must complete the degree requirements as per the Thesis Option.

Total Credits

48-60

- ¹ Foundation Courses serve to provide a mathematical and programming background for students without a computer science undergraduate degree. Foundation course needs are determined by pre-assessments. Students may test out of one or more Foundation courses.
- ² Thesis-track students must complete **three** quarters of COMP 4600 Seminar (0 credits). GTA's/GRA's are required to attend all seminars.

Outside Coursework

A maximum of 8 quarter hours may be earned in approved courses outside the COMP designation, including transfer credits from another university. Such credit must be approved in writing by an advisor from the computer science faculty.

Students should follow the rules and regulations stated in the departmental Graduate Student Manual.

Non-Coursework Requirements

Thesis Option

Thesis and Oral Defense

Non-Thesis Option

None

Master of Science in Cybersecurity

Cybersecurity Electives

1

Elective credits must be either a pre-approved cybersecurity course at DU, or with advisor approval. Pre-approved courses include COMP 4732, COMP 3421 and COMP 3424. Other courses with cyber security content at the discretion of the advisor or program director. Total Credits

Foundational Courses serve to provide a computer science foundation for students without a computer science background. Foundational Course needs are determined by pre-assessment by the department. Students may test out of one or more Foundational Courses.

² Capstone Project in Cybersecurity (COMP 4799) is required; however, with advisor approval, 0 credit Internship/Co-Op in Computing (COMP 3904) may be used as the basis for the capstone course. If using the Internship/Co-Op option, students will register for 4799 normally, and apply through pioneercareers (PCO) for their internship.

No thesis is required.

Students should follow the rules and regulations stated in the departmental Graduate Student Manual.

GTA/GRA Support

Due to the intensive nature of this program, Cybersecurity students are not eligible for graduate teaching or research support.

Consult with Financial Aid at finaid@du.edu or at 303-871-4020 to discuss financial aid options.

Dual Undergraduate-Graduate Degree Programs

4+1 Dual degree BS in Computer Science and MS in Computer Science

The Department of Computer Science at the University of Denver offers a Dual Degree Bachelor of Science in Computer Science (http:// bulletin.du.edu/undergraduate/majorsminorscoursedescriptions/traditionalbachelorsprogrammajorandminors/computerscience/ #programofstudytext) and Master of Science in Computer Science (p.). The BS/MS combines the strong foundation of a BS in Computer Science and further depth and breadth in more advanced computer science topics through the MS in Computer Science.

Total Credit Hours: 183 at the undergraduate level (UG) for the Bachelor degree + 36 at the graduate level (GR) for the Master of Science degree = 219 credits

Undergraduate Requirements

Students who intend to obtain a BS/MS in Computer Science must satisfy all the requirements of the Bachelor of Science degree as outlined in the University of Denver Undergraduate Bulletin (http://bulletin.du.edu/undergraduate/), which includes completing two minors and all of the requirements for the Bachelor of Science in Computer Science (http://bulletin.du.edu/undergraduate/majorsminorscoursedescriptions/ traditionalbachelorsprogrammajorandminors/computerscience/#programofstudytext) degree, including the Mathematics cognate requirements. In addition, 12 credits of the Breadth requirements for the BS in Computer Science are taken from the following list of **required** courses by the MS in Computer Science, but may be substituted for cross-listed COMP 3000-level undergraduate/graduate courses if these courses were taken prior to entry into the 4+1 program:

12 credits of the required MS in Computer Science courses that may be used for the Breadth requirement of the BS in Computer Science:

COMP 3200	Discrete Structures	4
COMP 3351	Programming Languages	4
COMP 3361	Operating Systems I	4
COMP 3371	Data Structures & Algorithms	4

Graduate Requirements

The student must complete 36 credit hours at the graduate level of required coursework for the MS. These 36 hours include the **required** courses for the MS in Computer Science (the 4 classes listed above), unless they were taken as part of the Breadth requirement for the BS in Computer Science. In this case, other graduate-level courses will be substituted for them to meet the 36 credit hour requirement of the degree. Internship/Co-Op in Computing (COMP 3904) may not be used to substitute for these requirements.

Advanced Programming, Theory, and 4000-level Elective Requirements

As with the MS in Computer Science, students are also required to satisfy the Advanced Programming, Theory, and 4000-level elective requirements of the MS in Computer Science (p.) in their 36 credit hours of graduate coursework.

All electives, especially the MATH and COMP electives, should be selected in close consultation with an academic advisor from the Computer Science Department.

4:1 Dual Degree: BS in Computer Science and MS Data Science

The 4:1 dual degree enables DU students to earn a BS in Computer Science (CS) and an MS in Data Science (DS) in 5 years. A key benefit to the 4:1 student is the combination of disciplinary depth afforded by undergraduate work in CS, coupled with an applied, professional, focus provided by the DS program. Upon earning their BS degree, a 4:1 student will matriculate into the online track of the data science graduate program, enabling them to combine full-time employment with evening classes.

The MS in Data Science is a 48-credit program comprising 10 required courses and 2 electives and two admission tracks, online and on-campus. The online track provides maximum flexibility in course choice and timing. Students can matriculate into the program at the start of any term, with the full set of courses available to them. In contrast, the on-campus track is cohort-based; students start in the fall term and take a preset sequence of courses during their first year and part of the second. Due to these limitations, the 4:1 option will be limited to matriculation into the online MS in Data Science program track.

Sample schedule

The following is a sample schedule for the BS in Computer Science + MS in Computer Science. Note that other MS requirements would replace the Theory and Adv. Programming requirements, instead coming from the requirements of those degrees.

First Year					
Fall	Credits	Winter	Credits	Spring	Credits

Total Credits: 219

COMP 3001 C and C++ Programming Foundations for New Graduate Students (4 Credits)

This accelerated course covers the basics of discrete mathematics including functions, relations, counting, logic, proofs etc that is necessary to attend CS graduate school. In addition, it includes an introduction to programming and algorithm analysis. Enrollment restricted to graduate students.

COMP 3002 C and C++ Foundations II for New Graduate Students (4 Credits)

This accelerated course continues to build on the basics of discrete mathematics by covering material including advanced counting, recurrences, graphs, trees, traversals, automata etc. that is necessary to attend Computer Science graduate school. In addition, it includes an introduction to additional algorithms and data structures. Prerequisite: COMP 3001.

COMP 3003 Foundations in Computer Systems (4 Credits)

This course introduces computer systems, including instruction set architectures; memory hierarchies including registers, caching, virtual memory, paging, and segmentation; number representations; binary arithmetic and operations; assembly language instructions; and pipelining in the CPU.

COMP 3004 Foundations in Discrete Structures & Algorithms (4 Credits)

Both discrete mathematics and an understanding of algorithms along with their analysis form principle foundations in computer science. In this course, the fundamentals of discrete mathematics including functions, relations, counting, logic, proofs, counting, recurrences, and probability are covered. In addition, beginning data structures and algorithms are covered including linked-lists, graphs, hash-tables, sorting, and binary search. An analysis of these data structures and algorithms is also covered through big-0 notation and proof methods.

COMP 3005 Foundations in Python Programming (4 Credits)

This accelerated course covers the basics of Python programming. By the end of the course students will be able to develop, design and implement Python programs, explain the differences between data types, learn to read from and write to files, understand and use data structures, understand and use object oriented programming, and use Python packages.

COMP 3006 Python Software Development (4 Credits)

This accelerated course covers advanced Python programming for data scientists and cybersecurity professionals. Course Objectives: name and demonstrate proficiency using advanced Python programming techniques; analyze a programming task and create a development plan and high-level software design that accomplishes the task; relate common portions of the Python standard library to specific programming tasks; understand and apply aspects of the Python scientific programming ecosystem to achieve an analysis goal. Prerequisites: COMP 3005.

COMP 3007 Foundations in Data Science Mathematics I (4 Credits)

This course presents the elements of calculus essential for work in data science. Students will study differentiation and integration in the context of probability density and of optimization.

COMP 3008 Foundations in Data Science Mathematics II (4 Credits)

This course presents the elements of linear algebra and discrete math essential for subsequent coursework in data science.

COMP 3009 Essential Math for Data Science and AI (4 Credits)

The primary objective of the course is to empower students with the mathematical tools most used in data science. Students will develop an understanding of fundamental topics such as matrix operations, eigenvectors, and singular value decomposition (SVD), along with key calculus principles, including derivatives and integrals, with a focus on their applications in data science. The course also explores elements of multivariate calculus and optimization techniques to solve real-world problems, as well as probability concepts relevant to modeling uncertainty and variability in data. Additionally, students will gain exposure to implementing mathematical models using Python libraries such as NumPy, Pandas, and Matplotlib to analyze and manipulate data. By synthesizing these mathematical principles, students will be prepared for more advanced topics in data science and machine learning. Graduate student will be expected to upload a course presentation/project assignment to their individual Github portfolio.

COMP 3200 Discrete Structures (4 Credits)

Discrete mathematical structures and non-numerical algorithms; graph theory, elements of probability, propositional calculus, Boolean algebras; emphasis on applications to computer science. Prerequisites: COMP 2300 and COMP 1353 for undergraduates and COMP 3004 for graduates.

COMP 3351 Programming Languages (4 Credits)

Learn the fundamentals of programming languages through functional programming through an in-depth understanding of syntax and semantics around program structures and how programming languages are parsed and interpreted. Understand recursion as a fundamental problem-solving paradigm and the important role that higher order types and kinds play in eliminating errors and simplifying software development. Satisfies the Programming Language elective requirement. Prerequisites: COMP 2362 and COMP 2370.

COMP 3352 Elements of Compiler Design (4 Credits)

Techniques required to design and implement a compiler; topics include lexical analysis, grammars and parsers, type-checking, storage allocation and code generation. Prerequisite: COMP 3351.

COMP 3353 Compiler Construction (4 Credits)

Design and implementation of a major piece of software relevant to compilers. Prerequisite: COMP 3352.

COMP 3356 Introductory C/C++ Programming (4 Credits)

This course introduces unmanaged programming language concepts to students whose primary programming experience is in a managed language (Java/Python, etc.). Concepts like type safety, manual memory management and "unsafe" library functions are covered. Common pitfalls in these languages from which most security issues arise are explained and students gain experience in understanding such code and evaluating it for program errors. Students will also be introduced to important compiled language concepts of static/dynamic linking, compilation and debugging. Prerequisites: COMP 3006.

COMP 3361 Operating Systems I (4 Credits)

Operating systems functions and concepts; processes, process communication, synchronization; processor allocation, memory management in multiprogramming, time sharing systems. Prerequisites: for undergraduates: (COMP 2355 and COMP 2691) or COMP 2361; COMP 2370; for graduate students: COMP 3003, 3004, and 3005.

COMP 3371 Data Structures & Algorithms (4 Credits)

Design and analysis of algorithms and data structures; asymptotic complexity, recurrence relations, lower bounds; algorithm design techniques such as incremental, divide-and-conquer, dynamic programming, iterative improvement, greedy algorithms; randomized data structures and algorithms. Prerequisites: COMP 2370 or equivalent and COMP 3200.

COMP 3372 Advanced Algorithms (4 Credits)

Advanced techniques for the design and analysis of algorithms and data structures; amortized complexity, self-adjusting data structures; randomized, online, and string algorithms; NP-completeness, approximation and exact exponential algorithms; flow networks.

COMP 3381 Software Engineering I (4 Credits)

An introduction to software engineering. Topics include software processes, requirements, design, development, validation and verification and project management. Cross-listed with COMP 4381. Prerequisites: COMP 3351; COMP 3361 or COMP 2362; or instructor permission.

COMP 3382 Software Engineering II (4 Credits)

Continuation of COMP 3381. Topics include component-based software engineering, model-driven architecture, and service-oriented architecture. Prerequisite: COMP 3381.

COMP 3411 Web Programming II (4 Credits)

In this course you will learn how to develop a full-stack web application that is capable of serving dynamic content from a database. Furthermore, you will learn the core design concepts and principles that will enable you to develop scalable and easy to maintain webapplications - a set of skills that will serve you well in both your personal and professional projects in the future. Prerequisite: COMP 3410.

COMP 3412 Web Projects: Web Development III (4 Credits)

In this course you will learn how to develop, as a group, a full-stack web application that is capable of serving dynamic content from a database. We will use the MongoDB, ExpressJS, Angular, and Node.js (MEAN) software stack to work on a real-life problem presented to us by an external product owner. In the class we will use the Scrum framework for Agile development to work, as a software team, through several sprints of development. You will be peer reviewing each other throughout the course, and the product owner will also be reviewing your product through end-of-sprint demos as features are completed. The goal for this class is for it to be a fun, collaborative, and educational environment that demonstrates what it is like to work as a real software team. Prerequisite: COMP 3411.

COMP 3421 Database Organization & Management I (4 Credits)

An introductory class in database management systems covering both relational and non-relational databases with an emphasis on relational. Topics include database design, ER modeling, relational algebra, SQL, scripting, and embedded SQL. Each student will design, load, query and update a nontrivial database using a relational database management system (RDBMS). In addition, an introduction to a NoSQL database will be included. Graduate students will read one or two relevant technical papers and write a summary report. Prerequisites: for undergraduates: COMP 1353 or COMP 2673; for graduates: COMP 3005 or COMP3006 (MS Data Science).

COMP 3424 NoSQL Databases (4 Credits)

In this course, students learn what NoSQL databases are, learn to identify the differences between them, and gain a fundamental understanding between SQL, relational databases, and NoSQL databases. Students further explore which type of NoSQL database is the correct one given a usecases, examining types, methods of communicating with it, contrasts to other NoSQL databases, performance and scalability. Prerequisites: for undergraduates, COMP 2355 or COMP 2361; for graduates: COMP 3005.

COMP 3431 Data Mining (4 Credits)

Data Mining is the process of extracting useful information implicitly hidden in large databases. Various techniques from statistics and artificial intelligence are used here to discover hidden patterns in massive collections of data. This course is an introduction to these techniques and their underlying mathematical principles. Topics covered include: basic data analysis, frequent pattern mining, clustering, classification, and model assessment. Prerequisites: COMP 2370.

COMP 3621 Computer Networking (4 Credits)

An introduction to computer networks with an emphasis on Internet protocols. Topics include: internet design, application layer protocols such as SMTP and HTTP, session layer protocols including TCP and UDP, the internet protocol (IP), link layer technology such as Ethernet, and security issues related to networking. Programming experience of client/server architectures using sockets and TCP/UDP through projects is emphasized. Prerequisites: for undergraduates: (COMP 2355 or COMP 2361) and COMP 2370; for graduates COMP 3004 and COMP 3006. Cross listed with COMP 4621.

COMP 3681 Networking for Games (4 Credits)

Implementing the networking code for multiplayer games is a complex task that requires an understanding of performance, security, game design, and advanced programming concepts. In this course, students are introduced to the networking stack and how this is connected to the Internet, learn how to write protocols for games, and implement several large games using a game engine that demonstrate the kind of networking and protocols required by different genres of games. In addition, tools are introduced that help understand and debug networking code, simplify the creation of protocols, and make the development of networking code easier.

COMP 3701 Topics in Computer Graphics (4 Credits)

COMP 3702 Topics in Database (4 Credits)

COMP 3703 Topics-Artificial Intelligence (4 Credits)

COMP 3704 Advanced Topics: Systems (4 Credits)

COMP 3705 Topics in Computer Science (1-4 Credits)

COMP 3731 Computer Forensics (4 Credits)

Computer Forensics involves the examination of information contained in digital media with the aim of recovering and analyzing latent evidence. This course will provide students an understanding of the basic concepts in preservation, identification, extraction and validation of forensic evidence in a computer system. The course covers many systems level concepts such as disk partitions, file systems, system artifacts in multiple operating systems, file formats, email transfers, and network layers, among others. Students work extensively on raw images of memory and disks, and in the process, build components commonly seen as features of commercial forensics tools (e.g. file system carver, memory analyzer, file carver, and steganalysis). Prerequisites: COMP 3361; COMP 2355 or 2361 for undergraduates; COMP 3006 for graduates.

COMP 3801 Introduction Computer Graphics (4 Credits)

Fundamentals of 3D rendering including the mathematics behind coordinate systems, projections, clipping, hidden surface removal, shadows, lighting models, shading models, and mapping techniques. Significant use of 3D APIs through shader programming is covered along with the basics of 3D model representation and animations. Satisfies "Advanced Programming" requirements for graduate students. Prerequisites: COMP 2370, MATH 1952 or 1962.

COMP 3820 Introduction to Game Programming (4 Credits)

Learn the fundamentals of game programming by creating 2D and 3D games using a modern game engine. Topics include working with 2D/3D art assets, character controllers, physics, camera systems, 2D and 3D animation integration, lighting, audio, user interfaces, artificial intelligence, and level design. The emphasis in this course is on game programming and implementing game mechanics in fully-working games. Prerequisites: COMP 2381 and COMP 2821.

COMP 3821 Game Programming I (4 Credits)

A continuation of Introduction to Game Programming, this course introduces advanced topics that are essential as future game programmers. Students have the opportunity to learn game engine architecture, 2D and 3D linear algebra for graphics, sprites, 2D and 3D animations, input handling, finite state machines, particle systems, user interfaces, game audio, and artificial intelligence for games. Prerequisites: COMP 2370 and COMP 3820.

COMP 3822 Game Programming II (4 Credits)

In this course, students learn how to work with a 3D game engine and build 3D games. Topics include algorithms, mathematics for 3D game engines, scene management, animations, 3D shaders, particle systems, physics for games, UIs, terrain systems, and working with higher-level scripting languages on top of the low-level implementation language. Prerequisites: COMP 3821. Suggested corequisite or prerequisite: COMP 3801.

COMP 3904 Internship/Co-Op in Computing (0-10 Credits)

Experiential learning through employment with a company to work in computer science. Students are expected to find the internship/co-op and connect their hiring manager with an advisor in the department to get approval. Requirements for approval include a job description that shows what will be accomplished throughout the quarter and a final report from the hiring manager to report on their performance so that a grade may be assigned. Prerequisites: COMP 2370 and approval of department. MS Data Science students: practical experience working under the supervision of data science employer and a data science faculty advisor. Learning outcomes will be assessed via student work such as summary reports, literature reviews, presentations, code notebooks and/or repositories. Prerequisites: permission of Data Science Faculty Director.

COMP 3991 Independent Study (1-10 Credits)

Cannot be arranged for any course that appears in the regular course schedule for that particular year.

COMP 4100 Human-Computer Interaction (4 Credits)

Introduces students in computer science and other disciplines to principles of and research methods in human-computer interaction (HCI). HCI is an interdisciplinary area concerned with the study of interaction between humans and interactive computing systems. Research in HCI looks at cognitive and social phenomena surrounding human use of computers with the goal of understanding their impact and creating guidelines for the design and evaluation of software, interfaces, physical products, and services in industry. No prerequisites are required to take the course and students from all disciplines are welcome. Cross listed with COMP 3100.

COMP 4333 Parallel and Distributed Computing (4 Credits)

Current techniques for effective use of parallel processing and large scale distributed systems. Programming assignments will give students experience in the use of these techniques. Specific topics will vary from year to year to incorporate recent developments. This course qualifies for the Computer Science "Advanced Programming" requirement. Prerequisites: COMP2370 and COMP2355, or equivalent.

COMP 4334 Parallel and Distributed Computing for Data Science and AI (4 Credits)

Current techniques for effective use of parallel processing and large-scale distributed systems for data science. Programming assignments will give students experience in the use of these techniques. Specific topics will vary from year to year to incorporate recent developments. This course is not to be used for the MS Computer Science. Graduate students are required to contribute at least one course assignment to their personal Github portfolio. Prior completion or concurrent enrollment in COMP 4432 is strongly recommended. Prerequisite: COMP 3006.

COMP 4355 Advanced System Programming (4 Credits)

This course covers programming in a UNIX environment, including use of common command line utilities, scripting, source control via Git, and integration of POSIX system calls into C/C++ code. These features will be leveraged to solve practical problems cleanly and efficiently. More emphasis will be placed on using these features than on how those features work. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4370 Algorthmic Problem Solving (4 Credits)

The course is intended for students who are familiar with programming syntax but have not had much experience writing computer programs to solve a problem stated as a high-level description. The course will run through multiple such problem descriptions, discuss the design of programs to solve those problems using popular data structures, and have students implement those designs using a programming language. This course does not count for MS Computer Science requirements. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4372 Advanced Algorithms (4 Credits)

Advanced techniques for the design and analysis of algorithms and data structures; amortized complexity, self-adjusting data structures; randomized, online, and string algorithms; NP-completeness, approximation and exact exponential algorithms; flow networks. Prerequisite: COMP 3371. Cross listed with COMP 3372.

COMP 4384 Secure Software Engineering (4 Credits)

This course is concerned with systematic approaches for the design and implementation of secure software. While topics such as cryptography, networking, network protocols and large scale software development are touched upon, this is not a course on those topics. Instead, this course is on identification of potential threats and vulnerabilities early in the design cycle. The emphasis in this course is on methodologies and paradigms for identifying and avoiding security vulnerabilities, formally establishing the absence of vulnerabilities, and ways to avoid security holes in new software. There are programming assignments designed to make students practice and experience secure software design and development. Prerequisites: COMP 3006, COMP 3361, COMP 3356.

COMP 4401 Introduction to Python for Data Science (2 Credits)

This eight-week course enables aspiring graduate students in data science to meet their Python programming proficiency prior to matriculation. Students who complete this course will be able to write and modularize code, design efficient control structures, perform basic data operations, debug errors, distinguish data types and basic structures, and work within an integrated development environment.

COMP 4431 Data Mining (4 Credits)

Data Mining is the process of extracting useful information implicitly hidden in large databases. Various techniques from statistics and artificial intelligence are used here to discover hidden patterns in massive collections of data. This course is an introduction to these techniques and their underlying mathematical principles. Topics covered include: basic data analysis, frequent pattern mining, clustering, classification, and model assessment. Prerequisites: COMP 4441 and COMP 4581.

COMP 4432 Machine Learning (4 Credits)

This course will give an overview of traditional machine learning techniques, their strengths and weaknesses, and the problems they are designed to solve. This will include the broad differences between supervised/unsupervised and reinforcement learning as well as associated learning problems such as classification and regression. Techniques covered, at the discretion of the instructor, may include approaches such as linear and logistic regression, support vector machines, kNN, decision trees, random forests, Naive Bayes, EM, k-Means, and PCA. After course completion, students will have a working knowledge of these approaches and experience applying them to learning problems. Graduate students will contribute and assignment or project to a digital portfolio on Github. Prerequisites: MATH 3009 and COMP 3006.

COMP 4433 Data Visualization (4 Credits)

This course explores visualization techniques and theory. The course covers how to use visualization tools to effectively present data as part of quantitative statements within a publication/report and as an interactive system. Both design principles (color, layout, scale, and psychology of vision) as well as technical visualization tools/languages will be covered. Graduate students will contribute one assignment or project to a personal portfolio on Github. Prerequisite: COMP 3006.

COMP 4441 Introduction to Probability and Statistics for Data Science & AI (4 Credits)

The course introduces fundamentals of probability for data science. Students survey data visualization methods and summary statistics, develop models for data, and apply statistical techniques to assess the validity of the models. The techniques will include parametric and nonparametric methods for parameter estimation and hypothesis testing for a single sample mean and two sample means, for proportions, and for simple linear regression. Students will acquire sound theoretical footing for the methods where practical, and will apply them to real-world data, primarily using R. Graduate students will contribute a course assignment or project to their personal portfolio in Github. Prerequisite: COMP 3009.

COMP 4442 Advanced Probability and Statistics for Data Science and AI (4 Credits)

This course builds on material in Probability and Statistics 1. Students will carry out model fitting and diagnostics for multiple regression, ANOVA, ANCOVA, and generalized linear models. Dimension reductions techniques such as PCA and Lasso are introduced, as are techniques for handling dependent data. The course introduces the principles of resampling and Bayesian Analysis. Students will acquire sound theoretical footing for the methods where practical, and will apply them to real-world data, primarily using R. Enforced Prerequisites: COMP 4441.

COMP 4447 Data Science Tools 1 (4 Credits)

Organizations are using data science to extract actionable insight from data. To highlight the hidden patterns in the data, this course equips students with essential sills for data collection, cleanup, transformation, feature engineering, summarization, visualization, and collaboration. Students will do assignments and a final project. This is a hands-on course. Students will use Python libraries, Linux commands, API requests, web-scraping, GitHub and various data sets to perform these activities. Prerequisites: COMP 3006.

COMP 4448 Data Science Tools 2 (4 Credits)

Building a successful predictive model is a multi-faceted process. This course focuses on hypothesis testing and the development of predictive models. Students will learn the data science process for model development while learning to program a variety of predictive algorithms. Students will do assignments and a final project. This is a hands-on course. Students will use Python libraries, Linux commands, and various data sets to perform these activities. Prerequisite: COMP 4447.

COMP 4449 Data Science & Al Capstone (4 Credits)

Data Science Capstone provides students an opportunity to demonstrate their expertise as data scientists. Students are expected to integrate prior knowledge and skills to design, develop, test, and present 'full-cycle' data science products, and apply them in real-world contexts. This includes assessing and communicating their value to decision-making. Two sets of challenges of increasing complexity are presented as mid-term and term projects. These two projects are implemented, documented, tested, and presented by the students or students' two-person teams. Prerequisites: COMP 4432.

COMP 4450 Machine Learning Operations (4 Credits)

This course introduces the engineering and deployment of machine learning systems. Students will learn essential technical and organizational skills needed to develop and deploy ML solutions, progressing from fundamental concepts through to practical implementation. Key topics include ML project lifecycle management, containerization, web application development, data management strategies, and cloud deployment. Focus will be given to the application of industry-standard tools and best practices for building production-ready machine learning systems. Prerequisites: COMP 3421 and COMP 4432.

COMP 4455 Shell Scripting and System Tools (4 Credits)

This course covers navigating and utilizing tools in a UNIX environment, including use of common command line utilities, Bash and Python shell scripting, source control via Git, pipes and I/O redirection, networking in Python and OS multi-processing/multi-threading. More emphasis will be placed on using these tools than on how those tools work. Prerequisite: COMP 3006.

COMP 4456 Deep Learning for Sequence Data (4 Credits)

This course introduces modern approaches to analyzing sequential data, with a focus on deep learning methods for time series and natural language processing. Students will develop practical skills in building and implementing neural network models for sequential data analysis, while gaining a thorough understanding of the underlying concepts. Through hands-on projects and real-world applications, students will learn to process, analyze, and generate predictions from various types of sequential data. The course emphasizes practical implementation and modern deep learning frameworks, bridging the gap between traditional statistical methods and contemporary neural network approaches. Prerequisite: COMP 4432.

COMP 4490 Understanding AI (4 Credits)

Understanding Artificial Intelligence provides a comprehensive introduction to artificial intelligence (AI) for students of all backgrounds. This course explores the diverse approaches to AI, including rule-based systems, expert systems, knowledge representation, search algorithms, machine learning, natural language processing, robotics, and human-AI interaction. Students will gain hands-on experience with AI tools and applications while critically examining their impact on society. The course emphasizes the capabilities, limitations, and ethical considerations of AI, preparing students to engage thoughtfully with AI technologies in various fields.

COMP 4491 Applications of Generative AI (4 Credits)

Applications of Generative Artificial Intelligence is a hands-on course explores the transformative power of generative artificial intelligence (AI) across various industries. Students will engage directly with generative AI tools and techniques, including text generation, image synthesis, music composition, code generation, and more. Through practical exercises, projects, and case studies, students will develop a deep understanding of how generative AI can enhance creativity, automate workflows, and drive innovation in diverse fields. This course is designed for students who have completed COMP 4490 and want to apply AI in practical, industry-relevant contexts. Prerequisite: COMP 4490 and non-majors.

COMP 4495 AI Design Project (4 Credits)

The Artificial Intelligence Design Project serves as the culminating experience for students who have completed COMP 4490 and COMP 4491. This course provides an opportunity for students to apply their AI knowledge and skills to a self-directed project in a domain of their choice. Over ten weeks, students will identify a problem, design an AI-driven solution, and develop a functional prototype or proof-of-concept. Emphasizing creativity, problem-solving, and ethical considerations, this capstone-style course enables students to make a tangible impact in their field. The course includes milestone check-ins, peer reviews, and a final presentation to showcase their work. Pre-requisite: COMP 3490 and COMP 3491.

COMP 4501 Introduction to Artificial Intelligence (4 Credits)

Introduces a variety of Artificial Intelligence concepts and techniques, relevant to a broad range of applications. Students survey multiple techniques including search, knowledge representation and reasoning, probabilistic inference, machine learning, and natural language processing. Examines concepts of constraint programming, evolutionary computation and non-standard computation. Graduate students will also consider current political, economic, and societal issues related to artificial intelligence through reading and discussion. Prerequisites: COMP 3004 or equivalent.

COMP 4525 Adv. Human Centered AI - Mind Reading Machines (4 Credits)

This course explores a key intersection of Artificial Intelligence (AI) and Human-Computer Interaction (HCI). How can AI enhance our interactions with computers by catering to our individual needs and differences? Can we teach computers to understand people's thoughts and feelings to improve overall interaction? Humans often adjust their communication when they notice the person they're talking to is frustrated—why can't computers do the same? In this interdisciplinary, research-focused course, you will read, present, and discuss seminal papers at the intersection of AI and HCI, including (but not limited to) affective computing, physiological computing, augmented cognition, and multimodal interaction. ## Learning Objectives (General Goal) Demonstrate a broad understanding of the intersections between Human-Computer Interaction and Artificial Intelligence, with an emphasis on user modeling. (LO1) Recognize how theories from fields outside of Computer Science can inform and enhance Computer Science practices. (LO2) Develop knowledge of state-of-the-art user modeling techniques, including practical applications and associated challenges. (LO3) Develop critical thinking and scientific communication skills related to current AI topics, including science writing and scientific discourse. (LO4 - Graduate Students Only) Consider how the intersection of Humans and Artificial Intelligence impacts your own research and work. Consider the ethical challenges of your own work more deeply and how these may be mitigated.

COMP 4531 Deep Learning: Model Design and Application (4 Credits)

This course addresses the foundational concepts and components of Artificial Neural Networks (ANN), highlighting their capabilities, strengths, and weaknesses as a machine learning algorithm. Students taking this course will develop ANN models from scratch in Python as a basis for understanding their design as well as the underlying mechanics and calculations that shape their behavior. Key topics such as forward-backward propagation, loss function characteristics and optimization will be considered in relation to model design and computational efficiency as well as to problems such as exploding and vanishing gradients. Training strategies (e.g., dropout, initialization, batch normalization) will further enable students to assess trade-offs in model bias & variance. Coupled with hands-on assignments, these building blocks provide the knowledge and skills required to effectively design and implement ANN models that are ethically and technically sound. As well as foreground important architectures such as Convolutional ANNs, Recurrent ANNs, LSTMS, and Transformers as well as their applicability to modern problems. Student learning and proficiency will be assessed based on a combination of quizzes, coding assignments, exams, and a culminating project. Prerequisite: COMP 4432.

COMP 4581 Algorithms for Data Science & Artificial Intelligence (4 Credits)

This course introduces the design and analysis of algorithms within the context of data science and artificial intelligence. Topics include; asymptotic complexity and algorithm design techniques such as incremental, divide and conquer, dynamic programming, randomization, greedy algorithms, and advanced sorting techniques. Examples to illustrate techniques are drawn from multi-dimensional clustering (k-means and probabilistic), regression, decision trees, order statistics, data mining using apriori algorithms, and algorithms for generating combinatorial objects. Graduate students will contribute at least 1 assignment to their personal portfolio on Github. Prerequisite: COMP 3006.

COMP 4591 Computational Geometry (4 Credits)

This class deals with the design and implementation of efficient algorithms for problems defined over geometric objects, such as points, lines, polygons, surfaces, etc. The methods and algorithms covered find applications in many areas, including computer graphics (e.g., hidden surface removal), computer-aided design and manufacturing (e.g., 3D printing), machine learning (e.g., supervised and unsupervised classification), geographic information systems (e.g. terrain visibility), robotics (e.g., motion planning), data mining (e.g., dimensionality reduction), and computer vision (3D reconstruction), to name a few. Fundamental geometric problems such as partitioning, proximity, intersection, convexity, visibility, point location, and motion planning are focused on. Efficient data structures and algorithms for their solutions and design techniques germane to the field, such as divide-and-conquer, plane sweep, randomization, duality, etc. are discussed in detail. Practical methods for the robust implementation of geometric algorithms are also covered. Prerequisites: COMP 3200 and COMP 3371. This course satisfies the Theory requirement for graduate students.

COMP 4600 Seminar in Computer Science (0-4 Credits)

Preparation and presentation of lectures on some aspect of current research in computer science; topics not generally encountered in formal courses, may include robotics, pattern recognition, parallel processing, computer applications. 10- to 15- page paper with bibliography required.

COMP 4621 Computer Networking (4 Credits)

The Internet is arguably the most transformative invention in recent history and is at its core a massive global computer network (of networks). Students in this course learn how the Internet works, from the highest-level application layer to the lowest-level hardware layer. Topics covered include the OSI and TCP/IP reference models, physical transmission methods, error detection and correction, addressing, routing algorithms, congestion control and more. Prerequisites: COMP 3006, COMP 3361 (or instructor approval). Cross listed with COMP 3621.

COMP 4701 Special Tpcs-Computer Graphics (1-4 Credits)

COMP 4702 Advanced Topics-Database (3 Credits)

COMP 4703 Adv Topics-Artificial Intell (1-4 Credits)

COMP 4704 Advanced Topics-Systems (3-4 Credits)

COMP 4705 Advanced Topics-Programming (1-4 Credits)

COMP 4709 Special Tpcs-Computer Security (1-4 Credits)

COMP 4711 Special Topics in Data Science and AI (4 Credits)

Special Topics in Data Science highlights selected methods & applications in machine learning that are not specifically addressed within the curriculum. Areas of study may include, but are not limited to, natural language processing, recommender systems, data science for social justice, machine learning operations, generative AI and more. Special Topics in Data Science will be offered as an elective on an intermittent basis. Prerequisites: COMP 4432 and COMP 4441.

COMP 4721 Computer Security (4 Credits)

This course gives students an overview of computer and system security along with some cryptography. Some network security concepts are also included. Other concepts include coverage of risks and vulnerabilities, policy formation, controls and protection methods, role-based access controls, database security, authentication technologies, host-based and network-based security issues. Prerequisites: COMP 3006, COMP 3361 (or advisor/ instructor approval).

COMP 4722 Network Security (4 Credits)

Network Security covers tools and techniques employed to protect data during transmission. It spans a broad range of topics including authentication systems, cryptography, key distribution, firewalls, secure protocols and standards, and overlaps with system security concepts as well. This course will provide an introduction to these topics, and supplement them with hands-on experience. In addition, students will perform an extensive analysis, or development of a security related product independently. Prerequisites: COMP 4721.

COMP 4723 Ethical Hacking (4 Credits)

Ethical hacking is the process of probing computer systems for vulnerabilities and exposing their presence through proof-of-concept attacks. The results of such probes are then utilized in making the system more secure. This course will cover the basics of vulnerability research, foot printing targets, discovering systems and configurations on a network, sniffing protocols, firewall hacking, password attacks, privilege escalation, rootkits, social engineering attacks, web attacks, and wireless attacks, among others. Prerequisites: COMP 3361, or COMP 3001, 3002, 3003, and 3004.

COMP 4724 Systems Security Management (4 Credits)

This course covers basic system administration tasks on a Unix environment, with a special focus on command line navigation, file/process access control, setting up network configurations, and managing services related to networks and their security. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4799 Capstone Project in Cybersecurity (1-8 Credits)

The purpose of the cybersecurity capstone project is to provide an integrative experience that ties together the learning outcomes from academic coursework undertakings and industry skills necessary to be productive in delivering an end product. Students will engage in one of many options available, such as involvement in a research project, a case study, a product development project, or an extensive survey paper. Capstone projects are presented at the end of the quarter in front of a representative group. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4991 Independent Study (1-12 Credits)

Independent study on a particular topic supervised by a faculty member. Student must find a faculty member who will supervise work on the topic. Cannot be arranged for any course that appears in regular course schedule for that particular year.

COMP 4995 Independent Research (1-17 Credits)

Research projects undertaken in conjunction with a faculty member.

COMP 5991 Independent Study (1-17 Credits)

COMP 5995 Independent Research (1-17 Credits)

Courses

COMP 3001 C and C++ Programming Foundations for New Graduate Students (4 Credits)

This accelerated course covers the basics of discrete mathematics including functions, relations, counting, logic, proofs etc that is necessary to attend CS graduate school. In addition, it includes an introduction to programming and algorithm analysis. Enrollment restricted to graduate students.

COMP 3002 C and C++ Foundations II for New Graduate Students (4 Credits)

This accelerated course continues to build on the basics of discrete mathematics by covering material including advanced counting, recurrences, graphs, trees, traversals, automata etc. that is necessary to attend Computer Science graduate school. In addition, it includes an introduction to additional algorithms and data structures. Prerequisite: COMP 3001.

COMP 3003 Foundations in Computer Systems (4 Credits)

This course introduces computer systems, including instruction set architectures; memory hierarchies including registers, caching, virtual memory, paging, and segmentation; number representations; binary arithmetic and operations; assembly language instructions; and pipelining in the CPU.

COMP 3004 Foundations in Discrete Structures & Algorithms (4 Credits)

Both discrete mathematics and an understanding of algorithms along with their analysis form principle foundations in computer science. In this course, the fundamentals of discrete mathematics including functions, relations, counting, logic, proofs, counting, recurrences, and probability are covered. In addition, beginning data structures and algorithms are covered including linked-lists, graphs, hash-tables, sorting, and binary search. An analysis of these data structures and algorithms is also covered through big-O notation and proof methods.

COMP 3005 Foundations in Python Programming (4 Credits)

This accelerated course covers the basics of Python programming. By the end of the course students will be able to develop, design and implement Python programs, explain the differences between data types, learn to read from and write to files, understand and use data structures, understand and use object oriented programming, and use Python packages.

COMP 3006 Python Software Development (4 Credits)

This accelerated course covers advanced Python programming for data scientists and cybersecurity professionals. Course Objectives: name and demonstrate proficiency using advanced Python programming techniques; analyze a programming task and create a development plan and high-level software design that accomplishes the task; relate common portions of the Python standard library to specific programming tasks; understand and apply aspects of the Python scientific programming ecosystem to achieve an analysis goal. Prerequisites: COMP 3005.

COMP 3007 Foundations in Data Science Mathematics I (4 Credits)

This course presents the elements of calculus essential for work in data science. Students will study differentiation and integration in the context of probability density and of optimization.

COMP 3008 Foundations in Data Science Mathematics II (4 Credits)

This course presents the elements of linear algebra and discrete math essential for subsequent coursework in data science.

COMP 3009 Essential Math for Data Science and AI (4 Credits)

The primary objective of the course is to empower students with the mathematical tools most used in data science. Students will develop an understanding of fundamental topics such as matrix operations, eigenvectors, and singular value decomposition (SVD), along with key calculus principles, including derivatives and integrals, with a focus on their applications in data science. The course also explores elements of multivariate calculus and optimization techniques to solve real-world problems, as well as probability concepts relevant to modeling uncertainty and variability in data. Additionally, students will gain exposure to implementing mathematical models using Python libraries such as NumPy, Pandas, and Matplotlib to analyze and manipulate data. By synthesizing these mathematical principles, students will be prepared for more advanced topics in data science and machine learning. Graduate student will be expected to upload a course presentation/project assignment to their individual Github portfolio.

COMP 3200 Discrete Structures (4 Credits)

Discrete mathematical structures and non-numerical algorithms; graph theory, elements of probability, propositional calculus, Boolean algebras; emphasis on applications to computer science. Prerequisites: COMP 2300 and COMP 1353 for undergraduates and COMP 3004 for graduates.

COMP 3351 Programming Languages (4 Credits)

Learn the fundamentals of programming languages through functional programming through an in-depth understanding of syntax and semantics around program structures and how programming languages are parsed and interpreted. Understand recursion as a fundamental problem-solving paradigm and the important role that higher order types and kinds play in eliminating errors and simplifying software development. Satisfies the Programming Language elective requirement. Prerequisites: COMP 2362 and COMP 2370.

COMP 3352 Elements of Compiler Design (4 Credits)

Techniques required to design and implement a compiler; topics include lexical analysis, grammars and parsers, type-checking, storage allocation and code generation. Prerequisite: COMP 3351.

COMP 3353 Compiler Construction (4 Credits)

Design and implementation of a major piece of software relevant to compilers. Prerequisite: COMP 3352.

COMP 3356 Introductory C/C++ Programming (4 Credits)

This course introduces unmanaged programming language concepts to students whose primary programming experience is in a managed language (Java/Python, etc.). Concepts like type safety, manual memory management and "unsafe" library functions are covered. Common pitfalls in these languages from which most security issues arise are explained and students gain experience in understanding such code and evaluating it for program errors. Students will also be introduced to important compiled language concepts of static/dynamic linking, compilation and debugging. Prerequisites: COMP 3006.

COMP 3361 Operating Systems I (4 Credits)

Operating systems functions and concepts; processes, process communication, synchronization; processor allocation, memory management in multiprogramming, time sharing systems. Prerequisites: for undergraduates: (COMP 2355 and COMP 2691) or COMP 2361; COMP 2370; for graduate students: COMP 3003, 3004, and 3005.

COMP 3371 Data Structures & Algorithms (4 Credits)

Design and analysis of algorithms and data structures; asymptotic complexity, recurrence relations, lower bounds; algorithm design techniques such as incremental, divide-and-conquer, dynamic programming, iterative improvement, greedy algorithms; randomized data structures and algorithms. Prerequisites: COMP 2370 or equivalent and COMP 3200.

COMP 3372 Advanced Algorithms (4 Credits)

Advanced techniques for the design and analysis of algorithms and data structures; amortized complexity, self-adjusting data structures; randomized, online, and string algorithms; NP-completeness, approximation and exact exponential algorithms; flow networks.

COMP 3381 Software Engineering I (4 Credits)

An introduction to software engineering. Topics include software processes, requirements, design, development, validation and verification and project management. Cross-listed with COMP 4381. Prerequisites: COMP 3351; COMP 3361 or COMP 2362; or instructor permission.

COMP 3382 Software Engineering II (4 Credits)

Continuation of COMP 3381. Topics include component-based software engineering, model-driven architecture, and service-oriented architecture. Prerequisite: COMP 3381.

COMP 3411 Web Programming II (4 Credits)

In this course you will learn how to develop a full-stack web application that is capable of serving dynamic content from a database. Furthermore, you will learn the core design concepts and principles that will enable you to develop scalable and easy to maintain webapplications - a set of skills that will serve you well in both your personal and professional projects in the future. Prerequisite: COMP 3410.

COMP 3412 Web Projects: Web Development III (4 Credits)

In this course you will learn how to develop, as a group, a full-stack web application that is capable of serving dynamic content from a database. We will use the MongoDB, ExpressJS, Angular, and Node.js (MEAN) software stack to work on a real-life problem presented to us by an external product owner. In the class we will use the Scrum framework for Agile development to work, as a software team, through several sprints of development. You will be peer reviewing each other throughout the course, and the product owner will also be reviewing your product through end-of-sprint demos as features are completed. The goal for this class is for it to be a fun, collaborative, and educational environment that demonstrates what it is like to work as a real software team. Prerequisite: COMP 3411.

COMP 3421 Database Organization & Management I (4 Credits)

An introductory class in database management systems covering both relational and non-relational databases with an emphasis on relational. Topics include database design, ER modeling, relational algebra, SQL, scripting, and embedded SQL. Each student will design, load, query and update a nontrivial database using a relational database management system (RDBMS). In addition, an introduction to a NoSQL database will be included. Graduate students will read one or two relevant technical papers and write a summary report. Prerequisites: for undergraduates: COMP 1353 or COMP 2673; for graduates: COMP 3005 or COMP3006 (MS Data Science).

COMP 3424 NoSQL Databases (4 Credits)

In this course, students learn what NoSQL databases are, learn to identify the differences between them, and gain a fundamental understanding between SQL, relational databases, and NoSQL databases. Students further explore which type of NoSQL database is the correct one given a usecases, examining types, methods of communicating with it, contrasts to other NoSQL databases, performance and scalability. Prerequisites: for undergraduates, COMP 2355 or COMP 2361; for graduates: COMP 3005.

COMP 3431 Data Mining (4 Credits)

Data Mining is the process of extracting useful information implicitly hidden in large databases. Various techniques from statistics and artificial intelligence are used here to discover hidden patterns in massive collections of data. This course is an introduction to these techniques and their underlying mathematical principles. Topics covered include: basic data analysis, frequent pattern mining, clustering, classification, and model assessment. Prerequisites: COMP 2370.

COMP 3621 Computer Networking (4 Credits)

An introduction to computer networks with an emphasis on Internet protocols. Topics include: internet design, application layer protocols such as SMTP and HTTP, session layer protocols including TCP and UDP, the internet protocol (IP), link layer technology such as Ethernet, and security issues related to networking. Programming experience of client/server architectures using sockets and TCP/UDP through projects is emphasized. Prerequisites: for undergraduates: (COMP 2355 or COMP 2361) and COMP 2370; for graduates COMP 3004 and COMP 3006. Cross listed with COMP 4621.

COMP 3681 Networking for Games (4 Credits)

Implementing the networking code for multiplayer games is a complex task that requires an understanding of performance, security, game design, and advanced programming concepts. In this course, students are introduced to the networking stack and how this is connected to the Internet, learn how to write protocols for games, and implement several large games using a game engine that demonstrate the kind of networking and protocols required by different genres of games. In addition, tools are introduced that help understand and debug networking code, simplify the creation of protocols, and make the development of networking code easier.

COMP 3701 Topics in Computer Graphics (4 Credits)

COMP 3702 Topics in Database (4 Credits)

COMP 3703 Topics-Artificial Intelligence (4 Credits)

COMP 3704 Advanced Topics: Systems (4 Credits)

COMP 3705 Topics in Computer Science (1-4 Credits)

COMP 3731 Computer Forensics (4 Credits)

Computer Forensics involves the examination of information contained in digital media with the aim of recovering and analyzing latent evidence. This course will provide students an understanding of the basic concepts in preservation, identification, extraction and validation of forensic evidence in a computer system. The course covers many systems level concepts such as disk partitions, file systems, system artifacts in multiple operating systems, file formats, email transfers, and network layers, among others. Students work extensively on raw images of memory and disks, and in the process, build components commonly seen as features of commercial forensics tools (e.g. file system carver, memory analyzer, file carver, and steganalysis). Prerequisites: COMP 3361; COMP 2355 or 2361 for undergraduates; COMP 3006 for graduates.

COMP 3801 Introduction Computer Graphics (4 Credits)

Fundamentals of 3D rendering including the mathematics behind coordinate systems, projections, clipping, hidden surface removal, shadows, lighting models, shading models, and mapping techniques. Significant use of 3D APIs through shader programming is covered along with the basics of 3D model representation and animations. Satisfies "Advanced Programming" requirements for graduate students. Prerequisites: COMP 2370, MATH 1952 or 1962.

COMP 3820 Introduction to Game Programming (4 Credits)

Learn the fundamentals of game programming by creating 2D and 3D games using a modern game engine. Topics include working with 2D/3D art assets, character controllers, physics, camera systems, 2D and 3D animation integration, lighting, audio, user interfaces, artificial intelligence, and level design. The emphasis in this course is on game programming and implementing game mechanics in fully-working games. Prerequisites: COMP 2381 and COMP 2821.

COMP 3821 Game Programming I (4 Credits)

A continuation of Introduction to Game Programming, this course introduces advanced topics that are essential as future game programmers. Students have the opportunity to learn game engine architecture, 2D and 3D linear algebra for graphics, sprites, 2D and 3D animations, input handling, finite state machines, particle systems, user interfaces, game audio, and artificial intelligence for games. Prerequisites: COMP 2370 and COMP 3820.

COMP 3822 Game Programming II (4 Credits)

In this course, students learn how to work with a 3D game engine and build 3D games. Topics include algorithms, mathematics for 3D game engines, scene management, animations, 3D shaders, particle systems, physics for games, UIs, terrain systems, and working with higher-level scripting languages on top of the low-level implementation language. Prerequisites: COMP 3821. Suggested corequisite or prerequisite: COMP 3801.

COMP 3904 Internship/Co-Op in Computing (0-10 Credits)

Experiential learning through employment with a company to work in computer science. Students are expected to find the internship/co-op and connect their hiring manager with an advisor in the department to get approval. Requirements for approval include a job description that shows what will be accomplished throughout the quarter and a final report from the hiring manager to report on their performance so that a grade may be assigned. Prerequisites: COMP 2370 and approval of department. MS Data Science students: practical experience working under the supervision of data science employer and a data science faculty advisor. Learning outcomes will be assessed via student work such as summary reports, literature reviews, presentations, code notebooks and/or repositories. Prerequisites: permission of Data Science Faculty Director.

COMP 3991 Independent Study (1-10 Credits)

Cannot be arranged for any course that appears in the regular course schedule for that particular year.

COMP 4100 Human-Computer Interaction (4 Credits)

Introduces students in computer science and other disciplines to principles of and research methods in human-computer interaction (HCI). HCI is an interdisciplinary area concerned with the study of interaction between humans and interactive computing systems. Research in HCI looks at cognitive and social phenomena surrounding human use of computers with the goal of understanding their impact and creating guidelines for the design and evaluation of software, interfaces, physical products, and services in industry. No prerequisites are required to take the course and students from all disciplines are welcome. Cross listed with COMP 3100.

COMP 4333 Parallel and Distributed Computing (4 Credits)

Current techniques for effective use of parallel processing and large scale distributed systems. Programming assignments will give students experience in the use of these techniques. Specific topics will vary from year to year to incorporate recent developments. This course qualifies for the Computer Science "Advanced Programming" requirement. Prerequisites: COMP2370 and COMP2355, or equivalent.

COMP 4334 Parallel and Distributed Computing for Data Science and AI (4 Credits)

Current techniques for effective use of parallel processing and large-scale distributed systems for data science. Programming assignments will give students experience in the use of these techniques. Specific topics will vary from year to year to incorporate recent developments. This course is not to be used for the MS Computer Science. Graduate students are required to contribute at least one course assignment to their personal Github portfolio. Prior completion or concurrent enrollment in COMP 4432 is strongly recommended. Prerequisite: COMP 3006.

COMP 4355 Advanced System Programming (4 Credits)

This course covers programming in a UNIX environment, including use of common command line utilities, scripting, source control via Git, and integration of POSIX system calls into C/C++ code. These features will be leveraged to solve practical problems cleanly and efficiently. More emphasis will be placed on using these features than on how those features work. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4370 Algorthmic Problem Solving (4 Credits)

The course is intended for students who are familiar with programming syntax but have not had much experience writing computer programs to solve a problem stated as a high-level description. The course will run through multiple such problem descriptions, discuss the design of programs to solve those problems using popular data structures, and have students implement those designs using a programming language. This course does not count for MS Computer Science requirements. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4372 Advanced Algorithms (4 Credits)

Advanced techniques for the design and analysis of algorithms and data structures; amortized complexity, self-adjusting data structures; randomized, online, and string algorithms; NP-completeness, approximation and exact exponential algorithms; flow networks. Prerequisite: COMP 3371. Cross listed with COMP 3372.

COMP 4384 Secure Software Engineering (4 Credits)

This course is concerned with systematic approaches for the design and implementation of secure software. While topics such as cryptography, networking, network protocols and large scale software development are touched upon, this is not a course on those topics. Instead, this course is on identification of potential threats and vulnerabilities early in the design cycle. The emphasis in this course is on methodologies and paradigms for identifying and avoiding security vulnerabilities, formally establishing the absence of vulnerabilities, and ways to avoid security holes in new software. There are programming assignments designed to make students practice and experience secure software design and development. Prerequisites: COMP 3006, COMP 3361, COMP 3356.

COMP 4401 Introduction to Python for Data Science (2 Credits)

This eight-week course enables aspiring graduate students in data science to meet their Python programming proficiency prior to matriculation. Students who complete this course will be able to write and modularize code, design efficient control structures, perform basic data operations, debug errors, distinguish data types and basic structures, and work within an integrated development environment.

COMP 4431 Data Mining (4 Credits)

Data Mining is the process of extracting useful information implicitly hidden in large databases. Various techniques from statistics and artificial intelligence are used here to discover hidden patterns in massive collections of data. This course is an introduction to these techniques and their underlying mathematical principles. Topics covered include: basic data analysis, frequent pattern mining, clustering, classification, and model assessment. Prerequisites: COMP 4441 and COMP 4581.

COMP 4432 Machine Learning (4 Credits)

This course will give an overview of traditional machine learning techniques, their strengths and weaknesses, and the problems they are designed to solve. This will include the broad differences between supervised/unsupervised and reinforcement learning as well as associated learning problems such as classification and regression. Techniques covered, at the discretion of the instructor, may include approaches such as linear and logistic regression, support vector machines, kNN, decision trees, random forests, Naive Bayes, EM, k-Means, and PCA. After course completion, students will have a working knowledge of these approaches and experience applying them to learning problems. Graduate students will contribute and assignment or project to a digital portfolio on Github. Prerequisites: MATH 3009 and COMP 3006.

COMP 4433 Data Visualization (4 Credits)

This course explores visualization techniques and theory. The course covers how to use visualization tools to effectively present data as part of quantitative statements within a publication/report and as an interactive system. Both design principles (color, layout, scale, and psychology of vision) as well as technical visualization tools/languages will be covered. Graduate students will contribute one assignment or project to a personal portfolio on Github. Prerequisite: COMP 3006.

COMP 4441 Introduction to Probability and Statistics for Data Science & AI (4 Credits)

The course introduces fundamentals of probability for data science. Students survey data visualization methods and summary statistics, develop models for data, and apply statistical techniques to assess the validity of the models. The techniques will include parametric and nonparametric methods for parameter estimation and hypothesis testing for a single sample mean and two sample means, for proportions, and for simple linear regression. Students will acquire sound theoretical footing for the methods where practical, and will apply them to real-world data, primarily using R. Graduate students will contribute a course assignment or project to their personal portfolio in Github. Prerequisite: COMP 3009.

COMP 4442 Advanced Probability and Statistics for Data Science and AI (4 Credits)

This course builds on material in Probability and Statistics 1. Students will carry out model fitting and diagnostics for multiple regression, ANOVA, ANCOVA, and generalized linear models. Dimension reductions techniques such as PCA and Lasso are introduced, as are techniques for handling dependent data. The course introduces the principles of resampling and Bayesian Analysis. Students will acquire sound theoretical footing for the methods where practical, and will apply them to real-world data, primarily using R. Enforced Prerequisites: COMP 4441.

COMP 4447 Data Science Tools 1 (4 Credits)

Organizations are using data science to extract actionable insight from data. To highlight the hidden patterns in the data, this course equips students with essential sills for data collection, cleanup, transformation, feature engineering, summarization, visualization, and collaboration. Students will do assignments and a final project. This is a hands-on course. Students will use Python libraries, Linux commands, API requests, web-scraping, GitHub and various data sets to perform these activities. Prerequisites: COMP 3006.

COMP 4448 Data Science Tools 2 (4 Credits)

Building a successful predictive model is a multi-faceted process. This course focuses on hypothesis testing and the development of predictive models. Students will learn the data science process for model development while learning to program a variety of predictive algorithms. Students will do assignments and a final project. This is a hands-on course. Students will use Python libraries, Linux commands, and various data sets to perform these activities. Prerequisite: COMP 4447.

COMP 4449 Data Science & Al Capstone (4 Credits)

Data Science Capstone provides students an opportunity to demonstrate their expertise as data scientists. Students are expected to integrate prior knowledge and skills to design, develop, test, and present 'full-cycle' data science products, and apply them in real-world contexts. This includes assessing and communicating their value to decision-making. Two sets of challenges of increasing complexity are presented as mid-term and term projects. These two projects are implemented, documented, tested, and presented by the students or students' two-person teams. Prerequisites: COMP 4432.

COMP 4450 Machine Learning Operations (4 Credits)

This course introduces the engineering and deployment of machine learning systems. Students will learn essential technical and organizational skills needed to develop and deploy ML solutions, progressing from fundamental concepts through to practical implementation. Key topics include ML project lifecycle management, containerization, web application development, data management strategies, and cloud deployment. Focus will be given to the application of industry-standard tools and best practices for building production-ready machine learning systems. Prerequisites: COMP 3421 and COMP 4432.

COMP 4455 Shell Scripting and System Tools (4 Credits)

This course covers navigating and utilizing tools in a UNIX environment, including use of common command line utilities, Bash and Python shell scripting, source control via Git, pipes and I/O redirection, networking in Python and OS multi-processing/multi-threading. More emphasis will be placed on using these tools than on how those tools work. Prerequisite: COMP 3006.

COMP 4456 Deep Learning for Sequence Data (4 Credits)

This course introduces modern approaches to analyzing sequential data, with a focus on deep learning methods for time series and natural language processing. Students will develop practical skills in building and implementing neural network models for sequential data analysis, while gaining a thorough understanding of the underlying concepts. Through hands-on projects and real-world applications, students will learn to process, analyze, and generate predictions from various types of sequential data. The course emphasizes practical implementation and modern deep learning frameworks, bridging the gap between traditional statistical methods and contemporary neural network approaches. Prerequisite: COMP 4432.

COMP 4490 Understanding AI (4 Credits)

Understanding Artificial Intelligence provides a comprehensive introduction to artificial intelligence (AI) for students of all backgrounds. This course explores the diverse approaches to AI, including rule-based systems, expert systems, knowledge representation, search algorithms, machine learning, natural language processing, robotics, and human-AI interaction. Students will gain hands-on experience with AI tools and applications while critically examining their impact on society. The course emphasizes the capabilities, limitations, and ethical considerations of AI, preparing students to engage thoughtfully with AI technologies in various fields.

COMP 4491 Applications of Generative AI (4 Credits)

Applications of Generative Artificial Intelligence is a hands-on course explores the transformative power of generative artificial intelligence (AI) across various industries. Students will engage directly with generative AI tools and techniques, including text generation, image synthesis, music composition, code generation, and more. Through practical exercises, projects, and case studies, students will develop a deep understanding of how generative AI can enhance creativity, automate workflows, and drive innovation in diverse fields. This course is designed for students who have completed COMP 4490 and want to apply AI in practical, industry-relevant contexts. Prerequisite: COMP 4490 and non-majors.

COMP 4501 Introduction to Artificial Intelligence (4 Credits)

Introduces a variety of Artificial Intelligence concepts and techniques, relevant to a broad range of applications. Students survey multiple techniques including search, knowledge representation and reasoning, probabilistic inference, machine learning, and natural language processing. Examines concepts of constraint programming, evolutionary computation and non-standard computation. Graduate students will also consider current political, economic, and societal issues related to artificial intelligence through reading and discussion. Prerequisites: COMP 3004 or equivalent.

COMP 4525 Adv. Human Centered AI - Mind Reading Machines (4 Credits)

This course explores a key intersection of Artificial Intelligence (AI) and Human-Computer Interaction (HCI). How can AI enhance our interactions with computers by catering to our individual needs and differences? Can we teach computers to understand people's thoughts and feelings to improve overall interaction? Humans often adjust their communication when they notice the person they're talking to is frustrated—why can't computers do the same? In this interdisciplinary, research-focused course, you will read, present, and discuss seminal papers at the intersection of AI and HCI, including (but not limited to) affective computing, physiological computing, augmented cognition, and multimodal interaction. ## Learning Objectives (General Goal) Demonstrate a broad understanding of the intersections between Human-Computer Interaction and Artificial Intelligence, with an emphasis on user modeling. (LO1) Recognize how theories from fields outside of Computer Science can inform and enhance Computer Science practices. (LO2) Develop knowledge of state-of-the-art user modeling techniques, including practical applications and associated challenges. (LO3) Develop critical thinking and scientific communication skills related to current AI topics, including science writing and scientific discourse. (LO4 - Graduate Students Only) Consider how the intersection of Humans and Artificial Intelligence impacts your own research and work. Consider the ethical challenges of your own work more deeply and how these may be mitigated.

COMP 4531 Deep Learning: Model Design and Application (4 Credits)

This course addresses the foundational concepts and components of Artificial Neural Networks (ANN), highlighting their capabilities, strengths, and weaknesses as a machine learning algorithm. Students taking this course will develop ANN models from scratch in Python as a basis for understanding their design as well as the underlying mechanics and calculations that shape their behavior. Key topics such as forward-backward propagation, loss function characteristics and optimization will be considered in relation to model design and computational efficiency as well as to problems such as exploding and vanishing gradients. Training strategies (e.g., dropout, initialization, batch normalization) will further enable students to assess trade-offs in model bias & variance. Coupled with hands-on assignments, these building blocks provide the knowledge and skills required to effectively design and implement ANN models that are ethically and technically sound. As well as foreground important architectures such as Convolutional ANNs, Recurrent ANNs, LSTMS, and Transformers as well as their applicability to modern problems. Student learning and proficiency will be assessed based on a combination of quizzes, coding assignments, exams, and a culminating project. Prerequisite: COMP 4432.

COMP 4581 Algorithms for Data Science & Artificial Intelligence (4 Credits)

This course introduces the design and analysis of algorithms within the context of data science and artificial intelligence. Topics include; asymptotic complexity and algorithm design techniques such as incremental, divide and conquer, dynamic programming, randomization, greedy algorithms, and advanced sorting techniques. Examples to illustrate techniques are drawn from multi-dimensional clustering (k-means and probabilistic), regression, decision trees, order statistics, data mining using apriori algorithms, and algorithms for generating combinatorial objects. Graduate students will contribute at least 1 assignment to their personal portfolio on Github. Prerequisite: COMP 3006.

COMP 4591 Computational Geometry (4 Credits)

This class deals with the design and implementation of efficient algorithms for problems defined over geometric objects, such as points, lines, polygons, surfaces, etc. The methods and algorithms covered find applications in many areas, including computer graphics (e.g., hidden surface removal), computer-aided design and manufacturing (e.g., 3D printing), machine learning (e.g., supervised and unsupervised classification), geographic information systems (e.g. terrain visibility), robotics (e.g., motion planning), data mining (e.g., dimensionality reduction), and computer vision (3D reconstruction), to name a few. Fundamental geometric problems such as partitioning, proximity, intersection, convexity, visibility, point location, and motion planning are focused on. Efficient data structures and algorithms for their solutions and design techniques germane to the field, such as divide-and-conquer, plane sweep, randomization, duality, etc. are discussed in detail. Practical methods for the robust implementation of geometric algorithms are also covered. Prerequisites: COMP 3200 and COMP 3371. This course satisfies the Theory requirement for graduate students.

COMP 4600 Seminar in Computer Science (0-4 Credits)

Preparation and presentation of lectures on some aspect of current research in computer science; topics not generally encountered in formal courses, may include robotics, pattern recognition, parallel processing, computer applications. 10- to 15- page paper with bibliography required.

COMP 4621 Computer Networking (4 Credits)

The Internet is arguably the most transformative invention in recent history and is at its core a massive global computer network (of networks). Students in this course learn how the Internet works, from the highest-level application layer to the lowest-level hardware layer. Topics covered include the OSI and TCP/IP reference models, physical transmission methods, error detection and correction, addressing, routing algorithms, congestion control and more. Prerequisites: COMP 3006, COMP 3361 (or instructor approval). Cross listed with COMP 3621.

COMP 4701 Special Tpcs-Computer Graphics (1-4 Credits)

COMP 4702 Advanced Topics-Database (3 Credits)

COMP 4703 Adv Topics-Artificial Intell (1-4 Credits)

COMP 4704 Advanced Topics-Systems (3-4 Credits)

COMP 4705 Advanced Topics-Programming (1-4 Credits)

COMP 4709 Special Tpcs-Computer Security (1-4 Credits)

COMP 4711 Special Topics in Data Science and AI (4 Credits)

Special Topics in Data Science highlights selected methods & applications in machine learning that are not specifically addressed within the curriculum. Areas of study may include, but are not limited to, natural language processing, recommender systems, data science for social justice, machine learning operations, generative AI and more. Special Topics in Data Science will be offered as an elective on an intermittent basis. Prerequisites: COMP 4432 and COMP 4441.

COMP 4721 Computer Security (4 Credits)

This course gives students an overview of computer and system security along with some cryptography. Some network security concepts are also included. Other concepts include coverage of risks and vulnerabilities, policy formation, controls and protection methods, role-based access controls, database security, authentication technologies, host-based and network-based security issues. Prerequisites: COMP 3006, COMP 3361 (or advisor/ instructor approval).

COMP 4722 Network Security (4 Credits)

Network Security covers tools and techniques employed to protect data during transmission. It spans a broad range of topics including authentication systems, cryptography, key distribution, firewalls, secure protocols and standards, and overlaps with system security concepts as well. This course will provide an introduction to these topics, and supplement them with hands-on experience. In addition, students will perform an extensive analysis, or development of a security related product independently. Prerequisites: COMP 4721.

COMP 4723 Ethical Hacking (4 Credits)

Ethical hacking is the process of probing computer systems for vulnerabilities and exposing their presence through proof-of-concept attacks. The results of such probes are then utilized in making the system more secure. This course will cover the basics of vulnerability research, foot printing targets, discovering systems and configurations on a network, sniffing protocols, firewall hacking, password attacks, privilege escalation, rootkits, social engineering attacks, web attacks, and wireless attacks, among others. Prerequisites: COMP 3361, or COMP 3001, 3002, 3003, and 3004.

COMP 4724 Systems Security Management (4 Credits)

This course covers basic system administration tasks on a Unix environment, with a special focus on command line navigation, file/process access control, setting up network configurations, and managing services related to networks and their security. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4799 Capstone Project in Cybersecurity (1-8 Credits)

The purpose of the cybersecurity capstone project is to provide an integrative experience that ties together the learning outcomes from academic coursework undertakings and industry skills necessary to be productive in delivering an end product. Students will engage in one of many options available, such as involvement in a research project, a case study, a product development project, or an extensive survey paper. Capstone projects are presented at the end of the quarter in front of a representative group. Prerequisites: COMP 3001, 3002, 3003, and 3004.

COMP 4991 Independent Study (1-12 Credits)

Independent study on a particular topic supervised by a faculty member. Student must find a faculty member who will supervise work on the topic. Cannot be arranged for any course that appears in regular course schedule for that particular year.

COMP 4995 Independent Research (1-17 Credits) Research projects undertaken in conjunction with a faculty member.

COMP 5991 Independent Study (1-17 Credits)

COMP 5995 Independent Research (1-17 Credits)

Electrical and Computer Engineering

Office: Ritchie School of Engineering and Computer Science Mail Code: 2155 E Wesley Ave, Room 283, Denver, CO 80208 Phone: 303.871.6618 Email: eceinfo@du.edu Web Site: ritchieschool.du.edu/departments/ECE (http://ritchieschool.du.edu/departments/ECE/)

Master's and Doctoral Degrees

Why study engineering at the University of Denver?

DU's Department of Electrical and Computer Engineering (ECE) is creating the future of technology by providing a graduate education that emphasizes both multi-disciplinary and cross-disciplinary knowledge. The distinguished faculty continues to create multi-disciplinary education programs that cover both depth and breadth, and research programs that incorporate and account for technological trends in research and development, along with industry. Graduate students will join the faculty in conducting cutting-edge basic and applied research in emerging disciplines developing novel and unique solutions to old and new problems and opportunities.

All laboratories in the Department contain state-of-the-art equipment and software to support basic and applied research in hardware and software design, hardware/software interfacing, communications and signal processing, image processing, computer vision and pattern recognition, optoelectronics, power and energy systems, robotics, mechatronic systems, intelligent systems, unmanned systems, and biosensing technologies, among other research areas. Small classes support our multi-disciplinary and real-time focus by providing close contact between students and faculty, which allows us to meet students' individual career goals.

Denver is a first-rate location for business, government and laboratory partnerships, and technology employment. The Colorado Front Range is consistently rated as one of the top high-tech areas in the country, and DU is located just minutes from the Denver Technological Center, the site of many top technology companies. The Department of Electrical and Computer Engineering is committed to active collaboration with these industry leaders. As a result, our students graduate with relevant research experience and a network of employment contacts in the technology sector that is second to none!

In addition, DU's ECE Department is one of the very few universities that offers BS, MS, and PhD degrees in Mechatronic Systems Engineering.

Doctor of Philosophy in Electrical and Computer Engineering

The objective of the PhD in Electrical and Computer Engineering degree program is to provide an educational environment that encourages students to develop the ability to contribute to the advancement of science, engineering and technology, through independent research. The PhD students of the 21st century may pursue academic, research, entrepreneurial, and/or industrial careers. We offer opportunities to develop individualized plans of study based on the students' previous experience and desired research areas. The plan of study allows students to work on interdisciplinary research, while also satisfying the PhD in ECE degree requirements.

Research requires an in-depth study of engineering problems with a broad knowledge base in science and engineering. Therefore, advanced courses are offered to strengthen the fundamentals and to broaden the engineering and science perspective. The minimum credit requirements are different for individuals entering a program with a closely related master's degree and for those entering with a bachelor's only. All requirements for the degree must be completed within seven years (eight years without a master's degree) from admission to candidacy. A grade of C- or better must be obtained in each course in order for that course to count toward the credit hour requirements. An overall minimum GPA of 3.0 is also required for graduation.

The PhD in ECE is appealing to students because it offers the much needed specialization component and the 'degree identity' required to be competitive in the job market. Graduates from this program will be well equipped to follow academic careers, or be hired in federal laboratories, industry and the private sector.

Doctor of Philosophy in Mechatronics Systems Engineering

The objective of the PhD in Mechatronics Systems Engineering (MSE) degree program is to provide an educational environment that encourages students to develop the ability to contribute to the advancement of science, engineering and technology, through independent research. The PhD students of the 21st century may pursue academic, research, entrepreneurial, and/or industrial careers. We offer opportunities to develop individualized plans of study based on the students' previous experience and desired research areas. The plan of study allows students to work on interdisciplinary research, while also satisfying the PhD in MSE degree requirements.

Research requires an in-depth study of engineering problems with a broad knowledge base in science and engineering. Therefore, advanced courses are offered to strengthen the fundamentals and to broaden the engineering and science perspective. The minimum credit requirements are different for individuals entering a program with a closely related master's degree and for those entering with a bachelor's only. All requirements for the degree

must be completed within seven years (eight years without a master's degree) from admission to candidacy. A grade of C- or better must be obtained in each course in order for that course to count toward the credit hour requirements. An overall minimum GPA of 3.0 is also required for graduation.

The PhD in MSE is at the forefront and intersection of the coupled disciplines of Electrical, Mechanical, Computer Engineering, and Computer Science. This unique degree is appealing to students because they will acquire the knowledge and ability to deal with and solve highly complex problems where integration is a key component. This degree provides a holistic approach to graduate education focusing on the ability to cover both breadth and depth of knowledge. Graduates of this program will lay the foundation for the modern engineering departments of the future, where 'integration' will be the key ingredient of studies.

Master of Science in Computer Engineering

The Master of Science in Computer Engineering (MSCpE) is designed to advance the student's knowledge in several areas of engineering. This degree provides breadth while permitting the student to achieve depth in a specialization area. This specialization area, with thematic sequences of courses, has been selected to coincide with those of high current interest as well as those emerging technologies that hold promise of increasing importance for the future. The purpose of this program is to serve the profession of engineering and the Colorado community through advanced study in computer engineering, electrical engineering, and other related fields. This program prepares the student for academic and industrial advancement. This program offers a thesis and a non-thesis option.

The Department of ECE offers both part-time and full-time programs. The Department recognizes that a student may be employed full-time while studying for a degree. The MSCpE degree program can generally be completed in about four years if one course is taken each quarter, but it is usually possible to take two courses per quarter, bringing completion time closer to the more common duration of two years. Also, students who select the one-year non-thesis will be able to graduate within 12 months, four academic quarters. For part-time students who are working in industry positions and who have chosen the thesis option, a topic related to the job function may be acceptable as the thesis research topic. Furthermore, a qualified staff member at the place of employment may be approved to serve as an Outside Committee Member on the thesis committee.

In addition, a grade of C- or better must be obtained in each course in order for that course to count toward the credit hour requirements. An overall minimum GPA of 3.0 is also required for graduation.

Master of Science in Electrical Engineering

The Master of Science in Electrical Engineering (MSEE) is designed to advance the student's knowledge in several areas of engineering. This degree provides breadth while permitting the student to achieve depth in a specialization area. This specialization area, with thematic sequences of courses, has been selected to coincide with those of high current interest as well as those emerging technologies that hold promise of increasing importance for the future. The purpose of this programs is to serve the profession of engineering and the Colorado community through advanced study in computer engineering, electrical engineering, and other related fields. This program prepares the student for academic and industrial advancement. This programs offers a thesis and a non-thesis option.

The Department of ECE offers both part-time and full-time programs. The Department recognizes that a student may be employed full-time while studying for a degree. The MSEE degree program can generally be completed in about four years if one course is taken each quarter, but it is usually possible to take two courses per quarter, bringing completion time closer to the more common duration of two years. Also, students who select the one-year non-thesis will be able to graduate within 12 months, four academic quarters. For part-time students who are working in industry positions and who have chosen the thesis option, a topic related to the job function may be acceptable as the thesis research topic. Furthermore, a qualified staff member at the place of employment may be approved to serve as an Outside Committee Member on the thesis committee.

In addition, a grade of C- or better must be obtained in each course in order for that course to count toward the credit hour requirements. An overall minimum GPA of 3.0 is also required for graduation.

Master of Science in Mechatronic Systems Engineering

The Master of Science in Mechatronic Systems Engineering (MSMSE) is designed to advance the student's knowledge in several areas of engineering. This degree provides breadth while permitting the student to achieve depth in a specialization area. This specialization area, with thematic sequences of courses, has been selected to coincide with those of high current interest as well as those emerging technologies that hold promise of increasing importance for the future. The purpose of this programs is to serve the profession of engineering and the Colorado community through advanced study in computer engineering, electrical engineering, and other related fields. This program prepares the student for academic and industrial advancement. This program offer a thesis and a non-thesis option.

The Department of ECE offers both part-time and full-time programs. The Department recognizes that a student may be employed full-time while studying for a degree. The MSMSE degree program can generally be completed in about four years if one course is taken each quarter, but it is usually possible to take two courses per quarter, bringing completion time closer to the more common duration of two years. Also, students who select the one-year non-thesis will be able to graduate within 12 months, four academic quarters. For part-time students who are working in industry positions and who have chosen the thesis option, a topic related to the job function may be acceptable as the thesis research topic. Furthermore, a qualified staff member at the place of employment may be approved to serve as an Outside Committee Member on the thesis committee.

In addition, a grade of C- or better must be obtained in each course in order for that course to count toward the credit hour requirements. An overall minimum GPA of 3.0 is also required for graduation.

Master of Science in Systems Engineering (Online)

The Master of Science degree in Systems Engineering (Online) (MSSY) along with the three Specialized Graduate Certificates covers the depth and breadth in systems design, analysis, synthesis, integration, testing, validation, and verification. We train our students with expertise in the fundamentals of the discipline of systems engineering. Our program has an emphasis on support for proposals after contract award, through critical design reviews, as well as systems design and integration and associated validation and verification activities, which are necessarily traceable to system requirements. We also provide practical exposure to the analytical and digital tools which are paramount to the evolving practice of systems engineering. This practical exposure is designed to enable the student to participate in rigorous post-test data analysis, model based design, model based systems engineering, as well as statistically relevant process improvement projects. Learned skills, knowledges, and case studies will be applicable to engineering professionals in many industries, particularly in regulated industries such as aerospace, biomedical, and autonomous vehicles.

The program is built for graduate students and industry professionals. The MSSY program is comprised of three Stackable Certificates that lead to the MS degree in Systems Engineering degree: Fundamentals of Systems Engineering, Systems Design & Architecture, and Systems Analytics and Practice. The program is delivered entirely online.

The MSSY degree program can generally be completed in about three years if two courses are taken each quarter, with each certificate being completed in approximately one year.

Students not interested in pursuing a degree but interested in taking an occasional course may register as special status students by following an abbreviated admissions process. However, only 9 QH earned as a special status student may be applied toward a MS degree.

Doctor of Philosophy in Electrical & Computer Engineering

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

Students with a MS in CpE, MS in MSE, MS in EE, MS in ME, or closely related areas may apply for admission to the PhD in ECE or PhD in MSE
programs. Admission with only a BS in this field is also possible, but students with only a BS degree are strongly encouraged to enroll first in
the MS (CpE, EE, MSE) programs. All graduate engineering courses presuppose mastery of the subject matter of a modern ABET-accredited
curriculum in engineering. Students with a BS in other engineering or related science fields and students with a BSCPE, BSEE, or BSME who have
not taken graduate academic work for some time may be required to complete preparatory courses that are prerequisites for the core courses of
the engineering concentrations on which the qualifying exams are based. These courses carry no credit toward the graduate degree.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Doctor of Philosophy in Mechatronic Systems Engineering

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

Students with a MS in CpE, MS in MSE, MS in EE, MS in ME, or closely related areas may apply for admission to the PhD in ECE or PhD in MSE
programs. Admission with only a BS in this field is also possible, but students with only a BS degree are strongly encouraged to enroll first in
the MS (CpE, EE, MSE) programs. All graduate engineering courses presuppose mastery of the subject matter of a modern ABET-accredited
curriculum in engineering. Students with a BS in other engineering or related science fields and students with a BSCpE, BSEE, or BSME who have
not taken graduate academic work for some time may be required to complete preparatory courses that are prerequisites for the core courses of
the engineering concentrations on which the qualifying exams are based. These courses carry no credit toward the graduate degree.

Other Required Materials

• We recommend PhD applicants contact faculty to find a research advisor BEFORE submitting the application. If we receive an application and there is no research advisor commitment, we will consider the applicant for the master's program only.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Science in Electrical Engineering, Computer Engineering or Mechatronic Systems Engineering Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

A Bachelor of Science (BS) degree in computer engineering (BSCpE), electrical engineering (BSEE), or closely related field from a regionally accredited college or university is required for admission to the programs. Those students whose backgrounds differ significantly from EAC/ABET-accredited BS computer, electrical programs may be required to complete prerequisite undergraduate courses. Such courses are not considered part of the 45 quarter hour requirements for the degree. A competency examination may be required of candidates who do not possess a 3.0 GPA or a BS in electrical, electronic, or computer from an EAC/ABET accredited program. Students with BS degrees in physics, mathematics, computer science, engineering science, electrical engineering technology, engineering physics, or similar BS degrees from a regionally accredited college or university may also be admitted. However, these students should be able to demonstrate competency in the following basic subjects by passing an appropriate competency examination: MSCpE: Circuits and Electronics, Digital Systems, Computer Organization, a high- or low-level computer language; MSEE: Digital Design Methods, Physical Electronics, Signals and Systems, Circuits and Electronics, Digital Design Methods, Mechanics, Electromagnetics.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5

- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Masters of Science in Systems Engineering (Online)

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Specialized Graduate Certificate in Fundamentals of Systems Engineering

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- · Minimum Duolingo English Test Score: 115

Specialized Certificate in Systems Analytics and Practice

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- · Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Specialized Graduate Certificate in Systems Design and Architecture

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- · Minimum Duolingo English Test Score: 115

Doctoral Degree Programs

Doctor of Philosophy in Electrical and Computer Engineering

Program requirements

All PhD students who have been admitted to the PhD in ECE program must successfully complete three milestones before the PhD degree can be conferred. These milestones refer to:

- · Demonstrating that the student is qualified to begin PhD studies
- · Demonstrating that the student may identify and formulate a research problem
- · Demonstrating that the student can defend her/his dissertation

These three milestones are referred to as the "PhD Qualifying Exam", the "Comprehensive Exam" (also known as the "PhD Proposal"), and the "Dissertation Defense", respectively.

Coursework requirements

The PhD in ECE does not have specific course requirements. The coursework plan needs to be approved by the student's advisor and the department chair.

Graduate Assessment Requirement

ECE Graduate Assessment (ENEE 4950)

This graduate assessment course is required for all ECE graduate students to be taken in their last quarter (the term they have applied as the graduation term). All required assessment materials are uploaded to the course Assignments online to meet the course requirements. Students will receive Canvas course announcements and or emails from the instructor notifying the students of what are required to be uploaded. As part of the graduate assessment effort, students' advisors and members of Master's thesis Committee / PhD Committee will be asked to provide related information online.

Specifically, (1) Master's degree thesis-option students are required to complete a written self-reflection essay on entire MS program including thesis research and upload the final OGE approved thesis, defense presentation slides, and the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation. (2) Master's degree non-thesis-option students are required to complete a written self-reflection essay on entire MS program and upload an assembled portfolio that includes reports from at least two course projects or homework from the core or depth courses, presentation slides from any course projects, along with the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation. (3) PhD students are required to complete a written self-reflection essay on entire PhD program including dissertation research and upload the final OGE approved dissertation, defense presentation slides, and the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation. (3) PhD students are required to complete a written self-reflection essay on entire PhD program including dissertation research and upload the final OGE approved dissertation, defense presentation slides, and the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation.

Minimum credit requirements

Students with a Bachelor of Science in Engineering/Science

For students admitted to the PhD program with a bachelor's degree, 90 QH are required, 75 of which must be completed at the University of Denver. A minimum of 48 QH must be at the 4000-level or higher and may include as many dissertation research hours (Independent Research and Independent Study) as considered appropriate by the advisor and department chair. The student with his/her advisor will develop an appropriate plan of study with core requirements, an area of specialization (depth requirement), breadth requirement and advanced mathematics. The core will consist of 8 QH of coursework. The area of specialization will consist of 16 QH of coursework. An additional 6 QH of coursework (excluding independent research) is required as related breadth requirement. The student must complete a minimum of 16 QH at the 4000-level courses, excluding independent research. Prior to completion of the comprehensive exam, the plan of study must be approved by the student's PhD committee and the chair.

If a student is entering the PhD program without a relevant master's degree, the student should work with his/her advisor in order to meet the degree requirements for a master's degree. All requirements for the given master's degree must be met.

ENEE 4950	ECE Graduate Assessment	0
A minimum of 48 QH must be at the by advisor and assuming a minimum	4000-level or higher, may include Independent Research or Independent Study as considered appropriate of 16 QH are earned excluding independent research	48
Core Requirement		8
Depth Requirement - Specialization A	rea	16
Breadth Requirement ¹		6
Total Credits		90

The breadth requirement must be pre-approved by the student's advisor.

Students with a Master of Science in Engineering/Science

If a student is admitted with a closely related master's degree, up to 45 hours may be transferred and applied to the doctorate degree. The student with his or her advisor will develop an appropriate program consisting of a minimum of 28 quarter hours at the 4000-level, which may include as many dissertation research hours (Independent Research and Independent Study) as considered appropriate by the advisor and the department chair. The student with his or her advisor will develop an appropriate plan of study with an area of specialization, breadth requirements and advanced mathematics. Prior to completion of the comprehensive exam, the student's plan of study must be approved by the student's PhD committee and the department chair.

Non-coursework Requirements

Qualifying Examination

Each student must demonstrate sufficient breadth and depth of basic engineering knowledge relevant to electrical and computer engineering and be able to demonstrate ability to organize and present her/his thoughts in a convincing manner. To achieve this, each admitted student is required to demonstrate proficiency in five chosen courses by receiving a final grade of B or better. Students may either enroll or test out these courses. These criteria do not necessarily have to be met within a single quarter; however, a maximum of two attempts is allowed for each course or test.

The five courses will be one from the list of Core Courses, two from two Subject Area Courses, and two courses approved by the advisor. The list of courses is subject to modification with the approval of the department.

Qualifier Transfer Policy

Policy Statement

The Electrical and Computer Engineering (ECE) Department at Denver University (DU) acknowledges the Qualifying Exam achievements of PhD students transferring from other institutions. Subject to the student having successfully passed the Qualifying Exam at their original institution and upon receiving endorsement from their advisor, the departmental faculty will consider and vote on granting an exemption from the DU ECE Qualifying Exam on a case-by-case basis. A majority decision will be required for approval.

This policy applies exclusively to PhD students transferring to DU ECE under the guidance of their advisor. This scenario primarily arises when the department seeks to attract top talent, with advisors bringing only those students who have already demonstrated their qualifications. In alignment with our strategy to recruit outstanding individuals, it is appropriate for the ECE Department to recognize and accept the results of Qualifying Exams

from other reputable institutions. This approach allows both faculty and newly admitted students to devote their efforts towards achieving significant research contributions for the department.

Timeline

Each admitted graduate student must complete/satisfy all Qualifying Exam requirements within <u>at most</u> 5 quarters from initial admittance. Failure to pass any component of the PhD Qualifying Exam within the given time constraints will prevent the student from continuing in the PhD program.

Comprehensive Examination

The purpose of the Comprehensive Examination is to ascertain the potential of the student for PhD quality research. At least two quarters prior to the final defense, the student shall schedule and take the Comprehensive Examination. This oral and written examination will be attended by a minimum of three faculty members, the same faculty who will attend the student's final dissertation defense. The Comprehensive Exam may be open to other students based on the requirements of the student's advisor. The student is expected to make a 30 to 40 minute concise presentation on her/his dissertation topic. The oral and written presentation will highlight previous work in this area, demonstrate a need for the given research, and explain how the given research will contribute to the advancement of the area. The student will also present completed work and results, and a detailed plan for project completion. In addition, the student will be expected to answer general fundamental questions in the area of her/his concentration and detailed questions in the area of the student's graduate course work.

The PhD Qualifying Examination must be taken and passed prior to the student taking the Comprehensive Examination. The Comprehensive Examination can be taken at most 2 times. If the student does not pass the Comprehensive Exam on the second try, the student will be terminated from the program. The comprehensive exam will be graded on a pass/fail system.

Dissertation

The student is required to complete and defend a dissertation of publishable quality based on the student's original research. The dissertation must be completed in written form in accordance with the University's Graduate School guidelines. A summary of the dissertation must be presented in a public seminar and subsequently defended by the student in the final oral defense. The defense committee will consist of the student's entire PhD committee.

Residence Requirement

Enrollment in at least six quarters (four semesters), including at least two consecutive quarters (one semester) of full-time attendance is required for graduation.

PhD Committee

The PhD committee should consist of at least four faculty members. Three faculty members must be from within the student's specialty area; these can include the student's advisor, other faculty in that degree program and, if necessary, off-campus experts. Finally, for the final oral defense of the dissertation, an oral defense chair, who must be a tenured faculty member outside the Department of Electrical and Computer Engineering and Mechanical and Materials Engineering, needs to be identified in consultation with the DU Graduate Studies Office. The PhD committee needs to be identified with the dissertation advisor and approved by the chair of the department and the Office of Graduate Studies.

Doctor of Philosophy in Mechatronics Systems Engineering

Program requirements

All PhD students who have been admitted to the PhD in ECE or PhD in MSE programs must successfully complete three milestones before the PhD degree can be conferred. These milestones refer to:

- · Demonstrating that the student is qualified to begin PhD studies
- · Demonstrating that the student may identify and formulate a research problem
- · Demonstrating that the student can defend her/his dissertation

These three milestones are referred to as the "PhD Qualifying Exam", the "Comprehensive Exam" (also known as the "PhD Proposal"), and the "Dissertation Defense", respectively.

Coursework requirements

The PhD in MSE has specific course requirements that can be found below. The coursework plan needs to be approved by the student's advisor and the department chair.

Graduate Assessment Requirement

ECE Graduate Assessment (ENEE 4950)

This graduate assessment course is required for all ECE graduate students to be taken in their last quarter (the term they have applied as the graduation term). All required assessment materials are uploaded to the course Assignments online to meet the course requirements. Students will receive Canvas course announcements and or emails from the instructor notifying the students of what are required to be uploaded. As part of

the graduate assessment effort, students' advisors and members of Master's thesis Committee / PhD Committee will be asked to provide related information online.

Specifically, (1) Master's degree thesis-option students are required to complete a written self-reflection essay on entire MS program including thesis research and upload the final OGE approved thesis, defense presentation slides, and the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation. (2) Master's degree non-thesis-option students are required to complete a written self-reflection essay on entire MS program and upload an assembled portfolio that includes reports from at least two course projects or homework from the core or depth courses, presentation slides from any course projects, along with the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students are required to complete a written self-reflection essay on entire MS program and upload an assembled portfolio that includes reports from at least two course projects or homework from the core or depth courses, presentation slides from any course projects, along with the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation. (3) PhD students are required to complete a written self-reflection essay on entire PhD program including dissertation research and upload the final OGE approved dissertation, defense presentation slides, and the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation.

Minimum credit requirements

Students with a Bachelor of Science in Engineering/Science

For students admitted to the PhD program with a bachelor's degree, 90 QH are required, 75 of which must be completed at the University of Denver. A minimum of 48 QH must be at the 4000-level or higher and may include as many dissertation research hours (Independent Research and Independent Study) as considered appropriate by the advisor and department chair. The student with their advisor will develop an appropriate plan of study with core requirements, an area of specialization (depth requirement), breadth requirement and advanced mathematics. The core will consist of 8 QH of coursework. The area of specialization will consist of 16 QH of coursework. An additional 6 QH of coursework (excluding independent research) is required as related breadth requirement. The student must complete a minimum of 16 QH at the 4000-level courses, excluding independent research. In addition, a grade of C- or better must be obtained in each course in order for that course to count toward the credit hour requirements. An overall minimum GPA of 3.0 is also required for graduation. Prior to completion of the comprehensive exam, the plan of study must be approved by the student's PhD committee and the department chair.

If a student is entering the PhD program without a relevant master's degree, the student should work with their advisor in order to meet the degree requirements for a master's degree. All requirements for the given master's degree must be met.

Code	Title	Credits

The student is required to complete and defend a dissertation of publishable quality based on the student's original research. The dissertation must be completed in written form in accordance with the University's Office of Graduate Education guidelines. A summary of the dissertation must be presented in a public seminar and subsequently defended by the student in the final oral defense. The defense committee will consist of the student's entire PhD committee.

Residence Requirement

Enrollment in at least six quarters, including at least two consecutive quarters of full-time attendance is required for graduation.

PhD Committee

The PhD committee should consist of at least four faculty members. Three faculty members must be from within the student's specialty area; these can include the student's advisor, other faculty in that degree program and, if necessary, off-campus experts. Finally, for the final oral defense of the thesis, an oral defense chair, must be a tenured member of the DU faculty and must be from a department, school, or college other than that of the candidate, and needs to be identified in consultation with the DU Office of Graduate Education. The PhD committee needs to be identified with the dissertation advisor and approved by the chair of the department and the Office of Graduate Education.

Master's Degree Programs

Master of Science in Computer Engineering

Minimum Credit Requirements

Every candidate for the MS degree must complete 45 QH of credit, at least 36 of which must be completed at the University of Denver.

Program Structure

Candidates may elect either the thesis or non-thesis option. This choice may be made at any time, although a delay in declaration may impact the completion date. Students who are GTAs or who receive financial support from a University research grant, such as GRAs, are required to elect the thesis option. The program is designed to be completed in about six quarters if two courses (usually 8 QH) are taken each quarter.

Graduate Assessment Requirement

ECE Graduate Assessment (ENEE 4950)

This graduate assessment course is required for all ECE graduate students to be taken in their last quarter (the term they have applied as the graduation term). All required assessment materials are uploaded to the course Assignments online to meet the course requirements. Students will receive Canvas course announcements and or emails from the instructor notifying the students of what are required to be uploaded. As part of the graduate assessment effort, students' advisors and members of Master's thesis Committee / PhD Committee will be asked to provide related information online.

Specifically, (1) Master's degree thesis-option students are required to complete a written self-reflection essay on entire MS program including thesis research and upload the final OGE approved thesis, defense presentation slides, and the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation. (2) Master's degree non-thesis-option students are required to complete a written self-reflection essay on entire MS program and upload an assembled portfolio that includes reports from at least two course projects or homework from the core or depth courses, presentation slides from any course projects, along with the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students are required to complete a written self-reflection essay on entire MS program and upload an assembled portfolio that includes reports from at least two course projects or homework from the core or depth courses, presentation slides from any course projects, along with the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation. (3) PhD students are required to complete a written self-reflection essay on entire PhD program including dissertation research and upload the final OGE approved dissertation, defense presentation slides, and the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation.

Non-Thesis Option

The non-thesis option is the more flexible of the two options. This program is designed with the working professional in mind. For this option, a grade of C- or better must be obtained in each course in order for that course to count toward the requirement of 45 QH. An overall minimum GPA of 3.0 is also required for graduation. Students may only take up to 8 quarter hours of independent study to be counted toward the degree, after approval by their advisor and the Chair. Each student must take a minimum of 24 quarter hours at the 4000-level.

One Year (four quarters) - Non-thesis Option

The Department of Electrical and Computer Engineering (ECE) offers a one-year, non-thesis option. Students who select the one-year program will be able to graduate within 12 months, four academic quarters, as there are enough courses offered in each specialization to meet the 20 QH depth requirement. The breadth requirement (14 QH) is fulfilled by taking courses offered in other specializations. In addition, every year courses that satisfy the mathematics requirement (3 QH) are offered. The MS non-thesis structure is shown below. QH in each category denote minimum requirements that must be satisfied. Any changes in the student's plan of study must be approved a-prior by the student's advisor.

The basic structure of the minimum 45 QH for the non-thesis option is as follows:

Requirements for Non-Thesis Option	(minimum QH)	
Code	Title	Credits
Graduate Assessment Requirement		0
Core Requirement		8
Depth Requirement - Specialization A	20	
Mathematics Requirement (requires	3	
Breadth Requirement		14
Total Credits		45

¹ This indicates minimum number of quarter hours. Any credits over the 3 QH from the mathematics courses will count toward the breadth requirement.

Thesis Option

A thesis permits a candidate to obtain depth in an area of study and it is especially useful for individuals who seek to pursue a subsequent degree, for example, a PhD degree. Thesis candidates work closely with a thesis advisor. The thesis option is required for all GRAs and GTAs. For this option, a grade of C- or better must be obtained in each course in order for that course to count toward the 45 QH hour requirements. An overall minimum GPA of 3.0 is also required for graduation. Students may only take up to 8 quarter hours of independent study to be counted toward the degree. Each student must take a minimum of 16 quarter hours at the 4000-level. The basic structure of the minimum 45 QH for the thesis option is as follows:

Requirements for Thesis Option (minimum QH)

Code	Title	Credits
Graduate Assessment Requirement		0
Core Requirement		8
Depth Requirement - Specialization A	rea	16
Breadth Requirement ¹		6
Thesis		15
Total Credits		45

The breadth requirement must be pre-approved by the student's advisor.

If a student who has elected to pursue a thesis option, then at any time thereafter elects to change to a non-thesis option, all requirements for the nonthesis must be met. Any independent research taken may be forfeited and students must adhere to the grade requirements of the non-thesis option.

Breadth Requirement (Non-Thesis and Thesis Option)

Breadth Requirement courses (each with not less than 3 QH of credit) may be chosen from courses offered in other specialization areas. A course that appears in more than one specialization area may only be counted toward either the specialization requirement or the breadth requirement. The remaining courses are chosen from appropriate courses numbered 3000 or higher, offered by the Department Mechanical & Materials Engineering, Department of Computer Science or NSM (Natural Sciences and Mathematics). Prior approval by the student's advisor is required. It is strongly recommended that students choose math related courses to satisfy the breadth requirement.

The MSCpE program offers one area of specialization:

· Computer Systems Engineering

The student's degree program will be a combination of the core courses, specialization areas (depth requirement) and the breadth requirement. Each student is required to complete the 2 core courses. Students may choose from any of the courses from their area of specialization but should keep in mind the 4000-level requirement of the degree.

Core courses for all Computer Engineering Students

The following courses are required for all computer engineering students:

Code	Title	Credits
ENEE 4950	ECE Graduate Assessment	0
ENCE 4110	Modern Digital Systems Design	4
ENGR 3621	Advanced Engineering Mathematics	4

Specialization in Computer Systems Engineering

This area of specialization prepares students with fundamental and working knowledge of methods for analysis, design, and implementation of intelligent systems (IS). Particular attention is given to signal and information processing in IS, design of IS, and implementation of IS using state-of-the-art technology. This is accomplished through several theoretical courses and applied courses. Students must choose from the following courses:

Code	Title	Credits
ENCE 3321	Network Design	4
ENCE 4231	Embedded Systems Programming	4
ENCE 4620	Advanced Computer Vision	4
ENEE 3670	Introduction to Digital Signal Processing	4
ENGR 4622	Advanced Optimization	4
ENCE 4631	Advanced Machine Learning	4

Master of Science in Electrical Engineering

The Master of Science in Electrical Engineering (MSEE) is designed to advance the student's knowledge in several areas of engineering. This degree provides breadth while permitting the student to achieve depth in a specialization area. This specialization area, with thematic sequences of courses, has been selected to coincide with those of high current interest as well as those emerging technologies that hold promise of increasing importance for the future. The purpose of this programs is to serve the profession of engineering and the Colorado community through advanced study in computer engineering, electrical engineering, and other related fields. This program prepares the student for academic and industrial advancement. The program offer a thesis and a non-thesis option.

The Department of ECE offers both part-time and full-time programs. The Department recognizes that a student may be employed full-time while studying for a degree. Therefore, most courses are offered at times and on days that will permit a student to complete the program by taking courses either late in the day or outside normal business hours. The MS degree program can generally be completed in about four years if one course is taken each quarter, but it is usually possible to take two courses per quarter, bringing completion time closer to the more common duration of two years. Also, students who select the one-year non-thesis will be able to graduate within 12 months, four academic quarters. For part-time students who are working in industry positions and who have chosen the thesis option, a topic related to the job function may be acceptable as the thesis research topic. Furthermore, a qualified staff member at the place of employment may be approved to serve as an adjunct faculty on the thesis committee.

Students not interested in pursuing a degree but interested in taking an occasional course may register as special status students by following an abbreviated admissions process. However, only 15 QH earned as a special status student may be applied toward a MS degree.

Minimum Credit Requirements

Every candidate for the MS degree must complete 45 QH of credit, at least 36 of which must be completed at the University of Denver.

Program Structure

Candidates may elect either the thesis or non-thesis option. This choice may be made at any time, although a delay in declaration may impact the completion date. Students who are GTAs or who receive financial support from a University research grant, such as GRAs, are required to elect the thesis option. The program is designed to be completed in about six quarters if two courses (usually 8 QH) are taken each quarter.

Required Graduate Assessment Course

ECE Graduate Assessment (ENEE 4950)

This graduate assessment course is required for all ECE graduate students to be taken in their last quarter (the term they have applied as the graduation term). All required assessment materials are uploaded to the course Assignments online to meet the course requirements. Students will receive Canvas course announcements and or emails from the instructor notifying the students of what are required to be uploaded. As part of the graduate assessment effort, students' advisors and members of Master's thesis Committee / PhD Committee will be asked to provide related information online.

Specifically, (1) Master's degree thesis-option students are required to complete a written self-reflection essay on entire MS program including thesis research and upload the final OGE approved thesis, defense presentation slides, and the completed and signed degree program plan, by the published

OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation. (2) Master's degree non-thesis-option students are required to complete a written self-reflection essay on entire MS program and upload an assembled portfolio that includes reports from at least two course projects or homework from the core or depth courses, presentation slides from any course projects, along with the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation. (3) PhD students are required to complete a written self-reflection essay on entire PhD program including dissertation research and upload the final OGE approved dissertation, defense presentation slides, and the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation.

Non-Thesis Option

The non-thesis option is the more flexible of the two options. This program is designed with the working professional in mind. For this option, a grade of C- or better must be obtained in each course in order for that course to count toward the requirement of 45 QH. An overall minimum GPA of 3.0 is also required for graduation. Students may only take up to 8 quarter hours of independent study to be counted toward the degree, after approval by their advisor and the Chair. Each student must take a minimum of 24 quarter hours at the 4000-level.

One Year (four quarters) - Non-thesis Option

The Department of Electrical and Computer Engineering (ECE) offers a one-year, non-thesis option. Students who select the one-year program will be able to graduate within 12 months, four academic quarters, as there are enough courses offered in each specialization to meet the 20 QH depth requirement. The breadth requirement (14 QH) is fulfilled by taking courses offered in other specializations. In addition, every year courses that satisfy the mathematics requirement (3 QH) are offered. The MS non-thesis structure is shown below. QH in each category denote minimum requirements that must be satisfied. Any changes in the student's plan of study must be approved a-prior by the student's advisor.

The basic structure of the minimum 45 QH for the non-thesis option is as follows:

Requirements for Non-Thesis Option (minimum QH)			
Code	Title	Credits	
Graduate Assessment Requirement		0	
Core Requirement		8	
Depth Requirement - Specialization Area		20	
Mathematics Requirement (requires one approved course at the 3000-level or higher) $^{ m 1}$		3	
Breadth Requirement		14	
Total Credits		45	

¹ This indicates minimum number of quarter hours. Any credits over the required 3 QH from the mathematics courses will count toward the breadth requirement.

Thesis Option

1

A thesis permits a candidate to obtain depth in an area of study and it is especially useful for individuals who seek to pursue a subsequent degree, for example, a PhD degree. Thesis candidates work closely with a thesis advisor. The thesis option is required for all GRAs and GTAs. For this option, a grade of C- or better must be obtained in each course in order for that course to count toward the 45 QH hour requirements. An overall minimum GPA of 3.0 is also required for graduation. Students may only take up to 8 quarter hours of independent study to be counted toward the degree. Each student must take a minimum of 16 quarter hours at the 4000-level. The basic structure of the minimum 45 QH for the thesis option is as follows:

Requirements for Thesis Option (minimum QH)				
Code	Title	Credits		
Graduate Assessment Requirement		0		
Core Requirement		8		
Depth Requirement - Specialization Area		16		
Breadth Requirement ¹		6		
Thesis		15		
Total Credits		45		

The breadth requirement must be pre-approved by the student's advisor.

If a student who has elected to pursue a thesis option, then at any time thereafter elects to change to a non-thesis option, all requirements for the nonthesis must be met. Any independent research taken may be forfeited and students must adhere to the grade requirements of the non-thesis option.

Breadth Requirement (Non-Thesis and Thesis Option)

Breadth Requirement courses (each with not less than 3 QH of credit) may be chosen from courses offered in other specialization areas. A course that appears in more than one specialization area may only be counted toward either the specialization requirement or the breadth requirement. The remaining courses are chosen from appropriate courses numbered 3000 or higher, offered by the Department Mechanical & Materials Engineering,

Department of Computer Science or NSM (Natural Sciences and Mathematics). Prior approval by the student's advisor is required. It is strongly recommended that students choose math related courses to satisfy the breadth requirement.

The MSEE program offers three areas of specialization:

- Control & Communication Systems
- · Electric Power & Energy Systems
- Optics/Optoelectronics/Photonics

Each student must choose an area of specialization. The student's degree program will be a combination of the core courses, specialization areas (depth requirement) and the breadth requirement. Each student is required to complete the 2 core courses. Students may choose from any of the courses from their area of specialization but should keep in mind the 4000-level requirement of the degree.

Core courses for all Electrical Engineering Students

The following courses are required for all electrical	engineering students,	, regardless of area of	f specialization:
---	-----------------------	-------------------------	-------------------

Code	Title	Credits
ENEE 4950	ECE Graduate Assessment	0
ENEE 4640	Electromagnetic Compatibility	4
ENGR 3621	Advanced Engineering Mathematics	4

Specialization in Control & Communication Systems

This area of specialization prepares students for basic and applied research and development of complex systems, including, electrical, mechanical, bio-inspired, mechatronic systems, robotic systems, and unmanned systems. This is accomplished through several theoretical courses and applied courses. Students must choose from the following courses:

Code	Title	Credits
ENCE 4231	Embedded Systems Programming	4
ENEE 3670	Introduction to Digital Signal Processing	4
ENGR 3721 & ENGR 3722	Controls and Control Systems Laboratory	4
ENEE 4141	Digital Communications	4
ENGR 4350	Reliability ¹	4
ENGR 4620	Optimization ¹	4
ENGR 4622	Advanced Optimization	4
ENGR 4730	Introduction to Robotics	4
ENGR 4735	Linear Systems	4
ENGR 4740	Adaptive Control Systems	4
ENGR 4745	Adv Non-Linear Control System	4
ENGR 4750	Networked Control Systems	4
ENGR 4755	Optimal Control	4
ENGR 4760	Multivariable Control	4

¹ This course may count toward the specialization with advisors pre-approval. This course may not be offered on a regular basis.

Specialization in Electric Power and Energy Systems

This area of specialization prepares students with the basic foundation and advanced knowledge, required for the research and development in the area of power systems, renewable energy systems, and power electronic devices. This is accomplished through several theoretical courses and applied courses. Students must choose from the following courses:

Code	Title	Credits
ENGR 3510	Renewable and Efficient Power and Energy Systems	4
ENGR 3540	Electric Power Systems	4
ENGR 3721 & ENGR 3722	Controls and Control Systems Laboratory	4
ENGR 4530	Intro to Power and Energy	4
ENGR 4545	Electric Power Economy	4

ENGR 4560	Power Generation Operation and Control	4
ENGR 4590	Power System Protection	4
ENGR 4735	Linear Systems	4
ENGR 4740	Adaptive Control Systems	4

Specialization in Optics/Optoelectronics/Photonics

This area of specialization prepares students for research, development, and design of devices and systems operating based on wave theory; focusing on laser, optics, light wave devises, and systems.

Code	Title	Credits
ENEE 4030	Optoelectronics	4
ENEE 4141	Digital Communications	4
ENGR 4735	Linear Systems	4
ENGR 4740	Adaptive Control Systems	4

Master of Science in Mechatronic Systems Engineering

Minimum Credit Requirements

Every candidate for the MS degree must complete 45 QH of credit, at least 36 of which must be completed at the University of Denver.

Program Structure

Candidates may elect either the thesis or non-thesis option. This choice may be made at any time, although a delay in declaration may impact the completion date. Students who are GTAs or who receive financial support from a University research grant, such as GRAs, are required to elect the thesis option. The program is designed to be completed in about six quarters if two courses (usually 8 QH) are taken each quarter.

Required Graduate Assessment Course

ECE Graduate Assessment (ENEE 4950)

This graduate assessment course is required for all ECE graduate students to be taken in their last quarter (the term they have applied as the graduation term). All required assessment materials are uploaded to the course Assignments online to meet the course requirements. Students will receive Canvas course announcements and or emails from the instructor notifying the students of what are required to be uploaded. As part of the graduate assessment effort, students' advisors and members of Master's thesis Committee / PhD Committee will be asked to provide related information online.

Specifically, (1) Master's degree thesis-option students are required to complete a written self-reflection essay on entire MS program including thesis research and upload the final OGE approved thesis, defense presentation slides, and the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation. (2) Master's degree non-thesis-option students are required to complete a written self-reflection essay on entire MS program and upload an assembled portfolio that includes reports from at least two course projects or homework from the core or depth courses, presentation slides from any course projects, along with the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students are required to complete a written self-reflection essay on entire PhD program including dissertation research and upload the final OGE approved dissertation, defense presentation slides, and the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation. (3) PhD students are required to complete a written self-reflection essay on entire PhD program including dissertation research and upload the final OGE approved dissertation, defense presentation slides, and the completed and signed degree program plan, by the published OGE "Deadline for thesis/dissertation formatting approval" of the students' last quarter before graduation.

Non-Thesis Option

The non-thesis option is the more flexible of the two options. This program is designed with the working professional in mind. For this option, a grade of C- or better must be obtained in each course in order for that course to count toward the requirement of 45 QH. An overall minimum GPA of 3.0 is also required for graduation. Students may only take up to 8 quarter hours of independent study to be counted toward the degree, after approval by their advisor and the Chair. Each student must take a minimum of 24 quarter hours at the 4000-level.

One Year (four quarters) - Non-thesis Option

The Department of Electrical and Computer Engineering (ECE) offers a one-year, non-thesis option. Students who select the one-year program will be able to graduate within 12 months, four academic quarters, as there are enough courses offered in each specialization to meet the 20 QH depth requirement. The breadth requirement (14 QH) is fulfilled by taking courses offered in other specializations. In addition, every year courses that satisfy the mathematics requirement (3 QH) are offered. The MS non-thesis structure is shown below. QH in each category denote minimum requirements that must be satisfied. Any changes in the student's plan of study must be approved a-prior by the student's advisor.

The basic structure of the minimum 45 QH for the non-thesis option is as follows:

Requirements for Non-Thesis Option (minimum quarter hours)		
Code	Title	Credits
Graduate Assessmen	t Requirement	0
Core Requirement		8
Depth Requirement - S	Specialization Area	20

Total Credits	45
Breadth Requirement	14
Mathematics Requirement (requires one approved course at the 3000-level or higher) $^{ m 1}$	3

This indicates minimum number of quarter hours. Any credits over the required 3 QH from the mathematics courses will count toward the breadth requirement.

Thesis Option

1

1

A thesis permits a candidate to obtain depth in an area of study and it is especially useful for individuals who seek to pursue a subsequent degree, for example, a PhD degree. Thesis candidates work closely with a thesis advisor. The thesis option is required for all GRAs and GTAs. For this option, a grade of C- or better must be obtained in each course in order for that course to count toward the 45 QH hour requirements. An overall minimum GPA of 3.0 is also required for graduation. Students may only take up to 8 quarter hours of independent study to be counted toward the degree. Each student must take a minimum of 16 quarter hours at the 4000-level. The basic structure of the minimum 45 QH for the thesis option is as follows:

Requirements for Thesis Option (minimum quarter hours)		
Code	Title	Credits
Graduate Assessment Requirement		0
Core Requirement		8
Depth Requirement - Specialization	rea	16
Breadth Requirement ¹	6	
Thesis		
Total Credits		45

The breadth requirement must be pre-approved by the student's advisor.

If a student who has elected to pursue a thesis option, then at any time thereafter elects to change to a non-thesis option, all requirements for the non-thesis must be met. Any independent research taken may be forfeited and students must adhere to the grade requirements of the non-thesis option.

Breadth Requirement (Non-Thesis and Thesis Option)

Breadth Requirement courses (each with not less than 3 QH of credit) may be chosen from courses offered in other specialization areas. A course that appears in more than one specialization area may only be counted toward either the specialization requirement or the breadth requirement. The remaining courses are chosen from appropriate courses numbered 3000 or higher, offered by the Department Mechanical & Materials Engineering, Department of Computer Science or NSM (Natural Sciences and Mathematics). Prior approval by the student's advisor is required. It is strongly recommended that students choose math related courses to satisfy the breadth requirement

The MSE program offers one area of specialization:

Robotic Systems

The student's degree program will be a combination of the core courses, specialization areas (depth requirement) and the breadth requirement. Each student is required to complete the 2 core courses. Students may choose from any of the courses from their area of specialization but should keep in mind the 4000-level requirement of the degree.

Core courses for all Mechatronic Systems Engineering Students

The following courses are required for all mechatronic systems engineering students regardless of area of specialization:

Code	Title	Credits
ENEE 4950	ECE Graduate Assessment	0
ENEE 4640	Electromagnetic Compatibility	4
or ENCE 4110	Modern Digital Systems Design	
ENGR 3621	Advanced Engineering Mathematics	4

Specialization in Robotics Systems

This area of specialization is designed to meet the needs of industry and federal research laboratories for engineers with multidisciplinary experience and ability to design and integrate complex systems requiring knowledge from diverse engineering disciplines. Said differently, mechatronic systems involves integration of mechanical, electrical, and computer engineering to design complex systems that perform real-world tasks. This program includes a broad set of common course requirements along with a selection of appropriate technical electives providing both breadth and depth of knowledge in a student's area of interest.

296 Electrical and Computer Engineering

Code	Title	Credits
ENCE 4231	Embedded Systems Programming	4
ENCE 4620	Advanced Computer Vision	4
ENGR 3630	Finite Element Methods ¹	4
ENGR 4620	Optimization ¹	4
ENGR 4730	Introduction to Robotics	4
ENGR 4735	Linear Systems	4
ENME 4020	Adv Finite Element Analysis ¹	4
ENGR 4740	Adaptive Control Systems	4
ENGR 4745	Adv Non-Linear Control System	4

This course may count toward the specialization with advisors preapproval. This course may not or may not be offered on a regular basis.

Master of Science in Systems Engineering (Online)

Minimum of 45 credit hours are required for the degree.

	ENGR 4991	Independent Study	

A maximum of 9 credit hours of the Graduate Capstone Design series will be applied as Required Elective Credit. Only Lockheed Martin employees in the Engineering Leadership Development Program (ELDP) may take the Graduate Capstone Design series courses.

² These courses are only available to Lockheed Martin Employees at this time.

Specialized Graduate Certificate Programs

Specialized Graduate Certificate in the Fundamentals of Systems Engineering

This Specialized Graduate Certificate provides expertise in fundamentals of the discipline of systems engineering, applicable to engineering professionals in many industries, particularly regulated industries such as aerospace, biomedical, and autonomous vehicles.

Please note that this is the first of the three stackable certificates leading to the MS in Systems Engineering (Online) and is available as a singular Specialized Graduate Certificate.

Minimum Credit Requirements

1

1

Every candidate for the Specialized Graduate Certificate must complete 15 credit hours.

Code	Title	Credits
Required Courses		
ENSY 4010	Systems Engineering Fundamentals	3
ENSY 4050	Digital Transformation for Advanced Integration	3
ENSY 4090	Project Management in Relation to Systems Engineering	3

ENGR 4503	Graduate Capstone Design III ¹	3
ENGR 4504	Graduate Capstone Design IV ¹	3
ENGR 4991	Independent Study	1-5
Total Credits		15

A maximum of 9 credit hours of Graduate Capstone Design courses will be applied as Required Elective Credit. Only Lockheed Martin employees in the current ELDP cohort may take the Graduate Capstone Design series courses.

Specialized Graduate Certificate in Systems Analytics & Practice

This Specialized Graduate Certificate provides systems engineering expertise with practical exposure to the analytical and digital tools which are paramount to the evolving practice of systems engineering. This practical exposure is designed to enable the student to participate in rigorous post-

test data analysis, to participate in model based design and model based systems engineering, as well as statistically relevant process improvement projects. Case studies are applicable to engineering professionals in many industries, particularly regulated industries such as aerospace, biomedical, and autonomous vehicles.

Please note that this is the third of the three stackable certificates leading to the MS in Systems Engineering (Online) and is available as a singular Specialized Graduate Certificate.

Minimum Credit Requirements

Every candidate for the Specialized Graduate Certificate must complete 15 credit hours.

Code	Title	Credits
Required Courses		
ENSY 4180	Applied Mathematics for Systems Engineering	
ENSY 4181	Introductory Probability and Statistics for Systems Engineering	
ENSY 4182	Data Analytics for Systems Engineering

ENGR 4502	Graduate Capstone Design II ¹	
ENGR 4503	Graduate Capstone Design III ¹	
ENGR 4504	Graduate Capstone Design IV ¹	
ENGR 4991	Independent Study	
Total Credits		15

A maximum of 9 credit hours of Graduate Capstone Design courses will be applied as Required Elective Credit. Only Lockheed Martin employees in the current ELDP cohort may take the Graduate Capstone Design series courses.

Specialized Graduate Certificate in Systems Design and Architecture

This Specialized Graduate Certificate provides systems engineering expertise with emphasis on support for proposals after contract award, through critical design reviews, as well as system design and integration and associated validation and verification activities, which are necessarily traceable to system requirements. Case studies are applicable to engineering professionals in many industries, particularly regulated industries such as aerospace, biomedical, and autonomous vehicles.

Please note that this is the second of the three stackable certificates leading to the MS in Systems Engineering (Online) and is available as a singular Specialized Graduate Certificate.

Minimum Credit Requirements

1

Every candidate for the Specialized Graduate Certificate must complete 15 credit hours.

Total Credits

A maximum of 9 credit hours of Graduate Capstone Design courses will be applied as Required Elective Credit. Only Lockheed Martin employees in the current ELDP cohort may take the Graduate Capstone Design series courses.

Engineering, Computer (ENCE)

ENCE 2101 Digital Design (3 Credits)

Basic logic concepts. Boolean algebra, truth tables and logic diagrams. Karnaugh maps; programmable devices including ROM's, PLA's and PAL's; data selectors and multiplexors; flip-flops, and memory design of sequential logic circuits. State diagrams, counters, latches and registers; realization of sequential and arbitrary counters; monostable multivibrators. Course includes engineering ethics. Laboratory.

ENCE 3100 Advanced Digital System Design (4 Credits)

Design of logic machines. Finite state machines, gate array designs, ALU and control unit designs, microprogrammed systems. Hardware design of digital circuits using SSI and MSI chips. Introduction to probability and statistics. Application of probability and stochastic processes for cache and paging performance. Laboratories incorporate specification, top-down design, modeling, implementation and testing of actual digital design systems hardware. Simulation of circuits using VHDL before actual hardware implementation. Laboratory. Cross listed with ENCE 4110. Prerequisite: ENCE 2101.

ENCE 3210 Microprocessor Systems I (4 Credits)

Introduction to microprocessors and to the design and operation of computer systems. A study of the microprocessor and its basic support components. Analysis of CPU architectures of modern computers. Assembly language programming. Use of an assembler and other development tools for programming and developing microprocessor-based systems. Laboratory. Cross listed with ENCE 4210. Prerequisite: ENCE 2101.

ENCE 3231 Embedded Systems Programming (4 Credits)

Design, construction and testing of microprocessor systems. Hardware limitations of the single-chip system. Includes micro-controllers, programming for small systems, interfacing, communications, validating hardware and software, microprogramming of controller chips, design methods and testing of embedded systems. Prerequisite: ENCE 3210.

ENCE 3260 Python for Engineers (3 Credits)

This course introduces python programming to students and gives them programming and mathematical tools that will be useful in different areas of engineering. The course is divided into 2 main parts. Part 1 (Introduction to Python Programming), covers the fundamental concepts of python programming, covering topics from variables and data structures, functions, algorithm complexity, representation of numbers and basics of parallel computing. Part 2 (Introduction to Numerical Methods), gives an overview of a variety of numerical methods that are useful for engineers. The course reviews the basics of linear algebra, discusses the importance of eigenvalues and eigenvectors, regressions and concepts of "discrete Fourier transform" and "fast Fourier transform".

ENCE 3321 Network Design (4 Credits)

Introduction to network components. Layering of network architecture. Analysis of Local Area Network (LAN) concepts and architecture based on IEEE standards. Design principles including switching and multiplexing techniques, physical link, signal propagation, synchronization, framing and error control. Application of probability and statistics in error detecting and control. Ethernet, Token-ring, FDDI (Fiber Distributed Data Interface), ATM (Asynchronous Transfer Mode), ISDN (Integrated Service Data Networks). Prerequisite: ENEE 3111, ENCE 2101 or permission of instructor.

ENCE 3501 VLSI Design (3 Credits)

Design of Very Large Scale Integration systems. Examination of layout and simulation of digital VLSI circuits using a comprehensive set of CAD tools in a laboratory setting. Studies of layouts of CMOS combinational and sequential circuits using automatic layout generators. Fundamental structures of the layout of registers, adders, decoders, ROM, PLA's, counters, RAM and ALU. Application of statistics and probability to chip performance. CAD tools allow logic verification and timing simulation of the circuits designed. Cross listed with ENCE 4501. Prerequisite: ENCE 3231.

ENCE 3620 Computer Vision (4 Credits)

This course is an introduction to the basic concepts in image processing and computer vision. First, an introduction to low-level image analysis methods, including radiometry and geometric image formation, edge detection, feature detection, and image segmentation are presented. Then, geometric-based image transformations (e.g., image warping and morphing) for image synthesis will be presented in the course. Furthermore, methods for reconstructing three-dimensional scenes including camera calibration, Epipolar geometry, and stereo feature matching are introduced. Other important topics include optical flow, shape from shading, and three-dimensional object recognition. In conclusion, students learn and practice image processing and computer vision techniques that can be used in other areas such as robotics, pattern recognition, and sensor networks. Cross listed with ENCE 4620. Prerequisites: ENGR 3611 or ENGR 3621 AND ENGR 1572 or ENGR 3650 or ENCE 3260 or permission of instructor.

ENCE 3631 Machine Learning (4 Credits)

This class covers topics in machine learning including but not limited to Bayesian decision theory, supervised learning, unsupervised learning and clustering, linear discriminant functions, deep learning, neural networks, linear classification techniques, manifold learning, bag of words, and Support Vector Machines. Cross listed with ENCE-4631.

ENCE 3830 Topics in Computer Engineering (1-5 Credits)

Special topics in computer engineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENCE 3991 Independent Study (1-5 Credits)

Topics in computer engineering investigated under faculty supervision. May be taken more than once. Students must obtain and complete an Independent Study form from the Office of the Registrar. Prerequisite: permission of instructor.

ENCE 3995 Independent Research (1-10 Credits)

ENCE 4110 Modern Digital Systems Design (4 Credits)

This course focuses on the design of digital systems using combinational, sequential, and programmable logic devices and Hardware Description Languages (HDL). Techniques for logic design including asynchronous logic, physical world interfaces to digital systems, and system performance analysis methods are studied. Students also learn HDL-Verilog to program CPLD devices and FPGA systems. Cross listed with ENCE 3100.

ENCE 4231 Embedded Systems Programming (4 Credits)

Design, construction and testing of microprocessor systems. Hardware limitations of the single-chip system. Includes micro-controllers, programming for small systems, interfacing, communications, validating hardware and software, microprogramming of controller chips, design methods and testing of embedded systems.

ENCE 4501 Advanced VLSI Design (4 Credits)

Advanced techniques in the fabrication and design of VLSI circuits and systems. Modeling of parasitic components. Floor-planning, clock distribution, routing, and low power design. Cross listed with ENCE 3501. Prerequisite: ENCE 3501 or permission of instructor.

ENCE 4620 Advanced Computer Vision (4 Credits)

This course covers advanced concepts in image processing and computer vision including but not limited to image radiometry and geometric formation, edge detection, geometric based transformations (e.g., image warping and morphing), camera calibration, Epipolar geometry, and stereo feature matching. Other advanced topics include optical flow, shape from shading, and three-dimensional object recognition. In conclusion, students learn and practice advanced topics in image processing and computer vision techniques that can be used in other areas such as robotics, pattern recognition, and sensor networks. Cross listed with ENCE 3620. Prerequisite: ENEE 3311.

ENCE 4631 Advanced Machine Learning (4 Credits)

This class covers advanced topics in machine learning including but not limited to Bayesian decision theory, supervised learning, unsupervised learning and clustering, linear discriminant functions, deep neural networks, deep learning, linear classification techniques, manifold learning, bag of words, and Support Vector Machines. Cross listed with ENCE 3631.

ENCE 4800 Advanced Topics (CPE) (1-5 Credits)

Various topics in computer engineering as announced. May be taken more than once. Cross-listed with ENCE 3321, ENCE 3620.

ENCE 4991 Independent Study (1-10 Credits)

ENCE 4995 Independent Research (1-18 Credits)

ENCE 5995 Independent Research (1-18 Credits)

Engineering, Electrical (ENEE)

ENEE 3011 Physical Electronics (4 Credits)

The basic physical concepts of electronics, electrons and holes in semiconductors, transport and optical processes. Concentration on device concepts, including material synthesis and device processing, P-N junction diodes, junctions with other materials, bipolar transistors, field effect transistors (JFET, MESFET, MOSFET) and optoelectronic effect transistors (JFET, MESFET, MOSFET) and optoelectronic devices (lasers, detectors). Prerequisites: CHEM 1010 or CHEM 1610, PHYS 1213 or PHYS 1214 or permission of instructor.

ENEE 3141 Digital Communications (3 Credits)

Introductory course on modern digital communication systems. The basic communication system theory, probability and random processes, baseband digital data transmission, coherent and non-coherent digital modulation techniques and analysis of bit error probability. Bandwidth efficiency and transmission of digital data through band-limited channels. Prerequisites: ENEE 3111, ENGR 3611 or permission of instructor.

ENEE 3620 Optical Fiber Communications (4 Credits)

A comprehensive treatment of the theory and behavior of basic constituents, such as optical fibers, light sources, photodetectors, connecting and coupling devices, and optical amplifiers. The basic design principles of digital and analog optical fiber transmission links. The operating principles of wavelength-division multiplexing (WDM) and the components needed for its realization. Descriptions of the architectures and performance characteristics of complex optical networks for connecting users with a wide range of transmission needs (SONET/SDH). Discussions of advanced optical communication techniques, such as soliton transmission, optical code-division multiplexing (optical CDMA) and ultra-fast optical time-division multiplexing (OTDM). Laboratory. Cross listed with ENEE 4620. Prerequisite: ENEE 3030 or permission of instructor.

ENEE 3641 Introduction to Electromagnetic Compatibility (4 Credits)

The study of the design of electronic systems so that they operate compatibly with other electronic systems and also comply with various governmental regulations on radiated and conducted emissions. Topics may include Electromagnetic Compatibility (EMC) requirements for electronic systems; non-ideal behavior of components; radiated emissions and susceptibility; conducted emissions and susceptibility; shielding and system design for EMC. Cross listed with ENEE 4640. Prerequisites: ENEE 2611 and ENEE 2223.

ENEE 3670 Introduction to Digital Signal Processing (4 Credits)

Introduction to the theory and applications of Digital Signal Processing. Special attention is paid to the fast Fourier transform and convolution and to the design and implementation of both FIR and IIR digital filters. Prerequisite: ENEE 3111.

ENEE 4030 Optoelectronics (4 Credits)

Optical fibers: structures, waveguiding, and fabrication; attenuation and dispersion; optical sources (LED, LASER, Fiber laser); power launching and coupling; photodetectors (APD, PIN, MSM); and practical optical transmitter and receivers. Cross listed with ENEE 3030.

ENEE 4141 Digital Communications (4 Credits)

Introductory course on modern digital communication systems. The basic communication system theory, probability and random processes, baseband digital data transmission, coherent and non-coherent digital modulation techniques and analysis of bit error probability. Bandwidth efficiency and transmission of digital data through band-limited channels.

ENEE 4620 Adv Optical Fiber Comm (4 Credits)

A comprehensive treatment of the theory and behavior of basic constituents, such as optical fibers, light sources, photodetectors, connecting and coupling devices, and optical amplifiers. The basic design principles of digital and analog optical fiber transmission links. The operating principles of wavelength-division multiplexing (WDM) and the components needed for its realization. Descriptions of the architectures and performance characteristics of complex optical networks for connecting users who have a wide range of transmission needs (SONET/SDH). Discussions of advanced optical communication techniques, such as soliton transmission, optical code-division multiplexing (optical CDMA), and ultra-fast optical time division multiplexing (OTDM). Advanced Project. Cross listed with ENEE 3620. Prerequisite: instructor permission.

ENEE 4640 Electromagnetic Compatibility (4 Credits)

The study of the design of electronic systems so that they operate compatibly with other electronic systems and also comply with various governmental regulations on radiated and conducted emissions. Topics may include: Electromagnetic Compatibility (EMC) requirements for electronic systems; non-ideal behavior of components; radiated emissions and susceptibility; conducted emissions and susceptibility; shielding and system design for EMC. Final Project. Cross listed with ENEE 3641.

ENEE 4800 Advanced Topics (EE) (1-5 Credits)

Various advanced topics in electrical engineering as announced. May be taken more than once. Cross-listed with ENEE 3035.

ENEE 4950 ECE Graduate Assessment (0 Credits)

This class does not meet. All graduate (MS and PhD) ECE students will enroll in this class during their last quarter. All required assessment materials will be uploaded online in Canvas Assignments to meet the course requirements. Students will receive Canvas course announcements and or emails from the instructor notifying the students of what are required to be uploaded. The purpose is to collect data for the assessment and continuous improvement of the graduate programs.

ENEE 4991 Independent Study (1-10 Credits)

ENEE 4995 Independent Research (1-16 Credits)

ENEE 5995 PhD Independent Research (1-10 Credits)

ENEE 6991 Ph.D Independent Study (1-10 Credits)

ENEE 6995 Independent Research (1-16 Credits)

Engineering, Systems (ENSY)

ENSY 4010 Systems Engineering Fundamentals (3 Credits)

An overview of systems engineering, including V-diagrams, functional architecture, physical architecture, system assembly and integration, verification and validation, and milestones to monitor the progress of the design.

ENSY 4012 Systems Engineering Requirements Development (3 Credits)

The course covers fundamentals of design and requirements analysis of complex systems to meet overall mission requirements. Spanning the requirements engineering phase, topics include: decomposition, derivation, allocation, verification and validation planning. Prerequisite: ENSY 4010, or permission of instructor.

ENSY 4014 Complex System Architectures (3 Credits)

The course focuses on mission requirements and how an overall mission should function by examining different architecture configurations and tools for modeling purposes. Topics include: allocation of functional and non-functional requirements, Service Oriented Architecture (SOA) and architectural modeling using the System Modeling Language (SysML). Prerequisite: ENSY 4010.

ENSY 4016 Conceptual Design of Systems (3 Credits)

Conceptual design is the part of the design process that yields a basic solution path, which leads to the principle solution. The focus of the course is on two important decision making principles: understanding a problem and devising a plan. Topics include: intellectual property and the development of engineering drawings, schematics and 3D models.

ENSY 4021 Design of Space Systems Part 1 (3 Credits)

This course is part one of a two-part series on spacecraft design by integrated systems and subsystems. Topics include: spacecraft overview, subsystem interfaces, concepts of operation (CONOPS) and the systems engineer's role as a generalist as opposed to specialists.

ENSY 4022 Design of Space Systems Part 2 (3 Credits)

This course is part two of a two-part series on spacecraft design by integrated systems and subsystems. Topics correspond to decomposition of the spacecraft into classical spacecraft subsystems. Practical applications and core functionality of these subsystems are presented, including required testing and integration at the subsystem and spacecraft levels. Prerequisite: ENSY 4021.

ENSY 4024 Applied Electrical, Mechanical and Software Systems (3 Credits)

This is a practice-centered course. Assess case studies of design, implementation and testing, validation and verification of complete complex (e.g. spacecraft) systems to meet mission requirements with performance guarantees. Prerequisites: ENSY 4012, ENSY 4014, and ENSY 4016, or permission by the Instructor.

ENSY 4030 Introduction to Aerospace Missions (3 Credits)

This class is for individuals working in aerospace engineering and related fields. Topics include: design of orbital spacecraft, design for Moon missions (such as landers), design for Mars missions (including rovers), design of an unmanned drone for surveillance (high-altitudes), CubeSats (having large constellations), and rockets and missiles (including hypersonic).

ENSY 4040 Systems Optimization (3 Credits)

The development and application of various optimization techniques will be explored with engineering examples. Topics include: analytical and numerical methods, linear and non-linear programming techniques for unconstrained and constrained problems, and advanced optimization techniques, e.g. global optimization. Assignments are in context of Systems Engineering case studies.

ENSY 4042 Optimization for Advanced Systems (3 Credits)

Advanced optimization algorithms are presented, as a pillar of data science and machine learning. Topics include: linear, nonlinear and integer programming models. Students will learn to understand tractability of models, particularly complex models as are central to the discipline of Systems Engineering. Prerequisite: ENSY 4040.

ENSY 4050 Digital Transformation for Advanced Integration (3 Credits)

Digital engineering technologies address the difficulties of managing complex and evolving technologies over their lifecycles of (i) development and (ii) operations & maintenance. This course will focus on digital technologies to integrate data across the enterprise, break organizational silos, and drive culture to realize risk reduction. Topics include: elements of the digital thread, such as digital twins and simulation, as well as machine learning and data analytics to inform decision-making throughout the lifecycle.

ENSY 4060 Practical Model Based Systems Engineering (3 Credits)

MBSE is part of a long-term trend toward model-centric approaches adopted by other engineering disciplines, including mechanical, electrical and software. In this course, students will be given hands-on access to MBSE tools in order to learn the UML/SysML language of MBSE and to practice systems engineering methods using the digital thread that is enabled by MBSE. Students will also gain an understanding of MBSE being a subset of Model Based Design (MBD). Prerequisite: ENSY 4050, or permission of instructor.

ENSY 4090 Project Management in Relation to Systems Engineering (3 Credits)

An overview of the skills and strategies for managing people, risks, schedules, and information to meet goals and objectives in large, complicated engineering projects. Includes managing project constraints, and best practices for working with project managers. Emphasis is on People, Process and the Business Environment.

ENSY 4112 Practical Validation and Verification Test Planning (3 Credits)

In this course, students gain a practical understanding of V-diagrams, and the path that must be traveled to fully validate and verify any system. Topics include: traceability between requirements and validation and verification test plans, including practical development of detailed test procedures at any level of integration. Prerequisite ENSY 4012, or permission by the instructor.

ENSY 4170 Practical Approaches to Continuous Improvement (3 Credits)

In this course, students learn practical differences between Continuous Improvement (CI) methods, such as Kaizen, Lean, Six Sigma, and Total Quality Management (TQM). Current events will be used as case studies to apply practical understanding of these CI methods. Practical application of the methods will leverage principles taught in ENSY 4010. Case studies and assignments are based on illustrations of value added CI engineering in the Systems Engineering discipline. Prerequisites: ENSY 4010 or instructor approval.

ENSY 4180 Applied Mathematics for Systems Engineering (3 Credits)

The course reviews topics in continuous and discrete mathematics (integral and differential calculus, matrices, vector calculus, discrete math: matrices, graphs, sets) and introductory probability, as they apply to engineering, and introduces students to more advanced concepts aiding the understanding and design of complex engineering systems. Examples are drawn from engineering systems applications. Students apply the techniques using engineering computing platform.

ENSY 4181 Introductory Probability and Statistics for Systems Engineering (3 Credits)

This course introduces fundamentals of probability for Systems Engineers. Students survey data visualization methods and summary statistics, develop models for data, and apply statistical techniques to assess the validity of the models. Techniques include parametric and nonparametric methods for parameter estimation and hypothesis testing for a single sample mean and two sample means, for proportions, and for simple linear regression. Students will apply methods to real-world engineering data, primarily using R.

ENSY 4182 Data Analytics for Systems Engineering (3 Credits)

This course is designed for students to develop skills in data analytics specifically tailored for systems engineering applications. It combines theoretical understanding with practical applications, covering various models for data inference, statistical methodologies, and the use of data analytics tools and software.

ENSY 4200 Applied Machine Learning for Advanced Systems Modeling (3 Credits)

This course covers topics in Machine Learning including Bayesian decision theory, supervised learning, unsupervised learning and clustering, linear discriminant functions, linear classification techniques such as Support Vector Machines, as well as Artificial Neural Networks and Deep Learning methods.

ENSY 4950 Graduate Assessment for Master of Science degree in Systems Engineering (0 Credits)

This class does not meet. All MS in Systems Engineering (MSSY) graduate students will enroll in this class during their last quarter. The purpose is to collect data for the assessment and continuous improvement of the graduate programs. All required assessment materials will be uploaded online in Canvas Assignments to meet the course requirements. Students will receive Canvas course announcements and or emails from the instructor notifying the students of what are required to be uploaded.

Engineering, Computer Courses

ENCE 3231 Embedded Systems Programming (4 Credits)

Design, construction and testing of microprocessor systems. Hardware limitations of the single-chip system. Includes micro-controllers, programming for small systems, interfacing, communications, validating hardware and software, microprogramming of controller chips, design methods and testing of embedded systems. Prerequisite: ENCE 3210.

ENCE 3321 Network Design (4 Credits)

Introduction to network components. Layering of network architecture. Analysis of Local Area Network (LAN) concepts and architecture based on IEEE standards. Design principles including switching and multiplexing techniques, physical link, signal propagation, synchronization, framing and error control. Application of probability and statistics in error detecting and control. Ethernet, Token-ring, FDDI (Fiber Distributed Data Interface), ATM (Asynchronous Transfer Mode), ISDN (Integrated Service Data Networks). Prerequisite: ENEE 3111, ENCE 2101 or permission of instructor.

ENCE 3501 VLSI Design (3 Credits)

Design of Very Large Scale Integration systems. Examination of layout and simulation of digital VLSI circuits using a comprehensive set of CAD tools in a laboratory setting. Studies of layouts of CMOS combinational and sequential circuits using automatic layout generators. Fundamental structures of the layout of registers, adders, decoders, ROM, PLA's, counters, RAM and ALU. Application of statistics and probability to chip performance. CAD tools allow logic verification and timing simulation of the circuits designed. Cross listed with ENCE 4501. Prerequisite: ENCE 3231.

ENCE 3620 Computer Vision (4 Credits)

This course is an introduction to the basic concepts in image processing and computer vision. First, an introduction to low-level image analysis methods, including radiometry and geometric image formation, edge detection, feature detection, and image segmentation are presented. Then, geometric-based image transformations (e.g., image warping and morphing) for image synthesis will be presented in the course. Furthermore, methods for reconstructing three-dimensional scenes including camera calibration, Epipolar geometry, and stereo feature matching are introduced. Other important topics include optical flow, shape from shading, and three-dimensional object recognition. In conclusion, students learn and practice image processing and computer vision techniques that can be used in other areas such as robotics, pattern recognition, and sensor networks. Cross listed with ENCE 4620. Prerequisites: ENGR 3611 or ENGR 3621 AND ENGR 1572 or ENGR 3650 or ENCE 3260 or permission of instructor.

ENCE 3631 Machine Learning (4 Credits)

This class covers topics in machine learning including but not limited to Bayesian decision theory, supervised learning, unsupervised learning and clustering, linear discriminant functions, deep learning, neural networks, linear classification techniques, manifold learning, bag of words, and Support Vector Machines. Cross listed with ENCE-4631.

ENCE 4110 Modern Digital Systems Design (4 Credits)

This course focuses on the design of digital systems using combinational, sequential, and programmable logic devices and Hardware Description Languages (HDL). Techniques for logic design including asynchronous logic, physical world interfaces to digital systems, and system performance analysis methods are studied. Students also learn HDL-Verilog to program CPLD devices and FPGA systems. Cross listed with ENCE 3100.

ENCE 4231 Embedded Systems Programming (4 Credits)

Design, construction and testing of microprocessor systems. Hardware limitations of the single-chip system. Includes micro-controllers, programming for small systems, interfacing, communications, validating hardware and software, microprogramming of controller chips, design methods and testing of embedded systems.

ENCE 4501 Advanced VLSI Design (4 Credits)

Advanced techniques in the fabrication and design of VLSI circuits and systems. Modeling of parasitic components. Floor-planning, clock distribution, routing, and low power design. Cross listed with ENCE 3501. Prerequisite: ENCE 3501 or permission of instructor.

ENCE 4620 Advanced Computer Vision (4 Credits)

This course covers advanced concepts in image processing and computer vision including but not limited to image radiometry and geometric formation, edge detection, geometric based transformations (e.g., image warping and morphing), camera calibration, Epipolar geometry, and stereo feature matching. Other advanced topics include optical flow, shape from shading, and three-dimensional object recognition. In conclusion, students learn and practice advanced topics in image processing and computer vision techniques that can be used in other areas such as robotics, pattern recognition, and sensor networks. Cross listed with ENCE 3620. Prerequisite: ENEE 3311.

ENCE 4631 Advanced Machine Learning (4 Credits)

This class covers advanced topics in machine learning including but not limited to Bayesian decision theory, supervised learning, unsupervised learning and clustering, linear discriminant functions, deep neural networks, deep learning, linear classification techniques, manifold learning, bag of words, and Support Vector Machines. Cross listed with ENCE 3631.

ENCE 4800 Advanced Topics (CPE) (1-5 Credits)

Various topics in computer engineering as announced. May be taken more than once. Cross-listed with ENCE 3321, ENCE 3620.

ENCE 4991 Independent Study (1-10 Credits)

ENCE 4995 Independent Research (1-18 Credits)

ENCE 5995 Independent Research (1-18 Credits)

Engineering, Electrical Courses

ENEE 3011 Physical Electronics (4 Credits)

The basic physical concepts of electronics, electrons and holes in semiconductors, transport and optical processes. Concentration on device concepts, including material synthesis and device processing, P-N junction diodes, junctions with other materials, bipolar transistors, field effect transistors (JFET, MESFET, MOSFET) and optoelectronic effect transistors (JFET, MESFET, MOSFET) and optoelectronic devices (lasers, detectors). Prerequisites: CHEM 1010 or CHEM 1610, PHYS 1213 or PHYS 1214 or permission of instructor.

ENEE 3141 Digital Communications (3 Credits)

Introductory course on modern digital communication systems. The basic communication system theory, probability and random processes, baseband digital data transmission, coherent and non-coherent digital modulation techniques and analysis of bit error probability. Bandwidth efficiency and transmission of digital data through band-limited channels. Prerequisites: ENEE 3111, ENGR 3611 or permission of instructor.

ENEE 3620 Optical Fiber Communications (4 Credits)

A comprehensive treatment of the theory and behavior of basic constituents, such as optical fibers, light sources, photodetectors, connecting and coupling devices, and optical amplifiers. The basic design principles of digital and analog optical fiber transmission links. The operating principles of wavelength-division multiplexing (WDM) and the components needed for its realization. Descriptions of the architectures and performance characteristics of complex optical networks for connecting users with a wide range of transmission needs (SONET/SDH). Discussions of advanced optical communication techniques, such as soliton transmission, optical code-division multiplexing (optical CDMA) and ultra-fast optical time-division multiplexing (OTDM). Laboratory. Cross listed with ENEE 4620. Prerequisite: ENEE 3030 or permission of instructor.

ENEE 3641 Introduction to Electromagnetic Compatibility (4 Credits)

The study of the design of electronic systems so that they operate compatibly with other electronic systems and also comply with various governmental regulations on radiated and conducted emissions. Topics may include Electromagnetic Compatibility (EMC) requirements for electronic systems; non-ideal behavior of components; radiated emissions and susceptibility; conducted emissions and susceptibility; shielding and system design for EMC. Cross listed with ENEE 4640. Prerequisites: ENEE 2611 and ENEE 2223.

ENEE 3670 Introduction to Digital Signal Processing (4 Credits)

Introduction to the theory and applications of Digital Signal Processing. Special attention is paid to the fast Fourier transform and convolution and to the design and implementation of both FIR and IIR digital filters. Prerequisite: ENEE 3111.

ENEE 4030 Optoelectronics (4 Credits)

Optical fibers: structures, waveguiding, and fabrication; attenuation and dispersion; optical sources (LED, LASER, Fiber laser); power launching and coupling; photodetectors (APD, PIN, MSM); and practical optical transmitter and receivers. Cross listed with ENEE 3030.

ENEE 4141 Digital Communications (4 Credits)

Introductory course on modern digital communication systems. The basic communication system theory, probability and random processes, baseband digital data transmission, coherent and non-coherent digital modulation techniques and analysis of bit error probability. Bandwidth efficiency and transmission of digital data through band-limited channels.

ENEE 4620 Adv Optical Fiber Comm (4 Credits)

A comprehensive treatment of the theory and behavior of basic constituents, such as optical fibers, light sources, photodetectors, connecting and coupling devices, and optical amplifiers. The basic design principles of digital and analog optical fiber transmission links. The operating principles of wavelength-division multiplexing (WDM) and the components needed for its realization. Descriptions of the architectures and performance characteristics of complex optical networks for connecting users who have a wide range of transmission needs (SONET/SDH). Discussions of advanced optical communication techniques, such as soliton transmission, optical code-division multiplexing (optical CDMA), and ultra-fast optical time division multiplexing (OTDM). Advanced Project. Cross listed with ENEE 3620. Prerequisite: instructor permission.

ENEE 4640 Electromagnetic Compatibility (4 Credits)

The study of the design of electronic systems so that they operate compatibly with other electronic systems and also comply with various governmental regulations on radiated and conducted emissions. Topics may include: Electromagnetic Compatibility (EMC) requirements for electronic systems; non-ideal behavior of components; radiated emissions and susceptibility; conducted emissions and susceptibility; shielding and system design for EMC. Final Project. Cross listed with ENEE 3641.

ENEE 4800 Advanced Topics (EE) (1-5 Credits)

Various advanced topics in electrical engineering as announced. May be taken more than once. Cross-listed with ENEE 3035.

ENEE 4950 ECE Graduate Assessment (0 Credits)

This class does not meet. All graduate (MS and PhD) ECE students will enroll in this class during their last quarter. All required assessment materials will be uploaded online in Canvas Assignments to meet the course requirements. Students will receive Canvas course announcements and or emails from the instructor notifying the students of what are required to be uploaded. The purpose is to collect data for the assessment and continuous improvement of the graduate programs.

ENEE 6995 Independent Research (1-16 Credits)

Engineering, Systems Courses

ENSY 4010 Systems Engineering Fundamentals (3 Credits)

An overview of systems engineering, including V-diagrams, functional architecture, physical architecture, system assembly and integration, verification and validation, and milestones to monitor the progress of the design.

ENSY 4012 Systems Engineering Requirements Development (3 Credits)

The course covers fundamentals of design and requirements analysis of complex systems to meet overall mission requirements. Spanning the requirements engineering phase, topics include: decomposition, derivation, allocation, verification and validation planning. Prerequisite: ENSY 4010, or permission of instructor.

ENSY 4014 Complex System Architectures (3 Credits)

The course focuses on mission requirements and how an overall mission should function by examining different architecture configurations and tools for modeling purposes. Topics include: allocation of functional and non-functional requirements, Service Oriented Architecture (SOA) and architectural modeling using the System Modeling Language (SysML). Prerequisite: ENSY 4010.

ENSY 4016 Conceptual Design of Systems (3 Credits)

Conceptual design is the part of the design process that yields a basic solution path, which leads to the principle solution. The focus of the course is on two important decision making principles: understanding a problem and devising a plan. Topics include: intellectual property and the development of engineering drawings, schematics and 3D models.

ENSY 4021 Design of Space Systems Part 1 (3 Credits)

This course is part one of a two-part series on spacecraft design by integrated systems and subsystems. Topics include: spacecraft overview, subsystem interfaces, concepts of operation (CONOPS) and the systems engineer's role as a generalist as opposed to specialists.

ENSY 4022 Design of Space Systems Part 2 (3 Credits)

This course is part two of a two-part series on spacecraft design by integrated systems and subsystems. Topics correspond to decomposition of the spacecraft into classical spacecraft subsystems. Practical applications and core functionality of these subsystems are presented, including required testing and integration at the subsystem and spacecraft levels. Prerequisite: ENSY 4021.

ENSY 4024 Applied Electrical, Mechanical and Software Systems (3 Credits)

This is a practice-centered course. Assess case studies of design, implementation and testing, validation and verification of complete complex (e.g. spacecraft) systems to meet mission requirements with performance guarantees. Prerequisites: ENSY 4012, ENSY 4014, and ENSY 4016, or permission by the Instructor.

ENSY 4030 Introduction to Aerospace Missions (3 Credits)

This class is for individuals working in aerospace engineering and related fields. Topics include: design of orbital spacecraft, design for Moon missions (such as landers), design for Mars missions (including rovers), design of an unmanned drone for surveillance (high-altitudes), CubeSats (having large constellations), and rockets and missiles (including hypersonic).

ENSY 4040 Systems Optimization (3 Credits)

The development and application of various optimization techniques will be explored with engineering examples. Topics include: analytical and numerical methods, linear and non-linear programming techniques for unconstrained and constrained problems, and advanced optimization techniques, e.g. global optimization. Assignments are in context of Systems Engineering case studies.

ENSY 4042 Optimization for Advanced Systems (3 Credits)

Advanced optimization algorithms are presented, as a pillar of data science and machine learning. Topics include: linear, nonlinear and integer programming models. Students will learn to understand tractability of models, particularly complex models as are central to the discipline of Systems Engineering. Prerequisite: ENSY 4040.

ENSY 4050 Digital Transformation for Advanced Integration (3 Credits)

Digital engineering technologies address the difficulties of managing complex and evolving technologies over their lifecycles of (i) development and (ii) operations & maintenance. This course will focus on digital technologies to integrate data across the enterprise, break organizational silos, and drive culture to realize risk reduction. Topics include: elements of the digital thread, such as digital twins and simulation, as well as machine learning and data analytics to inform decision-making throughout the lifecycle.

ENSY 4060 Practical Model Based Systems Engineering (3 Credits)

MBSE is part of a long-term trend toward model-centric approaches adopted by other engineering disciplines, including mechanical, electrical and software. In this course, students will be given hands-on access to MBSE tools in order to learn the UML/SysML language of MBSE and to practice systems engineering methods using the digital thread that is enabled by MBSE. Students will also gain an understanding of MBSE being a subset of Model Based Design (MBD). Prerequisite: ENSY 4050, or permission of instructor.

ENSY 4090 Project Management in Relation to Systems Engineering (3 Credits)

An overview of the skills and strategies for managing people, risks, schedules, and information to meet goals and objectives in large, complicated engineering projects. Includes managing project constraints, and best practices for working with project managers. Emphasis is on People, Process and the Business Environment.

ENSY 4112 Practical Validation and Verification Test Planning (3 Credits)

In this course, students gain a practical understanding of V-diagrams, and the path that must be traveled to fully validate and verify any system. Topics include: traceability between requirements and validation and verification test plans, including practical development of detailed test procedures at any level of integration. Prerequisite ENSY 4012, or permission by the instructor.

ENSY 4170 Practical Approaches to Continuous Improvement (3 Credits)

In this course, students learn practical differences between Continuous Improvement (CI) methods, such as Kaizen, Lean, Six Sigma, and Total Quality Management (TQM). Current events will be used as case studies to apply practical understanding of these CI methods. Practical application of the methods will leverage principles taught in ENSY 4010. Case studies and assignments are based on illustrations of value added CI engineering in the Systems Engineering discipline. Prerequisites: ENSY 4010 or instructor approval.

ENSY 4180 Applied Mathematics for Systems Engineering (3 Credits)

The course reviews topics in continuous and discrete mathematics (integral and differential calculus, matrices, vector calculus, discrete math: matrices, graphs, sets) and introductory probability, as they apply to engineering, and introduces students to more advanced concepts aiding the understanding and design of complex engineering systems. Examples are drawn from engineering systems applications. Students apply the techniques using engineering computing platform.

ENSY 4181 Introductory Probability and Statistics for Systems Engineering (3 Credits)

This course introduces fundamentals of probability for Systems Engineers. Students survey data visualization methods and summary statistics, develop models for data, and apply statistical techniques to assess the validity of the models. Techniques include parametric and nonparametric methods for parameter estimation and hypothesis testing for a single sample mean and two sample means, for proportions, and for simple linear regression. Students will apply methods to real-world engineering data, primarily using R.

ENSY 4182 Data Analytics for Systems Engineering (3 Credits)

This course is designed for students to develop skills in data analytics specifically tailored for systems engineering applications. It combines theoretical understanding with practical applications, covering various models for data inference, statistical methodologies, and the use of data analytics tools and software.

ENSY 4200 Applied Machine Learning for Advanced Systems Modeling (3 Credits)

This course covers topics in Machine Learning including Bayesian decision theory, supervised learning, unsupervised learning and clustering, linear discriminant functions, linear classification techniques such as Support Vector Machines, as well as Artificial Neural Networks and Deep Learning methods.

ENSY 4950 Graduate Assessment for Master of Science degree in Systems Engineering (0 Credits)

This class does not meet. All MS in Systems Engineering (MSSY) graduate students will enroll in this class during their last quarter. The purpose is to collect data for the assessment and continuous improvement of the graduate programs. All required assessment materials will be uploaded online in Canvas Assignments to meet the course requirements. Students will receive Canvas course announcements and or emails from the instructor notifying the students of what are required to be uploaded.

Engineering

Office: Ritchie School of Engineering and Computer Science Mail Code: 2155 E. Wesley Ave, Room 277, Denver, CO 80208 Phone: 303-871-3041

Email: mmeinfo@du.edu or eceinfo@du.edu

Web Site: https://ritchieschool.du.edu/academics-education/departments/mechanical-materials-engineering (https://ritchieschool.du.edu/academics-education/departments/mechanical-materials-engineering/) and https://ritchieschool.du.edu/academics-education/departments/ electrical-computer-engineering (https://ritchieschool.du.edu/academics-education/departments/electrical-computer-engineering/)

Master's and Doctoral Degrees

Why study engineering at the University of Denver?

The University of Denver's Daniel Felix Ritchie School of Engineering and Computer Science is creating the future of technology by providing a graduate education emphasizing cross-disciplinary knowledge. Engineering graduate students join the faculty in conducting cutting-edge research in emerging disciplines to develop unique solutions to old and new problems and opportunities.

The well-equipped laboratories contain state-of-the-art equipment and software to support research in biomedical engineering, advanced materials, robotics, mechanical design, and Al/machine learning, among others. Small classes support our multidisciplinary and real-time focus by providing close contact between students and faculty, which allows us to meet students' individual career goals.

The general engineering graduate student can choose courses from mechanical engineering, electrical engineering, computer engineering, computer science, and bioengineering.

Denver is a first-rate location for business, governmental and laboratory partnerships, and technology employment. The Colorado Front Range is consistently rated as one of the top high-tech areas in the country, and the University of Denver is located just minutes from the Denver Tech Center, site of many top technology companies. The Department of Mechanical Engineering is committed to active collaboration with these industry leaders. As a result, our students graduate with relevant research experience and a network of employment contacts in the technology sector.

Time Commitment

Our department recognizes that a student may be employed full-time while studying for a degree. Therefore, many courses are offered at times and on days that will permit a student to complete the program by taking courses either late in the day or outside normal business hours. Many employers will permit additional flexibility by releasing employees early to attend classes. We also can provide hybrid and Zoom-based course options.

The master's program offers thesis and non-thesis options and can be completed in one (non-thesis track only) to four years depending on the number of courses taken per quarter. The choice of thesis or non-thesis can be made at any time, although a delay in declaration may impact the completion date.

The doctoral program is generally completed in three to seven years, depending on the number of courses taken per quarter and whether the student enters with a BS or MS.

A student not interested in pursuing a degree, but interested in taking an occasional course, may register as a special status student (http:// www.du.edu/learn/graduates/degreeprograms/) by following an abbreviated admissions process. If at a later time the student chooses to enter a graduate degree program at DU, you may apply up to 15 special status credits to your degree, with departmental approval. Just follow the regular graduate application requirements, including submitting the application fee, to get started.

Degree Programs

The following are our general engineering degrees. Please see the Mechanical and Materials Engineering Programs for our other graduate engineering degrees.

- Master of Science in Engineering (MS ENGE)
- Master of Science in Engineering with a Concentration in Engineering Management (MS ENGE (CM))
- · Doctor of Philosophy in Engineering (PhD ENME)
- · Doctor of Philosophy in Biomedical Engineering

Doctor of Philosophy in Engineering

The Doctor of Philosophy in Engineering (PhD ENGE) program prepares students to contribute to the advancement of science, engineering, and technology through independent research. The PhD students of the 21st century may pursue academic, research, or industry careers. Individualized plans of study are based on students' previous experience and desired research areas. The plan of study allows students to work on interdisciplinary research, while also satisfying the PhD in engineering degree requirements.

The interdisciplinary Engineering PhD program offers opportunities for a student to develop a plan of study combining engineering and a complementary discipline (e.g. natural sciences). In the plan of study, coursework in the complementary discipline can be included up to the maximum number of technical elective credits. The student's plan of study must be approved by the PhD committee and the department chair. When the student is completing research and coursework in a complementary discipline, the student's PhD committee must include a faculty member from the related department or division/school.

For a part-time student who is working in an industry position, a topic related to the job function may be acceptable as the dissertation research topic. Furthermore, a student may request for a qualified staff member at the place of employment to serve as a special committee member on the dissertation committee.

Doctor of Philosophy in Biomedical Engineering

The Doctor of Philosophy in Biomedical Engineering (PhD BME) program combines cross-disciplinary course work in engineering and life sciences. It trains students to carry out independent research in fields related to human health and well-being. The training combines engineering principles with sciences to further our understanding of health-related problems and to design and create novel methods, devices, and software to bring innovative solutions to these problems.

Master of Science in Engineering

The Master of Science in Engineering (MS ENGE) is designed to advance the knowledge of students in areas differing from those in which they received their bachelor's degree. The program is particularly intended for students with bachelor's degrees in the natural sciences, mathematics, computer science or engineering who are making a change of discipline or wanting to develop expertise in an engineering area, often one that is of emerging importance or interdisciplinary in nature. The program combines a solid background in an area of engineering with a distinctly personal specialization. It enables the student to focus on a particular area of engineering, while providing breadth through its technical elective requirement addressing the student's specific interests.

A Master of Science in Engineering with a concentration in Management (CM) is also offered (see below). These engineering and management courses are focused on developing core knowledge and competencies in innovation and entrepreneurship, and providing concrete tools to successfully translate ideas and initiative into marketplace success.

Master of Science in Engineering with a Concentration in Engineering Management

The degree of Master of Science in Engineering allows students to pursue a concentration in engineering management (MS ENGE(CM)). This is an engineering degree with both engineering and management focuses. The concentration in engineering management is designed to meet the increasing needs of students to enhance their career opportunities as managers or as entrepreneurs by supplementing advanced engineering knowledge with a fundamental understanding of business principles within the context of technology enterprises. Drawing upon the strengths of both RSECS and the Daniels College of Business, the program provides the relevant content for graduates to lead technology enterprises. Candidates for the degree of master of science with a concentration in management will be on the non-thesis track only.

Doctor of Philosophy in Biomedical Engineering

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

• A bachelor's degree in engineering or related field from a regionally accredited college or university is required for admission to the program.

Standardized Test Scores

- GRE scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be
 received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores
 to the University of Denver is 4842.

Other Required Materials

PhD applicants should contact faculty to find a research advisor BEFORE submitting the application. Applications without a research advisor commitment may be considered for a master's program only.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Doctor of Philosophy in Engineering

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.

- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

• Students with a master's degree in Engineering or closely related areas may apply for the PhD program in Engineering (ENGR). Admission with only a Bachelor of Science degree in this field is also possible, but such students are encouraged to enroll first in the MS ENGR program. Note that although not an admission requirement, students who are not adequately prepared to succeed in our graduate level courses may choose to complete prerequisite undergraduate courses.

Other Required Materials

• We recommend PhD applicants contact faculty to find a research advisor BEFORE submitting the application. If we receive an application and there is no research advisor commitment, we will consider the applicant for the master's program only.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- · Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Science in Engineering

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

• Students with a bachelor's degree in Engineering, Mathematics, Chemistry, Biology or Physics is normally required for admission to the MS Engineering with or without the concentration in Management (ENGR/ENGR CM) programs. Note that although not an admission requirement, students who are not adequately prepared to succeed in our graduate level courses may choose to complete prerequisite undergraduate courses.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Doctoral Programs

Doctor of Philosophy in Biomedical Engineering

Degree requirements

Minimum number of credits required for the degree: 90 (45 for those who enter with a Master of Science degree)

PhD Students with a Bachelor of Science Degree Program Structure

For students entering with a bachelor's degree, 90 credits are required, at least 75 of which must be completed at the University of Denver.

- 1. A minimum of 48 credits must be at the 4000- or 5000-level and may include as many dissertation research credits as considered appropriate by the advisor.
- 2. No courses at the 1000- or 2000-level are acceptable.

- 3. An overall GPA of 3.0 is required for the degree.
- 4. Any individual grade lower than C- renders the credit unacceptable.
- 5. Students who have completed the required 90 credits and are still working on the dissertation are eligible for Continuous Enrollment to maintain active student status at the University.
- 6. Students must complete all requirements for the doctoral degree no later than eight years after doctoral studies begin.

Ph.D. Residence Requirement:

Enrollment in at least six guarters, including two consecutive guarters of full-time attendance is required for graduation.

Program Requirement Exam Structure

- 1. Each student must pass the gualifying exam to continue in the PhD program. A "mock research proposal" in an area related to the student's research. The student is expected to schedule this exam after 4 guarters. The gualifying exam can be retaken only once.
- 2. After completion of the qualifying exam and coursework, the student should schedule and take the dissertation proposal exam. The student will develop a research proposal (NSF or NIH format) for their proposed doctoral research project and orally defend their proposal. The dissertation proposal needs to be completed at least one year before the dissertation defense. The dissertation proposal exam can be retaken only once.
- 3. After successful completion of the qualifying exam and the dissertation proposal exam, the student is required to complete and defend a dissertation of publishable quality based on the student's original research. The dissertation must be completed in written form in accordance with the University's guidelines and must be defended by the student in the final oral defense. The defense committee members will consist of the student's entire PhD committee. The dissertation defense can be retaken only once.

Course requirements		
Code	Title	Credits
Required Courses:		
ENBI 4600	Biomedical Engineering: Technology, Research, and Design	4
ENBI 4610	Experimental Design in Biomedical Sciences	4
ENGR 4300	Advanced Numerical Methods	4
ENME 4900	Grad Professional Development	1
Elective Core:		8

· Candidates with an engineering undergraduate degree and/or a master's degree in engineering must take graduate-level coursework in biological sciences or chemistry and biochemistry with the approval of their advisor. Biological sciences, chemistry, and biochemistry courses listed under technical electives below are acceptable but they can count only once, either as elective core course or technical core course but not both simultaneously.

· Candidates without an engineering degree must take courses in engineering with the following prefixes ENCE, ENEE, ENME numbered 3000 or higher and must be approved by the advisor.

4

Doctor of Philosophy in Engineering

Program Requirements

Exam Structure:

- 1. Each student must pass the qualifying exam to continue in the PhD program. In consultation with the advisor, students should expect to take the qualifying exam about one year (24 credits) into their academic study. Students must take exams in three subject areas. The Design exam is required for all participants, and is an open-book exam, where the student will have one week to prepare a written and oral response to an open-ended design problem. The other two exams are closed-book, written exams and should be related to the student's research area. The exam is offered twice a year. once in the summer interterm (usually in June) and once in the winter interterm (usually in December or early January). The qualifying exam can be retaken only once, and must be completed within one year after prior to the first qualifying comprehensive exam was attempted.
- 2. After completion of the qualifying exam and coursework, the student should schedule and take the comprehensive exam attended by the student's PhD committee. The student will be expected to make a concise presentation on his/her dissertation topic. The presentation will highlight previous work in this area, demonstrate a need for the research, and explain how the research will contribute to the advancement of the area. The student will also present completed work and results, and results, and a detailed plan for project completion. The comprehensive exam can be retaken only once.
- 3. After successful completion of the qualifying exam and the comprehensive exam, the student is required to complete and **defend a dissertation** of publishable quality based on the student's original research. The dissertation must be completed in written form in accordance with the University's guidelines, and must be defended by the student in the final oral defense. The defense committee members will consist of the student's entire PhD committee. The dissertation defense can be retaken only once.

PhD Residence Requirement

Enrollment in at least six quarters, including two consecutive quarters of full-time attendance is required for graduation.

PhD Students with a Bachelor of Science Degree Program Structure

- 1. For students entering with a bachelor's degree, 90 credits are required, at least 75 of which must be completed at the University of Denver.
- 2. A minimum of 48 credits must be at the 4000- or 5000-level and may include as many dissertation research credits as considered appropriate by the advisor.
- 3. No courses at the 1000- or 2000-level are acceptable.
- 4. An overall GPA of 3.0 is required for the degree.
- 5. Any individual grade lower than C- renders the credit unacceptable.
- 6. Students who have completed the required 90 credits and are still working on the dissertation are eligible for Continuous Enrollment to maintain active student status at the University.
- 7. Students must complete all requirements for the doctoral degree no later than eight years after doctoral studies begin.

Course Requirements:

- 1. Candidates who hold only a bachelor's degree on entering the doctoral program are expected to **meet all degree requirements of the corresponding master's degree** program (as part of the doctoral requirements).
- Students are required to take ENME 4950 Graduate Assessment in the last quarter of study. <u>NOTE</u>: Students are required to complete a written self-reflection on their dissertation and provide their dissertation, defense presentation slides, and the completed and signed degree program plan before graduation.

3. PhD students who enter the program with a bachelor's are required to take ENME 4900 Graduate Professional Development in the first year (this is offered once a year; usually in winter quarter).

PhD Students with a Master of Science

- 1. A minimum of 36 credits must be completed at the 4000- or 5000-level, which may include as many research credits as considered appropriate by the advisor.
- 2. For students entering with a master's degree, up to 45 credits may be transferred and applied to the doctorate degree. In addition, a minimum of 45 credits must be completed at DU. The total number of credits required for the degree is 90.
- 3. No courses at the 1000- or 2000-level are acceptable.
- 4. An overall GPA of 3.0 is required for the degree.
- 5. Any individual grade lower than C- renders the credit unacceptable.
- 6. A student who holds a master's degree on entering the doctoral program is expected to complete all requirements for the degree no later than seven years after beginning the program.

Course Requirements:

- Students are required to take ENME 4950 Graduate Assessment in the last quarter of study. <u>NOTE</u>: Students are required to complete a written self-reflection on their dissertation and provide their dissertation, defense presentation slides, and the completed and signed degree program plan before graduation.
- 2. If a PhD student fails the qualifying exam on the first try, they will be required to take ENME 4900 Graduate Professional Development as well. ENME 4900 will be offered once a year, usually in winter quarter.

Master's Degree Program

Master of Science in Engineering

Program Structure (non-management option)

- 1. Every candidate for this degree must complete 45 credits, at least 36 of which must be completed at the University of Denver.
- 2. A minimum of six 4000-level courses of at least three credits each are required for non-thesis track; four 4000-level courses of at least three credits each are required for thesis track.
- 3. No courses at the 1000- or 2000-level are acceptable.
- 4. An overall GPA of 3.0 is required for the degree.
- 5. Any individual grade lower than C- renders the credit unacceptable.
- 6. Students who have completed the required 45 credits and are still working on a thesis or project are eligible for Continuous Enrollment to maintain active student status at the University.
- 7. Master's degree candidates are expected to complete degree requirements no later than five years after beginning their programs. These programs are designed to be completed in about six quarters if two courses (eight credits) are taken each quarter.

Course Requirements

- 1. Core Courses: a minimum of nine credits (two courses from ENME, MTSC, ENBI or ECE Core Course List; no more than one course from a single discipline) plus the required courses.
- Required Courses: All master's students are required to take ENME 4900 Graduate Professional Development in the first year (this will be offered once a year; usually in winter quarter) and ENME 4950 Graduate Assessment in the last quarter of study. <u>NOTE</u>: Students on the thesis track are required to complete a written self-reflection on their thesis and provide their thesis, defense presentation slides, and the completed and signed degree program plan before graduation. Students on the non-thesis track are required to provide an assembled portfolio that includes reports from at least two course projects or homework from the core courses, a mini-proposal and presentation slides from ENME 4950 along with the completed and signed degree program plan.
- 3. Technical Electives: a minimum of 16 credits for thesis track and 28 credits for non-thesis track. These do not include independent research credits.
 - a. Technical electives must be in engineering (bioengineering, mechanical engineering, materials science, etc.) or related areas (mathematics, computer science, physics, chemistry, etc.) and are at the advisor's discretion. 50% or more of the technical elective credits must be in engineering.
 - b. A students may take one business/management course as a technical elective. Special permission should be obtained in writing from the advisor **PRIOR TO REGISTRATION** if more than one business/management course is taken.
- 4. Advanced Math Requirement: a minimum of three credits for thesis track and six credits for non-thesis track from the Core Course List or advisor approval.
- 5. Thesis Hours: not allowed for non-thesis track.
- 6. Tool Requirement: As employers of graduates of this degree will inherently expect a basic competency in foundational engineering skills, students must demonstrate these before advancing to candidacy. Candidates with BS degrees from accredited engineering schools, or students completing a thesis, will be exempt from the tool requirement. Candidates with undergraduate degrees from non-engineering majors and completing a non-thesis MS will be required to pass a tool requirement. This will consist of an exam based on the topics in the Fundamentals of Engineering General Exam.

Master of Science in Engineering with a Concentration in Engineering Management

Program Structure (management focus)

- 1. Every candidate for this degree must complete 45 credits, at least 36 of which must be completed at the University of Denver.
- 2. A minimum of six 4000-level courses of at least three credits each are required for non-thesis track; four 4000-level courses of at least three credits each are required for thesis track. No courses at the 1000- or 2000-level are acceptable.
- 3. An overall GPA of 3.0 is required for the degree.
- 4. Any individual grade lower than C- renders the credit unacceptable.
- 5. Students who have completed the required 45 credits and are still working on a thesis or project are eligible for Continuous Enrollment to maintain active student status at the University. Students working on internships are not eligible for Continuous Enrollment.
- 6. Master's degree candidates are expected to complete degree requirements no later than five years after beginning their programs.

Course Requirements:

1. Core Courses: a minimum of nine credits (one course from ENME, ENBI, MTSC or ECE Core Course List AND one course from Management Concentration Core Course List) plus required courses.

- 2. Required Courses: All master's students are required to take ENME 4900 Graduate Professional Development in the first year (this will be offered once a year; usually in winter quarter) and ENME 4950 Graduate Assessment in the last quarter of study. <u>NOTE</u>: Students on this non-thesis track are required to upload to Assessment.du.edu an assembled portfolio that includes reports from at least two course projects or homework from the core courses, a mini-proposal and presentation slides from ENME 4900, along with the completed and signed degree program plan.
- 3. Technical Electives: a minimum of 16 credits should be selected from ENME, ENBI, MTSC or ECE Core Course List.
- 4. Management Electives: a minimum of 12 credits should be selected from the following provided all prerequisites are met: any 4XXX level ACTG, CMGT, FIN, INFO, INFOR, MGNT, MKTG or REAL courses. These management electives are in addition to the management core credit requirement.
- 5. Advanced Math Requirement: a minimum of three credits from Core Course List or advisor approval.
- 6. Tool Requirement: As employers of graduates of this degree will inherently expect a basic competency in foundational engineering skills, students must demonstrate these before advancing to candidacy. Candidates with BS degrees from accredited engineering schools, or students completing a thesis, will be exempt from the tool requirement. Candidates with undergraduate degrees from non-engineering majors and completing a non-thesis MS will be required to pass a tool requirement. This will consist of an exam based on the topics in the Fundamentals of Engineering General Exam.

Engineering, Bio (ENBI)

ENBI 4200 Medical Device Development (4 Credits)

Working in a fast-paced competitive biomedical R&D firm is a dramatic change of pace from most college classes. This course will create a realistic industry environment where students take on the role of development engineers to design and manufacture real-world medical devices. This course is intended to provide a working knowledge of the design and development process specifically for medical device applications.

ENBI 4500 Biofluids (4 Credits)

The application of fluid dynamics theory and design to problems within the biomedical community. Specific topics covered include the mechanics of inhaled therapeutic aerosols, basic theory of circulation and blood flow, foundations in biotechnology and bioprocessing, and controlled drug delivery. Cross listed with ENBI 3500.

ENBI 4510 Biomechanics (4 Credits)

An introduction to the mechanical behavior of biological tissues and systems. Specific topics covered include: Analysis of the human musculoskeletal system as sensors, levers, and actuators; Joint articulations and their mechanical equivalents; Kinematic and kinetic analysis of human motion; Introduction to modeling human body segments and active muscle loading for analysis of dynamic activities; Mechanical properties of hard and soft tissues; Mechanical and biological consideration for repair and replacement of soft and hard tissue and joints; Orthopedic implants. Cross listed with ENBI 3510.

ENBI 4520 Introduction to Cardiovascular Engineering (4 Credits)

An introduction to cardiovascular mechanics with a focus on the quantitative understanding of the mechanical phenomena that governs the cardiovascular system. Specific topics covered include: basic principles of circulation including macro and micro circulation, soft tissue mechanics, applications to cardiovascular diseases, modelling techniques, clinical and experimental methods, and design of cardiovascular devices. Recommended prerequisites: ENME 2541 and ENME 2661.

ENBI 4530 Biomechanics of Human Movement (4 Credits)

An introduction to engineering-based analysis of human movement. Topics include: musculoskeletal anatomy, nueromuscular physiology, muscle mechanics, electromyography, sensorimotor integration, anthropometry, kinematics and kinetics. Recommended pre-requisite material: knowledge of MATLAB, ENGR 1572.

ENBI 4600 Biomedical Engineering: Technology, Research, and Design (4 Credits)

Introduction to Biomedical Engineering is an interdisciplinary course that combines engineering principles with biological and medical sciences to advance healthcare in areas such as diagnosis, monitoring, and therapy. The course provides a foundational understanding of biomedical engineering and prepares students for further study or careers in the field.

ENBI 4610 Experimental Design in Biomedical Sciences (4 Credits)

This course offers an in-depth exploration of experimental design principles within the biomedical sciences, emphasizing statistical analysis, measurement techniques, and ethical considerations. It aims to provide students with practical skills necessary for designing, conducting, and analyzing biomedical research.

ENBI 4620 Bioelectronics (4 Credits)

This course introduces the principles and applications of bioelectronics, focusing on the interface between biological systems and electronic devices. It covers the fundamentals of electronic circuits, signal processing, and sensor technology, and their applications in areas like biometric monitoring, neuroprosthetics, and biosensing.

ENBI 4630 Biomaterials (4 Credits)

This course provides an introduction to the field of biomaterials science, focusing on the fundamental principles, properties, and applications of materials used in biomedical engineering and healthcare. Topics covered include the classification of biomaterials, biocompatibility, interactions with biological systems, surface modifications, fabrication techniques, characterization techniques and current applications in tissue engineering, regenerative medicine, drug delivery, and medical devices.

ENBI 4800 Adv Topics (Bioengineering) (1-5 Credits)

Various topics in Bioengineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENBI 4991 Independent Study (1-5 Credits)

ENBI 4995 Independent Research (1-18 Credits)

Engineering, Mechanical (ENME)

ENME 2410 Materials Science I (4 Credits)

Atomic structure, bonding and crystal structures in solids. Diffusion and crystal defects. Thermodynamics and phase equilibria in one-, two- and three-component systems, binary phase diagrams. Kinetics and phase transformations. Specific microstructure and mechanical properties of metals, glasses, ceramics, polymers and composites. Electrical conduction: energy levels and bands, charge carriers and insulators. Semiconductors of intrinsic and extrinsic types. Laboratory projects/demonstrations. Prerequisites: PHYS 1212 and CHEM 1010 and MATH 1952.

ENME 2421 Materials Science II (3 Credits)

Atomic structure, bonding and crystal structures in solids. Diffusion and crystal defects. Thermodynamics and phase equalibria in one-, two- and three-component systems, binary phase diagrams. Kinetics and phase transformations. Specific microstructure and mechanical properties of metals, glasses, ceramics, polymers and composites. Electrical conduction: energy levels and bands, charge carriers and insulators. Semiconductors of intrinsic and extrinsic types. Laboratory projects/demonstrations. Prerequisites: ENME 2410.

ENME 2510 Statics (4 Credits)

Study of static force systems. Topics include resolution and composition of forces and moments, equilibrium of two-dimensional and threedimensional force systems, shear and moments in beams, friction, and moments of inertia. Includes a laboratory component where students will engage in hands-on projects that apply loading equilibrium, design of structures, and stress/strain. Prerequisites: MATH 1951 AND PHYS 1211.

ENME 2520 Dynamics I with Lab (4 Credits)

Particles Kinematics, Reference Frames, Coordinate Systems, Newton's Laws, Energy and Momentum, Multiparticle Systems, Collisions, Variable Mass Systems. These topics are addressed through analytical analysis, numerical simulation using Matlab, and experimental data collection. Cross listed with PHYS 2520. Corequisite: MATH 2080; Prerequisite: ENME 2510 AND MATH 2070.

ENME 2530 Dynamics II (3 Credits)

Rotating reference frames, rigid body kinematics, rigid body kinetics, Euler's Laws, inertia, energy and momentum, and three-dimensional motion. Cross listed with PHYS 2530. Prerequisites: ENME 2520.

ENME 2540 System Dynamics (3 Credits)

This course covers modeling, analysis, and control of single and multiple degree-of freedom dynamical systems, including mechanical, electrical, thermal, fluid systems and their combinations (mixed systems). Basic concepts in system theory, such as state variables and stability concepts, will be introduced as well as bond graph notation and approach. Prerequisites: ENME 2530, ENME 2661, ENGR 1572, and ENEE 2012.

ENME 2541 Mechanics of Materials (3 Credits)

Normal and shear stress and strain; elasticity, mechanical properties of materials, principal stresses; torsion, beams, deflection of beams under loads, methods of superposition, failure theory, columns. Prerequisite: ENME 2510.

ENME 2651 Fluid Dynamics I (3 Credits)

Course series provides students with the basic skill levels required to solve fluid-mechanics and heat transfer problems. Topics include hydrostatics, dimensional analysis, incompressible and compressible flows, conduction, convection and radiation. Students explore a variety of solution techniques such as control volume, differential analysis, boundary layer analysis, finite differencing and resistance network analogies. Prerequisite: ENME 2510 and MATH 2070.

ENME 2661 Fluid Dynamics II/Heat Transfer I (3 Credits)

Course series provides students with the basic skills levels required to solve fluid-mechanics and heat transfer problems. Topics include hydrostatics, dimensional analysis, incompressible and compressible flows, conduction, convection and radiation. Students explore a variety of solution techniques such as control volume, differential analysis, boundary layer analysis, finite differencing and resistance network analogies. Prerequisite: ENME 2651.

ENME 2671 Heat Transfer II with Lab (4 Credits)

Course series provides students with the basic skill levels required to solve fluid-mechanics and heat transfer problems. Topics include hydrostatics, dimensional analysis, incompressible and compressible flows, conduction, convection and radiation. Students explore a variety of solution techniques such as control volume, differential analysis, boundary layer analysis, finite differencing and resistance network analogies. Prerequisite: ENME 2661.

ENME 2710 Engineering Thermodynamics I (3 Credits)

Properties of a pure substance. Use of tables of properties. First and second laws of thermodynamics for closed and open systems. Work, heat, power and entropy. Engine, power plant and refrigeration cycles. Gas mixtures, thermodynamic relations and chemical reactions. Prerequisite: PHYS 1212.

ENME 2720 Engineering Thermodynamics II (3 Credits)

Properties of a pure substance. Use of tables of properties. First and second laws of thermodynamics for closed and open systems. Work, heat, power and entropy. Engine, power plant and refrigeration cycles. Gas mixtures, thermodynamic relations and chemical reactions. Prerequisite: ENME 2710.

ENME 2810 Mechanical Engineering Lab I (3 Credits)

Engineering experiments illustrating selected topics in heat transfer, fluid mechanics, solid mechanics, thermodynamics, measurement and control. Use of microcomputers in experimentation and control. This course encourages the development of laboratory experimentation skills, design skills and technical writing skills. Prerequisites: ENME 2540 AND ENME 2671.

ENME 3320 Computer Aided Design and Analysis (4 Credits)

Introduction to the use of computer aided design and analysis with applications to solid and fluid mechanics, heat transfer and vibrations; projects in one or more of the above areas. Emphasis on how to use the software to analyze engineering systems. Prerequisites ENME 2541 and ENME 2651.

ENME 3400 Fatigue (4 Credits)

A detailed overview of fatigue. Topics include: stress life and strain life approaches, fracture mechanics, constant amplitude and spectrum loading, life prediction, fatigue at notches, microstructural effects, environmentally assisted fatigue, retardation and acceleration, multi-axial fatigue, design against fatigue, and reliability. Cross listed with ENME 4400.

ENME 3511 Machine Design (3 Credits)

Application of statics, dynamics, mechanics of materials and manufacturing processes to the design of machine elements and systems. Properties of materials and design criteria. Synthesis and analysis of a machine design project. Prerequisites: ENME 2520 and ENME 2541.

ENME 3545 Mechanisms (4 Credits)

Synthesis, analysis and use of mechanisms. Mechanisms studied include cams, gears and planar linkages, with an emphasis on planar linkages. Prerequisites: ENME 2530 and ENGR 1572.

ENME 3651 Computational Fluid Dynamics (4 Credits)

This course introduces principles and applications of computational methods in fluid flow and topics chosen from heat transfer, mass transfer or two phase flow. The conservation equations, their discretations and solutions, are presented. Convergence and validity of solutions along with computational efficiency are explored. Students learn to apply these techniques using the latest software packages. Prerequisites: ENME 2671.

ENME 3661 Mechanical Energy Systems Engineering (4 Credits)

This course covers energy systems engineering analysis from a mechanical and materials engineering perspective. This course covers energy production from traditional energy systems that use fossil fuel combustion such as internal combustion engines, coal-fired plants, and natural gas turbines, to nuclear energy and renewable energy methods such as wind, solar, hydraulic, and geothermal. Lastly, the course will survey emerging technologies for future (21st century) energy systems. Students should have taken at a minimum Thermodynamics, Dynamics, and Fluid Dynamics courses. Prerequisites: ENME 2720, ENME 2510, ENME 2651.

ENME 3720 Aerospace Engineering: Atmospheric Flight Dynamics (4 Credits)

This course provides and introduction to aerospace engineering analysis and design. In the atmospheric domain, the basics of aerodynamics are covered, followed by flight mechanics. The approach is from a practical perspective in which analysis and design are intertwined. Prerequisites: ENME 2651 and ENME 2720 and ENME 2530.

ENME 3730 Aerospace Engineering: Space Flight Dynamics (4 Credits)

This course is focused on the aerospace discipline of space environment and orbital mechanics. The topics in this discipline are discussed in detail and provide aid in designing spacecraft/space missions. Some of the topics covered in this course include space environment, satellite orbits, spacecraft configurations, transfer orbits, and elementary space propulsion. Prerequisites: ENME 2651 and ENME 2720 and ENME 2530.

ENME 3810 Mechanical Engineering Capstone Laboratory (3 Credits)

This course is the capstone mechanical engineering laboratory course requiring independent experimental design by student teams. Using experimental equipment available in heat transfer, fluid mechanics, solid mechanics, thermodynamics, and measurement and control, the student team is required to design experiments to solve given problems which will be unique to each team. This course encourages students to develop experimental design and research techniques while continuing to improve skills in fundamental lab notebook keeping, uncertainty analysis in measurements, data acquisition, data analysis, report writing, oral presentations, and laboratory safety and procedures. Prerequisite: ENME 2810.

ENME 3820 Topics Mechanical Engineering (0-5 Credits)

Mechanical engineering topics as announced. May be taken more than once. Prerequisite: vary with offering.

ENME 3991 Independent Study (1-5 Credits)

Topics in mechanical engineering investigated under faculty supervision. May be taken more than once. Students must obtain and complete an Independent Study form from the Office of the Registrar. Prerequisite: permission of instructor.

ENME 3995 Independent Research (1-10 Credits)

ENME 4020 Adv Finite Element Analysis (4 Credits)

ENME 4310 Computational Methods for Mechanics and Materials (4 Credits)

An introductory course for the general-purpose computational methods in advanced multiscale materials and mechanics. Students learn the fundamentals on the numerical methods used in mechanical and materials engineering. Cross listed with ENME 3310.

ENME 4360 Elasticity (4 Credits)

Students will be able to apply the fundamental principles of elasticity to solve two- and three-dimensional mechanical engineering problems involved in modern applications of elastic structures, composite materials, tribology and contact mechanics. Dependence on previous knowledge of solid mechanics, continuum mechanics or mathematics is minimized. The emphasis is placed on the engineering applications of elasticity. Suggeted prerequisite: ENME 2541.

ENME 4400 Fatigue (4 Credits)

A detailed overview of fatigue. Topics include: stress life and strain life approaches, fracture mechanics, constant amplitude and spectrum loading, life prediction, fatigue at notches, microstructural effects, environmentally assisted fatigue, retardation and acceleration, multi-axial fatigue, design against fatigue and reliability. Cross listed with ENME 3400.

ENME 4520 Intermediate Dynamics (4 Credits)

Development and analysis of dynamic systems through classical approaches. Topics will include: Vector algebraic/differential geometry for 3D translational and rotational kinematic analyses with motion constraints. Formulation of equations of motion for 3D multibody systems using: Newton/ Euler equations; Angular momentum principle; and D'Alembert principle (aka road-maps). Some exposure to Euler-Lagrange and Kane's Methods calculations. Symbolic and numerical computational solutions to linear/nonlinear algebraic and differential equations governing the configuration, forces, and motion of systems with multiple degrees of freedom. Recommended prerequisites: MATH 2070.

ENME 4530 Advanced Dynamics (4 Credits)

Formulation of equations of motion for constrained 3D multibody systems with: D'Alembert principle (MG road-maps); power, work, and energy; Lagrange's equations; and Kane's method. Euler parameters/quaternions, specified motion, constraint force/torque calculations, feed- forward control, inequality constraints and/or intermittent contact. Tensors and mass property calculations. Symbolic and numerical computer skills for geometry/ kinematic analysis, mass/inertia calculations, forces and motion, and simulation of multi-body dynamic systems. Training for advanced research and professional work. Recommended pre-requisite: ENME 4520.

ENME 4541 Advanced Mechanics of Materials (4 Credits)

This is a second-level course in mechanics of materials with an emphasis on techniques that are useful for mechanical design. Topics may include energy methods, non-symmetrical and nonlinear bending, shear and torsion of closed and open sections, beams in elastic foundations, membrane stress in axisymmetric shells, asisymmetric bending of cylindrical shells, thick-walled cylinders and disks, curved beams, and elastic stability. Recommended prerequisite: ENME 2541.

ENME 4630 Viscous Flow (4 Credits)

Course covers the fundamentals of fluid mechanics from an advanced point of view with emphasis on the mathematical treatment of viscous-flow phenomena. Topics cover the Navier-Stokes equations and its exact and similarity solutions, laminar boundary layer theory, free-shear flows, and the phenomena of instability and transition to turbulence. Recommended prerequisite: ENME 2661.

ENME 4670 Advanced Computational Fluid Dynamics (4 Credits)

Building on the principles and applications of computational methods in fluid flow and topics chosen from heat transfer, mass transfer and two phase flow. Specifically, Monte Carlo and volume of fluid techniques are discussed at length. Additionally, students learn how to set up automated design optimization using the latest software packages. Time permitting, students also are introduced to fluid-solid interaction modeling. Prerequisite: ENME 3651.

ENME 4671 Convective Heat Transfer (4 Credits)

The objective of this course is to examine the physical phenomena associated with heat transfer in the presence of fluid flow. We will develop a mathematical description of the processes (fluid flow and heat transfer) for laminar and turbulent flows for both internal and external situations. Exposure to the fundamentals of fluid mechanics and heat transfer is expected before taking this course.

ENME 4800 Advanced Topics (ME) (0-5 Credits)

Determined by interest and demand. May be taken more than once for credit.

ENME 4900 Grad Professional Development (1 Credit)

This course is required for all MME MS graduate students and all MME PhD graduate students who enter with a BS or enter with an MS but fail their first qualifying exam. One of our objectives is for all graduating students to have good written and verbal communication skills. This course is set up to meet those objectives. During this course, students write a mini-proposal and/or literature review. Students follow guidelines for a funding agency (e.g. NSF or NIH) for the mini-proposal. If students have a research advisor, students can coordinate with their advisor. If students do not have a research advisor, students may pick a topic that most interests them. Both a written proposal and an oral presentation are required of all students. Graduate standing is required.

ENME 4950 Graduate Assessment (0 Credits)

This graduate assessment course is required for all MME graduate students to be taken in their last quarter. All required assessment materials are uploaded to DU Assessment to meet the course requirements. Students will receive emails through the DU Assessment system notifying you of what is required to be uploaded.

ENME 4991 Independent Study (1-10 Credits)

ENME 4995 Independent Research (1-16 Credits)

ENME 5991 Independent Study (1-10 Credits)

ENME 5995 Independent Research (1-16 Credits)

Engineering (ENGR)

ENGR 3340 Product Development and Market Feasibility (4 Credits)

In this course, students gain knowledge of designing products for market success by developing a product and optimizing its design for specific mass manufacturing technologies. Students gain experience through the design development process including market feasibility research, human-centered design, brainstorming and ideating new concepts, refinement through design iteration, and constructing alpha and beta prototypes that are designed with mass manufacturing considerations. Projects are based upon real world new product development principles. Students learn and practice the fundamentals of design thinking, design process, and entrepreneurship.

ENGR 3450 Biosensing Technology (4 Credits)

Biosensors are defined as analytical devices incorporating a biological material, a biologically derived material or a biomimic associated with or integrated within a physicochemical transducer or transducing microsystem, which may be optical, electrochemical, thermometric, piezoelectric, magnetic or micromechanical. This course provides instruction in the basic science and engineering concepts required to understand the design and application of biosensors. This module serves as an introduction to some of the biosensors and measurement techniques.

ENGR 3510 Renewable and Efficient Power and Energy Systems (4 Credits)

This course introduces the current and future sustainable electrical power systems. Fundamentals of renewable energy sources and storage systems are discussed. Interfaces of the new sources to the utility grid are covered. Prerequisite: ENEE 2012.

ENGR 3520 Introduction to Power Electronics (4 Credits)

This covers fundamentals of power electronics. We discuss various switching converters topologies. Basic knowledge of Efficiency and small-signal modeling for the DC-DC switching converters is covered. Furthermore, magnetic and filter design are introduced. Prerequisites: ENEE 2211 and ENGR 3722.

ENGR 3540 Electric Power Systems (4 Credits)

This course covers methods of calculation of a comprehensive idea on the various aspects of power system problems and algorithms for solving these problems. Prerequisite: ENGR 3530.

ENGR 3621 Advanced Engineering Mathematics (4 Credits)

Applied mathematics for engineers. Topics include vector spaces, normed vector spaces, inner product spaces, linear transformations, finitedimensional linear transformations, linear operators, finite-dimensional linear operators, linear differential systems, linear difference systems, orthogonal transformations, amplitude estimation, fundamentals of real and functional analysis, and introduction to partial differential equations, and applications to engineering systems.

ENGR 3630 Finite Element Methods (4 Credits)

Introduction to the use of finite element methods in one or two dimensions with applications to solid and fluid mechanics, heat transfer and electromagnetic fields; projects in one or more of the above areas. Prerequisites: ENME 2541 AND ENGR 1572.

ENGR 3650 Probability and Statistics for Engineers (4 Credits)

This course covers quantitative analysis of uncertainty and decision analysis in engineering. It covers the fundamentals of sample space, probability, random variables (discrete and continuous), joint and marginal distributions, random sampling and point estimation of parameters. It also covers statistical intervals, hypotheses testing and simple linear regression. The course includes applications appropriate to the discipline. Prerequisite: MATH 1953.

ENGR 3721 Controls (3,4 Credits)

Modeling, analysis and design of linear feedback control systems using Laplace transform methods. Techniques and methods used in linear mathematical models of mechanical, electrical, thermal and fluid systems are covered. Feedback control system models, design methods and performance criteria in both time and frequency domains. A linear feedback control system design project is required. Prerequisites: ENEE 2022, ENGR 3611 or permission of instructor.

ENGR 3722 Control Systems Laboratory (1 Credit)

This laboratory course serves as supplement to ENGR 3721. It aims at providing "hands on" experience to students. It includes experiments on inverted pendulum, gyroscopes, motor control, feedback controller design, time-domain and frequency domain. Corequisite: ENGR 3721.

ENGR 3730 Robotics (3 Credits)

Introduction to the analysis, design, modeling and application of robotic manipulators. Review of the mathematical preliminaries required to support robot theory. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning, and kinetics. Cross listed with ENGR 4730. Prerequisites: ENME 2520 and MATH 2060 or MATH 2200 or permission of instructor.

ENGR 3731 Robotics Lab (1 Credit)

Laboratory that complements the analysis, design, modeling and application of robotic manipulators. Implementation of the mathematical structures required to support robot operation. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning and kinetics. Applications include programming and task planning of a manufacturing robot manipulator. Corequisite: ENGR 3730 or permission of instructor.

ENGR 3800 Topics (ENGR) (1-4 Credits)

Special topics in engineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENGR 3900 Engineering Internship (0-4 Credits)

Students in engineering may receive elective credit for engineering work performed for engineering employers with the approval of the chair or associate chair of the department. At the end of the term, a student report on the work is required, and a recommendation will be required from the employer before a grade is assigned. Junior, senior, or graduate status in engineering is normally required. May not be used to satisfy technical requirements. May be taken more than one for a maximum of 6 quarter hours. Prerequisite: permission of instructor.

ENGR 4100 Instrumentation and Data Acquisition (4 Credits)

This course examines different instrumentation techniques and describes how different measurement instruments work. Measurement devices include length, speed, acceleration, force, torque, pressure, sound, flow, temperature, and advanced systems. This course also examines the acquisition, processing, transmission and manipulation of data. Final project or paper. Cross listed with ENGR 3100. Prerequisites: PHYS 1213 OR PHYS 1214.

ENGR 4200 Introduction to Nanotechnology (4 Credits)

The most important recent accomplishments so far in the application of nanotechnology in several disciplines are discussed. Then a brief overview of the most important instrumentation systems used by nanotechnologists is provided. The nature of nanoparticles, nanoparticle composites, carbon nanostructures, including carbon nanotubes and their composites is subsequently discussed. The course also deals with nanopolymers, nanobiological systems, and nanoelectronic materials and devices. The issues of modeling of nanomaterials and nanostructures is also covered. Multiscale modeling based on finite element simulations, Monte Carlo methods, molecular dynamics and quantum mechanics calculations are briefly addressed. Most importantly, students should obtain appreciation of developments in nanotechnology outside their present area of expertise. Cross listed with ENGR 3200.

ENGR 4300 Advanced Numerical Methods (4 Credits)

Fundamental and advanced numerical methods to approximate mathematical problems for engineering applications using modern software such as Matlab. Topics include numerical differentiation and integration, solution to linear and non-linear equations, ordinary and partial differential equations, and initial, boundary, and eigen value problems. Recommended prerequisite: MATH 2070.

ENGR 4350 Reliability (4 Credits)

An overview of reliability-based design. Topics include: fundamentals of statistics, probability distributions, determining distribution parameters, design for six sigma, Monte Carlo simulation, first and second order reliability methods (FORM, SORM). Most Probable Point (MPP) reliability methods, sensitivity factors, probabilistic design.

ENGR 4455 Fluorescence and Its Applications in Biomedical Sensors (4 Credits)

The course introduces the principles of fluorescence and its applications in the real world. It covers various topics including fluorophores (dye, fluorescent proteins, quantum dots, etc.), nanomaterials and nanostructures, design of biomedical sensors, point-of-care systems, and wearable devices. Cross listed with ENGR 3455.

ENGR 4501 Graduate Capstone Design I (3 Credits)

This is a project-centered course. This is the first third of a practical class that plans the engineering design project prior to addressing the design in earnest. This requires teamwork to develop the plan that details the schedule, cost, and who is responsible for which portions of the design effort. In this segment, the engineering teams establish the starting point for the design. This class puts theory into practice with the "shredding" of the RFP, defining a strategy for the team, balancing what has to be done with existing constraints, understanding the "true" problem of the customer, capturing the associated risks, and capturing margins required for the start of any design activity.

ENGR 4502 Graduate Capstone Design II (3 Credits)

This is a project-centered course. This is the second third of a practical class that implements the engineering design process (left side of the vee). This requires teamwork to develop the detailed design, which is a continuation of the accepted proposal. In this segment, the engineering teams add the details to a conceptual design. This class puts theory into practice with requirements development, balancing requirements against the constraints, completing a functional decomposition, developing a CONOPs document, developing a physical architecture, developing a functional architecture, and defining the interfaces through an ICD.

ENGR 4503 Graduate Capstone Design III (3 Credits)

This is a project-centered course. This is the third of a practical class that implements the engineering design process (right side of the vee). This requires teamwork to build, checkout, and test the final product. In this segment, the engineering teams build or procure hardware as a step towards the integration of the system. This class puts theory into practice by building components, developing software modules, integrating software with hardware, checkout of the system, and performing tests to verify construction, validate models, and collect data for acceptance by the team prior to demonstrating the operations of the product to the customer. Test data is collected through instrumentation of the final product with a buy-out and certification by the team. Testing may include performance testing and environmental testing as envisioned in the context diagram.

ENGR 4504 Graduate Capstone Design IV (3 Credits)

This is a project-centered course. This is the fourth of a practical class that implements the entire engineering "vee" design process. This requires teamwork to build, checkout, and test the final design product, e.g. hypothetical missile. In this segment, the engineering teams fine-tune the design process which may address advanced topics such as fault management and resilience. This class puts theory into practice by building components, developing software modules, integrating software with hardware, checkout of the system, and performing tests to verify construction, validate models, and collect data for acceptance by the team prior to demonstrating the operations of the product to the customer. It may also include addressing the beginning of the program through early management and pre-phase A activities. Test data is collected through instrumentation of the final product with a buy-in and certification by the team. Testing may include performance testing, functional testing, and environmental testing as envisioned in the system process.

ENGR 4530 Intro to Power and Energy (4 Credits)

Basic concepts of AC systems, single-phase and three-phase networks, electromechanical energy conversion, electric power generation, transformers, transmission lines, AC machinery, DC motors, and contemporary topics in power and energy conversion. Cross listed with ENGR 3530.

ENGR 4545 Electric Power Economy (4 Credits)

This course covers economy aspects of electric power industry and the implications for power and energy engineering in the market environment. Cross listed with ENGR 3545.

ENGR 4560 Power Generation Operation and Control (4 Credits)

This course covers economic dispatch of thermal units and methods of solution; transmission system effects; generate with limited energy supply; production cost models; control of generation; interchange of power and energy; power system security; state estimation in power systems; optimal power flow. Prerequisite: ENGR 3530 or ENGR 4530 or permission of instructor.

ENGR 4590 Power System Protection (4 Credits)

This course covers methods of calculation of fault currents under different types of fault; circuit breakers, current transformers, potential transformers; basic principles of various types of relays; applications of relays in the protection of generator, transformer, line, and bus, etc. Prerequisite: ENGR 3530 or ENGR 4530.

ENGR 4620 Optimization (4 Credits)

The development and application of various optimization techniques will be explored with engineering examples. Topics include: analytical and numerical methods, linear and non-linear programming techniques for unconstrained and constrained problems, and advanced optimization techniques, e.g. global optimization. Optimization methods will be developed and evaluated in code and used in a real-world application project.

ENGR 4622 Advanced Optimization (4 Credits)

Optimization is an indispensable tool for many fields of science and engineering and is one of the pillars of data science and machine learning. This course introduces optimization methods that are suitable for large-scale problems arising in data science, machine learning, and other engineering applications. We will discuss the development, computation, and convergence aspects for algorithms including gradient methods, accelerated methods, quasi-Newton methods, stochastic optimization, variance reduction, online optimization, as well as distributed optimization. We will also exploit the efficacy of these methods in concrete data science problems, including learning low-dimensional models, deep learning, and (possible) reinforcement learning. This course together with ENGR 4620 Optimization will provide in-depth introductions to optimization.

ENGR 4680 Fault Diagnosis & Prognostics for System Design (4 Credits)

Reliability engineering is a sub-discipline of systems engineering that emphasizes dependability in the lifecycle management of a product. Reliability, describes the ability of a system or component to function under stated conditions for a specified period of time. Reliability is closely related to availability, which is typically described as the ability of a component or system to function at a specified moment or interval of time. Normally, quality focuses on the prevention of defects during the warranty phase whereas reliability looks at preventing failures during the useful lifetime of the product or system from commissioning to decommissioning. Diagnosis is used, with variations in the use of logic, analytics, and experience, to determine "cause and effect". In systems engineering, it is typically used to determine the causes of symptoms, mitigations, and solutions. Prognostics is an engineering discipline focused on predicting the time at which a system or a component will no longer perform its intended function. This lack of performance is most often a failure beyond which the system can no longer be used to meet desired performance. The predicted time then becomes the remaining useful life (RUL), which is an important concept in decision making for contingency mitigation. Success in this course requires knowledge of probability theory and statistics, and familiarity with MATLAB/Simulink.

ENGR 4723 Digital Control (4 Credits)

The course focuses on modeling, analysis, and design of digital control systems. Topics include: z-Transform and difference equations; sampling and aliasing; Zero-Order Hold (ZOH); A/D and D/A conversions; pulse transfer function representation; time and frequency domain representations; input/ output analysis; analysis of sample data systems; stability; design of discrete-time controllers; introduction to state-space representation. Cross listed with ENGR 3723. Prerequisites: ENGR 3721 and ENGR 3722.

ENGR 4730 Introduction to Robotics (4 Credits)

Introduction to the analysis, design, modeling and application of robotic manipulators. Review of the mathematical preliminaries required to support robot theory. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning, and kinetics. Applications include programming and task planning of a manufacturing robot manipulator. Cross listed with ENGR 3730. Prerequisites: ENGR 3611 or ENEE 3111 or instructor approval.

ENGR 4735 Linear Systems (4 Credits)

This course focuses on linear system theory in time domain. It emphasizes linear and matrix algebra, numerical matrix algebra and computational issues in solving systems of linear algebraic equations, singular value decomposition, eigenvalue-eigenvector and least-squares problems, linear spaces and linear operator theory. It studies modeling and linearization of multi-input/multi-output dynamic physical systems, state-variable and transfer function matrices, analytical and numerical solutions of systems of differential and difference equations, structural properties of linear dynamic physical systems, including controllability, observability and stability. It covers canonical realizations, linear state-variable feedback controller and asymptotic observer design, and the Kalman filter. Cross listed with ENGR 3735. Prerequisites: ENGR 3611, ENGR 3721, ENGR 3722, or permission of the instructor.

ENGR 4740 Adaptive Control Systems (4 Credits)

Theoretical and application aspects of robust adaptive control design for uncertain dynamical systems. Topics include: parameter estimation, stability, model reference adaptive systems, self-tuning regulators, gain scheduling, design for robustness against unmodeled dynamics and disturbance signals. Examples will be given from aerospace engineering (changes in the dynamics of aircraft), process control, and robotics. Modern alternatives to traditional adaptive control will be discussed (switching multi-model/multi-controller adaptive schemes). Prerequisite: ENGR 3721 or permission of instructor. Familiarity with MATLAB/Simulink.

ENGR 4745 Adv Non-Linear Control System (4 Credits)

Nonlinear system analysis methods: Existence of solutions of ODEs, uniqueness, continuity, compactness, fixed point, linearization, metric spaces, Contraction Mapping Theorem, Gronwall-Bellman lemma. Phase plane analysis; Limit Cycles. Lyapunov stability of autonomous and non-autonomous systems. Circle criterion, absolute stability, Popov criterion. Passivity and Lyapunov stability. Input-to-State stability. Small Gain Theorem. Describing functions. Nonlinear control system synthesis methods: Passivity-based control. Stability via Feedback Linearization. Lie derivatives.

ENGR 4750 Networked Control Systems (4 Credits)

Fundamental tools and recent advances in networked control. Topics include the control of multi-agent networks found in multi-vehicle coordination, control of sensor networks, unmanned vehicles, and energy systems. Network models, distributed control and estimation, distributed control under limited communications and sensing, formation control, coverage control in mobile sensor networks. Prerequisites: linear algebra, linear control systems, differential equations, familiarity with MATLAB, or permission of instructor.

ENGR 4755 Optimal Control (4 Credits)

Introduction to optimal control theory (control laws that maximize a specified measure of a dynamical system's performance). Topics include: optimality conditions and constraints; calculus of variations; review of mathematical programming (Language multipliers, convexity, Kuhn-Tucker theorem); Pontryagin's maximum principle (constraints, Hamilitonians, bang-bang control); dynamic programming and Linear Quadratic Regulation (Riccati, Hamilton-Jacobi equation). Prerequisites: ENGR 3721 (Controls) and ENGR 3735/4735 (Linear Systems) or equivalent courses.

ENGR 4760 Multivariable Control (4 Credits)

Multivariable aspects of control (systems with multiple actuators and sensors); performance analysis of feedback control systems; sensitivity; robustness and stability margins; disturbance attenuation; design tradeoffs; singular value; characteristic locus. Modern H-infinity control theory and 'mu' synthesis-based robust control design techniques. Enforced Prerequisites and Restrictions ENGR 3721 (Controls) and ENGR 4735 (Linear Systems at a graduate level) or equivalents.

ENGR 4765 Robot Control (4 Credits)

The course focuses on different techniques, methods, and theories for control of robots. The topics covered include: introduction to nonlinear control theory, review of independent joint control, nonlinear and multivariable robot control, feedback linearization control of robots, control of underactuated robots, control of nonholonomic and mobile robots. force and impedance control, and vision-based control. Pre-requisite or co-requisite: ENGR 3730 or ENGR 4730, or equivalent is recommended.

ENGR 4790 Systems Engineering Requirements (4 Credits)

The course covers fundamentals of design and requirements analysis of complex systems to meet overall mission requirements. It spans the whole requirements engineering phase that includes requirements analysis, decomposition, derivation, allocation, verification and validation planning. Students acquire expertise in creating UML and SYML case diagrams and in defining and implementing verification and validation plans. Requirement management methods and tools, associated vernacular, and requirements configuration control are also covered. Prerequisites: ENMT 4100, or permission by the Instructor.

ENGR 4810 Advanced Topics (ENGR) (1-5 Credits)

ENGR 4910 Conceptual Design (4 Credits)

Conceptual design is the part of the design process where—by identifying the essential problems through abstraction, establishing function structures, searching for appropriate working principles and combining these into a working structure— the basic solution path is laid down through the elaboration of a solution principle. Conceptual design specifies the principle solution. Concept design rarely starts at the same point; you might have an existing design that needs iterating or the requirement to create a conceptualized form. Problem solving consists of using generic or ad hoc methods in an orderly manner to find solutions to problems. George Polya (mathematician) presented two important decision-making principles, understanding the problem and devising a plan. To understand what is new, students are asked to look at intellectual property, a category of property that includes intangible creations of the human intellect. There are many types of intellectual property such as patents, and some countries recognize more than others. Designers assess the many different directions a design could take at this stage will allow you to identify what you like and don't like from each one. The preferred concept will then be further developed using engineering drawings, schematics and possibly 3D models which will show how the design will look and operate.

ENGR 4920 Aerospace Missions (4 Credits)

The Design "Problem" in Advanced Aerospace Systems describes the problems in the conceptual design of various types of aircraft, spacecraft, and complex vehicles. It covers the following topics: design of orbital spacecraft, design for Moon missions (such as landers), design for Mars missions (including rovers), design of an unmanned drone for surveillance (high-altitudes), CubeSats (having large constellations), and rockets and missiles (including hypersonic). Problem statements are concise descriptions of design problems. Design teams use them to define the current and ideal states, to freely find user-centered solutions. This class stands as a reference of interest to engineers and scientists working in aerospace engineering and related topics.

ENGR 4940 Mission Operation Controls (4 Credits)

Space operations is based at a centralized control center, a facility used for command & control (C2), and related communication equipment (antennas, etc.). The human operators conduct the day-to-day operations for controlling the spacecraft. They control the spacecraft and its payloads, and carries out all activities related to mission planning and scheduling. For example, normal orbital operations are interrupted every six months to conduct orbital maneuvers. Launch operations begin with spacecraft integration and checked-out for launch. Once safely placed in orbit, command and control goes back and forth between the ground control station and the spacecraft or satellite. A key aspect of spacecraft operations is the transferring of data from the onboard instruments collected by its payload to the ground, eventually disseminating the data to concerned users and analysts through a ground data network. This requires an on-orbit communication architecture.
ENGR 4991 Independent Study (1-5 Credits)

ENGR 4995 Independent Research (1-16 Credits)

ENGR 5991 Independent Study (0-10 Credits)

ENGR 5995 Independent Research (1-16 Credits)

Materials Science (MTSC)

MTSC 3020 Composite Materials I (4 Credits)

An introduction to composite materials. Properties of fibers and matrices, fiber architecture, elastic properties of laminae and laminates, interface in composites. Cross listed with MTSC 4020. Prerequisites: ENME 2410 and ENME 2541.

MTSC 3800 Topics in Materials Science (1-5 Credits)

Various topics in materials science as announced. May be taken more than once. Prerequisite: varies with each topic.

MTSC 4020 Composite Materials I (4 Credits)

An introduction to composite materials. Properties of fibers and matrices, fiber architecture, elastic properties of laminae and laminates, interface in composites. Cross listed with MTSC 3020.

MTSC 4800 Advanced Topics (MTSC) (1-5 Credits)

Selected topics (depending on student and faculty interest): fracture mechanics, fatigue, nonlinear constitutive models, dynamic behavior of materials, corrosion resistant design, thermodynamics of solids II.

MTSC 4991 Independent Study (1-10 Credits)

MTSC 4995 Independent Research (1-16 Credits)

MTSC 5995 Independent Research (1-16 Credits)

Engineering Courses

ENGR 3340 Product Development and Market Feasibility (4 Credits)

In this course, students gain knowledge of designing products for market success by developing a product and optimizing its design for specific mass manufacturing technologies. Students gain experience through the design development process including market feasibility research, human-centered design, brainstorming and ideating new concepts, refinement through design iteration, and constructing alpha and beta prototypes that are designed with mass manufacturing considerations. Projects are based upon real world new product development principles. Students learn and practice the fundamentals of design thinking, design process, and entrepreneurship.

ENGR 3450 Biosensing Technology (4 Credits)

Biosensors are defined as analytical devices incorporating a biological material, a biologically derived material or a biomimic associated with or integrated within a physicochemical transducer or transducing microsystem, which may be optical, electrochemical, thermometric, piezoelectric, magnetic or micromechanical. This course provides instruction in the basic science and engineering concepts required to understand the design and application of biosensors. This module serves as an introduction to some of the biosensors and measurement techniques.

ENGR 3510 Renewable and Efficient Power and Energy Systems (4 Credits)

This course introduces the current and future sustainable electrical power systems. Fundamentals of renewable energy sources and storage systems are discussed. Interfaces of the new sources to the utility grid are covered. Prerequisite: ENEE 2012.

ENGR 3520 Introduction to Power Electronics (4 Credits)

This covers fundamentals of power electronics. We discuss various switching converters topologies. Basic knowledge of Efficiency and small-signal modeling for the DC-DC switching converters is covered. Furthermore, magnetic and filter design are introduced. Prerequisites: ENEE 2211 and ENGR 3722.

ENGR 3540 Electric Power Systems (4 Credits)

This course covers methods of calculation of a comprehensive idea on the various aspects of power system problems and algorithms for solving these problems. Prerequisite: ENGR 3530.

ENGR 3621 Advanced Engineering Mathematics (4 Credits)

Applied mathematics for engineers. Topics include vector spaces, normed vector spaces, inner product spaces, linear transformations, finitedimensional linear transformations, linear operators, finite-dimensional linear operators, linear differential systems, linear difference systems, orthogonal transformations, amplitude estimation, fundamentals of real and functional analysis, and introduction to partial differential equations, and applications to engineering systems.

ENGR 3630 Finite Element Methods (4 Credits)

Introduction to the use of finite element methods in one or two dimensions with applications to solid and fluid mechanics, heat transfer and electromagnetic fields; projects in one or more of the above areas. Prerequisites: ENME 2541 AND ENGR 1572.

ENGR 3650 Probability and Statistics for Engineers (4 Credits)

This course covers quantitative analysis of uncertainty and decision analysis in engineering. It covers the fundamentals of sample space, probability, random variables (discrete and continuous), joint and marginal distributions, random sampling and point estimation of parameters. It also covers statistical intervals, hypotheses testing and simple linear regression. The course includes applications appropriate to the discipline. Prerequisite: MATH 1953.

ENGR 3721 Controls (3,4 Credits)

Modeling, analysis and design of linear feedback control systems using Laplace transform methods. Techniques and methods used in linear mathematical models of mechanical, electrical, thermal and fluid systems are covered. Feedback control system models, design methods and performance criteria in both time and frequency domains. A linear feedback control system design project is required. Prerequisites: ENEE 2022, ENGR 3611 or permission of instructor.

ENGR 3722 Control Systems Laboratory (1 Credit)

This laboratory course serves as supplement to ENGR 3721. It aims at providing "hands on" experience to students. It includes experiments on inverted pendulum, gyroscopes, motor control, feedback controller design, time-domain and frequency domain. Corequisite: ENGR 3721.

ENGR 3730 Robotics (3 Credits)

Introduction to the analysis, design, modeling and application of robotic manipulators. Review of the mathematical preliminaries required to support robot theory. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning, and kinetics. Cross listed with ENGR 4730. Prerequisites: ENME 2520 and MATH 2060 or MATH 2200 or permission of instructor.

ENGR 3731 Robotics Lab (1 Credit)

Laboratory that complements the analysis, design, modeling and application of robotic manipulators. Implementation of the mathematical structures required to support robot operation. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning and kinetics. Applications include programming and task planning of a manufacturing robot manipulator. Corequisite: ENGR 3730 or permission of instructor.

ENGR 3800 Topics (ENGR) (1-4 Credits)

Special topics in engineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENGR 3900 Engineering Internship (0-4 Credits)

Students in engineering may receive elective credit for engineering work performed for engineering employers with the approval of the chair or associate chair of the department. At the end of the term, a student report on the work is required, and a recommendation will be required from the employer before a grade is assigned. Junior, senior, or graduate status in engineering is normally required. May not be used to satisfy technical requirements. May be taken more than one for a maximum of 6 quarter hours. Prerequisite: permission of instructor.

ENGR 4100 Instrumentation and Data Acquisition (4 Credits)

This course examines different instrumentation techniques and describes how different measurement instruments work. Measurement devices include length, speed, acceleration, force, torque, pressure, sound, flow, temperature, and advanced systems. This course also examines the acquisition, processing, transmission and manipulation of data. Final project or paper. Cross listed with ENGR 3100. Prerequisites: PHYS 1213 OR PHYS 1214.

ENGR 4200 Introduction to Nanotechnology (4 Credits)

The most important recent accomplishments so far in the application of nanotechnology in several disciplines are discussed. Then a brief overview of the most important instrumentation systems used by nanotechnologists is provided. The nature of nanoparticles, nanoparticle composites, carbon nanostructures, including carbon nanotubes and their composites is subsequently discussed. The course also deals with nanopolymers, nanobiological systems, and nanoelectronic materials and devices. The issues of modeling of nanomaterials and nanostructures is also covered. Multiscale modeling based on finite element simulations, Monte Carlo methods, molecular dynamics and quantum mechanics calculations are briefly addressed. Most importantly, students should obtain appreciation of developments in nanotechnology outside their present area of expertise. Cross listed with ENGR 3200.

ENGR 4300 Advanced Numerical Methods (4 Credits)

Fundamental and advanced numerical methods to approximate mathematical problems for engineering applications using modern software such as Matlab. Topics include numerical differentiation and integration, solution to linear and non-linear equations, ordinary and partial differential equations, and initial, boundary, and eigen value problems. Recommended prerequisite: MATH 2070.

ENGR 4350 Reliability (4 Credits)

An overview of reliability-based design. Topics include: fundamentals of statistics, probability distributions, determining distribution parameters, design for six sigma, Monte Carlo simulation, first and second order reliability methods (FORM, SORM). Most Probable Point (MPP) reliability methods, sensitivity factors, probabilistic design.

ENGR 4455 Fluorescence and Its Applications in Biomedical Sensors (4 Credits)

The course introduces the principles of fluorescence and its applications in the real world. It covers various topics including fluorophores (dye, fluorescent proteins, quantum dots, etc.), nanomaterials and nanostructures, design of biomedical sensors, point-of-care systems, and wearable devices. Cross listed with ENGR 3455.

ENGR 4501 Graduate Capstone Design I (3 Credits)

This is a project-centered course. This is the first third of a practical class that plans the engineering design project prior to addressing the design in earnest. This requires teamwork to develop the plan that details the schedule, cost, and who is responsible for which portions of the design effort. In this segment, the engineering teams establish the starting point for the design. This class puts theory into practice with the "shredding" of the RFP, defining a strategy for the team, balancing what has to be done with existing constraints, understanding the "true" problem of the customer, capturing the associated risks, and capturing margins required for the start of any design activity.

ENGR 4502 Graduate Capstone Design II (3 Credits)

This is a project-centered course. This is the second third of a practical class that implements the engineering design process (left side of the vee). This requires teamwork to develop the detailed design, which is a continuation of the accepted proposal. In this segment, the engineering teams add the details to a conceptual design. This class puts theory into practice with requirements development, balancing requirements against the constraints, completing a functional decomposition, developing a CONOPs document, developing a physical architecture, developing a functional architecture, and defining the interfaces through an ICD.

ENGR 4503 Graduate Capstone Design III (3 Credits)

This is a project-centered course. This is the third of a practical class that implements the engineering design process (right side of the vee). This requires teamwork to build, checkout, and test the final product. In this segment, the engineering teams build or procure hardware as a step towards the integration of the system. This class puts theory into practice by building components, developing software modules, integrating software with hardware, checkout of the system, and performing tests to verify construction, validate models, and collect data for acceptance by the team prior to demonstrating the operations of the product to the customer. Test data is collected through instrumentation of the final product with a buy-out and certification by the team. Testing may include performance testing and environmental testing as envisioned in the context diagram.

ENGR 4504 Graduate Capstone Design IV (3 Credits)

This is a project-centered course. This is the fourth of a practical class that implements the entire engineering "vee" design process. This requires teamwork to build, checkout, and test the final design product, e.g. hypothetical missile. In this segment, the engineering teams fine-tune the design process which may address advanced topics such as fault management and resilience. This class puts theory into practice by building components, developing software modules, integrating software with hardware, checkout of the system, and performing tests to verify construction, validate models, and collect data for acceptance by the team prior to demonstrating the operations of the product to the customer. It may also include addressing the beginning of the program through early management and pre-phase A activities. Test data is collected through instrumentation of the final product with a buy-in and certification by the team. Testing may include performance testing, functional testing, and environmental testing as envisioned in the system process.

ENGR 4530 Intro to Power and Energy (4 Credits)

Basic concepts of AC systems, single-phase and three-phase networks, electromechanical energy conversion, electric power generation, transformers, transmission lines, AC machinery, DC motors, and contemporary topics in power and energy conversion. Cross listed with ENGR 3530.

ENGR 4545 Electric Power Economy (4 Credits)

This course covers economy aspects of electric power industry and the implications for power and energy engineering in the market environment. Cross listed with ENGR 3545.

ENGR 4560 Power Generation Operation and Control (4 Credits)

This course covers economic dispatch of thermal units and methods of solution; transmission system effects; generate with limited energy supply; production cost models; control of generation; interchange of power and energy; power system security; state estimation in power systems; optimal power flow. Prerequisite: ENGR 3530 or ENGR 4530 or permission of instructor.

ENGR 4590 Power System Protection (4 Credits)

This course covers methods of calculation of fault currents under different types of fault; circuit breakers, current transformers, potential transformers; basic principles of various types of relays; applications of relays in the protection of generator, transformer, line, and bus, etc. Prerequisite: ENGR 3530 or ENGR 4530.

ENGR 4620 Optimization (4 Credits)

The development and application of various optimization techniques will be explored with engineering examples. Topics include: analytical and numerical methods, linear and non-linear programming techniques for unconstrained and constrained problems, and advanced optimization techniques, e.g. global optimization. Optimization methods will be developed and evaluated in code and used in a real-world application project.

ENGR 4622 Advanced Optimization (4 Credits)

Optimization is an indispensable tool for many fields of science and engineering and is one of the pillars of data science and machine learning. This course introduces optimization methods that are suitable for large-scale problems arising in data science, machine learning, and other engineering applications. We will discuss the development, computation, and convergence aspects for algorithms including gradient methods, accelerated methods, quasi-Newton methods, stochastic optimization, variance reduction, online optimization, as well as distributed optimization. We will also exploit the efficacy of these methods in concrete data science problems, including learning low-dimensional models, deep learning, and (possible) reinforcement learning. This course together with ENGR 4620 Optimization will provide in-depth introductions to optimization.

ENGR 4680 Fault Diagnosis & Prognostics for System Design (4 Credits)

Reliability engineering is a sub-discipline of systems engineering that emphasizes dependability in the lifecycle management of a product. Reliability, describes the ability of a system or component to function under stated conditions for a specified period of time. Reliability is closely related to availability, which is typically described as the ability of a component or system to function at a specified moment or interval of time. Normally, quality focuses on the prevention of defects during the warranty phase whereas reliability looks at preventing failures during the useful lifetime of the product or system from commissioning to decommissioning. Diagnosis is used, with variations in the use of logic, analytics, and experience, to determine "cause and effect". In systems engineering, it is typically used to determine the causes of symptoms, mitigations, and solutions. Prognostics is an engineering discipline focused on predicting the time at which a system or a component will no longer perform its intended function. This lack of performance is most often a failure beyond which the system can no longer be used to meet desired performance. The predicted time then becomes the remaining useful life (RUL), which is an important concept in decision making for contingency mitigation. Success in this course requires knowledge of probability theory and statistics, and familiarity with MATLAB/Simulink.

ENGR 4723 Digital Control (4 Credits)

The course focuses on modeling, analysis, and design of digital control systems. Topics include: z-Transform and difference equations; sampling and aliasing; Zero-Order Hold (ZOH); A/D and D/A conversions; pulse transfer function representation; time and frequency domain representations; input/ output analysis; analysis of sample data systems; stability; design of discrete-time controllers; introduction to state-space representation. Cross listed with ENGR 3723. Prerequisites: ENGR 3721 and ENGR 3722.

ENGR 4730 Introduction to Robotics (4 Credits)

Introduction to the analysis, design, modeling and application of robotic manipulators. Review of the mathematical preliminaries required to support robot theory. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning, and kinetics. Applications include programming and task planning of a manufacturing robot manipulator. Cross listed with ENGR 3730. Prerequisites: ENGR 3611 or ENEE 3111 or instructor approval.

ENGR 4735 Linear Systems (4 Credits)

This course focuses on linear system theory in time domain. It emphasizes linear and matrix algebra, numerical matrix algebra and computational issues in solving systems of linear algebraic equations, singular value decomposition, eigenvalue-eigenvector and least-squares problems, linear spaces and linear operator theory. It studies modeling and linearization of multi-input/multi-output dynamic physical systems, state-variable and transfer function matrices, analytical and numerical solutions of systems of differential and difference equations, structural properties of linear dynamic physical systems, including controllability, observability and stability. It covers canonical realizations, linear state-variable feedback controller and asymptotic observer design, and the Kalman filter. Cross listed with ENGR 3735. Prerequisites: ENGR 3611, ENGR 3721, ENGR 3722, or permission of the instructor.

ENGR 4740 Adaptive Control Systems (4 Credits)

Theoretical and application aspects of robust adaptive control design for uncertain dynamical systems. Topics include: parameter estimation, stability, model reference adaptive systems, self-tuning regulators, gain scheduling, design for robustness against unmodeled dynamics and disturbance signals. Examples will be given from aerospace engineering (changes in the dynamics of aircraft), process control, and robotics. Modern alternatives to traditional adaptive control will be discussed (switching multi-model/multi-controller adaptive schemes). Prerequisite: ENGR 3721 or permission of instructor. Familiarity with MATLAB/Simulink.

ENGR 4745 Adv Non-Linear Control System (4 Credits)

Nonlinear system analysis methods: Existence of solutions of ODEs, uniqueness, continuity, compactness, fixed point, linearization, metric spaces, Contraction Mapping Theorem, Gronwall-Bellman lemma. Phase plane analysis; Limit Cycles. Lyapunov stability of autonomous and non-autonomous systems. Circle criterion, absolute stability, Popov criterion. Passivity and Lyapunov stability. Input-to-State stability. Small Gain Theorem. Describing functions. Nonlinear control system synthesis methods: Passivity-based control. Stability via Feedback Linearization. Lie derivatives.

ENGR 4750 Networked Control Systems (4 Credits)

Fundamental tools and recent advances in networked control. Topics include the control of multi-agent networks found in multi-vehicle coordination, control of sensor networks, unmanned vehicles, and energy systems. Network models, distributed control and estimation, distributed control under limited communications and sensing, formation control, coverage control in mobile sensor networks. Prerequisites: linear algebra, linear control systems, differential equations, familiarity with MATLAB, or permission of instructor.

ENGR 4755 Optimal Control (4 Credits)

Introduction to optimal control theory (control laws that maximize a specified measure of a dynamical system's performance). Topics include: optimality conditions and constraints; calculus of variations; review of mathematical programming (Language multipliers, convexity, Kuhn-Tucker theorem); Pontryagin's maximum principle (constraints, Hamilitonians, bang-bang control); dynamic programming and Linear Quadratic Regulation (Riccati, Hamilton-Jacobi equation). Prerequisites: ENGR 3721 (Controls) and ENGR 3735/4735 (Linear Systems) or equivalent courses.

ENGR 4760 Multivariable Control (4 Credits)

Multivariable aspects of control (systems with multiple actuators and sensors); performance analysis of feedback control systems; sensitivity; robustness and stability margins; disturbance attenuation; design tradeoffs; singular value; characteristic locus. Modern H-infinity control theory and 'mu' synthesis-based robust control design techniques. Enforced Prerequisites and Restrictions ENGR 3721 (Controls) and ENGR 4735 (Linear Systems at a graduate level) or equivalents.

ENGR 4765 Robot Control (4 Credits)

The course focuses on different techniques, methods, and theories for control of robots. The topics covered include: introduction to nonlinear control theory, review of independent joint control, nonlinear and multivariable robot control, feedback linearization control of robots, control of underactuated robots, control of nonholonomic and mobile robots. force and impedance control, and vision-based control. Pre-requisite or co-requisite: ENGR 3730 or ENGR 4730, or equivalent is recommended.

ENGR 4790 Systems Engineering Requirements (4 Credits)

The course covers fundamentals of design and requirements analysis of complex systems to meet overall mission requirements. It spans the whole requirements engineering phase that includes requirements analysis, decomposition, derivation, allocation, verification and validation planning. Students acquire expertise in creating UML and SYML case diagrams and in defining and implementing verification and validation plans. Requirement management methods and tools, associated vernacular, and requirements configuration control are also covered. Prerequisites: ENMT 4100, or permission by the Instructor.

ENGR 4810 Advanced Topics (ENGR) (1-5 Credits)

ENGR 4910 Conceptual Design (4 Credits)

Conceptual design is the part of the design process where—by identifying the essential problems through abstraction, establishing function structures, searching for appropriate working principles and combining these into a working structure— the basic solution path is laid down through the elaboration of a solution principle. Conceptual design specifies the principle solution. Concept design rarely starts at the same point; you might have an existing design that needs iterating or the requirement to create a conceptualized form. Problem solving consists of using generic or ad hoc methods in an orderly manner to find solutions to problems. George Polya (mathematician) presented two important decision-making principles, understanding the problem and devising a plan. To understand what is new, students are asked to look at intellectual property, a category of property that includes intangible creations of the human intellect. There are many types of intellectual property such as patents, and some countries recognize more than others. Designers assess the many different directions a design could take at this stage will allow you to identify what you like and don't like from each one. The preferred concept will then be further developed using engineering drawings, schematics and possibly 3D models which will show how the design will look and operate.

ENGR 4920 Aerospace Missions (4 Credits)

The Design "Problem" in Advanced Aerospace Systems describes the problems in the conceptual design of various types of aircraft, spacecraft, and complex vehicles. It covers the following topics: design of orbital spacecraft, design for Moon missions (such as landers), design for Mars missions (including rovers), design of an unmanned drone for surveillance (high-altitudes), CubeSats (having large constellations), and rockets and missiles (including hypersonic). Problem statements are concise descriptions of design problems. Design teams use them to define the current and ideal states, to freely find user-centered solutions. This class stands as a reference of interest to engineers and scientists working in aerospace engineering and related topics.

ENGR 4940 Mission Operation Controls (4 Credits)

Space operations is based at a centralized control center, a facility used for command & control (C2), and related communication equipment (antennas, etc.). The human operators conduct the day-to-day operations for controlling the spacecraft. They control the spacecraft and its payloads, and carries out all activities related to mission planning and scheduling. For example, normal orbital operations are interrupted every six months to conduct orbital maneuvers. Launch operations begin with spacecraft integration and checked-out for launch. Once safely placed in orbit, command and control goes back and forth between the ground control station and the spacecraft or satellite. A key aspect of spacecraft operations is the transferring of data from the onboard instruments collected by its payload to the ground, eventually disseminating the data to concerned users and analysts through a ground data network. This requires an on-orbit communication architecture.

ENGR 4991 Independent Study (1-5 Credits)

ENGR 5991 Independent Study (0-10 Credits)

ENGR 5995 Independent Research (1-16 Credits)

Engineering, Bio Courses

ENBI 4200 Medical Device Development (4 Credits)

Working in a fast-paced competitive biomedical R&D firm is a dramatic change of pace from most college classes. This course will create a realistic industry environment where students take on the role of development engineers to design and manufacture real-world medical devices. This course is intended to provide a working knowledge of the design and development process specifically for medical device applications.

ENBI 4500 Biofluids (4 Credits)

The application of fluid dynamics theory and design to problems within the biomedical community. Specific topics covered include the mechanics of inhaled therapeutic aerosols, basic theory of circulation and blood flow, foundations in biotechnology and bioprocessing, and controlled drug delivery. Cross listed with ENBI 3500.

ENBI 4510 Biomechanics (4 Credits)

An introduction to the mechanical behavior of biological tissues and systems. Specific topics covered include: Analysis of the human musculoskeletal system as sensors, levers, and actuators; Joint articulations and their mechanical equivalents; Kinematic and kinetic analysis of human motion; Introduction to modeling human body segments and active muscle loading for analysis of dynamic activities; Mechanical properties of hard and soft tissues; Mechanical and biological consideration for repair and replacement of soft and hard tissue and joints; Orthopedic implants. Cross listed with ENBI 3510.

ENBI 4520 Introduction to Cardiovascular Engineering (4 Credits)

An introduction to cardiovascular mechanics with a focus on the quantitative understanding of the mechanical phenomena that governs the cardiovascular system. Specific topics covered include: basic principles of circulation including macro and micro circulation, soft tissue mechanics, applications to cardiovascular diseases, modelling techniques, clinical and experimental methods, and design of cardiovascular devices. Recommended prerequisites: ENME 2541 and ENME 2661.

ENBI 4530 Biomechanics of Human Movement (4 Credits)

An introduction to engineering-based analysis of human movement. Topics include: musculoskeletal anatomy, nueromuscular physiology, muscle mechanics, electromyography, sensorimotor integration, anthropometry, kinematics and kinetics. Recommended pre-requisite material: knowledge of MATLAB, ENGR 1572.

ENBI 4600 Biomedical Engineering: Technology, Research, and Design (4 Credits)

Introduction to Biomedical Engineering is an interdisciplinary course that combines engineering principles with biological and medical sciences to advance healthcare in areas such as diagnosis, monitoring, and therapy. The course provides a foundational understanding of biomedical engineering and prepares students for further study or careers in the field.

ENBI 4610 Experimental Design in Biomedical Sciences (4 Credits)

This course offers an in-depth exploration of experimental design principles within the biomedical sciences, emphasizing statistical analysis, measurement techniques, and ethical considerations. It aims to provide students with practical skills necessary for designing, conducting, and analyzing biomedical research.

ENBI 4620 Bioelectronics (4 Credits)

This course introduces the principles and applications of bioelectronics, focusing on the interface between biological systems and electronic devices. It covers the fundamentals of electronic circuits, signal processing, and sensor technology, and their applications in areas like biometric monitoring, neuroprosthetics, and biosensing.

ENBI 4630 Biomaterials (4 Credits)

This course provides an introduction to the field of biomaterials science, focusing on the fundamental principles, properties, and applications of materials used in biomedical engineering and healthcare. Topics covered include the classification of biomaterials, biocompatibility, interactions with biological systems, surface modifications, fabrication techniques, characterization techniques and current applications in tissue engineering, regenerative medicine, drug delivery, and medical devices.

ENBI 4800 Adv Topics (Bioengineering) (1-5 Credits)

Various topics in Bioengineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENBI 4991 Independent Study (1-5 Credits)

ENBI 4995 Independent Research (1-18 Credits)

Engineering, Mechanical Courses

ENME 3320 Computer Aided Design and Analysis (4 Credits)

Introduction to the use of computer aided design and analysis with applications to solid and fluid mechanics, heat transfer and vibrations; projects in one or more of the above areas. Emphasis on how to use the software to analyze engineering systems. Prerequisites ENME 2541 and ENME 2651.

ENME 3511 Machine Design (3 Credits)

Application of statics, dynamics, mechanics of materials and manufacturing processes to the design of machine elements and systems. Properties of materials and design criteria. Synthesis and analysis of a machine design project. Prerequisites: ENME 2520 and ENME 2541.

ENME 3545 Mechanisms (4 Credits)

Synthesis, analysis and use of mechanisms. Mechanisms studied include cams, gears and planar linkages, with an emphasis on planar linkages. Prerequisites: ENME 2530 and ENGR 1572.

ENME 3651 Computational Fluid Dynamics (4 Credits)

This course introduces principles and applications of computational methods in fluid flow and topics chosen from heat transfer, mass transfer or two phase flow. The conservation equations, their discretations and solutions, are presented. Convergence and validity of solutions along with computational efficiency are explored. Students learn to apply these techniques using the latest software packages. Prerequisites: ENME 2671.

ENME 3661 Mechanical Energy Systems Engineering (4 Credits)

This course covers energy systems engineering analysis from a mechanical and materials engineering perspective. This course covers energy production from traditional energy systems that use fossil fuel combustion such as internal combustion engines, coal-fired plants, and natural gas turbines, to nuclear energy and renewable energy methods such as wind, solar, hydraulic, and geothermal. Lastly, the course will survey emerging technologies for future (21st century) energy systems. Students should have taken at a minimum Thermodynamics, Dynamics, and Fluid Dynamics courses. Prerequisites: ENME 2720, ENME 2510, ENME 2651.

ENME 3720 Aerospace Engineering: Atmospheric Flight Dynamics (4 Credits)

This course provides and introduction to aerospace engineering analysis and design. In the atmospheric domain, the basics of aerodynamics are covered, followed by flight mechanics. The approach is from a practical perspective in which analysis and design are intertwined. Prerequisites: ENME 2651 and ENME 2720 and ENME 2530.

ENME 3730 Aerospace Engineering: Space Flight Dynamics (4 Credits)

This course is focused on the aerospace discipline of space environment and orbital mechanics. The topics in this discipline are discussed in detail and provide aid in designing spacecraft/space missions. Some of the topics covered in this course include space environment, satellite orbits, spacecraft configurations, transfer orbits, and elementary space propulsion. Prerequisites: ENME 2651 and ENME 2720 and ENME 2530.

ENME 3810 Mechanical Engineering Capstone Laboratory (3 Credits)

This course is the capstone mechanical engineering laboratory course requiring independent experimental design by student teams. Using experimental equipment available in heat transfer, fluid mechanics, solid mechanics, thermodynamics, and measurement and control, the student team is required to design experiments to solve given problems which will be unique to each team. This course encourages students to develop experimental design and research techniques while continuing to improve skills in fundamental lab notebook keeping, uncertainty analysis in measurements, data acquisition, data analysis, report writing, oral presentations, and laboratory safety and procedures. Prerequisite: ENME 2810.

ENME 4020 Adv Finite Element Analysis (4 Credits)

ENME 4310 Computational Methods for Mechanics and Materials (4 Credits)

An introductory course for the general-purpose computational methods in advanced multiscale materials and mechanics. Students learn the fundamentals on the numerical methods used in mechanical and materials engineering. Cross listed with ENME 3310.

ENME 4360 Elasticity (4 Credits)

Students will be able to apply the fundamental principles of elasticity to solve two- and three-dimensional mechanical engineering problems involved in modern applications of elastic structures, composite materials, tribology and contact mechanics. Dependence on previous knowledge of solid mechanics, continuum mechanics or mathematics is minimized. The emphasis is placed on the engineering applications of elasticity. Suggeted prerequisite: ENME 2541.

ENME 4400 Fatigue (4 Credits)

A detailed overview of fatigue. Topics include: stress life and strain life approaches, fracture mechanics, constant amplitude and spectrum loading, life prediction, fatigue at notches, microstructural effects, environmentally assisted fatigue, retardation and acceleration, multi-axial fatigue, design against fatigue and reliability. Cross listed with ENME 3400.

ENME 4520 Intermediate Dynamics (4 Credits)

Development and analysis of dynamic systems through classical approaches. Topics will include: Vector algebraic/differential geometry for 3D translational and rotational kinematic analyses with motion constraints. Formulation of equations of motion for 3D multibody systems using: Newton/ Euler equations; Angular momentum principle; and D'Alembert principle (aka road-maps). Some exposure to Euler-Lagrange and Kane's Methods calculations. Symbolic and numerical computational solutions to linear/nonlinear algebraic and differential equations governing the configuration, forces, and motion of systems with multiple degrees of freedom. Recommended prerequisites: MATH 2070.

ENME 4530 Advanced Dynamics (4 Credits)

Formulation of equations of motion for constrained 3D multibody systems with: D'Alembert principle (MG road-maps); power, work, and energy; Lagrange's equations; and Kane's method. Euler parameters/quaternions, specified motion, constraint force/torque calculations, feed- forward control, inequality constraints and/or intermittent contact. Tensors and mass property calculations. Symbolic and numerical computer skills for geometry/ kinematic analysis, mass/inertia calculations, forces and motion, and simulation of multi-body dynamic systems. Training for advanced research and professional work. Recommended pre-requisite: ENME 4520.

ENME 4541 Advanced Mechanics of Materials (4 Credits)

This is a second-level course in mechanics of materials with an emphasis on techniques that are useful for mechanical design. Topics may include energy methods, non-symmetrical and nonlinear bending, shear and torsion of closed and open sections, beams in elastic foundations, membrane stress in axisymmetric shells, asisymmetric bending of cylindrical shells, thick-walled cylinders and disks, curved beams, and elastic stability. Recommended prerequisite: ENME 2541.

ENME 4630 Viscous Flow (4 Credits)

Course covers the fundamentals of fluid mechanics from an advanced point of view with emphasis on the mathematical treatment of viscous-flow phenomena. Topics cover the Navier-Stokes equations and its exact and similarity solutions, laminar boundary layer theory, free-shear flows, and the phenomena of instability and transition to turbulence. Recommended prerequisite: ENME 2661.

ENME 4670 Advanced Computational Fluid Dynamics (4 Credits)

Building on the principles and applications of computational methods in fluid flow and topics chosen from heat transfer, mass transfer and two phase flow. Specifically, Monte Carlo and volume of fluid techniques are discussed at length. Additionally, students learn how to set up automated design optimization using the latest software packages. Time permitting, students also are introduced to fluid-solid interaction modeling. Prerequisite: ENME 3651.

ENME 4671 Convective Heat Transfer (4 Credits)

The objective of this course is to examine the physical phenomena associated with heat transfer in the presence of fluid flow. We will develop a mathematical description of the processes (fluid flow and heat transfer) for laminar and turbulent flows for both internal and external situations. Exposure to the fundamentals of fluid mechanics and heat transfer is expected before taking this course.

ENME 4800 Advanced Topics (ME) (0-5 Credits)

Determined by interest and demand. May be taken more than once for credit.

ENME 4900 Grad Professional Development (1 Credit)

This course is required for all MME MS graduate students and all MME PhD graduate students who enter with a BS or enter with an MS but fail their first qualifying exam. One of our objectives is for all graduating students to have good written and verbal communication skills. This course is set up to meet those objectives. During this course, students write a mini-proposal and/or literature review. Students follow guidelines for a funding agency (e.g. NSF or NIH) for the mini-proposal. If students have a research advisor, students can coordinate with their advisor. If students do not have a research advisor, students may pick a topic that most interests them. Both a written proposal and an oral presentation are required of all students. Graduate standing is required.

ENME 4950 Graduate Assessment (0 Credits)

This graduate assessment course is required for all MME graduate students to be taken in their last quarter. All required assessment materials are uploaded to DU Assessment to meet the course requirements. Students will receive emails through the DU Assessment system notifying you of what is required to be uploaded.

ENME 4991 Independent Study (1-10 Credits)

ENME 4995 Independent Research (1-16 Credits)

ENME 5991 Independent Study (1-10 Credits)

ENME 5995 Independent Research (1-16 Credits)

Materials Science Courses

MTSC 4020 Composite Materials I (4 Credits)

An introduction to composite materials. Properties of fibers and matrices, fiber architecture, elastic properties of laminae and laminates, interface in composites. Cross listed with MTSC 3020.

MTSC 4800 Advanced Topics (MTSC) (1-5 Credits)

Selected topics (depending on student and faculty interest): fracture mechanics, fatigue, nonlinear constitutive models, dynamic behavior of materials, corrosion resistant design, thermodynamics of solids II.

MTSC 4991 Independent Study (1-10 Credits)

MTSC 4995 Independent Research (1-16 Credits)

MTSC 5995 Independent Research (1-16 Credits)

Mechanical Engineering

Master's and Doctoral Degrees Offered

Why study engineering at the University of Denver?

The University of Denver's Department of Mechanical Engineering is creating the future of technology by providing a graduate education emphasizing cross-disciplinary knowledge. A distinguished faculty is creating multidisciplinary education and research programs that anticipate technological trends in research and industry. Engineering graduate students join the faculty in conducting cutting-edge research in emerging disciplines to develop unique solutions to old and new problems and opportunities.

The well-equipped laboratories in the department contain state-of-the-art equipment and software to support research in biomedical engineering, advanced materials, robotics, mechanical design, and Al/machine learning, among others. Small classes support our multidisciplinary and real-time focus by providing close contact between students and faculty, which allows us to meet students' individual career goals.

Recognizing the different aims and goals of students, we offer several degree programs for students who wish to add to their technical skills in various areas: MS in Bioengineering; MS and PhD in Materials Science; and MS and PhD in Mechanical Engineering.

Denver is a first-rate location for business, governmental and laboratory partnerships, and technology employment. The Colorado Front Range is consistently rated as one of the top high-tech areas in the country, and the University of Denver is located just minutes from the Denver Tech Center, site of many top technology companies. The Department of Mechanical Engineering is committed to active collaboration with these industry leaders. As a result, our students graduate with relevant research experience and a network of employment contacts in the technology sector.

Time Commitment

Our department recognizes that a student may be employed full-time while studying for a degree. Therefore, many courses are offered at times and on days that will permit a student to complete the program by taking courses either late in the day or outside normal business hours. Many employers will permit additional flexibility by releasing employees early to attend classes. We also can provide hybrid and Zoom-based course options.

The master's program offer thesis and non-thesis options and can be completed in one (non-thesis track only) to four years depending on the number of courses taken per quarter. The choice of thesis or non-thesis can be made at any time, although a delay in declaration may impact the completion date.

The doctoral program is generally completed in three to seven years, depending on the number of courses taken per quarter and whether the student enters with a BS or MS.

A student not interested in pursuing a degree, but interested in taking an occasional course, may register as special status students (http:// www.du.edu/learn/graduates/degreeprograms/) by following an abbreviated admissions process. If at a later time the student chooses to enter a graduate degree program at DU, you may apply up to 15 special status credits to your degree, with departmental approval. Just follow the regular graduate application requirements, including submitting the application fee, to get started.

Degree Programs

Below are our graduate engineering degrees:

- Master of Science in Bioengineering
- Master of Science in Engineering (p. 309)(See Engineering program listing)
- · Master of Science in Engineering with a Concentration in Management (p. 309)(See Engineering program listing)
- Master of Science in Mechanical Engineering
- · Doctor of Philosophy in Engineering (p. 309)(See Engineering program listing)
- · Doctor of Philosophy in Mechanical Engineering

Doctor of Philosophy in Mechanical Engineering

The objective of the Doctor of Philosophy in Mechanical Engineering program is to provide an educational environment that encourages students to develop the ability to contribute to the advancement of mechanical engineering through independent research.

Master of Science in Bioengineering

The Master of Science in Bioengineering program integrates engineering sciences with biomedical sciences and clinical practice to provide the skill set needed by bioscience companies. The Department of Mechanical Engineering—in collaboration with the Departments of Electrical and Computer Engineering, Chemistry & Biochemistry, Biological Sciences, and Physics & Astronomy—has designed a cross-disciplinary master of science program to address industrial requirements and the desired qualifications of a 21st century workforce in bioengineering businesses. Students with bachelor's degrees in chemistry, biological sciences or physics, as well as those with accredited engineering degrees, acquire a specialized expertise in bioengineering through programs which leverage the individual students' undergraduate experience and expertise resident at DU.

Master of Science in Mechanical Engineering

The Master of Science in Mechanical Engineering program is intended for students with undergraduate degrees in mechanical engineering or a closely related field. It is designed to advance a student's knowledge in mechanical engineering topics related to their specific area of interest. The degree provides breadth through its flexible technical elective requirement, while permitting the students to achieve depth in one of several core areas: solid mechanics, fluid mechanics, heat transfer, biomechanics and robotics. These areas are grounded in the fundamentals of the field with connections to emerging technologies and applications with promise for the future. The purpose of the program is to prepare students to tackle a wide range of engineering challenges and to serve the profession of engineering through advanced study in mechanical engineering and related multidisciplinary areas.

Doctor of Philosophy in Mechanical Engineering

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.

- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

• Students with a master's degree in Mechanical Engineering or closely related areas may apply for the PhD program in Mechanical Engineering (ENME). Admission with only a Bachelor of Science degree in this field is also possible, but such students are encouraged to enroll first in the MS ENME program.

Other Required Materials

• We recommend PhD applicants contact faculty to find a research advisor BEFORE submitting the application. If we receive an application and there is no research advisor commitment, we will consider the applicant for the master's program only.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Science in Bioengineering

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Prerequisites

Students with a bachelor's degree in Engineering, Chemistry, Biology or Physics is normally required for admission to the MS Bioengineering (ENBI)
program. Note that although not an admission requirement, students who are not adequately prepared to succeed in our graduate level courses
may choose to complete prerequisite undergraduate courses.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- · Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Master of Science in Mechanical Engineering

Degrees and GPA Requirements

- Minimum Duolingo English Test Score: 115

Doctoral Programs

Doctor of Philosophy in Mechanical Engineering

Program Requirements

PhD Residence Requirement

Enrollment in at least six quarters, including at least two consecutive quarters of full-time attendance is required for graduation.

Exam Structure

- 1. Each student must pass the **qualifying exam** to obtain official entrance into the PhD program. In consultation with the advisor, students should expect to take the qualifying exam about one year (24 credits) into their academic study. Students must take exams in three subject areas. The design exam is required for all participants, and is an open book exam, where the student will have one week to prepare a written and oral response to an open ended design problem. The other two exams are closed-book written exams and should be related to the student's research area. The exam is offered twice a year. once in the summer interterm (usually in June) and once in the winter interterm (usually in December or early January). The qualifying exam can be retaken only once, and must be completed within one year after the first qualifying exam was attempted.
- 2. After completion of the qualifying exam and coursework, the student should schedule and take the **comprehensive exam** attended by the student's PhD committee. The student will be expected to make concise presentation on his/her dissertation topic. The presentation will highlight previous work in this area, demonstrate a need for the research, and explain how the research will contribute to the advancement of the area. The student will also present completed work and results, anticipated work and results, and a detailed plan for project completion. <u>The comprehensive exam can be retaken only once</u>.
- 3. After successful completion of the qualifying exam and the comprehensive exam, the student is required to complete and **defend a dissertation** of publishable quality based on the student's original research. The dissertation must be completed in written form in accordance with the University's Graduate School guidelines, and must be defended by the student in the final oral defense. The defense committee members will consist of the student's entire PhD committee. The dissertation defense can be retaken only once.

PhD Students with a Bachelor of Science

Program Structure

- 1. For students entering with a bachelor's degree, 90 credits are required, at least 75 of which must be completed at the University of Denver.
- 2. A minimum of 48 credits must be at the 4000- or 5000-level and may include as many dissertation research credits as considered appropriate by the advisor.
- 3. No courses at the 1000- or 2000-level are acceptable.
- 4. An overall GPA of 3.0 is required for the degree.
- 5. Any individual grade lower than C- renders the credit unacceptable.
- 6. Students who have completed the required 90 credits and are still working on the dissertation are eligible for Continuous Enrollment to maintain active student status at the University. Students working on internships are not eligible for Continuous Enrollment.
- 7. Students must complete all requirements for the doctoral degree no later than eight years after doctoral studies begin.

Course Requirements

- 1. Candidates who hold only a bachelor's degree on entering the doctoral program are expected to meet all degree requirements of the corresponding master's degree program (as part of the doctoral requirements).
- Students are required to take ENME 4950 Graduate Assessment in the last quarter of study. <u>NOTE</u>: Students are required to complete a written self-reflection on their thesis and provide their thesis, defense presentation slides, and the completed and signed degree program plan before graduation.

3. PhD students who enter the program with a bachelor's are required to take ENME 4900 Graduate Professional Development in the first year (this will be offered once a year; usually in winter quarter).

Code	Title	Credits

PhD Students with a Master of Science Program Structure:

- 1. A minimum of 36 credits must be at the 4000- or 5000-level and may include as many dissertation research credits as considered appropriate by the advisor. The total number of credits required for the degree is 90.
- 2. For students entering with a master's degree, up to 45 credits may be transferred and applied to the doctorate degree. In addition, a minimum of 45 credits must be completed at DU. The total number of credits required for the degree is 90.
- 3. No courses at the 1000- or 2000-level are acceptable.
- 4. An overall GPA of 3.0 is required for the degree.
- 5. Any individual grade lower than C- renders the credit unacceptable.
- 6. Students who have completed the required 90 credits and are still working on the dissertation are eligible for Continuous Enrollment to maintain active student status at the University. Students working on internships are not eligible for Continuous Enrollment.
- 7. Students must complete all requirements for the doctoral degree no later than seven years after doctoral studies begin.

Course Requirements:

- 1. Students are required to take ENME 4950 Graduate Assessment in the last quarter of study. <u>NOTE</u>: Students are required to complete a written self-reflection on their thesis and upload the report to Assess-It along with thesis, defense presentation slides, and the completed and signed degree program plan before graduation.
- 2. If a PhD student fails the qualifying exam on the first try, they will be required to take ENME 4900 Graduate Professional Development as well. ENME 4900 will be offered once a year, usually in winter quarter.

Master's Degree Programs

Master of Science in Bioengineering

Program Structure

- 1. Every candidate for this degree must complete 45 credits, at least 36 of which must be completed at the University of Denver.
- 2. A minimum of six 4000-level courses of at least three credits each are required for non-thesis track; four 4000-level courses of at least three credits each are required for thesis track.
- 3. No courses at the 1000- or 2000-level are acceptable.
- 4. An overall GPA of 3.0 is required for the degree.

5. Any individual grade lower than C- renders the credit unacceptable.

- 6. Students who have completed the required 45 credits and are still working on a thesis or project are eligible for Continuous Enrollment to maintain active student status at the University. Students working on internships are not eligible for Continuous Enrollment.
- 7. Master's degree candidates are expected to complete degree requirements no later than five years after beginning their programs.

Course Requirements

- 1. Core Courses: a minimum of nine credits (two courses from the Bioengineering Core Course List plus required courses) for both thesis and non-thesis tracks.
- Required Courses: All master's students are required to take ENME 4900 Graduate Professional Development in the first year (this will be offered once a year; usually in winter quarter) and ENME 4950 Graduate Assessment in the last quarter of study. <u>NOTE</u>: Students on the thesis track are required to complete a written self-reflection on their thesis and upload the report to Assess-It along with thesis, defense presentation slides, and the completed and signed degree program plan before graduation. Students on the non-thesis track are required to upload to Assess-It an assembled portfolio that includes reports from at least two course projects or homework from the core courses, a mini-proposal and presentation slides from ENME 4900, along with the completed and signed degree program plan.
- 3. Minor Elective Courses: minimum of eight credits for thesis track; eight credits for non-thesis track. A minor is required by each student and is intended to provide bioengineering students with additional knowledge in an area unassociated with their undergraduate degree. Candidates with non-engineering undergraduate degrees must take courses in engineering chosen from regular engineering course offerings numbered 3000 or higher and must be approved by the advisor. Candidates with engineering undergraduate degrees must take graduate-level coursework in biological sciences, chemistry and biochemistry, or physics and biophysics.
- 4. Technical Electives: a minimum of eight credits for thesis track and 20 credits for non-thesis track. These do not include independent research credits.
 - a. Technical elective courses are intended to provide bioengineering students an opportunity to take additional course work that will expand their knowledge of advanced engineering topics. 50% or more of the technical elective credits must be chosen from engineering course offerings numbered 3000 or higher and approved by the student's advisor.
 - b. Students may take one business/management course as a technical elective. Special permission should be obtained in writing from the advisor **PRIOR TO REGISTRATION** if more than one business/management course is taken.

5. Advanced Math Requirement: a minimum of three credits for both thesis track and non-thesis track from Core Course List or advisor approval.

- 6. Thesis Hours: not allowed for non-thesis track.
- 7. Tool Requirement: As employers of graduates of this degree will inherently expect a basic competency in foundational engineering skills, students must demonstrate these before advancing to candidacy. Candidates with BS degrees from accredited engineering schools, or students completing a thesis, will be exempt from the tool requirement. Candidates with undergraduate degrees from non-engineering majors and completing a non-thesis MS will be required to pass a tool requirement. This will consist of an exam based on the topics in the Fundamentals of Engineering General Exam.

Program Structure

- 1. Every candidate for this degree must complete 45 credits, at least 36 of which must be completed at the University of Denver.
- 2. A minimum of six 4000-level courses of at least three credits each are required for non-thesis track; four 4000-level courses of at least three credits each are required for thesis track.
- 3. No courses at the 1000- or 2000-level are acceptable.
- 4. An overall GPA of 3.0 is required for the degree.
- 5. Any individual grade lower than C- renders the credit unacceptable.
- 6. Students who have completed the required 45 credits and are still working on a thesis or project are eligible for Continuous Enrollment to maintain active student status at the University. Students working on internships are not eligible for Continuous Enrollment.
- 7. Master's degree candidates are expected to complete degree requirements no later than five years after beginning their programs.
- 8. International students must enroll in at least eight credits each quarter to maintain full-time status, except during the annual vacation term (usually the summer quarter) or the final quarter of study that requires fewer credits than the minimum full-time enrollment to complete the program. Failure to maintain full-time enrollment is a violation of student status and may result in the termination from the program. Based on the recommendation of the academic advisor, an international student advisor may authorize the student to drop below full-time status for academic reasons specifically permitted under immigration regulations. However, academic authorizations may only be given once per degree level and are usually issued during the first term of study.

Course Requirements

- 1. Core Courses: a minimum of nine credits (two courses from the Mechanical Engineering Core Course List plus required courses) for both thesis and non-thesis tracks.
- Required Courses: All master's students are required to take ENME 4900 Graduate Professional Development in the first year (this will be offered once a year; usually in winter quarter) and ENME 4950 Graduate Assessment in the last quarter of study. <u>NOTE</u>: Students on the thesis track are required to complete a written self-reflection on their thesis and provide their thesis, defense presentation slides, and the completed and signed degree program plan before graduation. Students on the non-thesis track are required to provide an assembled portfolio that includes reports from at least two course projects or homework from the core courses, a mini-proposal and presentation slides from ENME 4900 along with the completed and signed degree program plan.
- 3. Technical Electives: a minimum of 16 credits for thesis track and 28 credits non-thesis track. These do not include independent research credits.
 - a. Technical electives must be in engineering (bioengineering, mechanical engineering, materials science, etc.) or related areas (mathematics, computer science, physics, chemistry, etc.) and are at the advisor's discretion. 50% or more of the technical elective credits must be in engineering.
 - b. Students may take one business/management course as a technical elective. Special permission should be obtained in writing from the advisor **PRIOR TO REGISTRATION** if more than one business/management course is taken.
- Advanced Math Requirement: a minimum of three credits for thesis track and six credits for non-thesis track from Core Course List or advisor approval.
- 5. Thesis Hours: not allowed for non-thesis track.
- 6. Tool Requirement: As employers of graduates of this degree will inherently expect a basic competency in foundational engineering skills, students must demonstrate these before advancing to candidacy. Candidates with BS degrees from accredited engineering schools, or students completing a thesis, will be exempt from the tool requirement. Candidates with undergraduate degrees from non-engineering majors and completing a non-thesis MS will be required to pass a tool requirement. This will consist of an exam based on the topics in the Fundamentals of Engineering General Exam.

Engineering, Bio (ENBI)

ENBI 4200 Medical Device Development (4 Credits)

Working in a fast-paced competitive biomedical R&D firm is a dramatic change of pace from most college classes. This course will create a realistic industry environment where students take on the role of development engineers to design and manufacture real-world medical devices. This course is intended to provide a working knowledge of the design and development process specifically for medical device applications.

ENBI 4500 Biofluids (4 Credits)

The application of fluid dynamics theory and design to problems within the biomedical community. Specific topics covered include the mechanics of inhaled therapeutic aerosols, basic theory of circulation and blood flow, foundations in biotechnology and bioprocessing, and controlled drug delivery. Cross listed with ENBI 3500.

ENBI 4510 Biomechanics (4 Credits)

An introduction to the mechanical behavior of biological tissues and systems. Specific topics covered include: Analysis of the human musculoskeletal system as sensors, levers, and actuators; Joint articulations and their mechanical equivalents; Kinematic and kinetic analysis of human motion; Introduction to modeling human body segments and active muscle loading for analysis of dynamic activities; Mechanical properties of hard and soft tissues; Mechanical and biological consideration for repair and replacement of soft and hard tissue and joints; Orthopedic implants. Cross listed with ENBI 3510.

ENBI 4520 Introduction to Cardiovascular Engineering (4 Credits)

An introduction to cardiovascular mechanics with a focus on the quantitative understanding of the mechanical phenomena that governs the cardiovascular system. Specific topics covered include: basic principles of circulation including macro and micro circulation, soft tissue mechanics, applications to cardiovascular diseases, modelling techniques, clinical and experimental methods, and design of cardiovascular devices. Recommended prerequisites: ENME 2541 and ENME 2661.

ENBI 4530 Biomechanics of Human Movement (4 Credits)

An introduction to engineering-based analysis of human movement. Topics include: musculoskeletal anatomy, nueromuscular physiology, muscle mechanics, electromyography, sensorimotor integration, anthropometry, kinematics and kinetics. Recommended pre-requisite material: knowledge of MATLAB, ENGR 1572.

ENBI 4600 Biomedical Engineering: Technology, Research, and Design (4 Credits)

Introduction to Biomedical Engineering is an interdisciplinary course that combines engineering principles with biological and medical sciences to advance healthcare in areas such as diagnosis, monitoring, and therapy. The course provides a foundational understanding of biomedical engineering and prepares students for further study or careers in the field.

ENBI 4610 Experimental Design in Biomedical Sciences (4 Credits)

This course offers an in-depth exploration of experimental design principles within the biomedical sciences, emphasizing statistical analysis, measurement techniques, and ethical considerations. It aims to provide students with practical skills necessary for designing, conducting, and analyzing biomedical research.

ENBI 4620 Bioelectronics (4 Credits)

This course introduces the principles and applications of bioelectronics, focusing on the interface between biological systems and electronic devices. It covers the fundamentals of electronic circuits, signal processing, and sensor technology, and their applications in areas like biometric monitoring, neuroprosthetics, and biosensing.

ENBI 4630 Biomaterials (4 Credits)

This course provides an introduction to the field of biomaterials science, focusing on the fundamental principles, properties, and applications of materials used in biomedical engineering and healthcare. Topics covered include the classification of biomaterials, biocompatibility, interactions with biological systems, surface modifications, fabrication techniques, characterization techniques and current applications in tissue engineering, regenerative medicine, drug delivery, and medical devices.

ENBI 4800 Adv Topics (Bioengineering) (1-5 Credits)

Various topics in Bioengineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENBI 4991 Independent Study (1-5 Credits)

ENBI 4995 Independent Research (1-18 Credits)

Engineering, Mechanical (ENME)

ENME 3320 Computer Aided Design and Analysis (4 Credits)

Introduction to the use of computer aided design and analysis with applications to solid and fluid mechanics, heat transfer and vibrations; projects in one or more of the above areas. Emphasis on how to use the software to analyze engineering systems. Prerequisites ENME 2541 and ENME 2651.

ENME 3511 Machine Design (3 Credits)

Application of statics, dynamics, mechanics of materials and manufacturing processes to the design of machine elements and systems. Properties of materials and design criteria. Synthesis and analysis of a machine design project. Prerequisites: ENME 2520 and ENME 2541.

ENME 3545 Mechanisms (4 Credits)

Synthesis, analysis and use of mechanisms. Mechanisms studied include cams, gears and planar linkages, with an emphasis on planar linkages. Prerequisites: ENME 2530 and ENGR 1572.

ENME 3651 Computational Fluid Dynamics (4 Credits)

This course introduces principles and applications of computational methods in fluid flow and topics chosen from heat transfer, mass transfer or two phase flow. The conservation equations, their discretations and solutions, are presented. Convergence and validity of solutions along with computational efficiency are explored. Students learn to apply these techniques using the latest software packages. Prerequisites: ENME 2671.

ENME 3661 Mechanical Energy Systems Engineering (4 Credits)

This course covers energy systems engineering analysis from a mechanical and materials engineering perspective. This course covers energy production from traditional energy systems that use fossil fuel combustion such as internal combustion engines, coal-fired plants, and natural gas turbines, to nuclear energy and renewable energy methods such as wind, solar, hydraulic, and geothermal. Lastly, the course will survey emerging technologies for future (21st century) energy systems. Students should have taken at a minimum Thermodynamics, Dynamics, and Fluid Dynamics courses. Prerequisites: ENME 2720, ENME 2510, ENME 2651.

ENME 3720 Aerospace Engineering: Atmospheric Flight Dynamics (4 Credits)

This course provides and introduction to aerospace engineering analysis and design. In the atmospheric domain, the basics of aerodynamics are covered, followed by flight mechanics. The approach is from a practical perspective in which analysis and design are intertwined. Prerequisites: ENME 2651 and ENME 2720 and ENME 2530.

ENME 3730 Aerospace Engineering: Space Flight Dynamics (4 Credits)

This course is focused on the aerospace discipline of space environment and orbital mechanics. The topics in this discipline are discussed in detail and provide aid in designing spacecraft/space missions. Some of the topics covered in this course include space environment, satellite orbits, spacecraft configurations, transfer orbits, and elementary space propulsion. Prerequisites: ENME 2651 and ENME 2720 and ENME 2530.

ENME 3810 Mechanical Engineering Capstone Laboratory (3 Credits)

This course is the capstone mechanical engineering laboratory course requiring independent experimental design by student teams. Using experimental equipment available in heat transfer, fluid mechanics, solid mechanics, thermodynamics, and measurement and control, the student team is required to design experiments to solve given problems which will be unique to each team. This course encourages students to develop experimental design and research techniques while continuing to improve skills in fundamental lab notebook keeping, uncertainty analysis in measurements, data acquisition, data analysis, report writing, oral presentations, and laboratory safety and procedures. Prerequisite: ENME 2810.

ENME 4020 Adv Finite Element Analysis (4 Credits)

ENME 4310 Computational Methods for Mechanics and Materials (4 Credits)

An introductory course for the general-purpose computational methods in advanced multiscale materials and mechanics. Students learn the fundamentals on the numerical methods used in mechanical and materials engineering. Cross listed with ENME 3310.

ENME 4360 Elasticity (4 Credits)

Students will be able to apply the fundamental principles of elasticity to solve two- and three-dimensional mechanical engineering problems involved in modern applications of elastic structures, composite materials, tribology and contact mechanics. Dependence on previous knowledge of solid mechanics, continuum mechanics or mathematics is minimized. The emphasis is placed on the engineering applications of elasticity. Suggeted prerequisite: ENME 2541.

ENME 4400 Fatigue (4 Credits)

A detailed overview of fatigue. Topics include: stress life and strain life approaches, fracture mechanics, constant amplitude and spectrum loading, life prediction, fatigue at notches, microstructural effects, environmentally assisted fatigue, retardation and acceleration, multi-axial fatigue, design against fatigue and reliability. Cross listed with ENME 3400.

ENME 4520 Intermediate Dynamics (4 Credits)

Development and analysis of dynamic systems through classical approaches. Topics will include: Vector algebraic/differential geometry for 3D translational and rotational kinematic analyses with motion constraints. Formulation of equations of motion for 3D multibody systems using: Newton/ Euler equations; Angular momentum principle; and D'Alembert principle (aka road-maps). Some exposure to Euler-Lagrange and Kane's Methods calculations. Symbolic and numerical computational solutions to linear/nonlinear algebraic and differential equations governing the configuration, forces, and motion of systems with multiple degrees of freedom. Recommended prerequisites: MATH 2070.

ENME 4530 Advanced Dynamics (4 Credits)

Formulation of equations of motion for constrained 3D multibody systems with: D'Alembert principle (MG road-maps); power, work, and energy; Lagrange's equations; and Kane's method. Euler parameters/quaternions, specified motion, constraint force/torque calculations, feed- forward control, inequality constraints and/or intermittent contact. Tensors and mass property calculations. Symbolic and numerical computer skills for geometry/ kinematic analysis, mass/inertia calculations, forces and motion, and simulation of multi-body dynamic systems. Training for advanced research and professional work. Recommended pre-requisite: ENME 4520.

ENME 4541 Advanced Mechanics of Materials (4 Credits)

This is a second-level course in mechanics of materials with an emphasis on techniques that are useful for mechanical design. Topics may include energy methods, non-symmetrical and nonlinear bending, shear and torsion of closed and open sections, beams in elastic foundations, membrane stress in axisymmetric shells, asisymmetric bending of cylindrical shells, thick-walled cylinders and disks, curved beams, and elastic stability. Recommended prerequisite: ENME 2541.

ENME 4630 Viscous Flow (4 Credits)

Course covers the fundamentals of fluid mechanics from an advanced point of view with emphasis on the mathematical treatment of viscous-flow phenomena. Topics cover the Navier-Stokes equations and its exact and similarity solutions, laminar boundary layer theory, free-shear flows, and the phenomena of instability and transition to turbulence. Recommended prerequisite: ENME 2661.

ENME 4670 Advanced Computational Fluid Dynamics (4 Credits)

Building on the principles and applications of computational methods in fluid flow and topics chosen from heat transfer, mass transfer and two phase flow. Specifically, Monte Carlo and volume of fluid techniques are discussed at length. Additionally, students learn how to set up automated design optimization using the latest software packages. Time permitting, students also are introduced to fluid-solid interaction modeling. Prerequisite: ENME 3651.

ENME 4671 Convective Heat Transfer (4 Credits)

The objective of this course is to examine the physical phenomena associated with heat transfer in the presence of fluid flow. We will develop a mathematical description of the processes (fluid flow and heat transfer) for laminar and turbulent flows for both internal and external situations. Exposure to the fundamentals of fluid mechanics and heat transfer is expected before taking this course.

ENME 4800 Advanced Topics (ME) (0-5 Credits)

Determined by interest and demand. May be taken more than once for credit.

ENME 4900 Grad Professional Development (1 Credit)

This course is required for all MME MS graduate students and all MME PhD graduate students who enter with a BS or enter with an MS but fail their first qualifying exam. One of our objectives is for all graduating students to have good written and verbal communication skills. This course is set up to meet those objectives. During this course, students write a mini-proposal and/or literature review. Students follow guidelines for a funding agency (e.g. NSF or NIH) for the mini-proposal. If students have a research advisor, students can coordinate with their advisor. If students do not have a research advisor, students may pick a topic that most interests them. Both a written proposal and an oral presentation are required of all students. Graduate standing is required.

ENME 4950 Graduate Assessment (0 Credits)

This graduate assessment course is required for all MME graduate students to be taken in their last quarter. All required assessment materials are uploaded to DU Assessment to meet the course requirements. Students will receive emails through the DU Assessment system notifying you of what is required to be uploaded.

ENME 4991 Independent Study (1-10 Credits)

ENME 4995 Independent Research (1-16 Credits)

ENME 5991 Independent Study (1-10 Credits)

ENME 5995 Independent Research (1-16 Credits)

Engineering (ENGR)

ENGR 3340 Product Development and Market Feasibility (4 Credits)

In this course, students gain knowledge of designing products for market success by developing a product and optimizing its design for specific mass manufacturing technologies. Students gain experience through the design development process including market feasibility research, human-centered design, brainstorming and ideating new concepts, refinement through design iteration, and constructing alpha and beta prototypes that are designed with mass manufacturing considerations. Projects are based upon real world new product development principles. Students learn and practice the fundamentals of design thinking, design process, and entrepreneurship.

ENGR 3450 Biosensing Technology (4 Credits)

Biosensors are defined as analytical devices incorporating a biological material, a biologically derived material or a biomimic associated with or integrated within a physicochemical transducer or transducing microsystem, which may be optical, electrochemical, thermometric, piezoelectric, magnetic or micromechanical. This course provides instruction in the basic science and engineering concepts required to understand the design and application of biosensors. This module serves as an introduction to some of the biosensors and measurement techniques.

ENGR 3510 Renewable and Efficient Power and Energy Systems (4 Credits)

This course introduces the current and future sustainable electrical power systems. Fundamentals of renewable energy sources and storage systems are discussed. Interfaces of the new sources to the utility grid are covered. Prerequisite: ENEE 2012.

ENGR 3520 Introduction to Power Electronics (4 Credits)

This covers fundamentals of power electronics. We discuss various switching converters topologies. Basic knowledge of Efficiency and small-signal modeling for the DC-DC switching converters is covered. Furthermore, magnetic and filter design are introduced. Prerequisites: ENEE 2211 and ENGR 3722.

ENGR 3540 Electric Power Systems (4 Credits)

This course covers methods of calculation of a comprehensive idea on the various aspects of power system problems and algorithms for solving these problems. Prerequisite: ENGR 3530.

ENGR 3621 Advanced Engineering Mathematics (4 Credits)

Applied mathematics for engineers. Topics include vector spaces, normed vector spaces, inner product spaces, linear transformations, finitedimensional linear transformations, linear operators, finite-dimensional linear operators, linear differential systems, linear difference systems, orthogonal transformations, amplitude estimation, fundamentals of real and functional analysis, and introduction to partial differential equations, and applications to engineering systems.

ENGR 3630 Finite Element Methods (4 Credits)

Introduction to the use of finite element methods in one or two dimensions with applications to solid and fluid mechanics, heat transfer and electromagnetic fields; projects in one or more of the above areas. Prerequisites: ENME 2541 AND ENGR 1572.

ENGR 3650 Probability and Statistics for Engineers (4 Credits)

This course covers quantitative analysis of uncertainty and decision analysis in engineering. It covers the fundamentals of sample space, probability, random variables (discrete and continuous), joint and marginal distributions, random sampling and point estimation of parameters. It also covers statistical intervals, hypotheses testing and simple linear regression. The course includes applications appropriate to the discipline. Prerequisite: MATH 1953.

ENGR 3721 Controls (3,4 Credits)

Modeling, analysis and design of linear feedback control systems using Laplace transform methods. Techniques and methods used in linear mathematical models of mechanical, electrical, thermal and fluid systems are covered. Feedback control system models, design methods and performance criteria in both time and frequency domains. A linear feedback control system design project is required. Prerequisites: ENEE 2022, ENGR 3611 or permission of instructor.

ENGR 3722 Control Systems Laboratory (1 Credit)

This laboratory course serves as supplement to ENGR 3721. It aims at providing "hands on" experience to students. It includes experiments on inverted pendulum, gyroscopes, motor control, feedback controller design, time-domain and frequency domain. Corequisite: ENGR 3721.

ENGR 3730 Robotics (3 Credits)

Introduction to the analysis, design, modeling and application of robotic manipulators. Review of the mathematical preliminaries required to support robot theory. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning, and kinetics. Cross listed with ENGR 4730. Prerequisites: ENME 2520 and MATH 2060 or MATH 2200 or permission of instructor.

ENGR 3731 Robotics Lab (1 Credit)

Laboratory that complements the analysis, design, modeling and application of robotic manipulators. Implementation of the mathematical structures required to support robot operation. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning and kinetics. Applications include programming and task planning of a manufacturing robot manipulator. Corequisite: ENGR 3730 or permission of instructor.

ENGR 3800 Topics (ENGR) (1-4 Credits)

Special topics in engineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENGR 3900 Engineering Internship (0-4 Credits)

Students in engineering may receive elective credit for engineering work performed for engineering employers with the approval of the chair or associate chair of the department. At the end of the term, a student report on the work is required, and a recommendation will be required from the employer before a grade is assigned. Junior, senior, or graduate status in engineering is normally required. May not be used to satisfy technical requirements. May be taken more than one for a maximum of 6 quarter hours. Prerequisite: permission of instructor.

ENGR 4100 Instrumentation and Data Acquisition (4 Credits)

This course examines different instrumentation techniques and describes how different measurement instruments work. Measurement devices include length, speed, acceleration, force, torque, pressure, sound, flow, temperature, and advanced systems. This course also examines the acquisition, processing, transmission and manipulation of data. Final project or paper. Cross listed with ENGR 3100. Prerequisites: PHYS 1213 OR PHYS 1214.

ENGR 4200 Introduction to Nanotechnology (4 Credits)

The most important recent accomplishments so far in the application of nanotechnology in several disciplines are discussed. Then a brief overview of the most important instrumentation systems used by nanotechnologists is provided. The nature of nanoparticles, nanoparticle composites, carbon nanostructures, including carbon nanotubes and their composites is subsequently discussed. The course also deals with nanopolymers, nanobiological systems, and nanoelectronic materials and devices. The issues of modeling of nanomaterials and nanostructures is also covered. Multiscale modeling based on finite element simulations, Monte Carlo methods, molecular dynamics and quantum mechanics calculations are briefly addressed. Most importantly, students should obtain appreciation of developments in nanotechnology outside their present area of expertise. Cross listed with ENGR 3200.

ENGR 4300 Advanced Numerical Methods (4 Credits)

Fundamental and advanced numerical methods to approximate mathematical problems for engineering applications using modern software such as Matlab. Topics include numerical differentiation and integration, solution to linear and non-linear equations, ordinary and partial differential equations, and initial, boundary, and eigen value problems. Recommended prerequisite: MATH 2070.

ENGR 4350 Reliability (4 Credits)

An overview of reliability-based design. Topics include: fundamentals of statistics, probability distributions, determining distribution parameters, design for six sigma, Monte Carlo simulation, first and second order reliability methods (FORM, SORM). Most Probable Point (MPP) reliability methods, sensitivity factors, probabilistic design.

ENGR 4455 Fluorescence and Its Applications in Biomedical Sensors (4 Credits)

The course introduces the principles of fluorescence and its applications in the real world. It covers various topics including fluorophores (dye, fluorescent proteins, quantum dots, etc.), nanomaterials and nanostructures, design of biomedical sensors, point-of-care systems, and wearable devices. Cross listed with ENGR 3455.

ENGR 4501 Graduate Capstone Design I (3 Credits)

This is a project-centered course. This is the first third of a practical class that plans the engineering design project prior to addressing the design in earnest. This requires teamwork to develop the plan that details the schedule, cost, and who is responsible for which portions of the design effort. In this segment, the engineering teams establish the starting point for the design. This class puts theory into practice with the "shredding" of the RFP, defining a strategy for the team, balancing what has to be done with existing constraints, understanding the "true" problem of the customer, capturing the associated risks, and capturing margins required for the start of any design activity.

ENGR 4502 Graduate Capstone Design II (3 Credits)

This is a project-centered course. This is the second third of a practical class that implements the engineering design process (left side of the vee). This requires teamwork to develop the detailed design, which is a continuation of the accepted proposal. In this segment, the engineering teams add the details to a conceptual design. This class puts theory into practice with requirements development, balancing requirements against the constraints, completing a functional decomposition, developing a CONOPs document, developing a physical architecture, developing a functional architecture, and defining the interfaces through an ICD.

ENGR 4503 Graduate Capstone Design III (3 Credits)

This is a project-centered course. This is the third of a practical class that implements the engineering design process (right side of the vee). This requires teamwork to build, checkout, and test the final product. In this segment, the engineering teams build or procure hardware as a step towards the integration of the system. This class puts theory into practice by building components, developing software modules, integrating software with hardware, checkout of the system, and performing tests to verify construction, validate models, and collect data for acceptance by the team prior to demonstrating the operations of the product to the customer. Test data is collected through instrumentation of the final product with a buy-out and certification by the team. Testing may include performance testing and environmental testing as envisioned in the context diagram.

ENGR 4504 Graduate Capstone Design IV (3 Credits)

This is a project-centered course. This is the fourth of a practical class that implements the entire engineering "vee" design process. This requires teamwork to build, checkout, and test the final design product, e.g. hypothetical missile. In this segment, the engineering teams fine-tune the design process which may address advanced topics such as fault management and resilience. This class puts theory into practice by building components, developing software modules, integrating software with hardware, checkout of the system, and performing tests to verify construction, validate models, and collect data for acceptance by the team prior to demonstrating the operations of the product to the customer. It may also include addressing the beginning of the program through early management and pre-phase A activities. Test data is collected through instrumentation of the final product with a buy-in and certification by the team. Testing may include performance testing, functional testing, and environmental testing as envisioned in the system process.

ENGR 4530 Intro to Power and Energy (4 Credits)

Basic concepts of AC systems, single-phase and three-phase networks, electromechanical energy conversion, electric power generation, transformers, transmission lines, AC machinery, DC motors, and contemporary topics in power and energy conversion. Cross listed with ENGR 3530.

ENGR 4545 Electric Power Economy (4 Credits)

This course covers economy aspects of electric power industry and the implications for power and energy engineering in the market environment. Cross listed with ENGR 3545.

ENGR 4560 Power Generation Operation and Control (4 Credits)

This course covers economic dispatch of thermal units and methods of solution; transmission system effects; generate with limited energy supply; production cost models; control of generation; interchange of power and energy; power system security; state estimation in power systems; optimal power flow. Prerequisite: ENGR 3530 or ENGR 4530 or permission of instructor.

ENGR 4590 Power System Protection (4 Credits)

This course covers methods of calculation of fault currents under different types of fault; circuit breakers, current transformers, potential transformers; basic principles of various types of relays; applications of relays in the protection of generator, transformer, line, and bus, etc. Prerequisite: ENGR 3530 or ENGR 4530.

ENGR 4620 Optimization (4 Credits)

The development and application of various optimization techniques will be explored with engineering examples. Topics include: analytical and numerical methods, linear and non-linear programming techniques for unconstrained and constrained problems, and advanced optimization techniques, e.g. global optimization. Optimization methods will be developed and evaluated in code and used in a real-world application project.

ENGR 4622 Advanced Optimization (4 Credits)

Optimization is an indispensable tool for many fields of science and engineering and is one of the pillars of data science and machine learning. This course introduces optimization methods that are suitable for large-scale problems arising in data science, machine learning, and other engineering applications. We will discuss the development, computation, and convergence aspects for algorithms including gradient methods, accelerated methods, quasi-Newton methods, stochastic optimization, variance reduction, online optimization, as well as distributed optimization. We will also exploit the efficacy of these methods in concrete data science problems, including learning low-dimensional models, deep learning, and (possible) reinforcement learning. This course together with ENGR 4620 Optimization will provide in-depth introductions to optimization.

ENGR 4680 Fault Diagnosis & Prognostics for System Design (4 Credits)

Reliability engineering is a sub-discipline of systems engineering that emphasizes dependability in the lifecycle management of a product. Reliability, describes the ability of a system or component to function under stated conditions for a specified period of time. Reliability is closely related to availability, which is typically described as the ability of a component or system to function at a specified moment or interval of time. Normally, quality focuses on the prevention of defects during the warranty phase whereas reliability looks at preventing failures during the useful lifetime of the product or system from commissioning to decommissioning. Diagnosis is used, with variations in the use of logic, analytics, and experience, to determine "cause and effect". In systems engineering, it is typically used to determine the causes of symptoms, mitigations, and solutions. Prognostics is an engineering discipline focused on predicting the time at which a system or a component will no longer perform its intended function. This lack of performance is most often a failure beyond which the system can no longer be used to meet desired performance. The predicted time then becomes the remaining useful life (RUL), which is an important concept in decision making for contingency mitigation. Success in this course requires knowledge of probability theory and statistics, and familiarity with MATLAB/Simulink.

ENGR 4723 Digital Control (4 Credits)

The course focuses on modeling, analysis, and design of digital control systems. Topics include: z-Transform and difference equations; sampling and aliasing; Zero-Order Hold (ZOH); A/D and D/A conversions; pulse transfer function representation; time and frequency domain representations; input/ output analysis; analysis of sample data systems; stability; design of discrete-time controllers; introduction to state-space representation. Cross listed with ENGR 3723. Prerequisites: ENGR 3721 and ENGR 3722.

ENGR 4730 Introduction to Robotics (4 Credits)

Introduction to the analysis, design, modeling and application of robotic manipulators. Review of the mathematical preliminaries required to support robot theory. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning, and kinetics. Applications include programming and task planning of a manufacturing robot manipulator. Cross listed with ENGR 3730. Prerequisites: ENGR 3611 or ENEE 3111 or instructor approval.

ENGR 4735 Linear Systems (4 Credits)

This course focuses on linear system theory in time domain. It emphasizes linear and matrix algebra, numerical matrix algebra and computational issues in solving systems of linear algebraic equations, singular value decomposition, eigenvalue-eigenvector and least-squares problems, linear spaces and linear operator theory. It studies modeling and linearization of multi-input/multi-output dynamic physical systems, state-variable and transfer function matrices, analytical and numerical solutions of systems of differential and difference equations, structural properties of linear dynamic physical systems, including controllability, observability and stability. It covers canonical realizations, linear state-variable feedback controller and asymptotic observer design, and the Kalman filter. Cross listed with ENGR 3735. Prerequisites: ENGR 3611, ENGR 3721, ENGR 3722, or permission of the instructor.

ENGR 4740 Adaptive Control Systems (4 Credits)

Theoretical and application aspects of robust adaptive control design for uncertain dynamical systems. Topics include: parameter estimation, stability, model reference adaptive systems, self-tuning regulators, gain scheduling, design for robustness against unmodeled dynamics and disturbance signals. Examples will be given from aerospace engineering (changes in the dynamics of aircraft), process control, and robotics. Modern alternatives to traditional adaptive control will be discussed (switching multi-model/multi-controller adaptive schemes). Prerequisite: ENGR 3721 or permission of instructor. Familiarity with MATLAB/Simulink.

ENGR 4745 Adv Non-Linear Control System (4 Credits)

Nonlinear system analysis methods: Existence of solutions of ODEs, uniqueness, continuity, compactness, fixed point, linearization, metric spaces, Contraction Mapping Theorem, Gronwall-Bellman lemma. Phase plane analysis; Limit Cycles. Lyapunov stability of autonomous and non-autonomous systems. Circle criterion, absolute stability, Popov criterion. Passivity and Lyapunov stability. Input-to-State stability. Small Gain Theorem. Describing functions. Nonlinear control system synthesis methods: Passivity-based control. Stability via Feedback Linearization. Lie derivatives.

ENGR 4750 Networked Control Systems (4 Credits)

Fundamental tools and recent advances in networked control. Topics include the control of multi-agent networks found in multi-vehicle coordination, control of sensor networks, unmanned vehicles, and energy systems. Network models, distributed control and estimation, distributed control under limited communications and sensing, formation control, coverage control in mobile sensor networks. Prerequisites: linear algebra, linear control systems, differential equations, familiarity with MATLAB, or permission of instructor.

ENGR 4755 Optimal Control (4 Credits)

Introduction to optimal control theory (control laws that maximize a specified measure of a dynamical system's performance). Topics include: optimality conditions and constraints; calculus of variations; review of mathematical programming (Language multipliers, convexity, Kuhn-Tucker theorem); Pontryagin's maximum principle (constraints, Hamilitonians, bang-bang control); dynamic programming and Linear Quadratic Regulation (Riccati, Hamilton-Jacobi equation). Prerequisites: ENGR 3721 (Controls) and ENGR 3735/4735 (Linear Systems) or equivalent courses.

ENGR 4760 Multivariable Control (4 Credits)

Multivariable aspects of control (systems with multiple actuators and sensors); performance analysis of feedback control systems; sensitivity; robustness and stability margins; disturbance attenuation; design tradeoffs; singular value; characteristic locus. Modern H-infinity control theory and 'mu' synthesis-based robust control design techniques. Enforced Prerequisites and Restrictions ENGR 3721 (Controls) and ENGR 4735 (Linear Systems at a graduate level) or equivalents.

ENGR 4765 Robot Control (4 Credits)

The course focuses on different techniques, methods, and theories for control of robots. The topics covered include: introduction to nonlinear control theory, review of independent joint control, nonlinear and multivariable robot control, feedback linearization control of robots, control of underactuated robots, control of nonholonomic and mobile robots. force and impedance control, and vision-based control. Pre-requisite or co-requisite: ENGR 3730 or ENGR 4730, or equivalent is recommended.

ENGR 4790 Systems Engineering Requirements (4 Credits)

The course covers fundamentals of design and requirements analysis of complex systems to meet overall mission requirements. It spans the whole requirements engineering phase that includes requirements analysis, decomposition, derivation, allocation, verification and validation planning. Students acquire expertise in creating UML and SYML case diagrams and in defining and implementing verification and validation plans. Requirement management methods and tools, associated vernacular, and requirements configuration control are also covered. Prerequisites: ENMT 4100, or permission by the Instructor.

ENGR 4810 Advanced Topics (ENGR) (1-5 Credits)

ENGR 4910 Conceptual Design (4 Credits)

Conceptual design is the part of the design process where—by identifying the essential problems through abstraction, establishing function structures, searching for appropriate working principles and combining these into a working structure— the basic solution path is laid down through the elaboration of a solution principle. Conceptual design specifies the principle solution. Concept design rarely starts at the same point; you might have an existing design that needs iterating or the requirement to create a conceptualized form. Problem solving consists of using generic or ad hoc methods in an orderly manner to find solutions to problems. George Polya (mathematician) presented two important decision-making principles, understanding the problem and devising a plan. To understand what is new, students are asked to look at intellectual property, a category of property that includes intangible creations of the human intellect. There are many types of intellectual property such as patents, and some countries recognize more than others. Designers assess the many different directions a design could take at this stage will allow you to identify what you like and don't like from each one. The preferred concept will then be further developed using engineering drawings, schematics and possibly 3D models which will show how the design will look and operate.

ENGR 4920 Aerospace Missions (4 Credits)

The Design "Problem" in Advanced Aerospace Systems describes the problems in the conceptual design of various types of aircraft, spacecraft, and complex vehicles. It covers the following topics: design of orbital spacecraft, design for Moon missions (such as landers), design for Mars missions (including rovers), design of an unmanned drone for surveillance (high-altitudes), CubeSats (having large constellations), and rockets and missiles (including hypersonic). Problem statements are concise descriptions of design problems. Design teams use them to define the current and ideal states, to freely find user-centered solutions. This class stands as a reference of interest to engineers and scientists working in aerospace engineering and related topics.

ENGR 4940 Mission Operation Controls (4 Credits)

Space operations is based at a centralized control center, a facility used for command & control (C2), and related communication equipment (antennas, etc.). The human operators conduct the day-to-day operations for controlling the spacecraft. They control the spacecraft and its payloads, and carries out all activities related to mission planning and scheduling. For example, normal orbital operations are interrupted every six months to conduct orbital maneuvers. Launch operations begin with spacecraft integration and checked-out for launch. Once safely placed in orbit, command and control goes back and forth between the ground control station and the spacecraft or satellite. A key aspect of spacecraft operations is the transferring of data from the onboard instruments collected by its payload to the ground, eventually disseminating the data to concerned users and analysts through a ground data network. This requires an on-orbit communication architecture.

ENGR 4991 Independent Study (1-5 Credits)

ENGR 4995 Independent Research (1-16 Credits)

ENGR 5991 Independent Study (0-10 Credits)

ENGR 5995 Independent Research (1-16 Credits)

Materials Science (MTSC)

MTSC 4020 Composite Materials I (4 Credits)

An introduction to composite materials. Properties of fibers and matrices, fiber architecture, elastic properties of laminae and laminates, interface in composites. Cross listed with MTSC 3020.

MTSC 4800 Advanced Topics (MTSC) (1-5 Credits)

Selected topics (depending on student and faculty interest): fracture mechanics, fatigue, nonlinear constitutive models, dynamic behavior of materials, corrosion resistant design, thermodynamics of solids II.

MTSC 4991 Independent Study (1-10 Credits)

MTSC 4995 Independent Research (1-16 Credits)

MTSC 5995 Independent Research (1-16 Credits)

Engineering Courses

ENGR 3340 Product Development and Market Feasibility (4 Credits)

In this course, students gain knowledge of designing products for market success by developing a product and optimizing its design for specific mass manufacturing technologies. Students gain experience through the design development process including market feasibility research, human-centered design, brainstorming and ideating new concepts, refinement through design iteration, and constructing alpha and beta prototypes that are designed with mass manufacturing considerations. Projects are based upon real world new product development principles. Students learn and practice the fundamentals of design thinking, design process, and entrepreneurship.

ENGR 3450 Biosensing Technology (4 Credits)

Biosensors are defined as analytical devices incorporating a biological material, a biologically derived material or a biomimic associated with or integrated within a physicochemical transducer or transducing microsystem, which may be optical, electrochemical, thermometric, piezoelectric, magnetic or micromechanical. This course provides instruction in the basic science and engineering concepts required to understand the design and application of biosensors. This module serves as an introduction to some of the biosensors and measurement techniques.

ENGR 3510 Renewable and Efficient Power and Energy Systems (4 Credits)

This course introduces the current and future sustainable electrical power systems. Fundamentals of renewable energy sources and storage systems are discussed. Interfaces of the new sources to the utility grid are covered. Prerequisite: ENEE 2012.

ENGR 3520 Introduction to Power Electronics (4 Credits)

This covers fundamentals of power electronics. We discuss various switching converters topologies. Basic knowledge of Efficiency and small-signal modeling for the DC-DC switching converters is covered. Furthermore, magnetic and filter design are introduced. Prerequisites: ENEE 2211 and ENGR 3722.

ENGR 3540 Electric Power Systems (4 Credits)

This course covers methods of calculation of a comprehensive idea on the various aspects of power system problems and algorithms for solving these problems. Prerequisite: ENGR 3530.

ENGR 3621 Advanced Engineering Mathematics (4 Credits)

Applied mathematics for engineers. Topics include vector spaces, normed vector spaces, inner product spaces, linear transformations, finitedimensional linear transformations, linear operators, finite-dimensional linear operators, linear differential systems, linear difference systems, orthogonal transformations, amplitude estimation, fundamentals of real and functional analysis, and introduction to partial differential equations, and applications to engineering systems.

ENGR 3630 Finite Element Methods (4 Credits)

Introduction to the use of finite element methods in one or two dimensions with applications to solid and fluid mechanics, heat transfer and electromagnetic fields; projects in one or more of the above areas. Prerequisites: ENME 2541 AND ENGR 1572.

ENGR 3650 Probability and Statistics for Engineers (4 Credits)

This course covers quantitative analysis of uncertainty and decision analysis in engineering. It covers the fundamentals of sample space, probability, random variables (discrete and continuous), joint and marginal distributions, random sampling and point estimation of parameters. It also covers statistical intervals, hypotheses testing and simple linear regression. The course includes applications appropriate to the discipline. Prerequisite: MATH 1953.

ENGR 3721 Controls (3,4 Credits)

Modeling, analysis and design of linear feedback control systems using Laplace transform methods. Techniques and methods used in linear mathematical models of mechanical, electrical, thermal and fluid systems are covered. Feedback control system models, design methods and performance criteria in both time and frequency domains. A linear feedback control system design project is required. Prerequisites: ENEE 2022, ENGR 3611 or permission of instructor.

ENGR 3722 Control Systems Laboratory (1 Credit)

This laboratory course serves as supplement to ENGR 3721. It aims at providing "hands on" experience to students. It includes experiments on inverted pendulum, gyroscopes, motor control, feedback controller design, time-domain and frequency domain. Corequisite: ENGR 3721.

ENGR 3730 Robotics (3 Credits)

Introduction to the analysis, design, modeling and application of robotic manipulators. Review of the mathematical preliminaries required to support robot theory. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning, and kinetics. Cross listed with ENGR 4730. Prerequisites: ENME 2520 and MATH 2060 or MATH 2200 or permission of instructor.

ENGR 3731 Robotics Lab (1 Credit)

Laboratory that complements the analysis, design, modeling and application of robotic manipulators. Implementation of the mathematical structures required to support robot operation. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning and kinetics. Applications include programming and task planning of a manufacturing robot manipulator. Corequisite: ENGR 3730 or permission of instructor.

ENGR 3800 Topics (ENGR) (1-4 Credits)

Special topics in engineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENGR 3900 Engineering Internship (0-4 Credits)

Students in engineering may receive elective credit for engineering work performed for engineering employers with the approval of the chair or associate chair of the department. At the end of the term, a student report on the work is required, and a recommendation will be required from the employer before a grade is assigned. Junior, senior, or graduate status in engineering is normally required. May not be used to satisfy technical requirements. May be taken more than one for a maximum of 6 quarter hours. Prerequisite: permission of instructor.

ENGR 4100 Instrumentation and Data Acquisition (4 Credits)

This course examines different instrumentation techniques and describes how different measurement instruments work. Measurement devices include length, speed, acceleration, force, torque, pressure, sound, flow, temperature, and advanced systems. This course also examines the acquisition, processing, transmission and manipulation of data. Final project or paper. Cross listed with ENGR 3100. Prerequisites: PHYS 1213 OR PHYS 1214.

ENGR 4200 Introduction to Nanotechnology (4 Credits)

The most important recent accomplishments so far in the application of nanotechnology in several disciplines are discussed. Then a brief overview of the most important instrumentation systems used by nanotechnologists is provided. The nature of nanoparticles, nanoparticle composites, carbon nanostructures, including carbon nanotubes and their composites is subsequently discussed. The course also deals with nanopolymers, nanobiological systems, and nanoelectronic materials and devices. The issues of modeling of nanomaterials and nanostructures is also covered. Multiscale modeling based on finite element simulations, Monte Carlo methods, molecular dynamics and quantum mechanics calculations are briefly addressed. Most importantly, students should obtain appreciation of developments in nanotechnology outside their present area of expertise. Cross listed with ENGR 3200.

ENGR 4300 Advanced Numerical Methods (4 Credits)

Fundamental and advanced numerical methods to approximate mathematical problems for engineering applications using modern software such as Matlab. Topics include numerical differentiation and integration, solution to linear and non-linear equations, ordinary and partial differential equations, and initial, boundary, and eigen value problems. Recommended prerequisite: MATH 2070.

ENGR 4350 Reliability (4 Credits)

An overview of reliability-based design. Topics include: fundamentals of statistics, probability distributions, determining distribution parameters, design for six sigma, Monte Carlo simulation, first and second order reliability methods (FORM, SORM). Most Probable Point (MPP) reliability methods, sensitivity factors, probabilistic design.

ENGR 4455 Fluorescence and Its Applications in Biomedical Sensors (4 Credits)

The course introduces the principles of fluorescence and its applications in the real world. It covers various topics including fluorophores (dye, fluorescent proteins, quantum dots, etc.), nanomaterials and nanostructures, design of biomedical sensors, point-of-care systems, and wearable devices. Cross listed with ENGR 3455.

ENGR 4501 Graduate Capstone Design I (3 Credits)

This is a project-centered course. This is the first third of a practical class that plans the engineering design project prior to addressing the design in earnest. This requires teamwork to develop the plan that details the schedule, cost, and who is responsible for which portions of the design effort. In this segment, the engineering teams establish the starting point for the design. This class puts theory into practice with the "shredding" of the RFP, defining a strategy for the team, balancing what has to be done with existing constraints, understanding the "true" problem of the customer, capturing the associated risks, and capturing margins required for the start of any design activity.

ENGR 4502 Graduate Capstone Design II (3 Credits)

This is a project-centered course. This is the second third of a practical class that implements the engineering design process (left side of the vee). This requires teamwork to develop the detailed design, which is a continuation of the accepted proposal. In this segment, the engineering teams add the details to a conceptual design. This class puts theory into practice with requirements development, balancing requirements against the constraints, completing a functional decomposition, developing a CONOPs document, developing a physical architecture, developing a functional architecture, and defining the interfaces through an ICD.

ENGR 4503 Graduate Capstone Design III (3 Credits)

This is a project-centered course. This is the third of a practical class that implements the engineering design process (right side of the vee). This requires teamwork to build, checkout, and test the final product. In this segment, the engineering teams build or procure hardware as a step towards the integration of the system. This class puts theory into practice by building components, developing software modules, integrating software with hardware, checkout of the system, and performing tests to verify construction, validate models, and collect data for acceptance by the team prior to demonstrating the operations of the product to the customer. Test data is collected through instrumentation of the final product with a buy-out and certification by the team. Testing may include performance testing and environmental testing as envisioned in the context diagram.

ENGR 4504 Graduate Capstone Design IV (3 Credits)

This is a project-centered course. This is the fourth of a practical class that implements the entire engineering "vee" design process. This requires teamwork to build, checkout, and test the final design product, e.g. hypothetical missile. In this segment, the engineering teams fine-tune the design process which may address advanced topics such as fault management and resilience. This class puts theory into practice by building components, developing software modules, integrating software with hardware, checkout of the system, and performing tests to verify construction, validate models, and collect data for acceptance by the team prior to demonstrating the operations of the product to the customer. It may also include addressing the beginning of the program through early management and pre-phase A activities. Test data is collected through instrumentation of the final product with a buy-in and certification by the team. Testing may include performance testing, functional testing, and environmental testing as envisioned in the system process.

ENGR 4530 Intro to Power and Energy (4 Credits)

Basic concepts of AC systems, single-phase and three-phase networks, electromechanical energy conversion, electric power generation, transformers, transmission lines, AC machinery, DC motors, and contemporary topics in power and energy conversion. Cross listed with ENGR 3530.

ENGR 4545 Electric Power Economy (4 Credits)

This course covers economy aspects of electric power industry and the implications for power and energy engineering in the market environment. Cross listed with ENGR 3545.

ENGR 4560 Power Generation Operation and Control (4 Credits)

This course covers economic dispatch of thermal units and methods of solution; transmission system effects; generate with limited energy supply; production cost models; control of generation; interchange of power and energy; power system security; state estimation in power systems; optimal power flow. Prerequisite: ENGR 3530 or ENGR 4530 or permission of instructor.

ENGR 4590 Power System Protection (4 Credits)

This course covers methods of calculation of fault currents under different types of fault; circuit breakers, current transformers, potential transformers; basic principles of various types of relays; applications of relays in the protection of generator, transformer, line, and bus, etc. Prerequisite: ENGR 3530 or ENGR 4530.

ENGR 4620 Optimization (4 Credits)

The development and application of various optimization techniques will be explored with engineering examples. Topics include: analytical and numerical methods, linear and non-linear programming techniques for unconstrained and constrained problems, and advanced optimization techniques, e.g. global optimization. Optimization methods will be developed and evaluated in code and used in a real-world application project.

ENGR 4622 Advanced Optimization (4 Credits)

Optimization is an indispensable tool for many fields of science and engineering and is one of the pillars of data science and machine learning. This course introduces optimization methods that are suitable for large-scale problems arising in data science, machine learning, and other engineering applications. We will discuss the development, computation, and convergence aspects for algorithms including gradient methods, accelerated methods, quasi-Newton methods, stochastic optimization, variance reduction, online optimization, as well as distributed optimization. We will also exploit the efficacy of these methods in concrete data science problems, including learning low-dimensional models, deep learning, and (possible) reinforcement learning. This course together with ENGR 4620 Optimization will provide in-depth introductions to optimization.

ENGR 4680 Fault Diagnosis & Prognostics for System Design (4 Credits)

Reliability engineering is a sub-discipline of systems engineering that emphasizes dependability in the lifecycle management of a product. Reliability, describes the ability of a system or component to function under stated conditions for a specified period of time. Reliability is closely related to availability, which is typically described as the ability of a component or system to function at a specified moment or interval of time. Normally, quality focuses on the prevention of defects during the warranty phase whereas reliability looks at preventing failures during the useful lifetime of the product or system from commissioning to decommissioning. Diagnosis is used, with variations in the use of logic, analytics, and experience, to determine "cause and effect". In systems engineering, it is typically used to determine the causes of symptoms, mitigations, and solutions. Prognostics is an engineering discipline focused on predicting the time at which a system or a component will no longer perform its intended function. This lack of performance is most often a failure beyond which the system can no longer be used to meet desired performance. The predicted time then becomes the remaining useful life (RUL), which is an important concept in decision making for contingency mitigation. Success in this course requires knowledge of probability theory and statistics, and familiarity with MATLAB/Simulink.

ENGR 4723 Digital Control (4 Credits)

The course focuses on modeling, analysis, and design of digital control systems. Topics include: z-Transform and difference equations; sampling and aliasing; Zero-Order Hold (ZOH); A/D and D/A conversions; pulse transfer function representation; time and frequency domain representations; input/ output analysis; analysis of sample data systems; stability; design of discrete-time controllers; introduction to state-space representation. Cross listed with ENGR 3723. Prerequisites: ENGR 3721 and ENGR 3722.

ENGR 4730 Introduction to Robotics (4 Credits)

Introduction to the analysis, design, modeling and application of robotic manipulators. Review of the mathematical preliminaries required to support robot theory. Topics include forward kinematics, inverse kinematics, motion kinematics, trajectory control and planning, and kinetics. Applications include programming and task planning of a manufacturing robot manipulator. Cross listed with ENGR 3730. Prerequisites: ENGR 3611 or ENEE 3111 or instructor approval.

ENGR 4735 Linear Systems (4 Credits)

This course focuses on linear system theory in time domain. It emphasizes linear and matrix algebra, numerical matrix algebra and computational issues in solving systems of linear algebraic equations, singular value decomposition, eigenvalue-eigenvector and least-squares problems, linear spaces and linear operator theory. It studies modeling and linearization of multi-input/multi-output dynamic physical systems, state-variable and transfer function matrices, analytical and numerical solutions of systems of differential and difference equations, structural properties of linear dynamic physical systems, including controllability, observability and stability. It covers canonical realizations, linear state-variable feedback controller and asymptotic observer design, and the Kalman filter. Cross listed with ENGR 3735. Prerequisites: ENGR 3611, ENGR 3721, ENGR 3722, or permission of the instructor.

ENGR 4740 Adaptive Control Systems (4 Credits)

Theoretical and application aspects of robust adaptive control design for uncertain dynamical systems. Topics include: parameter estimation, stability, model reference adaptive systems, self-tuning regulators, gain scheduling, design for robustness against unmodeled dynamics and disturbance signals. Examples will be given from aerospace engineering (changes in the dynamics of aircraft), process control, and robotics. Modern alternatives to traditional adaptive control will be discussed (switching multi-model/multi-controller adaptive schemes). Prerequisite: ENGR 3721 or permission of instructor. Familiarity with MATLAB/Simulink.

ENGR 4745 Adv Non-Linear Control System (4 Credits)

Nonlinear system analysis methods: Existence of solutions of ODEs, uniqueness, continuity, compactness, fixed point, linearization, metric spaces, Contraction Mapping Theorem, Gronwall-Bellman lemma. Phase plane analysis; Limit Cycles. Lyapunov stability of autonomous and non-autonomous systems. Circle criterion, absolute stability, Popov criterion. Passivity and Lyapunov stability. Input-to-State stability. Small Gain Theorem. Describing functions. Nonlinear control system synthesis methods: Passivity-based control. Stability via Feedback Linearization. Lie derivatives.

ENGR 4750 Networked Control Systems (4 Credits)

Fundamental tools and recent advances in networked control. Topics include the control of multi-agent networks found in multi-vehicle coordination, control of sensor networks, unmanned vehicles, and energy systems. Network models, distributed control and estimation, distributed control under limited communications and sensing, formation control, coverage control in mobile sensor networks. Prerequisites: linear algebra, linear control systems, differential equations, familiarity with MATLAB, or permission of instructor.

ENGR 4755 Optimal Control (4 Credits)

Introduction to optimal control theory (control laws that maximize a specified measure of a dynamical system's performance). Topics include: optimality conditions and constraints; calculus of variations; review of mathematical programming (Language multipliers, convexity, Kuhn-Tucker theorem); Pontryagin's maximum principle (constraints, Hamilitonians, bang-bang control); dynamic programming and Linear Quadratic Regulation (Riccati, Hamilton-Jacobi equation). Prerequisites: ENGR 3721 (Controls) and ENGR 3735/4735 (Linear Systems) or equivalent courses.

ENGR 4760 Multivariable Control (4 Credits)

Multivariable aspects of control (systems with multiple actuators and sensors); performance analysis of feedback control systems; sensitivity; robustness and stability margins; disturbance attenuation; design tradeoffs; singular value; characteristic locus. Modern H-infinity control theory and 'mu' synthesis-based robust control design techniques. Enforced Prerequisites and Restrictions ENGR 3721 (Controls) and ENGR 4735 (Linear Systems at a graduate level) or equivalents.

ENGR 4765 Robot Control (4 Credits)

The course focuses on different techniques, methods, and theories for control of robots. The topics covered include: introduction to nonlinear control theory, review of independent joint control, nonlinear and multivariable robot control, feedback linearization control of robots, control of underactuated robots, control of nonholonomic and mobile robots. force and impedance control, and vision-based control. Pre-requisite or co-requisite: ENGR 3730 or ENGR 4730, or equivalent is recommended.

ENGR 4790 Systems Engineering Requirements (4 Credits)

The course covers fundamentals of design and requirements analysis of complex systems to meet overall mission requirements. It spans the whole requirements engineering phase that includes requirements analysis, decomposition, derivation, allocation, verification and validation planning. Students acquire expertise in creating UML and SYML case diagrams and in defining and implementing verification and validation plans. Requirement management methods and tools, associated vernacular, and requirements configuration control are also covered. Prerequisites: ENMT 4100, or permission by the Instructor.

ENGR 4810 Advanced Topics (ENGR) (1-5 Credits)

ENGR 4910 Conceptual Design (4 Credits)

Conceptual design is the part of the design process where—by identifying the essential problems through abstraction, establishing function structures, searching for appropriate working principles and combining these into a working structure— the basic solution path is laid down through the elaboration of a solution principle. Conceptual design specifies the principle solution. Concept design rarely starts at the same point; you might have an existing design that needs iterating or the requirement to create a conceptualized form. Problem solving consists of using generic or ad hoc methods in an orderly manner to find solutions to problems. George Polya (mathematician) presented two important decision-making principles, understanding the problem and devising a plan. To understand what is new, students are asked to look at intellectual property, a category of property that includes intangible creations of the human intellect. There are many types of intellectual property such as patents, and some countries recognize more than others. Designers assess the many different directions a design could take at this stage will allow you to identify what you like and don't like from each one. The preferred concept will then be further developed using engineering drawings, schematics and possibly 3D models which will show how the design will look and operate.

ENGR 4920 Aerospace Missions (4 Credits)

The Design "Problem" in Advanced Aerospace Systems describes the problems in the conceptual design of various types of aircraft, spacecraft, and complex vehicles. It covers the following topics: design of orbital spacecraft, design for Moon missions (such as landers), design for Mars missions (including rovers), design of an unmanned drone for surveillance (high-altitudes), CubeSats (having large constellations), and rockets and missiles (including hypersonic). Problem statements are concise descriptions of design problems. Design teams use them to define the current and ideal states, to freely find user-centered solutions. This class stands as a reference of interest to engineers and scientists working in aerospace engineering and related topics.

ENGR 4940 Mission Operation Controls (4 Credits)

Space operations is based at a centralized control center, a facility used for command & control (C2), and related communication equipment (antennas, etc.). The human operators conduct the day-to-day operations for controlling the spacecraft. They control the spacecraft and its payloads, and carries out all activities related to mission planning and scheduling. For example, normal orbital operations are interrupted every six months to conduct orbital maneuvers. Launch operations begin with spacecraft integration and checked-out for launch. Once safely placed in orbit, command and control goes back and forth between the ground control station and the spacecraft or satellite. A key aspect of spacecraft operations is the transferring of data from the onboard instruments collected by its payload to the ground, eventually disseminating the data to concerned users and analysts through a ground data network. This requires an on-orbit communication architecture.

ENGR 4991 Independent Study (1-5 Credits)

ENGR 4995 Independent Research (1-16 Credits)

ENGR 5991 Independent Study (0-10 Credits)

ENGR 5995 Independent Research (1-16 Credits)

Engineering, Bio Courses

ENBI 4200 Medical Device Development (4 Credits)

Working in a fast-paced competitive biomedical R&D firm is a dramatic change of pace from most college classes. This course will create a realistic industry environment where students take on the role of development engineers to design and manufacture real-world medical devices. This course is intended to provide a working knowledge of the design and development process specifically for medical device applications.

ENBI 4500 Biofluids (4 Credits)

The application of fluid dynamics theory and design to problems within the biomedical community. Specific topics covered include the mechanics of inhaled therapeutic aerosols, basic theory of circulation and blood flow, foundations in biotechnology and bioprocessing, and controlled drug delivery. Cross listed with ENBI 3500.

ENBI 4510 Biomechanics (4 Credits)

An introduction to the mechanical behavior of biological tissues and systems. Specific topics covered include: Analysis of the human musculoskeletal system as sensors, levers, and actuators; Joint articulations and their mechanical equivalents; Kinematic and kinetic analysis of human motion; Introduction to modeling human body segments and active muscle loading for analysis of dynamic activities; Mechanical properties of hard and soft tissues; Mechanical and biological consideration for repair and replacement of soft and hard tissue and joints; Orthopedic implants. Cross listed with ENBI 3510.

ENBI 4520 Introduction to Cardiovascular Engineering (4 Credits)

An introduction to cardiovascular mechanics with a focus on the quantitative understanding of the mechanical phenomena that governs the cardiovascular system. Specific topics covered include: basic principles of circulation including macro and micro circulation, soft tissue mechanics, applications to cardiovascular diseases, modelling techniques, clinical and experimental methods, and design of cardiovascular devices. Recommended prerequisites: ENME 2541 and ENME 2661.

ENBI 4530 Biomechanics of Human Movement (4 Credits)

An introduction to engineering-based analysis of human movement. Topics include: musculoskeletal anatomy, nueromuscular physiology, muscle mechanics, electromyography, sensorimotor integration, anthropometry, kinematics and kinetics. Recommended pre-requisite material: knowledge of MATLAB, ENGR 1572.

ENBI 4600 Biomedical Engineering: Technology, Research, and Design (4 Credits)

Introduction to Biomedical Engineering is an interdisciplinary course that combines engineering principles with biological and medical sciences to advance healthcare in areas such as diagnosis, monitoring, and therapy. The course provides a foundational understanding of biomedical engineering and prepares students for further study or careers in the field.

ENBI 4610 Experimental Design in Biomedical Sciences (4 Credits)

This course offers an in-depth exploration of experimental design principles within the biomedical sciences, emphasizing statistical analysis, measurement techniques, and ethical considerations. It aims to provide students with practical skills necessary for designing, conducting, and analyzing biomedical research.

ENBI 4620 Bioelectronics (4 Credits)

This course introduces the principles and applications of bioelectronics, focusing on the interface between biological systems and electronic devices. It covers the fundamentals of electronic circuits, signal processing, and sensor technology, and their applications in areas like biometric monitoring, neuroprosthetics, and biosensing.

ENBI 4630 Biomaterials (4 Credits)

This course provides an introduction to the field of biomaterials science, focusing on the fundamental principles, properties, and applications of materials used in biomedical engineering and healthcare. Topics covered include the classification of biomaterials, biocompatibility, interactions with biological systems, surface modifications, fabrication techniques, characterization techniques and current applications in tissue engineering, regenerative medicine, drug delivery, and medical devices.

ENBI 4800 Adv Topics (Bioengineering) (1-5 Credits)

Various topics in Bioengineering as announced. May be taken more than once. Prerequisite: varies with offering.

ENBI 4991 Independent Study (1-5 Credits)

ENBI 4995 Independent Research (1-18 Credits)

Engineering, Mechanical Courses

ENME 3320 Computer Aided Design and Analysis (4 Credits)

Introduction to the use of computer aided design and analysis with applications to solid and fluid mechanics, heat transfer and vibrations; projects in one or more of the above areas. Emphasis on how to use the software to analyze engineering systems. Prerequisites ENME 2541 and ENME 2651.

ENME 3511 Machine Design (3 Credits)

Application of statics, dynamics, mechanics of materials and manufacturing processes to the design of machine elements and systems. Properties of materials and design criteria. Synthesis and analysis of a machine design project. Prerequisites: ENME 2520 and ENME 2541.

ENME 3545 Mechanisms (4 Credits)

Synthesis, analysis and use of mechanisms. Mechanisms studied include cams, gears and planar linkages, with an emphasis on planar linkages. Prerequisites: ENME 2530 and ENGR 1572.

ENME 3651 Computational Fluid Dynamics (4 Credits)

This course introduces principles and applications of computational methods in fluid flow and topics chosen from heat transfer, mass transfer or two phase flow. The conservation equations, their discretations and solutions, are presented. Convergence and validity of solutions along with computational efficiency are explored. Students learn to apply these techniques using the latest software packages. Prerequisites: ENME 2671.

ENME 3661 Mechanical Energy Systems Engineering (4 Credits)

This course covers energy systems engineering analysis from a mechanical and materials engineering perspective. This course covers energy production from traditional energy systems that use fossil fuel combustion such as internal combustion engines, coal-fired plants, and natural gas turbines, to nuclear energy and renewable energy methods such as wind, solar, hydraulic, and geothermal. Lastly, the course will survey emerging technologies for future (21st century) energy systems. Students should have taken at a minimum Thermodynamics, Dynamics, and Fluid Dynamics courses. Prerequisites: ENME 2720, ENME 2510, ENME 2651.

ENME 3720 Aerospace Engineering: Atmospheric Flight Dynamics (4 Credits)

This course provides and introduction to aerospace engineering analysis and design. In the atmospheric domain, the basics of aerodynamics are covered, followed by flight mechanics. The approach is from a practical perspective in which analysis and design are intertwined. Prerequisites: ENME 2651 and ENME 2720 and ENME 2530.

ENME 3730 Aerospace Engineering: Space Flight Dynamics (4 Credits)

This course is focused on the aerospace discipline of space environment and orbital mechanics. The topics in this discipline are discussed in detail and provide aid in designing spacecraft/space missions. Some of the topics covered in this course include space environment, satellite orbits, spacecraft configurations, transfer orbits, and elementary space propulsion. Prerequisites: ENME 2651 and ENME 2720 and ENME 2530.

ENME 3810 Mechanical Engineering Capstone Laboratory (3 Credits)

This course is the capstone mechanical engineering laboratory course requiring independent experimental design by student teams. Using experimental equipment available in heat transfer, fluid mechanics, solid mechanics, thermodynamics, and measurement and control, the student team is required to design experiments to solve given problems which will be unique to each team. This course encourages students to develop experimental design and research techniques while continuing to improve skills in fundamental lab notebook keeping, uncertainty analysis in measurements, data acquisition, data analysis, report writing, oral presentations, and laboratory safety and procedures. Prerequisite: ENME 2810.

ENME 4020 Adv Finite Element Analysis (4 Credits)

ENME 4310 Computational Methods for Mechanics and Materials (4 Credits)

An introductory course for the general-purpose computational methods in advanced multiscale materials and mechanics. Students learn the fundamentals on the numerical methods used in mechanical and materials engineering. Cross listed with ENME 3310.

ENME 4360 Elasticity (4 Credits)

Students will be able to apply the fundamental principles of elasticity to solve two- and three-dimensional mechanical engineering problems involved in modern applications of elastic structures, composite materials, tribology and contact mechanics. Dependence on previous knowledge of solid mechanics, continuum mechanics or mathematics is minimized. The emphasis is placed on the engineering applications of elasticity. Suggeted prerequisite: ENME 2541.

ENME 4400 Fatigue (4 Credits)

A detailed overview of fatigue. Topics include: stress life and strain life approaches, fracture mechanics, constant amplitude and spectrum loading, life prediction, fatigue at notches, microstructural effects, environmentally assisted fatigue, retardation and acceleration, multi-axial fatigue, design against fatigue and reliability. Cross listed with ENME 3400.

ENME 4520 Intermediate Dynamics (4 Credits)

Development and analysis of dynamic systems through classical approaches. Topics will include: Vector algebraic/differential geometry for 3D translational and rotational kinematic analyses with motion constraints. Formulation of equations of motion for 3D multibody systems using: Newton/ Euler equations; Angular momentum principle; and D'Alembert principle (aka road-maps). Some exposure to Euler-Lagrange and Kane's Methods calculations. Symbolic and numerical computational solutions to linear/nonlinear algebraic and differential equations governing the configuration, forces, and motion of systems with multiple degrees of freedom. Recommended prerequisites: MATH 2070.

ENME 4530 Advanced Dynamics (4 Credits)

Formulation of equations of motion for constrained 3D multibody systems with: D'Alembert principle (MG road-maps); power, work, and energy; Lagrange's equations; and Kane's method. Euler parameters/quaternions, specified motion, constraint force/torque calculations, feed- forward control, inequality constraints and/or intermittent contact. Tensors and mass property calculations. Symbolic and numerical computer skills for geometry/ kinematic analysis, mass/inertia calculations, forces and motion, and simulation of multi-body dynamic systems. Training for advanced research and professional work. Recommended pre-requisite: ENME 4520.

ENME 4541 Advanced Mechanics of Materials (4 Credits)

This is a second-level course in mechanics of materials with an emphasis on techniques that are useful for mechanical design. Topics may include energy methods, non-symmetrical and nonlinear bending, shear and torsion of closed and open sections, beams in elastic foundations, membrane stress in axisymmetric shells, asisymmetric bending of cylindrical shells, thick-walled cylinders and disks, curved beams, and elastic stability. Recommended prerequisite: ENME 2541.

ENME 4630 Viscous Flow (4 Credits)

Course covers the fundamentals of fluid mechanics from an advanced point of view with emphasis on the mathematical treatment of viscous-flow phenomena. Topics cover the Navier-Stokes equations and its exact and similarity solutions, laminar boundary layer theory, free-shear flows, and the phenomena of instability and transition to turbulence. Recommended prerequisite: ENME 2661.

ENME 4670 Advanced Computational Fluid Dynamics (4 Credits)

Building on the principles and applications of computational methods in fluid flow and topics chosen from heat transfer, mass transfer and two phase flow. Specifically, Monte Carlo and volume of fluid techniques are discussed at length. Additionally, students learn how to set up automated design optimization using the latest software packages. Time permitting, students also are introduced to fluid-solid interaction modeling. Prerequisite: ENME 3651.

ENME 4671 Convective Heat Transfer (4 Credits)

The objective of this course is to examine the physical phenomena associated with heat transfer in the presence of fluid flow. We will develop a mathematical description of the processes (fluid flow and heat transfer) for laminar and turbulent flows for both internal and external situations. Exposure to the fundamentals of fluid mechanics and heat transfer is expected before taking this course.

ENME 4800 Advanced Topics (ME) (0-5 Credits)

Determined by interest and demand. May be taken more than once for credit.

ENME 4900 Grad Professional Development (1 Credit)

This course is required for all MME MS graduate students and all MME PhD graduate students who enter with a BS or enter with an MS but fail their first qualifying exam. One of our objectives is for all graduating students to have good written and verbal communication skills. This course is set up to meet those objectives. During this course, students write a mini-proposal and/or literature review. Students follow guidelines for a funding agency (e.g. NSF or NIH) for the mini-proposal. If students have a research advisor, students can coordinate with their advisor. If students do not have a research advisor, students may pick a topic that most interests them. Both a written proposal and an oral presentation are required of all students. Graduate standing is required.

ENME 4950 Graduate Assessment (0 Credits)

This graduate assessment course is required for all MME graduate students to be taken in their last quarter. All required assessment materials are uploaded to DU Assessment to meet the course requirements. Students will receive emails through the DU Assessment system notifying you of what is required to be uploaded.

ENME 4991 Independent Study (1-10 Credits)

ENME 4995 Independent Research (1-16 Credits)

ENME 5991 Independent Study (1-10 Credits)

ENME 5995 Independent Research (1-16 Credits)

Materials Science Courses

MTSC 4020 Composite Materials I (4 Credits)

An introduction to composite materials. Properties of fibers and matrices, fiber architecture, elastic properties of laminae and laminates, interface in composites. Cross listed with MTSC 3020.

MTSC 4800 Advanced Topics (MTSC) (1-5 Credits)

Selected topics (depending on student and faculty interest): fracture mechanics, fatigue, nonlinear constitutive models, dynamic behavior of materials, corrosion resistant design, thermodynamics of solids II.

MTSC 4991 Independent Study (1-10 Credits)

MTSC 4995 Independent Research (1-16 Credits)

MTSC 5995 Independent Research (1-16 Credits)

Daniels College of Business

The Daniels College of Business is dedicated to educating ethical business leaders, advancing the theory and practice of business, and making a positive global impact. As the eighth-oldest business college in the country, we have helped graduates achieve their career aspirations for more than a century. The College is ranked among the best of the world's top business schools. We are proud to be one of the 655 business schools accredited by the Association to Advance Collegiate Schools of Business (AACSB). Daniels is the only business school in Colorado to receive high rankings and recognition from *Businessweek*, the *Financial Times, U.S. News & World Report*, and *Forbes*. Daniels is internationally recognized for integrating social, environmental and ethical issues into our traditional curricula. Committed to diversity, we welcome all who want to hone their skills, improve their knowledge, and gain a lasting foundation.

Business Ethics and Legal Studies

Office: Daniels College of Business, 687 Mail Code: Daniels College of Business, 2101 S. University Blvd., Denver, CO 80208 Phone: 303-871-3213 Web Site: https://daniels.du.edu/business-ethics-legal-studies/

Certificate in Global Business and Corporate Social Responsibility

As a joint offering between the Daniels College of Business and the Korbel School of International Studies, this certificate focuses specifically on the challenges and opportunities businesses confront in a globalized and developing world.

A certificate in Global Business and Corporate Social Responsibility (CSR) will enable students to leverage the unique course offerings at Daniels and Korbel to learn about theory and practice related to economic development, business ethics, CSR strategy, social entrepreneurship, business and human rights, sustainability, impact investing, as well as considerations with regards to hard and soft law mechanisms that govern transnational space. These courses will give students the practical content they need to embrace and navigate the complexity of business and governance issues.

Certificate in Global Business and Corporate Social Responsibility

This certificate program is reserved for students who are enrolled in a master's level degree within the Daniels College of Business or the Josef Korbel School of International Studies. Those who have been accepted to a master's level degree are eligible to pursue this certificate program. Interested

students should contact the Student Services department in the Daniels College of Business at GradBus.Advising@du.edu. Students should complete a certificate form no later than six months prior to their graduation so the certificate may be formally declared and added to the student's record.

Certificate of Specialization in Global Business and Corporate Social Responsibility

Program Requirements

Coursework Requirements

Code	Title	Credits
Required Courses		12
BUS 4445	International Business: Strategy and Practice	4
or INTS 4029	International Business: Strategy and Practice	
BUS 4444	Global Bus, Governance & CSR	4
or INTS 4459	Global Business, Governance & Corporate Social Responsibility	
INTS 4324	International Political Economy	4
Elective Courses		12
Choose a minimum of 12 credits from	n the following list. Students must complete one elective outside of their primary college:	
ACTG 4610	Financial Accounting and Reporting ¹	4
CMGT 4155	Sustainable Development	4
FIN 4110	Ethics in Finance	4
FIN 4180	Global Finance	2
LGST 4400	White Collar & Corporate Crime	4
LGST 4701	Topics in Ethics & Legal Study	1-5
MBA 4610	Business Law and Public Policy	4
MBA 4446	Advanced Sustainability	4
INTS 4078	Modeling for Policy: Development, Sustainability, and Conflict	4
INTS 4220	Political Economy of Energy & Sustainable Development	4
INTS 4226	Social Entrepreneurship & Sustainable Development	4
INTS 4227	Social Impact & Sustainability Lab	4
INTS 4320	Int'l Monetary Relations	4
INTS 4330	International Business Transactions	4
INTS 4339	Microfinance Lessons: Inclusive Markets and Development	4
INTS 4370	The Global Economy	4
INTS 4391	Financial Management and Fundraising of Non-Profits	4
INTS 4622	Global Governance	4
INTS 4656	Power, Institutions, and Justice in Environmental Sustainability	4
INTS 4678	The Politics of Global Trade, Investment and Production: The Origins and Consequences of Open Border	4
INTS 4972	Global Environmental Governance	4
MFJS 4050	Foundations of Strategic Communication	4
MFJS 4080	Global/Multicultural Campaigns	4
PPOL 4500	Cost-Benefit Analysis/Pub Pol	4
TRAN 4100	Fundamentals of Supply Chain Management	4
TRAN 4180	Sustainability and Supply Chain Management	4
Total credits required:		24

Minimum number of credits required: 24

LGST 3020 Sports Law & Ethics (4 Credits)

Sports Law and Ethics offers a comprehensive examination of the legal considerations pertaining to amateur (NCAA and Olympic Movement) and professional sports (NFL, NHL, NBA, MLS, EPL) in North America and Europe. The course delves into the laws and regulations that impact athletes and the leagues they play. The curriculum includes in-depth topic overviews, interactive class discussions, and guest lectures on contemporary issues and sports law jurisprudence.

LGST 3030 The Supreme Court & Your Life (2 Credits)

This course evaluates the most critical ways in which the United States Supreme Court interacts with and affects an individual's life, career, education, freedom, and future. Over ten weeks, we analyze how: (1) each major section of the Constitution and how it makes its way to the Court, (2) is ultimately interpreted by each of the nine current Justices, and (3) the subsequent repercussions of the opinion. The primary vehicles used for this task are actual Supreme Court cases, federal circuit court opinions, and legal briefs filed by the parties and interest groups on both sides of each dispute. Each of these documents is part of the public record and easy to locate. Because many students are likely to hear, believe, and/or resonate with only one side of each politically-charged divisive case heard by the Court (perhaps because they listen to only one news source or affiliate primarily with people of the same ideological bent), this class will emphasize the importance of seeing both sides of important public policy, legal, and ethical issues before taking a position. This is a valuable skill that is often neglected in college courses but will take a student far in life.

LGST 3330 Advanced Constitutional Law (2 Credits)

This course evaluates the most critical ways in which the United States Supreme Court interacts with and affects an individual's life, career, education, freedom, and future. Over ten weeks, we analyze how: (1) each major section of the Constitution applies to each case and how the case makes its way to the Court, (2) each case is ultimately interpreted by each of the nine current Justices, and (3) the subsequent repercussions of the opinion resonate in the business world. The primary vehicles used for this task are actual Supreme Court cases, federal circuit court opinions, and legal briefs filed by the parties and interest groups on both sides of each dispute. Each of these documents is part of the public record and easy to locate. Because many students are likely to hear, believe, and/or resonate with only one side of each politically-charged divisive case heard by the Court (perhaps because they listen to only one news source or affiliate primarily with people of the same ideological bent), this class will emphasize the importance of seeing both sides of important public policy, legal, and ethical issues before taking a position. This is a valuable skill that is often neglected in college courses but will take a student far in life.

LGST 3400 White Collar & Corporate Crime (4 Credits)

This course offers an essential overview of corporate and "white collar" crime. Through the use of real-world case studies, legal and ethical analysis, criminological research and cultural reference materials such as iconic films and books, this course offers insight into the types, causes, and effects of crimes committed by businesses, corporate officers and directors, professionals and public officials. It will foster critical analysis of contemporary efforts to address recurring problems of corruption, bribery, fraud, insider trading, money laundering, collusion and more through the enactment of criminal statutes, international treaties, regulatory disclosure requirements, investigative methods, and litigation. Prerequisite: Undergraduates registering for this cross-listed course must complete LGST 2000. Graduate students are strongly advised to have successfully completed a course in business law.

LGST 3440 The Supreme Court & Your Life: Constitutional Law, Ethics & Policy for the 21st Century (2 Credits)

This course evaluates the most critical ways in which the United States Supreme Court interacts with and affects an individual's life, career, education, freedom, and future. Over ten weeks, we analyze how: (1) each major section of the Constitution and how it makes its way to the Court, (2) is ultimately interpreted by each of the nine current Justices, and (3) the subsequent repercussions of the opinion. The primary vehicles used for this task are actual Supreme Court cases, federal circuit court opinions, and legal briefs filed by the parties and interest groups on both sides of each dispute. Each of these documents is part of the public record and easy to locate. Because many students are likely to hear, believe, and/or resonate with only one side of each politically-charged divisive case heard by the Court (perhaps because they listen to only one news source or affiliate primarily with people of the same ideological bent), this class will emphasize the importance of seeing both sides of important public policy, legal, and ethical issues before taking a position. This is a valuable skill that is often neglected in college courses but will take a student far in life.

LGST 3450 Impact of Driverless Mobility: Business, Legal & Ethical Implications (4 Credits)

Smartphones and personal computers have changed the world and how we live in it. Now, Driverless Vehicles are poised to profoundly reshape our transportation systems, real estate development, access to goods and services, and our collective ecological footprint. In our "Impact of Driverless Mobility" course, we will consider many of the broad implications of this disruptive technology, including, but not limited to, the many legal, ethical and business considerations. Prerequisite: LGST 2000.

LGST 3540 Impact of Driverless Mobility (4 Credits)

Smartphones and personal computers have changed the world and how we live in it. Now, Driverless Vehicles are poised to profoundly reshape our transportation systems, real estate development, access to goods and services, and our collective ecological footprint. In our "Impact of Driverless Mobility" course, we will consider many of the broad implications of this disruptive technology, including, but not limited to, the many legal, ethical and business considerations. Prerequisite: LGST 2000.

LGST 4400 White Collar & Corporate Crime (4 Credits)

This course offers an essential overview of corporate and "white collar" crime. Through the use of real-world case studies, legal and ethical analysis, criminological research and cultural reference materials such as iconic films and books, this course offers insight into the types, causes, and effects of crimes committed by businesses, corporate officers and directors, professionals and public officials. It will foster critical analysis of contemporary efforts to address recurring problems of corruption, bribery, fraud, insider trading, money laundering, collusion and more through the enactment of criminal statutes, international treaties, regulatory disclosure requirements, investigative methods, and litigation. Prerequisite: Undergraduates registering for this cross-listed course must complete LGST 2000. Graduate students are strongly advised to have successfully completed a course in business law.

LGST 4700 International Law (4 Credits)

Offers both an introduction to public international law (the rights and duties of states and intergovernmental organizations [IGOs]) and to private international law (the rights and duties of individuals, businesses, and non- governmental organizations [NGOs] in their international affairs). Majority of course devoted to key international issues of business law and public policy such as alternative dispute resolution (ADR), privatization, intellectual property, international sales, the Foreign Corrupt Practices Act, trade (GATT and WTO), and the international facilities that deal with the adjudication and resolution of legal issues related to business.

LGST 4701 Topics in Ethics & Legal Study (1-5 Credits)

This course examines complexities, paradoxes, and dangers of leadership. The platform for the course is a Core Leadership Model (and logical deviations from it) which can result in Great Leadership. At the heart of Great Leadership one finds a values base. Through in-depth analysis of the key dimensions of the Core Model and its accompanying deviations, participants gain a deep understanding of - and practical experience with - Values Based Leadership in today's world.

LGST 4760 CEOs and Corporate Governance (4 Credits)

In the wake of the Sarbanes-Oxley and Dodd-Frank laws, corporate governance has become a compelling issue for business students and executives. Corporate board members and leaders of institutional investors share their insights concerning corporate governance from strategic, financial and legal perspectives. CEO/board dynamics are explored, along with leadership development and executive succession policies. The roles of major board committees, such as the audit, compensation, nominating, and legal compliance committees are given special emphasis. Board responsibilities in corporate crises and re-structuring are examined, along with the legal liabilities of executives, board members, and the corporation. Public policy pressures on corporate governance, including the roles played by the Securities and Exchange Commission and other regulatory bodies are discussed, along with the responses by business organizations, political interest groups, and self-regulatory bodies. Shareholder activism and litigation, along with pressures from other corporate governance systems, and governance reforms. Students engage in a number of case analyses over the course of the quarter, produce a four-part case study, and discuss actual real world solutions with business leaders who have been involved in the issues. Cross-listed with ACTG 4760.

LGST 4960 Employment Law & Ethics (4 Credits)

This course will introduce students to the key laws, rules and regulations governing employment in the United States. The course will explore workplace issues that arise because of the intersection of the hierarchical nature of organizations and the diversity of employees. As such, we will discuss workplace policies, practices and operations and their interactions with employment laws. This is an interactive course that will address issues such as: What is work? How do we value it? Who is an employee? What are the rights of employers? What are the rights of individuals in the workplace? What are some of the ethical issues faced by employers and employees, and how can both groups successfully navigate them? Graduate students will be assigned an independent study project focused on issues(s) faced by the Chief Human Resources Officer of an organization - a leader and strategic business partner in the organization.

LGST 4980 Internship (1-5 Credits)

LGST 4991 Independent Study (1-10 Credits)

LGST 4995 Independent Research (1-10 Credits)

Courses

LGST 2960 Employment Law & Ethics (4 Credits)

This course will introduce students to the key laws, rules and regulations governing employment in the United States. The course will explore workplace issues that arise because of the intersection of the hierarchical nature of organizations and the diversity of employees. As such, we will discuss workplace policies, practices and operations and their interactions with employment laws. This is an interactive course that will address issues such as: What is work? LGST 4980 Internship (1-5 Credits)

LGST 4991 Independent Study (1-10 Credits)

LGST 4995 Independent Research (1-10 Credits)

Business Information and Analytics

Office: Daniels College of Business, Room 580 Mail Code: Daniels College of Business, Room 580, 2101 S. University Blvd., Denver, CO 80210 Phone: 303-871-3695 Web Site: https://daniels.du.edu/business-information-analytics/

Master of Science in Business Analytics

The University of Denver's Daniels College of Business Master of Science in Business Analytics program focuses on the three pillars of business analytics: data management, analytic modeling, and business decision-making. Graduates will be able to bring value to their organizations by informing data-driven decisions. As part of the program, students consult for our partner organizations (corporate, government, and non-profit) to help them with their data-driven challenges. Through partnerships with IBM/SPSS, Tableau, Microsoft, and other leading technology vendors, Daniels is able to provide the most relevant analytic tools in our classrooms. This gives students an edge in solving complex problems and keeps them on the leading edge of business analytics. This is a STEM designated degree and is a 12–36-month, full or part-time. This degree is 54-58 credits. Students with an undergraduate business degree can waive INFO 4000 and complete the degree in 54 credits.

Daniels has been continuously accredited by the Association to Advance Collegiate Schools of Business International (AACSB) since 1923.

Master of Science in Business Analytics

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Standardized Test Scores

• GRE or GMAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.

• If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The GMAT code for the Business Analytics program is MZR-GT-47. The GRE code for the University of Denver is 4842.

Other Requirements

· An admissions interview will be required by invitation only.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Certificate or Specialized Certificate in Business Analytics Master of Science in Applied Quantitative Finance

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- · Minimum Duolingo English Test Score: 115

Other Requirements

• Applicants may be contacted by a Daniels representative to schedule the admissions interview, which will be conducted on campus or via webcam.

INFO 4000 Foundations of Business (4 Credits)

The Introduction to Business course is an introduction to provides an overview of the business arena, how a business operates, and the supporting functions that are needed in any business enterprise. Students will identify forms of ownership and the processes used in operations, marketing, accounting, finance, personnel, information technology and general management. Moreover, students will learn about social responsibility and business ethics in concurrence with the Daniels College legacy.

INFO 4100 Survey of Business Analytics (4 Credits)

This course provides an overview of business analytics: how business data are collected, processed, and analyzed to support decision making. It will address both how to assess and use data that is readily available as well as how to start with corporate strategy and determine what data is needed, how to generate and process it. The course will also explore how corporate culture, ethics, and globalization can affect data management and analytic decision-making.
INFO 4120 Python Programming (4 Credits)

Python is a popular general purpose programming language which is well suited to a wide range of problems. With the right set of add-ons, it is comparable to domain-specific languages such as R and MATLAB. Python is a scripting language. The following topics will be covered: Importing data, Reading and writing files, Cleaning and Managing Data, Merging and joining DataFrame objects, Plotting and Visualization, Statistical Analysis, Fitting data to probability distributions and Linear models. Packages: Pandas, NumPy, matplotlib, statsmodels, Scikit-learn, and IPython. Principal Content Elements: 1. Introduction to Programming Logic and Design Using Python 2. Data Management 3. Statistical Analysis 4. Advanced Data Management and Statistical Analysis Prerequisites: STAT 4610.

INFO 4140 Business Databases (4 Credits)

This is an introductory database course which covers enterprise database design, modeling and implementation.

INFO 4200 Business Analytics Capstone Planning (2 Credits)

This course prepares the student for the Capstone course by identifying a faculty advisor, company, data, and a business issue to be addressed in the Capstone course in the final quarter. (Must be taken two quarters prior to INFO4400, with the exception of off-cycle students, who will take it the quarter prior to INFO4400.) This course may be taken by MSBA students only.

INFO 4240 Data Warehousing (4 Credits)

This course introduces students to the main components of a data warehouse for business intelligence applications. Students will learn how a data warehouse fits into the overall strategy of a complex enterprise, how to develop data models useful for business intelligence, and how to combine data from disparate sources into a single database that comprises the core of a data warehouse. Students will also explore how to define and specify useful management reports from warehouse data. Prerequisites: INFO 4100, INFO 4140.

INFO 4250 Business Data and Analytics (4 Credits)

Businesses make decisions and improve processes using their own and external data with a variety of data-driven and analytic techniques. This course introduces students to the business data landscape, data management in commercial organizations, and the data-driven decision-making process. Students explore the fundamental concepts behind how data and analytics can improve business performance, using their individual roles and companies as subject matter. Principal Content Elements: 1. Data-driven decision making and performance improvement. 2. Data management in organizations. 3.Hands-on experience creating visualizations for data-driven insights. INFO 4250 requires a Windows Operating System. MAC users will have to virtualize their machines, or have access to a PC for async, live session and graded assignments. The software used in this course is Power BI and Visio Pro, which are Windows-only applications. Power BI is free, and the Department of Business Information and Analytics will provide a license for Visio Pro.

INFO 4260 Data Management Platforms (4 Credits)

This course continues the data management track of the MSBA program, following INFO4140 (Business Databases) and INFO4240 (Data Warehousing). Students will be introduced to cloud computing (through AWS) to learn the basic principles to include architecture, operating systems, computing, storage, security, networking, and many other cloud platform features. Additionally, in the context of available cloud-based resources, students will be introduced to Artificial Intelligence (AI) services (through OpenAI) as an analytic tool to solve data-driven business problems.

INFO 4281 Project Management (2 Credits)

"Cheaper, better, faster" is the mantra of modern business. Innovation, providing new products and services or using improved business processes, has become a prerequisite for businesses to thrive and flourish. Project Management is a discipline which supports innovation by examining how to facilitate one time events such a constructing a building, installing a software system, taking a product to market, reengineering a marketing process, or merging an acquired company. In this course, we examine the science, practice the art, and discuss the folklore of project management to enable students to contribute to and manage projects as well as to judge when to apply this discipline. Prerequisite: INFO 4100. Co-requisite: INFO 4200.

INFO 4300 Predictive Analytics (4 Credits)

This course is designed to prepare students for managerial data analysis and data mining, predictive modeling, model assessment and implementation using large data sets. The course addresses the how, when, why and where of data mining. The emphasis is on understanding the application of a wide range of modern techniques to specific decision-making situations, rather than on mastering the theoretical underpinnings of the techniques. The course covers methods that are aimed at prediction, forecasting, classification, clustering and association. Students gain hands-on experience in using computer software to mine business data sets. Prerequisite: STAT 4610.

INFO 4340 Data Mining and Visualization (4 Credits)

In this course, students create business intelligence tools such as balanced scorecards, data visualization and dashboards to inform business decisions. The course will focus on the identification of metrics, measures, and key performance indicators for a variety of business operations, and will introduce numerous analytic methodologies to support the decisions made with regard to these metrics. The focus will be on the advantages and disadvantages of various modeling methodologies and implementations moving towards performance improvement and business understanding. Prerequisite: STAT 4610.

INFO 4360 Complex Data Analytics (4 Credits)

This course addresses the rapidly-growing demands on businesses created by the prevalence of big and unstructured data. These include management of big data, big-data analytics, analysis of unstructured data (to include text mining), and management and analysis of real-time (streaming) data. The focus will be on enhancing business decision-making in the presence of big data, and on how to create the greatest ROI with large data sets.

INFO 4381 Decision Processes (2 Credits)

The competency we want to begin to develop in this course is the ability to make sound business decisions. A quick Google search can reassure you that there is no lack of information about how to make good decisions. And much of that information is confusing, if not downright contradictory. Since you will be making the decisions which impact your business and your career, you will need to decide what constitutes a good decision as well as a good decision process. In this course, we will explore some of the voluminous material available, use it to make decisions, practice with useful tools, identify traps and pitfalls, assess results, and extract guidelines for a decision process. Then we will iterate to update and refine the process.

INFO 4390 Advanced Predictive Modeling with R (4 Credits)

This course serves as an introduction to advanced predictive modeling and statistical learning using the R statistical software. Specific topics include linear, non-linear, and logistic regression, classification, resampling methods, and non-linear regression, tree-based methods, and support vector machines. The students will learn how to communicate their results (business reports, dashboards, etc.) of the varioius modeling exercises and projects using RStudio and the RMarkdown suite of tools. Enforced Prerequisites and Restrictions: INFO 4100 and INFO 4300.

INFO 4400 Business Analytics Capstone (4 Credits)

This course gives students an opportunity to apply the knowledge and skills learned in this program to a real-world problem submitted by a partner business. Students take a business problem from model construction and data collection through an analysis and presentation of results to recommendations for specific business decisions. Prerequisite: INFO 4200.

INFO 4401 Business Analytics Fundamentals (4 Credits)

Business Analytics is a broad term that describes the process of using data to make business decisions. Data driven business decisions are both critical in modern business and hard to produce with reliable outcomes. This course introduces students to decision-making using probability and other statistical techniques to support and validate the chosen decision. Students will practice hands on business analytics skills for making data driven business decisions.

INFO 4590 Optimization (4 Credits)

This course introduces students to the basic optimization modeling techniques and tools as practiced by business analysts to help their enterprises make better-informed decisions. Applications will include mix, selection, assignment, distribution, transportation, financial management, planning, scheduling, and management implementations in a variety of business settings. The course will focus on problem definitions, problem configuration, spreadsheet solutions, LP Software (LINGO) solutions, and interpreting and implementing results.

INFO 4610 Business Statistics and Analytics (4 Credits)

Making high quality business decisions is hard. Using data to make business decisions makes the process better. This course introduces students to a variety of techniques in analytics and statistics that facilitate data driven business decisions. Time will be spend identifying appropriate techniques to apply in various scenarios, applying in detail some of the quantitative techniques, and using analytic outputs to inform business decisions. Both technical skills and clear communication of results and decisions will be covered. Choosing proper techniques, technical work using Microsoft Excel, proper interpretation of results, and decision making are skills practiced in this course.

INFO 4700 Topics in Business Analytics (0-10 Credits)

Exploration of current trends and topics in business analytics. Prerequisite: INFO 4100.

INFO 4830 Executive Education - Data Analytics for Decision Making (2 Credits)

In this Executive Education workshop, students will explore how companies organize around data and analytics and how leaders use data to make decisions. Every organization has data, but not every organization knows how to leverage it. This course focuses on the process of analyzing data so that you can discover what problems data can solve and what successes data can make possible. The course will also provide a focus on analytic modeling, using regression analysis and optimization to develop familiarity and skills in the analytic process, and will culminate with an opportunity to explore the challenges that participants' organizations are facing around their data-driven decision processes. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

INFO 4855 Executive Education - Data Visualization Using Power BI (2 Credits)

A picture is worth a thousand words—or a thousand spreadsheets. In today's complex business world, where the amount of data is overwhelming, being able to create and communicate through compelling data visualizations is a must-have skill for all business professionals. For too long data has been trapped behind scripts, wizards and code. That can change! This Executive Education workshop is a deep dive into the world of data and data visualization. You will learn how to create, analyze and evaluate large data sets that will enable you to turn mountains of raw data into meaningful stories that inform decisions and drive change. This is a software-heavy class where you will have the opportunity to practice technical skills in Microsoft Power BI, a free software application that lets users visualize data. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

INFO 4875 Executive Education – Strategic Advantage Using Data Analytics (2 Credits)

In today's business world, labor, capital, raw materials, and data are all essential to an organization's strategy. Many leaders have well-developed strategies for the first three, but they lack the understanding and direction to tackle the fourth: data. This Executive Education workshop focuses on how to build and implement a data strategy to improve organizational performance. Data and analytics programs offer great potential value, and to be effective they must align strategically across the business to deliver a positive return on investment. By understanding and integrating the five main components of a data strategy – Program, People, Process, Platform and Data – you will be able to grow your business and accelerate progress toward your organization's goals. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

INFO 4991 Independent Study (1-10 Credits)

INFO 4995 Independent Research (1-10 Credits)

Executive PhD in Business Administration

The Daniels College of Business Executive PhD is a 90-credit hour comprehensive three-year blended program that immerses students in conducting applied business research. Students will gain rigorous research skills to address the complex programs facing business today. The program will integrate your career experience with a thorough education in quantitative analysis, qualitative analysis and mixed methods, teaching you to find powerful, data-driven business insights.

Daniels has been continuously accredited by the Association to Advance Collegiate Schools of Business International (AACSB) since 1923.

Cohort

The Daniels Executive PhD is a cohort-based program with lock-step curriculum which enables students to maximize cross-learning, collaboration and networking.

Class Schedules

This is a hybrid program delivered online and in-person. During the first two years of the program, students will attend nine on-campus immersions which are held from 8am – 5pm Friday and Saturday. In the third year of the program, students are required to come to campus at least one time to meet with their dissertation chair and committee.

Concentrations/Electives

There are no concentrations or electives offered for the Executive PhD Program. The dissertation stage of the program will enable students to conduct research in their area of interest.

Doctor of Philosophy in General Business

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

Master's degree: This program requires a master's degree as well as the baccalaureate.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Other Requirements

Degree Deguiremente

Applicants may be contacted by a Daniels representative to schedule an admissions interview, which will be conducted on campus or via webcam. The admissions interview is an opportunity for both you and Daniels staff to evaluate whether or not the program is a good fit. Interviews are by invitation only, sent after all other application requirements have been completed.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- · Minimum TOEFL Score (Internet-based test): 94 (No less than a 20 on any section)
- Minimum IELTS Score: 7.0 (No less than a 6.0 on any section)
- Minimum C1 Advanced Score: 185 (No less than a 170 on any section)
- Minimum Duolingo English Test Score: 125

Non-Coursework Requirements

Comprehensive Exam

Every PhD student must pass the comprehensive exam. To qualify for the comprehensive exam, the student must complete the required coursework consisting of research methodology/statistics, research seminars and the Applied Research Practicum (ARP) series with a minimum GPA of a 3.0. A grade lower than "C-renders the credit unacceptable for meeting eligibility to sit for the comprehensive exam and university degree requirements. Coursework taken at another university may not be applied to the coursework requirement.

The program chair will appoint a committee of scholarly qualified faculty to write the comprehensive exam. This exam will cover topics in the research methodology/statistics and research seminar courses. The exam will be take-home, and students will be given several days to complete it. The committee will grade the exam, and make a recommendation to the program chair on whether a student passes or fails. A failed exam may lead to dismissal from the program.

Sufficiently prior to the exam date, the program chair will appoint an examination committee of scholarly qualified faculty. The committee creates the exam and grades it. After the exam, the committee makes a recommendation on whether the student passes or fails. If requested, students may need to revise their answers.

Dissertation Proposal Defense

Following successful completion of the comprehensive exam, each student will prepare a dissertation proposal and defend the proposal to the dissertation committee. A successful dissertation defense qualifies the student to Ph.D. candidacy. The dissertation proposal should be prepared in close consultation with the student's advisor and should be available to all committee members at least two weeks prior to the exam. It should reflect an extensive critical literature survey, and contain an accurate assessment of the state-of-the-art in the area of research, a precise statement of the research question, motivation for pursuing the research, and the research method design that will be used to answer the research question.

Successful defense of the dissertation proposal results in agreement between the student and the committee as to what will constitute successful completion of the dissertation research.

The composition of the dissertation proposal committee must comply with the standards specified by the University of Denver Doctoral Degree Requirements and Standards. The dissertation proposal defense is an oral closed exam. If a student successfully defends the dissertation proposal but subsequently switches advisor and hence topic, the dissertation defense must be repeated within one year to ensure capability of the student and feasibility of the project.

Dissertation Defense

After the dissertation has been completed, the student must defend it in a final oral exam, as specified by the University of Denver Doctoral Degree Requirements and Standards.

University of Denver Doctoral Degree Requirements and Standards

http://bulletin.du.edu/graduate/academic-requirements-policies-and-procedures/doctoral-degree-requirements/

Master of Science in Applied Business Research

This degree can be awarded to students who leave the PhD program before completing the dissertation. The student must have minimum 3.0 GPA with no more than 25% of coursework with a grade of C.

Degree Requirements

Coursework Requirements

A minimum of 52 credits as follows:

- · 20 credits of Methods and Statistics
- 16 credits in Research Seminars
- 16 credits (the full sequence) of the Applied Research Practicum Series

Finance

Office: Daniels College of Business, Room 555 Mail Code: Daniels College of Business, Room 555, 2101 S. University Blvd., Denver, CO 80208 Phone Number: 303-871-3322 Web Site: https://daniels.du.edu/finance/

Master of Science in Applied Quantitative Finance

In the Master's in Applied Quantitative Finance program, you'll study leading-edge theories, models and applications across the major areas of finance. Take advantage of our quarter system to tailor your coursework as well as your internships. Develop your finance leadership and communication skills by participating in a variety of case studies and competitions, as well as hands-on money management. When you graduate, you'll be both a creator of finance knowledge and a disseminator who can grow to lead a finance enterprise.

The Master of Science in Applied Quantitative Finance is a STEM (Science, Technology, Engineering and Math) degree according to the Department of Homeland Security (DHS). The DHS expanded list includes designated degrees that qualify for up to 17 months Optional Practical Training (OPT) Extension for F-1 Nonimmigrant Students.

Daniels has been continuously accredited by the Association to Advance Collegiate Schools of Business International (AACSB) since 1923.

Master of Science in Applied Quantitative Finance

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.

- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Standardized Test Scores

- GRE or GMAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842. The code to submit GMAT scores for this program is MZR-GT-04.

Other Requirements

· An admissions interview will be required by invitation only.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

FIN 4890 Fixed Income Analysis

Total Credits:

FIN 4000 Financial Modeling and Databases Bootcamp (1 Credit)

This bootcamp is designed to introduce students to financial databases and to familiarize them with basic financial data analysis using Excel. The goal is for students to become comfortable with platforms such as Capital IQ and WRDS, which they will be using throughout their academic and/or professional careers. In addition, students will acquire a basic command of Excel functionality and efficiency in data analysis, together with modeling best practices and practical finance applications.

FIN 4030 Personal Finance (4 Credits)

This course provides an overview of topics which are critical to lifetime personal financial planning. The premise of the course is that personal financial planning starts early in life and especially as a new college graduate begins a professional career. The main topics in the course include Principles of Taxation, Basics of Estate Planning, Lifetime Asset Allocation, Principles of Insurance, Proper Debt Management, the Real Estate Housing Decision, and College Financial Planning for Children.

FIN 4060 Life Cycle/Financial Planning (4 Credits)

This course is designed for students who are interested in Financial Planning, possibly as a profession. We will cover six of the areas of financial planning: cash flows, protection (insurance), investments, goals (education and retirement), income taxation, and estate planning. This course is part of University of Denver CFP® Certification Financial Planning Education Program.

FIN 4090 Wealth Management (4 Credits)

Wealth Management offers students important skills to become a part of the growing wealth management industry. It includes such topics as the Financial Planning Process, Insurance Basics, Investment Basics and Strategies, Retirement Planning, and Estate Planning. We are pleased to work with the College for Financial Planning (CFFP), located in Denver, to provide instruction from their The Foundations in Financial PlanningSM program. This can lead to the Financial Paraplanner Qualified Professional[™] or FPQP[™] designation upon successful completion of an Examination. The Examination is administered through the CFFP. The FPQP[™] will be a valuable addition to your resume.

FIN 4110 Ethics in Finance (4 Credits)

The objective of this course is to discuss the ethical issues facing financial institutions and professionals and apply ethical principles to the analysis of these issues.

FIN 4150 Advanced Business Valuation (4 Credits)

In this course, students will learn theoretical development, analytical tools and practical approaches to analyze and tackle business valuation issues at the core of the financial professions. The theoretical section of the course provides indepth coverage of the financial theories and models essential to value businesses. The application section provides students with opportunities to apply the valuation principles and techniques to assess business value and develop strategies to create value in a real-world context.

FIN 4160 Treasury Management (4 Credits)

The objective of the course is to provide students with a comprehensive understanding of how various treasury functions are managed in a corporation and build students' capabilities to assume the role of a proficient treasury manager. This course will cover techniques used by major corporations to manage cash, the capital structure, financial risk and working capital. Prerequisite: FIN 4630.

FIN 4180 Global Finance (2 Credits)

This course explores financial management in the international arena. Principal content elements include: The market for foreign exchange, interest rate parity, hedging currency risk, international portfolio management. Prerequisites: FIN 4630.

FIN 4200 Financial Investments and Markets (4 Credits)

Students will learn how households, institutions, firms, and governments interact in financial markets to channel funds from savers to productive uses of capital and provide firms with opportunities to hedge certain risks. This comprehensive understanding of how markets function is essential for anyone with a finance or high-level management role. We will begin by identifying the key institutions in financial markets and how securities come into existence and subsequently trade. We will then learn to measure the risk and return of financial assets while identifying techniques to improve and assess the performance of investment portfolios. Finally, we will introduce derivatives and techniques to wisely hedge firm risks. Prerequisite: FIN 4630.

FIN 4320 Equity Analysis (4 Credits)

This course is an advanced finance course that focuses on the analysis of equity securities. The curriculum is primarily derived from the Candidate Body of Knowledge (CBOK) from the Chartered Financial Analyst® (CFA®) Program. The goal is to teach students how to implement objective, unbiased valuations through an understanding of the valuation process in theory and practice. Prerequisite: FIN 4200.

FIN 4330 Portfolio Management and Risk Analytics (4 Credits)

Case and project approach to foundation of investment portfolio management. This course emphasizes the application of modern portfolio management concepts and risk management principles. Prerequisite: FIN 4200.

FIN 4410 Financial Planning & Analysis (4 Credits)

Advanced course in financial planning and decision-making focusing on capital structure, working capital management, long-range and short-term financial planning, and other corporate events such as mergers and IPOs. Prerequisite: FIN 4630.

FIN 4420 Capital Expenditure Analysis (4 Credits)

Advanced course in capital budgeting examining capital allocation processes and procedures and the theory and applied techniques of capital spending and divestment under conditions of certainty and uncertainty. Related issues of cost of capital and leasing also included. Prerequisite: FIN 4630.

FIN 4500 Financial Modeling (4 Credits)

Use of various financial software applications to construct models from corporate finance, investments, and financial markets. In particular, the course will cover the application of Excel spreadsheet functions and R programming to various topics including the time value of money, investment projects analysis, financial statements analysis, capital budgeting, portfolio analysis, and data & pivot tables. Prerequisites: FIN 4630.

FIN 4630 Managerial Finance (4 Credits)

This course covers analytical skills and tools of finance managers; theoretical concepts and practical applications are included. Topics include ratio analysis, breakeven analysis and leverage, securities valuation, capital budgeting, financial forecasting, and working capital management. Corequisite: ACTG 4610.

FIN 4700 Topics in Finance (0-4 Credits)

Topics vary each quarter. Course may be taken more than once if topics are different.

FIN 4701 Topics in Finance (1-10 Credits)

Topics vary. For new/experimental courses taught within the Reiman School of Finance.

FIN 4710 Marsico Investment Fund I (4 Credits)

A securities analysis and portfolio management practicum in which students manage a University endowment gift donated by Tom and Cydney Marsico. Prerequisite: FIN 4630 (or MBA 4285).

FIN 4720 Marsico Investment Fund II (4 Credits)

A securities analysis and portfolio management practicum in which students manage a University endowment gift donated by Tom and Cydney Marsico. Prerequisite: FIN 4710.

FIN 4730 Marsico Investment Fund III (4 Credits)

This course is an elective course that is the third in the series of classes involving the Graduate investment fund class: Marsico Investment Fund I & II. This course allows students to apply the investment, security analysis, and portfolio management tools and techniques that they have learned in their Finance classes. The students manage an actual portfolio, a portion of the University's endowment originally gifted by Tom and Cydney Marsico. The selection of students for this class is competitive. Students must agree to participate for 2 consecutive quarters, and they must be willing to address portfolio issues during the between-quarter periods if necessary. Because the course involves the application of tools and concepts learned in other classes, the best time to take the course is in the last year of a student's program. Prerequisites: FIN 4710 and FIN 4720.

FIN 4740 Managerial Microeconomics (2 Credits)

This course combines the standard tools of microeconomic analysis with a well-rounded appreciation of the important perspectives that form the business environment in the contemporary world. The goal is to provide students with the tools from microeconomics, game theory, and industrial organization that they need to make sound managerial decisions. The course uses case studies to develop practical insights into managing the firm's resources to achieve competitive advantage. The course is divided into two principle modules based on market structure: perfect competition and imperfect competition. Both modules cover optimal behavior and strategies.

FIN 4750 Managerial Macroeconomics (2 Credits)

This course covers the theory and practice of modern macroeconomics. It teaches students how private market forces and government policy decisions drive fluctuations in the global economy and affect the business environment. It explores issues related to inflation, interest rates, foreign exchange rate, business cycles, and monetary and fiscal policies. The course uses case studies to analyze real-life macroeconomic issues, and students are encouraged to investigate the potential and limitations of macroeconomic theory with real-world problems. The course is divided into two principle modules: the economy in the long run, and the economy in the short run. Both modules cover impacts of government policies on the business environment in a closed economy and an open economy.

FIN 4760 Managerial Economics (4 Credits)

This course presents the fundamental concepts of microeconomics and macroeconomics and approaches them from a managerial decisionmaking perspective. The first half of the course emphasizes applying microeconomic theory to decision-making to help achieve a firm's objective – increasing profit, market share, or growth. In contrast to traditional economics course, this course emphasizes practical implementation AND how economics affects business decision making. The second half of the course discusses macroeconomics and factors that affect the economy. The goal is to develop an understanding of macro-economic concepts such as GDP, inflation, and government policy such as Federal Reserve actions and government spending, to obtain a framework to model a firm's behavior according to an informed understanding of what the economy is doing. Armed with an understanding of the cycle of economic activity, one can formulate a firm understanding of policy alternatives by both the Federal Reserve and Congress.

FIN 4800 An Organized Walk Down Wall Street (0-4 Credits)

After four class sessions in Denver, participants will spend five days in New York visiting exchanges, brokerage firms, investment bankers, commercial banks, asset managers, and other institutions.

FIN 4830 Econometrics for Finance (4 Credits)

Econometrics for Finance is designed to teach applied statistical tools relevant to understanding financial and economic data. It is designed to cover essential tools for working with financial data, including return forecasting, volatility and econometrics of asset pricing, such as testing market models. The emphasis is on empirical techniques which are used in the analysis of financial markets and how they are applied to actual data. It teaches how to use and apply techniques using R, a free software that is used by many finance professionals. The course is intended to prepare students to possess the quantitative tools to evaluate and implement in the finance arena. Prerequisite: STAT 4610 and FIN 4500 (If no experience in R).

FIN 4835 Executive Education - Finance for Non-Financial Managers (2 Credits)

This Executive Education workshop introduces you to the essential finance skills any business professional needs to know. You will learn the language, tools and techniques to become a more intelligent user of financial reports. Through hands-on learning exercises, you will learn how to simplify, understand and apply data from financial reports and budgets. You will gain the confidence to ask better questions and make more informed financial decisions. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

FIN 4860 Derivatives (4 Credits)

This course provides a theoretical foundation for the pricing of contingent claims and for designing risk-management strategies. It discusses more advanced material in financial derivatives and is intended for students who have a quantitative background and are interested in enhancing their knowledge of the way in which derivatives can be analyzed. This course covers option pricing models, hedging techniques, and trading strategies. It also includes portfolio insurance, value-at-risk measure, multistep binomial trees to value American options, interest rate options, and other exotic options. Prerequisite: FIN 4200.

FIN 4870 Strategic Finance (4 Credits)

Addresses theory, concepts, and techniques associated with asset management and creation of value from a strategic orientation. Links financial theory and practice to strategic and operational objectives of the firm, prepares student to incorporate risk and uncertainty into analytical decision-making process and to analyze divestiture, restructuring, and liquidation decisions. Prerequisite: FIN 4410.

FIN 4875 Executive Education – Strategic Finance (2 Credits)

Today's leading organizations require executives to use rigorous financial analysis in order to make strategic decisions that affect growth, profitability and competitive market advantage. Strategic Finance is a multidimensional Executive Education workshop that uses real simulations and an acquisition case study to map the connections between business strategy, finance and enterprise value creation. The goal of the course is to make you a more intelligent user of finance and strategy. It will enable you to ask better questions and to make better decisions. You will become a more sophisticated manager, particularly when focusing on the interplay and interdependence of strategy, finance & management. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

FIN 4885 Investment Banking and External Financing (4 Credits)

This course is an advanced Corporate Finance course, focusing on the decisions by companies related to external sources of financing. There will be a mix of theory and practice, with outside speakers providing insight into the practice component. Topics will include business valuation, mergers and acquisitions, startup financing, angel investing and venture capital, bank loans, private equity, stock issuance and going private. Prerequisite: FIN 4410.

FIN 4890 Fixed Income Analysis (4 Credits)

Emphasizes valuation and management of fixed income securities in prevailing environment of complex and innovative financial arrangements. Study of the nature of evolving markets, both domestically and internationally. Prerequisite: FIN 4200.

FIN 4980 Finance Internship (0-10 Credits)

Daniels College of Business's graduate curriculum is designed to be experiential and build upon practical experience. To gain the full benefit of this curriculum, students are encouraged to expand their experiential learning beyond the short term experiences required in the classroom. Internships that allow students to apply newly learned skills and theories in the workplace are considered an integral to the curriculum and all students are strongly encouraged to seek such opportunities. Permission of instructor required. Hours and times arranged by student.

FIN 4991 Independent Study (1-10 Credits)

Individual study and report. Hours and times arranged by student.

FIN 6305 Applied Quantitative Methods in Finance (4 Credits)

Applied Quantitative Methods in Finance" is a PhD-level seminar designed to immerse students in the techniques essential for quantitative research in Finance and other disciplines. This course offers a journey through the application of empirical methods and analytical frameworks using the Python programming language and key analytical packages. The examples and assignments cover topics including corporate governance, executive compensation, risk/return analysis, and the exploration of decentralized finance. Students will gain hands-on experience working with real-world data sets and get an introduction to the Finance literature. Structured around hands-on student research assignments, presentations and immersive sessions, the course covers a broad spectrum of quantitative methods including cross-sectional linear regression, two-stage least squares, forecasting and machine learning techniques such as variable selection. Each module is crafted to further the understanding of financial theories through empirical research and data analysis.

Courses

FIN 4000 Financial Modeling and Databases Bootcamp (1 Credit)

This bootcamp is designed to introduce students to financial databases and to familiarize them with basic financial data analysis using Excel. The goal is for students to become comfortable with platforms such as Capital IQ and WRDS, which they will be using throughout their academic and/or professional careers. In addition, students will acquire a basic command of Excel functionality and efficiency in data analysis, together with modeling best practices and practical finance applications.

FIN 4030 Personal Finance (4 Credits)

This course provides an overview of topics which are critical to lifetime personal financial planning. The premise of the course is that personal financial planning starts early in life and especially as a new college graduate begins a professional career. The main topics in the course include Principles of Taxation, Basics of Estate Planning, Lifetime Asset Allocation, Principles of Insurance, Proper Debt Management, the Real Estate Housing Decision, and College Financial Planning for Children.

FIN 4060 Life Cycle/Financial Planning (4 Credits)

We will cover six of the areas of financial planning: cash flows, protection (insurance), investments, goals (education and retirement), income taxation, and estate planning. This course is part of University of Denver CFP® Certification Financial Planning Education Program.

FIN 4090 Wealth Management (4 Credits)

Wealth Management offers students important skills to become a part of the growing wealth management industry. It includes such topics as the Financial Planning Process, Insurance Basics, Investment Basics and Strategies, Retirement Planning, and Estate Planning. We are pleased to work with the College for Financial Planning (CFFP), located in Denver, to provide instruction from their The Foundations in Financial PlanningSM program. This can lead to the Financial Paraplanner Qualified Professional[™] or FPQP[™] designation upon successful completion of an Examination. The Examination is administered through the CFFP. The FPQP[™] will be a valuable addition to your resume.

FIN 4110 Ethics in Finance (4 Credits)

The objective of this course is to discuss the ethical issues facing financial institutions and professionals and apply ethical principles to the analysis of these issues.

FIN 4150 Advanced Business Valuation (4 Credits)

In this course, students will learn theoretical development, analytical tools and practical approaches to analyze and tackle business valuation issues at the core of the financial professions. The theoretical section of the course provides indepth coverage of the financial theories and models essential to value businesses. The application section provides students with opportunities to apply the valuation principles and techniques to assess business value and develop strategies to create value in a real-world context.

FIN 4160 Treasury Management (4 Credits)

The objective of the course is to provide students with a comprehensive understanding of how various treasury functions are managed in a corporation and build students' capabilities to assume the role of a proficient treasury manager. This course will cover techniques used by major corporations to manage cash, the capital structure, financial risk and working capital. Prerequisite: FIN 4630.

FIN 4180 Global Finance (2 Credits)

This course explores financial management in the international arena. Principal content elements include: The market for foreign exchange, interest rate parity, hedging currency risk, international portfolio management. Prerequisites: FIN 4630.

FIN 4200 Financial Investments and Markets (4 Credits)

Students will learn how households, institutions, firms, and governments interact in financial markets to channel funds from savers to productive uses of capital and provide firms with opportunities to hedge certain risks. This comprehensive understanding of how markets function is essential for anyone with a finance or high-level management role. We will begin by identifying the key institutions in financial markets and how securities come into existence and subsequently trade. We will then learn to measure the risk and return of financial assets while identifying techniques to improve and assess the performance of investment portfolios. Finally, we will introduce derivatives and techniques to wisely hedge firm risks. Prerequisite: FIN 4630.

FIN 4320 Equity Analysis (4 Credits)

This course is an advanced finance course that focuses on the analysis of equity securities. The curriculum is primarily derived from the Candidate Body of Knowledge (CBOK) from the Chartered Financial Analyst® (CFA®) Program. The goal is to teach students how to implement objective, unbiased valuations through an understanding of the valuation process in theory and practice. Prerequisite: FIN 4200.

FIN 4330 Portfolio Management and Risk Analytics (4 Credits)

Case and project approach to foundation of investment portfolio management. This course emphasizes the application of modern portfolio management concepts and risk management principles. Prerequisite: FIN 4200.

FIN 4410 Financial Planning & Analysis (4 Credits)

Advanced course in financial planning and decision-making focusing on capital structure, working capital management, long-range and short-term financial planning, and other corporate events such as mergers and IPOs. Prerequisite: FIN 4630.

FIN 4420 Capital Expenditure Analysis (4 Credits)

Advanced course in capital budgeting examining capital allocation processes and procedures and the theory and applied techniques of capital spending and divestment under conditions of certainty and uncertainty. Related issues of cost of capital and leasing also included. Prerequisite: FIN 4630.

FIN 4500 Financial Modeling (4 Credits)

Use of various financial software applications to construct models from corporate finance, investments, and financial markets. In particular, the course will cover the application of Excel spreadsheet functions and R programming to various topics including the time value of money, investment projects analysis, financial statements analysis, capital budgeting, portfolio analysis, and data & pivot tables. Prerequisites: FIN 4630.

FIN 4630 Managerial Finance (4 Credits)

This course covers analytical skills and tools of finance managers; theoretical concepts and practical applications are included. Topics include ratio analysis, breakeven analysis and leverage, securities valuation, capital budgeting, financial forecasting, and working capital management. Corequisite: ACTG 4610.

FIN 4700 Topics in Finance (0-4 Credits)

Topics vary each quarter. Course may be taken more than once if topics are different.

FIN 4701 Topics in Finance (1-10 Credits)

Topics vary. For new/experimental courses taught within the Reiman School of Finance.

FIN 4710 Marsico Investment Fund I (4 Credits)

A securities analysis and portfolio management practicum in which students manage a University endowment gift donated by Tom and Cydney Marsico. Prerequisite: FIN 4630 (or MBA 4285).

FIN 4720 Marsico Investment Fund II (4 Credits)

A securities analysis and portfolio management practicum in which students manage a University endowment gift donated by Tom and Cydney Marsico. Prerequisite: FIN 4710.

FIN 4730 Marsico Investment Fund III (4 Credits)

This course is an elective course that is the third in the series of classes involving the Graduate investment fund class: Marsico Investment Fund I & II. This course allows students to apply the investment, security analysis, and portfolio management tools and techniques that they have learned in their Finance classes. The students manage an actual portfolio, a portion of the University's endowment originally gifted by Tom and Cydney Marsico. The selection of students for this class is competitive. Students must agree to participate for 2 consecutive quarters, and they must be willing to address portfolio issues during the between-quarter periods if necessary. Because the course involves the application of tools and concepts learned in other classes, the best time to take the course is in the last year of a student's program. Prerequisites: FIN 4710 and FIN 4720.

FIN 4740 Managerial Microeconomics (2 Credits)

This course combines the standard tools of microeconomic analysis with a well-rounded appreciation of the important perspectives that form the business environment in the contemporary world. The goal is to provide students with the tools from microeconomics, game theory, and industrial organization that they need to make sound managerial decisions. The course uses case studies to develop practical insights into managing the firm's resources to achieve competitive advantage. The course is divided into two principle modules based on market structure: perfect competition and imperfect competition. Both modules cover optimal behavior and strategies.

FIN 4750 Managerial Macroeconomics (2 Credits)

This course covers the theory and practice of modern macroeconomics. It teaches students how private market forces and government policy decisions drive fluctuations in the global economy and affect the business environment. It explores issues related to inflation, interest rates, foreign exchange rate, business cycles, and monetary and fiscal policies. The course uses case studies to analyze real-life macroeconomic issues, and students are encouraged to investigate the potential and limitations of macroeconomic theory with real-world problems. The course is divided into two principle modules: the economy in the long run, and the economy in the short run. Both modules cover impacts of government policies on the business environment in a closed economy and an open economy.

FIN 4760 Managerial Economics (4 Credits)

This course presents the fundamental concepts of microeconomics and macroeconomics and approaches them from a managerial decisionmaking perspective. The first half of the course emphasizes applying microeconomic theory to decision-making to help achieve a firm's objective – increasing profit, market share, or growth. In contrast to traditional economics course, this course emphasizes practical implementation AND how economics affects business decision making. The second half of the course discusses macroeconomics and factors that affect the economy. The goal is to develop an understanding of macro-economic concepts such as GDP, inflation, and government policy such as Federal Reserve actions and government spending, to obtain a framework to model a firm's behavior according to an informed understanding of what the economy is doing. Armed with an understanding of the cycle of economic activity, one can formulate a firm understanding of policy alternatives by both the Federal Reserve and Congress.

FIN 4800 An Organized Walk Down Wall Street (0-4 Credits)

After four class sessions in Denver, participants will spend five days in New York visiting exchanges, brokerage firms, investment bankers, commercial banks, asset managers, and other institutions.

FIN 4830 Econometrics for Finance (4 Credits)

Econometrics for Finance is designed to teach applied statistical tools relevant to understanding financial and economic data. It is designed to cover essential tools for working with financial data, including return forecasting, volatility and econometrics of asset pricing, such as testing market models. The emphasis is on empirical techniques which are used in the analysis of financial markets and how they are applied to actual data. It teaches how to use and apply techniques using R, a free software that is used by many finance professionals. The course is intended to prepare students to possess the quantitative tools to evaluate and implement in the finance arena. Prerequisite: STAT 4610 and FIN 4500 (If no experience in R).

FIN 4835 Executive Education - Finance for Non-Financial Managers (2 Credits)

This Executive Education workshop introduces you to the essential finance skills any business professional needs to know. You will learn the language, tools and techniques to become a more intelligent user of financial reports. Through hands-on learning exercises, you will learn how to simplify, understand and apply data from financial reports and budgets. You will gain the confidence to ask better questions and make more informed financial decisions. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

FIN 4860 Derivatives (4 Credits)

This course provides a theoretical foundation for the pricing of contingent claims and for designing risk-management strategies. It discusses more advanced material in financial derivatives and is intended for students who have a quantitative background and are interested in enhancing their knowledge of the way in which derivatives can be analyzed. This course covers option pricing models, hedging techniques, and trading strategies. It also includes portfolio insurance, value-at-risk measure, multistep binomial trees to value American options, interest rate options, and other exotic options. Prerequisite: FIN 4200.

FIN 4870 Strategic Finance (4 Credits)

Addresses theory, concepts, and techniques associated with asset management and creation of value from a strategic orientation. Links financial theory and practice to strategic and operational objectives of the firm, prepares student to incorporate risk and uncertainty into analytical decision-making process and to analyze divestiture, restructuring, and liquidation decisions. Prerequisite: FIN 4410.

FIN 4875 Executive Education – Strategic Finance (2 Credits)

Today's leading organizations require executives to use rigorous financial analysis in order to make strategic decisions that affect growth, profitability and competitive market advantage. Strategic Finance is a multidimensional Executive Education workshop that uses real simulations and an acquisition case study to map the connections between business strategy, finance and enterprise value creation. The goal of the course is to make you a more intelligent user of finance and strategy. It will enable you to ask better questions and to make better decisions. You will become a more sophisticated manager, particularly when focusing on the interplay and interdependence of strategy, finance & management. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

FIN 4885 Investment Banking and External Financing (4 Credits)

This course is an advanced Corporate Finance course, focusing on the decisions by companies related to external sources of financing. There will be a mix of theory and practice, with outside speakers providing insight into the practice component. Topics will include business valuation, mergers and acquisitions, startup financing, angel investing and venture capital, bank loans, private equity, stock issuance and going private. Prerequisite: FIN 4410.

FIN 4890 Fixed Income Analysis (4 Credits)

Emphasizes valuation and management of fixed income securities in prevailing environment of complex and innovative financial arrangements. Study of the nature of evolving markets, both domestically and internationally. Prerequisite: FIN 4200.

FIN 4980 Finance Internship (0-10 Credits)

Daniels College of Business's graduate curriculum is designed to be experiential and build upon practical experience. To gain the full benefit of this curriculum, students are encouraged to expand their experiential learning beyond the short term experiences required in the classroom. Internships that allow students to apply newly learned skills and theories in the workplace are considered an integral to the curriculum and all students are strongly encouraged to seek such opportunities. Permission of instructor required. Hours and times arranged by student.

FIN 4991 Independent Study (1-10 Credits)

Individual study and report. Hours and times arranged by student.

FIN 6305 Applied Quantitative Methods in Finance (4 Credits)

Applied Quantitative Methods in Finance" is a PhD-level seminar designed to immerse students in the techniques essential for quantitative research in Finance and other disciplines. This course offers a journey through the application of empirical methods and analytical frameworks using the Python programming language and key analytical packages. The examples and assignments cover topics including corporate governance, executive compensation, risk/return analysis, and the exploration of decentralized finance. Students will gain hands-on experience working with real-world data sets and get an introduction to the Finance literature. Structured around hands-on student research assignments, presentations and immersive sessions, the course covers a broad spectrum of quantitative methods including cross-sectional linear regression, two-stage least squares, forecasting and machine learning techniques such as variable selection. Each module is crafted to further the understanding of financial theories through empirical research and data analysis.

Management

Office: Daniels College of Business, 455 Mail Code: Daniels College of Business, 2101 S. University Blvd., Denver, CO 80208 Phone: 303-871-2489 Web Site: https://daniels.du.edu/management/

Master of Science in Management

The Master of Science in Management (MSM) is a 45-credit hour, 10-month program designed for people without a business background or degree. You will join a cohort of classmates from various careers, backgrounds and fields of study to learn management skills, ethical leadership, effective communications, and of course, business fundamentals. Wherever your passion lies, the Daniels MSM program can help prepare you for success. Daniels has been continuously accredited by the Association to Advance Collegiate Schools of Business International (AACSB) since 1923.

Master of Science in Management

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Standardized Test Scores

- GRE or GMAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842. The code to submit GMAT scores for this program is MZR-GT-31.

Other Requirements

· An admissions interview will be required by invitation only.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Certificate or Specialized Certificate in Leadership

MGMT 4201 Fundamentals of Managing and Leading (4 Credits)

Fundamentals of Managing and Leading is a graduate course that provides students with an introduction to essential management and leadership concepts and also their application. The course is organized around the classic managerial functions of planning, organizing, leading and controlling. In addition, the course surveys entrepreneurship, corporate strategy, and emerging topics in management and leadership.

MGMT 4202 Leading Self (4 Credits)

The purpose of this course is to provide insight into why and how sustainable desired change occurs at the level of individual human/social interaction. This course will focus on providing students the critical skills to "lead the self" towards personal/professional goals as the context for studying intentional change. Students will revisit assumptions held about themselves as they develop intentional strategic approaches to identify career opportunities in their selected fields and lead the self towards the accomplishment of professional objectives.

MGMT 4203 Leading Teams (4 Credits)

"Leading teams" is a graduate course to prepare students to provide formal and informal leadership to a team. Students will learn about the fundamental design principles of high-performing teams as well as common pitfalls that teams are subject to. Students will also learn about how to sustain team performance through effective information-sharing, decision-making, and conflict management. Students will also cover current topics in teams including virtual teams, team creativity and team-based innovation. This course is designed to stimulate student learning by letting students integrate abstract knowledge through concrete firsthand experiences.

MGMT 4204 Leading Organizations (4 Credits)

In this experiential challenge-driven course, students will leverage their skills and further build upon their experience by analyzing a company, including the firm's mission, vision, and values, business model and financial health of the organization via the Spring Challenge. After finalizing the scope of the spring project, students will assess the firm's strengths and weaknesses using a series of tools and frameworks as well as identifying opportunities and threats in their respective industry. Synthesis in the course takes place when the student is able to provide strategic recommendations that generate added value and competitive advantage for the firm. Learning is facilitated through a work-shop atmosphere that uses case studies of industry leaders currently in the news that can then be applied to the project subject company.

MGMT 4240 Global Business (2-4 Credits)

The Global Business course and ensuing international experience are designed to expose students to the challenges, opportunities and risks of doing business globally. How do you make well-informed decisions in a global environment, taking into consideration the economic, political, environmental, cultural and historical context of a country or region? Conducting business outside the United States involves a unique set of challenges. Diverse cultures, laws, languages, and currencies add to the complexity of putting together and managing international business ventures. As a part of the international trip, students will meet with business executives and organizational leaders across a variety of industries to gain a broad understanding of the business environment of the countries being visited. In addition to completing secondary research beforehand, students will also be responsible for conducting primary research by setting up small team meetings in-country to develop a hands-on understanding of the business environment on the ground. The core end deliverable is a feasibility study. Before registering for MGMT 4240 - Global Business, students must have a degree review with Academic Advisor or Program Director.

MGMT 4280 Business Design (4 Credits)

Each student learns an organized approach to rapid design of a business with a sustainable competitive advantage based upon innovations(s) to the business model. That innovation(s) is discovered through an investigation of the existing business models and the competitive landscape including: suppliers, customers, competitors, substitutes and barriers of entry. Specific opportunities are identified through investigation of the following: industry, market, and competition. Opportunities to create competitive advantages are investigated through the design of strategies in: marketing, sales, operations, human capital, social responsibility, financing, corporate governance and technology. The course offers a workshop atmosphere in which students are expected to apply and discuss the various aspects of business planning. The result is a written business plan and presentation to funding sources reflecting a sustainable competitive advantage and creation of a defensible market.

MGMT 4301 Organizational Behavior (4 Credits)

This course focuses on psychosocial and behavioral issues in management and leadership to better understand how to drive performance and well-being. The course is founded upon an interdisciplinary approach, with major inputs coming from social psychology, administrative science, engineering, medicine, sociology, and philosophy. The course will center around behavioral analysis and organizational concepts. Students will gain a solid understanding of the latest in organizational psychology from a declarative knowledge standpoint, then put this knowledge into use for procedural knowledge.

MGMT 4302 Leading Talent (2 Credits)

A management course for graduate students grounded in a strong foundation of real experiences managing and leading Human Resource organizations. This course is designed to unify strategy, human resource strategy and principles of management in a highly interactive format employing multiple learning methods.

MGMT 4303 Negotiating with Power (4 Credits)

This course presents conceptual models, tactical approaches, and self-assessment tools to help you understand political dynamics as they unfold around you, and to develop your own influence style and negotiation skill. By focusing on specific expressions of power and influence, this course gives you the opportunity to observe its effective—and ineffective—use in different contexts and stages of a person's career. This course will challenge you to define for yourself what will constitute the effective exercise of power and influence in your life. Once we have a basic understanding of power and political behavior, we will explore the relationship between power and effective negotiation. Yet, most of us know very little about why we are sometimes successful and other times not, and even fewer of us know what it takes to be consistently effective in negotiations. This course will broaden your understanding of how to effectively negotiate in a variety of contexts by engaging in simulated negotiations during class.

MGMT 4304 Project Management for Leaders (4 Credits)

This course will introduce the student to the key elements of a successful project delivery system. The project delivery system consists of five components: training, tools, core skills, company support, and a project delivery process. The process is the means by which projects are consistently and efficiently planned, executed, and completed to the satisfaction of clients. The system is aligned with the principles of a total quality improvement program, namely client focus, project manager commitment, evaluation and measurement, corporate support, and continuous improvement.

MGMT 4305 Business Model Design and Innovation (2 Credits)

Each student learns an organized approach to rapid design of a business with a sustainable competitive advantage based upon innovations(s) to the business model. Innovation(s) is discovered through an investigation of the existing business models and the industry landscape including: customers, competitors, substitutes, suppliers, and barriers to entry. Specific opportunities are identified through investigation of the following: industry, market, and competition. Opportunities to create competitive advantages are investigated through the design of financial, marketing, sales, operation, talent, technology, and social responsibility strategies. The course offers a workshop atmosphere in which students are expected to apply and discuss the various aspects of a Business Model and a Business Plan. The result is a written business plan and presentation to a potential funding panel.

MGMT 4306 Virtual Business Management Simulation (2 Credits)

The focus of this course is on gaining new venture experience. Through an online/virtual computer simulation, students will be placed into a very realistic international business setting, where they will start up and run a company through multiple rounds of decision-making. The online simulation allows students to build entrepreneurial firms, experiment with strategies, and compete with other student teams in a virtual business world. Designed to mimic the competitive, ever changing marketplace, the simulation lets students gain experience in market analysis, strategy formulation, and the management of a new venture.

MGMT 4330 Financials for Leaders (4 Credits)

This course is intended to help students develop a financial decision-making framework that can be used to assess and understand how financial decisions positively and negatively affect their company's short-and long-term well-being. Its emphasis is to introduce students to various tools and techniques used in financial management and to demonstrate how they are applied to the managerial decision-making process. This will be accomplished through a combination of class discussions and case study analyses. Topics include decision making, financial statements, ratio analysis, and return-on-investment.

MGMT 4340 Strategic Human Resource Mgmt (4 Credits)

This course focuses on the effective management of human resources in order to create sustained competitive advantage. The course covers the major policy areas of employee influence mechanisms, staffing, training and development, performance appraisal, reward systems, and work design so that students are better prepared to provide direction to the creation and implementation of effective management systems. Prerequisite: MGMT 3900 or permission of instructor.

MGMT 4345 Performance & Rewards System (4 Credits)

Measuring and improving human performance, techniques of individual objective settings including MBO, appraisal and feedback systems, creating and managing compensation programs, job design, analysis and redesign of reward systems in various organizational contexts. Prerequisite: MBA 4121 or equivalent.

MGMT 4350 Business Summit Series: Current Business Issues and Topics (4 Credits)

The Business Summit Series is an elective course that provides students with insights into a variety of contemporary business issues and topics with a practical approach to developing business leadership skills and competencies. Before the course commences, students are invited to provide input and help faculty select the topics that are covered in the series. The faculty will develop modules, with each module covering a discrete business topic a workshop format. The workshops are taught in four-hour segments, with some workshops covering more than four hours, depending on content and learning outcomes. Workshops span practical topics that are not covered in-depth during the core PMBA curriculum, and they also include emerging business subjects. Topics include: Go-To-Market Strategy, Business Development Strategies, Mastering Sales Techniques, Business Consulting Skills, Becoming a Manager, Organizational Change Leadership, Franchise Business Model, and Colorado's Marijuana Industry. Other emerging business topics may include the Colorado small business market and new industry segments. Industry leaders may present to the class as subject matter experts.

MGMT 4400 Ethical Leadership (4 Credits)

Consideration of ethics in business and organizations is relevant for being an effective and successful manager and leader. The course is designed to strengthen capacities in terms of ethical awareness, analysis, and application. An important learning outcome of the course is to facilitate the growth of students in terms of making practically wise and ethically sound decisions in their future careers. Decisions include fulfilling responsibilities to create and sustain ethical climates and cultures for teams, business units, and organizations. This course introduces students to fundamental ethical concepts and ethical decision making frameworks. Students will apply these frameworks to cases and issues relevant to one's role as a future manager and leader. Students will also be introduced current research in moral psychology and behavioral ethics, and students will apply this knowledge in assessing a current case related to business and management ethics. The course will cover current issues such as sexual harassment, privacy in the workplace, and whistleblowing. Students will develop a personalized values-based leadership plan.

MGMT 4401 Global Leadership I (2 Credits)

This course is the first of two in the global leadership sequence. As a part of the sequence, there is a mandatory international travel component that will occur over the break between the winter and spring quarters. The operation of a far-flung global enterprise (large or small) imposes special demands upon its leaders. This course explores, through a variety of leadership perspectives, actions and strategies that can be employed to succeed in a global firm. These perspectives include: (1) the headquarters and chief executive officer; (2) global functional disciplines (with special emphasis on global human resource management); (3) the country manager; (4) the global product/service manager; and (5) the host country. Throughout the course, students will systematically examine the cross-cultural, operational and ethical complexities of leading and managing a truly "global" company.

MGMT 4402 Global Leadership II (1 Credit)

The centerpiece of the Global Leadership course series is the Global Leadership Experience (GLX) taking place in between Winter and Spring quarters. GLX involves travel to an overseas location where students have the opportunity to interact with business, government, academic and/or NGO players while exploring global leadership challenges and engaging in research to support their field project. Although locations may differ, each GLX is designed to offer students a deep cross-cultural experience and an opportunity to examine first-had, global business activity in field locations. Global Leadership II offers students space to process and reflect on what they have learned during their Global Leadership Experience. Students will engage in collective debriefings on their experience using insights gained to develop a personal viewpoint on the future of globalization and implications of their experience for their careers. Students will also be challenged to apply learnings from Global Leadership I as they complete work on their team projects and present findings to their colleagues and an expert panel.

MGMT 4403 Business and Society (2 Credits)

This course examines the role of business in society and explores important issues in the relationships between business, government, and society. These issues are approached from a stakeholder perspective, integrating business strategy with law, ethics, and social responsibility. The obligations of business to its multiple stakeholders are established and applied through analysis of companies, cases, and current events.

MGMT 4405 Strategic Execution and Summit Team Competition and Assessment (3 Credits)

Strategic Execution is a Challenge Driven Educational (CDE) course that builds off several previous MS Management courses. Students will leverage the contents from accounting, finance, management, marketing, strategy, and business analytics to engage with corporate partners to examine real-world problems. This course provides you with the opportunity to apply what you have learned so far in the MSM program with a live client. You will work on a project focused on business and management. Scoping the project will be a key learning outcome.

MGMT 4410 Qualitative Research Methods (2 Credits)

This course provides students with an overview of and experience with qualitative methods. You are introduced to a wide variety of qualitative methods, including ethnography, observation, interviewing, grounded theory, discourse analysis, deconstruction, historical methods, and action research. The course is roughly divided into two major sections. The first half of the course introduces you to the epistemological foundations of qualitative research and emphasizes design and data collection. The second half of the course introduces a variety of techniques for coding and analyzing qualitative data and provides exposure to many exemplars of qualitative reports/studies. We will examine conventions for ensuring that qualitative work is rigorous and appropriate for action. Throughout the course you will be given opportunities to try on various methods and gain some hands-on experience in several areas.

MGMT 4425 Leading People and Organizations (2 Credits)

We live in a VUCA (Volatile, Uncertain, Complex and Ambiguous) world. Effective leaders are skilled in navigating the challenges presented by our VUCA world – especially when it comes to leading and managing people and organizations. This course focuses on the effective leadership and management of people, every organization's most critical resource. Employees' knowledge, skills, commitment, creativity, and effort are the basis for sustained competitive advantage. People are an organization's resources who deal directly with customers, have creative ideas for new products or for process improvements, who devise marketing strategy or take technologies to the next level. Effective and ethical leaders build and sustain employees' knowledge, skills, commitment, and creativity to build collaborative cultures that foster high performance, reap the benefits of a diverse workforce, and create sustained competitive advantage. In this course, we approach business from a general management perspective, integrating concepts from organizational behavior, organization theory, human resource management, strategy, political science, and cultural anthropology. Course topics include: • Organizational structure and systems. • Selection and hiring, onboarding, motivation, feedback and coaching, and employee engagement. • Organizational politics, power dynamics, and conflict. • Organizational culture.

MGMT 4450 Power and Influence (4 Credits)

This course presents conceptual models, tactical approaches, and self-assessment tools to help you understand political dynamics as they unfold around you, and to develop your own influence style and negotiation skill. By focusing on specific expressions of power and influence, this course gives you the opportunity to observe its effective—and ineffective—use in different contexts and stages of a person's career. This course will challenge you to define for yourself what will constitute the effective exercise of power and influence in your life.

MGMT 4501 Springboard Tools I (1 Credit)

PowerPoint, Microsoft Word, Adobe, Excel, Outlook... we could hardly imagine doing business in today's world without them. CRM software will soon be regarded in the same essential way. As technology fundamentally shifts the focus of business to a completely customer-centered environment, the pervasiveness of CRM tools will only grow. Though many of these tools exist, Salesforce is one of, if not the most, prevalent CRM tools available in today's market. Used by companies of all sizes and industries, Salesforce provides a suite of products that allow organizations to place their customers at the heart of their businesses, leveraging customer data to gain valuable insights, and provide the customer with a wholistic and seamless experience and interaction with the company's brand. Salesforce's CRM software provides products for the full spectrum of customer interactions, from sales to marketing, commerce to customer service. There are several paths to developing Salesforce proficiency, ranging from a business (end) user of the product, to an administrator (someone who customizes the tool to meet business requirements), to a consultant (someone who implements Salesforce rollouts at organizations), to a marketer (an expert in Salesforce's marketing tools), and beyond.

MGMT 4502 Springboard Tools II (1 Credit)

Your journey to securing a career upon graduation starts with the first day of classes and continues throughout your program. The Springboard Tools courses are designed to prepare students to be career-ready upon graduation. Students will learn various tools used in business today, such as Salesforce, Python, and more as determined by the business community. In addition to understanding the tool and its application, students will be required to incorporate problem-solving techniques when using a particular tool.

MGMT 4525 Facility Management (4 Credits)

What is a Public Assembly Facility? Public assembly facilities such as arenas, stadiums, convention centers, and theatres evolved out of the need by social communities to build permanent structures for public assembly, for political and commercial activities, religion, sports, spectacles, artistic expression and for commercial and educational assemblies. This course examines the specific areas of responsibility that one must acknowledge and understand to operate a successful venue of this type. We discuss the core competencies required and the unique areas of concentration that separate a public assembly facility from other venue types. Students realize the significant impact and benefit that facilities like these have on the social, educational and economic environment of communities.

MGMT 4530 Technologies for Sport & Entertainment Management (2 Credits)

This is a specialized course for the MBA student interested in expanding their knowledge of the sports industry as a business and as a world economic force. It provides students with a framework for understanding the scope of the sports business across various venues, as it relates to information technology. Management Sport Technology focuses on understanding the practical uses of computer applications as a tool in sport management activities. Emphasis is placed on demonstrated proficiency in project management, spreadsheet management, database management, and Web page development.

MGMT 4535 Managing Sponsorships for Sport & Entertainment Events (2 Credits)

The purpose of this course is to give students an understanding of sports sponsorship from the perspective of the corporate sponsor and the sports entity. The course identifies and describes the several media distribution channels that are used in corporate sports sponsorship. In addition, students learn how to use sports media distribution properties to create an effective sports marketing plan for corporate sponsors. Students put together a corporate sports marketing plan with a sample sports team.

MGMT 4540 Advanced Seminar in Sports and Entertainment Management (4 Credits)

The purpose of this seminar is to consider current topics in sport and entertainment management. Topics vary by quarter depending on timeliness of topics and interest of students. Potential topics may include public policy questions; ethical issues; current economic impacts and analysis; sport and entertainment management factors and how the various segments (professional, amateur, collegiate, high school, recreational and others) relate; environmental impacts; global issues and other issues that impact the current and future fields of sport and entertainment management.

MGMT 4545 Leadership, Team, and Career Development (2 Credits)

Daniels MBA students are preparing for leadership roles-as entrepreneurs, in corporations, and in not-for-profit organizations. In this course we will look at leadership from a variety of perspectives. Once we have reviewed what the experts have to say about leadership, we will turn our focus to helping you develop your personal theory of leadership. You will answer on important questions: How will I lead? Armed with this knowledge, you will be better equipped to handle leadership challenges as you go forward in life.

MGMT 4555 Interdisciplinary Projects for National Park Service (4 Credits)

A practical application of key business and managerial knowledge, skills, and competencies designed to integrate graduate program elements and provide students with a unique opportunity to work on value-add projects with key managers from the National Park Service. This is an experiential course for integrating and applying multi-disciplined learning outcomes and experiences to real-world challenges, problems, and dilemmas, resulting in solutions for the National Parks Service.

MGMT 4560 Leadership of the Future (4 Credits)

In nearly every aspect of life - science, business, pop culture, environment, technology, global politics - we are inundated with data about how much and how fast the world is changing. How will these major shifts impact what we think of as leadership, and how can one develop to be prepared to lead in a fast-moving, volatile, and complex world? Leadership of the Future is a course that takes a deep look at how we've thought about what "leadership" is in the past from a business perspective, and considers what the future will require of leaders as they seek to effectively lead and make a difference in a complex world. The course is founded upon an interdisciplinary approach, drawing from a variety of disciplines including psychology, administrative science, literature, medicine, and philosophy. The course will center around behavioral analysis and active reflective practice: together we will think deeply about leadership as a behavior within a particular context, and as a practice to cultivate. Students will articulate a set of leadership development goals for themselves and engage experientially in service of self-observation, personal growth, and learning. Cross-listed with MGMT 3560.

MGMT 4620 Organizational Dynamics (4 Credits)

In this course, you will: (1) understand and develop a set of management and leadership skills critical for effectiveness in high performance work environments; (2) develop the ability to analyze organizations and environments from multiple perspectives; (3) explore policies and practices for facilitating organizational change; (4) become a valued and effective member of a work team; and (5) learn how to incorporate effective communication, critical thinking, creative problem solving, and technology, into organizational behaviors and processes.

MGMT 4625 Leading People & Organizations (4 Credits)

This course focuses on the effective management of people, every organization's most critical resource. Employees' knowledge, skills, commitment, creativity, and effort are the basis for sustained competitive advantage. It is people who deal directly with customers, have creative ideas for new products or for process improvements, who devise marketing strategy or take technologies to the next level. In this course, we approach the people side of business from a general management perspective, integrating concepts from organizational behavior, human resource management, strategy, and organizational design. Course topics include motivation, reward systems, engagement; feedback; processes by which work is done and decisions are made, including attention to teams, power dynamics, conflict, and negotiations; the structure of the organization and its systems, including job and organizational design and systems and policies affecting human capital; the organization's culture and history; and the external environment within which the organization operates, including legal, regulatory, demographic, economic and national cultural factors.

MGMT 4630 Strategic Human Resources Management (4 Credits)

This course advances the argument that effective human resource policies will create sustained competitive advantage. To that end, this course will address the effective management of human resources in various policy areas: staffing, diversity, training and development, voice and influence, performance appraisal, and reward systems. Rather than taking a traditional, staff personnel perspective, we will discuss human resource management from the strategic perspective of a general manager. Prerequisite: MGMT 4620.

MGMT 4650 Introduction to Management Consulting (4 Credits)

This course is designed to provide a broad overview of the management consulting profession, including its industry and competitive dynamics, major practice areas, approaches to implementation, management of consulting firms and the future of consulting. In addition, emphasis is given to the practice of consulting through the development of certain high impact skills in evaluation, proposal writing, data gathering and client presentations. The course is relevant to those who: 1) are specifically interested in consulting careers, 2) have job interests that involve staff positions in corporations, 3) want to become line managers who might one day use consultants, 4) wish to develop general consulting skills and familiarity with the consulting industry. The learning process in class will consist of lectures, cases, readings, exercises and guest speakers. This wide variety of learning methods is intended to convey both the necessary knowledge and practical skills necessary for building a sound foundation for becoming a professional consultant. It is essential that everyone comes well-prepared to class, as the learning process depends heavily upon participation.

MGMT 4690 Strategic Management (4 Credits)

Management 4690 focuses on the strategic management of an organization as a whole. This course will introduce students to key decisions that top executives have to make when developing and implementing strategies, methodologies for informing those decisions, and how to interpret information from those approaches to guide strategic decision-making. Overall, from the perspective of leading an organization, students will learn how strategic decisions impact a firm's competitive advantage and success.

MGMT 4700 Topics in Management (1-4 Credits)

MGMT 4710 Sustaining Family Enterprises (4 Credits)

Family enterprises have a tremendous impact on our local, national and global economies. Today, the definition of the family enterprise extends beyond just the business entity. It includes family offices, family "banks," family councils, trusts, and family foundations, just to name a few. Further, what happens in, and how decisions are made by, family enterprise affects not only the active family members but other key stakeholders such as inactive family members, in-laws, non-family managers and employees, professional advisors, customers, suppliers and competitors. This course gives students insight into the universe of possibilities that families, enterprises and their advisors face when engaged in systemic transition planning. This highly interdisciplinary course is appropriate for anyone who intends to work in or with family enterprises. This includes family members, accountants, attorneys, estate planners, financial or wealth managers, family office professionals, insurance consultants, business advisors, management consultants, organizational and leadership development experts, international business professionals, psychologists, social workers, and family therapists.

MGMT 4720 Sustaining Family Enterprise (4 Credits)

This course is intended to provide students with greater insight into the world of family enterprise. It will cover definitions, concepts, frameworks, and models to help students develop the system perspective of family, business, ownership, governance, and wealth issues. This course is applicable to those working in or governing their family enterprise (family businesses, family offices, real estate management firms, investment entities, boards, family councils, etc.), those students in or seeking careers as professional service advisors to family enterprise (accountants, estate planners, lawyers, wealth planners, psychologists, family therapists, board members, etc.), and those students with a global interest in how family enterprise affects, and is affected by, the global economy.

MGMT 4740 Global Business I (2 Credits)

Almost all business is impacted by global trends. This course will help students develop a global mindset and understand challenges and opportunities arising from doing business across national boundaries and cultures. Addressing such issues as diverse cultures, laws, languages, currencies and economic contexts, the course will help students make well-informed decisions giving due consideration to the local and global context in which a given business operates. This course must be taken prior to MGMT 4745 and both courses are to be taken as a sequential series.

MGMT 4745 Global Business II (2 Credits)

Working across national boundaries and cultures demands a new approach to business management. This course will help students assess the local environment of the country in which they intend to do business; introduces students to global aspects of marketing, finance, and management; and examines examples of opportunities associated with doing business in so-called "base of the pyramid" markets. This course must be taken after MGMT 4740 and is the second in the series.

MGMT 4790 Managing Strategic Alliances (4 Credits)

The purpose of this course is to examine and expand upon the current understanding of the challenges of developing and managing strategic alliances. Reflecting the breadth of the novel features of the structure, the course draws from both strategic management and organizational behavioral disciplines. To order the discussion, we take a process view in addressing why and then how to use a strategic alliance. We initially focus on when to use an alliance. We then turn to the formation of an alliance - examining how to select a partner, which structure to choose and how to negotiate. Following, we discuss post-formation issues of partner relationships, management of the alliance, performance evaluation and alliance termination. We conclude the course with sessions devoted towards managing a portfolio of alliances and network management in general.

MGMT 4835 Negotiating with Confidence (1 Credit)

In this intensive Executive Education workshop, you'll practice skills to excel in complex business negotiations. Learn how to maintain control, project influence and confidence, and apply psychological principles effectively throughout the negotiation process. Our faculty leverages cutting-edge research and c-suite expertise to teach you innovative strategies to consistently secure the best possible outcomes. This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

MGMT 4855 Executive Education – Accelerated Leadership Experience (4 Credits)

Delivering best practices and highly applicable team building skills, the Accelerated Leadership Experience (ALX) from Daniels Executive Education is designed for managers to act as a catalyst for transformation. The result? Successful and fulfilled leaders. ALX includes both classroom and experiential activities and covers topics such as emotional intelligence, communication, coaching, feedback, wellness, stress management, energy management, team effectiveness, people development, diversity and inclusion. The support of ALX's innovative leadership curriculum, experienced faculty, and a cohort of professionals who are at similar points in their careers will help you develop the tools and skills needed to succeed in our increasingly complex world. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

MGMT 4875 Executive Education - Denver Leadership Experience (4 Credits)

The Denver Leadership Experience (DLX) from Daniels' Executive Education is a transformational workshop designed to challenge you to think and perform differently in order to reach your leadership potential. This award-winning program delivers timely, relevant, and innovative leadership development essentials for our ever-changing, increasingly complex business world. Employee well-being and mental health are more important than ever, therefore this program has deepened the focus on wellness, mindfulness, and stress management; habits which great leaders implement but tend to deprioritize. In addition to our robust leadership content and faculty expertise, you'll be surrounded by a group of professionals who will bring their own experiences and input which adds value to the conversation and deepens the impact of DLX. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

MGMT 4980 Graduate Internship in Mgmt (0-10 Credits)

Hours and times arranged by student.

MGMT 4991 Independent Study (1-10 Credits)

Individual research and report. Hours and times arranged by student.

MGMT 4995 Independent Research (1-10 Credits)

MGMT 6300 Seminar in Leadership Strategy Research (4 Credits)

The field of strategy is broad and covers a diverse set of 'macro' organizational theories and topics. In this course, you will have a solid overview of research in the field of strategy. This course will enable you to develop a conceptual view of the field and its theoretical roots, topics, and branches and begin to apply strategic management theories to address original research questions and to solve problems within your own organizations. This will require you to critique extant knowledge and to identify what is missing and what is needed to advance understanding. Finally, this course will provide a beginning point for your knowledge of strategy theories that can guide future pursuits. That is, it is not possible to cover the immense strategy literature in one semester but this course should provide you with the knowledge needed to explore the field of strategy on your own as you move forward.

MGMT 6301 Research Seminar in Organizational Ethics (4 Credits)

The seminar focuses an exploration of the role of ethics from the lens of a leader. In this area, the course examines a range of ethical and social performance issues and challenges that leaders must confront. Our goal is to broaden student understanding of the different theoretical arguments and tensions in this area, with a focus on issues faced by modern day organizations.

MGMT 6302 Research Seminar in Leadership: An Organizational Perspective (4 Credits)

This seminar will focus on understanding the major theoretical streams in the leadership literature with a focus on leadership within organizations. Emphasis will be placed on comparing historical trends such as trait, behavioral, contingency, and transformational/charismatic theories of leadership and exploring contemporary approaches such as servant leadership, authentic leadership, positive leadership, and shared leadership.

Courses

MGMT 4201 Fundamentals of Managing and Leading (4 Credits)

Fundamentals of Managing and Leading is a graduate course that provides students with an introduction to essential management and leadership concepts and also their application. The course is organized around the classic managerial functions of planning, organizing, leading and controlling. In addition, the course surveys entrepreneurship, corporate strategy, and emerging topics in management and leadership.

MGMT 4202 Leading Self (4 Credits)

The purpose of this course is to provide insight into why and how sustainable desired change occurs at the level of individual human/social interaction. This course will focus on providing students the critical skills to "lead the self" towards personal/professional goals as the context for studying intentional change. Students will revisit assumptions held about themselves as they develop intentional strategic approaches to identify career opportunities in their selected fields and lead the self towards the accomplishment of professional objectives.

MGMT 4203 Leading Teams (4 Credits)

"Leading teams" is a graduate course to prepare students to provide formal and informal leadership to a team. Students will learn about the fundamental design principles of high-performing teams as well as common pitfalls that teams are subject to. Students will also learn about how to sustain team performance through effective information-sharing, decision-making, and conflict management. Students will also cover current topics in teams including virtual teams, team creativity and team-based innovation. This course is designed to stimulate student learning by letting students integrate abstract knowledge through concrete firsthand experiences.

MGMT 4204 Leading Organizations (4 Credits)

In this experiential challenge-driven course, students will leverage their skills and further build upon their experience by analyzing a company, including the firm's mission, vision, and values, business model and financial health of the organization via the Spring Challenge. After finalizing the scope of the spring project, students will assess the firm's strengths and weaknesses using a series of tools and frameworks as well as identifying opportunities and threats in their respective industry. Synthesis in the course takes place when the student is able to provide strategic recommendations that generate added value and competitive advantage for the firm. Learning is facilitated through a work-shop atmosphere that uses case studies of industry leaders currently in the news that can then be applied to the project subject company.

MGMT 4240 Global Business (2-4 Credits)

The Global Business course and ensuing international experience are designed to expose students to the challenges, opportunities and risks of doing business globally. How do you make well-informed decisions in a global environment, taking into consideration the economic, political, environmental, cultural and historical context of a country or region? Conducting business outside the United States involves a unique set of challenges. Diverse cultures, laws, languages, and currencies add to the complexity of putting together and managing international business ventures. As a part of the international trip, students will meet with business executives and organizational leaders across a variety of industries to gain a broad understanding of the business environment of the countries being visited. In addition to completing secondary research beforehand, students will also be responsible for conducting primary research by setting up small team meetings in-country to develop a hands-on understanding of the business environment on the ground. The core end deliverable is a feasibility study. Before registering for MGMT 4240 - Global Business, students must have a degree review with Academic Advisor or Program Director.

MGMT 4280 Business Design (4 Credits)

Each student learns an organized approach to rapid design of a business with a sustainable competitive advantage based upon innovations(s) to the business model. That innovation(s) is discovered through an investigation of the existing business models and the competitive landscape including: suppliers, customers, competitors, substitutes and barriers of entry. Specific opportunities are identified through investigation of the following: industry, market, and competition. Opportunities to create competitive advantages are investigated through the design of strategies in: marketing, sales, operations, human capital, social responsibility, financing, corporate governance and technology. The course offers a workshop atmosphere in which students are expected to apply and discuss the various aspects of business planning. The result is a written business plan and presentation to funding sources reflecting a sustainable competitive advantage and creation of a defensible market.

MGMT 4301 Organizational Behavior (4 Credits)

This course focuses on psychosocial and behavioral issues in management and leadership to better understand how to drive performance and well-being. The course is founded upon an interdisciplinary approach, with major inputs coming from social psychology, administrative science, engineering, medicine, sociology, and philosophy. The course will center around behavioral analysis and organizational concepts. Students will gain a solid understanding of the latest in organizational psychology from a declarative knowledge standpoint, then put this knowledge into use for procedural knowledge.

MGMT 4302 Leading Talent (2 Credits)

A management course for graduate students grounded in a strong foundation of real experiences managing and leading Human Resource organizations. This course is designed to unify strategy, human resource strategy and principles of management in a highly interactive format employing multiple learning methods.

MGMT 4303 Negotiating with Power (4 Credits)

This course presents conceptual models, tactical approaches, and self-assessment tools to help you understand political dynamics as they unfold around you, and to develop your own influence style and negotiation skill. By focusing on specific expressions of power and influence, this course gives you the opportunity to observe its effective—and ineffective—use in different contexts and stages of a person's career. This course will challenge you to define for yourself what will constitute the effective exercise of power and influence in your life. Once we have a basic understanding of power and political behavior, we will explore the relationship between power and effective negotiation. Yet, most of us know very little about why we are sometimes successful and other times not, and even fewer of us know what it takes to be consistently effective in negotiations. This course will broaden your understanding of how to effectively negotiate in a variety of contexts by engaging in simulated negotiations during class.

MGMT 4304 Project Management for Leaders (4 Credits)

This course will introduce the student to the key elements of a successful project delivery system. The project delivery system consists of five components: training, tools, core skills, company support, and a project delivery process. The process is the means by which projects are consistently and efficiently planned, executed, and completed to the satisfaction of clients. The system is aligned with the principles of a total quality improvement program, namely client focus, project manager commitment, evaluation and measurement, corporate support, and continuous improvement.

MGMT 4305 Business Model Design and Innovation (2 Credits)

Each student learns an organized approach to rapid design of a business with a sustainable competitive advantage based upon innovations(s) to the business model. Innovation(s) is discovered through an investigation of the existing business models and the industry landscape including: customers, competitors, substitutes, suppliers, and barriers to entry. Specific opportunities are identified through investigation of the following: industry, market, and competition. Opportunities to create competitive advantages are investigated through the design of financial, marketing, sales, operation, talent, technology, and social responsibility strategies. The course offers a workshop atmosphere in which students are expected to apply and discuss the various aspects of a Business Model and a Business Plan. The result is a written business plan and presentation to a potential funding panel.

MGMT 4306 Virtual Business Management Simulation (2 Credits)

The focus of this course is on gaining new venture experience. Through an online/virtual computer simulation, students will be placed into a very realistic international business setting, where they will start up and run a company through multiple rounds of decision-making. The online simulation allows students to build entrepreneurial firms, experiment with strategies, and compete with other student teams in a virtual business world. Designed to mimic the competitive, ever changing marketplace, the simulation lets students gain experience in market analysis, strategy formulation, and the management of a new venture.

MGMT 4330 Financials for Leaders (4 Credits)

This course is intended to help students develop a financial decision-making framework that can be used to assess and understand how financial decisions positively and negatively affect their company's short-and long-term well-being. Its emphasis is to introduce students to various tools and techniques used in financial management and to demonstrate how they are applied to the managerial decision-making process. This will be accomplished through a combination of class discussions and case study analyses. Topics include decision making, financial statements, ratio analysis, and return-on-investment.

MGMT 4340 Strategic Human Resource Mgmt (4 Credits)

This course focuses on the effective management of human resources in order to create sustained competitive advantage. The course covers the major policy areas of employee influence mechanisms, staffing, training and development, performance appraisal, reward systems, and work design so that students are better prepared to provide direction to the creation and implementation of effective management systems. Prerequisite: MGMT 3900 or permission of instructor.

MGMT 4345 Performance & Rewards System (4 Credits)

Measuring and improving human performance, techniques of individual objective settings including MBO, appraisal and feedback systems, creating and managing compensation programs, job design, analysis and redesign of reward systems in various organizational contexts. Prerequisite: MBA 4121 or equivalent.

MGMT 4350 Business Summit Series: Current Business Issues and Topics (4 Credits)

The Business Summit Series is an elective course that provides students with insights into a variety of contemporary business issues and topics with a practical approach to developing business leadership skills and competencies. Before the course commences, students are invited to provide input and help faculty select the topics that are covered in the series. The faculty will develop modules, with each module covering a discrete business topic a workshop format. The workshops are taught in four-hour segments, with some workshops covering more than four hours, depending on content and learning outcomes. Workshops span practical topics that are not covered in-depth during the core PMBA curriculum, and they also include emerging business subjects. Topics include: Go-To-Market Strategy, Business Development Strategies, Mastering Sales Techniques, Business Consulting Skills, Becoming a Manager, Organizational Change Leadership, Franchise Business Model, and Colorado's Marijuana Industry. Other emerging business topics may include the Colorado small business market and new industry segments. Industry leaders may present to the class as subject matter experts.

MGMT 4400 Ethical Leadership (4 Credits)

Consideration of ethics in business and organizations is relevant for being an effective and successful manager and leader. The course is designed to strengthen capacities in terms of ethical awareness, analysis, and application. An important learning outcome of the course is to facilitate the growth of students in terms of making practically wise and ethically sound decisions in their future careers. Decisions include fulfilling responsibilities to create and sustain ethical climates and cultures for teams, business units, and organizations. This course introduces students to fundamental ethical concepts and ethical decision making frameworks. Students will apply these frameworks to cases and issues relevant to one's role as a future manager and leader. Students will also be introduced current research in moral psychology and behavioral ethics, and students will apply this knowledge in assessing a current case related to business and management ethics. The course will cover current issues such as sexual harassment, privacy in the workplace, and whistleblowing. Students will develop a personalized values-based leadership plan.

MGMT 4401 Global Leadership I (2 Credits)

This course is the first of two in the global leadership sequence. As a part of the sequence, there is a mandatory international travel component that will occur over the break between the winter and spring quarters. The operation of a far-flung global enterprise (large or small) imposes special demands upon its leaders. This course explores, through a variety of leadership perspectives, actions and strategies that can be employed to succeed in a global firm. These perspectives include: (1) the headquarters and chief executive officer; (2) global functional disciplines (with special emphasis on global human resource management); (3) the country manager; (4) the global product/service manager; and (5) the host country. Throughout the course, students will systematically examine the cross-cultural, operational and ethical complexities of leading and managing a truly "global" company.

MGMT 4402 Global Leadership II (1 Credit)

The centerpiece of the Global Leadership course series is the Global Leadership Experience (GLX) taking place in between Winter and Spring quarters. GLX involves travel to an overseas location where students have the opportunity to interact with business, government, academic and/or NGO players while exploring global leadership challenges and engaging in research to support their field project. Although locations may differ, each GLX is designed to offer students a deep cross-cultural experience and an opportunity to examine first-had, global business activity in field locations. Global Leadership II offers students space to process and reflect on what they have learned during their Global Leadership Experience. Students will engage in collective debriefings on their experience using insights gained to develop a personal viewpoint on the future of globalization and implications of their experience for their careers. Students will also be challenged to apply learnings from Global Leadership I as they complete work on their team projects and present findings to their colleagues and an expert panel.

MGMT 4403 Business and Society (2 Credits)

This course examines the role of business in society and explores important issues in the relationships between business, government, and society. These issues are approached from a stakeholder perspective, integrating business strategy with law, ethics, and social responsibility. The obligations of business to its multiple stakeholders are established and applied through analysis of companies, cases, and current events.

MGMT 4405 Strategic Execution and Summit Team Competition and Assessment (3 Credits)

Strategic Execution is a Challenge Driven Educational (CDE) course that builds off several previous MS Management courses. Students will leverage the contents from accounting, finance, management, marketing, strategy, and business analytics to engage with corporate partners to examine real-world problems. This course provides you with the opportunity to apply what you have learned so far in the MSM program with a live client. You will work on a project focused on business and management. Scoping the project will be a key learning outcome.

MGMT 4410 Qualitative Research Methods (2 Credits)

This course provides students with an overview of and experience with qualitative methods. You are introduced to a wide variety of qualitative methods, including ethnography, observation, interviewing, grounded theory, discourse analysis, deconstruction, historical methods, and action research. The course is roughly divided into two major sections. The first half of the course introduces you to the epistemological foundations of qualitative research and emphasizes design and data collection. The second half of the course introduces a variety of techniques for coding and analyzing qualitative data and provides exposure to many exemplars of qualitative reports/studies. We will examine conventions for ensuring that qualitative work is rigorous and appropriate for action. Throughout the course you will be given opportunities to try on various methods and gain some hands-on experience in several areas.

MGMT 4425 Leading People and Organizations (2 Credits)

We live in a VUCA (Volatile, Uncertain, Complex and Ambiguous) world. Effective leaders are skilled in navigating the challenges presented by our VUCA world – especially when it comes to leading and managing people and organizations. This course focuses on the effective leadership and management of people, every organization's most critical resource. Employees' knowledge, skills, commitment, creativity, and effort are the basis for sustained competitive advantage. People are an organization's resources who deal directly with customers, have creative ideas for new products or for process improvements, who devise marketing strategy or take technologies to the next level. Effective and ethical leaders build and sustain employees' knowledge, skills, commitment, and creativity to build collaborative cultures that foster high performance, reap the benefits of a diverse workforce, and create sustained competitive advantage. In this course, we approach business from a general management perspective, integrating concepts from organizational behavior, organization theory, human resource management, strategy, political science, and cultural anthropology. Course topics include: • Organizational structure and systems. • Selection and hiring, onboarding, motivation, feedback and coaching, and employee engagement. • Organizational politics, power dynamics, and conflict. • Organizational culture.

MGMT 4450 Power and Influence (4 Credits)

This course presents conceptual models, tactical approaches, and self-assessment tools to help you understand political dynamics as they unfold around you, and to develop your own influence style and negotiation skill. By focusing on specific expressions of power and influence, this course gives you the opportunity to observe its effective—and ineffective—use in different contexts and stages of a person's career. This course will challenge you to define for yourself what will constitute the effective exercise of power and influence in your life.

MGMT 4501 Springboard Tools I (1 Credit)

PowerPoint, Microsoft Word, Adobe, Excel, Outlook... we could hardly imagine doing business in today's world without them. CRM software will soon be regarded in the same essential way. As technology fundamentally shifts the focus of business to a completely customer-centered environment, the pervasiveness of CRM tools will only grow. Though many of these tools exist, Salesforce is one of, if not the most, prevalent CRM tools available in today's market. Used by companies of all sizes and industries, Salesforce provides a suite of products that allow organizations to place their customers at the heart of their businesses, leveraging customer data to gain valuable insights, and provide the customer with a wholistic and seamless experience and interaction with the company's brand. Salesforce's CRM software provides products for the full spectrum of customer interactions, from sales to marketing, commerce to customer service. There are several paths to developing Salesforce proficiency, ranging from a business (end) user of the product, to an administrator (someone who customizes the tool to meet business requirements), to a consultant (someone who implements Salesforce rollouts at organizations), to a marketer (an expert in Salesforce's marketing tools), and beyond.

MGMT 4502 Springboard Tools II (1 Credit)

Your journey to securing a career upon graduation starts with the first day of classes and continues throughout your program. The Springboard Tools courses are designed to prepare students to be career-ready upon graduation. Students will learn various tools used in business today, such as Salesforce, Python, and more as determined by the business community. In addition to understanding the tool and its application, students will be required to incorporate problem-solving techniques when using a particular tool.

MGMT 4525 Facility Management (4 Credits)

What is a Public Assembly Facility? Public assembly facilities such as arenas, stadiums, convention centers, and theatres evolved out of the need by social communities to build permanent structures for public assembly, for political and commercial activities, religion, sports, spectacles, artistic expression and for commercial and educational assemblies. This course examines the specific areas of responsibility that one must acknowledge and understand to operate a successful venue of this type. We discuss the core competencies required and the unique areas of concentration that separate a public assembly facility from other venue types. Students realize the significant impact and benefit that facilities like these have on the social, educational and economic environment of communities.

MGMT 4530 Technologies for Sport & Entertainment Management (2 Credits)

This is a specialized course for the MBA student interested in expanding their knowledge of the sports industry as a business and as a world economic force. It provides students with a framework for understanding the scope of the sports business across various venues, as it relates to information technology. Management Sport Technology focuses on understanding the practical uses of computer applications as a tool in sport management activities. Emphasis is placed on demonstrated proficiency in project management, spreadsheet management, database management, and Web page development.

MGMT 4535 Managing Sponsorships for Sport & Entertainment Events (2 Credits)

The purpose of this course is to give students an understanding of sports sponsorship from the perspective of the corporate sponsor and the sports entity. The course identifies and describes the several media distribution channels that are used in corporate sports sponsorship. In addition, students learn how to use sports media distribution properties to create an effective sports marketing plan for corporate sponsors. Students put together a corporate sports marketing plan with a sample sports team.

MGMT 4540 Advanced Seminar in Sports and Entertainment Management (4 Credits)

The purpose of this seminar is to consider current topics in sport and entertainment management. Topics vary by quarter depending on timeliness of topics and interest of students. Potential topics may include public policy questions; ethical issues; current economic impacts and analysis; sport and entertainment management factors and how the various segments (professional, amateur, collegiate, high school, recreational and others) relate; environmental impacts; global issues and other issues that impact the current and future fields of sport and entertainment management.

MGMT 4545 Leadership, Team, and Career Development (2 Credits)

Daniels MBA students are preparing for leadership roles-as entrepreneurs, in corporations, and in not-for-profit organizations. In this course we will look at leadership from a variety of perspectives. Once we have reviewed what the experts have to say about leadership, we will turn our focus to helping you develop your personal theory of leadership. You will answer on important questions: How will I lead? Armed with this knowledge, you will be better equipped to handle leadership challenges as you go forward in life.

MGMT 4555 Interdisciplinary Projects for National Park Service (4 Credits)

A practical application of key business and managerial knowledge, skills, and competencies designed to integrate graduate program elements and provide students with a unique opportunity to work on value-add projects with key managers from the National Park Service. This is an experiential course for integrating and applying multi-disciplined learning outcomes and experiences to real-world challenges, problems, and dilemmas, resulting in solutions for the National Parks Service.

MGMT 4560 Leadership of the Future (4 Credits)

In nearly every aspect of life - science, business, pop culture, environment, technology, global politics - we are inundated with data about how much and how fast the world is changing. How will these major shifts impact what we think of as leadership, and how can one develop to be prepared to lead in a fast-moving, volatile, and complex world? Leadership of the Future is a course that takes a deep look at how we've thought about what "leadership" is in the past from a business perspective, and considers what the future will require of leaders as they seek to effectively lead and make a difference in a complex world. The course is founded upon an interdisciplinary approach, drawing from a variety of disciplines including psychology, administrative science, literature, medicine, and philosophy. The course will center around behavioral analysis and active reflective practice: together we will think deeply about leadership as a behavior within a particular context, and as a practice to cultivate. Students will articulate a set of leadership development goals for themselves and engage experientially in service of self-observation, personal growth, and learning. Cross-listed with MGMT 3560.

MGMT 4620 Organizational Dynamics (4 Credits)

In this course, you will: (1) understand and develop a set of management and leadership skills critical for effectiveness in high performance work environments; (2) develop the ability to analyze organizations and environments from multiple perspectives; (3) explore policies and practices for facilitating organizational change; (4) become a valued and effective member of a work team; and (5) learn how to incorporate effective communication, critical thinking, creative problem solving, and technology, into organizational behaviors and processes.

MGMT 4625 Leading People & Organizations (4 Credits)

This course focuses on the effective management of people, every organization's most critical resource. Employees' knowledge, skills, commitment, creativity, and effort are the basis for sustained competitive advantage. It is people who deal directly with customers, have creative ideas for new products or for process improvements, who devise marketing strategy or take technologies to the next level. In this course, we approach the people side of business from a general management perspective, integrating concepts from organizational behavior, human resource management, strategy, and organizational design. Course topics include motivation, reward systems, engagement; feedback; processes by which work is done and decisions are made, including attention to teams, power dynamics, conflict, and negotiations; the structure of the organization and its systems, including job and organizational design and systems and policies affecting human capital; the organization's culture and history; and the external environment within which the organization operates, including legal, regulatory, demographic, economic and national cultural factors.

MGMT 4630 Strategic Human Resources Management (4 Credits)

This course advances the argument that effective human resource policies will create sustained competitive advantage. To that end, this course will address the effective management of human resources in various policy areas: staffing, diversity, training and development, voice and influence, performance appraisal, and reward systems. Rather than taking a traditional, staff personnel perspective, we will discuss human resource management from the strategic perspective of a general manager. Prerequisite: MGMT 4620.

MGMT 4650 Introduction to Management Consulting (4 Credits)

This course is designed to provide a broad overview of the management consulting profession, including its industry and competitive dynamics, major practice areas, approaches to implementation, management of consulting firms and the future of consulting. In addition, emphasis is given to the practice of consulting through the development of certain high impact skills in evaluation, proposal writing, data gathering and client presentations. The course is relevant to those who: 1) are specifically interested in consulting careers, 2) have job interests that involve staff positions in corporations, 3) want to become line managers who might one day use consultants, 4) wish to develop general consulting skills and familiarity with the consulting industry. The learning process in class will consist of lectures, cases, readings, exercises and guest speakers. This wide variety of learning methods is intended to convey both the necessary knowledge and practical skills necessary for building a sound foundation for becoming a professional consultant. It is essential that everyone comes well-prepared to class, as the learning process depends heavily upon participation.

MGMT 4690 Strategic Management (4 Credits)

Management 4690 focuses on the strategic management of an organization as a whole. This course will introduce students to key decisions that top executives have to make when developing and implementing strategies, methodologies for informing those decisions, and how to interpret information from those approaches to guide strategic decision-making. Overall, from the perspective of leading an organization, students will learn how strategic decisions impact a firm's competitive advantage and success.

MGMT 4700 Topics in Management (1-4 Credits)

MGMT 4710 Sustaining Family Enterprises (4 Credits)

Family enterprises have a tremendous impact on our local, national and global economies. Today, the definition of the family enterprise extends beyond just the business entity. It includes family offices, family "banks," family councils, trusts, and family foundations, just to name a few. Further, what happens in, and how decisions are made by, family enterprise affects not only the active family members but other key stakeholders such as inactive family members, in-laws, non-family managers and employees, professional advisors, customers, suppliers and competitors. This course gives students insight into the universe of possibilities that families, enterprises and their advisors face when engaged in systemic transition planning. This highly interdisciplinary course is appropriate for anyone who intends to work in or with family enterprises. This includes family members, accountants, attorneys, estate planners, financial or wealth managers, family office professionals, insurance consultants, business advisors, management consultants, organizational and leadership development experts, international business professionals, psychologists, social workers, and family therapists.

MGMT 4720 Sustaining Family Enterprise (4 Credits)

This course is intended to provide students with greater insight into the world of family enterprise. It will cover definitions, concepts, frameworks, and models to help students develop the system perspective of family, business, ownership, governance, and wealth issues. This course is applicable to those working in or governing their family enterprise (family businesses, family offices, real estate management firms, investment entities, boards, family councils, etc.), those students in or seeking careers as professional service advisors to family enterprise (accountants, estate planners, lawyers, wealth planners, psychologists, family therapists, board members, etc.), and those students with a global interest in how family enterprise affects, and is affected by, the global economy.

MGMT 4740 Global Business I (2 Credits)

Almost all business is impacted by global trends. This course will help students develop a global mindset and understand challenges and opportunities arising from doing business across national boundaries and cultures. Addressing such issues as diverse cultures, laws, languages, currencies and economic contexts, the course will help students make well-informed decisions giving due consideration to the local and global context in which a given business operates. This course must be taken prior to MGMT 4745 and both courses are to be taken as a sequential series.

MGMT 4745 Global Business II (2 Credits)

Working across national boundaries and cultures demands a new approach to business management. This course will help students assess the local environment of the country in which they intend to do business; introduces students to global aspects of marketing, finance, and management; and examines examples of opportunities associated with doing business in so-called "base of the pyramid" markets. This course must be taken after MGMT 4740 and is the second in the series.

MGMT 4790 Managing Strategic Alliances (4 Credits)

The purpose of this course is to examine and expand upon the current understanding of the challenges of developing and managing strategic alliances. Reflecting the breadth of the novel features of the structure, the course draws from both strategic management and organizational behavioral disciplines. To order the discussion, we take a process view in addressing why and then how to use a strategic alliance. We initially focus on when to use an alliance. We then turn to the formation of an alliance - examining how to select a partner, which structure to choose and how to negotiate. Following, we discuss post-formation issues of partner relationships, management of the alliance, performance evaluation and alliance termination. We conclude the course with sessions devoted towards managing a portfolio of alliances and network management in general.

MGMT 4835 Negotiating with Confidence (1 Credit)

In this intensive Executive Education workshop, you'll practice skills to excel in complex business negotiations. Learn how to maintain control, project influence and confidence, and apply psychological principles effectively throughout the negotiation process. Our faculty leverages cutting-edge research and c-suite expertise to teach you innovative strategies to consistently secure the best possible outcomes. This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

MGMT 4855 Executive Education – Accelerated Leadership Experience (4 Credits)

Delivering best practices and highly applicable team building skills, the Accelerated Leadership Experience (ALX) from Daniels Executive Education is designed for managers to act as a catalyst for transformation. The result? Successful and fulfilled leaders. ALX includes both classroom and experiential activities and covers topics such as emotional intelligence, communication, coaching, feedback, wellness, stress management, energy management, team effectiveness, people development, diversity and inclusion. The support of ALX's innovative leadership curriculum, experienced faculty, and a cohort of professionals who are at similar points in their careers will help you develop the tools and skills needed to succeed in our increasingly complex world. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

MGMT 4875 Executive Education - Denver Leadership Experience (4 Credits)

The Denver Leadership Experience (DLX) from Daniels' Executive Education is a transformational workshop designed to challenge you to think and perform differently in order to reach your leadership potential. This award-winning program delivers timely, relevant, and innovative leadership development essentials for our ever-changing, increasingly complex business world. Employee well-being and mental health are more important than ever, therefore this program has deepened the focus on wellness, mindfulness, and stress management; habits which great leaders implement but tend to deprioritize. In addition to our robust leadership content and faculty expertise, you'll be surrounded by a group of professionals who will bring their own experiences and input which adds value to the conversation and deepens the impact of DLX. *This short-form workshop does not follow the traditional quarter schedule. Please check daniels.du.edu/executive-education for class dates and formats.

MGMT 4980 Graduate Internship in Mgmt (0-10 Credits)

Hours and times arranged by student.

MGMT 4991 Independent Study (1-10 Credits)

Individual research and report. Hours and times arranged by student.

MGMT 4995 Independent Research (1-10 Credits)

MGMT 6300 Seminar in Leadership Strategy Research (4 Credits)

The field of strategy is broad and covers a diverse set of 'macro' organizational theories and topics. In this course, you will have a solid overview of research in the field of strategy. This course will enable you to develop a conceptual view of the field and its theoretical roots, topics, and branches and begin to apply strategic management theories to address original research questions and to solve problems within your own organizations. This will require you to critique extant knowledge and to identify what is missing and what is needed to advance understanding. Finally, this course will provide a beginning point for your knowledge of strategy theories that can guide future pursuits. That is, it is not possible to cover the immense strategy literature in one semester but this course should provide you with the knowledge needed to explore the field of strategy on your own as you move forward.

MGMT 6301 Research Seminar in Organizational Ethics (4 Credits)

The seminar focuses an exploration of the role of ethics from the lens of a leader. In this area, the course examines a range of ethical and social performance issues and challenges that leaders must confront. Our goal is to broaden student understanding of the different theoretical arguments and tensions in this area, with a focus on issues faced by modern day organizations.

MGMT 6302 Research Seminar in Leadership: An Organizational Perspective (4 Credits)

This seminar will focus on understanding the major theoretical streams in the leadership literature with a focus on leadership within organizations. Emphasis will be placed on comparing historical trends such as trait, behavioral, contingency, and transformational/charismatic theories of leadership and exploring contemporary approaches such as servant leadership, authentic leadership, positive leadership, and shared leadership.

Master of Science in Marketing

The Daniels Master of Science in Marketing program is a 45-credit degree that combines the in-depth study of marketing practices and principles with values-based leadership and ethical decision making. Your studies span the theoretical to the real world—from an independent study research project of your choosing to client projects that will test your marketing mettle. You'll be immersed in real-time scenarios that let you dive deep into what interests you most to stay ahead of the curve in this rapidly changing industry. We have a strong marketing community, and you will be expected to join us in exhibiting your passion for marketing and engagement with the marketing professional community, your peers and your professors.

You will engage with the Denver marketing professional community in a number of ways. Participation in the required Marketing Leadership and Professionalism series will provide interaction with professionals over the course of your program, while allowing you to sharpen your professional skills. Guest speakers will contribute in many of our classes, sharing case studies directly from their experience. You may choose to engage with Denver professionals through participating in one of the many internships offered to you. Additionally, you will also be invited to take part in several case competitions, sponsored by the professional community, as part of your degree experience.

You will engage with your peers both inside and outside of the classroom through participation in client work, in the DU Marketing Association, in study groups, and in our Marketing@Daniels community. You will engage with your professors by contributing to class discussions both in class and online, by becoming an active part of our community, by participating in our online community presence. In all, this program requires your active and thoughtful participation, applying the principles you learn to solve important client and community problems.

Daniels has been continuously accredited by the Association to Advance Collegiate Schools of Business International (AACSB) since 1923.

Master of Science in Marketing

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Standardized Test Scores

- GRE or GMAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842. The code to submit GMAT scores for this program is MZR-GT-65.

Other Requirements

· An admissions interview will be required by invitation only.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5

MKTG 4000 Foundations of Marketing (0 Credits)

The Master of Science of Marketing program is a deep dive into marketing knowledge and skills. This course onboards students into the program by outlining the program structure, professional leadership and development series, and the faculty and courses that provide a core foundation of marketing. It also provides an overview of six marketing pathways for students to consider as they plan for and navigate their careers as well as the resources and people to support their transformative educational journeys.

MKTG 4100 Marketing Concepts (4 Credits)

This course focuses on formulating and implementing marketing management strategies and tactics for providing customer value. The focus of this course is on marketing strategy – constructing an environmental scan, segmenting the market properly and targeting the appropriate markets. Once strategy has been set, brand management is considered along with using marketing tactics as levers to bring value to the customer. The course provides you with a lens through which you may view the world as a marketer, relating marketing principles to consumer and business actions. There is no degree restriction for this course for the graduate students.

MKTG 4150 Marketing and Product Strategy (includes Entrepreneurship Challenge) (4 Credits)

You'll be creating a business plan for the Entrepreneurship Challenge and one of the most essential pieces of that plan is the go-to-market strategy, which will be your final deliverable. For the Entrepreneurship Challenge we will be using design thinking to solve a problem that we can create a business around. Design thinking is an amazing, intuitive way to develop opportunities. We will be covering marketing essentials that enable you to create a compelling go-to-market strategy for your startup. We'll cover research, promotions, product, pricing and more!.

MKTG 4220 Customer Experience Management (4 Credits)

Customer Experience (CX) is a customer's brand perception throughout all aspects of the buying journey. As companies integrate with digital platforms, customers are now demanding to connect with brands before purchasing and beyond the features and benefits of a product or service. Marketers are utilizing customer insights, digital preferences, Open AI, and analytics to execute and deliver an outstanding end-to-end customer experience and build brand loyalty. This is a client-project-based course that explores the 5-component framework of customer experience (CX) strategy and includes digital user experience (UX), brand experience (BX), and stakeholder experience (SX) to understand how marketing efforts can drive brand loyalty. Through industry-relevant concepts such as customer journey mapping, CX ecosystem, ESG standards, voice of the customer (VoC), and other stakeholders' experiences, students will gain a tactical understanding and execution of customer experience management plans. This is an eight-week course and includes two-day experiential learning opportunity at our Kennedy Mountain Campus (KMC). There will be a course fee for use of KMC, which is \$75.00 per student. Student must attend the weekend retreat.

MKTG 4380 Supply Chain Management (4 Credits)

Supply chains are everywhere, from the local store to a large multinational electronics manufacturer operating halfway across the world. From cradle to grave, it is the supply chain management system that links all of the numerous stakeholders into one strategic plan for us as customers in markets. These systems link processes such as product design, sourcing, supply chain planning, manufacturing, fulfillment, and reuse. In today's fast paced markets driven by globalization and technology, knowledgeable professionals in supply chain management are increasingly important for companies to achieve their business objectives. Some of the most successful manufacturers (e.g., Apple and Samsung) and retailers (e.g., Wal-Mart and Amazon) are winning as a result of their supply chain strategies. Especially as markets change rapidly, supply chain management professionals will be integral to a company's success. The purpose of this course is to provide a student with a baseline of knowledge, skills, and abilities to succeed in the various functions of supply chain management at a managerial level of an organization. Prerequisites: MKTG 4360 and MKTG 4370, or instructor permission. Cross-list with TRAN 4100.

MKTG 4400 Social Awareness and Ethics (2 Credits)

Social awareness & ethics uses a fresh integrated approach to applying the basic fundamentals of marketing to complex and evolving scenarios involving social change and insight, cultural trends and topics, and tricky, often emotional, ethical situations. This course also helps students learn skills in a safe environment and leverage their experience and knowledge to investigate business situations and opportunities in a thoughtful and sophisticated manner. This course develops a student's ability to make sound business planning decisions using real information from the external environment. This course will combine business ethics' overarching intent to protect employees, the environment, and their customers with marketing ethics' principles of honesty, fairness, responsibility, and respect. As part of this, students will learn about and apply Daniels Fund Initiate Principles: http://www.danielsfund.org/_Assets/files/Ethics%20Initiative%20Principles.pdf Prerequisites: MKTG 4000.

MKTG 4501 Client Lab I (1 Credit)

MKTG 4501 is a requirement to be taken concurrently with a distinct marketing class over the duration of your program. In this course, you will be working with a business client to identify and solve a client problem in the area of focus for the companion course. By taking this course and solving three different types of client problems, over the duration of your program, you will have the chance to sharpen your problem identification abilities and to work with marketing professionals, demonstrating your marketing ability.

MKTG 4510 Consumer Behavior (4 Credits)

What makes consumers tick? This course draws on a variety of sources, including concepts and models from psychology, sociology, anthropology, and economics, to offer helpful frameworks for understanding the underlying drivers of consumer behavior. This course places a special emphasis on the cultural contexts that influence consumers. Students will learn and apply qualitative and experimental research methods used to study consumers to derive key insights for making marketing decisions. Prerequisite: MKTG 4000, MKTG 4100, or instructor permission.

MKTG 4515 International Consumer Behavior (4 Credits)

The focus of this course is to introduce the complex role that consumer behavior and consumption plays within an international context. Knowledge of customers is one of the cornerstones for developing sound business strategies, and there is a need to better understand the diverse aspects of consumer behavior that marketers must cater to in the global marketplace. As the study of consumer behavior draws upon marketing, psychology, economics, anthropology, and other disciplines, the added complexity of understanding it beyond ones' home market results in additional challenges and opportunities. Consumer behavior attempts to understand the consumption activities of individuals as opposed to markets, and as this course will demonstrate, consumption activities are not universal. The course will focus on both consumer behavior theory, as well as the integration of regional, global, and cultural variables that marketers must account for in developing marketing programs in strategies. Topics such as global consumer culture, values and consumption, international consumer attributes, international social and mental processes, will be used to help comprehend and explain the convergence and divergence of consumer behavior in the global marketplace. The goal of this course is to provide a more concrete understanding of how marketers account for similarities and differences in the development and implementation of marketing practices, in the field of advertising, product and service development and usage, retailing, and communications. Prerequisites: MKTG 4510.

MKTG 4520 Marketing Analytics (4 Credits)

There's no escape; even marketing managers need to understand financials. This course is designed to introduce MS Marketing students to the principles of financial decision-making and the use of marketing metrics, including customer lifetime value (CLV) and media mix modeling. Students learn how to compute marketing ROI and how to make marketing decisions that enhance the bottom line. Prerequisites: MKTG 4510 or instructor permission.

MKTG 4530 Marketing Research (4 Credits)

Understanding consumers requires careful observation and thoughtful questions. Marketing research represents a methodology for getting the answers needed to be successful in business. This course introduces students to a broad array of marketing research tools relying on primary and secondary data, including interviews, focus groups, ethnographic studies, survey research, and experiments. Students will learn how and when to apply these tools, as well as how to interpret the results to make sound marketing decisions. Prerequisite: MKTG 4000, MKTG 4100, or instructor permission.

MKTG 4540 Product and Service Innovation (4 Credits)

Developing and introducing new products and services are the lifeblood for companies and a primary responsibility of product management. This course is focused on the most current innovations in materials, hardware, CPG, and software. This is a travel course and students will be required to travel to the Consumer Electronics Show in addition to attending class on campus. We'll be using Google Ventures rapid sprint framework to develop/ test new product ideas. At least eight hours of graduate level MKTG courses or with instructor permission.

MKTG 4550 Marketing Planning (4 Credits)

It has been said that "planning without action is futile, and action without planning is fatal." The objective of this course is to enable students to utilize a rigorous planning process to develop action-oriented marketing programs. This activity involves an integrated application of concepts and theories characterized by the logical use of facts -- leading to alternatives -- leading to actions. By the end of the course students should be able to develop effective marketing programs, and to understand the strength and limitations of the principal planning tools a marketing manager has at his/her disposal. The skills developed in this class are particularly important because many organizations now use the marketing plan as the basis for developing the business plan. In fact, marketing-developed plans often must precede the subsequent decisions in planning production, finance, and other corporate activities. Each student will apply the planning process, develop an action plan, and identify specific marketing outcomes for an existing or prospective enterprise. The course utilizes current practices, contemporary exemplars, and rigorous communication/presentation platforms.

MKTG 4570 Digital Strategies (4 Credits)

We're 20 years into the digital marketing revolution and the ecosystem continues to evolve. From the birth of the Internet and email to the recent addition of messaging apps and the Internet of Things: It's a fantastic time to be a marketer. In this class, we will take what you learned in consumer behavior and extend it in the social/mobile/search realm. We'll utilize lessons learned from cognitive neuroscience combined with qualitative/ quantitative data to create one-to-one marketing experiences for B2B/B2C consumers. Prerequisites: MKTG 4510 or instructor permission.

MKTG 4580 Insights to Innovation (4 Credits)

Consumer insights are a driving force behind innovation for industries, organizations, and products. To remain relevant in the marketplace, companies must innovate. Creating new products, services, or processes requires the contributions of multiple stakeholders, including the voice of the customer. Students will gather secondary and primary data and apply it to design processes and models to optimize value creation and drive innovation. Students will learn how consumer insights can enable the development and enhancement of compelling value propositions. Through a thoughtful design process, students will develop a new product, brand the product, and determine a go-to-market strategy. The learning outcomes include how to apply the design-thinking framework, identify human-centered insights, and collaborate to innovate and create delightful customer experiences. Prerequisite: MKTG 4100.

MKTG 4605 Current Marketing Perspectives (4 Credits)

Like most disciplines, marketing is evolving constantly. One can learn about marketing and its classic terms and notions by reading a textbook. But to familiarize oneself with the current pressing issues, emerging ideas, and innovative applications, one must consult both industry practitioners and academic gurus. In this course, students and faculty will meet and interview several top business executives in the Denver area as well as visit their facilities. Such interaction with the managers and faculty will help the students understand the interface of theory and application. In addition, by identifying the current issues in marketing and learning how to develop strategies to handle them, students add to their preparation for the job market.

MKTG 4612 Customer Experience Management (1 Credit)

Sprint Course at the Kennedy Mountain Campus Navigating Excellence: The Power of Customer Experience Join our transformative Customer Experience Management (CX) short program (Sprint/Immersion) and expand your student 4D experience! This course is led by seasoned CX consulting professionals to bring real-world applications to an "outdoor" classroom. This dynamic program equips you with essential skills to begin to build a CX management program. Dive into CX competency framework, design thinking, data insights, and strategy. Immerse yourself at the University of Denver's Kennedy Mountain Campus, surrounded by breathtaking vistas and while discussing pressing business challenges. Through industry relevant concepts such as customer journey mapping, CX ecosystem, stakeholder engagement, voice of the customer (VoC) students will gain tactical understanding and execution of customer experience management planning. Elevate your student journey through the power of customer experience.

MKTG 4655 Leading the Sales Organization: Structure, Strategy, and Management (4 Credits)

Sales force design, strategy, and management provides both a strategic as well as a tactical perspective on the sales function. The course is suitable for anyone who will at some point in their career have a managerial position in an organization where salespeople are an integral part of the marketing mix. Topics discussed in class cover various elements of sales force design, strategy, and management including the role of salespeople in company's go-to-market strategy, design of sales organization structure, different sales role structures (inside vs. field etc.), territory management and quota (goal) setting, incentive and compensation design, and hiring and training strategies.

MKTG 4660 Sports & Entertainment Marketing (4 Credits)

There are few products for which consumers are more passionate than their sports and entertainment expenditures, so this topic is always an exciting one in marketing. This course provides an in-depth look at the processes and practices of marketing sports, concerts, film and other entertainment. The course emphasizes the practical use of advertising, promotion and public relations in creating athlete or entertainer images, providing a quality fan experience, promoting sponsorships or driving event ticket sales. Participation in a current sports marketing project provides context for graduate students to apply theory to practice. Cross listed with MKTG 3660. Prerequisites: MKTG 4100.

MKTG 4675 Marketing for Social Impact (4 Credits)

The integration of Impact + Profit is one of the biggest trends in the startup world–influencing socially-responsible products and driving cause-related branding, customer choice, and loyalty. Marketing for social impact is multifaceted and requires an understanding of how Impact + Profit is essential to social enterprises, B Corps, and nonprofits. Through this course students will develop themselves as purpose-driven professionals knowledgeable in the latest trends of story-driven marketing, conscious capitalism, and social psychology. This course builds upon students' understanding of Design Thinking to think strategically about value creation as it relates to Impact + Profit. Upon completion of the course, students will understand the relationship between business and social good, as well as acquire the necessary knowledge and skills to design a marketing campaign specific to a social enterprise, B Corp or nonprofit. Applicable to all facets of the business and nonprofit world, this advanced elective is open to all MBA students and provides skills and knowledge to help you be indispensable to your company or organization. Prerequisites: MKTG 4100 and any additional 4000-level MKTG course.

MKTG 4705 Topics in Marketing (1-4 Credits)

TOPIC CHANGES EACH TERM.

MKTG 4800 Global Integrated Marketing Communication (4 Credits)

The Global IMC class is for graduates who have worked in marketing communications or have taken marketing communications classes and want to gain an understanding of how use this knowledge in the global marketplace. It helps students to understand similarities and differences between markets and how to most effectively approach them. What are the IMC tools that work best and how do you use them with cultural sensitivity? The class features a number of guest speakers and at least one off-site agency visit. The finale to this high-intensity class will have competing teams creating a global campaign. Prerequisites: MKTG 4810 or instructor permission.

MKTG 4805 Foundations of Digital Marketing (4 Credits)

According to LinkedIn, the "Digital Marketing Specialist" role is among the top 10 most in-demand jobs in the USA. Knowing how to utilize digital marketing tools as part of a business strategy is critical in today's marketplace. This course provides the knowledge and skills necessary to plan and implement a digital marketing strategy, create and manage digital marketing campaigns, and select and utilize the most effective tools and technologies to achieve the business's objectives. This is a hands-on course where students will learn how to successfully integrate online tools, including user experience (UX), search engine optimization, pay-per-click advertising, email marketing, content marketing, reputation management, social media, and AI (e.g., ChatGPT.com / WriteSonic.com), within the overall marketing mix. Through simulations, certifications, and in-class assignments, students will acquire the fundamental digital experience that is a "must-have" for a marketing career in today's workplace. Cross listed with MKTG 3480.

MKTG 4810 Integrated Marketing Communication (4 Credits)

Integrated Marketing Communication (IMC), sometimes referred to as marketing campaigns, is a critical component of a marketing strategy and is vital for the success of any business. Organizational, technological, and societal trends over the past few years have presented marketers with a challenge: determining which marketing channels are needed to gain traction, engage customers, and drive economic growth. It's essential to integrate all marketing activities into one master short-term campaign plan. This client-project-based course is designed with the notion that marketing communications encompass much more than traditional advertising or social media, focusing on a multi-channel and integrated approach. Some of the concepts covered include consumer insights, branding, market segmentation, targeting, and positioning. The course provides a foundation in the development and execution of campaign strategies using digital tools, including AI, and promotional strategies through data-driven decision-making. Prerequisites:MKTG 4100 & MKTG 4510 or instructor permission.

MKTG 4815 Social Media Marketing (4 Credits)

(4 credit hours) Social Media Marketing is used by marketers to increase brand awareness, identify key audiences, generate leads, and build meaningful relationships with customers. Social media allows businesses to gain a competitive advantage through the creation and distribution of valuable, relevant, and consistent content to attract and retain clearly defined audiences. Marketing professionals entering the workforce today need to be equipped with how to utilize new and constantly updated social media marketing strategies for businesses. By the end of the course, students will know how to implement a successful content strategy for multiple platforms including but not limited to Facebook, Instagram, Twitter, Snapchat, Pinterest, LinkedIn, and YouTube. We will be working with real-world clients and scenarios to help them drive marketing ROI! Cross-listed with MKTG 3490. Prerequisites:MKTG 4100.

MKTG 4820 Brand Management (4 Credits)

Designing a compelling brand is the foundation of marketing. Explore the intricacies of developing a brand strategy to drive growth and ensure consistent brand messaging across the company and product/service lifecycle. Through this client-based course, explore how organizations create a compelling corporate image that inspires trust, builds a sense of community, differentiates, and fosters loyalty to generate brand value. As the digital landscape propels and empowers consumers, discover how brands are co-creating with customers to increase inclusiveness while reducing risk. Learn the concepts and models from brand authorities, then apply this knowledge to real-world business challenges. The learning outcomes are to create a goal-driven brand plan, harness tactics to cultivate brand loyalty, foster brand experiences, and ultimately build sustainable brand equity while measuring success. Prerequisite:MKTG 4100.Concurrent enrollment with MKTG 4100 allowed.

MKTG 4825 Mobile Marketing (4 Credits)

(4 credit hours) Smartphones are the device for today's consumer. Mobile usage easily eclipses all other digital venues, and you will be learning how to harness this ever-evolving field. Knowledge of mobile search, mobile applications, mobile advertising, and location-based services are essential for today's business leaders. This course covers how mobile marketing is defining business today, including strategy, tracking ROI, advertising, mobile websites, mobile apps, text messaging, QR codes, and the laws and ethics of mobile marketing. Students will use the design thinking process to design a mobile app and create a prototype of the app to solve their target market's problem. At the end of the course, students will deliver a prototype of the mobile tactics. Cross-listed with MKTG3475. Prerequisite: MKTG 4100.

MKTG 4835 Search Engine Marketing: Google Analytics & Google Ads (4 Credits)

(4 credit hours) Search marketing is the cornerstone of many digital marketing campaigns. An understanding of consumers' search behavior provides deep insight into how people make purchasing decisions and form brand affinities. This course examines the strategic use of search engine optimization in marketing to build profitable customer relationships. Topics in the course will include consumer search behavior, search engines and algorithms, website user-experience, on- and off-page SEO, and strategies for conducting SEO campaigns for traditional and niche search engines. The course is designed to teach the fundamentals of SEO through experience with Google Ads and Google Analytics. By the end of this course, students obtain relevant and applicable certifications in search engine marketing. Cross listed with MKTG 3485.

MKTG 4845 Tech in Marketing: Design Tools and Digital Foundations (4 Credits)

"Software is eating the world." That was the quote from Marc Andreesen way back in 2011. His point was now that software had disrupted the tech industry, it was now evolving into every other industry. Agriculture. Mass transit. Construction. Everything. This prediction has become true with companies like Google and Uber. We're at a point where coding/technology are now a matter of literacy. We are going to work together as a class to make you more literate. We are going to learn how to utilize digital design tools such as Adobe Photoshop and Illustrator to create brand imagery. We'll then move on to learn HTML/CSS and APIs: the building blocks of the Internet. We'll also spend some time prototyping software such as Axure and tap into memes and Gifs. This is a tactical, hands-on class. Cross-listed with MKTG 3495.

MKTG 4860 Data Science for Marketers (4 Credits)

Data is an essential part of (digital) marketing. In fact, data enables the promise of digital marketing: real-time feedback enabling businesses, marketing campaigns to pivot and become predictive. We'll cover what it takes to become a data-driven organization and how to tell stories through data.

MKTG 4865 SXSWi: Marketing, Technology & Innovation (4 Credits)

This class is focused on documenting/sharing lessons learned from the SXSWi conference in Austin Texas, the premier innovation conference in the US. The course is divided into two distinct halves. First, we will research the SXSWi sessions around subject matter and speaker backgound as well as planning the final deliverable that summarizes the entire SXSWi event. The second half includes participation in the conference to learn the most up-to-date digital marketing techniques in social, mobile, data and usability.

MKTG 4980 Marketing Internship (0-10 Credits)

Daniels College of Business's graduate curriculum is designed to be experiential and build upon practical experience. To gain the full benefit of this curriculum, students are required to expand their experiential learning beyond the short term experiences required in the classroom. Internships that allow students to apply newly learned skills and theories in the workplace are considered an integral to the curriculum and all students are strongly encouraged to seek such opportunities. We learn by doing. That's what a marketing internship at Daniels is all about. Recent studies show that one to three internships on a resume go a long way towards landing that first job in marketing. At Daniels, we network with some of the top marketers in Denver and across the US. Our marketing students have worked at National CineMedia, Integer Advertising, Bank of America, Enterprise, Northwestern Mutual Insurance, eBags, Crispin-Porter + Bogusky, Einstein's, Johns Manville, Ski Magazine, the Pepsi Center, 15 Million Elephants, Flextronics, Merrill Lynch, Dish Network, AEG Live, Altitude Sports & Entertainment, and the list goes on. Not only will students earn school credit, they may very well land a paid internship, and eventually a full-time job.

MKTG 4981 Marketing Leadership and Professional Development I (1 Credit)

This course involves several executive coaching experiences. In the Fall Quarter, you will participate in a weekend leadership experience, where you develop self-awareness of your style as a member and leader of a team. This experience will help build relationships with others in the program and with program faculty, setting you up for successful team experiences in the year ahead. Throughout the quarter, you will participate in other professional development experiences designed to improve your self-presentation skills, networking skills, and awareness of emerging marketing technologies. The exact content of the course will vary by quarter.

MKTG 4982 Marketing Leadership and Professional Development II (1 Credit)

Throughout the quarter, you will participate in other professional development experiences designed to improve your self-presentation skills, networking skills, and awareness of emerging marketing technologies. The exact content of the course will vary by quarter.

MKTG 4983 Marketing Leadership and Professional Development III (1 Credit)

Throughout the quarter, you will participate in other professional development experiences designed to improve your self-presentation skills, networking skills, and awareness of emerging marketing technologies. The exact content of the course will vary by quarter.

MKTG 4991 Independent Study (1-10 Credits)

Hours and times arranged by student.

MKTG 4999 Marketing Assessment (0 Credits)

This course, taken at the end of the MS Marketing program, is designed to assess what students know and can do as a result of being in the program, as well as to capture student feedback about the overall program. The assessments provide input to the Marketing faculty to enable continuous improvement in the program.

MKTG 6300 Seminar in Marketing (4 Credits)

This doctoral seminar focuses on research in marketing. This course will expose students to cutting-edge research in marketing in order to help them define and advance their research interests. This course will also offer in-depth discussions on some important topics in marketing and tools and methodologies required for conducting research in those areas.

Courses

MKTG 4000 Foundations of Marketing (0 Credits)

The Master of Science of Marketing program is a deep dive into marketing knowledge and skills. This course onboards students into the program by outlining the program structure, professional leadership and development series, and the faculty and courses that provide a core foundation of marketing. It also provides an overview of six marketing pathways for students to consider as they plan for and navigate their careers as well as the resources and people to support their transformative educational journeys.

MKTG 4100 Marketing Concepts (4 Credits)

This course focuses on formulating and implementing marketing management strategies and tactics for providing customer value. The focus of this course is on marketing strategy – constructing an environmental scan, segmenting the market properly and targeting the appropriate markets. Once strategy has been set, brand management is considered along with using marketing tactics as levers to bring value to the customer. The course provides you with a lens through which you may view the world as a marketer, relating marketing principles to consumer and business actions. There is no degree restriction for this course for the graduate students.

MKTG 4150 Marketing and Product Strategy (includes Entrepreneurship Challenge) (4 Credits)

You'll be creating a business plan for the Entrepreneurship Challenge and one of the most essential pieces of that plan is the go-to-market strategy, which will be your final deliverable. For the Entrepreneurship Challenge we will be using design thinking to solve a problem that we can create a business around. Design thinking is an amazing, intuitive way to develop opportunities. We will be covering marketing essentials that enable you to create a compelling go-to-market strategy for your startup. We'll cover research, promotions, product, pricing and more!.

MKTG 4220 Customer Experience Management (4 Credits)

Customer Experience (CX) is a customer's brand perception throughout all aspects of the buying journey. As companies integrate with digital platforms, customers are now demanding to connect with brands before purchasing and beyond the features and benefits of a product or service. Marketers are utilizing customer insights, digital preferences, Open AI, and analytics to execute and deliver an outstanding end-to-end customer experience and build brand loyalty. This is a client-project-based course that explores the 5-component framework of customer experience (CX) strategy and includes digital user experience (UX), brand experience (BX), and stakeholder experience (SX) to understand how marketing efforts can drive brand loyalty. Through industry-relevant concepts such as customer journey mapping, CX ecosystem, ESG standards, voice of the customer (VoC), and other stakeholders' experiences, students will gain a tactical understanding and execution of customer experience management plans. This is an eight-week course and includes two-day experiential learning opportunity at our Kennedy Mountain Campus (KMC). There will be a course fee for use of KMC, which is \$75.00 per student. Student must attend the weekend retreat.

MKTG 4380 Supply Chain Management (4 Credits)

Supply chains are everywhere, from the local store to a large multinational electronics manufacturer operating halfway across the world. From cradle to grave, it is the supply chain management system that links all of the numerous stakeholders into one strategic plan for us as customers in markets. These systems link processes such as product design, sourcing, supply chain planning, manufacturing, fulfillment, and reuse. In today's fast paced markets driven by globalization and technology, knowledgeable professionals in supply chain management are increasingly important for companies to achieve their business objectives. Some of the most successful manufacturers (e.g., Apple and Samsung) and retailers (e.g., Wal-Mart and Amazon) are winning as a result of their supply chain strategies. Especially as markets change rapidly, supply chain management professionals will be integral to a company's success. The purpose of this course is to provide a student with a baseline of knowledge, skills, and abilities to succeed in the various functions of supply chain management at a managerial level of an organization. Prerequisites: MKTG 4360 and MKTG 4370, or instructor permission. Cross-list with TRAN 4100.

MKTG 4400 Social Awareness and Ethics (2 Credits)

Social awareness & ethics uses a fresh integrated approach to applying the basic fundamentals of marketing to complex and evolving scenarios involving social change and insight, cultural trends and topics, and tricky, often emotional, ethical situations. This course also helps students learn skills in a safe environment and leverage their experience and knowledge to investigate business situations and opportunities in a thoughtful and sophisticated manner. This course develops a student's ability to make sound business planning decisions using real information from the external environment. This course will combine business ethics' overarching intent to protect employees, the environment, and their customers with marketing ethics' principles of honesty, fairness, responsibility, and respect. As part of this, students will learn about and apply Daniels Fund Initiate Principles: http://www.danielsfund.org/_Assets/files/Ethics%20Initiative%20Principles.pdf Prerequisites: MKTG 4000.

MKTG 4501 Client Lab I (1 Credit)

MKTG 4501 is a requirement to be taken concurrently with a distinct marketing class over the duration of your program. In this course, you will be working with a business client to identify and solve a client problem in the area of focus for the companion course. By taking this course and solving three different types of client problems, over the duration of your program, you will have the chance to sharpen your problem identification abilities and to work with marketing professionals, demonstrating your marketing ability.

MKTG 4510 Consumer Behavior (4 Credits)

What makes consumers tick? This course draws on a variety of sources, including concepts and models from psychology, sociology, anthropology, and economics, to offer helpful frameworks for understanding the underlying drivers of consumer behavior. This course places a special emphasis on the cultural contexts that influence consumers. Students will learn and apply qualitative and experimental research methods used to study consumers to derive key insights for making marketing decisions. Prerequisite: MKTG 4000, MKTG 4100, or instructor permission.

MKTG 4515 International Consumer Behavior (4 Credits)

The focus of this course is to introduce the complex role that consumer behavior and consumption plays within an international context. MKTG 4580 Insights to Innovation (4 Credits)

Consumer insights are a driving force behind innovation for industries, organizations, and products. To remain relevant in the marketplace, companies must innovate. Creating new products, services, or processes requires the contributions of multiple stakeholders, including the voice of the customer. Students will gather secondary and primary data and apply it to design processes and models to optimize value creation and drive innovation. Students will learn how consumer insights can enable the development and enhancement of compelling value propositions. Through a thoughtful design process, students will develop a new product, brand the product, and determine a go-to-market strategy. The learning outcomes include how to apply the design-thinking framework, identify human-centered insights, and collaborate to innovate and create delightful customer experiences. Prerequisite: MKTG 4100.

MKTG 4605 Current Marketing Perspectives (4 Credits)

Like most disciplines, marketing is evolving constantly. One can learn about marketing and its classic terms and notions by reading a textbook. But to familiarize oneself with the current pressing issues, emerging ideas, and innovative applications, one must consult both industry practitioners and academic gurus. In this course, students and faculty will meet and interview several top business executives in the Denver area as well as visit their facilities. Such interaction with the managers and faculty will help the students understand the interface of theory and application. In addition, by identifying the current issues in marketing and learning how to develop strategies to handle them, students add to their preparation for the job market.

MKTG 4612 Customer Experience Management (1 Credit)

Sprint Course at the Kennedy Mountain Campus Navigating Excellence: The Power of Customer Experience Join our transformative Customer Experience Management (CX) short program (Sprint/Immersion) and expand your student 4D experience! This course is led by seasoned CX consulting professionals to bring real-world applications to an "outdoor" classroom. This dynamic program equips you with essential skills to begin to build a CX management program. Dive into CX competency framework, design thinking, data insights, and strategy. Immerse yourself at the University of Denver's Kennedy Mountain Campus, surrounded by breathtaking vistas and while discussing pressing business challenges. Through industry relevant concepts such as customer journey mapping, CX ecosystem, stakeholder engagement, voice of the customer (VoC) students will gain tactical understanding and execution of customer experience management planning. Elevate your student journey through the power of customer experience.

MKTG 4655 Leading the Sales Organization: Structure, Strategy, and Management (4 Credits)

Sales force design, strategy, and management provides both a strategic as well as a tactical perspective on the sales function. The course is suitable for anyone who will at some point in their career have a managerial position in an organization where salespeople are an integral part of the marketing mix. Topics discussed in class cover various elements of sales force design, strategy, and management including the role of salespeople in company's go-to-market strategy, design of sales organization structure, different sales role structures (inside vs. field etc.), territory management and quota (goal) setting, incentive and compensation design, and hiring and training strategies.

MKTG 4660 Sports & Entertainment Marketing (4 Credits)

There are few products for which consumers are more passionate than their sports and entertainment expenditures, so this topic is always an exciting one in marketing. This course provides an in-depth look at the processes and practices of marketing sports, concerts, film and other entertainment. The course emphasizes the practical use of advertising, promotion and public relations in creating athlete or entertainer images, providing a quality fan experience, promoting sponsorships or driving event ticket sales. Participation in a current sports marketing project provides context for graduate students to apply theory to practice. Cross listed with MKTG 3660. Prerequisites: MKTG 4100.

MKTG 4675 Marketing for Social Impact (4 Credits)

The integration of Impact + Profit is one of the biggest trends in the startup world–influencing socially-responsible products and driving cause-related branding, customer choice, and loyalty. Marketing for social impact is multifaceted and requires an understanding of how Impact + Profit is essential to social enterprises, B Corps, and nonprofits. Through this course students will develop themselves as purpose-driven professionals knowledgeable in the latest trends of story-driven marketing, conscious capitalism, and social psychology. This course builds upon students' understanding of Design Thinking to think strategically about value creation as it relates to Impact + Profit. Upon completion of the course, students will understand the relationship between business and social good, as well as acquire the necessary knowledge and skills to design a marketing campaign specific to a social enterprise, B Corp or nonprofit. Applicable to all facets of the business and nonprofit world, this advanced elective is open to all MBA students and provides skills and knowledge to help you be indispensable to your company or organization. Prerequisites: MKTG 4100 and any additional 4000-level MKTG course.

MKTG 4705 Topics in Marketing (1-4 Credits)

TOPIC CHANGES EACH TERM.

MKTG 4800 Global Integrated Marketing Communication (4 Credits)

The Global IMC class is for graduates who have worked in marketing communications or have taken marketing communications classes and want to gain an understanding of how use this knowledge in the global marketplace. It helps students to understand similarities and differences between markets and how to most effectively approach them. What are the IMC tools that work best and how do you use them with cultural sensitivity? The class features a number of guest speakers and at least one off-site agency visit. The finale to this high-intensity class will have competing teams creating a global campaign. Prerequisites: MKTG 4810 or instructor permission.

MKTG 4805 Foundations of Digital Marketing (4 Credits)

According to LinkedIn, the "Digital Marketing Specialist" role is among the top 10 most in-demand jobs in the USA. Knowing how to utilize digital marketing tools as part of a business strategy is critical in today's marketplace. This course provides the knowledge and skills necessary to plan and implement a digital marketing strategy, create and manage digital marketing campaigns, and select and utilize the most effective tools and technologies to achieve the business's objectives. This is a hands-on course where students will learn how to successfully integrate online tools, including user experience (UX), search engine optimization, pay-per-click advertising, email marketing, content marketing, reputation management, social media, and AI (e.g., ChatGPT.com / WriteSonic.com), within the overall marketing mix. Through simulations, certifications, and in-class assignments, students will acquire the fundamental digital experience that is a "must-have" for a marketing career in today's workplace. Cross listed with MKTG 3480.

MKTG 4810 Integrated Marketing Communication (4 Credits)

Integrated Marketing Communication (IMC), sometimes referred to as marketing campaigns, is a critical component of a marketing strategy and is vital for the success of any business. Organizational, technological, and societal trends over the past few years have presented marketers with a challenge: determining which marketing channels are needed to gain traction, engage customers, and drive economic growth. It's essential to integrate all marketing activities into one master short-term campaign plan. This client-project-based course is designed with the notion that marketing communications encompass much more than traditional advertising or social media, focusing on a multi-channel and integrated approach. Some of the concepts covered include consumer insights, branding, market segmentation, targeting, and positioning. The course provides a foundation in the development and execution of campaign strategies using digital tools, including AI, and promotional strategies through data-driven decision-making. Prerequisites:MKTG 4100 & MKTG 4510 or instructor permission.

MKTG 4815 Social Media Marketing (4 Credits)

(4 credit hours) Social Media Marketing is used by marketers to increase brand awareness, identify key audiences, generate leads, and build meaningful relationships with customers. Social media allows businesses to gain a competitive advantage through the creation and distribution of valuable, relevant, and consistent content to attract and retain clearly defined audiences. Marketing professionals entering the workforce today need to be equipped with how to utilize new and constantly updated social media marketing strategies for businesses. By the end of the course, students will know how to implement a successful content strategy for multiple platforms including but not limited to Facebook, Instagram, Twitter, Snapchat, Pinterest, LinkedIn, and YouTube. We will be working with real-world clients and scenarios to help them drive marketing ROI! Cross-listed with MKTG 3490. Prerequisites:MKTG 4100.

MKTG 4820 Brand Management (4 Credits)

Designing a compelling brand is the foundation of marketing. Explore the intricacies of developing a brand strategy to drive growth and ensure consistent brand messaging across the company and product/service lifecycle. Through this client-based course, explore how organizations create a compelling corporate image that inspires trust, builds a sense of community, differentiates, and fosters loyalty to generate brand value. As the digital landscape propels and empowers consumers, discover how brands are co-creating with customers to increase inclusiveness while reducing risk. Learn the concepts and models from brand authorities, then apply this knowledge to real-world business challenges. The learning outcomes are to create a goal-driven brand plan, harness tactics to cultivate brand loyalty, foster brand experiences, and ultimately build sustainable brand equity while measuring success. Prerequisite:MKTG 4100.Concurrent enrollment with MKTG 4100 allowed.

MKTG 4825 Mobile Marketing (4 Credits)

(4 credit hours) Smartphones are the device for today's consumer. Mobile usage easily eclipses all other digital venues, and you will be learning how to harness this ever-evolving field. Knowledge of mobile search, mobile applications, mobile advertising, and location-based services are essential for today's business leaders. This course covers how mobile marketing is defining business today, including strategy, tracking ROI, advertising, mobile websites, mobile apps, text messaging, QR codes, and the laws and ethics of mobile marketing. Students will use the design thinking process to design a mobile app and create a prototype of the app to solve their target market's problem. At the end of the course, students will deliver a prototype of the mobile tactics. Cross-listed with MKTG3475. Prerequisite: MKTG 4100.

MKTG 4835 Search Engine Marketing: Google Analytics & Google Ads (4 Credits)

(4 credit hours) Search marketing is the cornerstone of many digital marketing campaigns. An understanding of consumers' search behavior provides deep insight into how people make purchasing decisions and form brand affinities. This course examines the strategic use of search engine optimization in marketing to build profitable customer relationships. Topics in the course will include consumer search behavior, search engines and algorithms, website user-experience, on- and off-page SEO, and strategies for conducting SEO campaigns for traditional and niche search engines. The course is designed to teach the fundamentals of SEO through experience with Google Ads and Google Analytics. By the end of this course, students obtain relevant and applicable certifications in search engine marketing. Cross listed with MKTG 3485.

MKTG 4845 Tech in Marketing: Design Tools and Digital Foundations (4 Credits)

"Software is eating the world." That was the quote from Marc Andreesen way back in 2011. His point was now that software had disrupted the tech industry, it was now evolving into every other industry. Agriculture. Mass transit. Construction. Everything. This prediction has become true with companies like Google and Uber. We're at a point where coding/technology are now a matter of literacy. We are going to work together as a class to make you more literate. We are going to learn how to utilize digital design tools such as Adobe Photoshop and Illustrator to create brand imagery. We'll then move on to learn HTML/CSS and APIs: the building blocks of the Internet. We'll also spend some time prototyping software such as Axure and tap into memes and Gifs. This is a tactical, hands-on class. Cross-listed with MKTG 3495.

MKTG 4860 Data Science for Marketers (4 Credits)

Data is an essential part of (digital) marketing. In fact, data enables the promise of digital marketing: real-time feedback enabling businesses, marketing campaigns to pivot and become predictive. We'll cover what it takes to become a data-driven organization and how to tell stories through data.

MKTG 4865 SXSWi: Marketing, Technology & Innovation (4 Credits)

This class is focused on documenting/sharing lessons learned from the SXSWi conference in Austin Texas, the premier innovation conference in the US. The course is divided into two distinct halves. First, we will research the SXSWi sessions around subject matter and speaker backgound as well as planning the final deliverable that summarizes the entire SXSWi event. The second half includes participation in the conference to learn the most up-to-date digital marketing techniques in social, mobile, data and usability.

MKTG 4980 Marketing Internship (0-10 Credits)

Daniels College of Business's graduate curriculum is designed to be experiential and build upon practical experience. To gain the full benefit of this curriculum, students are required to expand their experiential learning beyond the short term experiences required in the classroom. Internships that allow students to apply newly learned skills and theories in the workplace are considered an integral to the curriculum and all students are strongly encouraged to seek such opportunities. We learn by doing. That's what a marketing internship at Daniels is all about. Recent studies show that one to three internships on a resume go a long way towards landing that first job in marketing. At Daniels, we network with some of the top marketers in Denver and across the US. Our marketing students have worked at National CineMedia, Integer Advertising, Bank of America, Enterprise, Northwestern Mutual Insurance, eBags, Crispin-Porter + Bogusky, Einstein's, Johns Manville, Ski Magazine, the Pepsi Center, 15 Million Elephants, Flextronics, Merrill Lynch, Dish Network, AEG Live, Altitude Sports & Entertainment, and the list goes on. Not only will students earn school credit, they may very well land a paid internship, and eventually a full-time job.

MKTG 4981 Marketing Leadership and Professional Development I (1 Credit)

This course involves several executive coaching experiences. In the Fall Quarter, you will participate in a weekend leadership experience, where you develop self-awareness of your style as a member and leader of a team. This experience will help build relationships with others in the program and with program faculty, setting you up for successful team experiences in the year ahead. Throughout the quarter, you will participate in other professional development experiences designed to improve your self-presentation skills, networking skills, and awareness of emerging marketing technologies. The exact content of the course will vary by quarter.

MKTG 4982 Marketing Leadership and Professional Development II (1 Credit)

Throughout the quarter, you will participate in other professional development experiences designed to improve your self-presentation skills, networking skills, and awareness of emerging marketing technologies. The exact content of the course will vary by quarter.

MKTG 4983 Marketing Leadership and Professional Development III (1 Credit)

Throughout the quarter, you will participate in other professional development experiences designed to improve your self-presentation skills, networking skills, and awareness of emerging marketing technologies. The exact content of the course will vary by quarter.

MKTG 4991 Independent Study (1-10 Credits)

Hours and times arranged by student.

MKTG 4999 Marketing Assessment (0 Credits)

This course, taken at the end of the MS Marketing program, is designed to assess what students know and can do as a result of being in the program, as well as to capture student feedback about the overall program. The assessments provide input to the Marketing faculty to enable continuous improvement in the program.

MKTG 6300 Seminar in Marketing (4 Credits)

This doctoral seminar focuses on research in marketing. This course will expose students to cutting-edge research in marketing in order to help them define and advance their research interests. This course will also offer in-depth discussions on some important topics in marketing and tools and methodologies required for conducting research in those areas.

Master of Business Administration Programs Master of Business Administration in General Business: The Denver MBA

The Daniels College of Business full-time Denver MBA is a comprehensive program that immerses students in the study and practice of business. Students will gain the technical expertise and leadership skills required to navigate complex business situations with confidence and integrity.

The Daniels College of Business has been continuously accredited by the Association to Advance Collegiate Schools of Business International (AACSB) since 1923.

Program Highlights

A Dynamic Collaborative In-Person Environment. The Denver MBA is a cohort program where students experience the MBA core courses with the same set of peers to maximize cross-learning, collaboration, and networking.

Just-in-Time Learning. Class discussions are informed by current business issues and class assignments. The faculty are committed to bringing the most relevant issues and challenges into class discussions. Whether it is Generative AI such as ChatGPT or the Future of Work through machine learning, these contemporary issues will become part of the course regardless of subject.

Connection to Faculty. Faculty teaching in the full-time MBA program are esteemed researchers, practicing professionals, and experienced teachers who bring their boardroom experience into the classroom. The faculty care deeply about the students. With small class sizes (30:1), students will have the opportunity to engage and get to know the faculty, in and out of the classroom.

A Challenge Driven Education. Students take on four real-world challenges, each increasing in rigor and complexity. Students begin by working through an Entrepreneurial Challenge using tools such as Design Thinking. The Social Good Challenge enables students to partner with a non-profit to apply business practices for the public good. As students work collaboratively on applying critical problem-solving skills throughout each challenge, faculty experienced in consulting will advise them throughout the process.

Global Mindset. The Corporate Challenge partners the students with businesses looking to solve real problems around the world. The Global Challenge adds the complexity of traveling abroad. Program tuition includes the trip to work with an international organization on one of its business problems.

Leadership Development. In-classroom curricular work is complemented by immersive programming on professional development, career advancement, networking, and other topics aimed at enhancing the holistic Denver MBA student experience. Students receive hands-on support from dedicated faculty and staff committed to their academic and professional success.

Cohort

The Denver MBA is a 21-month, 80-credit cohort program.

Class Schedule

Varies based upon course Monday through Thursday. Most courses are available in-person and online providing students with flexibility, if needed. Additional required activities include the Outdoor and International (trip) Experientials that may include weekends and holidays. Each class session is recorded should an unexpected absence occur.

Concentrations/Electives

Students pursuing the Denver MBA will have 28 credits of electives of which 16 credits are required to qualify as a specific concentration. These concentrations include: Accounting, Business Analytics, Customized, Finance, Marketing, Real Estate and the Built Environment, and Supply Chain Management.

Master of Business Administration in Management Sciences and Quantitative Methods: The Denver Quantitative MBA

The Daniels College of Business full-time Denver Quantitative MBA is a comprehensive program that immerses students in the study and practice of business. Students will develop a deep understanding of management sciences and quantitative methods required to solve complex business problems with confidence and integrity.

The Daniels College of Business has been continuously accredited by the Association to Advance Collegiate Schools of Business International (AACSB) since 1923.

Program Highlights

A Dynamic Collaborative In-Person Environment. The Denver Quantitative MBA is a cohort program where students experience the MBA core courses with the same set of peers to maximize cross-learning, collaboration, and networking.

Just-in-Time Learning. Class discussions are informed by current business issues and class assignments. The faculty are committed to bringing the most relevant issues and challenges into class discussions. Whether it is Generative AI such as ChatGPT or the Future of Work through machine learning, these contemporary issues will become part of the course regardless of subject.

Connection to Faculty. Faculty teaching in the Denver Quantitative MBA are esteemed researchers, practicing professionals, and experienced teachers who bring their boardroom experience into the classroom. The faculty care deeply about the students. With small class sizes (30:1), students will have the opportunity to engage and get to know the faculty, in and out of the classroom.

A Challenge Driven Education. Students take on four real-world challenges, each increasing in rigor and complexity. Students begin by working through an Entrepreneurial Challenge using tools such as Design Thinking. The Social Good Challenge enables students to partner with a non-profit to apply business practices for the public good. As students work collaboratively on applying critical problem-solving skills throughout each challenge, faculty experienced in consulting will advise them throughout the process.

Global Mindset. The Corporate Challenge partners the students with businesses looking to solve real problems around the world. The Global Challenge adds the complexity of traveling abroad. Program tuition includes the trip to work with an international organization on one of its business problems.

Leadership Development. In-classroom curricular work is complemented by immersive programming on professional development, career advancement, networking, and other topics aimed at enhancing the holistic Denver Quantitative MBA student experience. Students receive hands-on support from dedicated faculty and staff committed to their academic and professional success.

Cohort

The Denver Quantitative MBA is a 21-month, 80-credit cohort program.

Class Schedule

Varies based upon course Monday through Thursday. Most courses are available in-person and online providing students with flexibility, if needed. Additional required activities include the Outdoor and International (trip) Experientials that may include weekends and holidays. Each class session is recorded should an unexpected absence occur.

Concentrations/Electives

Students pursuing the Denver Quantitative MBA must complete 28 credit hours of electives in a specific management science or quantitative methods concentration. These specific concentrations include: Accounting, Technology and Analytics, Applied Quantitative Finance, or Business Analytics.

Master of Business Administration in General Business: The Executive MBA Program

The Daniels Executive MBA (EMBA) at the University of Denver is a highly selective academic program designed for the mid-to-senior level professional with ten or more years of professional work experience. Strategically focused and integrated in approach, the EMBA classroom is a dynamic environment of leaders from a wide array of backgrounds and industries. Although the pace of the EMBA experience is accelerated and academically rigorous, it is offered in an efficient once-a-week format which allows for balance between career, school and personal life.

Daniels has been continuously accredited by the Association to Advance Collegiate Schools of Business International (AACSB) since 1923.

Cohort

This is a cohort MBA program with an integrated, lockstep curriculum of 24 courses (60 credit hours).

Class Schedule

Alternating Fridays and Saturdays once a week, from 8 a.m. to 5 p.m. 18 calendar months. Additional required opportunities include the Sailing Experience and the two-week global business travel seminar.

Master of Business Administration in General Business: The Professional MBA Program

The Daniels Professional MBA (PMBA) is an ideal fit for early-to-mid career professionals. It holds the same quality and rigor as our Full-time MBA with a curriculum suited for those with at least two years of professional work experience. Students in the cohort-based PMBA program are fully employed and enjoy a network of peers with comparable experience in diverse industries. Gaining exposure to one another's industries and challenges is a key benefit of this MBA option, as is the global business travel seminar.

The Daniels College of Business has been continuously accredited by the Association to Advance Collegiate Schools of Business International (AACSB) since 1923.

Program Highlights

A Dynamic Collaborative In-Person Environment. The Professional MBA is a cohort program where students experience the MBA core courses with the same set of peers to maximize cross-learning, collaboration and networking.

Just-in-Time Learning. Class discussions are informed by current business issues and class assignments. Faculty are committed to bringing the most relevant issues and challenges into class discussions. Whether it is Generative AI such as ChatGPT or the Future of Work through machine learning, these contemporary issues will become part of the course regardless of subject.

Connection to Faculty. Faculty teaching in the Professional MBA program are esteemed researchers, practicing professionals, and experienced teachers who bring their boardroom experience into the classroom. Faculty care deeply about the students, and with small class sizes, students will have the opportunity to engage and get to know the faculty, in and out of the classroom.

Learning by Doing. During the program, students will participate in a mountain leadership retreat and travel abroad to work with international organizations. This experiential learning will culminate with a social good challenge, where students will serve as consultants to a real Non-Profit organization with a genuine business problem.

Cohort

The Professional MBA is a 21-month, 60-credit cohort program.

Class Schedule

PMBA core courses meet in-person on Monday and Wednesday evenings between 6 p.m. and 10 p.m., with the exception of Global Business which meets on several Saturdays in the sixth quarter. To provide students with flexibility, core courses are available online, if needed. Each PMBA core class session is also recorded should an unexpected absence occur. Elective courses may meet on other days of the week. Additional required activities include the Outdoor and International (trip) Experientials that may include weekends and holidays.

Concentration / Electives

Students pursuing the Professional MBA will have 20 credits of electives. If students choose a concentration path, 16 elective credits in a specialized area are required to qualify as a concentration. These concentrations include: Accounting, Business Analytics, Customized, Executive Leadership, Finance, Marketing, and Real Estate and the Built Environment.

Master of Business Administration in General Business: MBA@Denver (Online)

The Daniels online MBA program—MBA@Denver—allows students to earn an MBA while maintaining a balanced life. Our blended format of online classes and in-person immersions offers convenience and connection. As students sharpen their skills and knowledge-base, they will also grow their network via our outstanding faculty and distinguished Daniels alumni.

Program Highlights

A Collaborative Online Environment. Students meet face-to-face and on-screen to work on group projects and connect with classmates. Students apply theory to solve current business problems together with the class and professor. Using a mobile app, students can work on a tablet or other mobile device from anywhere around the world, even offline.

Just-in-Time Learning. Class discussions are informed by current business issues and class assignments. The faculty are committed to bringing the most relevant issues and challenges into class discussions. Whether it is Generative AI such as ChatGPT or the Future of Work through machine learning, these contemporary issues will become part of the course regardless of subject.

Connection to Faculty. MBA@Denver faculty are experienced not only in the graduate classroom, but also in business. The faculty includes esteemed researchers, practicing professionals, and experienced teachers who bring their boardroom experience into the classroom. Many of the faculty teach both online and in-person at Daniels, and care deeply about connecting with their students.

Face-to-Face Experiences. To increase a professional network beyond the live sessions, students will attend two required in-person learning experiences, called immersions. Immersions are offered throughout the year and are held in a variety of locations including the DU campus, locations outside of Denver but within the continental U.S., and also international locations. These multi-day, weekend events give students the chance to push their leadership skills further and meet classmates, faculty and alumni in person.

An Extension Of The Campus Community. As an MBA@Denver student, each will be as much a part of the DU and Daniels communities as on-campus students. Students will have access to career coaching, case competitions, academic resources, mentorship programs, and student gatherings and networking events. All students—whether on campus or online—are invited to participate in graduation celebrations and University Commencement to celebrate the hard work that goes into earning a graduate degree.

Live 90-Minute Online Classes

- · Hosted via webcam at 6:30 p.m. or 8:30 p.m. during the week
- Approximate 20:1 student-to-professor ratio
- · Lively peer-to-peer discussions
- · Synchronous session recordings

Flexible Scheduling

- Students usually take two courses per quarter, though many choose to take only one course per quarter. The degree is 60 credit hours in length, so students have the flexibility to complete their coursework within 21 months. Alternatively, students may take as long as five years to complete their degree.
- All courses are available online and in-person, except for Global Business. MBA@Denver students complete Global Business in two parts and does not include an international trip.
- Students may choose to complete the general MBA or to concentrate in one of the following areas:
 - Executive Leadership (online only)
 - Finance (online or in-person)
 - Marketing (online or in-person)
 - Customized (online or in-person)
 - · Accounting (in-person only)
 - · Business Analytics (in-person only)
 - · Real Estate and the Built Environment (in-person only)
- · In-person courses are available on the University of Denver campus in Denver, Colorado.

Master of Business Administration in General Business: The Denver MBA

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

• GRE or GMAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.

• If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The GMAT code to submit GMAT scores to the MBA@Denver (Online MBA) program is MZR-GT-43. The GRE code for the University of Denver is 4842.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- · Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Other Requirements

· An admissions interview will be required by invitation only.

Leadership Outdoor Recreation Industry

Office: Daniels College of Business Mail Code: Phone: Web Site: https://daniels.du.edu/leadership-in-outdoor-recreation/

The University of Denver has partnered with the VF Foundation to offer the Outdoor Recreation Industry Certificate. With courses from the Daniels College of Business (https://daniels.du.edu/), Josef Korbel School of International Studies (https://korbel.du.edu/) and Sturm College of Law (https:// www.law.du.edu/), this graduate certificate is designed for individuals seeking to enter or advance in the outdoor recreation industry.

Degree and GPA Requirements

- · Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.
- · Grade point average: The minimum undergraduate GPA for admission consideration for graduate study at the University of Denver is a cumulative 2.5 on a 4.0 scale or a 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree. An earned master's degree or higher from a regionally accredited institution supersedes the minimum standards for the baccalaureate. For applicants with graduate coursework but who have not earned a master's degree or higher, the GPA from the graduate work may be used to meet the requirement. The minimum GPA is a cumulative 3.0 on a 4.0 scale for all graduate coursework undertaken.
- · Program GPA requirement: The minimum undergraduate GPA for admission consideration for this program is a cumulative 2.5 on a 4.0 scale.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- · Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

English Conditional Admission: No, this program does not offer English Conditional Admission.

Other Requirements

Applicants may be contacted by a Daniels representative to schedule the admissions interview, which will be conducted on campus or via webcam.

Specialized Graduate Certificate in Leadership in the Outdoor Recreation Industry

The certificate is inter-disciplinary and will leverage the strengths of three colleges at DU – Daniels College of Business, Sturm College of Law, and the Joseph Korbel School for International Studies.

Master of Science in Real Estate and the Built Environment

The Franklin L. Burns School of Real Estate and Construction Management at the Daniels College of Business allows you to combine the core competencies across the full spectrum of the built environment. Our core curriculum in real estate includes courses in income property finance, real estate financial analysis, property and asset management, valuation and appraisal, feasibility and development. On the construction management side, core course includes architecture and design management, construction building system, construction estimating. Outside of the core courses, students can take highly specialized courses like real estate capital markets, sustainable development, planning, entitlements and public finance, and construction project management along with a host of others. This holistic, integrated approach adds value in a way that no other program in the country adds and establishes a firm basis upon which to build a selected area of expertise. Outside the classroom, students participate in real and applied case study competitions, networking and other industry opportunities due to a very rich legacy, strong alumni base and excellent industry support. All our students get career and professional support through Burns and Daniels professional staff. Daniels has been continuously accredited by the Association to Advance Collegiate Schools of Business International (AACSB) since 1923.

Master of Science in Real Estate and the Built Environment

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Standardized Test Scores

- GRE or GMAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842. The code to submit GMAT scores for this program is MZR-GT-58.

Other Requirements

· An admissions interview will be required by invitation only.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Construction Management (CMGT)

CMGT 4120 Construction Scheduling (4 Credits)

Understanding and applying scheduling and control to construction projects is essential to successful construction management. Project scheduling emphasizes network-based schedules, such as critical path management (CPM), network calculations, critical paths, resource scheduling, probabilistic scheduling and computer applications. Project control focuses on goals, flow of information, time and cost control, and change management. Prerequisite or Corequisite: CMGT 4420.

CMGT 4155 Sustainable Development (4 Credits)

The course includes many case studies of historic and contemporary structures exemplifying various sustainability features. Emphasis is placed on how LEED project certification influences the overall construction project. Topics include LEED certification techniques for sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, innovation and design. The following topics are covered from a LEED perspective: ventilation, air conditioning, heating, electrical lighting, energy efficiency, and building control systems. The student studies and analyzes how management and LEED techniques are applied to current construction projects.

CMGT 4320 Introduction to Architecture and Design Management (4 Credits)

This course introduces students to the significant value that architecture brings to real estate and the built environment and the various services and professions associated with it. Students will be introduced to principles, protocols and the planning process related to the design function and the link between the architect's vision and the finished physical structure. Students will be introduced to design, thinking, theory and application. Student will learn to read and interpret the various graphical and written construction documents as well as know how they are developed and what information they contain. Architectural, structural, mechanical, electrical, plumbing and civil drawings and specifications are covered. The business model for design services will be explored as well as the unique risks and challenges associated with managing the design throughout the various stages of development and construction.

CMGT 4410 Construction Building Systems (4 Credits)

A survey of residential and commercial construction materials, means, and methods associated with the various structural and architectural systems used to design and construct buildings. Project plans and specifications are incorporated to teach the basic sequencing and overall construction process. The influence of sustainability in construction is introduced. This class will also have an off campus, experiential learning lab associated with it.

CMGT 4420 Construction Estimating (4 Credits)

This course is designed to provide the student with the theory, principles and techniques of quantity analysis (take-off), labor determinations, overhead and profit analysis. It offers insight into the construction estimating process. The role of the estimator, types of estimating, CSI divisions, bid/contract documents, change order pricing, design/build projects and estimation compilation will be introduced. Discussions regarding the cost/benefit of sustainable materials and typical construction materials will enhance the requisite knowledge of construction estimating. Experiential learning lab is associated with this course. Prerequisite: CMGT 4320 and CMGT 4410. This course is a co/prerequisite for CMGT 4120.

CMGT 4480 Construction Project Management (4 Credits)

Principles and techniques of construction project management, use of systems analysis, internal and external procedures, planning, programming, budgeting and staffing, controlling major projects, emphasis on construction scheduling techniques with case application.

CMGT 4490 Residential Development (4 Credits)

A course sequence designed to emphasize the practical application of the theories and concepts of residential development. The course provides a capstone experience for seniors. Students are expected to apply their knowledge of general business, real estate and construction management practices by forming a student business entity, acquiring land, building and selling a residential property in a case format. Students will apply accounting, finance, marketing, real estate and construction management techniques in the planning for a residential development. The application of green building materials and methods is emphasized.

CMGT 4700 Topics in Construction Mgmt (0-4 Credits)

CMGT 4980 Construction Internship (0-4 Credits)

Daniels College of Business's graduate curriculum is designed to be experiential and build upon practical experience. To gain the full benefit of this curriculum, students are encouraged to expand their experiential learning beyond the short term experiences required in the classroom. Internships that allow students to apply newly learned skills and theories in the workplace are considered an integral to the curriculum and all students are strongly encouraged to seek such opportunities. Please review REBE Internship Guidelines: o Internships must be requested via PCO at least two weeks in advance of the quarter in which the work will commence. Final PCO approval is the Burns School Director. o No internships will be approved once the quarter begins. o Internships in arrears will not be approved. o Students may use a maximum of 4 Internship credits towards their REBE major degree. o Students have the option to obtain these 4 REBE internship credits by completing one or multiple internships combined for a maximum of 4 credit hours. o For students working full time at a company, they cannot seek internship in the same company they are working for and receive credit (in advance or arrears). o Not allowed for MBA concentrations.

CMGT 4991 Independent Study (1-10 Credits)

Real Estate (REAL)

REAL 4000 Fundamentals of Real Estate and the Built Environment (4 Credits)

An exploration of the importance of real estate and the built environment through triple bottom line analysis of its social, environmental, and economic impacts. The course considers a "cradle to cradle" sustainability model that links the various phases, functions, and professions of real estate, project delivery, and asset/facility management to create holistic, value-generating solutions for society. Professional practices/skill sets associated with the many career options that engage the built environment are demonstrated. Principles of real estate, real estate industry and its markets; legal aspects of home ownership from consumer's point of view, including property rights, title concepts, deeds, purchase contracts, listing contracts, law of agency, environmental issues and disclosures, types of mortgages, basics of home loan finance, appraisal investment and tax benefits will also be covered. Partially satisfies Colorado real estate broker licensing requirements.

REAL 4002 The Business of Real Estate (2 Credits)

This is an introduction to home ownership, real estate industry and its markets; legal aspects of home ownership from consumer's point of view, including property rights, title, concepts, deeds, and purchase contracts. Listing contracts, law of agency, types of mortgages, basics of home loan finance, appraisal, investment and tax benefits are also covered in this class. Partially satisfies Colorado Real Estate sales licensing requirements.

REAL 4007 Real Estate Financial Analysis (4 Credits)

Alternative analysis formats that can be applied to a wide array of real estate analysis issues; simulates working/decision-making environment; structured overview of analysis tools focused on specific facets of multidimensional real estate decision-making environment; applications in investment analysis, feasibility analysis, valuation, market analysis, and report writing and presentation. Prerequisite: REAL 4407.

REAL 4010 Real Estate Capital Markets (4 Credits)

This course exposes students to the commercial real estate capital markets; including real estate investment trusts (REITs) and commercial mortgage-backed securities (CMBS), plus institutional investors. The complexities of capital market products are discussed, students receive a greater understanding of the alternatives that are available. The class includes lectures, guest speakers, readings, class discussions, a major REIT analysis project, and case studies. Prerequisite: REAL 4407.

REAL 4140 Global Immersion (0-4 Credits)

Inbound U.S. and outbound U.S. real estate topics, with a mix of cultural issues that impact real estate transactions. Application of sustainability concepts is important in this course dealing with international real estate. This course will require on campus preparation for projects followed by 1-2 weeks of abroad travel which will include working with host universities, students and industry partners. This course will have additional travel fees.
REAL 4210 Planning, Entitlements, and Public Finance (4 Credits)

Real estate development, place making, and community building require the combined efforts of the public, for-profit, and non-profit sectors. Participants in the real estate development process need to understand and appreciate the sometimes competing and sometimes collaborative interests of governments, agencies, and the private developer. This course is designed to familiarize students with the overall context of urban planning and land use. Students discover the variety of participants in the development process and also become familiar with the project entitlement process, zoning, and land use regulation. Students also examine public/private financing structures such as public-private-partnerships (P3s) and become familiar with detailed calculations relating to Tax Incremental Financing (TIF) and Metropolitan Districts.

REAL 4337 Securities, Syndications and Entrepreneurship (4 Credits)

Introduction to real estate securities; emphasis on private offerings; determining whether a contemplated transaction involves a security, and what happens if it does; exemptions from registration (Reg D); registration requirements; investor suitability, how to syndicate, acquisition of property, marketing or the property, tax structure and formation of syndication, compensation to syndicators, real estate tax considerations.

REAL 4347 Property and Asset Management (4 Credits)

Explore the complexities of managing apartments, condominiums, office buildings, industrial property and shopping centers. This course covers rental markets, development of rental schedules, leasing techniques and negotiations, repairs and maintenance, tenant relations, merchandising, selection and training of personnel, accounting, and owner relations.

REAL 4357 Corporate Real Estate & Management (4 Credits)

This course provides a snapshot view of the corporate real estate life cycle and how to strategically plan and manage it. Over the ten week period we will address the diverse but critical components that together account for Facility Management. These shall include: Building Life Cycles and sustainability, facility management as part of the enterprise model within a corporate structure, regulatory agencies, professional relationships and the impact of the build environment on the bottom line, contracting and budget management, move-add-change (MAC) / operations, and general administrative services.

REAL 4369 Real Estate Taxation (4 Credits)

Tax factors affecting investments and operations in real estate; special attention is given to legal forms of ownership, depreciation, tax basis, tax impacts of exchanges, syndications, real estate securities, and other federal tax laws affecting real estate.

REAL 4407 Income Property Finance (4 Credits)

This course explores conventional and alternative financing, mortgage banking, law and markets, loan underwriting analysis and the impact of monetary and fiscal policies on the real estate and mortgage markets, with emphasis on decision making from the equity investors point of view. Specific topics include an overview and history of real estate finance, the taxation and legal aspects of real estate finance, compounding and discounting, functions of interest and real estate capital markets and securities. Specific areas of focus are residential property finance, income property finance, and construction and development financing.

REAL 4417 Income Property Valuation and Appraisal (4 Credits)

Residential/Commercial appraising, including market cost and income approaches to value, gross rent multiplier analysis, neighborhood and site analysis, valuation of income properties including market cost and income approaches to value, capitalization theory and techniques, mortgage-equity analysis, and investment value concepts. Prerequisite: REAL 4407.

REAL 4438 Legal Aspects of Real Estate and the Built Environment (4 Credits)

To gain an understanding of certain legal issues that are repeatedly encountered by real estate and construction professionals.

REAL 4467 Development and Feasibility (4 Credits)

Commercial real estate development analysis and feasibility includes economic base analysis, tenant demand analysis, development and construction cost analysis, lease-up analysis, financial feasibility, leasing and property management practices. Five major property types (office, industrial, retail, apartment and hotel) are covered. Prerequisite: REAL 4407.

REAL 4477 Income Property Investment (4 Credits)

Comprehensive analytical framework for real estate investment decision-making, equity investment decisions via discounted cash flow, and risk analysis models and strategic planning concepts, structuring parameters to maximize rates of return while controlling downside risks; emphasis on theory, concept building, and practical application to various types of investment properties. Prerequisite: REAL 4407.

REAL 4701 Topics in Real Estate (0-4 Credits)

REAL 4800 NAIOP Challenge (0-4 Credits)

A unique non-traditional course, where the students will work on a complex real estate problem culminating in an internal competition and external competition which includes a written report and an oral presentation.

REAL 4890 Real Estate Internship (0-4 Credits)

Daniels College of Business's graduate curriculum is designed to be experiential and build upon practical experience. To gain the full benefit of this curriculum, students are encouraged to expand their experiential learning beyond the short term experiences required in the classroom. Internships that allow students to apply newly learned skills and theories in the workplace are considered an integral to the curriculum and all students are strongly encouraged to seek such opportunities. Please review REBE Internship Guidelines: o Internships must be requested via PCO at least two weeks in advance of the quarter in which the work will commence. Final PCO approval is the Burns School Director. o No internships will be approved once the quarter begins. o Internships in arrears will not be approved. o Students may use a maximum of 4 Internship credits towards their REBE major degree. o Students have the option to obtain these 4 REBE internship credits by completing one or multiple internships combined for a maximum of 4 credit hours. o For students working full time at a company, they cannot seek internship in the same company they are working for and receive credit (in advance or arrears). o Not allowed for MBA concentrations.

REAL 4980 Adv Valuation/Report Writing (1-10 Credits)

Advanced cutting-edge techniques not yet institutionalized nor commonly practiced in the field. Includes writing skills workshops appropriate to specialized nature of appraisal reports, and composition of a complex field problem report to prepare student for writing "demonstration" report required for MAI professional designation. Prerequisite: REAL 4417.

REAL 4991 Independent Study (1-10 Credits)

Construction Management Courses

CMGT 4120 Construction Scheduling (4 Credits)

Understanding and applying scheduling and control to construction projects is essential to successful construction management. Project scheduling emphasizes network-based schedules, such as critical path management (CPM), network calculations, critical paths, resource scheduling, probabilistic scheduling and computer applications. Project control focuses on goals, flow of information, time and cost control, and change management. Prerequisite or Corequisite: CMGT 4420.

CMGT 4155 Sustainable Development (4 Credits)

The course includes many case studies of historic and contemporary structures exemplifying various sustainability features. Emphasis is placed on how LEED project certification influences the overall construction project. Topics include LEED certification techniques for sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, innovation and design. The following topics are covered from a LEED perspective: ventilation, air conditioning, heating, electrical lighting, energy efficiency, and building control systems. The student studies and analyzes how management and LEED techniques are applied to current construction projects.

CMGT 4320 Introduction to Architecture and Design Management (4 Credits)

This course introduces students to the significant value that architecture brings to real estate and the built environment and the various services and professions associated with it. Students will be introduced to principles, protocols and the planning process related to the design function and the link between the architect's vision and the finished physical structure. Students will be introduced to design, thinking, theory and application. Student will learn to read and interpret the various graphical and written construction documents as well as know how they are developed and what information they contain. Architectural, structural, mechanical, electrical, plumbing and civil drawings and specifications are covered. The business model for design services will be explored as well as the unique risks and challenges associated with managing the design throughout the various stages of development and construction.

CMGT 4410 Construction Building Systems (4 Credits)

A survey of residential and commercial construction materials, means, and methods associated with the various structural and architectural systems used to design and construct buildings. Project plans and specifications are incorporated to teach the basic sequencing and overall construction process. The influence of sustainability in construction is introduced. This class will also have an off campus, experiential learning lab associated with it.

CMGT 4420 Construction Estimating (4 Credits)

This course is designed to provide the student with the theory, principles and techniques of quantity analysis (take-off), labor determinations, overhead and profit analysis. It offers insight into the construction estimating process. The role of the estimator, types of estimating, CSI divisions, bid/contract documents, change order pricing, design/build projects and estimation compilation will be introduced. Discussions regarding the cost/benefit of sustainable materials and typical construction materials will enhance the requisite knowledge of construction estimating. Experiential learning lab is associated with this course. Prerequisite: CMGT 4320 and CMGT 4410. This course is a co/prerequisite for CMGT 4120.

CMGT 4480 Construction Project Management (4 Credits)

Principles and techniques of construction project management, use of systems analysis, internal and external procedures, planning, programming, budgeting and staffing, controlling major projects, emphasis on construction scheduling techniques with case application.

CMGT 4490 Residential Development (4 Credits)

A course sequence designed to emphasize the practical application of the theories and concepts of residential development. The course provides a capstone experience for seniors. Students are expected to apply their knowledge of general business, real estate and construction management practices by forming a student business entity, acquiring land, building and selling a residential property in a case format. Students will apply accounting, finance, marketing, real estate and construction management techniques in the planning for a residential development. The application of green building materials and methods is emphasized.

CMGT 4700 Topics in Construction Mgmt (0-4 Credits)

CMGT 4980 Construction Internship (0-4 Credits)

Daniels College of Business's graduate curriculum is designed to be experiential and build upon practical experience. To gain the full benefit of this curriculum, students are encouraged to expand their experiential learning beyond the short term experiences required in the classroom. Internships that allow students to apply newly learned skills and theories in the workplace are considered an integral to the curriculum and all students are strongly encouraged to seek such opportunities. Please review REBE Internship Guidelines: o Internships must be requested via PCO at least two weeks in advance of the quarter in which the work will commence. Final PCO approval is the Burns School Director. o No internships will be approved once the quarter begins. o Internships in arrears will not be approved. o Students may use a maximum of 4 Internship credits towards their REBE major degree. o Students have the option to obtain these 4 REBE internship credits by completing one or multiple internships combined for a maximum of 4 credit hours. o For students working full time at a company, they cannot seek internship in the same company they are working for and receive credit (in advance or arrears). o Not allowed for MBA concentrations.

CMGT 4991 Independent Study (1-10 Credits)

Real Estate Courses

REAL 4000 Fundamentals of Real Estate and the Built Environment (4 Credits)

An exploration of the importance of real estate and the built environment through triple bottom line analysis of its social, environmental, and economic impacts. The course considers a "cradle to cradle" sustainability model that links the various phases, functions, and professions of real estate, project delivery, and asset/facility management to create holistic, value-generating solutions for society. Professional practices/skill sets associated with the many career options that engage the built environment are demonstrated. Principles of real estate, real estate industry and its markets; legal aspects of home ownership from consumer's point of view, including property rights, title concepts, deeds, purchase contracts, listing contracts, law of agency, environmental issues and disclosures, types of mortgages, basics of home loan finance, appraisal investment and tax benefits will also be covered. Partially satisfies Colorado real estate broker licensing requirements.

REAL 4002 The Business of Real Estate (2 Credits)

This is an introduction to home ownership, real estate industry and its markets; legal aspects of home ownership from consumer's point of view, including property rights, title, concepts, deeds, and purchase contracts. Listing contracts, law of agency, types of mortgages, basics of home loan finance, appraisal, investment and tax benefits are also covered in this class. Partially satisfies Colorado Real Estate sales licensing requirements.

REAL 4007 Real Estate Financial Analysis (4 Credits)

Alternative analysis formats that can be applied to a wide array of real estate analysis issues; simulates working/decision-making environment; structured overview of analysis tools focused on specific facets of multidimensional real estate decision-making environment; applications in investment analysis, feasibility analysis, valuation, market analysis, and report writing and presentation. Prerequisite: REAL 4407.

REAL 4010 Real Estate Capital Markets (4 Credits)

This course exposes students to the commercial real estate capital markets; including real estate investment trusts (REITs) and commercial mortgage-backed securities (CMBS), plus institutional investors. The complexities of capital market products are discussed, students receive a greater understanding of the alternatives that are available. The class includes lectures, guest speakers, readings, class discussions, a major REIT analysis project, and case studies. Prerequisite: REAL 4407.

REAL 4140 Global Immersion (0-4 Credits)

Inbound U.S. and outbound U.S. real estate topics, with a mix of cultural issues that impact real estate transactions. Application of sustainability concepts is important in this course dealing with international real estate. This course will require on campus preparation for projects followed by 1-2 weeks of abroad travel which will include working with host universities, students and industry partners. This course will have additional travel fees.

REAL 4210 Planning, Entitlements, and Public Finance (4 Credits)

Real estate development, place making, and community building require the combined efforts of the public, for-profit, and non-profit sectors. Participants in the real estate development process need to understand and appreciate the sometimes competing and sometimes collaborative interests of governments, agencies, and the private developer. This course is designed to familiarize students with the overall context of urban planning and land use. Students discover the variety of participants in the development process and also become familiar with the project entitlement process, zoning, and land use regulation. Students also examine public/private financing structures such as public-private-partnerships (P3s) and become familiar with detailed calculations relating to Tax Incremental Financing (TIF) and Metropolitan Districts.

REAL 4337 Securities, Syndications and Entrepreneurship (4 Credits)

Introduction to real estate securities; emphasis on private offerings; determining whether a contemplated transaction involves a security, and what happens if it does; exemptions from registration (Reg D); registration requirements; investor suitability, how to syndicate, acquisition of property, marketing or the property, tax structure and formation of syndication, compensation to syndicators, real estate tax considerations.

REAL 4347 Property and Asset Management (4 Credits)

Explore the complexities of managing apartments, condominiums, office buildings, industrial property and shopping centers. This course covers rental markets, development of rental schedules, leasing techniques and negotiations, repairs and maintenance, tenant relations, merchandising, selection and training of personnel, accounting, and owner relations.

REAL 4357 Corporate Real Estate & Management (4 Credits)

This course provides a snapshot view of the corporate real estate life cycle and how to strategically plan and manage it. Over the ten week period we will address the diverse but critical components that together account for Facility Management. These shall include: Building Life Cycles and sustainability, facility management as part of the enterprise model within a corporate structure, regulatory agencies, professional relationships and the impact of the build environment on the bottom line, contracting and budget management, move-add-change (MAC) / operations, and general administrative services.

REAL 4369 Real Estate Taxation (4 Credits)

Tax factors affecting investments and operations in real estate; special attention is given to legal forms of ownership, depreciation, tax basis, tax impacts of exchanges, syndications, real estate securities, and other federal tax laws affecting real estate.

REAL 4407 Income Property Finance (4 Credits)

This course explores conventional and alternative financing, mortgage banking, law and markets, loan underwriting analysis and the impact of monetary and fiscal policies on the real estate and mortgage markets, with emphasis on decision making from the equity investors point of view. Specific topics include an overview and history of real estate finance, the taxation and legal aspects of real estate finance, compounding and discounting, functions of interest and real estate capital markets and securities. Specific areas of focus are residential property finance, income property finance, and construction and development financing.

REAL 4417 Income Property Valuation and Appraisal (4 Credits)

Residential/Commercial appraising, including market cost and income approaches to value, gross rent multiplier analysis, neighborhood and site analysis, valuation of income properties including market cost and income approaches to value, capitalization theory and techniques, mortgage-equity analysis, and investment value concepts. Prerequisite: REAL 4407.

REAL 4438 Legal Aspects of Real Estate and the Built Environment (4 Credits)

To gain an understanding of certain legal issues that are repeatedly encountered by real estate and construction professionals.

REAL 4467 Development and Feasibility (4 Credits)

Commercial real estate development analysis and feasibility includes economic base analysis, tenant demand analysis, development and construction cost analysis, lease-up analysis, financial feasibility, leasing and property management practices. Five major property types (office, industrial, retail, apartment and hotel) are covered. Prerequisite: REAL 4407.

REAL 4477 Income Property Investment (4 Credits)

Comprehensive analytical framework for real estate investment decision-making, equity investment decisions via discounted cash flow, and risk analysis models and strategic planning concepts, structuring parameters to maximize rates of return while controlling downside risks; emphasis on theory, concept building, and practical application to various types of investment properties. Prerequisite: REAL 4407.

REAL 4701 Topics in Real Estate (0-4 Credits)

REAL 4800 NAIOP Challenge (0-4 Credits)

A unique non-traditional course, where the students will work on a complex real estate problem culminating in an internal competition and external competition which includes a written report and an oral presentation.

REAL 4890 Real Estate Internship (0-4 Credits)

Daniels College of Business's graduate curriculum is designed to be experiential and build upon practical experience. To gain the full benefit of this curriculum, students are encouraged to expand their experiential learning beyond the short term experiences required in the classroom. Internships that allow students to apply newly learned skills and theories in the workplace are considered an integral to the curriculum and all students are strongly encouraged to seek such opportunities. Please review REBE Internship Guidelines: o Internships must be requested via PCO at least two weeks in advance of the quarter in which the work will commence. Final PCO approval is the Burns School Director. o No internships will be approved once the quarter begins. o Internships in arrears will not be approved. o Students may use a maximum of 4 Internship credits towards their REBE internship credits by completing one or multiple internships combined for a maximum of 4 credit hours. o For students working full time at a company, they cannot seek internship in the same company they are working for and receive credit (in advance or arrears). o Not allowed for MBA concentrations.

REAL 4980 Adv Valuation/Report Writing (1-10 Credits)

Advanced cutting-edge techniques not yet institutionalized nor commonly practiced in the field. Includes writing skills workshops appropriate to specialized nature of appraisal reports, and composition of a complex field problem report to prepare student for writing "demonstration" report required for MAI professional designation. Prerequisite: REAL 4417.

REAL 4991 Independent Study (1-10 Credits)

School of Accountancy

Office: Daniels College of Business, Rooms 355-379 Mail Code: 2101 S. University Blvd., Suite 355, Denver, CO 80208 Phone: 303-871-2032 Web Site: http://daniels.du.edu/accountancy/ (http://daniels.du.edu/faculty-research/accountancy/)

Master of Accountancy and Master of Science in Accounting, Technology, and Analytics

The Master of Accountancy (MAcc) and the Master of Science in Accounting, Technology, and Analytics (MSATA) programs at the Daniels College of Business School of Accountancy provides rigorous training in accounting fundamentals, financial reporting, and assurance, preparing you for a rewarding career. The best indicator of the program's strength is the success of our graduates: nearly all of our domestic graduates accept positions before graduation.

Through demonstrated prerequisite knowledge, formal coursework, and elective internship opportunities students will develop technical knowledge in accounting and assurance and technology skills to effectively utilize accounting information systems. Students will gain critical thinking, communication, interpersonal and technology skills to be effective business advisors and establish the ethical grounding to act with integrity.

An undergraduate accounting or business major is not necessary and work experience is not a requirement for admission to the MAcc nor the MSATA. Students may work toward meeting foundation requirements during their course of study. Foundation requirements are demonstrated competency in introductory and intermediate financial accounting and introductory managerial accounting. Students meet the competency requirement by having passed these foundation courses in an AACSB-accredited program. Students who believe they have competency in these areas through other means should consult with the program director.

Our mission as a School of Accountancy in a great private university dedicated to the public good is to foster professional excellence, lifelong learning, impactful scholarship, and commitment to community among its graduates, faculty, and others in the accounting profession.

- Professional excellence means ensuring that our graduates are skilled in accounting, financial analysis, and decision-making, and that they understand the impact of their actions on the organization, the profession, and society.
- · Lifelong learning denotes motivation and commitment to continuous development at all levels of one's career.
- Impactful scholarship means scholarship which improves our understanding of accounting, the practice of accounting, and the process of educating future accountants.
- · Commitment to community is the giving of one's time, skills, and resources to help create a better world.

Daniels has been continuously accredited by the Association to Advance Collegiate Schools of Business International (AACSB) since 1923. The School of Accountancy has held supplemental, specialized AACSB accreditation since 1980 and is one of the first five universities to receive this distinction.

Master of Accountancy

Degrees and GPA Requirements

Bachelors degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Standardized Test Scores

- GRE or GMAT scores are optional for admission to this program. Applications submitted without scores will receive full consideration. Every application undergoes a comprehensive evaluation, including a careful review of all application materials.
- If you choose to submit test scores, you may upload your Test Taker Score Report PDF, which is considered unofficial. Official scores must be received directly from the appropriate testing agency upon admission to the University of Denver. The ETS institution code to submit GRE scores to the University of Denver is 4842. The code to submit GMAT scores for this program is MZR-GT-82.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Other Requirements

· An admissions interview will be required by invitation only.

Master of Accountancy in Accounting

Master of Science in Accounting, Technology and Analytics

Master of Science in Accounting, Technology and Analytics (MSATA) at the Daniels College of Business School of Accountancy is is a STEMdesignated program designed for students who plan to specialize in technology and data analytics as accounting professionals. An undergraduate accounting or business major is not necessary and work experience is not a requirement for admission to the MSATA. Students may work toward meeting foundation requirements during their course of study. Foundation requirements are demonstrated competency in introductory and intermediate financial accounting and introductory managerial accounting. Students who have met all foundation requirements complete the degree with 40 credit hours of study as specified. Foundation requirements can add up to an additional 16 credit hours of study for those who do not meet the prerequisite foundational requirements.

ACTG 4130 Accounting Process Technologies (4 Credits)

Accounting Process Technologies are a continually evolving discipline within the profession of accounting. Students are introduced to current and developing technologies used for process mining, automation, and analysis. Students will gain hands-on experience with various technologies as well as learn the accounting theories behind them.

ACTG 4155 Accounting Data Skills and Concepts (4 Credits)

This course is designed to give students an understanding of the technology underlying accounting information systems and help students develop more advanced data analysis skills. We will use the programming language Python to develop an understanding of the digital business logic that supports the operations of modern firms. We will learn to use Business Process Modeling Notation (BPMN) to graphically document operations and their underlying business logic. We will discuss and analyze a set of studies that use survey data from a global sample of executives and analysts to develop an understanding of the levels of technological sophistication in modern firms. We will also discuss and analyze distributed databases, information security, and eXtensible Business Reporting Language. Prerequisites: none.

ACTG 4176 Accounting Data Analytics (4 Credits)

In this course, students explore overarching trends in big data and the impact to accounting and auditing fields while also gaining hands on experience working with business data sets. In today's information world, accountants must be well equipped to understand and utilize the vast and varying data systems that feed a company's decision making process. This course allows students to develop big data skills by learning the SQL language to query data from mock clients. Students execute Computer Assisted Auditing Techniques (CAATs) using both the SQL language as well was the audit data mining tool, IDEA. Students simulate the process to request client data files, load complex data sets, design and execute guery procedures and summarize results for management. Prerequisite: ACTG 4610.

ACTG 4220 Financial Actg & Analysis (4 Credits)

Cross-listed with ACTG 3230.

ACTG 4222 Understanding Financial Statements (4 Credits)

At the conclusion of this course the student should understand: (1) management decisions that impact published financial statements, (2) the fundamentals of interpretation and analysis of financial statements, (3) economic and ethical issues relating to financial reporting, and (4) management attempts to enhance reported operating results. The course addresses the needs of managers and analysts, hence does not cover promulgated financial reporting rules in depth. The financial reporting topics expand on material presented in introductory Accounting and Finance courses. The focus is on the substance of the reported information. This course is not an approved elective for the MACC degree. Cross listed with ACTG 3220.

ACTG 4240 Topics & Cases in Financial Accounting (4 Credits)

This course develops a greater awareness of contemporary accounting issues, focusing on financial reporting. The course is designed to enhance each student's ability to identify, discuss, and resolve open-ended problems (i.e., those having no single "correct" answer) faced by accounting professionals. Each student must commit to being an active participant in the class discussions. Through the use of numerous cases involving all aspects of financial reporting, students identify issues, conduct authoritative research, then present and defend their conclusions using both oral and written presentation formats. Students also write an original research paper on a topic of their choice.

ACTG 4281 Intermediate Financial Accounting I (4 Credits)

The focus of this course is the foundation and content of published financial statements. Specifically it covers the following broad topics: (1) Conceptual Framework of Financial Reporting; (2) Financial Statements and Related Disclosures; (3) Assets: Recognition and Measurement; and (4) Liabilities: Recognition and Measurement. Common to each of the topics is an emphasis on reading GAAP and applying GAAP quidance to fact patterns. At the conclusion of the course, students should be aware of the proper accounting treatment for many common situations; moreover, students should be fully comfortable interpreting GAAP literature to address scenarios involving assets, liabilities, and income that were not specifically covered in the class.

ACTG 4282 Intermediate Financial Accounting II (4 Credits)

This course is a continuation of Intermediate Financial Accounting. The focus of this course is the application of Generally Accepted Accounting Principles to complex business transactions. In this final course of the sequence, we finish our examination of the balance sheet by exploring the issues involved with stockholders' equity, followed by in-depth study of some of the most complex accounting issues, including revenue recognition, accounting for income taxes, pensions and post-employment benefits, leases, and accounting changes and errors.

ACTG 4284 Consolidated Financial Statements (2 Credits)

This course introduces the student to the preparation of financial statements in compliance with GAAP when the reporting entity has investments in other entities that are other than passive investments. This module explores the financial reporting issues relating to partial or full ownership of one business entity by another. It includes use of the equity method as well as issues involved in reporting the financial results of consolidated entities, both at and subsequent to acquisition or formation.

ACTG 4285 Accounting for Foreign Operations (2 Credits)

Topics covered in this course include the financial statement impact of doing business in a foreign currency, having foreign subsidiaries or operations, and certain hedging activities.

ACTG 4290 Financial Accounting Theory (4 Credits)

This course introduces financial accounting theory with a focus on the application of accounting information as a tool for decision makers for firm valuation, contracting, executive compensation, enhancing corporate governance, and assessing earnings quality. The course draws from basic theories in economics, finance, and psychology to understand and predict accounting choices of firm managers and reactions of investors, lenders, auditors, and regulators to accounting information. The main objective is to foster conceptual, critical, and creative thinking about implications of accounting in the marketplace. Prerequisite: ACTG 4281.

ACTG 4340 Topics & Cases in Managerial Accounting (4 Credits)

Topics & Cases in Managerial Accounting focuses upon contemporary methodologies used by managerial accountants. Such methodologies are examined through classroom discussions of case studies and related articles. The course is designed to develop and enhance skills that are essential for the long-term success of career in accounting and finance.

ACTG 4354 Cost Accounting (4 Credits)

Accounting information in manufacturing enterprises, standard costs, and budgets. Open to students not having ACTG 3354 or equivalent. Prerequisite: MBA 4110, MBA 4111, or equivalent.

ACTG 4400 Taxation for Business and Investment Planning (4 Credits)

This is an introductory tax course that emphasizes a conceptual approach to learning the income tax framework applicable to common business and investment transactions. It is designed to sensitize students to the tax implications of business decisions and to cultivate the student's ability to ask good tax questions. This course will illustrate that effective business planning depends on an accurate assessment of relevant tax factors.

ACTG 4410 Federal Income Taxation (4 Credits)

The course is designed for graduate accounting students that wish to study federal income taxation. This is the first course in taxation, which introduces the federal taxation system, the importance of tax authorities, the concepts of gross income and tax deductions and the tax implications of common property transactions. The course generally focuses on property transactions, but the taxation of individuals is emphasized with an objective of students being able to properly prepare complex individual tax returns.

ACTG 4462 Corporate and Partnership Taxation (4 Credits)

The course is designed for graduate accounting, finance or other business students in their study of advanced topics in federal income taxation. This is the second course in taxation which concentrates on taxation of corporations, limited liability corporations, S corporations and partnerships. Prerequisites: ACTG 3440 or ACTG 3036 or ACTG 4400 or ACTG 4410 or ACTG 3461.

ACTG 4520 Forensic Accounting and Auditing (4 Credits)

Students will have an opportunity to learn, study, and discuss practical aspects of accounting as it is used to detect and prosecute fraud. Students will be exposed to improprieties, common fraud schemes, illegalities, and harassments. Prerequisites: ACTG 3551 or ACTG 4551 (Concurrent enrollment allowed).

ACTG 4530 Business Advisory and Internal Audit (4 Credits)

In today's business environment, a given company's "internal audit" function is asked to not only help keep the business out of trouble (control risks), but also help make the business better (leverage risk management to make better business decisions). In this course, we will "reimagine" internal audit with a heavy focus on the business advisory aspects of audit. Topics specifically covered in this course include risk appetite and tolerance, risk culture and an array of cutting-edge audit and advisory topics (cybersecurity, data privacy, social media, to name a few). Students experience "real life" examples and case studies to truly experience the role of an auditor as business advisor. Prerequisite: ACTG 3551 or ACTG 4551.

ACTG 4551 Auditing (4 Credits)

This course is designed to provide you with a thorough understanding of auditing and related attest services. This includes gaining requisite knowledge about AICPA (U.S. GAAS) and PCAOB auditing standards and how they are applied in conducting a financial statement audit. Application of these standards applies to planning an audit, the risk assessment process including gaining an understanding of internal control, gathering and evaluating evidence, sampling, and issuing an audit report.

ACTG 4552 Advanced Auditing (4 Credits)

This course is designed to build on the foundation of auditing knowledge developed in ACTG 4551 and apply that knowledge to specific accounts and assertions in a financial statement audit. Students also examine selected SEC enforcement actions and discuss what audit procedures may have been beneficial to prevent the misstatement. Prerequisite: ACTG 4551 or ACTG 3551.

ACTG 4575 Accounting Information System Risk, Control and Audit (4 Credits)

An auditor cannot just "audit the numbers" without strong consideration to the IT systems that generate those numbers. Today's accounting professionals must possess a strong understanding of accounting information system risks and controls. Topics specifically covered in this course include IT security controls, datacenter controls, data backup and disaster recovery planning, SDLC and change control processes. Students perform hands on simulated audit exercises and case studies to truly experience the role of an IT auditor. Prerequisites: ACTG 3551 or ACTG 4551 or test score AC51=1.

ACTG 4610 Financial Accounting and Reporting (4 Credits)

In this course, students will gain a strong understanding of corporate financial statements that are consumed by parties such as managers, shareholders, creditors and financial analysts. The course covers the fundamentals of accounting from recording individual business transactions through the preparation of a company's summarized financial statements. The course closely examines how economic events and business decisions impact the three main financial statements – Income Statement, Balance Sheet and Statement of Cash Flows. Students gain significant experience analyzing Form 10-K annual reports of publicly traded companies.

ACTG 4620 Accounting Ethics (4 Credits)

This course focuses on the idea of community and the ethical and social relationships of accounting leaders and business organizations in their communities. The course focus is on the role of the accounting professional and the unique and special responsibilities associated with that role. This is examined by analyzing a variety of issues that students will face during their careers. The goal is to provide students with generalized understanding and skills that can be employed in dealing with other issues that emerge directly relate to the state Code of Professional Conduct applicable to CPAs, the Code provisions are discussed and analyzed. Prerequisites: None.

ACTG 4660 Strategic Cost Management (4 Credits)

Course description: Strategic Cost Management (SCM) will teach students how to use accounting information to make correct decisions within their firms. These decisions will include costing, pricing, strategy, and performance management. SCM articulates how to use accounting information in order to properly price goods and/or services, how to decide between alternative strategies, and how perform relative performance evaluation among employees and/or departments within the firm. The focus is on interpreting accounting information and making business decisions. Topics in the course include cost behavior, activity-based costing, cost-volume-profit analysis, short-term decision-making, balanced scorecard, and management control. The course will enable students to apply strategic thinking to management planning, decision-making, and management reporting. Prerequisite: ACTG 4610.

ACTG 4661 Strategic Accounting for Managers (4 Credits)

Management accounting is in transition, moving from a quantitative procedural focus to include a qualitative strategic focus that uses accounting to facilitate the organization's success. Changes include a renewed focus on the customer, aggressive cost reduction, and increased use of information technologies, among others. Motivation for the changes in management accounting are driven by evolving business processes in response to increased competition, both global and domestic. The management accountant is no longer a reporter and analyzer of financial facts only, but a business partner – developing the financial and non-financial information the organization needs to be successful. The concepts of management accounting are used in manufacturing and service organizations and are increasingly applied to government and not-for-profit organizations to help them succeed in their service missions and to be responsible to the citizens and funding agencies. In this course, students will learn how the management accountant plays a strategic role in the organization, developing and presenting the information that is critical for the organization's success. Students will use higher order thinking to apply accounting information to the types of strategic decisions organizations make for long-term sustainability. Prerequisites: ACTG 4610.

ACTG 4700 Graduate Seminar in Accounting (1-17 Credits)

ACTG 4701 Special Topics in Accounting (1-5 Credits)

ACTG 4702 Special Topics in Accounting (1-5 Credits)

ACTG 4703 Special Topics in Accounting (1-5 Credits)

ACTG 4704 Special Topics in Accounting (1-5 Credits)

ACTG 4705 Topics in Accounting (1-4 Credits)

ACTG 4710 Managing the Family Business (4 Credits)

Family enterprises have a tremendous impact on our local, national and global economies. Today, the definition of the family enterprise extends beyond just the business entity. It includes family offices, family "banks," family councils, trusts, and family foundations, just to name a few. Further, what happens in, and how decisions are made by, family enterprise affects not only the active family members but other key stakeholders such as inactive family members, in-laws, non-family managers and employees, professional advisors, customers, suppliers and competitors. This course gives students insight into the universe of possibilities that families, enterprises and their advisors face when engaged in systemic transition planning. This highly interdisciplinary course is appropriate for anyone who intends to work in or with family enterprises. This includes family members, accountants, attorneys, estate planners, financial or wealth managers, family office professionals, insurance consultants, business advisors, management consultants, organizational and leadership development experts, international business professionals, psychologists, social workers, and family therapists.

ACTG 4730 International Accounting - London (4 Credits)

This course is designed for students to study international accounting from both academic and practical perspectives. The main objective of this course is to develop a greater awareness of contemporary accounting issues faced in the international marketplace. This course will consist of two components: pre-departure classes designed to provide the student with knowledge of issues experienced in a global economy; a ten-day international travel experience which includes experiential learning exercises, group discussions and presentations, and seven visits to international companies and CPA firms. Prerequisite: Instructor Permission.

ACTG 4735 Accounting for ESG -- Eastern Europe (4 Credits)

This course is designed to give students an introduction to ESG accounting measurement and reporting issues from the perspective of multiple players in this arena (companies, accounting firms, standard setters, regulators etc.). This course juxtaposes US ESG accounting standard setting, measurement issues and best practices with Eastern European viewpoints on the same issues. With that in mind, this course will provide participants with the ability to be able to research, obtain and interpret current information on ESG accounting rules and standard setting.

ACTG 4740 Valuation and Modeling (4 Credits)

The ultimate purpose of the course is to improve professional decision-making skills. Professional decisions are made using a combination of judgment and analysis. Even skilled professionals (in any field) will make incorrect decisions when working with incorrect or insufficient information. Thus, one key to improving decision-making is improving analytical insights and skills. This course emphasizes the definition, construction, uses and limitations of popular financial models and instruments. Further, the class focuses on how the instruments are used, why they are used and how decisions to use such instruments and tools/techniques to value them are made. Prerequisite ACTG 4610 or test code AC10 >=1.

ACTG 4750 Valuing a Business (4 Credits)

This course explores all major aspects of business valuation. Students not only study valuation theory, they appraise an actual business and draft a valuation report in compliance with the American Institute of Certified Public Accountants Statement on Standards for Valuation Services (SSVS) and Reporting Standards of the National Association of Certified Valuation Analysts (NACVA). Prerequisite: ACTG 4740.

ACTG 4760 CEOs and Corporate Governance (4 Credits)

This course examines the current and pressing issue of corporate governance, in its ethical, legal, and social dimensions. Students read the latest views of scholars and experts and gain the perspectives of corporate CEOs and other organization leaders. Topics explored include the history of various governance models, public policy on corporate governance, corporate board functions and responsibilities, the dynamics between CEOs and boards, ethical leadership and corporate culture, ethics and compliance programs, executive liability, nonprofit corporate governance, board and audit committee responsibilities, restructuring and governance, executive compensation problems and solutions, shareholder activism, and corporate governance reforms. Cross-listed with LGST 4760.

ACTG 4795 Graduate Research Sem-Actg (1-17 Credits)

ACTG 4880 Internship - Graduate (0-4 Credits) Hours and times arranged by student.

ACTG 4991 Independent Study (1-10 Credits)

Hours and times arranged by student.

ACTG 6300 Behavioral Research in Accounting Seminar (4 Credits)

This seminar will provide students with the tools needed for educated consumption of behavioral research in accounting. We will focus on the theoretical and methodological issues faced by those who conduct this research, as well as the practical implications of the research for business leaders. Students should leave the course with a basic knowledge of behavioral research in accounting and be better able to create, analyze and critique such research.

Courses

ACTG 4130 Accounting Process Technologies (4 Credits)

Accounting Process Technologies are a continually evolving discipline within the profession of accounting. Students are introduced to current and developing technologies used for process mining, automation, and analysis. Students will gain hands-on experience with various technologies as well as learn the accounting theories behind them.

ACTG 4155 Accounting Data Skills and Concepts (4 Credits)

This course is designed to give students an understanding of the technology underlying accounting information systems and help students develop more advanced data analysis skills. We will use the programming language Python to develop an understanding of the digital business logic that supports the operations of modern firms. We will learn to use Business Process Modeling Notation (BPMN) to graphically document operations and their underlying business logic. We will discuss and analyze a set of studies that use survey data from a global sample of executives and analysts to develop an understanding of the levels of technological sophistication in modern firms. We will also discuss and analyze distributed databases, information security, and eXtensible Business Reporting Language. Prerequisites: none.

ACTG 4176 Accounting Data Analytics (4 Credits)

In this course, students explore overarching trends in big data and the impact to accounting and auditing fields while also gaining hands on experience working with business data sets. In today's information world, accountants must be well equipped to understand and utilize the vast and varying data systems that feed a company's decision making process. This course allows students to develop big data skills by learning the SQL language to query data from mock clients. Students execute Computer Assisted Auditing Techniques (CAATs) using both the SQL language as well was the audit data mining tool, IDEA. Students simulate the process to request client data files, load complex data sets, design and execute query procedures and summarize results for management. Prerequisite: ACTG 4610.

ACTG 4220 Financial Actg & Analysis (4 Credits)

Cross-listed with ACTG 3230.

ACTG 4222 Understanding Financial Statements (4 Credits)

At the conclusion of this course the student should understand: (1) management decisions that impact published financial statements, (2) the fundamentals of interpretation and analysis of financial statements, (3) economic and ethical issues relating to financial reporting, and (4) management attempts to enhance reported operating results. The course addresses the needs of managers and analysts, hence does not cover promulgated financial reporting rules in depth. The financial reporting topics expand on material presented in introductory Accounting and Finance courses. The focus is on the substance of the reported information. This course is not an approved elective for the MACC degree. Cross listed with ACTG 3220.

ACTG 4240 Topics & Cases in Financial Accounting (4 Credits)

This course develops a greater awareness of contemporary accounting issues, focusing on financial reporting. The course is designed to enhance each student's ability to identify, discuss, and resolve open-ended problems (i.e., those having no single "correct" answer) faced by accounting professionals. Each student must commit to being an active participant in the class discussions. Through the use of numerous cases involving all aspects of financial reporting, students identify issues, conduct authoritative research, then present and defend their conclusions using both oral and written presentation formats. Students also write an original research paper on a topic of their choice.

ACTG 4281 Intermediate Financial Accounting I (4 Credits)

The focus of this course is the foundation and content of published financial statements. Specifically it covers the following broad topics: (1) Conceptual Framework of Financial Reporting; (2) Financial Statements and Related Disclosures; (3) Assets: Recognition and Measurement; and (4) Liabilities: Recognition and Measurement. Common to each of the topics is an emphasis on reading GAAP and applying GAAP guidance to fact patterns. At the conclusion of the course, students should be aware of the proper accounting treatment for many common situations; moreover, students should be fully comfortable interpreting GAAP literature to address scenarios involving assets, liabilities, and income that were not specifically covered in the class.

ACTG 4282 Intermediate Financial Accounting II (4 Credits)

This course is a continuation of Intermediate Financial Accounting. The focus of this course is the application of Generally Accepted Accounting Principles to complex business transactions. In this final course of the sequence, we finish our examination of the balance sheet by exploring the issues involved with stockholders' equity, followed by in-depth study of some of the most complex accounting issues, including revenue recognition, accounting for income taxes, pensions and post-employment benefits, leases, and accounting changes and errors.

ACTG 4284 Consolidated Financial Statements (2 Credits)

This course introduces the student to the preparation of financial statements in compliance with GAAP when the reporting entity has investments in other entities that are other than passive investments. This module explores the financial reporting issues relating to partial or full ownership of one business entity by another. It includes use of the equity method as well as issues involved in reporting the financial results of consolidated entities, both at and subsequent to acquisition or formation.

ACTG 4285 Accounting for Foreign Operations (2 Credits)

Topics covered in this course include the financial statement impact of doing business in a foreign currency, having foreign subsidiaries or operations, and certain hedging activities.

ACTG 4290 Financial Accounting Theory (4 Credits)

This course introduces financial accounting theory with a focus on the application of accounting information as a tool for decision makers for firm valuation, contracting, executive compensation, enhancing corporate governance, and assessing earnings quality. The course draws from basic theories in economics, finance, and psychology to understand and predict accounting choices of firm managers and reactions of investors, lenders, auditors, and regulators to accounting information. The main objective is to foster conceptual, critical, and creative thinking about implications of accounting in the marketplace. Prerequisite: ACTG 4281.

ACTG 4340 Topics & Cases in Managerial Accounting (4 Credits)

Topics & Cases in Managerial Accounting focuses upon contemporary methodologies used by managerial accountants. Such methodologies are examined through classroom discussions of case studies and related articles. The course is designed to develop and enhance skills that are essential for the long-term success of career in accounting and finance.

ACTG 4354 Cost Accounting (4 Credits)

Accounting information in manufacturing enterprises, standard costs, and budgets. Open to students not having ACTG 3354 or equivalent. Prerequisite: MBA 4110, MBA 4111, or equivalent.

ACTG 4400 Taxation for Business and Investment Planning (4 Credits)

This is an introductory tax course that emphasizes a conceptual approach to learning the income tax framework applicable to common business and investment transactions. It is designed to sensitize students to the tax implications of business decisions and to cultivate the student's ability to ask good tax questions. This course will illustrate that effective business planning depends on an accurate assessment of relevant tax factors.

ACTG 4410 Federal Income Taxation (4 Credits)

The course is designed for graduate accounting students that wish to study federal income taxation. This is the first course in taxation, which introduces the federal taxation system, the importance of tax authorities, the concepts of gross income and tax deductions and the tax implications of common property transactions. The course generally focuses on property transactions, but the taxation of individuals is emphasized with an objective of students being able to properly prepare complex individual tax returns.

ACTG 4462 Corporate and Partnership Taxation (4 Credits)

The course is designed for graduate accounting, finance or other business students in their study of advanced topics in federal income taxation. This is the second course in taxation which concentrates on taxation of corporations, limited liability corporations, S corporations and partnerships. Prerequisites: ACTG 3440 or ACTG 3036 or ACTG 4400 or ACTG 4410 or ACTG 3461.

ACTG 4520 Forensic Accounting and Auditing (4 Credits)

Students will have an opportunity to learn, study, and discuss practical aspects of accounting as it is used to detect and prosecute fraud. Students will be exposed to improprieties, common fraud schemes, illegalities, and harassments. Prerequisites: ACTG 3551 or ACTG 4551 (Concurrent enrollment allowed).

ACTG 4530 Business Advisory and Internal Audit (4 Credits)

In today's business environment, a given company's "internal audit" function is asked to not only help keep the business out of trouble (control risks), but also help make the business better (leverage risk management to make better business decisions). In this course, we will "reimagine" internal audit with a heavy focus on the business advisory aspects of audit. Topics specifically covered in this course include risk appetite and tolerance, risk culture and an array of cutting-edge audit and advisory topics (cybersecurity, data privacy, social media, to name a few). Students experience "real life" examples and case studies to truly experience the role of an auditor as business advisor. Prerequisite: ACTG 3551 or ACTG 4551.

ACTG 4551 Auditing (4 Credits)

This course is designed to provide you with a thorough understanding of auditing and related attest services. This includes gaining requisite knowledge about AICPA (U.S. GAAS) and PCAOB auditing standards and how they are applied in conducting a financial statement audit. Application of these standards applies to planning an audit, the risk assessment process including gaining an understanding of internal control, gathering and evaluating evidence, sampling, and issuing an audit report.

ACTG 4552 Advanced Auditing (4 Credits)

This course is designed to build on the foundation of auditing knowledge developed in ACTG 4551 and apply that knowledge to specific accounts and assertions in a financial statement audit. Students also examine selected SEC enforcement actions and discuss what audit procedures may have been beneficial to prevent the misstatement. Prerequisite: ACTG 4551 or ACTG 3551.

ACTG 4575 Accounting Information System Risk, Control and Audit (4 Credits)

An auditor cannot just "audit the numbers" without strong consideration to the IT systems that generate those numbers. Today's accounting professionals must possess a strong understanding of accounting information system risks and controls. Topics specifically covered in this course include IT security controls, datacenter controls, data backup and disaster recovery planning, SDLC and change control processes. Students perform hands on simulated audit exercises and case studies to truly experience the role of an IT auditor. Prerequisites: ACTG 3551 or ACTG 4551 or test score AC51=1.

ACTG 4610 Financial Accounting and Reporting (4 Credits)

In this course, students will gain a strong understanding of corporate financial statements that are consumed by parties such as managers, shareholders, creditors and financial analysts. The course covers the fundamentals of accounting from recording individual business transactions through the preparation of a company's summarized financial statements. The course closely examines how economic events and business decisions impact the three main financial statements – Income Statement, Balance Sheet and Statement of Cash Flows. Students gain significant experience analyzing Form 10-K annual reports of publicly traded companies.

ACTG 4620 Accounting Ethics (4 Credits)

This course focuses on the idea of community and the ethical and social relationships of accounting leaders and business organizations in their communities. The course focus is on the role of the accounting professional and the unique and special responsibilities associated with that role. This is examined by analyzing a variety of issues that students will face during their careers. The goal is to provide students with generalized understanding and skills that can be employed in dealing with other issues that emerge directly relate to the state Code of Professional Conduct applicable to CPAs, the Code provisions are discussed and analyzed. Prerequisites: None.

ACTG 4660 Strategic Cost Management (4 Credits)

Course description: Strategic Cost Management (SCM) will teach students how to use accounting information to make correct decisions within their firms. These decisions will include costing, pricing, strategy, and performance management. SCM articulates how to use accounting information in order to properly price goods and/or services, how to decide between alternative strategies, and how perform relative performance evaluation among employees and/or departments within the firm. The focus is on interpreting accounting information and making business decisions. Topics in the course include cost behavior, activity-based costing, cost-volume-profit analysis, short-term decision-making, balanced scorecard, and management control. The course will enable students to apply strategic thinking to management planning, decision-making, and management reporting. Prerequisite: ACTG 4610.

ACTG 4661 Strategic Accounting for Managers (4 Credits)

Management accounting is in transition, moving from a quantitative procedural focus to include a qualitative strategic focus that uses accounting to facilitate the organization's success. Changes include a renewed focus on the customer, aggressive cost reduction, and increased use of information technologies, among others. Motivation for the changes in management accounting are driven by evolving business processes in response to increased competition, both global and domestic. The management accountant is no longer a reporter and analyzer of financial facts only, but a business partner – developing the financial and non-financial information the organization needs to be successful. The concepts of management accounting are used in manufacturing and service organizations and are increasingly applied to government and not-for-profit organizations to help them succeed in their service missions and to be responsible to the citizens and funding agencies. In this course, students will learn how the management accountant plays a strategic role in the organization, developing and presenting the information that is critical for the organization's success. Students will use higher order thinking to apply accounting information to the types of strategic decisions organizations make for long-term sustainability. Prerequisites: ACTG 4610.

ACTG 4700 Graduate Seminar in Accounting (1-17 Credits)

ACTG 4701 Special Topics in Accounting (1-5 Credits)

ACTG 4702 Special Topics in Accounting (1-5 Credits)

ACTG 4703 Special Topics in Accounting (1-5 Credits)

ACTG 4704 Special Topics in Accounting (1-5 Credits)

ACTG 4705 Topics in Accounting (1-4 Credits)

ACTG 4710 Managing the Family Business (4 Credits)

Family enterprises have a tremendous impact on our local, national and global economies. Today, the definition of the family enterprise extends beyond just the business entity. It includes family offices, family "banks," family councils, trusts, and family foundations, just to name a few. Further, what happens in, and how decisions are made by, family enterprise affects not only the active family members but other key stakeholders such as inactive family members, in-laws, non-family managers and employees, professional advisors, customers, suppliers and competitors. This course gives students insight into the universe of possibilities that families, enterprises and their advisors face when engaged in systemic transition planning. This highly interdisciplinary course is appropriate for anyone who intends to work in or with family enterprises. This includes family members, accountants, attorneys, estate planners, financial or wealth managers, family office professionals, insurance consultants, business advisors, management consultants, organizational and leadership development experts, international business professionals, psychologists, social workers, and family therapists.

ACTG 4730 International Accounting - London (4 Credits)

This course is designed for students to study international accounting from both academic and practical perspectives. The main objective of this course is to develop a greater awareness of contemporary accounting issues faced in the international marketplace. This course will consist of two components: pre-departure classes designed to provide the student with knowledge of issues experienced in a global economy; a ten-day international travel experience which includes experiential learning exercises, group discussions and presentations, and seven visits to international companies and CPA firms. Prerequisite: Instructor Permission.

ACTG 4735 Accounting for ESG -- Eastern Europe (4 Credits)

This course is designed to give students an introduction to ESG accounting measurement and reporting issues from the perspective of multiple players in this arena (companies, accounting firms, standard setters, regulators etc.). This course juxtaposes US ESG accounting standard setting, measurement issues and best practices with Eastern European viewpoints on the same issues. With that in mind, this course will provide participants with the ability to be able to research, obtain and interpret current information on ESG accounting rules and standard setting.

ACTG 4740 Valuation and Modeling (4 Credits)

The ultimate purpose of the course is to improve professional decision-making skills. Professional decisions are made using a combination of judgment and analysis. Even skilled professionals (in any field) will make incorrect decisions when working with incorrect or insufficient information. Thus, one key to improving decision-making is improving analytical insights and skills. This course emphasizes the definition, construction, uses and limitations of popular financial models and instruments. Further, the class focuses on how the instruments are used, why they are used and how decisions to use such instruments and tools/techniques to value them are made. Prerequisite ACTG 4610 or test code AC10 >=1.

ACTG 4750 Valuing a Business (4 Credits)

This course explores all major aspects of business valuation. Students not only study valuation theory, they appraise an actual business and draft a valuation report in compliance with the American Institute of Certified Public Accountants Statement on Standards for Valuation Services (SSVS) and Reporting Standards of the National Association of Certified Valuation Analysts (NACVA). Prerequisite: ACTG 4740.

ACTG 4760 CEOs and Corporate Governance (4 Credits)

This course examines the current and pressing issue of corporate governance, in its ethical, legal, and social dimensions. Students read the latest views of scholars and experts and gain the perspectives of corporate CEOs and other organization leaders. Topics explored include the history of various governance models, public policy on corporate governance, corporate board functions and responsibilities, the dynamics between CEOs and boards, ethical leadership and corporate culture, ethics and compliance programs, executive liability, nonprofit corporate governance, board and audit committee responsibilities, restructuring and governance, executive compensation problems and solutions, shareholder activism, and corporate governance reforms. Cross-listed with LGST 4760.

ACTG 4795 Graduate Research Sem-Actg (1-17 Credits)

ACTG 4880 Internship - Graduate (0-4 Credits) Hours and times arranged by student.

ACTG 4991 Independent Study (1-10 Credits) Hours and times arranged by student.

ACTG 6300 Behavioral Research in Accounting Seminar (4 Credits)

This seminar will provide students with the tools needed for educated consumption of behavioral research in accounting. We will focus on the theoretical and methodological issues faced by those who conduct this research, as well as the practical implications of the research for business leaders. Students should leave the course with a basic knowledge of behavioral research in accounting and be better able to create, analyze and critique such research.

Joint Doctoral Program in the Study of Religion

This PhD program is a joint venture between the University of Denver and the Iliff School of Theology. With faculty from both schools equally available for coursework and mentoring, the Joint Doctoral Program (JDP) combines the expansive opportunities of the University of Denver with the deep theological resources of the Iliff School of Theology. Coursework emphasizes interdisciplinary dialogue and research. Some of the areas that participate include the University's graduate schools of Professional Psychology, Social Work, Education and International Studies, as well as the departments of Anthropology, Art History, Communication Studies, English, Philosophy, Religious Studies, the Center for Judaic Studies, and others. This degree equips students to become scholar-teachers who are committed to addressing contemporary social and spiritual matters. Other career options include positions in religious communities, governmental and non-profit organizations, counseling centers, curators and directors of education in museums, academic technologists, and administrative positions in higher education.

You can learn more about the program on our website (https://www.du.edu/duiliffjoint/).

DU Iliff Joint Doctoral Program in the Study of Religion

Office: Iliff School of Theology I-110 Mail Code: 4842 Phone: 1-303-765-3136 Email: Jointphd@iliff.edu Web Site: http://www.du.edu/duiliffjoint/

Doctor of Philosophy in the Study of Religion

The Joint Doctoral Program in the Study of Religion (JDP), housed at the University of Denver and the Iliff School of Theology, has been developing leaders in the field of religion for forty years. The program offers students a rich and rigorous, yet flexible and interdisciplinary, environment for academic conversation and study. Students in the JDP benefit from a strong sense of community. Our students participate in a range of colloquia, workshops, and symposia that promote innovative and relevant scholarship. The JDP prepares students for careers in academic technologists, administrative positions in higher education, and a variety of other vocational venues. Through close peer and faculty relationships and support, students develop their professional identities within the academic study of religion.

Across various specializations, JDP faculty are committed to educating all our students in the critical study of religion and to helping them develop the ability to understand their areas of specialization as a part of the larger discipline. The curriculum of the JDP seeks to prepare students to understand and participate in conversations about key ideas, themes, theories, questions, problems, and trends in the study of religion, including those within professional organizations such as the American Academy of Religion.

Spheres of Inquiry for Interdisciplinary Study

The academic program utilizes lenses for study and research called spheres of inquiry.

- · Lived Religion (persons and communities)
- · Conceptual Approaches to Religion (issues, concepts, and social and cultural phenomena)
- · Religion in Text, Image, and Artifact

The spheres are not discrete tracks of study but are intended to create spaces for conversation among faculty and students who have different areas of specialization. Each year, three colloquia will be offered, one for each sphere, focusing on a different theme. One faculty member will serve as moderator, but several faculty will participate as determined by their research interests. During their course work, students must take one colloquium in each sphere, though they may take more than one if they choose, since the themes will vary year to year.

Program Strengths for In-Depth Study

The JDP has resources to offer specialized study in a limited number of subject areas. The strengths of JDP faculty determine the most productive opportunities for study and for directed research, such as dissertation projects. The academic areas below are not distinct concentrations, but rather areas of strength among the current faculty of DU and Iliff.

- Bible, Ancient Judaism, Early Christianity
- · Religion, Art, and Media
- · Social Justice, Race, and Identity
- · Religion and Politics
- Theories of Religion
- Religion and Human Experience

Certificate in Latinx Studies

Highlighting our commitment to diversity and our celebration of inclusive excellence, the Joint PhD program in the Study of Religion offers a certificate in Latinx Studies. Guided by faculty at both DU and Iliff, Joint PhD students consider questions of Latinx histories and culture from a theological and religious studies perspective and engage directly with Latinx communities. This certificate prepares student to teach Latinx Studies focusing on religion, theology, and social praxis. It is open only to students already admitted to the DU/Iliff Joint PhD in the Study of Religion.

Doctor of Philosophy in Religion

Degree and GPA Requirements

Bachelor's degree: All graduate applicants must hold an earned baccalaureate from a regionally accredited college or university or the recognized equivalent from an international institution.

Masters degree: This program requires a masters degree as well as the baccalaureate.

University GPA requirement: The minimum grade point average for admission consideration for graduate study at the University of Denver must meet one of the following criteria:

- · A cumulative 2.5 on a 4.0 scale for the baccalaureate degree.
- A cumulative 2.5 on a 4.0 scale for the last 60 semester credits or 90 quarter credits (approximately two years of work) for the baccalaureate degree.
- An earned master's degree or higher from a regionally accredited institution or the recognized equivalent from an international institution supersedes the minimum GPA requirement for the baccalaureate.
- · A cumulative GPA of 3.0 on a 4.0 scale for all graduate coursework completed for applicants who have not earned a master's degree or higher.

Program GPA requirement: A completed master's degree relevant to the student's proposed concentration(s) from a HLC accredited American university or a comparably accredited outside the United States is required. A GPA from all graduate work of no less than 3.0 is required for admission into the program.

Prerequisites

• Students with an interest in studying the Bible or ancient texts are required to have at least one year of Koine Greek and one year of Biblical Hebrew within the last five years, or the equivalent. If you are uncertain if this requirement is relevant to you, please contact jointphd@iliff.edu for details.

English Language Proficiency Test Score Requirements

The minimum TOEFL/IELTS/C1 Advanced/Duolingo English Test score requirements for this degree program are:

- Minimum TOEFL Score (Internet-based test): 80
- Minimum IELTS Score: 6.5
- Minimum C1 Advanced Score: 176
- Minimum Duolingo English Test Score: 115

Certificate in Latinx Studies

Only students admitted to the DU/Iliff Joint Doctoral Program in the Study of Religion may apply.

Students will need to complete the certificate application form and an interview with the Latinx Certificate Coordinator.

Students must demonstrate a commitment to Latinx communities and Latinx Studies and demonstrate an initial awareness of Latinx cultural contexts and the effects of systemic inequities experienced by these communities and the religious or social legacies of such experiences.

Doctoral Program

Doctor of Philosophy in the Study of Religion

Degree requirements

Coursework requirements		
Code	Title	Credits
Core coursework requirements		24
RLGN 4000	Theories and Methods in the Study of Religion	4
RLGN 5000	Pedagogy and the Teaching of Religion	4
RLGN 6000	Dissertation Proposal Seminar	4
RLGN 5010	Lived Religion Colloquium	4
RLGN 5020	Conceptual Approaches to Religion Colloquium	4
RLGN 5030	Religion in Text, Image, and Artifact Colloquium	4
Additional coursework		42

Complete 42 credits of additional elective coursework, including up to 10 approved transfer credits, before beginning dissertation research. The maximum number of Independent Study credits allowed is 12. The maximum number of Directed Study credits allowed is also 12.

Elective coursework must be graduate level. Courses from the College of Professional Studies and Sturm College of Law do not apply toward the degree. Courses taken to fulfill the language tool requirement also do not apply.

Comprehensive Exam Review Courses

•		
RLGN 6010	Comprehensive Review I: Perspectives in the Study of Religion	4
RLGN 6020	Comprehensive Review II: Area Theories and Methods	4
RLGN 6030	Comprehensive Review III: Knowledge in a Professional Field	4
RLGN 6040	Comprehensive Review IV: Knowledge in Minor Areas or Subfields	4

Pass 4 comprehensive exams. Exams are pass/fail. A late exam may constitute an automatic fail. Any student who fails an exam may retake it one time. A student who fails the retake is terminated from the Program.

Dissertation Research

Complete 8 credits of RLGN 6995 Independent Research (formerly called Dissertation Research). Register for 1 independent research credit each quarter, beginning in the fall of the year following completion of comps and dissertation proposal course, until 8 credits are reached. Then register for 1 credit every fall (once per year) until graduation.

Total Credits

Minimum number of credits required for degree: 90 credits

Non-coursework Requirements

- · Successful oral defense of the dissertation proposal
- Written dissertation
- · Successful oral defense of the dissertation
- · Demonstrated proficiency in one modern research language other than the student's native language
- For students who also need to demonstrate expertise in ancient languages in order to pursue their research, an exam will be administered by appropriate faculty
- · Completion of all requirements for the degree within seven years with 9 quarters in residence

Master of Arts in the Study of Religion

This degree can be awarded to students who leave the PhD program before completing the dissertation.

Degree Requirements

Coursework Requirements

· Completion of 82 hours of coursework in this program, including all 6 required classes

8

16

Non-coursework Requirements

- · Demonstrated proficiency in a modern research language other than the student's native language
- · Pass four comprehensive exams

Certificate Program

Certificate in Latinx Studies

Program Requirements		
Code	Title	Credits
Required Courses		8
RLGN 4608	Latinx Theology and Ethics	
RLGN 6991	Independent Study (A 4 credit independent study course with one of the Latinx Studies faculty on Latinx religion, theology, ethics, history or sociology.)	
Elective Courses		16
RLGN 4402	American Indian Cultures and Worldview	
RLGN 4418	Decolonizing Congregational Leadership	
RLGN 4404	Race and Religion in the United States	
RLGN 4504	Muslims, Jews and Christians in Medieval Spain	
RLGN 4505	Spanish Mystics and Reformers	
RLGN 4614	Liberation Theologies	
RLGN 4640	Doing Christian Ethics from the Margins	
SOWK 4465	Human Security	
SOWK 4635	Immigration Policies and Services	
SOWK 4749	Culturally Responsive Practice with LatinX

SOWK 4753	Social Development in Latin America	
SOWK 4757	Social Work and Latino/a Cultures: An Intensive Practice and Spanish Immersion Course	
SOWK 4764	Historical Trauma and Healing	
SOWK 4990	Topics in Social Work	
Tatal Oradita		

Total Credits

Minimum number of credit hours to fulfill the Certificate: 24 credits

Non-coursework requirements:

- Students must demonstrate competency in Spanish language as evidenced by passing a Spanish qualifying exam. 2000-level Spanish-speaking courses are available at the university, but undergraduate classes will not count toward the 90-hour degree, and financial aid may not be applied to these undergraduate classes.
- · A comprehensive exam in Latinx Religion, Theology, History, Sociology, or Ethics.
- · Demonstrate active engagement within a Latinx community before or during the doctoral program.
- · Students will write a dissertation on a topic of Latinx Religion, Theology, History, Sociology, or Ethics.
- · At least one dissertation committee member must also be Latinx Certificate faculty.

RLGN 4000 Theories and Methods in the Study of Religion (4 Credits)

This course begins with a brief overview of the history of the study of religion in the west, from antiquity to the modern period. When we reach the modern period, the course shifts to considering 'representative' theories of religion, broken down roughly along ideological and/or disciplinary lines.

RLGN 4105 Empire and the Rise of Christianity (4 Credits)

This course covers approximately the first five centuries of Christian history with a view toward understanding the role empire played in the rise of Christianity, both in terms of the confluence between Christianity and the Roman Empire as well as its role in the development of Christian beliefs, practices, production of discourse, institutions, and strategies of social control.

RLGN 4106 Second Century Life & Thought (4 Credits)

An attempt to understand Christian life and thought in the Roman Empire in the Second-century by analyzing primary sources.

24

RLGN 4107 Women in Early Christianity (4 Credits)

An exploration of the role women played in early Christianity, with attention given to the social and literary constructions of women in Greco-Roman antiquity.

RLGN 4108 Jewish and Christian Non-Canonical Literature (4 Credits)

This seminar examines Jewish and Hellenistic backgrounds; the social scientific study of early Christianity; and the New Testament in its literary environment.

RLGN 4109 Formation of the Bible (4 Credits)

This course focuses on the development of the Christian Bible. Some attention, however, will be given to the emergence of the Jewish canon, primarily as it relates to and impacts the Christian canon. The chronological expanse of the course ranges from the Hellenistic through the late Roman period. The approach of the course is necessarily literary and historical, but theoretical issues about what constitutes scripture and canon will also be given attention.

RLGN 4110 Hebrew Reading (2 Credits)

Advanced work in biblical languages or a selected issue in a language study.

RLGN 4111 Greek Reading (2 Credits)

Selected readings from the New Testament and other early Christian literature. Greek I, II and Exegesis are prerequisites Offered each year. May be repeated for credit.

RLGN 4113 The Bible and Its Afterlives: Jonah (4 Credits)

This course invites students to place the biblical book of Jonah in conversation with works of literature, art, and theology that interpret Jonah or explore themes in the book, including the nature of God, prophecy, election, death, and transformation. The course will introduce students to the history of interpretation (or reception history) by considering Jonah's afterlives in a variety of Jewish, Christian, and Islamic texts, artistic programs, and manuscript illuminations.

RLGN 4115 Hebrew Bible Literature: Genesis (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4116 Hebrew Bible Literature: Exodus (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4117 Hebrew Bible Literature: Leviticus (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4118 Hebrew Bible Literature: Numbers (4 Credits)

RLGN 4119 Hebrew Bible Literature: Deuteronomy (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4125 Hebrew Bible Literature - Job (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4128 Hebrew Bible Literature: Jeremiah (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4129 Hebrew Bible Literature: Jonah (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4130 Hebrew Bible Literature: Prophetic Literature (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4131 Hebrew Bible Literature: Wisdom Literature (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4135 Poetry in the Hebrew Bible (4 Credits)

In this course, we will analyze poems primarily from the books of Job, Lamentations, Psalms, 2 Isaiah, and Jeremiah. Class sessions will be divided between studying some aspect of Hebrew prosody (e.g., metaphor, parallelism, lineation) and looking at the ways in which various poets use these particular devices. We will be particularly interested in identifying how poets bring their messages to life, engage their audiences, challenge (or uphold) the status quo, and revitalize the community's imagination and, in turn, its faith in YHWH. Each week, we will read about a particular aspect of poetry and prepare specific poems with the readings in mind; the readings will provide us with a language that we might discuss specifically how the poets impart and encode their messages.

RLGN 4141 New Testament Literature: Mark (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4142 New Testament Literature: Luke (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4143 New Testament Literature: John (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4144 New Testament Literature: Acts of the Apostles (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4145 New Testament Literature: Romans (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4146 New Testament Literature: Corinthians (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4147 New Testament Literature: Galatians (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4148 New Testament Literature: Hebrews (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4150 New Testament Literature: Revelation (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4151 Studies in Early Christianity (4 Credits)

A critical study of themes and selected movements within early Christianity and other religions of the Greco-Roman world. May be repeated for credit.

RLGN 4152 Identity in the Hebrew Bible (4 Credits)

This course explores diverse constructions of selfhood in the Hebrew Bible in conversation with theories of identity and the self from a range of disciplines, including anthropology, philosophy, sociology, and psychology. In this class, we will consider how the biblical texts present different models of selfhood through discourse, practice, and ritual. Each class session will focus on a different aspect of identity: gender, social class, ethnicity, nationality, colonialism, the body, and kindship and family. Throughout the course, we will discuss the implications of these constructs of identity for ethics, agency, and theology.

RLGN 4153 War, Politics, & Society in the Hebrew Bible (4 Credits)

This course examines the interrelationship between war, politics, and society in the Hebrew Bible and their interplay both in the texts and in larger historical, social, and cultural contexts.

RLGN 4154 Migration and the Bible (4 Credits)

Migration and people on the move pervades the Bible, from Adam and Eve to Jesus. This course examines migration in the Bible and the resources it offers for responding to the current realities of migration, immigration, exile, deportation, and other aspects of migration in the world today. A range of perspectives on migration and the Bible are considered, including denominational resources, international aid agencies, and theoretical viewpoints.

RLGN 4155 Being Human in the Bible (4 Credits)

What does it mean to be human, according to the biblical writers? This is both a simple and complicated question to ask, much less answer. How it is addressed has important consequences. A range of perspectives and answers to the question therefore will be taken up in this course. These can include life and death, gender and sexuality, technology, education, family relations, politics, peoplehood, ecology, human vs. animal, philosophy, and economics. These perspectives and answers are engaged in pursuit of gaining a greater appreciation for how one might think through this question.

RLGN 4160 Teaching the Bible (4 Credits)

Designed to integrate faith development theory, biblical interpretation and confluent education. Education instructional models for the purpose of assisting students to develop professional self-understanding and functional skills as interpreters and teachers; experience in teaching adults in a local setting.

RLGN 4161 Queering Early Christianity (4 Credits)

This course surveys some of the major influences of queer theory on the study of the New Testament and early Christianity, beginning with the work of Judith Butler and continuing through the contributions of queer theorizations inflected by affect, violence, diaspora, race and racialization, and trans discourses. The course considers a variety of canonical and non-canonical texts and practices from the first centuries of the Christian tradition, with an eye to how theorizations of queerness help frame inquiry into the formation of Christian "identity" and belonging.

RLGN 4162 Minoritized Interpretation of the New Testament (4 Credits)

Though the academic study of the New Testament has long been controlled by European and North American institutions and persons of European descent, recent decades have seen a surge of other perspectives that are sometimes collected under the heading of "minoritized." These perspectives include postcolonial and decolonial approaches, and methods centered on racial or ethnic identities, geographies, cultures, shared historical experiences, and gender and sexuality, to name a few. This course considers these forms of interpretation together and separately, as ways of reading biblical texts outside of the field's historical biases.

RLGN 4204 Multi-Cultural Pastoral Care & Counseling (4 Credits)

Examines multicultural issues in pastoral care and counseling and explores the dynamics and complexities of culture, race and other socializing factors in pastoral care conversations.

RLGN 4205 Introduction to Process Thought (4 Credits)

This course provides an overview of Process Theology from its early developments out of Process Philosophy to its current incarnations in theopoetics, ecological civilization, and radical interrelationality.

RLGN 4206 Spiritual Care of Trauma (4 Credits)

This advanced course integrates knowledge, capacities, and skills for practicing justice-seeking, interreligious, and research-literate spiritual care of trauma. This course draws upon psychological research on trauma and spiritual struggles. Readings on socially just spiritual care focus on practices, beliefs, and values that lament harm done by religiously based violence. A spiritually integrative pedagogy uses (1) body-based self-care practices and deep listening conversations about self-care; (2) self-assessment of one's interpersonal capacities for deep interreligious listening; (3) a qualitative analysis of one's spiritual orienting system (self-care practices, struggles, values, and beliefs) embedded in conversations about one's spiritual practices; (4) spiritually integrative assignment about a personal experience of trauma; (5) conversations with a learning partner and Dr. Doehring about this integrative assignment. These experiential components help students develop capacities for spiritual self-differentiation, empathy, and reflexivity. These experiential components are designed to help students integrate critical theory and research into practices of spiritual self-care, integration, and interreligious deep listening.

RLGN 4207 Moral Stress, Resilience & Spiritual Integration (4 Credits)

Moral stress arises from shame/guilt/fear of causing harm involving conflicts in values. Moral injury arises from traumatic stress that is more shame than fear based, and has been researched extensively among military personnel. Spiritual integration of moral stress and injury uses spiritual practices and theological meaning-making to compassionately identify life-limiting embedded shame-based values, beliefs, and ways of coping with moral stress and injury (lived theologies) in order to compassionately understand the origins of moral stress and injury. Relational resilience is the outcome of spiritual integration based on spiritual practices fostering compassion and more complex theological ways of understanding moral conflicts, stress and injury.

RLGN 4208 Erik Erikson: Resource for Pastoral Care (4 Credits)

This course explores Erik H. Erikson's life cycle theory as a resource for the pastoral care of children, adolescents, young adults, adults, and older adults. Attention is given to Erikson's psychoanalytic orientation and the development of his life cycle theory over the course of his career. The course encourages the use of developmental theory to deepen the student's introspective reflection and vocational orientation. By focusing on the work of a single author, this course is meant to illustrate how a pastoral theology student may use the work of a prominent psychologist in the development of a dissertation topic.

RLGN 4209 Spiritual Care in Pluralistic Contexts (4 Credits)

This course helps students learn emergent pastoral theologies of spiritual care in a pluralistic context and use them to reflect on case studies written by experienced practitioners. In this course, students will identify their personal values, attitudes, and beliefs and examine their own social identities to better understand how these dimensions of self can guide and challenge them in reflecting on spiritual care with those who are different from them.

RLGN 4210 Theories of the Self in Pastoral Theology (4 Credits)

This advanced course introduces students to psychological concepts and theories of the self that are operative in pastoral and spiritual care and counseling. Toward that end, this course traces understandings of the self within the works of pastoral theologians, psychologists of religion(s), and practitioners in pastoral and spiritual care. Particular attention will be given to identity formation, relationality, interdependence, and psychic-injury.

RLGN 4220 Research Methods and Ethics in Lived Religion/Practical Theology (4 Credits)

This course introduces students to a variety of qualitative and quantitative approaches to rigorous scholarly research in lived religious contexts, as well as to particular ethical challenges and questions that such approaches may elicit. Students will also be introduced to the Institutional Review Board (IRB) process as a foundational component in developing a critically informed, contextualized methodology for any research-based project in the fields of lived religion and practical theology.

RLGN 4221 Internal Family Systems (4 Credits)

Internal Family Systems Therapy (IFS) is a non-pathologizing psycho-spiritual approach to personal healing and spiritual transformation through selfcompassion and self-exploration. This course will introduce students to the core concepts and practices of the model through experiential and theoretical approaches to it and the worlds/pluridimensional qualities of what it means to be "ourselves".

RLGN 4302 Buddhist Philosophy (4 Credits)

An introduction to the Buddhist philosophical tradition that covers both the different philosophical movements within Buddhism as schools of thoughts and major philosophical issues, such as the theory of karma and determinism, the nature of mind, proofs for past and future lives, theories of knowledge, ethics, the doctrine of emptiness and the nature of enlightenment.

RLGN 4303 Sacred Space and Place in Comparative Perspective (4 Credits)

This course examines sacred spaces and sacred places from a comparative perspective. Through close reading and discussion of primary and secondary sources, students are challenged to think critically and theoretically about sacred spaces and places.

RLGN 4304 Material Divinity (4 Credits)

This course explores how religion happens in material culture- broadly defined as images, devotional and liturgical objects, architecture and sacred space, works of art, and mass-produced artifacts.

RLGN 4305 Pilgrimage in Comparative Perspective (4 Credits)

This is a comparative course that examines the dynamics of pilgrimage from a number of different angles - theoretical, doctrinal, ritual, social - and which utilizes a variety of sources - including classical, ethnographic studies of actual pilgrimages, and focused studies of particular pilgrimage places - with the goal of gaining a thorough understanding of the phenomena of pilgrimage in all of its complexity.

RLGN 4321 Islam and Gender (4 Credits)

This course examines issues surrounding gender and sexuality in Islam. Through a close reading of religious texts, critiques of patriarchy, and historical studies, students are challenged to think critically about the construction of gender roles and the regulation of sexual practices in Islam. By the conclusion of the class, students gain insight and understanding regarding the ways modernity has radically altered norms surrounding gender and sexual preference in Muslim-majority societies.

RLGN 4322 Interreligious Dialogue: A Critical Analysis (4 Credits)

This course exposes students to the theory and practice of interreligious dialogue (broadly defined) and the issues raised by interreligious dialogue, such theologies of religious pluralism, secularism, religiously motivated violence, and religion and public life. Students have opportunity to read critical scholarship on these topics generally, as well as study specific cases where points of contact occur between religious groups—either in terms of dialogue (or other mutually edifying endeavors) or conflicts that have arisen between religious groups. In the process students will also learn about some of the more prominent organizations working in interreligious dialogue.

RLGN 4401 Race, Gender, Class: Historical & Social Analysis of Racism in the Modern World (4 Credits)

An historical survey of the role of racism, sexism and classism in shaping the oppressive institutional structures of the existing world order and of how sociological analysis of these structures can help justice and peace activists direct effective action toward the elimination of race, gender and class oppression.

RLGN 4402 American Indian Cultures and Worldview (4 Credits)

A survey of the worldviews of Native American people, as these pertain to both inter-tribal beliefs and Native American ceremonial life, with an attempt to show how Native American practice proceeds from their worldview.

RLGN 4403 Sects, Cults & New Religions (4 Credits)

An exploration of non-mainstream religious groups. Topics include innovation and recruitment; "cult" controversies; sectarian Christianity, gender and sexuality; UFO religions; and religion and marginalized racial projects.

RLGN 4404 Race and Religion in the United States (4 Credits)

An exploration of the different ways in which race is understood religiously in the United States and how race impacts both white and racial minority religious institutions. Specific topics include the black church, the Nation of Islam, Native American theology, the Christian far right, Asian American religions, Latino/a religions, and multiracial congregations.

RLGN 4405 Social Construction & Selfhood (4 Credits)

This course invites us into a collection of investigations into the intersections of social structures and individual identity or selfhood. While reading in a variety of disciplines and genres, we are drawn together around the questions of how one understands the possibilities for individual or communal agency in light of the formative, systemic power of social structures and institutions. Beyond conceptual understanding of this relationship, we ask questions of how to encourage coherent religious, educational, and other forms of practice in light of the realities of social construction. These reflections are particularly important for persons who are interested in social change and the very real barriers to its generation.

RLGN 4406 Education and Social Change (4 Credits)

This course investigates the role of education in maintaining and transforming social structures, identity, and commitments. We examine how educational practices can contribute towards social change in both religious and public settings.

RLGN 4407 Ritual Studies (4 Credits)

By reading some of the most important "classic" and recent theorists of ritual, and by learning to observe and understand ritual behavior, this class will examine the important role of ritual in defining religious groups, creating religious identity, forming religious beliefs, and structuring how we view the world. Prerequisite: Masters students need permission of instructor.

RLGN 4408 Science & the Christian Right (4 Credits)

An examination of the American Christian Right's challenges to mainstream scientific theories and practices. Specific topics include Intelligent Design movement, reparative therapy of homosexuality, denial of human-driven climate change, and opposition to stem cell research.

RLGN 4409 Social Movements from Liberationist Perspectives (4 Credits)

Liberationist thought has greatly impacted how social movements, and the theological and ethical perspective which inform them, has been implemented to bring about social and political change since the mid-twentieth century. But with the state of the new millennium, many have proclaimed the death of liberation theology, dismissing its significance as a passing fad. The purpose of this course is to explore the roots, development, and history of liberationist thought as it first manifested itself within a Latin American context then expanding to other continents and faith traditions, and how that thought has been utilized to inform social movements.

RLGN 4410 American Christianity and Indian Genocide (4 Credits)

A collaborative research seminar exploring different aspects of the history of the relationship between American Christianity and genocidal campaigns against native peoples, including the colonial period through the 20th century. Students will research particular personalities and historical events related to this topic, including the campaigns of the military on the 18th century Western frontier, sites of massacres including Sand Creek in Colorado, and other events normally obscured by accounts of US history. Students will learn the relationships of ideology and worldview to the narration of history, as well as skills in identifying and working with primary historical sources.

RLGN 4412 Health & Healing, Death & Dying: Technologies of Inspiration and Expiration (4 Credits)

Through this course, students will encounter a variety of perspectives on the nature, morality, justices, and injustices of health, healing, and dying.

RLGN 4413 Theology and the Construction of Race (4 Credits)

Several important books have recently been published making the case that religion, and more specifically, Christian theology, have played a constitutive role in creating the ideas of race and racial hierarchies. This course is an extended argument (with which students are free to agree or disagree in part or in whole—in any case they will become familiar with the relevant literature and concepts) that 1. In significant ways religion and race are modern, not universal or permanent, constructions; that 2. Religion and race are two of the very few fundamental conceptual building blocks of the modern world, such that, no matter what one thinks of religion and race, one is unable to think or operate in the modern world without them; and that 3. Religion and race are mutually imbricated in such a way that, even when race is not explicitly a topic of discussion or observation, modern religion is always already racialized.

RLGN 4414 Atheists, Secularists & Nones (4 Credits)

An examination of non-religious and/or non-affiliated populations, with a primary focus on the United States. We will explore: 1) the variety of beliefs among those not affiliated with religious institutions; 2) different social expressions of atheism; 3) the implications of recent religious trends for debates about secularization in the modern West.

RLGN 4415 Environmental Racism: The Problem with Water (4 Credits)

The course seeks to develop a constructive conversation on the intersection of environmental racism and water by examining significant issues surrounding present-day issues the degradation of water quality its negative impact on communities of color. Furthermore, the course will examine what type of praxis can be employed to bring about social and political change.

RLGN 4416 Decolonizing Theories and Methods (4 Credits)

Religious studies draws from multiple disciplines which include anthropology, history, feminism, transnationalism, empire studies and sociology. Often, students approach theories and methods by reading classic authors and mainly contemporary eurocentric scholars of religion. This course will approach theories and methods from through the lens of decoloniality, concentrating of the perspectives and contributions emerging from the margins of eurocentric thought.

RLGN 4417 Still Black Post-human: Blackness Beyond Posthumanism (4 Credits)

Blackness waits at the door. It sits in the room. It seeps into crevices. It disrupts stable sensibilities. It is the abyss. It is an overwhelming presence of life and the beyond. And it waits. This course will explore many presentations of Blackness as an ontology, material essence, and tangible modality. In doing so, this course will not only explore ontomateriality of Blackness, but present a case for it as an integral framework to engage posthumanism's proclivity to emphasizes animal studies and ecology while holding fast to liberalism's damaging modes of uncritical inclusivity. This is important to the state of the theological experiment as James Cone insisted Blackness is the key to global salvation over 50 years ago. With recent moves to decenter human exceptionalism, shifts in focus to future realities, and intentional re-imaginings of the human-creature-divine relationship. It is important to continue to unravel humanist descendent offerings. As such, this course will provide a lens to investigate/disrupt the potentiality that posthumanity presents, pushing beyond its less obviously regressing boundaries, towards liberative future realities.

RLGN 4418 Decolonizing Congregational Leadership (4 Credits)

This course explores the applications of postcolonial and decolonial discourses to the theory and practice of parish leadership, particularly within Christian congregational contexts. Students will reflect on leadership praxis across several areas (i.e., euro-western constructions) of congregational life including: worship and liturgy, education and formation, organizational culture, and missions. As a whole, the course interrogates notions of tradition, practice, and leadership identities in the context of congregations toward the de/construction of lived realities.

RLGN 4419 Religion and Postcolonial Discourse (4 Credits)

This course will engage and focus on the intersections of the academic discipline of Religion and the academic discipline of Postcolonial Studies. This course is not an introduction to postcolonial studies course. The discourse of colonialism goes beyond a simple colonizer/colonized binary and is complicated by power, identity, and economics. Postcolonialism arose through the analysis of literary works following the independence and attainment of nationhood of peoples globally to address the continuing disruption set off by colonial logics. This course begins with the assumption that European colonialism is a reality that is defined by a particular worldview and shared features but is diverse in local imbrications. The course will focus on the feature of religion as an integral part of the colonizing worldview of the colonizer and simultaneously focus on how colonized people have recaptured their national and religious metanarrative under postcolonial dispensations as acts of counter-discourse and resistance.

RLGN 4420 Postcolonial Feminist Theology (4 Credits)

This course offers a critical exploration of Postcolonial Feminist Theologies. Drawing from the works of key women scholars, students will engage with theological perspectives that challenge colonial legacies and patriarchal structures embedded within traditional theological frameworks. Throughout the course, students will examine how feminist and postcolonial critiques have reshaped interpretations of the scripture, doctrines, and ministry practices. The course will critically assess how postcolonial feminist theologians have addressed issues of race, gender, class, and imperialism within both Christian theology and broader religious contexts. The course will offer students opportunities to develop theologically informed responses to contemporary global issues, emphasizing justice, liberation, and intersectionality.

RLGN 4501 Holy Spirit: History and Traditions (4 Credits)

What have Christians believed and written about the Holy Spirit through the centuries? Why does Pentecost show up in such different ways across the pages of Christian theology and literature? In the midst of the European Enlightenment, why did John Wesley hold such special reverence for the role of experience in Christian thought and education? Why has the Pentecostal legacy functioned simultaneously as a subversive trope for critiquing dominant church paradigms while also sparking creative, re-interpretations of Christian tradition among so many reformers? These are just a few of the questions explored in this class as we discuss historical and theological works by contemporary scholars in pneumatology and church history.

RLGN 4502 Historiography (4 Credits)

This course surveys the various theories and methods developed by historians since the emergence of the historical profession from the roots of historicism and philosophy of history in the mid-1800s; and examine the relationship of history to theology, cultural theory and literary studies.

RLGN 4503 Women in Medieval Europe (4 Credits)

This class focuses on the role of medieval women, who struggled to find a voice in the political, religious, social and literary arenas of medieval Europe from about 1100 to 1600. Through primary and secondary source readings we look at everyday women's lives in this period. The class also includes the lives and careers of some of the most famous women writers and leaders of the period, such as Hildegard of Bingen, Eleanore of Aquitaine, Marie de France, Margery Kempe, Julian of Norwich, Queen Isabel of Castile, Teresa of Ávila, and Queen Elizabeth I of England.

RLGN 4504 Muslims, Jews and Christians in Medieval Spain (4 Credits)

An exploration of the "Golden Age" of cross-cultural encounters that occurred in Medieval Spain from the Muslim conquest in 711 to the fall of Granada and the expulsion of Jews in 1492. This course offers an overview of the historical and ecumenical dimensions of Jewish, Christian, and Islamic coexistence, known as "La Convivencia," and critical reflection on the relevant lessons this era still holds in the post 9/11 period.

RLGN 4505 Spanish Mystics and Reformers (4 Credits)

Early modern Spain witnessed the emergence of Catholic and Protestant individuals whose timeless works and popular appeal in subsequent centuries rested largely upon the practice of "contemplation in action." This course examines the historical context and works of such mystics and reformers as Teresa of Ávila, John of the Cross, Ignatius of Loyola, Juan de Valdés, Constantino Ponce de la Fuente Cipriano de Valera, Casiodoro de Reina, Antonio del Corro, and others, and others. It also explores the influence of Islam and Judaism on these sixteenth century religious movements, as well as modern Spain's subsequent rejection of this pluralistic legacy as it sought to define the young nation-state sought to define its new national identity and consolidate power across Europe and its vast colonial territories in the Western Hemisphere.

RLGN 4506 The Pursuit of Happiness: A History (4 Credits)

This course provides a historical examination of key concepts, major questions, and practices about humanity's search for happiness from the Hellenistic-Roman period of Antiquity through the Early Christian and Medieval periods. The content centers on the role of Classical moral philosophy and Christian theology in the formulation of eudemonic theories about the problem of happiness in relation to metaphysical and religious influences as well as to socio-cultural, political, and institutional norms and practices that shaped Christian notions of human purpose and potential. The legacies of these ancient ideas on the development of modern assumptions about happiness and human flourishing are also discussed towards the end of the course.

RLGN 4507 Violence & Tolerance in Medieval Europe (4 Credits)

This course examines a wide range of texts and events from the 11th to the 16th centuries dealing with various forms of violence across the medieval European world and contrasts these with medieval European notions of toleration in theological, literary, and political discourse. Among the topics to be covered will be the Peace of God and the Truce of God, feudal warfare and its legacy, the Crusades and their impact upon the Latin West as well as the on Arab East, anti-Semitism in the Latin West, the Inquisition, persecution of heretics and witches, Church and State struggles, and the various dialogues of mutual, theocentric edification among Islamic, Jewish, and Christian authors.

RLGN 4508 Judaism, Gender, and Religion (4 Credits)

Germans refer to the period of roughly 1770-1850 as the Sattelzeit, or "Saddle Era"—the time between the end of the early modern world and Europe and the modern world. During this era basic assumptions that we continue to make about what religion is and what gender is are constructed. This is also the era when what we think of a Judaism is re-shaped in major ways. Through a close reading of primary texts by Jewish women we will examine the intersection of gender, Judaism, and religion and examine the modern construction of these categories.

RLGN 4509 Jewish Christian Relations 50-500 C.E. (4 Credits)

This course considers the "parting of the ways" between Judaism and Christianity, beginning with the tumultuous first century (the Jewish War and the beginnings of the Jesus tradition) and continuing through the synthesis of Christianity and Empire in late antiquity. Along the way, we will consider how Christianity and Judaism emerged from a common matrix, influenced and co-created each other, and Othered each other in their processes of self-definition. We will attend especially to the problems with the "World Religions" model, ancient identity formation, the origins of Christian anti-Semitism, the effects of empire and diaspora, and modern attempts to explain the "parting.".

RLGN 4520 Religion and Film (4 Credits)

Can film elicit the holy? Does the story of Jacob and Esau look different when told by a North African filmmaker? How does a Buddhist sensibility shape the form of Japanese films? Can we ask theological questions about secular films? In this course films are the primary texts, supplemented by readings, lecture and discussion. Students develop the film literacy and theological and theoretical acumen to explore these and other interactions between religion and film in cultural context. While there is no explicit prerequisite, background in film or literary criticism and/or theological or religious studies is helpful.

RLGN 4604 Religion in the Public Square (4 Credits)

What is the proper role of religion in the public debates necessary to healthy democracy? Some argue that religion in the public square threatens the fundamental democratic right the freedom of conscience; others that only religion can insulate the communal values that make democracy possible. This course examines the best and most prominent arguments in this contemporary debate.

RLGN 4605 Feminist Theology (4 Credits)

Analysis of feminist theology with attention to methodological issues, the relation of contemporary feminist visions to historical material, the ideas of God/Goddess and the question of what it means to be female. Prerequisite: At least one introductory level theology course.

RLGN 4607 Liberating Sex (4 Credits)

The purpose of the course is to search the Christian Scriptures, in spite of its accusations of being patriarchal, to find biblically-based guidelines for developing an ethical sexual lifestyle that is aware of how racism, classism, and specifically sexism influences the current conversation on sexual ethics. This course focuses on developing healthy models that foster intimacy and vulnerability for a disjointed and at times oppressive community.

RLGN 4608 Latinx Theology and Ethics (4 Credits)

The primary sources of Latinx theological and ethical thought are read to discover its foundational tenets. The course explores this contextual approach to religion to discover how it could serve to liberate the Latinx community from prevalent oppressive social structures. Comparisons are made with Eurocentric ethics and theology.

RLGN 4609 Queer Theory, Theoethics & Activism (4 Credits)

Queer theory has transformed religious thought in extraordinary ways especially over the course of the past four decades. This course explores the nature of queer theory as a discipline within and outside of the religious academy. This course also invites students to explore the ways that queer theory intersects with theories of race and praxes of activism.

RLGN 4610 Ethics of Neoliberalism and Globalization (4 Credits)

People of faith have responded to the triumph of the free market economy around the world in a variety of ways. To some, "neoliberalism" seems to hold the key to sustained economic growth worldwide and, eventually, to nothing less than the eradication of poverty itself. To others, it represents the unleashing of corporate greed on a scale previously unknown, with momentous and often disastrous consequences for the working poor, the economically marginalized, and the environment. Does the new global economy signify the lifting of all boats or the race to the bottom? Does it further Christian ethical values, or subvert them?.

RLGN 4611 Theology and the Challenge of Postmodernism (4 Credits)

An examination of representative postmodern thinkers, how they have changed the context for theology, and how theology has responded to them.

RLGN 4612 African Theology and Post-Colonial Discourse (4 Credits)

This course attempts to examine the relationship between the emergence of African Theology and the historical conditions which characterize Africa's encounter with the European/American will to power. The initial hypothesis to be tested is the claim that the will to power provides the locus classicus for formulating the identity of African theological reflection. This makes the latter a part of a much larger discourse on Africanity. The course takes the student through a close reading of basic texts produced by African theologians themselves. All the major issues characteristic of the discourse of African Theology is dealt with.

RLGN 4613 Augustine and His Influence: 400 C.E. to 1000 C.E, (4 Credits)

Theological contribution of the great North African Bishop; his major writings, such as Confessions, City of God and The Trinity; and his anti-Pelagian, anti-Donatist, and anti-Manichaean writings.

RLGN 4614 Liberation Theologies (4 Credits)

Consideration of contemporary liberation movements with focus on feminist, black and Third World theologies. Special concern is with what the various perspectives of sex, race and class analysis suggest for one another and for theology and social ethics generally.

RLGN 4615 Being Human in the Modern World (4 Credits)

What does it mean to be human? After a brief survey of traditional Christian answers to this question, we focus on the theological anthropology that has become the de facto theory of human nature since the emergence of the modern western world in the early 19th century. Theological anthropology can be the driver of other doctrines in a systematic theology; it also underpins work not necessarily seen as theological, such as ethics, development, and human rights. A rich understanding of this anthropology is necessary for theological reflection in our current context.

RLGN 4617 Forgiveness (4 Credits)

In the histories of philosophy and religions, 'forgiveness' emerges as a grounding concept for thinking about God, self, and community. This course examines core texts and contexts within a range of religious, philosophical, and theological discourses on forgiveness, 'loving the enemy', and reconciliation. The course explores a variety of spaces of forgiveness as well as the possibility that the 'impossibility of forgiveness' must be allowed to emerge as a valued theological, ethical, and civic principle of personal and communal identity.

RLGN 4618 Doctrine of God in the Modern World: The Pantheism Controversy (4 Credits)

What is the most fruitful model for thinking about God? There are a few perennial options, each of which have social, political, and ethical implications in addition to metaphysical ones. In the post-Enlightenment world a version of the pantheism model swept through philosophers and theologians, Jews and Christians, raising issues which, if possible, are even more pressing in our post-Christian context. The so-called Pantheism Controversy has the advantage of not only unpacking all the issues involved in the various models of God, but of also being a good story of the personal lives and relationships of a fascinating group of people. This course introduces students to the most pertinent writings from this controversy and engages theological and philosophical work, influenced by the controversy, from our own contexts.

RLGN 4619 Christian Theology and Disability (4 Credits)

Using the category of "disability" as a starting point, this seminar examines constructive theologies in which attention to human vulnerability, limitation, and interdependence is fundamental to religious thought and practice. It presents "ableism" as a form of social injustice, emphasizing its intersections with other forms of oppression. It names Christianity's past and present complicity in ableism, while also highlighting the tradition's resources for effective opposition. Consideration expands beyond persons with disabilities to include common phases of life like infancy and frail old age. The course's primary aim is to equip students to articulate theologies that affirm that which ableism devalues.

RLGN 4620 Fanon, Foucault and Friends (4 Credits)

This course reads the primary sources of post colonialists (mainly Fanon) and postmodernists (mainly Foucault) to explore creating ethical approaches to globalized manifestations of race, class, and gender oppression. Special attention is given to the use of Christianity as a liberationist response to global structures of oppression in spite of its historic use in causing much of said oppression.

RLGN 4621 Kierkegaard and Existential Theology (4 Credits)

Kierkegaard and the origins of existentialism; twentieth-century forms of existentialism and recent developments; the decline of neo-orthodoxy and resurgence of phenomenology.

RLGN 4622 Schleiermacher as Resource (4 Credits)

Consideration of the theology of Friedrich Schleiermacher. Analysis of the philosophical and theological predecessors of Schleiermacher as well as the tradition of theological liberalism that followed him.

RLGN 4640 Doing Christian Ethics from the Margins (4 Credits)

Many of us have been taught religion through the eyes of white, middle-class males. How then do we do ethics from the perspective of the disenfranchised? The aim of this course is to enable students to: construct ethical responses to case studies from the perspectives of those suffering from race, class and gender oppression; to investigate Biblical protest narratives as to the resistance and struggle against race, class and gender domination and oppression; and to examine various liberationist ethical interpretations as a source for overcoming dominant religious power structures.

RLGN 4641 Formative White Male Ethicists (4 Credits)

This course on formative white male figures in Christian Ethics examines the ethical canon from a historical perspective. Special attention is given to texts and traditions as living changing heritages.

RLGN 4642 Theology and the Rise of the Historical Consciousness (4 Credits)

Theological work today is done in the context of the rise of the historical consciousness, a phenomenon with its roots in the late 18th and early 19th centuries. We inherit a fundamentally different worldview from the worldviews of the ancient and medieval worlds that gave rise to many of the classical Christian practices and beliefs, and different from contemporary non-western worldviews. The historical consciousness leads to a particular set of assumptions about Biblical authority, identity and subjectivity, epistemology, the relationship of individuals to communities, etc. This class examines important texts in the development of the historical consciousness, analyzes issues raised for Christian theology, and points to some of the theological resources developed in its wake.

RLGN 4643 Women and Christian Theologies from the Global South: A Postcolonial Feminist Approach (4 Credits)

This course is a critical study of the challenges and contributions of Christian feminist theologies from the global south to theological studies in North America, particularly, Christian feminist theologies. Framed in postcoclonial discourses, this course will study works of representative figures in Christian feminist theologies from Africa, Latin America, and Asia. Topics will include the impact of globalization, postcolonial discourse, religion and culture, sexuality and spirituality, and ecological concerns.

RLGN 4644 Environmental Ethics and Global Hunger (4 Credits)

The course seeks to develop a constructive conversation on the causes of global hunger by examining significant issues surrounding the present-day distribution of food and its negative impact on the environment. Furthermore, the course will examine what type of praxis can be employed to bring about social and political change.

RLGN 4645 Artificial Intelligence and What It Means to Be Human (4 Credits)

Artificial Intelligence raises pressing questions about machines: Are they really intelligent? Can they have consciousness? Ought they have moral status? Are algorithms related to computers like minds are to bodies? Do smart machines change the relationship of humans to technology? Each of these questions, in turn, is actually a question about human nature: What are the kinds of human intelligence, and are they unique to humans? Why do humans have moral status? What kinds of embodiment are essential to humans? (Do we include things like race and gender?) Are humans tool-users, or did we evolve as humans because of tools? In that case, have humans always been cyborgs? Questions about human nature are one of the classic theological loci, falling under the rubric of theological anthropology. In other words, religious traditions have thousands of years of deep thinking on these questions that are being raised in new ways (as Nick Bostrom has famously argued, Al is like "philosophy with a deadline"). This course is a sophisticated but non-technical introduction to the history of Al and to the tools and ideas of Al in its current forms. We will cover the most important ethical issues with which Al confronts us, and bring the resources of philosophy and theology to tackling some of the questions of human nature raised by Al.

RLGN 4646 Ethics in an Age of Plagues, Pestilence, and Pandemics (2 Credits)

The world is gripped by a deadly pandemic. This is neither the first time, nor probably will be the last. What we do know is in the aftermath of such deadly epidemics, the societal bonds which once held community together are frayed if not completely broken as radical changes take hold and new ways of being arise. This course will wrestle with the importance of maintaining a moral compass during crisis and an ethical vision as a new reality is constructed. Special attention will be given to how not all suffer equally, and the roles of racism, classism, and sexism during national emergencies. Finally, the course would assist the student in finding their own ethical voice during a time of hopelessness and desperation.

RLGN 4647 Jesus for Christians and Non-Christians (4 Credits)

Who is Jesus of Nazareth, and what is his relationship to Jesus Christ? This course will examine this central question in multiple religious and nonreligious cultural contexts. We will use the methods of comparative theology to read ideas about Jesus in the contexts of Christianity, Islam, Judaism, Paganism, Spiritual But Not Religious (SBNR), and non-theistic texts. Students will compare and contrast these ideas of Jesus to create their own understanding of Jesus' narrative and his relationship to our present world in their particular context.

RLGN 4648 Biblical Ethics (4 Credits)

Anyone who reads the Bible does so from a particular social location. We are all born into an on-going society that shapes us. When we turn our attention to the biblical text as the source of our ethical perspectives, we participate in a dialogue between the written word and the meanings our community taught us to give to these words. Many of us have been taught to read the Bible through the eyes of white, middle-class males. Yet, can the text liberate those who are oppressed? To do so, it must be read with the eyes of the disenfranchised. This course will explore how the Bible can be used to bring about justice for those who suffer due to race, class and gender oppression.

RLGN 4649 WOMANIST THEOETHICS (4 Credits)

This course will focus on the canonical works of womanist theology and womanist ethics. Students will read the seminal texts of first wave womanist theologians and first wave womanist ethicists. Students will also read works by third wave womanists and evaluate how these texts build upon the canonical works to form what is known as the Womanist House of Wisdom. The course will seek to examine how pioneer womanist scholarship was interpreted in its historical context and how the disciple of womanist religious thought in theology and ethics was formed. Students will also explore womanist methodologies and how they can be operationalized by people outside of Black female embodiment. Finally, students will learn how womanist theoethics is used in womanist social justice praxis, pastoral care, and preached in congregational settings.

RLGN 4650 Advanced Practical Theological Research (4 Credits)

This collaborative seminar provides an opportunity for students to explore the process of practical theological research for their own dissertation projects and to work collaboratively to shape research that is impactful and compelling. Students will establish the theoretical framing of their project through deep engagement with a body of literature relevant to their topic, engage in rigorous contextual analysis of their research site/community, and begin the descriptive work necessary for their particular question, and in doing so refine their research question and appropriate self-reflexive research strategies necessary to their project.

RLGN 4651 Social Issues, Social Ethics (4 Credits)

The purpose of this course is to examine social issues through the lens of Christian Social Ethics. Students will learn about the discipline of Christian Social Ethics with focused learning on ethics from the margins and the ethics of responsibility. Students will learn how to analyze social issues through a Christian social ethical framework. A component of the course will focus on student leadership development with assignments that will develop students as leaders through the course's focus on skill development. The social issues examined in the course will vary each time the course is taught.

RLGN 4701 Topics in the Study of Religion (0-4 Credits)

RLGN 4702 Topics in Biblical Studies (0-4 Credits)

RLGN 4703 Topics in Theological Studies (0-4 Credits)

RLGN 4761 Social Ethical Issues (4 Credits)

Examination of the scope of Christian social ethics and the relationship of the analytic and diagnostic task to normative and prescriptive endeavor. May be repeated.

RLGN 4762 Justice & Peace Struggles (2,4 Credits)

Regular offerings include "Columbusday and the History of Christian Denial," "Justice in Native America," and "Church and the Colonial Residual: Pine Ridge, the Black Hills, Missionaries and Indian Justice.

RLGN 4991 Independent Study (1-4 Credits)

RLGN 5000 Pedagogy and the Teaching of Religion (4 Credits)

This course looks at pedagogical methods as they relate to the teaching of religion. Students design syllabi and materials appropriate for the teaching of religion in at least two different contexts. In addition, the course covers theoretical issues related to the teaching and learning process.

RLGN 5010 Lived Religion Colloquium (4 Credits)

This weekly colloquium functions as a collaborative space in which students and faculty of the JDP come together to discuss an interdisciplinary body of scholarship focused on religion as it is lived by persons and communities. The specific theme of the colloquium changes each time it is taught.

RLGN 5020 Conceptual Approaches to Religion Colloquium (4 Credits)

This weekly colloquium functions as a collaborative space in which students and faculty of the JDP come together to discuss an interdisciplinary body of scholarship focused on conceptual approaches to the study of Religion. The literature may focus on specific issues, concepts, and/or social and cultural phenomena. The specific theme of the colloquium changes each time it is taught.

RLGN 5030 Religion in Text, Image, and Artifact Colloquium (4 Credits)

This weekly colloquium functions as a collaborative space in which students and faculty of the JDP come together to discuss an interdisciplinary body of scholarship focused on texts, images, and/or artifacts through which religion, culture and worldview can be studied. The specific theme of the colloquium changes each time it is taught.

RLGN 5101 Methods for Interpreting Biblical Texts (4 Credits)

This seminar addresses critical study of biblical texts, the history of interpretations and hermeneutics.

RLGN 5102 Religious Identity in Antiquity (4 Credits)

An exploration of the way individuals and communities understood their religious beliefs and behaviors during the Hellenistic and Roman periods. The focus is on varieties of Jews and Christians (including how they formed their identities in relation to each other), but consideration is also given to the Greco-Roman religious context.

RLGN 5750 Professional Development (0 Credits)

This course provides the "nuts and bolts" on not only surviving, but also thriving within the academy. Assuming that the student's goal is an eventual tenure-track position, the course demystifies the PhD route so that the student, through a working knowledge of the academy, can better position her/himself to succeed. Besides providing professional development, the course attempts to raise the level of involvement of PhD candidates in the profession, from presenting papers to publishing articles.

RLGN 5751 Experiential Learning (0 Credits)

This 0-credit course enables students to acquire valuable teaching and other professional experience as teaching assistants, instructors of record, researchers, or other positions on or off campus. In the case of a teaching position, it will normally only be taken after completing RLGN 5000 Pedagogy & Teaching Religion. Students should work with the JDP Program Manager at least one quarter before they plan to register in order to get this course in the class schedule when it will be needed.

RLGN 5991 Independent Study (1-10 Credits)

RLGN 6000 Dissertation Proposal Seminar (4 Credits)

This seminar focuses upon the range of research topics and methods in religious and theological studies by examining dissertations and dissertation proposals related to the Joint Ph.D. Program at Iliff and the University of Denver. Bibliographic and research methods and matters of style and format receives particular emphasis. Students present their own dissertation proposals for discussion.

RLGN 6010 Comprehensive Review I: Perspectives in the Study of Religion (4 Credits)

Students meet weekly for review and discussion of the bibliography for theories and methods in the study of religion. The bibliography is available on line and students are encouraged to read in advance of the course. The final exam is the comprehensive exam in theories and methods in the study of religion. This course is taken in the fall quarter of the student's third year.

RLGN 6020 Comprehensive Review II: Area Theories and Methods (4 Credits)

Students meet weekly for review and discussion of the bibliography for theories and methods in one of the current areas of JDP program strength: 1) Bible, ancient Judaism and early Christianity 2) Religion, Race and Ethnicity 3) Media, Art and Religion 4) Religion and its Publics 5) Religion and Human Experience or 6) Theories of Religion. Bibliographies are available on line and students are encouraged to read in advance of the course. The final exam is the comprehensive exam in the area. This review course and exam is taken in the fall quarter of the student's third year.

RLGN 6030 Comprehensive Review III: Knowledge in a Professional Field (4 Credits)

Students work individually or in small groups with their dissertation advisor and committee members or other faculty in the students' chosen field of specialization. The purpose is to synthesize coursework, fill in gaps, and expand knowledge needed as a professional in the specific field. The final exam is the comprehensive exam in the major field. This review course and exam is taken in the winter quarter of the student's third year. It must be coordinated with Comp Review IV, and between these two reviews the student must have at least 3 different faculty examiners.

RLGN 6040 Comprehensive Review IV: Knowledge in Minor Areas or Subfields (4 Credits)

Students work individually or in small groups with faculty in the students' chosen subfield or minor area of study, or with the dissertation advisor on a deeper area of specialization within the professional field. The final exam is the comprehensive exam in the subfield or minor area. This review course and exam is taken in the winter quarter of the student's third year. It must be coordinated with Comp Review III and between these two reviews the student must have at least 3 different faculty examiners.

RLGN 6991 Independent Study (1-10 Credits)

RLGN 6995 Independent Research (0-10 Credits)

Joint Doctoral Program students use these credits as they work on their dissertations, beginning upon completion of comprehensive exams. Normally 8 credits are completed by each student.

Courses

RLGN 4000 Theories and Methods in the Study of Religion (4 Credits)

This course begins with a brief overview of the history of the study of religion in the west, from antiquity to the modern period. When we reach the modern period, the course shifts to considering 'representative' theories of religion, broken down roughly along ideological and/or disciplinary lines.

RLGN 4105 Empire and the Rise of Christianity (4 Credits)

This course covers approximately the first five centuries of Christian history with a view toward understanding the role empire played in the rise of Christianity, both in terms of the confluence between Christianity and the Roman Empire as well as its role in the development of Christian beliefs, practices, production of discourse, institutions, and strategies of social control.

RLGN 4106 Second Century Life & Thought (4 Credits)

An attempt to understand Christian life and thought in the Roman Empire in the Second-century by analyzing primary sources.

RLGN 4107 Women in Early Christianity (4 Credits)

An exploration of the role women played in early Christianity, with attention given to the social and literary constructions of women in Greco-Roman antiquity.

RLGN 4108 Jewish and Christian Non-Canonical Literature (4 Credits)

This seminar examines Jewish and Hellenistic backgrounds; the social scientific study of early Christianity; and the New Testament in its literary environment.

RLGN 4109 Formation of the Bible (4 Credits)

This course focuses on the development of the Christian Bible. Some attention, however, will be given to the emergence of the Jewish canon, primarily as it relates to and impacts the Christian canon. The chronological expanse of the course ranges from the Hellenistic through the late Roman period. The approach of the course is necessarily literary and historical, but theoretical issues about what constitutes scripture and canon will also be given attention.

RLGN 4110 Hebrew Reading (2 Credits)

Advanced work in biblical languages or a selected issue in a language study.

RLGN 4111 Greek Reading (2 Credits)

Selected readings from the New Testament and other early Christian literature. Greek I, II and Exegesis are prerequisites Offered each year. May be repeated for credit.

RLGN 4113 The Bible and Its Afterlives: Jonah (4 Credits)

This course invites students to place the biblical book of Jonah in conversation with works of literature, art, and theology that interpret Jonah or explore themes in the book, including the nature of God, prophecy, election, death, and transformation. The course will introduce students to the history of interpretation (or reception history) by considering Jonah's afterlives in a variety of Jewish, Christian, and Islamic texts, artistic programs, and manuscript illuminations.

RLGN 4115 Hebrew Bible Literature: Genesis (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4116 Hebrew Bible Literature: Exodus (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4117 Hebrew Bible Literature: Leviticus (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4118 Hebrew Bible Literature: Numbers (4 Credits)

RLGN 4119 Hebrew Bible Literature: Deuteronomy (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4125 Hebrew Bible Literature -Job (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4128 Hebrew Bible Literature: Jeremiah (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4129 Hebrew Bible Literature: Jonah (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4130 Hebrew Bible Literature: Prophetic Literature (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4131 Hebrew Bible Literature: Wisdom Literature (4 Credits)

Interpretation of selected Hebrew Bible literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4135 Poetry in the Hebrew Bible (4 Credits)

In this course, we will analyze poems primarily from the books of Job, Lamentations, Psalms, 2 Isaiah, and Jeremiah. Class sessions will be divided between studying some aspect of Hebrew prosody (e.g., metaphor, parallelism, lineation) and looking at the ways in which various poets use these particular devices. We will be particularly interested in identifying how poets bring their messages to life, engage their audiences, challenge (or uphold) the status quo, and revitalize the community's imagination and, in turn, its faith in YHWH. Each week, we will read about a particular aspect of poetry and prepare specific poems with the readings in mind; the readings will provide us with a language that we might discuss specifically how the poets impart and encode their messages.

RLGN 4141 New Testament Literature: Mark (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4142 New Testament Literature: Luke (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4143 New Testament Literature: John (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4144 New Testament Literature: Acts of the Apostles (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4145 New Testament Literature: Romans (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4146 New Testament Literature: Corinthians (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4147 New Testament Literature: Galatians (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4148 New Testament Literature: Hebrews (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4150 New Testament Literature: Revelation (4 Credits)

Interpretation of selected New Testament literature. Each course focuses on a book or selected topic. Different courses are offered each year.

RLGN 4151 Studies in Early Christianity (4 Credits)

A critical study of themes and selected movements within early Christianity and other religions of the Greco-Roman world. May be repeated for credit.

RLGN 4152 Identity in the Hebrew Bible (4 Credits)

This course explores diverse constructions of selfhood in the Hebrew Bible in conversation with theories of identity and the self from a range of disciplines, including anthropology, philosophy, sociology, and psychology. In this class, we will consider how the biblical texts present different models of selfhood through discourse, practice, and ritual. Each class session will focus on a different aspect of identity: gender, social class, ethnicity, nationality, colonialism, the body, and kindship and family. Throughout the course, we will discuss the implications of these constructs of identity for ethics, agency, and theology.

RLGN 4153 War, Politics, & Society in the Hebrew Bible (4 Credits)

This course examines the interrelationship between war, politics, and society in the Hebrew Bible and their interplay both in the texts and in larger historical, social, and cultural contexts.

RLGN 4154 Migration and the Bible (4 Credits)

Migration and people on the move pervades the Bible, from Adam and Eve to Jesus. This course examines migration in the Bible and the resources it offers for responding to the current realities of migration, immigration, exile, deportation, and other aspects of migration in the world today. A range of perspectives on migration and the Bible are considered, including denominational resources, international aid agencies, and theoretical viewpoints.

RLGN 4155 Being Human in the Bible (4 Credits)

What does it mean to be human, according to the biblical writers? This is both a simple and complicated question to ask, much less answer. How it is addressed has important consequences. A range of perspectives and answers to the question therefore will be taken up in this course. These can include life and death, gender and sexuality, technology, education, family relations, politics, peoplehood, ecology, human vs. animal, philosophy, and economics. These perspectives and answers are engaged in pursuit of gaining a greater appreciation for how one might think through this question.

RLGN 4160 Teaching the Bible (4 Credits)

Designed to integrate faith development theory, biblical interpretation and confluent education. Education instructional models for the purpose of assisting students to develop professional self-understanding and functional skills as interpreters and teachers; experience in teaching adults in a local setting.

RLGN 4161 Queering Early Christianity (4 Credits)

This course surveys some of the major influences of queer theory on the study of the New Testament and early Christianity, beginning with the work of Judith Butler and continuing through the contributions of queer theorizations inflected by affect, violence, diaspora, race and racialization, and trans discourses. The course considers a variety of canonical and non-canonical texts and practices from the first centuries of the Christian tradition, with an eye to how theorizations of queerness help frame inquiry into the formation of Christian "identity" and belonging.

RLGN 4162 Minoritized Interpretation of the New Testament (4 Credits)

Though the academic study of the New Testament has long been controlled by European and North American institutions and persons of European descent, recent decades have seen a surge of other perspectives that are sometimes collected under the heading of "minoritized." These perspectives include postcolonial and decolonial approaches, and methods centered on racial or ethnic identities, geographies, cultures, shared historical experiences, and gender and sexuality, to name a few. This course considers these forms of interpretation together and separately, as ways of reading biblical texts outside of the field's historical biases.

RLGN 4204 Multi-Cultural Pastoral Care & Counseling (4 Credits)

Examines multicultural issues in pastoral care and counseling and explores the dynamics and complexities of culture, race and other socializing factors in pastoral care conversations.

RLGN 4205 Introduction to Process Thought (4 Credits)

This course provides an overview of Process Theology from its early developments out of Process Philosophy to its current incarnations in theopoetics, ecological civilization, and radical interrelationality.

RLGN 4206 Spiritual Care of Trauma (4 Credits)

This advanced course integrates knowledge, capacities, and skills for practicing justice-seeking, interreligious, and research-literate spiritual care of trauma. This course draws upon psychological research on trauma and spiritual struggles. Readings on socially just spiritual care focus on practices, beliefs, and values that lament harm done by religiously based violence. A spiritually integrative pedagogy uses (1) body-based self-care practices and deep listening conversations about self-care; (2) self-assessment of one's interpersonal capacities for deep interreligious listening; (3) a qualitative analysis of one's spiritual orienting system (self-care practices, struggles, values, and beliefs) embedded in conversations about one's spiritual practices; (4) spiritually integrative assignment about a personal experience of trauma; (5) conversations with a learning partner and Dr. Doehring about this integrative assignment. These experiential components help students develop capacities for spiritual self-differentiation, empathy, and reflexivity. These experiential components are designed to help students integrate critical theory and research into practices of spiritual self-care, integration, and interreligious deep listening.

RLGN 4207 Moral Stress, Resilience & Spiritual Integration (4 Credits)

Moral stress arises from shame/guilt/fear of causing harm involving conflicts in values. Moral injury arises from traumatic stress that is more shame than fear based, and has been researched extensively among military personnel. Spiritual integration of moral stress and injury uses spiritual practices and theological meaning-making to compassionately identify life-limiting embedded shame-based values, beliefs, and ways of coping with moral stress and injury (lived theologies) in order to compassionately understand the origins of moral stress and injury. Relational resilience is the outcome of spiritual integration based on spiritual practices fostering compassion and more complex theological ways of understanding moral conflicts, stress and injury.

RLGN 4208 Erik Erikson: Resource for Pastoral Care (4 Credits)

This course explores Erik H. Erikson's life cycle theory as a resource for the pastoral care of children, adolescents, young adults, adults, and older adults. Attention is given to Erikson's psychoanalytic orientation and the development of his life cycle theory over the course of his career. The course encourages the use of developmental theory to deepen the student's introspective reflection and vocational orientation. By focusing on the work of a single author, this course is meant to illustrate how a pastoral theology student may use the work of a prominent psychologist in the development of a dissertation topic.

RLGN 4209 Spiritual Care in Pluralistic Contexts (4 Credits)

This course helps students learn emergent pastoral theologies of spiritual care in a pluralistic context and use them to reflect on case studies written by experienced practitioners. In this course, students will identify their personal values, attitudes, and beliefs and examine their own social identities to better understand how these dimensions of self can guide and challenge them in reflecting on spiritual care with those who are different from them.

RLGN 4210 Theories of the Self in Pastoral Theology (4 Credits)

This advanced course introduces students to psychological concepts and theories of the self that are operative in pastoral and spiritual care and counseling. Toward that end, this course traces understandings of the self within the works of pastoral theologians, psychologists of religion(s), and practitioners in pastoral and spiritual care. Particular attention will be given to identity formation, relationality, interdependence, and psychic-injury.

RLGN 4220 Research Methods and Ethics in Lived Religion/Practical Theology (4 Credits)

This course introduces students to a variety of qualitative and quantitative approaches to rigorous scholarly research in lived religious contexts, as well as to particular ethical challenges and questions that such approaches may elicit. Students will also be introduced to the Institutional Review Board (IRB) process as a foundational component in developing a critically informed, contextualized methodology for any research-based project in the fields of lived religion and practical theology.

RLGN 4221 Internal Family Systems (4 Credits)

Internal Family Systems Therapy (IFS) is a non-pathologizing psycho-spiritual approach to personal healing and spiritual transformation through selfcompassion and self-exploration. This course will introduce students to the core concepts and practices of the model through experiential and theoretical approaches to it and the worlds/pluridimensional qualities of what it means to be "ourselves".

RLGN 4302 Buddhist Philosophy (4 Credits)

An introduction to the Buddhist philosophical tradition that covers both the different philosophical movements within Buddhism as schools of thoughts and major philosophical issues, such as the theory of karma and determinism, the nature of mind, proofs for past and future lives, theories of knowledge, ethics, the doctrine of emptiness and the nature of enlightenment.

RLGN 4303 Sacred Space and Place in Comparative Perspective (4 Credits)

This course examines sacred spaces and sacred places from a comparative perspective. Through close reading and discussion of primary and secondary sources, students are challenged to think critically and theoretically about sacred spaces and places.

RLGN 4304 Material Divinity (4 Credits)

This course explores how religion happens in material culture- broadly defined as images, devotional and liturgical objects, architecture and sacred space, works of art, and mass-produced artifacts.

RLGN 4305 Pilgrimage in Comparative Perspective (4 Credits)

This is a comparative course that examines the dynamics of pilgrimage from a number of different angles - theoretical, doctrinal, ritual, social - and which utilizes a variety of sources - including classical, ethnographic studies of actual pilgrimages, and focused studies of particular pilgrimage places - with the goal of gaining a thorough understanding of the phenomena of pilgrimage in all of its complexity.

RLGN 4321 Islam and Gender (4 Credits)

This course examines issues surrounding gender and sexuality in Islam. Through a close reading of religious texts, critiques of patriarchy, and historical studies, students are challenged to think critically about the construction of gender roles and the regulation of sexual practices in Islam. By the conclusion of the class, students gain insight and understanding regarding the ways modernity has radically altered norms surrounding gender and sexual preference in Muslim-majority societies.

RLGN 4322 Interreligious Dialogue: A Critical Analysis (4 Credits)

This course exposes students to the theory and practice of interreligious dialogue (broadly defined) and the issues raised by interreligious dialogue, such theologies of religious pluralism, secularism, religiously motivated violence, and religion and public life. Students have opportunity to read critical scholarship on these topics generally, as well as study specific cases where points of contact occur between religious groups—either in terms of dialogue (or other mutually edifying endeavors) or conflicts that have arisen between religious groups. In the process students will also learn about some of the more prominent organizations working in interreligious dialogue.

RLGN 4401 Race, Gender, Class: Historical & Social Analysis of Racism in the Modern World (4 Credits)

An historical survey of the role of racism, sexism and classism in shaping the oppressive institutional structures of the existing world order and of how sociological analysis of these structures can help justice and peace activists direct effective action toward the elimination of race, gender and class oppression.

RLGN 4402 American Indian Cultures and Worldview (4 Credits)

A survey of the worldviews of Native American people, as these pertain to both inter-tribal beliefs and Native American ceremonial life, with an attempt to show how Native American practice proceeds from their worldview.

RLGN 4403 Sects, Cults & New Religions (4 Credits)

An exploration of non-mainstream religious groups. Topics include innovation and recruitment; "cult" controversies; sectarian Christianity, gender and sexuality; UFO religions; and religion and marginalized racial projects.

RLGN 4404 Race and Religion in the United States (4 Credits)

An exploration of the different ways in which race is understood religiously in the United States and how race impacts both white and racial minority religious institutions. Specific topics include the black church, the Nation of Islam, Native American theology, the Christian far right, Asian American religions, Latino/a religions, and multiracial congregations.

RLGN 4405 Social Construction & Selfhood (4 Credits)

This course invites us into a collection of investigations into the intersections of social structures and individual identity or selfhood. While reading in a variety of disciplines and genres, we are drawn together around the questions of how one understands the possibilities for individual or communal agency in light of the formative, systemic power of social structures and institutions. Beyond conceptual understanding of this relationship, we ask questions of how to encourage coherent religious, educational, and other forms of practice in light of the realities of social construction. These reflections are particularly important for persons who are interested in social change and the very real barriers to its generation.

RLGN 4406 Education and Social Change (4 Credits)

This course investigates the role of education in maintaining and transforming social structures, identity, and commitments. We examine how educational practices can contribute towards social change in both religious and public settings.

RLGN 4407 Ritual Studies (4 Credits)

By reading some of the most important "classic" and recent theorists of ritual, and by learning to observe and understand ritual behavior, this class will examine the important role of ritual in defining religious groups, creating religious identity, forming religious beliefs, and structuring how we view the world. Prerequisite: Masters students need permission of instructor.

RLGN 4408 Science & the Christian Right (4 Credits)

An examination of the American Christian Right's challenges to mainstream scientific theories and practices. Specific topics include Intelligent Design movement, reparative therapy of homosexuality, denial of human-driven climate change, and opposition to stem cell research.

RLGN 4409 Social Movements from Liberationist Perspectives (4 Credits)

Liberationist thought has greatly impacted how social movements, and the theological and ethical perspective which inform them, has been implemented to bring about social and political change since the mid-twentieth century. But with the state of the new millennium, many have proclaimed the death of liberation theology, dismissing its significance as a passing fad. The purpose of this course is to explore the roots, development, and history of liberationist thought as it first manifested itself within a Latin American context then expanding to other continents and faith traditions, and how that thought has been utilized to inform social movements.

RLGN 4410 American Christianity and Indian Genocide (4 Credits)

A collaborative research seminar exploring different aspects of the history of the relationship between American Christianity and genocidal campaigns against native peoples, including the colonial period through the 20th century. Students will research particular personalities and historical events related to this topic, including the campaigns of the military on the 18th century Western frontier, sites of massacres including Sand Creek in Colorado, and other events normally obscured by accounts of US history. Students will learn the relationships of ideology and worldview to the narration of history, as well as skills in identifying and working with primary historical sources.

RLGN 4412 Health & Healing, Death & Dying: Technologies of Inspiration and Expiration (4 Credits)

Through this course, students will encounter a variety of perspectives on the nature, morality, justices, and injustices of health, healing, and dying.

RLGN 4413 Theology and the Construction of Race (4 Credits)

Several important books have recently been published making the case that religion, and more specifically, Christian theology, have played a constitutive role in creating the ideas of race and racial hierarchies. This course is an extended argument (with which students are free to agree or disagree in part or in whole—in any case they will become familiar with the relevant literature and concepts) that 1. In significant ways religion and race are modern, not universal or permanent, constructions; that 2. Religion and race are two of the very few fundamental conceptual building blocks of the modern world, such that, no matter what one thinks of religion and race, one is unable to think or operate in the modern world without them; and that 3. Religion and race are mutually imbricated in such a way that, even when race is not explicitly a topic of discussion or observation, modern religion is always already racialized.

RLGN 4414 Atheists, Secularists & Nones (4 Credits)

An examination of non-religious and/or non-affiliated populations, with a primary focus on the United States. We will explore: 1) the variety of beliefs among those not affiliated with religious institutions; 2) different social expressions of atheism; 3) the implications of recent religious trends for debates about secularization in the modern West.

RLGN 4415 Environmental Racism: The Problem with Water (4 Credits)

The course seeks to develop a constructive conversation on the intersection of environmental racism and water by examining significant issues surrounding present-day issues the degradation of water quality its negative impact on communities of color. Furthermore, the course will examine what type of praxis can be employed to bring about social and political change.

RLGN 4416 Decolonizing Theories and Methods (4 Credits)

Religious studies draws from multiple disciplines which include anthropology, history, feminism, transnationalism, empire studies and sociology. Often, students approach theories and methods by reading classic authors and mainly contemporary eurocentric scholars of religion. This course will approach theories and methods from through the lens of decoloniality, concentrating of the perspectives and contributions emerging from the margins of eurocentric thought.

RLGN 4417 Still Black Post-human: Blackness Beyond Posthumanism (4 Credits)

Blackness waits at the door. It sits in the room. It seeps into crevices. It disrupts stable sensibilities. It is the abyss. It is an overwhelming presence of life and the beyond. And it waits. This course will explore many presentations of Blackness as an ontology, material essence, and tangible modality. In doing so, this course will not only explore ontomateriality of Blackness, but present a case for it as an integral framework to engage posthumanism's proclivity to emphasizes animal studies and ecology while holding fast to liberalism's damaging modes of uncritical inclusivity. This is important to the state of the theological experiment as James Cone insisted Blackness is the key to global salvation over 50 years ago. With recent moves to decenter human exceptionalism, shifts in focus to future realities, and intentional re-imaginings of the human-creature-divine relationship. It is important to continue to unravel humanist descendent offerings. As such, this course will provide a lens to investigate/disrupt the potentiality that posthumanity presents, pushing beyond its less obviously regressing boundaries, towards liberative future realities.

RLGN 4418 Decolonizing Congregational Leadership (4 Credits)

This course explores the applications of postcolonial and decolonial discourses to the theory and practice of parish leadership, particularly within Christian congregational contexts. Students will reflect on leadership praxis across several areas (i.e., euro-western constructions) of congregational life including: worship and liturgy, education and formation, organizational culture, and missions. As a whole, the course interrogates notions of tradition, practice, and leadership identities in the context of congregations toward the de/construction of lived realities.

RLGN 4419 Religion and Postcolonial Discourse (4 Credits)

This course will engage and focus on the intersections of the academic discipline of Religion and the academic discipline of Postcolonial Studies. This course is not an introduction to postcolonial studies course. The discourse of colonialism goes beyond a simple colonizer/colonized binary and is complicated by power, identity, and economics. Postcolonialism arose through the analysis of literary works following the independence and attainment of nationhood of peoples globally to address the continuing disruption set off by colonial logics. This course begins with the assumption that European colonialism is a reality that is defined by a particular worldview and shared features but is diverse in local imbrications. The course will focus on the feature of religion as an integral part of the colonizing worldview of the colonizer and simultaneously focus on how colonized people have recaptured their national and religious metanarrative under postcolonial dispensations as acts of counter-discourse and resistance.

RLGN 4420 Postcolonial Feminist Theology (4 Credits)

This course offers a critical exploration of Postcolonial Feminist Theologies. Drawing from the works of key women scholars, students will engage with theological perspectives that challenge colonial legacies and patriarchal structures embedded within traditional theological frameworks. Throughout the course, students will examine how feminist and postcolonial critiques have reshaped interpretations of the scripture, doctrines, and ministry practices. The course will critically assess how postcolonial feminist theologians have addressed issues of race, gender, class, and imperialism within both Christian theology and broader religious contexts. The course will offer students opportunities to develop theologically informed responses to contemporary global issues, emphasizing justice, liberation, and intersectionality.

RLGN 4501 Holy Spirit: History and Traditions (4 Credits)

What have Christians believed and written about the Holy Spirit through the centuries? Why does Pentecost show up in such different ways across the pages of Christian theology and literature? In the midst of the European Enlightenment, why did John Wesley hold such special reverence for the role of experience in Christian thought and education? Why has the Pentecostal legacy functioned simultaneously as a subversive trope for critiquing dominant church paradigms while also sparking creative, re-interpretations of Christian tradition among so many reformers? These are just a few of the questions explored in this class as we discuss historical and theological works by contemporary scholars in pneumatology and church history.

RLGN 4502 Historiography (4 Credits)

This course surveys the various theories and methods developed by historians since the emergence of the historical profession from the roots of historicism and philosophy of history in the mid-1800s; and examine the relationship of history to theology, cultural theory and literary studies.

RLGN 4503 Women in Medieval Europe (4 Credits)

This class focuses on the role of medieval women, who struggled to find a voice in the political, religious, social and literary arenas of medieval Europe from about 1100 to 1600. Through primary and secondary source readings we look at everyday women's lives in this period. The class also includes the lives and careers of some of the most famous women writers and leaders of the period, such as Hildegard of Bingen, Eleanore of Aquitaine, Marie de France, Margery Kempe, Julian of Norwich, Queen Isabel of Castile, Teresa of Ávila, and Queen Elizabeth I of England.

RLGN 4504 Muslims, Jews and Christians in Medieval Spain (4 Credits)

An exploration of the "Golden Age" of cross-cultural encounters that occurred in Medieval Spain from the Muslim conquest in 711 to the fall of Granada and the expulsion of Jews in 1492. This course offers an overview of the historical and ecumenical dimensions of Jewish, Christian, and Islamic coexistence, known as "La Convivencia," and critical reflection on the relevant lessons this era still holds in the post 9/11 period.

RLGN 4505 Spanish Mystics and Reformers (4 Credits)

Early modern Spain witnessed the emergence of Catholic and Protestant individuals whose timeless works and popular appeal in subsequent centuries rested largely upon the practice of "contemplation in action." This course examines the historical context and works of such mystics and reformers as Teresa of Ávila, John of the Cross, Ignatius of Loyola, Juan de Valdés, Constantino Ponce de la Fuente Cipriano de Valera, Casiodoro de Reina, Antonio del Corro, and others, and others. It also explores the influence of Islam and Judaism on these sixteenth century religious movements, as well as modern Spain's subsequent rejection of this pluralistic legacy as it sought to define the young nation-state sought to define its new national identity and consolidate power across Europe and its vast colonial territories in the Western Hemisphere.

RLGN 4506 The Pursuit of Happiness: A History (4 Credits)

This course provides a historical examination of key concepts, major questions, and practices about humanity's search for happiness from the Hellenistic-Roman period of Antiquity through the Early Christian and Medieval periods. The content centers on the role of Classical moral philosophy and Christian theology in the formulation of eudemonic theories about the problem of happiness in relation to metaphysical and religious influences as well as to socio-cultural, political, and institutional norms and practices that shaped Christian notions of human purpose and potential. The legacies of these ancient ideas on the development of modern assumptions about happiness and human flourishing are also discussed towards the end of the course.

RLGN 4507 Violence & Tolerance in Medieval Europe (4 Credits)

This course examines a wide range of texts and events from the 11th to the 16th centuries dealing with various forms of violence across the medieval European world and contrasts these with medieval European notions of toleration in theological, literary, and political discourse. Among the topics to be covered will be the Peace of God and the Truce of God, feudal warfare and its legacy, the Crusades and their impact upon the Latin West as well as the on Arab East, anti-Semitism in the Latin West, the Inquisition, persecution of heretics and witches, Church and State struggles, and the various dialogues of mutual, theocentric edification among Islamic, Jewish, and Christian authors.

RLGN 4508 Judaism, Gender, and Religion (4 Credits)

Germans refer to the period of roughly 1770-1850 as the Sattelzeit, or "Saddle Era"—the time between the end of the early modern world and Europe and the modern world. During this era basic assumptions that we continue to make about what religion is and what gender is are constructed. This is also the era when what we think of a Judaism is re-shaped in major ways. Through a close reading of primary texts by Jewish women we will examine the intersection of gender, Judaism, and religion and examine the modern construction of these categories.

RLGN 4509 Jewish Christian Relations 50-500 C.E. (4 Credits)

This course considers the "parting of the ways" between Judaism and Christianity, beginning with the tumultuous first century (the Jewish War and the beginnings of the Jesus tradition) and continuing through the synthesis of Christianity and Empire in late antiquity. Along the way, we will consider how Christianity and Judaism emerged from a common matrix, influenced and co-created each other, and Othered each other in their processes of self-definition. We will attend especially to the problems with the "World Religions" model, ancient identity formation, the origins of Christian anti-Semitism, the effects of empire and diaspora, and modern attempts to explain the "parting.".

RLGN 4520 Religion and Film (4 Credits)

Can film elicit the holy? Does the story of Jacob and Esau look different when told by a North African filmmaker? How does a Buddhist sensibility shape the form of Japanese films? Can we ask theological questions about secular films? In this course films are the primary texts, supplemented by readings, lecture and discussion. Students develop the film literacy and theological and theoretical acumen to explore these and other interactions between religion and film in cultural context. While there is no explicit prerequisite, background in film or literary criticism and/or theological or religious studies is helpful.

RLGN 4604 Religion in the Public Square (4 Credits)

What is the proper role of religion in the public debates necessary to healthy democracy? Some argue that religion in the public square threatens the fundamental democratic right the freedom of conscience; others that only religion can insulate the communal values that make democracy possible. This course examines the best and most prominent arguments in this contemporary debate.

RLGN 4605 Feminist Theology (4 Credits)

Analysis of feminist theology with attention to methodological issues, the relation of contemporary feminist visions to historical material, the ideas of God/Goddess and the question of what it means to be female. Prerequisite: At least one introductory level theology course.

RLGN 4607 Liberating Sex (4 Credits)

The purpose of the course is to search the Christian Scriptures, in spite of its accusations of being patriarchal, to find biblically-based guidelines for developing an ethical sexual lifestyle that is aware of how racism, classism, and specifically sexism influences the current conversation on sexual ethics. This course focuses on developing healthy models that foster intimacy and vulnerability for a disjointed and at times oppressive community.

RLGN 4608 Latinx Theology and Ethics (4 Credits)

The primary sources of Latinx theological and ethical thought are read to discover its foundational tenets. The course explores this contextual approach to religion to discover how it could serve to liberate the Latinx community from prevalent oppressive social structures. Comparisons are made with Eurocentric ethics and theology.

RLGN 4609 Queer Theory, Theoethics & Activism (4 Credits)

Queer theory has transformed religious thought in extraordinary ways especially over the course of the past four decades. This course explores the nature of queer theory as a discipline within and outside of the religious academy. This course also invites students to explore the ways that queer theory intersects with theories of race and praxes of activism.

RLGN 4610 Ethics of Neoliberalism and Globalization (4 Credits)

People of faith have responded to the triumph of the free market economy around the world in a variety of ways. To some, "neoliberalism" seems to hold the key to sustained economic growth worldwide and, eventually, to nothing less than the eradication of poverty itself. To others, it represents the unleashing of corporate greed on a scale previously unknown, with momentous and often disastrous consequences for the working poor, the economically marginalized, and the environment. Does the new global economy signify the lifting of all boats or the race to the bottom? Does it further Christian ethical values, or subvert them?.

RLGN 4611 Theology and the Challenge of Postmodernism (4 Credits)

An examination of representative postmodern thinkers, how they have changed the context for theology, and how theology has responded to them.

RLGN 4612 African Theology and Post-Colonial Discourse (4 Credits)

This course attempts to examine the relationship between the emergence of African Theology and the historical conditions which characterize Africa's encounter with the European/American will to power. The initial hypothesis to be tested is the claim that the will to power provides the locus classicus for formulating the identity of African theological reflection. This makes the latter a part of a much larger discourse on Africanity. The course takes the student through a close reading of basic texts produced by African theologians themselves. All the major issues characteristic of the discourse of African Theology is dealt with.

RLGN 4613 Augustine and His Influence: 400 C.E. to 1000 C.E, (4 Credits)

Theological contribution of the great North African Bishop; his major writings, such as Confessions, City of God and The Trinity; and his anti-Pelagian, anti-Donatist, and anti-Manichaean writings.

RLGN 4614 Liberation Theologies (4 Credits)

Consideration of contemporary liberation movements with focus on feminist, black and Third World theologies. Special concern is with what the various perspectives of sex, race and class analysis suggest for one another and for theology and social ethics generally.

RLGN 4615 Being Human in the Modern World (4 Credits)

What does it mean to be human? After a brief survey of traditional Christian answers to this question, we focus on the theological anthropology that has become the de facto theory of human nature since the emergence of the modern western world in the early 19th century. Theological anthropology can be the driver of other doctrines in a systematic theology; it also underpins work not necessarily seen as theological, such as ethics, development, and human rights. A rich understanding of this anthropology is necessary for theological reflection in our current context.

RLGN 4617 Forgiveness (4 Credits)

In the histories of philosophy and religions, 'forgiveness' emerges as a grounding concept for thinking about God, self, and community. This course examines core texts and contexts within a range of religious, philosophical, and theological discourses on forgiveness, 'loving the enemy', and reconciliation. The course explores a variety of spaces of forgiveness as well as the possibility that the 'impossibility of forgiveness' must be allowed to emerge as a valued theological, ethical, and civic principle of personal and communal identity.

RLGN 4618 Doctrine of God in the Modern World: The Pantheism Controversy (4 Credits)

What is the most fruitful model for thinking about God? There are a few perennial options, each of which have social, political, and ethical implications in addition to metaphysical ones. In the post-Enlightenment world a version of the pantheism model swept through philosophers and theologians, Jews and Christians, raising issues which, if possible, are even more pressing in our post-Christian context. The so-called Pantheism Controversy has the advantage of not only unpacking all the issues involved in the various models of God, but of also being a good story of the personal lives and relationships of a fascinating group of people. This course introduces students to the most pertinent writings from this controversy and engages theological and philosophical work, influenced by the controversy, from our own contexts.

RLGN 4619 Christian Theology and Disability (4 Credits)

Using the category of "disability" as a starting point, this seminar examines constructive theologies in which attention to human vulnerability, limitation, and interdependence is fundamental to religious thought and practice. It presents "ableism" as a form of social injustice, emphasizing its intersections with other forms of oppression. It names Christianity's past and present complicity in ableism, while also highlighting the tradition's resources for effective opposition. Consideration expands beyond persons with disabilities to include common phases of life like infancy and frail old age. The course's primary aim is to equip students to articulate theologies that affirm that which ableism devalues.

RLGN 4620 Fanon, Foucault and Friends (4 Credits)

This course reads the primary sources of post colonialists (mainly Fanon) and postmodernists (mainly Foucault) to explore creating ethical approaches to globalized manifestations of race, class, and gender oppression. Special attention is given to the use of Christianity as a liberationist response to global structures of oppression in spite of its historic use in causing much of said oppression.

RLGN 4621 Kierkegaard and Existential Theology (4 Credits)

Kierkegaard and the origins of existentialism; twentieth-century forms of existentialism and recent developments; the decline of neo-orthodoxy and resurgence of phenomenology.

RLGN 4622 Schleiermacher as Resource (4 Credits)

Consideration of the theology of Friedrich Schleiermacher. Analysis of the philosophical and theological predecessors of Schleiermacher as well as the tradition of theological liberalism that followed him.

RLGN 4640 Doing Christian Ethics from the Margins (4 Credits)

Many of us have been taught religion through the eyes of white, middle-class males. How then do we do ethics from the perspective of the disenfranchised? The aim of this course is to enable students to: construct ethical responses to case studies from the perspectives of those suffering from race, class and gender oppression; to investigate Biblical protest narratives as to the resistance and struggle against race, class and gender domination and oppression; and to examine various liberationist ethical interpretations as a source for overcoming dominant religious power structures.

RLGN 4641 Formative White Male Ethicists (4 Credits)

This course on formative white male figures in Christian Ethics examines the ethical canon from a historical perspective. Special attention is given to texts and traditions as living changing heritages.

RLGN 4642 Theology and the Rise of the Historical Consciousness (4 Credits)

Theological work today is done in the context of the rise of the historical consciousness, a phenomenon with its roots in the late 18th and early 19th centuries. We inherit a fundamentally different worldview from the worldviews of the ancient and medieval worlds that gave rise to many of the classical Christian practices and beliefs, and different from contemporary non-western worldviews. The historical consciousness leads to a particular set of assumptions about Biblical authority, identity and subjectivity, epistemology, the relationship of individuals to communities, etc. This class examines important texts in the development of the historical consciousness, analyzes issues raised for Christian theology, and points to some of the theological resources developed in its wake.

RLGN 4643 Women and Christian Theologies from the Global South: A Postcolonial Feminist Approach (4 Credits)

This course is a critical study of the challenges and contributions of Christian feminist theologies from the global south to theological studies in North America, particularly, Christian feminist theologies. Framed in postcoclonial discourses, this course will study works of representative figures in Christian feminist theologies from Africa, Latin America, and Asia. Topics will include the impact of globalization, postcolonial discourse, religion and culture, sexuality and spirituality, and ecological concerns.

RLGN 4644 Environmental Ethics and Global Hunger (4 Credits)

The course seeks to develop a constructive conversation on the causes of global hunger by examining significant issues surrounding the present-day distribution of food and its negative impact on the environment. Furthermore, the course will examine what type of praxis can be employed to bring about social and political change.

RLGN 4645 Artificial Intelligence and What It Means to Be Human (4 Credits)

Artificial Intelligence raises pressing questions about machines: Are they really intelligent? Can they have consciousness? Ought they have moral status? Are algorithms related to computers like minds are to bodies? Do smart machines change the relationship of humans to technology? Each of these questions, in turn, is actually a question about human nature: What are the kinds of human intelligence, and are they unique to humans? Why do humans have moral status? What kinds of embodiment are essential to humans? (Do we include things like race and gender?) Are humans tool-users, or did we evolve as humans because of tools? In that case, have humans always been cyborgs? Questions about human nature are one of the classic theological loci, falling under the rubric of theological anthropology. In other words, religious traditions have thousands of years of deep thinking on these questions that are being raised in new ways (as Nick Bostrom has famously argued, Al is like "philosophy with a deadline"). This course is a sophisticated but non-technical introduction to the history of Al and to the tools and ideas of Al in its current forms. We will cover the most important ethical issues with which Al confronts us, and bring the resources of philosophy and theology to tackling some of the questions of human nature raised by Al.

RLGN 4646 Ethics in an Age of Plagues, Pestilence, and Pandemics (2 Credits)

The world is gripped by a deadly pandemic. This is neither the first time, nor probably will be the last. What we do know is in the aftermath of such deadly epidemics, the societal bonds which once held community together are frayed if not completely broken as radical changes take hold and new ways of being arise. This course will wrestle with the importance of maintaining a moral compass during crisis and an ethical vision as a new reality is constructed. Special attention will be given to how not all suffer equally, and the roles of racism, classism, and sexism during national emergencies. Finally, the course would assist the student in finding their own ethical voice during a time of hopelessness and desperation.

RLGN 4647 Jesus for Christians and Non-Christians (4 Credits)

Who is Jesus of Nazareth, and what is his relationship to Jesus Christ? This course will examine this central question in multiple religious and nonreligious cultural contexts. We will use the methods of comparative theology to read ideas about Jesus in the contexts of Christianity, Islam, Judaism, Paganism, Spiritual But Not Religious (SBNR), and non-theistic texts. Students will compare and contrast these ideas of Jesus to create their own understanding of Jesus' narrative and his relationship to our present world in their particular context.

RLGN 4648 Biblical Ethics (4 Credits)

Anyone who reads the Bible does so from a particular social location. We are all born into an on-going society that shapes us. When we turn our attention to the biblical text as the source of our ethical perspectives, we participate in a dialogue between the written word and the meanings our community taught us to give to these words. Many of us have been taught to read the Bible through the eyes of white, middle-class males. Yet, can the text liberate those who are oppressed? To do so, it must be read with the eyes of the disenfranchised. This course will explore how the Bible can be used to bring about justice for those who suffer due to race, class and gender oppression.
RLGN 4649 WOMANIST THEOETHICS (4 Credits)

This course will focus on the canonical works of womanist theology and womanist ethics. Students will read the seminal texts of first wave womanist theologians and first wave womanist ethicists. Students will also read works by third wave womanists and evaluate how these texts build upon the canonical works to form what is known as the Womanist House of Wisdom. The course will seek to examine how pioneer womanist scholarship was interpreted in its historical context and how the disciple of womanist religious thought in theology and ethics was formed. Students will also explore womanist methodologies and how they can be operationalized by people outside of Black female embodiment. Finally, students will learn how womanist theoethics is used in womanist social justice praxis, pastoral care, and preached in congregational settings.

RLGN 4650 Advanced Practical Theological Research (4 Credits)

This collaborative seminar provides an opportunity for students to explore the process of practical theological research for their own dissertation projects and to work collaboratively to shape research that is impactful and compelling. Students will establish the theoretical framing of their project through deep engagement with a body of literature relevant to their topic, engage in rigorous contextual analysis of their research site/community, and begin the descriptive work necessary for their particular question, and in doing so refine their research question and appropriate self-reflexive research strategies necessary to their project.

RLGN 4651 Social Issues, Social Ethics (4 Credits)

The purpose of this course is to examine social issues through the lens of Christian Social Ethics. Students will learn about the discipline of Christian Social Ethics with focused learning on ethics from the margins and the ethics of responsibility. Students will learn how to analyze social issues through a Christian social ethical framework. A component of the course will focus on student leadership development with assignments that will develop students as leaders through the course's focus on skill development. The social issues examined in the course will vary each time the course is taught.

RLGN 4701 Topics in the Study of Religion (0-4 Credits)

RLGN 4702 Topics in Biblical Studies (0-4 Credits)

RLGN 4703 Topics in Theological Studies (0-4 Credits)

RLGN 4761 Social Ethical Issues (4 Credits)

Examination of the scope of Christian social ethics and the relationship of the analytic and diagnostic task to normative and prescriptive endeavor. May be repeated.

RLGN 4762 Justice & Peace Struggles (2,4 Credits)

Regular offerings include "Columbusday and the History of Christian Denial," "Justice in Native America," and "Church and the Colonial Residual: Pine Ridge, the Black Hills, Missionaries and Indian Justice.

RLGN 4991 Independent Study (1-4 Credits)

RLGN 5000 Pedagogy and the Teaching of Religion (4 Credits)

This course looks at pedagogical methods as they relate to the teaching of religion. Students design syllabi and materials appropriate for the teaching of religion in at least two different contexts. In addition, the course covers theoretical issues related to the teaching and learning process.

RLGN 5010 Lived Religion Colloquium (4 Credits)

This weekly colloquium functions as a collaborative space in which students and faculty of the JDP come together to discuss an interdisciplinary body of scholarship focused on religion as it is lived by persons and communities. The specific theme of the colloquium changes each time it is taught.

RLGN 5020 Conceptual Approaches to Religion Colloquium (4 Credits)

This weekly colloquium functions as a collaborative space in which students and faculty of the JDP come together to discuss an interdisciplinary body of scholarship focused on conceptual approaches to the study of Religion. The literature may focus on specific issues, concepts, and/or social and cultural phenomena. The specific theme of the colloquium changes each time it is taught.

RLGN 5030 Religion in Text, Image, and Artifact Colloquium (4 Credits)

This weekly colloquium functions as a collaborative space in which students and faculty of the JDP come together to discuss an interdisciplinary body of scholarship focused on texts, images, and/or artifacts through which religion, culture and worldview can be studied. The specific theme of the colloquium changes each time it is taught.

RLGN 5101 Methods for Interpreting Biblical Texts (4 Credits)
